PREFACE.

THE teachings embodied in the present volume let in a flood of light on questions connected with Buddhist doctrine which have deeply perplexed previous writers on that religion, and offer the world for the first time a practical clue to the meaning of almost all ancient religious symbolism. More than this, the Esoteric Doctrine, when properly understood, will be found to advance an overpowering claim on the attention of earnest thinkers. Its tenets are not presented to us as the invention of any founder or prophet. Its testimony is based on no written scriptures. Its views of Nature have been evolved by the researches of an immense succession of investigators, qualified for their task by the possession of spiritual faculties and perceptions of a higher order than those belonging to ordinary humanity. In the course of ages the block of knowledge thus accumulated, concerning the origin of the world and of man and

the ultimate destinies of our race—concerning also the nature of other worlds and states of existence differing from those of our present life—checked and examined at every point, verified in all directions, and constantly under examination throughout, has come to be looked on by its custodians as constituting the absolute truth concerning spiritual things, the actual state of the facts regarding vast regions of vital activity lying beyond this earthly existence.

European philosophy, whether concerned with religion or pure metaphysics, has so long been used to a sense of insecurity in speculations outrunning the limits of physical experiment, that absolute truth about spiritual things is hardly recognized any longer by prudent thinkers as a reasonable object of pursuit; but different habits of thought have been acquired in Asia. The secret doctrine which, to a considerable extent, I am now enabled to expound, is regarded not only by all its adherents but by vast numbers who have never expected to know more of it than that such a doctrine exists, as a mine of entirely trustworthy knowledge from which all religions and philosophies have derived whatever they possess of truth, and with which every religion must coincide if it claims to be a mode of expression for truth.

This is a bold claim indeed, but I venture to announce the following exposition as one of immense importance to the world, because I believe that claim can be substantiated.

I do not say that within the compass of this volume the authenticity of the esoteric doctrine can be proved. Such proof cannot be given by any process of argument ; only through the development in each inquirer for himself of the faculties required for the direct observation of Nature along the lines indicated. But his *primâ facie* conclusion may be determined by the extent to which the views of Nature about to be unfolded may recommend themselves to his mind, and by the reasons which exist for trusting the powers of observation of those by whom they are communicated.

Will it be supposed that the very magnitude of the claim now made on behalf of the esoteric doctrine, lifts the present statement out of the region of inquiry to which its title refers—inquiry as to the real inner meaning of the definite and specific religion called Buddhism. The fact is, however, that esoteric Buddhism, though by no means divorced from the associations of exoteric Buddhism, must not be conceived to constitute a mere *imperium in imperio*—a central school of culture in the vortex

of the Buddhist world. In proportion as Buddhism retreats into the inner penetralia of its faith, these are found to merge into the inner penetralia of other faiths. The cosmic conceptions, and the knowledge of Nature on which Buddhism not merely rests, but which constitute esoteric Buddhism, equally constitute esoteric Brahminism. And the esoteric doctrine is thus regarded by those of all creeds who are "enlightened" (in the Buddhist sense) as the absolute truth concerning Nature, Man, the origin of the Universe, and the destinies toward which its inhabitants are tending. At the same time, exoteric Buddhism has remained in closer union with the esoteric doctrine than any other popular religion. An exposition of the inner knowledge, addressed to English readers in the present day, will thus associate itself irresistibly with familiar outlines of Buddhist teaching. It will certainly impart to these a living meaning they generally seem to be without, but all the more on this account may the esoteric doctrine be most conveniently studied in its Buddhist aspect; one, moreover, which has been so strongly impressed upon it since the time of Gautama Buddha that though the essence of the doctrine dates back to a far more remote antiquity, the Buddhist colour-

ing has now permeated its whole substance. That which I am about to put before the reader is esoteric Buddhism, and for European students approaching it for the first time, any other designation would be a misnomer.

The statement I have to make must be considered in its entirety before the reader will be able to comprehend why initiates in the esoteric doctrine regard the concession involved in the present disclosure of the general outlines of this doctrine as one of startling magnitude. One explanation of this feeling, however, may be readily seen to spring from the extreme sacredness that has always been attached by their ancient guardians to the inner vital truths of Nature. Hitherto this sacredness has always prescribed their absolute concealment from the profane herd. And so far as that policy of concealment,—the tradition of countless ages,—is now being given up, the new departure which the appearance of this volume signalizes will be contemplated with surprise and regret by a great many initiated disciples. The surrender to criticism which may sometimes perhaps be clumsy and irreverent, of doctrines which have hitherto been regarded by such persons as too majestic in their import to be talked of at all except under circumstances of

befitting solemnity, will seem to them a terrible profanation of the great mysteries. From the European point of view it would be unreasonable to expect that such a book as this can be exempt from the usual rough-and-tumble treatment of new ideas. And special convictions or common-place bigotry may sometimes render such treatment in the present case peculiarly inimical. But all that, though a matter of course to European exponents of the doctrine like myself, will seem very grievous and disgusting to its earlier and more regular representatives. They will appeal sadly to the wisdom of the time-honoured rule which, in the old symbolical way, forbade the initiates from casting pearls before swine.

Happily, as I think, the rule has not been allowed to operate any longer to the prejudice of those who, while still far from being initiated, in the occult sense of the term, will probably have become, by sheer force of modern culture, qualified to appreciate the concession.

Part of the information contained in the following pages has been thrown out in a fragmentary form during the last eighteen months in the *Theosophist*, a monthly magazine, published hitherto at Bombay, but now at Madras, by the leaders of the Theosophical Society. As almost all the articles re-

ferred to have been my own writing, I have not hesitated to weld parts of them, when this course has been convenient, into the present volume. A certain advantage is gained by thus showing how the separate pieces of the mosaic as first presented to public notice, drop naturally into their places in the (comparatively) finished pavement.

The doctrine or system now disclosed in its broad outlines has been so jealously guarded hitherto, that no mere literary researches, though they might have curry-combed all India, could have brought to light any morsel of the information thus revealed. It is given out to the world at last by the free grace of those in whose keeping it has hitherto lain. Nothing could ever have extorted from them its very first letter. It is only after a perusal of the present explanations that their position generally, as regards their present disclosures or their previous reticence can be criticised or even comprehended. The views of Nature now put forward are altogether unfamiliar to European thinkers; the policy of the graduates in esoteric knowledge, which has grown out of their long intimacy with these views must be considered in connection with the peculiar bearings of the Doctrine itself.

As for the circumstances under which these re-

velations were first foreshadowed in the *Theosophist*, and are now rounded off and expanded as my readers will perceive, it is enough for the moment to say, that the Theosophical Society, through my connexion with which the materials dealt with in this volume have come into my hands, owes its establishment to certain persons who are among the custodians of esoteric science. The information poured out at last for the benefit of all who are ripe to receive it, has been destined for communication to the world through the Theosophical Society since the foundation of that body, and later circumstances only have indicated myself as the agent through whom the communication could be conveniently made.

Let me add, that I do not regard myself as the sole exponent for the outer world, at this crisis, of esoteric truth. These teachings are the final outcome, as regards philosophical knowledge, of the relations with the outer world which have been established by the custodians of esoteric truth, through me. And it is only regarding the acts and intentions of those esoteric teachers who have chosen to work through me, that I can have any certain knowledge. But, in different ways, some other writers are engaged in expounding for the

benefit of the world—and, as I believe, in accordance with a great plan, of which this volume is a part—the same truths, in different aspects, that I am commissioned to unfold. A remarkable book published within the last year or two, “The Perfect Way,” may be specially mentioned, as showing how more roads than one may lead to a mountain top. The inner inspirations of “The Perfect Way” appear to me identical with the philosophy that I have learned. The symbols in which those inspirations are clothed, in my opinion, I am bound to add, are liable to mislead the student; but this is a natural consequence of the circumstances under which the inner inspiration has been received. Far more important and interesting to me than the discrepancies between the teachings of “The Perfect Way” and my own, are the identities that may be traced between the clear scientific explanations now conveyed to me on the plane of the physical intellect, and the ideas which manifestly underlie those communicated on an altogether different system to the authors of the book I mention. These identities are a great deal too close to be the result either of coincidence or parallel speculation.

Probably the great activity at present of mere ordinary literary speculation on problems lying

beyond the range of physical knowledge, may also be in some way provoked by that policy, on the part of the great custodians of esoteric truth, of which my own book is certainly one manifestation, and the volume I have just mentioned, probably another. I find, for example, in M. Adolphe d'Assier's recently published "*Essai sur l'Humanité Posthume*," some conjectures respecting the destination of the higher human principles after death, which are infused with quite a startling flavour of true occult knowledge. Again, the ardour now shown in "*Psychical Research*," by the very distinguished, highly gifted, and cultivated men, who lead the society in London devoted to that object, is, to my inner convictions—knowing as I do something of the way the spiritual aspirations of the world are silently influenced by those whose work lies in that department of Nature—the obvious fruit of efforts, parallel to those with which I am more immediately concerned.

It only remains for me to disclaim, on behalf of the treatise which ensues, any pretension to high finish as regards the language in which it is cast. Longer familiarity with the vast and complicated scheme of cosmogony disclosed, will no doubt suggest improvements in the phraseology employed

to expound it. Two years ago, neither I, nor any other European living, knew the alphabet of the science here for the first time put into a scientific shape—or subject at all events to an attempt in that direction—the science of Spiritual Causes and their Effects, of Super-physical Consciousness, of Cosmical Evolution. Though, as I have explained above, ideas had begun to offer themselves to the world in more or less embarrassing disguise of mystic symbology, no attempt had ever been made by any esoteric teacher, two years back, to put the doctrine forward in its plain abstract purity. As my own instruction progressed on those lines, I have had to coin phrases and suggest English words as equivalents for the ideas which were presented to my mind. I am by no means convinced that in all cases I have coined the best possible phrases and hit on the most neatly expressive words. For example, at the threshold of the subject we come upon the necessity of giving some name to the various elements or attributes of which the complete human creature is made up. “Element” would be an impossible word to use, on account of the confusion that would arise from its use in other significations; and the least objectionable on the whole seemed to me “principle” though to an ear trained in the

niceties of metaphysical expression this word will have a very unsatisfactory sound in some of its present applications. Quite possibly, therefore, in progress of time the Western nomenclature of the esoteric doctrine may be greatly developed in advance of that I have provisionally constructed. The Oriental nomenclature is far more elaborate, but metaphysical Sanscrit seems to be painfully embarrassing to a translator—the fault my Indian friends assure me, not of Sanscrit, but of the language in which they are now required to express the Sanscrit idea. Eventually we may find that, with the help of a little borrowing from familiar Greek quarries, English may prove more receptive of the new doctrine—or rather, of the primeval doctrine as newly disclosed—than has yet been supposed possible in the East.

CONTENTS.

CHAPTER I.

ESOTERIC TEACHERS.

PAGE

Nature of the Present Exposition—Seclusion of Eastern Knowledge—The Arhats and their Attributes—The Mahatmas—Occultists generally—Isolated Mystics—Inferior Yogis—Occult Training—The Great Purpose—Its Incidental Consequences—Present Concessions	1

found recorded in any books. In Europe the notion of secrecy as applied to science is so repulsive to the prevailing instinct, that the first inclination of European thinkers is to deny the existence of that which they so much dislike. But circumstances have fully assured me during my residence in India that the conviction just referred to is perfectly well founded, and I have been privileged at last to receive a very considerable mass of instruction in the hitherto secret knowledge over which Oriental philosophers have brooded silently till now ; instruction which has hitherto been only imparted to sympathetic students, prepared themselves to migrate into the camp of secrecy. Their teachers have been more than content that all other inquirers should be left in doubt as to whether there was anything of importance to learn at their hands.

With quite as much antipathy at starting as any one could have entertained to the old Oriental policy in regard to knowledge, I came, nevertheless, to perceive that the old Oriental knowledge itself was a very real and important possession. It may be excusable to regard the high grapes as sour so long as they are quite out of reach, but it would be foolish to persist in that opinion if a tall friend hands down a bunch and one finds them sweet.

For reasons that will appear as the present explanations proceed, the very considerable block of hitherto secret teaching this volume contains, has been conveyed to me, not only without conditions of the usual kind, but to the express end that

I might convey it in my turn to the world at large.

Without the light of hitherto secret Oriental knowledge, it is impossible by any study of its published literature—English or Sanscrit—for students of even the most scholarly qualifications, to reach a comprehension of the inner doctrines and real meaning of any Oriental religion. This assertion conveys no reproach to the sympathetic, learned, and industrious writers of great ability who have studied Oriental religions generally, and Buddhism especially, in their external aspects. Buddhism, above all, is a religion which has enjoyed a dual existence from the very beginning of its introduction to the world. The real inner meaning of its doctrines has been kept back from uninitiated students, while the outer teachings have merely presented the multitude with a code of moral lessons and a veiled, symbolical literature, hinting at the existence of knowledge in the background.

This secret knowledge, in reality, long antedated the passage through earth-life of Gautama Buddha. Brahminical philosophy, in ages before Buddha, embodied the identical doctrine which may now be described as Esoteric Buddhism. Its outlines had indeed been blurred; its scientific form partially confused; but the general body of knowledge was already in possession of a select few before Buddha came to deal with it. Buddha, however, undertook the task of revising and refreshing the esoteric science of the inner circle of initiates, as well as the morality of the outer world.

The circumstances under which this work was done have been wholly misunderstood, nor would a straightforward explanation thereof be intelligible without explanations, which must first be furnished by a survey of the esoteric science itself.

From Buddha's time till now the esoteric science referred to has been jealously guarded as a precious heritage belonging exclusively to regularly initiated members of mysteriously organized associations. These, so far as Buddhism is concerned, are the Arahats, or more properly Arhats, referred to in Buddhist literature. They are the initiates who tread the "fourth path of holiness," spoken of in esoteric Buddhist writings. Mr. Rhys Davids, referring to a multiplicity of original texts and Sanscrit authorities, says :—" One might fill pages with the awe-struck and ecstatic praise which is lavished in Buddhist writings on this condition of mind, the fruit of the fourth path, the state of an Arabat, of a man made perfect according to the Buddhist faith." And then making a series of running quotations from Sanscrit authorities, he says :—" To him who has finished the path and passed beyond sorrow, who has freed himself on all sides, thrown away every fetter, there is no more fever or grief. . . . For such there are no more births . . . they are in the enjoyment of Nirvana. Their old karma is exhausted, no new karma is being produced ; their hearts are free from the longing after future life, and no new yearnings springing up within them, they, the wise, are extinguished like a lamp." These passages, and all like them, convey to European readers, at all events, an entirely false

idea as to what sort of person an Arhat really is, as to the life he leads while on earth, and what he anticipates later on. But the elucidation of such points may be postponed for the moment. Some further passages from exoteric treatises may first be selected to show what an Arhat is generally supposed to be.

Mr. Rhys Davids, speaking of *Jhana* and *Samadhi*—the belief that it was possible by intense self-absorption to attain supernatural faculties and powers—goes on to say:—"So far as I am aware, no instance is recorded of any one, not either a member of the order, or a Brahmin ascetic, acquiring these powers. A Buddha always possessed them; whether Arahats, *as such*, could work the particular miracles in question, and whether of mendicants only, Arahats or only Asekhas could do so, is at present not clear." Very little in the sources of information on the subject that have hitherto been explored will be found clear. But I am now merely endeavouring to show that Buddhist literature teems with allusions to the greatness and powers of the Arhats. For more intimate knowledge concerning them, special circumstances must furnish us with the required explanations.

Mr. Arthur Lillie, in "Buddha and Early Buddhism," tells us:—"Six supernatural faculties were expected of the ascetic before he could claim the grade of Arhat. They are constantly alluded to in the Sutras as the six supernatural faculties, usually without further specification. . . . Man has a body composed of the four elements

in this transitory body his intelligence is enchained, the ascetic finding himself thus confused, directs his mind to the creation of the *Manas*. He represents to himself, in thought, another body created from this material body—a body with a form, members, and organs. This body, in relation to the material body, is like the sword and the scabbard; or a serpent issuing from a basket in which it is confined. The ascetic then, purified and perfected, begins to practise supernatural faculties. He finds himself able to pass through material obstacles, walls, ramparts, &c.; he is able to throw his phantasmal appearance into many places at once, he can leave this world and even reach the heaven of Brahma himself. He acquires the power of hearing the sounds of the unseen world as distinctly as those of the phenomenal world—more distinctly in point of fact. Also by the power of *Manas* he is able to read the most secret thoughts of others, and to tell their characters.” And so on with illustrations. Mr. Lillie has not quite accurately divined the nature of the truth lying behind this popular version of the facts; but it is hardly necessary to quote more to show that the powers of the Arhats and their insight into spiritual things are respected by the world of Buddhism most profoundly, even though the Arhats themselves have been singularly indisposed to favour the world with autobiographies or scientific accounts of “the six supernatural powers.”

A few sentences from Mr. Hoey’s recent translation of Dr. Oldenberg’s “Buddha: his Life, his Doctrine, his Order,” may fall conveniently into

this place, and then we may pass on. We read:—
“Buddhist proverbial philosophy attributes in innumerable passages the possession of Nirvana to the *saint* who still treads the earth: ‘The disciple who has put off lust and desire, rich in wisdom, has here on earth attained deliverance from death, the rest, the Nirvana, the eternal state. He who has escaped from the trackless hard mazes of the Sansara, who has crossed over and reached the shore, self-absorbed, without stumbling and without doubt, who has delivered himself from the earthly and attained Nirvana, him I call a true Brahmin.’ If the saint will even now put an end to his state of being he can do so, but the majority stand fast until Nature has reached her goal; of such may those words be said which are put in the mouth of the most prominent of Buddha’s disciples, ‘I long not for death; I long not for life; I wait till mine hour come, like a servant who awaiteth his reward.’”

A multiplication of such quotations would merely involve the repetition in various forms of exoteric conceptions concerning the Arhats. Like every fact or thought in Buddhism, the Arhat has two aspects, that in which he is presented to the world at large, and that in which he lives, moves, and has his being. In the popular estimation he is a saint waiting for a spiritual reward of the kind the populace can understand—a wonder-worker meanwhile by favour of supernatural agencies. In reality he is the long-tried and proved-worthy custodian of the deepest and innermost philosophy of the one fundamental religion which Buddha refreshed and restored, and a student of natural science standing

in the very foremost front of human knowledge, in regard not merely to the mysteries of spirit, but to the material constitution of the world as well.

Arhat is a Buddhist designation. That which is more familiar in India, where the attributes of Arhatship are not necessarily associated with professions of Buddhism, is Mahatma. With stories about the Mahatmas, India is saturated. The older Mahatmas are generally spoken of as Rishis; but the terms are interchangable, and I have heard the title Rishi applied to men now living. All the attributes of the Arhats mentioned in Buddhist writings are described, with no less reverence in Indian literature, as those of the Mahatmas, and this volume might be readily filled with translations of vernacular books, giving accounts of miraculous achievements by such of them as are known to history and tradition by name.

In reality, the Arhats and the Mahatmas are the same men. At that level of spiritual exaltation, supreme knowledge of the esoteric doctrine blends all original sectarian distinctions. By whatever name such *illuminati* may be called, they are the adepts of occult knowledge, sometimes spoken of in India now as the Brothers, and the custodians of the spiritual science which has been handed down to them by their predecessors.

We may search both ancient and modern literature in vain, however, for any systematic explanation of their doctrine or science. A good deal of this is dimly set forth in occult writing; but very little of this is of the least use to readers who take up the subject without previous knowledge acquired

*Fair usage policy applies

accord to the Brothers of Tibet a second place in the world of spiritual enlightenment. The first place he regards as occupied by one person, now in this world no longer—his own occult master in life—whom he resolutely asserts to have been an incarnation of the Supreme Being. His own (my friend's) inner senses were so far awakened by this Master, that the visions of his entranced state, into which he can still throw himself at will, are to him the only spiritual region in which he can feel interested. Convinced that the Supreme Being was his personal instructor from the beginning, and continues so still in the subjective state, he is naturally inaccessible to suggestions that his impressions may be distorted by reason of his own misdirected psychological development. Again, the highly cultivated devotees, to be met with occasionally in India, who build up a conception of Nature, the universe, and God, entirely on a metaphysical basis, and who have evolved their systems by sheer force of transcendental thinking, will take some established system of philosophy as its groundwork, and amplify on this to an extent which only an Oriental metaphysician could dream of. They win disciples who put implicit faith in them, and found their little school which flourishes for a time within its own limits; but speculative philosophy of such a kind is rather occupation for the mind than knowledge. Such "Masters," by comparison with the organized adepts of the highest brotherhood, are like rowing boats compared with ocean steamships—helpful conveyances on their own native lake or river, but not craft to whose protection

you can trust yourself on a world-wide voyage of exploration over the sea.

Descending lower again in the scale, we find India dotted all over with Yogis and Fakirs, in all stages of self-development, from that of dirty savages, but little elevated above the gipsy fortune-tellers of an English racecourse, to men whose seclusion a stranger will find it very difficult to penetrate, and whose abnormal faculties and powers need only be seen or experienced to shatter the incredulity of the most contented representative of modern Western scepticism. Careless inquirers are very apt to confound such persons with the great adepts of whom they may vaguely hear.

Concerning the real adepts, meanwhile, I cannot at present venture on any account of what the Tibetan organization is like, as regards its highest ruling authorities. Those Mahatmas themselves, of whom some more or less adequate conception may, perhaps, be formed by readers who will follow me patiently to the end, are subordinate by several degrees to the chief of all. Let us deal rather with the earlier conditions of occult training, which can more easily be grasped.

The level of elevation which constitutes a man—what the outer world calls a Mahatma or “Brother”—is only attained after prolonged and weary probation, and anxious ordeals of really terrible severity. One may find people who have spent twenty or thirty years or more, in blameless and arduous devotion to the life-task on which they have entered, and are still in the earlier degrees of chelaship, still looking up to the heights of adeptship as far above

their heads. And at whatever age a boy or man dedicates himself to the occult career, he dedicates himself to it, be it remembered, without any reservations and for life. The task he undertakes is the development in himself of a great many faculties and attributes which are so utterly dormant in ordinary mankind, that their very existence is unsuspected—the possibility of their development denied. And these faculties and attributes must be developed by the chela himself, with very little, if any, help, beyond guidance and direction from his master. “The adept,” says an occult aphorism, “becomes: he is not made.” One may illustrate this point by reference to a very common-place physical exercise. Every man living, having the ordinary use of his limbs, is qualified to swim. But put those who, as the common phrase goes, cannot swim, into deep water, and they will struggle and be drowned. The mere way to move the limbs is no mystery; but unless the swimmer, in moving them, has a full belief that such movement will produce the required result, the required result is not produced. In this case, we are dealing with mechanical forces merely, but the same principle runs up into dealings with subtler forces. Very much further than people generally imagine will mere “confidence” carry the occult neophyte. How many European readers, who would be quite incredulous if told of some results which occult chelas in the most incipient stages of their training have to accomplish by sheer force of confidence, hear constantly in church nevertheless, the familiar Biblical assur-

ances of the power which resides in faith, and let the words pass by like the wind, leaving no impression.

The great end and purpose of adeptship is the achievement of spiritual development, the nature of which is only veiled and disguised by the common phrases of exoteric language. That the adept seeks to unite his soul with God, that he may thereby pass into Nirvana, is a statement that conveys no definite meaning to the ordinary reader, and the more he examines it with the help of ordinary books and methods, the less likely will he be to realize the nature of the process contemplated, or of the condition desired. It will be necessary to deal first with the esoteric conception of Nature, and the origin and destinies of Man, which differ widely from theological conceptions, before an explanation of the aim which the adept pursues can become intelligible. Meanwhile, however, it is desirable, at the very outset, to disabuse the reader of one misconception in regard to the objects of adeptship that he may very likely have framed.

The development of those spiritual faculties, whose culture has to do with the highest objects of the occult life, gives rise as it progresses to a great deal of incidental knowledge, having to do with physical laws of Nature not yet generally understood. This knowledge, and the practical art of manipulating certain obscure forces of Nature, which it brings in its train, invest an adept, and even an adept's pupils, at a comparatively early stage of their education, with very extraordinary powers, the application of which to matters of daily

life will sometimes produce results that seem altogether miraculous; and, from the ordinary point of view, the acquisition of apparently miraculous power is such a stupendous achievement, that people are sometimes apt to fancy the adept's object in seeking the knowledge he attains has been to invest himself with these coveted powers. It would be as reasonable to say of any great patriot of military history that his object in becoming a soldier had been to wear a gay uniform and impress the imagination of the nursemaids.

The Oriental method of cultivating knowledge has always differed diametrically from that pursued in the West during the growth of modern science. Whilst Europe has investigated Nature as publicly as possible, every step being discussed with the utmost freedom, and every fresh fact acquired, circulated at once for the benefit of all, Asiatic science has been studied secretly and its conquests jealously guarded. I need not as yet attempt either criticism or defence of its methods. But at all events these methods have been relaxed to some extent in my own case, and, as already stated, it is with the full consent of my teachers that I now follow the bent of my own inclinations as a European, and communicate what I have learned to all who may be willing to receive it. Later on it will be seen how the departure from the ordinary rules of occult study embodied in the concessions now made, falls naturally into its place in the whole scheme of occult philosophy. The approaches to that philosophy have always been open, in one sense, to all. Vaguely throughout the world in

various ways has been diffused the idea that *some* process of study which men here and there did actually follow, might lead to the acquisition of a higher kind of knowledge than that taught to mankind at large in books or by public religious preachers. The East, as pointed out, has always been more than vaguely impressed with this belief, but even in the West the whole block of symbolical literature relating to astrology, alchemy, and mysticism generally has fermented in European society, carrying to some few peculiarly receptive and qualified minds the conviction that behind all this superficially meaningless nonsense great truths lay concealed. For such persons eccentric study has sometimes revealed hidden passages leading to the grandest imaginable realms of enlightenment. But till now, in all such cases, in accordance with the law of those schools, the neophyte no sooner forced his way into the region of mystery than he was bound over to the most inviolable secrecy as to everything connected with his entrance and further progress there. In Asia in the same way, the "chela," or pupil of occultism, no sooner became a chela than he ceased to be a witness on behalf of the reality of occult knowledge. I have been astonished to find, since my own connection with the subject, how numerous such chelas are. But it is impossible to imagine any human act more improbable than the unauthorized revelation by any such chela, to persons in the outer world, that he is one, and so the great esoteric school of philosophy successfully guards its seclusion.

