Preface

At more than one million words, this is the largest dictionary of Buddhism ever produced in the English language. Yet even at this length, it only begins to represent the full breadth and depth of the Buddhist tradition. Many great dictionaries and glossaries have been produced in Asia over the long history of Buddhism and Buddhist Studies. One thinks immediately of works like the *Mahāvvyutpatti*, the ninth-century Tibetan-Sanskrit lexicon said to have been commissioned by the king of Tibet to serve as a guide for translators of the dharma. It contains 9,565 entries in 283 categories. One of the great achievements of twentieth-century Buddhology was the *Bukkyō Daijiten* (“Encyclopedia of Buddhism”), published in ten massive volumes between 1932 and 1964 by the distinguished Japanese scholar Mochizuki Shinkō. Among English-language works, there is William Soothill and Lewis Hodous’s *A Dictionary of Chinese Buddhist Terms*, published in 1937, and, from the same year, G. P. Malalasekera’s invaluable *Dictionary of Pāli Proper Names*. In preparing the present dictionary, we have sought to build upon these classic works in substantial ways.

Apart from the remarkable learning that these earlier works display, two things are noteworthy about them. The first is that they are principally based on a single source language or Buddhist tradition. The second is that they are all at least a half-century old. Many things have changed in the field of Buddhist Studies over the past fifty years, some for the worse, some very much for the better. One looks back in awe at figures like Louis de la Vallée Poussin and his student Msgr. Étienne Lamotte, who were able to use sources in Sanskrit, Pāli, Chinese, Japanese, and Tibetan with a high level of skill. Today, few scholars have the luxury of time to develop such expertise. Yet this change is not necessarily a sign of the decline of the dharma predicted by the Buddha; from several perspectives, we are now in the golden age of Buddhist Studies. A century ago, scholarship on Buddhism focused on the classical texts of India and, to a much lesser extent, China. Tibetan and Chinese sources were valued largely for the access they provided to Indian texts lost in the original Sanskrit. The Buddhism of Korea was seen as an appendage to the Buddhism of China or as a largely unacknowledged source of the Buddhism of Japan. Beyond the works of “the Pāli canon,” relatively little was known of the practice of

Buddhism in Sri Lanka and Southeast Asia. All of this has changed for the better over the past half century. There are now many more scholars of Buddhism, there is a much higher level of specialization, and there is a larger body of important scholarship on each of the many Buddhist cultures of Asia. In addition, the number of adherents of Buddhism in the West has grown significantly, with many developing an extensive knowledge of a particular Buddhist tradition, whether or not they hold the academic credentials of a professional Buddhologist. It has been our good fortune to be able to draw upon this expanding body of scholarship in preparing *The Princeton Dictionary of Buddhism*.

This new dictionary seeks to address the needs of this present age. For the great majority of scholars of Buddhism, who do not command all of the major Buddhist languages, this reference book provides a repository of many of the most important terms used across the traditions, and their rendering in several Buddhist languages. For the college professor who teaches “Introduction to Buddhism” every year, requiring one to venture beyond one’s particular area of geographical and doctrinal expertise, it provides descriptions of many of the important figures and texts in the major traditions. For the student of Buddhism, whether inside or outside the classroom, it offers information on many fundamental doctrines and practices of the various traditions of the religion. This dictionary is based primarily on six Buddhist languages and their traditions: Sanskrit, Pāli, Tibetan, Chinese, Japanese, and Korean. Also included, although appearing much less frequently, are terms and proper names in vernacular Burmese, Lao, Mongolian, Sinhalese, Thai, and Vietnamese. The majority of entries fall into three categories: the terminology of Buddhist doctrine and practice, the texts in which those teachings are set forth, and the persons (both human and divine) who wrote those texts or appear in their pages. In addition, there are entries on important places—including monasteries and sacred mountains—as well as on the major schools and sects of the various Buddhist traditions. The vast majority of the main entries are in their original language, although cross-references are sometimes provided to a common English rendering. Unlike many terminological dictionaries, which merely provide a brief listing of meanings with perhaps some of the equivalencies in various Buddhist languages, this work seeks to function as an encyclopedic dictionary. The main entries offer a short essay on the extended meaning and significance of the terms covered, typically in the range of two hundred to six hundred words, but sometimes substantially longer. To offer further assistance in understanding

a term or tracing related concepts, an extensive set of internal cross-references (marked in small capital letters) guides the reader to related entries throughout the dictionary. But even with over a million words and five thousand entries, we constantly had to make difficult choices about what to include and how much to say. Given the long history and vast geographical scope of the Buddhist traditions, it is difficult to imagine any dictionary ever being truly comprehensive. Authors also write about what they know (or would like to know); so inevitably the dictionary reflects our own areas of scholarly expertise, academic interests, and judgments about what readers need to learn about the various Buddhist traditions.

Despite the best efforts of the king of Tibet more than a thousand years ago, it has always been difficult for scholars of Buddhism to agree on translations. That difficulty persists in the present work for a variety of reasons, including the different ways that Buddhist scholiasts chose to translate technical terms into their various languages over the centuries, the preferences of the many modern scholars whose works we consulted, and the relative stubbornness of the authors. As a result, there will inevitably be some variation in the renderings of specific Buddhist terminology in the pages that follow. In our main entries, however, we have tried to guide users to the range of possible English translations that have been used to render a term. In addition, a significant effort has been made to provide the original language equivalencies in parentheses so that specialists in those languages can draw their own conclusions as to the appropriate rendering.

This book represents more than twelve years of effort. Donald Lopez initiated the project with the assistance of several of his graduate students at the University of Michigan, many of whom have now gone on to receive their degrees and be appointed to university positions. Around that time, Robert Buswell asked Lopez to serve as one of the editors of his two-volume *Encyclopedia of Buddhism* (New York: Macmillan Reference, 2004). When that project was completed, Lopez invited Buswell to join him as coauthor of the dictionary project, an offer he enthusiastically accepted, bringing with him his own team of graduate students from UCLA. In dividing up responsibilities for the dictionary, Buswell took principal charge of entries on mainstream Buddhist concepts, Indian abhidharma, and East Asian Buddhism; Lopez took principal charge of entries on Mahāyāna Buddhism in India, Buddhist tantra, and Tibetan Buddhism. Once drafts of the respective sections were complete, we exchanged files to review each other's sections. Over the last seven years, we were in touch almost daily on one or another aspect of the project as we expanded upon and

edited each other's drafts, making this a collaborative project in the best sense of the term. Graduate students at both the University of Michigan and UCLA assisted in gathering materials for the dictionary, preparing initial drafts, and tracing the multiple cross-references to Asian language terms. This project would have been impossible without their unstinting assistance and extraordinary commitment; we are grateful to each of them. Those graduate students and colleagues who made particularly extensive contributions to the dictionary are listed on the title page.

In addition to its more than five thousand main entries, this volume also contains a number of reference tools. Because the various historical periods and dynasties of India, China, Korea, and Japan appear repeatedly in the entries, historical chronologies of the Buddhist periods of those four countries have been provided. In order to compare what events were occurring across the Buddhist world at any given time, we have provided a timeline of Buddhism. Eight maps are provided, showing regions of the Buddhist world and of the traditional Buddhist cosmology. We have also included a List of Lists. Anyone with the slightest familiarity with Buddhism has been struck by the Buddhist propensity for making lists of almost anything. The *Mahāvvyutpatti* is in fact organized not alphabetically but by list, including such familiar lists as the four noble truths, the twelve links of dependent origination, and the thirty-two major marks of the Buddha, as well as less familiar lists, such as various kinds of grain (twenty items) and types of ornaments (sixty-four items). Here we have endeavored to include several of the most important lists, beginning with the one vehicle and ending with the one hundred dharmas of the Yogācāra school. After some discussion, we decided to forgo listing the 84,000 afflictions and their 84,000 antidotes.

Acknowledgments

Our first debt of gratitude is to the several generations of scholars of Buddhism around the world whose research we have mined shamelessly in the course of preparing our entries. We are unable to mention them by name, but those who remain during the present lifetime will recognize the fruits of their research as they read the entries. In addition to our collaborators listed on the title page, we would like to thank the following graduate students and colleagues, each of whom assisted with some of the myriad details of such a massive project: Wesley Borton, Bonnie Brereton, Tyler Cann, Caleb Carter, Mui-fong Choi, Shayne Clarke, Jacob Dalton, Martino Dibeltulo, Alexander Gardner, Heng Yi fashi (Chi Chen Ho), Anna Johnson, Min Ku Kim, Youme Kim, Alison Melnick, Karen Muldoon-Hules, Cuong Tu Nguyen, Aaron Proffitt, Cedar Bough Saeji, and Sherin Wing. In addition, we would like to thank our long-suffering colleagues: William Bodiford, Gregory Schopen, Natasha Heller, Stephanie Jamison, and Jennifer Jung-Kim at UCLA, and Madhav Deshpande, Luis Gómez, Robert Sharf, and James Robson, now or formerly at the University of Michigan. The map of Tibet was designed by Tsering Wangyal Shawa; the map of Japan and Korea was designed by Maya Stiller; all other maps were designed by Trevor Weltman. Christina Lee Buswell also provided invaluable assistance with preparing the lists of language cross-references.

Financial support for the project was provided by the Numata Fund in Buddhist Studies and the 14th Dalai Lama Fund in Tibetan and Buddhist Studies at the UCLA Center for Buddhist Studies; the UCLA Academic Senate Faculty Research Grant Program; the UCLA International Institute; the University of Michigan Institute for the Study of Buddhist Traditions; and the University of Michigan College of Literature, Science, and the Arts. A generous supplemental grant to help complete the project was provided by Bukkyo Dendo Kyokai (America).

Conventions

No single language crosses all of the linguistic and cultural boundaries of the Buddhist tradition. However, in order to present Buddhist terms that are used across this diverse expanse, it is convenient to employ a single linguistic vocabulary. For this reason European and North American scholars have, over the last century, come to use Sanskrit as the lingua franca of the academic discipline of Buddhist Studies. Following this scholarly convention we have used Sanskrit, and often Buddhist Hybrid Sanskrit forms, in our main entry headings for the majority of Indic-origin terms that appear across the Buddhist traditions. Pāli, Tibetan, or Chinese terms are occasionally used where that form is more commonly known in Western writings on Buddhism. We have attempted to avoid unattested Sanskrit equivalents for terms in Pāli and other Middle Indic languages, generally marking any hypothetical forms with an asterisk. These main entry headings are accompanied by cognate forms in Pāli, Tibetan, Chinese, Japanese, and Korean (abbreviated as P., T., C., J., and K., respectively), followed by the Sinographs (viz., Chinese characters) commonly used in the East Asian traditions. For those Indian terms that are known only or principally in the Pāli tradition, the main entry heading is listed in Pāli (e.g., bhavaṅga). Terms used across the East Asian traditions are typically listed by their Chinese pronunciation with Japanese and Korean cross-references, with occasional Japanese or Korean headings for terms that are especially important in those traditions. Tibetan terms are in Tibetan, with Sanskrit or Chinese cognates where relevant. In order that the reader may trace a standard term through any of the languages we cover in the dictionary, we also provide cross-references to each of the other languages at the end of the volume in a section called Cross-References by Language. In both the main entries and the Cross-References by Language, words have been alphabetized without consideration of diacritical marks and word breaks.

Book titles are generally given in the language of original provenance, e.g., *Saddharmapuṇḍarīkasūtra*, in Sanskrit, with cross-references to Tibetan, Chinese, Japanese, and Korean; *Dasheng qixin lun*, in Chinese, with cross-references to a putative Sanskrit reconstruction of the title, and Japanese and Korean. We also include some main entries to indigenous terms, book titles,

personal names, or place names in other Asian languages, e.g.: Burmese, Thai, Lao, Nepalese, Sinhalese, Mongolian, and Vietnamese.

To reduce the amount of capitalization in the dictionary, as a general rule we capitalize only: proper names: e.g., of historical figures, specific buddhas, bodhisattvas, and divinities; historical schools: Madhyamaka, Mūlasarvāstivāda, Huayan zong, but not hīnayāna, ekayāna, tathāgatagarbha; titles of books: e.g., *Sukhāvātīvyūhasūtra*, *Saddharmapuṇḍarīkasūtra*; terrestrial place names: e.g., Jambudvīpa, Śrāvastī, Turfan, but not celestial realms (e.g., tuṣita), infernal realms (avīci), or ideal realms (sukhāvātī).

East Asian monks, especially those in the Chan, Sŏn, Zen, and Thiĕn schools, often use multiple names throughout their careers, e.g., ordination name, cognomen, toponym (e.g., the mountains, monasteries, hermitages, or regions where they dwelled), posthumous or funerary name, and honorary names and titles conferred by a monarch. Commonly, these monks are listed in their genealogical lineages by a four-Sinograph name, which gives this alternate name first, typically followed by their ordination name: e.g., Linji Yixuan (hermitage name + ordination name), Dongshan Liangjie (mountain name + ordination name), Pojo Chinul (posthumous name/official title + ordination name). The main entries for these monks are found under this common four-Sinograph lineage name, with a blind cross-reference in the main body of the dictionary for their two-Sinograph ordination name; e.g.: **Congshen**. (C) (從諗). See [ZHAOZHOU CONGSHEN](#).

Transcription Systems

The dictionary uses the standard Romanization systems for East Asian languages: viz., pinyin for Chinese (rather than the now-superseded Wade-Giles system that most pre-1990s scholarship on Chinese Buddhism used), Revised Hepburn for Japanese, and McCune-Reischauer for Korean, with the transcriptions in some cases modified slightly to conform more closely to the Chinese parsing of compounds. While this dictionary was being compiled, the Korean government unveiled its latest iteration of a Revised Romanization system, but that system is still rarely used in academic writing in the West and its acceptance is uncertain; we therefore chose to employ McCune-Reischauer for this edition of the dictionary.

For Tibetan, the dictionary uses the standard Wylie system of transliteration, with words alphabetized by the first letter, regardless of whether it is the root letter. Tibetan does not have a standard system for rendering words phonetically. For Tibetan terms that appear as main entries, a phonetic approximation has been placed in parentheses following the Wylie transliteration. In addition, a separate listing of Tibetan pronunciations has been provided in the Cross-References by Language, where readers may look up phonetic renderings in order to find the Wylie transliteration used in the main entries.

Unlike Tibetan, where there are generally standard translations for Indian terms, in the East Asian tradition there are a plethora of alternate Sinographic renderings, including both translations and transcriptions (i.e., using the Chinese characters purely for their phonetic value to render Sanskrit or Middle Indic terms). We obviously could not include all possible renderings and have typically chosen one or at most two of the most common, e.g., one translation and one transcription. In addition, in Tibet and China, translations of Indian terms and texts were often given in abbreviated forms. We have attempted to provide the full form in most cases, using the abbreviation when it is the better known version of the term or text.

As a general rule, we provide multiple language equivalencies only for terms that were traditionally known in the other languages. For this reason, many late tantric terms known only in India and Tibet will not have East Asian equivalents (even though equivalents were in some cases created in the twentieth century);

Chinese texts not translated into Tibetan will give only Japanese and Korean equivalencies; Japanese and Korean figures and texts not generally known in China will have only Japanese and Korean transcriptions, and so forth.

The Princeton Dictionary of Buddhism

A. The first vowel and letter in the Sanskrit alphabet. The phoneme “a” is thought to be the source of all other phonemes and its corresponding letter the origin of all other letters. As the basis of both the Sanskrit phonemic system and the written alphabet, the letter “a” thus comes to be invested with mystical significance as the source of truth, nondifferentiation, and emptiness ([ŚŪNYATĀ](#)), or even of the universe as a whole. The [PRAJÑĀPĀRAMITĀSARVATATHĀGATAMĀTĀ-EKĀKṢARĀ](#), the shortest of the perfection of wisdom scriptures, also describes how the entirety of the perfection of wisdom is subsumed by this one letter. The letter in the Sanskrit [SIDDHAM](#) alphabet gained special significance within the esoteric Buddhist traditions in Japan ([MIKKYŌ](#)), such as Shingon (see [SHINGONSHŪ](#)), which considered it to be the “seed” ([BĪJA](#)) of [MAHĀVAIROCANA](#), the central divinity of esoteric Buddhism, and used it in a distinctive type of meditation called [AJIKAN](#) (“contemplation of the letter ‘a’”). The letter “a,” which is said to be originally uncreated ([AJI HONPUSHŌ](#)), is interpreted to be the essence of all phenomena in the universe and the [DHARMAKĀYA](#) of the buddha Mahāvairocana. In the East Asian [CHAN](#) traditions, the letter “a” is also sometimes understood to represent the buddha-nature ([FOXING](#), S. [BUDDHADHĀTU](#)) of all sentient beings.

abhabbatthāna. (S. *abhavyasthāna*; T. mi rung ba’i gnas; C. buwei; J. fui; K. purwi 不爲). In Pāli, “condition of being incapable” or “impossibility”; referring to nine immoral acts or inadequacies of character that an [ARHAT](#) is incapable of performing or possessing. Because he has destroyed the four [ĀSRAVA](#), or contaminants—of sensuality ([KĀMA](#)), becoming ([BHAVA](#)), ignorance ([AVIDYĀ](#)), and wrong views ([DRSTI](#))—he is rendered forever “incapable” of engaging in the following acts: (1) deliberately killing any living being; (2) theft; (3) sexual intercourse; (4) deliberately lying; (5) accumulating personal possessions for sensual indulgence, as would a layperson; or performing wrong actions prompted by (6) attachment; (7) hatred; (8) stupidity; or (9) fear.

ābhāsvaracitta. In Sanskrit, “mind of clear light.” See [PRABHĀSVARACITTA](#).

ābhāsvarāloka. (P. ābhassaraloka; T. 'od gsal ba; C. jiguangjing tian/guangyintian; J. gokukōjōten/kōonten; K. kŭkkwangjōng ch'ōn/kwangŭmch'ōn 極光淨天/光音天). In Sanskrit, the “heaven of radiant light” (in Chinese, the name is also parsed as the “heaven of radiant sound”), the highest of the three heavens associated with the second concentration ([DHYĀNA](#)) of the realm of subtle materiality ([RŪPADHĀTU](#)). As the [BRAHMĀ](#) divinities dwelling in this realm perpetually experience this profound state of meditation, they are described as subsisting on bliss ([PRĪTI](#)) and abiding in ease ([SUKHA](#)). Their bodies radiate light in all directions like lightning or like flames from a torch. While the bodies of the divinities of this realm are uniform, their perceptions are diverse, and there is no assurance that they will not be reborn in a lower realm of existence after their death. At the beginning of a world cycle, when the physical world ([BHĀJANALOKA](#)) of the sensuous realm ([KĀMADHĀTU](#)) has not yet been formed, and at the end of a world cycle when that physical world has been destroyed, many beings are reborn into the ābhāsvarāloka. A [BODHISATTVA](#) is never reborn in the immaterial realm ([ARŪPYADHĀTU](#)) even if he has achieved meditative states consistent with that realm, but he may be reborn in the ābhāsvarāloka. The Buddha once disabused a Brahmā god dwelling in that realm of the mistaken view that he was eternal. This god, whose name was Baka, had been the first living being born in the ābhāsvarāloka after a period of world dissolution, and presumed that no one had existed before him. When the divinities ([DEVA](#)) of the ābhāsvarāloka are first reborn in the realm of human beings ([MANUSYA](#)), they may retain their divine attributes for a time, being spontaneously generated rather than born viviparously, and possessing bodies made from subtle materiality rather than gross matter. However, as time passes and they take on the physical and mental characteristics of ordinary human beings, they lose their luminosity, develop sexual characteristics, and come to subsist on solid foods.

abhayadāna. (T. mi 'jigs pa sbyin pa; C. wuwei [bu]shi/shi wuwei; J. mui[fu]se/semui; K. muoe[bo]si/si muoe 無畏[布]施/施無畏). In Sanskrit, the “gift of fearlessness”; said to be one of the expanded list of three (sometimes four) forms of giving/gifts ([DĀNA](#)), along with the “gift of dharma” ([DHARMADĀNA](#)) and the “gift of material goods” ([ĀMIṢADĀNA](#)). This particular type of gift is typically offered by [BODHISATTVAS](#), whose encouragement, consolation, teaching of the dharma, and so forth relieve the fears, worries, and tribulations of the beneficiary. The common Buddhist practice of purchasing animals from butchers

in order to save them from slaughter (see [FANGSHENG](#)) is considered to be a form of abhayadāna.

[Abhayadattaśrī](#). (T. Mi 'jigs pa sbyin pa dpal). Indian author of the early twelfth century to whom the text of tantric hagiographies entitled [*CATURAŚĪTISIDDHAPRAVRTTI](#) (“Lives of the Eighty-Four Siddhas”) is ascribed. According to the colophon of this work, the author is known as “the great guru from Campara in India.”

[Abhayagiri](#). A Sri Lankan monastery built at the capital of [ANURĀDHAPURA](#) in first century BCE. The monastery was constructed for the elder Mahātissa by the Sinhala king [VATTAGĀMANI ABHAYA](#) in gratitude for the monk’s assistance during the king’s political exile and his struggle for the throne. According to medieval Pāli historical chronicles, Mahātissa was said to have been unrestrained and base in his behavior, which eventually prompted the monks of the [MAHĀVIHĀRA](#) to pass an act of banishment ([PRAVRĀJANĪYAKARMAN](#), P. pabbājanīyakamma) against him. Mahātissa thereafter conducted ecclesiastical ceremonies ([SAMGHAKARMAN](#), P. saṅghakamma) separately, and the Abhayagiri fraternity eventually seceded from the Mahāvihāra as a separate order of Sri Lankan Buddhism. The Abhayagiri flourished during the eleventh century, but, with the abandonment of Anurādhapura in the thirteenth century, ceased to exist as an active center. The site is today known for the massive Abhayagiri Thūpa ([STŪPA](#)), one of the largest in Sri Lanka, which was rediscovered deep in a forest at the end of the nineteenth century.

[Abhayākaragupta](#). (T. 'Jigs med 'byung gnas sbas pa) (d. c. 1125). Indian tantric Buddhist master who was born into a brāhmaṇa family in either Orissa or northeast India near Bengal. Sources vary regarding his dates of birth and death, although most agree that he was a contemporary of the Pāla king Rāmapāla, who began his reign during the final quarter of the eleventh century. Abhayākaragupta became a Buddhist monk in response to a prophetic vision and trained extensively in the esoteric practices of [TANTRA](#), while nevertheless maintaining his monastic discipline ([VINAYA](#)). Abhayākaragupta was active at the monastic university of [VIKRAMAŚĪLA](#) in Bihar and became renowned as both a scholar and a teacher. He was a prolific author, composing treatises in numerous fields of Buddhist doctrine, including monastic discipline and philosophy as well as tantric ritual practice and iconography. Many Sanskrit manuscripts of his works have been preserved in India, Nepal, and Tibet, and his writings were

influential both in India and among Newari Buddhists in Nepal. Translations of his works into Tibetan were begun under his supervision, and more than two dozen are preserved in the Tibetan canon. To date, Abhayākaragupta’s writings best known in the West are his treatises on tantric iconography, the *Vajrāvalī* and *Niṣpannayogāvalī*, and his syncretistic [ABHIDHARMA](#) treatise *Munimatālaṃkāra*.

[abhayamudrā](#). (T. mi ’jigs pa’i phyag rgya; C. shiwuwei yin; J. semuiin; K. simuoe in 施無畏印). In Sanskrit, “the gesture of fearlessness” or “gesture of protection”; also sometimes called the gesture of granting refuge. This gesture ([MUDRĀ](#)) is typically formed with the palm of the right hand facing outward at shoulder height and the fingers pointing up, although both hands may simultaneously be raised in this posture in a double abhayamudrā. Occasionally, the index, second, or third finger touches the thumb, with the remaining fingers extended upward. This gesture is associated with [ŚĀKYAMUNI](#) Buddha immediately following his enlightenment, and standing buddha images will often be depicted with this mudrā, portraying a sense of the security, serenity, and compassion that derive from enlightenment. This gesture is also commonly associated with [AMOGHASIDDHI](#).

[Abhedā](#). (T. Mi phyed pa). One of “the sixteen elders” or senior [ARHATS](#) in the Tibetan enumeration. See [SODĀŚASTHAVIRA](#).

[abhibhvāyatana](#). (P. abhibhāyatana; T. zil gyis gnon pa’i skye mched; C. shengchu; J. shōsho; K. sūngch’ō 勝處). In Sanskrit, “sphere of sovereignty” or “station of mastery”; eight stages of transcendence over the sense spheres ([ĀYATANA](#)), which are conducive to the development of meditative absorption ([DHYĀNA](#)). By recognizing from various standpoints that material forms are external, one trains oneself to let go of attachments to material objects and focus exclusively on the meditation subject. The standard list of eight is as follows. When one perceives forms internally (viz., on one’s own person), one sees forms external to oneself that are (1) limited and beautiful or ugly (viz., pure and impure colors) or (2) unlimited, and beautiful or ugly, and masters them so that one is aware that one knows and sees them; when one does not perceive forms internally, one sees external forms that are (3) limited or (4) unlimited. When one does not perceive forms internally, one sees external forms that are (5) blue, (6) yellow, (7) red, or (8) white and masters them so that one is aware that one knows and sees them. In the Pāli meditative literature, the earth and the color

devices ([KASINA](#)) are said to be especially conducive to developing these spheres of sovereignty. Progress through these spheres weans the mind from its attraction to the sensuous realm ([KĀMADHĀTU](#)) and thus encourages the advertence toward the four meditative absorptions ([DHYĀNA](#); [RŪPĀVACARADHYĀNA](#)) associated with the realm of subtle materiality ([RŪPADHĀTU](#)), wherein the mind becomes temporarily immune to sensory input and wholly absorbed in its chosen object of meditation.

[abhicāra](#). [alt. abhicara] (T. mngon spyod). In Sanskrit, “magic” or “wrathful action”; in [ANUTTARAYOGATANTRA](#), the fourth of the four activities ([CATURKARMAN](#)) of the Buddhist tantric adept. Abhicāra is broken down into māraṇa “killing,” mohana “enchanting,” stambhana “paralyzing,” vidveṣaṇa “rendering harm through animosity,” uccāṭana “removing or driving away,” and vaśīkaraṇa “subduing.” After initiation ([ABHISEKA](#)), adepts who keep their tantric commitments ([SAMAYA](#)) properly and reach the requisite yogic level are empowered to use four sorts of enlightened activity, as appropriate: these four types of activities are (1) those that are pacifying (S. [ŚĀNTICĀRA](#)); (2) those that increase prosperity, life span, etc. ([PAUSTIKA](#)), when necessary for the spread of the doctrine; (3) those that subjugate or tame (S. [VAŚĪKARANA](#)) the unruly; and finally (4) those that are violent or drastic measures (abhicāra) such as war, when the situation requires it. In the [MAÑJUŚRĪNĀMASAMGĪTI](#), Cānakya, Candragupta’s minister, is said to have used abhicāra against his enemies, and because of this misuse of tantric power was condemned to suffer the consequences in hell. Throughout the history of Buddhist tantra, the justification of violence by invoking the category of abhicāra has been a contentious issue. [PADMASAMBHAVA](#) is said to have tamed the unruly spirits of Tibet, sometimes violently, with his magical powers, and the violent acts that [RWALOTSĀBA](#) in the eleventh century countenanced against those who criticized his practices are justified by categorizing them as abhicāra.

[Abhidhammatthasaṅgaha](#). In Pāli, “Summary of the Meaning of Abhidharma”; a synoptic manual of Pāli [ABHIDHARMA](#) written by the Sri Lankan monk [ANURUDDHA](#) (d.u.), abbot of the Mūlasoma Vihāra in Polonnaruwa, sometime between the eighth and twelfth centuries CE, but most probably around the turn of the eleventh century. (Burmese tradition instead dates the text to the first century BCE.) The terse *Abhidhammatthasaṅgaha* Has been used for centuries as an introductory primer for the study of abhidharma in the monasteries of Sri

Lanka and the [THERAVĀDA](#) countries of Southeast Asia; indeed, no other abhidharma text has received more scholarly attention within the tradition, especially in Burma, where this primer has been the object of multiple commentaries and vernacular translations. The *Abhidhammatthasaṅgaha* includes nine major sections, which provide a systematic overview of Pāli Buddhist doctrine. Anuruddha summarizes the exegeses appearing in [BUDDHAGHOSA](#)'s [VISUDDHIMAGGA](#), though the two works could hardly be more different: where the *Visuddhimagga* offers an exhaustive exegesis of [THERAVĀDA](#) abhidharma accompanied by a plethora of historical and mythical detail, the *Abhidhammatthasaṅgaha* is little more than a list of topics, like a bare table of contents. Especially noteworthy in the *Abhidhammatthasaṅgaha* is its analysis of fifty-two mental concomitants ([CETASIKA](#)), in distinction to the forty-six listed in [SARVĀSTIVĀDA ABHIDHARMA](#) and the [ABHIDHARMAKOŚABHĀSYA](#). There is one major Pāli commentary to the *Abhidhammatthasaṅgaha* still extant, the *Porāṇaṭīkā*, which is attributed to Vimalabuddhi (d.u.). The *Abhidhammatthasaṅgaha* appears in the Pali Text Society's English translation series as *Compendium of Philosophy*.

[Abhidhammāvatāra](#). In Pāli, “Introduction to Abhidhamma”; a primer of Pāli [ABHIDHAMMA](#) attributed to [BUDDHADATTA](#) (c. fifth century CE), who is said to have been contemporaneous with the premier Pāli scholiast [BUDDHAGHOSA](#); some legends go so far as to suggest that the two [ABHIDHAMMIKAS](#) might even have met. The book was written in south India and is the oldest of the noncanonical Pāli works on abhidhamma. It offers a systematic scholastic outline of abhidhamma, divided into twenty-four chapters called niddesas (S. nirdeśa; “expositions”), and displays many affinities with Buddhaghosa's [VISUDDHIMAGGA](#). These chapters include coverage of the mind ([CITTA](#)) and mental concomitants ([CETASIKA](#)), the various types of concentration ([SAMĀDHI](#)), the types of knowledge ([JÑĀNA](#)) associated with enlightenment, and the process of purification (visuddhi, S. [VIŚUDDHI](#)). The work is written in a mixture of prose and verse.

[abhidhammika](#). [alt. Ābhidhammika]. In Pāli, “specialist in the [ABHIDHAMMA](#)”; scholarly monks who specialized in study of the abhidhamma (S. [ABHIDHARMA](#)) section of the Buddhist canon. In the Pāli tradition, particular importance has long been attached to the study of abhidharma. The [ATTHASĀLINĪ](#) says that the first [ABHIDHAMMIKA](#) was the Buddha himself, and the abhidhammikas were

presumed to be the most competent exponents of the teachings of the religion. Among the Buddha's immediate disciples, the premier abhidhammika was Sāriputta (S. [ŚĀRIPUTRA](#)), who was renowned for his systematic grasp of the dharma. Monastic "families" of abhidhamma specialists were known as abhidhammikagaṇa, and they passed down through the generations their own scholastic interpretations of Buddhist doctrine, interpretations that sometimes differed from those offered by specialists in the scriptures (P. sutta; S. [SŪTRA](#)) or disciplinary rules ([VINAYA](#)). In medieval Sri Lanka, the highest awards within the Buddhist order were granted to monks who specialized in this branch of study, rather than to experts in the scriptures or disciplinary rules. Special festivals were held in honor of the abhidhamma, which involved the recital of important texts and the granting of awards to participants. In contemporary Myanmar (Burma), where the study of abhidhamma continues to be highly esteemed, the seventh book of the Pāli [ABHIDHARMAPITAKA](#), the [PATTHĀNA](#) ("Conditions"), is regularly recited in festivals that the Burmese call pathan pwe. Pathan pwe are marathon recitations that go on for days, conducted by invited abhidhammikas who are particularly well versed in the *Paṭṭhāna*, the text that is the focus of the festival. The pathan pwe serves a function similar to that of [PARITTA](#) recitations, in that it is believed to ward off baleful influences, but its main designated purpose is to forestall the decline and disappearance of the Buddha's dispensation (P. sāsaṇa; S. [ŚĀSANA](#)). The Theravāda tradition considers the *Paṭṭhāna* to be the Buddha's most profound exposition of ultimate truth (P. paramatthasacca; S. [PARAMĀRTHASATYA](#)), and according to the Pāli commentaries, the *Paṭṭhāna* is the first constituent of the Buddha's dispensation that will disappear from the world as the religion faces its inevitable decline. The abhidhammikas' marathon recitations of the *Paṭṭhāna*, therefore, help to ward off the eventual demise of the Buddhist religion. This practice speaks of a [THERAVĀDA](#) orientation in favor of scholarship that goes back well over a thousand years. Since at least the time of [BUDDHAGHOSA](#) (c. fifth century CE), the life of scholarship (P. [PARIYATTI](#)), rather than that of meditation or contemplation (P. [PATIPATTI](#)), has been the preferred vocational path within Pāli Buddhist monasticism. Monks who devoted themselves exclusively to meditation were often portrayed as persons who lacked the capacity to master the intricacies of Pāli scholarship. Even so, meditation was always recommended as the principal means by which one could bring scriptural knowledge to maturity, either through awakening or the realization (P. paṭivedha; S. [PRATIVEDHA](#)) of Buddhist truths. See also [ĀBHIDHARMIKA](#).

[Abhidhānappadīpikā](#). A Pāli dictionary of synonyms attributed to the twelfth-century Sinhalese scholar–monk Moggallāna, which, in style and method, is similar to the Sanskrit lexicon the *Amarakośa*. The text is arranged into three sections, dealing with celestial, terrestrial, and miscellaneous topics. The three sections are further subdivided into various chapters, each composed of groups of synonyms arranged in verse for ease of memorization. For example, the first section of the thesaurus includes 179 different entries, each of which offers multiple entries: e.g., thirty-two different epithets for the Buddha and forty-six synonyms for nibbāna (S. [NIRVĀNA](#)). The second section has six different chapters, which include twenty-four synonyms for a house, ten for man, fifteen for woman, *etc.* The third section has four chapters on miscellaneous topics. A Sinhalese paraphrase and commentary on this dictionary were produced in Sri Lanka by Caturāṅgabala (d.u.), while a Burmese commentary was composed by Ñāṇāvāsa (d.u.) in the fourteenth century during the reign of King Kittisīhasūra (c. 1351); a Burmese vernacular translation was subsequently made during the eighteenth century.

[Abhidhānottaratantra](#). [alt. Avadānastotratāntra] (T. Mngon par brjod pa'i rgyud bla ma). In Sanskrit, “Continuation of the Explanation [of the [CAKRASAMVARATANTRA](#)]”; an Indian text describing the invocation of numerous tantric deities together with their seed syllables ([BĪJA](#)) and ritual meditations. The work was originally translated into Tibetan and edited by [ATIŚA DĪPAMKARASŪJĀNA](#) and [RIN CHEN BZANG PO](#) in the eleventh century.

[abhidharma](#). (P. abhidhamma; T. chos mngon pa; C. apidamo/duifa; J. abidatsuma/taihō; K. abidalma/taebōp 阿毘達磨/對法). In Sanskrit, abhidharma is a prepositional compound composed of abhi- + dharma. The compound is typically glossed with abhi being interpreted as equivalent to *uttama* and meaning “highest” or “advanced” [DHARMA](#) (viz., doctrines or teachings), or abhi meaning “pertaining to” the dharma. The [SARVĀSTIVĀDA](#) Sanskrit tradition typically follows the latter etymology, while the [THERAVĀDA](#) Pāli tradition prefers the former, as in [BUDDHAGHOSA](#)’s gloss of the term meaning either “special dharma” or “supplementary dharma.” These definitions suggest that abhidharma was conceived as a precise (P. *nippariyāya*), definitive ([PARAMĀRTHA](#)) assessment of the dharma that was presented in its discursive (P. *sappariyāya*), conventional ([SAMVRTI](#)) form in the [SŪTRAS](#). Where the sūtras offered more subjective presentations of the dharma, drawing on worldly

parlance, simile, metaphor, and personal anecdote in order to appeal to their specific audiences, the abhidharma provided an objective, impersonal, and highly technical description of the specific characteristics of reality and the causal processes governing production and cessation. There are two divergent theories for the emergence of the abhidharma as a separate genre of Buddhist literature. In one theory, accepted by most Western scholars, the abhidharma is thought to have evolved out of the “matrices” (S. [MĀTRKĀ](#); P. *mātikā*), or numerical lists of dharmas, that were used as mnemonic devices for organizing the teachings of the Buddha systematically. Such treatments of dharma are found even in the sūtra literature and are probably an inevitable by-product of the oral quality of early Buddhist textual transmission. A second theory, favored by Japanese scholars, is that abhidharma evolved from catechistic discussions (abhidharmakathā) in which a dialogic format was used to clarify problematic issues in doctrine. The dialogic style also appears prominently in the sūtras where, for example, the Buddha might give a brief statement of doctrine (uddeśa; P. *uddesa*) whose meaning had to be drawn out through exegesis (NIRDEŚA; P. *niddesa*); indeed, [MAHĀKĀTYĀYANA](#), one of the ten major disciples of the Buddha, was noted for his skill in such explications. This same style was prominent enough in the sūtras even to be listed as one of the nine or twelve genres of Buddhist literature (specifically, [VYĀKARANA](#); P. *veyyākaraṇa*). According to tradition, the Buddha first taught the abhidharma to his mother [MAHĀMĀYĀ](#), who had died shortly after his birth and been reborn as a god in [TUSITA](#) heaven. He met her in the heaven of the thirty-three ([TRĀYĀSTRIMŚĀ](#)), where he expounded the abhidharma to her and the other divinities there, repeating those teachings to [ŚĀRIPUTRA](#) when he descended each day to go on his alms-round. Śāriputra was renowned as a master of the abhidharma. Abhidharma primarily sets forth the training in higher wisdom ([ADHIPRAJÑĀŚIKṢĀ](#)) and involves both analytical and synthetic modes of doctrinal exegesis. The body of scholastic literature that developed from this exegetical style was compiled into the [ABHIDHARMAPITAKA](#), one of the three principal sections of the Buddhist canon, or [TRIPITAKA](#), along with sūtra and [VINAYA](#), and is concerned primarily with scholastic discussions on epistemology, cosmology, psychology, [KARMA](#), rebirth, and the constituents of the process of enlightenment and the path ([MĀRGA](#)) to salvation. (In the [MAHĀYĀNA](#) tradition, this abhidharmapitaka is sometimes redefined as a broader “treatise basket,” or [*ŚĀSTRAPITAKA](#).) [Abhidharmadharmaskandha\[pādaśāstra\]](#). (C. Apidamo fayun zu lun; J. Abidatsuma hōunsokuron; K. Abidalma pōbon chok non 阿毘達磨法蘊足論). See

[DHARMASKANDHA\[PĀDAŚĀSTRA\]](#).

[Abhidharmadhātukāya\[pādaśāstra\]](#). (C. Apidamo jieshen zu lun; J. Abidatsuma kaishinsokuron; K. Abidalma kyesin chok non 阿毘達磨界身足論). See [DHĀTUKĀYA\[PĀDAŚĀSTRA\]](#).

[Abhidharmadīpa](#). In Sanskrit, “Lamp of [ABHIDHARMA](#)”; an Indian scholastic treatise probably composed between 450 and 550 CE. Only fragments of the treatise (sixty-two of 150 folios) are extant; these were discovered in Tibet in 1937. The treatise is composed of two parts—the *Abhidharmadīpa*, written in verse (kārikā), and a prose autocommentary, the *Vibhāṣāprabhāvṛtti*—both of which were probably composed by the same anonymous author. The author, who refers to himself merely as the “Dīpakāra” (“author of the *Dīpa*”) may be Vimalamitra (d.u.), an otherwise-unknown disciple of [SAMGHABHADRA](#). The structure of the text is modeled on that of the influential [ABHIDHARMAKOŚABHĀSYA](#), and almost half of the kārikā verses included in the *Abhidharmadīpa* are virtually identical to those found in the *Abhidharmakośa*. Although borrowing freely from the *Kośa*, the Dīpakāra launches a harsh critique of [VASUBANDHU](#)’s (whom he calls the “Kośakāra,” or “author of the *Kośa*”) *Abhidharmakośabhāṣya*, from the standpoint of [SARVĀSTIVĀDA](#) abhidharma. Vasubandhu is criticized for the [SAUTRĀNTIKA](#) tendencies betrayed in his doctrinal analyses and also for being a Mahāyānist adherent of the teachings of the “three natures” ([TRISVABHĀVA](#)). As such, the *Abhidharmadīpa*’s author seems to have been a follower of [SAMGHABHADRA](#)’s [*NYĀYĀNUSĀRA](#), and the text helps to clarify the positions of Saṃghabhadra and the orthodox [VAIBHĀSIKA](#)s. The Dīpakāra shares the latter’s concern with providing both a systematic exegesis of abhidharma theory and a vigorous polemical defense of Sarvāstivāda doctrinal positions. Since it presents theories of other thinkers not covered in the *Abhidharmakośabhāṣya*, the *Abhidharmadīpa* serves as an important source for studying the history of Indian abhidharma. For example, in his discussion of the eponymous Sarvāstivāda position that “everything exists” throughout all three time periods ([TRIKĀLA](#)) of past, present, and future, the Dīpakāra also critiques three rival positions: the [VIBHAJYAVĀDA](#) and Dārṣṭāntikas, who maintain that only “part” exists (viz., the present); the Vaitulika and Ayogaśūnyatāvāda, who say that nothing exists; and the [PUḌGALAVĀDA](#), who presume that existence is indeterminate ([AVYĀKRTA](#)).

[*Abhidharmahṛdaya](#). (C. Apitan xin lun; J. Abidon shinron; K. Abidam sim

non 阿毘曇心論). In Sanskrit, “Heart of [ABHIDHARMA](#)”; one of the first attempts at a systematic presentation of abhidharma according to the [SARVĀSTIVĀDA](#) school; the treatise is attributed to Dharmasreṣṭhin (Fasheng, c. 130 BCE), who hailed from the [GANDHĀRA](#) region of Central Asia. The text is no longer extant in Sanskrit but survives only in a Chinese translation made sometime during the fourth century (alt. 376, 391) by Saṃghadeva and [LUSHAN HUIYUAN](#). The treatise functions essentially as a handbook for meditative development, focusing on ways of overcoming the negative proclivities of mind ([ANUŚAYA](#)) and developing correct knowledge ([JÑĀNA](#)). The meditative training outlined in the treatise focuses on the four absorptions ([DHYĀNA](#)) and on two practical techniques for developing concentration: mindfulness of breathing ([ĀNĀPĀNASMṚTI](#)) and the contemplation of impurity ([AŚUBHABHĀVANĀ](#)). The text is also one of the first to distinguish the path of vision ([DARŚANAMĀRGA](#)), which involves the initial insight into the [FOUR NOBLE TRUTHS](#), and the path of cultivation ([BHĀVANĀMĀRGA](#)), which eliminates all the remaining proclivities so that the adept may experience the stage of the worthy one ([ARHAT](#)).

[Abhidharmajñānaprasthāna](#). (C. Apidamo fazhi lun; J. Abidatsuma hotchiron; K. Abidalma palchi non 阿毘達磨發智論). See [JÑĀNAPRASTHĀNA](#).

[Abhidharmakośa](#). See [ABHIDHARMAKOŚABHĀSYA](#).

[Abhidharmakośabhāṣya](#). (T. Chos mngon pa'i mdzod kyi bshad pa; C. Apidamo jushe lun; J. Abidatsuma kusharon; K. Abidalma kusa non 阿毘達磨俱舍論). In Sanskrit, “A Treasury of [ABHIDHARMA](#), with Commentary”; an influential scholastic treatise attributed to [VASUBANDHU](#) (c. fourth or fifth century CE). The *Abhidharmakośabhāṣya* consists of two texts: the root text of the *Abhidharmakośa*, composed in verse (kārikā), and its prose autocommentary (bhāṣya); this dual verse-prose structure comes to be emblematic of later [SARVĀSTIVĀDA](#) abhidharma literature. As the title suggests, the work is mainly concerned with abhidharma theory as it was explicated in the [ABHIDHARMAMAHĀVIBHĀSĀ](#), the principal scholastic treatise of the [VAIBHĀSIKAĀBHIDHARMIKAS](#) in the Sarvāstivāda school. In comparison to the *Mahāvibhāṣā*, however, the *Abhidharmakośabhāṣya* presents a more systematic overview of Sarvāstivāda positions. At various points in his expositions, Vasubandhu criticizes the Sarvāstivāda doctrine from the standpoint of the more progressive [SAUTRĀNTIKA](#) offshoot of the Sarvāstivāda school, which elicited a spirited response from later Sarvāstivāda–Vaibhāṣika scholars, such as

[SAMGHABHADRA](#) in his [*NYAYĀNUSĀRA](#). The *Abhidharmakośabhāṣya* has thus served as an invaluable tool in the study of the history of the later [MAINSTREAM BUDDHIST SCHOOLS](#). The Sanskrit texts of both the *kārikā* and the *bhāṣya* were lost for centuries before being rediscovered in Tibet in 1934 and 1936, respectively. Two Chinese translations, by [XUANZANG](#) and [PARAMĀRTHA](#), and one Tibetan translation of the work are extant. The *Kośa* is primarily concerned with a detailed elucidation of the polysemous term [DHARMA](#), the causes ([HETU](#)) and conditions ([PRATYAYA](#)) that lead to continued rebirth in [SAMSĀRA](#), and the soteriological stages of the path ([MĀRGA](#)) leading to enlightenment. The treatise is divided into eight major chapters, called *kośasthānas*. (1) *Dhātunirdeśa*, “Exposition on the Elements,” divides dharmas into various categories, such as tainted ([SĀSRAVA](#)) and untainted ([ANĀSRAVA](#)), or compounded ([SAMSKRTA](#)) and uncompounded ([ASAMSKRTA](#)), and discusses the standard Buddhist classifications of the five aggregates ([SKANDHA](#)), twelve sense fields ([ĀYATANA](#)), and eighteen elements ([DHĀTU](#)). This chapter also includes extensive discussion of the theory of the four great elements ([MAHĀBHŪTA](#)) that constitute materiality ([RŪPA](#)) and the Buddhist theory of atoms or particles ([PARAMĀNU](#)). (2) *Indriyanirdeśa*, “Exposition on the Faculties,” discusses a fivefold classification of dharmas into materiality (*rūpa*), thought ([CITTA](#)), mental concomitants ([CAITTA](#)), forces dissociated from thought ([CITTAVIPRAYUKTASAMSKĀRA](#)), and the uncompounded ([ASAMSKRTA](#)). This chapter also has extensive discussions of the six causes ([HETU](#)), the four conditions ([PRATYAYA](#)), and the five effects or fruitions ([PHALA](#)). (3) *Lokanirdeśa*, “Exposition on the Cosmos,” describes the formation and structure of a world system ([LOKA](#)), the different types of sentient beings, the various levels of existence, and the principle of dependent origination ([PRATĪTYASAMUTPĀDA](#)) that governs the process of rebirth, which is discussed here in connection with the three time periods ([TRIKĀLA](#)) of past, present, and future. (4) *Karmanirdeśa*, “Exposition on Action,” discusses the different types of action ([KARMAN](#)), including the peculiar type of action associated with unmanifest materiality ([AVIJÑAPTIRŪPA](#)). The ten wholesome and unwholesome “paths of action” ([KUŚALA-KARMAPATHA](#) and [AKUŚALAKARMAPATHA](#)) also receive a lengthy description. (5) *Anuśayanirdeśa*, “Exposition on the Proclivities,” treats the ninety-eight types of [ANUŚAYA](#) in relation to their sources and qualities and the relationship between the *anuśayas* and other categories of unwholesome qualities, such as afflictions ([KLEŚA](#)), contaminants ([ĀSRAVA](#)), floods ([OGHA](#)), and yokes (*yoga*). (6) *Mārgapudgalanirdeśa*, “Exposition on the Path and the [Noble] Persons,” outlines how either insight into the four noble truths and carefully

following a series of soteriological steps can remove defilements and transform the ordinary person into one of the noble persons ([ĀRYAPUDGALA](#)). (7) *Jñānanirdeśa*, “Exposition on Knowledge,” offers a detailed account of the ten types of knowledge and the distinctive attributes of noble persons and buddhas. (8) *Samāpattinirdeśa*, “Exposition on Attainment,” discusses different categories of concentration ([SAMĀDHI](#)) and the attainments ([SAMĀPATTI](#)) that result from their perfection. (9) Appended to this main body is a ninth section, an independent treatise titled the *Pudgalanirdeśa*, “Exposition of the Notion of a Person.” Here, Vasubandhu offers a detailed critique of the theory of the self, scrutinizing both the Buddhist [PUDGALAVĀDA/VĀTSĪPUTRĪYA](#) “heresy” of the inexpressible (*avācya*) “person” ([PUDGALA](#)) being conventionally real and Brahmanical theories of a perduring soul ([ĀTMAN](#)). Numerous commentaries to the *Kośa*, such as those composed by [VASUMITRA](#), [YAŚOMITRA](#), [STHIRAMATI](#), and [Pūrṇavardhana](#), attest to its continuing influence in Indian Buddhist thought. The *Kośa* was also the object of vigorous study in the scholastic traditions of East Asia and Tibet, which produced many indigenous commentaries on the text and its doctrinal positions.

[Abhidharmakośavyākhyā](#) [Sphutārthā](#). See [SPHUTĀRTHĀ](#)
[ABHIDHARMAKOŚAVYĀKHYĀ](#).

[Abhidharmamahāvibhāṣā](#). (T. Chos mngon pa bye brag bshad pa chen po; C. Apidamo dapiposha lun; J. Abidatsuma daibibasharon; K. Abidalma taebibasa non 阿毘達磨大毘婆沙論). In Sanskrit, “Great Exegesis of [ABHIDHARMA](#),” also commonly known as *Mahāvibhāṣā*; a massive [VAIBHĀSIKA](#) treatise on [SARVĀSTIVĀDA](#) abhidharma translated into Chinese by the scholar–pilgrim [XUANZANG](#) and his translation bureau between 656 and 659 at [XIMINGSI](#) in the Tang capital of Chang’an. Although no Sanskrit version of this text is extant, earlier Chinese translations by Buddhavarman and others survive, albeit only in (equally massive) fragments. The complete Sanskrit text of the recension that Xuanzang used was in 100,000 Ślokas; his translation was in 200 rolls, making it one of the largest single works in the Buddhist canon. According to the account in Xuanzang’s [DA TANG XIYU JI](#), four hundred years after the Buddha’s [PARINIRVĀNA](#), King [KANISKA](#) gathered five hundred [ARHATS](#) to recite the Buddhist canon ([TRIPITAKA](#)). The [ABHIDHARMAPĪTAKA](#) of this canon, which is associated with the Sarvāstivāda school, is said to have been redacted during this council (see [COUNCIL, FOURTH](#)). The central abhidharma treatise of the

Sarvāstivāda school is [KĀTYĀYANĪPUTRA](#)'s [JÑĀNAPRASTHĀNA](#), and the *Abhidharmamahāvibhāṣā* purports to offer a comprehensive overview of varying views on the meaning of that seminal text by the five hundred arhats who were in attendance at the convocation. The comments of four major [ĀBHIDHARMIKAS](#) (Ghoṣa, [DHARMATRĀTA](#), [VASUMITRA](#), and Buddhadeva) are interwoven into the *Mahāvibhāṣā*'s contextual analysis of Kātyāyanīputra's material from the *Jñānaprasthāna*, making the text a veritable encyclopedia of contemporary Buddhist scholasticism. Since the *Mahāvibhāṣā* also purports to be a commentary on the central text of the Sarvāstivāda school, it therefore offers a comprehensive picture of the development of Sarvāstivāda thought after the compilation of the *Jñānaprasthāna*. The *Mahāvibhāṣā* is divided into eight sections (grantha) and several chapters (varga), which systematically follow the eight sections and forty-three chapters of the *Jñānaprasthāna* in presenting its explication. Coverage of each topic begins with an overview of varying interpretations found in different Buddhist and non-Buddhist schools, detailed coverage of the positions of the four major Sarvāstivāda Ābhidharmikas, and finally the definitive judgment of the compilers, the Kāśmīri followers of Kātyāyanīputra, who call themselves the Vibhāṣāsāstrins. The *Mahāvibhāṣā* was the major influence on the systematic scholastic elaboration of Sarvāstivāda doctrine that appears (though with occasional intrusions from the positions of the Sarvāstivāda's more-progressive [SAUTRĀNTIKA](#) offshoot) in [VASUBANDHU](#)'s influential [ĀBHIDHARMAKOŚABHĀSYA](#), which itself elicited a spirited response from later Sarvāstivāda–Vaibhāṣika scholars, such as [SAMGHABHADRA](#) in his [*NYĀYĀNUSĀRA](#). The *Mahāvibhāṣā* was not translated into Tibetan until the twentieth century, when a translation entitled *Bye brag bshad mdzod chen mo* was made at the Sino-Tibetan Institute by the Chinese monk [FAZUN](#) between 1946 and 1949. He presented a copy of the manuscript to the young fourteenth [DALAI LAMA](#) on the Dalai Lama's visit to Beijing in 1954, but it is not known whether it is still extant.

[*Abhidharmanyāyānusāra](#). See [*NYĀYĀNUSĀRA](#).

[abhidharmapitaka](#). (P. abhidhammapitaka; T. chos mngon pa'i sde snod; C. lunzang; J. ronzo; K. nonjang 論藏). The third of the three "baskets" ([PITAKA](#)) of the Buddhist canon ([TRIPITAKA](#)). The abhidharmapitaka derives from attempts in the early Buddhist community to elucidate the definitive significance of the teachings of the Buddha, as compiled in the [SŪTRAS](#). Since the Buddha was well

known to have adapted his message to fit the predilections and needs of his audience (cf. [UPĀYAKAUŚALYA](#)), there inevitably appeared inconsistencies in his teachings that needed to be resolved. The attempts to ferret out the definitive meaning of the [BUDDHADHARMA](#) through scholastic interpretation and exegesis eventually led to a new body of texts that ultimately were granted canonical status in their own right. These are the texts of the abhidharmapiṭaka. The earliest of these texts, such as the Pāli [VIBHAṄGA](#) and [PUGGALAPAÑÑATTI](#) and the [SARVĀSTIVĀDA SAMGĪTIPARYĀYA](#) and [DHARMASKANDHA](#), are structured as commentaries to specific sūtras or portions of sūtras. These materials typically organized the teachings around elaborate doctrinal taxonomies, which were used as mnemonic devices or catechisms. Later texts move beyond individual sūtras to systematize a wide range of doctrinal material, offering ever more complex analytical categorizations and discursive elaborations of the [DHARMA](#). Ultimately, abhidharma texts emerge as a new genre of Buddhist literature in their own right, employing sophisticated philosophical speculation and sometimes even involving polemical attacks on the positions of rival factions within the [SAMGHA](#).

¶ At least seven schools of Indian Buddhism transmitted their own recensions of abhidharma texts, but only two of these canons are extant in their entirety. The Pāli abhidhammapiṭaka of the [THERAVĀDA](#) school, the only recension that survives in an Indian language, includes seven texts (the order of which often differs): (1) [DHAMMASAṄGANI](#) (“Enumeration of Dharmas”) examines factors of mentality and materiality ([NĀMARŪPA](#)), arranged according to ethical quality; (2) [VIBHAṄGA](#) (“Analysis”) analyzes the aggregates ([SKANDHA](#)), conditioned origination ([PRATĪTYSAMUTPĀDA](#)), and meditative development, each treatment culminating in a catechistic series of inquiries; (3) [DHĀTUKATHĀ](#) (“Discourse on Elements”) categorizes all dharmas in terms of the skandhas and sense-fields ([ĀYATANA](#)); (4) [PUGGALAPAÑÑATTI](#) (“Description of Human Types”) analyzes different character types in terms of the three afflictions of greed ([LOBHA](#)), hatred ([DVEṢA](#)), and delusion ([MOHA](#)) and various related subcategories; (5) [KATHĀVATTHU](#) (“Points of Controversy”) scrutinizes the views of rival schools of mainstream Buddhism and how they differ from the Theravāda; (6) [YAMAKA](#) (“Pairs”) provides specific denotations of problematic terms through paired comparisons; (7) [PATTHĀNA](#) (“Conditions”) treats extensively the full implications of conditioned origination. ¶ The abhidharmapiṭaka of the [SARVĀSTIVĀDA](#) school is extant only in Chinese translation, the definitive versions of which were prepared by [XUANZANG](#)’s translation team in the seventh century. It also includes seven texts: (1) [SAMGĪTIPARYĀYA\[PĀDAŚĀSTRA\]](#)

(“Discourse on Pronouncements”) attributed to either [MAHĀKAUSTHILA](#) or [ŚĀRIPUTRA](#), a commentary on the *Samgītisūtra* (see [SAṄĪTISUTTA](#)), where śāriputra sets out a series of dharma lists ([MĀTRKĀ](#)), ordered from ones to eevens, to organize the Buddha’s teachings systematically; (2) [DHARMASKANDHA\[PĀDAŚĀSTRA\]](#) (“Aggregation of Dharmas”), attributed to śāriputra or [MAHĀMAUDGALYĀYANA](#), discusses Buddhist soteriological practices, as well as the afflictions that hinder spiritual progress, drawn primarily from the [AGAMAS](#); (3) [PRAJÑAPTIBHĀSYA\[PĀDAŚĀSTRA\]](#) (“Treatise on Designations”), attributed to Maudgalyāyana, treats Buddhist cosmology (lokaprajñapti), causes (kāraṇa), and action ([KARMAN](#)); (4) [DHĀTUKĀYA\[PĀDAŚĀSTRA\]](#) (“Collection on the Elements”), attributed to either [PŪRNA](#) or [VASUMITRA](#), discusses the mental concomitants (the meaning of [DHĀTU](#) in this treatise) and sets out specific sets of mental factors that are present in all moments of consciousness (viz., the ten [MAHĀBHŪMIKA](#)) or all defiled states of mind (viz., the ten [KLEŚAMAHĀBHŪMIKA](#)); (5) [VIJÑĀNAKĀYA\[PĀDAŚĀSTRA\]](#) (“Collection on Consciousness”), attributed to Devaśarman, seeks to prove the veracity of the eponymous Sarvāstivāda position that dharmas exist in all three time periods ([TRIKĀLA](#)) of past, present, and future, and the falsity of notions of the person ([PUDGALA](#)); it also provides the first listing of the four types of conditions ([PRATYAYA](#)); (6) [PRAKARANA\[PĀDAŚĀSTRA\]](#) (“Exposition”), attributed to [VASUMITRA](#), first introduces the categorization of dharmas according to the more developed Sarvāstivāda rubric of [RŪPA](#), [CITTA](#), [CAITTA](#), [CITTAVIPRAYUKTASAMSKĀRA](#), and [ASAMSKRTA](#) dharmas; it also adds a new listing of [KUŚĀLAMAHĀBHŪMIKA](#), or factors always associated with wholesome states of mind; (7) [JÑĀNAPRASTHĀNA](#) (“Foundations of Knowledge”), attributed to [KĀTYĀYANĪPUTRA](#), an exhaustive survey of Sarvāstivāda dharma theory and the school’s exposition of psychological states, which forms the basis of the massive encyclopedia of Sarvāstivāda-Vaibhāṣika abhidharma, the [ABHIDHARMAMAHĀVIBHĀSĀ](#). In the traditional organization of the seven canonical books of the Sarvāstivāda abhidharmapiṭaka, the [JÑĀNAPRASTHĀNA](#) is treated as the “body” ([ŚĀRĪRA](#)), or central treatise of the canon, with its six “feet” (pāda), or ancillary treatises (pādaśāstra), listed in the following order: (1) Prakaraṇapāda, (2) Vijñānakāya, (3) Dharmaskandha, (4) Prajñaptibhāṣya, (5) Dhātukāya, and (6) Samgītiparyāya. Abhidharma exegetes later turned their attention to these canonical abhidharma materials and subjected them to the kind of rigorous scholarly analysis previously directed to the sūtras. These led to the writing of innovative syntheses and synopses of abhidharma doctrine, in such texts as [BUDDHAGHOSA](#)’s [VISUDDHIMAGGA](#) and [ANURUDDHA](#)’s

[ABHIDHAMMATTHASAṄGAHA](#), [VASUBANDHU](#)'s [ABHIDHARMAKOŚABHĀŚYA](#), and [SAMGHABHADRA](#)'s *[NYĀYĀNUSĀRA](#). In East Asia, this third “basket” was eventually expanded to include the burgeoning scholastic literature of the [MAHĀYĀNA](#), transforming it from a strictly abhidharmapīṭaka into a broader “treatise basket” or *[ŚĀSTRAPITAKA](#) (C. lunzang).

[Abhidharmaprakaranapāda](#). (S). See [PRAKARANA\[PĀDAŚĀSTRA\]](#).

[Abhidharmasamuccaya](#). (T. Chos mngon pa kun las btus pa; C. Dasheng Apidamo ji lun; J. Daijō Abidatsuma jūron; K. Taesūng Abidalma chip non 大乘阿毘達磨集論). In Sanskrit, “Compendium of Abhidharma”; an influential scholastic treatise attributed to [ASAṄGA](#). The *Abhidharmasamuccaya* provides a systematic and comprehensive explanation of various categories of [DHARMA](#)s in [ABHIDHARMA](#) fashion, in five major sections. Overall, the treatise continues the work of earlier abhidharma theorists, but it also seems to uphold a [MAHĀYĀNA](#) and, more specifically, [YOGĀCĀRA](#) viewpoint. For example, unlike [SARVĀSTIVĀDA](#) abhidharma materials, which provide detailed listings of dharmas in order to demonstrate the range of factors that perdure throughout all three time periods ([TRIKĀLA](#)) of past, present, and future, Asaṅga’s exposition tends to reject any notion that dharmas are absolute realities, thus exposing their inherent emptiness ([ŚŪNYATĀ](#)). The first section of the treatise, *Lakṣaṇasamuccaya* (“Compendium of Characteristics”), first explains the five [SKANDHA](#), twelve [ĀYATANA](#), and eighteen [DHĀTU](#) in terms of their attributes ([MĀTRKĀ](#)) and then their includedness (*saṃgraha*), association (*saṃprayoga*), and accompaniment (*samanvāgama*). The second section of the treatise, *Satyaviniścaya* (“Ascertainment of the Truths”), is generally concerned with and classified according to the [FOUR NOBLE TRUTHS](#) (*catvāry Āryasatyāni*). The third section, *Dharmaviniścaya* (“Ascertainment of the Dharma”), outlines the teachings of Buddhism in terms of the twelve divisions ([DVĀDAŚĀṄGA\[PRAVACANA\]](#)) of texts in the [TRIPITAKA](#). The fourth section, *Prāptiviniścaya* (“Ascertainment of Attainments”), outlines the various types of Buddhist practitioners and their specific realizations ([ABHISAMAYA](#)). The fifth and last section, *Sāṃkathyaviniścaya* (“Ascertainment of Argumentation”), outlines specific modes of debate that will enable one to defeat one’s opponents. Fragments of the Sanskrit text of the *Abhidharmasamuccaya* (discovered in Tibet in 1934) are extant, along with a Tibetan translation and a Chinese translation made by [XUANZANG](#) in 652 CE. A commentary on the treatise by [STHIRAMATI](#), known as

the *Abhidharmasamuccayavyākhyā(na)*, was also translated into Chinese by Xuanzang.

[Abhidharmavijñānakāyapādaśāstra](#). See [VIJÑĀNAKĀYAI PĀDAŚĀSTRAJ](#).

[Ābhidharmika](#). (P. [ABHIDHAMMIKA](#); T. chos mngon pa ba; C. apidamo dalunshi/duifa zhushi; J. abidatsuma daironshi/taihō shashi; K. abidalma taeronsa/taeböpp chesa 阿毘達磨大論師/對法諸師). In Sanskrit, “specialist in [ABHIDHARMA](#)”; refers to exegetes and commentators specializing in the texts and teachings of the [ABHIDHARMAPITAKA](#). In [MAHĀYĀNA](#) sources, Ābhidharmika may also refer more generically to “scholars,” not necessarily only to specialists in abhidharma. In Chinese Buddhism, for example, the eminent Indian scholiasts [ĀSVAGHOSA](#), [NĀGĀRJUNA](#), [ĀRYADEVA](#), and Kumāralāta are said to be the four great Ābhidharmikas of the Mahāyāna tradition. See also [ABHIDHAMMIKA](#).

[abhidhyā](#). (P. abhijjhā; T. brnab sems; C. tan; J. ton; K. t’am 貪). In Sanskrit, “covetousness”; a synonym for greed ([LOBHA](#)) and craving ([TRSNĀ](#)), abhidhyā is listed as the eighth of ten unwholesome courses of action ([AKUŚĀLAKARMAPATHA](#)). Abhidhyā is a more intense form of lobha in which one’s inherent greed or lust for objects has evolved into an active pursuit of them in order to make them one’s own (“Ah, would that they were mine,” the commentaries say). The ten courses of action are divided into three groups according to whether they are performed by the body, speech, or mind. Covetousness is classified as an unwholesome mental course of action and forms a triad along with malice ([VYĀPĀDA](#)) and wrong views ([MITHYĀDRSTI](#)). Only extreme forms of defiled thinking are deemed an unwholesome course of mental action (akuśalakarmapatha), such as the covetous wish to misappropriate someone else’s property, the hateful wish to hurt someone, or adherence to pernicious doctrines. Lesser forms of defiled thinking are still unwholesome ([AKUŚĀLA](#)), but do not constitute a course of action. The unwholesome course of bodily action is of three types: killing, stealing, and unlawful sexual intercourse. The unwholesome course of verbal action includes four: false speech, slander, abusive speech, and prattle. The list of ten wholesome and ten unwholesome courses of action occurs frequently in mainstream Buddhist scriptures.

[abhijñā](#). (P. abhiññā; T. mngon shes; C. shentong; J. jinzū; K. sint’ong 神通). In Sanskrit, “superknowledges”; specifically referring to a set of supranormal powers that are by-products of meditation. These are usually enumerated as six:

(1) various psychical and magical powers ([ṚDDHIVIDHĀBHIIJÑĀ](#) [alt. ṛddhividhi], P. iddhividhā), such as the ability to pass through walls, sometimes also known as “unimpeded bodily action” (ṛddhisākṣātkriyā); (2) clairvoyance, lit. “divine eye” ([DIVYACAḶSUS](#), P. dibbacakkhu), the ability to see from afar and to see how beings fare in accordance with their deeds; (3) clairaudience, lit. “divine ear” ([DIVYAŚROTRA](#), P. dibbasota), the ability to hear from afar; (4) the ability to remember one’s own former lives ([PŪRVANIVĀSĀNUSMṚTI](#), P. pubbenivāsānunssati); (5) “knowledge of others’ states of mind” ([CETOPARYĀYĀBHIIJÑĀNA/PARACITTAJÑĀNA](#), P. cetopariyañāṇa), e.g., telepathy; and (6) the knowledge of the extinction of the contaminants ([ĀSRAVAKSAYA](#), P. āsavakkhāya). The first five of these superknowledges are considered to be mundane ([LAUKIKA](#)) achievements, which are gained through still more profound refinement of the fourth stage of meditative absorption ([DHYĀNA](#)). The sixth power is said to be supramundane ([LOKOTTARA](#)) and is attainable through the cultivation of insight ([VIPAŚYANĀ](#)) into the nature of reality. The first, second, and sixth superknowledges are also called the three kinds of knowledge ([TRIVIDYĀ](#); P. tevijjā).

abhilāsa. (P. abhilāsa; T. ’dod pa/mngon par ’dod pa; C. leqiu; J. gyōgu; K. nakku 樂求). In Sanskrit, “desire” or “longing”; in [MAHĀYĀNA](#) referring especially to the “longing” to remain at the level of a [ŚRĀVAKA](#).

abhimāna. (T. mngon pa’i nga rgyal; C. man; J. man; K. man 慢). In Sanskrit and Pāli, “conceit,” “haughtiness,” or “arrogance”; an intensification of mere “pride” ([MĀNA](#)). In the [YOGĀCĀRABHŪMIŚĀSTRA](#) and Tibetan sources, abhimāna is listed as one of seven types of conceit. This conceit can refer either to views that one holds arrogantly, haughtiness regarding the status into which one is born, or arrogance regarding the extent of one’s wealth and/or knowledge.

abhimukhī. (T. mngon du ’gyur ba/mngon du phyogs pa; C. xianqian [di]; J. genzen[chi]; K. hyōnjōn [chi] 現前[地]). In Sanskrit, “manifest” or “evident”; used with reference to a twofold classification of phenomena as manifest (abhimukhī)—viz., those things that are evident to sense perception—and hidden (S. [PAROKSA](#), T. lkog gyur)—viz., those things whose existence must be inferred through reasoning. ¶ Abhimukhī, as “immediacy” or “face-to-face,” is the sixth of the ten stages ([BHŪMI](#)) of the [BODHISATTVA](#) path described in the [DAŚABHŪMIKASŪTRA](#). The [MAHĀYĀNASŪTRĀLAMKĀRA](#) interprets this bhūmi as “directly facing,” or “face-to-face,” implying that the bodhisattva at this stage of

the path stands at the intersection between [SAMSĀRA](#) and [NIRVĀNA](#). The bodhisattva here realizes the equality of all phenomena (dharmasamatā), e.g., that all dharmas are signless and free of characteristics, unproduced and unoriginated, and free from the duality of existence and nonexistence. Turning away from the compounded dharmas of saṃsāra, the bodhisattva turns to face the profound wisdom of the buddhas and is thus “face-to-face” with both the compounded ([SAMSKRĪTA](#)) and uncompounded ([ASAMSKRĪTA](#)) realms. This bhūmi is typically correlated with mastery of the sixth perfection ([PĀRAMITĀ](#)), the perfection of wisdom ([PRAJÑĀPĀRAMITĀ](#)).

[abhinirūpanāvikalpa](#). (T. mngon par rtog pa/rnam par rtog pa; C. jidu fenbie; J. ketaku funbetsu; K. kyet’ak punbyöl 計度分別). In Sanskrit, “conceptualizing discrimination” or “discursive thought”; the second of the three types of conceptual discrimination ([VIKALPA](#)). See [TRIVIKALPA](#).

[Abhiniskramanasūtra](#). (T. Mngon par ’byung ba’i mdo; C. Fo benxing ji jing; J. Butsuhongyōjukkyō; K. Pul ponhaeng chip kyōng 佛本行集經). In Sanskrit, “Sūtra of the Great Renunciation”; this scripture relates the story of Prince [SIDDHĀRTHA](#)’s “going forth” (abhiniṣkramaṇa; P. abhinikkhamaṇa) from his father’s palace to pursue the life of a mendicant wanderer ([ŚRAMANA](#)) in search of enlightenment. There are no extant Sanskrit versions of the [SŪTRA](#), but the work survives in Tibetan and in several distinct recensions available in Chinese translation, one dating to as early as the first century CE. The best-known Chinese translation is the *Fo benxing ji jing*, made by [JÑĀNAGUPTA](#) around 587 CE, during the Sui dynasty. The text claims to be a [DHARMAGUPTAKA](#) recension of the [JĀTAKA](#), or past lives of the Buddha. (Franklin Edgerton has suggested that this text may instead be a translation of the [MAHĀVASTU](#), “The Great Account,” of the [LOKOTTARAVĀDA](#) offshoot of the [MAHĀSĀMĠHIKA](#) school.) Jñānagupta’s recension has sixty chapters, in five major parts. The first part is an introduction to the work as a whole, which relates how rare it is for a buddha to appear in the world and why people should take advantage of this opportunity. Reference is made to the various meritorious roots ([KUŚĀLAMŪLA](#)) that [ŚĀKYAMUNI](#) acquired throughout his many lifetimes of training, in order to prepare for this final life when he would finally attain enlightenment. The second part enumerates the entire lineage of the buddhas of antiquity, a lineage that Śākyamuni would soon join, and the third part follows with a genealogy of the [ŚĀKYA](#) clan. The fourth part describes the decisive stages in Śākyamuni’s life, from birth, through his

awakening, to the first “turning of the wheel of the [DHARMA](#)” ([DHARMAKRAPRAVARTANA](#)). The last part gives extended biographies (going even into their past lives) of his prominent disciples, of which the stories involving his longtime attendant, [ĀNANDA](#), are particularly extensive. In 1876, [SAMUEL BEAL](#) translated this Chinese recension of the sūtra into English as *The Romantic Legend of Śākya Buddha*.

[abhiprāya](#). (T. dgongs pa; C. yiqu; J. ishu; K. ūich’wi 意趣). In Sanskrit, “hidden intention” or “purpose”; a term used in hermeneutics to refer to the concealed intent the Buddha had in mind when he made a statement that was not literally true (see also [ABHISAMDHI](#)). In the [MAHĀYĀNASŪTRĀLAMKĀRA](#), there are four abhiprāyas. (1) The Buddha may say that two things are the same when in fact they are similar in only one, albeit important, feature. Thus, [ŚĀKYAMUNI](#) Buddha says that he is the past buddha [VIPĀŚYIN](#), thinking of the fact that there is not the slightest difference in their [DHARMAKĀYAS](#). This is called the intention of sameness (samatābhiprāya). (2) The Buddha may say one thing while intending something else (arthāntarābhiprāya). This category is often invoked in [YOGĀCĀRA](#) exegesis to explain why the Buddha proclaimed the nonexistence of all phenomena in the [PRAJÑĀPĀRAMITĀ](#) sūtras when he in fact did not intend this statement to be taken literally, thinking instead of the three natures ([TRILAKSANA](#)) of all phenomena propounded by the Yogācāra. (3) The buddha may make a statement intending another time (kālāntarābhiprāya) than that suggested by his words. For example, he may assure lazy persons who are incapable of any virtuous practice whatsoever that they will be reborn in [SUKHĀVATĪ](#), the paradise of [AMITĀBHA](#), if they will simply call on that buddha. He does this in order to encourage them to accumulate a modest amount of merit, although he knows that they will not be reborn there immediately or even in their next lifetime, but at some other time in the future. (4) The Buddha adjusts his teaching to the capacities of his students based on their dispositions (pudgalāntarābhiprāya). For example, the Buddha will extol the benefits of the practice of charity ([DĀNA](#)) to a person who is disposed toward the accumulation of merit ([PUNYA](#)) but will underplay the importance of charity to a person who becomes complacently attached to that practice. See [ABHISAMDHI](#); [SANDHYĀBHĀSĀ](#).

[abhirati](#). (T. mngon dga’; C. miaoqi/abiruoti; J. myōki/abiradai; K. myohŭi/abiraje 妙喜/阿比羅提). In Sanskrit, “delight,” “repose,” or “wondrous joy”; the world system ([LOKADHĀTU](#)) and buddha-field ([BUDDHAKSETRA](#)) of the

buddha [AKṢOBHYA](#), which is said to be located in the east. Abhirati is one of the earliest of the buddha-fields to appear in Buddhist literature and is depicted as an idealized form of our ordinary [SAHĀ](#) world. As its name implies, abhirati is a land of delight, the antithesis of the suffering that plagues our world, and its pleasures are the by-products of Akṣobhya's immense merit and compassion. In his land, Akṣobhya sits on a platform sheltered by a huge [BODHI TREE](#), which is surrounded by row after row of palm trees and jasmine bushes. The soil is golden in color and as soft as cotton. Although abhirati, like our world, has a sun and moon, both pale next to the radiance of Akṣobhya himself. In abhirati, there are gender distinctions, as in our world, but no physical sexuality. A man who entertains sexual thoughts toward a woman would instantly see this desire transformed into a [DHYĀNA](#) that derives from the meditation on impurity ([AŚUBHABHĀVANĀ](#)), while a woman can become pregnant by a man's glance (even though women do not experience menstruation). Food and drink appear spontaneously whenever a person is hungry or thirsty. Abhirati is designed to provide the optimal environment for Buddhist practice, and rebirth there is a direct result of an adept having planted meritorious roots ([KUŚALAMŪLA](#)), engaging in salutary actions, and then dedicating any merit deriving from those actions to his future rebirth in that land. Akṣobhya will eventually attain [PARINIRVĀNA](#) in abhirati through a final act of self-immolation (see [SHESHEN](#)). Abhirati is described in the [AKṢOBHYATATHĀGATASYAVYŪHA](#), an important precursor to the more famous [SUKHĀVATĪVYŪHA](#) that describes [SUKHĀVATĪ](#), the buddha-field of [AMITĀBHA](#).

[Abhirūpā Nandā](#). In Pāli, “Nandā the Lovely”; one of three prominent nuns named Nandā mentioned in the Pāli canon (the others being [JANAPADAKALYĀNĪ NANDĀ](#) and [SUNDARĪ NANDĀ](#)), all of whom share similar stories. According to Pāli sources, Abhirūpā Nandā was said to be the daughter of the Sākiyan (S. [ŚĀKYA](#)) chieftain Khemaka and lived in Kapilavastu (S. [KAPILAVASTU](#)). She was renowned for her extraordinary beauty, for which she was given the epithet Abhirūpā (Lovely). So popular was she that her parents became vexed by the many suitors who sought her hand in marriage. As was the Sākiyan custom, Nandā was entitled to choose her future husband, but on the day she was to wed, her fiancé died and her parents forced her into the monastic order against her will. Exceedingly proud of her beauty and having no real religious vocation, she avoided visiting the Buddha lest he rebuke her for her vanity. Learning of her reluctance, the Buddha instructed Mahāpajāpati (S. [MAHĀPRAJĀPATĪ](#)), his

stepmother and head of the nuns' order, to arrange for every nun in her charge to come to him for instruction. Nandā, in fear, sent a substitute in her place but the ruse was uncovered. When Nandā was finally compelled to appear before the Buddha, he created an apparition of lovely women standing and fanning him. Nandā was enthralled by the beauty of the conjured maidens, whom the Buddha then caused to age, grow decrepit, die, and rot, right before her eyes. The Buddha then preached to her about the fragility of physical beauty. Having been given a suitable subject of meditation ([KAMMATTHANA](#)), Nandā eventually gained insight into the impermanence ([ANITYA](#)), suffering ([DUHKHA](#)), and lack of self ([ANĀTMAN](#)) of all conditioned things and attained arahatship. The source for the stories related to Abhirūpā Nandā is the commentarial note to verses nineteen and twenty of the Pāli [THERĪGĀTHĀ](#), a text only known to the Pāli tradition.

[abhisamācārikāsīla](#). (C. biqiu weiyi; J. biku igi; K. pigu wiūi 比丘威儀). In Pāli, “virtuous (or proper) conduct”; often abbreviated simply as abhisamācārikā. The term may be used generically to refer to the basic moral codes ([ŚĪLA](#)) that are followed by all Buddhists, whether lay or monastic. More specifically, in the context of the Buddhist monastic codes ([VINAYA](#)), abhisamācārikā refers to the broad standards of behavior and norms that are expected of a monk ([BHIKSU](#)) or nun ([BHIKSUNĪ](#)) living in a monastery. In the monastic tradition, we find a distinction between two kinds of moral discipline. The first is abhisamācārikāsīla, which indicates a set of more mundane, external prescriptions including how a monk should treat his superior and how a monastery should be maintained from day to day. For example, the abhisamācārikā section of the [MAHĀSĀMGHIKA VINAYA](#) includes detailed instructions on how and when to hold the recitation of the monastic rules ([UPOSADHA](#)). The text lists the spaces that are appropriate for this ritual and gives detailed instructions on how the space is to be cleaned and prepared for the recitation. As with other monastic instructions, these rules are accompanied by a story that serves as an impetus for the making of the rule. The second type of moral discipline is [ĀDIBRAHMACARIYAKASĪLA](#), which are rules of conduct that will lead one further toward the complete eradication of suffering ([DUHKHA](#)). Abhisamācārikāsīla is understood to be the lesser discipline with mundane ends, while ādibrahmacariyakasīla is understood to be the higher transcendent discipline.

[abhisamaya](#). (T. mngon rtogs; C. xianguan; J. genkan; K. hyōn'gwan 現觀). In

Sanskrit and Pāli, “comprehension,” “realization,” or “penetration”; a foundational term in Buddhist soteriological theory, broadly referring to training that results in the realization of truth (satyābhisamaya; P. saccābhisamaya). This realization most typically involves the direct insight into the [FOUR NOBLE TRUTHS](#) (catvāry āryasatyāni) but may also be used with reference to realization of the twelvefold chain of dependent origination ([PRATĪTYASAMUTPĀDA](#)), the noble eightfold path ([ĀRYĀSTĀNGAMĀRGA](#)), the thirty-seven wings of enlightenment ([BODHIPĀKSIKADHARMA](#)), etc., thus making all these doctrines specific objects of meditation. The Pāli [PATISAMBHIDĀMAGGA](#) discusses forty-four specific kinds of abhisamaya, all related to basic doctrinal lists. In the [SARVĀSTIVĀDA](#) abhidharma, abhisamaya occurs on the path of vision ([DARŚANAMĀRGA](#)), through a “sequential realization” (anupūrvābhisamaya) of sixteen moments of insight into the four noble truths. This gradual unfolding of realization was rejected by the [THERAVĀDA](#) school and was strongly criticized in [HARIVARMAN](#)’s [*TATTVASIDDHI](#), both of which advocated the theory of instantaneous realization (ekakṣaṇābhisamaya). In the [YOGĀCĀRA](#) school of [MAHĀYĀNA](#), abhisamaya is not limited to the path of vision, as in the Sarvāstivāda school, but also occurs on the path of preparation ([PRAYOGAMĀRGA](#)) that precedes the path of vision through the abhisamayās of thought, faith, and discipline, as well as on the path of cultivation ([BHĀVANĀMĀRGA](#)) through two abhisamayās associated with wisdom and an abhisamaya associated with the ultimate path ([NISTHĀMĀRGA](#)). The term comes to be associated particularly with the [ABHISAMAYĀLAMKĀRA](#), attributed to [MAITREYANĀTHA](#), which sets forth the various realizations achieved on the “[HĪNAYĀNA](#)” and [MAHĀYĀNA](#) paths. In the eight chapters of this text are delineated eight types of abhisamaya, which subsume the course of training followed by both [ŚRĀVAKAS](#) and [BODHISATTVAS](#): (1) the wisdom of knowing all modes ([SARVĀKĀRAJÑATĀ](#)), (2) the wisdom of knowing the paths ([MĀRGAJÑATĀ](#)), (3) the wisdom of knowing all phenomena ([SARVAJÑATĀ](#)), (4) manifestly perfect realization of all (the three previous) aspects (sarvākārābhisambodha), (5) the summit of realization (mūrdhābhisamaya; see [MŪRDHAN](#)), (6) gradual realization (anupūrvābhisamaya), (7) instantaneous realization (ekakṣaṇābhisamaya), and (8) realization of the dharma body, or [DHARMAKĀYA](#) (dharmakāyābhisambodha).

[Abhisamayālamkāra](#). (T. Mngon par rtogs pa’i rgyan). In Sanskrit, “Ornament of Realization”; a major scholastic treatise of the [MAHĀYĀNA](#), attributed to [MAITREYANĀTHA](#) (c. 350CE). Its full title is *Abhisamayālamkāranāmaprajñāpāramitopadeśaśāstra* (T. Shes rab kyi pha rol

tu phyin pa'i man ngag gi bstan bcos mngon par rtogs pa'i rgyan) or “Treatise Setting Forth the Perfection of Wisdom called ‘Ornament for Realization.’” In the Tibetan tradition, the *Abhisamayālamkāra* is counted among the five treatises of Maitreya ([BYAMS CHOS SDE LNGA](#)). The 273 verses of the *Abhisamayālamkāra* provide a schematic outline of the perfection of wisdom, or [PRAJÑĀPĀRAMITĀ](#), approach to enlightenment, specifically as delineated in the [PAÑCAVIMŚATISĀHASRIKĀPRAJÑĀPĀRAMITĀ](#) (“Perfection of Wisdom in Twenty-Five Thousand Lines”). This detailed delineation of the path is regarded as the “hidden teaching” of the prajñāpāramitā sūtras. Although hardly known in East Asian Buddhism (until the modern Chinese translation by [FAZUN](#)), the work was widely studied in Tibet, where it continues to hold a central place in the monastic curricula of all the major sects. It is especially important for the [DGE LUGS](#) sect, which takes it as the definitive description of the stages of realization achieved through the Buddhist path. The *Abhisamayālamkāra* treats the principal topics of the prajñāpāramitā sūtras by presenting them in terms of the stages of realizations achieved via the five paths ([PAÑCAMĀRGA](#)). The eight chapters of the text divide these realizations into eight types. The first three are types of knowledge that are essential to any type of practice and are generic to both the mainstream and Mahāyāna schools. (1) The wisdom of knowing all modes ([SARVĀKĀRAJÑATĀ](#)), for the bodhisattva-adepts who are the putative target audience of the commentary, explains all the characteristics of the myriad dharmas, so that they will have comprehensive knowledge of what the attainment of enlightenment will bring. (2) The wisdom of knowing the paths ([MĀRGAJÑATĀ](#)), viz., the paths perfected by the [ŚRĀVAKAs](#), is a prerequisite to achieving the wisdom of knowing all modes. (3) The wisdom of knowing all phenomena ([SARVAJÑATĀ](#)) is, in turn, a prerequisite to achieving the wisdom of knowing the paths. With (4) the topic of the manifestly perfect realization of all aspects (sarvākārābhisambodha) starts the text’s coverage of the path itself, here focused on gaining insight into all aspects, viz., characteristics of dharmas, paths, and types of beings. By reaching (5) the summit of realization (mūrdhābhisamaya; see [MŪRDHAN](#)), one arrives at the entrance to ultimate realization. All the realizations achieved up to this point are secured and commingled through (6) gradual realization (anupūrvābhisamaya). The perfection of this gradual realization and the consolidation of all previous realizations catalyze the (7) instantaneous realization (ekakṣaṇābhisamaya). The fruition of this instantaneous realization brings (8) realization of the dharma body, or [DHARMAKĀYA](#) (dharmakāyābhisambodha). The first three chapters thus

describe the three wisdoms incumbent on the buddhas; the middle four chapters cover the four paths that take these wisdoms as their object; and the last chapter describes the resultant dharma body of the buddhas and their special attainments. The *Abhisamayālamkāra* provides a synopsis of the massive prajñāpāramitā scriptures and a systematic outline of the comprehensive path of Mahāyāna. The *Abhisamayālamkāra* spurred a long tradition of Indian commentaries and other exegetical works, twenty-one of which are preserved in the Tibetan canon. Notable among this literature are Ārya [VIMUKTISENA](#)'s *Vṛtti* and the [ABHISAMAYĀLAMKĀRĀLOKĀ](#) and *Vivṛti* (called *Don gsal* in Tibetan) by [HARIBHADRA](#). Later Tibetan commentaries include [BU STON RIN CHEN GRUB](#)'s *Lung gi snye ma* and [TSONG KHA PA](#)'s [LEGS BSHAD GSER PHRENG](#).

[Abhisamayālamkārikāprajñāpāramitopadeśaśāstrāṅkā-Prasphutapadā](#). (S). See [PRASPHUTAPADĀ](#).

[Abhisamayālamkāralokā-vyākhyā](#). (T. Mngon rtogs rgyan gyi snang ba rgya cher bshad pa). In Sanskrit, “Illuminating the ‘Ornament of Realization,’” by the Indian scholiast [HARIBHADRA](#) (c. 750 CE). This long commentary, summarized in his [ABHISAMAYĀLAMKĀRAVIVṚTI](#), correlates the 273 verses of [MAITREYANĀTHA](#)'s [ABHISAMAYĀLAMKĀRA](#) with the specific corresponding sections in the [ASTASĀHASRIKĀPRAJÑĀPĀRAMITĀ](#) (“Perfection of Wisdom in Eight Thousand Lines”). It was translated into Tibetan by [RIN CHEN BZANG PO](#) in the eleventh century and by [RNGOG BLO LDAN SHES RAB](#) and subsequently became a central text in the curricula of many Tibetan monasteries. See [ASTASĀHASRIKĀPRAJÑĀPĀRAMITĀVYĀKHYĀBHISAMAYĀLAMKĀRĀLOKĀ](#).

[Abhisamayālamkāravivṛti](#). (T. [Shes rab phar phyin man ngag gi bstan bcos] mngon rtogs rgyan gyi 'grel pa). In Sanskrit, “Commentary on the Ornament of Realization” by [HARIBHADRA](#). The work in four bundles (T. bam po) is a digest (called 'grel chung, “short commentary”) of his long detailed explanation of the [ASTASĀHASRIKĀPRAJÑĀPĀRAMITĀ](#) (“Perfection of Wisdom in Eight Thousand Lines”), the [ASTASĀHASRIKĀPRAJÑĀPĀRAMITĀVYĀKHYĀBHISAMAYĀLAMKĀRĀLOKĀ](#) (called 'grel chen, “long commentary”). The *Abhisamayālamkāravivṛti* gained considerable importance in Tibet after [RNGOG BLO LDAN SHES RAB](#) supplemented his translation of it with a summary (*bsdus don*) of its contents, beginning a tradition of [PRAJÑĀPĀRAMITĀ](#) commentary that spread from [GSANG PHU NE'U THOG](#) monastery into all four Tibetan sects. This tradition, which continues down to the present, uses the [ABHISAMAYĀLAMKĀRA](#) and [ABHISAMAYĀLAMKĀRAVIVṚTI](#) as

twin root texts to structure wide-ranging discussions of abhidharma, right philosophical view and proper praxis. There are two subcommentaries to the work, Dharmamitra's [PRASPHUTAPADĀ](#) and [DHARMAKĪRTIŚRĪ](#)'s *Durbodhāloka*. [PRAJÑĀKARAMATI](#), [RATNAKĪRTI](#), and Buddhajñāna wrote summaries of the work, all extant in Tibetan translation. See also [SPHUTĀRTHĀ](#).

[abhisam̐dhi](#). (T. ldem por dgongs pa; C. miyi; J. mitchi/mitsui; K. mirŭi 密意). In Sanskrit, "implied intention," a term used in hermeneutics to classify the types of statements made by the Buddha. In the [MAHĀYĀNASŪTRĀLAMKĀRA](#), there are four such abhisam̐dhi listed. (1) The first is implied intention pertaining to entrance (avatāraṇābhisam̐dhi). The Buddha recognizes that if he were to teach [HĪNAYĀNA](#) disciples that, in addition to the nonexistence of the self ([ANĀTMAN](#)), [DHARMA](#)s also did not exist ([DHARMANAIRĀTMYA](#)), they would be so terrified that they would never enter the [MAHĀYĀNA](#). Therefore, in order to coax them toward the Mahāyāna, he teaches them that a personal self does not exist while explaining that phenomena other than the person do exist. (2) The second is implied intention pertaining to the [three] natures (lakṣaṇābhisam̐dhi). When the Buddha said that all phenomena are without own-nature, he had in mind the imaginary nature ([PARIKALPITA](#)) of phenomena. When he said that they were neither produced nor destroyed, he had in mind their dependent nature ([PARATANTRA](#)). When he said that they were inherently free from suffering, he had in mind their consummate nature ([PARINIṢPANNA](#)). (3) The third is implied intention pertaining to antidotes (pratipakṣābhisam̐dhi). In the hīnayāna, the Buddha teaches specific antidotes ([PRATIPAKṢA](#)) to various defilements. Thus, as an antidote to hatred, he teaches the cultivation of love; as an antidote to sensuality, he teaches meditation on the foul, such as a decomposing corpse; as an antidote to pride, he teaches meditation on dependent origination; and as an antidote to a wandering mind, he teaches meditation on the breath. He indicates that these faults can be completely destroyed with these antidotes, calling them a supreme vehicle (agrayāna). In fact, these faults are only completely destroyed with full insight into non-self. Thus, the Buddha intentionally overstated their potency. (4) The final type is implied intention pertaining to translation (pariṇāmanābhisam̐dhi). This category encompasses those statements that might be termed antiphrastic, i.e., appearing to say something quite contrary to the tenor of the doctrine, which cannot be construed as even provisionally true. A commonly cited example of such a statement is the declaration in the [DHAMMAPADA](#) (XXI.5–6) that one becomes pure through killing one's parents;

the commentators explain that parents are to be understood here to mean negative mental states such as sensual desire. See also [ABHIPRĀYA](#); [SANDHYĀBHĀSĀ](#).

abhiṣeka. (P. abhiṣeka; T. dbang bskur; C. guanding; J. kanjō; K. kwanjōng 灌頂). In Sanskrit, “anointment,” “consecration,” “empowerment,” or “initiation”; a term originally used to refer to the anointment of an Indian king or the investiture of a crown prince, which by extension came to be applied to the anointment of a [BODHISATTVA](#) as a buddha. Just as a wheel-turning monarch ([CAKRAVARTIN](#)) invests the crown prince by sprinkling the crown of his head with fragrant water from all the four seas, so too do the buddhas anoint the crown of a bodhisattva when he makes his vow to achieve buddhahood. The Chinese translation, lit. “sprinkling the crown of the head,” conveys this sense of anointment. In the [MAHĀVASTU](#), an early text associated with the [LOKOTTARAVĀDA](#) branch of the [MAHĀSĀMGHIKA](#) school, the tenth and last stage ([BHŪMI](#)) of the bodhisattva path is named abhiṣeka, rather than the more commonly known [DHARMAMEGHĀBHŪMI](#), indicating that the bodhisattva has then been initiated into the lineage of the buddhas. Abhiṣeka is used especially in tantric literature, such as the [MAHĀVAIROCANĀBHISAMBODHISŪTRA](#), to refer to an initiation ceremony that empowers disciples to “enter the [MANDALA](#),” where they are then allowed to learn the esoteric formulae ([MANTRA](#)) and gestures ([MUDRĀ](#)) and receive the instructions associated with a specific tantric deity. In [ANUTTARAYOGATANTRA](#), a series of four initiations or empowerments are described, the vase empowerment ([KALĀŚĀBHISEKA](#)), the secret empowerment ([GUHYĀBHISEKA](#)), the knowledge of the wisdom empowerment ([PRAJÑĀJÑĀNĀBHISEKA](#)), and the word empowerment (śabdābhiṣeka), also known as the “fourth empowerment” (caturthābhiṣeka). The vase empowerment is the only one of the four that is used in the three other tantras of [KRIYĀTANTRA](#), [CARYĀTANTRA](#), and [YOGATANTRA](#). A special type of consecration ceremony, called a [BUDDHĀBHISEKA](#), is conducted at the time of the installation of a new buddha image, which vivifies the inert clay, metal, or wood of the image, invests the image with insight into the dharma (e.g., through reciting some version of the formula concerning causality, or [PRATĪTYASAMUTPĀDA](#)), and transforms the image into a living buddha.

abhiṣekamudrā. (T. dbang bskur phyag rgya; C. guanding yin; J. kanjōin; K. kwanjōng in 灌頂印). In Sanskrit, “gesture of anointment.” In this particular

mudrā, the palms are held together with the forefingers extended against each other. See also [MUDRĀ](#).

[abhūtaparikalpa](#). (T. yang dag pa ma yin pa'i kun tu rtog pa/kun rtog; C. xuwang fenbie; J. komō funbetsu; K. hōmang punbyōl 虛妄分別). In Sanskrit, “false imagining” or “construction of what is unreal”; a pivotal Yogācāra term describing the tendency of the dependent ([PARATANTRA](#)) nature ([SVABHĀVA](#)) to project false constructions of a reality that is bifurcated between self and others. Sentient beings mistakenly assume that what has been constructed through consciousness has a static, unchanging reality. This process inserts into the perceptual process an imaginary bifurcation ([VIKALPA](#)) between perceiving subject (grāhaka) and perceived object (grāhya) (see [GRĀHYAGRĀHAKAVIKALPA](#)), which is the basis for a continued proliferation of such mental constructions. This subject–object dichotomy is then projected onto all sensory experience, resulting in the imagined ([PARIKALPITA](#)) nature (svabhāva). By relying on these false imaginings to construct our sense of what is real, we inevitably subject ourselves to continued suffering ([DUHKHA](#)) within the cycle of birth-and-death ([SAMSĀRA](#)). The term figures prominently in [MAITREYNĀTHA](#)'s [MADHYĀNTAVIBHĀGA](#) (“Separating the Middle from the Extremes”) and [VASUBANDHU](#)'s commentary on the treatise, the *Madhyāntavibhāgabhāṣya*.

[abhyāyana](#). (P. abbhāna; T. mngon par 'ongs; C. chuzui; J. shutsuzai; K. ch'ulchoe 出罪). In Sanskrit, the formal ecclesiastical act of “calling back” a monk into communion. In the Pāli [VINAYA](#), for example, a monk who has committed a suspension (P. saṅghādisesa; S. [SAMGHĀVAŚESA](#)) offense is required to undergo rehabilitation through either penance (P. manatta; S. [MĀNATVA](#)) or probation ([PARIVĀSA](#)) until his offense has been expiated. If he does not properly carry out his penalty, it will be reimposed until the community is satisfied with his performance. At that point, the community performs the abbhāna-kamma, the ecclesiastical act of “calling back,” which restores the monk to functional membership in the [SAMGHA](#). A minimum of twenty monks must be present during the abhyāyana ritual for it to be valid. No member of the twenty may himself be observing either mānāpya or parivāsa at the time, although such a monk may be present as long as the minimum number of blameless monks is participating.

[abhyudaya](#). (T. mngon par mtho ba; C. shengsheng; J. shōsho; K. sūngsaeng 勝生). In Sanskrit, lit. “rising”; viz., a “superior rebirth.” In [MAHĀYĀNA](#) texts like

[NAGĀRJUNA](#)'s [RATNĀVALĪ](#), the term is typically used to refer to “rising” to a higher rebirth in the realms of the divinities ([DEVA](#)) or human beings ([MANUSYA](#)); often paired with [NIHŚREYASA](#), a term for [NIRVĀNA](#) that literally means “of which there is nothing finer.”

absorption. See [DHYĀNA](#); [JHĀNA](#).

acalā. (T. mi g.yo ba; C. budong di; J. fudōji; K. pudong chi 不動地). In Sanskrit, “immovable” or “steadfast”; the name for the eighth of the ten [BODHISATTVA](#) grounds or stages ([BHŪMI](#)) according to the [DAŚABHŪMIKASŪTRA](#). At this level of the path ([MĀRGA](#)), the bodhisattva realizes the acquiescence or receptivity to the nonproduction of dharmas ([ANUTPATTIKADHARMAKSĀNTI](#)) and is no longer perturbed by either cause or absence of cause. The eighth-stage bodhisattva is able to project different transformation bodies ([NIRMĀNAKĀYA](#)) anywhere in the universe. This bhūmi is sometimes correlated with mastery of the eighth perfection of resolve or aspiration ([PRANIDHĀNAPĀRAMITĀ](#)). According to some commentators, upon reaching this bhūmi, the bodhisattva has abandoned all of the afflictive obstructions ([KLEŚĀVARANA](#)) and is thus liberated from any further rebirth in a realm where he would be subject to defilement; for this reason, the eighth, ninth, and tenth bhūmis are sometimes called “pure bhūmis.”

Acalanātha-Vidyārāja. (T. Mi g.yo mgon po rig pa'i rgyal po; C. Budong mingwang; J. Fudō myōō; K. Pudong myōngwang 不動明王). In Sanskrit, a wrathful [DHARMAPĀLA](#) of the [VAJRAYĀNA](#) pantheon and the chief of the eight [VIDYĀRĀJA](#). As described in the [MAHĀVAIROCANĀBHISAMBODHISŪTRA](#), he is the [NIRMĀNAKĀYA](#) of [VAIROCANA](#), a protector of boundaries and vanquisher of obstacles. A late Indian deity, Acalanātha-Vidyārāja possibly originated from the [YAKSA](#) form of [VAJRAPĀNI](#), with whom he is associated in his form of Acalavajrapāṇi. Indian forms of the god from the eleventh century show him kneeling on his left leg, holding a sword (khaḍga). Vajrayāna images show him standing with one or three faces and varied numbers of pairs of hands, identified by his raised sword, snare, and [ACALĀSANA](#). The cult of Acalanātha-Vidyārāja entered China during the first millennium CE, and was brought to Japan by [KŪKAI](#) in the ninth century, where the wrathful deity (known in Japanese as Fudō myōō) became important for the Shingon school ([SHINGONSHŪ](#)), even being listed by it as one of the thirteen buddhas. In East Asian iconography, Acalanātha-Vidyārāja holds the sword and a snare or lasso (pāśa), with which he binds evil spirits.

acalāsana. (T. mi g.yo ba'i 'dug stangs; C. budongzuo; J. fudōza; K. pudongjwa 不動坐). In Sanskrit, the “immovable posture”; a semi-kneeling position, where the left knee touches the ground, but the right knee is raised off the ground. This posture is commonly seen in figures bearing gifts, where the hands are clasped in front of the donor’s chest in [AÑJALI](#). This pose is also characteristic of the wrathful deity [ACALANĀTHA-VIDYĀRĀJA](#), whose hands instead hold a snare (pāśa) in the left and a raised sword in the right. Bodhisattvas are also sometimes depicted in this posture.

[Acalavajrapāni](#). See [ACALANĀTHA-VIDYĀRĀJA](#).

ācariya. (S. ācārya, Thai, āchān; T. slob dpon; C. asheli; J. ajari; K. asari 阿闍梨). In Pāli, “teacher.” A monk takes an ācariya if he has lost his preceptor (P. upajjhāya; S. [UPĀDHYĀYA](#)) and is still in need of guidance (nissaya, S. [NISĀYA](#)). A preceptor is said to be lost when he goes away, disrobes, dies, joins another religion, or has expelled the monk under his guidance for wrongdoing. To act as an ācariya, a monk must possess the same qualifications as required of an upajjhāya; namely, he must be competent in [DHARMA](#) and [VINAYA](#) and be of at least ten years standing in the order since his own ordination. The monk taken under the guidance of the ācariya is called his [ANTEVĀSIKA](#), or pupil. The relationship between teacher and pupil is compared to that of father and son. The teacher is enjoined to teach dhamma and vinaya to his pupil and to supply him with all necessary requisites, such as robes (see [TRICĪVARA](#)) and alms bowl ([PĀTRA](#)). He should tend to him if he is ill and discipline him if he commits wrongdoing. If the pupil should begin to entertain doubts about the dispensation or his abilities to practice, the teacher must try to dispel them. If the pupil should commit a grave offense against the rules of the [SAMGHA](#), the teacher is to prevail upon him to go before the saṃgha to seek expiation. If the pupil misbehaves or is disobedient, the teacher is enjoined to expel him. But if the pupil shows remorse and asks forgiveness, the teacher is to take him again under guidance. A monk ceases to be an ācariya when he goes away, dies, disrobes, changes religion, or expels his pupil. See also [ĀCĀRYA](#).

ācārya. (P. ācariya; Thai āchān; T. slob dpon; C. asheli; J. ajari; K. asari 阿闍梨). In Sanskrit, “teacher” or “master”; the term literally means “one who teaches the ācāra (proper conduct),” but it has come into general use as a title for religious teachers. In early Buddhism, it refers specifically to someone who teaches the supra dharma and is used in contrast to the [UPĀDHYĀYA](#) (P. upajjhāya) or

“preceptor.” (See [ĀCARIYA](#) entry supra.) The title ācārya becomes particularly important in [VAJRAYĀNA](#) Buddhism, where the officiant of a tantric ritual is often viewed as the vajra master ([VAJRĀCĀRYA](#)). The term has recently been adopted by Tibetan monastic universities in India as a degree (similar to a Master of Arts) conferred upon graduation. In Japan, the term refers to a wise teacher, saint, holy person, or a wonder-worker who is most often a Buddhist monk. The term is used by many Japanese Buddhist traditions, including [ZEN](#), [TENDAI](#), and [SHINGON](#). Within the Japanese Zen context, an ajari is a formal title given to those who have been training for five years or more.

[āchān](#). Thai pronunciation of the Sanskrit term [ĀCĀRYA](#) (“teacher”); also seen transcribed as [AJAHN](#) or acchan. See [AJAHN](#).

[acintya](#). (P. acinteyya; T. bsam gyis mi khyab pa; C. bukesiyi; J. fukashigi; K. pulgasaūi 不可思議). In Sanskrit, “inconceivable”; a term used to describe the ultimate reality that is beyond all conceptualization. Pāli and mainstream Buddhist materials refer to four specific types of “inconceivables” or “unfathomables” (P. acinteyya): the range or sphere of a buddha, e.g., the extent of his knowledge and power; the range of meditative absorption ([DHYĀNA](#)); the potential range of moral cause and effect ([KARMAN](#) and [VIPĀKA](#)); and the range of the universe or world system ([LOKA](#)), i.e., issues of cosmogony, whether the universe is finite or infinite, eternal or transitory, etc. Such thoughts are not to be pursued, because they are not conducive to authentic religious progress or ultimately to [NIRVĀNA](#). See also [AVYĀKRTA](#).

[Acintyastava](#). (T. Bsam gyis mi khyab par bstod pa). In Sanskrit, “In Praise of the Inconceivable One”; an Indian philosophical work by the [MADHYAMAKA](#) master [NĀGĀRJUNA](#) written in the form of a praise for the Buddha. In the Tibetan tradition, there are a large number of such praises (called [STAVAKĀYA](#)) in contrast to the set of philosophical texts (called [YUKTIKĀYA](#)) attributed to Nāgārjuna. Among these praise works, the *Acintyastava*, [LOKĀTĪTASTAVA](#), [NIRAUPAMYASTAVA](#), and [PARAMĀRTHASTAVA](#) are extant in Sanskrit and are generally accepted to be his work; these four works together are known as the [CATUHSTAVA](#). It is less certain that he is the author of the [DHARMADHĀTUSTAVA](#) or [DHARMADHĀTUSTOTRA](#) (“Hymn to the Dharma Realm”) of which only fragments are extant in the original Sanskrit. The *Acintyastava* contains fifty-nine stanzas, many of which are addressed to the Buddha. The first section provides a detailed discussion of why dependently originated phenomena are

empty of intrinsic nature ([NIHŠVABHĀVA](#)); this section has clear parallels to the [MŪLAMADHYAMAKAKĀRIKĀ](#). The forty-fifth verse makes reference to the term [PARATANTRA](#), leading some scholars to believe that Nāgārjuna was familiar with the [LAŅKĀVATĀRASŪTRA](#). The second section describes wisdom ([JÑĀNA](#)); the third section sets forth the qualities of the true dharma ([SADDHARMA](#)); the fourth and final section extols the Buddha as the best of teachers ([ŚĀSTR](#)).

[ādānavijñāna](#). (T. len pa'i nram par shes pa; C. atuona shi/xiangxu shi; J. adanashiki/sōzokushiki; K. at'ana sik/sangsok sik 阿陀那識/相續識). In Sanskrit, “appropriating consciousness” or “retributory consciousness”; an alternate name for the [ĀLAYAVIJÑĀNA](#), the eighth consciousness in the [YOGĀCĀRA](#) analysis of consciousness, which serves as a repository (ālaya) of the seeds ([BĪJA](#)) of past action ([KARMA](#)) until they can come to fruition ([VIPĀKA](#)) in the future. Because that consciousness thus links the present with the future life, the ālayavijñāna also serves as the consciousness that “appropriates” a physical body at the moment of rebirth, hence, its name ādānavijñāna.

[ādarśajñāna](#). [alt. mahādarśajñāna] (T. me long lta bu'i ye shes; C. dayuanjing zhi; J. daienkyōchi; K. taewōn'gyōng chi 大圓鏡智). In Sanskrit, “mirrorlike wisdom” or “great perfect mirror wisdom”; one of the five types of wisdom ([PAŅCĀJÑĀNA](#)) exclusive to a buddha according to the [YOGĀCĀRA](#) and tantric schools, along with the wisdom of equality ([SAMATAJÑĀNA](#)), the wisdom of discriminating awareness ([PRATYAVEKSANAJÑĀNA](#)), the wisdom that one has accomplished what was to be done ([KRTYĀNUSTHĀNAJÑĀNA](#)), and the wisdom of the nature of the [DHARMADHĀTU](#) ([DHARMADHĀTUSVABHĀVAJÑĀNA](#)). This specific type of wisdom is a transformation of the eighth consciousness, the [ĀLAYAVIJÑĀNA](#), in which the perfect interfusion between all things is seen as if reflected in a great mirror.

[adbhutadharmā](#). (P. abbhutadhamma; T. rmad du byung ba'i chos; C. xifa; J. kehō; K. hūibōp 希法). In Sanskrit, “marvelous events”; one of the nine ([NAVAŅGA\[PĀVACANA\]](#)) or twelve ([DVĀDAŚĀŅGA\[PRAVACANA\]](#)) categories ([AŅGA](#)) of scripture recognized in Pāli and Sanskrit sources, respectively, as classified according to their structure or literary style. This particular genre of [SŪTRA](#) is characterized by the presence of various miraculous or supernatural events that occur during the course of the narrative.

[Adbhutadharmaparyāyasūtra](#). (T. Rmad du byung ba'i chos kyi nram grangs;

C. Shen xiyou jing/Weicengyou jing; J. Jinkeukyō/Mizōukyō; K. Sim hūiyu kyōng/Mijūngyu kyōng 甚希有經/未會有經). In Sanskrit, “Discourse on the Wondrous Teachings”; a [MAHĀYĀNA SŪTRA](#) best known for advocating that the merit deriving from worshipping the Buddha, such as sponsoring the production of a buddha image or a [STŪPA](#), surpasses that of all other activities. The sūtra states, for example, that erecting even a tiny stūpa containing the relics of a [TATHĀGATA](#) is more meritorious than building a large monastery. This text is extant only in three Chinese translations: the “Scripture on the Miraculous” (*Weicengyou jing*); “Scripture on the Rarest of Things” (*Shen xiyou jing*), translated by [XUANZANG](#) (600/602–664); and the “Chapter on Relative Merits” (*Xiaoliang gongde pin*), the first chapter of the “Scripture on the Unexcelled Basis” (*Fo shuo wushangyi jing*, S. *Anuttarāśrayasūtra), translated by [PARAMĀRTHA](#) (499–569).

[adhamapuruṣa](#). (T. skyes bu chung ngu; C. xiashi; J. geshi; K. hasa 下士). In Sanskrit, “person of lesser capacity”; the lowest in a threefold classification of religious practitioners, together with madhyapuruṣa (“person of average capacity”) and [MAHĀPURUSA](#) (“person of great capacity”). The person of lesser capacity seeks only happiness in [SAMSĀRA](#), wishing to be reborn as a human ([MANUSYA](#)) or a divinity ([DEVA](#)) in the next life. The three categories of persons are most famously set forth in [ATĪŚA](#)’s [BODHIPATHAPRADĪPA](#) and, deriving from that text, in the [LAM RIM](#) literature in Tibet. See also [TRĪNDRIYA](#); [MRDVINDRIYA](#); [TĪKṢNENDRIYA](#).

[adhigama](#). (T. rtogs pa; C. zheng; J. shō; K. chŭng 證). In Sanskrit, “realization,” especially in the realization of truth, either conceptually or directly. In this context, adhigama is contrasted with [ĀGAMA](#), the received scriptural tradition, as one of the two methods of realizing truth. See also [ADHIGAMADHARMA](#).

[adhigamadharma](#). (T. rtogs pa’i chos; C. zhengfa; J. shōhō; K. chŭngbōp 證法). In Sanskrit, “realized dharma”; one of the two divisions of the dharma or teaching of the Buddha, together with the “scriptural dharma” ([ĀGAMADHARMA](#)). The adhigamadharma is the practice of the dharma, often identified in this context as the training in higher morality ([ADHIŚĪLAŚIKSĀ](#)), the training in higher meditation ([ADHISAMĀDHIŚIKSĀ](#)), and the training in higher wisdom ([ADHIPRAJÑĀŚIKSĀ](#)), which leads to direct realization ([ADHIGAMA](#)), rather than mere conceptual understanding. It is also identified with the truths of cessation and path within the [FOUR NOBLE TRUTHS](#). See also [ĀGAMA](#); [ĀGAMADHARMA](#).

adhikarana. (T. rtsod pa; C. zhengshi/zhengsong; J. jōji/jōshō; K. chaengsa/chaengsong 諍事/諍訟). In Pāli and Sanskrit, “legal question” or “case,” an important term in the [VINAYA](#). Legal questions or cases are of four kinds: (1) those arising out of a dispute, (2) those arising out of censure, (3) those arising out of an offense, and (4) those arising out of an obligation. (1) Legal questions or cases arising out of a dispute are of eighteen kinds and deal primarily with what does and does not pertain to the monastic code, what is and is not sanctioned by the rules of vinaya, and what is an especially grievous offense, such as “defeat” ([PĀRĀJIKĀ](#)), vs. what is nongrievous. (2) Legal questions or cases arising out of censure are involved with whether or not a monk has fallen away from morality or good habits, fallen away from right view, or fallen away from right livelihood. (3) Legal questions or cases arising out of offenses deal with misdeeds classified under five headings: viz., pārajika, [SAMGHĀDIŚESA](#), [PĀYATTIKĀ](#), [PRATIDEŚANĪYA](#), or [DUṢKṚTA](#), or under seven headings: viz., the above five plus miscellaneous grave, but unconsummated offenses ([STHŪLĀTYAYA](#), P. thullaccaya), and mischievous talk ([DURBHĀSITA](#), P. dubbhāsita). (5) Legal questions or cases arising out of obligation concern the jurisdiction of resolutions and formal acts passed by the [SAMGHA](#). In the final section of the monastic codes of conduct ([PRĀTIMOKSA](#)), seven specific methods of resolving disputes ([ADHIKARANAŚAMATHA](#)) are offered.

adhikaranaśamatha. (P. adhikaraṇasamatha; T. rtsod pa nye bar zhi ba; C. miezhengfa; J. metsujōhō; K. myōlchaengpōp 滅諍法). In Sanskrit, “settlement of a legal case,” viz., rules for settling disputes, involving either confronting ordained monks and nuns who have transgressed the rules of the order (see [PRĀTIMOKSA](#)) or dealing with differences that have arisen within the order. The settlement of a legal question or case ([ADHIKARANA](#)) within the [SAMGHA](#) may be accomplished in seven ways ([SAPTĀDHIKARANAŚAMATHA](#)): (1) a verdict “in the presence of,” viz., bringing disputants before a panel of competent monks or the saṃgha as a whole and rendering a verdict according to the appropriate legal procedure; (2) a verdict “of mindfulness”: declaring the accused innocent by virtue of being pure and without offense—e.g., being an [ARHAT](#)—and thus incapable of wrongdoing; (3) declaring the accused not guilty by reason of insanity; (4) adding an additional punishment to a monk who confesses to a specific type of wrongdoing only after being interrogated; (5) rendering a verdict by majority vote of the whole saṃgha when a competent monk or a panel of

competent monks is unable to reach a decision; (6) resolution through an admission of guilt; and (7) a verdict of “covering over as with grass”: viz., settling a case between disputants through arbitration and compromise before bringing it before the saṃgha for a verdict. These seven methods of resolving disputes are typically placed at the end of the list of rules in the [PRĀTIMOKSA](#) code and appear in the Pāli *Pāṭimokkha* in its [CŪLAVAGGA](#) section. These seven types of verdicts are sometimes listed in different orders.