In a former book, "The Occult World," I have given a full and straightforward narrative of the circumstances under which I came in contact with the gifted and deeply instructed men from whom I have since obtained the teaching this volume contains. I need not repeat the story. I now come forward prepared to deal with the subject in a new way. The existence of occult adepts, and the importance of their acquirements, may be established along two different lines of argument: firstly, by means of external evidence,—the testimony of qualified witnesses, the manifestation by or through persons connected with adepts of abnormal faculties, affording more than a presumption of abnormally enlarged knowledge; secondly, by the presentation of such a considerable portion of this knowledge as may convey intrinsic assurances of its own value. My first book proceeded by the former method; I now approach the more formidable task of working on the latter.

subject is by no means shirked by esoteric students, and later on, in the course of this sketch, some hints will be given concerning the views occultism entertains of the earlier processes through which cosmic matter passes on its way to evolution. But an orderly statement of the earliest processes of Nature would embody references to man's spiritual constitution, which would not be understood without some preliminary explanation.

Seven distinct principles are recognized by esoteric science, as entering into the constitution of man. The classification differs so widely from any with which European readers will be familiar that I shall naturally be asked for the grounds on which occultism reaches so far-fetched a conclusion. But I must, on account of inherent peculiarities in the subject, which will be comprehended later on, beg for this Oriental knowledge I am bringing home, a hearing (in the first instance at all events) of the Oriental kind. The Oriental and the European systems of conveying knowledge are as unlike as any two methods can be. The West pricks and piques the learner's controversial instinct at every step. He is encouraged to dispute and resist conviction. He is forbidden to take any scientific statement on authority. *Pari passu*, as he acquires knowledge, he must learn how that knowledge has been acquired, and he is made to feel that no fact is worth knowing, unless he knows, with it, the way to prove it a fact. The East manages its pupils on a wholly different plan. It no more disregards the necessity of proving its teaching than the West, but it provides proof of a

wholly different sort. It enables the student to search Nature for himself, and verify its teachings, in those regions which Western philosophy can only invade by speculation and argument. It never takes the trouble to argue about anything. It says :—"So and so is fact; here is the key of knowledge; now go and see for yourself." In this way it comes to pass that teaching *per se* is never anything else but teaching on authority. Teaching and proof do not go hand in hand; they follow one another in due order. A further consequence of this method is that Eastern philosophy employs the method which we in the West have discarded for good reasons as incompatible with our own line of intellectual development—the system of reasoning from generals to particulars. The purposes which European science usually has in view would certainly not be answered by that plan, but I think that any one who goes far in the present inquiry will feel that the system of reasoning up from the details of knowledge to general inferences is inapplicable to the work in hand. One cannot understand details in this department of knowledge till we get a general understanding of the whole scheme of things. Even to convey this general comprehension by mere language, is a large and by no means an easy task. To pause at every moment of the exposition in order to collect what separate evidence may be available for the proof of each separate statement, would be practically impossible. Such a method would break down the patience of the reader, and prevent him from deriving, as he may from a more condensed treatise, that definite con-

ception as to what the esoteric doctrine means to teach, which it is my business to evoke.

This reflection may suggest, in passing, a new view, having an intimate connection with our present subject, of the Platonic and Aristotelian systems of reasoning. Plato's system, roughly described as reasoning from universals to particulars, is condemned by modern habits in favour of the later and exactly inverse system. But Plato was in fetters in attempting to defend his system. There is every reason to believe that his familiarity with esoteric science prompted his method, and that the usual restrictions under which he laboured as an initiated occultist, forbade him from saying as much as would really justify it. No one can study even as much occult science as this volume contains, and then turn to Plato or even to any intelligent epitome of Plato's system of thought, without finding correspondences cropping out at every turn.

The higher principles of the series which go to constitute Man are not fully developed in the mankind with which we are as yet familiar, but a complete or perfect man would be resolvable into the following elements. To facilitate the application of these explanations to ordinary exoteric Buddhist writings the Sanscrit names of these principles are given as well as suitable terms in English.*

* The nomenclature here adopted differs slightly from that hit upon when some of the present teachings were first given out in a fragmentary form in the *Theosophist*. Later on it will be seen that the names now preferred embody a fuller conception of the whole system, and avoid some difficulties to which the earlier names gave rise. If the earlier presentations of esoteric science were thus imperfect, one can hardly be surprised

- | | |
|-----------------------------|------------------------|
| 1. The Body | <i>Rupa.</i> |
| 2. Vitality | <i>Prana, or Jiva.</i> |
| 3. Astral Body | <i>Linga Sharira.</i> |
| 4. Animal Soul | <i>Kama Rupa.</i> |
| 5. Human Soul | <i>Manas.</i> |
| 6. Spiritual Soul | <i>Buddhi.</i> |
| 7. Spirit | <i>Atma.</i> |

Directly conceptions, so transcendental as some of those included in this analysis, are set forth in a tabular statement, they seem to incur certain degradation, against which, in endeavouring to realize clearly what is meant, we must be ever on our guard. Certainly it would be impossible for even the most skilful professor of occult science to exhibit each of these principles separate and distinct from the others, as the physical elements of a compound body can be separated by analysis and preserved independently of each other. The elements of a physical body are all on the same plane of materiality, but the elements of man are on very different planes. The finest gases of which the body may to some extent be chemically composed, are still, on one scale at all events, on nearly the lowest level of materiality. The second principle which, by its union with gross matter, changes it from what we generally call inorganic, or what might more properly be called inert, into living matter, is at once a something different from the

at so natural a consequence of the difficulties under which its English exponents laboured. But no substantial errors have to be confessed or deplored. The connotations of the present names are more accurate than those of the phrases first selected, but the explanations originally given, as far as they went, were quite in harmony with those now developed.

finest example of matter in its lower state. Is the second principle, then, anything that we can truly call matter at all? The question lands us, thus, at the very outset of this inquiry, in the middle of the subtle metaphysical discussion as to whether force and matter are different or identical. Enough for the moment to state that occult science regards them as identical, and that it contemplates no principle in Nature as wholly immaterial. In this way, though no conceptions of the universe, of man's destiny, or of Nature generally, are more spiritual than those of occult science, that science is wholly free from the logical error of attributing material results to immaterial causes. The esoteric doctrine is thus really the missing link between materialism and spirituality.

The clue to the mystery involved, lies of course in the fact, directly cognizable by occult experts, that matter exists in other states besides those which are cognizable by the five senses.

The second principle of Man, Vitality, thus consists of matter in its aspect as force, and its affinity for the grosser state of matter is so great that it cannot be separated from any given particle or mass of this, except by instantaneous translation to some other particle or mass. When a man's body dies, by desertion of the higher principles which have rendered it a living reality, the second, or life principle, no longer a unity itself, is nevertheless inherent still in the particles of the body as this decomposes, attaching itself to other organisms to which that very process of decomposition gives rise. Bury the body in the earth and its jiva will

attach itself to the vegetation which springs above, or the lower animal forms which evolve from its substance. Burn the body, and indestructible jiva flies back none the less instantaneously to the body of the planet itself from which it was originally borrowed, entering into some new combination as its affinities may determine.

The third principle, the Astral Body, or Linga Sharira, is an ethereal duplicate of the physical body, its original design. It guides jiva in its work on the physical particles, and causes it to build up the shape which these assume. Vitalized itself by the higher principles, its unity is only preserved by the union of the whole group. At death it is disembodied for a brief period, and, under some abnormal conditions, may even be temporarily visible to the external sight of still living persons. Under such conditions it is taken of course for the ghost of the departed person. Spectral apparitions may sometimes be occasioned in other ways, but the third principle, when *that* results in a visible phenomenon, is a mere aggregation of molecules in a peculiar state, having no life or consciousness of any kind whatever. It is no more a Being, than any cloud wreath in the sky which happens to settle into the semblance of some animal form. Broadly speaking, the linga sharira never leaves the body except at death, nor migrates far from the body even in that case. When seen at all, and this can but rarely occur, it can only be seen near where the physical body still lies. In some very peculiar cases of spiritualistic mediumship, it may for a short time exude from the

physical body and be visible near it, but the medium in such cases stands the while in considerable danger of his life. Disturb unwillingly the conditions under which the *linga sharira* was set free, and its return might be impeded. The second principle would then soon cease to animate the physical body as a unity, and death would ensue.

During the last year or two, while hints and scraps of occult science have been finding their way out into the world, the expression, "Astral Body," has been applied to a certain semblance of the human form, fully inhabited by its higher principles, which can migrate to any distance from the physical body—projected consciously and with exact intention by a living adept, or unintentionally, by the accidental application of certain mental forces to his loosened principles, by any person at the moment of death. For ordinary purposes there is no practical inconvenience in using the expression "Astral Body" for the appearance so projected—indeed, any more strictly accurate expression, as will be seen directly, would be cumbersome, and we must go on using the phrase in both meanings. No confusion need arise; but, strictly speaking, the *linga sharira*, or third principle, is the astral body, and that cannot be sent about as the vehicle of the higher principles.

The three lower principles, it will be seen, are altogether of the earth, perishable in their nature as a single entity, though indestructible as regards their molecules, and absolutely done with by man at his death.

as downwards, and capable of influencing the fifth, for practical purposes, as well as of being influenced by the fifth for its own control and improvement.

The fifth principle, human soul, or Manas (as described in Sanscrit in one of its aspects), is the seat of reason and *memory*. It is a portion of this principle, animated by the fourth, which is really projected to distant places by an adept, when he makes an appearance in what is commonly called his astral body.

Now the fifth principle, or human soul, in the majority of mankind is not even yet fully developed. This fact about the imperfect development as yet of the higher principles is very important. We cannot get a correct conception of the present place of man in Nature if we make the mistake of regarding him as a fully perfected being already. And that mistake would be fatal to any reasonable anticipations concerning the future that awaits him—fatal also to any appreciation of the appropriateness of the future which the esoteric doctrine explains to us as actually awaiting him.

Since the fifth principle is not yet fully developed, it goes without saying that the sixth principle is still in embryo. This idea has been variously indicated in recent forecasts of the great doctrine. Sometimes it has been said, we do not truly possess any sixth principle, we merely have germs of a sixth principle. It has also been said, the sixth principle is not *in* us; it hovers over us; it is a something that the highest aspirations of our nature must work up towards. But it is also said:—All things, not man alone, but every animal, plant, and

mineral have their seven principles, and the highest principle of all—the seventh itself—vitalizes that continuous thread of life which runs all through evolution, uniting into a definite succession the almost innumerable incarnations of that one life which constitute a complete series. We must imbibe all these various conceptions and weld them together, or extract their essence, to learn the doctrine of the sixth principle. Following the order of ideas which just now suggested the application of the term animal soul to the fourth principle, and human soul to the fifth, the sixth may be called the spiritual soul of man, and the seventh, therefore, spirit itself.

In another aspect of the idea the sixth principle may be called the vehicle of the seventh, and the fourth the vehicle of the fifth; but yet another mode of dealing with the problem teaches us to regard each of the higher principles from the fourth upwards, as a vehicle of what, in Buddhist philosophy, is called the One Life or Spirit. According to this view of the matter the one life is that which perfects, by inhabiting the various vehicles. In the animal the one life is concentrated in the *kama rupa*. In man it begins to penetrate the fifth principle as well. In perfected man it penetrates the sixth, and when it penetrates the seventh, man ceases to be man, and attains a wholly superior condition of existence.

This latter view of the position is especially valuable as guarding against the notion that the four higher principles are like a bundle of sticks tied together, but each having individualities of

their own if untied. Neither the animal soul alone, nor the spiritual soul alone, has any individuality at all; but, on the other hand, the fifth principle would be incapable of separation from the others in such a way, that its individuality would be preserved while both the deserted principles would be left unconscious. It has been said that the finer principles themselves even, are material and molecular in their constitution, though composed of a higher order of matter than the physical senses can take note of. So they are separable, and the sixth principle itself can be imagined as divorcing itself from its lower neighbour. But in that state of separation, and at this stage of mankind's development, it could simply reincarnate itself in such an emergency, and grow a new fifth principle by contact with a human organism; in such a case, the fifth principle would lean upon and become one with the fourth, and be proportionately degraded. And yet this fifth principle, which cannot stand alone, is the personality of the man; and its cream, in union with the sixth, his continuous individuality through successive lives.

The circumstances and attractions under the influence of which the principles do divide up, and the manner in which the consciousness of man is dealt with then, will be discussed later on. Meanwhile, a better understanding of the whole position than could ensue from a continued prosecution of the inquiry on these lines now, will be obtained by turning first to the processes of evolution by means of which the principles of man have been developed.

CHAPTER III.

THE PLANETARY CHAIN.

ESOTERIC Science, though the most spiritual system imaginable, exhibits, as running throughout Nature, the most exhaustive system of evolution that the human mind can conceive. The Darwinian theory of evolution is simply an independent discovery of a portion—unhappily but a small portion—of the vast natural truth. But occultists know how to explain evolution without degrading the highest principles of man. The esoteric doctrine finds itself under no obligation to keep its science and religion in separate water-tight compartments. Its theory of physics and its theory of spirituality are not only reconcilable with each other, they are intimately blended together and interdependent. And the first great fact which occult science presents to our notice in reference to the origin of man on this globe, will be seen to help the imagination over some serious embarrassments of the familiar scientific idea of evolution. The evolution of man is not a process carried out on this planet alone. It is a result to which many worlds in different conditions of material and spiritual development have contributed. If this statement were merely put forward as a conjecture, it would surely

recommend itself forcibly to rational minds. For there is a manifest irrationality in the commonplace notion that man's existence is divided into a material beginning, lasting sixty or seventy years, and a spiritual remainder lasting for ever. The irrationality amounts to absurdity when it is alleged that the acts of the sixty or seventy years—the blundering, helpless acts of ignorant human life—are permitted by the perfect justice of an all-wise Providence to define the conditions of that later life of infinite duration. Nor is it less extravagant to imagine that, apart from the question of justice, the life beyond the grave should be exempt from the law of change, progress and improvement, which every analogy of Nature points to as probably running through all the varied existences of the universe. But once abandon the idea of a uniform, unvarying, unprogressive life beyond the grave—once admit the conception of change and progress in that life—and we admit the idea of a variety hardly compatible with any other hypothesis than that of progress through successive worlds. As we have said before, this is not hypothesis at all for occult science, but a fact, ascertained and verified beyond the reach (for occultists) of doubt or contradiction.

The life and evolutionary processes of this planet—in fact, all which constitutes it something more than a dead lump of chaotic matter—are linked with the life and evolutionary processes of several other planets. But let it not be supposed that there is no finality as regards the scheme of this planetary union to which we belong. The human imagination once set free is apt sometimes to bound

too far. Once let this notion, that the earth is merely one link in a mighty chain of worlds, be fully accepted as probable, or true, and it may suggest the whole starry heavens as the heritage of the human family. That idea would involve a serious misconception. One globe does not afford Nature scope for the processes by which mankind has been evoked from chaos, but these processes do not require more than a limited and definite number of globes. Separated as these are, in regard to the gross mechanical matter of which they consist, they are closely and intimately bound together by subtle currents and forces, whose existence reason need not be much troubled to concede since the existence of *some* connection—of force or etherial media—uniting all visible celestial bodies, is proved by the mere fact that they *are* visible. It is along these subtle currents that the life-elements pass from world to world.

The fact, however, will at once be liable to distortion to suit preconceived habits of mind. Some readers may imagine our meaning to be that after death the surviving soul will be drawn into the currents of that world with which its affinities connect it. The real process is more methodical. The system of worlds is a circuit round which *all* individual spiritual entities have alike to pass; and that passage constitutes the Evolution of Man. For it must be realized that the evolution of man is a process still going on, and by no means yet complete. Darwinian writings have taught the modern world to regard the ape as an ancestor, but the simple conceit of Western speculation has rarely

permitted European evolutionists to look in the other direction and recognize the probability, that to our remote descendants we may be, as that unwelcome progenitor to us. Yet the two facts just declared hinge together. The higher evolution will be accomplished by our progress through the successive worlds of the system ; and in higher forms we shall return to this earth again and again. But the avenues of thought through which we look forward to this prospect, are of almost inconceivable length.

It will readily be supposed that the chain of worlds to which this earth belongs are not all prepared for a material existence exactly, or even approximately resembling our own. There would be no meaning in an organized chain of worlds which were all alike, and might as well all have been amalgamated into one. In reality the worlds with which we are connected are very unlike each other, not merely in outward conditions, but in that supreme characteristic, the proportion in which spirit and matter are mingled in their constitution. Our own world presents us with conditions in which spirit and matter are, on the whole, evenly balanced in equilibrium. Let it not be supposed on that account that it is very highly elevated in the scale of perfection. On the contrary, it occupies a very low place in that scale. The worlds that are higher in the scale are those in which spirit largely predominates. There is another world attached to the chain, rather than forming a part of it, in which matter asserts itself even more decisively than on earth, but this may be spoken of later.

That the superior worlds which Man may come

From that which, for reasons which will soon appear, must be considered the highest world on the ascending arc of the circle, to that which must be regarded as the first on the descending arc, in one sense the lowest—*i.e.*, in the order of development—there is no descent at all, but still ascent and progress. For the spiritual monad or entity, which has worked its way all round the cycle of evolution, at any one of the many stages of development into which the various existences around us may be grouped, begins its next cycle at the next higher stage, and is thus still accomplishing progress as it passes from world Z back again to world A. Many times does it circle, in this way, right round the system, but its passage round must not be thought of merely as a circular revolution in an orbit. In the scale of spiritual perfection it is constantly ascending. Thus, if we compare the system of worlds to a system of towers standing on a plain—towers each of many stories and symbolizing the scale of perfection—the spiritual monad performs a spiral progress round and round the series, passing through each tower, every time it comes round to it, at a higher level than before.

It is for want of realizing this idea that speculation, concerned with physical evolution, is so constantly finding itself stopped by dead walls. It is searching for its missing links in a world where it can never find them now, for they were but required for a temporary purpose, and have passed away. Man, says the Darwinian, was once an ape. Quite true; but the ape known to the Darwinian will never become a man—*i.e.*, the *form* will not

change from generation to generation till the tail disappears and the hands turn into feet, and so on. Ordinary science avows that, though changes of form can be detected in progress within the limits of species, the changes from species to species can only be inferred; and to account for these, it is content to assume great intervals of time and the extinction of the intermediate forms. There has been no doubt an extinction of the intermediate or earlier forms of all species (in the larger acceptation of the world)—*i.e.*, of all kingdoms, mineral, vegetable, animal, man, &c.—but ordinary science can merely guess that to have been the fact without realizing the conditions which rendered it inevitable, and which forbid the renewed generation of the intermediate forms.

It is the spiral character of the progress accomplished by the life impulses that develope the various kingdoms of Nature, which accounts for the gaps now observed in the animated forms which people the earth. The thread of a screw, which is a uniform inclined plane in reality, looks like a succession of steps when examined only along one line parallel to its axis. The spiritual monads which are coming round the system on the animal level, pass on to other worlds when they have performed their turn of animal incarnation here. By the time they come again, they are ready for human incarnation, and there is no necessity now for the upward development of animal forms into human forms—these are already waiting for their spiritual tenants. But, if we go back far enough, we come to a period at which there were no human forms

ready developed on the earth. When spiritual monads, travelling on the earliest or lowest human level, were thus beginning to come round, their onward pressure in a world at that time containing none but animal forms, provoked the improvement of the highest of these into the required form—the much-talked-of missing link.

In one way of looking at the matter, it may be contended that this explanation is identical with the inference of the Darwinian evolutionist in regard to the development and extinction of missing links. After all, it may be argued by a materialist, “we are not concerned to express an opinion as to the origin of the tendency in species to develop higher forms. We say that they do develop these higher forms by intermediate links, and that the intermediate links die out; and you say just the same thing.” But there is a distinction between the two ideas for any one who can follow subtle distinctions. The natural process of evolution from the influence of local circumstances and sexual selection, must not be credited with producing intermediate forms, and this is why it is inevitable that the intermediate forms should be of a temporary nature and should die out. Otherwise, we should find the world stocked with missing links of all kinds, animal life creeping by plainly apparent degrees up to manhood, human forms mingling in indistinguishable confusion with those of animals. The impulse to the new evolution of higher forms is really given, as we have shown, by rushes of spiritual monads coming round the cycle in a state fit for the inhabitation of new forms. These

superior life impulses burst the chrysalis of the older form on the planet they invade, and throw off an efflorescence of something higher. The forms which have gone on merely repeating themselves for millenniums, start afresh into growth; with relative rapidity they rise through the intermediate into the higher forms, and then, as these in turn are multiplied with the vigour and rapidity of all new growths, they supply tenements of flesh for the spiritual entities coming round on that stage or plane of existence, and for the intermediate forms there are no longer any tenants offering. Inevitably they become extinct.

Thus is evolution accomplished, as regards its essential impulse, by a *spiral progress* through the worlds. In the course of explaining this idea we have partly anticipated the declaration of another fact of first-rate importance as an aid to correct views of the world-system to which we belong. That is, that the tide of life,—the wave of existence, the spiritual impulse, call it by what name we please—passes on from planet to planet by rushes, or gushes, not by an even continuous flow. For the momentary purpose of illustrating the idea in hand, the process may be compared to the filling of a series of holes or tubs sunk in the ground, such as may sometimes be seen at the mouths of feeble springs, and connected with each other by little surface channels. The stream from the spring, as it flows, is gathered up entirely in the beginning by the first hole, or tub A, and it is only when this is quite full that the continued in-pouring of water from the spring causes that which it already contains

to overflow into tub B. This in turn fills and overflows along the channel which leads to tub C, and so on. Now, though, of course, a clumsy analogy of this kind will not carry us very far, it precisely illustrates the evolution of life on a chain of worlds like that we are attached to, and, indeed, the evolution of the worlds themselves. For the process which goes on does not involve the pre-existence of a chain of globes which Nature proceeds to stock with life; but it is one in which the evolution of each globe is the result of previous evolutions, and the consequence of certain impulses thrown off from its predecessor in the superabundance of their development. Now, it is necessary to deal with this characteristic of the process to be described, but directly we begin to deal with it we have to go back in imagination to a period in the development of our system very far antecedent to that which is specially our subject at present—the evolution of man. And manifestly, as soon as we begin talking of the beginnings of worlds, we are dealing with phenomena which can have had very little to do with *life*, as we understand the matter, and, therefore, it may be supposed, nothing to do with life impulses. But let us go back by degrees. Behind the human harvest of the life impulse, there lay the harvest of mere animal forms, as every one realizes; behind that, the harvest or growths of mere vegetable forms—for some of these undoubtedly preceded the appearance of the earliest animal life on the planet. Then, before the vegetable organizations, there were mineral organizations,—for even a mineral is a

product of Nature, an evolution from something behind it, as every imaginable manifestation of Nature must be, until in the vast series of manifestations, the mind travels back to the unmanifested beginning of all things. On pure metaphysics of that sort we are not now engaged. It is enough to show that we may as reasonably—and that we must if we would talk about these matters at all—conceive a life impulse giving birth to mineral forms, as of the same sort of impulse concerned to raise a race of apes into a race of rudimentary men. Indeed, occult science travels back even further in its exhaustive analysis of evolution than the period at which minerals began to assume existence. In the process of developing worlds from fiery nebulae, Nature begins with something earlier than minerals—with the elemental forces that underlie the phenomena of Nature as visible now and perceptible to the senses of man. But that branch of the subject may be left alone for the present. Let us take up the process at the period when the first world of the series, globe A let us call it, is merely a congeries of mineral forms. Now it must be remembered that globe A has already been described as very much more ethereal, more predominated by spirit, as distinguished from matter, than the globe of which we at present are having personal experience, so that a large allowance must be made for that state of things when we ask the reader to think of it, at starting, as a mere congeries of mineral forms. Mineral forms may be mineral in the sense of not belonging to the higher forms of vegetable organism, and may yet be very

immaterial as we think of matter, very ethereal, consisting of a very fine or subtle quality of matter, in which the other pole or characteristic of Nature, spirit, largely predominates. The minerals we are trying to portray are, as it were, the ghosts of minerals; by no means the highly-finished and beautiful, hard crystals which the mineralogical cabinets of this world supply. In these lower spirals of evolution with which we are now dealing, as with the higher ones, there is progress from world to world, and that is the great point at which we have been aiming. There is progress downwards, so to speak, in finish and materiality and consistency; and then, again, progress upward in spirituality as coupled with the finish which matter, or materiality rendered possible in the first instance. It will be found that the process of evolution in its higher stages as regards man is carried on in exactly the same way. All through these studies, indeed, it will be found that one process of Nature typifies another, that the big is the repetition of the little on a larger scale.

It is manifest from what we have already said, and in order that the progress of organisms on globe A shall be accounted for, that the mineral kingdom will no more develop the vegetable kingdom on globe A until it receives an impulse from without, than the Earth was able to develop Man from the ape till it received an impulse from without. But it will be inconvenient at present to go back to a consideration of the impulses which operate on globe A in the beginning of the system's construction.

round the spheres. But over and above this, there is a fact to be stated which has such an influence on the course of events, that, when it is realized, it will be seen that the life impulse has passed several times completely round the whole chain of worlds before the commencement of the human impulse on globe A. This fact is as follows:—Each kingdom of evolution, vegetable, animal, and so on, is divided into several spiral layers. The spiritual monads—the individual atoms of that immense life impulse of which so much has been said—do not fully complete their mineral existence on globe A, then complete it on globe B, and so on. They pass several times round the whole circle as minerals, and then again several times round as vegetables, and several times as animals. We purposely refrain for the present from going into figures, because it is more convenient to state the outline of the scheme in general terms first, but figures in reference to these processes of Nature have now been given to the world by the occult adepts (for the first time we believe in its history), and they shall be brought out in the course of this explanation, very shortly, but as we say the outline is enough for any one to think of at first.

And now we have rudimentary man beginning his existence on globe A, in that world where all things are as the ghosts of the corresponding things in this world. He is beginning his long descent into matter. And the life impulse of each “round” overflows, and the races of man are established in different degrees of perfection on all

the planets, on each in turn. But the rounds are more complicated in their design than this explanation would show, if it stopped short here. The process for each spiritual monad is not merely a passage from planet to planet. Within the limits of each planet, each time it arrives there, it has a complicated process of evolution to perform. It is many times incarnated in successive races of men before it passes onward, and it even has many incarnations in each great race. It will be found when we get on further that this fact throws a flood of light upon the actual condition of mankind as we know it, accounting for those immense differences of intellect and morality, and even of welfare in its highest sense, which generally appear so painfully mysterious.

That which has a definite beginning generally has an end also. As we have shown that the evolutionary process under description began when certain impulses first commenced their operation, so it may be inferred that they are tending towards a final consummation, towards a goal and a conclusion. That is so, though the goal is still far off. Man, as we know him on this earth, is but half-way through the evolutionary process to which he owes his present development. He will be as much greater, before the destiny of our system is accomplished, than he is now, as he is now greater than the missing link. And that improvement will even be accomplished on this earth, while, in the other worlds of the ascending series, there are still loftier peaks of perfection to be scaled. It is utterly beyond the range of faculties, untutored in

the discernment of occult mysteries, to imagine the kind of life which man will thus ultimately lead before the zenith of the great cycle is attained. But there is enough to be done in filling up the details of the outline now presented to the reader, without attempting to forecast those which have to do with existences towards which evolution is reaching across the enormous abysses of the future.

CHAPTER IV.

THE WORLD PERIODS.

A STRIKING illustration of the uniformities of Nature is brought out by the first glance at the occult doctrine in reference to the development of man on the earth. The outline of the design is the same as the outline of the more comprehensive design covering the whole chain of worlds. The inner details of this world, as regards its units of construction, are the same as the inner details of the larger organism of which this world itself is a unit. That is to say, the development of humanity on this earth is accomplished by means of successive waves of development which correspond to the successive worlds in the great planetary chain. The great tide of human life, be it remembered—for that has been already set forth—sweeps round the whole circle of worlds in successive waves. These primary growths of humanity may be conveniently spoken of as rounds. We must not forget that the individual units, constituting each round in turn, are identically the same as regards their higher principles, that is, that the individualities on the earth during round one, come back again after completing their travels round the whole series of worlds and constitute round two, and so on. But the point to which special attention should be drawn

here is that the individual unit having arrived at any given planet of the series, in the course of any given round, does not merely touch that planet and pass on to the next. Before passing on, he has to live through a series of races on that planet. And this fact suggests the outline of the fabric which will presently develope itself in the reader's mind and exhibit that similarity of design on the part of the one world as compared with the whole series to which attention has already been drawn. As the complete scheme of Nature that we belong to, is worked out by means of a series of rounds sweeping through all the worlds, so the development of humanity on each world is worked out by a series of races developed within the limits of each world in turn.

It is time now to make the working of this law clearer by coming to the actual figures which have to do with the evolution of our doctrine. It would have been premature to begin with them, but as soon as the idea of a system of worlds in a chain, and of life evolution on each through a series of rebirths, is satisfactorily grasped, the further examination of the laws at work will be greatly facilitated by precise reference to the actual number of worlds and the actual number of rounds and races, required to accomplish the whole purpose of the system. For the whole duration of the system is as certainly limited in time, be it remembered, as the life of a single man. Probably *not* limited to any definite number of years set irrevocably from the commencement, but that which has a beginning, progresses onward towards an end. The life of a man, leaving accidents quite out of the account, is a terminable period, and the life of a world system

leads up to a final consummation. The vast periods of time, concerned in the life of a world system, dazzle the imagination as a rule, but still they are measurable; they are divisible into sub-periods of various kinds, and these have a definite number.

By what prophetic instinct Shakespeare pitched upon seven as the number which suited his fantastic classification of the ages of man, is a question with which we need not be much concerned, but certain it is that he could not have made a more felicitous choice. In periods of sevens the evolution of the races of man may be traced, and the actual number of the objective worlds which constitute our system, and of which the earth is one, is seven also. Remember the occult scientists know this as a fact, just as the physical scientists know for a fact that the spectrum consists of seven colours, and the musical scale of seven tones. There are seven kingdoms of Nature, not three as modern science has imperfectly classified them. Man belongs to a kingdom distinctly separate from that of the animals, including beings in a higher state of organization than that which manhood has familiarized us with, as yet; and below the mineral kingdom there are three others which science in the West knows nothing about; but this branch of the subject may be set aside for the present. It is mentioned merely to show the regular operation of the septenary law in Nature.

Man—returning to the kingdom we are most interested in—is evolved in a series of rounds (progressions round the series of worlds), and seven of these rounds have to be accomplished before the destinies of our system are worked out. The

round which is at present going on is the fourth. There are considerations of the utmost possible interest connected with precise knowledge on these points, because each round is, as it were, specially allotted to the predominance of one of the seven principles in man, and in the regular order of their upward gradation.

An individual unit, arriving on a planet for the first time in the course of a round, has to work through seven races on that planet before he passes on to the next, and each of those races occupies the earth for a long time. Our old-fashioned speculations about time and eternity, suggested by the misty religious systems of the West, have brought on a curious habit of mind in connection with problems bearing on the actual duration of such periods. We can talk glibly of eternity, and, going to the other end of the scale, we are not shocked by a few thousand years, but directly years are numbered with precision in groups which lie in intervening regions of thought, illogical Western theologians are apt to regard such numbering as nonsense. Now, we at present living on this earth—the great bulk of humanity that is to say, for there are exceptional cases to be considered later—are now going through the fifth race of our present fourth round. And yet the evolution of that fifth race began about a million of years ago. Will the reader, in consideration of the fact that the present cosmogony does not profess to work with eternity, nerve himself to deal with estimates that do concern themselves with millions of years, and even count such millions by considerable numbers?

Each race of the seven which go to make up a

that passed on the physical earth and dealt with in the above enumeration of race incarnations. We must never forget that between each physical existence the individual unit passes through a period of existence in the corresponding spiritual world. And it is because the conditions of that existence are defined by the use that has been made of the opportunities in the next preceding physical existence that the spiritual earth is often spoken of in occult writing as the world of effects. The earth itself is its corresponding world of causes.

That which passes naturally into the world of effects after an incarnation in the world of causes is the individual unit or spiritual monad; but the personality just dissolved passes there with it, to an extent dependent on the qualifications of such personality—on the use, that is to say, which the person in question has made of his opportunities in life. The period to be spent in the world of effects—enormously longer in each case than the life which has paved the way for existence there—corresponds to the “hereafter” or heaven of ordinary theology. The narrow purview of ordinary religious conceptions deals merely with one spiritual life and its consequences in the life to come. Theology conceives that the entity concerned had its beginning in this physical life, and that the ensuing spiritual life will never stop. And this pair of existences, which is shown by the elements of occult science that we are now unfolding, to constitute a part only of the entity’s experience during its connection with a branch race, which is one of seven belonging to a subdivisional race, itself one of seven belonging to a main race, itself one of seven belonging to

the occupation of earth by one of the seven round waves of humanity which have each to occupy it in turn before its functions in Nature are concluded—this microscopic molecule of the whole structure is what common theology treats as *more* than the whole, for it is supposed to cover eternity.

The reader must here be warned against one conclusion to which the above explanations—perfectly accurate as far as they go, but not yet covering the whole ground—might lead him. He will *not* get at the exact number of lives an individual entity has to lead on the earth in the course of its occupation by one round, if he merely raises seven to its third power. If one existence only were passed in each branch race the total number would obviously be 343, but each life descends at least twice into objectivity in the same branch—each monad, in other words, incarnates twice in each branch race. Again, there is a curious cyclic law which operates to augment the total number of incarnations beyond 686. Each subdivisional race has a certain extra vitality at its climax, which leads it to throw off an additional offshoot race at that point in its progress, and again another offshoot race is developed at the end of the subdivisional race by its dying momentum, so to speak. Through these races the whole tide of human life passes, and the result is that the actual normal number of incarnations for each monad is not far short of 800. Within relatively narrow limits it is a variable number, but the bearings of that fact may be considered later on.

The methodical law which carries each and every

individual human entity through the vast evolutionary process thus sketched out, is in no way incompatible with that liability to fall away into abnormal destinies or ultimate annihilation which menaces the *personal* entities of people who cultivate very ignoble affinities. The distribution of the seven principles at death shows that clearly enough, but viewed in the light of these further explanations about evolution, the situation may be better realized. The permanent entity is that which lives through the whole series of lives, not only through the races belonging to the present round-wave on earth, but also through those of other round-waves and other worlds. Broadly speaking, it may, in due time, though at some inconceivably distant future as measured in years, recover a recollection of all those lives, which will seem as days in the past to us. But the astral dross, cast off at each passage into the world of effects, has a more or less independent existence of its own, quite separate from that of the spiritual entity from which it has just been disunited.

The natural history of this astral remnant is a problem of much interest and importance, but a methodical continuation of the whole subject, will require us in the first instance to endeavour to realize the destiny of the higher and more durable spiritual Ego, and before going into that inquiry there is a good deal more to be said about the development of the objective races.

Esoteric science, though interesting itself mainly with matters generally regarded as appertaining to religion, would not be the complete comprehensive and trustworthy system that it is, if it failed to

bring all the facts of earth life into harmony with its doctrines. It would have been little able to search out and ascertain the manner in which the human race has evolved through æons of time and series of planets, if it had not been in a position to ascertain also, as the smaller inquiry is included in the greater, the manner in which the wave of humanity with which we are now concerned has been developed on this earth. The faculties, in short, which enable adepts to read the mysteries of other worlds, and of other states of existence, are in no way unequal to the task of travelling back along the life-current of this globe. It follows that while the brief record of a few thousand years is all that our so-called universal history can deal with, the earth history, which forms a department of esoteric knowledge, goes back to the incidents of the fourth race which preceded ours, and to those of the third race which preceded that. It goes back still further indeed, but the second and first races did not develop anything that could be called civilization, and of them therefore, there is less to be said than of their successors. The third and fourth did—strange as it may seem to some modern readers to contemplate the notion of civilization on the earth several millions of years ago.

Where are its traces? they will ask. How could the civilization with which Europe has now endowed mankind pass away so completely that any future inhabitants of the earth could ever be ignorant that it once existed? How then can we conceive the idea that any similar civilization can have vanished, leaving no records for us?

The answer lies in the regular routine of plane-

tary life, which goes on *pari passu* with the life of its inhabitants. The periods of the great root races are divided from each other by great convulsions of Nature, and by great geological changes. Europe was not in existence as a continent at the time the fourth race flourished. The continent on which the fourth race lived was not in existence at the time the third race flourished, and neither of the continents which were the great vortices of the civilizations of those two races are in existence now. Seven great continental cataclysms occur during the occupation of the earth by the human life-wave for one round period. Each race is cut off in this way at its appointed time, some survivors remaining in parts of the world, not the proper home of their race; but these, invariably in such cases, exhibiting a tendency to decay, and relapsing into barbarism with more or less rapidity.

The proper home of the fourth race, which directly preceded our own, was that continent of which some memory has been preserved even in exoteric literature—the lost Atlantis. But the great island, the destruction of which is spoken of by Plato, was really but the last remnant of the continent. “In the Eocene age,” I am told, “even in its very first part, the great cycle of the fourth race men, the Atlanteans, had already reached its highest point, and the great continent, the father of nearly all the present continents, showed the first symptoms of sinking—a process that occupied it down to 11,446 years ago, when its last island, that, translating its vernacular name, we may call with propriety Poseidonis, went down with a crash.

“Lemuria” (a former continent stretching southwards from India across what is now the Indian Ocean, but connected with Atlantis, for Africa was not then in existence) “should no more be confounded with the Atlantis continent than Europe with America. Both sank and were drowned, with their high civilizations and ‘gods,’ yet between the two catastrophes a period of about 700,000 years elapsed, Lemuria flourishing and ending her career just about that lapse of time before the early part of the Eocene age, since its race was the third. Behold the relics of that once great nation in some of the flat-headed aborigines of your Australia.”

It is a mistake on the part of a recent writer on Atlantis to people India and Egypt with the colonies of that continent, but of that more anon.

“Why should not your geologists,” asks my revered Mahatma teacher, “bear in mind that under the continents explored and fathomed by them, in the bowels of which they have found the Eocene age, and forced it to deliver them its secrets, there may be hidden deep in the fathomless, or rather unfathomed ocean beds, other and far older continents whose strata have never been geologically explored; and that they may some day upset entirely their present theories. Why not admit that our present continents have, like Lemuria and Atlantis been several times already submerged, and had the time to reappear again, and bear their new groups of mankind and civilization; and that at the first great geological upheaval at the next cataclysm, in the series of periodical cataclysms that occur from the beginning to the end of every round, our

already autopsized continents will go down, and the Lemurias and Atlantises come up again.

“Of course the fourth race had its periods of the highest civilization.” (The letter from which I am now quoting was written in answer to a series of questions I put.) “Greek, and Roman, and even Egyptian civilizations are nothing compared to the civilizations that began with the third race. Those of the second race were not savages, but they could not be called civilized.

“Greeks and Romans were small sub-races, and Egyptians part and parcel of our own Caucasian stock. Look at the latter, and at India. Having reached the highest civilization, and what is more, *learning*, both went down; Egypt, as a distinct sub-race, disappearing entirely (her Copts are but a hybrid remnant); India, as one of the first and most powerful offshoots of the mother race, and composed of a number of sub-races, lasting to these times, and struggling to take once more her place in history some day. That history catches but a few stray, hazy glimpses of Egypt some 12,000 years back, when, having already reached the apex of its cycle thousands of years before, the latter had begun to go down.

“The Chaldees were at the apex of their occult fame before what you term the Bronze Age. We hold—but then what warrant can you give the world that we are right?—that far greater civilizations than our own have risen and decayed. It is not enough to say, as some of your modern writers do, that an extinct civilization existed before Rome and Athens were founded. We affirm that a series of

came horses and sheep to be found in company with the huge antediluvians?

“The region now locked in the fetters of eternal winter, uninhabited by man—that most fragile of animals—will very soon be proved to have had not only a tropical climate, something your science knows and does not dispute, but having been likewise the seat of one of the most ancient civilizations of the fourth race, whose highest relics we now find in the degenerate Chinaman, and whose lowest are hopelessly (for the profane scientist) intermixed with the remnants of the third. I told you before that the highest people now on earth (spiritually) belong to the first sub-race of the fifth root race, and those are the Aryan Asiatics, the highest race (physical intellectuality) is the last sub-race of the fifth—yourselves, the white conquerors. The majority of mankind belongs to the seventh sub-race of the fourth root race—the above-mentioned Chinamen and their offshoots and branchlets (Malayans, Mongolians, Tibetans, Javanese, &c. &c.)—with remnants of other sub-races of the fourth and the seventh sub-race of the third race. All these fallen, degraded semblances of humanity are the direct lineal descendants of highly civilized nations, neither the names nor memory of which have survived, except in such books as ‘Populvuh,’ the sacred book of the Guatemalans, and a few others unknown to science.”

I had inquired was there any way of accounting for what seems the curious rush of human progress within the last two thousand years as compared with the relatively stagnant condition of the fourth

round people up to the beginning of modern progress. This question it was that elicited the explanations quoted above, and also the following remarks in regard to the recent "rush of human progress."

"The latter end of a very important cycle. Each round, each race, as every sub-race, has its great and its smaller cycles on every planet that mankind passes through. Our fourth round humanity has its one great cycle and so have its races and sub-races. 'The curious rush' is due to the double effect of the former—the beginning of its downward course—and of the latter (the small cycle of your sub-race) running on to its apex. Remember you belong to the fifth race, yet you are but a western sub-race. Notwithstanding your efforts, what you call civilization is confined only to the latter and its offshoots in America. Radiating around, its deceptive light may seem to throw its rays on a greater distance than it does in reality. There is no rush in China, and of Japan you make but a caricature.

"A student of occultism ought not to speak of the stagnant condition of the fourth round people, since history knows next to nothing of that condition, 'up to the beginning of modern progress,' of other nations but the Western. What do you know of America, for instance, before the invasion of that country by the Spaniards? Less than two centuries prior to the arrival of Cortez there was as great a rush towards progress among the sub-races of Peru and Mexico as there is now in Europe and the United States. Their sub-race ended in nearly

total annihilation through causes generated by itself? We may speak only of the 'stagnant' condition into which, following the law of development growth, maturity and decline every race and sub-race falls during the transition periods. It is that latter condition your universal history is acquainted with, while it remains superbly ignorant of the condition even India was in some ten centuries back. Your sub-races are now running toward the apex of their respective cycles, and that history goes no further back than the periods of decline of a few other sub-races belonging most of them to the preceding fourth race."

I had asked to what epoch Atlantis belonged, and whether the cataclysm by which it was destroyed came in an appointed place in the progress of evolution, corresponding for the development of races to the obscuration of planets. The answer was :—

"To the Miocene times. Everything comes in its appointed time and place in the evolution of rounds, otherwise it would be impossible for the best seer to calculate the exact hour and year when such cataclysms great and small have to occur. All an adept could do would be to predict an approximate time, whereas now events that result in great geological changes may be predicted with as mathematical a certainty as eclipses and other revolutions in space. The sinking of Atlantis (the group of continents and isles) began during the Miocene period—as certain of your continents are now observed to be gradually sinking—and it culminated first in the final disappearance of the largest con-

continent, an event coincident with the elevation of the Alps, and second, with that of the last of the fair islands mentioned by Plato. The Egyptian priests of Saïs told his ancestor Solon, that Atlantis (*i.e.*, the only remaining large island) had perished 9,000 years before their time. This was not a fancy date, since they had for millenniums preserved most carefully their records. But then, as I say, they spoke but of the Poseidonis, and would not reveal even to the great Greek legislator their secret chronology. As there are no geological reasons for doubting, but, on the contrary, a mass of evidence for accepting the tradition, science has finally accepted the existence of the great continent and archipelago, and thus vindicated the truth of one more 'fable.'

"The approach of every new obscuration is always signalled by cataclysms of either fire or water. But apart from this, every root race has to be cut in two, so to say, by either one or the other. Thus having reached the apex of its development and glory, the fourth race—the Atlanteans—were destroyed by water; you find now but their degenerate fallen remnants, whose sub-races nevertheless, each of them, had its palmy days of glory and relative greatness. What they are now, you will be some day, the law of cycles being one and immutable. When your race, the fifth, will have reached its zenith of physical intellectuality, and developed its highest civilization (remember the difference we make between material and spiritual civilizations), unable to go any higher in its own cycle, its progress towards absolute evil will be arrested (as its predecessors, the Lemurians and the Atlan-

teans, the men of the third and fourth races were arrested in their progress towards the same) by one of such cataclysmic changes, its great civilization destroyed, and all the sub-races of that race will be found going down their respective cycles, after a short period of glory and learning. See the remnants of the Atlanteans, the old Greeks and Romans (the modern belong to the fifth race). See how great and how short, how evanescent were their days of fame and glory. For they were but sub-races of the seven offshoots of the root race.* No mother race, any more than her sub-races and offshoots, is allowed by the one reigning law to trespass upon the prerogatives of the race, or sub-race that will follow it; least of all to encroach upon the knowledge and powers in store for its successor."

The "progress towards absolute evil," arrested by the cataclysms of each race in turn, sets in with the acquisition by means of ordinary intellectual research and scientific advancement, of those powers over Nature, which accrue even now in adeptship from the premature development of higher faculties than those we ordinarily employ. I have spoken slightly of these powers in a preceding chapter, when endeavouring to describe our esoteric teachers; to describe them minutely would lead me into a long digression on occult phenomena. It is enough to say that they are such as cannot but be dangerous to society generally, and provocative of all manner of crimes which would utterly defy detection, if possessed by persons capable of regarding them as

* Branches of the subdivisions, according to the nomenclature I have adopted previously.

anything else but a profoundly sacred trust. Now some of these powers are simply the practical application of obscure forces of Nature, susceptible of discovery in the course of ordinary scientific progress. Such progress had been accomplished by the Atlanteans. The worldly men of science in that race had learned the secrets of the disintegration and reintegration of matter, which few but practical spiritualists as yet know to be possible, and of control over the elementals, by means of which that and other even more portentous phenomena can be produced. Such powers in the hands of persons willing to use them for merely selfish and unscrupulous ends, must not only be productive of social disaster, but also for the persons who hold them, of progress in the direction of that evilly-spiritual exaltation, which is a far more terrible result than suffering and inconvenience in this world. Thus it is, when physical intellect, unguarded by elevated morality, runs over into the proper region of spiritual advancement, that the natural law provides for its violent repression. The contingency will be better understood when we come to deal with the general destinies towards which humanity is tending.

The principle under which the various races of man as they develop are controlled collectively by the cyclic law, however they may individually exercise the free will they unquestionably possess, is thus very plainly asserted. For people who have never regarded human affairs as covering more than the very short period with which history deals, the course of events will perhaps, as a rule,

exhibit no cyclic character, but rather a chequered progress, hastened sometimes by great men and fortunate circumstances, sometimes retarded by war, bigotry, or intervals of intellectual sterility, but moving continually onwards in the long account at one rate of speed or another. As the esoteric view of the matter, fortified by the wide range of observation which occult science is enabled to take, has an altogether opposite tendency, it seems worth while to conclude these explanations with an extract from a distinguished author, quite unconnected with the occult world, who nevertheless, from a close observation of the mere historical record, pronounces himself decisively in favour of the theory of cycles. In his "History of the Intellectual Development of Europe," Dr. J. W. Draper writes as follows :—

"We are as we often say the creatures of circumstances. In that expression there is a higher philosophy than might at first sight appear. . . . From this more accurate point of view we should therefore consider the course of these events, recognizing the principle that the affairs of men pass forward in a determinate way, expanding and unfolding themselves. And hence we see that the things of which we have spoken as though they were matters of choice, were in reality forced upon their apparent authors by the necessity of the times. But in truth they should be considered as the presentation of a certain phase of life which nations in their onward course sooner or later assume. To the individual, how well we know that a sober moderation of action, an appropriate gravity

CHAPTER V.

DEVACHAN.

It was not possible to approach a consideration of the states into which the higher human principles pass at death, without first indicating the general framework of the whole design worked out in the course of the evolution of man. That much of my task, however, having now been accomplished, we may pass on to consider the natural destinies of each human Ego, in the interval which elapses between the close of one objective life, and the commencement of another. At the commencement of another, the karma of the previous objective life determines the state of life into which the individual shall be born. This doctrine of Karma is one of the most interesting features of Buddhist philosophy. There has been no secret about it at any time, though for want of a proper comprehension of elements in the philosophy which have been strictly esoteric, it may sometimes have been misunderstood.

Karma is a collective expression applied to that complicated group of affinities for good and evil generated by a human being during life, and the character of which inheres in the molecules of his fifth principle all through the interval which elapses

between his death from one objective life and his birth into the next. As stated sometimes, the doctrine seems to be one which exacts the notion of a superior spiritual authority summing up the acts of a man's life at its close, taking into consideration his good deeds and his bad, and giving judgment about him on the whole aspect of the case. But a comprehension of the way in which the human principles divide up at death, will afford a clue to the comprehension of the way in which Karma operates, and also of the great subject we may better take up first—the immediate spiritual condition of man after death.

At death, the three lower principles—the body, its mere physical vitality, and its astral counterpart—are finally abandoned by that which really is the Man himself, and the four higher principles escape into that world immediately above our own ; above our own, that is, in the order of spirituality—not above it at all, but in it and of it, as regards real locality—the astral plane, or karma loca, according to a very familiar Sanscrit expression. Here a division takes place between the two duads, which the four higher principles include. The explanations already given concerning the imperfect extent to which the upper principles of man are as yet developed, will show that this estimation of the process, as in the nature of a mechanical separation of the principles, is a rough way of dealing with the matter. It must be modified in the reader's mind by the light of what has been already said. It may be otherwise described as a trial of the extent to which the fifth principle has been developed. Re-

garded in the light of the former idea, however, we must conceive the sixth and seventh principles, on the one hand, drawing the fifth, the human soul, in one direction, while the fourth draws it back earthwards in the other. Now, the fifth principle is a very complex entity, separable itself into superior and inferior elements. In the struggle which takes place between its late companion principles, its best, purest, most elevated and spiritual portions cling to the sixth, its lower instincts, impulses and recollections adhere to the fourth, and it is in a measure torn asunder. The lower remnant, associating itself with the fourth, floats off in the earth's atmosphere, while the best elements, those, be it understood, which really constitute the Ego of the late earthly personality, the individuality, the consciousness thereof, follows the sixth and seventh into a spiritual condition, the nature of which we are about to examine.

Rejecting the popular English name for this spiritual condition, as encrusted with too many misconceptions to be convenient, let us keep to the Oriental designation of that region or state into which the higher principles of human creatures pass at death. This is additionally desirable because, although the Devachan of Buddhist philosophy corresponds in some respects to the modern European idea of heaven, it differs from heaven in others which are even more important.

Firstly, however, in Devachan, that which survives is not merely the individual monad, which survives through all the changes of the whole evolutionary scheme, and flits from body to body,

from planet to planet, and so forth—that which survives in Devachan is the man's own self-conscious personality, under some restrictions indeed, which we will come to directly, but still it is the same personality as regards its higher feelings, aspirations, affections, and even tastes, as it was on earth. Perhaps it would be better to say the essence of the late self-conscious personality.