[adhimāna](#). (T. lhag pa'i nga rgyal; C. zengshangman; J. zōjōman; K. chūngsangman 增上慢). In Sanskrit and Pāli, “arrogance” or “haughtiness”; this term refers specifically to overestimation of oneself or boasting about one’s spiritual accomplishments. When one is mistakenly convinced that one has attained one of the superknowledges ([ABHIJÑĀ](#)), meditative absorptions ([DHYĀNA](#)), or spiritual fruitions ([PHALA](#)), when in actuality one has not, one is said to possess *adhimāna*. When *adhimāna* is expressed verbally—that is, by bragging to others that one has mastered one of the aforementioned exceptional achievements for the purpose of winning reputation and material support—this braggadocio constitutes a grave offense, especially for ordained monks and nuns. According to the [VINAYA](#), such overestimation of one’s extraordinary spiritual achievements could constitute grounds for “defeat” ([PĀRAJIKĀ](#)), the most serious transgression that can be committed by monks and nuns. In its more generic usage, *adhimāna* may also refer simply to particularly intense forms of “conceit” and “pride” ([MĀNA](#)).

[adhimokṣa](#). (P. *adhimokkha*; T. mos pa; C. shengjie; J. shōge; K. sūnghae 勝解). In Sanskrit, “determination,” “resolution,” or “zeal”; a general term denoting an inclination toward a virtuous object, sometimes used to indicate a preliminary stage prior to the conviction that results from direct experience; also seen written as *adhimukti*. The *adhimukticyābhūmi* incorporates the stages of the path of accumulation ([SAMBHĀRAMĀRGA](#)) and the path of preparation ([PRAYOGAMĀRGA](#)) prior to the path of vision ([DARŚANAMĀRGA](#)). In a more technical sense, *adhimokṣa* is a mental factor ([CAITTA](#)) that keeps consciousness intent on its object without straying to another object. It is listed among the ten major omnipresent mental concomitants (S. [MAHĀBHŪMIKA](#)) that are present in all in the dharma taxonomy of the [SARVĀSTIVĀDA](#) school, among the five determinative mental concomitants (S. [VINIYATA](#)) in the [YOGĀCĀRA](#) dharma system, and one of the six secondary (P. *pakiṇṇaka*) factors in the Pāli [ABHIDHAMMA](#). *Adhimokṣa* is

also used to describe the interests or dispositions of sentient beings, the knowledge of which contributes to a buddha’s pedagogical skills.

[adhimukti](#). In Sanskrit, “resolution” or “resolute faith.” See [ADHIMOKSA](#).

[adhipatiphala](#). (T. bdag po’i ’bras bu; C. zengshang guo; J. zōjōka; K. chūngsang kwa 增上果). In Sanskrit, “predominant effects” or “sovereign effects”; this is one of the five effects ([PHALA](#)) enumerated in the [SARVĀSTIVĀDA ABHIDHARMA](#) and in [YOGĀCĀRA](#). In the Sarvāstivāda–[VAIBHĀSIKA](#) abhidharma system of six causes ([HETU](#)) and five effects ([PHALA](#)), the “predominant effect” is the result of the “efficient cause” ([KĀRANAHE TU](#)), referring to causation in its broadest possible sense, in which every conditioned dharma serves as the generic, indirect cause for the creation of all things except itself. The kāraṇahetu provides the general background necessary for the operation of causality, and the results of the causal process it supports are the adhipatiphala.

[adhipatipratyaya](#). (P. adhipatipaccaya; T. bdag po’i rkyen; C. zengshang yuan; J. zōjōen; K. chūngsang yōn 增上緣). In Sanskrit, “predominant” or “sovereign condition”; the fourth of the four types of conditions ([PRATYAYA](#)) recognized in the [SARVĀSTIVĀDA–VAIBHĀSIKA](#) system of [ABHIDHARMA](#) and in [YOGĀCĀRA](#); the term also appears as the ninth of the twenty-four conditions (P. paccaya) in the massive Pāli abhidhamma text, the [PATTHĀNA](#). In epistemology, the predominant condition is one of the three causal conditions necessary for perception to occur. It is the specific condition that provides the operative capability (kāraṇa) for the production of something else. In the case of sensory perception, the predominant condition for the arising of sensory consciousness ([VIJÑĀNA](#)) is the physical sense organ and the sensory object; but more generically even the seed could serve as the adhipatipratyaya for the generation of a sprout. The four primary physical elements ([MAHĀBHŪTA](#)) themselves serve as the predominant condition for the five physical sensory organs, in that they are the condition for the sensory organs’ production and development.

[adhiprajñāsīksā](#). (T. lhag pa’i shes rab kyi bslab pa; C. zengshanghui xue; J. zōjōegaku; K. chūngsanghye hak 增上慧學). In Sanskrit, “training in higher wisdom”; the third of the three trainings ([TRISĪKṢĀ](#)) required to achieve enlightenment, said to be set forth primarily in the [ABHIDHARMA](#) basket of the [TRIPITAKA](#). Adhiprajñāsīksā is primarily associated with the first two constituents of the eightfold path ([ĀRYĀSTĀṄGAMĀRGA](#)), viz., right views ([SAMYAGDRSTI](#)) and

right intention ([SAMYAKSAMKALPA](#)).

adhīsamādhiśikṣā. (T. lhag pa'i ting nge 'dzin gyi bslab pa; C. zengshangding xue; J. zōjōjōgaku; K. chūngsangjōng hak 增上定學). In Sanskrit, “training in higher meditation”; the second of the three trainings ([TRISIKSĀ](#)) required to achieve enlightenment, said to be set forth primarily in the [SŪTRA](#) basket of the [TRIPITAKA](#). Adhīsamādhiśikṣā is primarily associated with the last three constituents of the eightfold path ([ĀRYĀSTĀṄGAMĀRGA](#)), viz., right effort ([SAMYAGVYĀYĀMA](#)), right mindfulness ([SAMYAKSMRTI](#)), and right concentration ([SAMYAKSAMĀDHI](#)).

adhīśīlaśikṣā. (T. lhag pa'i tshul khriims kyi bslab pa; C. zengshangjie xue; J. zōjōkaigaku; K. chūngsanggye hak 增上戒學). In Sanskrit, “training in higher morality”; the first of the three trainings ([TRISIKSĀ](#)) required to achieve enlightenment, said to be set forth primarily in the [VINAYA](#) basket of the [TRIPITAKA](#). Adhīśīlaśikṣā is primarily associated with the middle three constituents of the eightfold path ([ĀRYĀSTĀṄGAMĀRGA](#)), viz., right speech ([SAMYAGVĀC](#)), right action ([SAMYAKKARMĀNTA](#)), and right livelihood ([SAMYAGĀJĪVA](#)).

adhīsthāna. (P. adhiṭṭhāna; T. byin gyis brlabs pa; C. jiachi; J. kaji; K. kaji 加持). In Sanskrit, lit. “determination” or “decisive resolution” and commonly translated as “empowerment.” Literally, the term has the connotation of “taking a stand,” viz., the means by which the buddhas reveal enlightenment to the world, as well as the adept’s reliance on the buddhas’ empowerment through specific ritual practices. In the former sense, adhiṭṭhāna can refer to the magical power of the buddhas and bodhisattvas, in which contexts it is often translated as “blessing” or “empowerment.” As the [LĀṆKĀVATĀRASŪTRA](#) notes, it is thanks to the buddhas’ empowerment issuing from their own original vows ([PRANIDHĀNA](#)) that [BODHISATTVAS](#) are able to undertake assiduous cultivation over three infinite eons ([ASAMKHYEYAKALPA](#)) so that they may in turn become buddhas. The buddhas’ empowerment sustains the bodhisattvas in their unremitting practice by both helping them to maintain tranquillity of mind throughout the infinity of time they are in training and, ultimately, once the bodhisattvas achieve the tenth and final stage ([BHŪMI](#)) of their training, the cloud of dharma ([DHARMAMEGHĀ](#)), the buddhas appear from all the ten directions to anoint the bodhisattvas as buddhas in their own right (see [ABHISEKA](#)). ¶ In mainstream Buddhist materials, adhiṭṭhāna refers to the first of a buddha’s six or ten psychic powers ([RDDHI](#)), the

ability to project mind-made bodies ([MANOMAYAKĀYA](#)) of himself, viz., to replicate himself ad infinitum. In Pāli materials, adhiṭṭhāna is also used to refer to the “determination” to extend the duration of meditative absorption (P. [JHĀNA](#); S. [DHYĀNA](#)) and the derivative psychic powers (P. iddhi; S. [RDDHĪ](#)).

[Adhyardhaśatikāprajñāpāramitāsūtra/Prajñāpāramitānayaśatapañcaśatikā](#) (T. Shes rab kyi pha rol tu phyin pa’i tshul brgya lnga bcu pa; C. Shixiang bore boluomi jing/Bore liqu fen; J. Jissō hannya haramitsukyō/Hannya rishubun; K. Silsang panya paramil kyōng/Panya ich’wi pun 實相般若波羅蜜經/般若理趣分). In Sanskrit, “Perfection of Wisdom in One Hundred and Fifty Lines.” The basic verses (in Sanskrit) and a commentary describing the ritual accompanying its recitation (originally in Khotanese), are found together as two [YOGA](#) class tantras, the *Śrīparamādhyā* (T. Dpal mchog dang po) and *Śrīvajramaṇḍalālamkāra* (T. Dpal rdo rje snying po rgyan). In Japan, [AMOGHAVAJRA](#)’s version of the text (called the *Rishukyō*) came to form an integral part of the philosophy and practice of the Japanese Shingon sect ([SHINGONSHŪ](#)).

[adhyāśaya](#). (T. lhag bsam; C. zhengzhi xin; J. shōjiki no shin, K. chōngjik sim 正直心). In Sanskrit, “determination” or “resolution”; a term used especially to describe the commitment of the [BODHISATTVA](#) to liberate all beings from suffering. In the Tibetan mind-training ([BLO SBYONG](#)) tradition, the bodhisattva’s resolute commitment is the last in a series of six causes (preceded by recollecting that all beings have been one’s mother, recollecting their kindness, wishing to repay them, love, and compassion), which culminate in [BODHICITTA](#) or [BODHICITTOTPĀDA](#). See also [XINXIN](#).

[adhyātmavidyā](#). (T. nang rig pa; C. neiming; J. naimyō; K. naemyōng 內明). In Sanskrit, “inner knowledge,” viz. knowledge of the three trainings ([TRISIKSĀ](#)) and the two stages ([UTPATTIKRAMA](#) and [NISPANNAKRAMA](#)) of [TANTRA](#); the term is sometimes used to refer to knowledge of Buddhist (as opposed to non-Buddhist) subjects.

[ādibrahmacariyakasīla](#). In Pāli, “higher rules of purity”; the more advanced of two types of moral discipline (P. sīla, S. [ŚĪLA](#)), referring to rules of conduct that will lead the practitioner further along toward the complete eradication of suffering. This type of discipline is contrasted with [ABHISAMĀCĀRIKĀSĪLA](#), or lesser discipline, which indicates more mundane, external prescriptions,

including how a monk should treat his superior and how a monastery should be maintained from day to day. While abhisamācārikāsīla is concerned with mundane ends, ādibrahmacariyakasīla is understood to be the higher, transcendent discipline.

ādibuddha. (T. dang po'i sangs rgyas/ye nas sangs rgyas; C. benchu fo; J. honshobutsu; K. ponch'o pul 本初佛). In Sanskrit, “original buddha” or “primordial buddha”; the personification of innate enlightenment. The term seems to appear for the first time in the [MAHĀYĀNASŪTRĀLAMKĀRA](#), where the existence of such a primordial buddha is refuted on the grounds that the achievement of buddhahood is impossible without the accumulation of merit ([PUNYA](#)) and wisdom ([JÑĀNA](#)). However, the term reemerges in tantric literature, most prominently in the [KĀLACAKRATANTRA](#). There, the term has two meanings, based on the reading of the term ādi. According to the first interpretation, ādi means “first” such that the ādibuddha was the first to attain buddhahood. According to the second interpretation, ādi means “primordial,” which suggests an eternal and atemporal state of innate buddhahood. However, when the commentators on this tantra use the term in this second sense, they appear to be referring not to a person but to an innate wisdom that is present in the minds of all sentient beings and which is the fundamental basis of [SAMSĀRA](#) and [NIRVĀNA](#). In Tibetan Buddhism, the term ādibuddha is often used to describe the buddha [SAMANTABHADRA](#) (according to the [RNYING MA](#) sect) or [VAJRADHARA](#) (for the [GSAR MA](#) sects); in East Asia, by contrast, the ādibuddha is typically considered to be [VAIROCANA](#).

ādikarmika. (P. ādikammika; T. las dang po pa; C. shiye; J. shigō; K. siōp 始業). In Sanskrit, “beginner” or “neophyte”; a term used to refer to someone who is a novice on the path ([MĀRGA](#)). More technically, it refers to a practitioner on the path of accumulation ([SAMBHĀRAMĀRGA](#)), where the initial tools necessary for spiritual development are first beginning to be gathered.

ādīnava. (T. nyes dmigs; C. guohuan; J. kagen; K. kwahwan 過患). In Sanskrit and Pāli, “dangers.” More generically, ādīnava refers to the evils that may befall a layperson who is made heedless ([PRAMĀDA](#)) by drinking, gambling, debauchery, and idleness. More specifically, however, the term comes to be used to designate a crucial stage in the process of meditative development ([BHĀVANĀ](#)), in which the adept becomes so terrified of the “dangers” inherent in impermanent, compounded things that he turns away from this transitory world

and instead turns toward the radical nonattachment that is [NIRVĀNA](#). In the so-called graduated discourse (P. [ANUPUBBIKATHĀ](#)) that the Buddha used to mold the understanding of his new adherents, the Buddha would outline in his elementary discourse the benefits of giving (*dānakathā*), right conduct (*śīlakathā*), and the prospect of rebirth in the heavens (*svargakathā*). Once their minds were pliant and impressionable, the Buddha would then instruct his listeners in the dangers (*ādīnava*) inherent in sensuality ([KĀMA](#)), in order to turn them away from the world and toward the advantages of renunciation (P. *nekkhamme ānisamsa*; see [NAISKRAMYA](#)). This pervasive sense of danger thence sustains the renunciatory drive that ultimately will lead to *nirvāṇa*. See also [ĀDĪNAVĀNUPASSANĀÑĀNA](#).

[ādīnavānupassanāñāṇa](#). In Pāli, “knowledge arising from the contemplation of danger ([ĀDĪNAVA](#))”; this is the fourth of nine knowledges (*ñāṇa*) cultivated as part of the “purity of knowledge and vision of progress along the path” ([PATIPADĀÑĀNADASSANAVISUDDHI](#)) according to the outline in the [VISUDDHIMAGGA](#). This latter category, in turn, constitutes the sixth and penultimate purity ([VISUDDHI](#)) to be developed along the path to liberation. Knowledge arising from the contemplation of danger is developed by noting the frightfulness of conditioned formations (*saṃkhāra*; S. [SAMSKĀRA](#)), that is to say, the mental and physical phenomena ([NĀMARŪPA](#)) comprising the individual and the universe. Having seen that all phenomena are fearful because they are impermanent (*anicca*; S. [ANITYA](#)) and destined for annihilation, the practitioner finds no refuge in any kind of existence in any of the realms of rebirth. He sees no conditioned formation or station on which he can rely or that is worth holding onto. The *Visuddhimagga* states that the practitioner sees the three realms of existence as burning charcoal pits, the elements of the physical world as venomous snakes, and the five aggregates (*khandha*; S. [SKANDHA](#)) comprising the person as murderers with drawn swords. Seeing danger in continued existence and in every kind of becoming ([BHAVA](#)), the practitioner realizes that the only safety and happiness are found in *nibbāna* (S. [NIRVĀNA](#)).

[Ādittapariyāyasutta](#). (S. **ādityaparyāyasūtra*; C. Ranshao; J. Nenshō; K. Yōnso 燃燒). In Pāli, lit. “Discourse on the Manner of Being Aflame,” usually known in English as the “Fire Sermon”; the third sermon spoken by the Buddha following his enlightenment. After his conversion of the three matted-hair ascetics Uruvela-Kassapa, Gayā-Kassapa, and Nadī-Kassapa, along with their one thousand disciples, the Buddha was traveling with them to Gayāsīsa, where

he delivered this sermon. Because of his new disciples' previous devotions to the Brahmanical fire sacrifice, once they were ordained the Buddha preached to these new monks a targeted discourse that he called the "Fire Sermon." The Buddha explains that all of the six sense bases, six sensory objects, and six sensory consciousnesses, along with the sensory contacts (phassa; S. [SPARŚA](#)) and sensations ([VEDANĀ](#)) that accompany the senses, are burning with the fires of greed ([LOBHA](#)), hatred (P. dosa; S. [DVESA](#)), and delusion ([MOHA](#)) and with the fires of all the various types of suffering (dukkha; S. [DUHKHA](#)). Only through dispassion toward the senses (see [INDRIYASAMVARA](#)) will attachment diminish and liberation eventually be achieved. In the Pāli tradition, the sermon appears in the [MAHĀVAGGA](#) section of the Pāli [VINAYAPITAKA](#), on the history of the dispensation, not in the [SUTTAPITAKA](#); a parallel [SARVĀSTIVĀDA](#) recension appears in the Chinese translation of the [SAMYUKTĀGAMA](#).

[Ādityabandhu](#). (P. ādiccabandhu; T. Nyi ma'i gnyen; C. Rizhong; J. Nisshu; K. Ilchong 日種). In Sanskrit, "Kinsman of the Sun"; one of the common epithets for [ŚĀKYAMUNI](#) or [GAUTAMA](#) Buddha, from his lineage ([GOTRA](#)) name of āditya. This epithet and gotra name led some early Western scholars, such as [ÉMILE SENART](#), to presume (wrongly) that the Buddha was an Indian solar deity. āditya is also the name of a past buddha.

[advaya](#). (T. gnyis su med pa; C. bu'er; J. funi; K. puri 不二). In Sanskrit, "nonduality"; one of the common synonyms for the highest teachings of Buddhism and one of the foundational principles of the [MAHĀYĀNA](#) presentation of doctrine. Nonduality refers to the definitive awareness achieved through enlightenment, which transcends all of the conventional dichotomies into which compounded existence is divided (right and wrong, good and evil, etc.). Most specifically, nondual knowledge ([ADVAYAJÑĀNA](#)) transcends the subject-object bifurcation that governs all conventional states of consciousness and engenders a distinctive type of awareness that no longer requires an object of consciousness. See also [WU'AXING](#).

[advayajñāna](#). (T. gnyis su med pa'i ye shes; C. bu'erzhi; J. funichi; K. puriji 不二智). In Sanskrit, "nondual knowledge"; referring to knowledge that has transcended the subject-object bifurcation that governs all conventional states of sensory consciousness, engendering a distinctive type of awareness that is able to remain conscious without any longer requiring an object of consciousness. See also [WU'AXING](#).

Advayavajra. (S). See [MAITRĪPA/MAITRĪPĀDA](#).

advesa. (P. adosa; T. zhe sdang med pa; C. wuchen; J. mushin; K. mujin 無瞋). In Sanskrit, “absence of ill will” or “absence of hatred.” One of the forty-six mental concomitants ([CAITTA](#)) according to the [VAIBHĀSIKA–SARVĀSTIVĀDA](#) school of [ABHIDHARMA](#), one of the fifty-one according to the [YOGACĀRA](#) school and one of the fifty-two in the Pāli [ABHIDHAMMA](#), “absence of ill will” is the opposite of “ill will” or “aversion” ([DVEṢA](#)). The [SARVĀSTIVĀDA](#) exegetes posited that this mental quality accompanied all wholesome activities, and it is therefore classified as one of the ten omnipresent wholesome factors ([KUŚALAMAHAḬBHŪMIKA](#)). “Absence of ill will” is listed as one of the three wholesome faculties ([KUŚALAMŪLA](#)), is one of the states of mind comprising right intention ([SAMYAKSAMKALPA](#)) in the noble eightfold path ([ĀRYĀSTAṄGIKAMĀRGA](#)), and is traditionally presumed to be a precondition for the cultivation of loving-kindness ([MAITRĪ](#)).

afflictions. See [KLEŚA](#).

āgama. (T. lung; C. ahan jing; J. agongyō; K. aham kyōng 阿含經). In Sanskrit and Pāli, “text” or “scripture”; a general term for received scriptural tradition. The term āgama is commonly paired with two other contrasting terms: āgama and [YUKTI](#) (reasoning) are the means of arriving at the truth; āgama and [ADHIGAMA](#) (realization) are the two divisions of the [BUDDHADHARMA](#)—the verbal or scriptural tradition and that which is manifested through practice. In its Sanskrit usage, the term āgama is also used to refer more specifically to the four scriptural collections of the mainstream tradition (now lost in Sanskrit but preserved in Chinese translation), attributed to the Buddha and his close disciples, which correspond to the four Pāli [NIKĀYAS](#): (1) [DĪRGHĀGAMA](#) or “Long Discourses,” belonging to the [DHARMAGUPTAKA](#) school and corresponding to the Pāli [DĪGHANIKĀYA](#); (2) [MADHYAMĀGAMA](#) or “Medium Discourses,” associated with the [SARVĀSTIVĀDA](#) school and corresponding to the Pāli [MAJJHIMANIKĀYA](#); (3) [SAMYUKTĀGAMA](#) or “Connected Discourses,” belonging to the Sarvāstivāda school (with a partial translation perhaps belonging to the [KĀŚYAPĪYA](#) school) and corresponding to the Pāli [SAMYUTTANIKĀYA](#); and (4) [EKOTTARĀGAMA](#) or “Numerically Arranged Discourses,” variously ascribed to the Dharmaguptakas, or less plausibly to the [MAHĀSĀMGIKA](#) school or its [PRAJÑĀPTIVĀDA](#) offshoot, and corresponding to the Pāli [AṄGUTTARANIKĀYA](#). Despite the similarities in the

titles of these collections, there are many differences between the contents of the Sanskrit āgamas and the Pāli nikāyas. The [KHUDDAKANIKĀYA](#) (“Miscellaneous Collection”), the fifth nikāya in the Pāli canon, has no equivalent in the extant Chinese translations of the āgamas; such miscellanies, or “mixed baskets” (S. kṣudrakapiṭaka), were however known to have existed in several of the [MAINSTREAM BUDDHIST SCHOOLS](#), including the Dharmaguptaka, Mahāsāṃghika, and [MAHĪSĀSAKA](#).

[āgamadharmā](#). (T. lung gi chos; C. jiaofa, J. kyōhō, K. kyobōp 教法). In Sanskrit, “scriptural dharma”; one of the two divisions of the dharma or teaching of the Buddha, together with the “realized dharma” ([ADHIGAMADHARMA](#)). This term refers to the scriptural dharma as the teaching of the Buddha in its verbal form and is often identified with the [TRIPITAKA](#) or with the twelve divisions ([DVĀDAŚĀṄGA\[PRAVACANA\]](#)) of the word of the Buddha ([BUDDHAVACANA](#)).

[āgantukakleśa](#). (P. āgantukakileśa; T. glo bur gyi nyon mongs; C. kechen fannaο; J. kyakujin bonnō; K. kaekchin pōnnoe 客塵煩惱). In Sanskrit, “adventitious afflictions” or “adventitious defilements”; indicating that the [KLEŚA](#) are accidental and extrinsic qualities of the mind, rather than natural and intrinsic. This notion builds on an ancient strand in Buddhist thought, such as in the oft-quoted passage in the Pāli [AṄGUTTARANIKĀYA](#): “The mind, O monks, is luminous but defiled by adventitious defilements” (pabhassaraṃ idaṃ bhikkave cittaṃ, tañ ca kho āgantukehi upakkilesehi upakkiliṭṭham). Since defilements are introduced into the thought processes from without, the intrinsic purity of the mind ([CITTA](#)) can be restored through counteracting the influence of the kleśa and overcoming the inveterate tendency toward attachment and its concomitant craving ([LOBHA](#)) and ill will ([DVESA](#)), which empower them. This concept of āgantukakleśa is critical to the [MAHĀYĀNA](#) doctrine of [TATHĀGATAGARBHA](#) (embryo of buddhahood), where the mind is presumed to be innately enlightened, but that enlightenment is temporarily obscured or concealed by defilements ([KLEŚA](#)) that are extrinsic to it.

[Aggaññasutta](#). (C. Xiaoyuan jing; J. Shōengyō; K. Soyōn kyōng 小緣經). In Pāli, “Discourse on Origins” or “Sermon on Things Primeval”; the twenty-seventh sutta of the [DĪGHANIKĀYA](#) (a separate [DHARMAGUPTAKA](#) recension appears as the fifth [SŪTRA](#) in the Chinese translation of the [DIRGHĀGAMA](#)); the sūtra provides a Buddhist account of the origins of the world and of human society. The Buddha preached the sermon at Sāvattī ([ŚRĀVASTĪ](#)) to two ordinands, Vāsettha and

Bhāradvāja, to disabuse them of the belief that the priestly brāhmaṇa caste was superior to the Buddha’s khattiya ([KṢĀTRIYA](#)), or warrior, caste. The Buddha describes the fourfold caste system of traditional Indian society as a by-product of the devolution of sentient beings. In the beginning of the eon ([KALPA](#)), beings possess spiritual bodies that are luminous, able to travel through the air, and feed on joy. But out of greed for sensual gratification, they degenerate into physical beings with ever grosser propensities: e.g., the coarser the food they eat (first a cream on the surface of water, then creepers, then eventually rice), the coarser their bodies become, until the beings develop sex organs, begin to have intercourse, and in turn build dwellings in order to conceal their debauchery. As their bodies become ever more physical, their life spans in turn also decrease. Immorality, strife, and violence ensue until people finally realize they need a leader to save them from anarchy. They elect the first human king, named Mahāsammata, who was also the first kṣatriya. It was out of the kṣatriya lineage deriving from this first king that the other three classes—brāhmaṇa, vaiśya, and Śūdra—also evolved. This account challenges the mainstream Indian belief that the brāhmaṇa caste is congenitally superior (descending, it claims, from the mouth of the god Brahmā himself) and posits that the effort of moral and spiritual perfection, not the accident of birth, is the true standard of human superiority. Although the Buddhist tradition presumes that this sermon offers a distinctively Buddhist account of the origin and development of both the universe and society, many of the topoi adopted in the story derive from Brahmanical cosmogonies, perhaps employed here as a satire of Brahmanical pretensions in Indian society. The scripture has also been treated by modern interpreters as offering an incipient Buddhist “environmentalism,” wherein human actions, motivated by greed and lust, cause deleterious effects on the physical world, turning, for example, naturally growing rice into a rice that must be cultivated.

[Aggavamsa](#). A twelfth-century scholar monk of the Pāli tradition who wrote the *Saddanīti*, an important Pāli grammar, in 1154. Although some texts describe him as hailing from [JAMBUDVĪPA](#) (viz., India), he seems instead to have lived north of Pagan (Bagan), present-day Myanmar (Burma).

[aggregates](#). See [SKANDHA](#).

[Agni](#). (T. Me lha; C. Huoshen; J. Kashin; K. Hwasin 火神). The Vedic fire deity adopted into the Buddhist pantheon as the guardian of the southeast. In the

[MAHĀVAIROCANĀBHISAMBODHISŪTRA](#), he is identified as an incarnation of [VAIROCANA](#); in Tibet, he is associated with [HEVAJRA](#). Agni is depicted riding a goat, with one face and two hands, the right holding a rosary, the left a vase full of the nectar of immortality ([AMRTA](#)). The term also refers to a class of pre-Buddhist fire deities absorbed into the Tibetan Buddhist pantheon.

[Agonshū](#). (阿含宗). In Japanese, “[ĀGAMA](#) School”; a Japanese “new religion” structured from elements drawn from esoteric Buddhism ([MIKKYŌ](#)) and indigenous Japanese religions; founded in 1970 by Kiriyama Seiyū (born Tsutsumi Masao in 1921). Kiriyama’s teachings are presented first in his *Henshin no genri* (“Principles of Transformation”; 1975). Kiriyama believed he had been saved by the compassion of Kannon ([ĀVALOKITEŚVARA](#)) and was told by that [BODHISATTVA](#) to teach others using the [HOMA](#) (J. goma) fire rituals drawn from Buddhist esoteric ([MIKKYŌ](#)) traditions. Later, while Kiriyama was reading the āgama (J. agon) scriptures, he realized that Buddhism as it was currently constituted in Japan did not correspond to the original teachings of the Buddha. In 1978, Kiriyama changed the name of his religious movement to Agon, the Japanese pronunciation of the transcription of āgama, positing that his teachings derived from the earliest scriptures of Buddhism and thus legitimizing them. His practices are fundamentally concerned with removing practitioners’ karmic hindrances ([KARMĀVARANA](#)). Since many of these hindrances, he claims, are the result of neglecting one’s ancestors or are inherited from them, much attention is also paid in the school to transforming the spirits of the dead into buddhas themselves, which in turn will also free the current generation from their karmic obstructions. Spiritual power in the school derives from the shinsei busshari (true [ŚĀRĪRA](#) [relics] of the Buddha), a sacred reliquary holding a bone fragment of the Buddha himself, given to Kiriyama in 1986 by the president of Sri Lanka. Individual adherents keep a miniature replica of the Śārīra in their own homes, and the relic is said to have the transformational power to turn ancestors into buddhas. A “Star Festival” (Hoshi Matsuri) is held in Kyōto on each National Foundation Day (February 11), at which time two massive homa fires are lit, one liberating the spirits of the ancestors (and thus freeing the current generation from inherited karmic obstructions), the other helping to make the deepest wishes of its adherents come true. Adherents write millions of prayers on wooden sticks, which are cast into the two fires.

[Agvaandandar](#). (T. Ngag dbang bstan dar a.k.a. Bstan dar lha ram pa) (1759–

1830). Mongolian scholar of the [DGE LUGS](#) sect of Tibetan Buddhism. He was born into a nomad family in the Eastern Qoshot banner of Alashan, entering the monastery at the age of seven. He was sent to ['BRAS SPUNGS](#) monastery in [LHA SA](#) at the age of nineteen, where he completed the Dge lugs curriculum and received the highest rank of [DGE BSHES](#), that of lha ram pa, around 1800. In Tibetan, he is often referred to as Bstan dar lha ram pa. He returned to his native Mongolia shortly thereafter where he was appointed to a high position at Eastern Monastery, before leaving again, this time for A mdo and the great Dge lugs monasteries of [SKU 'BUM](#) and [BLA BRANG](#). He traveled extensively, visiting monasteries in both Inner and Outer Mongolia, and going also to China, where he visited Beijing and [WUTAISHAN](#). He was regarded as one of the leading Dge lugs scholars of his generation. Agvaandandar returned to his native Alashan at the end of his life, where he died in 1830. His tomb at Sharil Chindar is still a place of worship. His collected works fill two volumes, comprising thirty-six titles, all written in Tibetan (two are bilingual Tibetan and Mongolian). He wrote on a wide range of topics in Buddhist philosophy, logic, poetics (based on Daṇḍin's *Kāvyaḍarśa*), and grammar (both Tibetan and Mongolian), including a Tibetan–Mongolian dictionary. His philosophical work included commentaries on the *Hetucakra* and the [ĀLAMBANAPARIKŚĀ](#) of [DIGNĀGA](#), the *Samtānāntarasiddhi* of [DHARMAKĪRTI](#), and on the [PRAJÑĀPĀRAMITĀHRDAYASŪTRA](#) (“Heart Sūtra”).

[agyo](#). (C. xiayu; K. haŏ 下語). In Japanese, “appended words” or “granted words.” Although the term is now used generally to refer to the instructions of a [ZEN](#) master, agyo can also more specifically refer to a set number of stereotyped sayings, often a verse or phrase, that were used in [KŌAN](#) (C. [GONG'AN](#)) training. Unlike the literate monks of the medieval [GOZAN](#) monasteries, monks of the RINKA, or forest, monasteries were usually unable to compose their own Chinese verses to express the insight that they had gained while struggling with a kōan. The rinka monks therefore began to study the “appended words” or “capping phrases” ([JAKUGO](#)) of a kōan text such as the [BIYAN LU](#), which summarized or explained each segment of the text. The agyo are found in kōan manuals known as [MONSAN](#), or Zen phrase manuals, such as the [ZENRIN KUSHŪ](#), where they are used to explicate a kōan.

[Agyō](#). (J) (阿形). See [NIŌ](#).

[ahamkāra](#). (T. ngar 'dzin; C. wozhi/woman; J. gashū/gaman; K. ajip/aman 我執/

我慢). In Sanskrit and Pāli, “conception of I,” “egotism,” or “arrogance”; a synonym of [ĀTMAGRĀHA](#) (attachment to a conception of self). See [ĀTMAGRĀHA](#).

āhāra. (T. zas; C. shi; J. jiki; K. sik 食) In Sanskrit and Pāli, lit. “food,” i.e., “nutriment” in the broadest sense, which nourishes everything associated with the body and mind. Four types of nutriment are commonly listed in mainstream materials: (1) food ([āhāra](#); P. kabalinkārāhāra) of both coarse and fine varieties, which nourishes the physical body; (2) sensory contact or impression ([SPARŚA](#), P. phassa), which nourishes pleasant, unpleasant, and neutral sensations ([VEDANĀ](#); see [PRATĪTYASAMUTPĀDA](#)); (3) intention ([CETANĀ](#); P. manosañcetanā), which nourishes actions ([KARMA](#)) performed via body, speech, and mind; and (4) consciousness ([VIJÑĀNA](#); P. viññāṇa), which nourishes mentality and corporeality ([NĀMARŪPA](#)), specifically at the moment of conception in the next rebirth (see [pratītyasamutpāda](#)).

ahimsā. (T. 'tshe ba med pa; C. buhai; J. fugai; K. purhae 不害). In Sanskrit and Pāli, “absence of harmful intentions,” “harmlessness,” “noninjury,” or “nonviolence.” The religious ideal and ethical injunction of “harmlessness” toward all living beings was shared in some fashion by several of the Indian [ŚRAMANA](#) traditions, including the Buddhists as well as the [JAINAS](#), who made it a central tenet of their religion. Some of the corollaries of this idea included the precept against killing, the injunction to refrain from physically and verbally abusing sentient beings, and vegetarianism. The Jainas were especially stringent in their interpretation of “harmlessness” toward all living creatures, demanding strict vegetarianism from their followers in order to avoid injuring sentient creatures, a requirement that the Buddha rejected when his rival in the order, [DEVADATTA](#), proposed it in his list of austerities (see [DHUTAṄGA](#)). The Buddha’s view was that monks were a “field of merit” ([PUNYAKSETRA](#)) for the laity and should accept all offerings made to them, including meat, unless the monk knew that the animal had been killed specifically to feed him, for example. The voluntary vegetarianism that is now prevalent in both Mahāyāna Buddhism and wider Indian Hindu culture is almost certainly a result of Jaina influence and constitutes that religion’s most enduring contribution to Indian religion. Buddhism treated “absence of harmful intentions” as one of the forty-six mental factors ([CAITTA](#)) according to the [SARVĀSTIVĀDA–VAIBHĀSIKA](#) school of [ABHIDHARMA](#), one of the fifty-one according to the [YOGACĀRA](#) school, and one of the fifty-two [CETASIKAS](#) in the Pāli [ABHIDHAMMA](#). It is the opposite of “harmful

intention” or “injury” ([VIHIMSA](#), and is sometimes seen written as avihimsā) and one of the states of mind comprising right intention (S. samyaksamkalpa; P. sammāsankappa) in the noble eightfold path ([ĀRYĀSTĀṄGIKAMĀRGA](#)). “Absence of harmful intentions” is also traditionally taken to be a precondition for the cultivation of “compassion” ([KARUNĀ](#)). See [VIHIMSA](#).

[aiśvarya](#). (T. dbang phyug; C. zizai; J. jizai; K. chajae 自在). In Sanskrit, lit. “sovereignty”; referring to the “self-mastery” or “autonomy” that is a product of religious training and/or related superknowledges ([ABHIJÑĀ](#)) that are gained thereby, such as clairvoyance, clairaudience, telepathy, the ability to manifest transformation bodies, and erudition.

[Aizen Myōō](#). (愛染明王) (S. Rāgavidyārāja). In Japanese, lit. “Bright King of the Taint of Lust”; an esoteric deity considered to be the destroyer of vulgar passions. In stark contrast to the traditional Buddhist approach of suppressing the passions through various antidotes or counteractive techniques ([PRATIPAKSA](#)), this [VIDYĀRĀJA](#) is believed to be able to transform attachment, desire, craving, and defilement directly into pure [BODHICITTA](#). This deity became a principal deity of the heretical Tachikawa branch ([TACHIKAWARYŪ](#)) of the [SHINGONSHŪ](#) and was considered the deity of conception. As an emanation of the buddha [MAHĀVAIROCANA](#) or the bodhisattva [VAJRASATTVA](#), Aizen Myōō was favored by many followers of Shingon Buddhism in Japan and by various esoteric branches of the [TENDAISHŪ](#). Aizen Myōō was also sometimes held to be a secret buddha ([HIBUTSU](#)) by these traditions. The [NICHIRENSHŪ](#) was the last to adopt him as an important deity, but he played an important role in the dissemination of its cult. Aizen Myōō is well known for his fierce appearance, which belies the love and affection he is presumed to convey. Aizen Myōō usually has three eyes (to see the three realms of existence) and holds a lotus in his hand, which is symbolic of the calming of the senses, among other things. Other attributes of this deity are the bow and arrows, [VAJRAS](#), and weapons that he holds in his hands.

[ajahn](#). Thai pronunciation of the Sanskrit term [ĀCĀRYA](#) (“teacher”); also transcribed as āchān.

[Ajahn Chah Bodhiñāna](#). (1918–1992). A prominent Thai monk who was one of the most influential Thai forest-meditation masters ([PHRA PA](#)) of the twentieth century. Born in the village of Baan Gor in the northeastern Thai province of Ubon Ratchathani, he was ordained as a novice at his local temple, where he

received his basic education and studied the Buddhist teachings. After several years of training, he returned to lay life to attend to the needs of his parents, but motivated by his religious calling, at the age of twenty, he took higher ordination ([UPASAMPADĀ](#)) as a [BHIKSU](#) and continued his studies of Pāli scripture. His father's death prompted him to travel to other monasteries in an effort to acquire a deeper understanding of Buddhist teaching and discipline under the guidance of different teachers. During his pilgrimage, he met [AJAHN MUN BHŪRIDATTA](#), the premier meditation master of the Thai forest-dwelling ([ARAÑÑAVĀSI](#)) tradition. After that encounter, Ajahn Chah traveled extensively throughout the country, devoting his energies to meditation in forests and charnel grounds ([ŚMAŚĀNA](#)). As his reputation grew, he was invited to establish a monastery near his native village, which became known as Wat Pa Pong after the name of the forest (reputed to be inhabited by ghosts) in which it was located. Ajahn Chah's austere lifestyle, simple method of mindfulness meditation, and straightforward style of teaching attracted a large following of monks and lay supporters, including many foreigners. In 1966, he established Wat Pa Nanachat, a branch monastery specifically for Western and other non-Thai nationals, next to Wat Pa Pong. In 1976, he was invited to England, which led to the establishment of the first branch monastery of Wat Pa Pong there, followed by others in Switzerland, Australia, New Zealand, and Italy. He also visited the United States, where he spoke at retreats at the Insight Meditation Center in Barre, Massachusetts. Ajahn Chah died in 1992, after several years in a coma.

[Ajahn Mun Bhūridatta](#). (1870–1949). Thai monk who revitalized the Thai forest-monk tradition (Thai [PHRA PA](#)), and the subject of a celebrated Thai hagiography by Ajahn Mahā Boowa ñāṇasampanṇo (b. 1913). Born in 1870, in Ban Khambong village in the province of Ubon Ratchathani, Mun was ordained in 1893 at Wat Liab and began studying insight practice ([VIPĀŚYANĀ](#)) under the guidance of Ajahn Sao Kantasīla (1861–1941). Through developing the meditation on foulness ([AŚUBHABHĀVANĀ](#)), he eventually had an experience of calmness ([ŚAMATHA](#)), and in order to enhance his practice, he embarked on the life of asceticism (P. [DHUTAṅGA](#)) as a forest dweller (P. [ARAÑÑAVĀSI](#)) in northeast Thailand and southern Laos. After every rains' retreat ([VARSĀ](#)) was over, he would travel into the forests, staying just close enough to a few small villages in order to perform his alms round ([PINDAPĀTA](#)) each morning. According to the hagiography, after first experiencing the fruition of the state of the nonreturner ([ANĀGĀMIN](#)), he eventually achieved the stage of a worthy one ([ARHAT](#)) in Chiang

Mai, an experience that he said shook the entire universe and brought a roar of accolades from the heavenly hosts. Ajahn Mun became a widely known and respected meditator and teacher, who was invited to dwell in monasteries throughout much of Thailand. The hagiography compiled by Ajahn Mahā Boowa is filled with exuberantly told tales of his meditative visions, prophetic dreams, lectures and instructions, and encounters with other eminent monks, laypeople, and even with deceased arhats and divinities ([DEVA](#)) such as [ŚAKRA](#) with his 100,000 strong retinue. Ajahn Mun's many prominent disciples helped revive the Thai forest-monk tradition, especially in the northeast, and defined its austere practices (Thai, [THUDONG](#); P. [DHUTAṄGA](#)) in their contemporary context.

[Ajantā](#). A complex of some thirty caves and subsidiary structures in India, renowned for its exemplary Buddhist artwork. Named after a neighboring village, the caves are carved from the granite cliffs at a bend in the Wagurna River valley, northeast of [AURANGĀBĀD](#), in the modern Indian state of Maharashtra. The grottoes were excavated in two phases, the first of which lasted from approximately 100 BCE to 100 CE, the second from c. 462 to 480, and consist primarily of monastic cave residences ([VIHĀRA](#)) and sanctuaries ([CAITYA](#)). The sanctuaries include four large, pillared [STŪPA](#) halls, each enshrining a central monumental buddha image, which renders the hall both a site for worship and a buddha's dwelling ([GANDHAKUTĪ](#)), where he presides over the activities of the monks in residence. The murals and sculpture located at Ajantā include some of the best-preserved examples of ancient Buddhist art. Paintings throughout the complex are especially noted for their depiction of accounts from the Buddha's previous lives ([JĀTAKA](#)). Despite the presence of some [AVALOKITEŚVARA](#) images at the site, it is Sanskrit texts of mainstream Buddhism, and especially the [MŪLASARVĀSTIVĀDA](#) school, that are the source and inspiration for the paintings of Ajantā. Indeed, almost all of Ajantā's narrative paintings are based on accounts appearing in the [MŪLASARVĀSTIVĀDA VINAYA](#), as well as the poems of Āryaśūra and [AŚVAGHOSA](#). On the other hand, the most common type of sculptural image at Ajantā (e.g., Cave 4) is a seated buddha making a variant of the gesture of turning the wheel of the dharma ([DHARMAKRAMUDRĀ](#)), flanked by the two bodhisattvas [AVALOKITEŚVARA](#) and [VAJRAPĀṆI](#). The deployment of this mudrā and the two flanking bodhisattvas indicates that these buddha images are of [VAIROCANA](#) and suggests that tantric elements that appear in the [MAHĀVAIROCANĀBHISAMBODHISŪTRA](#) and the [MAÑJUŚRĪMŪLAKALPA](#), both of which postdate the Ajantā images, developed over an extended period of time

and had precursors that influenced the iconography at Ajaṅṭā. Inscriptions on the walls of the earliest part of the complex, primarily in Indian Prakrits, attest to an eclectic, even syncretic, pattern of religious observance and patronage. Later epigraphs found at the site associate various patrons with Hariṣeṇa (r. 460–477), the last known monarch of the Vākāṭaka royal family. Varāhadeva, for example, who patronized Cave 16, was one of Hariṣeṇa’s courtiers, while Cave 1 was donated by Hariṣeṇa himself, and Cave 2 may have been patronized by a close relative, perhaps one of Hariṣeṇa’s wives. Cave 16’s central image, a buddha seated on a royal throne with legs pendant ([BHADRĀSANA](#)), is the first stone sculpture in this iconographic form found in western India. Introduced to India through the tradition of [KUSHAN](#) royal portraiture, the bhadrāsana has been interpreted as a position associated with royalty and worldly action. This sculpture may thus have functioned as a portrait sculpture; it may even allegorize Hariṣeṇa as the Buddha. In fact, it is possible that Varāhadeva may have originally intended to enshrine a buddha seated in the cross-legged lotus position ([VAJRAPARYAṆKA](#)) but changed his plan midway in the wake of a regional war that placed Hariṣeṇa’s control over the Ajaṅṭā region in jeopardy. Around 480, the constructions at Ajaṅṭā came to a halt with the destruction of the Vākāṭaka family. The caves were subsequently abandoned and became overgrown, only to be discovered in 1819 by a British officer hunting a tiger. They quickly became the object of great archaeological and art historical interest, and were designated a UNESCO World Heritage Site in 1983.

[Ajātaśatru](#). (P. Ajātasattu; T. Ma skyes dgra; C. Asheshi wang; J. Ajase ō; K. Asase wang 阿闍世王). In Sanskrit, “Enemy While Still Unborn,” the son of King [BIMBISĀRA](#) of Magadha and his successor as king. According to the Pāli account, when Bimbisāra’s queen [VAIDEHĪ](#) (P. Videhī) was pregnant, she developed an overwhelming urge to drink blood from the king’s right knee, a craving that the king’s astrologers interpreted to mean that the son would eventually commit patricide and seize the throne. Despite several attempts to abort the fetus, the child was born and was given the name Ajātaśatru. While a prince, Ajātaśatru became devoted to the monk [DEVADATTA](#), the Buddha’s cousin and rival, because of Devadatta’s mastery of yogic powers ([RDDHI](#)). Devadatta plotted to take revenge on the Buddha through manipulating Ajātaśatru, whom he convinced to murder his father Bimbisāra, a close lay disciple and patron of the Buddha, and seize the throne. Ajātaśatru subsequently assisted Devadatta in several attempts on the Buddha’s life. Ajātaśatru is said to have later grown remorseful over his evil deeds and, on the advice of the physician [JĪVAKA](#), sought the Buddha’s forgiveness. The Buddha preached to him on the benefits of renunciation from the [SĀMAÑÑAPHALASUTTA](#), and Ajātaśatru became a lay disciple. Because he had committed patricide, one of the five most heinous of evil deeds that are said to bring immediate retribution ([ĀNANTARYAKARMA](#)), Ajātaśatru was precluded from attaining any degree of enlightenment during this lifetime and was destined for rebirth in the lohakumbhiya hell. Nevertheless, Sakka (S. [ŚAKRA](#)), the king of the gods, described Ajātaśatru as the chief in piety among the Buddha’s unenlightened disciples. When the Buddha passed away, Ajātaśatru was overcome with grief and, along with other kings, was given a portion of the Buddha’s relics ([ŚARĪRA](#)) for veneration. According to the Pāli commentaries, Ajātaśatru provided the material support for convening the first Buddhist council (see [COUNCIL, FIRST](#)) following the Buddha’s death. The same sources state that, despite his piety, he will remain in hell for sixty thousand years but later will attain liberation as a solitary buddha (P. paccekabuddha; S. [PRATYEKABUDDHA](#)) named Veditavisesa. ¶ Mahāyāna scriptures, such as the [MAHĀPARINIRVĀNASŪTRA](#) and the [GUAN WULIANGSHOU JING](#) (“Contemplation Sūtra on the Buddha of Infinite Life”), give a slightly different account of Ajātaśatru’s story. Bimbisāra was concerned that his queen, Vaidehī, had yet to bear him an heir. He consulted a soothsayer, who told him that an aging forest ascetic would eventually be reborn as Bimbisāra’s son. The king then decided to speed the process along and had the ascetic killed so he would take rebirth in

Vaidehī's womb. After the queen had already conceived, however, the soothsayer prophesized that the child she would bear would become the king's enemy. After his birth, the king dropped him from a tall tower, but the child survived the fall, suffering only a broken finger. (In other versions of the story, Vaidehī is so mortified to learn that her unborn son will murder her husband the king that she tried to abort the fetus, but to no avail.) Devadatta later told Ajātaśatru the story of his conception and the son then imprisoned his father, intending to starve him to death. But Vaidehī kept the king alive by smuggling food to him, smearing her body with flour-paste and hiding grape juice inside her jewelry. When Ajātaśatru learned of her treachery, he drew his sword to murder her, but his vassals dissuaded him. The prince's subsequent guilt about his intended matricide caused his skin break out in oozing abscesses that emitted such a foul odor that no one except his mother was able to approach him and care for him. Despite her loving care, Ajātaśatru did not improve and Vaidehī sought the Buddha's counsel. The Buddha was able to cure the prince by teaching him the "Nirvāṇa Sūtra," and the prince ultimately became one of the preeminent Buddhist monarchs of India. This version of the story of Ajātaśatru was used by Kosawa Heisaku (1897–1968), one of the founding figures of Japanese psychoanalysis, and his successors to posit an "Ajase (Ajātaśatru) Complex" that distinguished Eastern cultures from the "Oedipal Complex" described by Sigmund Freud in Western psychoanalysis. As Kosawa interpreted this story, Vaidehī's ambivalence or active antagonism toward her son and Ajātaśatru's rancor toward his mother were examples of the pathological relationship that pertains between mother and son in Eastern cultures, in distinction to the competition between father and son that Freud posited in his Oedipal Complex. This pathological relationship can be healed only through the mother's love and forgiveness, which redeem the child and thus reunite them.

[aji gatsurinkan](#). (阿字月輪觀). In Japanese, "contemplation of the letter 'A' in the moon-wheel." See [AJIKAN](#).

[aji honpushō](#). (阿字本不生). In Japanese, "the letter 'A' that is originally uncreated." See [AJIKAN](#).

[ajikan](#). (阿字觀). In Japanese, "contemplation of the letter 'A'"; a meditative exercise employed primarily within the the Japanese [SHINGON](#) school of esoteric Buddhism. The ajikan practice is also known as the "contemplation of the letter 'A' in the moon-wheel" ([AJIGATSURINKAN](#)). The letter "A" is the first letter in the

Sanskrit [SIDDHAM](#) alphabet and is considered to be the “seed” ([BĪJA](#)) of [MAHĀVAIROCANA](#), the central divinity of the esoteric traditions. The letter “A” is also understood to be the “unborn” buddha-nature ([FOXING](#)) of the practitioner; hence, the identification of oneself with this letter serves as a catalyst to enlightenment. In ajikan meditation, the adept draws a picture of the full moon with an eight-petaled lotus flower at its center. The Siddham letter “A” is then superimposed over the lotus flower as a focus of visualization. As the visualization continues, the moon increases in size until it becomes coextensive with the universe itself. Through this visualization, the adept realizes the letter “A” that is originally uncreated ([AJI HONPUSHŌ](#)), which is the essence of all phenomena in the universe and the [DHARMAKĀYA](#) of [MAHĀVAIROCANA](#) Buddha.

[Ajita](#). (T. Ma pham pa; C. Ayiduo; J. Aitta; K. Ailta 阿逸多). In Sanskrit and Pāli, “Invincible”; proper name of several different figures in Buddhist literature. In the Pāli tradition, Ajita is said to have been one of the sixteen mendicant disciples of the brāhmaṇa ascetic Bāvarī who visited the Buddha at the request of their teacher. Upon meeting the Buddha, Ajita saw that he was endowed with the thirty-two marks of a great man ([MAHĀPURUSALAKSANA](#)) and gained assurance that the Buddha’s renown was well deserved. Starting with Ajita, all sixteen of the mendicants asked the Buddha questions. Ajita’s question is preserved as the *Ajitamānavapucchā* in the *Parāyanavagga* of the [SUTTANIPĀTA](#). At the end of the Buddha’s explanations, Ajita and sixteen thousand followers are said to have become worthy ones ([ARHAT](#)) and entered the [SAMGHA](#). Ajita returned to his old teacher Bāvarī and recounted to him what happened. Bāvarī himself converted and later became a nonreturner ([ANĀGĀMIN](#)). ¶ Another Ajita is Ajita-Keśakambala (Ajita of the Hair Blanket), a prominent leader of the [LOKĀYATA](#) (Naturalist) school of Indian wandering religious ([ŚRAMANA](#)) during the Buddha’s time, who is mentioned occasionally in Buddhist scriptures. His doctrine is recounted in the Pāli [SĀMAÑÑAPHALASUTTA](#), where he is claimed to have denied the efficacy of moral cause and effect because of his materialist rejection of any prospect of transmigration or rebirth. ¶ An Ajita also traditionally appears as the fifteenth on the list of the sixteen [ARHAT](#) elders ([SODĀŚASTHAVIRA](#)), who were charged by the Buddha with protecting his dispensation until the advent of the next buddha, [MAITREYA](#). Ajita is said to reside on Mt. [GRDHRAKŪTA](#) (Vulture Peak) with 1,500 disciples. He is known in Chinese as the “long-eyebrowed arhat” (changmei luohan) because he is said to have been born with long white eyebrows. In [CHANYUE GUANXIU](#)’s standard

Chinese depiction, Ajita is shown sitting on a rock, with both hands holding his right knee; his mouth is open, with his tongue and teeth exposed. East Asian images also sometimes show him leaning on a staff. In Tibetan iconography, he holds his two hands in his lap in [DHYĀNAMUDRĀ](#). ¶ Ajita is finally a common epithet of the bodhisattva [MAITREYA](#), used mostly when he is invoked in direct address.

[Ājīvaka](#). [alt. Ājīvakā; Ājīvika]. (T. 'Tsho ba can; C. Xieming waidao; J. Jamyō gedō; K. Samyōng oedo 邪命外道) In Sanskrit and Pāli, “Improper Livelihood”; one of the major early sects of Indian wandering religious ([ŚRAMANA](#)) during the fifth century BCE. Makkhali Gosāla (S. [MASKARIN GOŚĀLĪPUTRA](#)) (d. c. 488 BCE), the leader of the Ājīvakas, was a contemporary of the Buddha. No Ājīvaka works survive, so what little we know about the school derives from descriptions filtered through Buddhist materials. Buddhist explications of Ājīvaka views are convoluted and contradictory; what does seem clear, however, is that the Ājīvakas adhered to a doctrine of strict determinism or fatalism. The Ājīvakas are described as believing that there is no immediate or ultimate cause for the purity or depravity of beings; all beings, souls, and existent things are instead directed along their course by fate (niyati), by the conditions of the species to which they belong, and by their own intrinsic natures. Thus, attainments or accomplishments of any kind are not a result of an individual’s own action or the acts of others; rather, according to those beings’ positions within the various stations of existence, they experience ease or pain. Makkhali Gosāla is portrayed as advocating a theory of automatic purification through an essentially infinite number of transmigrations (saṃsāraśuddhi), by means of which all things would ultimately attain perfection. The Buddha is said to have regarded Makkhali Gosāla’s views as the most dangerous of heresies, which was capable of leading even the divinities ([DEVA](#)) to loss, discomfort, and suffering. [BUDDHAGHOSA](#) explains the perniciousness of his error by comparing the defects of Makkhali’s views to those of the views of two other heretical teachers, Pūraṇa Kassapa (S. Pūraṇa Kāśyapa) (d. c. 503 BCE), another Ājīvaka teacher, and [AJITA-KESAKAMBALA](#), a prominent teacher of the [LOKĀYATA](#) (Naturalist) school, which maintained a materialist perspective toward the world. Pūraṇa asserted the existence of an unchanging passive soul that was unaffected by either wholesome or unwholesome action and thereby denied the efficacy of [KARMAN](#); Ajita advocated an annihilationist theory that there is no afterlife or rebirth, which thereby denied any possibility of karmic retribution. Makkhali’s doctrine

of fate or noncausation, in denying both action and its result, was said to have combined the defects in both those systems of thought.

[Ājñātakaundinya](#). (P. Aññātakonḍañña / Aññākonḍañña; T. Kun shes kaun ḍi nya; C. Aruojiachenru; J. Anyakyōjinnyo; K. Ayakkyojinyō 阿若橋陳如). In Sanskrit, “Kaundinya (P. Konḍañña) who Knows”; the first person to understand the insights of the Buddha, as delivered in the first sermon, the [DHARMACAKRAPRAVARTANASŪTRA](#) (P. [DHAMMACAKKAPPAVATTANASUTTA](#)), and the first disciple to take ordination as a monk ([BHIKSU](#)), following the simple [EHIBHIKSUKĀ](#) (P. ehi bhikkhu), or “come, monk,” formula: “Come, monk, the [DHARMA](#) is well proclaimed; live the holy life for the complete ending of suffering.” Kaundinya was one of the group of five ascetics ([BHADRAVARGIYA](#)) converted by the Buddha at the [RSIPATANA](#) (P. Isipatana) [MRGADĀVA](#) (Deer Park), located just northeast of the city of Vārāṇasī. According to the Pāli account, he was a brāhmaṇa older than the Buddha, who was especially renowned in physiognomy. After the birth of the infant [GAUTAMA](#), he was one of eight brāhmaṇas invited to predict the infant’s future and the only one to prophesize that the child would definitely become a buddha rather than a wheel-turning monarch ([CAKRAVARTIN](#)). He left the world as an ascetic in anticipation of the bodhisattva’s own renunciation and was joined by the sons of four of the other eight brāhmaṇas. Kaundinya and the other four ascetics joined the bodhisattva in the practice of austerities, but when, after six years, the bodhisattva renounced extreme asceticism, they left him in disgust. After his enlightenment, the Buddha preached to the five ascetics at the Rṣipatana deer park, and Kaundinya was the first to realize the truth of the Buddha’s words. The Pāli canon describes Kaundinya’s enlightenment as proceeding in two stages: first, when the Buddha preached the *Dhammacakkappavattanasutta*, he attained the opening of the dharma eye ([DHARMACAKSUS](#)), the equivalent of stream-entry ([SROTAĀPANNA](#)), and five days later, when the Buddha preached his second sermon, the [ANATTALAKKHANASUTTA](#), he attained the level of [ARHAT](#). The Buddha praised him both times by exclaiming “Kaundinya knows!,” in recognition of which Ājñāta (“He Who Knows”) was thereafter prefixed to his name. Later, at a large gathering of monks at [JETAVANA](#) grove in [ŚRĀVASTĪ](#), the Buddha declared Ājñātakaundinya to be preeminent among his disciples who first comprehended the dharma, and preeminent among his long-standing disciples. Ājñātakaundinya received permission from the Buddha to live a solitary life in the Chaddantavana forest and only returned after twelve years to

take leave of the Buddha before his own [PARINIRVĀNA](#). After his cremation, Ājñātakauṇḍinya’s relics were given to the Buddha, who personally placed them in a silver reliquary ([CAITYA](#)) that spontaneously appeared from out of the earth.

[akalpikavastu](#). (P. akappiyavatthu; T. rung ba ma yin pa’i dngos po; C. bujing wu; J. fujōmotsu; K. pujōng mul 不淨物). In Sanskrit, “inappropriate possessions” or “improper matters”; eight kinds of possessions or activities that monks and nuns are expected to avoid, since they may compromise their status as renunciants: (1) gold, (2) silver, (3) servants or slaves, (4) cattle, (5) sheep, (6) safe deposits or warehouses, (7) engaging in trade, and (8) engaging in farming. (An alternative version of this list does not include “sheep,” but instead distinguishes between male and female servants or slaves). Another list has the following: (1) possessing land or property, (2) engaging in animal husbandry, (3) maintaining storage of grains or food and silk or other cloth, (4) having servants or slaves, (5) keeping animals (as either pets or livestock), (6) keeping money, (7) keeping cushions and pans, and (8) keeping furniture gilded with gold, ivory, or precious jewels.

[akaniṣṭha](#). (P. akaniṭṭha; T. ’og min; C. sejiujing tian; J. shikikukyōten; K. saekkyūyōng ch’ōn 色究竟天). In Sanskrit, “highest”; akaniṣṭha is the eighth and highest level of the realm of subtle materiality ([RŪPADHĀTU](#)), which is accessible only through experiencing the fourth meditative absorption ([DHYĀNA](#)); akaniṣṭha is thus one of the [BRAHMALOKAS](#) (see [DEVA](#)). akaniṣṭha is the fifth and highest class of the “pure abodes,” or [ŚUDDHĀVĀSA](#) (corresponding to the five highest heavens in the realm of subtle materiality), wherein abide “nonreturners” ([ANĀGĀMIN](#))—viz., adepts who need never again return to the [KĀMADHĀTU](#)—and some [ARHATS](#). The pure abodes therefore serve as a way station for advanced spiritual beings ([ĀRYA](#)) in their last life before final liberation. According to some Mahāyāna texts, akaniṣṭha is also the name of the abode of the enjoyment body ([SAMBHOGAKĀYA](#)) of a buddha in general and of the buddha [VAIROCANA](#) in particular.

[Ākaṅkheyyasutta](#). (C. Yuan jing; J. Gangyō; K. Wōn kyōng 願經). In Pāli, “Discourse on What One May Wish,” the sixth sutta in the [MAJJHIMANIKĀYA](#) (a separate [SARVĀSTIVĀDA](#) recension appears as [SŪTRA](#) no. 105 in the Chinese translation of the [MADHYAMĀGAMA](#), and a recension of uncertain affiliation in the Chinese translation of the [EKOTTARĀGAMA](#)); preached by the Buddha to a group of disciples in the [JETAVANA](#) grove in the town of [ŚRĀVASTĪ](#). The Buddha

describes how a monk who wishes for all good things to come to himself, his fellow monks, and his lay supporters should restrain his sense faculties by seeing danger ([ĀDĪNAVA](#)) in the slightest fault and by abiding by the dictates of the disciplinary codes ([PRĀTIMOKSA](#)). This restraint will allow him to develop morality ([ŚĪLA](#)), meditative concentration ([SAMĀDHI](#)), and liberating wisdom ([PRAJÑĀ](#)), leading to the destruction of the contaminants ([ĀSRAVAKSAYA](#)).

ākāra. (T. nam pa; C. xingxiang; J. gyōsō; K. haengsang 行相). In Sanskrit, “aspect,” “mode,” “form,” or “image”; a polysemous term that is notably employed in discussions of epistemology to describe an image cast by an object, which serves as the actual object of sense perception. At an early stage of its history (as ākr̥ti), the term refers to what a word articulates. Over time, it came to mean the content of a word (that may or may not be connected with an actual content in reality) and then the mediating mental image. Buddhist philosophical schools differ as to whether or not such an “aspect” is required in order for sense perception to occur. [VAIBHĀSIKAS](#) are non-aspectarians ([NIRĀKĀRAVĀDA](#)) who say mind knows objects directly; [SAUTRĀNTIKAS](#) are aspectarians ([SĀKĀRAVĀDA](#)) who say mind knows through an image (ākāra) of the object that is taken into the mind. [YOGĀCĀRAS](#) are aspectarians insofar as they do not accept external objects; they are divided into satyākāravādin (T. nam bden pa), or true aspectarians, who assert that appearances as gross objects exist and are not polluted by ignorance; and alīkākāravādin (T. nam rdzun pa), or false aspectarians, who assert that appearances as gross objects do not exist and are polluted by ignorance. In [SARVĀKĀRAJÑATĀ](#) (“knowledge of all modes”), the name in the perfection of wisdom ([PRAJÑĀPĀRAMITĀ](#)) literature for the omniscience of a buddha, ākāra is synonymous with [DHARMAS](#). In the [ABHISAMAYĀLAMKĀRA](#), there are 173 aspects that define the practice (prayoga) of a bodhisattva. They are the forms of a bodhisattva’s knowledge (of impermanence that counteracts the mistaken apprehension of permanence, for example) informed by [BODHICITTA](#) and the knowledge that the knowledge itself has no essential nature ([SVABHĀVA](#)).

ākāśa. (T. nam mkha’; C. xukong; J. kokū; K. hōgong 虛空). In Sanskrit, “space” or “spatiality”; “sky,” and “ether.” In [ABHIDHARMA](#) analysis, ākāśa has two discrete denotations. First, as “spatiality,” ākāśa is an absence that delimits forms; like the empty space inside a door frame, ākāśa is a hole that is itself empty but that defines, or is defined by, the material that surrounds it. Second, as the vast emptiness of “space,” ākāśa comes also to be described as the absence

of obstruction and is enumerated as one of the permanent phenomena (nityadharma) because it does not change from moment to moment. Space in this sense is also interpreted as being something akin to the Western conception of ether, a virtually immaterial, but glowing fluid that serves as the support for the four material elements ([MAHĀBHŪTA](#)). (Because this ethereal form of ākāśa is thought to be glowing, it is sometimes used as a metaphor for buddhahood, which is said to be radiant like the sun or space.) In addition to these two abhidharma definitions, the sphere of infinite space ([AKĀŚĀNANTYĀYATANA](#)) has a meditative context as well through its listing as the first of the four immaterial [DHYĀNAS](#). Ākāśa is recognized as one of the uncompounded dharmas ([ASAMSKRTADHARMA](#)) in six of the mainstream Buddhist schools, including the [SARVĀSTIVĀDA](#) and the [MAHĀSĀMĠHIKA](#), as well as the later [YOGĀCĀRA](#); three others reject this interpretation, including the [THERAVĀDA](#).

[Ākāśagarbha](#). (T. Nam mkha'i snying po; C. Xukongzang pusa; J. Kokūzō bosatsu; K. Hōgongjang posal 虛空藏菩薩). In Sanskrit, “Storehouse/Womb of Space”; a [BODHISATTVA](#) who is one of the [MAHOPAPUTRA](#), whose position is the north; also known as Cakrapāṇi. He is usually considered to be a form of [AKSOBHYA](#), although sometimes he is instead said to be the emanation of [VAIROCANA](#). He is depicted in bodhisattva form, with one face and two hands in various [MUDRĀS](#); his most common attribute is a sun disc. His consort is Mālā, and he is the counterpart to [KṢITIGARBHA](#), the “Womb of the Earth.” The sūtra that describes his attributes, the *Ākāśagarbhasūtra*, was first translated into Chinese by [BUDDHAYAŚAS](#) at the beginning of the fifth century and again by Dharmamitra a few decades later.

[ākāśānantyāyatana](#). (P. ākāśānañcāyatana; T. nam mkha' mtha' yas skye mched; C. kong wubian chu; J. kūmuhenjo; K. kong mubyōn ch'ō 空無邊處). In Sanskrit, “sphere of infinite space”; the first and lowest (in ascending order) of the four levels of the immaterial realm ([ĀRŪPYADHĀTU](#)) and the first of the four immaterial absorptions ([DHYĀNA](#)). It is a realm of rebirth as well as a meditative state that is entirely immaterial (viz., there is no physical [[RŪPA](#)] component to existence) in which the mind comes to an awareness of unlimited pervasive space ([AKĀŚA](#)) without the existence of material objects. Beings reborn in this realm are thought to live as long as forty thousand eons ([KALPAS](#)). However, as a state of being that is still subject to rebirth, even the realm of infinite space remains part of [SAMSĀRA](#). Like the other levels of the realm of subtle materiality

([RŪPADHĀTU](#)) and the immaterial realm, one is reborn in this state by achieving the specific level of meditative absorption of that state in the previous lifetime. One of the most famous and influential expositions on the subject of these immaterial states comes from the [VISUDDHIMAGGA](#) of [BUDDHAGHOSA](#), written in the fifth century. Although there are numerous accounts of Buddhist meditators achieving immaterial states of [SAMĀDHI](#), they are also used polemically in Buddhist literature to describe the attainments of non-Buddhist yogins, who mistakenly identify these exalted states within saṃsāra as states of permanent liberation from rebirth. See also [DHYĀNASAMĀPATTI](#); [DHYĀNOPAPATTI](#).

[ākiñcanyāyatana](#). (P. ākiñcaññāyatana; T. ci yang med pa'i skye mched; C. wu suoyou chu; J. mushousho; K. mu soyu ch'ō 無所有處). In Sanskrit, “sphere of nothing whatsoever,” or “absolute nothingness,” the third (in ascending order) of the four levels of the immaterial realm ([ĀRŪPYADHĀTU](#)) and the third of the four immaterial absorptions ([SAMĀPATTI](#)). It is “above” the first two levels of the immaterial realm, called infinite space ([AKĀŚĀNANTYĀYATANA](#)) and infinite consciousness ([VIJÑĀNĀNANTYĀYATANA](#)), but “below” the fourth level, called “neither perception nor nonperception” ([NAIVASAMJÑĀNĀSAMJÑĀYATANA](#)). It is a realm of rebirth as well as a meditative state that is entirely immaterial (viz., there is no physical [[RŪPA](#)] component to existence) in which all ordinary semblances of consciousness vanish entirely. Beings reborn in this realm are thought to live as long as sixty thousand eons ([KALPAS](#)). However, as states of being that are still subject to rebirth, all of these spheres remain part of [SAMSĀRA](#). See also [DHYĀNASAMĀPATTI](#); [DHYĀNOPAPATTI](#).

[akkhipūjā](#). In Pāli lit. “ritual of [opening] the eyes,” a consecration ceremony for a buddha image; the Pāli equivalent for the Sanskrit term [NETRAPRATISTHĀPANA](#). The Pāli term is attested at least as early as the sixth-century [MAHĀVAMSA](#) and [BUDDHAGHOSA](#)'s [SAMANTAPĀSĀDIKĀ](#).

[akliṣṭājñāna](#). (T. nyon mongs can ma yin pa'i mi shes pa; C. buran wuzhi; J. fuzen muchi; K. puryōm muji 不染無知). In Sanskrit, “unafflicted ignorance,” a form of ignorance that affects those who have destroyed the [KLEŚĀVARANA](#) (afflictive obstructions) but not the [JÑEYĀVARANA](#) (cognitive obstructions). The term is used specifically in the [MAHĀYĀNA](#) tradition to refer to [ARHATS](#), who have been liberated from rebirth ([SAMSĀRA](#)) but who are still presumed to possess this subtlest form of ignorance. These cognitive obstructions are considered to result from fundamental misapprehensions about the nature of reality and serve

as the origin of the afflictive obstructions. The buddhas therefore encourage the arhats to overcome even this unafflicted ignorance and enter the [BODHISATTVA](#) path that leads to buddhahood.

[akopya](#). (P. akoppa; T. mi 'khrugs pa; C. budong; J. fudō; K. pudong 不動). In Sanskrit, “imperturbable” or “unshakable”; used often in mainstream Buddhist materials in reference to the “imperturbable” liberation of mind ([CETOVIMUKTI](#)) that derives from mastering any of the four meditative absorptions (P. [JHĀNA](#); S. [DHYĀNA](#)). The term is also deployed in treatments of mastery of the “adept path” ([AŚAIKṢAMĀRGA](#)) of the [ARHAT](#): once the imminent arhat realizes the knowledge of the cessation ([KSAYAJÑĀNA](#)) of the afflictions ([KLEŚA](#)), and becomes imperturbable in that experience, the “knowledge of nonproduction” ([ANUTPĀDAJÑĀNA](#)) arises—viz., the awareness that the kleśas, once eradicated, will never arise again.

[aksana](#). (P. akkhaṇa; T. mi khom pa; C. nanchu; J. nansho; K. nanch'ō 難處). In Sanskrit, “inopportune birth” (lit. “not at the right moment”), referring specifically to a rebirth in which one will not be able to benefit from a buddha or his teachings. Eight such situations are typically listed: birth (1) as one of the hell denizens ([NĀRAKA](#)); (2) as an animal, (3) as a hungry ghost ([PRETA](#)), or (4) as a long-lived divinity ([DEVA](#)); (5) in a border land or barbarian region; (6) with perverted or heretical views; (7) as stupid and unable to understand the teachings; and (8) even if one could have understood the teachings, one is born at a time when or place where no buddhas have arisen. An opportune birth ([KSANA](#)), by contrast, means to be born at a time and place where a buddha or his teachings are present and where one has the intellectual faculties sufficient to benefit from them.

[Akṣayamati](#). (T. Blo gros mi zad pa; C. Wujinyi pusa; J. Mujin'i bosatsu; K. Mujinüi posal 無盡意菩薩). In Sanskrit, “Inexhaustible Intention,” a bodhisattva who expounds the [AKṢAYAMATINIRDEŚA](#). Akṣayamati is also the foil for chapter twentyfive of the [SADDHARMAPUNĀRĪKASŪTRA](#) (“Lotus Sūtra”) where the Buddha explains the efficacy of calling [AVALOKITEŚVARA](#)'s name; upon hearing the Buddha's discourse, Akṣayamati is said to have given Avalokiteśvara his crystal rosary.

[Akṣayamatinirdeśa](#). (T. Blo gros mi zad pas bstan pa; C. Wujinyi pusa pin/Achamo pusa jing; J. Mujin'i bosatsubon/Asamatsu bosatsukyō; K. Mujinüi

posal p'um/Ach'amal posal kyōng 無盡意菩薩品/阿差末菩薩經). In Sanskrit, “Exposition of Akṣayamati,” a [MAHĀYĀNA](#) sūtra in which the [BODHISATTVA AKṢAYAMATI](#) expounds the “inexhaustible eightyfold doctrine,” the method through which a [BODHISATTVA](#) should listen to and comprehend the dharma. Four Chinese translations are extant, including the *Wujinyi pusa pin* by Zhiyan and Baoyun and the *Achamo pusa jing* by [DHARMARAKSA](#) (C. Zhu Fahu). The sūtra also exists in a Tibetan translation by Chos nyid tshul khriṃs. The sūtra is particularly important as the source of the doctrine that the only definitive ([NĪTĀRTHA](#)) statements are those in which a buddha teaches emptiness ([ŚŪNYATĀ](#)) with words like unceasing, unproduced ([ANUTPĀDA](#)), and so on; all other statements require interpretation ([NEYĀRTHA](#)). See also [ALAKSANADHARMAKAKRA](#), [ABHIPRĀYA](#).

Akṣobhya. (T. Mi bskyod pa; C. Achu fo; J. Ashuku butsu; K. Ach'ok pul 阿閼佛). In Sanskrit, “Immovable” or “Imperturbable”; the name given to the buddha of the East because he is imperturbable in following his vow to proceed to buddhahood, particularly through mastering the practice of morality ([ŚĪLA](#)). Akṣobhya is one of the [PAÑCATATHĀGATA](#) (five tathāgatas), the buddha of the vajra family ([VAJRAKULA](#)). There are references to Akṣobhya in the [PRAJÑĀPĀRAMITĀ](#) sūtras and the [SADDHARMAPUNḌARĪKASŪTRA](#) (“Lotus Sūtra”), suggesting that his cult dates back to the first or second century of the Common Era, and that he was popular in India and Java as well as in the Himālayan regions. The cult of Akṣobhya may have been the first to emerge after the cult of [ŚĀKYAMUNI](#), and before that of [AMITĀBHA](#). In the *Saddharmapuṇḍarīkasūtra*, Akṣobhya is listed as the first son of the buddha Mahābhijñā Jñānābhibhu, and his bodhisattva name is given as Jñānākara. His cult entered China during the Han dynasty, and an early text on his worship, the [AKSOBHYATATHĀGATASYAVYŪHA](#), was translated into Chinese during the second half of the second century. Although his cult was subsequently introduced into Japan, he never became as popular in East Asia as the buddhas [AMITĀBHA](#) or [VAIROCANA](#), and images of Akṣobhya are largely confined to [MANDALAS](#) and other depictions of the pañcatathāgata. Furthermore, because Akṣobhya's buddha-field ([BUDDHAKSETRA](#)) or [PURE LAND](#) of [ABHIRATI](#) is located in the East, he is sometimes replaced in maṇḍalas by [BHAIŚAJYAGURU](#), who also resides in that same direction. Akṣobhya's most common [MUDRĀ](#) is the [BHŪMISPARŚAMUDRĀ](#), and he often holds a [VAJRA](#). His consort is either Māmakī or Locanā.

[Akṣobhyatathāgatasyavyūha](#). (T. De bzhin gshegs pa mi 'khrugs pa'i bkod pa; C. Achu fogue jing; J. Ashuku bukkokukyō; K. Ach'ok pulguk kyōng 阿閼佛國經). In Sanskrit, “The Array of the [TATHĀGATAAKṢOBHYA](#)”; a [SŪTRA](#) in which the Buddha, at [ŚĀRIPUTRA](#)'s request, teaches his eminent disciple about the buddha [AKṢOBHYA](#); also known as the *Akṣobhyavyūha*. It was first translated into Chinese in the mid-second century CE by [LOKAKSEMA](#), an Indo–Scythian monk from [KUSHAN](#), and later retranslated by the Tang-period monk [BODHIRUCI](#) in the early eighth century as part of his rendering of the [RATNAKŪTASŪTRA](#). The scripture also exists in a Tibetan translation by Jinamitra, Surendrabodhi, and Ye shes sde. The text explains that in the distant past, a monk made a vow to achieve buddhahood. He followed the arduous [BODHISATTVA](#) path, engaging in myriad virtues; the text especially emphasizes his practice of morality ([ŚĪLA](#)). He eventually achieves buddhahood as the buddha Akṣobhya in a buddha-field ([BUDDHAKSETRA](#)) located in the east called [ABHIRATI](#), which the sūtra describes in some detail as an ideal domain for the practice of the dharma. As its name implies, Abhirati is a land of delight, the antithesis of the suffering that plagues our world, and its pleasures are the by-products of Akṣobhya's immense merit and compassion. In his land, Akṣobhya sits on a platform sheltered by a huge [BODHI TREE](#), which is surrounded by rows of palm trees and jasmine bushes. Its soil is golden in color and as soft as cotton, and the ground is flat with no gullies or gravel. Although Abhirati, like our world, has a sun and moon, both pale next to the radiance of Akṣobhya himself. In Abhirati, the three unfortunate realms ([APĀYA](#)) of hell denizens, ghosts, and animals do not exist. Among humans, there are gender distinctions but no physical sexuality. A man who entertains sexual thoughts toward a woman would instantly see that desire transformed into a [DHYĀNA](#) that derives from the meditation on impurity ([AŚUBHABHĀVANĀ](#)), while a woman can become pregnant by a man's glance (even though women do not experience menstruation). Food and drink appear spontaneously whenever a person is hungry or thirsty. There is no illness, no ugliness, and no crime. Described as a kind of idealized monastic community, Abhirati is designed to provide the optimal environment to engage in Buddhist practice, both for those who seek to become [ARHATS](#) and for those practicing the bodhisattva path. Rebirth there is a direct result of having planted virtuous roots ([KUŚALAMŪLA](#)), engaging in wholesome actions, and then dedicating any merit deriving from those actions to one's future rebirth in that land. One is also reborn there by accepting, memorizing, and spreading this sūtra. Akṣobhya will eventually attain [PARINIRVĀNA](#) in Abhirati through a final act of self-immolation (see [SHESHEN](#)).

After his demise, his teachings will slowly disappear from the world.

akunin shōki. (悪人正機). In Japanese, lit. “evil people have the right capacity”; the emblematic teaching of the [JODO SHINSHŪ](#) teacher [SHINRAN](#) (1173–1263), which suggests that [AMITĀBHA](#)’s compassion is directed primarily to evildoers. When Amitābha was still the monk named [DHARMĀKARA](#), he made a series of forty-eight vows ([PRANIDHĀNA](#)) that he promised to fulfill before he became a buddha. The most important of these vows to much of the [PURE LAND](#) tradition is the eighteenth, in which he vows that all beings who call his name will be reborn in his pure land of [SUKHĀVATĪ](#). This prospect of salvation has nothing to do with whether one is a monk or layperson, man or woman, saint or sinner, learned or ignorant. In this doctrine, Shinran goes so far as to claim that if a good man can be reborn in the pure land, so much more so can an evil man. This is because the good man remains attached to the delusion that his virtuous deeds will somehow bring about his salvation, while the evil man has abandoned this conceit and accepts that only through Amitābha’s grace will rebirth in the pure land be won.

akuśala. (P. akusala; T. mi dge ba; C. bushan; J. fuzen; K. pulsŏn 不善). In Sanskrit, “unsalutary,” “unvirtuous,” “inauspicious,” “unwholesome,” used to describe those physical, verbal, and mental activities (often enumerated as ten) that lead to unsalutary rebirths. An “unvirtuous” or “unwholesome” action generally refers to any volition ([CETANĀ](#)) or volitional action, along with the consciousness ([VIJÑĀNA](#)) and mental constructions ([SAMSKĀRA](#)) associated with it, that are informed by the afflictions ([KLEŚA](#)) of greed ([LOBHA](#)), hatred ([DVEṢA](#); P. dosa), or delusion ([MOHA](#)). Such volitional actions produce unfortunate results for the actor and ultimately are the cause of the unfavorable destinies ([APĀYA](#); [DURGATI](#)) of hell denizens ([NĀRAKA](#)), hungry ghosts ([PRETA](#)), animals ([TIRYAK](#)), and (in some descriptions) titans or demigods ([ASURA](#)). A list of ten unwholesome courses of actions (see [KARMAPATHA](#)) are listed that lead to apāya and are equivalent to the ten wrong deeds (P. duccharita) as enumerated in the Nidānavagga of the [SAMYUTTANIKĀYA](#). The first three on the list are classified as bodily wrong deeds: killing (prāṇātipāta; P. pāṇātipāta), stealing (adattādāna; P. adinnādāna), and sexual misconduct ([KĀMAMITHYĀCĀRA](#); P. kāmamicchācāra). The next four in the list are classified as verbal wrong deeds: lying (mṛṣāvāda; P. musāvāda), slander or malicious speech ([PAIŚUNYA](#); P. piṣuṇavācā), offensive or rough speech (pāraṣyavāda; P. pharusavācā), and frivolous prattle (saṃbhinnapralāpa; P. samphappalāpa). The final three on the list are classified

as mental wrong deeds: covetousness ([ABHIDHYĀ](#); P. abhijjhā), ill will ([VYĀPĀDA](#)), and wrong views ([MITHYĀDRSTI](#); P. micchādiṭṭhi).

[akuśaladrsti](#). (C. ejian/xiejian; J. akuken/jaken; K. akkyōn/sagyōn 惡見/邪見). See [MITHYĀDRSTI](#).

[akuśalakarmapatha](#). In Sanskrit, the ten “unwholesome courses of action.” See [KARMAPATHA](#).

[akuśalamahābhūmika](#). (T. mi dge ba’i sa mang chen po; C. da bushandi fa; J. daifuzenjihō; K. tae pulsōnji pōp 大不善地法). In Sanskrit, “omnipresent unwholesome factors” or “unwholesome factors of wide extent”; the principal factors ([DHARMA](#)) that ground all unwholesome actions ([AKUŚALA](#)). In the [SARVĀSTIVĀDA ABHIDHARMA](#) system, two specific forces associated with mentality ([CITTASAMPRAYUKTASAMSKĀRA](#)) are identified as accompanying all unwholesome activities and are therefore described as “unwholesome factors of wide extent.” The two dharmas are “lack of a sense of decency” (āhrīkyā; cf. [HRĪ](#), “sense of decency”) and “lack of modesty” (anapatrāpyā; cf. [APATRĀPYA](#), “modesty”).

[akuśalamūla](#). (P. akusalamūla; T. mi dge ba’i rtsa ba; C. bushangen; J. fuzenkon; K. pulsōn’gūn 不善根). In Sanskrit, “unwholesome faculties,” or “roots of evil”; these refer to the cumulative unwholesome actions performed by an individual throughout one’s past lives, which lead that being toward the baleful destinies ([DURGATI](#)) of animals, hungry ghosts, and the denizens of hell. The Buddhist tradition offers various lists of these unwholesome faculties, the most common of which is threefold: craving or greed ([LOBHA](#)), aversion or hatred ([DVESA](#)), and delusion ([MOHA](#)). These same three are also known in the sūtra literature as the “three poisons” ([TRIVISA](#)). These three factors thus will fructify as unhappiness in the future and provide the foundation for unfavorable destinies or rebirths ([APĀYA](#)). These three unwholesome roots are the converse of the three wholesome faculties, or “roots of virtue” ([KUŚALAMŪLA](#)), viz., nongreed (alobha), nonhatred (adveṣa), and nondelusion (amoha), which lead instead to happiness or liberation ([VIMOKSA](#)). See also [SAMUCCHINNAKUŚALAMŪLA](#).

[Akutobhayā](#). (T. Ga las ’jigs med). In Sanskrit, “Fearless,” the abbreviated title of the *Mūlamadhyamakavṛtti-akutobhayā*, a commentary on [NĀGĀRJUNA](#)’s [MŪLAMADHYAMAKAKĀRIKĀ](#). In Tibet, the work has traditionally been attributed

to Nāgārjuna himself, but scholars doubt that he is the author of this commentary on his own work, in part because the commentary cites the [CATUḤŚATAKA](#) of [ĀRYADEVA](#), who was Nāgārjuna’s disciple. In places, the work is identical to the commentary of [BUDDHAPĀLITA](#). Regardless of the authorship, the work is an important commentary on Nāgārjuna’s most famous work. In China, the commentary of Qingmu (*Piṅgala?), an influential work in the [SAN LUN ZONG](#), is closely related to the *Akutobhayā*.

[Alagaddūpamasutta](#). (C. Alizha jing; J. Aritakyō; K. Arit’a kyōng 阿梨吒經). In Pāli, “Discourse on the Simile of the Snake,” the twenty-second sutta of the [MAJJHIMANIKĀYA](#) (a separate Sarvāstivāda recension appears as the 200th sūtra in the Chinese translation of the [MADHYAMĀGAMA](#), and the similes of the snake and of the raft are the subjects of independent sūtras in an unidentified recension in the [EKOTTARĀGAMA](#)). The discourse was preached by the Buddha at Sāvattī (ŚRĀVASTĪ), in response to the wrong view ([MITHYĀDRSTI](#)) of the monk Aritṭha. Aritṭha maintained that the Buddha taught that one could enjoy sensual pleasures without obstructing one’s progress along the path to liberation, and remained recalcitrant even after the Buddha admonished him. The Buddha then spoke to the assembly of monks on the wrong way and the right way of learning the dharma. In his discourse, he uses several similes to enhance his audience’s understanding, including the eponymous “simile of the snake”: just as one could be bitten and die by grasping a poisonous snake by the tail instead of the head, so too will using the dharma merely for disputation or polemics lead to one’s peril because of one’s wrong grasp of the dharma. This sutta also contains the famous “simile of the raft,” where the Buddha compares his dispensation or teaching ([ŚĀSANA](#)) to a makeshift raft that will help one get across a raging river to the opposite shore: after one has successfully crossed that river by paddling furiously and reached solid ground, it would be inappropriate to put the raft on one’s head and carry it; similarly, once one has used the dharma to get across the “raging river” of birth and death ([SAMŚĀRA](#)) to the “other shore” of [NIRVĀNA](#), the teachings have served their purpose and should not be clung to.

[alaksanadharmacakra](#). (T. mtshan nyid med pa’i chos ’khor; C. wuxiang falun; J. musō hōrin; K. musang pōmnyun 無相法輪). In Sanskrit, lit. “the dharma wheel of signlessness”; the second of the three turnings of the wheel of the dharma ([DHARMAKĀRAPRAVARTANA](#)) described in the [SAMDHINIRMOCANASŪTRA](#). The sūtra, an important source for [YOGĀCĀRA](#) doctrine, explains that the Buddha

turned the wheel of the dharma three times. According to the commentators on the sūtra, in the first turning of the wheel, called “the dharma wheel of the four noble truths” ([CATUḤSATYADHARMAKAKRA](#)), the Buddha taught that dharmas exist in reality. This wheel is described as provisional ([NEYĀRTHA](#)). The second turning of the wheel, delivered on Vulture’s Peak ([GRDHRAKŪTAPARVATA](#)) near [RĀJAGRHA](#), is called “the dharma wheel of signlessness” (alakṣaṇadharmacakra). Here, the Buddha taught that no dharmas exist. The sūtra also identifies this wheel as a provisional teaching ([NEYĀRTHA](#)). The third turning of the wheel is described as “well-differentiated” (suvibhakta), with the Buddha explaining that some dharmas exist and some do not. This wheel is described as definitive ([NĪTĀRTHA](#)). The description of the third wheel is an important scriptural source for the Yogācāra doctrine of the three natures ([TRISVABHĀVA](#)). Commentators identify this second turning of the wheel, the alakṣaṇadharmacakra, with the Mahāyāna doctrine set forth in the [PRAJÑĀPĀRAMITĀSŪTRAS](#) (perfection of wisdom sūtras) that all dharmas, even buddhahood and [NIRVĀNA](#), are without any intrinsic nature ([NIḤSVABHĀVA](#)). In Tibet, the schools of interpretation of the sūtra divided evenly into two camps: some (like [TSONG KHA PA](#)) assert that the *Samdhinirmocanasūtra*’s second turning of the wheel is the definitive teaching of the Buddha and that the third turning is an inferior [YOGĀCĀRA](#) teaching; others (like [DOL PO PA](#)) assert that the third turning of the wheel is a definitive teaching and the second turning of the wheel is provisional. See also [*SUVIBHAKTADHARMAKAKRA](#).

[ālabhana](#). (P. ārammaṇa; T. dmigs pa; C. suoyuan; J. shoen; K. soyŏn 所緣). In Sanskrit, “objective support,” “sense object,” or “object of cognition”; in epistemology, the object of any one of the six sensory consciousnesses ([VIJÑĀNA](#)), i.e., visual, auditory, olfactory, gustatory, tactile, and mental objects. In the mainstream traditions, these objects were considered to be the external constituent in the cognitive relationship between subject and object, whereby the contact ([SPARŚA](#)) between, e.g., an olfactory sensory object (e.g., gandha) and the olfactory sense base ([GHRANENDRIYA](#)) produces a corresponding olfactory consciousness ([GHRANAVIJÑĀNA](#)). Sense objects thus correspond to the six external “sense-fields” or “spheres of perception” ([ĀYATANA](#)) and the six external “elements” ([DHĀTU](#)). The term ālabhana is also used in instructions on meditation to describe the object upon which the meditator is to focus the mind. See also [ĀLAMBANAPRATYAYA](#).

Ālambanaparīkṣā. (T. Dmigs pa brtag pa; C. Guan suoyuan yuan lun; J. Kanshoen nenron; K. Kwan soyōn yōn non 觀所緣緣論). In Sanskrit, “An Analysis of the Objects of Cognition,” a text on [YOGĀCĀRA](#) epistemology by the early fifth-century Indian logician [DIGNĀGA](#), which examines the objective support ([ĀLAMBANA](#)) of cognition. Dignāga argues that cognition cannot take for its object anything from the external world; instead, the object of cognition is actually the form of an object that appears within cognition itself. While the original Sanskrit is lost, the text is preserved in both Tibetan and Chinese translations. Dignāga also composed a commentary to this work, the *Ālambanaparīkṣāvṛtti*, as did Vinītadeva (c. eighth century), the *Ālambanaparīkṣāṭīkā*.

ālambanapratyaya. (P. ārammaṇapaccaya; T. dmigs rkyen; C. suoyuan yuan; J. shoennen; K. soyōn yōn 所緣緣). In Sanskrit, “objective-support condition” or “observed-object condition,” the third of the four types of conditions ([PRATYAYA](#)) recognized in both the [VAIBHĀSIKA ABHIDHARMA](#) system of the [SARVĀSTIVĀDA](#) school and the [YOGĀCĀRA](#) school; the term also appears as the second of the twenty-four conditions (P. paccaya) in the massive Pāli abhidhamma text, the [PATTHĀNA](#). This condition refers to the role the corresponding sensory object ([ĀLAMBANA](#)) takes in the arising of any of the six sensory consciousnesses ([VIJÑĀNA](#)) and is one of the three causal conditions necessary for cognition to occur. Sensory consciousness thus cannot occur without the presence of a corresponding sensory object, whether that be visual, auditory, olfactory, gustatory, tactile, or mental.

Alaungpaya. Burmese king (r. 1752–1760) and founder of the Konbaung dynasty (1752–1885), the last Burmese royal house before the British conquest. He was born the son of the village headman of Mokesoebo in Upper Burma in 1711. Originally named Aungzeyya, he succeeded his father as headman and early on showed charismatic signs of leadership. By this time, the then Burmese empire of Taungoo, which had been founded in 1531, was on the verge of collapse. The Mon of Lower Burma, whose capital was Pegu, rebelled and soon swept northward, eventually capturing the Burmese capital, [AVA](#), and executing its king. When emissaries from the Mon king, Binnya-dala, demanded the allegiance of Mokesoebo, Aungzeyya beheaded them and organized a rebellion to restore Burmese sovereignty. Gathering around him a loyal cohort of local chiefs and soldiers from Ava, he crowned himself king and established

Mokesoebo as his first capital, which he renamed Shwebo. A brilliant tactician and masterful propagandist, he assumed the title Alaungpaya, meaning “Future Buddha,” and waged war on the Mon as a [BODHISATTVA](#) intent on restoring the purity of the Buddha’s religion and ushering in a golden age. In 1753, he recaptured Ava and subdued the Shan chieftains on his northern flank. In 1755, he captured the strategic port town of Dagon, which he renamed Yangon (Rangoon), meaning “End of Strife.” In 1757, after a protracted siege, he destroyed Pegu, the last stronghold of Mon resistance, executing its king, Binnya-dala, and massacring its population. After consolidating Burmese control over the central provinces, Alaungpaya marched his armies against the Hindu kingdom of Manipur, which had taken advantage of the civil war to pillage Burma’s western territories. Having vanquished Manipur, in 1760, he moved against the Thai kingdom of [AYUTHAYA](#) in the east in retaliation for fomenting anti-Burmese rebellions along the border. The Burmese seized Moulmein, Tavoy, and Tenasserim, but Alaungpaya was mortally wounded during the siege of Ayuthaya and died during the subsequent Burmese retreat. The empire created by Alaungpaya expanded under his sons and their descendants, eventually bringing it into conflict with the British East India Company.

[Ālavaka](#). Name of a man-eating ogre (P. *yakkha*; S. [YAKSA](#)) whose conversion by the Buddha is described in Pāli materials. Ālavaka dwelt in a tree near the town Ālavi and had been granted a boon by the king of the *yakkhas* that allowed him to eat anyone who came into the shadow of his tree. Even the sight of the ogre rendered the bodies of men as soft as butter. His tree was surrounded by a stout wall and covered with a metal net. Above it lay the sky passage to the Himālaya mountains traversed by those who possessed supernatural powers. Ascetics seeing the strange abode would descend out of curiosity, whereupon Ālavaka would ask them knotty questions about their beliefs. When they could not answer, he would penetrate their hearts with his mind and drive them mad. Ālavaka is most famous for the promise he extorted from the king of Ālavi, whom he captured while the monarch was on a hunting expedition. In order to save his life, the king promised to supply the ogre regularly with a human victim. The king first delivered convicted criminals for sacrifice, but when there were no more, he ordered each family to supply one child at the appointed time. Pregnant women fearing for their unborn infants fled the city, until after twelve years, only one child, the king’s own son, remained. The child was duly made ready and sent to the ogre. The Buddha knew of the impending event and went

to the ogre's abode to intervene. While Ālavaka was absent, the Buddha sat upon the ogre's throne and preached to his harem. Informed of the Buddha's brazenness, Ālavaka returned and attacked the Buddha with his superpowers to remove him from the throne, but to no avail. The Buddha only left when politely asked to do so. Still unwilling to admit defeat, the ogre invited the Buddha to answer questions put to him. So skillfully did the Buddha answer that Ālavaka shouted for joy and then there became a stream-enterer ([SROTAĀPANNA](#); P. sotāpanna). When the king's entourage delivered the young prince for sacrifice, Ālavaka, ashamed of his past deeds, surrendered the boy to the Buddha, who in turn handed him back to the king's men. Because he was handed from one to another, the boy was known as Hatthaka (Little Hand, or Handful) and in adulthood became one of the chief lay patrons of the Buddha. When the populace heard of the ogre's conversion, they were overjoyed and built a shrine for him, where they offered flowers and perfumes daily. Ālavaka is named in the *Aṭṭhāyāyasaṭṭa* as one of several yakṣas who may be entreated for protection against dangers.

[ālayavijñāna](#). (T. kun gzhi rnam par shes pa; C. alaiyeshi/zangshi; J. arayashiki/zōshiki; K. aroeyasik/changsik 阿賴耶識/藏識). In Sanskrit, “storehouse consciousness” or “foundational consciousness”; the eighth of the eight types of consciousness ([VIJÑĀNA](#)) posited in the [YOGĀCĀRA](#) school. All forms of Buddhist thought must be able to uphold (1) the principle of the cause and effect of actions ([KARMA](#)), the structure of [SAMSĀRA](#), and the process of liberation ([VIMOKṢA](#)) from it, while also upholding (2) the fundamental doctrines of impermanence ([ANITYA](#)) and the lack of a perduring self ([ANĀTMAN](#)). The most famous and comprehensive solution to the range of problems created by these apparently contradictory elements is the ālayavijñāna, often translated as the “storehouse consciousness.” This doctrinal concept derives in India from the [YOGĀCĀRA](#) school, especially from [AŚAṄGA](#) and [VASUBANDHU](#) and their commentators. Whereas other schools of Buddhist thought posit six consciousnesses (vijñāna), in the Yogācāra system there are eight, adding the afflicted mind ([KLIṢṬAMANAS](#)) and the ālayavijñāna. It appears that once the Sarvāstivāda's school's eponymous doctrine of the existence of dharmas in the past, present, and future was rejected by most other schools of Buddhism, some doctrinal solution was required to provide continuity between past and future, including past and future lifetimes. The ālayavijñāna provides that solution as a foundational form of consciousness, itself ethically neutral, where all the seeds

([BIJA](#)) of all deeds done in the past reside, and from which they fructify in the form of experience. Thus, the ālayavijñāna is said to pervade the entire body during life, to withdraw from the body at the time of death (with the extremities becoming cold as it slowly exits), and to carry the complete karmic record to the next rebirth destiny. Among the many doctrinal problems that the presence of the ālayavijñāna is meant to solve, it appears that one of its earliest references is in the context not of rebirth but in that of the [NIRODHASAMĀPATTI](#), or “trance of cessation,” where all conscious activity, that is, all [CITTA](#) and [CAITTA](#), cease. Although the meditator may appear as if dead during that trance, consciousness is able to be reactivated because the ālayavijñāna remains present throughout, with the seeds of future experience lying dormant in it, available to bear fruit when the person arises from meditation. The ālayavijñāna thus provides continuity from moment to moment within a given lifetime and from lifetime to lifetime, all providing the link between an action performed in the past and its effect experienced in the present, despite protracted periods of latency between seed and fruition. In Yogācāra, where the existence of an external world is denied, when a seed bears fruit, it bifurcates into an observing subject and an observed object, with that object falsely imagined to exist separately from the consciousness that perceives it. The response by the subject to that object produces more seeds, either positive, negative, or neutral, which are deposited in the ālayavijñāna, remaining there until they in turn bear their fruit. Although said to be neutral and a kind of silent observer of experience, the ālayavijñāna is thus also the recipient of karmic seeds as they are produced, receiving impressions ([VĀSANĀ](#)) from them. In the context of Buddhist soteriological discussions, the ālayavijñāna explains why contaminants ([ĀSRAVA](#)) remain even when unwholesome states of mind are not actively present, and it provides the basis for the mistaken belief in self (ātman). Indeed, it is said that the kliṣṭamanas perceives the ālayavijñāna as a perduring self. The ālayavijñāna also explains how progress on the path can continue over several lifetimes and why some follow the path of the [ŚRĀVAKA](#) and others the path of the [BODHISATTVA](#); it is said that one’s lineage ([GOTRA](#)) is in fact a seed that resides permanently in the ālayavijñāna. In India, the doctrine of the ālayavijñāna was controversial, with some members of the Yogācāra school rejecting its existence, arguing that the functions it is meant to serve can be accommodated within the standard six-consciousness system. The [MADHYAMAKA](#), notably figures such as [BHĀVAVIVEKA](#) and [CANDRAKĪRTI](#), attacked the Yogācāra proponents of the ālayavijñāna, describing it as a form of self, which all Buddhists must reject. ¶ In

East Asia, the ālayavijñāna was conceived as one possible solution to persistent questions in Buddhism about karmic continuity and about the origin of ignorance ([MOHA](#)). For the latter, some explanation was required as to how sentient beings, whom many strands of [MAHĀYĀNA](#) claimed were inherently enlightened, began to presume themselves to be ignorant. Debates raged within different strands of the Chinese Yogācāra traditions as to whether the ālayavijñāna is intrinsically impure because of the presence of these seeds of past experience (the position of the Northern branch of the Chinese [DI LUN ZONG](#) and the Chinese [FAXIANG](#) tradition of [XUANZANG](#) and [KUIJI](#)), or whether the ālayavijñāna included both pure and impure elements because it involved also the functioning of thusness, or [TATHATĀ](#) (the Southern Di lun school’s position). Since the sentient being has had a veritable interminable period of time in which to collect an infinity of seeds—which would essentially make it impossible to hope to counteract them one by one—the mainstream strands of Yogācāra viewed the mind as nevertheless tending inveterately toward impurity (daṣṭhulya). This impurity could only be overcome through a “transformation of the basis” ([ĀŚRAYAPARĀVṚTTI](#)), which would completely eradicate the karmic seeds stored in the storehouse consciousness, liberating the bodhisattva from the effects of all past actions and freeing him to project compassion liberally throughout the world. In some later interpretations, this transformation would then convert the ālayavijñāna into a ninth “immaculate consciousness” ([AMALAVIJÑĀNA](#)). See also [DASHENG QIXIN LUN](#).

[Alchi](#). The name, possibly of early Dardic origin, of a monastic complex located approximately twenty miles northwest of Leh, in the Ladakh region of the northwestern Indian state of Kashmir. The complex is renowned for its exceptional collection of early Tibetan Buddhist painting and statuary. Local legend ascribes Alchi’s foundation to the great eleventh-century translator [RIN CHEN BZANG PO](#). While the monastery’s early history is obscure, inscriptions within the complex attribute its foundation to Skal Idan shes rab (Kalden Sherap) and Tshul khrims ’od (Tsultrim Ö), active sometime between the eleventh and twelfth centuries. The complex of Alchi, called the chos ’khor (“dharma enclave”), comprises five main buildings: (1) the ’dus khang (“assembly hall”); (2) the lo tsā ba’i lha khang (“translator’s temple”); (3) the ’Jam dpal lha khang (“Mañjuśrī temple”); (4) the gsum brtsegs (“three-storied [temple]”); and (5) the lha khang so ma (“new temple”). While the ’dus khang stands as the earliest and largest structure, the gsum brtsegs is perhaps most famous for its three-storied

stucco statues of [AVALOKITEŚVARA](#), [MAITREYA](#), and [MAÑJUŚRĪ](#), each painted in elaborate detail. The temple also contains extraordinary murals painted by western Tibetan and Kashmiri artisans.

[ālīḍha](#). (T. g.yas brkyang ba). A Sanskrit term used to describe the Buddhist iconographic posture ([ĀSANA](#)) in which the figure holds one leg bent forward at the knee with the other leg stretched out in the opposite direction. While the term generally refers to standing postures, it may also apply to seated poses and is distinguished from [PRATYĀLĪḌHA](#), where the leg positions are reversed. Sources vary in describing which leg is outstretched and which leg is bent. In Tibetan tantric art, the ālīḍha posture is often found in deities of the [MOTHER TANTRA](#) class. See also [ĀSANA](#).

[ālikāli](#). (T. ā li kā li). The letters of the Sanskrit alphabet (A being the first in the list of vowels and ka the first in the list of consonants), often recited or visualized in tantric practice. See also [ARAPACANA](#); [AJIKAN](#).

[alms bowl](#). See [PĀTRA](#).

[alms round](#). See [PINDAPĀTA](#).

[alobha](#). (T. ma chags pa; C. wutan; J. muton; K. mut'am 無貪). In Sanskrit and Pāli, “absence of craving” or “absence of greed”; one of the most ubiquitous of moral virtues ([KUŚALA](#)), which serves as an antidote to the [KLEŚA](#) of desire and as the foundation for progress on the path. Alobha is one of the forty-six mental factors ([CAITTA](#)) according to the [SARVĀSTIVĀDA](#) school and the [ABHIDHARMAKOŚABHĀSYA](#), one of the fifty-one according to the [YOGĀCĀRA](#) school, and one of the fifty-one of the Pāli abhidhamma. “Absence of craving” is the opposite of “craving” or “greed” ([LOBHA](#)). The Sarvāstivāda [ABHIDHARMA](#) system posited that this mental quality accompanied all wholesome activities, and therefore lists it as the seventh of the ten major omnipresent wholesome factors ([KUŚALAMAHĀBHŪMIKA](#)). Absence of craving is listed as one of the so-called three roots of virtue ([KUŚALAMŪLA](#)), one of the states of mind comprising right intention ([SAMYAKSAMKALPA](#)) in the noble eightfold path ([ĀRYĀSTĀNGAMĀRGA](#)), and is traditionally taken to be the precondition for the cultivation of equanimity ([UPEKŚĀ](#)).

[Āloka lena](#). A cave near modern Matale in Sri Lanka where, during the last

quarter of the first century BCE, during the reign of King [VATTAGĀMANI ABHAYA](#), the Pāli tipitaka ([TRIPITAKA](#)) and its commentaries ([ATTHAKATHĀ](#)) were said to have been written down for the first time. The [DĪPAVAMSA](#) and [MAHĀVAMSA](#) state that a gathering of [ARHATS](#) had decided to commit the texts to writing out of fear that they could no longer be reliably memorized and passed down from one generation to the next. They convened a gathering of five hundred monks for the purpose, the cost of which was borne by a local chieftain. The subcommentary by Vajirabuddhi and the *Sāratthadīpanī* (c. twelfth century CE) deem that the writing down of the tipitaka occurred at the fourth Buddhist council (see [COUNCIL, FOURTH](#)), and so it has been generally recognized ever since throughout the [THERAVĀDA](#) world. However, the fourteenth-century [SADDHAMMASAṄGAHA](#), written at the Thai capital of [AYUTHAYA](#), deems this to be the fifth Buddhist council (see [COUNCIL, FIFTH](#)), the fourth council being instead the recitation of [VINAYA](#) by Mahā Ariṭṭha carried out during the reign of King [DEVĀNAMPIYATISSA](#).

[ālokasyopalabdhiśa](#). (T. nye bar thob pa'i snang ba). In Sanskrit “appearance of near-attainment,” the penultimate stage in the final three stages of the dissolution of consciousness that culminates in the dawning of “clear light” ([PRABHĀSVARA](#)), the actual moment of death according to certain systems of [ANUTTARAYOGATANTRA](#). After the gross elements and states of consciousness dissolve, a process that is accompanied by a series of signs, the subtler levels of consciousness appear: first an experience of radiant whiteness called appearance (*āloka*) like a night sky filled with moonlight, then an experience of redness, called increase (*vṛddhi*) like a clear sky filled with sunlight, and finally an experience called “near attainment” (*upalabdha*) like a black moonless sky, so called because it is the state nearest to the most subtle level of consciousness, the mind of clear light.

[Altan Khan](#). (1507–1583). A ruler descending from the lineage of Genghis Khan who became the leader of the Tümed Mongols in 1543. In 1578, he hosted [BSOD NAMS RGYA MTSHO](#), a renowned Tibetan lama of the [DGE LUGS](#) sect, bestowing on the prelate the appellation “[DALAI LAMA](#)” by translating part of his name, *rgya mtsho* (“ocean”), into the Mongolian word *dalai*. *Bsod nams rgya mtsho* was deemed the third Dalai Lama, with the title applied posthumously to his two predecessors. The Dge lugs gained influence under Tümed Mongol patronage, and, following the death of *Bsod nams rgya mtsho*, the grandson of

Altan Khan's successor was recognized as the fourth Dalai Lama. See also [DALAI LAMA](#).

amalavijñāna. (T. dri ma med pa'i rnam shes; C. amoluo shi/wugou shi; J. amarashiki/mukushiki; K. amara sik/mugu sik 阿摩羅識/無垢識). In Sanskrit, “immaculate consciousness”; a ninth level of consciousness posited in certain strands of the [YOGĀCĀRA](#) school, especially that taught by the Indian translator and exegete [PARAMĀRTHA](#). The amalavijñāna represents the intrusion of [TATHĀGATAGARBHA](#) (womb or embryo of buddhahood) thought into the eight-consciousnesses theory of the [YOGĀCĀRA](#) school. The amalavijñāna may have antecedents in the notion of immaculate gnosis (amalajñāna) in the [RATNAGOTRAVIBHĀGA](#) and is claimed to be first mentioned in [STHIRAMATI](#)'s school of Yogācāra, to which Paramārtha belonged. The term is not attested in Sanskrit materials, however, and may be of Chinese provenance. The most sustained treatment of the concept appears in the [SHE LUN ZONG](#), an exegetical tradition of Chinese Buddhism built around Paramārtha's translation of [ASAṄGA](#)'s [MAHĀYĀNASAMGRAHA](#) (*She Dasheng lun*). Paramārtha compares amalavijñāna to the perfected nature ([PARINISPANNA](#)) of consciousness, thus equating amalavijñāna with the absolute reality of thusness ([TATHATĀ](#)) and therefore rendering it the essence of all dharmas and the primary catalyst to enlightenment. As “immaculate,” the amalavijñāna emulates the emphasis in tathāgatagarbha thought on the inherent purity of the mind; but as “consciousness,” amalavijñāna could also be sited within the Yogācāra philosophy of mind as a separate ninth level of consciousness, now construed as the basis of all the other consciousnesses, including the eighth [ĀLAYAVIJÑĀNA](#). See also [BUDDHADHĀTU](#); [FOXING](#).

Amarapura. The “Immortal City”; Burmese royal capital during the Konbaung period (1752–1885), built by King Bodawpaya (r. 1782–1819). Amarapura was one of five Burmese capitals established in Upper Burma (Myanmar) after the fall of Pagan between the fourteenth and nineteenth centuries, the others being Pinya, [SAGAING](#), [AVA](#) (Inwa), and Mandalay. Located five miles north of the old capital of Ava (Inwa) and seven miles south of Mandalay on the southern bank of the Irrawaddy river, it served as the capital of the Burmese kingdom twice: from 1783 to 1823 and again from 1837 to 1857. The city was mapped out in the form of a perfect square, its perimeter surrounded by stout brick walls and further protected by a wide moat. The city walls were punctuated by twelve

gates, three on each side, every gate crowned with a tiered wooden pavilion (B. *pyatthat*). Broad avenues laid out in a grid pattern led to the center of the city where stood the royal palace and ancillary buildings, all constructed of teak and raised above the ground on massive wooden pylons. Located to the north of the city was a shrine housing the colossal [MAHĀMUNI](#) image of the Buddha (see [ARAKAN BUDDHA](#)), which was acquired by the Burmese as war booty in 1784 when King Bodawpaya conquered the neighboring Buddhist kingdom of Arakan. Since its relocation at the shrine, the seated image has been covered with so many layers of gold leaf that its torso is now completely obscured, leaving only the head and face visible. In 1816, Bodawpaya erected the monumental Pahtodawgyi pagoda, modeled after the Shwezigon pagoda at Pagan. Its lower terraces are adorned with carved marble plaques depicting episodes from the [JĀTAKAS](#). Another major shrine is the Kyauktawgyi pagoda, located to the southeast of the city on the opposite shore of Taungthaman lake. Kyauktawgyi pagoda is reached via the U Bein Bridge, a 3,000-foot- (1,200-meter) long bridge spanning the lake, which was constructed from teakwood salvaged from the royal palace at the vanquished capital of Ava. Amarapura was site of the [THUDHAMMA](#) (P. *Sudhamma*) reformation begun in 1782 under the patronage of Bodawpaya, which for a time unified the Burmese saṅgha under a single leadership and gave rise to the modern Thudhamma Nikāya, contemporary Burma's largest monastic fraternity. The Thudhamma council that Bodawpaya organized was directed to reform the Burmese saṅgha throughout the kingdom and bring it under Thudhamma administrative control. In 1800, the president of the council conferred higher ordination ([UPASAMPADĀ](#)) on a delegation of five low-caste Sinhalese ordinands who returned to Sri Lanka in 1803 and established a branch of the reformed Burmese order on the island; that fraternity was known as the [AMARAPURA NIKĀYA](#) and was dedicated to opening higher ordination to all without caste distinction. In 1857, when the royal residence was shifted from Amarapura to nearby Mandalay, the city walls and palace compound of Amarapura were disassembled and used as building material for the new capital. Today, Amarapura is home to modern Burma's most famous monastic college, Mahagandayon Kyaung Taik, built during the British period and belonging to the Shwegyin Nikāya.

[Amarapura Nikāya](#). One of three major monastic fraternities ([NIKĀYA](#)) within the modern Sinhalese [THERAVĀDA](#) saṅgha (S. [SAMGHA](#)), the others being the majority [SIYAM NIKĀYA](#) and the [RĀMAÑÑA NIKĀYA](#). The Amarapura Nikāya was

founded in the early nineteenth century in opposition to the Siyam Nikāya's policy of restricting higher ordination ([UPASAMPADĀ](#)) to the highest Goyigama caste. The Goyigama was concentrated in the interior highlands of Sri Lanka, which were governed by the Kandyan king. The lower castes—comprised of toddy tappers and cinnamon pickers, who formed the majority population in the British controlled coastal lowlands—were at most given lower ordination ([PRAVRAJYĀ](#)) as novices ([ŚRĀMANERA](#)). In protest, five low-caste Sinhalese novices journeyed to the Burmese capital of Amarapura in 1800 to receive higher ordination from the Burmese patriarch, Ñāṇabhivamsa. In 1803, they were ordained as monks ([BHIKSU](#)) and, together with three Burmese elders (P. thera), returned to Sri Lanka to establish the reformist Amarapura Nikāya. The Amarapura Nikāya takes as its charter the [KALYĀNĪ INSCRIPTIONS](#) of the Mon king Dhammazedi erected at Pegu in 1479, a recension of which it preserves in its monasteries as the *Kalyāṇipakaraṇa*. Following its establishment, the Amarapura Nikāya itself divided along caste lines into numerous subgroups, each group maintaining its own lineage of teachers that are traced back to the original founders of the Amarapura Nikāya. Continued sectarianism, along with doctrinal disagreements over the role of meditation, led to the formation of another reformist monastic order with Burmese roots, the Rāmañña Nikāya, in 1862.

[Amarāvātī](#). (T. 'Chi med ldan). In Sanskrit, "Immortal"; is the modern name for Dhānyakaṭaka or Dharaṇikoṭa, the site of a monastic community associated with the [MAHĀSĀMĠHIKA](#) school, located in eastern Andhra Pradesh. The site is best known for its large main [STŪPA](#), started at the time of [AŚOKA](#) (third century BCE), which, by the second century CE, was the largest monument in India. It is thought to have been some 140 feet in diameter and upwards of 100 feet tall, and decorated with bas-reliefs. The stūpa is mentioned in numerous accounts, including that by the Chinese pilgrim [XUANZANG](#). Amarāvātī (as Dhānyakaṭaka) reached its historical zenith as the southern capital of the later Śātavāhana [alt. Śātavāhana] dynasty that ended in 227 CE. The last inscription found at the site is dated to the eleventh century, and when first excavated at the end of the eighteenth century by the British, the stūpa had long been reduced to a large mound of earth. Over the following centuries, it has been the focus of repeated archaeological excavations that yielded many important finds, making it one of the best researched Buddhist sites of ancient India. The site is important in Tibetan Buddhism because the Buddha is said to have taught the

[KĀLACAKRATANTRA](#) at Dhānyakaṭaka. See also [NĀGARJUNAKONDĀ](#).

[Ambedkar, Bhimrao Ramji](#). (1891–1956). Indian reformer and Buddhist convert, who advocated for reform of the caste system and improvements in the social treatment of “untouchables” or the Dalit community during the independence period. The fourteenth child of a Dalit caste family in the Indian state of Maharashtra, Ambedkar was one of the few members of his caste to receive a secondary-school education and went on to study in New York and London, eventually receiving a doctorate from Columbia University. Upon his return to India, he worked both for Indian independence from Britain and for the social and political rights of the untouchables. After independence, he served in Nehru’s government, chairing the committee that drafted the constitution. Seeking a religious identity for Dalits that would free them from the caste prejudice of Hinduism, he settled on Buddhism after considering also Islam, Christianity, and Sikhism. Buddhism had been extinct in India for centuries, but Ambedkar’s research led him to conclude that the Dalits were descendants of Buddhists who had been persecuted by Hindus for their beliefs. In 1956, six weeks before his death, Ambedkar publicly converted to Buddhism and then led an audience of 380,000 in taking refuge in the three jewels ([RATNATRAYA](#)) and in accepting the five precepts ([PAÑCAŚĪLA](#)) of lay Buddhists. Eventually, millions of other Indians, mostly from low-caste and outcaste groups, followed his example. In his writings, Ambedkar portrayed the Buddha as a social reformer, whose teachings could provide India with the foundation for a more egalitarian society.

[Amida](#). Japanese pronunciation of the Sinographic transcripion of the name [AMITĀBHA](#), the buddha who is the primary focus of worship in the [PURE LAND](#) traditions of Japan. See [JŌDOSHŪ](#); [JŌDO SHINSHŪ](#).

[āmiṣadāna](#). (P. āmisadāna; T. zang zing gi sbyin pa; C. caishi; J. zaise; K. chaesi 財施). In Sanskrit, “the gift of material goods”; one of the two (or sometimes three) forms of giving ([DĀNA](#)) praised in the sūtras. The Sanskrit term āmiṣa connotes the venal world of the flesh—i.e., material goods, physical pleasures, and sensual enjoyment—as contrasted to the spiritual world of the dharma. Therefore, giving material goods, while certainly a salutary and meritorious act, is thought to be inferior to the “gift of dharma” ([DHARMADĀNA](#)), which is believed to bring greater merit ([PUNYA](#)). Sometimes, a third form of giving, the “gift of fearlessness” ([ABHAYADĀNA](#)), viz., helping others to overcome their fear, is added to the list. The gift of material goods typically

takes the form of laypeople providing material or monetary support to religious renunciants or institutions, or to the needy and indigent. See also [WUJINZANG YUAN](#).

Amitābha. (T. 'Od dpag med/Snang ba mtha' yas; C. Amituo fo/Wuliangguang fo; J. Amida butsu/Muryōkō butsu; K. Amit'a pul/Muryanggwang pul 阿彌陀佛/無量光佛). In Sanskrit, “Limitless Light,” the buddha of the western [PURE LAND](#) of [SUKHĀVATĪ](#), one of the most widely worshipped buddhas in the [MAHĀYĀNA](#) traditions. As recounted in the longer [SUKHĀVATĪVYŪHASŪTRA](#), numerous eons ago, a monk named [DHARMĀKARA](#) vowed before the buddha [LOKEŚVARARĀJA](#) to follow the [BODHISATTVA](#) path to buddhahood, asking him to set forth the qualities of buddha-fields ([BUDDHAKSETRA](#)). Dharmākara then spent five [KALPAS](#) in meditation, concentrating all of the qualities of all buddha-fields into a single buddha field that he would create upon his enlightenment. He then reappeared before Lokeśvararāja and made forty-eight specific vows ([PRANIDHĀNA](#)). Among the most famous were his vow that those who, for as few as ten times over the course of their life, resolved to be reborn in his buddha-field would be reborn there; and his vow that he would appear at the deathbed of anyone who heard his name and remembered it with trust. Dharmākara then completed the bodhisattva path, thus fulfilling all the vows he had made, and became the buddha Amitābha in the buddha-field called sukhāvātī. Based on the larger and shorter versions of the *Sukhāvātīvyūhasūtra* as well as the apocryphal [GUAN WULIANGSHOU JING](#) (**Amitāyurdhyānasūtra*), rebirth in Amitābha's buddha-field became the goal of widespread Buddhist practice in India, East Asia, and Tibet, with the phrase “Homage to Amitābha Buddha” (C. namo Amituo fo; J. [NAMU AMIDABUTSU](#); K. namu Amit'a pul) being a central element of East Asian Buddhist practice. Amitābha's Indian origins are obscure, and it has been suggested that his antecedents lie in Persian Zoroastrianism, where symbolism of light and darkness abounds. His worship dates back at least as far as the early centuries of the Common Era, as attested by the fact that the initial Chinese translation of the *Sukhāvātīvyūhasūtra* is made in the mid-second century CE, and he is listed in the [SADDHARMAPUNḌARĪKASŪTRA](#) (“Lotus Sūtra”) as the ninth son of the buddha Mahābhijñā Jñānābhīhu. The Chinese pilgrims [FAXIAN](#) and [XUANZANG](#) make no mention of him by name in their accounts of their travels to India in the fifth and seventh centuries CE, respectively, though they do include descriptions of deities who seem certain to have been Amitābha. Scriptures relating to Amitābha reached Japan in the seventh century, but he did not become a popular religious

figure until some three hundred years later, when his worship played a major role in finally transforming what had been previously seen as an elite and foreign tradition into a populist religion. In East Asia, the cult of Amitābha eventually became so widespread that it transcended sectarian distinction, and Amitābha became the most popular buddha in the region. In Tibet, Amitābha worship dates to the early propagation of Buddhism in that country in the eighth century, although it never became as prevalent as in East Asia. In the sixteenth century, the fifth [DALAI LAMA](#) gave the title [PAN CHEN LAMA](#) to his teacher, [BLO BZANG CHOS KYI RGYAL MTSHAN](#), and declared him to be an incarnation of Amitābha (the Dalai Lama himself having been declared the incarnation of Avalokiteśvara, Amitābha’s emanation). ¶ The names “Amitābha” and “Amitāyus” are often interchangeable, both deriving from the Sanskrit word “amita,” meaning “limitless,” “boundless,” or “infinite”; there are some intimations that Amita may actually have been the original name of this buddha, as evidenced, for example, by the fact that the Chinese transcription Amituo [alt. Emituo] transcribes the root word amita, not the two longer forms of the name. The distinction between the two names is preserved in the Chinese translations “Wulianguang” (“Infinite Light”) for Amitābha and Wuliangshou (“Infinite Life”) for Amitāyus, neither of which is used as often as the transcription Amituo. Both Amitābha and Amitāyus serve as epithets of the same buddha in the longer *Sukhāvativyūhasūtra* and the *Guan Wuliangshou jing*, two of the earliest and most important of the sūtras relating to his cult. In Tibet, his two alternate names were simply translated: ’Od dpag med (“Infinite Light”) and Tshe dpag med (“Infinite Life”). Despite the fact that the two names originally refer to the same deity, they have developed distinctions in ritual function and iconography, and Amitāyus is now considered a separate form of Amitābha rather than just a synonym for him. ¶ Amitābha is almost universally shown in [DHYĀNĀSANA](#), his hands at his lap in [DHYĀNAMUDRĀ](#), though there are many variations, such as standing or displaying the [VITARKAMUDRĀ](#) or [VARADAMUDRĀ](#). As one of the [PAÑCATATHĀGATA](#), Amitābha is the buddha of the padma family and is situated in the west. In tantric depictions he is usually red in color and is shown in union with his consort Pāṇḍarā, and in East Asia he is commonly accompanied by his attendants [ĀVALOKITEŚVARA](#) (Ch. [GUANYIN](#)) and [MAHĀSTHĀMAPRĀPTA](#). See also [JINGTU SANSHENG](#); [WANGSHENG](#).

[Amitābhasūtra](#). (C. Amituo jing; J. Amidakyō; K. Amit’a kyōng 阿彌陀經). The popular title for the “shorter” or “smaller” version of the

[SUKHĀVATĪVYŪHASŪTRA](#), one of the three main texts of the [PURE LAND](#) tradition of East Asia. See [SUKHĀVATĪVYŪHASŪTRA](#).

[Amitāyus](#). (T. Tshe dpag med; C. Wuliangshou fo; J. Muryōju butsu; K. Muryangsu pul 無量壽佛). In Sanskrit, the buddha or bodhisattva of “Limitless Life” or “Infinite Lifespan.” Although the name originally was synonymous with [AMITĀBHA](#), in the tantric traditions, Amitāyus has developed distinguishing characteristics and is now sometimes considered to be an independent form of Amitābha. The Japanese [SHINGON](#) school, for example, uses Muryōju in representations of the [TAIZŌKAI](#) (garbhadhātumaṇḍala) and Amida (Amitābha) in the [KONGŌKAI](#) (vajradhātumaṇḍala). Amitāyus is often central in tantric ceremonies for prolonging life and so has numerous forms and appellations in various groupings, such as one of six and one of nine. He is shown in bodhisattva guise, with crown and jewels, sitting in [DHYĀNĀSANA](#) with both hands in [DHYĀNAMUDRĀ](#) and holding a water pot (kalaśa) full of [AMRTA](#) (here the nectar of long life); like Amitābha, he is usually red.

[Amituo jingtu bian](#). (阿彌陀淨土變). In Chinese, “transformation tableaux of the [PURE LAND](#) of [AMITĀBHA](#) Buddha,” pictorial representations of Amitābha Buddha and his pure land of [SUKHĀVATĪ](#). Typically in colors and occasionally hung on the western wall of some pure land monasteries, these elaborate illustrations were typically created as [MANDALA](#), visual supplements to public preaching, or as visualization aids for people on their deathbed intent on being reborn into the pure land. The illustrations themselves—viz., Amitābha Buddha with his two flanking bodhisattvas [AVALOKITEŚVARA](#) and [MAHĀSTHĀMAPRĀPTA](#) (see [JINGTU SANSHENG](#)), his celestial entourage, jeweled trees, singing birds, lotus pond, and palatial buildings—are usually rendered in East Asian artistic style and are based on the way sukhāvātī is described in pure land texts such as the [GUAN WULIANGSHOU JING](#) (“Sūtra on the Contemplation of the Buddha of Immeasurable Life”). See also [JINGTU BIAN](#), [BIANXIANG](#), and [DIYU BIAN](#).

[Amituo jiupin yin](#). (J. Amida kuhon'in; K. Amit'a kup'um in 阿彌陀九品印). In Chinese, lit. “the nine-levels gesture of [AMITĀBHA](#)”; in East Asian Buddhist iconography, the distinctive gesture ([MUDRĀ](#)) associated with images of Amitābha Buddha, whose western paradise of [SUKHĀVATĪ](#) is said to have nine levels through which devotees pass in the process of attaining enlightenment. The gesture is formed with the index finger and thumbs of both hands touching each other, with one hand typically raised in the air.

Amoghapāśa (Lokeśvara). (T. Don yod zhags pa; C. Bukong Juansuo; J. Fukū Kenjaku; K. Pulgong Kyönsak 不空羂索). A popular tantric form of **AVALOKITEŚVARA**, primarily distinguished by his holding of a snare (pāśa); his name is interpreted as “Lokeśvara with the unfailing snare.” Like Avalokiteśvara, he is worshipped as a savior of beings, his snare understood to be the means by which he rescues devotees. His worship seems to have developed in India during the sixth century, as evidenced by the 587 Chinese translation of the *Amoghapāśahṛdayasūtra* (the first chapter of the much longer *Amoghapāśakalparājasūtra*) by Jñānagupta. Numerous translations of scriptures relating to Amoghapāśa by **BODHIRUCI**, **XUANZANG**, and **AMOGHAVAJRA** and others up into the tenth century attest to the continuing popularity of the deity. The earliest extant image of Amoghapāśa seems to be in Japan, in the monastery of **TŌDAIJI** in Nara, dating from the late seventh century. There are many extant images of the god in northwest India from the ninth and tenth centuries; some earlier images of Avalokiteśvara from the eighth century, which depict him holding a snare, have been identified as Amoghapāśa, although the identification remains uncertain. Tibetan translations of the *Amoghapāśahṛdayasūtra* and the *Amoghapāśakalparājasūtra* are listed in the eighth-century **LDAN DKAR MA** catalogue, though it is later translations that are included in the **BKA' 'GYUR**, where they are classified as kriyātantras. (The Tibetan canon includes some eight tantras concerning Amoghapāśa.) Numerous images of Amoghapāśa from Java dating to the early second millennium attest to his popularity in that region; in the Javanese custom of deifying kings, King Viṣṇuwardhana (d. 1268) was identified as an incarnation of Amoghapāśa. Amoghapāśa can appear in forms with any number of pairs of hands, although by far the most popular are the six-armed seated and eight-armed standing forms. Other than his defining snare, he often carries a three-pointed staff (tridaṇḍa) but, like other multiarmed deities, can be seen holding almost any of the tantric accoutrements. Amoghapāśa is depicted in bodhisattva guise and, like Avalokiteśvara, has an image of **AMITĀBHA** in his crown and is occasionally accompanied by **TARĀ**, **BHRKUTĪ**, Sudhanakumāra, and **HAYAGRĪVA**.

Amoghasiddhi. (T. Don yod grub pa; C. Bukong Chengjiu rulai fo; J. Fukū Jōju nyoraibutsu; K. Pulgong Söngch'wi yōrae pul 不空成就如來佛). In Sanskrit, “He Whose Accomplishments Are Not in Vain,” name of one of the **PAÑCATATHĀGATA**. He is the buddha of the **KARMA** family (**KARMAKULA**) and his

[PURE LAND](#) is located in the north. Amoghasiddhi is seldom worshipped individually and he appears to have been largely a creation to fill out the pañcatathāgata grouping. He is usually depicted in the guise of a buddha, green in color, and sitting in [DHYĀNĀSANA](#) with his right hand in [DHYĀNAMUDRĀ](#) or with a viśvavajra in his upturned palm; his left hand is held at his chest in [ABHAYAMUDRĀ](#). In Nepal, he alone of the five buddhas is shown with a [NĀGA](#) above his face or coiled beside him. In East Asian representations of the pañcatathāgata, Amoghasiddhi is often replaced with [ŚĀKYAMUNI](#) Buddha.

[Amoghavajra](#). (C. Bukong; J. Fukū; K. Pulgong 不空) (705–774). Buddhist émigré [ĀCĀRYA](#) who played a major role in the introduction and translation of seminal Buddhist texts belonging to the esoteric tradition or mijiao (see [MIKKYŌ](#); [TANTRA](#)). His birthplace is uncertain, but many sources allude to his ties to Central Asia. Accompanying his teacher [VAJRABODHI](#), Amoghavajra arrived in the Chinese capital of Chang’an in 720–1 and spent most of his career in that cosmopolitan city. In 741, following the death of his mentor, Amoghavajra made an excursion to India and Sri Lanka with the permission of the Tang-dynasty emperor and returned in 746 with new Buddhist texts, many of them esoteric scriptures. Amoghavajra’s influence in the Tang court reached its peak when he was summoned by the emperor to construct an [ABHISEKA](#), or consecration, altar on his behalf. Amoghavajra’s activities in Chang’an were interrupted by the An Lushan rebellion (655–763), but after the rebellion was quelled, he returned to his work at the capital and established an inner chapel for [HOMA](#) rituals and abhiṣeka in the imperial palace. He was later honored by the emperor with the purple robe, the highest honor for a Buddhist monk and the rank of third degree. Along with [XUANZANG](#), Amoghavajra was one of the most prolific translators and writers in the history of Chinese Buddhism. Among the many texts that he translated into Chinese, especially important are the [SARVATATHĀGATATATTVASAMGRAHA](#) and the [BHADRACARĪPRANIDHĀNA](#).

[amoha](#). (T. gti mug med pa; C. wuchi; J. muchi; K. much’i 無癡). In Sanskrit and Pāli, “nondelusion”; one of the eleven wholesome ([KUŚALA](#)) mental concomitants ([CAITTA](#)) according to the [YOGĀCĀRA](#) school, “nondelusion” is the opposite of “delusion” ([MOHA](#)). This mental quality was presumed to be so central to all wholesome activities that it was listed as one of the three wholesome faculties, or roots of virtue ([KUŚALAMŪLA](#)). Nondelusion is interpreted variously as clarity in perception regarding the way things are

(yathābhūta), the temporary suppression or permanent extirpation of ignorance ([AVIDYĀ](#)), the full comprehension of the [FOUR NOBLE TRUTHS](#), or the clear seeing of the three marks of existence ([TRILAKSANA](#)).

Āmrapālī. (P. Ambapālī [alt. AmbapālikĀ]; T. A mra skyong ma; C. Anpoluonü; J. Anbaranyo; K. Ambaranyō 菴婆羅女). A courtesan in the city of [VAIŚĀLĪ](#) (P. Vesālī) and famous patron of the Buddha, who donated her mango grove (the Āmrapālīvāna) to the [SAMGHA](#). Pāli sources describe her as a woman of exceptional beauty, who is said to have been spontaneously born at the foot of a mango tree in the king’s garden, whence her name. As a young maiden, many princes vied for her hand in marriage. To quell the unrest, she was appointed courtesan of the city. She is said to have charged her patrons the extraordinary amount of fifty kahāpaṇas for a night with her. So much revenue flowed into the coffers of Vaiśālī through her business that [BIMBISĀRA](#), the king of [RĀJAGRHA](#), decided to install a courtesan at his capital as well. It was during the Buddha’s last visit to Vaiśālī, shortly before his death, that Āmrapālī first encountered his teachings. Hearing that the famous sage was to preach in the nearby town of Kotigāma, she went there with a retinue of chariots to listen to him preach. Enthralled by his sermon, she invited him for his meal the next morning. Delighted at his acceptance and proud by nature, she refused to give way to the powerful Licchavi princes whom she met on the road, and who likewise had intended to invite the Buddha the next day. Knowing the effect such beauty could have on minds of men, the Buddha admonished his disciples to be mindful in her presence lest they become infatuated. At the conclusion of the meal, Āmrapālī offered to the Buddha and his order her park, Āmrapālīvāna, which was the venue of several sermons on the foundations of mindfulness (S. [SMRTYUPASTHĀNA](#); P. [SATIPATTHĀNA](#)). Āmrapālī’s son Vimāla Kauṇḍinya (P. Koṇḍañña) entered the order and became a renowned elder. Listening to him preach one day, Āmrapālī renounced the world and became a nun. Practicing insight ([VIPĀŚYANĀ](#)) and contemplating the faded beauty of her own aging body, she became an [ARHAT](#).

amṛta. (P. amata; T. ’chi med/bdud rtsi; C. ganlu; J. kanro; K. kamno 甘露). In Sanskrit, lit. “deathless” or “immortal”; used in mainstream Buddhist materials to refer to the “end” ([NISTHĀ](#)) of practice and thus liberation ([VIMOKSA](#)). The term is also used to refer specifically to the “nectar” or “ambrosia” of the [TRĀYĀSTRIMŚA](#) heaven, the drink of the divinities ([DEVA](#)) that confers

immortality. It is also in this sense that amṛta is used as an epithet of [NIRVĀNA](#), since this elixir confers specific physical benefit, as seen in the descriptions of the serene countenance and clarity of the enlightened person. Moreover, there is a physical dimension to the experience of nirvāṇa, for the adept is said to “touch the ‘deathless’ element with his very body.” Because amṛta is sweet, the term is also used as a simile for the teachings of the Buddha, as in the phrase the “sweet rain of dharma” (dharmavaṛṣaṃ amṛtaṃ). The term is also used in Buddhism to refer generically to medicaments, viz., the five types of nectar ([PAÑCĀMṚTA](#)) refer to the five divine foods that are used for medicinal purposes: milk, ghee, butter, honey, and sugar. Amṛtarāja (Nectar King) is the name of one of the five [TATHĀGATAS](#) in tantric Buddhism and is identified with [AMITĀBHA](#). In [ANUTTARAYOGATANTRA](#), there are five types of amṛta and five types of māṃsa (“flesh”) that are transformed in a [KAPĀLA](#) (“skull cup”) into a special offering substance called nang mchod, the “inner offering,” in Tibetan. Giving it to the deities in the [MANDALA](#) is a central feature in anuttarayogatantra practice ([SĀDHANA](#)) and ritual ([VIDHI](#)). The inner offering of important religious figures in Tibetan is often distilled into a pill (T. bdud rtsi ril bu) that is then given to followers to use. In tantric practices such as the visualization of [VAJRASATTVA](#), the meditator imagines a stream of amṛta descending from the teacher or deity visualized on the top of the head; it descends into the body and purifies afflictions ([KLEŚA](#)) and the residual impressions ([VĀSANĀ](#)) left by earlier negative acts.

[A myes rma chen](#). (Amnye Machen). A mountain that stands beside a bend in the Yellow River in the Chinese province of Qinghai (which Tibetans call the A mdo region), the seat of the Tibetan mountain god [RMA CHEN SPOM RA](#). This mountain is an important pilgrimage site in northeastern Tibet.

[an](#). (J. an; K. am 菴). In Chinese, “hermitage”; referring to residences where only a single hermit or a small number of monks are in residence; often used for smaller residences built in the mountains surrounding major monasteries. The term is also sometimes used for a nunnery or convent. See also [ANJITSU](#).

[An](#). (J. An; K. An 安). Sinograph used as an ethnicon for [PARTHIA](#); the character is used to transcribe the surname of monks and missionaries who hailed from Aršak or Arsakes (C. [ANXI GUO](#)), the Arsacid kingdom (c. 250 BCE–224 CE) southeast of the Caspian Sea, in the region Roman geographers called Parthia. This Chinese character appears, for example, in the names of the prolific early

translator [AN SHIGAO](#) (fl. c. 148–180 CE) and his compatriot An Xuan (fl. c. 168–189).

[anabhisamskāraparinirvāyin](#). (T. mngon par 'du byed pa med par yongs su mya ngan las 'das pa; C. wuxing ban/wuxing banniepan; J. mugyōhatsu/mugyōhatsunehan; K. muhaeng pan/muhaeng panyōlban 無行般/無行般涅槃). In Sanskrit, “one who achieves [NIRVĀNA](#) without effort”; a particular sort of nonreturner ([ANĀGĀMIN](#)), one of the twenty members of the [ĀRYASAMGHA](#) (see [VIMŚATIPRABHEDASAMGHA](#)). According to the [ABHIDHARMAKOŚABHĀSYA](#), the anabhisamskāraparinirvāyin are nonreturners who, having achieved any of the sixteen birth states of the realm of subtle materiality ([RŪPADHĀTU](#)), enter “nirvāṇa with remainder” ([SOPADHIŚESANIRVĀNA](#)) in that state without having to apply any effort. They are distinguished from those who achieve nirvāṇa at birth (see [UPAPADYAPARINIRVĀYIN](#)) or those who need to apply themselves in order to achieve nirvāṇa (see [SĀBHISAMSKĀRAPARINIRVĀYIN](#)).

[anabhraka](#). (T. sprin med; C. wuyun tian; J. muunten; K. muun ch'ōn 無雲天). In Sanskrit, “cloudless,” the lowest of the eight heavens of the fourth concentration ([DHYĀNA](#)) of the realm of subtle materiality ([RŪPADHĀTU](#)). As with all the heavens of the realm of subtle materiality, one is reborn as a divinity ([DEVA](#)) there through achieving the same level of concentration (dhyāna) as the gods of that heaven during one's practice of meditation in the preceding lifetime. This heaven has no analogue in Pāli.

[anāgāmin](#). (T. phyir mi 'ong ba; C. buhuan/bulai/anahan; J. fugen/furai/anagon; K. purhwan/pullae/anaham 不還/不來/阿那含). In Sanskrit and Pāli, “nonreturner”; the third of the four types of Buddhist saint or “noble person” ([ĀRYAPUDGALA](#)) in the mainstream traditions, along with the [SROTAĀPANNA](#) or “stream-enterer” (the first and lowest grade), the [SAKRDĀGĀMIN](#) or “once-returner” (the second grade), and the [ARHAT](#) or “worthy-one” (the fourth and highest grade). The anāgāmin is one who has completely put aside the first five of ten fetters ([SAMYOJANA](#)) that bind one to the cycle of rebirth: (1) belief in the existence of a perduring self ([SATKĀYADRSTI](#)), (2) belief in the efficacy of rites and rituals ([ŚĪLAVRATAPARĀMARŚA](#)), (3) skeptical doubt about the efficacy of the path ([VICIKITSĀ](#)), (4) sensual craving ([KĀMARĀGA](#)), and (5) malice ([VYĀPĀDA](#)). The anāgāmin has also weakened considerably the last five of the ten fetters (including such affective fetters as pride, restlessness, and ignorance), thus enervating the power of [SAMSĀRA](#). Having completely eradicated the first five

fetters, which are associated with the sensuous realm ([KĀMADHĀTU](#)), and weakened the latter five, the anāgāmin is a “nonreturner” in the sense that he will never be reborn in the kāmadhātu again; instead, he will either complete the path and become an arhat in the present lifetime or he will be reborn in the “pure abodes,” or [ŚUDDHĀVĀSA](#) (corresponding to the five highest heavens in the subtle-materiality realm, or [RŪPADHĀTU](#)); and specifically, in the [AKANISTHA](#) heaven, the fifth and highest of the pure abodes, which often serves as a way station for anāgāmins before they achieve arhatship. As one of the twenty members of the [ĀRYASAMGHA](#) (see [VIMŚATIPRABHEDASAMGHA](#)), the anāgāmin is the name for a candidate (pratipannaka) for anāgāmin (the third fruit of the noble path). In addition, the [ANĀGĀMIPHALASTHA](#) is the basis for several subdivisions of the twenty members. The anāgāmin may be either a follower through faith ([ŚRADDHĀNUSĀRIN](#)) or a follower through doctrine ([DHARMĀNUSĀRIN](#)) with either dull ([MRDVINDRIYA](#)) or keen faculties ([TĪKSNENDRIYA](#)). The anāgāmins have eliminated all of the nine levels of afflictions that cause rebirth in the sensuous realm (kāmadhātu) that the ordinary ([LAUKIKA](#)) path of meditation ([BHĀVANĀMĀRGA](#)) removes. Depending on their earlier career, they may be [VĪTARĀGAPŪRVIN](#) (those who have already eliminated sensuous-realm faults prior to reaching the path of vision) and an ānupūrvin (those who reach the four fruits of the noble path in a series). Those with dull faculties are ānupūrvin who have earlier been [SAKRDĀGĀMIPHALASTHA](#). Those with keen faculties reach the third fruit when they attain the [VIMUKTIMĀRGA](#) (path of liberation from the afflictions, or [KLEŚA](#)) on the [DARŚANAMĀRGA](#) (path of vision). See also [ANABHISAMSKĀRAPARINIRVĀYIN](#); [SĀBHISAMSKĀRAPARINIRVĀYIN](#); [UPAPADYAPARINIRVĀYIN](#).

[anāgāmiphalapratipannaka](#). (P. anāgāmimagga; T. phyir mi ’ong zhugs pa; C. buhuan xiang; J. fugenkō; K. purhwan hyang 不還向). In Sanskrit, candidate for the fruit of nonreturner. If an anāgāmiphalapratipannaka is an Ānupūrvin (one who reaches the four fruits of the noble path in a series), he is [SAKRDĀGĀMIPHALASTHA](#).

[anāgāmiphala](#). (P. anāgāmiphala; T. phyir mi ’ong ’bras gnas; C. zheng buhuan guo; J. shōfugenka; K. chŭng purhwan kwa 證不還果). In Sanskrit, “one who has reached or is the recipient of the fruit of nonreturner”; the anāgāmiphala is the basis for the division into a number of the twenty members of the [ĀRYASAMGHA](#) (see [VIMŚATIPRABHEDASAMGHA](#)). Among the

anāgāmiphalastha are those who have aspired through faith ([ŚRADDHĀDHIMUKTA](#)), those who attain through seeing ([DRSTIPRĀPTA](#)), and those who are Ānupūrvīn (those who reach the four fruits of the noble path in a series). See [SAKRDĀGĀMIPHALASTHA](#).

[anagārikā](#). [alt. anāgārikā; anagāriyā] (P. anagāriya; T. khyim med pa; C. feijia; J. hike; K. piga 非家). In Sanskrit, “the homeless life,” viz., to leave the home life behind and follow the ascetic existence of the wandering mendicant. The term was adopted in the twentieth century for unordained laymen who lived as monks. See [DHARMAPĀLA](#), [ANAGĀRIKA](#).

[Anāgatavaṃsa](#). In Pāli, “Chronicle of Future Events”; a medieval Pāli work in verse detailing the advent of Metteya ([MAITREYA](#)) Buddha in the far distant future of this auspicious eon (bhaddakappa; S. [BHADRAKALPA](#)). The current eon is deemed auspicious because five buddhas—Maitreya being the fifth—appear during its duration, the maximum number possible. Attributed to Coḷa Kassapa, author of *Vimativinodanī*, the *Anāgatavaṃsa* claims to have been preached to [ŚĀRIPUTRA](#) by the Buddha. The text elaborates upon the prophecy of the coming of Maitreya found in the [CAKKAVATTISĪHANĀDASUTTA](#) of the [DĪGHANIKĀYA](#). In eighteenth- and nineteenth-century Burma, the *Anāgatavaṃsa* became popular as a kind of charter for a host of millenarian movements and uprisings, including one that led in 1752 to the founding of Burma’s last royal dynasty, the Konbaung. Its founder, Alaung hpaya (r. 1752–1760), and his sons utilized this text to justify claims that their wars of conquest were prophesied to usher in a Buddhist Golden Age. A synopsis in English of a nineteenth-century Burmese recension of the *Anāgatavaṃsa* appears in [HENRY CLARK WARREN](#)’s *Buddhism in Translations* as “The Buddhist Apocalypse.”

[Anaksarakaraṇḍaka\[Vairocanagarbha\]sūtra](#). (T. Yi ge med pa’i za ma tog rnam par snang mdzad kyi snying po’i mdo; C. Wuzi baoqie jing; J. Muji hōkyōgyō; K. Muja pohyōp kyōng 無字寶篋經). In Chinese translation from the Sanskrit, “The Letter-less Casket”; a Mahāyāna scripture best known for its statement that, in the enlightenment of the [TATHĀGATA](#)s, the nature of all factors ([DHARMA](#)) is discovered to be empty ([ŚŪNYATĀ](#)); it is neither produced nor extinguished; it neither increases nor decreases; it neither comes nor goes; it is neither obtained nor discarded; and it is free from all causes and conditions. There are three Chinese translations, the best known of which is the *Wuzi baoqie jing*, which was translated by [BODHIRUCI](#) (?–527) between 508 and 535. There

are also two other Chinese recensions, both translated by Divākara (613–687), the first made in 683 and the second between 676 and 688.

Ānanda. (T. Kun dga' bo; C. Anan[tuo]; J. Anan[da]; K. Anan[da] 阿難[陀]). In Sanskrit and Pāli, literally “Bliss,” the name of the Buddha’s cousin, longtime attendant, and one of his chief disciples. According to tradition, in his previous life, he was a god in the [TUSITA](#) heaven, who was born on the same day and into the same [ŚĀKYA](#) clan as the [BODHISATTVA](#) and future buddha who was born as prince [SIDDHĀRTHA](#). Ānanda was born as the son of Amṛtodana, the brother of king [ŚUDDHODANA](#). He was thus the Buddha’s cousin and the brother of [DEVADATTA](#). When the Buddha returned to his home town of [KAPILĀVASTU](#) in the second year after his enlightenment, many of the Śākyan men, such as Ānanda and Devadatta, wished to renounce the householder life and become the Buddha’s disciples as monks. Not long after his ordination, Ānanda became a [SROTAĀPANNA](#) upon hearing a sermon by [PŪRNA](#). The Buddha did not have a personal attendant for the first twenty years after his enlightenment, with various monks occasionally offering various services to him. But after two decades of these ad hoc arrangements, the Buddha finally asked for someone to volunteer to be his personal attendant; all the monks volunteered except Ānanda, who said that he did not do so because the Buddha would choose the correct person regardless of who volunteered. The Buddha selected Ānanda, who accepted on the following conditions: the Buddha was never to give him any special food or robes that he had received as gifts; the Buddha was not to provide him with a special monk’s cell; and the Buddha was not to include him in dining invitations he received from the laity. Ānanda made these conditions in order to prevent anyone from claiming that he received special treatment because of serving as the Buddha’s attendant. In addition, he asked to be allowed to accept invitations on behalf of the Buddha; he asked to be allowed to bring to the Buddha those who came from great distances to see him; he asked to be able to bring any questions he had to the Buddha; and he asked that the Buddha repeat to him any doctrine that had been taught in his absence. Ānanda saw these latter conditions as the true advantages of serving the Buddha. For the next twentyfive years, Ānanda served the Buddha with great devotion, bringing him water, sweeping his cell, washing his feet, rubbing his body, sewing his robes, and accompanying him wherever he went. He guarded the Buddha’s cell at night, carrying a staff and a torch, in order to make sure that his sleep was not disturbed and to be ready should the Buddha need him. As the Buddha grew older and more infirm,

Ānanda provided devoted care, despite the fact that the two were exactly the same age. Because Ānanda was constantly in the Buddha's presence, he played a key role in many famous events of the early dispensation. For example, it was Ānanda who, on behalf of [MAHĀPRAJĀPATI](#), requested that women be allowed to enter the [SAMGHA](#) as nuns, persisting in his request despite the Buddha's initial refusal. He is therefore remembered especially fondly by the order of [BHIKSUNĪs](#), and it is said that he often preached to nuns. In a famous tale reproduced in various sources, the daughter of a woman named Mātāṅgī attempted to seduce Ānanda with the help of her mother's magical powers, only to come to realize her wrongdoing with the intervention of the Buddha. Toward the end of his life, the Buddha mentioned to Ānanda that a buddha could live for a [KALPA](#) or until the end of the kalpa if he were asked to do so. (See [CĀPĀLACAITYA](#).) Ānanda, distracted by [MĀRA](#), failed to request the Buddha to do so, despite the Buddha mentioning this three times. Ānanda was chastised for this blunder at the first council (see infra). Ānanda figures prominently in the account of the Buddha's last days in the [MAHĀPARINIBBĀNASUTTA](#), weeping at the knowledge that the Buddha was about to die and being consoled by him. Ānanda was known for his extraordinary powers of memory; he is said to have heard all 84,000 sermon topics (82,000 taught by the Buddha and 2,000 taught by other disciples) and was able to memorize 15,000 stanzas without omitting a syllable. He therefore played a key role in the recitation of the Buddha's teachings at the first council ([SAMGĪTI](#); see [COUNCIL, FIRST](#)) held at [RĀJAGRHA](#) shortly after the Buddha's death. However, [MAHĀKĀŚYAPA](#), who convened the council, specified that all five hundred monks in attendance must be [ARHATS](#), and Ānanda was not. On the night before the opening of the council, Ānanda achieved the enlightenment of an arhat as he was lying down to sleep, as his head fell to the pillow and his feet rose from the ground. He is therefore famous for achieving enlightenment in none of the four traditional postures ([ĪRYĀPATHA](#)): walking, standing, sitting, or lying down. As an arhat, Ānanda was welcomed to the council, where he recounted all the words of the Buddha (except those concerning the [VINAYA](#), or monastic rules, which were recited by [UPĀLI](#)). For this reason, most [SŪTRAS](#) open with the words, "Thus have I heard" ([EVAM MAYĀ ŚRUTAM](#)); the "I" is usually Ānanda. (For this reason, Ānanda is also known in China as Duowen Diyi, "First in Vast Hearing" or "He Who Heard the Most.") After the Buddha's death, the order of monks brought five charges against Ānanda: (1) the Buddha had said that after his passing, the monks could disregard the minor precepts, but Ānanda failed to ask him which those were; thus, all the precepts had to be followed; (2)

Ānanda had once stepped on the Buddha's robe when sewing it; (3) Ānanda had allowed women to honor the Buddha's naked body after his death and their tears had fallen on his feet; (4) Ānanda failed to ask the Buddha to live on for the rest of the kalpa; and (5) Ānanda urged the Buddha to admit women to the order. Ānanda replied that he saw no fault in any of these deeds but agreed to confess them. According to [FAXIAN](#), when Ānanda was 120 years old, he set out from [MAGADHA](#) to [VAIŚĀLĪ](#) in order to die. Seeking his relics ([ŚARĪRA](#)), [AJĀTAŚATRU](#) followed him to the Rohīni River, while a group from Vaiśālī awaited him on the other bank. Not wishing to disappoint either group, Ānanda levitated to the middle of the river in the meditative posture, preached the dharma, and then meditated on the [TEJOKASINA](#), which prompted his body to burst into flames, with the relics dividing into two parts, one landing on each bank of the river. Ānanda has long been one of the most beloved figures in the history of Buddhism, in part because he was not the wisest of the Buddha's disciples but showed unstinting devotion to the Buddha, always seeking to understand him correctly and to bring his teachings to as many people as possible.

[Ananda Metteyya](#). (1872–1923). Ordination name of the British Buddhist monk, born Charles Henry Allen Bennett. He was the son of an electrical engineer and studied science in his youth. In 1894, he joined the Hermetic Order of the Golden Dawn, a society devoted to esotericism, whence he gained a reputation as a magician and miracle worker, becoming the friend and teacher of Aleister Crowley. He became interested in Buddhism from reading [EDWIN ARNOLD](#)'s *The Light of Asia*. In 1900, he traveled to Asia, both because of his interest in Buddhism and his hope of relieving his asthma. Bennett was ordained as a Buddhist novice ([ŚRĀMANERA](#)) in Akyab, Burma, in 1901 and received the higher ordination ([UPASAMPADĀ](#)) as a monk ([BHIKSU](#)) in 1902. He was among the first Englishmen to be ordained as a bhikkhu, after Gordon Douglas (Bhikkhu Asoka), who was ordained in 1899 and the Irish monk U Dhammaloka, who was ordained some time prior to 1899. In 1903, he founded the International Buddhist Society (Buddhasasana Samagama) in Rangoon. Ananda Metteya led the first Buddhist mission to Britain with his patroness Hla Oung in 1908. In the previous year, in preparation for their visit, the Buddhist Society of Great Britain and Ireland was established, with [THOMAS W. RHYS DAVIDS](#) as president. He returned to Rangoon after six months. Plagued throughout his life with asthma, he disrobed in 1914 due to ill health and returned to England, where he continued his work to propagate Buddhism. Partly due to increasing drug

dependency prompted by continuing medical treatments, he passed his final years in poverty. His published works include *An Outline of Buddhism* and *The Wisdom of the Aryas*.

Ananda Temple. A monumental [THERAVĀDA](#) Buddhist monastery located outside the Tharba Gate in the medieval Burmese capital of Pagan. The Ananda was built around 1105 by King Kyanzittha (r. 1084–1111), third monarch of the Pagan empire, and is dedicated to the four buddhas who have appeared during the present auspicious age: Krakucchanda (P. Kakusandha), Kanakamuni (P. Koṇāgamana), [KĀŚYAPA](#), and [GAUTAMA](#). In architectural style, the Ananda represents a fusion of Bengali, Burmese, and Pyu (precursors of the ethnic Burmans) elements. Legend states that eight [ARHATS](#) from Mount Gandhamadana in India visited King Kyanzittha, and he was so impressed that he constructed a monastery for them, and next to it founded the Ananda. Like all temples and pagodas of the city of Pagan, the Ananda is built of fired brick and faced with stucco. It is cruciform in plan following a Pyu prototype and crowned with a North Indian style tower, or Śikhara. Its interior consists of two circumambulatory halls pierced by windows that allow a limited amount of light into the interior. The hallways are decorated with terracotta plaques depicting episodes from the Pāli [JĀTAKAS](#), the *Mahānipāta*, and [NIDĀNAKATHĀ](#). The inner hall contains niches housing numerous seated images of the Buddha that are rendered in a distinctive Pala style. The temple is entered from four entrances facing the four cardinal directions, which lead directly to four large inner chambers, each containing a colossal standing statue of a buddha. Two of the statues are original; a third was rebuilt in the eighteenth century; and the fourth has been repaired. Three of the statues are flanked by smaller images of their chief disciples. The exception is the statue of Gautama Buddha, located in the western chamber, which is flanked by what is believed to be portrait statues of King Kyanzittha and [SHIN ARAHAN](#), the Mon monk said to have converted Pagan to Theravāda Buddhism, who was also Kyanzittha's preceptor.

Anaṅgasutta. (C. Huipin jing; J. Ebongyō; K. Yep'um kyōng 穢品經). In Pāli, "Discourse on Being Unblemished," the fifth sutta in the [MAJJHIMANIKĀYA](#) (a separate [SARVĀSTIVĀDA](#) recension appears as the eighty-seventh sūtra in the Chinese translation of the [MADHYAMĀGAMA](#); there is also an unidentified recension in the Chinese translation of the [EKOTTARĀGAMA](#)); preached by [ŚĀRIPUTRA](#) to a group of monks in the [JETAVANA](#) grove in [ŚRĀVASTĪ](#). Śāriputra

describes how a monk will become blemished if he succumbs to evil wishes. In this regard, he explains that people are of four types: one who is impure who does not know his impurity, and one who is impure and knows his impurity; one who is pure and does not know his purity, and one who is pure who knows his purity. Of these four, the second of each pair is to be preferred: the one who knows his impurities can strive to remove them so that he dies with his mind undefiled; the one who knows that his mind is pure can continue to guard his senses so that he too keeps his mind without blemish until death.

anantarapratyaya. (P. anantarapaccaya; T. de ma thag pa'i rkyen; C. cidi yuan; J. shidaien; K. ch'aje yŏn 次第緣). In Sanskrit, “antecedent condition,” one of the four kinds of conditions (**PRATYAYA**) recognized in the **VAIBHĀSIKA** school of **SARVĀSTIVĀDAABHIDHARMA** and the **YOGĀCĀRA** school; the term is also listed as one of the twenty-four conditions (P. paccaya) in the massive Pāli **ABHIDHAMMA** text, the **PATTHĀNA**. This type of condition refers to the antecedent moment in the mental continuum (**SAMTĀNA**), which through its cessation enables a subsequent moment of consciousness to arise. Any moment of consciousness in the conditioned (**SAMSKRTA**) realm serves as an antecedent condition. The only exception is the final thought-moment in the mental continuum of an **ARHAT**: because the next thought-moment involves the experience of the unconditioned (**ASAMSKRTA**), no further thoughts from the conditioned realm can ever recur. This type of condition is also called the “immediate-antecedent condition” (**SAMANANTARAPRATYAYA**); the **VISUDDHIMAGGA** explains that samanantarapratyaya and anantarapratyaya are essentially the same, except that the former emphasizes the immediacy of the connection between the two moments.

ānantaryakarman. (P. ānantariyakamma; T. mtshams med pa'i las; C. wujian ye; J. mukengō; K. mugan ōp 無間業). In Sanskrit, “act that brings immediate retribution” or “inexpiable transgressions.” This term refers to particularly heinous deeds that after death result in the “immediate retribution” of rebirth in the **AVĪCI** hell, without an intervening rebirth in another realm. They are often enumerated as five: patricide, matricide, killing an **ARHAT**, spilling the blood of a buddha, and causing schism in the monastic order (**SAMGHABHEDA**). According to Pāli sources, this type of act also serves as a karmic obstruction (**KARMĀVARANA**) to concentration meditation (specifically of the **KASINA** visualization devices).

ānantaryamārga. (T. bar chad med lam; C. wujian dao; J. mukengō; K. mugan

to 無間道). In Sanskrit, the “immediate path” or “uninterrupted path”; a term that refers to the two-stage process of abandoning the afflictions ([KLEŚA](#)). In the [VAIBHĀSIKA](#) path ([MĀRGA](#)) schema, as one proceeds from the third level of the path, the path of vision ([DARŚANAMĀRGA](#)), to the fifth level, the adept path ([AŚAIKSAMĀRGA](#)), the kleśa are abandoned in sequence through repeated occasions of yogic direct perception ([YOGIPRATYAKSA](#)), which consists of two moments: the first is called the Ānantaryamārga (uninterrupted path) in which the specific kleśa or set of kleśas is actively abandoned, followed immediately by a second moment, the path of liberation ([VIMUKTIMĀRGA](#)), which is the state of having been liberated from the kleśa. A similar description is found in [YOGĀCĀRA](#) and [MADHYAMA](#) presentations of the path.

[ānantaryasamādhi](#). (T. bar chad med pa'i ting nge 'dzin; C. wujian ding; J. mukenjō; K. mugan chōng 無間定). In Sanskrit, “unimpeded concentration”; the culmination of the path of preparation ([PRAYOGAMĀRGA](#)), the second segment of the five-path schema outlined in the [VAIBHĀSIKA](#) school system of [SARVĀSTIVĀDAABHIDHARMA](#) and treated similarly in [YOGĀCĀRA](#) soteriology. After mastering all four of the “aids to penetration” ([NIRVEDHABHĀGIYA](#)) that catalyze knowledge of the reality of the [FOUR NOBLE TRUTHS](#), the meditator acquires fully the highest worldly dharmas ([LAUKIKĀGRADHARMA](#)), the last of these aids, an experience that is marked by the Ānantaryasamādhi. This distinctive type of [SAMĀDHI](#) receives its name from the fact that the adept then continues on without interruption to the path of vision ([DARŚANAMĀRGA](#)), the third stage of the path, which provides access to sanctity ([ĀRYA](#)) as a stream-enterer ([SROTAĀPANNA](#)).

[Ānāpānasatisutta](#). (S. Ānāpānasmṛtisūtra; T. Dbugs rngub pa dang 'byung ba dran pa'i mdo; C. Annabannanlian; J. Annahannanen; K. Annabannanyōm 安那般那念). In Pāli, “The Mindfulness of Breathing Discourse,” the 118th sutta ([SŪTRA](#)) in the [MAJJHIMANIKĀYA](#) (a separate [SARVĀSTIVĀDA](#) recension, as titled above, appears in the Chinese translation of the [SAMYUKTĀGAMA](#)). In this discourse, the Buddha outlines a type of meditation where the meditator remains mindful of the process of breathing in and breathing out (P. ānāpānasati; S. [ĀNĀPĀNASMṚTI](#)). The meditator begins by developing an awareness of the physical processes involved in breathing, such as whether the breath is long or short; remaining cognizant of either the entire body during breathing or the entire process of breathing (as the commentaries typically interpret it), it culminates in breathing

while consciously striving to calm the body. The meditator then follows the in- and out-breaths while developing salutary affective states, such as rapture (P. *pīti*, S. [PRĪTI](#)) and ease ([SUKHA](#)). The penultimate step is breathing while actively seeking to focus and liberate the mind. The meditation culminates in mindfulness of the breath while focusing on the awareness of the mental qualities of impermanence, cessation, and relinquishment. Through this progressive development, mindfulness of breathing thus leads from physical and mental calm, to direct insight into the value of nonattachment. The discourse ends with a treatment of the seven aspects of awakening (P. *bojjhaṅga*; S. [BODHYAṄGA](#)) with regard to the four foundations of mindfulness (P. *satipaṭṭhāna*; S. [SMRTYUPASTHĀNA](#)) of the physical body, physical sensations, state of mind, and mental qualities. See also [ANBAN SHOUYI JING](#).

[ānāpānasmṛti](#). (P. *ānāpānasati*; T. *dbugs rngub pa dang 'byung ba dran pa*; C. *shuxi guan/annabannanian*; J. *susokukan/annahannanen*; K. *susik kwan/annabannanyōm* 數息觀/安那般那念). In Sanskrit, lit. “mindfulness ([SMRTI](#)) of inhalation (*āna* = *prāṇa*) and exhalation (*apāna*),” or simply, “mindfulness of breathing”; referring to one of the oldest and most basic meditative techniques found in Buddhism. The practice requires focusing on the breath as it moves into and out of the body during inhalation and exhalation, some say through attention to the sensation of the movement of breath at the tip of the nose, others say through attention to the rise and fall of the diaphragm. This passive following of the breath leads to physical and mental calm, which allows the meditator to focus on the generic aspect of breath: viz., the fact that the constant ebb and flow of the breath is emblematic of impermanence ([ANITYA](#)). This awareness may then lead to nonattachment and insight. The Pāli [ĀNĀPĀNASATISUTTA](#) provides a detailed description of the processes involved in developing this type of meditation. Unlike many of the other forty topics of meditation ([KAMMATTHĀNA](#)) in Pāli Buddhism, which are said to suit specific types of personalities or as antidotes to specific negative tendencies, *ānāpānasmṛti* is claimed to be suitable for all, which may account for its continued popularity. Elsewhere, it is said to be a suitable object of meditation for those given to excessive thought. Some form of this practice is found in nearly every Buddhist tradition. There are various renderings of the term using Chinese Sinographs; although *shuxi guan* is one of the most common translations, there are others (e.g., *chixi guan*), as well as different ways of transcribing the Sanskrit into Chinese (e.g., *anabona nian*).

anāsrava. (P. anāsava; T. zag pa med pa; C. wulou; J. muro; K. muru 無漏). In Sanskrit, “uncontaminated” or “non-outflow”; referring to the absence of the “contaminants” ([ĀSRAVA](#)) of sensuality ([KĀMA](#)), the desire for continued existence ([BHAVA](#)), ignorance ([AVIDYĀ](#)), and sometimes wrong views ([DRSTI](#)). The absence of these contaminants may be either the quality of a specific object, such as [NIRVĀNA](#), or a state achieved through meditative training. In the former sense, anāsrava refers both to freedom from the afflictions ([KLEŚA](#)) and to those factors that are uncontaminated in the sense that their observation does not serve to increase the afflictions (kleśa). Examples of the latter include true cessations ([NIRODHASATYA](#)) and true paths ([MĀRGASATYA](#)) among the [FOUR NOBLE TRUTHS](#). The “uncontaminated actions” (anāsrava-[KARMA](#)) performed after enlightenment by [ARHATS](#) and [PRATYEKABUDDHAS](#), and by great [BODHISATTVAS](#) who have gained control (vaśitāprāptabodhisattva) may in some cases lead to rebirth, but they will not produce continued subjection to [SAMSĀRA](#) as would be the case for ordinary beings. See also [PARINĀMIKAJARĀMARANA](#) (“transfigurational birth-and-death”).

anāsravadhātu. (T. zag pa med pa'i dbyings; C. wulou jie; J. murokai; K. muru kye 無漏界). In Sanskrit, the “uncontaminated realm.” According to those proponents of the [MAHĀYĀNA](#) who assert that all beings will eventually become buddhas, [ARHATS](#) do not enter the [NIRVĀNA](#) without remainder ([ANUPADHIŚESANIRVĀNA](#)) at the time of death but instead enter the anāsravadhātu. There, they abide in states of deep concentration until they are roused by the buddhas and exhorted to abandon their “unafflicted ignorance” ([AKLIṢṬĀJÑĀNA](#)) by following the [BODHISATTVA](#) path to buddhahood.

Anāthapiṇḍada. (P. [Anāthapiṇḍika](#); T. Mgon med zas sbyin; C. Jigudu zhangzhe; J. Gikkodoku chōja; K. Kūpkodok changja 給孤獨長者). In Sanskrit, “Feeder of the Defenseless”; a wealthy merchant from the city of [ŚRĀVASTĪ](#) who became such a great patron of the [SAMGHA](#) that the Buddha declared him to be chief among laymen ([UPĀSAKA](#)) in his munificence. His personal name was Sudatta; Anāthapiṇḍada was a sobriquet suggesting his philanthropic qualities. Anāthapiṇḍada’s father-in-law introduced him to the Buddha, and he was quickly converted, becoming in the process a stream-enterer ([SROTAĀPANNA](#)). Anāthapiṇḍada built numerous dwellings, guest houses, and residential parks for the Buddha and his monastic order and was unstinting in his donation of requisites. The most famous of the residences he built was the [JETAVANA](#) park on

the outskirts of Śrāvastī, which he purchased from the prince [JETA](#) (Jetakumāra) by covering the entire property with gold coins. Prince Jeta himself donated the entrance to the park, over which he built a splendid gate. Anāthapiṇḍada had numerous buildings constructed at the site—including the Buddha’s own residence, the [GANDHAKUTĪ](#), or perfumed chamber—to serve the Buddha and the monastic community during the rains retreat ([VARSA](#)). The very same spot had served as a monastery and rains retreat center for previous buddhas as well, although the extent of the establishments varied. Jeta’s Grove was said to be the Buddha’s favorite residence and, according to tradition, he passed nineteen rains retreats there. After the laywoman [VIŚAKHĀ](#) built the grand monastery [MRGĀRAMĀTRPRĀSĀDA](#) in Śrāvastī, the Buddha would alternate between both residences, spending the day at one and the night at another. The Buddha preached numerous sermons to Anāthapiṇḍada who, in turn, was fond of debating with ascetics and teachers of other religions. Although skilled in business, Anāthapiṇḍada was in his later years reduced to penury. He is said to have died shortly after feeding the monks with gruel prepared from his own cooking pot. One of the more poignant exchanges in the Pāli canon involves Anāthapiṇḍada and is recorded in the *Anāthapiṇḍikovādasutta*, the 143rd sutta in the Pāli [MAJJHIMANIKĀYA](#) (a recension of unidentified affiliation appears in the Chinese translation of the [EKOTTARĀGAMA](#)). When Anāthapiṇḍada was on his deathbed, the Buddha sent [ŚĀRIPUTRA](#), one of his two chief disciples, along with [ĀNANDA](#) as his attendant, to visit him. Learning that Anāthapiṇḍada was in great pain, Śāriputra taught him a fairly standard discourse on how to guard the senses ([INDRIYASAMVARA](#)) so as to remain unattached toward sensory experience and thereby develop a state of consciousness that clings to nothing. At the conclusion of the discourse, Anāthapiṇḍada was brought to tears; seeing him weep, Śāriputra asked him whether he was deteriorating. Anāthapiṇḍada said that he was actually lamenting the fact that, throughout his years of attending the Buddha and his monks, he had not once heard this kind of instruction. Śāriputra responded that such teachings were intended for the monks, not the laity, but Anāthapiṇḍada begged him to make such teachings available to the laity as well, since some of them had “little dust in their eyes” and would be able to understand. Soon afterward that evening, Anāthapiṇḍada was reborn in [TUSITA](#) heaven and, as a young divinity ([DEVA](#)), visited the Buddha and praised the virtues of the Jetavana and of Śāriputra, of whom Anāthapiṇḍada was especially fond.

anātman. (P. anattā; T. bdag med; C. wuwo; J. muga; K. mua 無我). In Sanskrit, “no self” or “nonself” or more broadly “insubstantiality”; the third of the “three marks” ([TRILAKSANA](#)) of existence, along with impermanence ([ANITYA](#)) and suffering ([DUHKHA](#)). The concept is one of the key insights of the Buddha, and it is foundational to the Buddhist analysis of the compounded quality ([SAMSKRTA](#)) of existence: since all compounded things are the fruition ([PHALA](#)) of a specific set of causes ([HETU](#)) and conditions ([PRATYAYA](#)), they are therefore absent of any perduring substratum of being. In the sūtra analysis of existence, the “person” ([PUDGALA](#)) is said to be a product of five aggregates ([SKANDHA](#))—materiality ([RŪPA](#)), physical sensations ([VEDANĀ](#)), perception ([SAMJÑĀ](#)), impulses ([SAMSKĀRA](#)), and consciousness ([VIJÑĀNA](#))—which together comprise the totality of the individual’s physical, mental, and emotional existence. What in common parlance is called the person is a continuum ([SAMTĀNA](#)) imputed to the construction of these aggregates, but when these aggregates are separated at the time of death, the person also simultaneously vanishes. This relationship between the person and the skandhas is clarified in the [MILINDAPAÑHA](#)’s famous simile of the chariot: a chariot is composed of various constituent parts, but if that chariot is broken down into its parts, there is no sense of “chariot” remaining. So it is with the person and his constituent parts, the skandhas. The Buddha is rigorously against any analysis of phenomena that imputes the reality of a person: when a questioner asks him, “Who senses?,” for example, the Buddha rejects the question as wrongly conceived and reframes it in terms of conditionality, i.e., “With what as condition does sensation occur?” (“Sensory contact” [[SPARŚA](#)] is the answer.) Buddhism thus rejects any notion of an eternal, perduring soul that survives death, or which transmigrates from lifetime to lifetime; rather, just as we can impute a conventional continuity to the person over one lifetime, so can this same continuity be imputed over several lifetimes. The continuum of karmic action and reaction ensures that the last moment of consciousness in the present life serves as the condition for the first moment of consciousness in the next. The next life is therefore neither the same as nor different from the preceding lifetime; instead, it is causally related to it. For this reason, any specific existence, or series of existences, is governed by the causes and conditions that create it, rendering life fundamentally beyond our attempts to control it (another connotation of “nonself”) and thus unworthy as an object of attachment. Seeing this lack of selfhood in compounded things generates a sense of “danger” ([ĀDĪNAVA](#)) that catalyzes the aspiration to seek liberation ([VIMOKSA](#)). Thus, understanding this mark of anātman is the crucial antidote ([PRATIPAKSA](#)) to

ignorance ([AVIDYĀ](#)) and the key to liberation from suffering (duḥkha) and the continuing cycle of rebirth ([SAMSĀRA](#)). Although the notion of anātman is applied to the notion of a person in mainstream Buddhism, in the [PRAJÑĀPĀRAMITĀ](#) scriptures and the broader [MAHĀYĀNA](#) tradition the connotation of the term is extended to take in the “nonself of phenomena” ([DHARMANAIRĀTMYA](#)) as well. This extension may be a response to certain strands of the mainstream tradition, such as [SARVĀSTIVĀDA](#) (lit. the “Teaching That All [Dharmas] Exist”), which considered dharmas (i.e., the five skandhas and so on) to be factors that existed in reality throughout all three time periods ([TRIKĀLA](#)) of past, present, and future. In order to clarify that dharmas have only conventional validity, the Mahāyāna posited that they also were anātman, although the nature of this lack of self was differently understood by the [YOGĀCĀRA](#) and [MADHYAMAKA](#) schools.

[Anattalakkhaṇasutta](#). (S. *Anātmalakṣaṇasūtra; C. Wuwo; J. Muga; K. Mua 無我). In Pāli, “Discourse on the Mark of Nonself,” Gautama Buddha’s second sermon, delivered five days after the [DHAMMACAKKAPPAVATTANASUTTA](#) (S. [DHAMMACAKRAPRAVARTANASŪTRA](#)); the discourse appears in the [MAHĀVAGGA](#) section of the Pāli [VINAYA](#), which recounts the founding of the dispensation ([ŚĀSANA](#)). (Separate [SARVĀSTIVĀDA](#) recensions, as titled above, appear in the Chinese translation of the [SAMUKTĀGAMA](#).) In this second sermon delivered to the group of five new monks ([BHADRAVARGĪYA](#), [PAÑCAVARGIKA](#)), the Buddha demonstrates that the five aggregates ([SKANDHA](#)) are not a perduring self, because they are impermanent ([ANITYA](#)), suffering ([DUHKHA](#)), and therefore impossible to control, viz., “nonself” ([ANĀTMAN](#)). The Buddha concludes that any manifestation of the aggregates, whether past, present, or future, whether internal or external, etc., are not mine, are not what I am, and are not my self. This realization will lead, the Buddha says, to dispassion toward the aggregates and eventually liberation. After hearing the sermon, all five monks progressed from the stage of stream-enterer ([SROTAĀPANNA](#)) to worthy one ([ARHAT](#)).

[Anawrahta](#). (S. Aniruddha; P. Anuruddha) (1015–1078). King of Pagan (r. c. 1044–1077 CE), who is celebrated in Burmese history and legend as the founder of the first Burmese empire and as having established [THERAVĀDA](#) Buddhism as the national religion of the Burmese people. Fifteenth-century Mon inscriptions record that Anawrahta conquered the Mon kingdom of Thaton in 1057 and carried off to his capital relics of the Buddha, Pāli texts, and orthodox Theravāda monks. With these acquisitions, he laid the foundation for Pāli Buddhism in his

kingdom. Later Burmese chronicles recount that, prior to his invasion of the Mon kingdom, Anawrahta had been converted to Theravāda Buddhism by the Mon saint [SHIN ARAHAN](#), who preached to the king the *Appamādasutta*. After his conversion, Anawrahta is alleged to have suppressed an already established sect of heretical Buddhist monks dwelling at Pagan known as the Ari, which seem to have been a [MAHĀYĀNA](#) strand that practiced some forms of tantra. Although supposedly reprehensible in their behavior, the Ari had enjoyed the patronage of Pagan's kings for generations. In revenge, the Ari monks attempted to harm Shin Araham, whereupon Anawrahta defrocked them and conscripted them into his army. To firmly establish Theravāda Buddhism as the sole religion of Pagan, Shin Araham advised Anawrahta to request Buddha relics and Pāli scriptures from the king of Thaton, the Mon Theravāda kingdom whence Shin Araham hailed. When Manuha, the Thaton king in Rāmañña, refused Anawrahta's request, Anawrahta and his Burmese forces invaded and acquired these objects by force. Manuha was himself seized and transported to Pagan in golden chains where he and his family were dedicated to the Shwezigon Pagoda as temple slaves and allowed to worship the Buddha until the end of their days. Whatever the historical accuracy of the legend, epigraphic and archaeological evidence indicates that Anawrahta was more eclectic in his beliefs than traditional sources suggest. According to the [CŪLAVAMSA](#), Anawrahta assisted the Sinhalese king Vijayabāhu I (r. 1055–1110) in reinstating a valid Theravāda ordination line in Sri Lanka, but Anawrahta also circulated in his own kingdom votive tablets adorned with Mahāyāna imagery, and seals bearing his name are inscribed in Sanskrit rather than in Pāli. In addition, Anawrahta supported a royal cult of spirits (Burmese [NAT](#)) propitiation at the Shwezigon pagoda in the capital, which was dedicated to the same deities said to have been worshipped by the heterodox Ari monks. All of this evidence suggests a religious environment at Pagan during Anawrahta's time that was far more diverse than the exclusivist Theravāda practices described in the chronicles; indeed, it is clear that more than one Buddhist tradition, along with brahmanism and the nat cult, received the patronage of the king and his court.

[Anban shouyi jing](#). (J. Anpanshuikyō; K. Anban suī kyōng 安般守意經). In Chinese, “The Ānāpāna Guarding the Mind Scripture” composed by the Parthian teacher and translator [AN SHIGAO](#) sometime during the second century. Although the text purports to be a translation of a Middle Indic analogue of the Pāli [ĀNĀPĀNASATISUTTA](#), the text is interspersed with commentarial notes on the

practice of mindfulness of the process of breathing in and breathing out ([ĀNĀPĀNASMṚTI](#), P. ānāpānasati) and brief explanations of such numerical categories as the five [SKANDHAS](#), twelve [ĀYATANAS](#), and so on. The text is similar in content to certain sections of the [ABHIDHARMAMAHĀVIBHĀSĀ](#). The *Anban shouyi jing* relies heavily upon indigenous Chinese terminology and consequently serves as an important source for studying the process through which Buddhist meditative techniques were introduced into China. The Sogdian monk [KANG SENGHUI](#) wrote a preface and commentary to this text, but his commentary is no longer extant.

[anchin kokkahō](#). (安鎮國家法). In Japanese, the “technique for pacifying the state.” Japanese [TENDAI](#) priests often performed this ritual in the palace at the request of the emperor. Offerings were made to the deity fudō myōō (S. [ACALANĀTHA-VIDYĀRĀJA](#)), who in return would quell the demons who were disturbing the peace of the state. A simplified version of this ritual known as kachin or chintaku is now commonly performed for laity at their homes.

[Andhakā](#). In Pāli, “Those from Andhra,” a collective designation used by [BUDDHAGHOSA](#), in the introduction to his commentary to the [KATHĀVATTHU](#), to refer to the Rājagirīya, Siddhārthika, [PŪRVAŚAILA](#), and Aparāśaila [MAINSTREAM BUDDHIST SCHOOLS](#), which seem to have been related to the [CAITYA](#) [alt. Caitiya] school, a collateral line of the [MAHĀSĀMGHIKA](#) school.

[Āndhra](#). In Sanskrit, “Those from Andhra,” a Telegu-speaking region in central India now incorporated into the modern state of Andhra Pradesh. See [ANDHAKĀ](#).

[aṅga](#). (T. yan lag; C. zhi; J. shi; K. chi 支). In Sanskrit and Pāli, literally “branch” or “limb” but, in the context of Buddhist doctrine, usually connoting “section” or a constituent of a list. The term is used as an abbreviation for the Pāli [NAVĀṄGA](#) and Sanskrit [DVĀDAŚĀṄGA](#), the nine or twelve sections or categories of the Buddha’s word ([BUDDHAVACANA](#)), divided according to structure, literary style, or content (see List of Lists). It is also widely used in Buddhist lists such as seven factors of enlightenment ([BODHYAṄGA](#)), eightfold noble path ([ĀRYĀSTĀṄGAMĀRGA](#)), and so on.

[Āṅgaja](#). (T. Yan lag ’byung; C. Yinjietuo; J. Inkatsuda; K. In’get’a 因揭陀). The Sanskrit name of the thirteenth of the sixteen [ARHAT](#) elders ([SODĀŚASTHAVIRA](#)), who were charged by the Buddha with protecting his dispensation until the

advent of the next buddha, [MAITREYA](#). He is said to reside on Guangxie Mountain with thirteen hundred disciples. According to the Chinese tradition, Aṅgaja had been a snake wrangler before he was ordained, so whenever he went into the mountains, he carried a cloth bag with him to catch snakes, which he would release after removing their fangs so they would not injure people. For this reason, he earned the nickname “Cloth-Bag Arhat” ([BUDAILUOHAN](#)/heshang). In [CHANYUE GUANXIU](#)’s standard Chinese depiction, Aṅgaja leans against a staff, with his head lowered, reading a [SŪTRA](#) that he holds in his left hand, his right hand counting recitation beads ([JAPAMĀLĀ](#)).

[Angkor Thom](#). Twelfth-century Khmer (Cambodian) temple city constructed by Jayavarman VII (r. 1181–c. 1220) and dedicated to [AVALOKITEŚVARA](#). Built shortly after the Khmer capital was sacked by invading Chams from the region of today’s central Vietnam, Angkor Thom is surrounded by a hundred-meter-wide moat and an eight-meter-high wall. Arranged in the shape of a perfect rectangle oriented toward the cardinal directions, its walls are pierced at their center by gates that connect the city to the outside world via four broad avenues that bridge the moat. The avenues are flanked by massive railings in the form of a cosmic snake ([NĀGA](#)) held aloft on one side by divinities ([DEVA](#)) and on the other by [ASURAS](#), a motif recalling the Hindu creation myth of the churning of the cosmic ocean. The avenues run at right angles toward the center of the city complex, where the famous funerary temple of [BAYON](#) is located. Constructed of sandstone and in the form of a terraced pyramid, the Bayon represents among other symbols Mt. [SUMERU](#), the axis mundi of the Hindu–Buddhist universe. The temple is entered through four doorways, one on each side, that lead through galleries richly carved with bas-reliefs depicting scenes from contemporary life and Hindu mythology. The temple is crowned with fifty-two towers, the largest of which occupies the center and pinnacle of the structure. The four sides of every tower bear colossal guardian faces that are believed to be portraits of Jayavarman VII in the guise of the bodhisattva Avalokiteśvara. The Bayon is the first of Angkor’s many temples dedicated to a [MAHĀYĀNA](#) Buddhist cult; those built earlier were exclusively Hindu in affiliation. Beneath the central tower is a chamber that once housed a buddha image protected by a hooded nāga. This image was situated above a receptacle intended to receive the king’s ashes at death. The Bayon thus combines the function and architectural elements of a Hindu temple and a Buddhist [STŪPA](#); and Jayavarman’s identification with Avalokiteśvara was but an extension of Angkor’s long-standing Hindu devarāja

(divine king) cult, which identified the reigning monarch as an incarnation of Śiva. Angkor Thom was the last of several temple cities that cover the large area known today as Angkor, each city having been built by a successive Khmer king and crowned with an elaborate funerary shrine at its center. The most famous of these is the nearby [ANGKOR WAT](#), the largest religious structure in the world, built by Suryavarman II between 1131 and 1150.

[Angkor Wat](#). Massive temple complex and religious monument located in northwest Cambodia; the name refers to both a specific temple and the larger archaeological site, which includes hundreds of temples, including [ANGKOR THOM](#), an ancient capital city of the Khmer kingdom. The Angkor Wat temple was constructed under the auspices of King Suryavarman II (r. 1131–1150 CE) in honor of the Hindu god Viṣṇu. The temple is constructed in high Khmer (Cambodian) classical style and consists of five major towers, which are said to represent the five peaks surrounding Mt. [SUMERU](#), the axis mundi of the universe in Indian cosmology; it also includes an extensive bas-relief, the longest continuous such carving in the world, that depicts famous episodes in Hindu mythology. As the fortunes of the Khmer empire declined along with the Hindu religion it had supported, Angkor Wat was later reconceived as a Buddhist monument, and a Hall of a Thousand Buddhas added to its main entrance. In 1992, UNECSO designated the entire complex as a World Heritage Site.

[ango](#). (S. vārṣika; P. vassa; C. anju; K. an'gō 安居). In Japanese, “peaceful dwelling”; also known as gegyō (“summer dwelling”), zage (“sitting in the summer”), zarō (“sitting age”), *etc.* The term is used in [ZEN](#) monasteries to refer either to the summer rainy season retreat, which usually lasts for three months, or to an intensive period of meditative training during the summer rain’s retreat. The beginning of this period is known as kessei (C. [JIEZHI](#)), but this term is also occasionally used in place of ango to refer to the meditation retreat. In the Sōtō Zen tradition ([SŌTOSHŪ](#)), ango is often used as a means of measuring the dharma age, or hōrō (C. [FALA](#)), of a monk. A monk who completes his first summer retreat is known as “one who has entered the community,” five retreats or more a “saint,” and ten retreats or more a “master.” See also [VARSA](#).

[Aṅgulimāla](#). (S. alt. Aṅgulimālīya; T. Sor mo phreng ba; C. Yangjuemoluo; J. Ōkutsumara; K. Anggulmara 央掘摩羅). In Sanskrit and Pāli, literally, “Garland of Fingers”; nickname given to Ahimsaka, a notorious murderer and highwayman who was converted by the Buddha and later became an [ARHAT](#); the Sanskrit is

also seen written as Aṅgulimālya and Aṅgulimālīya. Ahiṃsaka was born under the thieves' constellation as the son of a brāhmaṇa priest who served the king of [KOŚALA](#). His given name means "Harmless," because even though his birth was attended by many marvels, no one was injured. The boy was intelligent and became a favorite of his teacher. His classmates, out of jealousy, poisoned his teacher's mind against him, who thenceforth sought Ahiṃsaka's destruction. His teacher instructed Ahiṃsaka that he must collect one thousand fingers as a gift. (In an alternate version of the story, the brāhmaṇa teacher's wife, driven by lust, attempted to seduce the handsome student, but when he rebuffed her, the resentful wife informed her husband that it was instead he who had attempted to seduce her. Knowing that he could not defeat his disciple by force, the vengeful brāhmaṇa teacher told his student that he must kill a thousand people and string together a finger from each victim into a garland as the final stage of his training.) Following his teacher's instructions, he began to murder travelers, cutting off a single finger from each victim. These he made into a garland that he wore around his neck, hence his nickname Aṅgulimāla, or "Garland of Fingers." With one finger left to complete his collection, Aṅgulimāla resolved to murder his own mother, who was then entering the forest where he dwelled. It was at this time that the Buddha decided to intervene. Recognizing that the thief was capable of attaining arhatship in this life but would lose that chance if he killed one more person, the Buddha taunted Aṅgulimāla and converted him through a miracle: although the Buddha continued to walk sedately in front of the brigand, Aṅgulimāla could not catch him no matter how fast he ran. Intrigued at this feat, Aṅgulimāla called out to the Buddha to stop, but the Buddha famously responded, "I have stopped, Aṅgulimāla; may you stop as well." Aṅgulimāla thereupon became a disciple of the Buddha and spent his time practicing the thirteen austere practices (see [DHUTAṄGA](#)), eventually becoming an [ARHAT](#). Because of his former misdeeds, even after he was ordained as a monk and became an arhat, he still had to endure the hatred of the society he used to terrorize, sometimes suffering frightful beatings. The Buddha explained that the physical pain he suffered was a consequence of his violent past and that he should endure it with equanimity. His fate illustrates an important point in the theory of [KARMA](#): viz., even a noble one who has overcome all prospect of future rebirth and who is certain to enter [NIRVĀNA](#) at death can still experience physical (but not mental) pain in his last lifetime as a result of past heinous deeds. Aṅgulimāla also became the "patron saint" of pregnant women in Buddhist cultures. Once, while out on his alms round, Aṅgulimāla was

profoundly moved by the suffering of a mother and her newborn child. The Buddha recommended that Aṅgulimāla cure them by an “asseveration of truth” ([SATYAVACANA](#)). The Buddha first instructed him to say, “Sister, since I was born, I do not recall that I have ever intentionally deprived a living being of life. By this truth, may you be well and may your infant be well.” When Aṅgulimāla politely pointed out that this was not entirely accurate, the Buddha amended the statement to begin, “since I was born with noble birth.” The phrase “noble birth” can be interpreted in a number of ways, but here it seems to mean “since I became a monk.” When Aṅgulimāla spoke these words to the mother and her child, they were cured. His statement has been repeated by monks to pregnant women over the centuries in the hope of assuring successful childbirth. See also [Aṅgulimāliyasūtra](#).

[Aṅgulimāliyasūtra](#). (T. Sor mo’i phreng ba la phan pa’i mdo; C. Yangjuemoluo jing; J. Ōkutsumarakyō; K. Anggulmara kyōng 央掘摩羅經). In Sanskrit, “The Discourse on [Aṅgulimāla](#)”; a [TATHĀGATAGARBHA](#) sūtra that tells the story of Aṅgulimāla. Aṅgulimāla’s story (see previous entry) also serves here as a frame for several sermons concerning the [EKAYĀNA](#) and tathāgatagarbha doctrine. When asked by the Buddha about the meaning of “one learning,” for example, Aṅgulimāla replies that the path to awakening consists of a single vehicle (ekayāna), a single act of taking refuge, and a single truth. In reply to the [BODHISATTVA MAÑJUŚRĪ](#)’s questions about the meaning of tathāgatagarbha, the Buddha teaches that every sentient being possesses the tathāgatagarbha, which remains concealed (S. saṃdhi/abhisamḍhi, C. yinfu) and covered by afflictions ([KLEŚA](#)); this is one of the two major interpretations of the concept. The Buddha proclaims the tathāgatagarbha to be the only true foundation of the bodhisattva path.

[Aṅgulimālya](#). (S). See [Aṅgulimāla](#).

[Aṅguttaranikāya](#). (S. Ekottarāgama; T. Gcig las ’phros pa’i lung; C. Zengyi ahan jing; J. Zōichiagongyō; K. Chūngil aham kyōng 增壹阿含經). In Pāli, “Collection of Numerically Arranged Discourses”; the fourth division of the Pāli [SUTTAPITAKA](#) (S. [SŪTRAPITAKA](#)). This collection, which may date from as early as the first century BCE, is composed of 2,198 suttas organized into nine nipātas, or sections. It corresponds in general structure to the [EKOTTARĀGAMA](#), extant only in Chinese translation (and of unidentified affiliation), which is much smaller at only 471 sūtras. The suttas in the Pāli collection are arranged sequentially in

numbered lists according to their subject matter, beginning with discussions of singularities, such as nibbāna ([NIRVĀNA](#)), and progressing up to sets of eleven. Its Pāli commentary, the [MANORATHAPŪRANĪ](#), was probably composed during the fifth century CE. The *Aṅguttaranikāya* appears in the Pali Text Society's English translation series as *The Book of Gradual Sayings*.

[Anham](#). (安含) (c. 579–640). Korean pilgrim-monk of the Silla dynasty. According to the [HAEDONG KOSŬNG CHŎN](#), in 600, Anham attempted with a fellow monk by the name of Hyesuk to travel to China in search of the teachings of the Buddha but had to turn back due to a heavy rainstorm. The following year, a royal decree permitted him to accompany a Silla envoy to China. At the behest of the Chinese emperor, he studied various scriptures at the monastery of Xingshengsi in the imperial capital of Chang'an for five years. Anham returned to Silla in 605 with foreign monks from Khotan, Serindia, India, and China. While residing at the monastery of [HWANGNYONGSA](#), these monks are claimed to have translated together a scripture known as the *Zhantanxianghuo xingguang miaonü jing*, which emphasizes the efficacy of a [DHĀRANĪ](#) called zhantanxiang shen. Anham might also be identical to another Korean monk by the name of Anhong who is said to have brought the [LĀNKĀVATĀRASŪTRA](#), [ŚRĪMĀLĀDEVĪSIMHANĀDASŪTRA](#), and relics of the Buddha to Korea in 576. Anham was renowned for his superknowledges ([ABHIJÑĀ](#)) and was worshipped as one of the “ten worthies of Silla” (Silla sipsŏng) at Hwangnyongsa. A text known as the *Tongdo sŏngnip ki* (“Record of the Establishment of the Eastern Capital”) is attributed to Anham.

[ānimitta](#). (P. animitta; T. mtshan ma med pa; C. wuxiang; J. musō; K. musang 無相). In Sanskrit, “signless”; one of three “gates to deliverance” ([VIMOKSAMUKHA](#)), along with emptiness ([ŚUNYATĀ](#)) and wishlessness ([APRANIHITA](#)). A sign or characteristic ([NIMITTA](#)) refers to the generic appearance of an object, in distinction to its secondary characteristics or [ANUVYAÑJANA](#). Advertence toward the generic sign and secondary characteristics of an object produces a recognition or perception ([SAMJÑĀ](#)) of that object, which may in turn lead to clinging or rejection and ultimately suffering. Hence, signlessness is crucial in the process of sensory restraint ([INDRIYASAMVARA](#)), a process in which one does not actively react to the generic signs of an object (i.e., treating it in terms of the effect it has on oneself), but instead seeks to halt the perceptual process at the level of simple recognition. By not seizing on these signs,

perception is maintained at a pure level prior to an object’s conceptualization and the resulting proliferation of concepts ([PRAPAÑCA](#)) throughout the full range of sensory experience. As the frequent refrain in the [SŪTRAS](#) states, “In the seen, there is only the seen,” and not the superimpositions (cf. [SAMĀROPA](#)) created by the intrusion of ego ([ĀTMAN](#)) into the perceptual process. Mastery of this technique of sensory restraint provides access to the signless gate to deliverance. Signlessness is produced through insight into impermanence ([ANITYA](#)) and serves as the counteragent ([PRATIPAKSA](#)) to attachments to anything experienced through the senses; once the meditator has abandoned all such attachments to the senses, he is then able to advert toward [NIRVĀNA](#), which ipso facto has no sensory signs of its own by which it can be recognized. In the [PRAJÑĀPĀRAMITĀ](#) literature, signlessness, emptiness, and wishlessness are equally the absence of the marks or signs of intrinsic existence ([SVABHĀVA](#)). The [YOGĀCĀRABHŪMIŚĀSTRA](#) says when signlessness, emptiness, and wishlessness are spoken of without differentiation, the knowledge of them is that which arises from hearing or learning ([ŚRUTAMAYĪPRAJÑĀ](#)), thinking ([CINTĀMAYĪPRAJÑĀ](#)), and meditation ([BHĀVANĀMAYĪPRAJÑĀ](#)), respectively.

[animittayoga](#). (T. mtshan med kyi mal ’byor). Literally, “yoga without signs,” a term that occurs in Buddhist tantric literature and is especially associated with [YOGATANTRA](#) among the four classes of tantric texts. It refers to those meditation practices in which one meditates on emptiness ([ŚŪNYATĀ](#)) in such a way that there are no dualistic appearances or “signs.” It is contrasted with [SANIMITTAYOGA](#) or “yoga with signs,” practices that entail dualistic appearances or signs in the sense that the meditator visualizes seed syllables ([BĪJA](#)) and deities.

[aniñjyakarman](#). [alt. aniñjanakarman] (P. aniñjītakamma; T. mi g.yo ba’i las; C. budong ye; J. fudōgō; K. pudong ōp 不動業). In Sanskrit, “invariable” or “unwavering action”; usually appearing in conjunction with the dichotomies of wholesome ([KUŚALA](#)) and unwholesome ([AKUŚALA](#)) or meritorious ([PUNYA](#)) and demeritorious ([APUNYA](#)) in referring to types of action ([KARMAN](#)) or the states of existence resulting therefrom. Wholesome and unwholesome actions lead to rebirth, but other actions may intervene and produce their results first. In particular, according to the [ABHIDHARMAKOŚABHĀSYA](#), when a meditator attains the fundamental state (maula) of a [DHYĀNA](#) (concentration) in the realm of subtle materiality ([RŪPADHĀTU](#)) or the immaterial realm ([ĀRŪPYADHĀTU](#)), the force of

the action is aniñjya and will definitely lead to rebirth as a deity in the corresponding heaven in the next life. It is said, however, that [BODHISATTVAS](#) are able to circumvent birth as a long-lived divinity in one of the heavens of the realm of subtle materiality or immaterial realm so that they can better offer assistance to sentient beings. Thus, aniñjyakarman indicates the “invariable” connection or continuity between the achievement of those states in this lifetime and the subsequent rebirth: for example, a person who achieves the fourth immaterial absorption in this lifetime will “invariably” be reborn as a [BHAVĀGRA](#) deity in the fourth immaterial heaven in the next lifetime.

[aniruddha](#). (T. ma 'gags pa; C. bumie; J. fumetsu; K. pulmyöl 不滅). In Sanskrit, “unextinguished”; a term used to describe uncompounded ([ASAMSKRTA](#)) phenomena, especially [NIRVĀNA](#), which are not subject either to production or extinction. In some MAHĀYĀNA SŪTRAS, all phenomena, including compounded ([SAMSKRTA](#)) phenomena, are described as being aniruddha, which is interpreted to mean that from the standpoint of absolute truth ([PARAMĀRTHASATYA](#)), they are not produced and therefore are not extinguished or do not cease. See [NIRODHA](#).

[Aniruddha](#). (P. Anuruddha; T. Ma 'gags pa; C. Analü; J. Anaritsu; K. Anayul 阿那律). One of the ten great disciples of the Buddha, who was [GAUTAMA](#)'s first cousin and brother of [MAHĀNĀMAN](#). Along with many others of the Buddha's relatives in the [ŚĀKYA](#) clan, such as [ĀNANDA](#) and [DEVADATTA](#), Aniruddha renounced the life of a householder to become a disciple of the Buddha when the Buddha returned to his home town of [KAPILAVASTU](#) after his enlightenment. According to legend, Aniruddha was once scolded by the Buddha for sleeping too much. Aniruddha subsequently devoted himself to vigorous practice without sleep (see [DHUTAṄGA](#)), as a consequence of which he became blind. The Pāli [THERAGĀTHĀ](#) notes that he did not sleep at all for twentyfive years, and that for the last thirty years of his life, he slept only during the last watch of the night. Despite his physical blindness, he attained through his meditative practice the divine eye ([DIVYACAKSUS](#)) and came to be ranked as foremost among the Buddha's disciples in that attainment. For this reason, in East Asia, he is given the epithet Tianyan Diyi or “First of Those Who Have the Divine Eye.” According to Pāli tradition, after the recitation of the Buddha's teachings at the first Buddhist council ([COUNCIL, FIRST](#)), Aniruddha and his disciples were entrusted with preserving the [AṄGUTTARANIKĀYA](#). Aniruddha and the Buddha held one another in particularly high regard, and many of the Buddha's

discourses were addressed personally to him. In assemblies, Aniruddha always sat near the Buddha, and he was present at the Buddha's death. He consoled his fellow monks at their master's passing ([PARINIRVĀNA](#)) and advised the [MALLĀ](#) on how properly to carry out the funerary rites.

[anisong](#). In Thai, “blessings” (from the Pāli ānisamsa [S. [ANUSĀMSA](#)], “blessing” or “merit”), referring to a type of text in the northern Thai tradition that explains the benefits of certain merit-making rituals. The anisong may have been written specifically to encourage participation in Buddhist rituals and festivals.

anitya. [alt. anityatā] (P. anicca; T. mi rtag pa; C. wuchang; J. mujō; K. musang 無常). In Sanskrit, “impermanence”; the first of the “three marks” ([TRILAKSANA](#)) of existence, along with suffering ([DUHKHA](#)), and nonself ([ANĀTMAN](#)). “Impermanence” refers to the fact that compounded objects ([SAMSKRTA](#)) created by causes ([HETU](#)) and conditions ([PRATYAYA](#)) are inevitably subject to change, decline, and finally destruction. Because conditioned objects are subject to such impermanence, they are seen to be unsuitable objects for either desire ([LOBHA](#)) or hatred ([DVESA](#)), thus prompting the meditator to turn away from conditioned objects and toward the unconditioned ([ASAMSKRTA](#)). Mistaking what is in fact impermanent for something permanent is one of the four fundamental “inverted views” ([VIPARYĀSA](#)) and a primary cause of suffering. Two kinds of impermanence (see [ER WUCHANG](#)) are sometimes delineated: “impermanence marked by a successive period” (S. prabandhānitya, C. xiangxu wuchang), i.e., when an event or length of time has elapsed, such as the ending of a human life or the waning daylight at dusk; and “impermanence that occurs at every thought-instant” (S. kṣaṇikānitya, C. niannian wuchang), i.e., the inexorable change that is taking place anytime and anywhere, even before an event has come to an end (e.g., even before a person’s biological death, the person “dies” every instant in the continuum of flux that defines his existence). ¶ In the [SARVĀSTIVĀDA ABHIDHARMA](#) system, anityatā (more technically “desinence,” viz., death) is treated as a “conditioned force dissociated from thought” ([CITTAVIPRAYUKTASAMSKĀRA](#)), which functions as one of the four conditioned characteristics ([CATURLAKSANA](#), [SAMSKRTALAKSANA](#)) that are associated with all conditioned objects. Because the ontology of the Sarvāstivāda school, as its name implies, postulated that “everything exists” in all three time periods ([TRIKĀLA](#)) of past, present, and future, the school had to posit some mechanism through which to account for the apparent change that conditioned objects underwent through time. Therefore, along with the other three characteristics of birth ([JĀTI](#)), continuance ([STHITI](#)), and senescence ([JARĀ](#)), desinence was posited as a “conditioned force dissociated from thought” that serves as the predominant condition of an object’s death. The very definition of conditioned objects is that they are subject to these conditioned characteristics, including this inevitability of death, and this is what ultimately distinguishes them from the unconditioned (asamskrta), viz., [NIRVĀNA](#).

aniyata. (T. gzhan ’gyur; C. buding; J. fujō; K. pujōng 不定). In Sanskrit and

Pāli, “undetermined” or “indeterminate”; the term has separate usages in both [ABHIDHARMA](#) and [VINAYA](#) materials. In the abhidharma analysis of mind, among the mental constituents ([CAITTA](#), P. [CETASIKA](#)), “indeterminate” refers to mental factors that, depending on the intention of the agent, may be virtuous, nonvirtuous, or neutral. They are variously listed as four (in the [YOGĀCĀRA](#) hundred-dharmas list) or eight (in the seventy-five dharmas list of the [SARVĀSTIVĀDA](#) school) and include sleep ([MIDDHA](#)), contrition ([KAUKRTYA](#), which can be nonvirtuous when one regrets having done a good deed), applied thought or investigation ([VITARKA](#)), and sustained thought or analysis ([VICĀRA](#)). ¶ In the vinaya (rules of discipline), “undetermined” refers to a category of ecclesiastical offenses of “uncertain” gravity, which therefore must be evaluated by the [SAMGHA](#) in order to make a determination. Aniyata offenses are of two types and always concern the conduct of a monk toward a woman in either (1) private or (2) semiprivate situations. For the monk, even to place himself in such a potentially compromising situation is an offense, since it can arouse suspicion among the laity about the monk’s intentions. After learning of such an offense, the saṃgha must then determine the seriousness of the monk’s offense by evaluating his conduct while in that situation. After due evaluation, his “undermined” offense will then be judged accordingly as one of three types: (1) [PĀRĀJIKA](#), or most grave, entailing “defeat”; (2) [SAMGHĀVAŚESA](#) (P. saṅghādisesa), the second most serious category, entailing confession before the assembly and expiation; and (3) [PĀYATTIKA](#) (P. pācittiya), the least serious offense, requiring only confession.

[aniyatagotra](#). (T. rigs ma nges pa; C. buding zhongxing; J. fujōshushō; K. pujōng chongsōng 不定種姓). In Sanskrit, “indeterminate lineage”; referring to those beings who are not predestined to a particular path and who, depending on circumstances, may follow one path and then change to another. According to some [YOGĀCĀRA](#) schools, at birth some beings are endowed with an inherent lineage ([PRAKRTISTHAGOTRA](#)) directing them toward one of three vehicles: the [ŚRĀVAKAYĀNA](#), [PRATYEKABUDDHAYĀNA](#), or [BODHISATTVAYĀNA](#). The difficulty or ease with which they proceed on the path results from a developed lineage ([SAMUDĀNĪTAGOTRA](#)) obtained from cultivating earlier wholesome roots ([KUŚĀLAMŪLA](#)). For such persons, the lineages of the śrāvaka, pratyekabuddha, and bodhisattva remain definite even when facing great hindrances. There are also persons of indeterminate or indefinite lineage. For such persons, whether they follow the śrāvaka, pratyekabuddha, or bodhisattva path depends on

circumstances, such as which teacher they encounter. Persons of this lineage can therefore change their path. For example, beginner ([ĀDIKARMIKA](#)) bodhisattvas may revert to a śrāvaka path and seek personal [NIRVĀNA](#) when faced with either the prospect of the difficult deeds (*duṣkaracaryā*) that bodhisattvas must perform for the sake of others or the seemingly interminable length of time (see [ASAMKHYEYAKALPA](#)) required to achieve full enlightenment ([ANUTTARASAMYAKSAMBODHI](#)). In addition, a Śrāvaka may be inspired to seek buddhahood for the sake of all beings and thus switch to the bodhisattva path.

[añjali\[mudrā\]](#). (T. *thal mo sbyar ba*; C. *hezhang*; J. *gasshō*; K. *hapchang* 合掌). In Sanskrit and Pāli, “gesture of supplication” or “gesture of greeting.” The añjali is a traditional Indian gesture of salutation and respect wherein the palms of the hands are pressed together with fingers pointing up, usually at the level of the heart or the forehead. As a specific type of gesture ([MUDRĀ](#)), añjali is used to symbolize thusness ([TATHATĀ](#)). In Buddhist iconography, this is one of the principal mudrās of [AVALOKITEŚVARA](#), who in several forms holds a wish-fulfilling gem ([CINTĀMANI](#)) between cupped palms at his heart. This gesture is also commonly seen in images of religious donors and patrons.

[anjitsu](#). (C. *anishi*; K. *amsil* 庵室). In Japanese “hut” or “hermitage”; the term is used for a small residence often used by monks to further their training away from the company of others. According to various sources, such as the [SHASEKISHŪ](#), an anshitsu was preferably built deep in the mountains, far away from the hustle and bustle of cities and towns, which might distract monks from their practice. See also [AN](#).

[ankokuji](#). (安國寺). In Japanese, “temples for the pacification of the country.” After the Ashikaga shogunate took over control of the capital of Kyōto from the rapidly declining forces of Emperor Godaigo (1288–1339) between the years 1336 and 1337, they sought to heal the scars of civil war by following the suggestions of the [ZEN](#) master [MUSŌ SOSEKI](#) and building pagodas and temples in every province of Japan. By constructing these temples, the shogunate also sought to subsume local military centers under the control of the centralized government, just as the monarch Shōmu (r. 724–749) had once done with the [KOKUBUNJI](#) system. These pagodas were later called *rishōtō*, and the temples were given the name *ankokuji* in 1344. Many of these temples belonged to the lineages of the [GOZAN](#) system, especially that of Musō and [ENNI BEN’EN](#).

anleguo. (J. anrakukoku; K. allakkuk 安樂國). In Chinese, the “land of peace and happiness.” One of the many names in Chinese for the buddha-field ([BUDDHAKSETRA](#)) of [AMITĀBHA](#) known as [SUKHĀVATĪ](#) or the “realm of bliss.” Other terms such as [JILE](#) or [JINGTU](#), however, are more commonly used to translate the Sanskrit term *sukhāvātī*.

Anle ji. (安樂集). In Chinese, “Collected Writings on the Land of Peace and Happiness”; an influential Chinese Buddhist treatise compiled by the monk [DAOCHUO](#) sometime during the early seventh century. The text is divided into twelve sections that largely consist of scriptural quotations and exhortations to seek rebirth in [AMITĀBHA](#)’s [PURE LAND](#), otherwise known as the land of peace and happiness ([ANLEGUO](#)). The *Anle ji* classifies the Buddha’s teachings into two “gates” known as the “sagely way” (*shengdao men*) and the “pure land” (*jingtu men*). The latter refers to the teachings of the Buddha that emphasize the chanting of his name and especially that of the buddha Amitābha, and the former refers to those teachings that expound the means of attaining [NIRVĀNA](#) or enlightenment. This classification became the standard defense for the practice of [NIANFO](#), or “chanting the name of the Buddha.” Many of Daochuo’s contemporaries, such as Jiakai (d.u.), also noted inconsistencies in certain parts of the text that have even led some to argue that the text was not compiled by Daochuo.

Anlu. (C) (安錄). See [ZONGLI ZHONGJING MULU](#).

Annen. (安然) (841–889?). Japanese TENDAI (C. [Tiantai](#)) monk considered to be the founder of Japanese Tendai esoterism and thus also known as *Himitsu daishi*. Annen studied under [ENNIN](#) and initiated a reform of the Japanese Tendai tradition by incorporating new teachings from China called [MIKKYŌ](#), or esoteric Buddhism. He received the bodhisattva precepts at [ENRYAKUJI](#) on Mt. Hiei ([HIEIZAN](#)) in 859 and by 884 had become the main dharma lecturer at Gangyoji. He subsequently was the founder of a monastery called Godaiin and is therefore often known to the tradition as “master Godaiin” (*Godaiin daitoku* or *Godaiin ajari*). Over one hundred works are attributed to Annen on both the exoteric and esoteric teachings of Tendai as well as on Sanskrit [SIDDHAM](#) orthography; dozens are extant, including texts that are considered primary textbooks of the Japanese Tendai tradition, such as his *Hakke hiroku*, *Kyōjijō*, and *Shittanzō*. Annen is especially important for having examined comprehensively the relationship between precepts associated with the esoteric tradition and the Buddhist

monastic precepts, including the bodhisattva precepts ([BODHISATTVAŚĪLA](#)); his ultimate conclusion is that all precepts ultimately derive from specific sets of esoteric precepts.

An Shigao. (J. An Seikō; K. An Segō 安世高) (fl. c. 148–180 CE). An early Buddhist missionary in China and first major translator of Indian Buddhist materials into Chinese; he hailed from Arsakes (C. [ANXI GUO](#)), the Arsacid kingdom (c. 250 BCE–224 CE) of [PARTHIA](#). (His ethnicon [AN](#) is the Chinese transcription of the first syllable of Arsakes.) Legend says that he was a crown prince of Parthia who abandoned his right to the throne in favor of a religious life, though it is not clear whether he was a monk or a layperson, or a follower of [MAHĀYĀNA](#) or [SARVĀSTIVĀDA](#), though all of the translations authentically ascribed to him are of mainstream Buddhist materials. An moved eastward and arrived in 148 at the Chinese capital of Luoyang, where he spent the next twenty years of his life. Many of the earliest translations of Buddhist texts into Chinese are attributed to An Shigao, but few can be determined with certainty to be his work. His most famous translations are the *Ren benyu sheng jing* ([MAHĀNIDĀNASUTTANTA](#)), [ANBAN SHOUYI JING](#) ([ĀNĀPĀNASĀTISUTTA](#)), *Yinchiru jing*, and *Daodi jing*. Although his *Anban shouyi jing* is called a [SŪTRA](#), it is in fact made up of both short translations and his own exegesis on these translations, making it all but impossible to separate the original text from his exegesis. An Shigao seems to have been primarily concerned with meditative techniques such as [ĀNĀPĀNASMṚTI](#) and the study of numerical categories such as the five [SKANDHAS](#) and twelve [ĀYATANAS](#). Much of An’s pioneering translation terminology was eventually superseded as the Chinese translation effort matured, but his use of transcription, rather than translation, in rendering seminal Buddhist concepts survived, as in the standard Chinese transcriptions he helped popularize for buddha (C. [FO](#)) and [BODHISATTVA](#) (C. pusa). Because of his renown as an early translator, later Buddhist scriptural catalogues ([JINGLU](#)) in China ascribed to An Shigao many works that did not carry translator attributions; hence, there are many indigenous Chinese Buddhist scriptures (see [APOCRYPHA](#)) that are falsely attributed to him.

antagrāhadṛṣṭi. (T. mthar ’dzin gyi lta ba; C. bianjian; J. henken; K. pyōn’gyōn 邊見). In Sanskrit, “extreme views”; one of the five major types of (wrong) views ([DRSTI](#)), along with the view that there is a perduring self, or soul ([SATKĀYADRSTI](#)); fallacious views ([MITHYĀDRSTI](#)); the attachment to views

([DRSTIPARĀMARŚA](#)); and attachment to rites and rituals ([ŚĪLAVRATAPARĀMARŚA](#)). “Extreme views” refers specifically to the mistaken notion that there is a perduring soul that continues to be reborn unchanged from one lifetime to the next, or to the self as being annihilated at death and thus not subject to rebirth. The former view is called the extreme of eternalism ([ŚĀŚVATADRSTI](#); P. sassatadiṭṭhi); the latter, the extreme of annihilationism ([UCCHEADRSTI](#); P. ucchedadiṭṭhi). The Buddhist middle way ([MADHYAMAPRATIPAD](#)) between these two extremes posits that there is no permanent, perduring soul (countering eternalism), and yet there is karmic continuity from one lifetime to the next (countering annihilationism).

antarābhava. (T. bar do'i srid pa/bar do; C. zhongyin/zhongyou; J. chūin/chūu; K. chungŭm/chungyu 中陰/中有). In Sanskrit, “intermediate state” or “transitional existence,” a transitional state between death (maraṇabhava) and rebirth (upapattibhava), distinct from the five or six destinies of [SAMSĀRA](#) (see [GATI](#)), during which time the transitional being ([GANDHARVA](#)) prepares for rebirth. The antarābhava is considered one of sentient beings’ “four modes of existence” (catvāro bhavāḥ), along with birth/rebirth (upapattibhava), life (pūrvakālabhava), and death (maraṇabhava). The notion of an intermediate state was controversial. Schools that accepted it, including the [SARVĀSTIVĀDA](#) and most [MAHĀYĀNA](#) traditions, resorted to scriptural authority to justify its existence, citing, for example, [SŪTRAS](#) that refer to seven states of existence (bhava), including an antarābhava. A type of nonreturner ([ANĀGĀMIN](#)), the third stage of sanctity in the mainstream Buddhist schools, was also called “one who achieved [NIRVĀNA](#) while in the intermediate state” ([ANTARĀPARINIRVĀYIN](#)), again suggesting the scriptural legitimacy of the antarābhava. There were several views concerning the maximum duration of the [ANTARĀBHAVA](#). The [ABHIDHARMAMAHĀVIBHĀSĀ](#), for example, lists such variations as instantaneous rebirth, rebirth after a week, indeterminate duration, and forty-nine days. Of these different durations, forty-nine days became dominant, and this duration is found in the [ABHIDHARMAKOŚABHĀSYA](#) and the [YOGĀCĀRABHŪMIŚĀSTRA](#). Ceremonies to help guide the transitional being toward a more salutary rebirth, if not toward enlightenment itself, take place once weekly (see [QIQI JI](#)); these observances culminate in a “forty-ninth day ceremony” ([SISHIJIU \[RI\] ZHAI](#)), which is thought to mark the end of the process of transition, when rebirth actually occurs. The transitional being in the intermediate state is termed either a gandharva (lit. “fragrance eater”), because it does not take solid food but is said to subsist only

on scent (gandha), or sometimes a “mind-made body” ([MANOMAYAKĀYA](#)). During the transitional period, the gandharva is searching for the appropriate place and parents for its next existence and takes the form of the beings in the realm where it is destined to be reborn. In the Tibetan tradition, the antarābhava is termed the [BAR DO](#), and the guidance given to the transitional being through the process of rebirth is systematized in such works as the [BAR DO THOS GROL CHEN MO](#), commonly known in the West as *The Tibetan Book of the Dead*. Like several of the [MAINSTREAM BUDDHIST SCHOOLS](#), the [THERAVĀDA](#) scholastic tradition rejects the notion of an intermediate state, positing instead that an instantaneous “connecting” or “linking” consciousness (P. paṭisandhiviññāna; S. *pratisaṃdhivijñāna) directly links the final moment of consciousness in the present life to the first moment of consciousness in the next.

[antaradhāna](#). In Pāli, “disappearance [of the Buddha’s teachings].” According to the Pāli commentaries, the true dharma (saddhamma) or teaching (sāsana) of the Buddha is destined to survive in the world for at most five thousand years, during which time it will suffer a steady decline in five stages, called the pañcantaradhānāni. There are several alternate theories found in the commentaries as to the specifics of the decline. One version of the five disappearances, which appears in the [MANORATHAPŪRANĪ](#), the commentary to the [AṄGUTTARANIKĀYA](#), describes the sequential disappearance of (1) the four noble (āriya) attainments, (2) observance of the precepts, (3) knowledge of the texts, (4) outward signs of monasticism, and (5) the Buddha’s relics. In the [PRAJÑĀPĀRAMITĀ](#) (perfection of wisdom) literature, there are similarly a number of explanations of the disappearance or extinction of the teaching (saddharmakṣaya). The *Śatasāhasrikāprajñāpāramitābr̥haṭṭikā*, an early commentary extant only in Tibetan, subdivides the five thousand years that the teaching lasts into ten periods of five hundred years each. The first three (the period of understanding) are when people realize the doctrine and attain results of [ARHAT](#), [ANĀGĀMIN](#) (nonreturner), and [SROTAĀPANNA](#) (stream-enterer), respectively; the second three (the period of practice) are when people cultivate insight ([VIPAŚYANĀ](#)), serenity ([ŚAMATHA](#)), and morality ([ŚĪLA](#)), respectively; the third three are when the majority have a scripture-centered religious life based on the [ABHIDHARMA](#), [SŪTRA](#), and [VINAYA](#) sections of the [TRIPITAKA](#); and the final five hundred years are when there is just the mere show of the dharma. See also [MOFA](#); [SADDHARMAVIPRALOPA](#).

antarāparinirvāyin. (T. bar ma dor yongs su mya ngan las 'das pa; C. zhong ban/zhong banniepan; J. chūhatsu/chūhatsunehan; K. chung pan/chung panyōlban 中般/中般涅槃). In Sanskrit, “one who achieves [NIRVĀNA](#) in the [ANTARĀBHAVA](#) (intermediate state)”; a specific type of nonreturner ([ANĀGĀMIN](#)), one of the twenty members of the āryasaṃgha (see [VIMŚATIPRABHEDASAMGHA](#)). According to the [ABHIDHARMAKOŚABHĀSYA](#), the antarāparinirvāyin are nonreturners who, having been reborn in any of the seventeen intermediate states that would have led to rebirth in the realm of subtle materiality ([RŪPADHĀTU](#)) (with the exception of the great Brahmā heaven), enter “nirvāṇa without remainder” ([NIRUPADHIŚESANIRVĀNA](#)) on the basis of that support. There are three types: those who enter into nirvāṇa without remainder immediately after the intermediate state comes into being; those who enter after it has come into being and just before the sequence of events leading to the conception state begins; and those who enter when thoughts begin to turn toward the conception state.

antarvāsas. (P. antaravāsaka; T. smad g.yogs; C. neiyi; J. naie; K. naeüi 內衣). In Sanskrit, the “lower robe” or “waist cloth”; one of the “three robes” ([TRICĪVARA](#)) worn by a monk or nun, along with the larger outer robe (S. [SAMGHĀTĪ](#); P. saṅghāṭi) and the upper robe (S. [UTTARĀSAMGA](#); P. uttarāsaṅga). See also [CĪVARA](#); [KĀSĀYA](#).

antevāsika. [alt. antevāsī] (T. nye gnas; C. jinzhu dizi; J. gonjū deshi; K. kŭnju cheja 近住弟子). In Pāli and Sanskrit, a “pupil” who dwells with a teacher. A monk who loses his preceptor (P. upajjhāya; S. [UPĀDHYĀYA](#)) while still in need of “guidance” (P. [NISSAYA](#); S. [NĪŚRAYA](#)) must seek instruction and training under another qualified master. This new master is called the [ĀCARIYA](#) (S. [ĀCĀRYA](#)), or “teacher,” and the monk is then designated an antevāsika, or “pupil.” The same relationship pertains between the antevāsika and the ācariya as between a *SĀRDHAVIHĀRIN (P. saddhivihārika) and an upajjhāya, and it is described as being like that of a son and father. Accordingly, the pupil is required to serve the daily needs of his teacher, by, for example, providing him with water, washing and preparing his robes and alms bowl, cleaning his residence, accompanying him on journeys, attending him when he is sick, and so forth. As part of his responsibilities toward the teacher, if the teacher should begin to entertain doubts about the doctrine or his ability to practice, the pupil is to try to dispel them. If the teacher should commit a grave offense against the rules of the saṃgha, the pupil is supposed to try to prevail upon his teacher to go before the saṃgha to

receive its judgment. An antevāsika requires the permission of his ācariya to attend to others, to accompany others on alms round ([PINDAPĀTA](#)), to seek instruction from others, *etc.* The antevāsika is required to seek pardon from his ācariya for any wrongdoing, and may be expelled for bad behavior. A fully ordained monk (P. bhikkhu; S. [BHIKSU](#)) must remain under the guidance (nissaya) of either his upajjhāya or an ācariya or for a minimum of five years from the time of his ordination. A monk may be required to live under nissaya for a longer period, or for his whole life, if he is unable to become competent in [DHARMA](#) and [VINAYA](#).

[antidote](#). See [PRATIPAKSA](#).

[anubhāva](#). (T. mthu; C. weishen; J. ijin; K. wisin 威神). In Sanskrit and Pāli, “majesty” or “splendor”; referring to the inconceivable power and glory of the buddhas, the spiritual equivalent to the majesty of royalty. The term is often found in compound to express different aspects of Buddhistic splendor. For example, the buddhas are said to have the ability to display various psychic powers ([RDDHI](#)), including telekinesis, and the ability to walk through walls and to project themselves infinitely (see [ADHISTHĀNA](#)); the majestic power displayed through these thaumaturgic abilities is termed ṛddhyanubhāva (P. iddhānubhāva).

[anujñā](#). (T. rjes gnam). In Sanskrit, “authorization”; referring to a ritual less elaborate than the [ABHISEKA](#) (consecration) rite, which imparts the authorization to perform certain practices within a particular cycle of tantric instructions, including deity yoga ([DEVATĀYOGA](#)) and [MANTRA](#) recitation, but excluding the activities of teaching and bestowing consecrations authorized by the final part of the abhiṣeka, the [ĀCĀRYA](#) (teacher) consecration.

[anulomañāna](#). In Pāli, “conformity knowledge”; according to the [VISUDDHIMAGGA](#), this is the ninth and last of nine knowledges (P. ñāṇa, S. [JÑĀNA](#)) cultivated as part of the purity of knowledge and vision of progress along the path (P. paṭipadañāṇadassanavisuddhi). This latter category, in turn, constitutes the sixth of the seven purities ([VISUDDHI](#)) to be developed along the path to liberation. “Conformity knowledge” refers to the last three so-called impulsion moments (javana) of consciousness that arise in the mind of the practitioner preceding his perception of the nibbāna element ([NIRVĀNADHĀTU](#)). This knowledge is so named because it conforms itself to the preceding eight

stages of knowledge, as well as to the immediately following supramundane path (P. āriyamāgga, S. [ĀRYAMĀRGA](#)) and the thirty-seven constituents of enlightenment (P. bodhipakkhiyadhamma, S. [BODHIPĀKṢIKADHARMA](#)). When the three moments are treated separately, they receive different names. The first impulsion moment is called “preparation” (P. parikamma), when adaptation knowledge takes as its object the compounded formations ([SAMSKĀRA](#)) as being something impermanent ([ANITYA](#)), suffering ([DUHKHA](#)), and nonself ([ANĀTMAN](#)). Immediately thereafter, the second impulsion moment arises, which takes the same formations as its object and is called “access” (upacāra). Immediately following that the third impulsion moment arises taking the same object, which is called “conformity” (anuloma). At this point, the practitioner is at the threshold of liberation (P. vimokkha, S. [VIMOKSA](#)), and, therefore, conformity knowledge is described as the final stage in what is called “insight leading to emergence” (P. vuṭṭhānagāminivipassanā). This category includes the sixth, seventh, and eighth knowledges (ñāṇa) in the ninefold schema: namely, “knowledge arising from the desire for deliverance” (P. [MUCCITUKAMYATĀÑĀNA](#)), “knowledge arising from the contemplation on reflection” (P. [PATISĀṆKHĀNUPASSANĀÑĀNA](#)), and “knowledge arising from equanimity regarding all formations of existence” (P. [SAṆKHĀRUPEKKHĀÑĀNA](#)).

[anulomapratiloma](#). (P. anulomapaṭiloma; T. lugs ’byung lugs ldog; C. shunni; J. jungyaku; K. sunyŏk 順逆). In Sanskrit, “forward and reverse”; a term most commonly used in discussions of the twelvefold chain of dependent origination ([PRATĪTYASAMUTPĀDA](#)). The “forward” order of the twelve constituents provides an account of the origin of [SAMSĀRA](#), i.e., an ontology, whereby ignorance produces predispositions, (linking) consciousness, and name-and-form, ultimately leading to birth, aging, and death. The “reverse” order refers to the soteriological sequence, whereby birth, aging, and death are ended by bringing an end ultimately to ignorance; thus, from the cessation of ignorance, volitional action ceases; from the cessation of volitional action, consciousness ceases; and so on.

[anumāna](#). (T. rjes su dpag pa; C. biliang; J. hiryō; K. piryang 比量). In Sanskrit and Pāli, “inference.” In Buddhist logic and epistemology, inference is considered to be one of the two forms of valid knowledge ([PRAMĀNA](#)), along with direct perception ([PRATYAKṢA](#)). Inference allows us to glean knowledge concerning objects that are not directly evident to the senses. In the Buddhist

logical traditions, inferences may be drawn from logical signs ([HETU](#), [LĪNGA](#)): e.g., there is a fire on the mountain ([SĀDHYA](#)), because there is smoke ([SĀDHANA](#)), like a stove ([SAPAKSA](#)), unlike a lake ([VIPAKSA](#)).

[Anumānasutta](#). (C. Biqiu qing jing; J. Bikushōkyō; K. Pigu ch'ong kyōng 比丘請經). In Pāli, “Discourse on Inference,” the fifteenth sutta of the [MAJJHIMANIKĀYA](#) (a separate [SARVĀSTIVĀDA](#) recension appears as the eighty-ninth [SŪTRA](#) in the Chinese translation of the [MADHYAMĀGAMA](#)). The sūtra was preached by [MAHĀMAUDGALYĀYANA](#) (P. Mahāmoggallāna) to a large group of monks at Suṃsumāragiri in the Bhagga country. Mahāmaudgalyāyana enumerates sixteen faults that make it difficult for a monk to be admonished by his teachers or fellow monks, such as evil wishes, conceit, deceit, anger, resentment, stubbornness, defensiveness, and prevarication. Should a monk discover any of these negative traits within himself, he should strive to remove them.