It may be worth the reader's while to learn what Colonel H. S. Olcott has to say in his "Buddhist Catechism" (14th thousand) of the intrinsic difference between "individuality" and "personality." Since he wrote not only under the approval of the High Priest of the Sripada and Galle, Sumangala, but also under the direct instruction of his Adept Guru, his words will have weight for the student of Occultism. This is what he says, in his Appendix:—

"Upon reflection, I have substituted 'personality' for 'individuality' as written in the first edition. The successive appearances upon one or many earths, or 'descents into generation' of the *tanhai-cally*-coherent parts (Skandhas) of a certain being, are a succession of personalities. In each birth the *personality* differs from that of the previous or next succeeding birth. Karma, the *deus ex máchina*, masks (or shall we say, reflects?) itself now in the personality of a sage, again as an artisan, and so on throughout the string of births. But though personalities ever shift, the one line of life along which they are strung like beads, runs unbroken.

"It is ever *that particular line*, never any other. It is therefore individual, an individual vital undulation which began in Nirvana or the subjective

side of Nature, as the light or heat undulation through æther began at its dynamic source; is careering through the objective side of Nature, under the impulse of Karma and the creative direction of Tanha; and tends through many cyclic changes back to Nirvana. Mr. Rhys Davids calls that which passes from personality to personality along the individual chain, 'character' or 'doing.' Since 'character' is not a mere metaphysical abstraction but the sum of one's mental qualities and moral propensities, would it not help to dispel what Mr. Rhys Davids calls, 'the desperate expedient of a mystery,' if we regarded the life undulation as individuality and each of its series of natal manifestations as a separate personality?

"The denial of 'soul' by Buddha (see 'Sanyutto Nikaya,' the Sutta Pitaka) points to the prevalent delusive believe in an independent transmissible personality; an entity that could move from birth to birth unchanged, or go to a place or state where, as such perfect entity, it could eternally enjoy or suffer. And what he shows is that the 'I am I' consciousness, is, as regards permanency, logically impossible, since its elementary constituents constantly change, and the 'I' of one birth differs from the 'I' of every other birth. But everything that I have found in Buddhism accords with the theory of a gradual evolution of the perfect man—viz., a Buddha through numberless natal experiences. And in the consciousness of that person who at the end of a given chain of beings attains Buddhahood, or who succeeds in attaining the fourth stage of Dhyana, or mystic self-development, in any one

of his births anterior to the final one, the scenes of all these serial births are perceptible. In the 'Jatakattahavannana,' so well translated by Mr. Rhys Davids, an expression continually recurs which I think rather supports such an idea—viz., 'Then the blessed one *made manifest an occurrence hidden by change of birth,*' or 'that which had been hidden by, &c.' Early Buddhism then, clearly held to a permanency of records in the Akasa, and the potential capacity of man to read the same when he has evolved to the stage of true individual enlightenment."

The purely sensual feelings and tastes of the late personality, will drop off from it in Devachan, but it does not follow that nothing is preservable in that state, except feelings and thoughts having a direct reference to religion or spiritual philosophy. On the contrary, all the superior phases, even of sensuous emotion, find their appropriate sphere of development in Devachan. To suggest a whole range of ideas by means of one illustration, a soul in Devachan, if the soul of a man who was passionately devoted to music, would be continuously enraptured by the sensations music produces. The person whose happiness of the higher sort on earth had been entirely centered in the exercise of the affections will miss none in Devachan of those whom he or she loved. But, at once it will be asked, if some of these are not themselves fit for Devachan, how then? The answer is, that does not matter. For the person who loved them *they will be there.* It is not necessary to say much more to give a clue to the position. Devachan is a subjec-

tive state. It will seem as real as the chairs and tables round us ; and remember that, above all things, to the profound philosophy of Occultism, are the chairs and tables, and the whole objective scenery of the world, unreal and merely transitory delusions of sense. As real as the realities of this world to us, and even more so, will be the realities of Devachan to those who go into that state.

From this it ensues that the subjective *isolation* of Devachan, as it will perhaps be conceived at first, is not real isolation at all, as the word is understood on the physical plane of existence ; it is companionship with all that the true soul craves for, whether persons, things, or knowledge. And a patient consideration of the place in Nature which Devachan occupies will show that this subjective isolation of each human unit is the only condition which renders possible anything which can be described as a felicitous spiritual existence after death for mankind at large, and Devachan is as much a purely and absolutely felicitous condition for all who attain it, as Avitchi is the reverse of it. There is no inequality or injustice in the system ; Devachan is by no means the same thing for the good and the indifferent alike, but it is not a life of responsibility, and therefore there is no logical place in it for suffering any more than in Avitchi there is any room for enjoyment or *repentance*. It is a life of *effects*, not of *causes* ; a life of being paid your earnings, not of labouring for them. Therefore it is impossible to be during that life cognizant of what is going on on earth.

in heaven impossible, may still doubt whether true happiness is possible in the state, as it may be objected, of monotonous isolation now described. The objection is merely raised from the point of view of an imagination that cannot escape from its present surroundings. To begin with, about monotony. No one will complain of having experienced monotony during the minute, or moment, or half-hour, as it may have been, of the greatest happiness he may have enjoyed in life. Most people have had some happy moments, at all events, to look back to for the purpose of this comparison; and let us take even one such minute or moment, too short to be open to the least suspicion of monotony, and imagine its sensations immensely prolonged without any external events in progress to mark the lapse of time. There is no room, in such a condition of things, for the conception of weariness. The unalloyed unchangeable sensation of intense happiness goes on and on, not for ever, because the causes which have produced it are not infinite themselves, but for very long periods of time, until the efficient impulse has exhausted itself.

Nor must it be supposed that there is, so to speak, no change of occupation for souls in Devachan—that any one moment of earthly sensation is selected for exclusive perpetuation. As a teacher of the highest authority on this subject writes :—

“ There are two fields of causal manifestations—the objective and subjective. The grosser energies—those which operate in the denser condition of matter—manifest objectively in the next physical

life, their outcome being the new personality of each birth marshalling within the grand cycle of the evolving individuality. It is but the moral and spiritual activities that find their sphere of effects in Devachan. And, thought and fancy being limitless, how can it be argued for one moment that there is anything like monotony in the state of Devachan? Few are the men whose lives were so utterly destitute of feeling, love, or of a more or less intense predilection for some one line of thought as to be made unfit for a proportionate period of Devachanic experience beyond their earthly life. So, for instance, while the vices, physical and sensual attractions, say, of a great philosopher, but a bad friend and a selfish man, may result in the birth of a new and still greater intellect, but at the same time a most miserable man, reaping the Karmic effects of all the causes produced by the 'old' being, and whose make-up was inevitable from the preponderating proclivities of that being in the preceding birth, the intermedial period between the two physical births *cannot* be, in Nature's exquisitely well-adjusted laws, but a *hiatus* of unconsciousness. There can be no such dreary blank as kindly promised, or rather implied, by Christian Protestant theology, to the 'departed souls,' which, between death and 'resurrection,' have to hang on in space, in mental catalepsy, awaiting the 'Day of Judgment.' Causes produced by mental and spiritual energy being far greater and more important than those that are created by physical impulses, their effects have to be, for weal or woe, proportionately as great.

Lives on this earth, or other earths, affording no proper field for such effects, and every labourer being entitled to his own harvest, they have to expand in either Devachan or Avitchi.* Bacon, for instance, whom a poet called

‘The brightest, wisest, *meanest* of mankind,’

might reappear in his next incarnation as a greedy money-getter, with extraordinary intellectual capacities. But, however great the latter, they would find no proper field in which that particular line of thought, pursued during his previous lifetime by the founder of modern philosophy, could reap all its dues. It would be but the astute lawyer, the corrupt Attorney-General, the ungrateful friend, and the dishonest Lord Chancellor, who might find, led on by his Karma, a congenial new soil in the *body* of the money-lender, and reappear as a new Shylock. But where would Bacon, the incomparable thinker, with whom philosophical inquiry upon the most profound problems of Nature was his ‘first and last and only love,’ where would this ‘intellectual giant of his race,’ once disrobed of his lower nature, go to? Have all the effects of that magnificent intellect to vanish and disappear? Certainly not. Thus his moral and spiritual qualities would also have to find a field in which their energies could expand themselves. Devachan is such a field. Hence, all the great plans of moral reform, of intellectual research into abstract principles of Nature—all the divine, spiritual aspi-

* The lowest states of Devachan interchain with those of Avitchi.

rations that had so filled the brightest part of his life would, in Devachan, come to fruition ; and the abstract entity, known in the preceding birth as Francis Bacon, and that *may* be known in its subsequent re-incarnation as a despised usurer—that Bacon's own creation, his Frankenstein, the son of his Karma—shall in the meanwhile occupy itself in this inner world, also of its own preparation, in enjoying the effects of the grand beneficial spiritual causes sown in life. It would live a purely and spiritually conscious existence—a dream of realistic vividness—until Karma, being satisfied in that direction, and the ripple of force reaching the edge of its sub-cyclic basin, the being should move into its next area of causes, either in this same world or another, according to his stage of progression. . . . Therefore, there is ‘ a change of occupation,’ a continual change, in Devachan. For that dream-life is but the fruition, the harvest-time, of those psychic seed-germs dropped from the tree of physical existence in our moments of dream and hope—fancy-glimpses of bliss and happiness, stifled in an ungrateful social soil, blooming in the rosy dawn of Devachan, and ripening under its ever-fructifying sky. If man had but one single moment of ideal experience, not even then could it be, as erroneously supposed, the indefinite prolongation of that ‘ single moment.’ That one note, struck from the lyre of life, would form the key-note of the being's subjective state, and work out into numberless harmonic tones and semitones of psychic phantasmagoria. There, all unrealized hopes, aspirations, dreams, become fully realized, and the dreams of the objec-

tive become the realities of the subjective existence. And there, behind the curtain of Maya, its vaporous and deceptive appearances are perceived by the Initiate, who has learned the great secret how to penetrate thus deep into the Arcana of Being. . . .”

As physical existence has its cumulative intensity from infancy to prime, and its diminishing energy thenceforward to dotage and death, so the dream-life of Devachan is lived correspondentially. There is the first flutter of psychic life, the attainment of prime, the gradual exhaustion of force passing into conscious lethargy, semi-unconsciousness, oblivion and—not death but birth! birth into another personality and the resumption of action which daily begets new congeries of causes that must be worked out in another term of Devachan.

“It is not a reality then, it is a mere dream,” objectors will urge; “the soul so bathed in a delusive sensation of enjoyment which has no reality all the while, is being cheated by Nature, and must encounter a terrible shock when it wakes to its mistake.” But, in the nature of things, it never does or can wake. The waking from Devachan is its next birth into objective life, and the draught of Lethe has then been taken. Nor as regards the isolation of each soul is there any consciousness of isolation whatever; nor is there ever possibly a parting from its chosen associates. Those associates are not in the nature of companions who may wish to go away, of friends who may tire of the friend that loves them, even if he or she does not tire of them. Love, the creating force, has

placed their living image before the personal soul which craves for their presence, and that image will never fly away.

On this aspect of the subject I may again avail myself of the language of my teacher :—

“ Objectors of that kind will be simply postulating an incongruity, an intercourse of entities in Devachan, which applies only to the mutual relationship of physical existence ! Two sympathetic souls, both disembodied, will each work out its own Devachanic sensations, making the other a sharer in its subjective bliss. This will be as real to them, naturally, as though both were yet on this earth. Nevertheless, each is dissociated from the other as regards personal or corporeal association. While the latter is the only one of its kind that is recognized by our earth experience as an *actual* intercourse, for the Devachanee it would be not only something unreal, but could have no existence for *it* in any sense, not even as a delusion : a physical body or even a Mayavi-rupa remaining to *its* spiritual senses as invisible as it is itself to the physical senses of those who loved it best on earth. Thus even though one of the ‘ sharers ’ were alive and utterly unconscious of that intercourse in his waking state, still every dealing with him would be to the Devachanee an absolute *reality*. And what *actual* companionship could there ever be other than the purely idealistic one as above described, between two *subjective* entities which are not even as material as that etherial body-shadow—the Mayavi-rupa ? To object to this on the ground that one is thus ‘ cheated by Nature ’ and to call it ‘ a

delusive sensation of enjoyment which has no reality,' is to show oneself utterly unfit to comprehend the conditions of life and being outside of our material existence. For how can the same distinction be made in Devachan—*i.e.*, outside of the conditions of earth-life—between what we call a reality, and a factitious or an artificial counterfeit of the same, in this, our world? The same principle cannot apply to the two sets of conditions. Is it conceivable that what we call a reality in our embodied physical state will exist under the same conditions as an actuality for a disembodied entity? On earth, man is dual—in the sense of being a thing of matter and a thing of spirit; hence the natural distinction made by his mind—the analyst of his physical sensations and spiritual perceptions—between an actuality and a fiction; though, even in this life, the two groups of faculties are constantly equilibrating each other, each group when dominant seeing as fiction or delusion what the other believes to be most real. But in Devachan our Ego has ceased to be dualistic, in the above sense, and becomes a spiritual, mental entity. That which was a fiction, a dream in life, and which had its being but in the region of 'fancy,' becomes, under the new conditions of existence, the only possible *reality*. Thus, for us, to postulate the possibility of any other reality for a Devachanee is to maintain an absurdity, a monstrous fallacy, an idea unphilosophical to the last degree. The actual is that which is acted or performed *de facto*: 'the reality of a thing is proved by its actuality.' And the suppositious and artificial having no possible

certainty. Not merely as regards the duration of the blissful state, which is determined by the causes engendered during objective life, but as regards the intensity and amplitude of the emotions which constitute that blissful state, the heaven of each person who attains the really existent heaven is precisely fitted to his capacity for enjoying it. It is the creation of his own aspirations and faculties. More than this it may be impossible for the uninitiated comprehension to realize. But this indication of its character is enough to show how perfectly it falls into its appointed place in the whole scheme of evolution.

“Devachan,” to resume my direct quotations, “is, of course, a *state*, not a locality, as much as Avitchi, its antithesis (which please not to confound with *hell*). Esoteric Buddhist philosophy has three principal *lokas* so-called—namely, 1, *Kama loka* ; 2, *Rupa loka* ; and 3, *Arupa loka* ; or in their literal translation and meaning—1, world of desires or passions, of unsatisfied earthly cravings—the abode of ‘Shells’ and Victims, of Elementaries and Suicides ; 2, the world of Forms—*i.e.*, of shadows more spiritual, having form and objectivity, but no substance ; and 3, the *formless* world, or rather the world of no form, the incorporeal, since its denizens can have neither body, shape, nor colour for us mortals, and in the sense that we give to these terms. These are the three spheres of ascending spirituality in which the several groups of subjective and semi-subjective entities find their attractions. All but the suicides and the victims of premature violent deaths go, according to

their attractions and powers, either into the Devachanic or the Avitchi state, which two states form the numberless subdivisions of Rupa and Arupa lokas—that is to say, that such states not only vary in degree, or in their presentation to the subject entity as regards form, colour, &c., but that there is an infinite scale of such states, in their progressive spirituality and intensity of feeling; from the lowest in the Rupa, up to the highest and the most exalted in the Arupa-loka. The student must bear in mind that *personality* is the synonym for limitation; and that the more selfish, the more contracted the person's ideas, the closer will he cling to the lower spheres of being, the longer loiter on the plane of selfish social intercourse."

Devachan being a condition of mere subjective enjoyment, the duration and intensity of which is determined by the merit and spirituality of the earth-life last past, there is no opportunity, while the soul inhabits it, for the punctual requital of evil deeds. But Nature does not content herself with either forgiving sins in a free and easy way, or damning sinners outright, like a lazy master too indolent, rather than too good-natured, to govern his household justly. The Karma of evil, be it great or small, is as certainly operative at the appointed time as the Karma of good. But the place of its operation is not Devachan, but either a new rebirth, or Avitchi—a state to be reached only in exceptional cases and by exceptional natures. In other words, while the common-place sinner will reap the fruits of his evil deeds in a following re-incarnation, the exceptional criminal, the aristocrat

of sin, has Avitchi in prospect—that is to say, the condition of subjective spiritual misery which is the reverse side of Devachan.

“Avitchi is a state of the most *ideal spiritual* wickedness, something akin to the state of Lucifer, so superbly described by Milton. Not many though, are there who can reach it, as the thoughtful reader will perceive. And if it is urged that since there is Devachan for nearly all, for the good, the bad, and the indifferent, the ends of harmony and equilibrium are frustrated, and the law of retribution and of impartial, implacable justice, hardly met and satisfied by such a comparative scarcity if not absence of its antithesis, then the answer will show *that it is not so*. ‘*Evil* is the dark son of Earth (matter) and *Good*—the fair daughter of Heaven’ (or Spirit) says the Chinese philosopher; hence the place of punishment for most of our sins is the earth—its birth-place and play-ground. There is more apparent and relative than actual evil even on earth, and it is not given to the *hoi polloi* to reach the fatal grandeur and eminence of a ‘Satan’ every day.”

Generally, the re-birth into objective existence is the event for which the Karma of evil patiently waits; and then it irresistibly asserts itself, not that the Karma of good exhausts itself in Devachan, leaving the unhappy monad to develop a new consciousness with no material beyond the evil deeds of its last personality. The re-birth will be qualified by the merit as well as the demerit of the previous life, but the Devachan existence is a rosy sleep—

*Fair usage policy applies

of the subjective spiritual communications—most of them when the sensitives are pure-minded—are real, though it is most difficult for the uninitiated medium to fix in his mind the true and correct pictures of what he sees and hears. In the same way some of the phenomena called psychography (though more rarely) are also real. The spirit of the sensitive getting odylized, so to say, by the aura of the spirit in the Devachan *becomes* for a few minutes that departed personality, and writes in the handwriting of the latter, in his language and in his thoughts as they were during his lifetime. The two spirits become blended in one, and the preponderance of one over the other during such phenomena, determines the preponderance of personality in the characteristics exhibited. Thus, it may incidentally be observed, what is called *rapport*, is, in plain fact, an identity of molecular vibration between the astral part of the incarnate medium and the astral part of the disincarnate personality.

As already indicated, and as the common sense of the matter would show, there are great varieties of states in Devachan, and each personality drops into its befitting place there. Thence, consequently, he emerges in his befitting place in the world of causes, this earth or another, as the case may be, when his time for re-birth comes. Coupled with survival of the affinities, comprehensively described as Karma, the affinities both for good and evil engendered by the previous life, this process will be seen to accomplish nothing less than an explanation

of the problem which has always been regarded as so incomprehensible—the inequalities of life. The conditions on which we enter life are the consequences of the use we have made of our last set of conditions. They do not impede the development of fresh Karma, whatever they may be, for this will be generated by the use we make of *them* in turn. Nor is it to be supposed that every event of a current life which bestows joy or sorrow is old Karma bearing fruit. Many may be the immediate consequences of acts in the life to which they belong—ready-money transactions with Nature, so to speak, of which it may be hardly necessary to make any entry in her books. But the great inequalities of life, as regards the start in it which different human beings make, is a manifest consequence of old Karma, the infinite varieties of which always keep up a constant supply of recruits for all the manifold varieties of human condition.

It must not be supposed that the real Ego slips instantaneously at death from the earth life and its entanglements, into the Devachanic condition. When the division of or purification of the fifth principle has been accomplished in Kama loca by the contending attractions of the fourth and sixth principles, the real Ego passes into a period of unconscious gestation. I have spoken already of the way in which the Devachanic life is itself a process of growth, maturity, and decline; but the analogies of earth are even more closely preserved. There is a spiritual ante-natal state at the entrance to

spiritual life, as there is a similar and equally unconscious physical state at the entrance to objective life. And this period, in different cases, may be of very different duration—from a few moments to immense periods of years. When a man dies, his soul or fifth principle becomes unconscious and loses all remembrance of things internal as well as external. Whether his stay in Kama loca has to last but a few moments, hours, days, weeks, months or years, whether he dies a natural or a violent death; whether this occurs in youth or age, and whether the Ego has been good, bad, or indifferent, his consciousness leaves him as suddenly as the flame leaves the wick when it is blown out. When life has retired from the last particle of the brain matter, his perceptive faculties become extinct for ever, and his spiritual powers of cognition and volition become for the time being as extinct as the others. His Mayavi-rupa may be thrown into objectivity as in the case of apparitions after death, but unless it is projected by a conscious or intense desire to see or appear to some one shooting through the dying brain, the apparition will be simply automatic. The revival of consciousness in Kama loca is obviously, from what has been already said, a phenomenon that depends on the characteristic of the principles passing, unconsciously at the moment, out of the dying body. It may become tolerably complete under circumstances by no means to be desired, or it may be obliterated by a rapid passage into the gestation state leading to Devachan. This gestation state

CHAPTER VI.

KAMA LOCA.

THE statements already made in reference to the destiny of the higher human principles at death, will pave the way for a comprehension of the circumstances in which the inferior remnant of these principles finds itself, after the real Ego has passed either into the Devachanic state, or that unconscious intervening period of preparation therefor which corresponds to physical gestation. The sphere in which such remnants remain for a time is known to occult science as Kama loca, the region of desire, not the region in which desire is developed to any abnormal degree of intensity as compared with desire as it attaches to earth-life, but the sphere in which that sensation of desire, which is a part of the earth-life, is capable of surviving.

It will be obvious, from what has been said about Devachan, that a large part of the recollections which accumulate round the human Ego during life are incompatible in their nature with the pure subjective existence to which the real, durable, spiritual Ego passes; but they are not necessarily on that account extinguished or annihilated out of existence. They inhere in certain molecules of those finer (but not finest) principles,

which escape from the body at death ; and just as dissolution separates what is loosely called the soul from the body, so also it provokes a further separation between the constituent elements of the soul. So much of the fifth principle, or human soul, which is in its nature assimilable with, or has gravitated upwards toward, the sixth principle, the spiritual soul, passes with the germ of that divine soul into the superior region, or state of Devachan, in which it separates itself almost completely, from the attractions of the earth ; quite completely, as far as its own spiritual course is concerned, though it still has certain affinities with the spiritual aspirations emanating from the earth, and may sometimes draw these towards itself. But the animal soul, or fourth principle (the element of will and desire as associated with objective existence), has no upward attraction, and no more passes away from the earth than the particles of the body consigned to the grave. It is not in the grave, however, that this fourth principle can be put away. It is not spiritual in its nature or affinities, but it is not physical in its nature. In its affinities it is physical, and hence the result. It remains within the actual physical local attraction of the earth—in the earth's atmosphere—or, since it is not the gases of the atmosphere that are specially to be considered in connection with the problem in hand, let us say, in Kama loca.

And with the fourth principle a large part (as regards most of mankind unfortunately, though a part very variable in its relative magnitude) inevitably remains. There are plenty of attributes

which the ordinary composite human being exhibits, many ardent feelings, desires, and acts, floods of recollections, which even if not concerned with a life as ardent perhaps as those which have to do with the higher aspirations, are nevertheless essentially belonging to the physical life, which take time to die. They remain behind in association with the fourth principle, which is altogether of the earthly perishable nature, and disperse or fade out, or are absorbed into the respective universal principles to which they belong, just as the body is absorbed into the earth, in progress of time, and rapidly or slowly in proportion to the tenacity of their substance. And where meanwhile, is the consciousness of the individual who has died or dissolved? Assuredly in Devachan; but a difficulty presents itself to the mind untrained in occult science, from the fact that a semblance of consciousness inheres in the astral portion—the fourth principle with a portion of the fifth—which remains behind in Kama loca. The individual consciousness, it is argued, cannot be in two places at once. But first of all, to a certain extent, it can. As may be perceived presently, it is a mistake to speak of consciousness, as we understand the feeling in life, attaching to the astral shell or remnant; but nevertheless a certain spurious semblance may be re-awakened in that shell, without having any connection with the real consciousness all the while growing in strength and vitality in the spiritual sphere. There is no power on the part of the shell of taking in and assimilating new ideas and initiating courses of action on the basis of those new ideas. But

*Fair usage policy applies

desire, but it is not will itself. It must be alive, in union with the overshadowing spirit, or "one life," to be thus the agent of that very elevated function of life—will, in its sublime potency. As already mentioned, the Sanscrit names of the higher principles connote the idea that they are vehicles of the one life. Not that the one life is a separable molecular principle itself, it is the union of all—the influences of the spirit; but in truth the idea is too subtle for language, perhaps for intellect itself. Its manifestation in the present case, however, is apparent enough. Whatever the willing fourth principle may be when alive, it is no longer capable of active will when dead. But then, under certain abnormal conditions, it may partially recover life for a time; and this fact it is which explains many, though by no means all, of the phenomena of spiritualistic mediumship. The "elementary," be it remembered—as the astral shell has generally been called in former occult writings—is liable to be galvanized for a time in the mediumistic current into a state of consciousness and life which may be suggested by the first condition of a person who, carried into a strange room in a state of insensibility during illness, wakes up feeble, confused in mind, gazing about with a blank feeling of bewilderment, taking in impressions, hearing words addressed to him and answering vaguely. Such a state of consciousness is unassociated with the notions of past or future. It is an automatic consciousness, derived from the medium. A medium, be it remembered, is a person whose principles are loosely united and susceptible of

being borrowed by other beings, or floating principles, having an attraction for some of them or some part of them. Now what happens in the case of a shell drawn into the neighbourhood of a person so constituted? Suppose the person from whom the shell has been cast, died with some strong unsatisfied desire, not necessarily of an unholy sort, but connected entirely with the earth-life, a desire, for example, to communicate some fact to a still living person. Certainly the shell does not go about in Kama loca with a persistent intelligent conscious purpose of communicating that fact; but, amongst others, the volitional impulse to do this has been infused into the fourth principle, and while the molecules of that principle remain in association, and that may be for many years, they only need a partial galvanization into life again, to become operative in the direction of the original impulse. Such a shell comes into contact with a medium (not so dissimilar in nature from the person who has died as to render a *rapport* impossible), and something from the fifth principle of the medium associates itself with the wandering fourth principle and sets the original impulse to work. So much consciousness and so much intelligence as may be required to guide the fourth principle in the use of the immediate means of communication at hand—a slate and pencil, or a table to rap upon—is borrowed from the medium, and then the message given may be the message which the dead person originally ordered his fourth principle to give, so to speak, but which the shell has never till then had an opportunity of giving. It may be argued

that the production of writing on a closed slate, or of raps on a table without the use of a knuckle or a stick, is itself a feat of a marvellous nature, bespeaking a knowledge on the part of the communicating intelligence of powers of Nature we in physical life know nothing about. But the shell is itself in the astral world; in the realm of such powers. A phenomenal manifestation is its natural mode of dealing. It is no more conscious of producing a wonderful result by the use of new powers acquired in a higher sphere of existence, than we are conscious of the forces by which in life the volitional impulse is communicable to nerves and muscles.