[anumodana](#). (T. rjes su yi rang; C. suixi; J. zuiki; K. suhŭi 隨喜). In Sanskrit and Pāli, “admiration” or “gratification,” also written anumodanā; the act of taking delight in the virtuous acts of others, which, in contrast to the unwholesome emotion of envy ([IRSYĀ](#)), enables one also to accumulate virtue for oneself. It is considered an effective means of gaining merit ([PUNYA](#)) and figures as a standard component in [MAHĀYĀNA](#) liturgies, including the three-part Mahāyāna liturgy ([TRISKANDHAKA](#)) and the sevenfold [PŪJĀ](#) ([SAPTĀṄGAVIDHI](#)). Anumodanā is also used in mainstream Buddhism to refer to the “benedictions” (C. zhouyuan) that monks recite after receiving a meal or a gift, which express thanks or “gratification” to the donors for their offerings.

[Anūnatvāpūrṇatvanirdeśa](#). (C. Buzeng bujian jing; J. Fuzōfugengyō; K. Pujŏng pulgam kyōng 不增不減經). In Sanskrit, the “Neither Increase nor Decrease Sūtra,” one of the earliest [TATHĀGATAGARBHA](#) (embryo of the tathāgatas) scriptures, along with the [TATHĀGATAGARBHASŪTRA](#) and the [ŚRĪMĀLĀ-DEVĪSIMHANĀDASŪTRA](#). The text, only a single roll in length, was far more influential in the development of tathāgatagarbha thought in East Asia than its length might suggest. The complete text survives only in a Chinese translation made in 525 by [BODHIRUCI](#) (d. 527). Neither Sanskrit nor Tibetan recensions of the text are extant, although the [RATNAGOTRAVIBHĀGA](#) includes many quotations from the scripture. The *Anūnatvāpūrṇatvanirdeśa* explains the absolute identity between sentient beings and the [DHARMAKĀYA](#) of the buddhas through the concept of tathāgatagarbha. According to the scripture, although

sentient beings endure endless rebirths among the six destinies ([GATI](#)) because of afflictions ([KLEŚA](#)), they in fact neither arise nor perish because they are all actually manifestations of the unchanging dharmakāya. Since sentient beings are therefore nothing other than the dharmakāya—and since the dharmakāya is unchanging, ever-present, and subject neither to increase nor to decrease—the sentient beings who possess the dharmakāya as their nature also “neither increase nor decrease.” The scripture also explains that such wrong views as the notion that sentient beings are subject to increase or decrease are caused by not realizing that the realms of sentient beings and tathāgatas are in fact one and the same. When the dharmakāya is obscured by afflictions and resides in the suffering of [SAMSĀRA](#), it is called a sentient being; when it is cultivating the perfections ([PĀRAMITĀ](#)) and developing a repugnance for the suffering of saṃsāra, it is called a [BODHISATTVA](#); when it is pure and free from all afflictions, it is called a tathāgata. Sentient beings, tathāgatagarbha, and dharmakāya are therefore merely different names for the one realm of reality ([DHARMADHĀTU](#)). The *Anūnatvāpūrṇatvanirdeśa* thus emphasizes the immanent aspect of tathāgatagarbha, whereas the *Śrīmālāsūtra* emphasizes its transcendent aspect.

[anupadhiśeṣanirvāṇa](#). [alt. nirupadhiśeṣanirvāṇa] (P. anupādisesanibbāna; T. phung po’i lhag ma med par mya ngan las ’das ba / lhag med myang ’das; C. wuyu niepan; J. muyonehan; K. muyō yōlban 無餘涅槃). In Sanskrit, “the nirvāṇa without remainder”; one of the two kinds of [NIRVĀṆA](#), along with “the nirvāṇa with remainder” ([SOPADHIŚEṢANIRVĀṆA](#)). After a buddha or, in some interpretations, an [ARHAT](#) has achieved awakening ([BODHI](#)), some Buddhist schools distinguish between the experience of nirvāṇa while it is still accompanied by a substratum of existence (upadhi = [SKANDHA](#)) and the nirvāṇa that is completely freed from that substratum. According to this view, at the time of his enlightenment under the [BODHI TREE](#), the Buddha achieved the nirvāṇa with remainder, because he had destroyed all causes for future rebirth, but the “remainder” of his mind and body persisted. The anupadhiśeṣanirvāṇa subsequently occurred at the time of the Buddha’s death. It was achieved through having brought an absolute end to any propensity toward defilement ([KLEŚA](#)) and of the causes that would lead to any prospect of future rebirth; it is therefore the total extinction of all conventional physical and mental existence. The nirvāṇa that is experienced at death is thus “without remainder” because there are no physical or mental constituents remaining that were the products of previous [KARMA](#); anupadhiśeṣanirvāṇa is therefore synonymous with

[PARINIRVĀNA](#). Since this type of nirvāṇa results from the complete eradication of the afflictive destructions ([KLEŚĀVARANA](#)), [MAINSTREAM BUDDHIST SCHOOLS](#) typically claim that it is accessible by [ŚRĀVAKAS](#) and [PRATYEKABUDDHAS](#). However, according to those proponents of the [MAHĀYĀNA](#) who assert that all beings will eventually become buddhas, arhats do not enter anupādiśeṣanirvāṇa upon death but instead enter the uncontaminated realm ([ANĀSRAVADHĀTU](#)), where they remain in states of deep concentration until they are roused by the buddhas and exhorted to abandon their “unafflicted ignorance” ([AKLISTĀJÑĀNA](#)). In the [YOGĀCĀRA](#) school, anupādiśeṣanirvāṇa is one of the four kinds of nirvāṇa, which entails the cessation of any tendency toward delusion through the transformation of the eighth consciousness, the storehouse consciousness ([ĀLAYAVIJÑĀNA](#)), into the mirrorlike knowledge ([ĀDARŚAJÑĀNA](#)).

anupalabdhi. [alt. anupalambha] (T. mi dmigs pa / dmigs med; C. bukede; J. fukatoku; K. pulgadūk 不可得). In Sanskrit, “unascertainable,” “noncognition,” or “non-observation,” describing the peculiar type of cognition inherent in enlightenment, in which perception occurs without any bifurcation between subject and object in the case of [YOGĀCĀRA](#) or without any perception or “observation” of intrinsic existence ([SVABHĀVA](#)) in the case of [MADHYAMAKA](#) and is thus freed from any kind of false dichotomization. This type of perception is therefore “unascertainable,” viz., freed from conventional types of cognition and thus “noncognition.”

anupassanā. (S. [ANUPĀŚYANĀ](#)). In Pāli, “contemplation.” A term applied to several sets of meditation practices, most notably as enumerated under the category of the four “foundations of mindfulness” (P. satipaṭṭhāna; S. [SMRTYUPASTHĀNA](#)). The first foundation is called “contemplation of the body” (kāyānupassanā, S. [KĀYĀNUPĀŚYANĀ](#)) and comprises fourteen practices, which include mindfulness of breathing (P. ānāpānasati, S. [ĀNĀPĀNASMRTI](#)), mindfulness of postures or deportments (P., iriyāpatha, S. [IRYĀPATHA](#)), full awareness of bodily actions, contemplation of bodily impurities, contemplation of the four physical elements ([DHĀTU](#), [MAHĀBHŪTA](#)), and nine cemetery meditations (P. asubhabhāvanā, S. [ĀSUBHABHĀVANĀ](#)). The second foundation is called “contemplation of sensations” (P. vedanānupassanā, S. vedanānupasyanā) and consists of one practice: mindfulness of physical sensations ([VEDANĀ](#)) as pleasant, unpleasant, or neutral. The third foundation is called “contemplation of mind” (P. cittānupassanā, S. cittānupasyanā) and consists of one practice:

mindfulness of one's general state of mind ([CITTA](#)), *e.g.* as calm or distracted, elated or depressed, *etc.* The fourth foundation is “contemplation of mind-objects” (P. dhammānupassanā, S. dharmānupasyanā) and includes five meditations on specific categories of factors (P. dhamma, S. [DHARMA](#)), namely: the five hindrances ([NĪVARANA](#)), the five aggregates ([SKANDHA](#)), the six sense bases and six sense objects ([ĀYATANA](#)), the seven enlightenment factors ([BODHYAṄGA](#)), and the [FOUR NOBLE TRUTHS](#). In the Pāli [SATIPATTHĀNASUTTA](#), the four anupassanās are extolled as the one path leading to the realization of nibbāna ([NIRVĀNA](#)). Another common set of anupassanās found in the Pāli tradition includes three members: (1) contemplation of impermanence (aniccānupassanā), (2) contemplation of suffering (dukkhānupassanā), and (3) contemplation of nonself (anattānupassanā). In the [PATISAMBHIDĀMAGGA](#), this list is expanded to ten with the addition of (4) contemplation of nirvāṇa (nibbānānupassanā), (5) contemplation of dispassion (virāgānupassanā), (6) contemplation of cessation (nirodhānupassanā), (7) contemplation of renunciation (paṭinissaggānupassanā), (8) contemplation of signlessness (animittānupassanā), (9) contemplation of desirelessness (appaṇihitānupassanā), and (10) contemplation of emptiness (suññatānupassanā).

[anupaśyanā](#). (T. rjes su lta ba; C. xunguan; J. junkan; K. sun'gwan 循觀). In Sanskrit, “contemplation” or “consideration.” See [ANUPASSANĀ](#) (P).

[anupubbikathā](#). (S. anupūrvikathā; T. mthar gyis pa; C. cidi shuofa/jianwei shuofa; J. shidai seppō/zen'i seppō; K. ch'aje sōlbōp/chōmwī sōlbōp 次第說法/漸爲說法). In Pāli, “graduated discourse” or “step-by-step instruction”; the systematic outline of religious benefits that the Buddha used to mold the understanding of new lay adherents and to guide them toward the first stage of enlightenment. In this elementary discourse, the Buddha would outline the benefits of generosity (dānakathā) and morality (śīlakathā) before finally holding out for the laity the prospect of rebirth in the heavens (svargakathā). Once their minds were pliant and impressionable, the Buddha then would instruct his listeners in the dangers ([ĀDĪNAVA](#)) inherent in sensuality ([KĀMA](#)) in order to turn them away from the world and toward the advantages of renunciation (P. nekkhamme ānisama; S. NAIṢKRAMYA). Only after his listeners' minds were made fully receptive would the Buddha then go on to teach them the doctrine that was unique to the buddhas: the [FOUR NOBLE TRUTHS](#) of suffering, origination, cessation, and path. Understanding the pervasive reality of the fact that “all that is subject to

production is subject to cessation” (yaṃ kiñci samudayadhammaṃ taṃ nirodhadhammaṃ), the laity would then gain a profound personal understanding of the dharma, which often prompted the experience of “stream-entry” ([SROTAĀPANNA](#)). The “graduated discourse” was such a stock formula in the standard sermon to the laity that it appears only in summary form in the [NIKĀYAS](#) and [ĀGAMAS](#). The only detailed treatment of the graduated discourse appears in the *Tuṇḍilovādasutta* (Advice to Layman Tuṇḍila), a late Pāli apocryphon (see [APOCRYPHA](#)) probably composed in Sri Lanka in the eighteenth century. This late text provides a systematic outline of the specifics of the practice of generosity ([DĀNA](#)), morality ([ŚĪLA](#)), the heavens ([SVARGA](#)), the dangers in sensual desires, and the benefits of renunciation, leading up to the “perfect peace” of nibbāna (S. [NIRVĀNA](#)).

[anupūrvikathā](#). In Sanskrit, “graduated discourse.” See [ANUPUBBIKATHĀ](#).

[Anurādhapura](#). Ancient capital of Sri Lanka nearly continuously from the fourth century BCE to the ninth century CE, with interludes of foreign occupation by Cōḷa forces from South India. To the south of the city was the [MAHĀMEGHAVANA](#) park, which was gifted to the elder [MAHINDA](#) by King [DEVĀNAMPIYATIṢṢA](#) when the latter converted to Buddhism in the third century BCE. Soon, the [MAHĀVIHĀRA](#) and the shrine of the southern branch of the [BODHI TREE](#) were built there. In the second century BCE, King [DUTTHAGĀMANĪ](#) built the seven-storied [LOHAPĀSĀDA](#) and the [MAHĀTHŪPA](#). The site also housed the [ABHAYAGIRI](#) monastery, built in the first century BCE by King [VATTAGĀMANĪ](#), and the [JETAVANA](#) monastery built in the fourth century CE by King Mahāsenā. The latter two monasteries were headquarters of the two eponymous secessionist fraternities of Sri Lankan Buddhism. Although Anurādhapura was abandoned in favor of Pulatthipura as the capital in the ninth century, it remained a center of pilgrimage and religious activity.

[Anuruddha](#). (P) The Pāli name for one of the ten chief disciples of the Buddha; see [ANIRUDDHA](#). ¶ Anuruddha is also the name of the author of the [THERAVĀDA](#) abhidhamma manual [ABHIDHAMMATTHASAṄGAHA](#), as well as the *Paramatthavinicchaya* and the *Nāmarūpapariccheda*. Anuruddha flourished during the eleventh or twelfth century and was the abbot of Mūlasoma Vihāra. His *Abhidhammatthasaṅgaha* has for centuries been the most widely used introductory text for the study of [ABHIDHAMMA](#) (S. [ABHIDHARMA](#)) in monastic colleges throughout the Pāli Buddhist world.

anuśamsa. [alt. ānuśamsa; ānuśamsā, etc.] (P. ānisamsa; T. phan yon; C. gongde/liyi; J. kudoku/riyaku; K. kongdōk/iik 功德/利益). In Buddhist Hybrid Sanskrit, “blessing,” “benefit,” “reward,” or “advantage” that accrues from leading a virtuous life or performing various types of virtuous actions. In the Pāli [MAHĀPARINIBBĀNASUTTANTA](#), for example, while preaching on the benefits of moral rectitude to a gathering of lay disciples in the city of Pāṭaligāma (see [PĀTALIPUTRA](#)), the Buddha enumerates five such blessings that a morally upright person can expect to acquire in this lifetime: first, great wealth (bhogakkhandha); second, a good reputation (kittisadda); third, self-confidence (visārada); fourth, a peaceful death (asammūḷho kālaṃ karoti); and fifth, after he dies, a happy rebirth (saggaṃ lokaṃ upapajjati). In contrast, a morally dissolute person can expect in this lifetime: first, poverty due to sloth; second, a bad reputation; third, shame in the presence of others; fourth, an anxious death; and fifth, after he dies, an unhappy rebirth. In the so-called graduated discourse (P. [ANUPUBBIKATHĀ](#)), the Buddha also teaches the blessings of renunciation (nekkhamme ānisamsa) as a prerequisite to understanding the [FOUR NOBLE TRUTHS](#). Different lists of five, ten, or eighteen such blessings appear in Sanskrit sources. The [PRAJÑĀPĀRAMITĀ](#) literature has long passages praising the merit gained from writing out in book form, reading, memorizing, and generally worshipping the prajñāpāramitā as compared, in particular, to worshipping a [STŪPA](#) containing the relics of a [TATHĀGATA](#), and the commentarial literature lists the benefits (anuśamsa) of the [BODHISATTVA](#)’s path of vision ([DARŚANAMĀRGA](#)) when compared with the earlier understanding of the [FOUR NOBLE TRUTHS](#).

anuśaya. (P. anusaya; T. bag la nyal ba; C. suimian; J. zuimen; K. sumyōn 隨眠). In Sanskrit, “proclivity” or “predisposition”; various unwholesome mental states that lead eventually to suffering. There are several lists, most common of which is a list of six or seven principal proclivities: sensual passion ([KĀMARĀGA](#); see also [RĀGA](#)), hostility ([PRATIGHA](#)), pride ([MĀNA](#)), ignorance ([AVIDYĀ](#)), views ([DRSTI](#)), and skeptical doubt ([VICIKITSĀ](#)); sometimes, passion for existence (bhavarāga) is added as a seventh. The [SARVĀSTIVĀDA](#) school of [ABHIDHARMA](#) offers an extensive list of ninety-eight proclivities, in which drṣṭi is subdivided into five subtypes, giving ten, which are then further subdivided into ninety-eight in relation to the three realms of existence (sensual, subtle materiality, and immaterial) and the five classes of discipline.

anusmaranavikalpa. (T. rjes su dran pa’i rnam rtog; C. suinian fenbie; J. zuinen

funbetsu; K. sunyōm punbyōl 隨念分別). In Sanskrit, “discrimination involving reflection on past events”; the third of the three types of conceptual discrimination ([VIKALPA](#)). See [TRIVIKALPA](#).

[anusmṛti](#). (P. anussati; T. rjes su dran pa; C. nian; J. nen; K. yōm 念). In Sanskrit, “recollection.” The Pāli form anussati is applied to a number of mental exercises enumerated in the Pāli tradition under the category of [KAMMATTHĀNA](#), or topics of meditation. The fifth-century [VISUDDHIMAGGA](#) lists ten such recollections conducive to the cultivation of concentration ([SAMĀDHI](#)): namely, recollection of (1) the [BUDDHA](#), (2) the [DHARMA](#), (3) the [SAMGHA](#), (4) morality, (5) generosity, (6) the gods, (7) death, (8) the body, (9) the in-breath and out-breath, and (10) peace. Of these, recollection or mindfulness (P. sati; S. [SMṚTI](#)) of the in-breath and out-breath can produce all four meditative absorptions ([DHYĀNA](#); P. [JHĀNA](#)), while recollection of the body can produce the first absorption. The remaining recollections can produce only “access concentration” ([UPACĀRASAMĀDHI](#)), which immediately precedes but does not quite reach the first absorption. In East Asia, the practice of recollection of the Buddha ([BUDDHĀNUMSMṚTI](#)) evolved into the recitation of name of the buddha [AMITĀBHA](#) in the form of the Chinese phrase namo Amituo fo (Homage to the buddha Amitābha; see [NAMU AMIDABUTSU](#)). See also [BUDDHĀNUMSMṚTI](#).

[anuśrava](#). (P. anussava; T. gsan pa; C. suiwen; J. zuimon; K. sumun 隨聞). In Sanskrit, “tradition,” “hearsay,” or “report” (in Chinese, it is, literally, “according to what has been heard”), referring to knowledge learned from received tradition, which is said to be unreliable as a standard for judging truth and falsity. In the Pāli [KĀLĀMASUTTA](#), the Buddha rejects the validity of testimony based on anussava (tradition) in favor of what practitioners learn through their own personal training to be blameworthy or praiseworthy, harmful or beneficial.

[anutpāda](#). [alt. anutpanna] (T. skye med; C. wusheng; J. mushō; K. musaeng 無生). In Sanskrit, “unproduced” or “nonproduction”; a term used to describe unconditioned phenomena, especially [NIRVĀNA](#), which are not subject to either production or cessation. In some [MAHĀYĀNA](#) sūtras, all phenomena, including impermanent phenomena, are described as anutpāda; this is interpreted to mean that they ultimately are neither produced nor extinguished.

[anutpādajñāna](#). (T. mi skye ba shes pa; C. wusheng zhi; J. mushōchi; K.

musaeng chi 無生智). In Sanskrit, “knowledge of nonproduction”; one of the two knowledges (along with [KSAYAJÑĀNA](#)) that accompanies liberation from rebirth ([SAMSĀRA](#)). Anutpādajñāna refers specifically to the knowledge that the afflictions ([KLEŚA](#)), once destroyed, will never be produced again. See also [ANUTPATTIKADHARMAKSĀNTI](#).

[anutpanna](#). (S; T. skye med). See [ANUTPĀDA](#).

[anutpattikadharmaksānti](#). (T. mi skye ba’i chos la bzod pa; C. wushengfaren; J. mushōbōnin; K. musaeng pōbin 無生法忍). In Sanskrit, the “acquiescence” or “receptivity” “to the nonproduction of dharmas.” In the [MAHĀYĀNA](#), a [BODHISATTVA](#) is said to have attained the stage of “nonretrogression” ([AVAIVARTIKA](#)) when he develops an unswerving conviction that all dharmas are “unproduced” ([ANUTPĀDA](#)) and “empty” ([ŚŪNYATĀ](#)) in the sense that they lack any intrinsic nature ([NIHŠVABHĀVA](#)). This stage of understanding has been variously described as occurring on either the first or eighth [BHŪMI](#)s of the bodhisattva path. This conviction concerning emptiness is characterized as a kind of “acquiescence,” “receptivity,” or “forbearance” ([KSĀNTI](#)), because it sustains the bodhisattva on the long and arduous path of benefiting others, instilling an indefatigable equipoise, and preventing him from falling back into the selfish preoccupation with personal liberation. The bodhisattva “bears” or “acquiesces to” the difficulty of actively entering the world to save others by residing in the realization that ultimately there is no one saving others and no others being saved. In other words, all dharmas—including sentient beings and the rounds of rebirth—are originally and eternally “unproduced” or “tranquil.” This realization of nonduality—of the self and others, and of [SAMSĀRA](#) and [NIRVĀNA](#)—inoculates the bodhisattva from being tempted into a premature attainment of “cessation,” wherein one would escape from personal suffering through the extinction of continual existence, but at the cost of being deprived of the chance to attain the even greater goal of buddhahood through sustained practice along the bodhisattva path. Anutpattikadharmaksānti is sometimes used in a nonpolemical context, where it refers both to the Mahāyāna realization of the truth of “emptiness” and to the non-Mahāyāna realization of no-self ([ANĀTMAN](#)) and the [FOUR NOBLE TRUTHS](#). In a non-Mahāyāna context, the term corresponds to the path of vision ([DARŚANAMĀRGA](#)).

[anuttarasamyaksambodhi](#). (T. bla na med pa yang dag par rdzogs pa’i byang chub; C. wushang zhengdeng jue/anouduoluo sanmiao sanputi; J.

mujōshōtōgaku/anokutara-sanmyaku-sanbodai; K. musang chōngdŭng kak/anyoktara sammyak sambori 無上正等覺/阿耨多羅三藐三菩提). In Sanskrit, “unsurpassed (anuttara), complete (samyak), and perfect enlightenment ([SAMBODHI](#))”; the enlightenment ([BODHI](#)) of a buddha, superior to all other forms of enlightenment. The term is often used to distinguish the enlightenment of a buddha from that of an [ARHAT](#), with the former deemed superior because it is the result of the sustained practice of the [BODHISATTVA](#) path over the course of many eons ([KALPA](#)) of lifetimes. According to Mahāyāna schools, in anuttarasamyaksambodhi, both of the two kinds of obstructions, the afflictive obstructions ([KLEŚĀVARANA](#)) and the obstructions to omniscience ([JÑEYĀVARANA](#)), have been completely overcome. Although [ARHATS](#) also achieve enlightenment ([BODHI](#)), they have overcome only the first of the obstructions, not the second, and thus have still not realized anuttarasamyaksambodhi. This enlightenment, which is unique to the buddhas, surpasses all other types of realization and is thus unsurpassed, complete, and perfect. See also [MAHĀBODHI](#); [SAMBODHI](#).

[anuttarayogatantra](#). (T. bla na med pa'i rnal 'byor rgyud). In Sanskrit, “unsurpassed yoga tantra.” According to an Indian classification system, later adopted in Tibet, anuttarayogatantra is the highest category in the fourfold division of tantric texts, above [YOGATANTRA](#), [CARYĀTANTRA](#), and [KRIYĀTANTRA](#). Texts classified as unsurpassed yoga tantras include such works as the [GUHYASAMĀJATANTRA](#), the [HEVAJRATANTRA](#), and the [CAKRASAMVARATANTRA](#). These tantras were further divided into mother tantras ([MĀTRATANTRA](#)) and father tantras ([PITRATANTRA](#)). The mother tantras, also known as [DĀKINĪ](#) tantras, are traditionally said to emphasize wisdom ([PRAJÑĀ](#)) over method ([UPĀYA](#)), especially wisdom in the form of the mind of clear light ([PRABHĀSVARACITTA](#)). The father tantras are those that, between method (upāya) and wisdom (prajñā), place a particular emphasis on method, especially as it pertains to the achievement of the illusory body ([MĀYĀDEHA](#)) on the stage of generation ([UTPATTIKRAMA](#)). According to Tibetan exegetes, buddhahood can only be achieved through the practice of anuttarayogatantra; it cannot be achieved by the three “lower tantras” or by the practice of the [PĀRAMITĀYĀNA](#). The many practices set forth in the anuttarayogatantras are often divided into two larger categories, those of the stage of generation (utpattikrama) and those of the stage of completion ([NISPANNAKRAMA](#)). The latter typically includes the practice of sexual yoga. The status of the [KĀLACAKRATANTRA](#), historically the latest of the

unsurpassed yoga tantras (the text includes apparent references to Muslim invaders in the Indian subcontinent), was accorded special status by [DOL PO PA SHES RAB RGYAL MTSHAN](#); [TSONG KHA PA](#) in his [SNGAGS RIM CHEN MO](#) (“Great Exposition of the Stages of Tantra”) gave it a separate place within a general anuttarayogatantra category, while others such as Red mda’ ba Gzhon nu blo gros said it was not a Buddhist tantra at all.

[anuvyañjana](#). (T. dpe byad; C. hao; J. kō; K. ho 好). In Sanskrit and Pāli, “minor mark” or “secondary characteristic”; the secondary characteristics of an object, in distinction to its generic appearance, or “sign” ([NIMITTA](#)). Advertence toward the generic sign and secondary characteristics of an object produces a recognition or perception ([SAMJÑĀ](#)) of that object, which may then lead to clinging or rejection and ultimately suffering. ¶ The term anuvyañjana [alt. vyañjana] also refers specifically to the eighty minor marks of a “great man” ([MAHĀPURUSA](#)) and specifically of a buddha; these are typically mentioned in conjunction with the thirty-two major marks of a great man ([MAHĀPURUSALAKSANA](#)). These are set forth at length in, for example, the [PAÑCAVIMŚATISĀHASRIKĀPRAJÑĀPĀRAMITĀ](#) (see [PRAJÑĀPĀRAMITĀ](#)) and chapter eight of the [ABHISAMAYĀLAMKĀRA](#) and are known as well in mainstream Buddhist sources.

[anuyoga](#). (T. a nu yo ga). In Sanskrit, “subsequent yoga” or “further yoga,” the eighth of the nine vehicles ([THEG PA DGU](#)) of Buddhism according to the [RNYING MA](#) sect of Tibetan Buddhism. Here, the system of practice described elsewhere as [ANUTTARAYOGATANTRA](#) is divided into three: [MAHĀYOGA](#), anuyoga, and [ATIYOGA](#), with anuyoga corresponding to the practices of the “stage of completion” ([NISPANNAKRAMA](#)), mahāyoga to the stage of generation ([UTPATTIKRAMA](#)) and atiyoga to the great completion ([RDZOGS CHEN](#)) and the spontaneous achievement of buddhahood. Thus, such stage of completion practices as causing the winds ([PRĀNA](#)) to move through the channels ([NĀDĪ](#)) to the [CAKRAs](#) are set forth in anuyoga. In Rnying ma, anuyoga is also a category of texts in the [RNYING MA’I RGYUD ’BUM](#), divided under the following headings: the four root sūtras (rtsa ba’i mdo bzhi), the six tantras clarifying the six limits (mtha’ drug gsal bar byed pa’i rgyud drug), the twelve rare tantras (dkon rgyud bcu gnyis), and the seventy written scriptures (lung gi yi ge bdun bcu).

[anvayañāna](#). (S). See [DHARMAKSĀNTI](#).

Anxi guo. (J. Ansoku koku; K. Ansik kuk 安息國). Chinese transcription of the Parthian proper name Aršak, referring to the Arsacid kingdom (c. 250 BCE–224 CE) in the region Roman geographers called **PARTHIA**. Aršak was the name adopted by all Parthian rulers, and the Chinese employed it to refer to the lands that those rulers controlled to the southeast of the Caspian Sea. In the Marv oasis, where the old Parthian city of Margiana was located, Soviet archeologists discovered the vestiges of a Buddhist monastic complex that has been dated to the third quarter of the fourth century CE, as well as birch-bark manuscripts written in the **BRĀHMĪ** script that are associated with the **SARVĀSTIVĀDA** school of mainstream Buddhism. There is therefore archaeological evidence of at least a semblance of Buddhist presence in the area during the fourth through sixth centuries. Parthian Buddhists who were active in China enable us to push this dating back at least two more centuries, for two of the important early figures in the transmission of Buddhist texts into China also hailed from Parthia: **AN SHIGAO** (fl. c. 148–180 CE), a prolific translator of mainstream Buddhist works, and An Xuan (fl. c. 168–189), who translated the **UGRAPARIPRCCHĀ** with the assistance of the Chinese Yan Fotiao. (The **AN** in their names is an ethnicon referring to Parthia.) There is, however, no extant Buddhist literature written in the Parthian language and indeed little evidence that written Parthian was ever used in other than government documents and financial records until the third century CE, when Manichaean texts written in Parthian begin to appear.

anxin. (J. anjin; K. ansim 安心). In Chinese, “pacification of mind” or “peace of mind.” Used generally to refer to an enlightened state of mind, anxin is used specifically in the Chan school (**CHAN ZONG**) in the more active sense of focusing one’s attention in “wall contemplation” (**BIGUAN**) and thereby calming or “pacifying” the mind. According to the **ERRU SIXING LUN** attributed to the founder of Chan, **BODHIDHARMA**, the result of such cultivation is said to be an immovable state of mind. In the **PURE LAND** traditions, the “pacification of mind” refers to the firm establishment of a sense of faith in the teachings of the buddhas and the patriarchs (**ZUSHI**).

Anyang jie. (J. Annyōkai; K. Anyang kye 安養界). In Chinese, the “realm of peace and nurturance”; also known as the Anyang jingtu, or “pure land of peace and nurturance.” One of the many names in Chinese for **SUKHĀVATĪ** (“land of bliss”), the purified buddha-field (**BUDDHAKSETRA**) of **AMITĀBHA** Buddha. Sukhāvātī is, however, more commonly translated as **JILE** (“ultimate bliss”).

[Anzhai shenzhou jing](#). (J. Antaku jinshukyō; K. Ant'aek sinju kyōng 安宅神呪經). In Chinese, the “Spirit-Spell Scripture for Pacifying Homes”; together with the *Anzhai tuolunizhou jing* (“[DHĀRANĪ](#)-Spell Scripture for Pacifying Homes”), both [SŪTRAS](#) detail the ritual known as anzhai zhai (“feast for pacifying homes”). According to this scripture, a merchant’s sons were anguished by the unending travails that befell their household and asked the Buddha for help. The Buddha went to the merchant’s house, reprimanded the spirits who were supposed to be protecting the home (anzhai jingshen), and expounded the means of preparing the feast for pacifying homes. This ritual, which had to be supervised by a [BHIKSU](#), entailed burning incense, lighting lamps, and chanting the *Anzhai shenzhou jing*. The scripture is claimed to have been translated during the Eastern Han dynasty (25–220 CE) by an unidentified translator, but no Indian or Tibetan recension is known, and it is suspected to be an indigenous Chinese composition (see [APOCRYPHA](#)).

[Apabhramśa](#). In Sanskrit, literally “corrupt,” or “ungrammatical”; a term used in ancient Sanskrit works to refer to the dialects of northern India. The term is used with reference to a number of north Indian languages, including Bengali, between the sixth and thirteenth centuries CE. A number of important tantric texts, such as the [CARYĀGĪTIKOSA](#), were composed in Apabhramśa.

[Apadāna](#). In Pāli, “Heroic Tales” or “Narratives” (cf. S. [AVADĀNA](#)); the thirteenth book of the [KHUDDAKANIKĀYA](#) of the Pāli [SUTTAPITAKA](#), this collection includes hagiographies of 547 monks and forty nuns, all arahant (S. [ARHAT](#)) disciples who lived during the lifetime of the Buddha. The text also contains two introductory chapters in verse. The first, the “Buddhāpadāna,” is a series of encomiums praising the merits and perfections (P. pāramī; S. [PĀRAMITĀ](#)) of the Buddha and an account of the past lives during which he mastered these qualities. The second chapter, the “Paccekabuddhāpadāna,” deals with solitary buddhas who do not teach (paccekabuddha; S. [PRATYEKABUDDHA](#)). Quite distinctively, the *Apadāna* names thirty-five buddhas of antiquity, in contrast to the twenty-four listed in the [BUDDHAVAMSA](#); this is one of the reasons that the *Apadāna* is presumed to be one of the latest books in the Pāli canon. The third and fourth chapters offer accounts of the noble deeds of the senior disciples, including many of the most famous names in Buddhist history. Each story focuses on a specific meritorious action performed by one of these elders while they trained under a buddha in a previous lifetime, followed by an account of

what wholesome result that action produced in subsequent lifetimes, and how this ultimately led them to achieve arahantship in the present life. The collection thus highlights the merit that results from perfecting specific types of moral actions.

[aparagodānīya](#). (S). See [GODĀNĪYA](#).

[Aparamitāyurnāmamahāyānasūtra](#). (S). See [AMITĀBHASŪTRA](#).

[Aparānta](#). [alt. Aparāntaka]. A territory in western India traversing modern Rajasthan and Gujarat along the Narmada River; according to the Pāli tradition, it was one of the nine regions to which Buddhist missions were dispatched during the reign of King [AŚOKA](#). After the completion of the third Buddhist council (see [COUNCIL, THIRD](#)) in the third century BCE, the elder [MOGGALIPUTTATISSA](#) dispatched the elder Yonaka Dhammarakkhita from Pāṭaliputta (S. [PĀTALIPUTRA](#)) to Aparānta to promote Buddhism. Burmese and Thai chroniclers, by contrast, variously identify Aparānta with Chiangmai, [AYUTHAYA](#), and the Irrawaddy river basin in Middle Burma. The third Buddhist council at Pāṭaliputta and the nine Buddhist missions are known only in Pāli sources and are first recorded in the fifth-century [DĪPAVAMSA](#).

[āpas](#). (P. āpo; T. chu; C. shuida; J. suidai; K. sudae 水大). In Sanskrit, lit. “water,” viz., the property of “cohesion”; also seen written as āpodhātu. One of the four “great elements” ([MAHĀBHŪTA](#)) or “major elementary qualities” of which the physical world of materiality ([RŪPA](#)) is composed, along with earth (viz., solidity; [PṚTHIVĪ](#), P. paṭhavī), wind (viz., motion, movement, or oscillation; [VĀYU](#), P. vāyu/vāyo), and fire (viz., temperature, warmth; [TEJAS](#), P. tejo). “Water” is defined as that which is moist and fluid and refers to the principle of liquidity; it also is the agent that binds the other elements together. Since water can convey things, such as ships (viz., earth), has relative temperature (viz., fire), and is capable of motion (viz., wind), the existence of all the other three elements may also be inferred even in that single element. In the physical body, this water element is associated with blood, tears, urine, sweat, phlegm, and so on.

[apatrāpya](#). (P. ottappa; T. khrel yod pa; C. kui; J. gi, K. koe 愧). In Sanskrit, “modesty” or “blame”; one of the fundamental mental concomitants thought to accompany all wholesome actions ([KUŚALA](#)) and therefore listed as the sixth of

the ten “wholesome factors of wide extent” ([KUSĀLAMAHĀBHŪMIKA](#)) in the [SARVĀSTIVĀDA ABHIDHARMA](#) and one of the twenty-five wholesome (P. kusala) mental concomitants ([CETASIKA](#)) in the Pāli [ABHIDHAMMA](#). It refers to a fear of blame or condemnation that prevents one from engaging in nonvirtuous deeds. “Modesty” is often seen in compound with the term “shame” or “decency” ([HRĪ](#)), where hrī refers to the sense of shame or the pangs of moral conscience that one feels oneself at the prospect of engaging in an immoral act, whereas apatrāpya refers to the fear of being blamed or embarrassed by others for engaging in such acts. This dual sense of “shame and blame” was thought to be foundational to progress in morality ([ŚĪLA](#)).

apavāda. (T. skur 'debs; C. sunjian; J. songen; K. son'gam 損減). In Sanskrit, “denigration” or “slander”; denying the presence of positive qualities and falsely ascribing negative qualities. Philosophically, the term is used to describe the underestimation or denigration of the status of phenomena, by claiming, for example, that phenomena do not exist conventionally. Wrong views ([MITHYĀDRSTI](#)) themselves are considered to be the “denigration” of that which really exists, such as the truth of suffering ([DUHKHA](#)); other specific sorts of wrong views may also be the “erroneous affirmation” or “superimposition” ([SAMĀROPA](#)) of things that actually do not exist in reality. Four types of apavāda are mentioned in the [ABHIDHARMAMAHĀVIBHĀSĀ](#): denigration of (1) cause, which is countered by understanding the noble truth of origination; (2) effect, which is countered by the noble truth of suffering; (3) the path, which is countered by the noble truth of the path; and (4) cessation, which is countered by the noble truth of cessation.

apāya. (T. ngan song; C. equ; J. akushu; K. akch'wi 惡趣). In Sanskrit and Pāli, lit. “falling away,” or “misfortune,” viz., “baleful destinies,” and synonymous with the unfortunate destinies ([DURGATI](#)); refers to an unsalutary rebirth that occurs as a consequence of performing unwholesome actions (S. [AKUŚALA](#); P. akusala). Three such unfortunate rebirth destinies ([GATI](#)) are typically enumerated in the literature: rebirth as (1) a denizen of the hells (S. [NĀRAKA](#); P. nirāya); (2) an animal (S. [TIRYAK](#), P. tiracchāna); or (3) a ghost (S. [PRETA](#); P. peta); birth as a demigod or titan ([ASURA](#)) is sometimes added as a fourth. Unwholesome actions that lead to unfortunate rebirth are classified into ten types of wrong deeds (S. duṣcarita; P. duccharita), which include (1) intentionally killing living beings (S. prāṇātipāta; P. paṇātipāta); (2) stealing (S. adattādāna; P.

adinnādāna); and (3) sexual misconduct (S. [KĀMAMITHYĀCĀRA](#); P. kāmamicchācāra). The next four in the list are classified as verbal wrong deeds and include (4) lying (S. mṛṣāvāda; P. musāvāda); (5) malicious speech (S. [PAISUNYA](#); P. piṣuṇavācā); (6) harsh speech (S. [PĀRASVAVĀDA](#); P. pharusavācā); and (7) frivolous prattle (S. sampralāpa; P. samphappalāpa). The final three of the list are classified as mental wrong deeds and include (8) covetousness (S. [ABHIDHYĀ](#); P. abhijjhā); (9) malice (S. [VYĀPĀDA](#); P. vyāpāda); and (10) wrong views (S. [MITHYĀDRSTI](#); P. micchādiṭṭhi). Other sūtra literature, such as the [SĀMAÑÑAPHALASUTTA](#), attribute rebirth in this state to reviling the noble ones ([ĀRYA](#)), keeping wrong views, and performing unwholesome acts as a result of those wrong views. See also [BHAVACAKRA](#).

apocrypha. (C. yijing/weijing; J. gikyō/gikyō; K. ũigyōng/wigyōng 疑經/偽經). Buddhist scholars have appropriated (though not without some controversy) the Judeo-Christian religious term “apocrypha” to refer to indigenous sūtras composed outside the Indian cultural sphere, but on the model of translated Indian or Serindian scriptures. Such scriptures were sometimes composed in conjunction with a revelatory experience, but many were intentionally forged using their false ascription to the Buddha or other enlightened figures as a literary device to enhance both their authority and their prospects of being accepted as authentic scriptures. Many of the literary genres that characterize Judeo-Christian apocrypha are found also in Buddhist apocrypha, including the historical, didactic, devotional, and apocalyptic. Both were also often composed in milieus of social upheaval or messianic revivalism. As Buddhism moved outside of its Indian homeland, its scriptures had to be translated into various foreign languages, creating openings for indigenous scriptures to be composed in imitation of these translated texts. Ferreting out such inauthentic indigenous scripture from authentic imported scripture occupied Buddhist bibliographical cataloguers (see [JINGLU](#)), who were charged with confirming the authenticity of the Buddhist textual transmission. For the Chinese, the main criterion governing scriptural authenticity was clear evidence that the text had been brought from the “Outer Regions” (C. waiyu), meaning India or Central Asia; this concern with authenticating a text partially accounts for why Chinese translations of Buddhist scriptures typically included a colophon immediately following the title, giving the name of the translator (who was also sometimes the importer of the scripture), along with the place where, and often the imperial reign era during which the translation was made. Scriptures for which there was no such proof

were in danger of being labeled as texts of “suspect” or “suspicious” authenticity (yijing) or condemned as blatantly “spurious” or “counterfeit” scriptures (weijing). The presence of indigenous cultural elements, such as yin-yang cosmology, local spirits, or rituals and liturgies associated with folk religion could also be enough to condemn a scripture as “spurious.” In Tibet, “treasure texts” ([GTER MA](#)) were scriptures or esoteric teachings attributed to enlightened beings or lineage holders that purported to have been buried or hidden away until they could be rediscovered by qualified individuals. Because of their association with a revelatory experience, such “treasure texts” carried authority similar to that of translated scripture. Different classifications of apocryphal scriptures have been proposed, based on genre and style, social history, and doctrinal filiations. In one of the ironies of the Buddhist textual transmission, however, many of the scriptures most influential in East Asian Buddhism have been discovered to be indigenous “apocrypha,” not translated scriptures. Such indigenous scriptures were able to appeal to a native audience in ways that translated Indian materials could not, and the sustained popularity of many such “suspect” texts eventually led cataloguers to include them in the canon, despite continuing qualms about their authenticity. Such “canonical apocrypha” include such seminal scriptures as the [FANWANG JING](#) (“Brahmā’s Net Sūtra”), [RENWANG JING](#) (“Humane Kings Sūtra”), and the [YUANJUE JING](#) (“Perfect Enlightenment Sūtra”), as well as treatises like the [DASHENG QIXIN LUN](#) (“Awakening of Faith”). Similar questions of authenticity can be raised regarding scriptures of Indian provenance, since it is virtually impossible to trace with certainty which of the teachings ascribed to the Buddha in mainstream canonical collections ([TRIPITAKA](#)) such as the Pāli canon can be historically attributed to him. Similarly, the [MAHĀYĀNA](#) sūtras, which are also attributed to the Buddha even though they were composed centuries after his death, are considered apocryphal by many of the [MAINSTREAM BUDDHIST SCHOOLS](#), including the modern [THERAVĀDA](#) tradition; however, modern scholars do not use the term “Buddhist apocrypha” to describe Mahāyāna texts.

apoha. (T. gzhan sel; C. chu; J. jo; K. che 除). In Sanskrit, “exclusion”; a technical term in later Indian Buddhist philosophy of language and epistemology, which describes comprehension through the negative process of exclusion: i.e., only by excluding everything that is other than the target concept will the significance of that concept be comprehended. Buddhist apoha theory therefore posits that concepts convey meaning only to the extent that they

“exclude” other meanings: e.g., the concept “chair” is understood only by the mental consciousness excluding everything else that is “not chair.” Concepts thus do not denote the actual objects that they purport to reference but instead denote the mere “exclusion” of everything else that is not relevant. See also [VYATIREKA](#).

[appanāsamādhi](#). In Pāli, “absorptive concentration”; the more advanced of the two broad types of concentration ([SAMĀDHI](#)) discussed in Pāli commentarial literature. Both of these two types of samādhi are used with reference to meditators who are specializing in calmness (samatha; S. [ŚAMATHA](#)) techniques. The preliminary “threshold concentration” ([UPACĀRASAMĀDHI](#)) helps to calm and focus the mind but is too discursive to lead to full meditative absorption ([JHĀNA](#); S. [DHYĀNA](#)). In order to develop jhāna, meditators must proceed to cultivate less discursive topics of meditation ([KAMMATTHĀNA](#)) that will lead to “absorptive concentration” and thence jhāna: e.g., mindfulness of breathing (ānāpānasati, S. [ĀNĀPĀNASMRTI](#)); the four “divine abidings” ([BRAHMAVIHĀRA](#); [alt. P. appamañña], S. [APRAMĀNA](#)), namely, loving-kindness (P. mettā; S. [MAITRĪ](#)), compassion ([KARUNĀ](#)), altruistic or empathetic joy ([MUDITĀ](#)), and equanimity or impartiality (P. upekkhā; S. [UPEKSĀ](#)); and the ten “visual devices” ([KASINA](#))—devices that are constructed from the elements earth, water, fire, and air; the colors blue, yellow, red, and white; and light and space. See also [KHANIKASAMĀDHI](#).

[apramāda](#). (P. appamāda; T. bag yod pa; C. bufangyi; J. fuhōitsu; K. pulbangil 不放逸). In Sanskrit, “heedfulness” or “vigilance”; one of the forty-six mental concomitants ([CAITTA](#)) according to the [SARVĀSTIVĀDA-VAIBHĀSIKA](#) school of [ABHIDHARMA](#) and one of the fifty-one according to the [YOGACĀRA](#) school. Heedfulness is the opposite of “heedlessness” ([PRAMĀDA](#)) and is the vigilant attitude that strives toward virtuous activities and remains ever watchful of moral missteps. Heedfulness fosters steadfastness regarding spiritual and ethical matters; it was presumed to be so foundational to any kind of ethical or wholesome behavior that the Sarvāstivāda abhidharma system included it among the predominant wholesome factors of wide extent ([KUŚĀLAMAHĀBHŪMIKA](#)). Heedfulness is also an integral part of the path of cultivation ([BHĀVANĀMĀRGA](#)), where certain types of proclivities ([ANUŚAYA](#))—such as passion for sensual pleasure ([RĀGA](#))—can only be removed by consistent and vigilant training, rather than simply through correct insight, as on the path of vision ([DARŚANAMĀRGA](#)).

Heedfulness was so crucial to spiritual progress that the Buddha recommended it in his last words delivered on his deathbed, as related in the Pāli [MAHĀPARINIBBĀNASUTTANTA](#): “Indeed, monks, I declare to you: decay is inherent in all compounded things; strive on with vigilance.” (Handa ’dāni bhikkhave āmantayāmi vo: vayadhammā saṅkhārā; appamādena sampādeṭṭha.) [apramāṇa](#). (P. appammaññā; T. tshad med pa; C. wuliangxin; J. muryōshin; K. muryangsim 無量心). In Sanskrit, “the boundless states,” “unlimiteds,” or “limitless qualities.” This list is identical to the four “divine abidings” ([BRAHMAVIHĀRA](#)) of loving-kindness ([MAITRĪ](#)), compassion ([KARUNĀ](#)), empathetic joy ([MUDITĀ](#)), and equanimity or impartiality ([UPEKSĀ](#)). When taken as objects of concentration and extended in meditation to all beings without limit, the divine abidings then become “boundless states” (apramāṇa). The meditator is taught to take up each of the boundless states in the same way: starting with the first apramāṇa, for example, filling his mind with loving-kindness, he pervades the world with it, first in one direction, then in a second direction, then a third and a fourth, then above, below, and all around, identifying himself with all beings and remaining free from hatred and ill will. In the same way, he takes up compassion, empathetic joy, and equanimity. These four factors are taken up as objects of meditation to counter the influence of specific unwholesome states of mind: viz., loving-kindness counteracts hostility ([VYĀPĀDA](#)); compassion counters harmfulness ([VIHIMŚĀ](#)); empathetic joy counters dissatisfaction or envy regarding others’ achievements (arati); and equanimity counters both the desire and hostility arising from sensuality ([KĀMARĀGA-VYĀPĀDA](#)) and the desire to win the approval of others (anunaya). Of these boundless states, the first three are capable of producing the first three of the four [DHYĀNAS](#), or meditative absorptions; the fourth divine abiding is the only one capable of producing the fourth meditative absorption.

[apramāṇābha](#). (P. appamāṇābha; T. tshad med ’od; C. wuliangguang tian; J. muryōkōten; K. muryanggwang ch’ōn 無量光天). In Sanskrit, “immeasurable radiance”; the second of the three heavens of the second meditative absorption ([DHYĀNA](#)) of the realm of subtle materiality ([RŪPADHĀTU](#)). The divinities of this heaven are so-called because their bodies emanate limitless light. As with all the heavens of the realm of subtle materiality, one is reborn as a divinity in this realm through achieving the same level of concentration (dhyāna) as the gods of that heaven during one’s practice of meditation in a previous lifetime.

apramāṇasūbha. (P. appamāṇasubha; T. tshad med dge; C. wuliangjing tian; J. muryōjōten; K. muryangjōng ch'ōn 無量淨天). In Sanskrit, “immeasurable purity”; the second of the three heavens of the third meditative absorption (**DHYĀNA**) of the realm of subtle materiality (**RŪPADHĀTU**).

apraṇihita. (P. appaṇihita; T. smon pa med pa; C. wuyuan; J. mugan; K. muwōn 無願). In Sanskrit, “wishless”; apraṇihita is one of the three “gates to deliverance” (**VIMOKSAMUKHA**), along with emptiness (**ŚŪNYATĀ**) and signlessness (**ĀNIMITTA**). Once signlessness has exposed the dangers (**ĀDĪNAVA**) inherent in sensory perception, the meditator loses all desire for the compounded (**SAMSKRTA**) things of this world and adverts instead toward the un compounded (**ASAMSKRTA**), which is **NIRVĀNA**. The wishless is produced through insight into suffering (**DUHKHA**) and serves as the counteragent (**PRATIPAKSA**) to all the intentions (āśaya) and aspirations (**PRANIDHĀNA**) one has toward any compounded dharma. Once the meditator has abandoned all such aspirations, he or she is then able to advert toward nirvāṇa, which has no relation to anything that can be desired (**VAIRĀGYA**). This leads to the seeming conundrum of Buddhist soteriology, viz., that nirvāṇa can only be attained once the meditator no longer has any desire for anything, including nirvāṇa itself. The **SARVĀSTIVĀDA** and **YOGĀCĀRA** schools sought to resolve this conundrum about nirvāṇa being uncaused by positing that nirvāṇa was a specific type of effect, the **VISAMYOGAPHALA**, or “disconnection fruition,” which was disconnected from the afflictions (**KLEŚA**).

aprāpti. (T. 'thob pa med pa; C. feide; J. hitoku; K. pidük 非得). In Sanskrit, “dispossession” or “nonacquisition”; the second of the fourteen “conditioned forces dissociated from thought” (**CITTAVIPRAYUKTASAMSKĀRA**) listed in the **SARVĀSTIVĀDA–VAIBHĀSIKA ABHIDHARMA** and in the **YOGĀCĀRA** system. It is the opposite of the dissociated force of “possession” (**PRĀPTI**), which serves as a kind of glue that causes the various independent constituents of reality (**DHARMA**) to stick together into apparently permanent constructs. Aprāpti is the absence of such possession: when, for example, the afflictions (**KLEŚA**) are eliminated through the experience of sanctity, there is a “dispossession” between the afflictions and the mental continuum (**SAMTĀNA**) of that sage to whom they were previously attached. Similarly, the state of an ordinary person (**PRTHAGJANA**) involves the “dispossession” of the noble (**ĀRYA**) dharmas.

apratīsamkhyānirodha. (T. so sor brtags min gyi 'gog pa; C. feizemie; J. hichakumetsu; K. pit'aekmyōl 非擇滅). In Sanskrit, “nonanalytical suppression”

or “nonanalytical cessation,” one of the un compounded factors ([ASAMSKRTADHARMA](#)) listed by both the [VAIBHĀSIKA-SARVĀSTIVĀDA](#) and the [YOGĀCĀRA](#) schools. In the Vaibhāṣika dharma theory, where all factors were presumed to exist in all three time periods ([TRIKĀLA](#)) of past, present, and future, this dharma was posited to suppress the production of all other dharmas, ensuring that they remain ever positioned in future mode and never again able to arise in the present. Whenever any specific factor is unproduced, this is due to its position in the present mode being occupied by the nonanalytical suppression; thus the number of apratisamkhyānirodha is coextensive with the number of factors. Because this dharma is not produced, not an object of knowledge, and not a result of insight, it is considered to be “nonanalytical.” Other schools, such as the [SAUTRĀNTIKA](#), presume that this factor has only nominal validity and refers to dharmas when they are in their unproduced state. The term also refers to states of temporary absence or cessation that do not occur as the result of meditative practice, such as the cessation of hunger after eating a meal. See also [PRATISAMKHYĀNIRODHA](#).

[apratisthitānirvāna](#). (T. mi gnas pa’i mya ngan las ’das pa; C. wuzhu niepan; J. mujūnehan; K. muju yōlban 無住涅槃). In Sanskrit, “unlocated nirvāṇa” or “nirvāṇa that is not permanently fixed”; the [MAHĀYĀNA](#) description of the [NIRVĀNA](#) of the buddhas, which is “not permanently fixed” at either the extreme of the [SAMŚĀRA](#) of ordinary beings ([PRTHAGJANA](#)) or what is presented as the overly quietistic nirvāṇa of the [ARHAT](#). Since the buddhas’ nirvāṇa is “unlocated,” the buddhas are free to return to this world in order to save all sentient beings from suffering, without becoming in any way entangled by the prospect of rebirth, and without having passed completely away into the nirvāṇa of the arhat. Nirvāṇa as it is experienced by the buddhas, who have eradicated both the afflictive obstructions ([KLEŚĀVARANA](#)) and obstructions to omniscience ([JÑEYĀVARANA](#)), is therefore qualitatively different from that of the arhats, who have eradicated only the former.

[apsaras](#). (P. accharā; T. chu skyes mo; C. tiannü; J. tennyō; K. ch’ōnnyō 天女). In Sanskrit, “celestial nymph” (lit. “between the vapors [of the clouds]”); female divinities who dwell in the sky but have the capacity to visit the earth at will and thus occupy a liminal state between the celestial and the terrestrial worlds; they are eventually incorporated into Buddhist cosmology as one of several different types of nonhuman beings who dwell in the sensuous realm ([KĀMADHĀTU](#)).

According to Indian mythology, they are married to the “celestial musicians” ([GANDHARVA](#)). The apsaras occupy an ambivalent position in Buddhist cosmology, since they are sometimes depicted as the debauched seductresses of Buddhist ascetics, at other times as the heavenly reward of leading a spiritual life. In Buddhist art, the apsaras are typically depicted as aerial beings fluttering above Buddhist deities or saints.

[Ārāḍa Kālāma](#). (P. Āḷāra Kālāma; T. Sgyu rtsal shes kyi bu ring du 'phur; C. Aluoluojialan; J. Ararakaran; K. Araragan 阿羅邏迦蘭). The Sanskrit name of one of the Buddha’s two teachers of meditation (the other being [UDRAKA RĀMAPUTRA](#)) prior to his enlightenment. He was known as a meditation master who once sat in deep concentration without noticing that five hundred carts had passed by. He explained to [GAUTAMA](#) that the goal of his system was the attainment of the “state of nothing whatsoever” ([ĀKIṆCANYĀYATANA](#)), which the [BODHISATTVA](#) quickly attained. Ārāḍa Kālāma then regarded the bodhisattva as his equal. However, Gautama eventually recognized that this state was not [NIRVĀNA](#) and left to begin the practice of austerities. Upon his eventual achievement of buddhahood, Gautama surveyed the world to identify the most worthy recipient of his first sermon. He thought first of Ārāḍa Kālāma but determined that he had unfortunately died just seven days earlier.

[arahant](#). (S. arhat). In Pāli, “worthy one”; the highest of the four grades of Buddhist saint or “noble person” (ariyapuggala) recognized in the mainstream Buddhist schools. For a full description see [ARHAT](#); [LUOHAN](#).

[Arakan Buddha](#). A colossal buddha image that is one of the most sacred images in Arakan, a coastal kingdom along the west coast of what eventually became the country of Burma after the Burmese conquest of the region in the eighteenth century; also known as the [MAHĀMUNI](#) Buddha or the Candasāra Buddha. This twelve-foot, seven-inch, tall bronze image of the Buddha as Mahāmuni (“Great Sage”) is claimed by tradition to have been cast in 197 CE, during the reign of the Arakan king Candrasurya, and is assumed to be an exact replica of the Buddha himself, which was made at the time of his putative visit to the Arakan kingdom. The image is cast in the “earth-touching gesture” ([BHŪMISPARŚAMUDRĀ](#)) and is now enshrined in the Arakan pagoda (Mahāmuni Paya), located near the old capital of [AMARAPURA](#) on the outskirts of the city of Mandalay, which was constructed to house it. The image was coveted by several of Arakan’s neighboring kingdoms, including Prome, Pagan, Pegu, and the Shan, but was

eventually carried off to Mandalay by the Burmese as war booty in 1784 when King Bodawpaya finally conquered the kingdom. Since its relocation to the shrine, the seated image has been covered by worshippers with so many layers of gold leaf that its torso is now totally obscured, leaving only the head and face fully visible. The image is embellished with a pointed crown and earrings made in 1884 in the [JAMBUPATI](#) style, with a royal insignia across its chest; the Buddha is also draped in shawls by the temple vergers every night to ward off the evening chill.

[ārāma](#). (T. kun dga' ra ba; C. yuan; J. on; K. wŏn 園). In Sanskrit and Pāli, “park” or “pleasure grove”; a term that originally referred to a garden, a favorite site for the teaching or practice of the dharma. The term came to mean an enclosed area, often in or near a city, which contained permanent dwellings for the use of monks during the annual rains retreat ([VARSA](#)). The dwellings were built and maintained by a donor ([DĀNAPATI](#)), who offered them to the [SAMGHA](#) for its use. An ārāma donated as property to the saṃgha was called a saṃghārāma and is considered to be the forerunner of the monastery, or [VIHĀRA](#). These residences were often named after their donors, e.g., the [JETAVANA](#)-ārāma in [ŚRĀVASTĪ](#), named after Prince [JETA](#).

[araññavāsi](#). In Pāli, “forest-dweller”; in the Pāli Buddhist tradition, a monk who is principally dedicated to meditative training ([VIPASSANĀDHURA](#)); contrasted with “town-dweller” ([GĀMAVĀSI](#)), who lives in a village or town monastery and whose monastic vocation focuses on doctrinal study and teaching, or “book work” ([GANTHĀDHURA](#)). In Sri Lankan Buddhism, the emphases within the Buddhist order on both meditation and study led to the evolution over time of these two major practice vocations. The araññavāsi remained in solitude in the forest to focus principally on their meditative practice. The gāravāsi, by contrast, were involved in studying and teaching the dhamma, especially within the lay community of the village, and thus helped to disseminate Buddhism among the people. The araññavāsi were not necessarily hermits, but they did live a more secluded life than the gāravāsi, devoting most of their time to meditation (either individually or in smaller groups) and keeping their contact with the laity to a minimum. According to the [VINAYA](#), a monk cannot remain constantly alone in the forest by himself; at a minimum, he must join together with the saṅgha at least once a fortnight to participate in the uposatha (S. [UPOSADHA](#)) rite, when the monks gather to confess any transgressions of the precepts and to listen to a

recitation of the rules of discipline (P. pāṭimokkha; S. [PRĀTIMOKSA](#)). These two vocations have a long history and have continued within the saṅgha into modern times. In a sense, the Buddha himself was an araṅṅavāsi for six years before he attained enlightenment; subsequently, he then passed much of his time as a gāṃavāsi, teaching people the dharma and encouraging them to practice to bring an end to their suffering. See also [PHRA PA](#); [THUDONG](#).

[aranya](#). (P. araṅṅa; T. dgon pa; C. [a]lanruo; J. [a]rannya; K. [a]ranya [阿]蘭若). In Sanskrit, “forest” or “wilderness”; the ideal atmosphere for practice, and one of the various terms used to designate the residences of monks. The solitude and contentment fostered by forest dwelling was thought to provide a better environment for meditation ([BHĀVANA](#)) than the bustle and material comforts of city monasteries, and there is some evidence in mainstream Buddhist materials of discord between monks who followed the two different ways of life. Forest dwelling was frequently championed by the Buddha, and living at the root of a tree was one of the thirteen specific ascetic practices (S. [DHŪTAGUNA](#), P. [DHUTAṄGA](#)) authorized by the Buddha. Forest dwelling is also used as a metaphor for the renunciation and nonattachment that monks were taught to emulate. Forest dwellers are called aranyaka (P. araṅṅaka or āraṅṅaka). See also [ARAṅṅAVĀSI](#); [PHRA PA](#).

[arapacana](#). (T. a ra pa dza na). The arapacana is a syllabary of Indic or Central Asian origin typically consisting of forty-two or forty-three letters, named after its five initial constituents a, ra, pa, ca, and na. The syllabary appears in many works of the [MAHĀYĀNA](#) tradition, including the [PRAJÑĀPĀRAMITĀ](#), [GANDAVYŪHA](#), [LALITAVISTARA](#), and [AVATAMSAKA SŪTRAS](#), as well as in texts of the [DHARMAGUPTAKA VINAYA](#) ([SIFEN LŪ](#)) and [MŪLASARVĀSTIVĀDA VINAYA](#). It occurs in both original Sanskrit works and Chinese and Tibetan translations. In most cases, each syllable in the list is presumed to correspond to a key doctrinal term beginning with, or containing, that syllable. A, for example, is associated with the concept of [ANUTPĀDA](#) (nonarising), ra with rajo’pagata (free from impurity), and so forth. Recitation of the syllabary, therefore, functioned as a mystical representation of, or mnemonic device ([DHĀRANĪ](#)) for recalling, important Mahāyāna doctrinal concepts, somewhat akin to the [MĀTRKĀ](#) lists of the [ABHIDHARMA](#). Other interpretations posit that the syllables themselves are the primal sources whence the corresponding terms later developed. The syllabary includes: a, ra, pa, ca, na, la, da, ba, ḍa, ṣa, va, ta, ya, ṣṭa, ka, sa, ma, ga, sṭha, tha,

ja, śva, dha, śa, kha, kṣa, sta, jña, rta, ha, bha, cha, sma, hva, tsa, gha, ṭha, ṇa, pha, ska, ysa, śca, ṭa, ḍha. The arapacana also constitutes the central part of the root [MANTRA](#) of the [BODHISATTVA MAÑJUŚRĪ](#); its short form is om a ra pa ca na dhi. It is therefore also considered to be an alternate name for Mañjuśrī.

[Arbuda](#). (S). One of the twenty-four sacred sites associated with the [CAKRASAMVARATANTRA](#). See [PĪTHA](#).

[arciṣmatī](#). (T. 'od 'phro ba; C. yanhui di; J. enneji; K. yŏmhye chi 焰慧地). In Sanskrit, “radiance” or “effulgence”; the fourth of the ten [BODHISATTVA](#) grounds or stages ([BHŪMI](#)) according to the [DAŚABHŪMIKASŪTRA](#). At this stage, the bodhisattva masters the thirty-seven wings of enlightenment ([BODHIPĀKSIKADHARMA](#)), whose radiance becomes so intense that it incinerates all the obstructions and afflictions. The bodhisattva thus develops inexhaustible energy for his quest for enlightenment; this bhūmi is therefore often correlated with mastery of the fourth perfection ([PĀRAMITĀ](#)), the perfection of vigor or energy ([VĪRYAPĀRAMITĀ](#)). The fourth-stage bodhisattva also shows special devotion to the fourth means of conversion ([SAMGRAHAVASTU](#)), that of the common good, or consistency between words and deeds ([SAMĀNĀRTHATĀ](#)).

[ardhapadmāsana](#). (T. pad ma'i skyil krung phyed pa; C. ban lianhuazuo; J. hanrengeza; K. pan yŏnhwajwa 半蓮華坐). In Sanskrit, “half-lotus posture” a position in which only one leg is crossed completely over the top of the opposite thigh, the other leg being simply folded underneath. (In full-lotus posture, both legs would be crossed completely over the opposite thigh.) See also [PADMĀSANA](#); [ARDHAPARYAṅKA](#).

[ardhaparyāṅka](#). (T. skyil krung phyed pa; C. ban jiafuzuo; J. hankafuza; K. pan kabujwa 半跏趺坐). In Sanskrit, the “half cross-legged” posture ([ĀSANA](#)). This particular posture may be formed in a number of ways. As a seated pose, either foot rests on the opposite thigh with the remaining leg bent forward. Alternatively, both shins may be loosely crossed at the ankles while resting or crouching on the seat. As a standing pose, it may form a dancing posture sometimes described as [NRTYĀSANA](#). Some standing Japanese images described as being in ardhaparyāṅka may show a raised foot lifted straight up off the ground, as if about to stomp down. See also [VAJRAPARYAṅKA](#); [ARDHAPADMĀSANA](#).

[arhat](#). (P. arahant; T. dgra bcom pa; C. aluohan/yinggong; J. arakan/ōgu; K.

arahan/ūnggong 阿羅漢/應供). In Sanskrit, “worthy one”; one who has destroyed the afflictions ([KLEŚA](#)) and all causes for future [REBIRTH](#) and who thus will enter [NIRVĀNA](#) at death; the standard Tibetan translation dgra bcom pa (drachompa) (“foe-destroyer”) is based on the paronomastic gloss ari (“enemy”) and han (“to destroy”). The arhat is the highest of the four grades of Buddhist saint or “noble person” ([ĀRYAPUDGALA](#)) recognized in the mainstream Buddhist schools; the others are, in ascending order, the [SROTAĀPANNA](#) or “stream-enterer” (the first and lowest grade), the [SAKRDĀGĀMIN](#) or “once-returner” (the second grade), and the [ANĀGĀMIN](#) or “nonreturner” (the third and penultimate grade). The arhat is one who has completely put aside all ten fetters ([SAMYOJANA](#)) that bind one to the cycle of rebirth: namely, (1) belief in the existence of a perduring self ([SATKĀYADRSTI](#)); (2) skeptical doubt (about the efficacy of the path) ([VICIKITSĀ](#)); (3) belief in the efficacy of rites and rituals ([ŚĪLAVRATAPARĀMARŚA](#)); (4) sensual craving ([KĀMARĀGA](#)); (5) malice ([VYĀPĀDA](#)); (6) craving for existence as a divinity ([DEVA](#)) in the realm of subtle materiality ([RŪPARĀGA](#)); (7) craving for existence as a divinity in the immaterial realm ([ĀRŪPYARĀGA](#)); (8) pride ([MĀNA](#)); (9) restlessness ([AUDDHATYA](#)); and (10) ignorance ([AVIDYĀ](#)). Also described as one who has achieved the extinction of the contaminants ([ĀSRAVAKSAYA](#)), the arhat is one who has attained nirvāṇa in this life, and at death attains final liberation ([PARINIRVĀNA](#)) and will never again be subject to rebirth. Although the arhat is regarded as the ideal spiritual type in the mainstream Buddhist traditions, where the Buddha is also described as an arhat, in the [MAHĀYĀNA](#) the attainment of an arhat pales before the far-superior achievements of a buddha. Although arhats also achieve enlightenment ([BODHI](#)), the Mahāyāna tradition presumes that they have overcome only the first of the two kinds of obstructions, the afflictive obstructions ([KLEŚĀVARANA](#)), but are still subject to the noetic obstructions ([JÑEYĀVARANA](#)); only the buddhas have completely overcome both and thus realize complete, perfect enlightenment ([ANUTTARASAMYAKSAMBOODHI](#)). Certain arhats were selected by the Buddha to remain in the world until the coming of [MAITREYA](#). These arhats (called [LUOHAN](#) in Chinese, a transcription of arhat), who typically numbered sixteen (see [SODĀŚASTHAVIRA](#)), were objects of specific devotion in East Asian Buddhism, and East Asian monasteries will often contain a separate shrine to these luohans. Although in the Mahāyāna sūtras, the bodhisattva is extolled over the arhats, arhats figure prominently in these texts, very often as members of the assembly for the Buddha’s discourse and sometimes as key figures. For example, in the [SADDHARMAPUNDIRĪKASŪTRA](#) (“Lotus Sūtra”), [ŚĀRIPUTRA](#) is one of the Buddha’s chief interlocutors and, with

other arhats, receives a prophecy of his future buddhahood; in the [VAJRACCHEDIKĀPRAJÑĀPĀRAMITĀSŪTRA](#), [SUBHŪTI](#) is the Buddha's chief interlocutor; and in the [VIMALAKĪRTINIRDEŚA](#), Śāriputra is made to play the fool in a conversation with a goddess.

[arhatpratipannaka](#). (P. arahattamagga; T. dgra bcom zhugs pa; C. aluohan xiang; J. arakankō; K. arahan hyang 阿羅漢向). In Sanskrit, “candidate for worthy one”; one of the [VIMŚATIPRABHEDASAMGHA](#) (“twenty varieties of the ārya saṃgha”) based on the list given in the [ABHISAMAYĀLAMKĀRA](#). The arhatpratipannaka is usually an [ANĀGĀMIPHALASTHA](#) (one who has reached, or is the recipient of the fruit of nonreturner) who is making an effort to eliminate any fault that could cause rebirth in [SAMŚĀRA](#), including the very last, ninth fetter to the [BHAVĀGRA](#) (summit of existence) that only the supramundane ([LOKOTTARA](#)) path of meditation ([BHĀVANĀMĀRGA](#)) can eliminate. See [ARHAT](#).

[Ariyapariyesanāsutta](#). (C. Luomo jing; J. Ramakyō; K. Rama kyōng 羅摩經). In Pāli, “Discourse on the Noble Quest”; the twenty-sixth sutta ([SŪTRA](#)) in the [MAJJHIMANIKĀYA](#), also known as the *Pāsārāsīsutta* (a separate [SARVĀSTIVĀDA](#) recension appears as the 204th [SŪTRA](#) in the Chinese translation of the [MADHYAMĀGAMA](#)); preached by the Buddha to an assembly of monks at the hermitage of the brāhmaṇa Rammaka in the town of [ŚRĀVASTĪ](#). The Buddha explains the difference between noble and ignoble quests and recounts his own life as an example of striving to distinguish between the two. Beginning with his renunciation of the householder's life, he tells of his training under two meditation masters, his rejection of this training in favor of austerities, and ultimately his rejection of austerities in order to discover for himself his own path to enlightenment. The Buddha also relates how he was initially hesitant to teach what he had discovered, but was convinced to do so by the god [BRAHMĀ SAHĀMPATI](#), and how he then converted the “group of five” ascetics ([PAÑCAVARGIKA](#)) who had been his companions while he practiced austerities. There is an understated tone of the narrative, devoid of the detail so familiar from the biographies. There is no mention of the opulence of his youth, no mention of his wife, no mention of the chariot rides, no description of the departure from the palace in the dead of night, no mention of [MĀRA](#). Instead, the Buddha states, “Later, while still young, a black-haired young man endowed with the blessing of youth, in the prime of life, though my mother and father wished otherwise and wept with tearful faces, I shaved off my hair and beard,

put on the yellow robe, and went forth from the home life into homelessness.” Although the accounts of his study with other meditation masters assume a sophisticated system of states of concentration, the description of the enlightenment itself is both simple and sober, portrayed as the outcome of long reflection rather than as an ecstatic moment of revelation.

[Ariyaratne, A. T.](#) See [SARVODAYA](#).

[Arnold, Edwin.](#) (1832–1904). Sir Edwin Arnold was educated at Oxford and served as principal of a government college in Pune, India, from 1856 to 1861, during which time he studied Indian languages and published translations from the Sanskrit. He eventually returned to England, due primarily to the death of a child and his wife’s illness. Upon his return, he became a writer for *The Daily Telegraph* newspaper, where he was appointed chief editor in 1873. He wrote his most famous work, *The Light of Asia*, during this period. After leaving his editorial position, he traveled widely in Asia, especially in Japan, and published popular accounts of his travels. Although largely forgotten today, *The Light of Asia* was in its own time a foundational text for anyone in the English-speaking world interested in Buddhism. First published in 1879, *The Light of Asia* was a poetic rendering of the life of the Buddha. Arnold used as his chief source a French translation of the [LALITAVISTARA](#), one of the more ornate and belletristic Indian biographies of the Buddha. Arnold, however, added his own embellishments and deployed important scenes from the life of the Buddha differently than had previous authors in order to intensify the narrative. Despite the animosity it aroused in many Christian pulpits, the book was a favorite of Queen Victoria, who subsequently knighted Arnold. Although it has long been rendered obsolete, *The Light of Asia* played a seminal role in introducing the history and belief systems of Buddhism to the West. Arnold also played an important role in rallying support worldwide for the restoration of the important Buddhist pilgrimage site of [BODHGAYĀ](#), the place where the Buddha achieved enlightenment. He and Reverend [SUMANGALA](#) sent a petition to the Queen of England requesting permission to buy the land and the temple from the Hindus and restore the neglected site. Although unsuccessful, his efforts eventually came to fruition after Indian independence in 1949, when the Indian government returned control of Bodhgayā to the Buddhists.

[āropa.](#) (S). See [SAMĀROPA](#).

artha. (P. attha/aṭṭha; T. don; C. yi; J. gi; K. ūi 義). In Sanskrit, “meaning” or “object”; a polysemous term of wide import in Buddhist materials. In perhaps its most common usage, artha refers to the meaning or denotation of a term (and is always spelled aṭṭha in Pāli in this meaning), and, as the first of the four reliances ([PRATISARANA](#)), suggests that adepts should rely on the real meaning (artha) of words rather than their mere “letter” (vyañjana). In other contexts, however, artha may also be contrasted with [DHARMA](#) to refer to the principal denotation of a word rather than its interpreted connotations, implying the “literal meaning” of a term rather than its imputed “true spirit.” Artha, as extensive understanding of meaning, is also listed as one of the four discriminating insights ([PRATISAMVID](#)), along with knowledge of reasons or causal interconnections ([DHARMA](#)), explanation ([NIRUKTI](#)), and eloquence ([PRATIBHĀNA](#)). In other contexts, artha also can mean a sensory object; an event, matter, or aim; and welfare, benefit, profit, or even wealth. Thus, the bodhisattva seeks the welfare (artha) of others.

arthacaryā. (S). See [SAMGRAHAVASTU](#).

arthakriyā. (T. don byed nus pa; C. liyi; J. riyaku; K. iik 利益). In Sanskrit, “efficiency” or “capable of functioning”; a term used to describe the capacity of impermanent phenomena to produce effects. Arthakriyā as “actions that bring spiritual benefit to others,” is also sometimes listed as one of the four means of conversion ([SAMGRAHAVASTU](#)), in place of the more typical arthacaryā (actions that benefit others, i.e., helpfulness). The term is also important in [YOGĀCĀRA](#) and [MADHYAMAKA](#) philosophy in describing conventional truths ([SAMVRTISATYA](#)), which, although empty of intrinsic nature ([NIH SVABHĀVA](#)), are nonetheless able to perform a function. Thus, for example, although the water in a mirage and the water in a glass are both empty of intrinsic nature, the water in a glass is nonetheless conventionally existent because it can perform the function of slaking thirst.

arūpadhātu. (S, P). See [ARŪPYADHĀTU](#).

arūpaloka. In Sanskrit and Pāli, “immaterial world.” See [AVACARA](#).

ārūpyadhātu. [alt. in S. and P. arūpadhātu] (T. gzugs med pa’i khams; C. wuse jie; J. mushikikai; K. musaek kye 無色界). In Sanskrit, “immaterial” or “formless” “realm”; the highest of the three realms of existence ([TRAIDHĀTUKA](#)) within

[SAMSĀRA](#), along with the sensuous realm ([KĀMADHĀTU](#)) and the realm of subtle materiality ([RŪPADHĀTU](#)). The heavens of the immaterial realm are comprised of four classes of divinities ([DEVA](#)) whose existence is entirely mental, no longer requiring even a subtle material foundation for their ethereal states of mind: (1) the sphere of infinite space ([ĀKĀŚĀNANTYĀYATANA](#)); (2) the sphere of infinite consciousness ([VIJÑĀNĀNANTYĀYATANA](#)); (3) the sphere of nothing whatsoever or absolute nothingness ([ĀKIŅCANYĀYATANA](#)); (4) the sphere of neither perception nor nonperception ([NAIVASAMJÑĀNĀSAMJÑĀYATANA](#), see also [BHAVĀGRA](#)). Rebirth in these different spheres is based on mastery of the corresponding four immaterial meditative absorptions ([ĀRŪPYĀVACARADHYĀNA](#)) in previous lives. Because they have transcended all materiality, the beings here retain only the subtlest form of the last four aggregates ([SKANDHA](#)). For a detailed description, see [DEVA](#).

[ārūpyarāga](#). (P. arūparāga; T. gzugs med pa'i 'dod chags; C. wuse tan; J. mushikiton; K. musaek t'am 無色貪). In Sanskrit, “craving for immaterial existence”; the seventh of ten “fetters” ([SAMYOJANA](#)) that keep beings bound to the cycle of rebirth ([SAMSĀRA](#)). Ārūpyarāga is the desire to be reborn as a divinity ([DEVA](#)) in the immaterial realm ([ĀRŪPYADHĀTU](#)), where beings are composed entirely of mentality and are perpetually absorbed in the meditative bliss of the immaterial absorptions or attainments ([ĀRŪPYĀVACARADHYĀNA](#)). Craving for immaterial existence is permanently eliminated upon attaining the stage of a worthy one ([ARHAT](#)), the fourth and highest degree of Buddhist sanctity ([ĀRYAPUDGALA](#)) in the mainstream schools.

[ārūpyāvacaradhyāna](#). (P. arūpāvacarajhāna; T. gzugs med na spyod pa'i bsam gtan; C. wusejie ding; J. mushikikaijō; K. musaekkye chōng 無色界定). In Sanskrit, “meditative absorption associated with the immaterial realm”; equivalent to S. ārūpyadhyāna (q.v. [DHYĀNA](#)) and synonymous with “immaterial attainment” (arūpasamāpatti). One of two broad varieties of [DHYĀNA](#) or meditative absorption; the other being [RŪPĀVACARADHYĀNA](#) (P. rūpāvacarajhāna) or meditative absorption belonging to the realm of subtle materiality. In both cases, dhyāna refers to the attainment of single-pointed concentration of the mind on an ideational object of meditation. Ārūpyāvacaradhyāna is described as accessible only to those who have already mastered the fourth absorption of the realm of subtle materiality, and is itself merely a refinement of that state. In the immaterial absorptions, the “object” of meditation is gradually attenuated until

the meditator abides in the sphere of infinite space (S. [ĀKĀŚĀNANTYĀYATANA](#); P. ākāsānañcāyatana). In the second immaterial absorption, the meditator sets aside infinite space and abides in the sphere of infinite consciousness (S. [VIJÑĀNĀNANTYĀYATANA](#); P. viññāṇānañcāyatana). In the third immaterial absorption, one sets aside the perception of infinite consciousness and abides in the sphere of nothingness (S. [ĀKIÑCANYĀYATANA](#); P. ākiñcaññāyatana). In the fourth immaterial absorption, one sets aside the perception of nothingness and abides in the sphere of neither perception nor nonperception (S. [NAIVASAMJÑĀNĀSAMJÑĀYATANA](#); P. nevasaññānāsaññāyatana). Mastery of any of the absorptions of the immaterial realm can result in rebirth as a divinity ([DEVA](#)) within the corresponding plane in the immaterial realm (ārūpyāvacara or [ĀRŪPYADHĀTU](#)); see [ANIÑJYAKARMA](#). See also [KAMMATTHĀNA](#).

ārya. (P. ariya; T. 'phags pa; C. sheng; J. shō; K. sōng 聖). In Sanskrit, “noble” or “superior.” A term appropriated by the Buddhists from earlier Indian culture to refer to its saints and used technically to denote a person who has directly perceived reality and has become a “noble one.” In the fourfold path structure of the mainstream schools, an ārya is a person who has achieved at least the first level of sanctity, that of stream-enterer ([SROTAĀPANNA](#)), or above. In the fivefold path system, an ārya is one who has achieved at least the path of vision ([DARŚANAMĀRGA](#)), or above. The [SARVĀSTIVĀDA](#) (e.g., [ABHIDHARMAKOŚABHĀṢYA](#)) and [THERAVĀDA](#) (e.g., [VISUDDHIMAGGA](#)) schools of mainstream Buddhism both recognize seven types of noble ones (ārya, P. ariya). In e.g., the [VISUDDHIMAGGA](#), these are listed in order of their intellectual superiority as (1) follower of faith (P. saddhānusāri; S. [ŚRADDHĀNUSĀRIN](#)); (2) follower of the dharma (P. dhammānusāri; S. [DHARMĀNUSĀRIN](#)); (3) one who is freed by faith (P. saddhāvimutta; S. [ŚRADDHĀVIMUKTA](#)); (4) one who has formed right view (P. diṭṭhippatta; S. [DRSTIPRĀPTA](#)), by developing both faith and knowledge; (5) one who has bodily testimony (P. kāyasakkhi; S. [KĀYASĀKSIN](#)), viz., through the temporary suspension of mentality in the equipoise of cessation ([NIRODHASAMĀPATTI](#)); (6) one who is freed by wisdom (P. paññāvimutta; S. [PRAJÑĀVIMUKTA](#)), by freeing oneself through analysis; and (7) one who is freed both ways (P. ubhatobhāgavimutta; S. [UBHAYATOBHĀGAVIMUKTA](#)), by freeing oneself through both meditative absorption (P. jhāna; S. [DHYĀNA](#)) and wisdom (P. paññā; S. [PRAJÑĀ](#)). In the *Abhidharmakośabhāṣya*, the seven types of ārya beings are presented in a slightly different manner, together with the list of eight noble persons ([ĀRYAPUDGALA](#)) based on candidates for (pratipannika) and those

who have reached the result of (phalastha) stream-enterer (srotaāpanna), once-returner ([SAKRDĀGĀMIN](#)), nonreturner ([ANĀGĀMIN](#)), and [ARHAT](#); these are again further expanded into a list of twenty members of the ārya [VIMŚATIPRABHEDASAMGHA](#) and in Mahāyāna explanations into forty-eight or more [ĀRYABODHISATTVA](#)s. The Chinese character sheng, used to render this term in East Asia, has a long indigenous history and several local meanings; see, for example, the Japanese vernacular equivalent [HIJIRI](#). It is also the name of one of two Indian esoteric [GUHYASAMĀJATANTRA](#) traditions, receiving its name from Ārya Nāgārjuna, the author of the [PAÑCAKRAMA](#).

[āryabodhisattva](#). (T. byang chub sems dpa' 'phags pa). In Sanskrit, superior bodhisattva, a bodhisattva who has achieved either the path of vision ([DARŚANAMĀRGA](#)) or the path of cultivation ([BHĀVANĀMĀRGA](#)).

[Āryadeva](#). (T. 'Phags pa lha; C. Tipo; J. Daiba; K. Cheba 提婆). While traditional sources are often ambiguous, scholars have identified two Āryadevas. The first Āryadeva (c. 170–270 CE) was an important Indian philosopher, proponent of [MADHYAMAKA](#) philosophy, and a direct disciple of the Madhyamaka master [NĀGĀRJUNA](#). According to traditional accounts, he was born to a royal family in Sri Lanka. Renouncing the throne at the time of his maturity, he instead sought monastic ordination and met Nāgārjuna at [PĀTALIPUTRA](#). After his teacher's death, Āryadeva became active at the monastic university of [NĀLANDĀ](#), where he is said to have debated and defeated numerous brahmanic adherents, eventually converting them to Buddhism. He is the author of the influential work [CATUḤŚATAKA](#) (“The Four Hundred”). He is also said to be the author of the *[ŚATAŚĀSTRA](#) (C. [BAI LUN](#)), or “The Hundred Treatise,” counted as one of the “three treatises” of the [SAN LUN ZONG](#) of Chinese Buddhism, together with the *Zhong lun* (“Middle Treatise,” i.e., [MŪLAMADHYAMAKAKĀRIKĀ](#)) and [SHI'ERMEN LUN](#) (“Twelve [Chapter] Treatise”), both attributed to Nāgārjuna. The **Śataśāstra* is not extant in Sanskrit or Tibetan, but is preserved only in Chinese. ¶ The second Āryadeva [alt. Āryadevapāda; d.u.] trained in yogic practices under the tantric master Nāgārjuna at Nālandā. In the Tibetan tradition, this Āryadeva is remembered for his great tantric accomplishments, and is counted among the eighty-four [MAHĀSIDDHA](#)s under the name Kaṇari or Kaṇheri. His important tantric works include the *Caryāmelapakapradīpa* (“Lamp that Integrates the Practices”) and *Cittaviśuddhiprakaraṇa* [alt. *Cittāvaraṇaviśuddhiprakaraṇa*] (“Explanation of

Mental Purity”).

āryamārga. (P. ariyamagga; T. 'phags lam; C. shengdao; J. shōdō; K. sōngdo 聖道). In Sanskrit, “noble path”; the path of vision ([DARŚANAMĀRGA](#)), of cultivation ([BHĀVANĀMĀRGA](#)), and of the adept who has nothing more to learn ([AŚAIKSAMĀRGA](#)), in either the mainstream or [MAHĀYĀNA](#) traditions. On these three paths, the practitioner becomes a noble person ([ĀRYA](#)) as a result of a direct perception of the truth. The paths of the stream-enterer ([SROTAĀPANNA](#)), once-returner ([SAKRDĀGĀMIN](#)), and nonreturner ([ANĀGĀMIN](#)) would all be classified as noble paths. See also [ĀRYĀSTĀṄGAMĀRGA](#).

āryamārgaphala. (P. ariyamaggaphala; T. 'phags lam gyi 'bras bu; C. shengdaoguo; J. shōdōka; K. sōngdo kwa 聖道果). In Sanskrit, “noble path and fruit”; the four supramundane ([LOKOTTARA](#)) paths ([MĀRGA](#)) and the four supramundane fruitions ([PHALA](#)) that mark the attainment of sanctity ([ĀRYA](#)). Attainment of the path refers to the first moment of entering into or becoming a candidate (pratipannaka) for any of the four stages of sanctity; viz., stream-enterer ([SROTAĀPANNA](#)), once-returner ([SAKRDĀGĀMIN](#)), nonreturner ([ANĀGĀMIN](#)), and worthy one ([ARHAT](#)). During this initial moment of path attainment, the mind takes the nirvāṇa element ([NIRVĀNADHĀTU](#)) as its object. Path attainment is brought about by insight ([VIPAŚYANĀ](#)) into the three universal marks ([TRILAKSANA](#)) of existence that characterize all phenomena: impermanence ([ANITYA](#)), suffering ([DUHKHA](#)), and nonself ([ANĀTMAN](#)). Attainment of the fruit refers to the moments of consciousness that immediately follow attainment of the path. Attainment of any of the four paths occurs only once, while attainment of the fruit can be repeated indefinitely during a lifetime, depending on the circumstances. It is said that, by virtue of attaining the path, one “becomes” free in stages of the ten fetters ([SAMYOJANA](#)) that bind one to the cycle of rebirth, and, by virtue of attaining the fruit, one “is” free from the fetters. The ten fetters that are put aside in stages are (1) belief in the existence of a self ([ĀTMAN](#)) in relation to the body ([SATKĀYADRSTI](#); P. sakkāyadiṭṭhi); (2) belief in the efficacy of rites and rituals ([ŚĪLAVRATAPARĀMARŚA](#); P. sīlabbataparāmāsa) as a means of salvation; (3) doubt about the efficacy of the path ([VICIKITSĀ](#); P. vicikicchā); (4) sensual craving ([KĀMACCHANDA](#)); (5) malice ([VYĀPĀDA](#)); (6) craving for existence as a divinity in the realm of subtle materiality ([RŪPARĀGA](#)); (7) craving for existence as a divinity in the immaterial realm ([ĀRŪPYARĀGA](#); P. arūparāga); (8) pride ([MĀNA](#)); (9) restlessness ([AUDDHATYA](#); P. uddhacca); and (10) ignorance

([AVIDYĀ](#); P. avijjā). See also [ŚRĀMANYAPHALA](#).

āryapudgala. (P. ariyapuggala; T. 'phags pa'i gang zag; C. xiansheng; J. kenjō; K. hyōnsōng 賢聖). In Sanskrit, “noble person”; an epithet given to enlightened beings, i.e., those who have reached at least the path of vision ([DARŚANAMĀRGA](#)). There is a well-known list of four types of noble persons, from stream-enterer ([SROTAĀPANNA](#)) to once-returner ([SAKRDĀGĀMIN](#)), nonreturner ([ANĀGĀMIN](#)), and worthy one ([ARHAT](#)). This list is then subdivided into eight types or grades of noble persons according to their respective attainment of the paths and fruits of the noble path ([ĀRYAMĀRGAPHALA](#)). These are (1) the person who has entered the path of stream-enterer ([SROTAĀPANNAPHALAPRATIPANNAKA](#)); (2) the person who abides in the fruit of stream-enterer ([SROTAĀPANNAPHALASTHA](#)); (3) the person who has entered the path of once-returner ([SAKRDĀGĀMIPHALAPRATIPANNAKA](#)); (4) the person who abides in the fruit of once-returner ([SAKRDĀGĀMIPHALASTHA](#)); (5) the person who has entered the path of nonreturner ([ANĀGĀMIPHALAPRATIPANNAKA](#)); (6) the person who abides in the fruit of nonreturner ([ANĀGĀMIPHALASTHA](#)); (7) the person who has entered the path of a worthy one ([ARHATPRATIPANNAKA](#)); and (8) the person who has attained that fruition and become a worthy one (arhat). In some treatments, this list is presented together with a list of seven types of noble ones ([ĀRYA](#)) in order of intellectual superiority. By attaining the path and fruit of stream-entry, that is, by becoming a srotaāpanna, a person becomes free of the first three of the ten fetters ([SAMYOJANA](#)) that bind one to the cycle of rebirth: namely, (1) belief in the existence of a perduring self in relation to the body ([SATKĀYADRSTI](#), P. sakkāyadiṭṭhi); (2) belief in the efficacy of rites and rituals ([ŚĪLAVRATAPARĀMARŚA](#), P. sīlabbataparāmāsa) as a means of salvation; and (3) skeptical doubt ([VICIKITSĀ](#), P. vicikicchā) about the efficacy of the path. By attaining the path and fruit of once-returning, i.e., becoming a sakṛdāgāmin, a person in addition severely weakens the effects of the fourth and fifth fetters, namely, (4) sensual craving ([KĀMACCHANDA](#)) and (5) malice ([VYĀPĀDA](#)). By attaining the path and fruit of nonreturning, i.e., becoming an anāgāmin, a person is completely freed of the first five fetters. Finally, by attaining the path and fruit of a worthy one and becoming an arhat, a person is additionally freed of the last five of the ten fetters: (6) craving for existence as a divinity ([DEVA](#)) in the realm of subtle materiality ([RŪPARĀGA](#)); (7) craving for existence as a divinity in the immaterial realm ([ĀRŪPYARĀGA](#); P. arūparāga); (8) pride ([MĀNA](#)); (9) restlessness ([AUDDHATYA](#), P. uddhacca); and (10) ignorance ([AVIDYĀ](#), P. avijjā).

āryasamgha. (P. ariyasāṅgha; T. 'phags pa'i dge 'dun; C. shengseng; J. shōsō; K. sōngsūng 聖僧). “Noble community” or “community of noble ones”; the community of followers of the Buddha who are noble persons ([ĀRYAPUDGALA](#)). There are eight types or grades of noble persons according to their respective attainment of the paths and fruits of the noble path ([ĀRYAMĀRGAPHALA](#)). These are (1) the person who has entered the path of stream-enterer ([SROTAĀPANNAPHALAPRATIPANNAKA](#)); (2) the person who abides in the fruit of stream-enterer ([SROTAĀPANNAPHALASTHA](#)); (3) the person who has entered the path of once-returner ([SAKRDĀGĀMIPHALAPRATIPANNAKA](#)); (4) the person who abides in the fruit of once-returner ([SAKRDĀGĀMIPHALASTHA](#)); (5) the person who has entered the path of nonreturner ([ANĀGĀMIPHALAPRATIPANNAKA](#)); (6) the person who abides in the fruit of nonreturner ([ANĀGĀMIPHALASTHA](#)); (7) the person who has entered the path of a worthy one ([ARHATPRATIPANNAKA](#)); and (8) the person who has attained the fruit of a worthy one ([ARHAT](#)) (see also [VIMŚATIPRABHEDASAMGHA](#)). These eight persons are said to constitute the “[SAMGHA](#) jewel” among the three jewels ([RATNATRAYA](#)) to which Buddhists go for refuge ([ŚARANA](#)).

āryāstāṅgamārga. (P. ariyāṭṭhaṅgikamagga; T. 'phags lam yan lag brgyad; C. bazhengdao; J. hasshōdō; K. p'alchōngdo 八正道). In Sanskrit, “noble eightfold path”; the path ([MĀRGA](#)) that brings an end to the causes of suffering ([DUHKHA](#)); the fourth of the [FOUR NOBLE TRUTHS](#) (catvāry āryasatyāni). This formulation of the Buddhist path to enlightenment appears in what is regarded as the Buddha’s first sermon after his enlightenment, the “Setting Forth the Wheel of Dharma” ([DHARMAKAKRAPRAVARTANASŪTRA](#)), in which he sets forth a middle way ([MADHYAMAPRATIPAD](#)) between the extremes of asceticism and sensual indulgence. That middle way, he says, is the eightfold path, which, like the four truths, he calls “noble” ([ĀRYA](#)); the term is therefore commonly rendered as “noble eightfold path.” However, as in the case of the four noble truths, what is noble is not the path but those who follow it, so the compound might be more accurately translated as “eightfold path of the [spiritually] noble.” Later in the same sermon, the Buddha sets forth the four noble truths and identifies the fourth truth, the truth of the path, with the eightfold path. The noble eightfold path is comprised of (1) right views ([SAMYAGDRSTI](#); P. sammādiṭṭhi), which involve an accurate understanding of the true nature of things, specifically the four noble truths; (2) right intention ([SAMYAKSAMKALPA](#); P. sammāsāṅkappa), which means avoiding thoughts of attachment, hatred, and harmful intent and promoting

loving-kindness and nonviolence; (3) right speech ([SAMYAGVĀC](#); P. sammāvācā), which means refraining from verbal misdeeds, such as lying, backbiting and slander, harsh speech and abusive language, and frivolous speech and gossip; (4) right action or right conduct ([SAMYAKKARMĀNTA](#); P. sammākammanta), which is refraining from physical misdeeds, such as killing, stealing, and sexual misconduct; (5) right livelihood ([SAMYAGĀJĪVA](#); P. sammājīva), which entails avoiding trades that directly or indirectly harm others, such as selling slaves, selling weapons, selling animals for slaughter, dealing in intoxicants or poisons, or engaging in fortune-telling and divination; (6) right effort ([SAMYAGVYĀYĀMA](#); P. sammāvāyāma), which is defined as abandoning unwholesome states of mind that have already arisen, preventing unwholesome states that have yet to arise, sustaining wholesome states that have already arisen, and developing wholesome states that have yet to arise; (7) right mindfulness ([SAMYAKSMRTI](#); P. sammāsati), which means to maintain awareness of the four foundations of mindfulness ([SMRTYUPASTHĀNA](#)), viz., body, physical sensations, the mind, and phenomena; and (8) right concentration ([SAMYAKSAMĀDHI](#); P. sammāsamādhi), which is one pointedness of mind. ¶ The noble eightfold path receives less discussion in Buddhist literature than do the four noble truths (of which they are, after all, a constituent). Indeed, in later formulations, the eight factors are presented not so much as a prescription for behavior but as eight qualities that are present in the mind of a person who has understood [NIRVĀNA](#). The eightfold path may be reduced to a simpler, and more widely used, threefold schema of the path that comprises the “three trainings” ([TRISĪKSĀ](#)) or “higher trainings” (adhiśikṣā) in morality ([ŚĪLA](#); P. sīla; see [ADHIŚĪLAŚIKSĀ](#)), concentration ([SAMĀDHI](#), see [ADHISAMĀDHIŚIKSĀ](#)), and wisdom ([PRAJÑĀ](#); P. paññā; see [ADHIPRAJÑĀŚIKSĀ](#)). In this schema, (1) right views and (2) right intention are subsumed under the training in higher wisdom (adhiprajñāśikṣā); (3) right speech, (4) right conduct, and (5) right livelihood are subsumed under higher morality (adhiśīlaśikṣā); and (6) right effort, (7) right mindfulness, and (8) right concentration are subsumed under higher concentration (adhisamādhiśikṣā). According to the [MADHYĀNTAVIBHĀGA](#), a [MAHĀYĀNA](#) work attributed to [MAITREYANĀTHA](#), the eightfold noble path comprises the last set of eight of the thirty-seven constituents of enlightenment ([BODHIPĀKSIKADHARMA](#)), where enlightenment ([BODHI](#)) is the complete, nonconceptual awakening achieved during the path of vision ([DARŚANAMĀRGA](#)). After that vision, following the same pattern as the Buddha, right view is the perfect understanding of the vision, and right intention is the articulation of the vision that motivates the teaching of it. Right

mindfulness, right effort, and right concentration correspond respectively to the four types of mindfulness ([SMRTYUPASTHĀNA](#)), four efforts ([PRAHĀNA](#)), and four [RDDHIPĀDA](#) (“legs of miraculous attainments,” i.e., samādhi) when they are perfect or right (samyak), after the vision of the four noble truths.

[āryavaṃśa](#). (P. ariyavaṃsa; T. ’phags pa’i rigs; C. shengzhong; J. shōshu; K. sōngjong 聖種). In Sanskrit, “[attitudes of] the noble lineage.” A list of four such attitudes commonly appears in the literature: contentment with robes, food, and beds, and devotion to the way of liberation. In [MAHĀYĀNA](#) literature, the meaning of lineage changes, and the word [GOTRA](#) or [DHĀTU](#) is used in place of vaṃśa.

[āśaikṣa](#). (P. asekha; T. mi slob pa; C. wuxue; J. mugaku; K. muhak 無學). In Sanskrit, lit. “one for whom no further training is necessary,” an “adept”; a term for one who has completed the path (see [ĀŚAIKṢAMĀRGA](#)), used especially as an epithet of the [ARHAT](#). The āśaikṣa has completed the three “higher trainings” (adhiśikṣā; P. adhisikkhā) in morality ([ADHIŚĪLAŚIKṢĀ](#)), concentration ([ADHISAMĀDHIŚIKṢĀ](#)), and wisdom ([ADHIPRAJÑĀŚIKṢĀ](#)).

[āśaikṣamārga](#). (T. mi slob lam; C. wuxuedao; J. mugakudō; K. muhakto 無學道). In Sanskrit, “the path of the adept” (lit. “the path where there is nothing more to learn” or “the path where no further training is necessary”); the fifth of the five-path schema ([PAÑCAMĀRGA](#)) used in both [SARVĀSTIVĀDA ABHIDHARMA](#) and the [YOGĀCĀRA](#) and [MADHYAMAKA](#) schools of [MAHĀYĀNA](#). It is the equivalent of the path of completion ([NISTHĀMĀRGA](#)) and is synonymous with āśaikṣapatha. With the consummation of the “path of cultivation” ([BHĀVANĀMĀRGA](#)), the adept (whether following the [ŚRĀVAKA](#), [PRATYĒKABUDDHA](#), or [BODHISATTVA](#) path) achieves the “adamantine-like concentration” ([VAJROPAMASAMĀDHI](#)), which leads to the permanent destruction of even the subtlest and most persistent of the ten fetters ([SAMYOJANA](#)), resulting in the “knowledge of cessation” ([KSAYAJÑĀNA](#)) and in some presentations an accompanying “knowledge of nonproduction” ([ANUTPĀDAJÑĀNA](#)), viz., the knowledge that the fetters are destroyed and can never again recur. Because the adept now has full knowledge of the eightfold path ([ĀRYĀSTĀṄGAMĀRGA](#)) and has achieved full liberation ([VIMOKṢA](#)) as either an [ARHAT](#) or a buddha, he no longer needs any further instruction—thus he has completed the “path where there is nothing more to learn.”

[asamayavimukta](#). (T. dus dang mi sbyor bar rnam par grol ba; C. bushi jietuo;

J. fujigedatsu; K. pulsi haet'al 不時解脫). In Sanskrit, “one who is liberated regardless of occasion,” in the sense that there is no occasion in which the meditative concentration of such an [ARHAT](#) will degenerate; one of the twenty members of the [ĀRYASAMGHA](#) (see [VIMŚATIPRABHEDASAMGHA](#)).

[asamjñāsamāpatti](#). [alt. asamjñīsamāpatti] (P. asaññasamāpatti; T. 'du shes med pa'i snyoms par 'jug pa; C. wuxiang ding; J. musōjō; K. musang chōng 無想定). In Sanskrit, “equipoise of nonperception” or “unconscious state of attainment”; viz., a “meditative state wherein no perceptual activity remains.” It is a form of meditation with varying, even contradictory, interpretations. In some accounts, it is positively appraised: for example, the Buddha was known for entering into this type of meditation in order to “rest himself” and, on another occasion, to recover from illness. In this interpretation, [asamjñāsamāpatti](#) is a temporary suppression of mental activities that brings respite from tension, which in some accounts, means that the perception ([SAMJÑĀ](#)) aggregate ([SKANDHA](#)) is no longer functioning, while in other accounts, it implies the cessation of all conscious thought. In such cases, [asamjñāsamāpatti](#) is similar to [ānimittasamāpatti](#) in functions and contents, the latter being a meditative stage wherein one does not dwell in or cling to the “characteristics” ([NIMITTA](#)) of phenomena, and which is said to be conducive to the “liberation of the mind through signlessness ([ANIMITTA](#))” (P. ānimittacetovimutti)—one of the so-called three gates to deliverance ([VIMOKSAMUKHA](#)). Elsewhere, however, [asamjñāsamāpatti](#) is characterized negatively as a nihilistic state of mental dormancy, which some have mistakenly believed to be final liberation. Non-Buddhist meditators were reported to mistake this vegetative state for the ultimate, permanent quiescence of the mind and become attached to this state as if it were liberation. In traditional Buddhist classificatory systems (such as those of the [YOGĀCĀRA](#) school and the [ABHIDHARMAKOŚABHĀSYA](#)), [asamjñāsamāpatti](#) is sometimes also conflated with the fourth [DHYĀNA](#), and the karmic fruition of dwelling in this meditation is the rebirth in the [asamjñā](#) heaven ([ASAMJÑIKA](#)) located in the “realm of subtle materiality,” where the heavens corresponding to the fourth dhyāna are located (see [RŪPADHĀTU](#)). Together with the “trance of cessation” ([NIRODHASAMĀPATTI](#)), these two forms of meditation are classified under the [CITTAVIPRAYUKTASAMSKĀRA](#) (“forces dissociated from thought”) category in [SARVĀSTIVĀDA ABHIDHARMA](#) texts, as well as in the one hundred dharmas of the Yogācāra school, and are also called in the East Asian tradition “the two kinds of meditation that are free of mental activity” (er wuxin ding).

asamjñika. (P. asañña; T. 'du shes med pa; C. wuxiang tian; J. musōten; K. musang ch'ōn 無想天). In Sanskrit, “free from discrimination,” or “nonperception”; according to some systems, one of the heavens of the fourth meditative absorption ([DHYĀNA](#)) associated with the realm of subtle materiality ([RŪPADHĀTU](#); see [RŪPĀVACARADHYĀNA](#)). In the Pāli tradition, it is one of the seven heavens of the fourth dhyāna; in Sanskrit sources, in some cases, it is considered a ninth heaven of the fourth dhyāna, and in other cases, it is considered to be a region of the [BRHATPHALA](#) heaven. It is a place of rebirth for those who, during their lifetimes as humans, have cultivated the trance of nonperception ([ASAMJÑĀSAMĀPATTI](#)), a state of meditative trance in which there is no mental activity; it is compared to dreamless sleep. During their long lifetime in this heaven, these divinities have a slight perception of having been born there and then have no other thoughts, sensations, or perceptions until the end of their period of rebirth in that heaven. Such beings are called asaññasatta (“unconscious beings”) in Pāli. This particular state is often described as the attainment of non-Buddhist ascetics, who mistake it for the state of liberation ([VIMOKSA](#)).

asamkhya. (P. asaṅkhyā; T. grangs med pa; C. asengqi; J. asōgi; K. asūnggi 阿僧祇). In Sanskrit, literally, “incalculable” or “infinite”; often used with reference to “infinite” eons of time ([ASAMKHYEYAKALPA](#)).

asamkhyeyakalpa. (P. asaṅkheyyakappa; T. bskal pa grangs med pa; C. asengqi jie; J. asōgikō; K. asūnggi kōp 阿僧祇劫). In Sanskrit, “incalculable eon” or “infinite eon.” The longest of all [KALPAs](#) is named “incalculable” ([ASAMKHYA](#)); despite its name, it has been calculated by dedicated Buddhist scholiasts as being the length of a mahākalpa (itself, eight intermediate kalpas in duration) to the sixtieth power. The [BODHISATTVA](#) path leading to buddhahood is presumed to take not one but three “incalculable eons” to complete, because the store of merit ([PUNYA](#)), knowledge ([JÑĀNA](#)), and wholesome actions ([KUSĀLA-KARMAPATHA](#)) that must be accumulated by a bodhisattva in the course of his training is infinitely massive. Especially in the East Asian traditions, this extraordinary period of time has been taken to mean that practice is essentially interminable, thus shifting attention from the goal to the process of practice. For example, the [AVATAMSAKASŪTRA](#)’s statement that “at the time of the initial arousal of the aspiration for enlightenment ([BODHICITTOTPĀDA](#)), complete, perfect enlightenment ([ANUTTARASAMYAKSAMBOODHI](#)) is already achieved” has been interpreted in the East Asian [HUAYAN ZONG](#) to imply that enlightenment is in fact achieved at the very inception of religious training—a realization that renders possible a bodhisattva’s commitment to continue practicing for three infinite eons. In [YOGĀCĀRA](#) and [MADHYAMAKA](#) presentations of the path associated with the [ABHISAMAYĀLAMKĀRA](#), the three incalculable eons are not considered infinite, with the bodhisattva’s course divided accordingly into three parts. The first incalculable eon is devoted to the paths of accumulation ([SAMBHĀRAMĀRGA](#)) and preparation ([PRAYOGAMĀRGA](#)); the second incalculable eon devoted to the path of vision ([DARŚANAMĀRGA](#)) and the first seven bodhisattva stages ([BHŪMI](#)); and the third incalculable eon devoted to the eighth, ninth, and tenth stages.

asamprajanya. (P. asampajañña; T. shes bzhin med pa; C. buzhenzhi; J. fushōchi; K. pujōngji 不正知). In Sanskrit, “without circumspection” or “without clear comprehension.” In Buddhist psychological analysis, when contact with sensory objects is made “without circumspection” (asamprajanya), then “attachment” ([RĀGA](#)), “greed” ([LOBHA](#)), “aversion” ([DVESA](#)), or “delusion” ([MOHA](#)) may result. The [YOGĀCĀRA](#) school lists asamprajanya in its hundred dharmas (C. [BAIFA](#)) list as the last of twenty secondary afflictions ([UPAKLEŚA](#)).

Asaṃprajanya is the opposite of [SAMPRAJANYA](#) (P. sampajañña), a term closely related to “mindfulness” (S. [SMRTI](#); P. sati), with which is it often used in compound as “mindfulness and clear comprehension.”

[asamskrta](#). (P. asaṅkhata; T. 'dus ma byas; C. wuwei; J. mui; K. muwi 無爲). In Sanskrit, “uncompounded” or “unconditioned”; a term used to describe the few factors ([DHARMA](#)), especially [NIRVĀNA](#) and in some schools space ([ĀKĀŚA](#)), that are not conditioned ([SAMSKRTA](#)) and are thus not subject to the inevitable impermanence ([ANITYA](#)) that plagues all conditioned dharmas. See [ASAMSKRTADHARMA](#).

[asamskrtadharmas](#). (P. asaṅkhatadhamma; T. 'dus ma byas kyi chos; C. wuweifa; J. muihō; K. muwibōp 無爲法). In Sanskrit, “uncompounded” or “unconditioned” “factors”; a term used to describe the few [DHARMAS](#) that are not conditioned ([SAMSKRTA](#)) and are therefore perduring phenomena ([NITYADHARMA](#)) that are not subject to impermanence ([ANITYA](#)). The lists differ in the various schools. The Pāli tradition’s list of eighty-two dharmas (P. dhamma) recognizes only one uncompounded dharma: [NIRVĀNA](#) (P. nibbāna). The [SARVĀSTIVĀDA](#) school recognizes three out of seventy-five: space ([ĀKĀŚA](#)), and two varieties of nirvāṇa: “analytical” “suppression” or “cessation” ([PRATISAMKHYĀNIRODHA](#)) and “nonanalytical suppression” ([APRATISAMKHYĀNIRODHA](#)). [YOGĀCĀRA](#) recognizes six of its one hundred dharmas as uncompounded: the preceding three, plus “motionlessness” (āniñjya, [alt. aniñjya]), the “cessation of perception and sensation” ([SAMJÑĀVEDAYITANIRODHA](#)), and “suchness” ([TATHATĀ](#)). Nirvāṇa is the one factor that all Buddhist schools accept as being uncompounded. It is the one dharma that exists without being the result of a cause (ahetuja), though it may be accessed through the three “gates to deliverance” ([VIMOKSAMUKHA](#)). Because nirvāṇa neither produces nor is produced by anything else, it is utterly distinct from the conditioned realm that is subject to production and cessation; its achievement, therefore, means the end to the repeated cycle of rebirth ([SAMSĀRA](#)). In several schools of Buddhism, including the Sarvāstivāda, nirvāṇa is subdivided into two complementary aspects: an “analytical cessation” (pratisamkhyānirodha) that corresponds to earlier notions of nirvāṇa and “nonanalytical suppression” (apratisamkhyānirodha), which ensures that the enlightened person will never again be subject to the vagaries of the conditioned world. “Analytical cessation” (pratisamkhyānirodha) occurs through the direct meditative insight into the [FOUR NOBLE TRUTHS](#) (catvāry āryasatyāni) and the

cognition of nonproduction ([ANUTPĀDAJÑĀNA](#)), which brings about the disjunction (visamyoga) from all unwholesome factors ([AKUŚĀLADHARMA](#)). “Nonanalytical suppression” (apratisamkhyānirodha) prevents the dharmas of the conditioned realm from ever appearing again for the enlightened person. In the [VAIBHĀSIKA](#) interpretation, this dharma suppresses the conditions that would lead to the production of dharmas, thus ensuring that they remain forever positioned in future mode and unable ever again to arise in the present. Because this dharma is not a result of insight, it is called “nonanalytical.” Space (ākāśa) has two discrete denotations. First, space is an absence that delimits forms; like the empty space inside a door frame, ākāśa is a hole that is itself empty but that defines, or is defined by, the material that surrounds it. Second, as the vast emptiness of space, space comes also to be described as the absence of obstruction; in this sense, space also comes to be interpreted as something akin to the Western conception of ether, a virtually immaterial, but glowing fluid that serves as the support for the four material elements ([MAHĀBHŪTA](#)). Space is accepted as an un compounded dharma in six of the mainstream Buddhist schools, including the [SARVĀSTIVĀDA](#) and the [MAHĀSĀMĀGHĪKA](#), as well as the later [YOGĀCĀRA](#); three others reject this interpretation, including the [THERAVĀDA](#). The Yogācāra additions to this list essentially subsume the upper reaches of the immaterial realm (ārūpyāvacara) into the listing of un compounded dharmas. Anīñjya, or motionlessness, is used even in the early Buddhist tradition to refer to actions that are neither wholesome nor unwholesome (see [ANIÑJYAKARMA](#)), which lead to rebirth in the realm of subtle materiality or the immaterial realm and, by extension, to those realms themselves. The “cessation of perception and sensation” (saṃjñāvedayitānirodha) is the last of the eight liberations ([VIMOKṢA](#); P. vimokkha) and the ninth and highest of the immaterial attainments ([SAMĀPATTI](#)). “Suchness” ([TATHATĀ](#)) is the ultimate reality (i.e., [ŚŪNYATĀ](#)) shared in common by a [TATHĀGATA](#) and all other afflicted ([SAMKLIṢṬA](#)) and pure ([VIŚUDDHI](#)) dharmas; the “cessation of perception and sensation” (saṃjñāvedayitānirodha) is not only “a meditative trance wherein no perceptual activity remains,” but one where no feeling, whether pleasant, unpleasant, or neutral, is experienced.

[asamvāsa](#). (T. gnas par mi bya; C. bugongzhu; J. fugūjū; K. pulgongju 不共住). In Sanskrit and Pāli, “not in communion”; the lifelong punishment enjoined in the [VINAYA](#) on monks (and nuns) who have transgressed one of the major offenses that bring “defeat” ([PĀRĀJIKĀ](#)), such as the prohibition against engaging in sexual

intercourse. The monk who is *asaṃvāsa* is not permitted to participate in any of the official monastic proceedings or ecclesiastical acts ([KARMA](#)); thus he is effectively ostracized from the formal activities of the monastery. Although this term has sometimes been interpreted as “expulsion,” *asaṃvāsa* does not necessarily mean that the monk is banished from the monastery but simply that he is “no longer in communion” with the work, rules, and training of the monastic community as a whole. Indeed, there is evidence from virtually all recensions of the vinaya (except the Pāli recension of the [THERAVĀDA](#) school), that *pārājika* monks continued to live in the monastery even after their transgressions, in the special status of *pārājika* penitents ([ŚIKSĀDATTAKA](#)).

āsana. (T. ’dug stangs; C. zuofa/zuo; J. zahō/za; K. chwaböp/chwa 坐法/座). In Sanskrit, “posture”; commonly referring to the position of the legs and feet in representations of Buddhist images. Āsanas may be seated or standing, passive or active, and, in the context of esoteric imagery, they are usually prescribed in literary sources such as [TANTRAS](#) and [SĀDHANAS](#). The term may also be used to refer to the physical support or seat for a Buddhist deity. See also [ACALĀSANA](#); [ĀLĪDHA](#); [ARDHAPARYAṆKA](#); [BHADRĀSANA](#); [LALITĀSANA](#); [MAITREYĀSANA](#); [NRTYĀSANA](#); [PADMĀSANA](#); [PRALAMBAPĀDĀSANA](#); [PRATYĀLĪDHA](#); [RĀJALĪLĀSANA](#); [SATTVAPARYAṆKA](#); [SATTVĀRDHAPARYAṆKA](#); [VAJRAPARYAṆKA](#); [VAJRĀSANA](#).