But, it may be objected, the "communicating intelligence" at a spiritual *séance* will constantly perform remarkable feats for no other than their own sake, to exhibit the power over natural forces which it possesses. The reader will please remember, however, that occult science is very far from saying that all the phenomena of spiritualism are traceable to one class of agents. Hitherto in this treatise little has been said of the "elementals," those semi-intelligent creatures of the astral light, who belong to a wholly different kingdom of Nature from ourselves. Nor is it possible at present to enlarge upon their attributes, for the simple and obvious reason, that knowledge concerning the elementals, detailed knowledge on that subject, and in regard to the way they work, is scrupulously withheld by the adepts of occultism. To possess such knowledge is to wield power, and the whole motive of the great secrecy in which occult science is shrouded, turns upon the danger of con-

*Fair usage policy applies

principle conveyed into it, the fourth principle is once more an instrument in the hands of a master. With a medium entranced so that the energies of his fifth principle are conveyed into the wandering shell to a very large extent, the result is that there is a very tolerable revival of consciousness in the shell for the time being, as regards the given moment. But what is the nature of such consciousness, after all? Nothing more, really, than a reflected light. Memory is one thing, and perceptive faculties quite another. A madman may remember very clearly some portions of his past life; yet he is unable to perceive anything in its true light, for the higher portion of his Manas, fifth, and Buddhi, sixth principles, are paralyzed in him and have left him. Could an animal—a dog, for instance—explain himself, he could prove that his memory, in direct relation to his canine personality, is as fresh as his master's; nevertheless, his memory and instinct cannot be called perceptive faculties.

Once that a shell is in the aura of a medium, he will perceive, clearly enough, whatever he can perceive through the borrowed principles of the medium, and through organs in magnetic sympathy therewith; but this will not carry him beyond the range of the perceptive faculties of the medium, or of some one else present in the circle. Hence the often rational and sometimes highly intelligent answers he may give, and hence, also, his invariably complete oblivion of all things unknown to that medium or circle, or not found in the lower recollections of his late personality, galvanized afresh by the influences under which he is placed. The

shell of a highly intelligent, learned, but utterly unspiritual man, who died a natural death, will last longer than those of weaker temperament, and (the shadow of his own memory helping) he may deliver, through trance-speakers, orations of no contemptible kind. But these will never be found to relate to anything beyond the subjects he thought much and earnestly of during life, nor will any word ever fall from him indicating a real advance of knowledge.

It will easily be seen that a shell, drawn into the mediumistic current, and getting into *rapport* with the medium's fifth principle, is not by any means sure to be animated with a consciousness (even for what such consciousnesses are worth), identical with the personality of the dead person from whose higher principles it was shed. It is just as likely to reflect some quite different personality, caught from the suggestions of the medium's mind. In this personality it will perhaps remain and answer for a time; then some new current of thought, thrown into the minds of the people present, will find its echo in the fleeting impressions of the elementary, and his sense of identity will begin to waver; for a little while it flickers over two or three conjectures, and ends by going out altogether for a time. The shell is once more sleeping in the astral light, and may be unconsciously wafted in a few moments to the other ends of the earth.

Besides the ordinary elementary or shell of the kind just described, Kama loca is the abode of another class of astral entities, which must be taken into account if we desire to comprehend the various conditions under which human creatures may pass

from this life to others. So far we have been examining the normal course of events, when people die in a natural manner. But an abnormal death will lead to abnormal consequences. Thus, in the case of persons committing suicide, and in that of persons killed by sudden accident, results ensue which differ widely from those following natural deaths. A thoughtful consideration of such cases must show, indeed, that in a world governed by rule and law, by affinities working out their regular effects in that deliberate way which Nature favours, the case of a person dying a sudden death at a time when all his principles are firmly united, and ready to hold together for twenty, forty, or sixty years, whatever the natural remainder of his life would be, must surely be something different from that of a person who, by natural processes of decay, finds himself, when the vital machine stops, readily separable into his various principles, each prepared to travel their separate ways. Nature, always fertile in analogies, at once illustrates the idea by showing us a ripe and an unripe fruit. From out of the first the inner stone will come away as cleanly and easily as a hand from a glove, while from the unripe fruit the stone can only be torn with difficulty, half the pulp clinging to its surface. Now, in the case of the sudden accidental death or of the suicide, the stone has to be torn from the unripe fruit. There is no question here about the moral blame which may attach to the act of suicide. Probably, in the majority of cases, such moral blame does attach to it, but that is a question of Karma which will follow the person concerned into the

thirst for life at the unwholesome spring of mediumship. If they were of a very material sensual type in life, the enjoyments they will seek will be of a kind the indulgence of which in their disembodied state may readily be conceived even more prejudicial to their Karma than similar indulgences would have been in life. In such cases *facilis est descensus*. Cut off in the full flush of earthly passions which bind them to familiar scenes, they are enticed by the opportunity which mediums afford for the gratification of these vicariously. They become the incubi and succubi of mediæval writing, demons of thirst and gluttony, provoking their victims to crime. A brief essay on this subject, which I wrote last year, and from which I have reproduced some of the sentences just given, appeared in the *Theosophist*, with a note, the authenticity of which I have reason to trust, and the tenor of which was as follows:—

“The variety of states after death is greater if possible than the variety of human lives upon this earth. The victims of accident do not generally become earth walkers, only those falling into the current of attraction who die full of some engrossing earthly passion, the *selfish* who have never given a thought to the welfare of others. Overtaken by death in the consummation, whether real or imaginary, of some master passion of their lives, the desire remaining unsatisfied even after a full realization, and they still craving for more, such personalities can never pass beyond the earth attraction to wait for the hour of deliverance in

happy ignorance and full oblivion. Among the suicides, those to whom the above statement about provoking their victims to crime, &c. applies, are that class who commit the act in consequence of a crime to escape the penalty of human law or their own remorse. Natural law cannot be broken with impunity; the inexorable causal relation between action and result has its full sway only in the world of effects, the Kama loca, and every case is met there by an adequate punishment, and in a thousand ways, that would require volumes even to describe them superficially."

Those who "wait for the hour of deliverance in happy ignorance and full oblivion," are of course such victims of accident as have already on earth engendered pure and elevated affinities, and after death are as much beyond the reach of temptation in the shape of mediumistic currents as they would have been inaccessible in life to common incitements to crime.

Entities of another kind occasionally to be found in Kama loca have yet to be considered. We have followed the higher principles of persons recently dead, observing the separation of the astral dross from the spiritually durable portion, that spiritually durable portion being either holy or Satanic in its nature, and provided for in Devachan or Avitchi accordingly. We have examined the nature of the elementary shell cast off and preserving for a time a deceptive resemblance to a true entity; we have paid attention also to the exceptional cases of real four principled

beings in Kama loca who are the victims of accident or suicide. But what happens to a personality which has absolutely no atom of spirituality, no trace of spiritual affinity in its fifth principle, either of the good or bad sort? Clearly in such a case there is nothing for the sixth principle to attract to itself. Or, in other words, such a personality has already lost its sixth principle by the time death comes. But Kama loca is no more a sphere of existence for such a personality, than the subjective world ; Kama loca may be permanently inhabited by astral beings, by elementals, but can only be an antechamber to some other state for human beings. In the case imagined, the surviving personality is promptly drawn into the current of its future destinies, and these have nothing to do with this earth's atmosphere or with Devachan, but with that "eighth sphere" of which occasional mention will be found in older occult writings. It will have been unintelligible to ordinary readers hitherto why it was called the "eighth" sphere, but since the explanation, now given out for the first time, of the sevenfold constitution of our planetary system, the meaning will be clear enough. The spheres of the cyclic process of evolution are seven in number, but there is an eighth in connection with our earth, our earth being, it will be remembered, the turning-point in the cyclic chain, and this eighth sphere is out of circuit, a *cul de sac*, and the bourne from which it may be truly said no traveller returns.

It will readily be guessed that the only sphere

the threshold of a far more exalted spiritual state than that which we are now concerned with, and which is attained far later on in the progress of the vast cycles of evolution. Each one of the long series of lives that will have been passed through will then be, as it were, a page in a book to which the possessor can turn back at pleasure, even though many such pages will then seem to him most likely very dull reading, and will not be frequently referred to. It is this revival eventually of recollection concerning all the long forgotten personalities that is really meant by the doctrine of the Resurrection. But we have no time at present to stop and unravel the enigmas of symbolism as bearing upon the teachings at present under conveyance to the reader. It may be worth while to do this as a separate undertaking at a later period; but meanwhile, to revert to the narrative of how the facts stand, it may be explained that in the whole book of pages, when at last the "resurrection" has been accomplished, there will be no entirely infamous pages; for even if any given spiritual individuality has occasionally, during its passage through this world, been linked with personalities so deplorably and desperately degraded that they have passed completely into the attraction of the lower vortex, that spiritual individuality in such cases will have retained in its own affinities no trace or taint of them. Those pages will, as it were, have been cleanly torn out from the book. And, as at the end of the struggle, after crossing the Kama loca, the spiritual individuality will have

passed into the unconscious gestation state from which, skipping the Devachan state, it will be directly (though not immediately in time) re-born into its next life of objective activity, all the self-consciousness connected with that existence will have passed into the lower world, there eventually to “perish everlastingly;” an expression of which, as of so many more, modern theology has proved a faithless custodian, making pure nonsense out of psycho-scientific facts.

CHAPTER VII.

THE HUMAN TIDE-WAVE.

A GENERAL account has already been given of the way in which the great evolutionary life-wave sweeps round and round the seven worlds which compose the planetary chain of which our earth is a part. Further assistance may now be offered, with the view of expanding this general idea into a fuller comprehension of the processes to which it relates. And no one additional chapter of the great story will do more towards rendering its character intelligible, than an explanation of certain phenomena connected with the progress of worlds, that may be conveniently called obscurations.

Students of occult philosophy who enter on that pursuit with minds already abundantly furnished in other ways, are very liable to misinterpret its earlier statements. Everything cannot be said at once, and the first broad explanations are apt to suggest conceptions in regard to details which are most likely to be erroneous with the most active-minded and intelligent thinkers. Such readers are not content with shadowy outlines even for a moment. Imagination fills in the picture, and if its work is undisturbed for any length of time, the author of it will be surprised afterwards to find that later-

the kingdoms of Nature as known to occultists, be it remembered, are seven in number, three having to do with astral and elementary forces, preceding the grosser material kingdoms in the order of their development. Kingdom 1 evolves on globe A, and passes on to B, as kingdom 2 begins to evolve on A. Carry out this system and of course it will be seen that kingdom 1 is evolving on globe G, while kingdom 7, the human kingdom, is evolving on globe A. But now what happens as kingdom 7 passes on to globe B. There is no eighth kingdom to engage the activities of globe A. The great processes of evolution have culminated in the final tidal-wave of humanity, which, as it sweeps on, leaves a temporary lethargy of Nature behind. When the life-wave goes on to B, in fact, globe A passes for the time into a state of obscuration. This state is not one of decay, dissolution, or anything that can be properly called death. Decay itself, though its aspect is apt to mislead the mind, is a condition of activity in a certain direction, this consideration affording a clue to the meaning of a great deal which is otherwise meaningless, in that part of Hindu mythology which relates to the deities presiding over destruction. The obscuration of a world is a total suspension of its activity; this does not mean that the moment the last human monad passes on from any given world, that world is paralyzed by any convulsion, or subsides into the enchanted trance of a sleeping palace. The animal and vegetable life goes on as before, for a time, but its character begins to recede instead of advancing. The great life-wave has left

it, and the animal and vegetable kingdoms gradually return to the condition in which they were found when the great life-wave first reached them. Enormous periods of time are available for this slow process by which the obscured world settles into sleep, for it will be seen that obscuration in each case lasts six times* as long as the period of each world's occupation by the human life-wave. That is to say, the process which is accomplished as above described in connection with the passage of the life-wave from globe A to globe B, is repeated all along the chain. When the wave passes to C, B is left in obscuration as well as A. Then D receives the life-wave, and A, B, C, are in obscuration. When the wave reaches G, all the preceding six worlds are in obscuration. Meanwhile the life-wave passes on in a certain regular progression, the symmetrical character of which is very satisfactory to scientific instincts. The reader will be prepared to pick up the idea at once, in view of the explanations already given of the way in which humanity evolves through seven great races, during each round period on a planet—that is to say, during the occupation of such planet by the tidal wave of life. The fourth race is obviously the middle race of the series. As soon as this middle point is turned, and the evolution of the fifth race on any given planet begins, the preparation for humanity begins on the next. The evolution of the fifth race on E for example, is commensurate with the evolu-

* Or we may say five times, allowing for the half period of morning which precedes and the half period of evening which follows the day of full activity.

tion, or rather with the revival, of the mineral kingdom on D, and so on. That is to say, the evolution of the sixth race on D, coincides with the revival of the vegetable kingdom on E, the seventh race on D, with the revival of the animal kingdom on E, and then when the last monads of the seventh race on D have passed into the subjective state or world of effects, the human period on E begins, and the first race begins its development there. Meanwhile the twilight period on the world preceding D has been deepening into the night of obscuration in the same progressive way, and obscuration there definitely sets in when the human period on D passes its half-way point. But just as the heart of a man beats and respiration continues, no matter how profound his sleep, there are processes of vital action which go on in the resting world even during the most profound depths of its repose. And these preserve, in view of the next return of the human wave, the results of the evolution that preceded its first arrival. Recovery for the reawaking planet is a larger process than its subsidence into rest, for it has to attain a higher degree of perfection against the return of the human life-wave, than that at which it was left when the wave last went onward from its shore. But with every new beginning, Nature is infused with a vigour of its own—the freshness of a morning—and the later obscuration period, which is a time of preparation and hopefulness as it were, invests evolution itself with a new momentum. By the time the great life-wave returns, all is ready for its reception.

In the first essay on this subject it was roughly

The two planets of our chain that are behind Mars, and the two that are in advance of Mercury, are not composed of an order of matter which telescopes can take cognizance of. Four out of the seven are thus of an ethereal nature, which people who can only conceive matter in its earthly form will be inclined to call immaterial. But they are not really immaterial at all. They are simply in a finer state of materiality than the earth, but their finer state does not in any way defeat the uniformity of Nature's design in regard to the methods and stages of their evolution. Within the scale of their subtle "invisibility," the successive rounds and races of mankind pass through their stages of greater and less materiality just as on this earth; but whoever would comprehend them must comprehend this earth first, and work out their delicate phenomena by correspondential inferences. Let us return therefore to the consideration of the great life-wave in its aspects on this planet.

Just as the chain of worlds treated as a unity much in so far as the heat of planets has a great deal to do with another influence quite distinct from the Sun, an influence which will not be thoroughly understood till more is known than at present about the correlations of heat and magnetism, and of the magnetic, meteoric dust, with which inter-planetary space is pervaded. However it is enough—to rebut any objection that might be raised against the explanations now in progress, from the point of view of loyal devotees of last year's science—to point out that such objections would be already out of date. Modern science is very progressive,—this is one of its greatest merits,—but it is not a meritorious habit with modern scientists to think, at each stage of its progress, that all conceptions incompatible with that stage must necessarily be absurd.

has its north and south, its spiritual and material pole, working from spirituality down through materiality up to spirituality again, so the rounds of mankind constitute a similar series which the chain of globes itself might be taken to symbolize. In the evolution of man in fact, on any one plane as on all, there is a descending and an ascending arc; spirit, so to speak, involving itself into matter, and matter evolving itself into spirit. The lowest or most material point in the cycle thus becomes the inverted apex of physical intelligence, which is the masked manifestation of spiritual intelligence. Each round of mankind evolved on the downward arc (as each race of each round if we descend to the smaller mirror of the cosmos) must thus be more physically intelligent than its predecessor, and each in the upward arc must be invested with a more refined form of mentality commingled with greater spiritual intuitiveness. In the first round therefore we find man, a relatively ethereal being compared even on earth with the state he has now attained here, not intellectual, but super-spiritual. Like the animal and vegetable shapes around him, he inhabits an immense but loosely organized body. In the second round he is still gigantic and ethereal, but growing firmer and more condensed in body—a more physical man, but still, less intelligent than spiritual. In the third round he has developed a perfectly concrete and compacted body, at first the form rather of a giant ape than of a true man, but with intelligence coming more and more into the ascendant. In the last half of the third round his gigantic stature decreases, his body improves in

texture, and he begins to be a rational man. In the fourth round intellect, now fully developed, achieves enormous progress. The direct races with which the round begins, acquire human speech as we understand it. The world teems with the results of intellectual activity and spiritual decline. At the halfway point of the fourth round here the polar point of the whole seven-world period is passed. From this point outwards the spiritual Ego begins its real struggle with body and mind to manifest its transcendental powers. In the fifth round the struggle continues, but the transcendental faculties are largely developed, though the struggle between these on the one hand with physical intellect and propensity is fiercer than ever, for the intellect of the fifth round as well as its spirituality is an advance on that of the fourth. In the sixth round humanity attains a degree of perfection both of body and soul, of intellect and spirituality, which ordinary mortals of the present epoch will not readily realize in their imaginations. The most supreme combinations of wisdom, goodness, and transcendental enlightenment which the world has ever seen or thought of, will represent the ordinary type of manhood. Those faculties which now, in the rare efflorescence of a generation, enable some extraordinarily gifted persons to explore the mysteries of Nature and gather the knowledge of which some crumbs are now being offered (through these writings and in other ways) to the ordinary world, will then be the common appanage of all. As to what the seventh round will be like, the most communicative occult teachers are solemnly silent.

persons, few in relation to the total number, who, properly speaking, belong to the fifth round. Now, in the sense of the term at present employed, it must not be supposed that by any miraculous process, any individual unit has actually travelled round the whole chain of worlds once more often than his compeers. Under the explanations just given as to the way the tide-wave of humanity progresses, it will be seen that this is impossible. Humanity has not yet paid its fifth visit even to the planet next in advance of our own. But individual monads may outstrip their companions as regards their individual development, and so become exactly as mankind generally will be when the fifth round has been fully evolved. And this may be accomplished in two ways. A man born as an ordinary fourth round man, may, by processes of occult training, convert himself into a man having all the attributes of a fifth round man, and so become what we may call an artificial fifth rounder. But independently of all exertions made by man in his present incarnation, a man may also be born a fifth rounder, though in the midst of fourth round humanity, by virtue of the total number of his previous incarnations.

If x stands for the normal number of incarnations which in the course of Nature a monad must go through during a round period on one planet, and y for the margin of extra incarnations into which by a strong desire for physical life he may force himself during such a period, then, as a matter of fact, $24\frac{1}{2}(x + y)$ may exceed $28x$; that is to say, in $3\frac{1}{2}$ rounds a monad may have accomplished as

many incarnations as an ordinary monad would have accomplished in four complete rounds. In less than $3\frac{1}{2}$ rounds the result could not have been attained, so that it is only now that we have passed the halfway point of evolution on this halfway planet, that the fifth rounders are beginning to drop in.

It is not possible in the nature of things that a monad can do more than outstrip his companions by more than one round. This consideration, notwithstanding Buddha was a sixth round man, but this fact has to do with a great mystery outside the limits of the present calculation. Enough for the moment to say that the evolution of a Buddha has to do with something more than mere incarnations within the limits of one planetary chain.

Since large numbers of lives have been recognized in the above calculations as following one another in the successive incarnations of an individual monad, it is important here, with the view of averting misconceptions, to point out that the periods of time over which these incarnations range are so great, that vast intervals separate them, numerous as they are. As stated above, we cannot just now give the actual duration of the round periods. Nor, indeed, could any figures be quoted as indicating the duration of all round periods equally, for these vary in length within very wide limits. But here is a simple fact which has been definitely stated on the highest occult authority we are concerned with. The present *race* of humanity, the present fifth *race* of the fourth round period, began to evolve about one million of years ago.

Now it is not yet finished ; but supposing that a million years had constituted the complete life of the race,* how would it have been divided up for each individual monad ? In a race there must be rather more than 100, and there can hardly be 120 incarnations for an individual monad. But say even there have been already 120 incarnations for monads in the present race already. And say that the average life of each incarnation was a century, even then we should only have 12,000 years out of the million spent in physical existence against 988,000 years spent in the subjective sphere, or there would be an average of more than 8,000 years between each incarnation. Certainly these intervening periods are of very variable length, but they can hardly even contract to anything less than 1,500 years—leaving out of account of course the case of adepts who have placed themselves quite outside the operation of the ordinary law—and 1,500 years if not an impossibly short, would be a very brief interval between two rebirths.

These calculations must be qualified by one or two considerations, however. The cases of children dying in infancy are quite unlike those of persons who attain full maturity, and for obvious reasons, that the explanations now already given will sug-

* The complete life of a race is certainly much longer than this ; but when we get to figures of this kind we are on very delicate ground, for precise periods are very profound secrets, for reasons uninitiated students ("lay chelas," as the adepts now say, coining a new designation to meet a new condition of things) can only imperfectly divine. Calculations like those given above may be trusted literally as far as they go, but must not rashly be made the basis of others.

CHAPTER VIII.

THE PROGRESS OF HUMANITY.

THE course of Nature provides, as the reader will now have seen, for the indefinite progress towards higher phases of existence of all human entities. But no less will it have been seen that by endowing these entities, as they advance with ever-increasing faculties and by constantly enlarging the scope of their activity, Nature also furnishes each human entity with more and more decisive opportunities of choosing between good and evil. In the earlier rounds of humanity this privilege of selection is not fully developed, and responsibility of action is correspondingly incomplete. The earlier rounds of humanity, in fact, do not invest the Ego with spiritual responsibility at all in the larger sense of the term which we are now approaching. The Devachanic periods which follow each objective existence in turn, dispose fully of its merits and demerits, and the most deplorable personality which the ego during the first half of its evolution can possibly develope, is merely dropped out of the account as regards the larger undertaking, while the erring personality itself pays its relatively brief penalty, and troubles Nature no more. But the second half of the great evolutionary period is carried on on different principles. The phases of existence

which are now coming into view, cannot be entered upon by the ego without positive merits of its own appropriate to the new developments in prospect; it is not enough that the now fully responsible and highly gifted being which man becomes at the great turning-point in his career, should float idly on the stream of progress; he must begin to swim, if he wishes to push his way forward.

Debarred by the complexity of the subject from dealing with all its features simultaneously, our survey of Nature has so far contemplated the seven rounds of human development, which constitute the whole planetary undertaking with which we are concerned, as a continuous series throughout which it is the natural destiny of humanity in general to pass. But it will be remembered that humanity in the sixth round has been spoken of so highly developed that the sublime attributes and faculties of the highest adeptship are the common appanage of all; while in the seventh round the race has almost emerged from humanity into divinity. Now every human being in this stage of development will still be identified by an uninterrupted connection with all the personalities which have been strung upon that thread of life from the beginning of the great evolutionary process. Is it conceivable that the character of such personalities is of no consequence in the long-run, and that two God-like beings might stand side by side in the seventh round, developed, the one from a long series of blameless and serviceable existences, the other from an equally long series of evil and grovelling lives? That surely could not come to pass, and we have to ask now, how do we find

the congruities of Nature preserved compatibly with the appointed evolution of humanity to the higher forms of existence which crown the edifice?

Just as childhood is irresponsible for its acts, the earlier races of humanity are irresponsible for theirs ; but there comes the period of full growth, when the complete development of the faculties which enable the individual man to choose between good and evil, in the single life with which he is for the moment concerned, enable the continuous ego also to make its final selection. That period—that enormous period, for Nature is in no hurry to catch its creatures in a trap in such a matter as this—is barely yet beginning, and a complete round period around the seven worlds will have to be gone through before it is over. Until the middle of the fifth period is passed on this earth, the great question—to be or not to be for the future—is not irrevocably settled. We are coming now into the possession of the faculties which render man a fully responsible being, but we have yet to employ those faculties during the maturity of our ego-hood in the manner which shall determine the vast consequences hereafter.

It is during the first half of the fifth round that the struggle principally takes place. Till then, the ordinary course of life may be a good or a bad preparation for the struggle, but cannot fairly be described as the struggle itself. And now we have to examine the nature of the struggle, so far merely spoken of as the selection between good and evil. That is in no way an inaccurate, but it is an incomplete, definition.

*Fair usage policy applies

spirituality ; it has not been made acquainted with the range of the inner faculties of man ; it has merely groped blindly in the direction of a belief that such inner faculties existed ; and Kant himself, the greatest modern exponent of that idea, does little more than contend that there is such a faculty as intuition—if we only knew how to work with it.

The process of working with it, is occult science in its highest aspect, the cultivation of spirituality. The cultivation of mere power over the forces of Nature, the investigation of some of her subtler secrets as regards the inner principles controlling physical results, is occult science in its lowest aspect, and into that lower region of its activity mere physical science may, or even must, gradually run up. But the acquisition by mere intellect—physical science *in excelsis*—of privileges which are the proper appanage of spirituality,—is one of the dangers of that struggle which decides the ultimate destiny of the human ego. For there is one thing which intellectual processes do not help mankind to realize, and that is the nature and supreme excellence of spiritual existence. On the contrary, intellect arises out of physical causes—the perfection of the physical brain—and tends only to physical results, the perfection of material welfare. Although, as a concession to “weak brethren” and “religion,” on which it looks with good-humoured contempt, modern intellect does not condemn spirituality, it certainly treats the physical human life as the only serious business with which grave men, or even earnest philanthropists, can concern themselves. But obviously, if spiritual existence,

vivid subjective consciousness, really does go on for periods greater than the periods of intellectual physical existence in the ratio, as we have seen in discussing the Devachanic condition, of 80 to 1 at least, then surely man's subjective existence is more important than his physical existence and intellect in error, when all its efforts are bent on the amelioration of the physical existence.

These considerations show how the choice between good and evil—which has been made by the human ego in the course of the great struggle between intellect and spirituality—is not a mere choice between ideas so plainly contrasted as wickedness and virtue. It is not so rough a question as that—whether man be wicked or virtuous—which must really at the final critical turning-point decide whether he shall continue to live and develope into higher phases of existence, or cease to live altogether. The truth of the matter is (if it is not imprudent at this stage of our progress to brush the surface of a new mystery) that the question, to be or not to be, is not settled by reference to the question whether a man be wicked or virtuous *at all*. It will plainly be seen eventually that there must be evil spirituality as well as good spirituality. So that the great question of continued existence turns altogether and of necessity on the question of spirituality, as compared with physicality. The point is not so much “*shall* a man live, is he good enough to be permitted to live any longer,” as “*can* the man live any longer in the higher levels of existence into which humanity must at last evolve?” Has he qualified himself to live by the cultivation

of the durable portion of his nature? If not, he has got to the end of his tether. The destiny which must befall him is annihilation—not necessarily suffering in a conscious existence, but that dissolution that must befall the soul which has wholly assimilated itself to matter. Into the eighth sphere of pure matter that ego must descend, which is finally convicted of unfitness to go any further in the upward spiral path around the planetary chain.

It need not be hurriedly supposed that occult philosophy considers vice and virtue of no consequence to human spiritual destinies, because it does not discover in Nature that these characteristics determine ultimate progress in evolution. No system is so pitilessly inflexible in its morality as the system which occult philosophy explores and expounds. But that which vice and virtue of themselves determine, is happiness and misery, not the final problem of continued existence, beyond that immeasurably distant period, when in the progress of evolution man has got to begin being something more than man, and cannot go on along the path of progress with the help only of the relatively lower human attributes. It is true again that one can hardly imagine virtue in any decided degree to fail in engendering, in due time, the required higher attributes, but we should not be scientifically accurate in speaking of it as the cause of progress, in ultimate stages of elevation, though it may provoke the development of that which is the cause of progress.

This consideration—that ultimate progress is

direction of such proof all around us if we have but the patience to examine their true bearings. It is idle to say, in face, merely for one thing, of the phenomena of clairvoyance—crude and imperfect as those have been which have pushed themselves on the attention of the world—that there are no other avenues to consciousness but those of the five senses. Certainly in the ordinary world the clairvoyant faculty is an exceedingly rare one, but it indicates the existence in man of a potential faculty, the nature of which, as inferred from its slightest manifestations, must obviously be capable in its highest development of leading to a direct assimilation of knowledge independently of observation.

One of the most embarrassing difficulties that beset the present attempt to translate the esoteric doctrine into plain language, is due really to the fact, that spiritual perceptiveness, apart from all ordinary processes by which knowledge is acquired, is a great and grand possibility of human nature. It is by that method in the regular course of occult training that adepts impart instruction to their pupils. They awaken the dormant sense in the pupil, and through this they imbue his mind with a knowledge that such and such a doctrine is the real truth. The whole scheme of evolution, which the foregoing chapters have portrayed, infiltrates into the regular chela's mind by reason of the fact that he is made to see the process taking place by clairvoyant vision. There are no words used in his instruction at all. And adepts themselves to whom the facts and processes of Nature are familiar as

our five fingers to us, find it difficult to explain in a treatise which they cannot illustrate for us, by producing mental pictures in our dormant sixth sense, the complex anatomy of the planetary system.

Certainly it is not to be expected that mankind as yet should be generally conscious of possessing the sixth sense, for the day of its activity has not yet come. It has been already stated that each round in turn is devoted to the perfection in man of the corresponding principle in its numerical order, and to its preparation for assimilation with the next. The earlier rounds have been described as concerned with man in a shadowy, loosely organized, unintelligent form. The first principle of all, the body was developed, but it was merely growing used to vitality, and was unlike anything we can now picture to ourselves. The fourth round, in which we are now engaged, is the round in which the fourth principle, Will, Desire, is fully developed, and in which it is engaged in assimilating itself with the fifth principle, reason, intelligence. In the fifth round, the completely developed reason, intellect, or soul, in which the Ego then resides, must assimilate itself to the sixth principle, spirituality, or give up the business of existence altogether.

All readers of Buddhist literature are familiar with the constant references made there to the Arhat's union of his soul with God. This, in other words, is the premature development of his sixth principle. He forces himself right up through all the obstacles which impede such an operation in the

case of a fourth round man, into that stage of evolution which awaits the rest of humanity—or rather so much of humanity as may reach it in the ordinary course of Nature—in the latter part of the fifth round. And in doing this it will be observed he tides himself right over the great period of danger—the middle of the fifth round. That is the stupendous achievement of the adept as regards his own personal interests. He has reached the further shore of the sea in which so many of mankind will perish. He waits there in a contentment which people cannot even realize without some glimmerings of spirituality—of the sixth sense,—themselves for the arrival there of his future companions. He does not wait in his physical body, let me hasten to add to avoid misconception, but when at last *privileged to resign this*, in a spiritual condition, which it would be foolish to attempt to describe, while even the Devachanic states of ordinary humanity are themselves almost beyond the reach of imaginations untrained in spiritual science.

But, returning to the ordinary course of humanity and the growth into sixth round people of men and women, who do not become adepts at any premature stage of their career, it will be observed that this is the ordinary course of Nature in one sense of the expression, but so also is it the ordinary course of Nature for every grain of corn that is developed to fall into appropriate soil, and grow up into an ear of corn itself. All the same a great many grains do nothing of the sort, and a great many human Egos will never pass through the trials of

more than the ordinary brain has ever yet conceived of immortality. Every good deed and elevated impulse that every man or woman ever did or felt, must reverberate through æons of spiritual existence, whether the human entity concerned proves able or not to expand into the sublime and stupendous development of the seventh round. And it is out of the causes generated in one of our brief lives on earth, that exoteric speculation conceives itself capable of constructing eternal results! Out of such a seven or eight hundredth part of our objective life on earth during the present stay here of the evolutionary life-wave, we are to expect Nature to discern sufficient reason for deciding upon our whole subsequent career. In truth, Nature will make such a large return for a comparatively small expenditure of human will-power in the right direction, that, extravagant as the expectation just stated may appear, and extravagant as it is applied to ordinary lives, one brief existence may sometimes suffice to anticipate the growth of milliards of years. The adept may in the one earth-life* achieve so much advancement that his subsequent growth is certain, and merely a matter of time; but then the seed germ which produces an adept in our life, must be very perfect to begin with, and the early conditions of its growth favourable, and withal the effort on the part of the man himself, life-long and far more concentrated, more intense, more arduous, than it

* In practise, my impression is that this is rarely achieved in one earth-life; approached rather in two or three artificial incarnations.

is possible for the uninitiated outsider to realize. In ordinary cases, the life which is divided between material enjoyment and spiritual aspiration—however sincere and beautiful the latter—can only be productive of a correspondingly duplex result, of a spiritual reward in Devachan, of a new birth on earth. The manner in which the adept gets above the necessity of such a new birth, is perfectly scientific and simple be it observed, though it sounds like a theological mystery when expounded in exoteric writings by reference to Karma and Skandhas, Trishna, and Tanha, and so forth. The next earth-life is as much a consequence of affinities engendered by the fifth principle, the continuous human soul, as the Devachanic experiences which come first are the growth of the thoughts and aspirations of an elevated character, which the person concerned has created during life. That is to say, the affinities engendered in ordinary cases are partly material, partly spiritual. Therefore they start the soul on its entrance into the world of effects with a double set of attractions inhering in it, one set producing the subjective consequences of its Devachanic life, the other set asserting themselves at the close of that life, and carrying the soul back again into re-incarnation. But if the person during his objective life absolutely develops no affinities for material existence, starts his soul at death with all its attractions tending one way in the direction of spirituality, and none at all drawing it back to objective life, it does not come back; it mounts into a condition of spirituality, corresponding to the intensity of the attractions

or affinities in that direction, and the other thread of connection is cut off.

Now this explanation does not entirely cover the whole position, because the adept himself, no matter how high, does return to incarnation eventually, after the rest of mankind have passed across the great dividing period in the middle of the fifth round. Until the exaltation of Planetary Spirit-hood is reached, the highest human soul must have a certain affinity for earth still, though not the earth-life of physical enjoyments and passions that we are going through. But the important point to realize in regard to the spiritual consequences of earthly life is, that in so large a majority of cases, that the abnormal few need not be talked about, the sense of justice in regard to the destiny of good men is amply satisfied by the course of Nature step by step as time advances. The spirit-life is ever at hand to receive, refresh, and restore the soul after the struggles, achievements, or sufferings of incarnation. And more than this, reserving the question about eternity, Nature, in the intercylic periods at the apex of each round, provides for all mankind, except those unfortunate failures who have persistently adhered to the path of evil, great intervals of spiritual blessedness, far longer and more exalted in their character than the Devachanic periods of each separate life. Nature, in fact, is inconceivably liberal and patient to each and all her candidates for the final examination during their long preparation for this. Nor is one failure to pass even this final examination absolutely fatal. The failures may try again, if they are not utterly

pleteness of the whole evolutionary scheme may be perceived.

And with this last contingency provided for, the whole scheme does lie before the reader *in its main outlines* with tolerable completeness. We have seen the one life, the spirit, animating matter in its lowest forms first, and evoking growth by slow degrees into higher forms. Individualizing itself at last in man, it works up through inferior and irresponsible incarnations until it has penetrated the higher principles, and evolved a true human soul, which is thenceforth the master of its own fate, though guarded in the beginning by natural provisions which debar it from premature shipwreck, which stimulate and refresh it on its course. But the ultimate destiny offered to that soul is to develope not only into a being capable of taking care of itself, but into a being capable of taking care also of others, of presiding over and directing, within what may be called constitutional limits, the operations of Nature herself. Clearly before the soul can have earned the right to that promotion, it must have been tried by having conceded to it full control over its own affairs. That full control necessarily conveys the power to shipwreck itself. The safeguards put round the Ego in its youth—its inability to get into higher or lower states than those of intermundane Devachan and Avitchi—fall from it in its maturity. It is potent, then, over its own destinies, not only in regard to the development of transitory joy and suffering, but in regard to the stupendous opportunities in both directions which existence opens out before

it. It may seize on the higher opportunities in two ways ; it may throw up the struggle in two ways ; it may attain sublime spirituality for good or sublime spirituality for evil ; it may ally itself to physically for (not evil but for) utter annihilation ; or, on the other hand, for (not good but for) the negative result of beginning the educational processes of incarnation all over again.

CHAPTER IX.

BUDDHA.

THE historical Buddha, as known to the custodians of the Esoteric Doctrine, is a personage whose birth is not invested with the quaint marvels popular story has crowded round it. Nor was his progress to adeptship traced by the literal occurrence of the supernatural struggles depicted in symbolic legend. On the other hand, the incarnation, which may outwardly be described as the birth of Buddha, is certainly not regarded by occult science as an event like any other birth, nor the spiritual development through which Buddha passed during his earth-life, a mere process of intellectual evolution, like the mental history of any other philosopher. The mistake which ordinary European writers make in dealing with a problem of this sort, lies in their inclination to treat exoteric legend either as a record of a miracle about which no more need be said, or as pure myth, putting merely a fantastic decoration on a remarkable life. This, it is assumed, however remarkable, must have been lived according to the theories of Nature at present accepted by the nineteenth century. The account which has now been given in the foregoing pages, may prepare the way for a statement

the Devachanic attraction. He becomes one of the conscious directing powers of the planetary system to which he belongs, and great as this mystery of selected reincarnation may be, it is not by any means restricted in its application to such extraordinary events as the birth of a Buddha. It is a phenomenon frequently reproduced by the higher adepts to this day, and while a great deal recounted in popular Oriental mythology is either purely fictitious or entirely symbolical, the reincarnations of the Dalai and Teshu Lamas in Tibet, at which travellers only laugh for want of the knowledge that might enable them to sift fact from fancy, is a sober scientific achievement. In such cases the adept states beforehand in what child, when and where to be born, he is going to reincarnate, and he very rarely fails. We say very rarely, because there are some accidents of physical nature which cannot be entirely guarded against; and it is not absolutely certain that with all the foresight even an adept may bring to bear upon the matter, the child he may choose to become—in his reincarnated state—may attain physical maturity successfully. And, meanwhile, *in the body*, the adept is relatively helpless. Out of the body he is just what he has been ever since he became an adept; but as regards the new body he has chosen to inhabit, he must let it grow up in the ordinary course of Nature, and educate it by ordinary processes, and initiate it by the regular occult method into adeptship, before he has got a body fully ready again for occult work on the physical plane. All these processes are immensely simplified, it is true, by the peculiar spiritual force

working within; but at first, in the child's body, the adept soul is certainly cramped and embarrassed, and, as ordinary imagination might suggest, very uncomfortable and ill at ease. The situation would be very much misunderstood if the reader were to imagine that reincarnation of the kind described, is a privilege which adepts avail themselves of with pleasure.

Buddha's birth was a mystery of the kind described, and by the light of what has been said, it will be easy to go over the popular story of his miraculous origin, and trace the symbolic references to the facts of the situation in some even of the most grotesque fables. None for example can look less promising as an allusion to anything like a scientific fact, than the statement that Buddha entered the side of his mother as a young white elephant. But the white elephant is simply the symbol of adeptship—something considered to be a rare and beautiful specimen of its kind. So with other anti-natal legends pointing to the fact that the future child's body had been chosen as the habitation of a great spirit already endowed with superlative wisdom and goodness. Indra and Brahma came to do homage to the child at his birth—that is to say, the powers of Nature were already in submission to the Spirit within him. The thirty-two signs of a Buddha, which legends describe by means of a ludicrous physical symbolism, are merely the various powers of adeptship.

The selection of the body known as Siddhartha, and afterwards as Gautama, son of Suddhodana, of Kapila-Vastu, as the human tenement of the

enlightened human spirit, who had submitted to incarnation for the sake of teaching mankind, was *not* one of those rare failures spoken of above ; on the contrary, it was a signally successful choice in all respects, and nothing interfered with the accomplishment of adeptship by the Buddha in his new body. The popular narrative of his ascetic struggles and temptations, and of his final attainment of Buddhahood under the Bo-tree, is nothing more of course than the exoteric version of his initiation.

From that period onward, his work was of a dual nature ; he had to reform and revive the morals of the populace and the science of the adepts—for adeptship itself is subject to cyclic changes, and in need of periodical impulses. The explanation of this branch of the subject, in plain terms, will not alone be important for its own sake, but will be interesting to all students of exoteric Buddhism, as elucidating some of the puzzling complications of the more abstruse “Northern doctrine.”

A Buddha visits the earth for each of the seven races of the great planetary period. The Buddha with whom we are occupied was the fourth of the series, and that is why he stands fourth in the list quoted by Mr. Rhys Davids, from Burnouf,—quoted as an illustration of the way the Northern doctrine has been, as Mr. Davids supposes, inflated by metaphysical subtleties and absurdities crowded round the simple morality which sums up Buddhism as presented to the populace. The fifth, or Maitreya Buddha, will come after the final disappearance of the fifth race, and when the sixth

*Fair usage policy applies

the esoteric doctrine on a sufficient number of receptive minds, to ensure the continued reverberation of the ideas so implanted through successive generations of men in the millions of years to come, before the first race shall have completed its course. It is this advent in the beginning of the round period of a Divine Being in human form that starts the ineradicable conception of the anthropomorphic God in all exoteric religions.

The first Buddha of the series in which Gautama Buddha stands fourth, is thus the second incarnation of Avaloketiswara—the mystic name of the hosts of the Dhyan Chohans or Planetary Spirits belonging to our planetary chain—and though Gautama is thus the fourth incarnation of enlightenment by exoteric reckoning, he is really the fifth of the true series, and thus properly belonging to our fifth race.

Avaloketiswara, as just stated, is the mystic name of the hosts of the Dhyan Chohans; the proper meaning of the word is manifested wisdom, just as Addi-Buddha and Amitabha both mean abstract wisdom.

The doctrine, as quoted by Mr. Davids, that “every earthly mortal Buddha has his pure and glorious counterpart in the mystic world, free from the debasing conditions of this material life, or rather that the Buddha under material conditions is only an appearance, the reflection, or emanation, or type of a Dhyan Buddha” is perfectly correct; the number of Dhyan Buddhas or Dhyan Chohans, or planetary spirits, perfected human spirits of former world periods, is infinite, but only five are

practically identified in exoteric and seven in esoteric teaching, and this identification, be it remembered, is a manner of speaking which must not be interpreted too literally, for there is a unity in the sublime spirit-life in question that leaves no room for the isolation of individuality. All this will be seen to harmonize perfectly with the revelations concerning Nature embodied in previous chapters, and need not in any way be attributed to mystic imaginings. The Dhyani Buddhas, or Dhyan Chohans, are the perfected humanity of previous Manwantaric epochs, and their *collective intelligence* is described by the name "Addi-Buddha," which Mr. Rhys Davids is mistaken in treating as a comparatively recent invention of the Northern Buddhish. Addi-Buddha means primordial wisdom, and is mentioned in the oldest Sanscrit books. For example, in the philosophical dissertation on the "Mandukya Upanishad," by Gowdapatha, a Sanscrit author contemporary with Buddha himself, the expression is freely used and expounded in exact accordance with the present statement. A friend of mine in India, a Brahmin pundit of first-rate attainments as a Sanscrit scholar, has shown me a copy of this book, which has never yet, that he knows of, been translated into English, and has pointed out a sentence bearing on the present question, giving me the following translation: "Prakriti itself in fact, is Addi-Buddha, and all the Dharmas have been existing from eternity." Gowdapatha is a philosophical writer respected by all Hindoo and Buddhist sects alike, and widely known. He was the guru, or

spiritual teacher of the first Sankaracharya, of whom I shall have to speak more at length very shortly.

Adeptship, when Buddha incarnated, was not the condensed, compact hierarchy that it has since become under his influence. There has never been an age of the world without its adepts; but they have sometimes been scattered throughout the world, they have sometimes been isolated in separate seclusions, they have gravitated now to this country, now to that; and finally, be it remembered, their knowledge and power has not always been inspired with the elevated and severe morality which Buddha infused into its latest and highest organization. The reform of the occult world by his instrumentality was, in fact, the result of his great sacrifice, of the self-denial which induced him to reject the blessed condition of Nirvana to which, after his earth-life as Buddha, he was fully entitled, and undertake the burden of renewed incarnations in order to carry out more thoroughly the task he had taken in hand, and confer a correspondingly increased benefit on mankind. Buddha reincarnated himself, next after his existence as Gautama Buddha, in the person of the great teacher of whom but little is said in exoteric works on Buddhism, but without a consideration of whose life it would be impossible to get a correct conception of the position in the Eastern world of esoteric science—namely, Sankaracharya. The latter part of this name, it may be explained—acharya—merely means teacher. The whole name as a title is perpetuated to this day under curious circumstances, but the

*Fair usage policy applies

admitting all castes equally to the path of adeptship. The change may have been perfectly right in principle, but it paved the way for a great deal of trouble, and as the Brahmins conceived, for the degradation of occult knowledge itself—that is to say, its transfer to unworthy hands, not unworthy merely because of caste inferiority, but because of the moral inferiority which they conceived to be introduced into the occult fraternity, together with brothers of low birth. The Brahmin contention would not by any means be, that because a man should be a Brahmin, it followed that he was necessarily virtuous and trustworthy, but the argument would be : It is supremely necessary to keep out all but the virtuous and trustworthy from the secrets and powers of initiation. To that end it is necessary not only to set up all the ordeals, probations, and tests we can think of, but also to take no candidates except from the class which, on the whole, by reason of its hereditary advantages, is likely to be the best nursery of fit candidates.

Later experience is held on all hands now to have gone far towards vindicating the Brahmin apprehension, and the next incarnation of Buddha, after that in the person of Sankaracharya, was a practical admission of this ; but meanwhile, in the person of Sankaracharya, Buddha was engaged in smoothing over, beforehand, the sectarian strife in India which he saw impending. The active opposition of the Brahmins against Buddhism began in Asoka's time, when the great efforts made by that ruler to spread Buddhism provoked an apprehension on their part in reference to their social and

political ascendancy. It must be remembered that initiates are not wholly free in all cases from the prejudices of their own individualities. They possess *some* such god-like attributes that outsiders, when they first begin to understand something of these, are apt to divest them, in imagination, even too completely of human frailties. Initiation and occult knowledge held in common, is certainly a bond of union among adepts of all nationalities, which is far stronger than any other bond. But it has been found on more occasions than one to fail in obliterating all other distinctions. Thus the Buddhist and Brahmin initiates of the period referred to, were by no means of one mind on all questions, and the Brahmins very decidedly disapproved of the Buddhist reformation in its exoteric aspects. Chandragupta, Asoka's grandfather, was an upstart, and the family were Sudras. This was enough to render his Buddhist policy unattractive to the representatives of the orthodox Brahmin faith. The struggle assumed a very embittered form, though ordinary history gives us few or no particulars. The party of primitive Buddhism was entirely worsted, and the Brahmin ascendancy completely re-established in the time of Vikramaditya, about 80 B.C. But Sankaracharya had travelled all over India in advance of the great struggle, and had established various *mathams*, or schools of philosophy, in several important centres. He was only engaged in this task for a few years, but the influence of his teaching has been so stupendous that its very magnitude disguises the change wrought. He brought exoteric Hinduism

into practical harmony with the esoteric “wisdom religion,” and left the people amusing themselves still with their ancient mythologies, but leaning on philosophical guides who were esoteric Buddhists to all intents and purposes, though in reconciliation with all that was ineradicable in Brahmanism. The great fault of previous exoteric Hinduism lay in its attachment to vain ceremonial and its adhesion to idolatrous conceptions of the divinities of the Hindu pantheon. Sankaracharya emphasized, by his commentaries on the Upanishads, and by his original writings, the necessity of pursuing *gnyanam* in order to obtain *moksha*—that is to say, the importance of the secret knowledge to spiritual progress, and the consummation thereof. He was the founder of the Vedantin system—the proper meaning of Vedanta being the final end or crown of knowledge—though the sanctions of that system are derived by him from the writings of Vyasa, the author of the “Mahabharata,” the “Puranas,” and the “Brahmasutras.” I make these statements, the reader will understand, not on the basis of any researches of my own—which I am not Oriental scholar enough to attempt—but on the authority of a Brahmin initiate who is himself a first rate Sanscrit scholar as well as an occultist.

The Vedantin school at present is almost co-extensive with Hinduism, making allowance, of course, for the existence of some special sects like the Sikhs, the Vallabacharyas, or Maharajah sect, of very unfair fame, and may be divided into three great divisions—the Adwaites, the Vishista Adwaites, and the Dwaites. The outline of the

*Fair usage policy applies

increased emphasis, the duality of the human spirit and the highest principle of the universe, and including many ceremonial observances as an essential part of *Bhakti*.

But all these differences of view, it must be borne in mind, have to do merely with the exoteric variations on the fundamental idea, introduced by different teachers with varying impressions as to the capacity of the populace for assimilating transcendental ideas. All leaders of Vedantin thought look up to Sankaracharya and the Mathams he established with the greatest possible reverence, and their inner faith runs up in all cases into the one esoteric doctrine. In fact the initiates of all schools in India interlace with one another. Except as regards nomenclature, the whole system of cosmogony as held by the Buddhist-Arhats, and as set forth in this volume, is equally held by initiated Brahmins, and has been equally held by them since before Buddha's birth. Whence did they obtain it? the reader may ask. Their answer would be from the Planetary Spirit, or Dhyan Chohan, who first visited this planet at the dawn of the human race in the present round period—more millions of years ago than I like to mention on the basis of conjecture, while the real exact number is withheld.

Sankaracharya founded four principle Mathams, one at Sringeri, in Southern India, which has always remained the most important; one at Juggernath, in Orissa; one at Dwaraka, in Kathiawar; and one at Gungotri, on the slopes of the Himalayas in the North. The chief of the Sringeri temple has always borne the designation Sankaracharya, in

addition to some individual name. From these four centres others have been established, and Mathams now exist all over India, exercising the utmost possible influence on Hinduism.

I have said that Buddha, by his third incarnation, recognized the fact that he had, in the excessive confidence of his loving trust in the perfectibility of humanity, opened the doors of the occult sanctuary too widely. His third appearance was in the person of Tsong-ka-pa, the great Tibetan adept reformer of the fourteenth century. In this personality he was exclusively concerned with the affairs of the adept fraternity, by that time collecting chiefly in Tibet.

From time immemorial there had been a certain secret region in Tibet, which to this day is quite unknown to and unapproachable by any but initiated persons, and inaccessible to the ordinary people of the country as to any others, in which adepts have always congregated. But the country generally was not in Buddha's time, as it has since become, the chosen habitation of the great brotherhood. Much more than they are at present, were the Mahatmas in former times distributed about the world. The progress of civilization, engendering the magnetism they find so trying, had, however, by the date with which we are now dealing—the fourteenth century—already given rise to a very general movement towards Tibet on the part of the previously dissociated occultists. Far more widely than was held to be consistent with the safety of mankind, was occult knowledge and power then found to be disseminated. To the task of putting

it under the control of a rigid system of rule and law did Tsong-ka-pa address himself.