Asaṅga. (T. Thogs med; C. Wuzhao; J. Mujaku; K. Much’ak 無著) (c. 320–c. 390 CE). a.k.a. Ārya Asaṅga, Indian scholar who is considered to be a founder of the [YOGĀCĀRA](#) school of [MAHĀYĀNA](#) Buddhism. In the Tibetan tradition, he is counted as one of the “six ornaments of [JAMBUDVĪPA](#)” (’dzam gling rgyan drug), together with [VASUBANDHU](#), [NĀGĀRJUNA](#) and [ĀRYADEVĀ](#), and [DIGNĀGA](#) and [DHARMAKĪRTI](#). Born into a brāhmaṇa family in Puruṣapura (modern-day Peshawar, Pakistan), Asaṅga originally studied under [SARVĀSTIVĀDA](#) (possibly [MAHĪŚĀSAKA](#)) teachers but converted to the Mahāyāna later in life. His younger brother was the important exegete Vasubandhu; it is said that he was converted to the Mahāyāna by Asaṅga. According to traditional accounts, Asaṅga spent twelve years in meditation retreat, after which he received a vision of the future buddha [MAITREYA](#). He visited Maitreya’s abode in [TUSITA](#) heaven, where the bodhisattva instructed him in Mahāyāna and especially Yogācāra doctrine. Some of these teachings were collected under the name Maitreya-nātha, and the Buddhist tradition generally regards them as revealed by Asaṅga through the power of the future buddha. Some modern scholars, however, have posited the

existence of a historical figure named [MAITREYANĀTHA](#) or simply Maitreya. Asaṅga is therefore associated with what are known as the “five treatises of Maitreyanātha” (the [ABHISAMAYĀLAMKĀRA](#), the [DHARMADHARMATĀVIBHĀGA](#), the [MADHYĀNTAVIBHĀGA](#), the [MAHĀYĀNASŪTRĀLAMKĀRA](#), and the [RATNAGOTRAVIBHĀGA](#)). Asaṅga was a prolific author, composing commentaries on the [SAMDHINIRMOCANASŪTRA](#) and the [VAJRACCHEDIKĀPRAJÑĀPĀRAMITĀSŪTRA](#). Among his independent treatises, three are particularly important. The [ABHIDHARMASAMUCCAYA](#) sets forth the categories of the [ABHIDHARMA](#) from a Yogācāra perspective. The [MAHĀYĀNASAMGRAHA](#) is a detailed exposition of Yogācāra doctrine, setting forth such topics as the [ĀLAYAVIJÑĀNA](#) and the [TRISVABHĀVA](#) as well as the constituents of the path. His largest work is the compendium entitled [YOGĀCĀRABHŪMIŚĀSTRA](#). Two of its sections, the [ŚRĀVAKABHŪMI](#) and the [BODHISATTVABHŪMI](#), circulated as independent works, with the former important for its exposition of the practice of [DHYĀNA](#) and the latter for its exposition of the bodhisattva’s practice of the six [PĀRAMITĀ](#); the chapter on [ŚĪLA](#) is particularly influential. These texts have had a lasting and profound impact on the development of Buddhism, especially in India, Tibet, and East Asia. Among the great figures in the history of Indian Buddhism, Asaṅga is rare for the breadth of his interests and influence, making significant contributions to philosophy (as the founder of Yogācāra), playing a key role in [TATHĀGATAGARBHA](#) thought (through the *Ratnagotravibhāga*), and providing significant expositions of Buddhist practice (in the *Yogācārabhūmi*).

[āśava](#). (S. āśrava). In Pāli, “contaminants” or “outflows”; mental contaminants that are eradicated upon attaining arahantship. They are: (1) the contaminant of sensuality (P. kāmāsava); (2) the contaminant of continuing existence (P. bhavāsava); and (3) the contaminant of ignorance (P. avijjāsava); to this list is sometimes added (4) the contaminant of views (P. diṭṭhāsava). See also [ĀSAVAKKHAYA](#); and the more extensive discussion in [ĀSRAVA](#) s.v.

[āśavakkhaya](#). (S. āśravakṣaya). In Pāli, “extinction of the contaminants” or “destruction of the outflows”; a supramundane (lokuttara) supernormal power (abhiññā) produced through the perfection of insight ([VIPASSANĀ](#)). It is equivalent to the attainment of “worthiness” (arahatta) or perfect sainthood. One who achieves this is a “worthy one” (arahant), attains in this life deliverance of mind (cetovimutti) and deliverance through wisdom (paññāvimutti), and at death passes into nibbāna never to be reborn. See [ĀSRAVAKSAYA](#).

asceticism. (S. duṣkaracaryā; P. dukkarakārikā; T. dka' ba spyod pa; C. kuxing; J. kugyō; K. kohaeng 苦行). Derived from the Greek term askesis, “to exercise”; the performance of austerities, both mental and physical, for the purpose of attaining enlightenment ([BODHI](#)) and, in certain cases, special powers or knowledges ([ABHIJÑĀ](#)). The basic Buddhist attitude toward asceticism, as found in the narrative surrounding the life of the Buddha, has been a negative one, particularly with regard to those practices associated with physical torment, such as fasting. The Buddha himself is said to have once practiced asceticism with five fellow ascetics in the forest of [URUVILVĀ](#), only to eventually abandon it for the middle way ([MADHYAMAPRATIPAD](#)) between sensual indulgence and mortification of the flesh. Ascetic practices nevertheless continued to be important in the various Buddhist traditions, as attested to by the life stories of the teachers [MI LA RAS PA](#) (Milarepa), [BODHIDHARMA](#), and [HAKUIN EKAKU](#) to name but a few. See also [DUSKARACARYĀ](#); [DHUTAṄGA](#); [TAPAS](#).

asipattravana. (P. asipattavana; T. ral gri'i lo ma'i nags; C. jianye lin; J. ken'yōrin; K. kōmyōp rim 劍葉林). In Sanskrit, “forest with leaves of swords,” one of the neighboring hells ([PRATYEKANARAKA](#)) surrounding the eight hot hells, through which the denizens of the hells ([NĀRAKA](#)) must pass as they depart from those baleful realms. It is classified as part of the third of the four neighboring hells, called “razor road” ([KSURAMĀRGA](#)). From a distance, the forest appears to be a forest of mango trees, and the denizens of hell approach in the hope of eating the mangoes. Upon arrival, they find that the leaves on the trees are swords and, as the denizens of hell pass through the forest, the leaves fall from the trees, lacerating their bodies.

Asita. (T. Mdog nag po; C. Asituo; J. Ashida; K. Asat'a 阿私陀). Sanskrit and Pāli name for an Indian brāhmaṇa who, according to Pāli sources, was chaplain to the [BODHISATTVA](#)'s grandfather Sīhahanu (S. Siṃhahanu) and teacher of the bodhisattva's father Suddhodana (S. [ŚUDDHODANA](#)). After his retirement from the world, Asita developed various supranormal powers through his mastery of meditation and used them to sojourn in the realm of the divinities ([DEVA](#)). Once while staying in [TRĀYASTRIMŚĀ](#) heaven, he learned that the future buddha [SIDDHĀRTHA GAUTAMA](#) had been born as the son of King Śuddhodana. Asita went to the palace to examine the infant and saw that the child was endowed with the thirty-two marks of a [MAHĀPURUSA](#), or great man. From these signs, he realized that Siddhārtha was destined to become a fully enlightened buddha.

Despite his great joy, Asita was also dismayed to realize that, at his current age of ninety, he would not live long enough to witness this event. Instead, he would die and be reborn in the immaterial realm ([ĀRŪPYADHĀTU](#)), where he would not be able to hear the Buddha preach and could not be liberated by his salvific message. Asita urged his nephew Nālaka to renounce the world in anticipation of the future buddha's enlightenment. The boy complied and later attained arhatship after reflecting on the sermon the Buddha delivered to him in the *Nālakasutta*.

[Aśoka](#). (P. Asoka; T. Mya ngan med; C. Ayu wang; J. Aiku ō; K. Ayuk wang 阿育王) (c. 300–232 BCE; r. c. 268–232 BCE). Indian Mauryan emperor and celebrated patron of Buddhism; also known as Dharmāśoka. Son of Bindusāra and grandson of Candragupta, Aśoka was the third king of the Mauryan dynasty. Aśoka left numerous inscriptions recording his edicts and proclamations to the subjects of his realm. In these inscriptions, Aśoka is referred to as [DEVĀNĀM PRIYAH](#), “beloved of the gods.” These inscriptions comprise one of the earliest bodies of writing as yet deciphered from the Indian subcontinent. His edicts have been found inscribed on boulders, on stone pillars, and in caves and are widely distributed from northern Pakistan in the west, across the Gangetic plain to Bengal in the east, to near Chennai in South India. The inscriptions are ethical and religious in content, with some describing how Aśoka turned to the [DHARMA](#) after subjugating the territory of Kalinga (in the coastal region of modern Andhra Pradesh) in a bloody war. In his own words, Aśoka states that the bloodshed of that campaign caused him remorse and taught him that rule by dharma, or righteousness, is superior to rule by mere force of arms. While the Buddha, dharma, and [SAMGHA](#) are extolled and Buddhist texts are mentioned in the edicts, the dharma that Aśoka promulgated was neither sectarian nor even specifically Buddhist, but a general code of administrative, public, and private ethics suitable for a multireligious and multiethnic polity. It is clear that Aśoka saw this code of ethics as a diplomatic tool as well, in that he dispatched embassies to neighboring states in an effort to establish dharma as the basis for international relations. The edicts were not translated until the nineteenth century, however, and therefore played little role in the Buddhist view of Aśoka, which derives instead from a variety of legends told about the emperor. The legend of Aśoka is recounted in the Sanskrit [DIVYĀVADĀNA](#), in the Pāli chronicles of Sri Lanka, [DĪPAVAMSA](#) and [MAHĀVAMSA](#), and in the Pāli commentaries, particularly the [SAMANTAPĀSĀDIKĀ](#). Particularly in Pāli materials,

Aśoka is portrayed as a staunch sectarian and exclusive patron of the Pāli tradition. The inscriptional evidence, as noted above, does not support that claim. In the *Mahāvamsa*, for example, Aśoka is said to have been converted to [THERAVĀDA](#) Buddhism by the novice [NIGRODHA](#), after which he purifies the Buddhist [SAMGHA](#) by purging it of non-Theravāda heretics. He then sponsors the convention of the third Buddhist council ([SAMGĪTĪ](#); see [COUNCIL, THIRD](#)) under the presidency of [MOGGALIPUTTATIṢṢA](#), an entirely Theravāda affair. Recalling perhaps the historical Aśoka's diplomatic missions, the legend recounts how, after the council, Moggaliputtatissa dispatched Theravāda missions, comprised of monks, to nine adjacent lands for the purpose of propagating the religion, including Aśoka's son ([MAHINDA](#)) and daughter ([SAṄGHAMITTĀ](#)) to Sri Lanka. In Sri Lanka, where the legend appears to have originated, and in the Theravāda countries of Southeast Asia, the Pāli account of King Aśoka was adopted as one of the main paradigms of Buddhist kingship and models of ideal governance and proper saṃgha-state relations. A different set of legends, which do not recount the conversion of Sri Lanka, appears in Sanskrit sources, most notably, the [AŚOKĀVADĀNA](#).

[Aśokan pillars](#). Stone pillars erected or embellished during the reign of King [AŚOKA](#), many of which bear royal edicts attesting to the king's support of the "dharma" and putatively of Buddhism. Although later Buddhist records mention more than forty such pillars, less than half of these have been identified. At least some pillars predate Aśoka's ascendance, but most were erected by the king to commemorate his pilgrimage to sacred Buddhist sites or as Buddhist memorials. One representative example, located at Lauriyā Nandangarh, stands nearly forty feet tall and extends over ten feet below the ground. The heaviest may weigh up to 75,000 pounds. The pillar edicts form some of the earliest extant written records in the Indian subcontinent and typically avoid mentioning Buddhist philosophy, offering instead general support of dharma, or righteousness, and in some cases of the Buddhist [SAMGHA](#). At one time, the pillars supported stone capitals in the form of animals such as the bull. One Aśokan innovation was the use of lion capitals, the most famous being a lotus vase supporting a drum of four wheels and other animals, topped with four lions and a wheel (now missing). The use of lion symbolism may have been a direct reference to the [ŚĀKYA](#) clan of the Buddha, which took the lion (siṃha) as its emblem.

[Aśokāvadāna](#). (T. Ku ṅā la'i rtogs pa brjod pa; C. Ayu wang zhuan; J. Aiku ō

den; K. Ayuk wang chön 阿育王傳). In Sanskrit, “The Story of Aśoka,” a text belonging to the category of “edifying tales” ([AVADĀNA](#)), which narrates the major events in the life of King [AŚOKA](#) of the Indian Mauryan dynasty. The work focuses primarily on Aśoka’s conversion to Buddhism, his subsequent support of the [DHARMA](#) and monastic community ([SAMGHA](#)), his visits to the major sites of the Buddha’s life ([MAHĀSTHĀNA](#)), and his construction of [STŪPA](#)s. It also records the transmission of the Buddhist teachings by five early teachers: [MAHĀKĀŚYAPA](#), [ĀNANDA](#), [MADHYĀNTIKA](#), [ŚĀNAKAVĀSIN](#), and [UPAGUPTA](#). The *Aśokāvadāna* relates that, in a previous life, Aśoka (then a small boy named Jaya) placed a handful of dirt in the Buddha’s begging bowl ([PĀTRA](#)). The Buddha predicted that one hundred years after his passage into nirvāṇa, the child would become a [DHARMARĀJA](#) and [CAKRAVARTIN](#) named Aśoka. As emperor, Aśoka becomes a devout Buddhist and righteous king, renowned for collecting the relics ([ŚARĪRA](#)) of the Buddha from eight (or in one version, seven of eight) stūpas and redistributing them in 84,000 stūpas across his realm. Parts of the Sanskrit text have been preserved in the [DIVYĀVADĀNA](#), and the entire work is extant in Chinese. Only the Kunāla chapter of the *Aśokāvadāna* was rendered into Tibetan, in the eleventh century, by Padmākaravarman and [RIN CHEN BZANG PO](#).

āśraddhya. [alt. aśrāddhya] (P. asaddhā/asaddhiya; T. ma dad pa; C. buxin; J. fushin; K. pulsŏn 不信). In Sanskrit, “lack of faith,” “disbelief.” In the roster of seventy-five factors ([DHARMA](#)) in the [SARVĀSTIVĀDA](#) school of [ABHIDHARMA](#), āśraddhya is listed as the fourth of the six major afflicted factors of wide extent ([KLEŚAMAHĀBHŪMIKA](#)) that are associated with all defiled thoughts and afflictions ([KLEŚA](#)), together with delusion ([MOHA](#)), heedlessness ([PRAMĀDA](#)), indolence ([KAUSĪDYA](#)), sloth ([STYĀNA](#)), and restlessness ([AUDDHATYA](#)). The [YOGĀCĀRA](#) school lists it in its roster of a hundred dharmas (C. [BAIFA](#)) as the thirteenth of the twenty secondary afflictions ([UPAKLEŚA](#)). Āśraddhya refers to the inability of a person to generate the tacit belief or confidence in a teacher and the doctrines that is necessary to undertake practice in earnest; it has a stronger affective dimension than the intellectual skepticism of the related term doubt ([VICIKITSĀ](#)).

āsrava. (P. [ASA](#)VA; T. zag pa; C. lou; J. ro; K. nu 漏). In Sanskrit, “contaminants,” “outflows,” or “fluxes”; mental contaminants that are eradicated upon attaining the status of a “worthy one” ([ARHAT](#)); also written as āsrava. They

are (1) the contaminant of sensuality (kāmāsrava; [KĀMA](#)); (2) the contaminant of continuing existence (bhavāsrava; [BHAVA](#)); and (3) the contaminant of ignorance (avidyāsrava; [AVIDYĀ](#)); to this list is often added (4) the contaminant of views (dr̥ṣṭyāsrava; [DRSTI](#)). Since the āsravas bind or immerse one in the cycle of existence, they are also sometimes called the “floods” ([OGHA](#)) and the “yokes” (yoga). The term āsrava is used in both Buddhism and Jainism, suggesting that it is one of the earliest such terms for the mental contaminants used within the tradition. (In the Buddhist interpretation, an āsrava is more of an “outflow,” because the contaminants flow out from the mind and affect the ways in which one interacts with the external world; indeed, the Chinese translation of the term means literally to “leak.” In the [JAINA](#) tradition, an āsrava is more of an “inflow,” because the contaminants flow into the body, where they adhere to the [ĀTMAN](#), thus defiling it.) The term is a synonym of the [KLEŚAs](#) (afflictions, defilements), since objects (such as the five [SKANDHAs](#)) that can serve as objects of defilement are “contaminated” (sāsrava). The contaminants are permanently overcome through insight into such fundamental Buddhist truths as the [FOUR NOBLE TRUTHS](#), conditioned origination ([PRATĪTYASAMUTPĀDA](#)), or the three marks of existence ([TRILAKSANA](#)). Because the [ARHAT](#) has permanently uprooted the contaminants from the mind, he or she receives the epithet [KSĪNĀSRAVA](#) (“one whose contaminants are extinguished”). See also [ĀSAVA](#), [ANĀSRAVA](#), [ĀSRAVAKSAYA](#).

āsravakṣaya. (P. āsavakkhaya; T. zag pa zad pa; C. loujin[zhi]; J. rojin[chi]; K. nujin[ji] 漏盡[智]). In Sanskrit, “extinction of the contaminants”; a supranormal power ([ABHIJÑĀ](#)) produced through the perfection of insight ([VIPAŚYANĀ](#)), and one of the three knowledges ([TRIVIDYĀ](#)) that are the products of enlightenment ([BODHI](#)). One who achieves this state is a “worthy one” ([ARHAT](#)) and at death passes into [NIRVĀNA](#), never to be reborn. See also [ANĀSRAVA](#); [ĀSRAVA](#).

āśraya. (T. gnas; C. suoyi; J. sho'e; K. soŭi 所依). In Sanskrit, lit. “basis.” In the [SAUTRĀNTIKA](#) school, the term is used idiosyncratically to refer to the “substratum” of existence. This substratum is the psychophysical entity that was presumed to exist independently from the momentary flow of the conscious continuum ([SAMTĀNA](#)) and thus to provide the physical support for thought ([CITTA](#)) and the mental concomitants ([CAITTA](#)). This Sautrāntika teaching was critiqued by other Buddhist schools as skirting dangerously close to the proscribed notion of a perduring self ([ĀTMAN](#)). The term is also adopted subsequently in the [YOGĀCĀRA](#) school to refer to the “transformation of the

basis” ([ĀŚRAYAPARĀVRṬTI](#)) of the mind, the path, and the proclivities, which transforms an ordinary person ([PRTHAGJANA](#)) into a noble one ([ĀRYA](#)).

[āśrayaparāvṛtti](#). [alt. āśrayaparivṛtti] (T. gnas yongs su ’gyur pa; C. zhuanyi; J. ten’e; K. chönüi 轉依). In Sanskrit, “transformation of the basis” or “fundamental transmutation”; the transmutation of the defiled state in which one has not abandoned the afflictions ([KLEŚA](#)) into a purified state in which the kleśas have been abandoned. This transmutation thus transforms an ordinary person ([PRTHAGJANA](#)) into a noble one ([ĀRYA](#)). In the [YOGĀCĀRA](#) school’s interpretation, by understanding (1) the emptiness ([ŚŪNYATĀ](#)) of the imagined reality ([PARIKALPITA](#)) that ordinary people mistakenly ascribe to the sensory images they experience (viz., “unreal imaginings,” or [ABHŪTAPARIKALPA](#)) and (2) the conditioned origination of things through the interdependent aspect of cognition ([PARATANTRA](#)), the basis will be transformed into the perfected ([PARNISPANNA](#)) nature, and enlightenment realized. [STHIRAMATI](#) posits three aspects to this transformation: transformation of the basis of the mind (cittāśrayaparāvṛtti), transformation of the basis of the path (mārgāśrayaparāvṛtti), and transformation of the basis of the proclivities (dauṣṭhulyāśrayaparāvṛtti). “Transformation of the basis of mind” transmutes the imaginary into the perfected through the awareness of emptiness. Insight into the perfected in turn empties the path of any sense of sequential progression, thus transmuting the mundane path ([LAUKIKAMĀRGA](#)) with its multiple steps into a supramundane path (lokottaramārga, cf. [LOKUTTARAMAGGA](#)) that has no fixed locus; this is the “transformation of the basis of the path.” Finally, “transformation of the basis of the proclivities” eradicates the seeds ([BĪJA](#)) of action ([KARMAN](#)) that are stored in the storehouse consciousness ([ĀLAYAVIJÑĀNA](#)), liberating the bodhisattva from the effects of any past unwholesome actions and freeing him to project compassion liberally throughout the world.

[Aṣṭabhayatrāṇa-Tārā](#). (S). See [TĀRĀ](#).

[astaduḥkha](#). (T. sdug bsngal brgyad; C. baku; J. hakku; K. p’algo 八苦). In Sanskrit, “eight types of suffering” ([DUḤKHA](#)), sometimes specified as the eight sufferings of humans. The eight are the suffering associated with (1) birth (jātiduḥkha), (2) aging (jarāduḥkha), (3) sickness (vyādhiduḥkha), and (4) death (maraṇaduḥkha); (5) “the suffering of being separated from persons and things one likes” (priyaviprayogaduḥkha); (6) “the suffering of being associated with persons and things one dislikes” (apriyasamprayogaduḥkha); (7) “the suffering

of not getting what one wants” (yad api icchayā paryeṣamāṇo na labhate tad api duḥkham); and (8) “the suffering inherent in the five aggregates” (saṃkṣepeṇa pañcopādānaskandhaduḥkham); the eighth appears in some lists as “the suffering of getting what one does not want.” See discussion in [DUHKHA](#) entry.

astaksana. (T. dal ba brgyad). In Sanskrit, lit. “eight moments,” i.e., eight qualities of an opportune [human] rebirth (these are defined in Tibetan as “eight freedoms”). The eight are freedom from (1) birth as one of the hell denizens ([NĀRAKA](#)); (2) birth as an animal ([TIRYAK](#)), (3) birth as a ghost ([PRETA](#)), or (4) birth as a long-lived divinity ([DEVA](#)); (5) birth in a border land or barbarian region; (6) birth in a place with perverted or heretical views; (7) birth as a stupid person who is unable to understand the teachings; and (8) birth at a time when or a place where no buddhas have arisen. In Tibetan [LAM RIM](#) literature, one is instructed to contemplate the rarity of such an opportune birth in order to take full advantage of it by practicing the path. See [KSANA](#).

astalokadharmas. (T. ’jig rten gyi chos brgyad). In Sanskrit, “eight mundane dharmas” or “eight worldly concerns”; the preoccupation with gain (lābha) and loss (alābha), pleasure ([SUKHA](#)) and pain ([DUHKHA](#)), praise (praśamsā) and blame (nindā), and fame (yaśas) and disgrace (ayaśas). This list encapsulates the concerns of foolish ([BĀLA](#)) ordinary persons ([PRTHAGJANA](#)) who in each case desire to attain the first and avoid the second, unlike those who practice asceticism ([DHUTAṅGA](#)), understand impermanence ([ANITYA](#)), and are motivated to attain both a better rebirth and the state of [NIRVĀNA](#) and [BODHI](#).

aṣṭamahābodhisattva. In Sanskrit, “eight great [BODHISATTVAs.](#)” See [ASTAMAHOPAPUTRA](#).

aṣṭamahāśmaśāna. (T. dur khrod chen po brgyad). In Sanskrit, “eight great charnel grounds.” See [ŚMAŚĀNA](#).

aṣṭamahopaputra. (T. nye ba’i sras chen brgyad; C. ba da pusa; J. hachidai bosatsu; K. p’al tae posal 八大菩薩). In Sanskrit, the “eight great associated sons”; a group of eight bodhisattvas also known as the [ASTAMAHĀBODHISATTVA](#) or “eight great bodhisattvas”; they are [KSITIGARBHA](#), [ĀKĀŚAGARBHA](#), [AVALOKITEŚVARA](#), [VAJRAPĀNI](#), [MAITREYA](#), [SARVANĪVARANAVISKAMBHIN](#), [SAMANTABHADRA](#), and [MAÑJUŚRĪ](#). Textual evidence for the grouping is found as early as the third century, the date of [ZHI QIAN](#)’s Chinese translation of the

Aṣṭabuddhakaśūtra (*Fo shuo ba jixiangshen zhoujing*). In earlier representations, they flank either [ŚĀKYAMUNI](#) or [AMITĀBHA](#). Their roles are laid out in the *Aṣṭamaṅḍalakaśūtra*, where the aims of their worship are essentially mundane—absolution from transgressions, fulfillment of desires, and protection from ills. The grouping is known throughout Asia, from northern India, where they first appeared in [ELLORĀ](#), Ratnagiri, and [NĀLANDĀ](#), and from there as far east as Japan and Indonesia—indeed, virtually anywhere [MAHĀYĀNA](#) and tantric Buddhism flourished. They figure as a group in [TANTRAS](#) of various classes, where their number of arms corresponds to the main deity of the [MANDALA](#) and their colors correspond to the direction in which they are placed. In the maṅḍala of the [GUHYASAMĀJATANTRA](#), they flank the central figure [AKSOBHYA](#), who appears in the form of Vajradhṛk and his consort Sparśavajrā. When each has a consort, the females are called the aṣṭapūjādevī (“eight offering goddesses”). There are four in the *Guhyasamājatantra* maṅḍala: Rūpavajrā, Śabdavajrā, Gandhavajrā, and Rasavajrā. In the vajradhātu mahāmaṅḍala, the group of bodhisattvas is expanded to sixteen.

[astamaṅgala](#). (T. bkra shis rtags brgyad; C. ba jixiang; J. hachikichijō; K. p’al kilsang 八吉祥). In Sanskrit, “eight auspicious symbols”; eight Indian emblems of good fortune, which became especially popular in Nepal and Tibet but are also known in China. The eight include the lotus ([PADMA](#)), the endless knot (śrīvatsa, T. dpal be’u), the pair of golden fish (suvarṇamatsya, T. gser nya), the parasol (chattra, T. gdugs), the victory banner (ketu, T. rgyal mtshan), the treasure vase (dhanakumbha, T. gter gyi bum pa), the white conch shell (śaṅkha, T. dung dkar), and the wheel ([CAKRA](#), T. ’khor lo). [VAJRAYĀNA](#) Buddhism deified the symbols as eight goddesses, the aṣṭamaṅgaladevī, who each carry one of these emblems as their attribute. Chinese Buddhism regards the symbols as representing eight organs of the Buddha’s body, and in one Tibetan tradition the eight are collectively identified as forming the body of the Buddha. Designs of these symbols are found throughout both sacred and secular artwork and commonly adorn furniture, murals, carpets, and brocade hangings. In Tibetan communities, the eight symbols are traditionally drawn on the ground out of sprinkled flour or powder as a greeting to visiting religious teachers.

[aṣṭamāyopamā](#). (T. sgyu ma’i dpe brgyad; C. ruhuan yu; J. nyogen no yu; K. yōhwan yu 如幻喻). In Sanskrit, “eight similes of illusion”; teaching that all dharmas lack an inherent nature ([NIHŠVABHĀVA](#)). In the

[PAÑCAVIMŚATSĀHASRIKĀPRAJÑĀPĀRAMITĀSŪTRA](#), these are listed as a dream (svapna); an illusion ([MĀYĀ](#)); a mirage (marīci); an echo (pratiśabda); an optical illusion (pratibhāsa); a reflection (pratibimba), such as of the moon reflected in water (udakacandra); a city of the [GANDHARVAS](#) ([GANDHARVANAGARA](#)); and a tathāgata’s magical creation (tathāgatanirmita). Other famous metaphors or similes for the insubstantiality of the five aggregates ([SKANDHA](#)) include the five in the *Phenapiṇḍūpamasutta* of the [SAMYUTTANIKĀYA](#), which compare form to a lump of foam (P. phenapiṇḍa), feeling to a water bubble (P. bubbulaka), perception to a mirage (P. marīcikā), conditioned formations to the trunk of a plantain tree (P. kadalikkhandha), and consciousness to a conjurer (māyākāra). See also [LIUYU](#) (“six similes”).

[astāṅgasamanvāgatam upavāsam](#). (P. aṭṭhaṅgasamannāgatam uposatham; T. yan lag brgyad pa’i gso sbyong; C. bazhaijie; J. hassaikai; K. p’alchaegye 八齋戒). In Sanskrit, the “fortnightly assembly with its eight constituents,” more popularly known as the eight rules of conduct ([ŚIKSĀPADA](#); P. sikkhāpada). On the fortnightly [UPOSADHA](#) days, Buddhist laity would take three additional precepts beyond their standard list of five precepts ([PAÑCAŚĪLA](#)) to help foster a sense of renunciation. The full list of eight includes prohibitions against (1) killing, (2) stealing, (3) engaging in sexual misconduct, (4) lying, and (5) consuming intoxicants; these are supplemented by these three extra precepts prohibiting (6) resting on a high or luxurious bed, (7) using makeup and perfumes and enjoying music and dance, and (8) eating at improper times (viz., after midday). See also [BAGUAN ZHAI](#); [ŚĪLA](#).

[astāṅgikamārga](#). In Sanskrit, “eightfold path.” See [ĀRYĀSTĀNGAMĀRGA](#).

[astānta](#). (T. mtha’ brgyad; C. babu; J. happu; K. p’albul 八不). In Sanskrit, “eight extremes,” an important term in the [MADHYAMAKA](#) school, referring to eight qualities of which all phenomena are said to be empty (see [ŚŪNYATĀ](#)). The eight (in four pairs) are cessation and production, annihilation and permanence, coming and going, and difference and sameness. The locus classicus for the list is the opening passage of [NĀGĀRJUNA](#)’s [MŪLAMADHYAMAKĀRIKĀ](#), which reads, “Homage to the perfect Buddha, best of teachers, who taught that what is dependently arisen has no cessation and no production, no annihilation and no permanence, no coming and no going, no difference and no sameness, is free of elaborations and is at peace.” See also [BABU](#).

[astāryapudgala](#). (P. aṭṭhāriyapuggala; T. 'phags pa'i gang zag brgyad/gang zag ya brgyad; C. badaren; J. hachidainin; K. p'altaein 八大人). In Sanskrit, “eight noble persons”; referring to those who have achieved the four right paths and four fruitions of sanctity. See [ĀRYAPUDGALA](#).

[Aṣṭasāhasrikāprajñāpāramitāvyaḅhyābhisamayālamkāraḅlokā](#). (T. Brgyad stong 'grel chen/Rgyan snang). In Sanskrit, “Light for the Ornament of Clear Realizations, a Commentary on the Perfection of Wisdom in Eight Thousand Lines,” by the Indian scholiast [HARIBHADRA](#). See [ABHISAMAYĀLAMKĀRĀLOKĀVYĀKHYĀ](#).

[Aṣṭasāhasrikāprajñāpāramitā](#). (T. Sher phyin brgyad stong pa; C. Xiaopin bore jing; J. Shōbon hanyakyō; K. Sop'um panya kyōng 小品般若經). In Sanskrit, “Perfection of Wisdom in Eight Thousand Lines.” This scripture is now generally accepted to be the earliest of the many [PRAJÑĀPĀRAMITĀ](#) sūtras and thus probably one of the very earliest of the [MAHĀYĀNA](#) scriptures. The *Aṣṭa*, as it is often referred to in the literature, seems to have gradually developed over a period of about two hundred years, from the first century BCE to the first century CE. Some of its earliest recensions translated into Chinese during the Han dynasty do not yet display the full panoply of self-referentially Mahāyāna terminology that characterize the more elaborate recensions translated later, suggesting that Mahāyāna doctrine was still under development during the early centuries of the Common Era. The provenance of the text is obscure, but the consensus view is that it was probably written in central or southern India. The *Aṣṭa*, together with its verse summary, the [RATNAGUNASAMCAYAGĀTHĀ](#), probably represents the earliest stratum of the prajñāpāramitā literature; scholars believe that this core scripture was subsequently expanded between the second and fourth centuries CE into other massive Prajñāpāramitā scriptures in as many as 100,000 lines (the [ŚATASĀHASRIKĀPRAJÑĀPĀRAMITĀ](#)). By about 500 CE, the *Aṣṭa*'s basic ideas had been abbreviated into shorter condensed statements, such as the widely read, 300-verse [VAJRACCHEDIKĀPRAJÑĀPĀRAMITĀ](#) (“Diamond Sūtra”). (Some scholars have suggested instead that the “Diamond Sūtra” may in fact represent one of the earliest strata of the prajñāpāramitā literature.) The Mahāyāna tradition's view of its own history, however, is that the longest of the prajñāpāramitā scriptures, the 100,000-line *Śatasāhasrikāprajñāpāramitā*, is the core text from which all the other perfection of wisdom sūtras were subsequently excerpted. The main interlocutor of the *Aṣṭa*, as in most of the prajñāpāramitā

scriptures, is [SUBHŪTI](#), an [ARHAT](#) foremost among the Buddha's disciples in dwelling at peace in remote places, rather than [ŚĀRIPUTRA](#), who much more commonly appears in this role in the mainstream Buddhist scriptures (see [ĀGAMA](#); [NIKĀYA](#)). The prominent role accorded to Subhūti suggests that the *prajñāpāramitā* literature may derive from forest-dwelling (*āraṇyaka*) ascetic traditions distinct from the dominant, urban-based monastic elite. The main goal of the *Aṣṭa* and other *prajñāpāramitā* scriptures is rigorously to apply the foundational Buddhist notion of nonself ([ANĀTMAN](#)) to the investigation of all phenomena—from the usual compounded things ([SAMSKĀRA](#)) and conditioned factors ([SAMSKRTADHARMA](#)), but even to such quintessentially Buddhist summa bona as the fruits of sanctity ([ĀRYAMĀRGAPHALA](#)) and [NIRVĀNA](#). The constant refrain of the *Aṣṭa* is that there is nothing that can be grasped or to which one should cling, not [PRAJÑĀ](#), not [PĀRAMITĀ](#), not [BODHISATTVA](#), and not [BODHI](#). Even the six perfections ([ṢADPĀRAMITĀ](#)) of the bodhisattva are subjected to this same refutation: for example, only when the bodhisattva realizes that there is no giver, no recipient, and no gift will he have mastered the perfection of giving ([DĀNAPĀRAMITĀ](#)). Such radical nonattachment even to the central concepts of Buddhism itself helps to foster a thoroughgoing awareness of the emptiness ([ŚŪNYATĀ](#)) of all things and thus the perfection of wisdom (*prajñāpāramitā*). Even if the *Aṣṭa*'s area of origin was in the south of India, the *prajñāpāramitā* scriptures seem initially to have found their best reception in the northwest of India during the [KUSHAN](#) dynasty (c. first century CE), whence they would have had relatively easy entrée into Central Asia and then East Asia. This geographic proximity perhaps accounts for the early acceptance the *Aṣṭa* and the rest of the *prajñāpāramitā* literature received on the Chinese mainland, helping to make China the first predominantly Mahāyāna tradition.

***astasenā.** (T. lha srin sde brgyad; C. tianlong babu; J. tenryū hachibu; K. ch'ōnnyong p'albu 天龍八部). Sanskrit term for a grouping of eight nonhuman beings associated with the sensuous realm ([KĀMADHĀTU](#)); they are often listed as being in attendance when the Buddha speaks the [MAHĀYĀNA](#) sūtras. There are various lists, but a standard grouping includes divinities ([DEVA](#)), dragons ([NĀGA](#)), demons ([YAKSA](#)), demigods or titans ([ASURA](#)), demigod musicians ([GANDHARVA](#)), mythical birds ([GARUDA](#)), half-horse/half-men ([KIMNARA](#)), and great snakes ([MAHORĀGA](#)).

astavimoksa. (P. aṭṭhavimokkha; T. rnam par thar pa brgyad; C. ba jietuo; J.

hachigedatsu; K. p'al haet'al 八解脱). In Sanskrit, “eight liberations”; referring to a systematic meditation practice for cultivating detachment and ultimately liberation ([VIMOKṢA](#)). There are eight stages in the attenuation of consciousness that accompany the cultivation of increasingly deeper states of meditative absorption ([DHYĀNA](#)). In the first four dhyānas of the realm of subtle materiality ([RŪPĀVACARADHYĀNA](#)), the first three stages entail (1) the perception of materiality ([RŪPA](#)) in that plane of subtle materiality (S. rūpasamjñin, P. rūpasaññī), (2) the perception of external forms while not perceiving one's own form (S. arūpasamjñin, P. arūpasaññī), and (3) the developing of confidence through contemplating the beautiful (S. Śubha, P. subha). The next five stages transcend the realm of subtle materiality to take in the four immaterial dhyānas ([ĀRŪPYĀVACARADHYĀNA](#)) and beyond: (4) passing beyond the material plane with the idea of “limitless space,” one attains the plane of limitless space ([ĀKĀŚĀNANTYĀYATANA](#)); (5) passing beyond the plane of limitless space with the idea of “limitless consciousness,” one attains the plane of limitless consciousness ([VIJÑĀNĀNANTYĀYATANA](#)); (6) passing beyond the plane of limitless consciousness with the idea that “there is nothing,” one attains the plane of nothingness ([ĀKIÑCANYĀYATANA](#)); (7) passing beyond the plane of nothingness, one attains the plane of neither perception nor nonperception ([NAIVASAMJÑĀNĀSAMJÑĀYATANA](#)); and (8) passing beyond the plane of neither perception nor nonperception, one attains the cessation of all perception and sensation ([SAMJÑĀVEDAYITANIRODHA](#)). ¶ The [ABHIDHARMASAMUCCAYA](#) and [YOGĀCĀRABHŪMIŚĀSTRA](#) give an explanation of the first three of the eight vimokṣas within the larger context of bodhisattvas who compassionately manifest shapes, smells, and so on for the purpose of training others. Bodhisattvas who have reached any of the nine levels (the [RŪPADHĀTU](#), the four subtle-materiality [DHYĀNAS](#), and four immaterial attainments) engage in this type of practice. In the first vimokṣa, they destroy “form outside,” i.e., those in the rūpadhātu who have not destroyed attachment to forms (to their own color, shape, smell, and so on) cultivate detachment to the forms they see outside. (Other bodhisattvas who have reached the first dhyāna and so on do this by relaxing their detachment for the duration of the meditation.) In the second vimokṣa, they destroy the “form inside,” i.e., they cultivate detachment to their own color and shape. (Again, others who have reached the immaterial attainments and have no attachment to their own form relax that detachment for the duration of the meditation.) In the third, they gain control over what they want to believe about forms by meditating on the relative nature of beauty,

ugliness, and size. They destroy grasping at anything as having an absolute pleasant or unpleasant identity, and perceive them all as having the same taste as pleasant, or however else they want them to be. These texts finally give an explanation of the remaining five vimokṣas, “to loosen the rope of craving for the taste of the immaterial levels.”

[aśubhabhāvanā](#). (P. asubhabhāvanā; T. mi sdug pa bsgom pa; C. bujing guan; J. fujōkan; K. pujōng kwan 不淨觀). In Sanskrit, the “contemplation on the impure” or “foul”; a set of traditional topics of meditation (see [KAMMATTHĀNA](#)) that were intended to counter the affliction of lust ([RĀGA](#)), develop mindfulness ([SMṚTI](#); P. [SATI](#)) regarding the body, and lead to full mental absorption ([DHYĀNA](#)). In this form of meditation, “impure” or “foul” is most often used to refer either to a standardized list of thirty-one or thirty-two foul parts of the body or to the various stages in the decay of a corpse. In the case of the latter, for example, the meditator is to observe nine or ten specific types of putrefaction, described in gruesome detail in the Buddhist commentarial literature: mottled discoloration of the corpse ([vinīlakasaṃjñā](#)), discharges of pus ([vipūyakasaṃjñā](#)), decaying of rotten flesh ([vipaḍumakasaṃjñā](#)), bloating and tumefaction ([vyādhmātakasaṃjñā](#)), the exuding of blood and the overflow of body fluids ([vilohitakasaṃjñā](#)), infestation of worms and maggots ([vikhāditakasaṃjñā](#)), the dissolution of flesh and exposure of bones and sinews ([vikṣiptakasaṃjñā](#)), the cremated remains ([vidagdhakasaṃjñā](#)), and the dispersed skeletal parts ([asthisamjñā](#)). The *Kāyagatāsatisutta* of the [MAJJHIMANIKĀYA](#) includes the contemplation of the impure within a larger explanation of the contemplation of one’s body with mindfulness ([KĀYĀNUPAŚYANĀ](#); see also [SMṚTYUPASTHĀNA](#)); before the stages in the decay of the corpse, it gives the standardized list of thirty-one (sometimes thirty-two) foul parts of the body: the head hairs, body hairs, nails, teeth, skin, flesh, tendons, bones, bone marrow, kidneys, heart, liver, diaphragm, spleen, lungs, large intestines, small intestines, gorge, feces, bile, phlegm, pus, blood, sweat, fat, tears, skin-oil, saliva, mucus, fluid in the joints, and urine. These parts are chosen specifically because they will be easily visualized, and may have been intended to be the foul opposites of the thirty-two salutary marks of the great man ([MAHĀPURUSALAKSANA](#)). The Chinese tradition also uses a contemplation of seven kinds of foulness regarding the human body in order to counter lust and to facilitate detachment. (1) “Foulness in their seeds” (C. zhongzi bujing): human bodies derive from seminal ejaculate and, according to ancient medicine, mother’s blood. (2) “Foulness in their conception” (C.

shousheng bujing): human bodies are conceived through sexual intercourse. (3) “Foulness in their [gestational] residence” (C. zhuchu bujing): human bodies are conceived and nurtured inside the mother’s womb. (4) “Foulness in their nutriment” (C. shidan bujing): human bodies in the prenatal stage live off and “feed on” the mother’s blood. (5) “Foulness in their delivery” (C. chusheng bujing): it is amid the mess of delivery, with the discharge of placenta and placental water, that human bodies are born. (6) “Foulness in their entirety” (C. jüti bujing): human bodies are innately impure, comprising of innards, excrement, and other foul things underneath a flimsy skin. (7) “Foulness in their destiny” (C. jiuqing bujing): human bodies are destined to die, followed by putrid infestation, decomposition, and utter dissolution. There is also a contemplation on the nine bodily orifices (C. [QIAO](#)), which are vividly described as constantly oozing pus, blood, secretions, etc. ¶ As contemplation on foulness deepens, first an eidetic image (S. udgrahanimitta, P. [UGGAHANIMITTA](#)), a perfect mental reproduction of the visualized corpse, is maintained steadily in mind; this is ultimately followed by the appearance of the representational image (S. pratibhāganimitta, P. [PATIBHĀGANIMITTA](#)), which the [VISUDDHIMAGGA](#) (VI.66) describes as a perfectly idealized image of, for example, a bloated corpse as “a man with big limbs lying down after eating his fill.” Continued concentration on this representational image will enable the meditator to access up to the fourth stage of the subtle-materiality dhyānas ([ĀRŪPYĀVACARADHYĀNA](#)). After perfecting dhyāna, this meditation may also be used to develop wisdom ([PRAJÑĀ](#)) through developing increased awareness of the reality of impermanence ([ANITYA](#)). Foulness meditation is ritually included as part of the [THERAVĀDA](#) ordination procedure, during which monks are taught the list of the first five of the thirty-two foul parts of the body (viz., head hair, body hair, nails, teeth, and skin) in order to help them ward off lust.

Asuka. (飛鳥). Japan’s first historical epoch, named after a region in the plains south of modern [NARA](#). Until the eighth century (710) when the capital was moved to Nara, a new palace, and virtually a new capital, was built every time a new ruler succeeded to the throne. One of the earliest capitals was located in the region of Asuka. The Asuka period is characterized by the rise of powerful aristocratic clans such as the Soga and Mononobe and attempts such as the Taika reform (646) to counteract the rise of these clans and to strengthen the authority of the emperor. According to the [NIHON SHOKI](#) (“Historical Records of Japan”), the inception of Buddhism occurred in the Japanese isles during this period,

when Emperor Kimmei (r. 532–571) received an image of the Buddha from the King Sōngmyōng of the Korean kingdom of Paekche in 552 (var. 538). Buddhism became the central religion of the Asuka court with the support of such famous figures as Prince [SHŌTOKU](#), Empress Suiko (r. 593–628), and Empress Jitō (r. 686–697). After the establishment of the grand monastery [ASUKADERA](#) by the descendants of a Korean clan, other temples modeled after early Chinese monastery campuses, such as [HŌRYŪJI](#), were also constructed during this period. These temples enshrined the magnificent sculptures executed by Tori Busshi.

[Asukadera](#). (飛鳥寺) In Japanese, “Asuka Temple”; also known as Hōkōji (“Monastery of the Flourishing Dharma”), the Asukadera was built during the [ASUKA](#) period on a site known as the Amakashi no Oka by the Asuka River near Nara, Japan. Shortly after the death of Emperor Yōmei in 587, the powerful vassals Mononobe no Moriya (d. 587), who represented the indigenous ritual specialists, and Soga no Umako (551?–626), a supporter of Buddhism who came from the Korean peninsula, found themselves caught in battle over imperial succession. In celebration of the Soga clan’s victory over the Mononobe and the death of Moriya, the Soga commenced the construction of the first complete monastic compound in Japan, which they named Hōkōji in 588. Hōkōji was completed nine years later in 596 and for more than a century served as the central monastic complex of the Yamato court. The large monastic compound contained a central hall or KONDŌ and a central pagoda flanked by two other halls. A large lecture hall flanked by a belfry and [SŪTRA](#) repository was located behind the main monastic complex. According to the NIHON SHOKI (“Historical Records of Japan”), Empress Suiko commissioned two sixteen-foot gilt-bronze icons of the Buddha to be made by Tori Busshi for installment in Hōkōji. When the capital was moved from Fujiwarakyō to Heijōkyō (modern-day Nara) in 710, the major monasteries including Hōkōji were moved as well. Hōkōji, otherwise known as Asukadera, was subsequently renamed Gangōji.

[asura](#). (T. lha ma yin; C. axiuluo; J. ashura; K. asura 阿修羅). In Sanskrit and Pāli, lit., “nongods,” also translated rather arcanelly as “demigod” and “titan,” referring to both a class of divinities and the destiny where those beings reside in the sensuous realm ([KĀMADHĀTU](#)); in the list of six destinies ([GATI](#)), the asuras are ranked between the realms of the divinities ([DEVĀ](#)) and human beings ([MANUSYA](#)) and are usually considered to be a baleful destiny (see [APĀYA](#);

[DURGATI](#)). The asuras live in the oceans surrounding the central continent of the world and in the lower reaches of Mount [SUMERU](#). The asuras are said to be constantly jealous of the good fortunes of the divinities (deva), which prompted the king of the gods [INDRA](#) [alt. [ŚAKRA](#)] to expel them from their original home in the heaven of the thirty-three ([TRĀYASTRIMŚA](#)); the asuras continue to engage in futile warfare against the devas above them to regain access to their lost realm. Many indigenous non-Buddhist deities, such as the Tibetan srung ma (sungma), were placed in this realm as they were assimilated into the Buddhist pantheon.

[Asura Cave](#). A cave south of the Kathmandu Valley in Nepal where [PADMASAMBHAVA](#) is said to have meditated and conquered the twelve bstan ma (tenma) goddesses. It is an important pilgrimage place, considered sacred by Tibetan and Newar Buddhists as well as Hindus, and the site of several Tibetan monasteries. According to the writings of one Tibetan lama, the fourth [KHAMSPRUL](#) (Khamtrul) Rin po che, the cave may take its name from a small passage at its rear that is purported to lead to the realm of the [ASURAS](#).

[Asvabhāva](#). (T. Ngo bo nyid med pa). Name of the author of the *Mahāyānasamgrahopanibandhana*, a commentary on Asaṅga's *Mahāyānasamgraha*. See also [NIHSVABHĀVA](#) (“without self-nature”).

[Aśvaghoṣa](#). (T. Rta dbyangs; C. Maming; J. Memyō; K. Mamyōng 馬鳴) (c. second century CE). An Indian Buddhist poet from [ŚRĀVASTĪ](#), renowned for his epic kāvya poem, the [BUDDHACARITA](#), the first complete biography of the Buddha. According to traditional accounts, Aśvaghoṣa was born into a brāhmaṇa family in Ayodhyā during the reign of the [KUSHAN](#) king [KANISKA](#) and was converted to Buddhism by the [VAIBHĀSIKA](#) teacher [PĀRŚVA](#). His poetic works are esteemed for their distinguished artistic merit, considered representative of the high Sanskrit literary tradition. While the *Buddhacarita* is Aśvaghoṣa's most famous work, he authored numerous other epic poems including the *Saundarananda* (“The Handsome Nanda,” an account of [NANDA](#)'s conversion) and the *Śāriputraprakaraṇa* (“Story of [ŚĀRIPUTRA](#)”). East Asian tradition also attributes to Aśvaghoṣa the [DASHENG QIXIN LUN](#) (*Awakening of Faith*), a treatise on [TATHĀGATAGARBHA](#) thought that is now widely presumed to be an indigenous Chinese treatise (see [APOCRYPHA](#)). ¶ A second tantric Aśvaghoṣa, author of the [GURUPAÑCĀSIKĀ](#) (a brief text detailing the proper worship of a tantric guru), lived in about the tenth century.

[Aśvajit](#). (P. Assaji; T. Rta thul; C. Ashuoshi; J. Asetsuji; K. Asōlsi 阿説示). The fifth of the five ascetics ([PAÑCAVARGIKA](#)), along with [ĀJÑĀTAKAUNDINYA](#) (P. Aññātakonḍañña), [BHADRIKA](#) (P. Bhaddiya), [VĀSPA](#) (P. Vappa), and [MAHĀNĀMAN](#) (P. Mahānāma), who practiced austerities with [GAUTAMA](#) prior to his enlightenment. Subsequently, when Gautama abandoned the severe asceticism they had been practicing in favor of the middle way ([MADHYAMAPRATIPAD](#)), Aśvajit and his companions became disgusted with Gautama's backsliding and left him, going to the [RSIPATANA](#) (P. Isipatana) deer park, located in the northeast of Vārāṇasī. After the Buddha's enlightenment, however, the Buddha sought them out to teach them the first sermon, the [DHARMACAKRAPRAVARTANASŪTRA](#) (P. [DHAMMACAKKAPAVATTANASUTTA](#)); while listening to this sermon, Aśvajit achieved the first stage of awakening or "opening of the dharma eye" ([DHARMACAKSUS](#)), becoming a stream-enterer ([SROTAĀPANNA](#)), and was immediately ordained as a monk using the informal [EHIBHIKSUKĀ](#), or "come, monk," formula. Five days later, the Buddha then preached to the group of five new monks the second sermon, the **Anātmalakṣaṇasūtra* (P. [ANATTALAKKHANASUTTA](#)), which led to Aśvajit's becoming a worthy one ([ARHAT](#)). It was through an encounter with Aśvajit that [ŚĀRIPUTRA](#) and [MAHĀMAUDGALYĀYANA](#), the Buddha's two chief disciples, were initially converted. Śāriputra witnessed Aśvajit's calm demeanor while gathering alms in the city of [RĀJAGRHA](#). Impressed, he approached Aśvajit and asked who his teacher was and what were his teachings. In response, Aśvajit said that he was new to the teachings and could offer only the following summary: "Of those phenomena produced through causes, the Tathāgata has proclaimed their causes and also their cessation. Thus has spoken the great renunciant." His description, which came to be known as the [YE DHARMĀ](#) (based on its first two words of the summary), would become perhaps the most commonly repeated statement in all of Buddhist literature. Upon hearing these words, Śāriputra attained the stage of stream-entry (see [SROTAĀPANNA](#)), and when he repeated what he heard to his friend Maudgalyāyana, he also did so. The two then agreed to become the Buddha's disciples. According to Pāli sources, Aśvajit once was approached by the ascetic Nigaṇṭha Saccaka, who inquired of the Buddha's teachings. Aśvajit explained the doctrine of nonself ([ANĀTMAN](#)) with a summary of the *Anattalakkhaṇasutta*, which the Buddha had taught him. Convinced that he could refute that doctrine, Nigaṇṭha Saccaka challenged the Buddha to a debate and was vanquished. The Pāli commentaries say that Aśvajit intentionally

offered only the briefest of explanations of the nonself doctrine as a means of coaxing the ascetic into a direct encounter with the Buddha.

Ātānātiyasutta. In Pāli, “Discourse on the Ātānātiya Protective Spell,” the thirty-second sutta of the [DĪGHANIKĀYA](#) (there is no equivalent recension in the Chinese translations of the [ĀGAMAS](#)). The discourse was preached by the Buddha to an assembly of deities on Vulture Peak ([GRDHRAKŪTAPARVATA](#)) in [RĀJAGRHA](#). The divinities of the four directions, together with a retinue of lesser deities, told the Buddha that there are many unbelievers among gods and men who might bring harm to the faithful. They requested that the Buddha allow them to teach his monks the ātānātiya [PARITTA](#), a protective spell to ward off danger; the lengthy spell lists the names of the seven buddhas of antiquity ([SAPTATATHĀGATA](#)) and the virtues of the current buddha [GAUTAMA](#), to whom even the ogres (P. *yakkha*; S. [YAKSA](#)) pay homage. The Buddha consented and advised that monks, nuns, laymen, and laywomen memorize the spell so that they might dwell in comfort and safety.

atapa. (P. *atappa*; T. *mi gdung ba*; C. *wure*; J. *munetsu*; K. *muyŏl* 無熱). In Sanskrit, “not burning” (viz., “cool”), or “without torment” (also seen spelled as *atapas*, *anavatapta*); the second of the five pure abodes ([ŚUDDHĀVĀSA](#)), where those who have attained the rank of [ANĀGĀMIN](#) become [ARHATS](#), and the highest level of the fourth meditative realm of subtle materiality ([RŪPADHĀTU](#)); it is also the name of the divinities ([DEVA](#)) who reside there. As with all the heavens of the realm of subtle materiality, one is reborn as a god there through achieving the same level of concentration ([DHYĀNA](#)) during one’s practice of meditation as the gods of that heaven. According to [BUDDHAGHOSA](#), the heaven is called “without torment” because the gods born there torment no one.

Atigupta. (S). See [ATIKŪTA](#).

Atikūta. (C. *Adiqu duo*; J. *Ajikuta*; K. *Ajiguda* 阿地瞿多) (c. seventh century). An Indian translator who traveled to the Chinese capital of Chang’an in 652, during the Tang dynasty. (His Chinese name may also be transcribed as *Atigupta*.) His major translation was the *Dhāraṇīsamuccaya* (*Tuoluoni ji jing*), which was completed in a total of twelve rolls in 653–654.

Atiśa Dīpamkaraśrījñāna. (T. *A ti sha Mar me mdzad dpal ye shes*) (982–1054). Indian Buddhist monk and scholar revered by Tibetan Buddhists as a

leading teacher in the later dissemination ([PHYI DAR](#)) of Buddhism in Tibet. His name, also written as Atisha, is an Apabhraṃśa form of the Sanskrit term *atiśaya*, meaning “surpassing kindness.” Born into a royal family in what is today Bangladesh, Atiśa studied [MAHĀYĀNA](#) Buddhist philosophy and [TANTRA](#) as a married layman prior to being ordained at the age of twenty-nine, receiving the ordination name of *Dīpaṃkaraśrījñāna*. After studying at the great monasteries of northern India, including [NĀLANDĀ](#), [ODANTAPURĪ](#), [VIKRAMAŚĪLA](#), and [SOMAPURA](#), he is said to have journeyed to the island of Sumatra, where he studied under the [CITTAMĀTRA](#) teacher Dharmakīrtiśrī (also known as guru Sauvarṇadvīpa) for twelve years; he would later praise Dharmakīrtiśrī as a great teacher of [BODHICITTA](#). Returning to India, he taught at the Indian monastic university of [VIKRAMAŚĪLA](#). Atiśa was invited to Tibet by the king of western Tibet [YE SHES 'OD](#) and his grandnephew [BYANG CHUB 'OD](#), who were seeking to remove perceived corruption in the practice of Buddhism in Tibet. Atiśa reached Tibet in 1042, where he initially worked together with the renowned translator [RIN CHEN BZANG PO](#) at [THO LING](#) monastery in the translation of [PRAJÑĀPĀRAMITĀ](#) texts. There, he composed his famous work, the [BODHIPATHAPRADĪPA](#), or “Lamp for the Path to Enlightenment,” an overview of the Mahāyāna Buddhist path that served as a basis for the genre of literature known as [LAM RIM](#) (“stages of the path”). He spent the remaining twelve years of his life in the central regions of Tibet, where he formed his principal seat in Snye thang (Nyetang) outside of [LHA SA](#) where he translated a number of [MADHYAMAKA](#) works into Tibetan. He died there and his relics were interred in the [SGROL MA LHA KHANG](#). Atiśa and his chief disciples ['BROM STON RGYAL BA'I 'BYUNG GNAS](#) and [RNGOG LEGS PA'I SHES RAB](#) are considered the forefathers of the [BKA' GDAMS PA](#) sect of Tibetan Buddhism. In Tibet, he is commonly known by the honorific title Jo bo rje (Jowoje), “the Superior Lord.”

[atiyoga](#). (T. a ti yo ga/shin tu rnal 'byor). In Sanskrit, “surpassing yoga”; the ninth and most advanced of the nine vehicles according to the [RNYING MA](#) sect of Tibetan Buddhism. Here, the system of practice described elsewhere as [ANUTTARAYOGATANTRA](#) is divided into three: [MAHĀYOGA](#), [ANUYOGA](#), and [atiyoga](#), with [atiyoga](#) referring to the practice of the great completion ([RDZOGS CHEN](#)) in which all the phenomena of [SAMSĀRA](#) and [NIRVĀNA](#) appear as the sport of self-arisen wisdom.

[ātmabhāvaparityāga](#). (S). See [SHESHEN](#).

ātmagraha. (P. attagaha; T. bdag 'dzin; C. wozhi; J. gashū; K. ajip 我執). In Sanskrit, “clinging to self” or “conception of self”; the fundamental ignorance that is the ultimate cause of suffering ([DUHKHA](#)) and rebirth ([SAMSĀRA](#)). Although the self does not exist in reality, the mistaken conception that a self exists ([SATKĀYADRSTI](#)) constitutes the most fundamental form of clinging, which must be eliminated through wisdom ([PRAJÑĀ](#)). Two types of attachment to self are mentioned in [MAHĀYĀNA](#) literature: the type that is constructed or artificial (S. parakalpita; T. kun btags; C. fenbie wozhi) and that type that is innate (S. sahaja; T. lhan skyes; C. jusheng wozhi). The former is primarily an epistemic error resulting from unsystematic attention ([AYONISOMANASKĀRA](#)) and exposure to erroneous philosophies and mistaken views ([VIPARYĀSA](#)); it is eradicated at the stage of stream-entry (see [SROTAĀPANNA](#)) for the [ŚRĀVAKA](#) and [PRATYEKABUDDHA](#) and at the [DARŚANAMĀRGA](#) for the [BODHISATTVA](#). The latter is primarily an affective, habitual, and instinctive clinging, conditioned over many lifetimes in the past, which may continue to be present even after one has abandoned the mistaken conception of a perduring self after achieving stream-entry. This innate form of clinging to self is only gradually attenuated through the successive stages of spiritual fruition, until it is completely extinguished at the stage of arhatship (see [ARHAT](#)) or buddhahood. In the Mahāyāna philosophical schools, the conception of self is said to be twofold: the conception of the self of persons (pudgalātmagraha) and the conception of the self of phenomena or factors (dharmātmagraha). The second is said to be more subtle than the first. The first is said to be abandoned by followers of the [HĪNAYĀNA](#) paths in order to attain the rank of arhat, while both forms must be abandoned by the [BODHISATTVA](#) in order to achieve buddhahood. See also [ĀTMAN](#); [PUDGALANĀIRĀTMYA](#).

ātman. (P. attan; T. bdag; C. wo; J. ga; K. a 我). In Sanskrit, “self” or “I,” with a similar range of meanings as the terms possess in English, but used especially to refer to a perduring substratum of being that is the agent of actions, the possessor of mind and body ([NĀMARŪPA](#)), and that passes from lifetime to lifetime. The misconception that there is an “I” (ātman), a perduring soul that exists in reality ([SATKĀYADRSTI](#)), and a “mine” (ātmīya), viz., things that belong to me, injects a “point of view” into all of one’s perception ([SAMJÑĀ](#)), which inevitably leads to clinging (toward things we like, viz., [LOBHA](#)) and hatred (toward things we dislike, viz., [DVEṢA](#)). This mistaken belief that there is such a permanent self is regarded as fundamental ignorance ([AVIDYĀ](#)) and the root cause of all suffering ([DUHKHA](#)). The Buddha therefore taught “nonself” ([ANĀTMAN](#)) as a palliative to

this misconception of permanence. The precise meaning of ātman, the ways in which the misconception arises, and how that misconception is then extended beyond the person are considered in great detail in the various Buddhist philosophical schools. See also [PUDGALA](#).

ātmavāda. (P. attavāda; T. bdag tu smra ba; C. woyu; J. gago; K. aǒ 我語). In Sanskrit, the mistaken “notion of a self”; viz., the misconception that there is a perduring soul that exists in reality ([SATKĀYADRSTI](#)), which constitutes the most fundamental form of clinging. The false notion of a self is commonly listed as the fourth of the four kinds of attachments ([UPĀDĀNA](#)), along with the attachments to sensuality ([KĀMA](#)), views ([DRSTI](#)), and the soteriological efficacy of rites and rituals ([ŚILAVRATA](#)).

attachment. See [UPĀDĀNA](#); [NONATTACHMENT](#).

Atthakanāgarasutta. (C. Bacheng jing; J. Hachijōkyō; K. P’alsōng kyōng 八城經). In Pāli, “Discourse to the Man from Atthaka”; the fifty-second sutta in the [MAJJHIMANIKĀYA](#) (a separate [SARVĀSTIVĀDA](#) recension appears as [SŪTRA](#) no. 217 in the Chinese translation of the [MADHYAMĀGAMA](#)); preached by the Buddha’s attendant [ĀNANDA](#) to the householder Dasaka of Atthaka at Beluvagāmaka near Vesālī ([VAISĀLĪ](#)). According to the Pāli recension, a merchant from the town (nāgara) of Atthaka named Dasaka approaches Ānanda and asks him if there was any one thing that could lead to liberation from bondage. Ānanda teaches him the eleven doors of the deathless, by means of which it is possible to attain liberation from bondage. These doors are made up of the four meditative absorptions ([JHĀNA](#); S. [DHYĀNA](#)), the four [BRAHMAVIHĀRA](#) meditations, and the three immaterial meditations of infinite space ([ĀKĀŚĀNANTYĀYATANA](#)), infinite consciousness ([VIJÑĀNĀNANTYĀYATANA](#)), and nothing-whatsoever ([ĀKIÑCANYĀYATANA](#)). Ānanda states that by contemplating the conditioned and impermanent nature of these eleven doors to liberation, one can attain arhatship (see [ARHAT](#)) in this life or short of that will attain the stage of a nonreturner ([ANĀGĀMIN](#)), who is destined to be reborn in the pure abodes ([ŚUDDHĀVĀSA](#)), whence he will attain arhatship and final liberation.

atthakathā. In Pāli, lit. “recital of meaning” or “exegesis”; referring specifically to the “commentaries” to the first four [NIKĀYAs](#), or scriptural collections, that comprise the Pāli Buddhist canon (tipiṭaka; S. [TRIPITAKA](#)). According to [THERAVĀDA](#) tradition, [MAHINDA](#) brought the Pāli tipiṭaka and atthakathās to Sri

Lanka from the Indian mainland during the third century CE, during the time of King [AŚOKA](#). The language of those Indian commentaries is unknown, but they were initially written down in Sri Lanka in some sort of Sinhalese [PRAKRIT](#). That first Sinhalese recension of the four aṭṭhakathās was superseded when, two centuries later, the renowned Theravāda scholiast, [BUDDHAGHOSA](#), rewrote them in Pāli and wrote a lengthy prolegomenon to this massive body of commentarial literature, which he titled the [VISUDDHIMAGGA](#) (“Path of Purification”). In conjunction with the systematic overview provided in the *Visuddhimagga*, the aṭṭhakathās thus claim to offer a comprehensive account of the full panoply of Buddhist doctrine. The aṭṭhakathā to the last, and latest, of the nikāyas, the [KHUDDAKANIKĀYA](#) (“Miscellaneous Discourses”), was composed separately, probably sometime between 450 and 600 CE, by the prolific Pāli commentator [DHAMMAPĀLA](#), and seems to draw on a separate textual recension from that used by Buddhaghosa.

[Aṭṭhakavagga](#). (S. Arthavargīya; C. Yizu jing; J. Gisokukyō; K. Ūijok kyōng 義足經). In Pāli, “The Octet Chapter” [alt. “The Chapter on Meaning,” as the Chinese translation suggests], an important chapter of the [SUTTANIPĀTA](#). Based on analysis of the peculiar meters and grammatical formations used in this text, philologists have reached a broad consensus that the Aṭṭhakavagga and its companion chapter, the Pārāyanavagga, are among the very earliest strata of extant Pāli literature and may have existed even during the Buddha’s own lifetime. The Pāli suttas include citations and exegeses of some of the verses from the Aṭṭhakavagga, and the [MAHĀNIDESA](#), a commentary that covers the text, is accepted as canonical in the Pāli canon (tipiṭaka, S. [TRIPITAKA](#)). All this evidence suggests its relative antiquity within the canon. The teachings contained in the chapter seem to suggest an early stratum of Buddhist teachings, prior to their formalization around fixed numerical lists of doctrines. The technical terminology that becomes emblematic of the standardized Buddhist presentation of doctrine is also relatively absent in its verses ([GATHĀ](#)). The Aṭṭhakavagga offers a rigorous indictment of the dangers inherent in “views” (P. diṭṭhi; S. [DRSTI](#)) and displays a skepticism about religious dogmas in general, seeing them as virulent sources of attachment that lead ultimately to conceit, quarrels, and divisiveness. Some scholars have suggested that the kind of thoroughgoing critique of views presented in the Aṭṭhakavagga might have been the prototype of the later [MADHYAMAKA](#) logical approach, which sought to demonstrate the fallacies inherent in any philosophical statement. The verses

also seem to represent an earlier stage in the evolution of Buddhist institutions, when monks still lived alone in the forest or with small groups of fellow ascetics, rather than in larger urban monasteries. Monks are still referred to as hermits or “seers” (P. *isi*, S. *ṛṣi*), a generic Indian term for religious recluses, rather than the formal Buddhist term *bhikkhu* ([BHIKSU](#)) as is seen in the prose passages. A two-roll Chinese translation of a Sanskrit or Middle Indic recension of the text was made by [ZHI QIAN](#) during the Wu dynasty (c. 223–253 CE).

[Aṭṭhasālinī](#). In Pāli, “Exposition of Meaning,” commentary by [BUDDHAGHOSA](#) on the [DHAMMASAṄGANI](#), the first book of the Pāli [ABHIDHAMMAPITAKA](#) (S. [ABHIDHARMAPITAKA](#)). The [MAHĀVAMSA](#) and [SĀSANAVAMSA](#) state that the *Aṭṭhasālinī* was originally written in India; the commentary also mentions by name the [SAMANTAPĀSĀDIKĀ](#) (the commentary to the Pāli [VINAYA](#)) and the [VISUDDHIMAGGA](#), suggesting that it comes from a relatively late stratum of Pāli commentarial writings. The *Aṭṭhasālinī* provides a spirited defense of the claim that the seven books of the Pāli *abhidhammapitaka* were actually spoken by the Buddha himself, rather than being later scholastic elaborations; they are the Buddha’s own enunciations of his enlightenment experience, which were handed down to [ŚĀRIPUTRA](#) and an unbroken succession of [ABHIDHAMMIKA](#)s until they were brought to Sri Lanka. The *Aṭṭhasālinī*’s extended defense suggests that this claim was a matter of much controversy, even within the tradition. The third chapter of the *Aṭṭhasālinī* presents some of the most comprehensive and detailed explanations of the workings of [KARMA](#)n theory found in Pāli literature. The *Aṭṭhasālinī* appears in the Pali Text Society’s English translation series as *The Expositor*.

[auddhatya](#). (P. *uddhacca*; T. *rgod pa*; C. *diao*; J. *jō*; K. *to* 掉). In Sanskrit, “restlessness,” “agitation,” or “distraction”; along with its related “worry” or “regret” ([KAUKṚTYA](#)), with which it is often seen in compound, *auddhatya* constitutes the fourth of the five hindrances ([NĪVARANA](#)) to the attainment of meditative absorption ([DHYĀNA](#)). *Auddhatya-kaukr̥tya* is the specific hindrance to joy ([SUKHA](#)), the fourth of the five factors of *dhyāna* ([DHYĀNĀṄGA](#)). Restlessness and worry are fostered by unwise attention ([AYONIŚOMANASKĀRA](#)) to mental unrest and are overcome through learning and reflecting on the [SŪTRAS](#) and [VINAYA](#) and by associating with elders of calm demeanor. Restlessness and worry are countered by [SAMĀDHI](#), the fourth of the five spiritual faculties ([INDRIYA](#)) and the sixth of the factors of enlightenment ([BODHYAṄGA](#)), together

with development of the factors of tranquillity ([PRAŚRABDHI](#)), and equanimity ([UPEKSĀ](#)).

[Aurangābād](#). A complex of twelve rock-cut Buddhist caves located at the outskirts of the city of Aurangābād in the modern Indian state of Maharashtra. The oldest structure at the site is the severely damaged Cave 4, which dates to the beginning of the Common Era. The complex functioned as a center of popular devotion and secular patronage in the region. This strong linkage of the site with popular religiosity is particularly evident in Cave 2, with its central sanctum and pradakṣiṇapatha for circumambulation ([PRADAKSINA](#)) left undecorated to display a number of individually commissioned votive panels. The arrangement combines the ritual need for circumambulation with the preference for placing the main buddha against the rear wall by creating a corridor around the entire shrine. The entrance to the shrine is flanked by the [BODHISATTVAS](#) [MAITREYA](#) and [AVALOKITEŚVARA](#), both attended by serpent kings ([NĀGA](#)); the shrine itself contains a seated buddha making the gesture of turning the wheel of the [DHARMA](#) ([DHARMAKRAMUDRĀ](#)) flanked by two bodhisattvas. The creation of the Aurangābād cave site appears to have been connected with the collapse of the Vākāṭakas, who had patronized the cave temples at [AJANTĀ](#). Aurangābād rose in response, testimony to the triumph of the regional powers and local Buddhist forces at the end of the fifth century. The small number of cells for the [SAMGHA](#), the presence of the life-size kneeling devotees with a portrait-like appearance and royal attire sculpted in Cave 3, and the individually commissioned votive panels in Cave 2 indicate the growing importance of the “secular” at Aurangābād. The strong affinities in design, imagery, and sculptural detail between Aurangābād Cave 3 and Caves 2 and 26 at Ajaṅṭā indicate that the same artisans might have worked at both sites. The sculptural panels in Cave 7, which date to the mid-sixth century, may demonstrate the growing importance of tantric sects, with their use of the imagery of voluptuous females with elaborate coiffures serving as attendants to bodhisattvas or buddhas.

[aureole](#). See [KĀYAPRABHĀ](#).

[auspicious symbols, eight](#). See [ASTAMAṄGALA](#).

[Ava](#). [alt. Inwa]. Name of the chief Burmese (Myanmar) kingdom and its capital that flourished in Upper Burma between the fourteenth and sixteenth centuries CE. Founded in 1364 at the confluence of the Irrawaddy and Myitnge rivers, the

city of Ava, whose official Pāli name is Ratanapura, was the successor state of the [PAGAN](#) empire (1044–c. 1287), whose cultural, religious, and political traditions Ava’s kings consciously sought to preserve. While occupying a much reduced realm compared to imperial Pagan and hemmed in by the hostile Mon kingdom of Rāmañña (Pegu) in the south, and Shan warlords in the north and east, Ava remained the preeminent military power in the region through its strategic control of the irrigated district of Kyaukse. Ava’s kings were lavish in their support of Buddhist institutions as testified by the numerous pagodas and temples constructed within the environs of the city. Especially important were the Sagaing hills on the opposite shore of the Irrawaddy river, where successive kings built scores of monasteries and colleges, making it one of Southeast Asia’s major Theravāda scholastic centers. In contrast to the neighboring Mon and Thai kingdoms, which by the fifteenth century had largely adopted the reformed [THERAVĀDA](#) Buddhism of Sri Lankan tradition, Ava continued to patronize its own native “unreformed” saṅgha, which was descended from Pagan and which Ava regarded as possessing a purer and more ancient pedigree than that of the Sinhalese. The political and religious traditions preserved at Ava came to an abrupt end, however, when in 1527, Shan armies overran the capital and three years later massacred its monks. Ava’s glory was resurrected in 1635 when King Thalun (r. 1629–1648) rebuilt the city and made it the capital of the restored Burmese empire of Taungoo. From the throne of Ava, Thalun orchestrated a major Buddhist revival in which he rebuilt the kingdom’s ancient national shrine of Shwesettaw near Minbu and erected the gigantic Kaungmudaw pagoda in Sagaing. In addition to the construction of monuments, Thalun held an inquest into monastic lands and instituted the office of ecclesiastical censor (B. mahadan-wun) to oversee religious affairs throughout the country, an office that survived into the British period. Ava was again sacked and its king executed by Mon rebels in 1752, an event that marked the end of the Taungoo dynasty. It was rebuilt and served twice as the capital of the third Burmese empire of Konbaung in 1765–1783 and 1823–1837.

[avacara](#). (T. spyod pa; C. jieji; J. kaike; K. kyegye 界繫). In Sanskrit and Pāli, when used at the end of compound words, means “sphere,” “domain,” or “realm of existence.” In Buddhist cosmology, the term refers to the things that “belong to the sphere” of the three realms of existence (traidhātukāvacara, see [TRAIDHĀTUKA](#)), which comprise the entire phenomenal universe: the sensuous realm (kāmvacara or [KĀMADHĀTU](#)), the realm of subtle materiality or form

(rūpāvacara or [RŪPADHĀTU](#)), and the immaterial or formless realm ([Ārūpyāvacara](#) or [ĀRŪPYADHĀTU](#)). The three realms of existence taken together comprise all of [SAMSĀRA](#), the cycle of rebirth, and are the spheres within which beings take rebirth: there are no realms of existence that are unoccupied, and no beings are born anywhere other than in these three spheres. The sensuous realm is the lowest stratum of the universe and contains the following destinies ([GATI](#)), in ascending order: denizens of hell, hungry ghosts, animals, humans, demigods ([ASURA](#)), and divinities ([DEVA](#)). Rebirth in the sensuous realm is the result of past performance of either predominantly unwholesome deeds (in the case of hell denizens, hungry ghosts, animals, and asuras), a mix of unwholesome and wholesome deeds (as with human beings), or predominantly wholesome deeds (the divinities). The beings in the sensuous realm all have a coarser physical constituent. The realm of subtle materiality is occupied by the [BRAHMĀ](#) and other gods, whose minds are perpetually absorbed in one of the four subtle-materiality meditative absorptions ([RŪPĀVACARADHYĀNA](#)). Rebirth in the realm of subtle materiality is the result of mastery of one or all of these four dhyānas, and the beings residing there are refined enough that they require only the subtlest of material foundations for their consciousnesses. The immaterial realm is occupied by divinities who are entirely mental, no longer requiring even a subtle-material foundation for their ethereal states of mind. The divinities in the immaterial realm are perpetually absorbed in immaterial trance states, and rebirth there is the result of mastery of one or all of the immaterial dhyānas ([ĀRŪPYĀVACARADHYĀNA](#)).

[avadāna](#). (P. apadāna; T. rtogs par brjod pa; C. apotuona/piyu; J. ahadana or apadana/hiyu; K. ap'adana/piyu 阿波陀那/譬喻). In Sanskrit, “tales” or “narrative”; a term used to denote a type of story found in both Buddhist and non-Buddhist literature. The precise meaning of the word has been the subject of much discussion. In the Indian Brāhmaṇas and śrauta literature, the term denotes either something that is sacrificed or a portion of a sacrifice. The term avadāna was originally thought to mean “something cut off; something selected” and was presumed to derive from the prefix ava- + the Sanskrit root √dā. Feer, who published a French translation of the [AVADĀNAŚATAKA](#) in 1891, tentatively translated it as “légende, action héroïque,” while noting that the Tibetans, the Chinese, and the Mongols all employed differing translations of the word as well. (The Chinese use a transcription, apotuona, as well as a translation, piyu, meaning “simile.” The Tibetan rtogs brjod has been rendered as “judgment” or

“moral legend”; literally, it means the presentation or expression of the realizations [of an adept]. The Mongolian equivalent is domok.) Feer’s rendering of avadāna is closer to its meaning of “heroic action” in classical Indian works such as the *Raghuvamśa* and the *Kumārasambhava*. Avadānas are listed as the tenth of the twelvefold ([DVĀDAŚĀṄGA](#)) division of the traditional genres of Buddhist literature, as classified by compositional style and content. The total corpus of the genre is quite extensive, ranging from individual avadānas embedded in [VINAYA](#) texts, or separate sūtras in the [SŪTRAPITAKA](#), to avadānas that circulated either individually or in avadāna collections. These stories typically illustrate the results of both good and bad [KARMA](#), i.e., past events that led to present circumstances; in certain cases, however, they also depict present events that lead to a prediction ([VYĀKARANA](#)) of high spiritual attainment in the future. Avadānas are closely related to [JĀTAKA](#)s, or birth stories of the Buddha; indeed, some scholars have considered jātakas to be a subset of the avadāna genre, and some jātika tales are also included in the [AVADĀNAŚATAKA](#), an early avadāna collection. Avadānas typically exhibit a three-part narrative structure, with a story of the present, followed by a story of past action (karman), which is then connected by identifying the past actor as a prior incarnation of the main character in the narrative present. In contrast to the jātakas, however, the main character in an avadāna is generally not the Buddha (an exception is Kṣemendra’s eleventh-century *Bodhisattvāvadānakalpalatā*) but rather someone who is or becomes his follower. Moreover, some avadānas are related by narrators other than the Buddha, such as those of the [AŚOKĀVADĀNA](#), which are narrated by [UPAGUPTA](#). Although the avadāna genre was once dismissed as “edifying stories” for the masses, the frequent references to monks as listeners and the directives to monks on how to practice that are embedded in these tales make it clear that the primary audience was monastics. Some of the notations appended to the stories in Śūra’s [alt. Āryaśūra; c. second century CE] [JĀTAKAMĀLĀ](#) suggest that such stories were also used secondarily for lay audiences. On the Indian mainland, both mainstream and [MAHĀYĀNA](#) monks compiled avadāna collections. Some of the avadānas from northwestern India have been traced from kernel stories in the [MŪLASARVĀSTIVĀDA VINAYA](#) via other mainstream Buddhist versions. In his French translation of the *Avadānaśataka*, Feer documented a number of tales from earlier mainstream collections, such as the *Avadānaśataka*, which were reworked and expanded in later Mahāyāna collections, such as the *Ratnāvadānamālā* and the *Kalpadrūmāvadānamālā*, which attests to the durability and popularity of the genre. Generally speaking,

the earlier mainstream avadānas were prose works, while the later Mahāyāna collections were composed largely in verse.

[Avadānaśataka](#). (T. *Rtogs pa brjod pa brgya pa*; C. *Zhuanji baiyuan jing*; J. *Senjū hyakuengyō*; K. *Ch’anjip paegyōn kyōng* 撰集百緣經). In Sanskrit, “A Hundred Tales” ([AVADĀNA](#)). The collection was originally ascribed to the [SARVĀSTIVĀDA](#) school but is now thought to belong to the [MŪLASARVĀSTIVĀDA](#), because of the large number of stereotyped passages that the *Avadānaśataka* shares with the [DIVYĀVADĀNA](#) and the Mūlasarvāstivāda [VINAYA](#) and its close correlation with certain other elements of the Mūlasarvāstivāda vinaya. Hence, the *Avadānaśataka* most likely originated in the northwest of the Indian subcontinent, a provenance confirmed with the recent discovery of fragments of the text in the Schøyen Collection that most likely come from [BĀMIYĀN](#). The *Avadānaśataka* is one of the earliest avadāna collections and was translated into Chinese (*Zhuanji baiyuan jing*), a translation traditionally attributed to [ZHI QIAN](#). The Tibetan translation (*Gang po la sogs pa rtogs pa brjod pa brgya pa*) was carried out in the early ninth century by the monk Jinamitra and Devacandra. The composition date of the *Avadānaśataka* is uncertain. A date c. 100 CE has been proposed, based on Zhi Qian’s putative Chinese translation, whose traditional date of c. 223–253 CE provided a terminus ante quem for the compilation of the anthology. Recent scholarship, however, has questioned this attribution to Zhi Qian and indicates that the translation probably dates instead to the late fifth or early sixth century CE. The significant degree of divergence between the known Sanskrit texts and the Chinese recension may indicate that two or more Sanskrit versions were in circulation. The Chinese text also includes interpolations of story elements that derive from another Chinese collection, the *Xian yu jing*. In terms of structure, the stories in the *Avadānaśataka* are arranged symmetrically in ten chapters of ten stories apiece, each with a central theme: (1) prophecies ([VYĀKARANA](#)) of buddhahood, (2) [JĀTAKA](#) tales, (3) prophecies of pratyeka (“solitary”) buddhahood (see [PRATYEKABUDDHA](#)), (4) more jātakas, (5) tales of [PRETA](#) or “hungry ghosts,” (6) heavenly rebirths as [DEVA](#) (“divinities”), (7)–(9) male and female disciples who become [ARHATS](#), and (10) stories of suffering resulting from misdeeds in past lives. The structure of a typical avadāna story includes (1) a frame story told in the narrative present; (2) a story of past deeds (which is the cause of the present achievement or suffering); and (3) a bridge between the two, linking the past actor with the person presently experiencing its consequence. Major motifs include devotion to the Buddha, the

benefits of donation ([DĀNA](#)), and the workings of moral cause and effect (see [KARMA](#)), as indicated in the stock passage with which more than half of the tales end: “Thus, O monks, knowing that black actions bear black fruits, white actions white fruits, and mixed ones mixed fruits, you should shun the black and the mixed and pursue only the white.” Although avadānas have often been assumed to target the laity, the reference to monks in this stock passage clearly indicates the monastic audience to which these tales were directed.

[avadhūtī](#). (T. rtsa dbu ma; C. afudi; J. abatei; K. abujō 阿嚩底). In Sanskrit, “channel,” “vein,” or “canal.” According to various systems of tantric physiognomy, the avadhūtī refers to the central channel that runs from either the tip of the genitals or the base of the spine to either the crown of the head or the point between the eyebrows, with a number of “wheels” ([CAKRA](#)) along its course. To its left and right are two channels, both smaller in diameter, the [RASANĀ](#) (the left channel in males and the right channel in females) and the [LALANĀ](#) (the right channel in males and the left channel in females). Much tantric practice is devoted to techniques for causing the winds or energies that course through the other channels to enter into this central channel.

[Avadhūtipāda](#). (S). See [MAITRĪPA/MAITRĪPĀDA](#).

[avaivartika](#). (T. phyir mi ldog; C. butuizhuan; J. futaiten; K. pult’oejōn 不退轉). In Sanskrit, “nonretrogression” or “irreversible”; a term used to describe a stage on the path ([MĀRGA](#)) at which further progress is assured, with no further possibility of retrogressing to a previous stage. For the [BODHISATTVA](#), different texts posit this crucial transition as occurring at various points along the path, such as on the path of preparation ([PRAYOGAMĀRGA](#)), where there is then no danger of the bodhisattva turning back to seek instead to become an [ARHAT](#); the first [BHŪMI](#); or the eighth bhūmi, when the bodhisattva is then certain to continue forward to complete, perfect enlightenment ([ANUTTARASAMYAKSAMBOHDI](#)). There are many variant forms in Sanskrit (e.g., avaivaryā, avinivartyā, avinivartanīyā, and anivartiyā), of which avaiivartika is among the most common. The state of nonretrogression is also termed the avaiivartyabhūmi. Nonretrogression is also listed in the [MAHĀVASTU](#) as the highest of four stages of practice ([CARYĀ](#)). In the [PURE LAND](#) schools, taking rebirth ([WANGSHENG](#)) in [AMITĀBHA](#)’s [PURE LAND](#) of [SUKHĀVATĪ](#) is said to constitute the stage of nonretrogression.

[āvajjana](#). In Pāli, “advertence,” that is, adverting the mind toward a sensory

object, which is the first of seven functions in the cognitive process that ultimately lead to sensory consciousness (P. *viññāṇa*, S. [VIJÑĀNA](#)). When the unconscious mind (P. [BHAVAṄGASOTA](#)) is interrupted by the presence of a sensory object, the mind first performs the function of “adverting” toward the object. Thereafter, the mind performs in sequence the functions of “seeing” (P. *dassana*), “receiving” (P. *sampaticchana*), “investigating” (P. *santīrana*), and “determining” (P. *votthapana*). Immediately after this, the mind generates six or seven “impulse moments” (P. *javanacitta*) associated with either wholesome, unwholesome, or neutral classes of consciousness, after which it reverts to the *bhavaṅga*.

[Avalokitavrata](#). (T. *Spyan ras gzigs brtul zhugs*). Indian scholiast of the eighth century CE and successor to [BHĀVAVIVEKA](#) [alt. *Bhavya*] in the [SVĀTANTRIKA](#) school of [MADHYAMAKA](#). [Avalokitavrata](#) wrote the *Prajñāpradīpaṭīkā*, an extensive subcommentary to [Bhāvaviveka](#)’s [PRAJÑĀPRADĪPA](#), his commentary on [NĀGĀRJUNA](#)’s [MŪLAMADHYAMAKĀRIKĀ](#), in which he defends [Bhāvaviveka](#) from [CANDRAKĪRTI](#)’s critiques. That subcommentary is extant only in Tibetan translation.

[Avalokiteśvara](#). (T. *Spyan ras gzigs*; C. *Guanshiyin/Guanyin*; J. *Kanzeon/Kannon*; K. *Kwanseŭm/Kwanŭm* 觀世音/觀音). In Sanskrit, “Lord who Looks Down [in Empathy]”; the [BODHISATTVA](#) of compassion, the most widely worshipped of the [MAHĀYĀNA](#) bodhisattvas and one of the earliest to appear in Buddhist literature. According to legend, [Avalokiteśvara](#) was produced from a beam of light that radiated from the forehead of [AMITĀBHA](#) while that buddha was deep in meditation. For this reason, Buddhist iconography often depicts [Amitābha](#) as embedded in [Avalokiteśvara](#)’s crown. His name dates back to the beginning of the Common Era, when he replaced the Vedic god [BRAHMĀ](#) as the attendant to [ŚĀKYAMUNI](#) Buddha, inheriting in turn [Brahmā](#)’s attribute of the lotus ([PADMA](#)). Images of [Avalokiteśvara](#) as [PADMAPĀNI LOKEŚVARA](#) (“Lord with a Lotus in his Hand”), an early name, are numerous. [Avalokiteśvara](#) is the interlocutor or main figure in numerous important Mahāyāna sūtras, including the [PRAJÑĀPĀRAMITĀHRDAYASŪTRA](#) (“Heart Sūtra”). His cult was introduced to China in the first century CE, where his name was translated as *Guanshiyin* (“Perceiver of the Sounds of the World”) or [GUANYIN](#) (“Perceiver of Sounds”); his cult entered Korea and Japan with the advent of Buddhism in those countries. [Avalokiteśvara](#) was once worshipped widely in Southeast Asia as well,

beginning at the end of the first millennium CE. Although the Mahāyāna tradition eventually faded from the region, images of Avalokiteśvara remain. Avalokiteśvara is also the patron deity of Tibet, where he is said to have taken the form of a monkey and mated with [TĀRĀ](#) in the form of a local demoness to produce the Tibetan race. Tibetan political and religious leaders have been identified as incarnations of him, such as the seventh-century king [SRONG BTSAN SGAM PO](#) (although that attribution was most likely a later addition to the king's legacy) and, notably, the [DALAI LAMAS](#). The [PO TA LA](#) Palace, the residence of the Dalai Lamas, in the Tibetan capital of [LHA SA](#) is named for Avalokiteśvara's abode on Mount [POTALAKA](#) in India. In China, Avalokiteśvara as Guanyin underwent a transformation in gender into a popular female bodhisattva, although the male iconographic form also persists throughout East Asia. [PUTUOSHAN](#), located off the east coast of China south of Shanghai, is said to be Potalaka. Avalokiteśvara is generally depicted in the full raiments of a bodhisattva, often with an image of Amitābha in his crown. He appears in numerous forms, among them the two-armed Padmapāṇi who stands and holds a lotus flower; the four-armed seated Avalokiteśvara, known either as Caturbhūja Avalokiteśvara [Caturbhujāvalokiteśvara] or Cintāmaṇi Avalokiteśvara [Cintāmaṇyavalokiteśvara], who holds the wish-fulfilling jewel ([CINTĀMANI](#)) with his central hands in [AÑJALIMUDRĀ](#), and a lotus and crystal rosary in his left and right hands, respectively; the eleven-armed, eleven-faced [EKĀDAŚAMUKHA](#); and the thousand-armed and thousand-headed [SĀHASRABHUJASĀHASRANETRĀVALOKITEŚVARA](#) (q.v. [MAHĀKARUNIKA](#)). Tradition holds that his head split into multiple skulls when he beheld the suffering of the world. Numerous other forms also exist in which the god has three or more heads, and any number of arms. In his wrathful form as Aṣṭabhayatrāṇāvalokiteśvara (T. Spyan ras gzigs 'jigs pa brgyad skyob), "Avalokiteśvara who Protects against the Eight Fears," the bodhisattva stands in [ARDHAPARYĀṆKA](#) ("half cross-legged posture") and has one face and eight hands, each of which holds a symbol of one of the eight fears. This name is also given to eight separate forms of Avalokiteśvara that are each dedicated to protecting from one of the eight fears, namely: Agnibhayatrāṇāvalokiteśvara ("Avalokiteśvara Who Protects from Fear of Fire") and so on, replacing fire with Jala (water), Siṃha (lion), Hasti (elephant), Daṇḍa (cudgel), Nāga (snake), ḍĀkinī (witch) [alt. Piśācī]; and Cora (thief). In addition to his common iconographic characteristic, the lotus flower, Avalokiteśvara also frequently holds, among other accoutrements, a jeweled rosary ([JAPAMĀLĀ](#)) given to him by

Akṣamati (as related in chapter twenty-five of the [SADDHARMAPUNḌARĪKASŪTRA](#)), or a vase. In East Asia, Avalokiteśvara often appears in a triad: the buddha Amitābha in the center, flanked to his left and right by his two bodhisattva attendants, Avalokiteśvara and [MAHĀSTHĀMAPRĀPTA](#), respectively. In Tibet, Avalokiteśvara is part of a popular triad with [VAJRAPĀNI](#) and [MAÑJUŚRĪ](#). As one of the [ASTAMAHOPAPUTRA](#), Avalokiteśvara also appears with the other bodhisattvas in group representation. The tantric deity [AMOGHAPĀŚA](#) is also a form of Avalokiteśvara. The famous mantra of Avalokiteśvara, [OM MANI PADME HŪM](#), is widely recited in the Mahāyāna traditions and nearly universally in Tibetan Buddhism. In addition to the twenty-fifth chapter of the *Saddharmapuṇḍarīkasūtra*, the [KĀRANDAVYŪHA](#) is also devoted to him. See also [BAIYI GUANYIN](#); [GUANYIN](#); [MIAOSHAN](#); [MANI BKA' 'BUM](#).

[Avalokiteśvaragūṇa-Kārandavyūha](#). (S). See [KĀRANDAVYŪHA](#).

[Avalokiteśvarasahasrabhujanetra](#). In Sanskrit, “Thousand-Armed and Thousand-Eyed [AVALOKITEŚVARA](#)”; one of the manifestations of the bodhisattva of compassion, Avalokiteśvara. See [SĀHASRABHUJASĀHASRANETRĀVALOKITEŚVARA](#).

[Avanti](#). (T. Srung byed; C. Abanti [guo]; J. Ahandai[koku]; K. Abanje [kuk] 阿般提[國]). In Sanskrit and Pāli, an Indian kingdom in the southwest subcontinent, north of present-day Mumbai; its capital was Ujjayinī (P. Ujjenī); the dialect spoken there was related to, and perhaps the ancestor of, the language used in the Pāli canon. Avanti was located along the major southern Indian trade route (the Dakṣiṇāpatha) that passed through [ŚRĀVASTĪ](#) in central India, one of the main centers of early Buddhism. Buddhist missionaries following this trade route began to proselytize in the southwest even during the Buddha’s lifetime. Kātyāyana, also known as “Kātyāyana the Great” ([MAHĀKĀTYĀYANA](#); P. Mahākaccāna), one of the Buddha’s ten major disciples, hailed from the Avanti region and later returned to his native land to disseminate Buddhism. He is said to have requested that the Buddha allow for special dispensation to ordain new monks in outlying regions without the requisite number of ten monastic witnesses. [PŪRNA](#) (P. Puṇṇa) was another important disciple from the coastal area of this region (Sūrpāraka), who returned there to proselytize as well. He is the subject of the *Puṇṇovādasutta* (no. 145 in the Pāli [MAJJHIMANIKĀYA](#)) and the *Pūrṇāvadāna*, which describe his resolve to spread the teachings of Buddhism. Buddhism became firmly established in the Avanti region at least by the time of

King [AŚOKA](#); Aśoka's son, [MAHINDA](#), who later transmitted Buddhism to the island kingdom of Sri Lanka (Ceylon), is said to have been a native of its capital, Ujjayinī. Avanti was a stronghold of the [STHAVIRANIKĀYA](#), and its monks led the opposition to ten disputed items in the monastic discipline that resulted in the schism with the [MAHĀSĀMGIKA](#) order.

[āvaraṇa](#). (T. sgrib pa; C. zhang; J. shō; K. chang 障). In Sanskrit and Pāli, “obstruction,” “obstacle,” or “hindrance.” In [MAHĀYĀNA](#) literature, two types of āvaraṇa are commonly described: “obstructions that are the afflictions,” or “afflictive obstructions” ([KLEŚĀVARANA](#)), and cognitive or noetic obstructions, viz., “obstructions to omniscience” ([JÑEYĀVARANA](#)). [ŚRĀVAKAS](#) and [PRATYEKABUDDHAS](#) can be freed from the afflictive obstructions, but only [BODHISATTVAS](#) are able to free themselves from the cognitive obstructions. In the [YOGĀCĀRA](#) system, the cognitive obstructions result from fundamental misapprehensions about the nature of reality. Because of the attachment that derives from the reification of what are actually imaginary external phenomena, conceptualization and discrimination arise in the mind, which in turn lead to pride, ignorance, and wrong views. Based on the mistakes in understanding generated by these cognitive obstructions, the individual engages in defiled actions motivated by anger, envy, etc., which constitute the afflictive obstructions. The afflictive obstructions may be removed by followers of the śrāvaka, pratyekabuddha, and beginning bodhisattva paths by applying various antidotes or counteragents ([PRATIPAKṢA](#)) to the afflictions or defilements ([KLEŚĀ](#)); overcoming these types of obstructions will lead to freedom from further rebirth. The cognitive obstructions, however, can only be overcome by advanced bodhisattvas who seek instead to achieve buddhahood, by perfecting their understanding of emptiness ([ŚŪNYATĀ](#)) and compassion ([KARUNĀ](#)) and amassing a great store of merit ([PUNYA](#)) by engaging in the bodhisattva deeds ([CARYĀ](#)). Buddhas, therefore, are the only class of beings who have overcome both types of obstructions and thus are able simultaneously to cognize all objects of knowledge in the universe. The jñeyāvaraṇa are therefore sometimes translated as “obstructions to omniscience.” In the elaboration of the obstructions in the Yogācāra text [CHENG WEISHI LUN](#) (**Vijñaptimātratāsiddhi*), there are ten types of āvaraṇa that are specifically said to obstruct the ten types of suchness ([TATHATĀ](#)) correlated with the ten stages of the bodhisattva path ([DAŚABHŪMI](#)): (1) the obstruction of the common illusions of the unenlightened (pṛthagjanatvāvaraṇa; C. yishengxing zhang); (2) the obstruction of deluded conduct

(mithyāpratipattyāvaraṇa; C. xiexing zhang); (3) the obstruction of dullness (dhaṇḍhatvāvaraṇa; C. andun zhang); (4) the obstruction of the manifestation of subtle afflictions (sūkṣmakleśasamudācārāvaraṇa; C. xihuo xianxing zhang); (5) the obstruction of the lesser [HĪNAYĀNA](#) ideal of [PARINIRVĀNA](#) (hīnayānaparinirvāṇāvaraṇa; C. xiasheng niepan zhang); (6) the obstruction of the manifestation of coarse characteristics (sthūlanimittasamudācārāvaraṇa; C. cuxiang xianxing zhang); (7) the obstruction of the manifestation of subtle characteristics (sūkṣmanimittasamudācārāvaraṇa; C. xixiang xianxing zhang); (8) the obstruction of the continuance of activity even in the immaterial realm that is free from characteristics (nirnimittābhisamkāraṇa; C. wuxiang jiaxing zhang); (9) the obstruction of not desiring to act to bring salvation to others (parahitacaryākāmanāvaraṇa; C. buyuxing zhang); and (10) the obstruction of not yet acquiring mastery over all things (dharmeṣuvaśitāpratīlambhāvaraṇa; fa weizizai zhang). These ten obstructions are overcome by practicing, respectively: (1) the perfection of giving ([DĀNAPĀRAMITĀ](#)); (2) the perfection of morality ([ŚĪLAPĀRAMITĀ](#)); (3) the perfection of forbearance ([KṢĀNTIPĀRAMITĀ](#)); (4) the perfection of energetic effort ([VĪRYAPĀRAMITĀ](#)); (5) the perfection of meditative absorption ([DHYĀNAPĀRAMITĀ](#)); (6) the perfection of wisdom ([PRAJÑĀPĀRAMITĀ](#)); (7) the perfection of expedient means ([UPĀYAPĀRAMITĀ](#)); (8) the perfection of the vow (to attain enlightenment) ([PRANIDHĀNAPĀRAMITĀ](#)); (9) the perfection of powers ([BALAPĀRAMITĀ](#)); and (10) the perfection of omniscience (jñānapāramitā). See also [KARMĀVARANA](#); [NĪVARANA](#).

[Avatamsakasūtra](#). (T. Mdo phal po che; C. Huayan jing; J. Kegongyō; K. Hwaōm kyōng 華嚴經). In Sanskrit, “Garland Scripture”; also known as the [BUDDHĀVATAMSAKASŪTRA](#) (“Scripture of the Garland of Buddhas”), or **Buddhāvataṃsakanāmamahāvaiṇavyasūtra*, the Sanskrit reconstruction of the title of the Chinese translation *Dafangguang fo huayan jing*, which is usually abbreviated in Chinese simply as the [HUAYAN JING](#) (“Flower Garland Scripture”). The sūtra is one of the most influential Buddhist scriptures in East Asia and the foundational text of the indigenous East Asian [HUAYAN ZONG](#). The first major edition of the *Avatamsakasūtra* was said to have been brought from [KHOTAN](#) and was translated into Chinese by [BUDDHABHADRA](#) in 421; this recension consisted of sixty rolls and thirty-four chapters. A second, longer recension, in eighty rolls and thirty-nine chapters, was translated into Chinese by [ŚIKSĀNANDA](#) in 699; this is sometimes referred to within the Huayan tradition as the “New [translation of

the] *Avataṃsakasūtra*” (*Xin Huayan jing*). A Tibetan translation similar to the eighty-roll recension also exists. The *Avataṃsakasūtra* is traditionally classified as a [VAIPULYASŪTRA](#); it is an encyclopedic work that brings together a number of heterogeneous texts, such as the [GANDAVYŪHA](#) and [DAŚABHŪMIKASŪTRA](#), which circulated independently before being compiled together in this scripture. No Sanskrit recension of the *Avataṃsakasūtra* has been discovered; even the title is not known from Sanskrit sources, but is a reconstruction of the Chinese. (Recent research in fact suggests that the correct Sanskrit title might actually be *Buddhāvataṃsakasūtra*, or “Scripture of the Garland of Buddhas,” rather than *Avataṃsakasūtra*.) There are, however, extant Sanskrit recensions of two of its major constituents, the *Daśabhūmikasūtra* and *Gaṇḍavyūha*. Given the dearth of evidence of a Sanskrit recension of the complete *Avataṃsakasūtra*, and since the scripture was first introduced to China from Khotan, some scholars have argued that the scripture may actually be of Central Asian provenance (or at very least was heavily revised in Central Asia). There also exists in Chinese translation a forty-roll recension of the *Avataṃsakasūtra*, translated by [PRAJÑA](#) in 798, which roughly corresponds to the *Gaṇḍavyūha*, otherwise known in Chinese as the Ru fajie pin or “Chapter on the Entry into the [DHARMADHĀTU](#).” Little attempt is made to synthesize these disparate materials into an overarching narrative, but there is a tenuous organizational schema involving a series of different “assemblies” to which the different discourses are addressed. The Chinese tradition presumed that the *Avataṃsakasūtra* was the first sermon of the Buddha (see [HUAYAN ZHAO](#)), and the sūtra’s first assembly takes place at the [BODHI TREE](#) two weeks after he had attained enlightenment while he was still immersed in the samādhi of oceanic reflection ([SĀGARAMUDRĀSAMĀDHI](#)). The *Avataṃsaka* is therefore believed to provide a comprehensive and definitive description of the Buddha’s enlightenment experience from within this profound state of samādhi. The older sixty-roll recension includes a total of eight assemblies held at seven different locations: three in the human realm and the rest in the heavens. The later eighty-roll recension, however, includes a total of nine assemblies at seven locations, a discrepancy that led to much ink in Huayan exegesis. In terms of its content, the sūtra offers exuberant descriptions of myriads of world systems populated by buddhas and bodhisattvas, along with elaborate imagery focusing especially on radiant light and boundless space. The scripture is also the inspiration for the famous metaphor of [INDRAJĀLA](#) (Indra’s Net), a canopy made of transparent jewels in which each jewel is reflected in all the others, suggesting the multivalent levels of interaction between all phenomena in the universe. The

text focuses on the unitary and all-pervasive nature of enlightenment, which belongs to the realm of the Buddha of Pervasive Light, [VAIROCANA](#), the central buddha in the *Avataṃsaka*, who embodies the [DHARMAKĀYA](#). The sūtra emphasizes the knowledge and enlightenment of the buddhas as being something that is present in all sentient beings (see [TATHĀGATAGARBHA](#) and [BUDDHADHĀTU](#)), just as the entire universe, or trichilocosm (S. [TRISĀHASRAMAHĀSĀHASRALOKADHĀTU](#)) is contained in a minute mote of dust. This notion of interpenetration or interfusion ([YUANRONG](#)) is stressed in the thirty-second chapter of Buddhahadra's translation, whose title bears the influential term "nature origination" ([XINGQI](#)). The sūtra, especially in [FAZANG](#)'s authoritative exegesis, is presumed to set forth a distinctive presentation of dependent origination ([PRATĪTYASAMUTPĀDA](#)) in terms of the dependence of the whole on its parts, stressing the unity of the universe and its emptiness ([ŚŪNYATĀ](#)) of inherent nature; dependent origination here emerges as a profound ecological vision in which the existence of any one thing is completely dependent on the existence of all other things and all things on any one thing. Various chapters of the sūtra were also interpreted as providing the locus classicus for the exhaustive fifty-two stage Mahāyāna path ([MĀRGA](#)) to buddhahood, which included the ten faiths (only implied in the scripture), the ten abodes, ten practices, ten dedications, and ten stages ([DAŚABHŪMI](#)), plus the two stages of awakening itself: virtual enlightenment (dengjue) and sublime enlightenment (miaojue). This soteriological process was then illustrated through the peregrinations of the lad [SUDHANA](#) to visit his religious mentors, each of whom is identified with one of these specific stages; Sudhana's lengthy pilgrimage is described in great detail in the massive final chapter (a third of the entire scripture), the *Gaṇḍavyūha*, titled in the *Avataṃsakasūtra* the "Entry into the Dharmadhātu" chapter (Ru fajie pin). The evocative and widely quoted statement in the "Brahmacarya" chapter that "at the time of the initial arousal of the aspiration for enlightenment ([BODHICITTOTPĀDA](#)), complete, perfect enlightenment ([ANUTTARASAMYAKSAMBOBODHI](#)) is already achieved" was also influential in the development of the East Asian notion of sudden enlightenment ([DUNWU](#)), since it implied that awakening could be achieved in an instant of sincere aspiration, without requiring three infinite eons ([ASAMKHYEYAKALPA](#)) of religious training. Chinese exegetes who promoted this sūtra reserved the highest place for it in their scriptural taxonomies (see [JIAOXIANG PANSHI](#)) and designated it the "perfect" or "consummate" teaching ([YUANJIAO](#)) of Buddhism. Many commentaries on and exegeses of the sūtra are extant, among which the most

influential are those written by [FAZANG](#), [ZHIYAN](#), [CHENGGUAN](#), [LI TONGXUAN](#), [GUIFENG ZONGMI](#), [WÖNHYO](#), [ŪISANG](#), and [MYŌE KŌBEN](#).

avavāda. (P. ovāda; T. gdams ngag; C. jiaodaolun; J. kyōdōron; K. kyodoron 教導論). In Sanskrit, “admonitions” or “instructions”; oral instructions that provide practical advice to a student. These may include instructions given to a monk or nun, or instructions on how to put into practice a particular doctrine or teaching. The term carries the connotation of advice drawn from experience in contrast to learning derived from books, although a true practitioner is said to be someone who can see all of the [SŪTRAS](#) and [ŚĀSTRAS](#) as avavāda. The term often appears in compound with its near-synonym anuśāsanī as “admonition and instruction” (avavādānuśāsanī). The compound [OVĀDAPĀTIMOKKHA](#) (S. *avavādaprātimokṣa) is also used to refer to a foundational disciplinary code ([PRĀTIMOKSA](#)) handed down by the past buddha [VIPASŪYIN](#) (P. Vipassī), which is believed to summarize the teachings fundamental to all the buddhas; it is found in the [MAHĀPADĀNASUTTANTA](#) [[DĪGHANIKĀYA](#) no. 14] and [DHAMMAPADA](#) v. 183: “Not doing anything evil,/Undertaking what is wholesome,/Purifying one’s mind:/This is the teaching of the buddhas” (P. sabbapāpassa akaraṇaṃ/kusalassūpasampadā/sacittapariyodapanam/etaṃ buddhāna sāsanaṃ). This verse has been widely incorporated into [THERAVĀDA](#) Buddhist rituals and ceremonies. According to the [ABHISAMAYĀLAMKĀRA](#), in the [PRAJÑĀPĀRAMITĀ](#) sūtras, there are distinct avavāda for each stage of the bodhisattva path ([MĀRGA](#)) corresponding to the twenty-two stages of [BODHICITTA](#).

āvenika[buddha]dharma. (T. chos ma ’dres pa/ma ’dres pa’i chos; C. bugong[fo]fa; J. fugūhō/fugūbuppō; K. pulgong[bul]bōp 不共[佛]法). In Sanskrit and Pāli, “unshared factors”; special qualities that are unique to the buddhas. They usually appear in a list of eighteen (aṣṭādaśa Āvenikā buddhadharmāḥ): (1)–(2) the buddhas never make a physical or verbal mistake; (3) their mindfulness never diminishes; (4) they have no perception of difference; (5) they are free from discursiveness; (6) their equanimity is not due to a lack of discernment; (7)–(12) they do not regress in their devotion, perseverance, recollection, concentration, wisdom, or liberation; (13)–(15) all their physical, verbal, and mental actions are preceded and followed by gnosis; and (16)–(18) they enter into the perception of the gnosis that is unobstructed and unimpeded with respect to the past, future, and present. An expanded listing of 140 such unshared factors is given in the [YOGĀCĀRABHŪMISĀSTRA](#).

āveśa. (T. 'bebs pa; C. aweishe; J. abisha; K. amisa 阿尾捨). In Sanskrit, “possession”; the possession of shamans and mediums by a spirit or divinity so they could serve as oracles. Specific rites are outlined in esoteric Buddhist materials to incite possession in young children of usually seven or eight years of age; once the children began to shake from their inhabitation by the possessing deity, they would be asked a series of questions regarding portents for the future. In China, the tantric master [VAJRABODHI](#) was said to have used two seven-year-old girls as oracles in the palace, who were claimed to have been possessed by two deceased princesses. In Tibet, some of the bodies (rten, sku rten) through which an oracle (lha) speaks attained considerable importance in the religious and even political affairs of the state; among them the [GNAS CHUNG](#) (Nechung) oracle, said to be the pre-Buddhist spirit [PE HAR](#), who was tamed by [PADMASAMBHAVA](#) and tasked with protecting the Buddha’s teaching, has the status of state oracle.

avīci. (T. mnar med; C. abi diyu/wujian diyu; J. abijigoku/mukenjigoku; K. abi chiok/mugan chiok 阿鼻地獄/無間地獄). In Sanskrit and Pāli, “interminable,” “relentless,” “incessant”; referring to the deepest, largest, and most tortuous of the eight great, or eight hot, hells (see [NĀRAKA](#)). (The Chinese use either a transcription corresponding to the first two syllables of the Sanskrit avīci or else the translation “interminable,” combined with their own cultural translation of “hell” as a “subterranean prison.”) This hell is said to be located twenty thousand [YOJANAS](#) below the continent of [JAMBUDVĪPA](#) and is the destination of beings whose “wholesome faculties are eradicated” ([SAMUCCHINNAKUŚĀLAMŪLA](#)) or who have committed the most heinous of acts, which, after death, result in immediate rebirth in the avīci hell: patricide, matricide, killing an [ARHAT](#), wounding a buddha, and causing schism in the [SAMGHA](#) (see [ĀNANTARYAKARMA](#)). Because beings reborn in this hell are being constantly burned alive in hot flames, with no respite in their torture, the agony they experience is said to be “Interminable.” (*Editors’ note*: According to one esoteric lineage, there is a special level of the avīci hell reserved especially for compilers of dictionaries, where, no matter how many terms the authors have defined, an interminable list remains.) Another seven levels of the hot hells are either situated above, or in other interpretations, at the same level as avīci. The [ABHIDHARMAKOŚABHĀSYA](#) lists a corresponding series of bitterly cold hells beginning with the arbuda hell. Avīci and its seven companion hells each have sixteen (four in each direction) neighboring hells ([PRATYEKANĀRAKA](#)) or subhells

(utsada), where supplementary tortures are meted out to the unfortunate inhabitants, such as plains of ash that burn their feet; swamps of excrement and corpses in which maggots eat their flesh; roads and forests of razor blades that slice off their flesh; and rivers of boiling water in which they are plunged. Like all levels of hell, however, avīci is ultimately impermanent and, once the previous unwholesome actions of the inhabitant are expiated after many eons, that being will be reborn elsewhere according to his [KARMAN](#).

[avidyā](#). (P. avijjā; T. ma rig pa; C. wuming; J. mummyō; K. mummyōng 無明). In Sanskrit, “ignorance”; the root cause of suffering ([DUḤKHA](#)) and one of the key terms in Buddhism. Ignorance occurs in many contexts in Buddhist doctrine. For example, ignorance is the first link in the twelfefold chain of dependent origination ([PRATĪTYASAMUTPĀDA](#)) that sustains the cycle of birth and death ([SAMŚĀRA](#)); it is the condition that creates the predispositions ([SAMSKĀRA](#)) that lead to rebirth and thus inevitably to old age and death. Ignorance is also listed as one of the root afflictions (S. [MŪLAKLEŚA](#)) and the ten “fetters” ([SAMYOJANA](#)) that keep beings bound to saṃsāra. Avidyā is closely synonymous with “delusion” ([MOHA](#)), one of the three unwholesome roots ([AKUŚĀLAMŪLA](#)). When they are distinguished, moha may be more of a generic foolishness and benightedness, whereas avidyā is instead an obstinate misunderstanding about the nature of the person and the world. According to [ASAṄGA](#)’s [ABHIDHARMASAMUCCAYA](#), for example, moha is the factor of nescience, while avidyā is the active misconstruction of the nature of reality; he uses the analogy of twilight (= moha) falling on a coiled rope (= reality), which someone in the darkness wrongly conceives to be a snake (= avidyā). Due to the pervasive influence of ignorance, the deluded sentient being ([PRTHAGJANA](#)) sees what is not self as self, what is impermanent as permanent, what is impure as pure, and what is painful as pleasurable (see [VIPĀRYĀSA](#)); and due to this confusion, one is subject to persistent suffering (duḥkha) and continued rebirth. The inveterate propensity toward ignorance is first arrested in the experience of stream-entry (see [SROTAĀPANNA](#)), which eliminates the three cognitive fetters of belief in a perduring self ([SATKĀYADRSTI](#)), attachment to rules and rituals (S. [ŚĪLAVRATAPARĀMARŚA](#)), and skeptical doubt (S. [VICIKITSĀ](#)). Avidyā is gradually alleviated at the stages of once-returners ([SAKRDĀGĀMIN](#)) and nonreturners ([ANĀGĀMIN](#)), and permanently eliminated at the stage of arhatship (see [ARHAT](#)), the fourth and highest degree of sanctity in mainstream Buddhism (see [ĀRYAPUDGALA](#)).

avijñaptirūpa. (T. mnam par rig byed ma yin pa'i gzugs; C. wubiao; J. muhyōjiki; K. mup'yosaek 無表色). In Sanskrit, “unmanifest material force,” or “hidden imprints”; a special type of materiality (**RŪPA**) recognized in the **SARVĀSTIVĀDA** school of **ABHIDHARMA**, especially. The Sarvāstivāda school notably makes recourse to this unique type of materiality as one way of reconciling the apparent contradiction in Buddhism between advocating the efficacy of moral cause and effect and rejecting any notion of an underlying substratum of being (**ANĀTMAN**), as well as issues raised by the teaching of momentariness (**KSANIKAVĀDA**). When a person forms the intention (**CETANĀ**) to perform an action (**KARMA**), whether wholesome (**KUŚALA**) or unwholesome (**AKUŚALA**), that intention creates an “unmanifest” type of materiality that imprints itself on the person as either bodily or verbal information, until such time as the action is actually performed via body or speech. Unmanifest materiality is thus the “glue” that connects the intention that initiates action with the physical act itself. Unmanifest material force can be a product of both wholesome and unwholesome intentions, but it is most commonly associated in Sarvāstivāda literature with three types of restraint (**SAMVARA**) against the unwholesome specifically: (1) the restraint proffered to a monk or nun when he or she accepts the disciplinary rules of the order (**PRĀTIMOKṢASAMVARA**); (2) the restraint that is produced through mental absorption (dhyānaśamvara); and (3) the restraint that derives from being free from the contaminants (anāsravasamvara). In all three cases, the unmanifest material force creates an invisible and impalpable force field that helps to protect the monk or nun from unwholesome action. Prātimokṣasamvara, for example, creates a special kind of force that dissuades people from unwholesome activity, even when they are not consciously aware they are following the precepts or when they are asleep. This specific type of restraint is what makes a man a monk, since just wearing robes or following an ascetic way of life would not itself be enough to instill in him the protective power offered by the **PRĀTIMOKṢA**. Meditation was also thought to confer on the monk protective power against physical harm while he was absorbed in **DHYĀNA**: the literature abounds with stories of monks who saw tiger tracks all around them after withdrawing from dhyāna, thus suggesting that dhyāna itself provided a protective shield against accident or injury. Finally, anāsravasamvara is the restraint that precludes someone who has achieved the extinction of the outflows (**ĀSRAVA**)—that is, enlightenment—from committing any action (**KARMA**) that would produce a karmic result (**VIPĀKA**), thus ensuring that their remaining actions in this life do not lead to any additional rebirths.

Because avijñaptirūpa sounds as much like a force as a type of matter, later authors, such as [HARIVARMAN](#) in his [TATTVASIDDHI](#), instead listed it among the “conditioned forces dissociated from thought” ([CITTAVIPRAYUKTASAMSKĀRA](#)).

[Avikalpapraveśadhāraṇī](#). (T. Rnam par mi rtog pa la ’jug pa’i gzungs). In Sanskrit, “[DHĀRAṆĪ](#) for Entrance into the Nonconceptual”; also called the Drumavikalpapraveśadhāraṇī, or “Dhāraṇī for Entrance to the [Wish Fulfilling] Tree of Paradise.” The text is cited in the [DHARMADHARMATĀVIBHĀGA](#) and appears to be the source of a number of its doctrines. There is a commentary on the text by [KAMALAŚĪLA](#).

[avṛha](#). (P. aviha; T. mi che ba; C. wufan tian; J. mubonten; K. mubōn ch’ōn 無煩天). In Sanskrit, “free from afflictions”; the name of the fifth highest of the eight heavens of the fourth concentration ([DHYĀNA](#)) of the realm of subtle materiality ([RŪPADHĀTU](#)), and one of the five heavens within the fourth dhyāna that constitute the [ŚUDDHĀVĀSA](#), the “pure abodes,” where those who have attained the rank of [ANĀGĀMIN](#) become [ARHATS](#). As with all the heavens of the realm of subtle materiality, one is reborn as a divinity there through achieving the same level of concentration (dhyāna) as the gods of that heaven during one’s previous practice of meditation.

[avyākṛta](#). (P. avyākata; T. lung du ma bstan pa/lung ma bstan; C. wuji; J. muki; K. mugi 無禮). In Sanskrit, “indeterminate” or “unascertainable”; used to refer to the fourteen “indeterminate” or “unanswered” questions (avyākṛtavastu) to which the Buddha refuses to respond. The American translator of Pāli texts [HENRY CLARKE WARREN](#) rendered the term as “questions which tend not to edification.” These questions involve various metaphysical assertions that were used in traditional India to evaluate a thinker’s philosophical lineage. There are a number of versions of these “unanswerables,” but one common list includes fourteen such questions, three sets of which are framed as “four alternatives” ([CATUSKOTI](#)): (1) Is the world eternal?, (2) Is the world not eternal?, (3) Is the world both eternal and not eternal?, (4) Is the world neither eternal nor not eternal?; (5) Is the world endless?, (6) Is the world not endless?, (7) Is the world both endless and not endless?, (8) Is the world neither endless nor not endless?; (9) Does the tathāgata exist after death?, (10) Does the tathāgata not exist after death?, (11) Does the tathāgata both exist and not exist after death?, (12) Does the tathāgata neither exist nor not exist after death?; (13) Are the soul (jīva) and the body identical?, and (14) Are the soul and the body not identical? It was in

response to such questions that the Buddha famously asked whether a man shot by a poisoned arrow would spend time wondering about the height of the archer and the kind of wood used for the arrow, or whether he should seek to remove the arrow before it killed him. Likening these fourteen questions to such pointless speculation, he called them “a jungle, a wilderness, a puppet-show, a writhing, and a fetter, and is coupled with misery, ruin, despair, and agony, and does not tend to aversion, absence of passion, cessation, quiescence, knowledge, supreme wisdom, and nirvāṇa.” The Buddha thus asserted that all these questions had to be set aside as unanswerable for being either unexplainable conceptually or “wrongly framed” (P. *ṭhapanīya*). Questions that were “wrongly framed” inevitably derive from mistaken assumptions and are thus the products of wrong reflection ([AYONIŚOMANASKĀRA](#)); therefore, any answer given to them would necessarily be either misleading or irrelevant. The Buddha’s famous silence on these questions has been variously interpreted, with some seeing his refusal to answer these questions as deriving from the inherent limitations involved in using concepts to talk about such rarified existential questions. Because it is impossible to expect that concepts can do justice, for example, to an enlightened person’s state of being after death, the Buddha simply remains silent when asked this and other “unanswerable” questions. The implication, therefore, is that it is not necessarily the case that the Buddha does not “know” the answer to these questions, but merely that he realizes the conceptual limitations inherent in trying to answer them definitively and thus refuses to respond. Yet other commentators explained that the Buddha declined to answer the question of whether the world (that is, [SAMSĀRA](#)) will ever end because the answer (“no”) would prove too discouraging to his audience.

[avyākṛtadharmā](#). (P. *avyākatadhamma*; T. *lung du ma bstan pa’i chos*; C. *wujifa*; J. *mukihō*; K. *mugibōp* 無禮法). In Sanskrit, “indeterminate,” “neutral,” or “indifferent” dharmas. This term is used in contrast to dharmas that are wholesome ([KUSĀLA](#)) or unwholesome ([AKUSĀLA](#)); *avyākṛtadharmas* are neither wholesome nor unwholesome, and therefore “neutral.” Such “interdeterminate dharmas” include the [KLISTAMANAS](#), [ĀLAYAVIJÑĀNA](#), and the results of [KARMA](#). The term is also used more generally for deeds that in themselves are neither virtuous nor nonvirtuous but may become so depending on the intention with which they are performed.

[Awakening of Faith \(in Mahāyāna\)](#). See [DASHENG QIXIN LUN](#).

ayahśālmalivana. (P. simbalivana; T. lcags kyi shing shal ma li'i nags; C. tieci lin; J. tesshirin; K. ch'Ōlcha rim 鐵刺林). In Sanskrit “forest of iron thorns”; one of the neighboring hells ([PRATYEKANARAKA](#)) surrounding the eight hot hells, through which the denizens of hell must pass as they depart from hell. It is classified as part of the third of the four neighboring hells, called “razor road” ([KSURAMĀRGA](#)). The denizens of this hell arrive at a tree, where a loved one sits at the top of the tree beckoning. As the denizen climbs the tree, its body is lacerated by iron thorns in the bark of the tree. When it reaches the top, the loved one is gone and is now beckoning from the bottom of the tree. Climbing down, the body is again lacerated. The process is repeated until the unwholesome action has been expiated.

āyatana. (T. skye mched; C. chu; J. sho; K. ch'ŏ 處). In Sanskrit and Pāli, “sense-fields” or “bases of cognition.” In epistemology, these twelve sense-fields, which serve as the bases for the production of consciousness, are the six internal sense bases, or sense organs (the “faculties” or [INDRIYA](#), i.e., eye, ear, nose, tongue, body, and mind) and the six external sense objects (the “objective supports” or [ĀLAMBANA](#), i.e., forms, sounds, odors, tastes, tangible objects, and mental phenomena). The contact ([SPARŚA](#)) between a sense base and its corresponding sense object would lead to specific sensory consciousnesses ([VIJÑĀNA](#)); hence, the āyatanas are considered to be the “access” (āya) of the mind and mental states. In the context of the twelfefold chain of dependent origination ([PRATĪTYASAMUTPĀDA](#)), the āyatanas are usually described as comprising only the six sense bases. The twelve āyatana are subsumed as the first twelve of the eighteen elements ([DHĀTU](#)). The āyatanas are one of the three major taxonomies of factors (along with [SKANDHA](#) and dhātu) found in the [SŪTRAS](#), and represent a more primitive stage of [DHARMA](#) classification than the elaborate analyses found in the later [ABHIDHARMA](#) literature. In compound words like [ĀKĀŚĀNANTYĀYATANA](#), [ABHIBHAVĀYATANA](#), and so on, āyatana means simply “stage” or “level.”

ayoniśomanaskāra. [alt. ayoniśomanasikāra] (P. ayonisomanasikāra; T. tshul bzhin ma yin pa'i yid la byed pa/tshul min yid byed; C. feili zuoyi/buzheng siwei; J. hiri no sai/fushōshiyui; K. piri chagüi/pujöng sayu 非理作意/不正思惟). In Sanskrit, “unsystematic attention” or “wrong reflection”; attention directed to an object in a superficial manner, without thoroughgoing attention. This term refers especially to the entrancement with the compounded forms of things as revealed

through their external marks ([LAKSANA](#)) and secondary characteristics ([ANUVYAÑJANA](#)), so that one does not perceive that they are impermanent ([ANITYA](#)). It also entails wrongly ascribing a notion of permanent selfhood ([SATKĀYADRSTI](#)) to things that are compounded and thus lacking a perduring substratum of being. Because of unsystematic attention to sensory experience, the sentient being becomes subject to an inexorable process of conceptual proliferation ([PRAPAÑCA](#)), in which everything that can be experienced in this world is tied together into a labyrinthine network of concepts, all connected to oneself and projected outward as craving ([TRSNĀ](#)), conceit ([MĀNA](#)), and wrong views ([DRSTI](#)), thus creating bondage to [SAMSĀRA](#).

[āyuṣman](#). (P. Āvuso; T. tshe dang ldan pa; C. jushou; J. guju; K. kusu 具壽). In Sanskrit, “friend” or “brother” (lit. “endowed with life,” which is the meaning of the Chinese translation “full of life”); a polite form of monastic address, usually used between equals or when a teacher or senior monk addresses a student or junior monk.

[Ayuthaya](#). [alt. Ayutthaya]. There are two important places called Ayuthaya in the Buddhist tradition. ¶ Ayuthaya was a city in north-central India, prominent in early Buddhist texts, that is identified as the ancient city of [SĀKETA](#); it was said to be the birthplace of the Indian divine-king Rāma. ¶ Ayuthaya is the name of a major Thai kingdom and its capital that flourished between 1350 and 1767 CE. The city of Ayuthaya was built on an island at the confluence of the Chao Phraya, Pasak, and Lopburi rivers and grew in importance as the power of its neighbor, the Thai kingdom of [SUKHOTHAI](#), waned. Strategically located and easy to defend, Ayuthaya was accessible to seagoing vessels and commanded the northward trade of the entire Menam basin, whence it grew rapidly into a major Asian entrepôt. Merchant ships from China, Java, Malaya, Japan, India, Sri Lanka, Persia, Portugal, Holland, France, and England regularly docked at its port. One of the world’s wealthiest capitals, Ayuthaya contained hundreds of gilded monasteries, temples, and pagodas within its walls and was traversed by grand canals and waterways that served as avenues. Strong Khmer influence is evident in the architecture of Ayuthaya, which developed a distinctive stepped-pyramidal pagoda form called prang. The city’s magnificence was extolled in the travelogues of European and Asian visitors alike. Soon after the city’s founding, Ayuthaya’s kings became enthusiastic patrons of reformed Sinhalese-style [THERAVĀDA](#) Buddhism, inviting missionaries from their stronghold in Martaban

to reform the local sangha. The same form of Buddhism was adopted by neighboring Thai states in the north, the Mon kingdom of Pegu, and later the Burmese, making it the dominant form of Buddhism in Southeast Asia. In 1548, the Burmese king, Tabin Shwehti, invaded the kingdom of Ayuthaya and laid siege to its capital, initiating more than two centuries of internecine warfare between the Burmese and the Thai kingdoms, which culminated in the destruction of Ayuthaya in 1767 and the building of a new Thai capital, Bangkok, in 1782.

[babu](#). (J. happu; K. p'albul 八不). In Chinese, “eight extremes” (the Chinese is a free rendering of the Sanskrit AṢṬĀNTA): the antinomies of production and cessation, eternality and annihilation, sameness and difference, and coming and going, which constitute eight misconceptions of sentient beings. The negation of these eight extremes is a central philosophical and soteriological tenet of the [SAN LUN ZONG](#) (the East Asian equivalent of the [MADHYAMA](#) school) and is adapted from the opening verse of [NĀGĀRJUNA](#)'s [MŪLAMADHYAMAKĀRIKĀ](#). See also [CATUṢKOTI](#).

[ba bushan jue](#). (C) (八不善覺). See [BA JUE](#).

[Bactria](#). The name of a region of Central Asia, located between the Hindu Kush range and the Amu Darya River (now lying in Afghanistan, Uzbekistan, and Tajikistan), which was an active center of Buddhism in the centuries immediately preceding and following the onset of the Common Era. A Greco-Bactrian kingdom was established by Diodotus I around 250 BCE. The Greek rulers received Buddhist emissaries from [AŚOKA](#) and the [MAHĀVAMSA](#) describes the monk Mahādharmarakṣita as ordaining Greeks as monks. Buddhism would flourish under later Greek kings, most notably Menander, the putative interlocutor of the [MILINDAPAÑHA](#). Buddhist texts written in cursive Greek have been discovered in Afghanistan. Clement of Alexandria seems to mention Buddhists among the Bactrians during the second century CE, when, in describing the gymnosophists, he writes, “Some of the Indians obey the precepts of Boudda; whom, on account of his extraordinary sanctity, they have raised to divine honors.” The [SARVĀSTIVĀDA](#) school of mainstream Buddhism, especially its [VAIBHĀSIKA](#) strand, seems to have been active in the region.

[ba da zizai wo](#). (J. hachidai jizaiga; K. p'al tae chaje a 八大自然我). In Chinese, the “eight great types of autonomy of the self.” In distinction to mainstream Buddhist teachings about the absence of a perduring self ([ANĀTMAN](#)), the Chinese recension of the [MAHĀYĀNA MAHĀPARINIRVĀNASŪTRA](#) teaches a doctrine of a “great self” (dawo, S. mahātman) that is realized through

enlightenment. According to the Chinese renderings, a buddha, having realized this great self, is capable of eight kinds of miraculous transformations (ba shenbian; ba zizai): (1) self-manifesting (he has the power to make his body appear as multiple emanations; nengshi yishen wei duoshen); (2) infinite enlargement (his physical body appears to fill the myriad world systems; shi yichenshen man daqian jie); (3) levitation and translocation (viz., to transport himself to remote places through space; dashen qingju yuandao); (4) incarnating into myriad species or categories of sentient beings (xian wulianglei changju); (5) intentional synesthesia (e.g., to see with his ears, to smell with his eyes, etc.; zhugen huyong); (6) attaining any ability imaginable, but without giving rise to the (conceited) thought of attainment (de yiqie fa wude xiang); (7) elaborating on the meaning of a single scriptural stanza for innumerable eons (before exhausting his knowledge and eloquence; shuo yiji yi jing wuliang jie); (8) pervading all of infinite space (shenbian zhuchu youru xukong). Other Mahāyāna scriptures outline similarly fantastic and dramatic depictions of greatly apotheosized buddhas and advanced bodhisattvas.

baguan zhai. (S. aṣṭāṅgasamanvāgatam upavāsam; P. aṭṭhaṅgasamanāgatam uposatham; T. yan lag brgyad dang ldan pa'i bsnyen gnas; J. hakkansai; K. p'algwan chae 八關齋). In Chinese, “eight-restrictions fast”; also known as bajie (“eight precepts”), bajie zhai (“eight-precepts fast”), bafenzhaijie (“eight-fold fasting precepts”), etc. This fast was held on specific days when the laity was expected to observe a temporary set of more restrictive moral precepts. For one day and night, the laity would leave their homes and keep eight precepts ([ASTĀṄGASAMANVĀGATAṆ UPAVĀSAM](#); see [ŚĪLA](#)), as if they had entered the [SAMGHA](#), effectively becoming monks or nuns for a day. According to the Chinese Buddhist calendar, the [UPOSADHA](#) days reserved for the eight-precepts fast were the eighth, fourteenth, fifteenth, twenty-third, twenty-ninth, and thirtieth of each month. The eight precepts prohibit (1) killing, (2) stealing, (3) engaging in sexual misconduct, (4) lying, (5) consuming intoxicants, (6) resting on a high or luxurious bed, (7) using makeup and perfumes and enjoying music and dance, and (8) eating at improper times. Monasteries sometimes handed out certificates to those laypeople who participated in the precepts ceremony. In Korea, the p'algwan chae (which in Korean is usually called the [P'ALGWANHOE](#), or “eight-restrictions festival”) became an important winter festival of thanksgiving held over two full-moon days of the eleventh lunar month; the festival combined indigenous religious practices propitiating the spirits of

mountains and rivers with tributes to the memory of fallen warriors. In Tibet, important religious dignitaries customarily give the precepts to both ordained and lay followers before sunrise on days marking important festivals. See also [UPAVĀSA](#); [JINGDU SANMEI JING](#).

[Bāhīranidāna](#). In Pāli, lit., the “Outer Origin,” a work by [BUDDHAGHOSA](#), conceived as a preface to his [SAMANTAPĀSĀDIKĀ](#), his commentary on the [VINAYA](#), considered by some to be his most important work. The *Bāhīranidāna* recounts the early history of the dispensation ([ŚĀSANA](#)), from the Buddha’s death through the convocation of the first three Buddhist councils and on to the recitation of the vinaya in Sri Lanka by [MAHĀRITTHA](#) during the reign of the Sinhalese king [DEVĀNAMPIYATIṢṢA](#). Although not technically a [VAMSA](#), or “chronicle,” the work is based on the same sources as the [DĪPAVAMSA](#), seeking to establish the authenticity of the vinaya by tracing it back to its origins, before beginning the formal commentary upon it. A translation of the *Bāhīranidāna* appears in the Pali Text Society’s English translation series as *The Inception of Discipline*.

[bahirdhā](#). (P. bahiddhā; T. phyi; C. wai; J. ge; K. oe 外). In Sanskrit, “outer” (also written bāhya); usually paired with “inner” (adhyātma) and sometimes with a third “both” (ubhaya), particularly in lists of the types of emptiness ([ŚŪNYATĀ](#)) in the [PRAJÑĀPĀRAMITĀ SŪTRAS](#). Outer refers to the first six external sense-fields ([ĀYATANA](#), the objects of eye, ear, nose, and so on); inner to the six internal sense-fields (from the eye-to mind-faculties); and both to the inner and outer sense-fields of other persons. The emptiness of these three categories completes the presentation of the emptiness of a person ([PUDGALA](#)); it is followed by the demonstration of the emptiness of emptiness itself. See also [BĀHYĀRTHA](#).

[Bāhiya-Dārucīriya](#). (C. Poxijia; J. Bakika; K. Pasaga 婆嚩迦). A lay [ARHAT](#) (P. arahant), who is declared by the Buddha to be foremost among those of swift intuition (khippābhiññānaṃ). According to Pāli accounts, Bāhiya was a merchant from the town of Bāhiya (whence his toponym), who was engaged in maritime trade. He sailed seven times across the seas in search of profit and seven times returned home safely. On an eighth journey, however, he was shipwrecked and floated on a plank until he came ashore near the seaport town of Suppāraka. Having lost his clothes, he dressed himself in tree bark and went regularly to the town to beg for alms with a bowl. Impressed with his demeanor, the people of Suppāraka were exceedingly generous, offering him luxurious gifts and fine clothes, which he consistently refused. Over time, he came to be regarded by the

populace as an arhat, and, infatuated with his growing fame, Bāhiya also came to believe that he had attained that state of holiness. A [BRAHMĀ](#) god, who had been Bāhiya's friend in a previous existence, convinced him out of kindness that he was mistaken and recommended that he seek out the Buddha in [ŚRĀVASTĪ](#) (P. Sāvattī). The Brahmā god transported Bāhiya to the city of [RĀJAGRHA](#) (P. Rājagaha) where the Buddha was then staying and told him to meet the Buddha during his morning alms round. Bāhiya approached the Buddha and requested to be taught what was necessary for liberation, but the Buddha refused, saying that alms round was not the time for teaching. Bāhiya persisted three times in his request, whereupon the Buddha consented. The Buddha gave him a short lesson in sensory restraint ([INDRIYASAMVARA](#)): i.e., “in the seen, there is only the seen; in the heard, only the heard; in what is thought, only the thought,” *etc.* As he listened to the Buddha's terse instruction, Bāhiya attained arhatship. As was typical for laypersons who had attained arhatship, Bāhiya then requested to be ordained as a monk, but the Buddha refused until Bāhiya could be supplied with a bowl and robe. Bāhiya immediately went in search of these requisites but along the path encountered an ox, which gored him to death. Disciples who witnessed the event informed the Buddha, who from the beginning had been aware of Bāhiya's impending demise. He instructed his disciples to cremate the body and build a reliquary mound (P. thūpa, S. [STŪPA](#)) over the remains; he then explained that Bāhiya's destiny was such that he could not be ordained in his final life.

[Bahuśrutīya](#). (P. Bahussutaka/Bahulika; T. Mang du thos pa; C. Duowenbu; J. Tamonbu; K. Tamunbu 多聞部). In Sanskrit, lit. “Great Learning”; one of the traditional eighteen schools of mainstream Indian Buddhism. The Bahuśrutīya was one of the two subschools of the [KAUKKUTIKA](#) branch of the [MAHĀSĀMGHIKA](#) school, along with the [PRAJÑAPTIVĀDA](#), which may have split off as a separate school around the middle of the third century CE. The school was based in [NĀGĀRJUNAKONDA](#) in the Andhra region of India, although there is also evidence it was active in the Indian Northwest. One of the few extant texts of the Bahuśrutīya is [HARIVARMAN](#)'s c. third-century CE [*TATTVASIDDHI](#) ([alt. *Satyasiddhi]; C. [CHENGSHI LUN](#), “Treatise on Establishing Reality”), a summary of the school's lost [ABHIDHARMA](#); this text is extant only in its Chinese translation. The positions the Bahuśrutīya advocates are closest to those of the [STHAVIRANIKĀYA](#) and [SAUTRĀNTIKA](#) schools, though, unlike the Sthaviranikāya, it accepts the reality of “unmanifest materiality” ([AVIJÑAPTIRŪPA](#)) and, unlike the Sautrāntika, rejects the notion of an “intermediate state” ([ANTARĀBHAVA](#))

between existences. The Bahuśrutīya also opposed the [SARVĀSTIVĀDA](#) position that dharmas exist in both past and future, the Mahāsāṃghika view that thought is inherently pure, and the [VĀTSĪPUTRĪYA](#) premise that the “person” ([PUDGALA](#)) exists. The Bahuśrutīya thus seems to have adopted a middle way between the extremes of “everything exists” and “everything does not exist,” both of which it views as expedencies that do not represent ultimate reality. The Bahuśrutīya also claimed that the Buddha offered teachings that were characterized by both supramundane ([LOKOTTARA](#)) and mundane ([LAUKIKA](#)) realities, a position distinct from the [LOKOTTARAVĀDA](#), one of the other main branches of the Mahāsāṃghika, which claimed that the Buddha articulates all of his teachings in a single utterance that is altogether transcendent (lokottara). The Bahuśrutīya appears to be one of the later subschools of mainstream Buddhism; its views are not discussed in the Pāli [KATHĀVATTHU](#). They are also claimed to have attempted a synthesis of mainstream and [MAHĀYĀNA](#) doctrine.

[bāhya](#). (S). See [BAHIRDHĀ](#).

[bāhyārtha](#). (T. phyi don; C. waijing; J. gekyō; K. oegyōng 外境). In Sanskrit, “external object”; referring specifically to sensory objects ([ĀYATANA](#)) that exist externally to the sensory consciousnesses ([VIJÑĀNA](#)) that perceive them; the term is sometimes also seen in Sanskrit as bahirdhārtha. Such objects are knowable because there is some feature or quality ([ĀKĀRA](#)) that is specific to that particular sense datum. In the [MADHYAMAKA](#) school, the conventional existence of external objects is sometimes upheld, although they are said to lack intrinsic nature ([SVABHĀVA](#)). External objects are built up out of atoms ([PARAMĀNU](#)), the smallest particles, sometimes compared to a mote of dust. These indivisible atoms serve as building blocks that coalesce to create an external object large enough to have an impact on a sensory faculty ([INDRIYA](#)). In his critique of individual atoms in his [MADHYAMAKĀLAMKĀRA](#), [ŚĀNTARAKSITA](#) describes three basic assertions about how this process happens: (1) different atoms are connected with one another; (2) the atoms are surrounded by external atoms of the same class, with interstices in between, each grounding the others’ potential; they cohere and do not drift apart because of a reciprocal energy but do not touch each other; (3) there are no interstices at all between the atoms. In the [YOGĀCĀRA](#) school, external objects are presumed not to exist prior to and separate from the sensory consciousnesses that perceive them, and thus lack any intrinsic reality of their own. [VASUBANDHU](#)’s [VIMŚATIKĀ](#) presents the Yogācāra view that indivisible

atoms of any type cannot form gross objects. The Yogācāra refutation is part of a larger project to demonstrate that Buddhist notions of causality are tenable only in the absence of external objects. According to this view, the conscious experience of apparent external objects is in fact the result of residual impressions ([VĀSANĀ](#)) left by earlier, similar experiences on an eighth consciousness, the storehouse-like subconscious ([ĀLAYAVIJÑĀNA](#)).

[Bai lun](#). [alt. Bo lun]. (J. Hyakuron; K. Paek non 百論). In Chinese, “The Hundred Treatise,” a philosophical work attributed to the [MADHYAMA](#) master [ĀRYADEVĀ](#), and counted as one of the “three treatises” of the SANLUN ZONG of Chinese Buddhism. See [*ŚATAŚĀSTRA](#).

[Baidūrya dkar po](#). (Vaidurya Karpo). In Tibetan, “White Beryl.” The monumental astronomical and astrological treatise written in 1685 by the regent of the fifth [DALAI LAMA](#), [SDE SRID SANGS RGYAS RGYA MTSHO](#); the full title is *Phug lugs rtsis kyi legs bshad mkhas pa’i mgul rgyan baidūrya dkar po’i do shal dpyod ldan snying nor*. It deals with the principles of astrology, astronomy, geomancy, and calendrical calculations based on the five elements of wood, fire, earth, metal, and water. Like the larger [BAIDŪRYA SNGON PO](#), it is supplemented by detailed illustrations. The author’s *Baidūrya dkar po las ’phros pa’i snyan sgron dang dri lan g.ya’ sel* (known as *Baidūrya g.ya’ sel*) clarifies and further elucidates controversial points in the text.

[Baidūrya gser po](#). (Vaidurya Serpo). In Tibetan, “Golden Beryl.” The text is a history of the [DGE LUGS](#) sect of Tibetan Buddhism, its principal teachers, and its institutions, written in 1698 by the regent of the fifth [DALAI LAMA](#), [SDE SRID SANGS RGYAS RGYA MTSHO](#); also known as the *Dga’ ldan chos ’byung* (“History of the Dga’ ldan pa [= Dge lugs pa]”); the full title is *Dpal mnyam med ri bo dga’ ldan pa’i bstan pa zhwa ser cod pan ’chang ba’i ring lugs chos thams cad kyi rtsa ba gsal bar byed pa baidūrya ser po’i me long*. Vostrikov’s *Tibetan Historical Literature* gives a summary of the contents of the work.

[Baidūrya sngon po](#). (Vaidurya Ngonpo). In Tibetan, “Blue Beryl”; a commentary composed by the regent of the fifth [DALAI LAMA](#), [SDE SRID SANGS RGYAS RGYA MTSHO](#) on the “four tantras” (rgyud bzhi), the basic texts of the Tibetan medical system. Completed in 1688, the work’s full title is *Gso ba rig pa’i bstan bcos sman bla’i dgongs rgyan rgyud bzhi’i gsal byed baidūrya sngon po*; it is an important treatise on the practice of Tibetan medicine (gso rig). Its

two volumes explain the Tibetan medical treatise *Bdud rtsi snying po yan lag brgyad pa gsang ba man ngag gi rgyud*, a text probably by G.yu thog yon tan mgon po (Yutok Yonten Gonpo) the younger, but accepted by Sangs rgyas rgya mtsho to be an authentic work of the “Medicine Buddha” [BHAIŚAJYAGURU](#). The *Baiḍūrya sngon po* covers a wide range of medical topics approximating physiology, pathology, diagnosis, and cure; although based on the four tantras, the text is a synthesis of earlier medical traditions, particularly those of the Byang (Jang) and Zur schools. Its prestige was such that it became the major reference work of a science that it brought to classical maturity. Sangs rgyas rgya mtsho’s original commentary on the four tantras was supplemented by a set of seventy-nine (originally perhaps eighty-five) [THANG KA](#) (paintings on cloth) that he commissioned to elucidate his commentary. Each painting represented in detail the contents of a chapter, making up in total 8,000 vignettes, each individually captioned. These famous paintings, a crowning achievement in medical iconography, adorned the walls of the Lcags po ri (Chakpori) medical center that Sangs rgyas rgya mtsho founded in [LHA SA](#) in 1696; they were destroyed in 1959. It is the commentary most widely studied in the Sman rtsis khang (Mentsikang), a college founded by the thirteenth [DALAI LAMA](#) for the study of traditional Tibetan medicine.

baifa. (S. śatadharmā; J. hyappō; K. paekpōp 百法). In Chinese, the “hundred [DHARMAS](#)”; the standard [YOGĀCĀRA](#) classification of factors, classified in five major categories: (1) Eight dharmas concerning the mind ([CITTA](#))—the five affective consciousnesses associated with the five senses, plus the mental consciousness ([MANOVIJÑĀNA](#)), mentality ([MANAS](#)), and the “storehouse consciousness” ([ĀLAYAVIJÑĀNA](#)). (2) Fifty-one forces associated with thought ([CITTASAMPRA-YUKTASAMSKĀRA](#)), such as “applied thought” ([VITARKA](#)), “sustained attention” ([VICĀRA](#)), and “envy” ([ĪRSYĀ](#)); these are the mental concomitants ([CAITTA](#)). (3) Eleven “material” ([RŪPA](#)) dharmas, including the eye organ and visual objects, and formal thought objects (dharmāyatanīkarūpa). (4) Twenty-four forces dissociated from thought ([CITTA-VIPRAYUKTASAMSKĀRA](#)); these are either subconscious or involuntary phenomena, such as “life force” (jīvitendriya) and the “meditative trance wherein no perceptual activities remain” ([ASAMJÑĀSAMĀPATTI](#)), or abstract notions, such as “possession” ([PRĀPTI](#)), which are nonetheless classified as real existents. (5) Six “uncompounded” ([ASAMSKṚTA](#)) dharmas, such as “space” ([ĀKĀŚA](#)) and “suchness” ([TATHATĀ](#)), which are taken to be neither contingent on nor susceptible to causal forces,

since they are unproduced by conditions and eternally unchanging. For the full roster of the hundred dharmas, see the List of Lists (s.v.).

Bai Juyi. (C) (白居易). See [BO JUYI](#).

Bailian jiao. (白蓮教). In Chinese, “White Lotus teachings.” As with the [BAILIAN SHE](#), this name was used frequently during the Ming dynasty to refer pejoratively to various religious teachings and magical techniques deemed heretical or traitorous by local officials and Buddhist leaders. No specific religious group, however, seems to coincide precisely with this appellation. The White Lotus teachings are nonetheless often associated with millenarian movements that began to appear during the Mongol Yuan dynasty. Religious groups associated with these movements compiled their own scriptures, known as “precious scrolls” ([BAOJUAN](#)), which spoke of the future buddha [MAITREYA](#) and the worship of Wusheng Laomu (“Eternal Venerable Mother”).

Bailian she. (J. Byakurensha; K. Paengnyōnsa 白蓮社). In Chinese, “White Lotus Society.” In the late fourth and early fifth centuries, the Chinese monk [LUSHAN HUIYUAN](#) assembled a group of 123 monks and laymen on [LUSHAN](#) and contemplated the image of the buddha [AMITĀBHA](#); this group came to be known as the White Lotus Society. This name was also used by putatively heterodox lay Buddhist organizations that flourished during the Tang, Song, and early Yuan dynasties, as well as by monks mainly associated with the [Tiantai](#) school. Inspired by Huiyuan’s White Lotus Society and the repentance rituals of the Tiantai school, Mao Ziyuan (c. 1086–1166) constructed halls for repentance called White Lotus repentance halls and promoted the practice of [NIANFO](#) (see [BUDDHĀNUMSRTI](#)) as a means of maintaining the five moral precepts ([PAÑCAŚĪLA](#)). Mao Ziyuan’s White Lotus Society was further popularized by the monk Pudu (1255–1330), who compiled an influential treatise known as the *Lushan lianzong baojian* (“Precious Mirror of the Lotus Tradition at Mt. Lu”). Despite ongoing governmental suppression, he and many other lay followers established cloisters and worship halls all over the country. There seems to be little if any connection between these later organizations and that of Lushan Huiyuan. These lay organizations primarily focused on the recitation of the name of Amitābha in hopes of ensuring rebirth in his [PURE LAND](#). During the early Ming, the name White Lotus Society was frequently associated with rebellious millenarian movements that worshipped the future buddha [MAITREYA](#), which prompted the Ming government to ban any use of the name. Another more common name for

these millenarian movements was [BAILIAN JIAO](#). White Lotus societies also flourished in Korea during the Koryŏ dynasty, where they were called Paengnyŏn kyŏlsa (White Lotus retreat societies). Especially well known was the White Lotus Society (Paengnyŏnsa) established at Mandŏksa in 1211 by [WŎNMYO YOSE](#) (1163–1240), the mid-Koryŏ revitalizer of the Korean [CH'ŎNT'AE \(TIANTAI\)](#) tradition and a colleague of [POJO CHINUL](#). See also [JIESHE](#).

[Baimasi](#). (J. Hakubaji; K. Paengmasa 白馬寺). In Chinese, “White Horse Monastery”; according to tradition, the oldest Buddhist monastery in China; putatively founded in 75 CE in the Chinese capital of Luoyang by [MINGDI](#) (r. 58–75), emperor of the Latter Han dynasty. According to a well-known legend found in the preface to the [SISHI'ER ZHANG JING](#) (“Sūtra in Forty-Two Sections”), in 67 CE, Emperor Ming had a dream of a radiant golden figure flying through the air, whom his vassals later told him was the Buddha. He subsequently sent envoys to the Western Regions (Xiyu, viz., Central Asia), where this divine being was presumed to reside. The envoys were said to have returned three years later with a copy of the *Sishi'er zhang jing* and two foreign missionaries, [KĀŚYAPA MĀTAṄGA](#) and Zhu Falan (Dharmaratna). The emperor ordered that a monastery be built on their behalf in the capital of Luoyang; this monastery was named Baimasi because the two Indian monks were said to have arrived in China with scriptures carried on white horses. This legend probably originated in the third century as a means of legitimizing the apocryphal *Sishi'er zhang jing*. A second founding narrative, which occurs in the [GAOSENZHUAN](#) (“Biographies of Eminent Monks”), begins with a monastery in India of the same name. According to this legend, a king ordered the destruction of all Buddhist monasteries, but spared one monastery because in his dream he saw a white horse circumambulating the monastery and took this to be an auspicious omen. This king then renamed the monastery White Horse monastery, and, in a reversal of his previous order, began establishing new monasteries throughout India. Emperor Ming thus imitated him in building his own White Horse Monastery in Luoyang. Baimasi quickly became a center for Buddhist study and practice, housing both foreign and Chinese monks. During the Wei dynasty (220–265 CE), [SAMGHAVARMAN](#) stayed there; during the Six Dynasties period (420–589 CE), [DHARMARAKṢA](#), Dharmaruci, and Buddhaśānta (d.u.); and during the Tang dynasty, [BUDDHATRĀTA](#). During the Five Dynasties period (the transition from the Tang to the Song dynasties), Baimasi flourished as a residence for [CHAN](#) masters, and during the later Jin dynasty (936–947 CE), it also served as a center

for the [HUAYAN ZONG](#). The monastery burned down during the early twelfth century but was rebuilt in 1175 CE by the Jin-dynasty prince Sengyan and was extensively renovated during both the Ming and Qing dynasties.

[Baiyi Guanyin](#). (S. Pāṇḍaravāsini; T. Gos dkar mo; J. Byakue kannon; K. Paegŭi Kwanŭm 白衣觀音). In Chinese, “White-Robed [GUANYIN](#) (Perceiver of Sounds).” An esoteric form of the [BODHISATTVA AVALOKITEŚVARA](#) (known as Guanyin in Chinese), who became a popular focus of cultic worship in East Asia. The cult of Baiyi Guanyin began around the tenth century in China, whence it spread to Korea and Japan. Several indigenous Chinese scriptures praise the compassion and miraculous powers of White-Robed Guanyin. According to the various Baiyi Guanyin [APOCRYPHA](#), she was also a grantor of children, as was Songzi Guanyin. Many testimonials from literati are appended to these scriptures, which attest to Baiyi Guanyin’s ability to ensure the birth of sons, although it is also said that she granted children of both genders. Like many other Guanyin-related texts, the White-Robed Guanyin texts frequently invoke esoteric Buddhist terminology such as [DHĀRANĪ](#), [MUDRĀ](#), and [MANTRA](#). Beginning in the tenth century, Baiyi Guanyin’s cult was associated with the founding of temples, as well as the production of countless images commissioned by both religious and laity. Many worshippers, especially monastics and royalty, had visions of White-Robed Guanyin. These dreams range from being promised children in return for a residence (such as the Upper Tianzhu monastery outside of Hangzhou, later also associated with Princess [MIAOSHAN](#)), to enlarging existing structures or even restoring them once a vision or dream of White-Robed Guanyin occurred. In such visions and dreams, White-Robed Guanyin appeared as a female, thus differentiating this form of the bodhisattva from [SHUIYUE GUANYIN](#) (Moon-in-the-Water Avalokiteśvara), who was similarly dressed in a white robe, but appeared as a male. Some miracle tales highlighting the donors’ names were also produced in honor of Baiyi Guanyin, lending further credence to the accounts of the bodhisattva’s miraculous powers.

[Baiyun Shouduan](#). (J. Hakuun Shutan; K. Paegun Sudan 白雲守端) (1025–1072). Chinese [CHAN](#) master of the [LINJI ZONG](#). Baiyun was a native of Hengyang in present-day Hunan province. After studying with various teachers, Baiyun eventually became a disciple of the Chan master [YANGQI FANGHUI](#) (992–1049) and inherited his [YANGQI PAI](#) collateral lineage of the Linji school. Baiyun’s

illustrious career took him to such monasteries as Shengtian Chanyuan in Jiangzhou, Shongsheng Chanyuan in Yuantong, Zhengdao Chanyuan on Mt. Fahua, Ganming Chanyuan on Mt. Longmen, and Haihui Chanyuan on Mt. Baiyun, whence he acquired his toponym. The Yangqi lineage came to dominate the Chan tradition of the Song dynasty largely through the efforts of Baiyun and his disciples. Among Baiyun's disciples, [WUZU FAYAN](#) (1024?–1104) is most famous. His teachings can be found in the *Baiyun Shouduan yulu*, *Baiyun Duan heshang guanglu*, and *Baiyun Duan heshang yuyao*.

[Baizhang Huaihai](#). (J. Hyakujō Ekai; K. Paekchang Hoehae 百丈懷海) (749–814). Chinese [CHAN](#) monk of the Tang dynasty, who was a dharma successor ([FASI](#)) of [MAZU DAOYI](#). Mazu's disciples dedicated a monastery known as Dazhi Shengshou Chansi (Chan Monastery of Great Wisdom and Sagacious Longevity) on Mt. Baizhang (whence Huaihai derived his toponym) and appointed Baizhang Huaihai to be its founding patriarch (kaizu). According to later Song-dynasty accounts, Baizhang compiled for this first independent Chan monastery a novel code of monastic regulations known as the [BAIZHANG QINGGUI](#). This text was said to have been compiled so that Chan monks would no longer need to reside in [VINAYA](#) monasteries, where they were regulated by the imported monastic rules of the Indian vinaya tradition, but could now follow a code unique to their own tradition. Because of this supposedly momentous development in Chan history, Baizhang is often heralded as a revolutionary figure within the Chan tradition. However, thus far, no conclusive evidence exists from the time of Baizhang to support this claim. The famous Chan maxim “a day without work is a day without food” is also attributed to Baizhang. He left many famous disciples, among whom [GUISHAN LINGYOU](#) and [HUANGBO XIYUN](#) are best known.

[Baizhang qinggui](#). (J. Hyakujō shingi; K. Paekchang ch'ōnggyu 百丈清規). In Chinese, “Baizhang's Rules of Purity”; a monastic code distinctive to the [CHAN](#) school, attributed to the eminent Tang dynasty monk [BAIZHANG HUAIHAI](#); the text is no longer extant, but it is abridged in the [CHANMEN GUISHI](#). According to later Song-dynasty accounts, Baizhang wrote this [QINGGUI](#) (“pure rules”) for the new monastery that he had helped establish on Mt. Baizhang. This monastery is considered by the Chan tradition to be the first independent Chan institution, and its unique monastic code is thus a symbol of the school's emancipation from the regulations of the Indian [VINAYA](#) tradition. The *Baizhang qinggui* is said to have

emphasized the role of the abbot within monastic administration, the precedence of ordination age over monastic rank, and the importance of communal labor. The code also divides the Chan monastic institution into ten administrative offices and provides a general outline of the daily ritual activities in the monastery. This story of the promulgation of the code can be found in the biography of Baizhang in the [SONG GAOSEN ZHUAN](#) and [JINGDE CHUANDENG LU](#), as well as in the preface attributed to Yang Yi (968–1024) in the 1335 edition of the *Baizhang guishi*. Whether Baizhang’s monastic codes were ever compiled in written form, and if so, whether they bore this title, remain matters of scholarly controversy.

ba jue. (J. hachikaku/hakkaku; K. p’algak 八覺). In Chinese, “eight kinds of [misplaced] attention”: (1) that directed at desire (yu; S. [CHANDA](#)), (2) that directed at aversion (chen; S. [DVESA](#)), (3) harmful intent (hai; S. [VIHIMSA](#)), (4) partiality and nostalgia for one’s loved ones and relatives ([QINLI JUE](#)), (5) chauvinistic identification with one’s land or country (guotu jue), (6) the delusion that one is safe from death (busi jue), (7) identification with or pride in one’s clan or family or lineage (zuxing jue), and (8) belittlement of or contempt toward others (qingwu jue).

Ba Khin, U. (1899–1971). Influential lay Burmese teacher of insight meditation (S. [VIPASĪYANĀ](#); P. [VIPASSANĀ](#)). Born to a working-class family in Rangoon, U Ba Khin was educated in Christian middle and high schools. Married with six children, he began his career as a government clerk during the British colonial period, later becoming accountant general of independent Burma. He began practicing vipassanā in 1937 under the guidance of Saya Thet Gyi, a lay meditation teacher and disciple of the Burmese monk [LEDI SAYADAW](#). He explored several styles of tranquility (P. samatha, S. [ŚAMATHA](#)) and insight meditation and eventually developed his own technique of vipassanā by drawing on his own experiences. The method he devised focuses on physical sensations ([VEDANĀ](#)), beginning at the crown of the head and continuing throughout the body; his approach is considered to be especially effective in producing states of deep concentration ([SAMĀDHI](#)). In 1941, U Ba Khin met the famous meditation teacher Webu Sayadaw, who encouraged him to teach his meditation technique to others. He began teaching small groups informally and eventually, while accountant general, taught vipassanā to his staff. Under his influence, the government of Burma instituted a policy of encouraging civil servants to

practice meditation as part of their daily routine. In 1952, U Ba Khin established the International Meditation Centre in Rangoon, where he taught meditation and began holding intensive ten-day vipassanā retreats on a regular basis. After his retirement from government service in 1953, he devoted all of his time to promoting vipassanā practice. He also played an active role in the sixth Buddhist council (see [COUNCIL, SIXTH](#)), held in Rangoon from 1954–1956. His style of vipassanā is one of the most widely disseminated techniques internationally, and his disciples include such well-known meditation teachers as S. N. Goenka.

Bakkula. [alt. Nakula; Vakula; etc.] (P. Bakkula; T. Ba ku la; C. Bojuluo; J. Hakukura; K. Pakkura 薄拘羅). Sanskrit and Pāli name of an [ARHAT](#) disciple of the Buddha, who became an arhat only eight days after ordaining at the age of eighty. The Buddha declared him to be foremost among those who enjoyed good health, and also one of the four monks most proficient in superknowledges ([ABHIJÑĀ](#)), supernatural powers that are the byproducts of meditation. ¶ Bakkula is also traditionally listed as fifth (or, in Tibetan, ninth) of the sixteen arhat elders ([SODĀŚASTHAVIRA](#)), who are charged by the Buddha with protecting his dispensation until the advent of the next buddha, [MAITREYA](#). He is said to reside in [JAMBUDVĪPA](#) with eight hundred disciples. According to the East Asian tradition, Bakkula was a fierce warrior. After he ordained, the Buddha calmed him by making him sit in meditation, whence he became known as the “Quietly Sitting Arhat” (Jingzuo Luohan). Bakkula may be the arhat known by the epithet of Kundovahan (Holder of the Mongoose; C. Juntoupohan) referred to in the *Śāriputraparipṛcchā* (“Sūtra of Śāriputra’s Questions”). In Tibetan iconography he holds a mongoose (nakula) spitting out jewels; East Asian images have him seated in a chair holding a mongoose, sometimes accompanied by a beggar child. In [CHANYUE GUANXIU](#)’s standard Chinese depiction, Bakkula is shown sitting cross-legged on a rock, with both hands holding a backscratcher over his left shoulder. In Tibetan Buddhism, Bakkula (or Bakula) is the first figure in an important incarnation ([SPRUL SKU](#)) lineage of the [DGE LUGS](#) sect. The nineteenth Bakula Rinpoche (1917–2003) served in the Indian parliament and as the Indian ambassador to Mongolia. Bakkula is alternatively known in Sanskrit as Bakula, Vakkula, Vakula, Vatkula (cf. P. Bākula; Vakkula).

bala. (T. stobs; C. li; J. riki; K. yōk 力). In Sanskrit and Pāli, “power” or “strength”; used in a variety of lists, including the five powers (the eighteenth to twenty-second of the [BODHIPĀKSIKADHARMAS](#), or “thirty-seven factors pertaining

to awakening”), the ten powers of a [TATHĀGATA](#), the ten powers of a [BODHISATTVA](#), and the ninth of the ten perfections ([PĀRAMITĀ](#)). The five powers are the same as the five spiritual faculties ([INDRIYA](#))—faith ([ŚRADDHĀ](#)), perseverance ([VĪRYA](#)), mindfulness ([SMṚTI](#)), concentration ([SAMĀDHI](#)), and wisdom ([PRAJÑĀ](#))—but now fully developed at the [LAUKIKĀGRADHARMA](#) stage of the path of preparation ([PRAYOGAMĀRGA](#)), just prior to the path of vision ([DARŚANAMĀRGA](#)). A tathāgata’s ten powers are given in both Pāli and Sanskrit sources as the power of the knowledge (jñānabala) of: (1) what can be and cannot be (sthānāsthāna), (2) karmic results (karmavipāka), (3) the various dispositions of different beings (nānādhimukti), (4) how the world has many and different elements (nānādhātu), (5) the higher (or different) faculties people possess (indriyaparāpara), (6) the ways that lead to all destinations (sarvatraḡāminīpratipad), (7) the defilement and purification of all meditative absorptions ([DHYĀNA](#)), liberations ([VIMOKSA](#)), samādhis, and trances ([SAMĀPATTI](#)) (sarvadhyanavimokṣasamādhisamāpatti-saṃkleśavyavadānavyavasthāna), (8) recollecting previous births ([PŪRVANIVĀSĀNUMṚTI](#)), (9) decease and birth (cyutyupapatti), and (10) the extinction of the contaminants ([ĀSRAVAKSAYA](#)). Another list gives the Buddha’s ten powers as the power of aspiration (āśaya), resolution ([ADHYĀŚAYA](#)), habit (abhyāsa), practice ([PRATIPATTI](#)), wisdom (prajñā), vow ([PRANIDHĀNA](#)), vehicle ([YĀNA](#)), way of life (caryā), thaumaturgy (vikurvaṇa), the power derived from his bodhisattva career, and the power to turn the wheel of dharma ([DHARMAKAKRAPRAVARTANA](#)). When the Mahāyāna six perfections ([PĀRAMITĀ](#)) are expanded and linked to the ten bodhisattva stages ([DAŚABHŪMI](#)), four perfections are added: the perfections of skillful means ([UPĀYA](#)), vow, power, and knowledge ([JÑĀNA](#)). Thus the perfection of power ([BALAPĀRAMITĀ](#)) is linked with the ninth bodhisattva stage ([BHŪMI](#)). When the ten powers are listed as a bodhisattva’s perfection of power, they are sometimes explained to be the powers of a tathāgata before they have reached full strength.

bāla. (T. byis pa; C. yutong; J. gudō; K. udong 愚童). In Sanskrit and Pāli, “foolish,” “childish”; a pejorative term used to describe a worldlyling ([PRTHAGJANA](#)), especially one who is ignorant or heedless of the [DHARMA](#). The two terms often appear in a compound as bālapṛthagjana (foolish worldlyling).

balapāramitā. (T. stobs kyi pha rol tu phyin pa; C. li boluomi; J. rikiharamitsu; K. yōk paramil 力波羅蜜). In Sanskrit, “perfection of power” or “strength”; the ninth of the ten perfections ([PĀRAMITĀ](#)), which is mastered at the ninth stage

([BHŪMI](#)) of the [BODHISATTVA](#) path, viz., [SĀDHUMATĪ](#). The bodhisattva's strength of intellect achieved through this perfection allows him to master the four analytical knowledges ([PRATISAMVID](#)), which gives him the subtlety of thought necessary to craft his understanding of dharma so that it is relevant to each and every sentient being. See [DAŚABHŪMI](#).

[Bāmiyān](#). (C. Fanyanna; J. Bon'enna; K. Pōmyōnna 梵衍那) (The Chinese is probably a transcription of the Indian equivalency Bayana). A complex of several hundred Buddhist caves situated in the heart of the Hindu Kush mountains, some seventy miles northwest of the modern city of Kabul, Afghanistan; renowned for two massive standing buddhas carved into the cliff face, which were the largest in the world. The Bāmiyān Valley was a thriving Buddhist center of the [LOKOTTARAVĀDA](#) school from the second through roughly the ninth century CE, until Islam entered the region. Scholars tend to divide the valley into three sections: the western section contained a giant standing buddha (some 177 feet, or fifty-five meters high) and numerous painted caves; the eastern section contained a second large-scale buddha statue (some 124 feet, or thirty-eight meters high); and the central section is marked by a smaller buddha image. The seventh-century Chinese pilgrim [XUANZANG](#) described a giant reclining buddha at Bāmiyān, although no archaeological evidence of such a statue has been found. The series of caves excavated between the massive statues vary in size and layout and include both monastic residences ([VIHĀRA](#)) as well as cave basilicas perhaps used for worship by passing monks and traveling merchants. The diversity of artistic styles found at Bāmiyān, like those in the caves at [DUNHUANG](#), is a reminder of its crucial position along the ancient [SILK ROAD](#). In 1222 CE, the Mongol ruler Genghis Khan defaced some of the statues, and the Taliban of Afghanistan shelled the two large buddha statues and destroyed them in March 2001. In 2003, the archaeological remains of the Bāmiyān Valley were listed as a UNESCO World Heritage site.

[Bandhudatta](#). (C. Pantoudaduo; J. Banzudatta; K. Pandudalta 槃頭達多). A teacher of [KUMĀRAJĪVA](#), the scholar-monk who eventually became the preeminent translator of Indian Buddhist materials into Chinese. Kumārajīva's mother became a Buddhist nun when her son was seven years old. She also had her son ordained at that time and two years later took him to Kashmir to further his studies. There, over the course of the next three years, he was instructed in the [ĀGAMAS](#) and [SARVĀSTIVĀDA](#) doctrine by Bandhudatta. Kumārajīva later

invited his teacher to [KUCHA](#), where he sought to convert him to the [MAHĀYĀNA](#). Bandhudatta initially resisted, comparing the doctrine of [ŚŪNYATĀ](#) to an invisible garment worn by a madman, but Kumārajīva was eventually able to win him over.

[banghe](#). (J. bōkatsu; K. ponghal 棒喝). In Chinese, literally “the stick and the shout.” Also known as fojuanbanghe (“fly whisk, fist, stick, and shout”). A method of pedagogical engagement associated with the “question-and-answer” ([WENDA](#)) technique and employed primarily by teachers of the [CHAN](#), [SŌN](#), and [ZEN](#) traditions. In response to questions about the nature of the mind or the teachings of [BODHIDHARMA](#), Chan masters of the Tang dynasty began to respond by hitting, kicking, and shouting at their students. This illocutionary method of instruction is said to have been pioneered by such eminent masters of the Chinese Chan school as [HUANGPO XIYUN](#), [DESHAN XUANJIAN](#), and [LINJI YIXUAN](#). According to his recorded sayings ([YULU](#)), Linji Yixuan would often strike or shout at his students before they could even begin to respond. The [BIYAN LU](#) (“Blue Cliff Record”) specifically refers to “Deshan’s stick and Linji’s shout” (Deshan bang Linji he) in describing this pedagogical style.

[Bankei Yōtaku](#). (盤珪永琢) (1622–1693). Japanese [ZEN](#) master of the Tokugawa period; also known as Eitaku. Bankei was born in the district of Hamada in present-day Hyōgō prefecture. According to his sermons, Bankei was dissatisfied with the standard explanations of the concept of “bright virtue” (mingde) found in the CONFUCIAN classic *Daxue* (“Great Learning”), and sought explanations elsewhere. His search eventually brought him to the temple of Zuiōji, the residence of Zen master Unpo Zenshō (1568–1653). After he received ordination and the dharma name Yōtaku from Unpo, Bankei left his teacher to perform a long pilgrimage (angya) to various temples and hermitages. After what he describes in sermons as an awakening at the age of twenty-six, Bankei continued his post-awakening training under Unpo’s senior disciple, Bokuō Sogyū (d. 1694), and perfected the teaching of [FUSHŌ ZEN](#) (“unborn Zen”). Upon hearing of the arrival of the Chinese monk [DAOZHE CHAOYUAN](#) in Nagasaki (1651), Bankei traveled to Sōfukuji where Daozhe was residing and furthered his studies under the Chinese master. Bankei spent the rest of his life teaching his “unborn Zen” to both lay and clergy in various locations. He also built and restored a great number of temples and hermitages, such as Ryūmonji in his native Hamada. In 1672 he was appointed the abbot of the [RINZAI](#)

monastery of [MYŌSHINJI](#) in Kyōto.

[banruo](#). (C) (般若). Alternative Sinographic transcription for the Sanskrit [PRAJÑĀ](#) (wisdom). The preferred transcription is [BORE](#). See [BORE](#) (for related Chinese terms); [PRAJÑĀ](#) (for Sanskrit).

[Bao'en](#). (J. Hōon; K. Poŭn 報恩). See [DAHONG BAO'EN](#).

[Bao'en fengben jing](#). (J. Hōonbubongyō; K. Poŭn pongbun kyōng 報恩奉盆經). In Chinese, “Scripture for Offering Bowls to Requite Kindness.” Along with the [YULANBEN JING](#), the *Bao'en fengben jing* details the practice of the ghost festival ([YULANBEN](#)) and its mythology. These scriptures describe the pious efforts of Mulian (the Chinese transcription of the Sanskrit name [MAUDGALYĀYANA](#)), one of the two main disciples of the Buddha, to save his mother from the tortures of her rebirth as a hungry ghost ([PRETA](#)). In this scripture, the Buddha explains to Mulian that if someone should make offerings to the [SAMGHA](#) in a bowl, the power of the order's meditative practices will be sufficient to save one's ancestors and loved ones from unfortunate rebirths (see [APĀYA](#), [DURGATI](#)).

[Bao'ensi](#). (報恩寺). In Chinese, “Requiting Kindness Monastery”; located in Jiangsu province. Sometime during the first half of the third century, the Sogdian monk [KANG SENGHUI](#) brought to the Wu dynasty (222–264) of the Chinese Three Kingdoms period (c. 220–280 CE) a relic ([ŚARĪRA](#)) of the Buddha. The Wu emperor ordered the construction of a monastery called [JIANCHUSI](#) (First Built Monastery), where he installed a legendary [AŚOKA STŪPA](#) to enshrine that relic. The monastery went through several renovations and relocations during the successive dynasties that had suzerainty over the region. The establishment of the Ming dynasty's capital in the nearby city of Nanjing helped the monastery regain imperial patronage. In 1412, the Yongle emperor of the Ming dynasty began repairs on the monastery in commemoration of his wife's death and renamed it Bao'ensi. He also ordered the construction of a new nine-story stūpa there, now known as the “Porcelain Pagoda,” which was decorated with white bricks, glazed tiles, and murals executed by leading artists of the day.

[baohua ershen](#). (J. hōke nishin; K. pohwa isin 報化二身). In Chinese, “the enjoyment body and the transformation body [of a buddha],” Two of the three bodies ([TRIKĀYA](#)) of a buddha described in the [MAHĀYĀNA](#). The “enjoyment body” ([SAMBHOGAKĀYA](#)) is described as the product of eons of bodhisattva

activities, which resides forever in that buddha's [PURE LAND](#). The “transformation body” or “emanation body” ([NIRMĀNAKĀYA](#)) is, by contrast, a magical emanation of a buddha in ordinary realms of rebirth, which appears to be subject to old age and death. By inference, the “true essence” of a buddha's [PURE LAND](#), which is beyond the dualities of purity and impurity, is eternally abiding, and is called the “pure land of the enjoyment body” (baotu). The magically transformed buddha lands (huatu), in contrast, may manifest as either pure or impure in varying degrees according to the mental condition and collective karma (see [BUDDHAKSETRA](#) and [GONG BUGONG YE](#)) of their inhabitants, and are subject to the laws of formation and dissolution. See [TRIKĀYA](#).

[Baojing sanmei](#). (J. Hōkyō sanmai/zanmai; K. Pogyōng sammae 寶鏡三昧). In Chinese, “Jeweled-Mirror [SAMĀDHI](#)”; a definitive poem on enlightenment and practice from the standpoint of the Chinese [CAODONG ZONG](#); otherwise known as the *Baojing sanmei ge*, or “[GĀTHĀ](#) of the Jeweled-Mirror Samādhi.” This lengthy Chinese song is attributed to the Chan master [DONGSHAN LIANGJIE](#) and, along with the [CANTONG QI](#), is revered in the Chinese Caodong and Japanese [SŌTŌ](#) schools of [CHAN](#) and [ZEN](#) as the foundational scripture of their tradition. Although the song is traditionally attributed to Dongshan, a number of sources note that Dongshan secretly received this song from his teacher Yunyan Tansheng (780–841), and Dongshan in turn transmitted it to his head disciple [CAOSHAN BENJI](#). The earliest version of this song appears in the entry on Caoshan in the [CHANLIN SENGBAO ZHUAN](#), written in 1123. The *Baojing sanmei* emphasizes the “inherent enlightenment” ([BENJUE](#); cf. [HONGAKU](#)) of sentient beings and the futility of seeking that enlightenment through conscious reflection. Instead, the song urges its audience to allow one's inherently pure enlightened nature to “silently illuminate” itself through meditation ([MOZHAO CHAN](#)), as the Buddha did under the [BODHI TREE](#). Numerous commentaries on this song are extant.

[baojuan](#). (寶卷). In Chinese, “precious scrolls” or “treasure scrolls”; a genre of scripture produced mainly by popular religious sects with Buddhist orientations during the Ming and Qing dynasties. The baojuan are believed to have been divinely revealed to select beings who often became the leaders of these new religious movements (see also T. [GTER MA](#)). The earliest extant baojuan, which focuses on the worship of [MAITREYA](#), the future buddha, is dated 1430, shortly after the fall of the Yuan dynasty. Lo Qing (1442–1527), a lay Buddhist,

founded the Wuwei jiao (“Teachings of Noninterference”), for instance, for which he produced “five books and six volumes” of baojuan. Precious scrolls seem to share certain mythological elements, such as a new cosmogony of both the creation and demise of the world. Many of them also expound a new soteriology based on [CHAN](#) meditation and Daoist alchemy. The baojuan genre seems to be an evolutionary development from the earlier Buddhist vernacular narrative known as “transformation texts” ([BIANWEN](#)). Like bianwen, the baojuan were also employed for both popular entertainment and religious propagation.

[Baolin zhuan](#). (J. Hōrinden; K. Porim chŏn 寶林傳). In Chinese, “Chronicle of the Bejeweled Forest (Monastery)”; an important early lineage record of the early Chinese [CHAN](#) tradition, in ten rolls; also known as *Da Tang Shaozhou Shuangfeng shan Caoxi Baolin zhuan* or *Caoxi Baolin zhuan*. The title refers to Baolinsi, the monastery in which [HUINENG](#), the legendary “sixth patriarch” ([LIUZU](#)) of Chan, resided. The *Baolin zhuan* was compiled by the obscure monk Zhiju (or Huiju) in 801, and only an incomplete version of this text remains (rolls 7, 9, 10 are no longer extant). As one of the earliest extant records of the crucial [CHAN](#) legend of patriarchal succession (cf. [FASI](#), [ZUSHI](#)), the *Baolin zhuan* offers a rare glimpse into how the early Chan tradition conceived of the school’s unique place in Buddhist history. Texts like the *Baolin zhuan* helped pave the way for the rise of a new genre of writing, called the “transmission of the lamplight records” ([CHUANDENG LU](#)), which provides much more elaborate details on the principal and collateral lineages of the various Chan traditions. The *Baolin zhuan*’s list of patriarchs includes the buddha [ŚĀKYAMUNI](#), twenty-eight Indian patriarchs beginning with [MAHĀKĀŚYAPA](#) down to [BODHIDHARMA](#) (the *Baolin Zhuan* is the earliest extant text to provide this account), and the six Chinese patriarchs: Bodhidharma, [HUIKE](#), [SENGCAN](#), [DAOXIN](#), [HONGREN](#), and [HUINENG](#) (the *Baolin zhuan*’s entries on the last three figures are no longer extant). For each patriarch, the text gives a short biography and transmission verse ([GĀTHĀ](#)).

[Baomingsi](#). (保明寺). In Chinese, “Protecting the Ming [Dynasty] Monastery”; located in West Huang Village in the Western Hills near Beijing and closely associated with the Ming imperial family. According to legend, the monastery was established by the Ming dynasty emperor Yingzong (r. 1457–1464 CE) in 1457 CE, in honor of a nun known only by her surname, Lü. While the Ming emperor was being held captive by the Mongols, Nun Lü, who by that time had

died, is said to have provided him with food and drink to keep him alive. After he returned to power in 1457 CE, the Yingzong Emperor gave the nun the posthumous imperial rank of “imperial younger sister” (yumei) and built a convent in her honor. Due to her rank, Nun Lü subsequently came to be called an “imperial aunt” (huanggu), and the monastery was renamed Huanggusi. Later in the Ming, its original name Baomingsi was restored. Baomingsi benefited from its close relationship to Ming royalty. During the Chenghua reign era of the Ming (1465–1487 CE), a petition was made for it to receive an imperially bestowed plaque, which was eventually granted during the reign of the Xiaozong emperor (r. 1488–1505 CE). This bestowal brought the monastery imperial protection and exemption from taxes and corvée labor. During the reign of the Jiajing emperor (r. 1507–1567 CE), a period during which Buddhist monasteries and convents were severely persecuted, the emperor spared Baomingsi because of its patronage by two empress dowagers: his own and his predecessor’s mothers. A bell was cast for the Guanyin Hall of Baomingsi during the reign of the Longqing emperor (r. 1537–1572 CE) commemorating Nun Lü. The inscriptions on the bell include one commemorating the date of its casting. The other inscription is a list of more than a hundred donors, headed by Empress Dowager Cisheng, further legitimizing the relationship of Baomingsi with the Ming imperial family.

Baotang Wuzhu. (J. Hotō Mujū: K. Podang Muju 保唐無住) (714–774). Chinese monk in the early [CHAN](#) school, who is considered the founder of the [BAOTANG ZONG](#) during the Tang dynasty. Baotang is the name of the monastery where Wuzhu resided (located in present-day Sichuan province). Wuzhu is said to have attained awakening through the influence of Chen Chuzhang (d.u.), a lay disciple of the monk Hui’an (582–799; a.k.a. Lao’an); Chen was thought to be an incarnation of the prototypical Buddhist layman [VIMALAKĪRTI](#). According to the [LIDAI FABAO JI](#), Wuzhu attended a mass ordination performed by the Korean monk [CHŎNGJONG MUSANG](#) at Jingzhong monastery in the city of Chengdu. Upon hearing Musang’s instructions to practice in the mountains, Wuzhu left for Baiyaishan, where he remained for the next seven years (759–766). He subsequently went to the monastery Konghuisi, until he finally moved to Baotangsi, where he passed away in the summer of 774. Wuzhu was famous for his antinomian teachings that rejected all devotional practices, and is remembered as the founder of the eponymous [BAOTANG ZONG](#). Wuzhu’s successor was a lay disciple by the name of Tu Hongjian, deputy commander-in-

chief and vice president of the Imperial Chancellery.

Baotang zong. (J. Hotōshū; K. Podang chong 保唐宗). An important school of the early Chinese [CHAN](#) tradition, known for its radically antinomian doctrines. The school takes its name from the monastery (Baotangsi) where the school's putative founder, [BAOTANG WUZHU](#), resided. The monastery was located in Jiannan (in modern-day Sichuan province), in the vicinity of the city of Chengdu. Until the recent discovery of the [LIDAI FABAO JI](#) at [DUNHUANG](#), information on this school was limited to the pejorative comments found in the writings of the ninth-century [CHAN](#) historian [GUIFENG ZONGMI](#). Owing perhaps to the antinomian teachings espoused by its members, the school was short-lived. The school rejected all soteriological practices and devotional activities. No images of the Buddha were enshrined in their monasteries, and they questioned the value of chanting scriptures and performing repentance rituals. Instead, they insisted on “simply sitting in emptiness and quietude” (zhikong xianzuo) and transmitting “no thought” ([WUNIAN](#)) in lieu of formal precepts. The Baotang lineage is often traced back to Hui'an (582–709; also known as Lao'an, “Old An,” because of his long life), a disciple of the fifth patriarch [HONGREN](#), and to Hui'an's lay disciple Chen Chuzhang (d.u.), through whose influence Baotang Wuzhu is said to have attained awakening. Although the author of the *Lidai fabao ji*, a disciple of Wuzhu, attempts to associate the Baotang lineage with that of [CHÖNGJONG MUSANG](#), the founder of the [JINGZHONG ZONG](#), these schools are now considered to have been two distinct traditions. Like the Jingzhong school, the Baotang zong also seems to have exerted considerable influence on the development of Tibetan Buddhism, especially on the early teachings of [RDZOGS CHEN](#) (dzogchen).

Baozang lun. (J. Hōzōron; K. Pojang non 寶藏論). In Chinese, “Treasure Store Treatise,” in one roll, attributed to [SENGZHAO](#). The treatise comprises three chapters: (1) the broad illumination of emptiness and being, (2) the essential purity of transcendence and subtlety, and (3) the empty mystery of the point of genesis. Doctrinally, the *Baozang lun* resembles works associated with the [NIUTOU ZONG](#) of the [CHAN](#) school, such as the [JUEGUAN LUN](#), [XINXIN MING](#), and [WUXIN LUN](#). In both terminology and rhetorical style, the treatise is also similar to the *Daode jing* and to texts that belong to the Daoist exegetical tradition known as Chongxuan. The author(s) of the *Baozang lun* thus sought to synthesize the metaphysical teachings of the Buddhist and Daoist traditions.

Baozhi. (J. Hōshi; K. Poji 保誌/寶誌) (418–514). Chinese monk and well-known thaumaturge who comes to be especially revered by the [CHAN](#) school. The earliest sources referring to Baozhi are his epitaph written by Lu Chui (470–526) and his hagiography in the [GAOSEN ZHUAN](#). According to these two texts, Baozhi’s secular surname was Zhu, and he was a native of Jinling (in present-day Jiansu); he is therefore sometimes known as Jinling Baozhi, using this toponym. Baozhi became a monk at a young age and around 466 suddenly turned eccentric: he would go for days without food, showing no sign of hunger, let his hair grow several inches long, and wander around the streets barefoot with a pair of scissors, a mirror, and a few strips of silk dangling from a long staff that he carried over his shoulder. Portraits of Baozhi often picture him carrying his staff with its various accoutrements, all symbols of his prescience. He also would work miracles, giving predictions and appearing in many places simultaneously. By the middle of the Tang dynasty, he was believed to be an incarnation of [AVALOKITEŚVARA](#) and was widely worshipped. Baozhi was especially venerated by Emperor Wu of the Liang dynasty (r. 502–549) and appears in the famous [GONG’AN](#) that relates Emperor Wu’s encounter with the Chan founder [BODHIDHARMA](#); there, Baozhi played the role of a clairvoyant witness who revealed to the emperor Bodhidharma’s true identity as an incarnation of Avalokiteśvara; [YUANWU KEQIN](#)’s (1063–1135) commentary to this gong’an in the [BIYAN LU](#) (“Blue Cliff Record”) refers briefly to the notion that Bodhidharma and Baozhi were both incarnations of Avalokiteśvara. A few verses attributed to Baozhi are included in such Chan writings as [HUANGBO XIYUN](#)’s [CHUANXIN FAYAO](#), [GUIFENG ZONGMI](#)’s commentary to the [YUANJUE JING](#) (*Yuanjue xiuduoluo liaoyi jing lüeshu*), and [YONGMING YANSHOU](#)’s [ZONGJING LU](#); these refer, for example, to the metaphor of wheat flour and flour products, and the nonduality between ordinary activities and the functioning of the buddha-nature ([BUDDHADHĀTU](#); [FOXING](#)). These verses, however, are retrospective attributions, since they contain Chan ideas that postdate Baozhi and include terminology and ideology similar to later [HONGZHOU ZONG](#) texts, which could not have derived from Baozhi.

Barabudur. See [BOROBUDUR](#).

’bar ba spun bdun. (barwa pündün). A group of seven Tibetan dharma protectors ([DHARMAPĀLA](#)), who are the commanders of the [BTSAN](#) (tsen) class of native Tibetan deities. They are chief among the native spirits who attempted to

prevent the propagation of Buddhism in Tibet and were subdued by [PADMASAMBHAVA](#), who accomplished this feat through meditating on [HAYAGRĪVA](#), a wrathful tantric deity. Their chief is the dharmapāla [TSPU DMAR PO](#). An important place of worship of the 'bar ba spun bdun is in Dpal ti (Palti) near Yar 'brog mtsho (Lake Yardrok) and Rgyal rtse (Gyantse) in the Gtsang (Tsang) region of central Tibet. Seven temples, or btsan khang, were erected to house them, and travelers would stop and present offerings, from simple red flowers to elaborate red [GTOR MA](#) or a bla rdo (life stone). They are also known as dam can mched bdun, drag btsan mched bdun, btsan rgod 'bar ba, and btsan rgod zangs ri spun bdun.

bar bskor. (barkor) In Tibetan, “middle circuit”; the middle of three main ritual circuits in the Tibetan capital of [LHA SA](#), skirting the outer walls of the [JO KHANG](#) temple and its surrounding structures. The other two circuits are the “inner circuit” (nang bskor) going around the central statue in the Jo khang, and the “sanctuary circuit” (gling bskor) around what used to be the limits of the city of Lha sa. The bar bskor is a major center for religious activity in the city, drawing devotees from all parts of the Tibetan Buddhist world to walk, prostrate, pray, and perform offerings around the ambulatory. It is also an important social venue and marketplace, where individuals meander through street vendors’ stalls and modern Chinese department stores. Since the late 1980s, the bar bskor has become the stage for political protest, merging civil expression with religious and social ritual space.

bar do. In Tibetan, literally “between two”; often translated as “intermediate state”; the Tibetan translation of the Sanskrit [ANTARĀBHAVA](#), the intermediate state between death and rebirth, posited by some, but not all, Buddhist schools (the [STHAVIRANIKĀYA](#), for example, rejects the notion). In Tibet, the term received considerable elaboration, especially in the [RNYING MA](#) sect, most famously in a cycle of treasure texts ([GTER MA](#)) discovered in the fourteenth century by [KARMA GLING PA](#) entitled “The Profound Doctrine of Self-Liberation of the Mind [through Encountering] the Peaceful and Wrathful Deities” (*Zab chos zhi khro dgongs pa rang grol*) also known as the “Peaceful and Wrathful Deities According to Karmalingpa” (*Kar gling zhi khro*). A group of texts from this cycle is entitled [BAR DO THOS GROL CHEN MO](#) (“Great Liberation in the Intermediate State through Hearing”). Selections from this group were translated by [KAZI DAWA-SAMDUP](#) and published by [WALTER Y. EVANS-WENTZ](#) in 1927 as

The Tibetan Book of the Dead. In Karma gling pa's texts, the universe through which the dead wander is composed of three bar dos. The first, and briefest, is the bar do of the moment of death ('chi kha'i bar do), which occurs with the dawning of the profound state of consciousness called the clear light ([PRABHĀSVARACITTA](#)). If one is able to recognize the clear light as reality, one is immediately liberated from rebirth. If not, the second bar do begins, called the bar do of reality (chos nyid bar do). The disintegration of the personality brought on by death reveals reality, but in this case, not in the form of clear light, but in the form of a [MANDALA](#) of fifty-eight wrathful deities and a maṇḍala of forty-two peaceful deities from the [GUHYAGARBHATANTRA](#). These deities appear in sequence to the consciousness of the deceased in the days immediately following death. If reality is not recognized in this second bar do, then the third bar do, the bar do of existence (srid pa'i bar do), dawns, during which one must again take rebirth in one of the six realms ([SADGATI](#)) of divinities, demigods, humans, animals, ghosts, or hell denizens. The entire sequence may last as long as seven days and then be repeated seven times, such that the maximum length of the intermediate state between death and rebirth is forty-nine days. This is just one of many uses of the term bar do in Tibetan Buddhism; it was used to describe not only the period between death and rebirth but also that between rebirth and death, and between each moment of existence, which always occurs between two other moments. Cf. also [SISHIJU \[RI\] ZHAI](#).

[Bar do thos grol chen mo](#). (Bardo Tödröl Chenmo). In Tibetan, "Great Liberation through Hearing in the Intermediate State." It is a section of large cycle of mortuary texts entitled "The Profound Doctrine of Self-Liberation of the Mind [through Encountering] the Peaceful and Wrathful Deities" (*Zab chos zhi khro dgongs pa rang grol*) also known as the "Peaceful and Wrathful Deities according to Karmalingpa" (*Kar gling zhi khro*). The *Bar do thos grol chen mo* is a treasure text ([GTER MA](#)) of the [RNYING MA](#) sect of Tibetan Buddhism, discovered in the fourteenth century by [KARMA GLING PA](#). Selections from it were translated by [KAZI DAWA SAMDUP](#) and published by [WALTER Y. EVANS-WENTZ](#) in 1927 as *The Tibetan Book of the Dead*. See also [ANTARĀBHAVA](#), [BAR DO](#).

[Bureau, André](#). (1921–1993). A distinguished French scholar of Sanskrit and Pāli who made important contributions to scholarly understanding of the early history of Buddhism in India. While studying philosophy at the Sorbonne, Bureau first became interested in Sanskrit and Pāli. Studying with Jean Filliozat

and [PAUL DEMIÉVILLE](#), in 1951 he completed his doctoral thesis, which dealt with the evolution of the notion of the unconditioned ([ASAMSKRṬA](#)) in Buddhism. Bareau would go on to publish thirteen books and more than one hundred articles. Among these books, his most important monographs include *Les Sectes bouddhiques du petit véhicule* (1955) and *Recherches sur la biographie du Buddha dans les Sūtrapīṭaka et les Vinayapīṭaka anciens* (1963). Among his greatest contributions was his work on the earliest sources for the life of the Buddha, which he traced to the third century BCE, more than a century after the Buddha's death. He held the chair in Buddhist Studies at the Collège de France from 1971 to 1991.

[Barlaam and Josaphat](#). A Christian saint's tale that contains substantial elements drawn from the life of the Buddha. The story tells the tale of the Christian monk Barlaam's conversion of an Indian prince, Josaphat. (Josaphat is a corrupted transcription of the Sanskrit term [BODHISATTVA](#), referring to [GAUTAMA](#) Buddha prior to his enlightenment.) The prince then undertakes the second Christian conversion of India, which, following the initial mission of the apostle Thomas, had reverted to paganism. For their efforts, both Barlaam and Josaphat were eventually listed by the Roman Catholic Church among the roster of saints (their festival day is November 27). There are obvious borrowings from Buddhist materials in the story of Josaphat's life. After the infant Josaphat's birth, for example, astrologers predict he either will become a powerful king or will embrace the Christian religion. To keep his son on the path to royalty, his pagan father has him ensconced in a fabulous palace so that he will not be exposed to Christianity. Josaphat grows dissatisfied with his virtual imprisonment, however, and the king eventually accedes to his son's request to leave the palace, where he comes across a sick man, a blind man, and an old man. He eventually meets the monk Barlaam, who instructs him using parables. Doctrines that exhibit possible parallels between Buddhism and Christianity, such as the emphasis on impermanence and the need to avoid worldly temptations, are a particular focus of Barlaam's teachings, and the account of the way of life followed by Barlaam and his colleagues has certain affinities with that of wandering Indian mendicants ([ŚRAMANA](#)). By the late nineteenth century, the story of Barlaam and Josaphat was recognized to be a Christianized version of the life of the Buddha. The Greek version of the tale is attributed to "John the Monk," whom the Christian scholastic tradition assumed to be St. John of Damascus (c. 676–749). The tale was, however, first rendered into Greek from

Georgian in the eleventh century, perhaps by Euthymius (d. 1028). The Georgian version, called the *Balavariani*, appears to be based on an Arabic version, *Kitāb Bilawhar wa Būdhāsaf*. The source of the Arabic version has not been identified, nor has the precise Buddhist text from which the Buddhist elements were drawn. After the Greek text was translated into Latin, the story was translated into many of the vernaculars of Europe, becoming one of the most popular saint's tales of the Middle Ages.

'Ba' rom bka' brgyud. (Barom Kagyü). One of the eight Tibetan subsects of the [BKA' BRGYUD](#) sect of Tibetan Buddhism, originating with 'Ba' rom Dar ma dbang phyug (Barom Darma Wangchuk, 1127–1199), a disciple of [SGAM PO PA BSOD NAMS RIN CHEN](#).

Ba shenbian. (C) (八神變). See [BA DA ZIZAI WO](#).

Bashō. (J) (芭蕉). See [MATSUO BASHŌ](#).

Bassui Tokushō. (拔隊得勝) (1327–1387). Japanese monk of the Hottō branch of the [RINZAISHŪ](#) of [ZEN](#); also known as Bassui Zenji. Ordained at the age of twenty-nine, Bassui subsequently began a pilgrimage around the Kantō area of Japan in search of enlightened teachers. He eventually met Kohō Kakumyō (1271–1361) of Unjuji in Izumo, and received from him the name Bassui, which means “well above average,” lit., “to rise above the rank-and-file.” Their relationship, however, remains unclear. After taking leave from Kohō, Bassui continued traveling on pilgrimage until he settled down in Kai, where his local patrons established for him the monastery of Kōgakuji (“Facing Lofty Peaks Monastery”). Bassui's teachings stress the importance of [KŌAN](#) (C. [GONG'AN](#)) training and especially the notion of doubt (see [YIJING](#); [YITUAN](#)). Bassui was also extremely critical of [SŌTŌ](#) teachers of his day, despite the fact that his own teacher Kohō was once a Sōtō monk, and he was strongly critical of their use of kōan manuals called [MONSAN](#) in their training. Although his teacher Kohō employed Sōtō-style “lineage charts” (see [KECHIMYAKU SŌJŌ](#)) as a means of attracting lay support, Bassui rejected their use and instead stressed the importance of practice.

ba wei. (J. hachimi; K. p'al mi 八味). In Chinese, lit. “eight tastes”; a numerical list derived from Chinese translations of the [MAHĀPARINIRVĀNASŪTRA](#), where the Buddha's experience of [NIRVĀNA](#) is said to be characterized by eight “tastes,” or

experiences: (1) it is perpetually abiding (changzhu), (2) calm and extinguished (viz., of suffering and afflictions) (jimie), (3) not subject to old age (bulao), (4) deathless (busi), (5) immaculate (qingjing), (6) unobstructed like space (xutong), (7) imperturbable (budong), and (8) blissful (kuaile).

ba wu san er. (八五三二). In Chinese, “[teaching involving] eight, five, three, and two [dharmas]”; a numerical schema used in the Chinese [FAXIANG ZONG](#) ([YOGĀCĀRA](#)) to summarize key tenets of its analysis of factors ([DHARMA](#)). In this schema, “eight” refers to “eight consciousnesses” (the six sensory consciousnesses; the seventh consciousness, or [KLISTAMANAS](#); and the eighth consciousness, or [ĀLAYAVIJÑĀNA](#)); “five” refers to the “five [aspects of] dharmas” ([WUFA](#)); the “three” refers to “three natures” ([TRISVABHĀVA](#)); and the “two” to “two kinds of nonself” (see [PUDGALANAIRĀTMYA](#) and [DHARMANAIRĀTMYA](#)).

baxiang. (J. hassō; K. p’alsang 八相). In Chinese, “eight episodes”; eight archetypal events in the life of any buddha: (1) descending from [TUSITA](#) heaven to undertake his final life as a [BODHISATTVA](#); (2) entering the womb of his mother for his final life; (3) birth; (4) renunciation (i.e., leaving home to become a monk); (5) subjugating [MĀRA](#); (6) attaining enlightenment; (7) turning the wheel of the dharma ([DHARMAKAPRAVARTANA](#)) at the first sermon; (8) passing into [PARINIRVĀNA](#). Another common list is (1) descent from tuṣita heaven; (2) birth in [LUMBINĪ](#); (3) seeing the four portents ([CATURNIMITTA](#)); (4) going forth into homelessness ([PRAVRAJITA](#)); (5) ascetic practice in the Himālayas; (6) subjugating Māra beneath the [BODHI TREE](#) and attaining enlightenment; (7) turning the wheel of the dharma in the Deer Park ([MRGADĀVA](#)); (8) passing into parinirvāṇa beneath twin [ŚĀLA](#) trees. The lists may differ slightly, e.g., replacing subjugating Māra with gestation in the womb. These eight episodes are common themes in Buddhist art. See also [TWELVE DEEDS OF A BUDDHA](#).

ba xunsi. (C) (八尋思). See [BAJUE](#).

Bayinnaung. (r. 1551–1581). Burmese king and third monarch of the Taungoo dynasty. Bayinnaung was the brilliant general and brother-in-law of King Tabinshwehti (r. 1531–1550), who first expanded the territory of the city-state Taungoo to create the Taungoo empire (1531–1752). Tabinshwehti sought to reunify the various kingdoms and petty states that had once been vassals to the first Burmese empire of Pagan (1044–1287). To this end, he followed a policy of

conciliation toward vanquished peoples, especially the Mon, whose brand of reformed Sinhalese [THERAVĀDA](#) Buddhism he favored. Bayinnaung continued this ecumenical religious policy even while he aggressively extended the borders of his empire eastward through military campaigns launched in the name of the Buddha. In a series of campaigns, he subdued the Shan tribes, the Lao kingdom of Vientiane, and the Thai kingdoms of [AYUTHAYA](#) and Chiangmai, creating briefly Southeast Asia's largest polity. Throughout these territories, he built pagodas and distributed copies of [PALI](#) scriptures. In the Shan hills, he compelled the local warlords to abandon human sacrifice and convert to Buddhism, requiring them to provide material support to missionary monks dispatched from his capital. While officially promoting the reformed Buddhism of the Mon, Bayinnaung remained tolerant of local Buddhist custom and allowed independent monastic lineages to continue. He maintained close diplomatic relations with the Buddhist kingdom of Sri Lanka and offered munificent gifts to its palladium, the [TOOTH RELIC](#) at Kandy. In 1560, when the Portuguese captured the relic, Bayinnaung sought to ransom it for 300,000 ducats, only to have his emissaries witness its destruction in a public ceremony ordered by the archbishop of Goa. Legend says that the tooth miraculously escaped and divided itself into two, one of which was returned to Kandy, while the other was gifted to Bayinnaung, who enshrined it in the Mahazedi pagoda at his capital Pegu. The religious policies of Bayinnaung and his successors greatly influenced the character of Burmese Buddhism and society. Royal patronage of Buddhist scholarship coupled with the proliferation of village monastery schools fostered a common Buddhist identity among the populace that crossed ethnic boundaries and facilitated a degree of peasant literacy that was unusual in premodern societies.

Bayon. One of the most important Buddhist temples sites at [ANGKOR THOM](#), the temple-city of the ancient Khmer kingdom; built by the Khmer king Jayavarman VII (r. 1181–c. 1220). The Bayon is a funerary temple located at the center of the Angkor Thom city complex. Constructed of sandstone and in the form of a terraced pyramid, the Bayon represents among other symbols Mt. [SUMERU](#), the axis mundi of the Hindu-Buddhist universe. The temple is entered through four doorways, one on each side, that lead through galleries richly carved with bas-reliefs depicting scenes from contemporary life and Hindu mythology. The temple is crowned with fifty-two towers, the largest of which occupies the center and pinnacle of the structure. The four sides of every tower bear colossal

guardian faces that are believed to be portraits of Jayavarman VII in the guise of the bodhisattva [AVALOKITEŚVARA](#). The Bayon is the first of Angkor's many temples specifically dedicated to a [MAHĀYĀNA](#) Buddhist cult; those built earlier were exclusively Hindu in affiliation. Beneath the central tower is a chamber that once housed a buddha image protected by a hooded cobra. This image was situated above a receptacle intended to receive the king's ashes at death. The Bayon thus combines the function and architectural elements of a Hindu temple and a Buddhist [STŪPA](#), while Jayavarman's identification with Avalokiteśvara was but an extension of Angkor's long-standing Hindu devarājan (divine king) cult.

[Ba zizai](#). (C) (八自在). See [BA DA ZIZAI WO](#).

[bca' yig](#). (chayik). In Tibetan, "constitution" or "charter"; the monastic codes promulgated at individual monasteries, which govern life at those centers. These individual codes supplement the much larger [MŪLASARVĀSTIVĀDA VINAYA](#), the primary source for the monastic code, and its summary in [GUNAPRABHA'S VINAYASŪTRA](#), a medieval Indian summary of the monastic code. Each monastery has its own bca' yig, which sometimes is an oral code of best practices, sometimes a written document drawn up by a respected party. The bca' yig condenses customs, oral lore, and traditional documentation into a single constitution for the community, addressing specific questions to do with the governance of the monastery, the duties, responsibilities, and dress of monastic officers, the order of priority among members, and the procedures for arriving at binding decisions. It also codifies the observance of ritual activities. See also [QINGGUI](#).

[Bdag med ma](#). (Dakmema) (fl. c. eleventh century). Chief of the nine wives of the renowned Tibetan translator [MAR PA CHOS KYI BLO GROS](#). Bdag med ma plays a leading role in the life story of Marpa's chief disciple [MI LA RAS PA](#), as his benefactor, confidant, and teacher. Her name, literally "selfless woman," is the Tibetan translation for the Sanskrit goddess [NAIRĀTMYĀ](#), consort of the deity [HEVAJRA](#). Marpa's principal chosen deity ([YI DAM](#)) was Hevajra, and it is believed that Marpa's family represented the nine deity Hevajra [MANDALA](#) (Kye'i rdo rje lha dgu) consisting of Hevajra and Nairātmyā in the center surrounded by eight goddesses.

[Bde lam lam rim](#). (Delam Lamrim). In Tibetan, "The Stages of the Easy Path,"

an important “stages of the path” ([LAM RIM](#)) treatise composed by the first [PAN CHEN LAMA BLO BZANG CHOS KYI RGYAL MTSHAN](#). The work’s complete title is *Byang chub lam gyi rim pa’i khrid yig thams cad mkhyen par bgrod pa’i bde lam*.

bdud. (dü). In Tibetan, “demon”; a class of pre-Buddhist harmful spirits, who are said to cause fits of unconsciousness and other illnesses, and are counteracted through a glud (lÜ) ceremony known as the brgya bzhi (gyashi). The bdud are depicted as black wrathful gods, carrying a snare (S. pāśa, T. zhags pa) or notched staff (T. khram shing) and riding black horses. There are also female bdud, known as bdud mo. The bdud are classified according to numerous schemata that include a different deity as the king. In [BON](#) texts, they are commonly grouped in classes of four or five: the sa (earth) bdud in the east, rlung (wind) bdud in the north, me (fire) bdud in the west and chu (water) bdud in the south; sometimes a fifth class, the lha (god) bdud, is added at the zenith. Bdud is also used as the Tibetan translation of [MĀRA](#), evil personified.

Bdud ’joms Rin po che. (Düdjom Rinpoche) (1904–1987). An influential twentieth-century Tibetan master who served for a time as the head of the [RNYING MA](#) sect of Tibetan Buddhism. Born in the southern Tibetan region of [PADMA BKOD](#), Bdud ’joms Rin po che was recognized at the age of three as the reincarnation of the treasure revealer ([GTER STON](#)) Bdud ’joms gling pa (Düdjom Lingpa). He trained primarily at [SMIN GROL GLING](#) monastery in central Tibet, establishing himself as a leading exponent of Rnying ma doctrine, especially the instructions of [RDZOGS CHEN](#) or “great completion.” Following his flight into exile in 1959, Bdud ’joms Rin po che became the religious leader of the Rnying ma sect, while actively supporting the educational activities of the Tibetan diasporic community in India. He spent much of his later life in the West, establishing centers and garnering a wide following in the United States and France. He died in 1987 at his religious institution in Dordogne, France. Renowned as a treasure revealer, scholar, and poet, Bdud ’joms Rin po che is especially known for his extensive historical writings, including the comprehensive *The Nyingma School of Tibetan Buddhism: Its Fundamentals and History*. His full name is ’Jigs bral ye shes rdo rje (Jikdral Yeshe Dorje).

Beal, Samuel. (1825–1889). British translator of Chinese Buddhist works. A graduate of Trinity College, Cambridge, he worked as a chaplain in the British navy and rector of various Anglican parishes, including Wark and

Northumberland. In 1877, Beal was appointed as lecturer, and later professor, of Chinese at University College, London, where he specialized in Chinese Buddhist materials. Beal is perhaps best known for his translations of the travelogues of Chinese Buddhist pilgrims to India, including [FAXIAN](#) (c. 399/337–422), Song Yun (c. 516–523), and [XUANZANG](#) (600/602–664). Especially influential was his translation of Xuanzang’s travelogue [DA TANG XIYU JI](#), which he rendered as *Si-Yu-Ki: Buddhist Records of the Western World* (two volumes, 1884). Beal’s anthology of Chinese Buddhist texts, *A Catena of Buddhist Scriptures from the Chinese* (1872), includes translations of a wide range of important Buddhist texts. Beal also compiled one of the first Western-language catalogues of the Chinese Buddhist canon. Other books of his include *The Romantic Legend of Śākya Buddha* (1876) and *Texts from the Buddhist Canon, commonly known as Dhammapada* (1878).

[begging bowl](#). See [PĀTRA](#); [PINDAPĀTA](#).

[Beg tse](#). In Tibetan, “Hidden Coat of Mail”; an important wrathful deity in Tibetan Buddhism, one of the eight [DHARMAPĀLA](#) (chos skyong) or protectors of the dharma. He is also known as Lcam sring (“Brother and Sister”) and as Srog bdag or Srog bdag dmar po (“Lord of the Life Force” or “Red Lord of the Life Force”). According to legend, he was a war god of the Mongols prior to their conversion to Buddhism. In 1575, he tried to prevent the third [DALAI LAMA BSOD NAMS RGYA MTSHO](#) from visiting the Mongol khan but was defeated by the Buddhist cleric and converted to Buddhism as a protector of the dharma. According to some descriptions, he is a worldly protector (’jig rten pa’i srung ma); according to others, he is a transcendent protector (’jig rten las ’das pa’i srung ma). In texts devoted to [HAYAGRĪVA](#), Beg tse is sometimes represented as the principal protector deity.

[beidou qixing](#). (J. hokuto shichishō; K. puktu ch’ilsŏng 北斗七星). In Chinese, “seven stars of the Northern Dipper” (viz., the Big Dipper, or Ursa Major); Daoist divinities that are also prominent in Korean Buddhism, where they are typically known as the ch’ilsŏng. The cult of the seven stars of the Big Dipper developed within Chinese Buddhist circles through influence from indigenous Daoist schools, who worshipped these seven deities to guard against plague and other misfortunes. The apocryphal *Beidou qixing yanming jing* (“Book of the Prolongation of Life through Worshipping the Seven Stars of the Northern Dipper”), suggests a correlation between the healing buddha [BHAIŚAJYAGURU](#)

and the Big Dipper cult by addressing the seven-star [TATHĀGATA](#)s (qixing rulai) with names that are very similar to Bhaiṣajyaguru's seven emanations. This indigenous Chinese scripture (see [APOCRYPHA](#)), which derives from an early Daoist text on Big Dipper worship, is certainly dated no later than the late thirteenth or early fourteenth centuries but may have been composed as early as the middle of the eighth century; it later was translated into Uighur, Mongolian, and Tibetan, as part of the Mongol Yuan dynasty's extension of power throughout the Central Asian region. Thanks to this scripture, the seven-star cult became associated in Buddhism with the prolongation of life. We know that seven-star worship had already been introduced into esoteric Buddhist ritual by at least the eighth century because of two contemporary manuals that discuss [HOMA](#) fire offerings to the seven stars: [VAJRABODHI](#)'s (671–741) *Beidou qixing niansong yigui* (“Ritual Procedures for Invoking the Seven Stars of the Northern Dipper”) and his disciple [AMOGHAVAJRA](#)'s (705–774) *Beidou qixing humo miyao yigui* (“Esoteric Ritual Procedure for the Homa Offering to the Seven Stars of the Northern Dipper”). Renderings of [DHĀRANĪ](#) sūtras dedicated to the tathāgata [TEJAPRABHA](#) (Qixingguang Rulai), who is said to be master of the planets and the twenty-eight asterisms, are also attributed to Amoghavajra's translation bureau. Worship of the seven stars within esoteric Buddhist circles was therefore certainly well established in China by the eighth century during the Tang dynasty and probably soon afterward in Korean Buddhism. ¶ The worship of the Big Dipper in Korea may date as far back as the Megalithic period, as evidenced by the engraving of the Big Dipper and other asterisms on dolmens or menhirs. In the fourth-century Ji'an tombs of the Koguryŏ kingdom (37 BCE–668 CE), one of the traditional Three Kingdoms of early Korea, a mural of the Big Dipper is found on the north wall of tomb no. 1, along with an accompanying asterism of the six stars of Sagittarius (sometimes called the Southern Dipper) on the south wall; this juxtaposition is presumed to reflect the influence of the Shangqing school of contemporary Chinese Daoism. Court rituals to the seven stars and the tathāgata Tejaprabha date from the twelfth century during the Koryŏ dynasty. By at least the thirteenth century, the full range of texts and ritual practices associated with the seven-star deities were circulating in Korea. At the popular level in Korea, the divinities of the Big Dipper were thought to control longevity, especially for children, and the ch'ilsŏng cult gained widespread popularity during the Chosŏn dynasty (1392–1910). This popularization is in turn reflected in the ubiquity in Korean monasteries of “seven-stars shrines” (ch'ilsŏnggak), which were typically located in less-conspicuous locations along the outer

perimeter of the monasteries and were worshipped primarily by the nonelite. Inside these shrines were hung seven-star paintings ([T'AENGHWA](#)), which typically depict the tathāgatas of the seven stars, with the tathāgata Tejaprabha presiding at the center. There are also several comprehensive ritual and liturgical manuals compiled during the Chosŏn dynasty and Japanese colonial period in Korea that include rituals and invocations to the seven stars and Tejaprabha, most dedicated to the prolongation of life. Along with the mountain god (sansin), who also often has his own shrine in the monasteries of Korea, the role of the ch'ilsŏng in Korean Buddhism is often raised in the scholarship as an example of Buddhism's penchant to adapt beliefs and practices from rival religions. Although ch'ilsŏng worship has declined markedly in contemporary Korea, the ch'ilsŏkche, a worship ceremony dedicated to the tathāgata Tejaprabha, is occasionally held at some Buddhist monasteries on the seventh day of the seventh lunar month, with lay believers praying for good fortune and the prevention of calamity.

[Beishan lu](#). (北山錄). In Chinese, lit. “North Mountain Record”; a lengthy treatise in ten rolls, compiled by the Chinese monk Shenqing (d. 1361). This comprehensive treatise provides a detailed account of the formation of the world, the appearance of sages and sacred texts, and the history of Chinese thought. Among its many claims, the harmony of Buddhist, Daoist, and Confucian thought and its harsh critique of the [CHAN](#) school's “transmission of the lamplight” (chundang; see [CHUANDENG LU](#)) theory were the most controversial and came under attack later by [FORI QISONG](#).

[Bei zong](#). (J. Hokushū; K. Puk chong 北宗). In Chinese, “Northern school”; a designation for an early tradition of the [CHAN](#) school that flourished in the seventh and eighth centuries, and referring specifically to the lineage of [SHENXIU](#) and his disciples. The doctrines of the “Northern school” are known to have focused on the transcendence of thoughts (linian) and the five expedient means (fangbian; S. [UPĀYA](#)); these teachings appear in “Northern school” treatises discovered at Dunhuang, such as the [DASHENG WUSHENG FANGBIAN MEN](#), [YUANMING LUN](#), and *Guanxin lun*. The appellations “Northern school” and “Southern school” ([NAN ZONG](#)) began to be used widely throughout the Tang dynasty, largely due to the efforts of [HEZE SHENHUI](#) and his followers. As a result of Shenhui's polemical attacks on Shenxiu and his followers, later Chan historians such as [GUIFENG ZONGMI](#) came to speak of a “Northern school” whose

teachings promoted a “gradual awakening” ([JIANWU](#)) approach to enlightenment (see [SUDDEN-GRADUAL ISSUE](#)); this school was distinguished from a superior “Southern school,” which was founded on the prospect of “sudden awakening” ([DUNWU](#)). While such a characterization is now known to be misleading, subsequent genealogical histories of the Chan tradition (see [CHUANDENG LU](#)) more or less adopted Shenhui’s vision of early Chan wherein the legendary sixth patriarch ([LIUZU](#)) [HUINENG](#), rather than Shenxiu, became the bearer of the orthodox transmission from the fifth patriarch [HONGREN](#). The [LIUZU TAN JING](#) played an important role in making this characterization of a gradualist Northern school and a subitist Southern school part of the mainstream tradition. Despite Shenhui’s virulent attacks, Shenxiu and his disciples [YIFU](#) (661–736), [PUJI](#) (651–739), and [XIANGMO ZANG](#) played a much more important role in the early growth of Chan than the later tradition generally acknowledges. There is strong evidence, in fact, that Shenxiu was considered by his contemporaries to be the legitimate successor to the fifth patriarch Hongren and he and his followers were part of the metropolitan elite and wielded deep influence at the Chinese imperial court. The Northern school also seems to have been a force in Tibetan Buddhism during the eighth century and the Northern-school monk Heshang [MOHEYAN](#) was the Chinese protagonist in the famous [BSAM YAS DEBATE](#).

[Bendōhō](#). (辨道法). In Japanese, “Techniques for Pursuing the Way”; a work devoted to the rules of the [SAMGHA](#) hall (see C. [SENGTANG](#)), written by [DŌGEN KIGEN](#). Primarily during his stays at the monasteries Daibutsuji and [EIHEIJI](#), Dōgen wrote a number of related manuals on monastic rules (C. [QINGGUI](#)), of which the *Bendōhō* is perhaps most important. These manuals, including the *Bendōhō*, were later collected and published together as a single text known as the [EIHEI SHINGI](#). Dōgen modeled his regulations after those found in an earlier code of monastic rules produced in China, the [CHANYUAN QINGGUI](#). The *Bendōhō* was therefore heavily influenced by the Chinese Chan master [CHANGLU ZONGZE](#)’s manual of meditation, [ZUOCHAN YI](#), which was embedded in the *Chanyuan qinggui*. The text includes guidelines for all of the activities of the saṃgha hall, from sitting, walking, sleeping, and cleaning to the practice of seated meditation (J. zazen; C. [ZUOCHAN](#)). The *Bendōhō* also contains a version of Dōgen’s [FUKAN ZAZENGI](#).

[Bendōwa](#). (辨道話). In Japanese, “A Talk on Pursuing the Way”; a short essay written in vernacular Japanese by the SŌTŌ ZEN monk [DŌGEN KIGEN](#) in 1231.

Dōgen’s earliest extant work, the *Bendōwa* contains a brief description of the orthodox transmission to the East of the “true dharma” (shōbō; S. [SADDHARMA](#)) of the Buddha and also a succinct explanation of Zen in a series of eighteen questions and answers. The *Bendōwa* was later incorporated into Dōgen’s magnum opus, the [SHŌBŌGENZŌ](#). The teachings on Zen meditation found in the *Bendōwa* are similar to those of Dōgen’s [FUKAN ZAZENGI](#).

[Ben’en](#). (J) (辨圓). See [ENNI BEN’EN](#).

[Benevolent Kings Sūtra](#). See [RENWANG JING](#).

[Benji](#). (J. Honjaku; K. Ponji 本寂). See [CAOSHAN BENJI](#).

[benji](#). (J. honzai; K. ponje 本際). In Chinese, “point of genesis”; the term frequently appears in Buddhist and Chongxuan Daoist texts. Buddhist writers used the term to translate the Sanskrit terms [BHŪTAKOTI](#) (“ultimate state”), pūrvakoṭi (“absolute beginning”), and [KOTI](#) (“end”), which all denote a sense of limit, end, or origin. The term benji was also sometimes used as a synonym for [NIRVĀNA](#) and for “absolute truth” ([PARAMĀRTHASATYA](#)); in certain texts, it could also refer to the origin of [SAMSĀRA](#). Other terms, such as zhenji (“apex of truth”) or shiji (“apex of reality”), are also used in place of benji as expressions for ultimate truth.

[benjue](#). (J. hongaku; K. pon’gak 本覺). In Chinese, lit. “original enlightenment”; also sometimes translated as “inherent” or “intrinsic” enlightenment. The term was apparently coined in China and explicated in many Buddhist [APOCRYPHA](#), such as the [DASHENG QIXIN LUN](#) and the [KŪMGANG SAMMAE KYŌNG](#). The *Dasheng qixin lun* synthesized the earlier Indian theories of [TATHĀGATAGARBHA](#) and [ĀLAYAVIJÑĀNA](#), which came to stand for two different aspects of the one mind ([YIXIN](#)). The *Dasheng qixin lun* also posited a difference between attaining awakening through a process of cultivation known as “actualizing enlightenment” ([SHIJUE](#)) and the inherent purity of the mind represented by the term “original enlightenment” (benjue). From the standpoint of the buddhas and sages, the mind of the ordinary sentient being is seen as being inherently endowed with the tathāgatagarbha, the embryo of buddhahood and thus intrinsically in a state of “original enlightenment” (benjue). From the standpoint of sentient beings, however, the foundation of that same mind is the ālayavijñāna, which, as a storehouse of a seemingly infinite number of seeds or

potencies ([BĪJA](#)) of past unwholesome deeds, is defiled and thus in need of purification through a process of “actualizing enlightenment” (shijue). Once that actualization process is completed, however, one realizes that the enlightenment achieved through cultivation is in fact identical to the enlightenment that is innate, viz., “original enlightenment” (benjue). Hence, the difference between these two types of enlightenment is ultimately a matter of perspective: the buddhas and sages see the mind as the innately pure tathāgatagarbha and thus originally enlightened, while ordinary persons ([PRTHAGJANA](#)) see the mind as defiled and thus needing purification through the process of actualizing enlightenment. See also [HONGAKU](#).

[Benkenmitsu nikyōron](#). ([辯顯密二教論](#)). In Japanese, literally “Distinguishing the Two Teachings of the Exoteric and Esoteric”; a relatively short treatise composed by the Japanese [SHINGON](#) monk [KŪKAI](#) in the early ninth century. The text is commonly known more simply as the *Nikyōron*. As the title suggests, the central theme of the *Benkenmitsu nikyōron* is the elaboration of the difference between the exoteric and esoteric teachings of Buddhism and the demonstration of the latter’s superiority. The text begins with a brief introduction, followed by a series of questions and answers, and a short conclusion. The *Benkenmitsu nikyōron* describes the relation between the exoteric teachings preached by the [NIRMĀNAKĀYA](#) of the Buddha and the esoteric teachings preached by his [DHARMAKĀYA](#) as that between provisional words spoken according to the different capacities of sentient beings and ultimate truth. By meticulously citing scriptural references, such as the [LAṆKĀVATĀRASŪTRA](#), the *Benkenmitsu nikyōron* shows that the dharmakāya, like the nirmāṇakāya and [SAMBHOGAKĀYA](#), can indeed preach and that it does so in a special language best articulated in such esoteric scriptures as the [MAHĀVAIROCANĀBHISAMBODHISŪTRA](#). Whereas the nirmāṇakāya speaks the [DHARMA](#) with reference to the six perfections ([PĀRAMITĀ](#)), the dharmakāya employs the language of the three mysteries: the body, speech, and mind of [MAHĀVAIROCANA](#) expressed in [MUDRĀ](#), [MANTRA](#), and [MANDALA](#). Like many of kūkai’s other writings, the arguments presented in his *Benkenmitsu nikyōron* helped him legitimize the introduction and installment of the new teachings, now known as [MIKKYŌ](#) or esoteric Buddhism, which he had brought back from China. There are several commentaries on the text, including those composed by Seisen (1025–1115), Raiyu (1226–1304), Yūkai (1345–1416), and Kaijō (1750–1805).

[benlai mianmu](#). (J. honrai no menmoku; K. pollae myŏnmok 本來面目). In Chinese, “original face”; an expression used in the [CHAN](#) school to describe the inherent state of enlightenment and often synonymous with buddha-nature ([BUDDHADHĀTU](#); C. [FOXING](#)). The term is best known in the [GONG’AN](#) attributed by the tradition to the sixth patriarch ([LIUZU](#)) [HUINENG](#) (638–713), “Not thinking of good, not thinking of evil, at this very moment, what is your original face before your parents conceived you?” (The last line is often found translated as “what is your original face before your parents were born,” but the previous rendering is preferred.) This gong’an is often one of the first given to RINZAI ZEN neophytes in Japan as part of their meditation training; the term, however, does not appear in the earlier [DUNHUANG](#) version of the [LIUZU TAN JING](#) (“Platform Sūtra of the Sixth Patriarch”), but only in later Song-dynasty recensions, suggesting it is actually a Song-period locution.

[Benye jing](#). (C) (本業經). See [PUSA BENYE JING](#).

[benyou zhongzi](#). (C) (本有種子). In Chinese, “primordial seeds.” See [BĪJA](#).

[betsuji nenbutsu](#). (別時念佛). In Japanese, lit. “special-time recitation of the Buddha’s name,” also known as nyohō nenbutsu; a term for an intensive nenbutsu (C. [NIANFO](#)) practice, usually the chanting of the name of the buddha [AMITĀBHA](#), as mentioned in the [ŌJŌ YŌSHŪ](#) and [SHASEKISHŪ](#). This type of recitation is mainly practiced among the followers of the [JŌDOSHŪ](#) for a special period of one, seven, ten, or ninety days as a means of overcoming torpor and sluggishness.

[Bezeklik](#). In Uighur, “Place of Paintings”; an archeological site in Central Asia with more than seventy cave temples unique for their Uighur Buddhist wall paintings and inscriptions. Situated near the ruins of the ancient Uighur capital of Gaochang (Kharakhoja) and east of the modern city of [TURFAN](#) (in China’s Xinjiang province), the Bezeklik caves were in use from roughly the fourth to the twelfth centuries CE. In addition to the extensive Buddhist presence in the caves, scholars have also found evidence of Manichaean Christian influence at the site. Nearby cave complexes include Toyuk and Sangim. In 1905, the German explorer Albert von Le Coq visited the site and removed many of its painted wall murals so that they could be sent back to Europe for study and safekeeping. Ironically, many of the murals von Le Coq removed were destroyed during the Allied bombing of Berlin during World War II. What remains of his

collection is now housed in museums in Berlin.

[Bhaddā-Kuṇḍalakesā](#). (S. *Bhadrā-Kuṇḍalakeśā; C. Batuo Juntuoluojuyiguo; J. Batsuda Gundarakuikoku; K. Palt'a Kundaraguiguk 拔陀軍陀羅拘夷國). A female [ARHAT](#) whom the Buddha declared foremost among his nun disciples in swift intuition (khippābhiññā). According to Pāli sources, Bhaddā was the daughter of the treasurer of Rājagaha (S. [RĀJAGRHA](#)). She witnessed once from her window a handsome thief named Sattuka being led off to execution and instantly fell in love with him. Pleading that she could not live without the young man, she persuaded her father to bribe the guard to release the thief into his custody. Sattuka was bathed and brought to the treasurer's home, where Bhaddā bedecked in her finest jewelry waited upon him. Sattuka feigned love for her, all the while plotting to murder her for her jewelry. One day he informed her that he had once promised the deity of Robbers' Cliff that, if he were ever to escape punishment, he would make an offering to the god, and that now the time was at hand to fulfill his promise. Bhaddā trusted him and, after preparing an offering for the deity, she accompanied Sattuka to the cliff adorned in her finest jewelry. Once they reached the edge of the cliff, he informed her of his real intentions, and without hesitation, she begged him to let her embrace him one last time. He agreed and, while feigning an embrace, Bhaddā pushed him over the cliff to his death. The local deity commended her for her cleverness and presence of mind. Bhaddā refused to return to her father's house after what had happened and joined the [JAINA](#) nuns' order. As part of her ascetic regime, she pulled out her hair with a palmyra comb, but it grew back in curls, hence her epithet Kuṇḍalakesā, "Curly Hair." Bhaddā was exceptionally intelligent and soon grew dissatisfied with Jain teachings. She wandered as a solitary mendicant, challenging all she encountered to debate and quickly proved her proficiency. Once she debated Sāriputta (S. [ŚĀRIPUTRA](#)), one of the Buddha's two chief disciples, who answered all her questions. He then asked her, "One: What is that?" which left her speechless. She asked Sāriputta to be her teacher, but he instead brought her before the Buddha, who preached her a sermon about it being better to know one verse bringing tranquillity than a thousand profitless verses. Hearing the Buddha's words, she immediately became an [ARHAT](#) and the Buddha personally ordained her as a nun in his order.

[Bhaddekarattasutta](#). In Pāli, "The Ideal Lover of Solitude," the 131st sūtra in the [MAJJHIMANIKĀYA](#) (there is no corresponding version in the Chinese

translations of the [ĀGAMAS](#)); spoken at Jeta's Grove in Sāvasthi ([ŚRĀVASTĪ](#)); several related [DHARMAGUPTAKA](#) recensions appear in the Chinese translation of the [MADHYAMĀGAMA](#), although none with a corresponding title. The Buddha recites an enigmatic verse, in which he defines ideal solitude as letting go of everything involving the past or the future and dwelling solely in the present moment, discerning phenomena with wisdom as they appear. In his own exposition of the meaning of his verses, the Buddha explains that tracing back the past means not so much remembering the past but rather binding oneself to one's past aggregates ([SKANDHA](#)) through delighting in them; similarly, yearning for the future means the desire to have one's aggregates appear a certain way in the future. Instead, the religious should not identify with any of the five skandhas as being oneself; such a one is called an "ideal lover of solitude." The *Majjhimanikāya* collects subsequent expositions of these same verses by the Buddha's attendant [ĀNANDA](#), Mahākaccāna ([MAHĀKĀTYĀYANA](#)), and Lomasakaṅgiya. The term bhaddekaratta has given traditional Pāli commentators difficulties and has sometimes been interpreted to mean "one who is happy [viz., auspicious?] for one night" (bhaddakassa ekarattassa) because he possesses insight, an interpretation that has its analogues in the Chinese translation of the Sanskrit title [BHADRAKĀRĀTRĪ](#) as shanye (a good night).

[Bhaddiya-Kāligodhāputta](#). (S. *Bhadrika-Kāligodhāputrika; C. Bati; J. Batsudai; K. Palche 跋提). An [ARHAT](#) whom the Buddha declared foremost among his disciples of aristocratic birth (P. uccakulika). According to Pāli sources, Bhaddiya was the son of lady Kāligodhā and belonged to the royal Sākiyan (S. [ŚĀKYA](#)) clan of Kapilavatthu (S. [KAPILAVASTU](#)) and entered the order together with Anuruddha (S. [ANIRUDDHA](#)) and other nobles in the Anupiya mango grove. Bhaddiya and Anuruddha were childhood friends. When Anuruddha decided to renounce the world, his mother agreed, but only on the condition that Bhaddiya accompany him. Her hope was that Bhaddiya would dissuade him, but in the end Anuruddha instead convinced Bhaddiya to join him as a renunciant. Soon after his ordination, Bhaddiya attained arhatship and subsequently dwelled in solitude beneath a tree, exclaiming, "Oh happiness, Oh happiness!" as he reveled in the bliss of [NIRVĀNA](#). When the Buddha queried him about his exclamation, he explained that as a prince in his realm he was well guarded but nevertheless always felt anxious of enemies; now, however, having renounced all worldly things, he was finally free from all fear. Bhaddiya was regal in bearing, a consequence of having been born a king five hundred times in

previous lives. During the time of Padumuttara Buddha, he was the son of a wealthy family and performed numerous meritorious deeds, which earned him this distinction under the current buddha [GAUTAMA](#).