Without re-establishing the system on the previous unreasonable basis of caste exclusiveness, he elaborated a code of rules for the guidance of the adepts, the effect of which was to weed out of the occult body all but those who sought occult knowledge in a spirit of the most sublime devotion to the highest moral principles.

An article in the *Theosophist* for March, 1882, on "Re-incarnations in Tibet," for the complete trustworthiness of which in all its mystic bearings I have the highest assurance, gives a great deal of important information about the branch of the subject with which we are now engaged, and the relations between esoteric Buddhism and Tibet, which cannot be examined too closely by any one who desires an exhaustive comprehension of Buddhism in its real signification.

"The regular system," we read, "of the Lamaic incarnations of 'Sangyas' (or Buddha), began with Tsong-kha-pa. This reformer is not the incarnation of one of the five celestial Dhyanas or heavenly Buddhas, as is generally supposed, said to have been created by Sakya Muni after he had risen to Nirvana, but that of Amita, one of the Chinese names for Buddha. The records preserved in the Gon-pa (lamasery) of Tda-shi Hlum-po (spelt by the English *Teshu Lumbo*) show that Sangyas incarnated himself in Tsong-kha-pa, in consequence of the great degradation his doctrines had fallen into. Until then there had been no other incarnations than those of the five celestial Buddhas, and of

“The most important element in the Buddhist reform has always been its social and moral code, not its metaphysical theories. That moral code, taken by itself, is one of the most perfect which the world has ever known; and it was this blessing that the introduction of Buddhism brought into Tibet.”

“The blessing,” says the authoritative article in the *Theosophist*, from which I have just been quoting, “has remained and spread all over the country, there being no kinder, purer-minded, more simple, or sin-fearing nation than the Tibetans. But for all that, the popular lamaism, when compared with the real esoteric, or Arahat Buddhism of Tibet, offers a contrast as great as the snow trodden along a road in the valley, to the pure and undefiled mass which glitters on the top of a high mountain peak.”

The fact is that Ceylon is saturated with exoteric, and Tibet with esoteric, Buddhism. Ceylon concerns itself merely or mainly with the morals, Tibet, or rather the adepts of Tibet, with the science, of Buddhism.

These explanations constitute but a sketch of the whole position. I do not possess the arguments nor the literary leisure which would be required for its amplification into a finished picture of the relations which really subsist between the inner principles of Hinduism and those of Buddhism. And I am quite alive to the possibility that many learned and painstaking students of the subject will have formed, as the consequences of prolonged and erudite research, conclusions with which the explanations I am now enabled to give may seem at

first sight to conflict. But none the less are these explanations directly gathered from authorities to whom the subject is no less familiar in its scholarly than in its esoteric aspect. And their inner knowledge throws a light upon the whole position which wholly exempts them from the danger of misconstruing texts and mistaking the bearings of obscure symbology. To know when Gautama Buddha was born, what is recorded of his teaching, and what popular legends have gathered round his biography, is to know next to nothing of the real Buddha, so much greater than either the historical moral teacher, or the fantastic demi-god of tradition. And it is only when we have comprehended the link between Buddhism and Brahminism that the greatness of the esoteric doctrine rises into its true proportions.

CHAPTER X.

NIRVANA.

A COMPLETE assimilation of esoteric teaching up to the point we have now reached will enable us to approach the consideration of the subject which exoteric writers on Buddhism have generally treated as the doctrinal starting-point of that religion.

Hitherto, for want of any better method of seeking out the true meaning of Nirvana, Buddhist scholars have generally picked the word to pieces, and examined its roots and fragments. One might as hopefully seek to ascertain the smell of a flower by dissecting the paper on which its picture was painted. It is difficult for minds schooled in the intellectual processes of physical research—as all our Western nineteenth-century minds are, directly or indirectly—to comprehend the first spiritual state above this life, that of Devachan. Such conditions of existence are but partly for the understanding, a higher faculty must be employed to realize them, and all the more is it impossible to force their meaning upon another mind by words. It is by first awakening that higher faculty in his pupil, and then putting the pupil in a position to observe for himself, that the regular occult teacher proceeds in such a matter.

measurable vistas of the future, we must next conceive ourselves approaching the period which would correspond to the intercylic period of the seventh round of humanity, in which men have become as gods. The very last most elevated and glorious of the objective lives having been completed, the perfected spiritual being reaches a condition in which a complete recollection of all lives lived at any time in the past returns to him. He can look back over the curious masquerade of objective existences, as it will seem to him then, over the minutest details of any of these earth-lives among the number through which he has passed, and can take cognisance of them and of all things with which they were in any way associated, for in regard to this planetary chain he has reached omniscience. This supreme development of individuality is the great reward which Nature reserves not only for those who secure it prematurely, so to speak, by the relatively brief, but desperate and terrible struggles which lead to Adeptship, but also for all who by the distinct preponderance of good over evil in the character of the whole series of their incarnations, have passed through the valley of the shadow of death in the middle of the fifth round, and have worked their way up to it in the sixth and seventh rounds.

This sublimely blessed state is spoken of in esoteric science as the threshold of Nirvana.

Is it worth while to go any further in speculation as to what follows? One may be told that no state of individual consciousness, even though but a phase of feeling already identified in a large

measure with the general consciousness on that level of existence, can be equal in spiritual elevation to absolute consciousness in which all sense of individuality is merged in the whole. We may use such phrases as intellectual counters, but for no ordinary mind—dominated by its physical brain and brain-born intellect—can they have a living signification.

All that words can convey is that Nirvana is a sublime state of conscious rest in omniscience. It would be ludicrous, after all that has gone before, to turn to the various discussions which have been carried on by students of exoteric Buddhism as to whether Nirvana does or does not mean annihilation. Worldly similes fall short of indicating the feeling with which the graduates of esoteric science regard such a question. Does the last penalty of the law mean the highest honour of the peerage? Is a wooden spoon the emblem of the most illustrious pre-eminence in learning? Such questions as these but faintly symbolize the extravagance of the question whether Nirvana is held by Buddhism to be equivalent to annihilation. And in some, to us inconceivable, way the state of para-Nirvana is spoken of as immeasurably higher than that of Nirvana. I do not pretend myself to attach any meaning to the statement, but it may serve to show to what a very transcendental realm of thought the subject belongs.

A great deal of confusion of mind respecting Nirvana has arisen from statements made concerning Buddha. He is said to have attained Nirvana while on Earth; he is also said to have foregone

Nirvana in order to submit to renewed incarnations for the good of humanity. The two statements are quite reconcilable. As a *great* adept, Buddha naturally attained to that which is the great achievement of adeptship on earth,—the passing of his own Ego-spirit into the ineffable condition of Nirvana. Let it not be supposed that for any adept such a passage is one that can be lightly undertaken. Only stray hints about the nature of this great mystery have reached me, but putting these together I believe I am right in saying that the achievement in question is one which only some of the high initiates are qualified to attempt, which exacts a total suspension of animation in the body for periods of time compared to which the longest cataleptic trances known to ordinary science are insignificant; the protection of the physical frame from natural decay during this period by means which the resources of occult science are strained to accomplish, and withal it is a process involving a double risk to the continued earthly life of the person who undertakes it. One of these risks is the doubt whether when once Nirvana is attained the Ego will be willing to return. That the return will be a terrible effort and sacrifice is certain, and will only be prompted by the most devoted attachment, on the part of the spiritual traveller, to the idea of duty in its purest abstraction. The second great risk is that allowing the sense of duty to predominate over the temptation to stay, a temptation be it remembered that is not weakened by the notion that any conceivable penalty can attach to it—even then it is always doubtful whether the traveller will

humanity, is how to help as many people as possible across the great critical period of the fifth round.

Until that time everything is a mere preparation for the supreme struggle, in the estimation of an adept, all the more of a Buddha. The material welfare of the existing generation is not even as dust in the balance in such a calculation, the only thing of importance at present is, to cultivate those tendencies in mankind which may launch as many Egos as possible upon such a Karmic path that the growth of their spirituality in future births will be promoted. Certainly it is the fixed conviction of esoteric teachers—of the adept co-workers with Buddha—that the very process of cultivating such spirituality will immensely reduce the sum of even transitory human sorrow. And the happiness of mankind, even in any one generation only, is by no means a matter on which esoteric science looks with indifference. So the esoteric policy is not to be considered as something so hopelessly up in the air that it will never concern any of us who are living now. But there are seasons of good and bad harvest for wheat and barley, and so also for the desired growth of spirituality amongst men; and in Europe, at all events, going by the experience of former great races, at periods of development corresponding to that of our own now, the great present uprush of intelligence in the direction of physical and material progress, is not likely to bring on a season of good harvests for progress of the other kind. For the moment the best chance of doing good in coun-

tries where the uprush referred to is most marked, is held to lie in the possibility that the importance of spirituality may come to be perceived by intellect, even in advance of being felt, if the attention of that keen though unsympathetic tribunal can but be secured. Any success in that direction to which these explanations may conduce, will justify the views of those—but a minority—among the esoteric guardians of humanity who have conceived that it is worth while to have them made.

So Nirvana is truly the keynote of esoteric Buddhism, as of the hitherto rather misdirected studies of external scholars. The great end of the whole stupendous evolution of humanity, is to cultivate human souls so that they shall be ultimately fit for that as yet inconceivable condition. The great triumph of the present race of planetary spirits who have reached that condition themselves, will be to draw thither as many more Egos as possible. We are far as yet from the era at which we may be in serious danger of disqualifying ourselves definitively for such progress, but it is not too soon even now to begin the great process of qualification, all the more as the Karma which will propagate itself through successive lives in that direction, will carry its own reward with it, so that an enlightened pursuit of our highest interests, in the very remote future, will coincide with the pursuit of our immediate welfare in the next Devachanic period, and the next rebirth.

Will it be argued that if the cultivation of spirituality is the great purpose to be followed, it

matters little whether men pursue it along one religious pathway or another. This is the mistake which, as explained in a former chapter, Buddha as Sankaracharya set himself especially to combat—viz., the early Hindu belief that *moksha* can be attained by *bhakti* irrespective of *gnyanam*—that is, that salvation is obtainable by devout practices irrespective of knowledge of eternal truth. The sort of salvation we are talking about now, is not escape from a penalty to be achieved by cajoling a celestial potentate—it is a positive and not a negative achievement—the ascent into regions of spiritual elevation so exalted that the candidate aiming at them, is claiming that which we ordinarily describe as omniscience. Surely it is plain, from the way Nature habitually works, that under no circumstances will a time ever come when a person, merely by reason of having been good, will suddenly become wise. The supreme goodness *and wisdom* of the sixth round man, who once becoming that, will assimilate by degrees the attributes of divinity itself, can only be grown by degrees themselves, and goodness alone, associated as we so often find it with the most grotesque religious beliefs, cannot conduct a man to more than Devachanic periods of devout but unintelligent rapture, and in the end, if similar conditions are reproduced through many existences, to some painless extinction of individuality at the great crisis.

It is by a steady pursuit of, and desire for, real spiritual truth, not by an idle, however well-meaning acquiescence in the fashionable dogmas of the nearest church, that men launch their souls into

with the help of many words and much wrangling and disputation. But at all events it may be hunted, and, if it is not finally captured, the chase on the part of the hunters will have engendered instincts that will propagate themselves and lead to results hereafter.

CHAPTER XI.

THE UNIVERSE.

IN all Oriental literature bearing on the constitution of the cosmos, frequent reference is made to the days and the nights of Brahma; the inbreathings and the outbreathings of the creative principle, the periods of manvantara,* and the periods of pralaya. This idea runs into various Eastern mythologies, but in its symbolical aspects we need not follow it here. The process in Nature to which it refers is of course the alternate succession of activity and repose that is observable at every step of the great ascent from the infinitely small to the infinitely great. Man has a manvantara and pralaya every four-and-twenty hours, his periods of waking and sleeping; vegetation follows the same rule from year to year as it subsides and revives with the seasons. The world too has its manvantaras and pralayas, when the tide-wave of humanity approaches its shore, runs through the evolution of its seven races, and ebbs away again, and such a manvantara has been treated by most exoteric religions as the whole cycle of eternity.

The major manvantara of our planetary chain is that which comes to an end when the last Dhyan

* As transliterated into English, this word may be written either *manwantara* or *manvantara*; and the proper pronunciation is something between the two, with the accent on the second syllable.

Chohan of the seventh round of perfected humanity passes into Nirvana. And the expression has thus to be regarded as one of considerable elasticity. It may be said indeed to have infinite elasticity, and that is one explanation of the confusion which has reigned in all treatises on Eastern religions in their popular aspects. All the root-words transferred to popular literature from the secret doctrine have a seven-fold significance at least, for the initiate, while the uninitiated reader, naturally supposing that one word means one thing, and trying always to clear up its meaning by collating its various applications, and striking an average, gets into the most hopeless embarrassment.

The planetary chain with which we are concerned is not the only one which has our sun as its centre. As there are other planets besides the Earth in our chain, so there are other chains besides this in our solar system. There are seven such, and there comes a time when all these go into pralaya together. This is spoken of as a solar pralaya, and within the interval between two such pralayas, the vast solar manvantara covers seven pralayas and manvantaras of our—and each other—planetary chain. Thought is baffled, say even the adepts, in speculating as to how many of our solar pralayas must come before the great cosmic night in which the whole universe, in its collective enormity, obeys what is manifestly the universal law of activity and repose, and with all its myriad systems passes itself into pralaya. But even that tremendous result, says esoteric science, must surely come.

and to the day of the next evolution, they will rest in their lethargic sleep in space, until brought into life again at the new solar manvantara. The old elementals will rest till they are called on to become in their turn the bodies of mineral, vegetable, and animal entities on another and a higher chain of globes on their way to become human entities, while the germinal entities of the lowest forms—and at that time there will remain but few of such—will hang in space like drops of water suddenly turned into icicles. They will thaw at the first hot breath of the new solar manvantara, and form the soul of the future globes. The slow development of the vegetable kingdom, up to the period we are now dealing with, will have been provided for by the longer interplanetary rest of man. When the solar pralaya comes, the whole purified humanity merges into Nirvana, and from that intersolar Nirvana will be reborn in the higher systems. The strings of worlds are destroyed, and vanish like a shadow from the wall when the light is extinguished. “We have every indication,” say the adepts, “that at this very moment such a solar pralaya is taking place, while there are two minor ones ending somewhere.”

At the beginning of the solar manvantara the hitherto subjective elements of the material worlds, now scattered in cosmic dust, receiving their impulse from the new Dhyan Chohans of the new solar system (the highest of the old ones having gone higher) will form into primordial ripples of life, and separating into differentiating centres of activity, combine in a graduated scale of seven stages of evolution. Like every other orb of space, our earth

has, before obtaining its ultimate materiality, to pass through a gamut of seven stages of density. Nothing in this world now can give us an idea of what that ultimate stage of materiality is like. The French astronomer Flammarion, in a book called *La Resurrection et la Fin des Mondes*, has approached a conception of this ultimate materiality. The facts are, I am informed, with slight modifications, much as he surmises. In consequence of what he treats as secular refrigeration, but which more truly is old age and loss of vital power, the solidification and desiccation of the earth at last reaches a point when the whole globe becomes a relaxed conglomerate: Its period of child-bearing has gone by; its progeny are all nurtured; its term of life is finished. Hence its constituent masses cease to obey those laws of cohesion and aggregation which held them together. And becoming like a corpse, which abandoned to the work of destruction, leaves each molecule composing it free to separate itself from the body, and obey in future the sway of new influences, "the attraction of the moon," suggests M. Flammarion, "would itself undertake the task of demolition by producing a tidal wave of earth particles instead of an aqueous tide." This last idea must not be regarded as countenanced by occult science except so far as it may serve to illustrate the loss of molecular cohesion in the material of the earth.

Occult physics pass fairly into the region of metaphysics, if we seek to obtain some indication of the way in which evolution recommences after a universal pralaya.

The one eternal, imperishable thing in the universe which universal pralayas themselves pass over without destroying, is that which may be regarded indifferently as space, duration, matter or motion; not as something having these four attributes but as something which is these four things at once, and always. And evolution takes its rise in the atomic polarity which motion engenders. In cosmogony the positive and the negative, or the active and passive, forces correspond to the male and female principles. The spiritual efflux enters into the veil of cosmic matter; the active is attracted by the passive principle, and if we may here assist imagination by having recourse to old occult symbology—the great Nag—the serpent emblem of eternity, attracts its tail to its mouth, forming thereby the circle of eternity, or rather cycles in eternity. The one and chief attribute of the universal spiritual principle, the unconscious but ever active life giver is to expand and shed; that of the universal material principle is to gather in and fecundate. Unconscious and non-existing when separate, they become consciousness and life when brought together. The word Brahma comes from the Sanscrit root *brih*, to expand, grow, or fructify, esoteric cosmogony being but the vivifying expansive force of Nature in its eternal evolution. No one expression can have contributed more to mislead the human mind in basic speculation concerning the origin of things than the word “creation.” Talk of creation and we are continually butting against the facts. But once realize that our planet and ourselves are no

Dhyan Chohans, the perfected humanity of the last preceding manvantara. These Dhyan Chohans, or Planetary Spirits, on whose nature it is almost fruitless to ponder until one can at least realize the nature of disembodied existence in one's own case, impart to the reawakening worlds at the end of a planetary chain pralaya, such impulses that evolution feels them throughout its whole progress. The limits of Nature's great law restrain their action. They cannot say, let there be paradise throughout space, let all men be born supremely wise and good; they can only work through the principle of evolution, and they cannot deny to any man who is to be invested with the potentiality of development himself into a Dhyan Chohan, the right to do evil if he prefers that to good. Nor can they prevent evil, if done, from producing suffering. Objective life is the soil in which the life-germs are planted; spiritual existence (the expression being used, remember, in contrast merely to grossly material existence) is the flower to be ultimately obtained. But the human germ is something more than a flower-seed; it has liberty of choice in regard to growing up or growing down, and it could not be developed without such liberty being exercised by the plant. This is the necessity of evil. But within the limits that logical necessity prescribes, the Dhyan Chohan impresses his conceptions upon the evolutionary tide, and comprehends the origin of all that he beholds.

Surely as we ponder in this way over the magnitude of the cyclic evolution with which esoteric

science is in this way engaged, it seems reasonable to postpone considerations as to the origin of the whole cosmos. The ordinary man in this earth-life, with certainly some hundred many earth-lives to come, and then very much many important inter-incarnation periods (more important, that is, as regards duration and the prospect of happiness or sorrow) also in prospect, may surely be most wisely occupied with the inquiries whose issue will affect practical results, than with speculation in which he is practically quite uninterested. Of course, from the point of view of religious speculation resting on no positive knowledge of anything beyond this life, nothing can be more important or more highly practical than conjectures as to the attributes and probable intentions of the personal, terrible Jehovah pictured as an omnipotent tribunal into whose presence the soul at its death is to be introduced for judgment. But scientific knowledge of spiritual things throws back the day of judgment into a very dim perspective, the intervening period being filled with activity of all kinds. Moreover, it shows mankind that certainly, for millions and millions of centuries to come, it will not be confronted with any judge at all, other than that all pervading judge, that Seventh Principle, or Universal Spirit which exists everywhere, and, operating on matter, provokes the existence of man himself, and the world in which he lives, and the future conditions towards which he is pressing. The Seventh Principle, undefinable, incomprehensible for us at our present stage of enlightenment, is of course, the only God recognized by

esoteric knowledge, and no personification of this can be otherwise than symbolical.

And yet in truth, esoteric knowledge, giving life and reality to ancient symbolism in one direction, as often as it conflicts with modern dogma in the other, shows us how far from absolutely fabulous are even the most anthropomorphic notions of Deity associated by exoteric tradition with the beginning of the world. The Planetary Spirit, actually incarnated among men in the first round, was the prototype of personal deity in all subsequent developments of the idea. The mistake made by uninstructed men in dealing with the idea is merely one of degree. The personal God of an insignificant minor manvantara has been taken for the creator of the whole cosmos, a most natural mistake for people forced, by knowing no more of human destiny than was included in one objective incarnation, to suppose that all beyond was a homogenous spiritual future. The God of this life, of course, for them, was the God of all lives and worlds and periods.

The reader will not misunderstand me, I trust, to mean that esoteric science regards the Planetary Spirit of the first round as a god. As I say, it is concerned with the working of Nature in an immeasurable space, from an immeasurable past, and all through immeasurable future. The enormous areas of time and space in which our solar system operates is explorable by the mortal adepts of esoteric science. Within those limits they know all that takes place, and how it takes place, and they know that every thing is accounted for by the constructive will of the

evolved a human soul. It does not follow that the plants and animals around us have any principle evolved in them as yet which will assume a human form in the course of the present manvantara; but though the course of an incomplete evolution may be suspended by a period of natural repose, it is not rendered abortive. Eventually every spiritual monad—itsself a sinless unconscious principle, will work through conscious forms on lower levels, until these, throwing off one after another higher and higher forms, will produce that in which the God-like consciousness may be fully evoked. Certainly it is not by reason of the grandeur of any human conceptions as to what would be an adequate reason for the existence of the universe, that such a consummation can appear an insufficient purpose, not even if the final destiny of the planetary spirit himself, after periods to which his development from the mineral forms of primæval worlds is but a childhood in the recollection of the man, is to merge his glorified individuality into that sum total of all consciousness, which esoteric metaphysics treat as absolute consciousness, which is non-consciousness. These paradoxical expressions are simply counters representing ideas that the human mind is not qualified to apprehend, and it is waste of time to haggle over them.

These considerations supply the key to esoteric Buddhism, a more direct outcome of the universal esoteric doctrine than any other popular religion, for the effort in its construction has been to make men love virtue for its own sake and for its good effect on their future incarnations, not to keep them in

subjection to any priestly system or dogma by terrifying their fancy with the doctrine of a personal judge waiting to try them for more than their lives at their death. Mr. Lillie is mistaken, admirable as his intention has been, and sympathetic as his mind evidently is with the beautiful morality and aspiration of Buddhism, in deducing from its Temple ritual the notion of a Personal God. No such conception enters into the great esoteric doctrine of Nature, of which this volume has furnished an imperfect sketch. Nor even in reference to the farthest regions of the immensity beyond our own planetary system, does the adept exponent of the esoteric doctrine tolerate the adoption of an agnostic attitude. It will not suffice for him to say—"as far as the elevated senses of planetary spirits, whose cognition extends to the outermost limits of the starry heavens—as far as their vision can extend Nature is self-sufficing; as to what may lie beyond we offer no hypothesis." What the adept really says on this head is, "The universe is boundless, and it is a stultification of thought to talk of any hypothesis setting in beyond the boundless—on the other side of the limits of the limitless."

That which antedates every manifestation of the universe, and would lie beyond the limit of manifestation, if such limits could ever be found, is that which underlies the manifested universe within our own purview—matter animated by motion, its Parabrahm or Spirit. Matter, space, motion, and duration, constitute one and the same eternal substance of the universe. There is nothing

else eternal absolutely. That is the first state of matter, itself perfectly uncognizable by physical senses, which deal with manifested matter, another state altogether. But though thus in one sense of the word materialistic, the esoteric doctrine, as any reader of the foregoing explanations will have seen, is as far from resembling the gross narrow-minded conception of Nature, which ordinarily goes by the name of Materialism, as the North Pole looks away from the South. It stoops to Materialism, as it were, to link its methods with the logic of that system, and ascends to the highest realms of idealism to embrace and expound the most exalted aspirations of Spirit. As it cannot be too frequently or earnestly repeated—it is the union of Science with Religion—the bridge by which the most acute and cautious pursuers of experimental knowledge may cross over to the most enthusiastic devotee, by means of which the most enthusiastic devotee may return to Earth and yet keep Heaven still around him.

*Fair usage policy applies

thus remained incapable of reconciliation with some of their own most obvious consequences. The omniscience of a personal Creator ranging over the future as well as the past, left man no room to exercise the independent authority over his own destinies, which nevertheless it was absolutely necessary to allow him to exercise in order that the policy of punishing or rewarding him for his acts in life could be recognized as anything but the most grotesque injustice. One great English philosopher, frankly facing the embarrassment, declared in a famous posthumous essay, that by reason of these considerations, it was impossible that God could be all-good *and* all-potent. People were free to invest him logically with one or other of these attributes, but not with both. The argument was treated with the respect due to the great reputation of its author, and put aside with the discretion due to respect for orthodox tenets.

But the esoteric doctrine comes to our rescue in this emergency. First of all it honestly takes into account the insignificant size of this world compared to the universe. This is a fact of Nature, which the early Christian church feared with a true instinct, and treated with the cruelty of terror. The truth was denied, and its authors were tortured for many centuries. Established at last beyond even the authority of papal negations, the Church resorted to the "desperate expedient," to quote Mr. Rhys David's phrase, of pretending that it did not matter.

The pretence till now has been more successful than its authors could have hoped. When they

dreaded astronomical discovery, they were crediting the world at large with more remorseless logic than it ultimately showed any inclination to employ. People have been found willing as a rule to do that which I have described Esoteric Buddhism as not requiring us to do, to keep their science and their religion in separate watertight compartments. So long and so thoroughly has this principle been worked upon, that it has finally ceased to be an argument against the credibility of a religious dogma to point out that it is impossible. But when we establish a connection between our hitherto divided reservoirs and require them to stand at the same level, we cannot fail to see how the insignificance of the earth's magnitude diminishes in a corresponding proportion the plausibility of theories that require us to regard the details of our own lives as part of the general stock of a universal Creator's omniscience. On the contrary, it is unreasonable to suppose that the creatures inhabiting one of the smaller planets of one of the smaller suns in the ocean of the universe, where suns are but water-drops in the sea, are exempt in any way from the general principle of government by law. But that principle cannot co-exist with government by caprice, which is an essential condition of such predestination as conventional discussions of the problems before us associate with the use of the word. For, be it observed that the predestination which conflicts with free-will, is not the predestination of races, but individual predestination, associated with the ideas of divine grace or wrath. The predestination of races, under laws analogous to those which control the

general tendency of any multitude of independent chances, is perfectly compatible with individual free will, and thus it is that the esoteric doctrine reconciles the long-standing contradiction of Nature. Man has control over his own destiny within constitutional limits, so to speak; he is perfectly free to make use of his natural rights as far as they go, and they go practically to infinity as far as he, the individual unit, is concerned. But the average human action, under given conditions, taking a vast multiplicity of units into account, provides for the unfailing evolution of the cycles which constitute their collective destiny.