[Bhadra](#). (P. Bhadda; T. Bzang po; C. Batuoluo zunzhe; J. Batsudara sonja; K. Palt'ara chonja 跋陀羅尊者). The Sanskrit name of the sixth of the sixteen [ARHAT](#) elders ([SODĀŚASTHAVIRA](#)), who are charged by the Buddha with protecting his dispensation until the advent of the next buddha, [MAITREYA](#). He is said to reside in Sri Lanka with nine hundred disciples. His mother gave birth to him under the bhadra (auspicious) tree, hence his name. A cousin of the Buddha, he served as his attendant and was famed for his clear exposition of the teachings. In the Chinese tradition, he is charged with matters related to bathing and his image is therefore enshrined in bath houses in some mountain monasteries. In [CHANYUE GUANXIU](#)'s standard Chinese depiction, Bhadra typically sits on a rock in meditation. His forehead is high, his cheeks plump, and his gaze is turned slightly upward. His right hand is hidden under his robes and his left hand rests on his knee, holding prayer beads ([JAPAMĀLĀ](#)). Some East Asian images also show him accompanied by a tiger. In Tibetan iconography, he holds his left hand at his chest in [VITARKAMUDRĀ](#), his right at his lap in [DHYĀNAMUDRĀ](#).

[Bhadracarīpraṇidhāna](#). (T. Bzang po spyod pa'i smon lam; C. Puxian pusa xingyuan zan; J. Fugen bosatsu gyōgansan; K. Pohyōn posal haengwōn ch'an 普賢菩薩行願讚). In Sanskrit, "Vows of Good Conduct," the last section of the [GANDAVYŪHA](#) in the [AVATAMSAKASŪTRA](#) and one of the most beloved texts in all of Mahāyāna Buddhism; also known as the *Samantabhadracarīpraṇidhānarāja*. The *Bhadracarīpraṇidhāna* focuses on the ten great vows ([PRANIDHĀNA](#)) taken by [SAMANTABHADRA](#) to realize and gain access to the [DHARMADHĀTU](#), which thereby enable him to benefit sentient beings. The ten vows are: (1) to pay homage to all the buddhas, (2) to praise the tathāgatas, (3) to make unlimited offerings, (4) to repent from one's transgressions in order to remove karmic hindrances (cf. [KARMĀVARANA](#)), (5) to take delight in others' merit, (6) to request the buddhas to turn the wheel of dharma ([DHARMACAKRAPRAVARTANA](#)), (7) to request the buddhas to continue living in the world, (8) always to follow the teachings of the Buddha, (9) always to comply with the needs of sentient beings, and (10) to transfer all merit to sentient beings for their spiritual edification. The text ends with a stanza wishing that sentient beings still immersed in evil be reborn in the [PURE LAND](#) of [AMITĀBHA](#). The text was translated into Chinese in

754 by [AMOGHAVAJRA](#) (705–774). Other Chinese recensions appear in the *Wenshushili fayuan jing* (“Scripture on the Vows made by [MAÑJUŚRĪ](#)”), translated in 420 by [BUDDHABHADRA](#) (359–429), which corresponds to the verse section from *Ru busiyi jietuo jingjie Puxian xingyuan pin*, the last roll of the forty-roll recension of the *Huayan jing* translated by [PRAJÑA](#) in 798. (There is no corresponding version in either the sixty-or the eighty-roll translations of the *Huayan jing*.) The verses are also called the “Précis of the *Huayan jing*” (*Lüe Huayan jing*), because they are believed to constitute the core teachings of the *Avataṃsakasūtra*. In the main Chinese recension by Amoghavajra, the text consists of sixty-two stanzas, each consisting of quatrains with lines seven Sinographs in length, thus giving a total number of 1,736 Sinographs. In addition to the sixty-two core stanzas, Amoghavajra’s version adds ten more stanzas of the *Bada pusa zan* (“Eulogy to the Eight Great Bodhisattvas”) from the *Badapusa mantuluo jing* (“Scripture of the [MANDALAS](#) of the Eight Great Bodhisattvas”) (see [ASTAMAHĀBODHISATTVA](#); [ASTAMAHOPAPUTRA](#)). Buddhahadra’s version consists of forty-four stanzas with 880 Sinographs, each stanza consisting of a quatrain with lines five Sinographs in length. Prajña’s version contains fifty-two stanzas with each quatrain consisting of lines seven sinographs in length. There are five commentaries on the text attributed to eminent Indian exegetes, including [NĀGĀRJUNA](#), [DIGNĀGA](#), and [VASUBANDHU](#), which are extant only in Tibetan translation. In the Tibetan tradition, the prayer is called the “king of prayers” (smon lam gyi rgyal po). It is incorporated into many liturgies; the opening verses of the prayer are commonly incorporated into a Tibetan’s daily recitation.

[bhadrakalpa](#). (P. bhaddakappa; T. bskal pa bzang po; C. xianjie; J. kengō/gengō; K. hyōn’gōp 賢劫). In Sanskrit, “auspicious eon”; the current of the numerous “great eons” ([MAHĀKALPA](#)), or cyclic periods in the existence of a universe, that are recognized in Buddhist cosmology. The “auspicious eon” along with the last and the next “great eons”—that is, the “glorious eon” (vyūhakalpa) and “the eon of the constellations” (nakṣatrakalpa)—are together termed the “three great eons.” Each great eon is presumed to consist of four “intermediate eons” (antarakalpa), viz., an “eon of formation” ([VIVARTAKALPA](#)); “stability” or “abiding” ([VIVARTASTHĀYIKALPA](#)); “decay” ([SAMVARTAKALPA](#)); and “dissolution” ([SAMVARTASTHĀYIKALPA](#)). A bhadrakalpa refers specifically to an eon in which buddhas appear, the present eon being such an era. The bhadrakalpa occurs during an eon ([KALPA](#)) of stability, following a period when

the lifespan of human beings has been gradually reduced from innumerable years to eighty thousand. The number of buddhas who take rebirth during a bhadrakalpa varies widely in the texts, some stating that five buddhas will appear during this era, others that upward of a thousand buddhas will appear. In many texts, [ŚĀKYAMUNI](#) is presumed to have been preceded by six previous buddhas, bridging two different eons, who together are called the “seven buddhas of antiquity” ([SAPTATATHĀGATA](#)). Elsewhere, it is presumed that a thousand buddhas appear during the “eon of stability” in each of the three preceding great eons. The full list of the thousand buddhas of the present bhadrakalpa is extolled in the [BHADRAKALPIKASŪTRA](#), a [MAHĀYĀNA](#) scripture that lists the names of the buddhas, their entourages, and their places of residence and enjoins the practice of various concentrations ([SAMĀDHI](#)) and perfections ([PĀRAMITĀ](#)). In this sūtra, the current buddha Śākyamuni is said to be the fourth buddha of the present kalpa, [MAITREYA](#) is to follow him, and another 995 buddhas will follow in succession, in order to continually renew Buddhism throughout the eon. A bhadrakalpa is presumed to last some 236 million years, of which over 151 million years have already elapsed in our current eon.

[Bhadrakalpikasūtra](#). (T. Bskal pa bzang po'i mdo/Mdo sde bskal bzang; C. Xianjie jing; J. Gengōgyō; K. Hyōn'gōp kyōng 賢劫經). In Sanskrit, “Auspicious Eon Scripture”; a [MAHĀYĀNA](#) text in twenty-four chapters, written c. 200–250 CE and translated into Chinese by [DHARMARAKSA](#) in either 291 or 300 CE. In this scripture, the Buddha teaches a special concentration ([SAMĀDHI](#)) through the mastery of which bodhisattvas come to be equipped with 2,100 perfections ([PĀRAMITĀ](#)), 84,000 samādhis and 84,000 codes ([DHĀRANĪ](#)). He then lists the names of a thousand buddhas who will appear during the “auspicious eon” ([BHADRAKALPA](#)) due to the merit they obtained from practicing this samādhi, as well as their residences, parents, disciples, spiritual powers, teachings, and so on. In the Tibetan [BKA' 'GYUR](#) the *Bhadrakalpikasūtra* takes pride of place as the first in the sūtra section (mdo sde); it is recited often, and it is not uncommon for the elaborate hagiographies ([RNAM THAR](#)) of important Tibetan religious figures or incarnations ([SPRUL SKU](#)) to identify their subject as an earlier rebirth of one of the thousand buddhas.

[Bhadra-Kapilānī](#). (P. Bhaddā-Kapilānī; C. Batuoluo Jiabeiliye; J. Batsudara Kahiriya; K. Palt'ara Kabiriya 跋陀羅迦卑梨耶). A female [ARHAT](#) whom the Buddha declared to be foremost among his nun disciples in her ability to recall

former lives ([PŪRVANIVĀSĀNUMṚTI](#)). According to Pāli sources, she was the daughter of a wealthy man named Kapila and was married to Pippali, a landlord's son who later was to become the great arhat Mahākassapa ([S. MAHĀKĀŚYAPA](#)). It is said that Pippali was inclined toward renunciation and only agreed to his parents' request that he marry on the condition that it be a woman as lovely as a beautiful statue he had crafted. Bhaddā was found to be the equal of the statue in beauty and arrangements were made for their wedding. But Bhaddā too was similarly inclined toward renunciation and, although she and Pippali finally consented to marry for the sake of their parents, they chose not to consummate their marriage. Pippali was master of a grand estate and one day, while observing a plowman plow one of his fields, saw birds eating worms turned up by the plow. At the same time, Bhaddā witnessed crows eating insects as they scurried among sesame seeds drying in the sun. Filled with pity and remorse for indirectly causing the death of those creatures, the couple resolved to renounce the world and take up the life of mendicancy. After shaving their heads and donning the yellow robes of mendicants, Pippali and Bhaddā abandoned their estate and wandered forth into homelessness, parting company at a fork in the road. Pippali met the Buddha and was ordained as Mahākāssapa and soon attained arhatship. Bhaddā took up residence in a hermitage near the [JETAVANA](#) Grove named Titthiyārāma. There she dwelled for five years, unable to take ordination because the nuns' ([BHIKSUNĪ](#)) order had not yet been established. When [MAHĀPRAJĀPATĪ GAUTAMĪ](#) was finally granted permission to begin a nuns' order, Bhaddā took ordination from her and quickly attained arhatship. Bhaddā Kapilānī became a famous preacher, though several of her disciples are recorded as having been unruly and ill disciplined.

[Bhadrakārātrī](#). (T. Mtshan mo bzang po; C. Shanye jing; J. Zen'yakyō; K. Sōnya kyōng 善夜經). In Sanskrit, "Scripture of One Fine Night," an apotropaic and soteriological text, in one roll, with close parallels to the Pāli [BHADDEKARATTASUTTA](#); translated into Chinese in 701 by [YIJING](#) (635–713), and into Tibetan by [YE SHES SDE](#) (fl. c. 800). The Sanskrit title, which is found in the colophon of the Tibetan translation of the sūtra (three folios in length) is otherwise unattested in the literature. The title is interpreted in Chinese as meaning "a fine night" and is used as an analogy for the mind of a person who is freed from all kinds of suffering ([DUHKHA](#)) and afflictions ([KLEŚA](#)). The text seems to have its origins in an incantation that the Buddha had spoken previously. One day, a divinity ([DEVA](#)) visited a monk who was then staying with

the Buddha in the Bamboo Grove (S. [VENUVANAVIHĀRA](#)) in [RĀJAGRHA](#), to ask about this verse. The monk, who did not know the verse, went to the Buddha, informed him of the divinity's request, and asked him to teach it. The Buddha then explained this scripture, which he said had the power to protect human beings from baleful spirits. One who follows the teachings of the scripture would also be relieved from all miseries and transgressions and could soon attain awakening. If one recites the scripture or one of its verses, or explains it to others, one would experience no misfortunes and would acquire knowledge of one's past and future lives. A recension of the text is also included in the Chinese translation of the [MADHYAMĀGAMA](#) (no. 165), which partially corresponds to the Pāli *Bhaddekarattasutta* spoken by Mahākaccāna ([MAHĀKĀTYĀYANA](#)), the 133rd sutta in the [MAJJHIMANIKĀYA](#).

***Bhadra-Kundalakesā** (S). See [BHADDĀ-KUNDALAKESĀ](#).

Bhadrapāla. (T. Bzang skyong; C. Xianhu/Batuoboluo; J. Kengo/Batsudahara; K. Hyōnho/Palt'abara 賢護/跋陀波羅) In Sanskrit, "Auspicious Protector"; a lay ([GRHAPATI](#)) [BODHISATTVA](#) who is listed as one of the eight great bodhisattvas (S. [ASTAMAHOPIPUTRA](#)), who have vowed to protect and propagate the true dharma (S. [SADDHARMA](#)) in the age of decline (S. [SADDHARMAVIPRALOPA](#); C. [MOFA](#)) after Śākyamuni Buddha's death and to guard sentient beings. He is also listed in the [DAZHIDU LUN](#) (**Mahāprajñāpāramitāsāstra*) as one of the sixteen great bodhisattvas who have remained a householder. In the [RATNAKŪTASŪTRA](#), Bhadrapāla is described as the son of a wealthy merchant (gṛhapati) whose enjoyments surpassed even those of [INDRA](#), the king of the gods, himself. In the *Banzhou sanmei jing* ([PRATYUTPANNABUDDHASAMMUKHĀVASTHITASAMĀDHISŪTRA](#)), Bhadrapāla appears together with his five hundred attendant bodhisattvas to ask the Buddha how bodhisattvas can obtain wisdom that is as deep and broad as the ocean. In the twentieth chapter of the [SADDHARMAPUNḌARĪKASŪTRA](#) ("Lotus Sutra"), Bhadrapāla is identified as someone who slighted the Buddha in a previous lifetime and as a result fell into [AVICI](#) hell. After suffering there for a thousand eons ([KALPA](#)) and requiting his offenses, Bhadrapāla was again able to encounter the Buddha and finally accept his teaching. He is also mentioned as one of the eighty thousand bodhisattvas who attended the assembly on Vulture Peak ([GRDHRAKŪTAPARVATA](#)) where Śākyamuni preached in the opening chapter of the *Saddharmapuṇḍarīkasūtra*. Bhadrapāla eventually became a buddha who

attained enlightenment through the contemplation of water. Drawing on this experience, the Chinese apocryphal *[ŚŪRAMGAMASŪTRA](#) (*Shoulengyan jing*) says that Bhadrāpāla became enlightened as he entered the bathhouse; hence, the Chinese [CHAN](#) tradition enshrined an image of Bhadrāpāla in the monastic bathhouse and some Japanese Buddhist schools similarly considered him to be the patron of the temple bathhouse.

[bhadrāsana](#). (T. bzang po'i 'dug stangs) In Sanskrit, “auspicious posture” or “posture of good fortune.” See [PRALAMBAPĀDĀSANA](#).

[bhadravargīya](#). (S). See [PAÑCAVARGIKA](#).

[Bhadrayāniya](#). See [VĀTSĪPUTRĪYA](#).

[Bhadrika](#). (P. Bhaddiya; T. Bzang ldan; C. Poti/Renxian; J. Badai/Ninken; K. Paje/Inhyōn 婆提/仁賢). In Sanskrit, “Felicitous,” one of the five ascetics (S. [PAÑCAVARGIKA](#); P. pañcavaggiyā), along with [ĀJŅĀTAKAUNDINYA](#) (P. Aññakoṇḍañña), [AŚVAJIT](#) (P. Assaji), [VĀSPA](#) (P. Vappa), and [MAHĀNĀMAN](#) (P. Mahānāma), who practiced austerities with [GAUTAMA](#) before his enlightenment; he later became one of the Buddha’s first disciples upon hearing the first “turning of the wheel of the [DHARMA](#)” ([DHARMAKRAPRAVARTANA](#); P. dhammacakkappavatana) at the [RṢIPATANA](#) (P. Isipatana) deer park. When Gautama first renounced the world to practice austerities, Bhadrīka and his four companions accompanied him (some texts say that the Buddha’s father, King [ŚUDDHODANA](#), dispatched them to ensure his son’s safety). Later, when Gautama abandoned the severe asceticism they had been practicing in favor of the middle way ([MADHYMAPRATIPAD](#)), Bhadrīka and his companions became disgusted with Gautama’s backsliding and left him, going to practice in the Rṣipatana deer park, located in the northeast of Benares. After the Buddha’s enlightenment, however, the Buddha sought them out to teach them the first sermon, the [DHARMAKRAPRAVARTANASŪTRA](#) (P. [DHAMMACAKKAPPAVATTANASUTTA](#)); Bhadrīka became a stream-enterer ([SROTAĀPANNA](#)) while listening to this sermon and was immediately ordained as a monk using the informal [EHIBHIKSUKĀ](#) (P. ehi bhikkhu), or “come, monk,” formula. Five days later, the Buddha then preached to the group of five monks the second sermon, the **Anātmalakṣaṇasūtra* (P. [ANATTALAKKHANASUTTA](#)), which led to Bhadrīka becoming an arhat. Bhadrīka is presumed to have been related to the Buddha on his father King Śuddhodana’s side and was the son of one of the eight brāhmaṇas who attended Gautama’s

naming ceremony, when it was predicted he would become either a wheel-turning monarch ([CAKRAVARTIN](#); P. cakkavattin) or a buddha. There are several variant transcriptions of Bhadrīka’s name in Chinese and a number of different translations, including Xiaoxian (J. Shōken; K. Sohyōn), Shanxian (J. Zenken; K. Sōnhyōn), Renxian (J. Ninken; K. Inhyōn), and Youxian (J. Yūken; K. Yuhyōn). ¶ For another Bhadrīka (P. Bhaddiya) known in the mainstream Buddhist literature as chief among monks of aristocratic birth, see [BHADDIYA-KALIGODHĀPUTTA](#).

***Bhadrīka-Kāligodhāputrika.** (S). See [BHADDIYA-KALIGODHĀPUTTA](#).

bhāga. (T. cha; C. fen; J. bun; K. pun 分). In Sanskrit, “part” or “portion”; a term used in the [YOGĀCĀRA](#) school to describe the functioning of consciousness. As a seed ([BĪJA](#)) from the eighth storehouse consciousness ([ĀLAYAVIJÑĀNA](#)) fructifies, it simultaneously produces both a moment of consciousness ([VIJÑĀNA](#)) and a corresponding sensory object ([ĀLAMBANA](#)). The object, which is in fact not external to the mind, is called the “image portion” (nimittabhāga) or the “grasped” (grāhya). The perception of that object is called the “perceiving portion” (darśanabhāga) or the “grasper” (grāhaka). The awareness that perception has occurred is called the “self-witnessing portion” (svasaṃvittibhāga).

bhagavat. [alt. bhagavant] (T. bcom ldan ’das; C. shizun; J. seson; K. sejon 世尊). In Sanskrit and Pāli, lit. “endowed with fortune”; one of the standard epithets of a buddha, commonly rendered in English as “Blessed One,” “Exalted One,” or simply “Lord.” The term means “possessing fortune,” “prosperous,” and, by extension, “glorious,” “venerable,” “divine.” In Sanskrit literature, bhagavat is reserved either for the most honored of human individuals, or for the gods. In Buddhist literature, however, the term is used almost entirely with reference to the Buddha, and points to the perfection of his virtue, wisdom, and contentment. There are several transcriptional and declensional variants of the term commonly found in English-language sources, including bhagavān (nominative singular), bhagavat (weak stem), bhagavad (a saṃdhi pronunciation change), bhagawan, and bhagwan. The Chinese translation of bhagavat, shizun, means “World-Honored One.” The Tibetan translation may be rendered as “Transcendent and Accomplished Conqueror,” as it indicates a conqueror (bcom) who is endowed with all good qualities (ldan) and has gone beyond [SAMSĀRA](#) (’das).

[bhāgyacāra](#). (S). See [VAŚĪKARANA](#).

Bhairava. (T. 'Jigs byed; C. Buwei; J. Fui; K. P'ooe 怖畏). In Sanskrit, “Fierce,” “Frightening,” “Horrible”; the name of a Śaivite Hindu and Buddhist deity. Bhairava first appears as one of the emanations of the Hindu god Śiva. Many stories appear in the Hindu tradition explaining how and why Śiva first took this wrathful form. In Buddhism, Bhairava, or commonly [VAJRABHAIRAVA](#), is closely related to [YAMĀNTAKA](#), “He who Brings an End (antaka) to Death (yama).” Vajrabhairava and Yamāntaka are understood to be emanations of the [BODHISATTVA MAÑJUŚRĪ](#). Bhairava is particularly popular in Nepal and Tibet. In Tibetan Buddhism, Bhairava is both a meditative deity ([YI DAM](#)), where his wrathful appearance is said to frighten away the mistaken belief in a self ([ĀTMAN](#)), as well as a protector of the dharma ([DHARMAPĀLA](#)) who frightens away baleful spirits with his terrifying appearance. In Buddhist art, Bhairava is typically depicted with black or dark-blue skin, a single head (often that of a buffalo), and multiple arms brandishing a variety of weapons. He may also have a necklace made of skulls, a mouth stained with blood, and have his feet holding down a prone figure he has vanquished.

Bhaiṣajyaguru. (T. Sman bla; C. Yaoshi rulai; J. Yakushi nyorai; K. Yaksa yōrae 藥師如來). In Sanskrit, “Medicine Teacher”; the “Healing Buddha” or “Medicine Buddha,” who was the focus of an important salvific cult in the early [MAHĀYĀNA](#) tradition. According to his eponymous scripture, the [BHAISAJYAGURUSŪTRA](#), he has a body more brilliant than the sun, which was the color of lapis lazuli (vaiḍūryamaṇi) and possessed the power to heal illness and physical deformities; his pure land of Vaiḍūryanirbhāsa is located in the east. The origin of Bhaiṣajyaguru and his healing cult is unclear, although his worship seems to have arisen contemporaneously with the rise of the Mahāyāna. [BHAISAJYARĀJA](#) and Bhaiṣajyasamudgata, two bodhisattvas mentioned in the [SADDHARMAPUNĀRĪKASŪTRA](#) (“Lotus Sūtra”), are likely antecedents, and similarities with other “celestial” buddhas like [AMITĀBHA](#) and [AKṢOBHYA](#) also suggest possible influence from those rival cults. The *Bhaiṣajyagurusūtra* was translated into Chinese in the seventh century, during the Tang dynasty, when his worship finally achieved the wide recognition that it continues to enjoy within the Chinese tradition. The *Bhaiṣajyagurusūtra* is also cited in the eighth-century tantric text, [MAÑJUŚRĪMŪLAKALPA](#), indicating that his cult had by then achieved widespread acclaim throughout Asia. Bhaiṣajyaguru was one of the

earliest buddhas to gain popularity in Japan, although initially he was familiar only within the imperial court, which constructed monasteries in his honor beginning in the sixth century. By the eighth century, his cult had spread throughout the country, with Bhaiṣajyaguru being invoked both to cure illness and to ward off dangers. The worship of Bhaiṣajyaguru seems to have entered Tibet during the eighth century, two versions of the *Bhaiṣajyagurusūtra* having been translated into Tibetan by the prolific [YE SHES SDE](#) and others. Early in the development of his cult, Bhaiṣajyaguru was divided into a group of eight medicine buddhas (aṣṭa-bhaiṣajyaguru), made up of seven of his emanations plus the principal buddha. Their names vary according to source, and none save Bhaiṣajyaguru are worshipped individually. Two of these emanations—Sūryaprabha and Candraprabha—are often depicted in a triad with Bhaiṣajyaguru. Further, Bhaiṣajyaguru is also said to command twelve warriors ([YAKSA](#)) related to various astrological categories and to wage war on illness in the name of their leader. Indic images of Bhaiṣajyaguru are rare, but his depictions are common across both the East Asian and Tibetan cultural spheres. East Asian images are almost uniform in depicting him seated, with his right hand in the gesture of fearlessness ([ABHAYAMUDRĀ](#)) or the gesture of generosity ([VARADAMUDRĀ](#)), his left in his lap, occasionally holding a medicine bowl. In Tibet, he is also shown holding the fruit of the medicinal myrobalan plant.

[Bhaiṣajyagurusūtra](#). [alt. Bhaiṣajyaguruvaiḍūryaprabhārājasūtra] (T. Sman gyi bla bai ḍūrya'i 'od kyi rgyal po'i sngon gyi smon lam gyi khyad par rgyas pa'i mdo; C. Yaoshi benyuan jing; J. Yakushi hongangyō; K. Yaksa ponwŏn kyŏng 藥師本願經). An eponymous [MAHĀYĀNA SŪTRA](#) that recounts the qualities, vows, and [PURE LAND](#) ([BUDDHAKSETRA](#)) of the buddha [BHAISAJYAGURU](#)—the Master of Healing, also known as the Medicine Buddha, or the Tathāgata of Lapis-Lazuli Light. The scripture was most likely written in northern India during the early centuries of the Common Era. In this sūtra, at the request of [MAÑJUŚRĪ](#)-kumāra, [ŚĀKYAMUNI](#) describes this buddha and his pure land. Bhaiṣajyaguru's pure land lies in the east, separated from our world system by innumerable buddhakṣetras. Like other pure lands, Bhaiṣajyaguru's realm is free from the miseries that invariably plague existence and is ideal for the acquisition of the dharma as taught by Bhaiṣajyaguru himself and his retinue of [BODHISATTVA](#)s. The ground in this realm is made of lapis lazuli. Its roads, also made of precious stones, are marked with ropes of gold. Its houses are made of jewels. Śākyamuni also describes the bodhisattva vows taken by Bhaiṣajyaguru in his quest for

awakening. Bhaiṣajyaguru vowed that his name, if merely uttered, would cure diseases, free prisoners, secure food and clothing for the impoverished, and produce other similar benefits. He also vowed that his body would be as resplendent as lapis lazuli itself so that it might illuminate the world. This sūtra describes methods by which one may gain Bhaiṣajyaguru's favor; these methods include making an image of Bhaiṣajyaguru, reciting the text of the *Bhaiṣajyagurusūtra*, or merely thinking of his name. Chinese translations of this sūtra were made by Dharmagupta in 616 and by [XUANZANG](#) in 650 at [DACI'ENSI](#) in the Tang capital of Chang'an.

[Bhaiṣajyaguruvaidūryaprabhārājasūtra](#). (S). See [BHAIṢAJYAGURUSŪTRA](#).

[Bhaiṣajyarāja](#). (T. Sman gyi rgyal po; C. Yaowang pusa; J. Yakuō bosatsu; K. Yagwang posal 藥王菩薩). In Sanskrit, “Medicine King”; a [BODHISATTVA](#) brother and probable antecedent of the buddha [BHAIṢAJYAGURU](#). Like his younger brother Bhaiṣajyasamudgata (C. Yaoshang), Bhaiṣajyarāja is mentioned in both the [SADDHARMAPUNḌARĪKASŪTRA](#) (“Lotus Sūtra”) as well as in the *Foshuo Guan Yaowang Yaoshang er pusa jing* (“Sūtra Spoken by the Buddha on Visualizing the Two Bodhisattvas Bhaiṣajyarāja and Bhaiṣajyasamudgata”) translated into Chinese by [KĀLAYAŚAS](#) between 424–442 CE. The appearance of the brothers in the *Saddharmapuṇḍarīkasūtra* suggests that a cult of a medicine bodhisattva or buddha had developed in India by at least the third century CE. The *Saddharmapuṇḍarīkasūtra* tells of the elder brother Bhaiṣajyarāja offering his own body to a buddha by burning himself on a pyre, a fire that is said to have burned for twelve hundred years. As their own sūtra (the *Guan Yaowang Yaoshang er pusa jing*) relates, the two brothers did not make their initial bodhisattva aspirations before a buddha, as would typically be the case, but in front of an as-yet unenlightened monk named Sūryagarbha, though both have the buddhas of the ten directions in their headdresses. That sūtra further describes the myriad benefits attained through visualization of the two, an indication that the bodhisattvas were evolving from models of behavior to emulate, as they are depicted in the *Saddharmapuṇḍarīkasūtra* into objects of worship. With the rise of the cult of the buddha Bhaiṣajyaguru, however, the two bodhisattvas assumed subservient positions, becoming the two main figures in that buddha's group of seven acolytes. See also [SHESHEN](#).

[Bhaiṣajyasamudgata](#). (S). See [BHAIṢAJYARĀJA](#).

Bhājā. One of the earliest and best-preserved Buddhist cave temples in western India, located around 150 miles south of Mumbai (Bombay). According to the paleography of the inscriptions on site and the stylistic features of the monuments, the site seems to have been excavated around 100–70 BCE. Early Buddhist rock-cut cave temples like Bhājā, [AJANTĀ](#), and [KĀRLI](#) were located along ancient trade routes, especially those connecting ports with inland towns. The architecture of these temples generally included one worship hall ([CAITYA](#)) containing a [STŪPA](#) with an ambulatory that enabled circumambulation ([PRADAKSINA](#)), as well as numerous other cells that comprised the living quarters for the monks ([VIHĀRA](#)). At Bhājā, a large caitya hall dominates the site, featuring stylistic characteristics typical of this early phase of Buddhist architecture: a simple apsidal plan, divided into a nave and side aisles, crowned by a tunnel vault; the imitation of wooden prototypes in the detailing of the surface and the almost complete absence of sculptural decoration in the interior (though paintings may have once adorned the walls). The caitya hall is accompanied by seventeen further caves, which supposedly once housed a community of Buddhist nuns.

bhājanaloka. (T. snod kyi 'jig rten; C. qishijian; J. kiseken; K. kisegan 器世間) In Sanskrit, lit. “container world,” referring to the wider environment, or the physical or inanimate world, whose function is to serve merely as a “container” for the lives of ordinary sentient beings ([SATTVA](#)). Bhājanaloka is used in contrast to and in conjunction with [SATTVALOKA](#), the world of sentient beings, who are the inhabitants of that “container.” Its ancillary production and cessation as well as its overall physical qualities were considered to be byproducts of the actions ([KARMAN](#)) of sentient beings. In the [YOGĀCĀRA](#) school, the physical world is viewed as a product of the storehouse consciousness ([ĀLAYAVIJÑĀNA](#)).

Bhallika. (T. Bzang pa; C. Boli; J. Hari; K. P'ari 波利). In Sanskrit and Pāli, one of the two merchants (together with his brother [TRAPUṢA](#), P. Tapussa) who became the first lay Buddhists ([UPĀSAKA](#)). Following his enlightenment, the Buddha remained in the vicinity of the [BODHI TREE](#). In the seventh week, he went to the Rājāyatana tree to continue his meditation. Two merchants, Bhallika and his older brother Trapuṣa, who were leading a large trading caravan with five hundred carts, saw him there and, realizing that he had not eaten for weeks (as many as eight weeks, in some accounts), offered the Buddha sweet rice cakes with butter and honey. In response to their act of charity ([DĀNA](#)), the Buddha

spoke with them informally and gave them the Buddha and dharma refuges ([ŚĀRANA](#)) (the [SAMGHA](#) had not yet been created), making them the first lay Buddhists. The Buddha is said to have given the two brothers eight strands of hair from his head, which they took back to their homeland and interred for worship as relics ([ŚARĪRA](#)) in a [STŪPA](#). According to Mon-Burmese legend, Tapussa and Bhallika were Mon natives, and their homeland of Ukkala was a place also called Dagon in the Mon homeland of Rāmañña in lower Burma. The stūpa they constructed at Ukkala/Dagon, which was the first shrine in the world to be erected over relics of the present buddha, was to be enlarged and embellished over the centuries to become, eventually, the golden [SHWEDAGON PAGODA](#) of Rangoon. Because of the preeminence of this shrine, some Burmese chroniclers date the first introduction of Buddhism among the Mon in Rāmañña to Tapussa and Bhallika's time. Bhallika eventually ordained and became an [ARHAT](#); Tapuṣa achieved the stage of stream-enterer ([SROTAĀPANNA](#)). The merchants were also the subject of a Chinese apocryphal text, the [TIWEI \[BOLI\] JING](#), written c. 460–464, which praises the value of the lay practices of giving and of keeping the five precepts ([PAÑCAŚĪLA](#)).

[bhānaka](#). In Sanskrit and Pāli, “reciter,” especially referring to monks in a monastic community whose vocation was to memorize, recite, and transmit to the next generation one of the various collections ([NIKĀYA](#), [ĀGAMA](#)) of the scriptural canon ([SŪTRAPITAKA](#)). See [DHARMABHĀNAKA](#).

[bhaṅgānupassanāñāna](#). In Pāli, “knowledge arising from the contemplation of dissolution”; according to [BUDDHAGHOSA](#)'s [VISUDDHIMAGGA](#), the second of nine types of knowledge (P. ÑĀNA) cultivated as part of the “purity of knowledge and vision of progress along the path” ([PATIPADĀÑĀNADASSANAVISUDDHI](#)). This latter category, in turn, constitutes the sixth and penultimate purity ([VISUDDHI](#)) that is to be developed along the path to liberation. “Knowledge arising from the contemplation of dissolution” is developed by observing the dissolution of material and mental phenomena ([NĀMARŪPA](#)). Having keenly observed the arising, subsistence, and decay of phenomena, the meditator turns his attention solely to their dissolution or destruction (bhaṅga). He then observes, for example, that consciousness arises because of causes and conditions: namely, it takes as its objects the five aggregates (P. khandha, S. [SKANDHA](#)) of matter ([RŪPA](#)), sensation ([VEDANĀ](#)), perception (P. saññā, S. [SAMJÑĀ](#)) conditioned formations (P. saṅkhāra, S. [SAMSKĀRA](#)) and consciousness (P. viññāṇa, S.

[VIJÑĀNA](#)), after which it is inevitably dissolved. Seeing this, the meditator understands that all consciousness is characterized by the three marks of existence (tilakkhaṇa; S. [TRILAKSANA](#)); namely, impermanence (anicca; S. [ANITYA](#)), suffering (dukkha; S. [DUHKHA](#)) and nonself (anattā; S. [ANĀTMAN](#)). By understanding these three marks, he feels aversion for consciousness and overcomes his attachment to it. Eight benefits accrue to one who develops knowledge arising from the contemplation of dissolution; (1) he overcomes the view of eternal existence, (2) he abandons attachment to life, (3) he develops right effort, (4) he engages in a pure livelihood, (5 & 6) he enjoys an absence of anxiety and of fear, (7) he becomes patient and gentle, and (8) he overcomes boredom and sensual delight.

[Bharadvāja](#). [alt. Bhāradvāja] (T. Bha ra dhwa dza *Bha ra dhwa dza'i bu* Rgyal mtshan 'dzin). In Sanskrit, “One Who Carries a Banner,” or “Son of the One Who Carries a Banner”; found in the names [PINDOLA BHARADVĀJA](#) and [KANAKA BHĀRADVĀJA](#) (the Tibetan transcriptions do not always clearly differentiate between the two forms of the names), both counted among the sixteen [ARHATS \(SODĀŚASTHAVIRA\)](#); also the name of one of the sixteen sons of the past buddha Mahābhijñā Jñānābhibhu.

[Bhārhut](#). An important Buddhist archeological site in India; located in central India, in northeastern Madhya Pradesh. In 1873, the British general Alexander Cunningham discovered at the site an ancient Buddhist [STŪPA](#), or reliquary mound, dating as far back as the third century BCE. Surrounding this stūpa are a series of sculptures that date to the second and first centuries BCE. The antiquity of these works, and the quality of their preservation, render them invaluable to the study of Indian Buddhist iconography. The structure follows the general Indian stūpa design, with a central mound surrounded by a fence-like enclosure with four gates. The stūpa is illustrated with several aniconic representations of the Buddha. These images include an empty throne ([VAJRĀSANA](#)), a [BODHI TREE](#), a set of the Buddha's footprints ([BUDDHAPĀDA](#)), the triple gem ([RATNATRAYA](#)) and a dharma wheel ([DHARMAKAKRA](#)). This stūpa also includes a number of reliefs depicting various episodes in the life of the Buddha (see [BAXIANG](#); [TWELVE DEEDS OF A BUDDHA](#)), including the dream of queen [MĀYĀ](#) when he was conceived, the battle with [MĀRA](#), and his enlightenment. Also depicted are a number of the Buddha's birth stories ([JĀTAKA](#)). The stūpa's sculptural remains are now housed in the Indian Museum in Kolkata (Calcutta) and in the Municipal Museum of

Allahabad. See also [SAÑCI](#).

Bhartṛhari. (fl. c. 475). Sanskrit proper name of an important Indian grammarian and author of the *Vākyapadīya*, the central text of the Śabdabrahman school of Indian philosophy; thought by some to be a teacher of [DIGNĀGA](#), who cites lines from Bhartṛhari in his seminal work the [PRAMĀNASAMUCCAYA](#). Dignāga’s theory of [APOHA](#) (exclusion), a central tenet in his system, is central to [SAUTRĀNTIKA](#) and some [YOGĀCĀRA](#) interpretations of the two truths ([SAMVRTISATYA](#) and [PARAMĀRTHASATYA](#)). The apoha theory holds that objects of conceptual thought have only a shared (sāmānya) essence and appear only as the exclusion of other categories. Some suggest this theory can be traced back through Bhartṛhari to the grammarian Vyāḍi. Bhartṛhari himself was not a follower of any Buddhist school, and his views are briefly refuted by [ŚĀNTARAKSITA](#) in his [TATTVASAMGRAHA](#).

bhāṣya. (T. bshad pa; C. lun; J. ron; K. non 論). In Sanskrit, “commentary,” or “exposition”; especially an exegesis on a set of aphoristic statements ([SŪTRAS](#)) or kārikās (the same in verse form): e.g., [ABHIDHARMAKOŚABHĀSYA](#). In East Asia, the term lun was reserved for the commentaries of the eminent bodhisattva-exegetes of Indian [MAHĀYĀNA](#) Buddhism, such as [VASUBANDHU](#), [ASAṄGA](#), and [MAITREYA/MAITREYANĀTHA](#); commentaries by indigenous East Asian exegetes are usually termed shu. One of the very few exceptions is the “Exposition of the **Vajrasamādhisūtra* ([KŪMGANG SAMMAE KYŌNG](#))” ([KŪMGANG SAMMAEGYŌNG NON](#)), by the Korean exegete [WŎNHYO](#), which was so highly regarded that it was given this special designation.

bhautika. (T. ’byung ’gyur; C. youda; J. udai; K. yudae 有). In Sanskrit, a secondary formation from [BHŪTA](#) (“element”), and therefore often rendered in English as “secondary element” or “sensible phenomenon.” According to the [VAIBHĀSIKA](#) and [SAUTRĀNTIKA](#) schools, any material object ([ĀLAMBANA](#)) except sound (viz., an object of sight, smell, taste, and touch) is made up of eight components: the four elements ([MAHĀBHŪTA](#)) of earth, water, fire, and wind; and the four secondary elements (bhautika) of form, smell, taste, and touch. These eight components are inseparable from each other.

bhava. (T. srid pa; C. you; J. u; K. yu 有). In Sanskrit and Pāli, “becoming” or “existence,” conceived of as a process; the tenth link in the twelve-linked chain of dependent origination ([PRATĪTYASAMUTPĀDA](#); P. paṭiccasamuppāda). In Pāli sources, bhava is of three types depending on the strata of the universe in which

it occurs: namely, sensuous becoming (kāmaabhava) in the sensuous realm ([KĀMADHĀTU](#)), subtle-material becoming (rūpabhava) in the subtle-materiality realm ([RŪPADHĀTU](#)), and immaterial becoming (arūpabhava) in the immaterial realm ([ARŪPYADHĀTU](#)). Wherever it occurs, bhava can be divided into an active process (P. kammabhava) or a passive process (P. uppattibhava). The active process is ethically charged, that is to say it is comprised of virtuous and unvirtuous volitional action ([KARMA](#)) which leads to fortunate and unfortunate rebirth according to the deeds performed. The passive process refers to rebirth and all other events that befall an individual as a consequence of previous action. As such events or phenomena are automatic effects and are not volitional, they are ethically neutral. According to the [ABHIDHARMAKOSĀBHĀSYA](#) and [MAHĀYĀNA](#) sources, the word bhava as the tenth link in the chain of dependent origination is a case of ascribing the name of the result (“becoming” reborn) to its cause (the most intense moment of upādāna attraction that fully ripens the volitional action in the instant prior to rebirth). The term is also used in a more general sense as “existence” and hence in some cases as a synonym of [SAMŚĀRA](#). See [BHAVACAKRA](#). In Tibetan, the translation of the term, srid, also denotes the secular realm, as opposed to the religious realm (chos).

[bhavacakra](#). (P. bhavacakka; T. srid pa’i khor lo; C. youlun; J. urin; K. yuryun 有輪). In Sanskrit, “wheel of existence”; a visual depiction of [SAMŚĀRA](#) in the form of a wheel, best known in its Tibetan forms but widely used in other Buddhist traditions as well. The [BHAVACAKRA](#) is a seminal example of Buddhist didactic art. The chart is comprised of a series of concentric circles, each containing pictorial representations of some of the major features of Buddhist cosmology and didactics. Standard versions consist of an outer ring of images depicting the twelve-linked chain of dependent origination ([PRATĪTYASAMUTPĀDA](#)). Within this ring is another circle broken into six equal sectors—one for each of the six realms of existence in samśāra. The salutary realms of divinities ([DEVA](#)), demigods ([ASURA](#)), and humans ([MANUSYA](#)) are found in the top half of the circle, while the unfortunate realms ([DURGATI](#); [APĀYA](#)) of animals ([TIRYAK](#)), hungry ghosts ([PRETA](#)), and hell denizens ([NĀRAKA](#)) are found in the bottom half. Inside this circle is a ring that is divided evenly into dark and light halves. The most popular interpretation of these two halves is that the light half depicts the path of bliss, or the path that leads to better rebirth and to liberation, while the dark half represents the path of darkness, which leads to misfortune and rebirth in the hells. Finally, in the center of the picture is a small

circle in which can be seen a bird, a snake, and a pig. These three animals represent the “three poisons” ([TRIVIṢA](#))—the principal afflictions ([KLEṢA](#)) of greed or sensuality ([LOBHA](#) or [RĀGA](#)), hatred or aversion ([DVESA](#)), and delusion ([MOHA](#))—that bind beings to the round of rebirth. The entire wheel is held in the jaws and claws of a demon whose identity varies from version to version. Often this demon is presumed to be [MĀRA](#), the great tempter who was defeated in his attempt to sway [GAUTAMA](#) from enlightenment. Another common figure who grips the wheel is [YAMA](#), the king of death, based on the idea that Yama was the original being, the first to die, and hence the ruler over all caught in the cycle of birth and death. Often outside the circle appear one or more buddhas, who may be pointing to a [SŪTRA](#), or to some other religious object. The buddhas’ location outside the circle indicates their escape from the cycle of birth and death. The same figure of a buddha may be also found among the denizens of hell, indicating that a buddha’s compassion extends to beings in even the most inauspicious destinies. According to several Indian texts, the Buddha instructed that the bhavacakra should be painted at the entrance of a monastery for the instruction of the laity; remnants of a bhavacakra painting were discovered at [AJANTĀ](#).

[bhavāgra](#). (P. bhavagga; T. srid rtse; C. youding tian; J. uchōten; K. yujōng ch’ōn 有頂天). In Sanskrit, the “summit of existence” or “apex of the universe”; one of the names for the fourth and highest level of heavens of the immaterial realm of existence ([ĀRŪPYADHĀTU](#)), which is also known as the sphere of neither perception nor nonperception ([NAIVASAMJÑĀNĀSAMJÑĀYATANA](#)). As the highest level of existence, bhavāgra is also sometimes used in contrast to the lowest level of the hells, the [AVĪCI](#).

[bhāvanā](#). (T. sgom pa; C. xiuxi; J. shujū; K. susŭp 修習). In Sanskrit and Pāli, “cultivation” (lit. “bringing into being”); a Sanskrit term commonly translated into English as “meditation.” It is derived from the root √bhū, “to be” or “to become,” and has a wide range of meanings including cultivating, producing, manifesting, imagining, suffusing, and reflecting. It is in the first sense, that of cultivation, that the term is used to mean the sustained development of particular states of mind. However, bhāvanā in Buddhism can include studying doctrine, memorizing sūtras, and chanting verses to ward off evil spirits. The term thus refers broadly to the full range of Buddhist spiritual culture, embracing the “bringing into being” (viz., cultivating) of such generic aspects of training as the

path ([MĀRGA](#)), specific spiritual exercises (e.g., loving-kindness, or [MAITRĪ](#)), or even a general mental attitude, such as virtuous ([KUŚALA](#)) states of mind. The term is also used in the specific sense of a “path of cultivation” ([BHĀVANĀMĀRGA](#)), which “brings into being” the insights of the preceding path of vision ([DARŚANAMĀRGA](#)). Hence, bhāvanā entails all the various sorts of cultivation that an adept must undertake in order to enhance meditation, improve its efficacy, and “bring it into being.” More specifically as “meditation,” two general types of meditation are sometimes distinguished in the commentarial literature: stabilizing meditation ([ŚAMATHA](#)) in which the mind focuses with one-pointedness on an object in an effort to expand the powers of concentration; and analytical meditation ([VIPAŚYANĀ](#)), in which the meditator conceptually investigates a topic in order to develop insight into it.

[Bhāvanākrama](#). (T. Sgom rim). In Sanskrit, “Stages of Meditation,” the title of three separate but related works by the late-eighth century Indian master [KAMALAŚĪLA](#). During the reign of the Tibetan king [KHRI SRONG LDE BTSAN](#) at the end of the eighth century, there were two Buddhist factions at court, a Chinese faction led by the Northern Chan ([BEI ZONG](#)) monk Heshang Moheyan (Mahāyāna) and an Indian faction of the recently deceased [ŚĀNTARAKṢITA](#), who with the king and [PADMASAMBHAVA](#) had founded the first Tibetan monastery at [BSAM YAS](#) (Samye). According to traditional accounts, Śāntarakṣita foretold of dangers and left instructions in his will that his student Kamalaśīla should be summoned from India. A conflict seems to have developed between the Indian and Chinese partisans (and their allies in the Tibetan court) over the question of the nature of enlightenment, with the Indians holding that enlightenment takes place as the culmination of a gradual process of purification, the result of perfecting morality ([ŚĪLA](#)), concentration ([SAMĀDHI](#)), and wisdom ([PRAJÑĀ](#)). The Chinese spoke against this view, holding that enlightenment was the intrinsic nature of the mind rather than the goal of a protracted path, such that one need simply to recognize the presence of this innate nature of enlightenment by entering a state of awareness beyond distinctions; all other practices were superfluous. According to both Chinese and Tibetan records, a debate was held between Kamalaśīla and Moheyan at Bsam yas, circa 797, with the king himself serving as judge (see [BSAM YAS DEBATE](#)). According to Tibetan reports (contradicted by the Chinese accounts), Kamalaśīla was declared the winner and Moheyan and his party banished from Tibet, with the king proclaiming that thereafter the [MADHYAMAKA](#) school of Indian Buddhist philosophy (to which

Śāntarakṣita and Kamalaśīla belonged) would have pride of place in Tibet. ¶ According to Tibetan accounts, after the conclusion of the debate, the king requested that Kamalaśīla compose works that presented his view, and in response, Kamalaśīla composed the three *Bhāvanākrama*. There is considerable overlap among the three works. All three are germane to the issues raised in the debate, although whether all three were composed in Tibet is not established with certainty; only the third, and briefest of the three, directly considers, and refutes, the view of “no mental activity” (*amanasikāra*, cf. [WUNIAN](#)), which is associated with Moheyan. The three texts set forth the process for the potential [BODHISATTVA](#) to cultivate [BODHICITTA](#) and then develop [ŚAMATHA](#) and [VIPAŚYANĀ](#) and progress through the bodhisattva stages ([BHŪMI](#)) to buddhahood. The cultivation of vipaśyanā requires the use of both scripture ([ĀGAMA](#)) and reasoning ([YUKTI](#)) to understand emptiness ([ŚŪNYATĀ](#)); in the first *Bhāvanākrama*, Kamalaśīla sets forth the three forms of wisdom (*prajñā*): the wisdom derived from learning ([ŚRUTAMAYĪPRAJÑĀ](#)), the wisdom derived from reflection ([CINTĀMAYĪPRAJÑĀ](#)), and the wisdom derived from cultivation ([BHĀVANĀMAYĪPRAJÑĀ](#)), explaining that the last of these gradually destroys the afflictive obstructions ([KLEŚĀVARANA](#)) and the obstructions to omniscience ([JÑEYĀVARANA](#)). The second *Bhāvanākrama* considers many of these same topics, stressing that the achievement of the fruition of buddhahood requires the necessary causes, in the form of the collection of merit ([PUNYASAMBHĀRA](#)) and the collection of wisdom ([JÑĀNASAMBHĀRA](#)). Both the first and second works espouse the doctrine of mind-only ([CITTAMĀTRA](#)); it is on the basis of these and other statements that Tibetan doxographers classified Kamalaśīla as a [YOGĀCĀRA-SVĀTANTRIKA-MADHYAMAKA](#). The third and briefest of the *Bhāvanākrama* is devoted especially to the topics of Śamatha and vipaśyanā, how each is cultivated, and how they are ultimately unified. Kamalaśīla argues that analysis ([VICĀRA](#)) into the lack of self ([ĀTMAN](#)) in both persons ([PUDGALA](#)) and phenomena ([DHARMA](#)) is required to arrive at a nonconceptual state of awareness. The three texts are widely cited in later Tibetan Buddhist literature, especially on the process for developing Śamatha and vipaśyanā.

[bhāvanāmārga](#). (T. sgom lam; C. xiudao; J. shudō; K. sudo 修道). In Sanskrit, “the path of cultivation” or “path of meditation”; the fourth of the five stages of the path ([MĀRGA](#)) in the [SARVĀSTIVĀDA](#) soteriological system (also adopted in the [MAHĀYĀNA](#)), which follows the path of vision or insight ([DARŚANAMĀRGA](#)) and precedes the adept path where no further training is necessary ([ĀŚAIKSAMĀRGA](#)).

In the Sarvāstivāda path schema, the path of vision consists of fifteen thought-moments, with a subsequent sixteenth moment marking the beginning of the path of cultivation ([BHĀVANĀMĀRGA](#)). This sixteenth moment, that of subsequent knowledge ([ANVAYAJÑĀNA](#)) of the truth of the path (mārga), is, in effect, the knowledge that all of the afflictions ([KLEŚA](#)) of both the subtle-materiality realm ([RŪPADHĀTU](#)) and the immaterial realm ([ĀRŪPYADHĀTU](#)) that are associated with the [FOUR NOBLE TRUTHS](#) have been abandoned. As a result, the meditator destroys all causes for future rebirth as an animal, ghost, or hell denizen, but is not liberated from rebirth altogether and may still be reborn as a human or divinity. The more deeply rooted afflictions are destroyed over the course of the path of cultivation. For each of the nine levels of the three realms of rebirth—the sensuous realm (with one level), the realm of subtle materiality (with four levels), and the immaterial realm (with four levels)—there are nine levels of afflictions ([KLEŚA](#)), from the most coarse to the most insidious, making eighty-one levels of affliction to be destroyed. As was the case with the path of vision, these defilements must be destroyed in a two-step process: the actual destruction of the particular affliction and the knowledge that it has been destroyed. There are therefore 162 “moments” of the abandoning of afflictions. This process, which takes place over the course of the path of cultivation, may occur over several lifetimes. However, when the 162nd stage is reached, and the subtlest of the subtle afflictions associated with the ninth level—that is, the fourth absorption of the immaterial realm—has been abandoned, the adept is then liberated from rebirth. The bhāvanāmārga is one of the “paths of the nobles” ([ĀRYAMĀRGA](#)) and one on this stage is immune to any possibility of retrogression and is assured of eventually achieving [NIRVĀNA](#). Reference is also sometimes made to the mundane path of cultivation ([LAUKIKA](#)-bhāvanāmārga), which refers to the three trainings ([TRISIKSĀ](#)) in morality ([ŚĪLA](#)), concentration ([SAMĀDHI](#)), and wisdom ([PRAJÑĀ](#)) as they are developed before the first of the three fetters ([SAMYOJANA](#)) is eradicated and insight achieved. In the Mahāyāna path system, with variations between [YOGĀCĀRA](#) and [MADHYAMAKA](#), the bhāvanāmārga is the period in which the [BODHISATTVA](#) proceeds through the ten [BHŪMIS](#) and destroys the afflictive obstructions ([KLEŚĀVARANA](#)) and the obstructions to omniscience ([JÑEYĀVARANA](#)).

[bhāvanāmāyīprajñā](#). (P. bhāvanāmāyapaññā; T. bsgoms pa las byung ba'i shes rab; C. xiuhui; J. shue; K. suhye 修慧). In Sanskrit, lit. “wisdom generated by cultivation”; often translated as “wisdom derived from meditation”; the third of

the three types of wisdom, together with [ŚRUTAMAYĪPRAJÑĀ](#) (wisdom derived from what is heard, viz., learning) and [CINTĀMAYĪPRAJÑĀ](#) (wisdom derived from reflection or analysis). Although the general understanding is that this third and final manifestation of wisdom comes after, and is largely dependent on, the previous two types, [bhāvanāmayīprajñā](#) is considered to be the highest of these three because it is the culmination of one’s efforts to cultivate the path ([MĀRGA](#)) and the product of direct spiritual experience. This third type of wisdom is a form of [VIPĀŚYANĀ](#), an understanding of reality at the level of [ŚAMATHA](#)—profound concentration coupled with tranquility.

[bhavaṅgasota](#). In Pāli, “subconscious continuum”; a concept peculiar to later Pāli epistemological and psychological theory, which the [ABHIDHAMMA](#) commentaries define as the foundation of experience. The [bhavaṅgasota](#) is comprised of unconscious moments of mind that flow, as it were, in a continuous stream (*sota*) or continuum and carry with them the impressions or potentialities of past experience. Under the proper conditions, these potentialities ripen as moments of consciousness, which, in turn, interrupt the flow of the [bhavaṅga](#) briefly before the mind lapses back into the subconscious continuum. Moments of consciousness and unconsciousness are discreet and never overlap in time, with unconsciousness being the more typical of the two states. This continuum is, therefore, what makes possible the faculty of memory. The [bhavaṅgasota](#) is the Pāli counterpart of idealist strands of Mahāyāna Buddhist thought, such as the “storehouse consciousness” ([ĀLAYAVIJÑĀNA](#)) of the [YOGĀCĀRA](#) school. See also [CITTASAMTĀNA](#); [SAMTĀNA](#).

[Bhavasamkrānti](#). (T. Srid pa ’pho ba). In Sanskrit, “Transference of Existence,” a brief work ascribed to [NĀGĀRJUNA](#); also known as *Madhyamakabhavasamkrānti*. The title seems to suggest that it deals with the practice of transferring one’s consciousness from one body to another, but this topic is actually not covered in the text. It discusses instead standard [MADHYAMAKA](#) topics such as the function of [VIKALPA](#) as the source of the world, the ultimate nonexistence of all phenomena, the six perfections ([PĀRAMITĀ](#)), [UPĀYA](#) and [PRAJÑĀ](#), and the two truths ([SATYADVAYA](#)). Nāgārjuna’s major commentators ([BHĀVAVIVEKA](#), [CANDRAKĪRTI](#) et al.) do not cite the work, which raises questions about its authorship.

[Bhāvaviveka](#). (T. Legs ldan ’byed; C. Qingbian; J. Shōben; K. Ch’ōngbyōn 清辯) (c. 500–570). Also known as *Bhāviveka* and *Bhavya*, an important Indian

master of the [MADHYAMAKA](#) school, identified in Tibet as a proponent of [SVĀTANTRIKA MADHYAMAKA](#) and, within that, of [SAUTRĀNTIKA-SVĀTANTRIKA-MADHYAMAKA](#). He is best known for two works. The first is the [PRAJÑĀPRADĪPA](#), his commentary on [NĀGĀRJUNA'S MŪLAMADHYAMAKAKĀRIKĀ](#); this work has an extensive subcommentary by [AVALOKITAVRATA](#). Although important in its own right as one of the major commentaries on the central text of the Madhyamaka school, the work is most often mentioned for its criticism of the commentary of [BUDDHAPĀLITA](#) on the first chapter of Nāgārjuna's text, where Bhāvaviveka argues that it is insufficient for the Madhyamaka only to state the absurd consequences ([PRASAṄGA](#)) that follow from the position of the opponent. According to Bhāvaviveka, the Madhyamaka must eventually state his own position in the form of what is called an autonomous inference (svatantrānumāna) or an autonomous syllogism ([SVATANTRAPRAYOGA](#)). In his own commentary on the first chapter of Nāgārjuna's text, [CANDRAKĪRTI](#) came to the defense of Buddhapālita and criticized Bhāvaviveka, stating that it is inappropriate for the Madhyamaka to use autonomous syllogisms. It is on the basis of this exchange that Tibetan exegetes identified two schools within Madhyamaka: the Svātantrika, which includes Bhāvaviveka, and the Prāsaṅgika, which includes Buddhapālita and Candrakīrti. ¶ The other major work of Bhāvaviveka is his [MADHYAMAKAHRDAYA](#), written in verse, and its prose autocommentary, the [TARKAJVĀLĀ](#). The *Madhyamakahrdaya* is preserved in both Sanskrit and Tibetan, the *Tarkajvālā* only in Tibetan. It is a work of eleven chapters, the first three and the last two of which set forth the main points in Bhāvaviveka's view of the nature of reality and the Buddhist path, dealing with such topics as [BODHICITTA](#), the knowledge of reality (tattvajñāna), and omniscience ([SARVAJÑĀTĀ](#)). The intervening chapters set forth the positions (and Bhāvaviveka's refutations) of various Buddhist and non-Buddhist schools, including the [ŚRĀVAKA](#), [YOGĀCĀRA](#), Sāṃkhya, Vaiśeṣika, Vedānta, and Mīmāṃsā. These chapters (along with [ŚĀNTARAKSITA'S TATTVASAMGRAHA](#)) are an invaluable source of insight into the relations between Madhyamaka and other contemporary Indian philosophical schools, both Buddhist and non-Buddhist. The chapter on the śrāvakas, for example, provides a detailed account of the reasons put forth by the [ŚRĀVAKAYĀNA](#) schools of mainstream Buddhism as to why the Mahāyāna sūtras are not the word of the Buddha ([BUDDHAVACANA](#)). Bhāvaviveka's response to these charges, as well as his refutation of [YOGĀCĀRA](#) in the subsequent chapter, are particularly spirited, arguing that reality ([TATHATĀ](#)) cannot be substantially existent (dravyasat), as

those rival schools claim. However, Bhāvaviveka made extensive use of both the logic and epistemology of [DIGNĀGA](#), at least at the level of conventional analysis. Bhāvaviveka appears to have been the first Madhyamaka author to declare that the negations set forth by the Madhyamaka school are nonaffirming (or simple) negations ([PRASAJYAPRATISEDHA](#)) rather than affirming (or implicative) negations ([PARYUDĀSAPRATISEDHA](#)). Also attributed to Bhāvaviveka is the *Karatalaratna* (“Jewel in Hand Treatise”; *Zhangzhen lun*), a work preserved only in the Chinese translation of [XUANZANG](#). Bhāvaviveka’s [MADHYAMAKĀRTHASAMGRAHA](#) is a brief text in verse. As the title suggests, it provides an outline of the basic topics of [MADHYAMAKA](#) philosophy, such as the middle way (S. [MADHYAMAPRATIPAD](#)) between the extremes of existence and nonexistence, Madhyamaka reasoning, and the two truths ([SATYADVAYA](#)). The [MADHYAMAKARATNAPRADĪPA](#) is likely the work of another author of the same name, since it makes reference to such later figures as Candrakīrti and [DHARMAKĪRTI](#).

[Bhāviveka](#). (S). See [BHĀVAVIVEKA](#).

[Bhavya](#). (S). See [BHĀVAVIVEKA](#).

[Bhayabheravasutta](#). In Pāli, “Discourse on Fear and Dread,” the fourth sutta in the [MAJJHIMANIKĀYA](#) (an untitled recension of uncertain affiliation appears in the Chinese translation of the [EKOTTARĀGAMA](#)); preached by the Buddha to a brāhmaṇa named Jāṇussoṇi in the [JETAVANA](#) Grove in [ŚRĀVASTĪ](#). The Buddha explains how a monk living alone in a fearful jungle must guard his thoughts, words, and deeds from evil. He then explains how he had to guard his own thoughts, words, and deeds while he strove to attain enlightenment as he sat beneath the [BODHI TREE](#).

[bhayatupatthānāñāna](#). In Pāli, “knowledge arising from the awareness of terror”; according to the [VISUDDHIMAGGA](#), the third of nine knowledges (ñāṇa; [JÑĀNA](#)) cultivated as part of “purity of knowledge and vision of progress along the path” ([PATIPADĀÑĀNADASSANAVISUDDHI](#)). This latter category, in turn, constitutes the sixth and penultimate purity ([VISUDDHI](#)) to be developed along the path to liberation. Knowledge arising from the contemplation of terror is developed by noting how all conditioned formations (saṅkhāra; [SAMSKĀRA](#)) or mental and physical phenomena ([NĀMARŪPA](#)) of the past, present and future have either gone, are going, or are destined to go to destruction. A simile given in the

Visuddhimagga is that of a woman whose three sons have offended the king. The woman, who has already witnessed the beheading of her eldest son, witnesses the beheading of her middle son. And having witnessed the beheadings of her two older sons, the woman is filled with terror at the knowledge that her youngest son will likewise be executed. In the same way, the practitioner observes how phenomena of the past have ceased, how phenomena of the present are ceasing, and how those of the future are likewise destined to cease. Seeing conditioned formations as destined to destruction in this way, that is, as impermanent (anicca; [ANITYA](#)), the practitioner is filled with terror. Similarly, the practitioner sees conditioned formations as suffering (dukkha; [DUHKHA](#)), and as impersonal and nonself (anattā; [ANĀTMAN](#)) and is filled with terror. In this way, the practitioner comes to realize that all mental and physical phenomena, being characterized by the three universal marks of existence (tilakkhaṇa; [TRILAKSANA](#)), are frightful.

[bhikkhu](#). In Pāli, “mendicant”; a fully ordained Buddhist monk, who is enjoined to observe 227 rules of discipline according to the Pāli [VINAYA](#). Upon receiving higher ordination ([UPASAMPADĀ](#)), the new monk is required to remain under the guidance (nissaya; [NĪSĀYĀ](#)) of his preceptor (upajjhāya; [UPĀDHYĀYĀ](#)) for at least five years, until he becomes sufficiently skilled in dhamma and vinaya. After ten years, the monk becomes an elder (thera) in the saṅgha and is allowed to serve as an upajjhāya and ordain others. See also [BHIKSU](#).

[bhikkhunī](#). (P). See [BHIKSUNĪ](#).

[bhikṣu](#). (P. bhikkhu; T. dge slong; C. biqiu; J. biku; K. pigu 比丘). In Sanskrit, lit. “beggar”; a male “religious mendicant” or, as commonly translated, “monk.” The female counterparts of bhikṣu are [BHIKSUNĪ](#) (nuns). The term is derived from the Sanskrit root √bhikṣ meaning, among other things, “to beg for alms.” The Tibetan translation of the term literally means “virtuous beggar”; the Chinese instead uses a transcription. Buddhism was one of the principal early groups of wandering religious ([ŚRAMANA](#)), which constituted a new religious movement in the fifth century BCE, and coined the term bhikṣu to distinguish its wanderers from those of other Śramaṇa sects, such as the [JAINA](#) and [ĀJĪVAKA](#). A bhikṣu holds the higher ordination ([UPASAMPADĀ](#)) of his [VINAYA](#) lineage and is thus distinguished from a novice, or [ŚRĀMANERA](#). Novitiate status is attained by undergoing the “going forth” (pravrajyā; see [PRAVRAJITA](#)) ceremony and accepting a set of ten (and, in some traditions, expanded to thirty-six) precepts

([ŚĪLA](#)). After a period of service in the order, one may undergo the upasampadā ceremony, by which one attains full ordination. At that point, the bhikṣu is expected to adhere to all the rules found in the litany of monastic discipline, or [PRĀTIMOKSA](#), e.g., 227 in the Pāli vinaya used in Southeast Asia, 250 in the [DHARMAGUPTAKA](#) vinaya used in much of East Asia, 253 in the [MŪLASARVĀSTIVĀDA](#) vinaya followed in Tibet, *etc.* By rule, although not necessarily in practice, a bhikṣu is allowed to possess only a set of four or eight “requisites” ([PARISKĀRA](#), P. parikkhāra), which provide him with the minimal necessities of food, clothing, and shelter. The duties of a bhikṣu vary widely across the Buddhist tradition. These duties include, but are not limited to, preserving the teaching by memorizing, copying and/or reciting the scriptures; instructing younger monks, novices, and lay adherents; conducting a variety of different kinds of ceremonies; maintaining the monastery grounds, *etc.* Bhikṣus were customarily presumed to be dependent on lay followers for their material requirements and, in return, served as a field of merit ([PUNYAKSETRA](#)) for them by accepting their donations ([DĀNA](#)). Within any given monastery, bhikṣus maintain hierarchical relationships. Depending on the monk’s tradition, seniority may be determined by the number of years since full ordination (see [VARSĀ](#); C. [JIELA](#)), one’s performance in examinations, or other factors. Literary evidence suggests that the first Buddhist monks were itinerant ascetics who resided in communities only during the monsoon season. Later, as the tradition grew, these temporary residences evolved into permanent monasteries. In the Hindu tradition, the term bhikṣu may sometimes also be used to signify the fourth stage (āśrama) of life, in which one renounces worldly attachments for the sake of study and reflection (although this stage is more commonly referred to as saṃnyāsin); in this context, however, no formal renunciation through ordination is necessarily required. Throughout much of the history of Buddhism, there have been regions and historical periods in which Buddhist monks married but continued to maintain the appearance of a fully-ordained bhikṣu, including wearing monastic robes and shaving their heads. In English, such religious might better be called “priests” rather than “monks.” See also [BHIKKHU](#).

[bhikṣuṇī](#). (P. bhikkhunī; T. dge slong ma; C. biqiuni; J. bikuni; K. piguni 比丘尼) In Sanskrit, “beggar (female),” commonly translated as “nun.” A bhikṣuṇī holds full ordination in her [VINAYA](#) lineage and is distinguished from a novice nun ([ŚRĀMANERIKĀ](#)) or a probationary postulant ([ŚIKSAMĀNĀ](#)) who both accept only the preliminary training rules. The bhikṣuṇī is enjoined to observe the full set of

rules of monastic discipline, or [PRĀTIMOKṢA](#), governing fully ordained nuns, which vary from 311 in the Pāli vinaya to 364 in the [MŪLASARVĀSTIVĀDA](#) vinaya followed in Tibet (although the order of bhikṣuṇī was never established there). These rules mirror closely those also incumbent on monks ([BHIKSU](#)) (although there are substantially greater numbers of rules in all categories of the bhikṣuṇī prātimokṣa); an important exception, however, is that nuns are also required to adhere to the eight “weighty” or “deferential” “rules” ([GURUDHARMA](#)), a set of special rules that nuns alone are enjoined to follow, which explicitly subordinate the bhikṣuṇī to the bhikṣu [SAMGHA](#). Upon receiving higher ordination ([UPASAMPADĀ](#)), the new nun is required to remain under the guidance ([NĪŚRAYA](#); P. nissaya) of her preceptor ([UPĀDHYĀYĀ](#); P. upajjhāyā) for at least two years until she becomes skilled in dharma and vinaya. After ten years, the nun becomes an elder (sthavirī; P. therī) in the bhikṣuṇī saṃgha and, after another two years, may act as a preceptor and ordain new nuns into the order. In South Asia, the formal upasampadā ordination of nuns is thought to have died out sometime during the medieval period, and there is little evidence that a formal bhikṣuṇī saṃgha was ever established in Southeast Asia. The only surviving bhikṣuṇī ordination lineages are in China, Korea, and Taiwan. Apart from East Asia, most Buddhist women known as “nuns” are actually only ordained with the eight, nine, or ten extended lay precepts (as in Southeast Asia), as Śrāmaṇerikā (as in Tibet), or else take the East Asian bodhisattva precepts of the [FANWANG JING](#) (as in Japan). In recent years there has been a concerted effort to reintroduce the bhikṣuṇī ordination to countries where it had died out or was never established.

[bhrāntijñāna](#). (T. 'khrul shes; C. luanshi; J. ranjiki; K. nansik 亂識). In Sanskrit, “mistaken consciousness”; an epistemological term that is used to describe a consciousness that is mistaken with regard to its external sensory object, or “appearing object” (T. snang yul). Hence, according to the [SAUTRĀNTIKA](#) school, all conceptual consciousnesses, even those that are veridical, are mistaken in the sense that they mistake a generic image (arthasāmānya) of an object for the actual object. [YOGĀCĀRA](#) schools say all consciousness of external appearance is mistaken, and some [MADHYAMA](#) schools say basic ignorance makes even nonconceptual sensory perceptions mistaken. In addition to mistaken consciousnesses that arise from such forms of ignorance ([AVIDYĀ](#)), there are also mistaken consciousnesses produced by superficial causes—inner and outer causes and conditions that distort the five physical senses and sixth mental sense.

For example, jaundice may cause something that is white to appear yellow and summer sunlight and sand may cause a mirage, in which the mistaken consciousness sees water where there is none.

Bhṛkūtī. (T. Khro gnyer can; C. Pijuzhi; J. Bikutei; K. Piguji 毘俱胝). In Sanskrit, lit. “She who Frowns”; a wrathful deity understood to be a form of [TĀRĀ](#), who is reputed to have been born from a frown of the [BODHISATTVA AVALOKITEŚVARA](#). An alternate account is that she arose from a ray of light emanating out of Avalokiteśvara’s left eye at the same time Tārā was born from the right eye. Bhṛkūtī is sometimes said to be an emanation of the buddha [AMITĀBHA](#) as well, particularly in Japan, and often appears with an image of Amitābha in her crown. Although she can appear in peaceful form, she is generally depicted as a wrathful deity, most commonly with one face with three eyes, and four arms holding a trident, vase, and rosary and displaying the [VARADAMUDRĀ](#), and either standing in [ALĪDHA](#) posture or sitting in [LALITĀSANA](#). ¶ Bhṛkūtī is also the name of the Nepali princess who married [SRONG BTSAN SGAM PO](#). According to the [MANI BKA’ ’BUM](#), she was the daughter of the Nepalese king Aṃśuvarman and was brought to Tibet by the famed minister Mgar stong btsan after Srong btsan sgam po saw her in a prophetic dream. The Nepalese king initially refused to send her, deriding Tibet as a land of savagery, lacking not only the teachings of the Buddha but basic civil laws as well. Mgar convinced the king that Srong btsan sgam po was sincere in desiring the [DHARMA](#), and was able to return with her, after which he set out to China to bring back the Tang princess [WENCHENG](#). Bhṛkūtī is said to have brought with her to Tibet the statue of [ŚĀKYAMUNI](#) called [JO BO MI BSKYOD RDO RJE](#), which was eventually housed in [RA MO CHE](#). The historicity of both Bhṛkūtī and her father has been called into question by recent scholarship. The Nepalese princess is said to have also brought a sandalwood statue of Bhṛkūtī to Tibet, but (if it ever existed) it had disappeared by the seventeenth century, when the fifth [DALAI LAMA](#), in his guidebook to the temples of [LHA SA](#), reported it missing.

bhūmi. (T. sa; C. di; J. ji; K. chi 地). In Sanskrit, lit. “ground”; deriving from an [ABHIDHARMA](#) denotation of bhūmi as a way or path ([MĀRGA](#)), the term is used metaphorically to denote a “stage” of training, especially in the career of the [BODHISATTVA](#) or, in some contexts, a [ŚRĀVAKA](#). A list of ten stages ([DAŚABHŪMI](#)) is most commonly enumerated, deriving from the [DAŚABHŪMIKASŪTRA](#) (“Discourse on the Ten Bhūmis”), a sūtra that is later subsumed into the massive

scriptural compilation, the [AVATAMSAKASŪTRA](#). The bodhisattva does not enter the ten bhūmis immediately after generating the aspiration for enlightenment ([BODHICITTOTPĀDA](#)); rather, the first bhūmi coincides with the attainment of the path of vision ([DARŚANAMĀRGA](#)) and the remaining nine to the path of cultivation ([BHĀVANĀMĀRGA](#)). The ultimate experience of buddhahood is sometimes referred to (as in the [LAŅKĀVATĀRASŪTRA](#)) as an eleventh [TATHĀGATABHŪMI](#), which the [MAHĀVYUTPATTI](#) designates as the samantaprabhābuddhabhūmi. The stage of the path prior to entering the path of vision is sometimes referred to as the adhimukticaryābhūmi (“stage of the practice of resolute faith”), a term from the [BODHISATTVABHŪMI](#). An alternative list of “ten shared stages” of spiritual progress common to all three vehicles of [ŚRĀVAKA](#), [PRATYEKABUDDHA](#), and bodhisattva is described in the [*MAHĀPRAJÑĀPĀRAMITĀSŪTRA](#) and the [DAZHIDU LUN](#) (**Mahāprajñāpāramitāsāstra*). An alternative list of seven bhūmis of the bodhisattva path, as found in [MAITREYANĀTHA](#) and [ASAṄGA](#)’s *Bodhisattvabhūmi*, is also widely known in Mahāyāna literature. For full treatment of each the bhūmi system, see [BODHISATTVABHŪMI](#), [DAŚABHŪMI](#); [ŚRĀVAKABHŪMI](#); see also individual entries for each [BHŪMI](#).

[bhūmisparśamudrā](#). (T. sa gnon gyi phyag rgya; C. chudi yin; J. sokujiin; K. ch’okchi in 觸地印). In Sanskrit, “gesture of touching the earth”; this [MUDRĀ](#) is formed by the right hand touching the ground with extended fingers, usually across the right knee, while the left hand remains resting in the lap. It is the most common mudrā depicted in seated images of [ŚĀKYAMUNI](#) Buddha. The bhūmisparśamudrā recalls a specific moment in Śākyamuni’s biography. After [MĀRA](#) had sought to dislodge the future buddha from his seat under the [BODHI TREE](#) by attacking him with his minions and seducing him with his daughters, he ultimately tried to cause the Buddha to move by claiming that he had no right to occupy that spot. The bodhisattva then touched the earth, thereby calling on the goddess of the earth Pṛthivī or [STHĀVARĀ](#) to bear witness to his practice of virtue over his many lifetimes on the bodhisattva path. The goddess responded affirmatively by causing the earth to quake. With that, Māra withdrew for good and the bodhisattva went on to achieve buddhahood that evening. In Southeast Asia, this scene is elaborated to include the goddess, called [THORANI](#), emerging from the earth to wring from her hair all of the water that the Buddha had offered during his lifetimes as a [BODHISATTVA](#). The water creates a flood that sweeps away Māra and his horde. The mudrā is also considered a gesture of immovability (acala) and is thus the mudrā associated with the buddha

[AKṢOBHYA](#).

[Bhūridatta](#). See [AJAHN MUN BHÜRIDATTA](#).

[bhūta](#). (T. 'byung po; C. zhen/gui; J. shin/ki; K. chin/kwi 眞/鬼). The past passive participle of the Sanskrit root √bhū (cognate with English “be”); in compound words in Buddhist texts, it means “element,” “true,” or “real”; the word alone also means a class of harm-inflicting and formless obstructing spirits (i.e., “elemental spirits”). The [MAHĀBHŪTA](#) (literally “great elements”) are the well-known elements of earth, water, fire, and wind; the [BHŪTAKOTI](#) (“ultimate state”) is a technical term used in the [MAHĀYĀNA](#) to distinguish between different levels of spiritual achievement; [BHŪTATATHATĀ](#) (“true suchness”) is the eternal nature of reality that is “truly thus” and free of all conceptual elaborations. The bhūta (“elemental”) spirits, who are sometimes equivalent to [PRETA](#) (“hungry ghost”), are said to inhabit the northeast quarter of the universe, or in some descriptions, all of the ten directions ([DAŚADIŚ](#)). Because they obstruct rainfall, the bhūta are propitiated by rituals to cause precipitation, as are the [NĀGA](#) (“serpent spirits, spirits of the watery subsoil”) who inhabit rivers and lakes. Tibetan medical texts also identify eighteen elemental spirits ('byung po'i gdon) that invade the psyche and cause mental problems.

[bhūtaḍāmaramudrā](#). (T. 'byung po 'dul byed kyi phyag rgya; C. xiang sanshi yin; J. gōzanzein; K. hang samse in 降三世印). In Sanskrit, “spirit-subduing gesture,” a gesture ([MUDRĀ](#)) formed by crossing the left wrist in front of the right with palms facing forward and linking the little fingers; the thumbs hold down the two middle fingers and the forefingers of both hands stick out in the threatening gesture ([TARJANĪMUDRĀ](#)). In Tibet, the mudrā is specific to BhūtaḍĀmara, a name for a four-armed wrathful form of [VAJRAPĀNI](#); the Chinese translation of the term means “gesture that subjugates the three time periods” of past, present, and future.

[bhūtakoti](#). (T. yang dag pa'i mtha'; C. shiji; J. jissai; K. silche 實際). In Sanskrit, lit. “end,” “limit,” or perhaps “edge” or “apex” ([KOTI](#)) of “reality” ([BHŪTA](#)); the “peak experience” or “ultimate state” that is realized in the experience of the absolute ([PARAMĀRTHA](#)). Both buddhas and [ARHATS](#) are said to reside in the bhūtakoti, which in this context is synonymous with absolute truth ([PARAMĀRTHASATYA](#)). The [DAZHIDU LUN](#) (**Mahāprajñāpāramitāsāstra*) glosses the term as follows: “In the term bhūtakoti, “real” (bhūta) refers to the

[DHARMATĀ](#); because it is realized, it is called the “end” (koṭi).” While dharmatā as the “nature of reality” is used interchangeably with “things as they are” ([TATHATĀ](#), yathābhūta) to refer to the nature of reality itself, bhūtakoṭi appears along with [NIRVĀNA](#) to imply the “peak experience” or “ultimate state” that is reached in the realization of that nature of reality. The [ABHISAMAYĀLAMKĀRA](#) commentarial tradition also describes the bhūtakoṭi as a limit that bodhisattvas must cross over. In those contexts bhūtakoṭi is equivalent to the partial nirvāṇa of the arhat that bodhisattvas must avoid falling into, and hence is the extreme of tranquility. Bodhisattvas finally cross over that “reality limit” when they reach the state of full enlightenment.

[bhūtatahatā](#). (C. zhenru; J. shinnyo; K. chinyō 眞如). In Sanskrit, “true suchness.” See [TATHATĀ](#).

[biandi](#). (J. henji; K. pyōnji 邊地). In Chinese, “peripheral,” or “outlying” “regions”; referring to the regions beyond the civilizing influences of Buddhism and higher spiritual culture. The corresponding Sanskrit term [YAVANA](#) was used to designate Greeks (Ionians) and later even Arab Muslims. In Buddhist cosmology, the term refers to regions north and west of India proper, which are inhabited by illiterate, barbaric peoples hostile to Buddhism. The birth into a “peripheral region” is considered to be one of the states that constitute an “inopportune moment or birth” ([AKSANA](#)), i.e., a state that precludes attainment of enlightenment in the present lifetime. In other contexts, as in the [SUKHĀVATĪVYŪHASŪTRA](#), a [PURE LAND](#) devotee who practices with doubt, hesitancy, and intermittent faith, or who eventually regrets and regresses from his or her devotion, will not be able to be reborn directly into [AMITĀBHA](#) Buddha’s pure land (see [SUKHĀVATĪ](#)). Instead, he or she would be reborn first in the biandi (“outlying region”) of the pure land for five hundred years before being granted access to sukhāvātī proper. The outlying region of the pure land is depicted as a bejeweled place landscaped with lotus ponds and teeming with palatial buildings; it is almost as blissful and trouble-free as the pure land itself, except that its denizens lack the freedom to roam anywhere beyond its confines.

[bianwen](#). (變文). In Chinese, “transformation texts”; the earliest examples of Chinese vernacular writings, many drawing on prominent Buddhist themes. Produced during the Tang dynasty (c. seventh through tenth centuries), they were lost to history until they were rediscovered among the manuscript cache at [DUNHUANG](#) early in the twentieth century. The vernacular narratives of bianwen

are probably descended from [BIANXIANG](#), pictorial representations of Buddhist and religious themes. The Sinograph *bian* in both compounds refers to the “transformations” or “manifestations” of spiritual adepts, and seems most closely related to such Sanskrit terms as *nirmāṇa* (“magical creation” or “magical transformation,” as in [NIRMĀNAKĀYA](#)) or [RDDHI](#) (“magical powers”). *Bianwen* were once thought to have been prompt books that were used during public performances, but this theory is no longer current. Even so, *bianwen* have a clear pedigree in oral literature and are the first genre of Chinese literature to vary verse recitation with spoken prose (so-called “prosimetric” narratives). As such, the *bianwen* genre was extremely influential in the evolution of Chinese performing arts, opera, and vernacular storytelling. *Bianwen* are primarily religious in orientation, and the Buddhist *bianwen* are culled from various sources, such as the [JĀTAKAMĀLĀ](#), [SADDHARMAPUNĀRĪKASŪTRA](#), and [VĪMALAKĪRTINIRDEŚĀ](#). The genre does, however, include a few examples drawn from secular subjects. *Bianwen* may also have led to the development of later vernacular genres of literature with a religious orientation, such as the “treasure scrolls,” or [BAOJUAN](#).

[bianxiang](#). (變相) In Chinese, “transformation tableaux”; pictorial representations of Buddhist narratives, which seem to have been the antecedent for later vernacular narratives of the same themes known as [BIANWEN](#). As is the case with the compound *bianwen*, the logograph *bian* here refers to the “transformations” or “manifestations” of spiritual adepts. *Bianxiang* deal almost entirely with religious topics and involve especially pictorial representations of [AMITĀBHA’S PURE LAND \(JINGTU\)](#) of [SUKHĀVATĪ](#), famous episodes in the lives and activities of the Buddha and [BODHISATTVAS](#) (especially [AVALOKITEŚVARA](#)), and synopses of important sūtras (such as the [SADDHARMAPUNĀRĪKASŪTRA](#)). A great number of *bianxiang* were discovered at [DUNHUANG](#) and provide a window on the popular practices in medieval Chinese Buddhism. See also [AMITUO JINGTU BIAN](#); [DIYU BIANXIANG](#); [JINGTU BIAN](#).

[bianyi shengsi](#). (J. *hen’i shōji*; K. *pyōni saengsa* 變異生死). In Chinese, “birth and death as alternation and change”; one of the two types of rebirth (see [SAMSĀRA](#)) described in the Chinese [FAXIANG \(YOGĀCĀRA\)](#) and [TĪANTAI](#) schools, along with “birth and death in punctuated succession” ([FENDUAN SHENGSI](#)). This type refers either to the process of positive psychological transformation, wherein a person could be “reborn” symbolically while still in the same physical body, or to the

subtle mental instabilities a novice [BODHISATTVA](#) experiences due to the presence of minor, but as yet unresolved, afflictions ([KLEŚA](#)).

[Bianzheng lun](#). (J. Benshōron; K. Pyōnjōng non 辯正論). In Chinese, “Treatise on Determining Orthodoxy”; a polemical treatise composed in 626 by the Tang dynasty monk Falin (d.u.) in response to such treatises as the *Shiyi jiumi lun* (“Treatise on the Ten Differences and Nine Obscurities”) and *Xuanzheng lun* (“Treatise on Manifesting Orthodoxy”) presented to the court by Daoist priests in defense of their own religion. The *Bianzheng lun* compares the teachings of Buddhists, Confucians, and Daoists in order to demonstrate the superiority of Buddhism. The Buddhist response to such theories as Laozi’s conversion of the barbarians (see [LAOZI HUAHU JING](#)) and early Chinese notions of qi (pneuma or energy) and [DAO](#) (way or path) can be found in the *Bianzheng lun*. The treatise is therefore a valuable resource for studying Buddhist perspectives on Chinese thought.

[biexiang sanguan](#). (C) (J. bessō no sangan; K. pyōlsang sangwan 別相三觀). See [SANGUAN](#).

[biexu](#). (C) (別序). See [ER XU](#).

[biguan](#). (J. hekikan; K. pyōkkwan 壁觀). In Chinese, “wall contemplation” or “wall gazing”; a type of meditative practice reputedly practiced by the putative founder of the [CHAN](#) school, the Indian monk [BODHIDHARMA](#), whom legend says spent nine years in wall contemplation in a small cave near the monastery [SHAOLINSI](#) on [SONGSHAN](#). This practice is explained as a meditation that entails “pacifying the mind” ([ANXIN](#)) and is the putative origin of contemplative practice in the [CHAN](#) school. Despite the prestige the term carries within the Chan tradition because of its association with Bodhidharma, precisely what “wall contemplation” means has remained fraught with controversy since early in the school’s history. Two of the more commonly accepted explanations are that the practitioner renders his or her mind and body silent and still like a wall, or that the mind is “walled in” and kept isolated from sensory disturbance. Some scholars have suggested that the term might actually be a combination of a transcription bi and a translation kuan, both referring to [VIPAŚYANĀ](#) (insight) practice, but this theory is difficult to reconcile with the historical phonology of the Sinograph bi. Tibetan translations subsequently interpret biguan as “abiding in luminosity” (lham mer gnas), a gloss that may have tantric implications.

Whatever its actual practice, the image of Bodhidharma sitting in a cross-legged meditative posture while facing a wall becomes one of the most frequent subjects of Chan painting.

bīja. (T. sa bon; C. zhongzi; J. shuji; K. chongja 種子). In Sanskrit, “seed,” a term used metaphorically in two important contexts: (1) in the theory of [KARMAN](#), an action is said to plant a “seed” or “potentiality” in the mind, where it will reside until it fructifies as a future experience or is destroyed by wisdom; (2) in tantric literature, many deities are said to have a “seed syllable” or seed [MANTRA](#) that is visualized and recited in liturgy and meditation in order to invoke the deity. In the Chinese [FAXIANG \(YOGĀCĀRA\)](#) school, based on similar lists found in Indian Buddhist texts like the [MAHĀYĀNASAMGRAHA](#), a supplement to the [YOGĀCĀRABHŪMI](#), various lists of two different types of seeds are mentioned. (1) The primordial seeds ([BENYOU ZHONGZI](#)) and the continuously (lit. newly) acquired seeds ([XINXUN ZHONGZI](#)). The former are present in the eighth “storehouse consciousness” ([ĀLAYAVIJÑĀNA](#)) since time immemorial, and are responsible for giving rise to a sentient being’s basic faculties, such as the sensory organs ([INDRIYA](#)) and the aggregates ([SKANDHA](#)). The latter are acquired through the activities and sense impressions of the other seven consciousnesses ([VIJÑĀNA](#)), and are stored within the eighth storehouse consciousness as pure, impure, or indeterminate seeds that may become activated again once the right conditions are in place for it to fructify. (2) Tainted seeds (yolou zhongzi) and untainted seeds (wulou zhongzi). The former are sowed whenever unenlightened activities of body, speech, and mind and the contaminants ([ĀSRAVA](#)) of mental defilements take place. The latter are associated with enlightened activities that do not generate such contaminants. In all cases, “full emergence” ([SAMUDĀCĀRA](#), C. xiangxing) refers to the sprouting of those seeds as fully realized action. ¶ In tantric Buddhism the buddha field ([BUDDHAKSETRA](#)) is represented as a [MANDALA](#) with its inhabitant deities ([DEVATĀ](#)). The sonic source of the maṇḍala and the deities that inhabit it is a “seed syllable” (bīja). In tantric practices ([VIDHI](#); [SĀDHANA](#)) the meditator imagines the seed syllable emerging from the expanse of reality, usually on a lotus flower. The seed syllable is then visualized as transforming into the maṇḍala and its divine inhabitants, each of which often has its own seed syllable. At the end of the ritual, the process is reversed and collapsed back into the seed syllable that then dissolves back into the nondual original expanse. Seed syllables in tantric Buddhism are connected with [DHĀRANĪ](#), mnemonic codes widespread in Mahāyāna sūtras that consist of strings

of letters, often the first letter of profound terms or topics. These strings of letters in the dhāraṇī anticipate the [MANTRAS](#) found in tantric ritual practices. The tantric “seed syllable” is thought to contain the essence of the mantra, the letters of which are visualized as standing upright in a circle around the seed syllable from which the letters emerge and to which they return.

[Bi ma snying thig](#). (Bime Nyingtik) In Tibetan, “Heart Essence of [VIMALAMITRA](#)”; associated with [KLONG CHEN RAB 'BYAMS](#) whose collection of [RDZOGS CHEN](#) teaching of the “instruction class” ([MAN NGAG SDE](#)) are loosely referred to by this name. The *Bi ma snying thig* itself is a collection of five texts attributed to Vimalamitra, rediscovered as treasure texts ([GTER MA](#)) by Lce btsun Seng ge dbang phyug in [CHIMS PHU](#) near [BSAM YAS](#), and passed down through Zhang ston Bkra shis rdo rje (1097–1167) to Klong chen pa who established the [SNYING THIG](#) (“heart essence”) as the central element in the rdzogs chen tradition. He gave an exegesis on the theory and practice of rdzogs chen in his [MDZOD BDUN](#) (“seven great treasuries”) and [NGAL GSO SKOR GSUM](#) (“Trilogy on Rest”), and in his *Bla ma yang thig*, revealed the contents of the Bi ma snying thig itself.

[Bimbisāra](#). (T. Gzugs can snying po; C. Pinposuoluo; J. Binbashara; K. Pinbasara 頻婆娑羅) (r. c. 465–413 BCE). King of [MAGADHA](#), and chief royal patron of the Buddha during his lifetime, who reigned from his capital city of [RĀJAGRHA](#) (P. Rājagaha). There are several accounts of how the two first met. According to the Pāli [JĀTAKA](#), the two first met at Rājagṛha just after [GAUTAMA](#) had renounced the world when the [BODHISATTVA](#) passed beneath the king’s window. Impressed with the mendicant’s demeanor, Bimbisāra invited him to join his court. When the bodhisattva refused, Bimbisāra wished him success in his quest for enlightenment and requested that he visit his palace as soon as he achieved his goal. The Buddha honored his request and, soon after attaining enlightenment, returned to Rājagṛha to preach to Bimbisāra and his courtiers. Immediately upon listening to the sermon, the king and his attendants became stream-enterers ([SROTAĀPANNA](#)). The Pāli [MAHĀVAMSA](#), however, states instead that they were childhood friends. Bimbisāra was munificent in his support for the Buddha and his [SAMGHA](#). The most famous of his donations was the [VENUVANA](#) (P. Veḷuvana) bamboo grove, where it is said he constructed a multistoried residence for the monks. He repaired the road from Rājagṛha to the Ganges River, a distance of five leagues, just so the Buddha would have an easier walk on his way to [VAISĀLĪ](#). With such gifts, Bimbisāra declared that the

five ambitions of his life had been fulfilled: that he would become king, that the Buddha would visit his kingdom, that he would render service to the Buddha, that the Buddha would preach to him, and that he would understand the meaning of the Buddha's teachings. Bimbisāra met a tragic death at the hands of his son [AJĀTAŚATRU](#) (P. Ajātasattu). Even as his son was conceived, according to some accounts, astrologers had predicted that the unborn child would kill his father and recommended to the king that the fetus be aborted. The king would not hear of it and instead showered affection on his son throughout his childhood. Ajātaśatru was persuaded to murder his father by [DEVADATTA](#), the Buddha's evil cousin, who saw Bimbisāra's continued patronage of the Buddha as the chief obstacle to his ambition to become leader of the saṃgha himself. According to some reports, it was only upon the birth of his own son that he realized the paternal love that his father had had for him. According to the Pāli account, Bimbisāra was reborn as a yakkha ([YAKSA](#)) named Janavasabha and is said to have visited the Buddha in that form. See also [VAIDEHĪ](#).

bindu. (T. thig le). In Sanskrit, “drop,” as in the title of Buddhist texts like [DHARMAKĪRTI](#)'s [NYĀYABINDU](#) (“Drop of Reasoning”). In Buddhist tantra, bindu is [BODHICITTA](#), seminal fluids in the ordinary sense, and in an extraordinary sense the seed of the illusory world and enlightenment; in this tantric sense, bindu is either red (from the female) or white (from the male). A second meaning of bindu found widely in tantric literature in Tibet, and in the [RNYING MA](#) sect in particular, is in words like thig le chen po (great circle) and thig le nyag chig (single circle, single sphere), words for the primordial basis: the natural state of the mind as empty, creative, and a state of great bliss both in ordinary beings, and as the [DHARMAKĀYA](#) at the time of enlightenment. This bindu is understood as including all phenomena, in a causal sense, and as their essence. According to tantric physiology, the bindu resides in the channels ([NĀDĪ](#)) and is the source of bliss when manipulated in meditation practice through the control of the energies ([PRĀNA](#)). Iconographically, it is represented as a curved line on the top of the circular symbol placed on the top of letters to represent the nasalization of vowels (anusvāra).

bingfu. (J. hinpotsu; K. pyŏngbul 秉拂). In Chinese, lit. “to take hold of the whisk”; dharma discourses delivered by a [CHAN](#) master from the high seat while holding the fly whisk or “chowrie” (see [VĀLAVYAJANA](#); C. [FUZI](#)). The chowrie, a yak-tail fan that Buddhist monks used to keep flies and mosquitoes away, is

presumed to have originally been used among followers of the [JAINA](#) tradition to shoo away flies without injuring them and came to be used widely throughout India. In the Chinese [CHAN](#) tradition, the fly whisk (which in East Asia is usually made from a horse tail) became a symbol of the office or privilege of a Chan master and the first thing the Chan master would do after ascending to his seat for his formal dharma discourse (see [SHANGTANG](#)) was to “take up the whisk”; by metonymy, the term came to be used to refer to a formal Chan sermon. The head monks in a Chan monastery who are privileged to “take hold of the whisk” in the Chan master’s stead are called the “chief officers” (C. [TOUSHOU](#)): i.e., the chief seat (C. [SHOUZUO](#)), scribe (C. [SHUJI](#)), library prefect (C. [ZANGZHU](#)), guest prefect (C. [ZHIKE](#)), bath prefect (C. [ZHIYU](#)), and hall prefect (C. [ZHIDIAN](#)).

Binglingsi. (J. Heireiji; K. Pyŏngnyŏngsa 炳靈寺). In Chinese, “Bright and Numinous Monastery”; site of a Buddhist cave complex, located fifty miles outside Lanzhou, the capital of the present-day Chinese province of Gansu, and accessible only by boat. The complex contains 183 caves with 694 stone and eighty-two clay statues. Binglingsi, along with [MAIJISHAN](#), developed under the patronage of the Qifu rulers of the Western Qin dynasty (385–43). The carving of Buddhist caves at Binglingsi may have started as early as the late fourth century; however, the earliest inscription was found in cave 169 and is dated 420. Two novel features can be found in cave 169. One is the stylistic link of some of its sculptures with the Buddhist art of [KHOTAN](#) on the southern [SILK ROAD](#). For example, five seated buddhas in niche 23 inside the cave are attired in their monastic robes and perform the meditation gesture ([DHYĀNAMUDRĀ](#)), backed by a large aureole. Second, numerous inscriptions identify the sculptures and painted images in this cave, which include [AMITĀBHA](#) Buddha, accompanied by [AVALOKITEŚVARA](#) ([GUANYIN](#)) and [MAHĀSTHĀMAPRĀPTA](#) (Dashizi). This triad in niche 6 closely resembles the style of Liangzhou, and thus [KUCHA](#). Among the painted images are the buddhas of the ten directions (see [DAŚADĪŚ](#)), members of the Qin dynastic house, and the state preceptor ([GUOSHI](#)) Tanmobi (Dharmapriya), cotranslator with [ZHU FONIAN](#) of the [ASTASĀHASRIKĀPRAJÑĀPĀRAMITĀ](#). The representations in cave 169 depict the content of then-newly translated scriptures such as the [VIMALAKĪRTINIRDEŚA](#), [SADDHARMAPUNĀRĪKASŪTRA](#), and the shorter [SUKHĀVATĪVYŪHASŪTRA](#) (see also [AMITĀBHASŪTRA](#)), which had been translated by [KUMĀRAJĪVA](#) in Chang’an around 400–410. The sculptures and paintings at Binglingsi serve as precedents for the subsequent Northern Wei sculpture found at [YUNGANG](#) and [LONGMEN](#).

[Biographies of Eminent Monks](#). See [GAOSENZHUAN](#).

[Biqiuni zhuan](#). (J. Bikuniden; K. Piguni chōn 比丘尼傳). In Chinese, “Lives of the Nuns,” the major Chinese collection of biographies of eminent [BHIKSUNĪ](#), compiled c. 516 CE by Shi Baochang, a Buddhist monk whose own biography can be found in the [XU GAOSENZHUAN](#) (“Continued Lives of Eminent Monks”). The anthology consists of sixty-five nuns’ biographies, arranged chronologically beginning in the Eastern Jin (317–420 CE) and continuing through the period of the Northern and Southern dynasties (420–588 CE). The introduction lists several characteristics that Shi Baochang deems worthy of emulation and special mention. These include steadfast asceticism, skill in meditation and study, chastity, and teaching abilities. The hagiographies themselves emphasize the following activities: over half of the nuns included in the anthology excelled in either scriptural study or meditation and religious practice. Almost half taught scripture and established convents. One-third of the nuns are said to have practiced strict vegetarianism. The same number is also said to have excelled in chanting scriptures: the most frequently named scriptures as the object of this devotion include the [SADDHARMAPUNDARĪKASŪTRA](#), the [MAHĀPARINIRVĀNASŪTRA](#), and the [MAHĀPRAJÑĀPĀRAMITĀSŪTRA](#). The majority of nuns are also said to have inspired numerous monastic and secular followers. Many of the lay followers came from the highest reaches of society: governors and lords are regularly mentioned as patrons who often were instrumental in the founding of a new convent by donating land, funding construction, or both. In addition, almost half of the nuns were praised for their pure faith in the Buddha. In the instances where age was mentioned, almost half of the nuns were said to have adopted their vocation when they were still quite young (preadolescent); in contrast, only one-third were said to have left secular life once they were adults. The legitimacy of the Chinese nuns’ order was specifically addressed in at least three hagiographies, where it is asserted that the subjects’ ordinations were performed by foreign monks and nuns and was therefore valid.

[Birushana nyorai](#). (J) (毗盧遮那如來). See [NARA DAIBUTSU](#).

[Biyān lu](#). (J. Hekiganroku; K. Pyōgam nok 碧巖錄). In Chinese, “Emerald Grotto Record” or, as it is popularly known in the West, the “Blue Cliff Record”; compiled by [CHAN](#) master [YUANWU KEQIN](#); also known by its full title of *Foguo Yuanwu chanshi biyan lu* (“Emerald Grotto Record of Chan Master Foguo Yuanwu”). The *Biyān lu* is one of the two most famous and widely used

collection of Chan cases ([GONG'AN](#)), along with the [WUMEN GUAN](#) (“The Gateless Checkpoint”). The anthology is built around [XUEDOU CHONGXIAN](#)'s *Xuedou heshang baice songgu*, an earlier independent collection of one hundred old Chan cases (GUCE) with verse commentary; Xuedou's text is embedded within the *Biyān lu* and Yuanwu's comments are interspersed throughout. Each of the one hundred cases, with a few exceptions, is introduced by a pointer ([CHUI SHI](#)), a short introductory paragraph composed by Yuanwu. Following the pointer, the term “raised” (ju) is used to formally mark the actual case. Each case is followed by interlinear notes known as annotations or capping phrases ([ZHUOYU](#); J. [JAKUGO](#)) and prose commentary (PINGCHANG), both composed by Yuanwu. The phrase “the verse says” (song yue) subsequently introduces Xuedou's verse, which is also accompanied by its own capping phrases and prose commentary, both added by Yuanwu. The cases, comments, and capping phrases found in the *Biyān lu* were widely used and read among both the clergy and laity in China, Korea, Japan, and Vietnam as a contemplative tool in Chan meditation practice and, in some contexts, as a token of social or institutional status. A famous (or perhaps infamous) story tells of the Chan master [DAHUI ZONGGAO](#), the major disciple of Yuanwu, burning his teacher's *Biyān lu* for fear that his students would become attached to the words of Xuedou and Yuanwu. The *Biyān lu* shares many cases with the *Wumen guan*, and the two texts continue to function as the foundation of training in the Japanese [RINZAI](#) Zen school.

[Bka' babs bdun ldan gyi brgyud pa'i rnam thar](#). (Kabap Dünden gyi Gyüpe Namtar). In Tibetan, “Biographies of the Seven Instruction Lineages”; a collection of brief biographies composed by the Tibetan historian [TĀRANĀTHA](#) (1575–1634). It documents the lives of fifty-nine Indian [SIDDHAS](#) involved in the early transmission of tantric instructions that came to be important and widely practiced later in Tibet. Although it serves to legitimize the author's own lineage, the text is considered to be an important source of historical information, because Tāranātha had direct contact with several of these masters. According to the text's colophon, Tāranātha composed the work when he was twenty-six, in about the year 1601. Its complete title is: *Bka' babs bdun ldan gyi brgyud pa'i rnam thar ngo mtshar rmad du byung ba rin po che'i lta bu'i rgyan*.

[bka' babs bzhi](#). (kabap shi). In Tibetan, “four instructional lineages” (bka' means words—of a buddha or enlightened master—and babs means to descend in a stream); a series of tantric instructions that the Indian [SIDDHA TILOPA](#)

received from various masters, codified, and then passed on to his disciple [NĀROPA](#). These later became foundational teachings for the [BKA' BRGYUD](#) sect of Tibetan Buddhism and were incorporated into the six doctrines of Nāropa ([NĀ RO CHOS DRUG](#)). Tibetan sources vary widely regarding the lineage and content of these four transmissions. According to a biography of Tilopa composed by [MAR PA CHOS KYI BLO GROS](#), they are (1) the transmission of illusory body (T. sgyu lus kyi bka' babs) received from the siddha [NĀGĀRJUNA](#); (2) the transmission of dreams (T. rmi lam gyi bka' babs) received from the siddha Caryāpa; (3) the transmission of clear light (T. 'od gsal gyi bka' babs) received from the siddha Lavapa; and (4) the transmission of inner heat (T. gtum mo'i bka' babs) received from JñĀnaḍĀkinī. According to other sources, these four may alternatively include the transmissions of [MAHĀMUDRĀ](#), the intermediate state ([BAR DO](#)), mother tantra ([MĀTRTANTRA](#)), father tantra ([PITRTANTRA](#)), and individual tantras such as the tantra of [CAKRASAMVARA](#), [HEVAJRA](#), and [GUHYASAMĀJA](#).

[Bka' brgyud](#). (Kagyü). In Tibetan, “Oral Lineage” or “Lineage of the Buddha’s Word”; one of the four main sects of Tibetan Buddhism. The term bka' brgyud is used by all sects of Tibetan Buddhism in the sense of an oral transmission of teachings from one generation to the next, a transmission that is traced back to India. Serving as the name of a specific sect, the name Bka' brgyud refers to a specific lineage, the [MAR PA BKA' BRGYUD](#), the “Oral Lineage of Mar pa,” a lineage of tantric initiations, instructions, and practices brought to Tibet from India by the translator [MAR PA CHOS KYI BLO GROS](#) in the eleventh century. Numerous sects and subsects evolved from this lineage, some of which developed a great deal of autonomy and institutional power. In this sense, it is somewhat misleading to describe Bka' brgyud as a single sect; there is, for example, no single head of the sect as in the case of [SA SKYA](#) or [DGE LUGS](#). The various sects and subsects, however, do share a common retrospection to the teachings that Mar pa retrieved from India. Thus, rather than refer to Bka' brgyud as one of four sects (chos lugs), in Tibetan the Mar pa Bka' brgyud is counted as one of the eight streams of tantric instruction, the so-called eight great chariot-like lineages of achievement ([SGRUB BRGYUD SHING RTA CHEN PO BRGYAD](#)), a group which also includes the [RNYING MA](#), the [BKA' GDAMS](#) of [ATIŚA](#), and the instructions on “severance” ([GCOD](#)) of [MA GCIG LAB SGRON](#). In some Tibetan histories, Mar pa’s lineage is called the Dkar brgyud (“White Lineage”), named after the white cotton shawls worn by its yogins in their practice of solitary meditation. The reading Dka' brgyud (“Austerities Lineage”) is also

found. The lineage from which all the sects and subsects derive look back not only to Mar pa, but to his teacher, and their teachers, traced back to the tantric buddha [VAJRADHARA](#). Vajradhara imparted his instructions to the Indian [MAHĀSIDDHA TILOPA](#), who in turn transmitted them to the Bengali scholar and yogin [NĀROPA](#). It was Nāropa (in fact, his disciples) whom Mar pa encountered during his time in India, receiving the famous [NĀ RO CHOS DRUG](#), or the six doctrines of Nāropa. Mar pa returned to Tibet, translated the texts and transmitted these and other teachings (including [MAHĀMUDRĀ](#), the hallmark practice of Bka' brgyud) to a number of disciples, including his most famous student, [MI LA RAS PA](#). These five figures—the buddha Vajradhara, the Indian tantric masters Tilopa and Nāropa, and their Tibetan successors Mar pa and Mi la ras pa (both of whom were laymen rather than monks)—form a lineage that is recognized and revered by all forms of Bka' brgyud. One of Mi la ras pa's chief disciples, the physician and monk [SGAM PO PA BSOD NAMS RIN CHEN](#) united the tantric instructions he received from Mi la ras pa and presented them in the monastic and exegetical setting that he knew from his studies in the Bka' gdams sect. Sgam po pa, therefore, appears to have been instrumental in transforming an itinerant movement of lay yogins into a sect with a strong monastic element. He established an important monastery in the southern Tibetan region of Dwags po; in acknowledgment of his importance, the subsequent branches of the Bka' brgyud are sometimes collectively known as the [DWAGS PO BKA' BRGYUD](#). The Bka' brgyud later divided into what is known in Tibetan as the “four major and eight minor Bka' brgyud” ([BKA' BRGYUD CHE BZHI CHUNG BRGYAD](#)). A number of these subsects no longer survive as independent institutions, although the works of their major figures continue to be studied. Among those that survive, the [KARMA BKA' BRGYUD](#), ['BRI GUNG BKA' BRGYUD](#), and ['BRUG PA BKA' BRGYUD](#) continue to play an important role in Tibet, the Himalayan region, and in exile.

[Bka' brgyud che bzhi chung brgyad](#). (Kagyü che shi chung gye). In Tibetan, the “Four Major and Eight Minor Bka' brgyud.” A division of the [BKA' BRGYUD](#) sect of Tibetan Buddhism into various sects and subsects stemming from the disciples of [SGAM PO PA BSOD RNAM RIN CHEN](#). The terms “major” and “minor” indicate a relative proximity to the master Sgam po pa and carry no quantitative or qualitative overtones. The four major subsects follow from the direct disciples of Sgam po pa and his nephew Dwags po Sgom tshul (Dakpo Gomtshul, 1116–1169):

1. [KARMA BKA' BRGYUD](#), also called the Karma kam tshang, originating with the

first [KARMA PA DUS GSUM MKHYEN PA](#)—a disciple of Sgam po pa 2. [TSHAL PA BKA' BRGYUD](#) originating with Zhang tshal pa Brtson 'grus grags pa (Shangtsalpa Tsöndru Drakpa, 1123–1193)—a disciple of Dwags po Sgom tshul 3. ['BA' ROM BKA' BRGYUD](#) originating with 'Ba' rom Dar ma dbang phyug (Barom Darma Wangchuk, 1127–1199)—a disciple of Sgam po pa 4. Phag gru bka' brgyud (Pakdru Kagyü) originating with [PHAG MO GRU PA RDO RJE RGYAL PO](#)—a disciple of Sgam po pa.

The eight minor subsects stem from disciples of Phag mo gru pa:

1. ['BRI GUNG BKA' BRGYUD](#) originating with ['JIG RTEN GSUM MGON](#)
2. [STAG LUNG BKA' BRGYUD](#) originating with [STAG LUNG THANG PA BKRA SHIS DPAL](#)
3. Gling ras bka' brgyud (Lingre Kagyü) originating with Gling rje ras pa Padma rdo rje (Lingje Repa Pema Dorje, 1128–1288), this later became the ['BRUG PA BKA' BRGYUD](#) under his disciple [GTSANG PA RGYA RAS YE SHES RDO RJE](#)
4. G.ya' bzang bka' brgyud (Yasang Kagyü) originating with Zwa ra ba Skal ldan ye shes seng ge (Sarawa Kalden Yeshe Senge, d. 1207) 5. [KHRO PHU BKA' BRGYUD](#) originating with Rgya tsha (Gyatsa, 1118–1195), Kun ldan ras pa (Kunden Repa, 1148–1217), and their nephew Khro phu lo tsā ba Byams pa dpal (Trophu Lotsāwa Jampapal, 1173–1228) 6. [SHUG GSEB BKA' BRGYUD](#) originating with [GYER SGOM TSHUL KHRIMS SENG GE](#)
7. [YEL PA BKA' BRGYUD](#) originating with Ye shes brtsegs pa (Yeshe Tsekpa, d.u.)
8. [SMAR TSHANG BKA' BRGYUD](#) originating with Smar pa grub thob Shes rab seng ge (Marpa Druptob Sherap Senge, d.u.)

[Bka' brgyud mgur mtsho.](#) (Kagyü Gurtso). In Tibetan, “An Ocean of Songs of the Bka' brgyud”; a collection of spiritual songs and poetry composed by eminent masters of the [BKA' BRGYUD](#) sect of Tibetan Buddhism. It was compiled by the eighth [KARMA PA MI BSKYOD RDO RJE](#) in about 1542, originally intended as a liturgical text to be recited as an invocation of the entire Bka' brgyud lineage. The text is also part biographical recollection and doctrinal catalogue and is still much loved and widely read by adherents of the tradition. Its complete title is: *Mchog gi dngos grub mngon du byed pa'i myur lam bka' brgyud bla ma rnams kyi rdo rje'i mgur dbyangs ye shes char 'bebs rang grol lhun grub bde chen rab 'bar nges don rgya mtsho'i snying po.*

[Bka' brgyud pa.](#) (Kagyüpa). A person affiliated with the [BKA' BRGYUD](#) sect of Tibetan Buddhism.

[Bka' brgyud sngags mdzod](#). (Kagyü Ngagdzö). In Tibetan, “Treasury of Bka' brgyud Mantra”; a compilation of tantric teachings belonging to the [BKA' BRGYUD](#) sect of Tibetan Buddhism, compiled and edited in six volumes by the nineteenth-century Tibetan master ['JAM MGON KONG SPRUL BLO GROS MTHA' YAS](#). The collection forms one of the five treasuries of Kong sprul ([KONG SPRUL MDZOD LNGA](#)), and largely preserves the esoteric instructions transmitted by Bka' brgyud founder [MAR PA CHOS KYI BLO GROS](#) to his disciple Rngog Chos sku rdo rje (Ngok Chöku Dorje).

[Bka' chems ka khol ma](#). (Kachem Kakölma). In Tibetan, “The Pillar Testament”; an early historiographic text, purportedly the testament of the seventh-century Tibetan religious king [SRONG BSTAN SGAM PO](#). It is said to have been discovered in the hollow of a pillar in the [JO KHANG](#) Temple of [LHA SA](#) by the Indian master [ATIŚA DĪPAMKARASŪJĀNA](#) in about 1049. The circumstances of both the author and revealer, however, have recently been called into question. The text details the reign of Srong bstan sgam po and likely served as a primary source for later accounts of the early royal dynastic period in Tibet.

[Bka' gdams](#). (Kadam). An early sect of Tibetan Buddhism. In Tibetan, [BKA'](#) (ka) is the word of the Buddha or an enlightened master, and gdams (dam) means “to instruct”; traditionally the compound is parsed as “those who take all of the Buddha’s words as instruction.” Another etymology associates the word bka' with the words of [ATIŚA DĪPAMKARASŪJĀNA](#), whose followers began the early sect of Tibetan Buddhism, and in place of gdams “to advise” understands dam “to bind,” hence, “those who hold his sacred words as binding.” The origins of the sect are traced back to the founding of [RWA SGRENG](#) monastery in 1056 by Atiśa’s foremost disciple and interpreter ['BROM STON RGYAL BA'I 'BYUNG GNAS](#). The three main students of 'Brom ston pa are Po to ba Rin chen gsal (Potowa), Spyang mnga' ba Tshul khriims 'bar (Chen Ngawa), and Bu chung ba Gzhon nu rgyal mtshan (Bu chungwa), from whom originate the three principal Bka' gdams lineages (bka' babs): (1) the authoritative treatises (gzhung) lineage, (2) the essential instruction (gdams ngag) lineage, and (3) the oral instruction (man ngag) lineage, respectively. Po to ba’s authoritative treatise lineage emphasized the close study of six paired fundamental Buddhist treatises: the [BODHISATTVA BHŪMI](#) and [MAHĀYĀNASŪTRĀLAMKĀRA](#), the [BODHICARYĀVATĀRA](#) and [ŚIKSĀSAMUCCAYA](#), and the [JĀTAKAMĀLĀ](#) and [UDĀNAVARGA](#). The teachings of the lineage of oral instructions are collected in the [BKA' GDAMS GLEGS BAM PHA](#)

[CHOS BU CHOS](#). The sect is probably best known for its strict discipline and austerity of practice, but the Gsang phu ne'u thog Bka' gdams lineage that is traced back to the founding of the monastery of [GSANG PHU NE'U THOG](#) in about 1073 by [RNGOG LEGS PA'I SHES RAB](#), an immediate disciple of Atiśa, and his nephew, the translator [RNGOG BLO LDAN SHES RAB](#), gave the Bka' gdams a well-deserved reputation as a sect of great learning. Monks from Gsang phu ne'u thog like [PHYWA PA CHOS KYI SENG GE](#) wrote important works on [PRAMĀNA](#) (logic and epistemology) and formalized debate (rtsod rigs). The Bka' gdams was responsible for the distinctive Tibetan [BSTAN RIM](#) (tenrim) (“stages of teaching”) genre, based on Atiśa’s seminal work, the [BODHIPATHAPRADĪPA](#). This genre was later adapted and popularized by [TSONG KHA PA](#) in his influential [LAM RIM CHEN MO](#). Tsong kha pa idealized Atiśa as the perfect teacher and his early [DGE LUGS PA](#) followers, first called Dga' ldan pa (Gandenpa) after the [DGA' LDAN](#) monastery he founded, were also known as the new Bka' gdams pa. After the rise of the Dge lugs sect, the Bka' gdams disappeared from Tibetan history, for reasons still not fully understood, with only the monasteries of Rwa sgren and [SNAR THANG](#) retaining their original affiliation.