Individual predestination, it is true, may be asserted, not as a religious dogma having to do with divine grace or wrath, but on purely metaphysical grounds—that is to say, it may be argued that each human creature is fundamentally, in infancy, subject to the same influence by similar circumstances, and that an adult life is thus merely the product or impression of all the circumstances which have influenced such a life from the beginning, so that if those circumstances were known, the moral and intellectual result would be known. By this train of reasoning it can be made to appear that the circumstances of each man's life may be theoretically knowable by a sufficiently searching intelligence; that hereditary tendencies, for example, are but products of antecedent circumstances entering into any given calculation as a perturbation, but not the less calculable on that account. This contention, however, is no less in direct conflict with the consciousness of humanity, than the religious dogma of individual

what a gardener can do with dahlias on a small one ; he can evolve considerable improvements in form and colour, but his flowers, however carefully tended, will be dahlias still.

Is it nothing, one may ask in passing, in support of the acceptability of the esoteric doctrine, that natural analogies support it at every turn ? As it is below so it is above, wrote the early occult philosophers, the microcosm is a mirror of the macrocosm. All Nature lying within the sphere of our physical observation verifies the rule, so far as that limited area can exhibit any principles. The structure of lower animals is reproduced with modifications in higher animals, and in Man ; the fine fibres of the leaf ramify like the branches of the tree, and the microscope follows such ramifications, repeated beyond the range of the naked eye. The dust-laden currents of rain-water by the roadside deposit therein “ sedimentary rocks ” in the puddles they develope, just as the rivers do in the lakes and the great waters of the world over the sea-bed. The geological work of a pond and that of an ocean differ merely in their scale, and it is only in scale that the esoteric doctrine shows the sublimest laws of Nature differing, in their jurisdiction over the man and their jurisdiction over the planetary family. As the children of each human generation are tended in infancy by their parents, and grow up to tend another generation in their turn, so in the whole humanity of the great manvantaric periods, the men of one generation, grow to be the Dhyan Chohans of the next, and then yield their places in the ultimate progress of time to their

descendants and pass themselves to higher conditions of existence.

Not less decisively than it answers the question about free-will, does the esoteric doctrine deal with the existence of evil. This subject has been discussed in its place in the preceding chapter on the Progress of Humanity, but the esoteric doctrine, it will be seen, grapples with the great problem more closely than by the mere enunciation of the way human free-will, which it is the purpose of Nature to grow, and cultivate into Dhyan Chohanship, must by the hypothesis be free to develop evil itself if it likes. So much for the broad principle in operation, but the way it works is traceable in the present teaching as clearly as the principle itself. It works through physical Karma, and could not but work that way except by a suspension of the invariable law that causes cannot but produce effects. The objective man born into the physical world is just as much the creation of the person he last animated as the subjective man who has in the interim been living the Devachanic existence. The evil that men do lives after them, in a more literal sense even than Shakespeare intended by those words. It may be asked how can the moral guilt of a man in one life cause him to be born blind or crippled at a different period of the world's history several thousand years later, of parents with whom he has had, through his former life, no lack of physical connexion whatever. But the difficulty is met by considering the operation of affinities more easily than may be imagined at the first glance. The blind or crippled child, as

regards his physical frame, may have been the potentiality rather than the product of local circumstances. But he would not have come into existence unless there had been a spiritual monad pressing forward for incarnation and bearing with it a fifth principle (so much of a fifth principle as is persistent, of course) precisely adapted by its Karma to inhabit that potential body. Given these circumstances and the imperfectly organized child is conceived and brought into the world to be a cause of trouble to himself and others—an effect becoming a cause in its turn—and a living enigma for philosophers endeavouring to explain the origin of evil.

The same explanation applies with modifications to a vast range of cases that might be cited to illustrate the problem of evil in the world. Incidentally, moreover, it covers a question connected with the operation of the Karmic law that can hardly be called a difficulty, as the answer would probably be suggested by the bearings of the doctrine itself, but is none the less entitled to notice. The selective assimilation of Karma laden spirits with parentage which corresponds to their necessities or deserts, is the obvious explanation which reconciles rebirth with atavism and heredity. The child born may seem to reproduce the moral and mental peculiarities of parents or ancestors as well as their physical likeness, and the fact suggests the notion that his soul is as much an offshoot of the family tree as his physical frame. It is unnecessary to enlarge here on the multifarious embarrassments by which that theory would be

means earned that penalty, and so with a great variety of accidents. But of these all that need be said is that Nature is not at all embarrassed by her accidents ; she has ample time to repair them. The undeserved suffering of one life is amply redressed under the operation of the Karmic law in the next, or the next. There is plenty of time for making the account even, and the adepts declare, I believe, that, as a matter-of-fact, in the long run undeserved suffering operates as good luck rather than otherwise, thereby deriving from a purely scientific observation of facts a doctrine which religion has benevolently invented sometimes for the consolation of the afflicted.

While the esoteric doctrine affords in this way an unexpected solution of the most perplexing phenomena of life, it does this at no sacrifice in any direction of the attributes we may fairly expect of a true religious science. Foremost among the claims we may make on such a system is that it shall contemplate no injustice, either in the direction of wrong done to the undeserving, or of benefits bestowed on the undeserving; and the justice of its operation must be discernible in great things and small alike. The legal maxim, *de minimis non curat lex*, is means of escape for human fallibility from the consequences of its own imperfections. There is no such thing as indifference to small things in chemistry or mechanics. Nature in physical operations responds with exactitude to small causes as certainly as to great, and we may feel instinctively sure that in her spiritual operations also she has no clumsy habit of treating trifles as of no con-

sequence, of ignoring small debts in consideration of paying big ones, like a trader of doubtful integrity content to respect obligations which are serious enough to be enforced by law. Now the minor acts of life, good and bad alike are of necessity ignored under any system which makes the final question at stake, admission to or exclusion from a uniform or approximately uniform condition of blessedness. Even as regards that merit and demerit which is solely concerned with spiritual consequences, no accurate response could be made by Nature except by means of that infinitely graduated condition of spiritual existence described by the esoteric doctrine as the Devachanic state. But the complexity to be dealt with is more serious than even the various conditions of Devachanic existence can meet. No system of consequences ensuing to mankind after the life now under observation, can be recognized as adapted scientifically to the emergency, unless it responds to the sense of justice, in regard to the multifarious acts and habits of life generally, including those which merely relate to physical existence, and are not deeply coloured by right or wrong.

Now, it is only by a return to physical existence that people can possibly be conceived to reap with precise accuracy the harvest of the minor causes they may have generated, when last in objective life. Thus, on a careful examination of the matter the Karmic law, so unattractive to Buddhist students, hitherto, in its exoteric shape, and no wonder, will be seen not only to reconcile itself to the sense of justice, but to constitute the only

imaginable method of natural action that would do this. The continued individuality running through successive Karmic rebirths once realized, and the corresponding chain of spiritual existences intercalated between each, borne in mind, the exquisite symmetry of the whole system is in no way impaired by that feature which seems obnoxious to criticism at the first glance,—the successive baths of oblivion, through which the reincarnating spirit has to pass. On the contrary, that oblivion itself is in truth the only condition on which objective life could fairly be started afresh. Few earth-lives are entirely free from shadows, the recollection of which would darken a renewed lease of life for the former personality. And if it is alleged that the forgetfulness in each life of the last involves waste of experience and effort, and intellectual acquirements, painfully or laboriously obtained, that objection can only be raised in forgetfulness of the Devachanic life in which, far from being wasted, such efforts and acquirements are the seeds from which the whole magnificent harvest of spiritual results will be raised. In the same way the longer the esoteric doctrine occupies the mind the more clearly it is seen that every objection brought against it meets with a ready reply, and only seems an objection from the point of view of imperfect knowledge.

Passing from abstract considerations to others partly interwoven with practical matters, we may compare the esoteric doctrine with the observable facts of Nature in several ways with the view of directly checking its teachings. A spiritual science

still a little shy in its relations with dogma, from the mere force of habit. In that way geology has been content to say, such and continents, as their shell-beds testify, must have been more than once submerged below and elevated above the surface of the ocean. It has not yet grown used to the free application of its own materials, to speculation which trenches upon religious territory. But surely if geology were required to interpret all its facts into a consistent history of the earth, throwing in the most plausible hypotheses it could invent to fill up gaps in its knowledge, it would already construct a history for mankind, which in its broad outlines would not be unlike that sketched out in the chapter on the Great World Periods; and the further geological discovery progresses, our esoteric teachers assure us, the more closely will the correspondence of the doctrine and the bony traces of the past be recognized. Already we find experts from the *Challenger* vouching for the existence of Atlantis, though the subject belongs to a class of problems unattractive to the scientific world generally, so that the considerations in favour of the lost continent are not yet generally appreciated. Already thoughtful geologists are quite ready to recognize that in regard to the forces which have fashioned the earth, this, the period within the range of historic traces, may be a period of comparative inertia and slow change; that cataclysmal metamorphoses may have been added formerly to those of gradual subsidence, upheaval, and denudation. It is only a step or two to the recognition as a fact, of what no one could any longer find fault with as a

hypothesis, that great continental upheavals and submergences take place alternately ; that the whole map of the world is not only thrown occasionally into new shapes, like the pictures of a kaleidoscope as its coloured fragments fall into new arrangements, but subject to systematically recurrent changes, which restore former arrangements at enormous intervals of time.

Pending further discoveries, however, it will, perhaps, be admitted that we have a sufficient block of geological knowledge already in our possession to fortify the cosmogony of the esoteric doctrine. That the doctrine should have been withheld from the world generally as long as no such knowledge had paved the way for its reception, can hardly be considered indiscreet for the part of its custodians. Whether the present generation will attach sufficient importance to its correspondence with what has been ascertained of Nature in other ways, remains to be seen.

These correspondences may, of course, be traced in biology as decisively as in geology. The broad Darwinian theory of the Descent of Man from the animal kingdom, is not the only support afforded by this branch of science to the esoteric doctrine. The detailed observations now carried out in embryology are especially interesting for the light they throw on more than one department of this doctrine. Thus the now familiar truth that the successive stages of ante-natal human development correspond to the progress of human evolution through different forms of animal life, is nothing less than a revelation, in its analogical bearings.

It does not merely fortify the evolutionary hypothesis itself, it affords a remarkable illustration of the way Nature works in the evolution of new races of men at the beginning of the great round periods. When a child has to be developed from a germ which is so simple in its constitution that it is typical less of the animal—less even of the vegetable—than of the mineral kingdom, the familiar scale of evolution is run over, so to speak, with a rapid touch. The ideas of progress which may have taken countless ages to work out in a connected chain for the first time, are once for all firmly lodged in Nature's memory, and thenceforth they can be quickly recalled in order, in a few months. So with the new evolution of humanity on each planet as the human tide-wave of life advances. In the first round the process is exceedingly slow, and does not advance far. The ideas of Nature are themselves under evolution. But when the process has been accomplished once it can be quickly repeated. In the later rounds, the life impulse runs up the gamut of evolution with a facility only conceivable by help of the illustration which embryology affords. This is the explanation of the way the character of each round differs from its predecessor. The evolutionary work which has been once accomplished is soon repeated; then the round performs its own evolution at a very different rate, as the child, once perfected up to the human type, performs its own individual growth but slowly, in proportion to the earlier stages of its initial development.

No elaborate comparison of exoteric Buddhism

religious system that ever publicly employed itself on the problem of the origin of all things, has, as will now be seen, done more than scratch the surface of that speculation, in comparison with the exhaustive researches of the esoteric science of which Buddha was no less prominent an exponent than he was a prominent teacher of morals for the populace.

The positive conclusions as to what Buddhism does teach—carefully as he has worked them out—are no less inaccurately set forth by Mr. Rhys Davids than the negative conclusion just quoted. It was inevitable that all such conclusions should hitherto be inaccurate. I quote an example, not to disparage the careful study of which it is the fruit, but to show how the light now shed over the whole subject penetrates every cranny and puts an entirely new complexion on all its features.

“Buddhism takes as its ultimate fact the existence of the material world, and of conscious beings living within it; and it holds that everything is subject to the law of cause and effect, and that everything is constantly, though imperceptibly, changing. There is no place where this law does not operate; no heaven or hell therefore in the ordinary sense. There are worlds where angels live whose existence is more or less material according as their previous lives were more or less holy; but the angels die, and the worlds they inhabit pass away. There are places of torment where the evil actions of men or angels produce unhappy beings; but when the active power of the evil that produced them is exhausted, they will vanish and the worlds they inhabit are not eternal.

The whole Kosmos—earth, and heavens, and hells—is always tending to renovation or destruction, is always in a course of change, a series of revolutions or of cycles, of which the beginning and the end alike are unknowable and unknown. To this universal law of composition and dissolution, men and gods form no exception; the unity of forces which constitutes a sentient being must sooner or later be dissolved, and it is only through ignorance and delusion that such a being indulges in the dream that it is a separable and self-existent entity.”

Now certainly this passage might be taken to show how the popular notions of Buddhist philosophy are manifestly thrown off from the real esoteric philosophy. Most assuredly that philosophy no more finds in the universe than in the belief of any truly enlightened thinker,—Asiatic or European,—the unchangeable and eternal heaven and hell of monkish legend; and “the worlds where angels live,” and so on,—the vividly real though subjective strata of the Devachanic state,—*are* found in Nature truly enough. So with all the rest of the popular Buddhist conceptions just passed in review. But in their popular form they are the nearest caricatures of the corresponding items of esoteric knowledge. Thus the notion about individuality being a delusion, and the *ultimate* dissolution as such of the sentient being, is perfectly unintelligible without fuller explanations concerning the multitudinous æons of individual life, in as yet, to us, inconceivable, but ever-progressive, conditions of spiritual exaltation, which

come before that unutterably remote mergence into the non-individualized condition. That condition certainly must be somewhere in futurity, but its nature is something which no uninitiated philosopher, at any rate, has ever yet comprehended by so much as the faintest glimmering guess. As with the idea of Nirvana, so with this about the delusion of individuality, writers on Buddhist doctrine derived from exoteric sources, have most unfortunately found themselves entangled with some of the remote elements of the great doctrine, under the impression that they were dealing with Buddhist views of conditions immediately succeeding this life. The statement, which is almost absurd, thus put out of its proper place in the whole doctrine, may be felt, not only as no longer an outrage on the understanding, but as a sublime truth when restored to its proper place in relation to other truths. The ultimate mergence of the perfected Man-god or Dhyan Chohan in the absolute consciousness of para-nirvana, has nothing to do, let me add, with the "heresy of individuality," which relates to physical personalities. To this subject I recur a little later on.

Justly enough, Mr. Rhys Davids says, in reference to the epitome of Buddhist doctrine quoted above: "Such teachings are by no means peculiar to Buddhism, and similar ideas lie at the foundation of earlier Indian philosophies." (Certainly by reason of the fact that Buddhism as concerned with doctrine, was earlier Indian philosophy itself.) "They are to be found indeed in other systems widely separated from them in time and place; and

creature once having attained manhood, falls back into the animal kingdom. Again, while nothing indeed could be more ineffectual as an explanation of the origin of evil, than such a caricature of transmigration as would contemplate such a return, the progressive rebirths of human Egos into objective existence, coupled with the operation of physical Karma, and the inevitable play of free-will within the limits of its privilege, *do* explain the origin of evil, finally and completely. The effort of Nature being to grow a new harvest of Dhyan Chohans whenever a planetary system is evolved, the incidental development of transitory evil is an unavoidable consequence under the operation of the forces or processes just mentioned, themselves unavoidable stages in the stupendous enterprise set on foot.

At the same time the reader, who will now take up Mr. Rhys Davids' book and examine the long passage on this subject, and on the *skandhas*, will realize how utterly hopeless a task it was to attempt the deduction of any rational theory of the origin of evil from the exoteric materials there made use of. Nor was it possible for these materials to suggest the true explanation of the passage immediately afterwards, quoted from the Brahmajala Sutra :

“ After showing how the unfounded belief in the eternal existence of God or gods arose, Gautama goes on to discuss the question of the soul, and points out thirty-two beliefs concerning it, which he declares to be wrong. These are shortly as follows : ‘ Upon what principle, or on what ground, do these mendicants and Brahmans hold the doctrine of future existence. They teach that the

soul is material, or is immaterial, or is both or neither; that it will have one or many modes of consciousness; that its perceptions will be few or boundless; that it will be in a state of joy or of misery, or of neither. These are the sixteen heresies, teaching a conscious existence after death. Then there are eight heresies teaching that the soul material or immaterial, or both or neither, finite or infinite, or both or neither, has one unconscious existence after death. And, finally, eight others which teach that the soul, in the same eight ways, exists after death in a state of being neither conscious nor unconscious. ‘Mendicants,’ concludes the sermon, ‘That which binds the teacher to existence (viz., *tanha*, thirst), is cut off, but his body still remains. While his body shall remain, he will be seen by gods and men, but after the termination of life, upon the dissolution of the body, neither gods nor men will see him.’ Would it be possible in a more complete and categorical manner to deny that there is any soul—anything of any kind which continues to exist in any manner after death.”

Certainly, for exoteric students, such a passage as this could not but seem in flagrant contradiction with those teachings of Buddhism which deal with the successive passages of the same individuality through several incarnations, and which thus along another line of thought may seem to assume the existence of a transmissible soul, as plainly as the passage quoted denies it. Without a comprehension of the seven principles of man, no separate utterances on the various aspects of this question

of immortality could possibly be reconciled. But the key now given leaves the apparent contradiction devoid of all embarrassment. In the passage last quoted Buddha is speaking of the astral personality, while the immortality recognized by the esoteric doctrine is that of the spiritual individuality. The explanation has been fully given in the chapter on Devachan, and in the passages quoted there from Colonel Olcott's "Buddhist Catechism." It is only since fragments of the great revelation this volume contains have been given out during the last two years in the *Theosophist*, that the important distinction between personality and individuality, as applied to the question of human immortality, has settled into an intelligible shape, but there are plentiful allusions in former occult writing, which may now be appealed to in proof of the fact that former writers were fully alive to the doctrine itself. Turning to the most recent of the occult books in which the veil of obscurity was still left to wrap the doctrine from careless observation, though it was strained in many places almost to transparency, we might take any one of a dozen passages to illustrate the point before us. Here is one:—

“The philosophers who explained the fall into generation their own way, viewed spirit as something wholly distinct from the soul. They allowed its presence in the astral capsule only so far as the spiritual emanations or rays of the “shining one” were concerned. Man and soul had to conquer their immortality by ascending toward the unity, with which, if successful, they were finally linked,

*Fair usage policy applies

by the years of his childhood, is the same individual as some one of quite a different nationality and epoch who lived thousands of years ago, or the same that will reappear after a similar lapse of time under some entirely new conditions in the future. But the feeling "I am I," is the same through the three lives and through all the hundreds; for that feeling is more deeply seated than the feeling "I am John Smith, so high, so heavy, with such and property and relations." Is it inconceivable—as a notion in the mind—that John Smith, inheriting the gift of Tithonus, changing his name from time to time, marrying afresh every other generation or so, losing property here, coming into possession of property there, and getting interested as time went on in a great variety of different pursuits—is it inconceivable that such a person in a few thousand years should forget all circumstances connected with the present life of John Smith, just as if the incidents of that life for him had never taken place? And yet the Ego would be the same. If this is conceivable in the imagination, what can be inconceivable in the individual continuity of an *intermittent* life, interrupted and renewed at regular intervals, and varied with passages through a purer condition of existence.

No less than it clears up the apparent conflict between the identity of successive individualities and the "heresy" of individuality, will the esoteric doctrine be seen to put the "incomprehensible mystery" of Karma which Mr. Rhys Davids disposes of so summarily, on a perfectly intelligible and scientific basis. Of this he says that because Buddhism

“does not acknowledge a soul,” it has to resort to the desperate expedient of a mystery to bridge over the gulf between one life and another somewhere else, the doctrine, namely, of Karma. And he condemns the idea as “a non-existent fiction of the brain.” Irritated as he feels with what he regards as the absurdity of the doctrine, he yet applies patience and great mental ingenuity in the effort to evolve something that shall feel like a rational metaphysical conception out of the tangled utterances concerning Karma of the Buddhist scriptures. He writes:—

“Karma, from a Buddhist point of view, avoids the superstitious extreme, on the one hand, of those who believe in the separate existence of some entity called the soul; and the irreligious extreme on the other of those who do not believe in moral justice and retribution. Buddhism claims to have looked through the word soul for the fact it purports to cover, and to have found no fact at all, but only one or other of twenty different delusions which blind the eyes of men. Nevertheless, Buddhism is convinced that if a man reaps sorrow, disappointment, pain, he himself and no other must at some time have sown folly, error, sin, and if not in this life, then in some former birth. Where, then, in the latter case, is the identity between him who sows and him who reaps. *In that which alone remains* when a man dies, and the constituent parts of the sentient being are dissolved, in the result, namely, of his action, speech, and thought, in his good or evil Karma (literally his doing) which *does not* die. We are familiar with the doctrine,

‘Whatever a man soweth that shall he also reap,’ and can therefore enter into the Buddhist feeling that whatever a man reaps that he must also have sown; we are familiar with the doctrine of the indestructibility of force, and can therefore understand the Buddhist dogma (however it may contravene our Christian notions) that no exterior power can destroy the fruit of a man’s deeds, that they must work out their full effect to the pleasant or the bitter end. But the peculiarity of Buddhism lies in this, that the result of what a man is or does is held not to be dissipated as it were into many separate streams, but to be concentrated together in the formation of one new sentient being—new that is in its constituent parts and powers, but the same in its essence, its being, its doing, its Karma.”

Nothing could be more ingenious as an attempt to invent for Buddhism an explanation of its “mystery” on the assumption that the authors of the mystery threw it up originally as a “desperate expedient” to cover their retreat from an untenable position. But in reality the doctrine of Karma has a far simpler history, and does not need so subtle an interpretation. Like many other phenomena of Nature having to do with futurity, it was declared by Buddha an incomprehensible mystery, and questions concerning it were thus put aside, but he did not mean that because it was incomprehensible for the populace, it was incomprehensible, or any mystery at all for the initiates in the esoteric doctrine. It was impossible to explain it without reference to the esoteric doctrine, but the

laden spiritual monad fly to that incarnation with which its mysterious attractions link it. Nor is there in that process any creation of a new sentient being, except in the sense that the new bodily structure evolved is a new instrument of sensation. That which inhabits it, that which feels joy or sorrow, is the old Ego—walled off by forgetfulness from its last set of adventures on earth it is true, but reaping their fruit nevertheless—the same “I am I” as before.

“Strange it is,” Mr. Rhys Davids thinks, that “all this,” the explanation of Buddhist philosophy which esoteric materials have enabled him to give, “should have seemed not unattractive, these 2,300 years and more, to many despairing and earnest hearts—that they should have trusted themselves to the so seeming stately bridge which Buddhism has tried to build over the river of the mysteries and sorrows of life. . . . They have failed to see that the very keystone itself, the link between one life and another is a mere word—this wonderful hypothesis, this airy nothing, this imaginary cause beyond the reach of reason—the individualized and individualizing grace of Karma.”

It would have been strange indeed if Buddhism had been built on such a frail foundation ; but its apparent frailty has been simply due to the fact that its mighty fabric of knowledge has hitherto been veiled from view. Now that the inner doctrine has been unveiled it will be seen how little it depends for any item of its belief on shadowy subtleties of metaphysics. So far as these have clustered round Buddhism they have merely been

constructed by external interpreters of stray doctrinal hints that could not be entirely left out of the simple system of morals prescribed for the populace.

In that which really constitutes Buddhism we find a sublime simplicity, like that of Nature herself—one law running into infinite ramifications—complexities of detail it is true, as Nature herself is infinitely complex in her manifestations, however unchangeably uniform in her purposes, but always the immutable doctrine of causes and their effects, which in turn become causes again in an endless cyclic progression.

THE END.

TRÜBNER'S

COLLECTION OF SIMPLIFIED GRAMMARS

OF THE

PRINCIPAL ASIATIC AND EUROPEAN LANGUAGES.

EDITED BY REINHOLD ROST, LL.D., PH.D.

The object of this Series is to provide the learner with a concise but practical Introduction to the various Languages, and at the same time to furnish Students of Comparative Philology with a clear and comprehensive view of their structure. The attempt to adapt the somewhat cumbrous grammatical system of the Greek and Latin to every other tongue has introduced a great deal of unnecessary difficulty into the study of Languages. Instead of analysing existing locutions and endeavouring to discover the principles which regulate them, writers of grammars have for the most part constructed a framework of rules on the old lines, and tried to make the language of which they were treating fit into it. Where this proves impossible, the difficulty is met by lists of exceptions and irregular forms, thus burdening the pupil's mind with a mass of details of which he can make no practical use.

In these Grammars the subject is viewed from a different standpoint; the structure of each language is carefully examined, and the principles which underlie it are carefully explained; while apparent discrepancies and so-called irregularities are shown to be only natural euphonic and other changes. All technical terms are excluded unless their meaning and application is self-evident; no arbitrary rules are admitted; the old classification into declensions, conjugations, &c., and even the usual *paradigms* and tables, are omitted. Thus reduced to the simplest principles, the Accidence and Syntax can be thoroughly comprehended by the student in one perusal, and a few hours' diligent study will enable him to analyse any sentence in the language.

NOW READY.

Crown 8vo, cloth, uniformly bound.

- I.—**Hindustani, Persian, and Arabic.** By the late E. H. Palmer, M.A. Pp. 112. 5s.