[Bka' gdams glegs bam pha chos bu chos](#). (Kadam Lekbam Pachö Buchö). In Tibetan, “The Book of Bka' gdams, Dharma of the Father and Sons” originating with the Indian master [ATIŚA DIPAMKARĀŚRĪJÑĀNA](#) a seminal work of the [BKA' GDAMS](#) sect of Tibetan Buddhism, being the primary text of the oral-instruction (man ngag) lineage organized into its present version by Mkhan chen Nyi ma rgyal mtshan (Kenchen Nyima Gyaltzen) in 1302. “Dharma of the Father” refers to Atiśa’s responses to questions posed by his foremost Tibetan student ['BROM STON RGYAL BA'I 'BYUNG GNAS](#) (the two “fathers” of Bka' gdams); “Dharma of the Sons” refers to Atiśa’s responses to questions posed by [RNGOG LEGS PA'I SHES RAB](#) and Khu ston Brtson 'grus g.yung drung (Kutön Tsondrü Yungdrung), the spiritual sons of Atiśa and 'Brom ston pa.

[bka' 'gyur](#). (kangyur). In Tibetan, “translation of the word [of the Buddha],” one of the two traditional divisions of the Tibetan Buddhist canon, along with the [BSTAN 'GYUR](#), the translation of the treatises ([ŚĀSTRA](#)). The bka' 'gyur comprises those [SŪTRAS](#) and [TANTRAS](#) that were accepted by the tradition as spoken or directly inspired by the Buddha. The collection was redacted, primarily by the fourteenth-century polymath [BU STON RIN CHEN GRUB](#), based upon earlier catalogues, lists, and collections of texts, particularly a major

collection at [SNAR THANG](#) monastery. The four major editions of the bka' 'gyur presently in circulation (called the Co ne, [SNAR THANG](#), [SDE DGE](#), and Beijing editions after the places they were printed) go back to two earlier branches of the textual tradition, called Them spangs ma and 'Tshal pa in modern scholarship. The first xylographic print of the bka' 'gyur was produced in China in 1410; the Sde dge bka' 'gyur, edited by Si tu Gstug lag chos kyi 'byung gnas (1700–1774) was printed in the Tibetan kingdom of Sde dge (in present-day Sichuan province) in 1733. While the collection is traditionally said to include 108 volumes (an auspicious number), most versions contain somewhat fewer. The Snar thang edition holds ninety-two volumes, divided as follows: thirteen volumes of [VINAYA](#), twenty-one volumes of [PRAJÑĀPĀRAMITĀ](#), six volumes of the [AVATAMSAKASŪTRA](#), six volumes of the [RATNAKŪTASŪTRA](#), thirty volumes of other sūtras, and twenty-two volumes of tantras. The [BON](#) tradition formulated its own bka' 'gyur, based on the Buddhist model, in the late fourteenth or early fifteenth century.

[bka' ma](#). (kama). In Tibetan “words”; in the Tibetan [RNYING MA](#) sect, referring particularly to the [MAHĀYOGA](#), [ANUYOGA](#), and [ATIYOGA TANTRAS](#). The term is contrasted with [GTER MA](#) (“treasure text”), which is also accepted as authentic scripture, but hidden and rediscovered at a later time, or directly transmitted through the medium of the mind. Two collections of the teachings of the Rnying ma sect in fifty-eight and 120 volumes are called Bka' ma; they include the entire range of texts, from [VINAYA](#) to modern commentaries on the tantras and gter ma.

[Bka' thang gser 'phreng](#). (Katang Sertreng). In Tibetan, “The Golden Rosary Chronicle”; a treasure text ([GTER MA](#)) containing a well-known biography of [PADMASAMBHAVA](#), discovered by the treasure revealer ([GTER STON](#)) [SANGS RGYAS GLING PA](#). Its complete title is: *O rgyan gu ru padma 'byung gnas kyi rnam par thar pa gser gyi phreng ba thar lam gsal byed*.

[bka' thang sde lnga](#). (katang denga). In Tibetan, “the five chronicles”; treasure texts ([GTER MA](#)) describing the times and events surrounding the life of [PADMASAMBHAVA](#), and discovered in stages by the treasure revealer ([GTER STON](#)) [O RGYAN GLING PA](#) during the late fourteenth century. The collection contains five books: the kings (rgyal po), queens (btsun mo), ministers (blon po), translators and paṇḍitas (lo paṇ), and gods and ghosts (lha 'dre). These accounts contain many early legends and myths but also sections of historical value and

interest, including descriptions of Chinese [CHAN](#) Buddhist doctrine.

[Bka' thang zangs gling ma](#). (Katang Sanglingma). In Tibetan, “The Copper Island Chronicle”; the earliest of the many treasure texts ([GTER MA](#)) containing biographies of [PADMASAMBHAVA](#), discovered by the twelfth-century treasure revealer ([GTER STON](#)) [NYANG RAL NYI MA 'OD ZER](#).

[Bka' tshal](#). (Katsel). In Tibetan, one of the four “edge-taming temples” or “edge-pinning temples” ([MTHA' 'DUL GTSUG LAG KHANG](#)) said to have been constructed during the time of the Tibetan king [SRONG BTSAN SGAM PO](#) to pin down the limbs of the demoness (T. srin mo) who was impeding the introduction of Buddhism into Tibet. The temple is located on the head flank (T. dbu ru) and pins down her right hip.

[Bkra shis lhun po](#). (Tashi Lhunpo). A Tibetan monastery that served as the seat of the [PAN CHEN LAMAS](#), located in the Tibetan city of Gzhi ka rtse (Shigatse), and considered one of the six great institutions of the [DGE LUGS](#) sect of Tibetan Buddhism. The others include [SE RA](#), ['BRAS SPUNGS](#), and [DGA' LDAN](#), all located near [LHA SA](#), together with [BLA BRANG BKRA SHIS 'KHYIL](#) and [SKU 'BUM](#), in the northeast region of A mdo. Bkra shis lhun po was founded in 1447 by [DGE 'DUN GRUB](#), a disciple of the Dge lugs luminary [TSONG KHA PA](#). In 1618, the [KARMA BKA' BRGYUD](#) monastery Bkra shis zil gnon (Tashi Silnön, “Tashi Lhunpo Suppressor”) was established on a nearby hill and, for a short while, superceded Bkra shis lhun po, but it was eventually destroyed amid sectarian strife between the rival institutions. The cleric [BLO BZANG CHOS KYI RGYAL MTSHAN](#) enlarged Bkra shis lhun po’s original structure, and the fifth Dalai Lama [NGAG DBANG BLO BZANG RGYA MTSHO](#) conferred upon him the title of [PAN CHEN LAMA](#), “Great Scholar.” Blo bzang chos kyi rgyal mtshan was affirmed as the fourth such master, with the first three prelates recognized posthumously, beginning with Tsong kha pa’s disciple [MKHAS GRUB DGE LEGS DPAL BZANG](#). The Paṅ chen Lama was elevated to a position of great religious and political authority, officially ranking second after the Dalai Lama but often acting as his tutor and occasionally rivaling him in political power. His monastery thus became a key institution in the religious and political history of central and western Tibet from the seventeenth century onward. The large monastic complex of assembly halls, temples, and residences, including its famous golden roof, was spared major destruction during the Chinese Cultural Revolution (1966–1976).

[bkra shis tshe ring mched lnga](#). (tashi tsering chenga). In Tibetan, “the five long-life sisters,” a group of pre-Buddhist Tibetan deities who were subdued and converted to Buddhism by [PADMASAMBHAVA](#); the sisters also make an appearance in the songs of [MI LA RAS PA](#) ([MI LA'I MGUR 'BUM](#)) collected by [GTSANG SMYON HERUKA](#), where they give the yogin access to the highest states of bliss. According to the [DGE LUGS](#) tradition, they are dharma protectors ([DHARMAPĀLA](#)) who have not transcended existence in [SAMŚĀRA](#) (although both the [RNYING MA](#) and [BKA' BRGYUD](#) sects assert that they have done so). They reside at either Mount Everest or [LA PHYI](#), on the border between Tibet and Nepal. Their leader is Bkra shis tshe ring ma/Rdo rje kun grags ma or Tshe yi dbang phyug ma. The other members are Mthing gi zhal bzang ma, Mi g.yo glang bzang ma, Cod pan mgrin bzang ma, and Gtal dkar 'gro bzang ma. They are also known as the bkra shis tshe yi lha mo lnga.

[Bla brang bkra shis 'khyil](#). (Labrang Tashikyil). One of the six great monasteries of Tibet belonging to the [DGE LUGS](#) sect of Tibetan Buddhism; located in the northeast region of A mdo near the traditional border with China. The other five include [SE RA](#), ['BRAS SPUNGS](#), [DGA' LDAN](#), and [BKRA SHIS LHUN PO](#), all located in central Tibet, together with [SKU 'BUM](#) in A mdo. The monastery was established in 1709 by the first ['JAM DBYANGS BZHAD PA](#) incarnation, Ngag dbang brtson grus, and became the principal seat of his subsequent incarnations. At its peak, Bla brang bkra shis 'khyil housed four thousand monks and several colleges, making it the largest and most powerful in A mdo.

[Black Hats](#). (C. heimao 黑帽). A popular designation in both European languages and Chinese for the [KARMA PA](#) lineage of incarnate lamas in the [KARMA BKA' BRGYUD](#) subsect of the [BKA' BRGYUD](#) sect of Tibetan Buddhism. Because of his black crown, the Karma pa is sometimes called the “black hat” (zhwa nag) lama. In the nineteenth century, a Western misunderstanding of this term led to the presumption that there was a “Black Hat” sect of Tibetan Buddhism, a mistake that persists in some accounts of Tibetan Buddhism. The Western and Chinese division of major Tibetan sects into [YELLOW HATS](#), [RED HATS](#), and Black Hats has no corollary in Tibetan Buddhism and should be avoided.

[bla ma](#). (lama). A Tibetan term of uncertain derivation, used to translate the Sanskrit word [GURU](#), or “teacher.” According to traditional paranomastic glosses, it means “none higher” and “high mother.” Outside of Tibet, it is sometimes assumed that any Tibetan monk is a lama, but this is not the case. This

misconception is reflected in the Chinese term lama jiao, or “teachings of the lama,” the source of the European misnomer for Tibetan Buddhism, “Lamaism.” Within Tibetan Buddhism, the term may be applied to any religious teacher, especially one’s own teacher, regardless of whether the teacher is a monk or a layperson. In common Tibetan parlance, bla ma usually denotes an incarnate lama ([SPRUL SKU](#)).

[Bla ma g.yung drung dgon pa](#). (Lama Yuru). The oldest Buddhist monastery in Ladakh and Zangskar; located 125 kilometers west of Leh, the capital of Ladakh. Bla ma g.yung drung is thought to have been founded between the tenth and eleventh centuries; the site is also believed to be a sacred [BON](#) site. According to traditional accounts, when [NAROPA](#) came to the area to meditate in the eleventh century, he decided where the monastery would be built. He then magically drained a lake in the valley in order to make way for its construction. It is a [’BRUG PA BKA’ BRGYUD](#) monastery, and currently one of the most active monasteries in the region. Bla ma g.yung drung’s library is also thought to be one of the oldest in Ladakh. The translator [RIN CHEN BZANG PO](#) built many temples at Bla ma g.yung drung.

[Bla ma Zhang](#). [full name, Zhang tshal pa Brtson ’grus grags pa] (Shangtsalpa Tsöndrü Drakpa) (1123–1193). The founder of the [TSHAL PA BKA’ BRGYUD](#), one of the four major and eight minor subsects of the [BKA’ BRGYUD](#) sect of Tibetan Buddhism ([BKA’ BRGYUD CHE BZHI CHUNG BRGYAD](#)). He was an important figure in twelfth-century Tibet in both the religious and political realms. Born into an aristocratic family near [LHA SA](#), he is said to have studied black magic in his youth. When both of his parents soon died, he attributed their deaths to his negative deeds and decided to become a Buddhist monk, receiving [BHIKSU](#) ordination in 1148. In 1152, he met the nephew of [SGAM PO PA](#), from whom he received instructions in [MAHĀMUDRĀ](#), the subject of his best known work, *Phyag chen lam mchog mthar thug* (“Supreme Path of Mahāmudrā”). In 1175 he established his own community, Tshal gung thang, north of Lha sa, controlling the region with a law code of his own composition and his own militia, dismissing criticisms of his use of force with the claim that such acts were the skillful methods of the tantric master. However, he eventually agreed to renounce violence when he was requested to do so by the first [KARMA PA](#), [DUS GSUM MKHYEN PA](#).

[Blavatsky, Helena Petrovna](#). (1831–1891). A founding member of the

Theosophical Society, Blavatsky was born in Ukraine to an aristocratic family, the daughter of a military officer and a well-known novelist. She was largely self-educated, and traveled throughout the world for more than twenty years. Arriving in New York from Paris in 1873, two years later she and [HENRY STEEL OLCOTT](#) founded the Theosophical Society, an organization that played a prominent role in the introduction of Asian religions to Europe and America. The society's purpose focused on promoting the understanding and awareness of the nature of reality through various disciplines. Madame Blavatsky claimed to have spent seven years in Tibet studying with masters whom she called "mahatmas," preservers of an ancient wisdom that provided the foundation for all mystical traditions. She also claimed to have remained in telepathic communication with these masters throughout her life and to have translated their teachings from the Senzar language into English. After attempts at alliances with various Asian teachers in India, Madame Blavatsky concluded that the modern manifestations of Hinduism and Buddhism had drifted far from their original essence, so she devoted much of her writing to expounding the true teachings, which she sometimes referred to as "Esoteric Buddhism." Two of her most important works are *The Secret Doctrine* (1888) and *The Voice of the Silence* (1889); these provide an account of, and commentary on, the theory of spiritual evolution that she is said to have discovered in the ancient *Book of Dzyan*, written in the secret language of Senzar. Although this text has not been found, nor the Senzar language identified, *The Voice of the Silence* has been considered to be a Buddhist text by some prominent figures within the modern Buddhist tradition.

[Blo bzang chos kyi rgyal mtshan](#). (Losang Chökyi Gyaltsen) (1570–1662). A Tibetan Buddhist scholar and incarnate lama ([SPRUL SKU](#)), revered as the first or the fourth [PAN CHEN LAMA](#); he was the first to receive the title. He entered [BKRA SHIS LHUN PO](#) monastery at age seventeen and in 1601 ascended the throne as the monastery's abbot. He also later served as abbot of '[BRAS SPUNGS](#) and [SE RA](#). He lived during a formative period in Tibetan history that saw the rise to power of the [DALAI LAMA](#) institution and the [DGA' LDAN PHO BRANG](#) government, and the demise of the political power of the [KARMA BKA' BRGYUD](#) sect and their Gtsang patrons. Blo bzang chos kyi rgyal mtshan was instrumental in forging alliances between the emerging [DGE LUGS](#) sect and powerful families associated with the [RNYING MA](#) sect. He discovered and served as tutor to the fifth Dalai Lama, [NGAG DBANG BLO BZANG RGYA MTSHO](#), who recognized Blo bzang chos kyi rgyal

mtshan’s achievements and conferred on him the title paṇḍita chen po, or “great scholar,” from which the name Paṇ chen Lama is derived. Blo bzang chos kyi rgyal mtsan is traditionally viewed as the fourth such master, with the first three prelates recognized posthumously as the previous incarnations, beginning with the Dge lugs founder [TSONG KHA PA](#)’s disciple [MKHAS GRUB DGE LEGS DPAL BZANG](#). For this reason, Blo bzang chos kyi rgyal mtshan is also sometimes considered the fourth Paṇ chen Lama.

blo rigs. [alt. blo rig] (lorik). In Tibetan, “mind and reasoning,” “categories of mind” or “mind and awareness” (when spelled blo rig); a genre of Tibetan monastic textbook literature (yig cha) that sets forth the categories of mind so that beginners can learn the basic concepts of Buddhist epistemology and logic. This genre supplements, or is a subset of, the “collected topics” ([BSDUS GRWA](#)) genre of textbook that forms the basis of the curriculum during the first years of study in many Tibetan monasteries. The categories of mind are not fixed, but usually include subdivisions into seven, three, and pairs. The seven minds range on a scale from wrong consciousness (log shes), through doubt, assumption, and inference ([ANUMĀNA](#)), to direct perception ([PRATYAKSA](#)); among the contrasting pairs of minds are “sense consciousness” (dbang shes) via the sense faculties ([INDRIYA](#)) and “mental consciousness” (yid shes) based on [MANAS](#); minds that are tshad ma (“valid”) and tshad min (“invalid”); conceptual (rtog bcas) and nonconceptual minds (rtog med); and minds that have a specifically characterized ([SVALAKṢANA](#)) appearing object (snang yul) and a generally characterized ([SĀMĀNYALAKṢANA](#)) appearing object. The last of the contrasting pairs is primary and secondary minds, or minds ([CITTA](#)) and mental factors ([CAITTA](#)). Longer discussion of this topic includes a discussion of the fifty-one mental factors in several subcategories. The explanation of mind in blo rigs draws mainly on terminology found in [DHARMAKĪRTI](#)’s [PRAMĀNAVĀRTTIKA](#) and its commentarial tradition, as well as the [ABHIDHARMAKOŚABHĀSYA](#).

blo sbyong. (lojong). In Tibetan, “mind training”; a tradition of Tibetan Buddhist practice associated especially with the [BKA’ GDAMS](#) sect and providing pithy instructions on the cultivation of compassion ([KARUNĀ](#)) and [BODHICITTA](#). The trainings are based primarily on the technique for the equalizing and exchange of self and other, as set forth in the eighth chapter of [ŚĀNTIDEVA](#)’s [BODHICARYĀVATĀRA](#), a poem in ten chapters on the [BODHISATTVA](#) path. The practice is to transform the conception of self ([ĀTMAGRAHA](#)), characterized as a

self-cherishing attitude (T. rang gces 'dzin) into cherishing others (gzhan gces 'dzin), by contemplating the illusory nature of the self, the faults in self-cherishing, and the benefits that flow from cherishing others. The training seeks to transform difficulties into reasons to reaffirm a commitment to bodhicitta. Dharmarakṣita's *Blo sbyong mtshon cha'i 'khor lo* (sometimes rendered as "Wheel of Sharp Weapons"), translated into Tibetan by [ATIŚA DĪPAMKARĀŚRĪJÑĀNA](#) and '[BROM STON](#), founders of the Bka' gdam sect, in the eleventh century; Glang ri thang pa's (Langri Thangpa) (1054–1123) [BLO SBYONG TSHIG BRGYAD MA](#) ("Eight Verses on Mind Training"); '[CHAD KA BA YE SHES RDO RJE](#)'s [BLO SBYONG DON BDUN MA](#) (Lojong dōndünma) ("Seven Points of Mind Training"), and Hor ston Nam mkha'i dpal bzang's (1373–1447) *Blo sbyong nyi ma'i 'od zer* ("Mind Training like the Rays of the Sun") are four among a large number of widely studied and practiced blo sbyong texts. The *Blo sbyong mtshon cha'i 'khor lo*, for example, compares the bodhisattva to a hero who can withstand spears and arrows, and to a peacock that eats poison and becomes even more beautiful; it says difficulties faced in day-to-day life are reasons to strengthen resolve because they are like the spears and arrow of karmic results launched by earlier unsalutary actions. From this perspective, circumstances that are ordinarily upsetting or depressing are transformed into reasons for happiness, by thinking that negative [KARMA](#) has been extinguished. The influence of tantric Buddhism is discernable in the training in blo sbyong texts like the *Mtshon cha'i 'khor lo* that exhorts practitioners to imagine themselves as the deity [YAMĀNTAKA](#) and mentally launch an attack on the conception of self, imagining it as a battle. The conception of self is taken as the primary reason for the earlier unsalutary actions that caused negative results, and for engaging in present unsalutary deeds that harm others and do nothing to advance the practitioner's own welfare.

[Blo sbyong don bdun ma](#). (Lojong Dōndünma). In Tibetan, "Seven Points of Mind Training"; an influential Tibetan work in the [BLO SBYONG](#) ("mind training") genre. The work was composed by the [BKA' GDAMS](#) scholar '[CHAD KA BA YE SHES RDO RJE](#), often known as Dge bshes Mchad kha ba, based on the tradition of generating [BODHICITTA](#) known as "mind training" transmitted by the Bengali master [ATIŚA DĪPAMKARĀŚRĪJÑĀNA](#). It also follows the system laid out previously by Glang ri thang pa (Langri Tangpa) in his [BLO SBYONG TSHIG BRGYAD MA](#) ("Eight Verses on Mind Training"). Comprised of a series of pithy instructions and meditative techniques, the *Blo sbyong don bdun ma* became influential in

Tibet, with scholars from numerous traditions writing commentaries to it. According to the commentary of the nineteenth-century Tibetan polymath '[JAM MGON KONG SPRUL](#), the seven points covered in the treatise are: (1) the preliminaries to mind training, which include the contemplations on the preciousness of human rebirth, the reality of death and impermanence, the shortcomings of [SAMSĀRA](#), and the effects of [KARMA](#); (2) the actual practice of training in bodhicitta; (3) transforming adverse conditions into the path of awakening; (4) utilizing the practice in one's entire life; (5) the evaluation of mind training; (6) the commitments of mind training; and (7) guidelines for mind training.

[Blo sbyong tshig brgyad ma](#). (Lojong Tsikgyema). In Tibetan, “Eight Verses on Mind Training”; a text composed by the [BKA' GDAMS](#) scholar Glang ri thang pa (Langri Thangpa, 1054–1123), based upon the instructions for generating [BODHICITTA](#) transmitted to Tibet by the Bengali master [ATIŚA DĪPAMKARASŪJĪNĀNA](#). The work became famous in Tibet for its penetrating advice for the practice of compassion ([KARUNĀ](#)). It formed the basis for future influential works, including the often-quoted [BLO SBYONG DON BDUN MA](#) (“Seven Points of Mind Training”), by the Bka' gdams scholar '[CHAD KA BA YE SHES RDO RJE](#), written several decades later. The first seven verses teach the practice of conventional ([SAMVṚTI](#)) bodhicitta, and the last verse ultimate ([PARAMĀRTHA](#)) bodhicitta. The first training is to view sentient beings as wish-granting gems because it is only by feeling compassion for beings that bodhisattvas reach enlightenment; the second is to cultivate an attitude similar to a person of low status whose natural place is serving others; and the third is to immediately confront and counteract afflictions ([KLEŚA](#)) (here understood specifically as selfishness, attachment to one's own interests, and hatred for those who oppose them). The fourth training is to treat people who are actually cruel as extremely rare and precious because they present an opportunity to practice patience and compassion, without which enlightenment is impossible; the fifth is the famous advice to “give all victory to others; take all defeat for yourself;” the sixth is to treat ungrateful persons as special gurus, and the seventh is to practice [GTONG LEN](#) (giving and taking), a practice of breathing out love and compassion and breathing in the sufferings of others. The eighth training is in a mind free from all conceptions.

[Blue Cliff Record](#). See [BIYAN LU](#).

[Blyth, Reginald H.](#) (1898–1964). An early English translator of Japanese poetry, with a particular interest in [ZEN](#) Buddhism. Blyth was born in Essex; his father was railway clerk. He was imprisoned for three years during the First World War as a conscientious objector. In 1925, he traveled to Korea, then a Japanese colony, where he taught English at Keijō University in Seoul. It was there that he developed his first interest in Zen through the priest Hanayama Taigi. After a brief trip to England, he returned to Seoul and then went to Japan, where he taught English in Kanazawa. With the outbreak of the Pacific War, Blyth was interned as an enemy alien, despite having expressed sympathy for the Japanese cause. Although he remained interned throughout the war, he was allowed to continue his studies, and in 1942 published his most famous work, *Zen in English Literature and Oriental Classics*, which sought to identify Zen elements in a wide range of literature. After the war, Blyth served as a liaison between the Japanese imperial household and the Allies, later becoming a professor of English at Gakushuin University, where one of his students was the future emperor Akihito (b. 1933). After the war, he published a four-volume collection of his translations of Japanese haiku poetry, which was largely responsible for European and American interest in haiku during the 1950s, among the Beat Poets and others, and the writing of haiku in languages other than Japanese. Subsequent scholarship has questioned the strong connection that Blyth saw between Zen and haiku. Blyth died in Japan and is buried in Kamakura next to his friend [D. T. SUZUKI](#).

[Bo.](#) (J. Haku; K. Paek 帛). Ethnikon used in China for monks who hailed from [KUCHA](#), an Indo-European oasis kingdom along the [SILK ROAD](#), at the northern edge of the Takla Makhan desert in Central Asia. The Chinese is the transcription of the surname of the royal family of Kucha, and thus applied to everyone who came from the region. See [FOTUDENG](#); [SHI](#).

[bodaiji.](#) (菩提寺). In Japanese, literally “[BODHI](#) temple”; also known as bodaiin, bodaisho, or [DANNADERA](#). Bodaiji are temples that flourished mainly during the Edo period under the parish system ([DANKA SEIDO](#)) established by the Tokugawa shogunate. Parishioners, known as danka or DAN’OTSU, were required to register at these local temples. By establishing the danka and terauke (“temple support”) system, the early Tokugawa shogunate hoped to eradicate the threat of Christianity as they had witnessed it in the Christian-led Shimabara Uprising of 1637. During the Edo period, the bodaiji primarily offered funerary and

memorial services for the ancestors of its parishioners and in many cases came to function as cemeteries. Festivals for the dead such as bon (see [YULANBEN](#)) and higan were also held annually at these temples. Although the danka system was abolished during the Meiji period, the bodaiji continue to function as memorial temples in modern Japan.

[Bodawpaya](#). (r. 1782–1819). Burmese king and sixth monarch of the Konbaung dynasty (1752–1885). Originally known as Badon Min, he was the fourth son of Alaungpaya (r. 1752–1760), founder of the dynasty, and ascended to the throne through usurpation. His official regnal title was Hsinpyumyashin, “Lord of Many White Elephants”; the name by which he is most commonly known, Bodawpaya, “Lord Grandfather,” is a posthumous sobriquet. Immediately upon becoming king in 1782, he began construction of a new capital, [AMARAPURA](#), and convened a conclave of abbots, known as the [THUDHAMMA](#) (P. Sudhamm) council, to oversee a reform of the Burmese [SAMGHA](#). In 1784, he conquered the kingdom of Arakan and transported its colossal palladium, the [MAHĀMUNI](#) image of the Buddha (see [ARAKAN BUDDHA](#)), to Amarapura and enshrined it in a temple to the north of the city. Later, in 1787 he dispatched a Buddhist mission to Arakan to bring the Arakanese [THERAVĀDA](#) saṃgha into conformity with Thudhamma standards. In 1791 Buddhist missions were sent from the capital to forty-two cities around the realm, each equipped with Thudhamma handbooks and newly edited copies of the Buddhist canon (tipiṭaka; S. [TRIPITAKA](#)). The missions were charged with the threefold task of defrocking unworthy monks, disestablishing local monastic fraternities, and reordaining worthy monks from these local groups into a single empire-wide monastic order under Thudhamma control. In conjunction with this policy of saṃgha unification, a standardized syllabus for monastic education was promulgated and monks and novices throughout the realm were thenceforth required to pass state-administered Pāli examinations or to leave the order. That same year (1791), Bodawpaya retired from the palace, placing the daily affairs of the kingdom in the hands of his son, the crown prince. While retaining ultimate royal authority, he donned the robes of a mendicant and took up residence at Mingun, some fifteen miles north of Amarapura on the opposite bank of the Irrawaddy River. There, he oversaw for several years the construction of the great Mingun pagoda, which, if it had been completed, would have been the largest pagoda in the world. The labor force for this project, numbering some twenty thousand people, was conscripted from the vanquished kingdom of Arakan. Strict and austere in temperament, Bodawpaya

was quick to suppress heresy and banned the use of intoxicants and the slaughter of cattle, on penalty of death. He was enamored of Hindu science and sent several missions to India to acquire Brahmanical treatises on medicine, alchemy, astrology, calendrics, and what he hoped would be original Indian recensions of Buddhist scriptures. His missions reached [BODHGAYĀ](#) and returned with models of the main shrine and maps of its environs, which were used to create a miniature replica of the site at Mingun. He appointed Indian brāhmaṇas to refine court punctilio and attempted to reform the Burmese calendar along Indian lines. The calendar reforms were rejected by monastic leaders and this rebuff appears to have caused the king to become increasingly critical of the monkhood. Toward the end of his reign, Bodawpaya defrocked the Thudhamma patriarch, declaring the dispensation (P. *sāsana*; S. [ŚĀSANA](#)) of Gotama ([GAUTAMA](#)) Buddha to be extinct and its saṃgha therefore defunct. This attempt to disestablish the Burmese saṃgha met with little success outside the capital and was later abandoned. Bodawpaya's military campaigns against Arakan and Assam extended the borders of the Burmese empire to the frontiers of the British East India Company. The cruelty of Bodawpaya's rule in Arakan created an influx of refugees into British territory, who were regularly pursued by Burmese troops. Although British diplomacy kept tensions with the Burmese kingdom under control throughout Bodawpaya's reign, the stage was set for eventual military conflict between the two powers and the subsequent British conquest of Burma in three wars during the nineteenth century.

[Bodhgayā](#). (S. *Buddhagayā*). Modern Indian place name for the most significant site in the Buddhist world, renowned as the place where [ŚĀKYAMUNI](#) Buddha (then, still the [BODHISATTVA](#) prince [SIDDHĀRTHA](#)) became a buddha while meditating under the [BODHI TREE](#) at the “seat of enlightenment” ([BODHIMANDA](#)) or the “diamond seat” ([VAJRĀSANA](#)). The site is especially sacred because, according to tradition, not only did Śākyamuni Buddha attain enlightenment there, but all buddhas of this world system have or will do so, albeit under different species of trees. Bodhgayā is situated along the banks of the [NAIRAÑJANĀ](#) river, near [RĀJAGRHA](#), the ancient capital city of the [MAGADHA](#) kingdom. Seven sacred places are said to be located in Bodhgayā, each being a site where the Buddha stayed during each of the seven weeks following his enlightenment. These include, in addition to the bodhimaṇḍa under the Bodhi tree: the place where the Buddha sat facing the Bodhi tree during the second week, with an unblinking gaze (and hence the site of the *animeṣalocana caitya*);

the place where the Buddha walked back and forth in meditation ([CAṆKRAMA](#)) during the third week; the place called the ratnagrha, where the Buddha meditated during the fourth week, emanating rays of light from his body; the place under the ajapāla tree where the god [BRAHMĀ](#) requested that the Buddha turn the wheel of the dharma ([DHARMACAKRAPRAVARTANA](#)) during the fifth week; the lake where the [NĀGA MUCILINDA](#) used his hood to shelter the Buddha from a storm during the sixth week; and the place under the rājāyatana tree where the merchants [TRAPUSA](#) and [BHALLIKA](#) met the Buddha after the seventh week, becoming his first lay disciples. ¶ Located in the territory of [MAGADHA](#) (in modern Bihar), the ancient Indian kingdom where the Buddha spent much of his teaching career, Bodhgayā is one of the four major pilgrimage sites ([MAHĀSTHĀNA](#)) sanctioned by the Buddha himself, along with [LUMBINĪ](#) in modern-day Nepal, where the Buddha was born; the Deer Park ([MRGADĀVA](#)) at [SĀRNĀTH](#), where he first taught by “turning the wheel of the dharma” ([DHARMACAKRAPRAVARTANA](#)); and [KUŚINAGARĪ](#) in Uttar Pradesh, where he passed into [PARINIRVĀNA](#). According to the [AŚOKĀVADĀNA](#), the emperor [AŚOKA](#) visited Bodhgayā with the monk [UPAGUPTA](#) and established a [STŪPA](#) at the site. There is evidence that Aśoka erected a pillar and shrine at the site during the third century BCE. A more elaborate structure, called the vajrāsana [GANDHAKUṬĪ](#) (“perfumed chamber of the diamond seat”), is depicted in a relief at Bodhgayā, dating from c. 100 BCE. It shows a two-storied structure supported by pillars, enclosing the Bodhi tree and the vajrāsana, the “diamond seat,” where the Buddha sat on the night of his enlightenment. The forerunner of the present temple is described by the Chinese pilgrim [XUANZANG](#). This has led scholars to speculate that the structure was built sometime between the third and sixth centuries CE, with subsequent renovations. Despite various persecutions by non-Buddhist Indian kings, the site continued to receive patronage, especially during the Pāla period, from which many of the surrounding monuments date. A monastery, called the Bodhimaṇḍavihāra, was established there and flourished for several centuries. [FAXIAN](#) mentions three monasteries at Bodhgayā; Xuanzang found only one, called the Mahābodhisamghārāma (see [MAHĀBODHI TEMPLE](#)). The temple and its environs fell into neglect after the Muslim invasions that began in the thirteenth century. British photographs from the nineteenth century show the temple in ruins. Restoration of the site was ordered by the British governor-general of Bengal in 1880, with a small eleventh-century replica of the temple serving as a model. There is a tall central tower some 165 feet (fifty meters) in height, with a high arch over the entrance with smaller

towers at the four corners. The central tower houses a small temple with an image of the Buddha. The temple is surrounded by stone railings, some dating from 150 BCE, others from the Gupta period (300–600 CE) that preserve important carvings. In 1886, [EDWIN ARNOLD](#) visited Bodhgayā. He published an account of his visit, which was read by [ANAGĀRIKA DHARMAPĀLA](#) and others. Arnold described a temple surrounded by hundreds of broken statues scattered in the jungle. The Mahābodhi Temple itself had stood in ruins prior to renovations undertaken by the British in 1880. Also of great concern was the fact that the site had been under Śaiva control since the eighteenth century, with reports of animal sacrifice taking place in the environs of the temple. Dharmapāla visited Bodhgayā himself in 1891, and returned to Sri Lanka, where he worked with a group of leading Sinhalese Buddhists to found the [MAHĀBODHI SOCIETY](#) with the aim of restoring Bodhgayā as place of Buddhist worship and pilgrimage. The society undertook a series of unsuccessful lawsuits to that end. In 1949, after Indian independence, the Bodhgayā Temple Act was passed, which established a committee of four Buddhists and four Hindus to supervise the temple and its grounds. The Government of India asked Anagārika Munindra, a Bengali monk and active member of the Mahābodhi Society, to oversee the restoration of Bodhgayā. Since then, numerous Buddhist countries—including Bhutan, China, Japan, Myanmar, Nepal, Sikkim, Sri Lanka, Thailand, Tibet, and Vietnam—have constructed (or restored) their own temples and monasteries in Bodhgayā, each reflecting its national architectural style. In 2002, the Mahābodhi Temple was named a UNESCO World Heritage Site.

bodhi. (T. byang chub; C. puti/jue; J. bodai/kaku; K. pori/kak 菩提/覺). In Sanskrit and Pāli, “awakening,” “enlightenment”; the consummate knowledge that catalyzes the experience of liberation ([VIMOKSA](#)) from the cycle rebirth. Bodhi is of three discrete kinds: that of perfect buddhas ([SAMYAKSAMBOUDI](#)); that of [PRATYEKABUDDHAS](#) or “solitary enlightened ones” (pratyekabodhi); and that of [ŚRĀVAKAS](#) or disciples (śrāvakabodhi). The content of the enlightenment experience is in essence the understanding of the [FOUR NOBLE TRUTHS](#) (catvāry āryasatyāni): namely, the truth of suffering ([DUHKHA](#)), the truth of the cause of suffering ([SAMUDAYA](#)), the truth of the cessation of suffering ([NIRODHA](#)), and the truth of the path leading to the cessation of suffering ([MĀRGA](#)). Bodhi is also elaborated in terms of its thirty-seven constituent factors ([BODHIPĀKSIKADHARMA](#)) that are mastered in the course of perfecting one’s understanding, or the seven limbs of awakening ([BODHYAṄGA](#)) that lead to the attainment of the “threefold

knowledge” ([TRIVIDYĀ](#); P. tevijjā): “recollection of former lives” (S. [PŪRVANIVĀSĀNUMṚTI](#); P. pubbenivāsānussati), the “divine eye” ([DIVYACAḶṢUS](#); P. dibbacakkhu), which perceives that the death and rebirth of beings occurs according to their actions ([KARMAṆ](#)), and the “knowledge of the extinction of the contaminants” ([ĀSRAVAḶṢAYA](#); P. āsavakkayañāṇa). Perfect buddhas and solitary buddhas (pratyekabuddha) become enlightened through their own independent efforts, for they discover the four noble truths on their own, without the aid of a teacher in their final lifetime (although pratyekabuddhas may rely on the teachings of a buddha in previous lifetimes). Of these two types of buddhas, perfect buddhas are then capable of teaching these truths to others, while solitary buddhas are not. Śrāvakas, by contrast, do not become enlightened on their own but are exposed to the teachings of perfect buddhas and through the guidance of those teachings gain the understanding they need to attain awakening. Bodhi also occupies a central place in [MAHĀYĀNA](#) religious conceptions. The Mahāyāna ideal of the [BODHISATTVĀ](#) means literally a “being” ([SATTVĀ](#)) intent on awakening (bodhi) who has aroused the aspiration to achieve buddhahood or the “thought of enlightenment” ([BODHICITTA](#); [BODHICITTOTPĀDA](#)). The Mahāyāna, especially in its East Asian manifestations, also explores in great detail the prospect that enlightenment is something that is innate to the mind (see [BENJUE](#); [HONGAKU](#)) rather than inculcated, and therefore need not be developed gradually but can instead be realized suddenly (see [DUNWU](#)). The Mahāyāna also differentiates between the enlightenment (bodhi) of śrāvakas and pratyekabuddhas and the full enlightenment (samyaksambodhi) of a buddha. According to Indian and Tibetan commentaries on the [PRAJÑĀPĀRAMITĀ](#) sūtras, buddhas achieve full enlightenment not beneath the [BODHI TREE](#) in [BODHGAYĀ](#), but in the [AKANISṬHA](#) heaven in the form of a [SAMBHOGAKĀYA](#), or enjoyment body remaining for eternity to work for the welfare of sentient beings. The bodhisattva who strives for enlightenment and achieves buddhahood beneath the Bodhi tree is a [NIRMĀNAKĀYA](#), a conjured body meant to inspire the world. See also [WU](#); [JIANWU](#).

[Bodhicaryāvatāra](#). (T. Byang chub sems dpa’i spyod pa la ’jug pa; C. Putixing jing; J. Bodaigyōkyō; K. Porihaeng kyōng 菩提行經). In Sanskrit, lit. “Introduction to the Practice of Enlightenment,” a.k.a. *Bodhisattvacaryāvatāra*, “Introduction to the Bodhisattva Practice”; a poem about the [BODHISATTVĀ](#) path, in ten chapters, written by the Indian poet [ŚĀNTIDEVA](#) (fl. c. 685–763). The verse is regarded as one of the masterpieces of late Indian [MAHĀYĀNA](#) Buddhism,

eliciting substantial commentary in both India and Tibet. The most influential of the Indian commentaries is the *Bodhicaryāvatārapañjikā* by [PRAJÑĀKARAMATI](#). The text is especially important in Tibetan Buddhism, where it has long been memorized by monks and where stanzas from the text are often cited in both written and oral religious discourse. The poem is an extended reverie on the implications of the “aspiration for enlightenment” ([BODHICITTA](#)) that renders a person a bodhisattva, and on the deeds of the bodhisattva, the six perfections ([PĀRAMITĀ](#)). In the first chapter, Śāntideva distinguishes between two forms of bodhicitta, the intentional ([PRANIDHICITTOTPĀDA](#)) and the practical ([PRASTHĀNACITTOTPĀDA](#)), comparing them to the decision to undertake a journey and then actually setting out on that journey. In the fifth chapter he provides a famous argument for patience ([KSĀNTI](#)), stating that in order to walk uninjured across a surface of sharp stones, one can either cover the entire world with leather or one can cover the sole of one’s foot with leather; in the same way, in order to survive the anger of enemies, one can either kill them all or practice patience. In the eighth chapter, he sets forth the technique for the equalizing and exchange of self and other, regarded in Tibet as one of the two chief means of cultivating bodhicitta. The lengthiest chapter is the ninth, devoted to wisdom ([PRAJÑĀ](#)). Here Śāntideva refutes a range of both non-Buddhist and Buddhist positions. On the basis of this chapter, Śāntideva is counted as a [PRĀSAṄGIKA](#) in the Tibetan doxographical system. According to legend, when Śāntideva recited this chapter to the monks of [NĀLANDĀ](#) monastery, he began to rise into the air, leaving some questions as to precisely how the chapter ends. The final chapter is a prayer, often recited independently.

[bodhicitta](#). (T. byang chub kyi sems; C. putixin; J. bodaishin; K. porisim 菩提心). In Sanskrit, “thought of enlightenment” or “aspiration to enlightenment”; the intention to reach the complete, perfect enlightenment ([ANUTTARASAMYAKSAMBODHI](#)) of the buddhas, in order to liberate all sentient beings in the universe from suffering. As the generative cause that leads to the eventual achievement of buddhahood and all that it represents, bodhicitta is one of the most crucial terms in [MAHĀYĀNA](#) Buddhism. The achievement of bodhicitta marks the beginning of the [BODHISATTVA](#) path: bodhicitta refers to the aspiration that inspires the bodhisattva, the being who seeks buddhahood. In some schools of Mahāyāna Buddhism, bodhicitta is conceived as being latent in all sentient beings as the “innately pure mind” (prakṛtipariśuddhacitta), as, for example, in the [MAHĀVAIROCANĀBHISAMBODHISŪTRA](#): “Knowing one’s own mind

according to reality is [BODHI](#), and bodhicitta is the innately pure mind that is originally existent.” In this sense, bodhicitta was conceived as a universal principle, related to such terms as [DHARMAKĀYA](#), [TATHĀGATA](#), or [TATHATĀ](#). However, not all schools of the Mahāyāna (e.g., some strands of [YOGĀCĀRA](#)) hold that all beings are destined for buddhahood and, thus, not all beings are endowed with bodhicitta. Regardless of whether or not bodhicitta is regarded as somehow innate, however, bodhicitta is also a quality of mind that must be developed, hence the important term [BODHICITTOTPĀDA](#), “generation of the aspiration to enlightenment.” Both the [BODHISATTVABHŪMI](#) and the [MAHĀYĀNASŪTRĀLAMKĀRA](#) provide a detailed explanation of bodhicitta. In late Indian Mahāyāna treatises by such important authors as [ŚĀNTIDEVA](#), [KAMALAŚĪLA](#), and [ATIŚA DĪPAMKARASŪTRĪJĀNA](#), techniques are set forth for cultivating bodhicitta. The development of bodhicitta also figures heavily in Mahāyāna liturgies, especially in those where one receives the bodhisattva precepts ([BODHISATTVASAMVARA](#)). In this literature, two types of bodhicitta are enumerated. First, the “conventional bodhicitta” ([SAMVRTIBODHICITTA](#)) refers to a bodhisattva’s mental aspiration to achieve enlightenment, as described above. Second, the “ultimate bodhicitta” ([PARAMĀRTHABODHICITTA](#)) refers to the mind that directly realizes either emptiness ([ŚŪNYATĀ](#)) or the enlightenment inherent in the mind. This “conventional bodhicitta” is further subdivided between [PRANIDHICITTOTPĀDA](#), literally, “aspirational creation of the attitude” (where “attitude,” [CITTA](#), refers to bodhicitta), where one makes public one’s vow ([PRANIDHĀNA](#)) to attain buddhahood; and [PRASTHĀNACITTOTPĀDA](#), literally “creation of the attitude of setting out,” where one actually sets out to practice the path to buddhahood. In discussing this latter pair, Śāntideva in his [BODHICARYĀVATĀRA](#) compares the first type to the decision to undertake a journey and the second type to actually setting out on the journey; in the case of the bodhisattva path, then, the first therefore refers to the process of developing the aspiration to buddhahood for the sake of others, while the second refers to undertaking the various practices of the bodhisattva path, such as the six perfections ([PĀRAMITĀ](#)). The [AVATAMSAKASŪTRA](#) describes three types of bodhicitta, those like a herder, a ferryman, and a king. In the first case the bodhisattva first delivers all others into enlightenment before entering enlightenment himself, just as a herder takes his flock into the pen before entering the pen himself; in the second case, they all enter enlightenment together, just as a ferryman and his passengers arrive together at the further shore; and in the third, the bodhisattva first reaches enlightenment and then helps

others to reach the goal, just as a king first ascends to the throne and then benefits his subjects. A standard definition of bodhicitta is found at the beginning of the [ABHISAMAYĀLAMKĀRA](#), where it is defined as an intention or wish that has two aims: buddhahood, and the welfare of those beings whom that buddhahood will benefit; the text also gives a list of twenty-two types of bodhicitta, with examples for each. Later writers like Ārya [VIMUKTISENA](#) and [HARIBHADRA](#) locate the *Abhisamayālamkāra*'s twenty-two types of bodhicitta at different stages of the bodhisattva path and at enlightenment. At the beginning of his [MADHYAMAKĀVATĀRA](#), [CANDRAKĪRTI](#) compares compassion ([KARUNĀ](#)) to a seed, water, and crops and says it is important at the start (where compassion begins the bodhisattva's path), in the middle (where it sustains the bodhisattva and prevents a fall into the limited [NIRVĀNA](#) of the [ARHAT](#)), and at the end when buddhahood is attained (where it explains the unending, spontaneous actions for the sake of others that derive from enlightenment). Karuṇā is taken to be a cause of bodhicitta because bodhicitta initially arises and ultimately will persist, only if [MAHĀKARUNĀ](#) ("great empathy for others' suffering") is strong. In part because of its connotation as a generative force, in [ANUTTARAYOGATANTRA](#), bodhicitta comes also to refer to semen, especially in the practice of sexual yoga, where the physical seed ([BĪJA](#)) of awakening (representing [UPĀYA](#)) is placed in the lotus of wisdom ([PRAJÑĀ](#)).

[Bodhicittavivarana](#). (T. Byang chub sems 'grel). In Sanskrit, "Exposition of the Mind of Enlightenment"; a work traditionally ascribed to [NĀGĀRJUNA](#), although the text is not cited by Nāgārjuna's commentators [BUDDHAPĀLITA](#), [CANDRAKĪRTI](#), or [BHĀVAVIVEKA](#). This absence, together with apparently tantric elements in the text and the fact that it contains a sustained critique of [VIJÑĀNAVĀDA](#), have led some scholars to conclude that it is not the work of the same Nāgārjuna who authored the [MŪLAMADHYAMAKĀRIKĀ](#). Nonetheless, the work is widely cited in later Indian Mahāyāna literature and is important in Tibet. The text consists of 112 stanzas, preceded by a brief section in prose. It is essentially a compendium of [MAHĀYĀNA](#) theory and practice, intended for bodhisattvas, both monastic and lay, organized around the theme of [BODHICITTA](#), both in its conventional aspect ([SAMVRTIBODHICITTA](#)) as the aspiration to buddhahood out of compassion for all sentient beings, and in its ultimate aspect ([PARAMĀRTHABODHICITTA](#)) as the insight into emptiness ([ŚŪNYATĀ](#)). In addition to the refutation of Vijñānavāda, the text refutes the self as understood by the [TĪRTHIKAS](#) and the [SKANDHAS](#) as understood by the [ŚRĀVAKAS](#).

bodhicittotpāda. (T. byang chub kyi sems bskyed pa; C. fa puti xin; J. hotsubodaishin; K. pal pori sim 發菩提心). In Sanskrit, “generating the aspiration for enlightenment,” “creating (utpāda) the thought ([CITTA](#)) of enlightenment ([BODHI](#))”; a term used to describe both the process of developing [BODHICITTA](#), the aspiration to achieve buddhahood, as well as the state achieved through such development. The [MAHĀYĀNA](#) tradition treats this aspiration as having great significance in one’s spiritual career, since it marks the entry into the Mahāyāna and the beginning of the [BODHISATTVA](#) path. The process by which this “thought of enlightenment” (bodhicitta) is developed and sustained is bodhicittotpāda. Various types of techniques or conditional environments conducive to bodhicittotpāda are described in numerous Mahāyāna texts and treatises. The [BODHISATTVABHŪMI](#) says that there are four predominant conditions ([ADHIPATIPRATYAYA](#)) for generating bodhicitta: (1) witnessing an inconceivable miracle (ṛddhiprātihārya) performed by a buddha or a bodhisattva, (2) listening to a teaching regarding enlightenment ([BODHI](#)) or to the doctrine directed at bodhisattvas ([BODHISATTVAPITAKA](#)), (3) recognizing the dharma’s potential to be extinguished and seeking therefore to protect the true dharma ([SADDHARMA](#)), (4) seeing that sentient beings are troubled by afflictions ([KLEŚA](#)) and empathizing with them. The *Fa putixinjing lun* introduces another set of four conditions for generating bodhicitta: (1) reflecting on the buddhas; (2) contemplating the dangers ([ĀDĪNAVA](#)) inherent in the body; (3) developing compassion ([KARUNĀ](#)) toward sentient beings; (4) seeking the supreme result ([PHALA](#)). The Chinese apocryphal treatise [DASHENG QIXIN LUN](#) (“Awakening of Faith According to the Mahāyāna”) refers to three types of bodhicittotpāda: that which derives from the accomplishment of faith, from understanding and practice, and from realization. [JINGYING HUIYUAN](#) (523–592) in his [DASHENG YIZHANG](#) (“Compendium on the Purport of Mahāyāna”) classifies bodhicittotpāda into three groups: (1) the generation of the mind based on characteristics, in which the bodhisattva, perceiving the characteristics of [SAMŚĀRA](#) and [NIRVĀNA](#), abhors saṃsāra and aspires to seek nirvāṇa; (2) the generation of the mind separate from characteristics, in which the bodhisattva, recognizing that the nature of saṃsāra is not different from nirvāṇa, leaves behind any perception of their distinctive characteristics and generates an awareness of their equivalency; (3) the generation of the mind based on truth, in which the bodhisattva, recognizing that the original nature of bodhi is identical to his own mind, returns to his own original state of mind. The Korean scholiast [WŎNHYO](#) (617–686), in his *Muryangsugyōng chongyo* (“Doctrinal Essentials of the ‘Sūtra of Immeasurable

Life’”), considers the four great vows of the bodhisattva (see C. [SI HONGSHIYUAN](#)) to be bodhicitta and divides its generation into two categories: viz., the aspiration that accords with phenomena (*susa palsim*) and the aspiration that conforms with principle (*suri palsim*). The topic of bodhicittotpāda is the subject of extensive discussion and exegesis in Tibetan Buddhism. For example, in his [LAM RIM CHEN MO](#), [TSONG KHA PA](#) sets forth two techniques for developing this aspiration. The first, called the “seven cause and effect precepts” (*rgyu ’bras man ngag bdun*) is said to derive from [ATISA DIPAMKARASRIJNANA](#). The seven are (1) recognition of all sentient beings as having been one’s mother in a past life, (2) recognition of their kindness, (3) the wish to repay their kindness, (4) love, (5) compassion, (6) the wish to liberate them from suffering, and (7) bodhicitta. The second, called the equalizing and exchange of self and other (*bdag gzhan mnyam brje*) is derived from the eighth chapter of [ŚĀNTIDEVA](#)’s [BODHICARYĀVATĀRA](#). It begins with the recognition that oneself and others equally want happiness and do not want suffering. It goes on to recognize that by cherishing others more than oneself, one ensures the welfare of both oneself (by becoming a buddha) and others (by teaching them the dharma). Mahāyāna sūtra literature typically assumes that, after generating the bodhicitta, the bodhisattva will require not one, but three “incalculable eons” ([ASAMKHYEYAKALPA](#)) of time in order to complete all the stages ([BHŪMI](#)) of the bodhisattva path ([MĀRGA](#)) and achieve buddhahood. The Chinese [HUAYAN ZONG](#) noted, however, that the bodhisattva had no compunction about practicing for such an infinity of time, because he realized at the very inception of the path that he was already a fully enlightened buddha. They cite in support of this claim the statement in the “Brahmacaryā” chapter of the [AVATAMSAKASŪTRA](#) that “at the time of the initial generation of the aspiration for enlightenment (bodhicittotpāda), complete, perfect enlightenment ([ANUTTARASAMYAKSAMBOHI](#)) is already achieved.”

Bodhidharma. (C. Putidamo; J. Bodaidaruma; K. Poridalma 菩提達磨) (c. late-fourth to early-fifth centuries). Indian monk who is the putative “founder” of the school of [CHAN](#) (K. [SŎN](#), J. [ZEN](#), V. [THIÊN](#)). The story of a little-known Indian (or perhaps Central Asian) emigré monk grew over the centuries into an elaborate legend of Bodhidharma, the first patriarch of the Chan school. The earliest accounts of a person known as Bodhidharma appear in the *Luoyang qielan ji* and [XU GAOSENG ZHUAN](#), but the more familiar and developed image of this figure can be found in such later sources as the [BAOLIN ZHUAN](#), [LENGQIE SHIZI JI](#), [LIDAI FABAO JI](#), [ZUTANG JI](#), [JINGDE CHUANDENG LU](#), and other “transmission of

the lamplight” ([CHUANDENG LU](#)) histories. According to these sources, Bodhidharma was born as the third prince of a South Indian kingdom. Little is known about his youth, but he is believed to have arrived in China sometime during the late fourth or early fifth century, taking the southern maritime route according to some sources, the northern overland route according to others. In an episode appearing in the *Lidai fabao ji* and [BIYAN LU](#), after arriving in southern China, Bodhidharma is said to have engaged in an enigmatic exchange with the devout Buddhist emperor Wu (464–549, r. 502–549) of the Liang dynasty (502–557) on the subject of the Buddha’s teachings and merit-making. To the emperor’s questions about what dharma Bodhidharma was transmitting and how much merit ([PUNYA](#)) he, Wudi, had made by his munificent donations to construct monasteries and ordain monks, Bodhidharma replied that the Buddha’s teachings were empty (hence there was nothing to transmit) and that the emperor’s generous donations had brought him no merit at all. The emperor seems not to have been impressed with these answers, and Bodhidharma, perhaps disgruntled by the emperor’s failure to understand the profundity of his teachings, left for northern China, taking the Yangtze river crossing (riding a reed across the river, in a scene frequently depicted in East Asian painting). Bodhidharma’s journey north eventually brought him to a cave at the monastery of [SHAOLINSI](#) on [SONGSHAN](#), where he sat in meditation for nine years while facing a wall ([MIANBI](#)), in so-called “wall contemplation” ([BIGUAN](#)). During his stay on Songshan, the Chinese monk [HUIKE](#) is said to have become Bodhidharma’s disciple, allegedly after cutting off his left arm to show his dedication. This legend of Bodhidharma’s arrival in China is eventually condensed into the famous Chan case ([GONG’AN](#)), “Why did Bodhidharma come from the West?” (see [XILAI YI](#)). Bodhidharma’s place within the lineage of Indian patriarchs vary according to text and tradition (some list him as the twenty-eighth patriarch), but he is considered the first patriarch of Chan in China. Bodhidharma’s name therefore soon became synonymous with Chan and subsequently with Sōn, Zen, and Thiên. Bodhidharma, however, has often been confused with other figures such as [BODHIRUCI](#), the translator of the [LAṆKĀVATĀRASŪTRA](#), and the Kashmiri monk [DHARMATRĀTA](#), to whom the [DHYĀNA](#) manual [DAMODUOLUO CHAN JING](#) is attributed. The *Lidai fabao ji*, for instance, simply fused the names of Bodhidharma and Dharmatrāta and spoke of a Bodhidharmatrāta whose legend traveled with the *Lidai fabao ji* to Tibet. Bodhidharma was even identified as the apostle Saint Thomas by Jesuit missionaries to China, such as Matteo Ricci. Several texts, a number of which

were uncovered in the [DUNHUANG](#) manuscript cache in Central Asia, have been attributed to Bodhidharma, but their authorship remains uncertain. The [ERRU SIXING LUN](#) seems to be the only of these texts that can be traced with some certainty back to Bodhidharma or his immediate disciples. The legend of Bodhidharma in the *Lengqie shizi ji* also associates him with the transmission of the *Laṅkāvatārasūtra* in China. In Japan, Bodhidharma is often depicted in the form of a round-shaped, slightly grotesque-looking doll, known as the “Daruma doll.” Like much of the rest of the legends surrounding Bodhidharma, there is finally no credible evidence connecting Bodhidharma to the Chinese martial arts traditions (see [SHAOLINSI](#)).

[bodhimaṇḍa](#). (T. byang chub snying po; C. daochang; J. dōjō; K. toryang 道場). In Sanskrit (and very late Pāli), “seat of enlightenment” or “platform of enlightenment,” the place in [BODHGAYĀ](#) under the [BODHI TREE](#) where the Buddha sat when he achieved liberation from the cycle of birth and death ([SAMSĀRA](#)). (The word maṇḍa in this compound refers to the scum that forms on the top of boiling rice or the heavy cream that rises to the top of milk, thus suggesting the observable and most essential signs of the supreme act of [BODHI](#), or enlightenment. Note that Western literature sometimes wrongly transcribes the term as *bodhimaṇḍala rather than bodhimaṇḍa.) All buddhas are associated with such a place, and it is presumed that all [BODHISATTVA](#)s of this world system as well will sit on such a seat before attaining buddhahood. The term is also used to refer to the region surrounding the seat itself, which, in the case of [ŚĀKYAMUNI](#), is Bodhgayā. The bodhimaṇḍa is also known as the [VAJRĀSANA](#) (“diamond seat”), since it is the only site on earth strong enough to bear the pressures unleashed by the battle for enlightenment. Buddhist iconography often depicts the Buddha just prior to his enlightenment sitting on the bodhimaṇḍa in the “earth-touching gesture” ([BHŪMISPARŚAMUDRĀ](#)), i.e., with his right hand touching the ground, calling the earth to bear witness to his achievement. The bodhimaṇḍa is often said to be the center or navel of the world and thus can be understood as what early scholars of religion called an axis mundi—the liminal site between divine and profane realms; according to the [ABHIDHARMAKOŚABHĀSYA](#), the various hot and cold hells (see [NĀRAKA](#)) are located not below Mount [SUMERU](#) but below the bodhimaṇḍa. In medieval East Asia, the Chinese term for bodhimaṇḍa began to be used to designate a “ritual precinct,” viz., a site where such critical Buddhist rituals as ordinations were held, and by the seventh century came to be commonly used as the equivalent of

“monastery” (si). In Korea, toryang (= bodhimaṇḍa) is also used to designate the central courtyard around which are arrayed the most important shrine halls in a monastery.

[Bodhiñāna](#). (1917–1992). See [AJAHN CHAH BODHIÑĀNA](#).

[bodhipakṣa](#). (S). See [BODHIPĀKṢIKADHARMA](#).

[bodhipākṣikadharmā](#). [alt. -pakṣa-; -pakṣika-] (P. bodhipakkhiyadhamma; T. byang chub kyi phyogs kyi chos; C. puti fen/sanshiqi daopin; J. bodaibun/sanjūshichidōbon; K. pori pun/samsipch’il top’um 菩提分/三十七道品). In Sanskrit, “factors pertaining to awakening” or “wings of awakening.” There are thirty-seven factors pertaining to enlightenment (saptatṛiṃśad bodhipākṣikā dharmāḥ), a conflation of seven distinct lists of practices: (1–4) the four foundations of mindfulness ([SMRTYUPASTHĀNA](#), P. [SATIPATTHĀNA](#)), (5–8) the four right efforts or abandonments ([SAMYAKPRADHĀNA](#), P. sammāpadhāna), (9–12) the four requisites of supranormal power ([RDDHIPĀDA](#), P. iddhipāda), (13–17) the five spiritual faculties ([INDRIYA](#)), (18–22) the five mental powers ([BALA](#)), (23–29) the seven factors of enlightenment ([BODHYAṄGA](#), P. bojjaṅga), and (30–37) the noble eightfold path ([ĀRYĀSTĀṄGAMĀRGA](#)). This comprehensive list is said to encompass the entire teachings of the Buddha and may constitute one of, if not the, earliest examples in Buddhist literature of “matrices” ([MĀTRKĀ](#); P. mātikā), the dharma lists that were the foundation of the [ABHIDHARMA](#). As additional psychic characteristics associated with meditative states were added to this original list of bodhipākṣikadharmanas, the various factors listed in these mātṛkā came to be considered an exhaustive accounting of the “elements of reality” ([DHARMA](#)).

[Bodhipathapradīpa](#). (T. Byang chub lam gyi sgron ma). In Sanskrit, “Lamp for the Path to Enlightenment”; a work composed by the Indian scholar [ATIŚA DĪPAMKARAŚRĪJĀNA](#) at [THO LING GTSUG LAG KHANG](#) shortly after he arrived in Tibet in 1042. Tibetan histories often note that Atiśa wrote this text in order to clarify problematic points of Buddhist practice, especially [TANTRA](#), which were thought to have degenerated and become distorted, and to show that tantra did not render basic Buddhist practice irrelevant. The *Bodhipathapradīpa* emphasizes a gradual training in the practices of the [MAHĀYĀNA](#) and [VAJRĀYĀNA](#) and became a prototype and textual basis first for the bstan rim, or “stages of the teaching” genre, and then for the genre of Tibetan religious literature known as

[LAM RIM](#), or “stages of the path.” It is also an early source for the instructions and practice of [BLO SBYONG](#), or “mind training.” Atiśa wrote his own commentary (pañjikā) (*Commentary on the Difficult Points of the Lamp for the Path to Enlightenment*) to the text. The text says bodhisattvas must first follow one of the sets of [PRĀTIMOKSA](#) disciplinary rules; based on those precepts, they practice the six perfections ([PĀRAMITĀ](#)); with those perfections as a solid foundation, they finally practice Buddhist tantra.

[Bodhirak, Phra](#). (P. Bodhirakkha) (b. 1934). Thai Buddhist leader who is the founder of the [SANTI ASOKE](#) movement. Born in 1934 in northeastern Thailand as Mongkhon Rakphong, he became a well-known TV entertainer, songwriter, and movie producer before abruptly walking away from his career at the age of thirty-six to seek the dhamma. He was ordained in 1970 into first the [THAMMAYUT](#) and later the [MAHĀNIKAI](#) orders, but eventually left both orders to establish the independent Santi Asoke (“People of Asoke”) movement, which grew rapidly. Bodhirak was finally excommunicated from the Thai saṅgha in 1989 for defying national ecclesiastical law (including publicly proclaiming himself to be a “once-returner,” or sakadāgāmi [S. [SAKRDĀGĀMIN](#)]) and for his controversial views on Buddhism, which mainstream traditions found to be iconoclastic and doctrinaire. He continues to live as a monk and is an influential figure in contemporary Thai Buddhism; he and his movement have also come to play a role in Thai politics through the Phalang Dhamma Party, which has ties to Santi Asoke.

[Bodhiruci](#). (C. Putiliuzhi; J. Bodairushi; K. Poriryuji 菩提流支) (fl. sixth century). A renowned Indian translator and monk (to be distinguished from a subsequent Bodhiruci [s.v.] who was active in China two centuries later during the Tang dynasty). Bodhiruci left north India for Luoyang, the Northern Wei capital, in 508. He is said to have been well versed in the [TRIPITAKA](#) and talented at incantations. Bodhiruci stayed at the monastery of [YONGNINGSI](#) in Luoyang from 508 to 512 and with the help of Buddhaśānta (d.u.) and others translated over thirty [MAHĀYĀNA](#) sūtras and treatises, most of which reflect the latest developments in Indian Mahāyāna, and especially [YOGĀCĀRA](#). His translations include the [DHARMASAMGĪTI](#), [SHIDIJING LUN](#), [LĀNKĀVATĀRASŪTRA](#), [VAJRACCHEDIKĀPRAJÑĀPĀRAMITĀSŪTRA](#), and the [WULIANGSHOU JING YOUTPOTISHE YUANSHENG JI](#), attributed to [VASUBANDHU](#). Bodhiruci’s translation of the *Shidijing lun*, otherwise known more simply as the *Di lun*, fostered the formation

of a group of [YOGĀCĀRA](#) specialists in China that later historians retroactively call the [DI LUN ZONG](#). According to a story in the [LIDAI FABAO JI](#), a jealous Bodhiruci, assisted by a monk from [SHAOLINSI](#) on [SONGSHAN](#) named Guangtong (also known as Huiguang, 468–537), is said to have attempted on numerous occasions to poison the founder of the [CHAN](#) school, [BODHIDHARMA](#), and eventually succeeded. Bodhiruci is also said to have played an instrumental role in converting the Chinese monk [TANLUAN](#) from Daoist longevity practices to the [PURE LAND](#) teachings of the [GUAN WULIANGSHOU JING](#).

Bodhiruci. (C. Putiliuzhi; J. Bodairushi; K. Poriryuji 菩提流支) (d. 727). A renowned Indian translator and monk (to be distinguished from an earlier Bodhiruci [s.v.], who was active two centuries earlier during the Northern Wei dynasty). Bodhiruci is said to have been a south Indian who was invited to China by Emperor Gaozong (r. 649–683) of the Tang dynasty in 663, but did not arrive until thirty years later, in 693, during the reign of Empress [WU ZETIAN](#) (r. 684–704). He is said to have changed his name from Dharmaruci to Bodhiruci at the request of Empress Wu. He resided in the monastery of Foshoujisi, where he dedicated himself to the translation of several scriptures, including the [RATNAMEGHASŪTRA](#) (*Baoyun jing*), [ADHYARDHAŚATIKĀPRAJÑĀPĀRAMITĀSŪTRA](#) (*Shixiang bore bolomi jing*), and *Gayāśīrṣasūtra*. Bodhiruci also assisted [ŚIKSĀNANDA](#) in his translation of the [ĀVATAMSAKASŪTRA](#). In 706, he resided in the monastery Chongfusi and commenced the translation of the lengthy [RATNAKŪTASŪTRA](#), which the famed Chinese pilgrim and translator [XUANZANG](#) had failed to complete earlier. Bodhiruci’s translation, edited into 120 rolls, was completed in 713.

bodhisambhāra. (T. byang chub kyi tshogs; C. puti ju/puti ziliang; J. bodaigu/bodaishiryō; K. pori ku/pori charyang 菩提具/菩提資糧). In Sanskrit, “collection” of, or “equipment” ([SAMBHĀRA](#)) for, “enlightenment” ([BODHI](#)); the term refers to specific sets of spiritual requisites (also called “accumulations”) necessary for the attainment of awakening. The [BODHISATTVA](#) becomes equipped with these factors during his progress along the path ([MĀRGA](#)) leading to the attainment of buddhahood. In a buddha, the amount of this “enlightenment-collection” is understood to be infinite. These factors are often divided into two major groups: the collection of merit ([PUNYASAMBHĀRA](#)) and the collection of knowledge ([JÑĀNASAMBHĀRA](#)). The collection of merit ([PUNYA](#)) entails the strengthening of four perfections ([PĀRAMITĀ](#)): generosity ([DĀNA](#)), morality ([ŚĪLA](#)),

patience ([KSĀNTI](#)), and energy ([VĪRYA](#)). The collection of knowledge entails the cultivation of meditative states leading to the realization that emptiness ([ŚŪNYATĀ](#)) is the ultimate nature of all things. The bodhisambhāra were expounded in the **Bodhisambhāraka*, attributed to the [MADHYAMAKA](#) exegete [NĀGĀRJUNA](#), which is now extant only in Dharmagupta's 609 CE Chinese translation, titled the *Puti ziliang lun*. In this treatise, Nāgārjuna explains that the acquisition, development, and fruition of these factors is an essentially interminable process: enlightenment will be achieved when these factors have been developed for as many eons as there are grains of sand in the Ganges River (see [GAṄĀNADĪVĀLUKĀ](#)). The text also emphasizes the importance of compassion ([KARUNĀ](#)), calling it the mother of perfect wisdom ([PRAJÑĀPĀRAMITĀ](#)). The perfection of wisdom sūtras stress that [PARINĀMANĀ](#) (turning over [merit]) and [ANUMODANA](#) (rejoicing [in the good deeds of others]) are necessary to amass the collection necessary to reach the final goal.

[bodhisattva](#). (P. bodhisatta; T. byang chub sems dpa'; C. pusa; J. bosatsu; K. posal 菩薩). In Sanskrit, lit. "enlightenment being." The etymology is uncertain, but the term is typically glossed to mean a "being ([SATTVA](#)) intent on achieving enlightenment ([BODHI](#))," viz., a being who has resolved to become a buddha. In the [MAINSTREAM BUDDHIST SCHOOLS](#), the Buddha refers to himself in his many past lifetimes prior to his enlightenment as a bodhisattva; the word is thus generally reserved for the historical Buddha prior to his own enlightenment. In the [MAHĀYĀNA](#) traditions, by contrast, a bodhisattva can designate any being who resolves to generate [BODHICITTA](#) and follow the vehicle of the bodhisattvas ([BODHISATTVAYĀNA](#)) toward the achievement of buddhahood. The Mahāyāna denotation of the term first appears in the [ASTASĀHASRIKĀPRAJÑĀPĀRAMITĀ](#), considered one of the earliest Mahāyāna sūtras, suggesting that it was already in use in this sense by at least the first century BCE. Schools differ on the precise length and constituent stages of the bodhisattva path ([MĀRGA](#)), but generally agree that it encompasses a huge number of lifetimes—according to many presentations, three incalculable eons of time ([ASAMKHYEYAKALPA](#))—during which the bodhisattva develops specific virtues known as perfections ([PĀRAMITĀ](#)) and proceeds through a series of stages ([BHŪMI](#)). Although all traditions agree that the bodhisattva is motivated by "great compassion" ([MAHĀKARUNĀ](#)) to achieve buddhahood as quickly as possible, Western literature often describes the bodhisattva as someone who postpones his enlightenment in order to save all beings from suffering. This description is primarily relevant to the mainstream

schools, where an adherent is said to recognize his ability to achieve the enlightenment of an [ARHAT](#) more quickly by following the teachings of a buddha, but chooses instead to become a bodhisattva; by choosing this longer course, he perfects himself over many lifetimes in order to achieve the superior enlightenment of a buddha at a point in the far-distant future when the teachings of the preceding buddha have completely disappeared. In the Mahāyāna, the nirvāṇa of the arhat is disparaged and is regarded as far inferior to buddhahood. Thus, the bodhisattva postpones nothing, instead striving to achieve buddhahood as quickly as possible. In both the mainstream and Mahāyana traditions, the bodhisattva, spending his penultimate lifetime in the [TUSITA](#) heaven, takes his final rebirth in order to become a buddha and restore the dharma to the world. [MAITREYA](#) is the bodhisattva who will succeed the dispensation ([ŚĀSANA](#)) of the current buddha, [GAUTAMA](#) or [ŚĀKYAMUNI](#); he is said to be waiting in the tuṣita heaven, until the conditions are right for him to take his final rebirth and become the next buddha in the lineage. In the Mahāyāna tradition, many bodhisattvas are described as having powers that rival or even surpass those of the buddhas themselves, and come to symbolize specific spiritual qualities, such as [AVALOKITEŚVARA](#) (the bodhisattva of compassion), [MAÑJUŚRĪ](#) (the bodhisattva of wisdom), [VAJRAPĀNI](#) (the bodhisattva of power), and [SAMANTABHADRA](#) (the bodhisattva of extensive practice). In Western literature, these figures are sometimes referred to as “celestial bodhisattvas.” ¶ In Korea, the term posal also designates laywomen residents of monasteries, who assist with the menial chores of cooking, preserving food, doing laundry, *etc.* These posal are often widows or divorcées, who work for the monastery in exchange for room and board for themselves and their children. The posal will often serve the monastery permanently and end up retiring there as well.

[bodhisattvabhūmi](#). (T. byang chub sems dpa’i sa; C. pusa di; J. bosatsuji; K. posal chi 菩薩地). In Sanskrit, lit. “ground” or “stage” ([BHŪMI](#)) of a [BODHISATTVA](#), referring to the systematic stages along the path ([MĀRGA](#)) of a bodhisattva’s maturation into a buddha. A normative list of ten bhūmis, which becomes standard in many [MAHĀYĀNA](#) accounts of the bodhisattva path, appears in the [DAŚABHŪMIKASŪTRA](#), a sūtra that was later incorporated into the [AVATAMSAKASŪTRA](#) compilation. These ten stages ([DAŚABHŪMI](#)) of the *Daśabhūmikasūtra* correspond to the forty-first to fiftieth stages among the fifty-two bodhisattva stages, the comprehensive outline of the entire bodhisattva path taught in such scriptures as the Avatamsakasūtra, the [PUSA YINGLUO BENYE JING](#),

and the [RENWANG JING](#). The first bhūmi begins on the path of vision ([DARŚANAMĀRGA](#)), and the other nine bhūmis occur on the path of cultivation ([BHĀVANĀMĀRGA](#)). (For detailed explication of each stage, see [DAŚABHŪMI](#) s.v.) The [PRAJÑĀPĀRAMITĀ SŪTRAS](#), and the [MAHĀYĀNASŪTRĀLAMKĀRA](#) and [ABHISAMAYĀLAMKĀRA](#) in their exegesis of these stages, explain that bodhisattvas reach each higher level along the path after completing the preparations (parikarman) for it; they set forth the same ten levels as the *Daśabhūmikasūtra* with the same names. Ārya [VIMUKTISENA](#), in his exegesis of the *Abhisamayālamkāra*, says bodhisattvas on the tenth bhūmi are like [TATHĀGATAS](#) who have passed beyond all stages, and lists eight other stages corresponding roughly to the stages of the eight noble persons ([ĀRYAPUDGALA](#)), with the first through ninth bodhisattva bhūmis described as a transcendent ninth level. In contrast to the normative ten bhūmis described in the *Daśabhūmikasūtra*, [MAITREYANĀTHA/ASAṄGA](#) in the [BODHISATTVABHŪMI](#) instead outlines a system of seven stages (bhūmi), which are then correlated with the thirteen abodes ([VIHĀRA](#)). (See the following entry on the treatise for further explication.) The seven-bhūmi schema of the *Bodhisattvabhūmi* and the ten-bhūmi schema of the *Daśabhūmikasūtra* are independent systematizations.

[Bodhisattvabhūmi](#). (T. Byang chub sems dpa'i sa; C. Pusa dichi jing; J. Bosatsujijikyō; K. Posal chiji kyōng 菩薩地持經). In Sanskrit, “The Bodhisattva Stages”; a treatise on the entire vocation and training of a [BODHISATTVA](#), attributed to [MAITREYA/MAITREYANĀTHA](#) or [ASAṄGA](#) (c. fourth century CE), the effective founder of the [YOGĀCĀRA](#) school. Sanskrit and Tibetan recensions are extant, as well as three different renderings in Chinese: (1) *Pusa dichi jing*, translated by [DHARMAKSEMA](#) between 414–421 CE, which is also abbreviated as the “Treatise on the Bodhisattva Stages” (C. Dichi lun; J. Jijiron; K. Chiji non); (2) *Pusa shanjie jing*, translated by [GUNAVARMAN](#) in 431 CE; and (3) a version incorporated as the fifteenth section of [XUANZANG](#)'s Chinese translation of Asaṅga's [YOGĀCĀRABHŪMIŚĀSTRA](#). In the Tibetan [BSTAN 'GYUR](#), the *Bodhisattvabhūmi* appears as the sixteenth and penultimate part of the fundamental section (sa'i dngos gzhi) of the *Yogācārabhūmi* (which has a total of seventeen sections), but it is set apart as a separate work in 6,000 lines. The *Bodhisattvabhūmi* explains in three major sections the career and practices of a bodhisattva. The chapters on the abodes (vihārapaṭala) in the second major division and the chapter on stages (bhūmipaṭala) in the third section are considered especially important, because they provide a systematic outline of the

soteriological process by which a bodhisattva attains enlightenment. ¶ In contrast to the ten stages ([DAŚABHŪMI](#)) of the bodhisattva path that are described in the [DAŚABHŪMIKASŪTRA](#), the *Bodhisattvabhūmi* instead outlines a system of seven stages ([BHŪMI](#)), which are then correlated with the thirteen abodes ([VIHĀRA](#)): (1) The stage of innate potentiality (gotrabhūmi), which corresponds to the abode of innate potentiality (gotravihāra); (2) the stage of the practice of resolute faith (adhimukticyābhūmi), corresponding to the abode of resolute faith (adhimukticyāvihāra); (3) the stage of superior aspiration (śuddhādhyāśayabhūmi), which corresponds to the abode of extreme bliss (pramuditavihāra); (4) the stage of carrying out correct practices (caryāpratipattibhūmi), which includes the abode of superior morality (adhiśīlavihāra), the abode of superior concentration (adhicittavihāra), and the abode of the superior wisdom (adhiprajñavihāra), i.e., the abode of superior insight associated with the factors of enlightenment (bodhipakṣyapratisaṃyukto 'dhiprajñavihāra), the abode of superior insight associated with the truths (satyapratisaṃyukto 'dhiprajñavihāra), the abode of superior insight associated with the cessation of dependently arisen transmigrations (pratītyasamutpādapravṛttinivṛttipratisaṃyukto 'dhiprajñavihāra), and the signless abode of applied practices and exertion (sābhisamkārasābhoganirnimittavihāra); (5) the stage of certainty (niyatabhūmi), which is equivalent to the signless abode that is free from application and exertion (anābhoganirnimittavihāra); (6) the stage of determined practice (niyatacaryābhūmi), which corresponds to the abode of analytical knowledge (pratisaṃvidvihāra); (7) the stage of arriving at the ultimate (niṣṭhāgamanabhūmi), which correlates with the abode of ultimate consummation [viz., of bodhisattvahood] (paramavihāra) and the abode of the tathāgata (tathāgatavihāra). In this schema, the first two stages are conceived as preliminary stages of the bodhisattva path: the first stage, the stage of innate potentiality (gotrabhūmi), is presumed to be a state in which the aspiration for enlightenment ([BODHICITTA](#)) has yet to be generated; the second stage, the stage of the practice of resolute faith (adhimukticyābhūmi), is referred to as the stage of preparation (saṃbhārāvasthā) and applied practice (prayogāvasthā) in the case of the fivefold [YOGĀCĀRA](#) mārga schema, or alternatively to the ten faiths, ten abodes, ten practices, and ten dedications in the case of the comprehensive fifty-two stage bodhisattva path presented in the [AVATAMSAKASŪTRA](#), [PUSA YINGLUO BENYE JING](#), and [RENWANG JING](#). The third stage, the stage of superior aspiration, is regarded as corresponding to the first of the ten bhūmis in the

Daśabhūmikasūtra; the fourth stage of carrying out correct practices corresponds to the second through seventh bhūmis in that rival schema; the fifth stage of certainty pertains to the eighth bhūmi; the stage of determined practice to the ninth bhūmi; and the stage of arriving at the ultimate to the tenth bhūmi. In fact, however, the seven-bhūmi schema of the *Bodhisattvabhūmi* and the ten-bhūmi schema of the *Daśabhūmikasūtra* developed independently of each other and it requires consider exegetical aplomb to correlate them. ¶ The *Bodhisattvabhūmi* also serves as an important source of information on another crucial feature of bodhisattva practice: the Mahāyāna interpretation of a set of moral codes specific to bodhisattvas ([BODHISATTVAŚĪLA](#)). The chapter on precepts (*śīlapaṭala*) in the first major section of the text provides an elaborate description of Mahāyāna precepts, which constitute the bodhisattva’s perfection of morality ([ŚĪLAPĀRAMITĀ](#)). These precepts are classified into the “three sets of pure precepts” (trividhāni śīlāni; C. sanju jingjie, see [ŚĪLATRAYA](#); [TRISAMVARA](#)): (1) the saṃvaraśīla, or “restraining precepts,” (cf. [SAMVARA](#)), which refers to the “[HĪNAYĀNA](#)” rules of discipline ([PRĀTIMOKSA](#)) that help adepts restrain themselves from all types of unsalutary conduct; (2) practicing all virtuous deeds (*kuśaladharmasamgrāhakaśīla*), which accumulates all types of salutary conduct; and (3) *sattvārthakriyāśīla*, which involve giving aid and comfort to sentient beings. Here, the first group corresponds to the generic hīnayāna precepts, while the second and third groups are regarded as reflecting a specifically Mahāyāna position on morality. Thus, the three sets of pure precepts are conceived as a comprehensive description of Buddhist views on precepts, which incorporates both hīnayāna and Mahāyāna perspectives into an overarching system. A similar treatment of the three sets of pure precepts is also found in the Chinese apocryphal sūtra [FANWANG JING](#) (see [APOCRYPHA](#)), thus providing a scriptural foundation in East Asia for an innovation originally appearing in an Indian treatise. ¶ In Tibet, the *Bodhisattvabhūmi* was a core text of the [BKA’ GDAMS](#) sect, and its chapter on śīla was the basis for a large body of literature elaborating a [VINAYA](#)-type ritual for taking bodhisattva precepts in a Mahāyāna ordination ceremony. The [SA SKYA PA](#) master Grags pa rgyal mtshan’s explanation of [CANDRAGOMIN](#)’s synopsis of the morality chapter, and [TSONG KHA PA](#)’s *Byang chub gzhung lam* are perhaps the best known works in this genre. In Tibet, the [SDOM GSUM](#) genre incorporates the *Bodhisattvabhūmi*’s three sets of pure precepts into a new scheme that reconciles hīnayāna and Mahāyāna with [TANTRA](#).

[Bodhisattvacaryāvatāra](#). (T. Byang chub sems dpa'i spyod pa la 'jug pa). An alternate title of the [BODHICARYĀVATĀRA](#) by [ŚĀNTIDEVA](#). See [BODHICARYĀVATĀRA](#).

[bodhisattva path](#). See [BODHISATTVAYĀNA](#); [MĀRGA](#).

[Bodhisattvapitaka](#). (T. Byang chub sems dpa'i sde snod; C. Pusazang jing; J. Bosatsuzōkyō; K. Posalchang kyōng 菩薩藏經). In Sanskrit, “The Bodhisattva Basket,” one of the earliest [MAHĀYĀNA](#) scriptures, written by at least the first century CE and perhaps even as early as the first century BCE. The text is no longer extant, but its antiquity is attested by its quotation in some of the earliest Mahāyāna sūtras translated into Chinese, including [*LOKAKSEMA](#)'s translation of the [KĀŚYAPAPARIVARTA](#) made in 179 CE and in [DHARMARAKSA](#)'s 289 CE rendering of the *Vimaladattāpariprcchā*. The content of the anthology is unknown, but based on much later compilations bearing the same title (and which therefore might have been derived from the original *Bodhisattvapitaka*), the text must have been substantial in size (one later Chinese translation is twenty rolls in length) and have offered coverage of at least the six perfections ([PĀRAMITĀ](#)). Sections of the *Bodhisattvapitaka* may also have been subsumed in later collections of Mahāyāna materials, such as the [RATNAKŪTASŪTRA](#).

[bodhisattvapranidhāna](#). (T. byang chub sems pa'i smon lam; C. pusa yuan; J. bosatsugan; K. posal wŏn 菩薩願). In Sanskrit, “bodhisattva vow”; the vow to achieve buddhahood in order to liberate all beings from suffering. Following the [BODHICARYĀVATĀRA](#), the [MAHĀYĀNA](#) commentarial tradition considers this vow to be the point at which one makes a public pronouncement of one's aspiration to achieve buddhahood ([PRANIDHICITTOTPĀDA](#)), which is distinguished from the subsequent practice of this aspiration ([PRASTHĀNACITTOTPĀDA](#)), i.e., cultivating specific bodhisattva precepts (see [BODHISATTVASAMVARA](#)) and mastering the six perfections ([PĀRAMITĀ](#)). In Mahāyāna sūtras, which tend to be less systematized, this vow is typically made before a buddha, who then offers a prediction ([VYĀKARANA](#)) that the aspirant will succeed in his quest; the person is then called one who will not turn back, or “irreversible” ([AVAIVARTIKA](#)). The recitation of the bodhisattva vow is a central component in many Mahāyāna liturgies. See also [BODHICITTOTPĀDA](#).

[bodhisattva precepts](#). See [BODHISATTVASAMVARA](#); [BODHISATTVAŚĪLA](#); [PUSA JIE](#); [SDOM GSUM](#).

bodhisattvasaṃvara. (T. byang chub sems dpa'i sdom pa; C. pusa jie; J. bosatsukai; K. posal kye 菩薩戒). In Sanskrit, lit. “restraints for the [BODHISATTVA](#)”; the “restraints,” “precepts,” or code of conduct ([SAMVARA](#)) for someone who has made the bodhisattva vow ([BODHISATTVAPRANIDHĀNA](#); [PRANIDHĀNA](#)) to achieve buddhahood in order to liberate all beings from suffering. The mainstream moral codes for monastics that are recognized across all forms of Buddhism are listed in the [PRĀTIMOKṢA](#), which refers to rules of discipline that help adepts restrain themselves from all types of unwholesome conduct. With the rise of various groups that came to call themselves the [MAHĀYĀNA](#), different sets of moral codes developed. These are formulated, for example, in the [BODHISATTVABHŪMI](#) and Candragomin’s *Bodhisattvasaṃvaraviṃśaka*, and in later Chinese apocrypha, such as the [FANWANG JING](#). The mainstream prātimokṣa codes are set forth in the *Bodhisattvabhūmi* as saṃvaraśīla, or “restraining precepts.” These are the first of three types of bodhisattva morality, called the “three sets of restraints” ([TRISAMVARA](#)), which are systematized fully in Tibet in works like [TSONG KHA PA](#)’s *Byang chub gzhung lam*. It seems that in the early Mahāyāna, people publicly took the famous bodhisattva vow, promising to achieve buddhahood in order to liberate all beings. A more formal code of conduct developed later, derived from a number of sources, with categories of root infractions and secondary infractions. The bodhisattva precepts, however, could be taken equally by laypeople and monastics, men and women, and formal ceremonies for conferring the precepts are set forth in a number of Mahāyāna treatises. In addition, there appear to have been ceremonies for the confession of infractions, modeled on the [UPOSADHA](#) rituals. Some of the precepts have to do with interpersonal relations, prescribing the kind of altruistic behavior that one might expect from a bodhisattva. Others are grander, such as the precept not to destroy cities, and appear to presuppose a code of conduct for kings or other important figures in society. There is also the suggestion that the bodhisattva precepts supersede the prātimokṣa precepts: one of the secondary infractions of the bodhisattva code is not to engage in killing, stealing, sexual misconduct, lying, divisive speech, harsh speech, or senseless speech when in fact it would be beneficial to do so. The great weight given to the precept not to reject the Mahāyāna as being the word of the Buddha ([BUDDHAVACANA](#)) suggests that, throughout the history of the Mahāyāna in India, there were concerns raised about the questionable origin of the Mahāyāna sūtras. With the rise of [TANTRA](#), the “three restraints” (trisaṃvara) of bodhisattva morality were refigured as the

second of a new set of precepts, preceded by the prātimokṣa precepts and followed by the tantric vows. There was much discussion, especially in Tibetan [SDOM GSUM](#) (dom sum) literature, of the relationships among the three sets of restraints and of their compatibility with each other. ¶ Although there is much variation in the listings of bodhisattva precepts, according to one common list, the eighteen root infractions are: (1) to praise oneself and slander others out of attachment to profit or fame; (2) not to give one's wealth or the doctrine, out of miserliness, to those who suffer without protection; (3) to become enraged and condemn another, without listening to his or her apology; (4) to abandon the Mahāyāna and teach a poor facsimile of its excellent doctrine; (5) to steal the wealth of the three jewels ([RATNATRAYA](#)); (6) to abandon the excellent doctrine; (7) to steal the saffron robes of a monk and beat, imprison, and or expel him from his life of renunciation, even if he has broken the moral code; (8) to commit the five deeds of immediate retribution ([ĀNANTARYAKARMA](#)) i.e., patricide, matricide, killing an arhat, wounding a buddha, or causing dissent in the saṃgha; (9) to hold wrong views; (10) to destroy cities and so forth; (11) to discuss emptiness ([ŚŪNYATĀ](#)) with sentient beings whose minds have not been trained; (12) to turn someone away from buddhahood and full enlightenment; (13) to cause someone to abandon completely the prātimokṣa precepts in order to practice the Mahāyāna; (14) to believe that desire and so forth cannot be abandoned by the vehicle of the [ŚRĀVAKAS](#) and to cause others to believe that view; (15) to claim falsely, "I have withstood the profound emptiness (śūnyatā)"; (16) to impose fines on renunciates; to take donors and gifts away from the three jewels; (17) to cause meditators to give up the practice of [ŚAMATHA](#); to take the resources of those on retreat and give them to reciters of texts; (18) to abandon the two types of [BODHICITTA](#) (the conventional and the ultimate). See also [BODHISATTVAŚĪLA](#).

[bodhisattvaśīla](#). (T. byang chub sems dpa'i tshul khirms; C. pusa jie; J. bosatsukai; K. posal kye 菩薩戒). In Sanskrit, "[BODHISATTVA](#) morality" or "bodhisattva precepts"; the rules of conduct prescribed by [MAHĀYĀNA](#) literature for bodhisattvas, or beings intent on achieving buddhahood. These precepts appear in a variety of texts, including the chapter on morality (śīlapaṭala) in the [BODHISATTVABHŪMI](#) and the Chinese [FANWANG JING](#) (**Brahmajālasūtra*). Although there is not a single universally recognized series of precepts for bodhisattvas across all traditions of Buddhism, all lists include items such as refraining from taking life, refraining from boasting, refraining from slandering

the three jewels ([RATNATRAYA](#)), etc. In the *Bodhisattvabhūmi*, for example, the Mahāyāna precepts are classified into the “three sets of pure precepts” (trividhāni śīlāni; C. sanju jingjie): (1) the saṃvaraśīla, or “restraining precepts,” which refers to the so-called [HĪNAYĀNA](#) rules of discipline ([PRĀTIMOKṢA](#)) that help adepts restrain themselves from all types of unsalutary conduct; (2) practicing all virtuous deeds (kuśaladharmasaṃgrāhakaśīla), which accumulates all types of salutary conduct; and (3) sattvārthakriyāśīla, which involve giving aid and comfort to sentient beings. Here, the first group corresponds to the preliminary hīnayāna precepts, while the second and third groups reflect a uniquely Mahāyāna position on morality. Thus, the three sets of pure precepts are conceived as a comprehensive description of Buddhist views on precepts (sarvaśīla), which incorporates both hīnayāna and Mahāyāna perspectives into an overarching system. A similar treatment of the three sets of pure precepts is also found in such Chinese indigenous sūtras as *Fanwang jing* (“Sūtra of Brahmā’s Net”) and [PUSA YINGLUO BENYE JING](#) (see [APOCRYPHA](#)), thus providing a scriptural foundation in East Asia for an innovation originally appearing in an Indian treatise. The *Fanwang jing* provides a detailed list of a list of ten major and forty-eight minor Mahāyāna precepts that came to be known as the “Fanwang Precepts”; its listing is the definitive roster of bodhisattva precepts in the East Asian traditions. As in other [VINAYA](#) ordination ceremonies, the bodhisattva precepts are often taken in a formal ritual along with the bodhisattva vows ([BODHISATTVAPRANIDHĀNA; PRANIDHĀNA](#)). However, unlike the majority of rules found in the mainstream vinaya codes (prātimokṣa), the bodhisattva precepts are directed not only at ordained monks and nuns, but also may be taken by laypeople. Also, in contrast to the mainstream vinaya, there is some dispensation for violating the bodhisattvaśīla, provided that such violations are done for the welfare and weal of other beings. See also [BODHISATTVASAMVARA](#).

[bodhisattva vow](#). See [BODHISATTVAPRANIDHĀNA](#); [BODHISATTVASAMVARA](#); [BODHISATTVAŚĪLA](#).

[bodhisattvayāna](#). (T. byang chub sems dpa’i theg pa; C. pusa sheng; J. bosatsujō; K. posal sūng 菩薩乘). In Sanskrit, lit. “[BODHISATTVA](#) vehicle,” the path ([MĀRGA](#)) that begins with the initial activation of the aspiration for enlightenment ([BODHICITTOTPĀDA](#)) and culminates in the achievement of buddhahood; one of the early terms used for what eventually comes to be called the “Great Vehicle” ([MAHĀYĀNA](#)). The bodhisattvayāna focuses on the development of the six

perfections ([PĀRAMITĀ](#)) over a period as long as three incalculable eons of time ([ASAMKHYEYAKALPA](#)). At the culmination of this essentially interminable process, the bodhisattva becomes a buddha, with the full range of unique qualities ([ĀVENIKA|BUDDHA|DHARMA](#)) that are developed only as a result of mastering the perfections. The bodhisattvayāna is distinguished from the [ŚRĀVAKAYĀNA](#), in which teachings were learned from a buddha or an enlightened disciple ([ŚRĀVAKA](#)) of the Buddha and which culminates in becoming a “worthy one” ([ARHAT](#)); and the [PRATYEKABUDDHAYĀNA](#), the vehicle of those who reach their goal in solitude. The bodhisattvayāna, by contrast, is modeled on the accounts of the current buddha [ŚĀKYAMUNI](#)’s extensive series of past lives, during which he was motivated by the altruistic aspiration to save all beings from suffering by becoming a buddha himself, not simply settling for arhatship. The śrāvakayāna, pratyekabuddhayāna, and bodhisattvayāna together constitute the [TRIYĀNA](#), or “three vehicles,” mentioned in many Mahāyāna sūtras, most famously in the [SADDHARMAPUNĀRIKASŪTRA](#).

[Bodhisena](#). (C. Putixianna; J. Bodaisenna; K. Porisōnna 菩提僊那) (704–760). Indian monk who traveled first to Southeast Asia and China starting in 723 and subsequently continued on to Japan in 736 at the invitation of the Japanese emperor Shōmu (r. 724–749), where he resided at [DAIANJI](#) in Nara. Bodhisena was instrumental in helping to introduce the teachings of the [HUAYAN](#) (Kegon) school of Buddhism to Japan. Shōmu also asked Bodhisena to perform the “opening the eyes” ([KAIYAN](#); [NETRAPRATIṢṬHĀPANA](#)) ceremony for the 752 dedication of the great buddha image of [VAIROCANA](#) (see [NARA DAIBUTSU](#); Birushana Nyorai) at [TŌDAJI](#). At forty-eight feet high, this image remains the largest extant gilt-bronze image in the world and the Daibutsuden (Great Buddha Hall) where the image is enshrined is the world’s largest surviving wooden building.

[Bodhi tree](#). (S. bodhidruma [alt. bodhivṛkṣa; bodhiyaṣṭi; bodhivṛṣa]; P. bodhirukkha; T. byang chub shing; C. puti shu; J. bodaiju; K. pori su 菩提樹). The name for the sacred tree under which each buddha achieves enlightenment ([BODHI](#)), according to the standard hagiographies; sometimes abbreviated as the “bo tree” in English. The Bodhi tree is one of the elements in all stories of a buddha’s enlightenment and each buddha has a specific type of tree associated with him. In the case of the current buddha, [GAUTAMA](#) or [ŚĀKYAMUNI](#), the tree under which he sat when he attained enlightenment is a pipal, or fig, tree (*Ficus*

religiosa). The original Bodhi tree was located at the “seat of enlightenment” ([BODHIMANDA](#), [VAJRĀSANA](#)) in [BODHGAYĀ](#), in northern India, but cuttings from it have throughout history been replanted at Buddhist sites around Asia, and now the world. It is said that the Buddha authorized a seed from the tree to be planted in [JETAVANA](#). Its veneration and protection are a common theme in Buddhist literature, figuring prominently, for example, in the story of [AŚOKA](#). The tree was cut, burned, and uprooted by various Hindu kings, including Saśānka of Bengal in the seventh century. It was subsequently replaced by a seedling derived from a cutting that had been taken to Sri Lanka in the third century BCE. The Pāli [MAHĀBODHIVAMSA](#) (c. tenth–eleventh century CE) tells the history of the Bodhi tree, the arrival of a cutting from it in Sri Lanka, and the beginnings of the Sinhalese worship of the tree as a Buddhist relic. The large seeds of the Bodhi tree are commonly used to make Buddhist rosaries ([JAPAMĀLĀ](#)).

[Bodhnāth Stūpa](#). (T. *Bya rung kha shor*). The popular Nepali name for a large [STŪPA](#) situated on the northeast edge of the Kathmandu Valley in Nepal. Venerated by both Newar and Tibetan Buddhists, it has become one of Nepal's most important and active Buddhist pilgrimage sites. The base, arranged on three terraces in a multiangled shape called *viṃśatikōṇa* (lit. "twenty angles"), is more than 260 feet on each side with the upper dome standing some 130 feet high. At the structure's south entrance stands a shrine to the Newar goddess known as Ajima or [HĀRITĪ](#). Together with [SVAYAMBHŪ](#) and [NAMO BUDDHA](#), Bodhnāth forms a triad of great stūpas often depicted together in Tibetan literature. The stūpa's origins are unclear and a variety of competing traditions account for its founding and subsequent development. Most Nepali sources agree that the mahācaitya was founded through the activities of King Mānadeva I (reigned 464–505), who unwittingly murdered his father but later atoned for his patricide through a great act of contrition. Among Newars, the stūpa is commonly known as the Khāsticaitya, literally "the dew-drop [CAITYA](#)." This name is said to refer to the period in which King Mānadeva founded the stūpa, a time of great drought when cloth would be spread out at night from which the morning dew could be squeezed in order to supply water necessary for the construction. The site is also called Khāsacaitya, after one legend which states that Mānadeva was the reincarnation of a Tibetan teacher called Khāsā; another well-known tradition explains the name as stemming from the buddha [KĀŚYAPA](#), whose relics are said to be enclosed therein. The major Tibetan account of the stūpa's origin is found in a treasure text ([GTER MA](#)) said to have been hidden by the Indian sage [PADMASAMBHAVA](#) and his Tibetan consort [YE SHES MTSHO RGYAL](#). According to this narrative, the monument was constructed by a widowed poultry keeper. The local nobility grew jealous that such a grand project was being undertaken by a woman of such low status. They petitioned the king, requesting that he bring the construction to a halt. The king, however, refused to intervene and instead granted permission for the work to be completed, from which its Tibetan name *Bya rung kha shor* (Jarung Kashor, literally "permission to do what is proper") is derived. The stūpa was renovated under the guidance of Tibetan lamas on numerous occasions and it eventually came under the custodial care of a familial lineage known as the Chini Lamas. Once surrounded by a small village, since 1959 Bodhnāth has become a thriving center for Tibetan refugee culture and the location for dozens of relocated Tibetan monasteries.

bodhyaṅga. (P. bojḅhaṅga; T. byang chub kyi yan lag; C. juezhi/qijuezhi; J. kakushi/shichikakushi; K. kakchi/ch'ilgakchi 覺支/七覺支). In Sanskrit, “branches of enlightenment,” or “limbs of awakening”; seven qualities attained at the point of realizing the path of vision ([DARŚANAMĀRGA](#)): mindfulness ([SMṚTI](#); P. sati), investigation of factors (dharmapravicaya; P. dhammavicaya), energy ([VĪRYA](#); P. viriya), rapture ([PRĪTI](#); pīti), tranquility ([PRAŚRABDHI](#); passaddhi), concentration ([SAMĀDHI](#)), and equanimity ([UPEKSĀ](#); upekkhā). In their roles as “branches of enlightenment,” mindfulness, first, refers to the “four foundations of mindfulness” ([SMṚTYUPASTHĀNA](#); P. [SATIPATTHĀNA](#)), where the practitioner dwells contemplating four types of objects: namely, the body ([KĀYA](#)), sensations ([VEDANĀ](#)), the mind ([CITTA](#)), and mental objects ([DHARMA](#)). Investigation of factors refers to investigating, examining, and reflecting on the teachings and numerical lists of factors taught by the Buddha. Energy refers to firm and unshaken energy that arises in the mind of the practitioner while investigating factors, *etc.* Rapture refers to the supersensuous bliss that arises as a consequence of contemplating with energy. Tranquility refers to the tranquility that arises as a consequence of the mind experiencing rapture. Concentration refers to the mental absorption that arises as a consequence of tranquility. Finally, equanimity refers to the sense of complete composure that arises as a consequence of the mind being well concentrated on an object. These are called factors of “enlightenment,” because they lead to awakening ([BODHI](#)) or more specifically to the attainment of the “threefold knowledge” ([TRIVIDYĀ](#); P. tevijjā): “recollection of former lives” (S. [PŪRVANIVĀSĀNUSMṚTI](#); P. pubbenivāsānussati), the “divine eye” ([DIVYACAKSUS](#); P. dibbacakkhu), which sees the death and rebirth of beings occurring according to their actions, and the “knowledge of the extinction of the contaminants” ([ĀSRAVAKṢAYA JÑĀNA](#); P. āsavakhayañāṇa).

bodhyaṅgīmudrā. (T. byang chub mchog gi phyag rgya; C. zhiquan yin; J. chicken'in; K. chigwŏn in 智拳印). In Sanskrit, “gesture of the branches of enlightenment”; a gesture ([MUDRĀ](#)) found primarily with images of [VAIROCANA](#), the [DHARMAKĀYA](#) buddha, the central figure of the esoteric traditions of Buddhism and the chief buddha of the [TATHĀGATA](#) family (see [PAÑCAKULA](#)). The gesture is typically formed with the right fist clasp ing the raised left index finger at the level of the heart, although the hand positions may be reversed. (This gesture is known in Chinese as the zhiquan yin, or “wisdom-fist gesture” a rendering often found in English accounts.) Alternatively, the raised thumb of the left fist may be clasped by the four fingers of the right fist, symbolizing the

[MANDALA](#) of the five buddhas ([PAÑCATATHĀGATA](#)). The gesture is interpreted to indicate the unity in the [DHARMAKĀYA](#) of the divergent experience of ordinary beings ([PRTHAGJANA](#)) and buddhas, [SAMŚĀRA](#) and [NIRVĀNA](#), ignorance ([AVIDYĀ](#)) and wisdom ([PRAJÑĀ](#)), and delusion ([MOHA](#)) and enlightenment ([BODHI](#)). See also [JÑĀNAMUSTI](#).

Bo dong. Name of a place in central Tibet and of a small, institutionally independent Tibetan Buddhist sect with its major seat at Bo dong E monastery. The sect was founded in about 1049 in the Shigatse region of Tibet by the [BKA' GDAMS](#) geshe ([DGE BSHE](#)) Mu dra pa chen po, who invited Sthirapāla ('Bum phrag gsum pa), a contemporary of [ATIŚA DĪPAMKARAŚRĪJÑĀNA](#), to stay in the monastery on his arrival from India. The monastery's earlier history is not well known, though it is compared by some to the more famous Bka' gdams monastery [GSANG PHU NE'U THOG](#), founded by [RNGOG LEGS PA'I SHES RAB](#). [KO BRAG PA BSOD NAMS RGYAL MTSHAN](#), an abbot of Bo dong, is known for his teaching of the [KĀLACAKRA](#) ṣaḍaṅgayoga practice, and for propagating a lineage of the [LAM 'BRAS](#) "path and result" teaching that was later subsumed into the [SA SKYA](#) tradition. The Bo dong sect, as it is now known, begins properly with [BO DONG PHYOGS LAS RNAM RGYAL](#), who wrote a huge encyclopedic work *De nyid 'dus pa* ("Compendium of the Principles") in 137 volumes (in the incomplete published edition). The monastery of Bsam lding (Samding) overlooking Yam 'brog mtsho retains an affiliation with the Bo dong sect; it was founded for a student of Phyogs las rnam rgyal, the Gung thang princess Chos kyi sgron me (1422–1455). It is the only Tibetan monastery whose abbot is traditionally a woman; her incarnations are said to be those of the goddess [VAJRAVĀRĀHĪ](#) (T. Rdo rje phag mo), "Sow-Headed Goddess."

Bo dong Phyogs las rnam rgyal. (Chokle Namgyal) (1376–1451). The twenty-third abbot of Bo dong E monastery, founded in about 1049 by the [BKA' GDAMS](#) geshe ([DGE BSHE](#)) Mu dra pa chen po, and the founder of the [BO DONG](#) tradition. His collected works, said to number thirty-six titles, include his huge encyclopedic work *De nyid 'dus pa* ("Compendium of the Principles"); it alone runs to 137 volumes in the incomplete edition published by Tibet House in Delhi. Phyogs las rnam rgyal (who is sometimes confused with Jo nang pa Phyogs las rnam rgyal who lived some fifty years earlier) was a teacher of [DGE 'DUN GRUB](#) (retroactively named the first [DALAI LAMA](#)) and [MKHAS GRUB DGE LEGS DPAL BZANG](#), both students of [TSONG KHA PA](#). Among his leading disciples

was the king of Gung thang, Lha dbang rgyal mtshan (1404–1463), whose daughter Chos kyi sgron me (1422–1455) became a nun after the death of her father and then the head of Bsam lding (Samding) monastery, which her father founded for her. The monastery is the only Tibetan monastery whose abbot is traditionally a woman; incarnations are said to be those of the goddess [VAJRAVĀRĀHĪ](#) (T. Rdo rje phag mo), “Sow-Headed Goddess.”

[Bo Juyi](#). [alt. Bai Juyi] (J. Haku Kyoi; K. Paek Kōi 白居易) (772–846). A celebrated Chinese poet of the Tang dynasty; also known as Yaotian (Enjoying Heaven) and Layman Xiangshan. Bo Juyi was born in Henan to a destitute family with a scholarly background. He passed the civil examinations at the age of twenty-seven and held various government positions throughout his political career. Bo Juyi was exiled in 815 from the capital of Chang’an for his criticisms of governmental policies, after which he turned to Buddhism for solace. Bo Juyi befriended numerous [CHAN](#) masters of his time and studied under Foguang Ruman (d.u.), a disciple of the renowned Chan master [MAZU DAOYI](#). He acquired his Buddhist toponym Xiangshan during his residence at the monastery of [XIANGSHANSI](#). In addition to his famous collections of poems, such as the *Changhen ge*, Bo Juyi also left numerous funerary inscriptions that he composed for deceased monks. His writings were compiled together in his *Baishi wenji*, in seventy-five rolls.

[bokuseki](#). (墨蹟). In Japanese, “ink traces”; generally referring to any sort of calligraphy executed by an ink brush on paper or silk. The Japanese monk Murata Jukō (1422–1502) is said to have hung in his tea room the calligraphy of the Song-dynasty [CHAN](#) master [YUANWU KEQIN](#), which he had received from his teacher [IKKYŪ SŌJUN](#), a practice that seems to have had no precedent in Japan. Following his lead, monks largely from the [GOZAN](#) lineage began to collect the calligraphy of eminent Song-dynasty Chan masters such as [DAHUI ZONGGAO](#) and [XUTANG ZHIYU](#) to display in their private quarters and tea rooms. From the time of the Zen and tea master Sen no Rikyū (Sōeki Rikyū; 1521–1591), the calligraphy of Japanese Zen monks such as [MYŌAN EISAI](#), [DŌGEN KIGEN](#), and [MUSŌ SŌSEKI](#) began to be seen as valuable commodities. The calligraphy of Zen masters belonging to the [DAITOKUJI](#) lineage such as [SŌHŌ MYŌCHŌ](#), Ikkyū Sōjun, and [TAKUAN SŌHŌ](#) also came to be highly prized. Beginning with Sen no Rikyū, the practice of collecting relatively simple calligraphy, comprised largely of a single, horizontally executed line, came to be favored over those containing

longer poems or sermons written in vertical lines.

Bon. In Tibetan, “reciter”; originally a term for a category of priest in the royal cult of pre-Buddhist Tibet. Traditional Tibetan histories present these priests as opponents of the introduction of Buddhism in Tibet during the seventh and eighth centuries. In the eleventh century, Bon emerged as fully elaborated sect of Tibetan religion, with its own buddha, its own pantheon, and its own path to liberation from rebirth. Bon should not be regarded as the pre-Buddhist religion of Tibet, but rather as the leading non-Buddhist religion of Tibet, which has had a long history of mutual influence and interaction with the Buddhist sects.

Bon Festival. [alt. Obon] (J. 盆/お盆). See *[ULLAMBANA](#).

bonze. (J. bonsō/bossō 凡僧). An early English term for a Buddhist monk, especially in East Asia, deriving from the Portuguese pronunciation of the Japanese bonsō (“ordinary cleric”). Although occasionally still used in reference to Japanese Buddhist priests, this sixteenth-century term is long outmoded and should be discarded.

bore. (C) (般若). The preferred Sinographic transcription for “[PRAJÑĀ](#)”; the term is also sometimes seen transcribed as [BANRUO](#) or [BORUO](#).

Bore wuzhi lun. (J. Hannya muchiron; K. Panya muji non 般若無知論). In Chinese, the “Nescience of Prajñā Treatise”; a subtreatise in a larger work entitled the [ZHAO LUN](#), attributed to the Chinese monk [SENGZHAO](#). In this treatise, the author claims that because wisdom ([PRAJÑĀ](#)) is quiescent, empty, and lacking any perduring essence, any conscious awareness of it is impossible. Although prajñā is itself formless, it interacts with the realm of perceived objects through a process known as [GANYING](#), or “sympathetic resonance.” This treatise is said to have been based on [KUMĀRAJĪVA](#)’s translation of the [PAÑCAVIMŚATISĀHASRIKĀPRAJÑĀPĀRAMITĀSŪTRA](#).

Borobudur. [alt. Barabudur]. A massive Indonesian Buddhist monument located in a volcanic area west of Yogyakarta, in the south-central region of the island of Java. Although there are no written records concerning the monument’s dating, archaeological and art-historical evidence suggests that construction started around 790 CE during the Śailendra dynasty and continued for at least another three-quarters of a century. The derivation of its name remains controversial.

The anglicized name Borobudur was given to the site by the colonial governor Sir Thomas Raffles, when Java was under British colonial rule. The name “budur” occurs in an old Javanese text referring to a Buddhist site and Raffles may have added the “boro” to refer to the nearby village of Bore. Borobudur is a pyramid-shaped [MANDALA](#) with a large central [STŪPA](#), which is surrounded by three concentric circular tiers that include a total of seventy-two individual stūpas, and four square terraces, giving the monument the appearance of a towering mountain. The maṇḍala may have been associated with the pilgrimage of the laḍ [SUDHANA](#) described in the [GANDAVYŪHA](#) (and its embedded version in the “Entering the Dharmadhātu” chapter of the [AVATAMSAKASŪTRA](#)). This structure is without analogue anywhere else in the Buddhist world, but seems to have influenced Khmer (Cambodian) architectural traditions. The central stūpa houses a buddha image, and originally may have also enshrined a relic ([ŚARĪRA](#)). Each of the seventy-two smaller stūpas also enshrines an image of a [BODHISATTVA](#), of whom [MAÑJUŚRĪ](#) and [SAMANTABHADRA](#) are most popular. The walls of Borobudur are carved with some 1,350 bas-reliefs that illustrate tales of the Buddha’s past and present lives from the [JĀTAKA](#) and [AVADĀNA](#) literature, as well as events from such texts as the [LALITAVISTARA](#), Gaṇḍavyūha, and the [BHADRACARĪPRANIDHĀNA](#). There are also niches at the upper parts of the walls that are enshrined with buddha images employing different hand gestures ([MUDRĀ](#)). The three circular tiers of Borobudur are presumed to correspond to the three realms of Buddhist cosmology ([TRAIDHĀTUKA](#)); thus, when pilgrims circumambulated the central stūpa, they may have also been traveling symbolically through the sensuous realm ([KĀMADHĀTU](#)), the subtle-materiality realm ([RŪPADHĀTU](#)) and the immaterial realm ([ĀRŪPYADHĀTU](#)). There are also ten series of bas-reliefs, which suggest that pilgrims making their way through the monument were also ritually reenacting a bodhisattva’s progression through the ten stages ([DAŚABHŪMI](#)) of the bodhisattva path ([MĀRGA](#)). The monument is constructed on hilly terrain rather than flat land, and there is also some geological evidence that it may have originally been built on a lakeshore, as if it were a lotus flower floating in a lake. Borobudur is aligned with two other Buddhist temples in the area, Pawon and Mendu, an orientation that may well have had intentional ritual significance. By at least the fifteenth century, Borobudur was abandoned. There are two main theories regarding its fate. Since Borobudur was buried under several layers of volcanic ash at the time of its rediscovery, one theory is that a famine resulting from a volcanic eruption prompted the depopulation of the region and the monument’s abandonment. A

second explanation is that the rise of Islam hastened the downfall of Buddhism in Java and the neglect of the monument.

[Borommaracha I](#). (P. Paramarājā) (r. 1370–1388). Thai king of [AYUTHAYA](#). During his reign, the Thai monk Dhammakitti Mahāsāmī returned to Ayuthaya from Sri Lanka and wrote the [SADDHAMMASAṄGAHA](#), the earliest-known Buddhist chronicle written in Southeast Asia. The *Saddhammasaṅgaha* borrows its account of [PARĀKRAMABĀHU](#)’s reforms of the Buddhist order from the historical introduction of the [MAHĀPARĀKRAMABĀHU-KATIKĀVATA](#).

[Borommaracha II](#). (P. Paramarājā) (r. 1424–1448). Thai king of [AYUTHAYA](#), who expanded the city-state’s boundaries, turning it into a regional power. He destroyed the Khmer empire of Ankor to the east and absorbed the kingdom of [SUKHOTHAI](#). In 1442 he attacked the Thai kingdom of Lānnā, beginning a century of warfare between Ayuthaya and Chiangmai. Toward the end of his life he received a delegation of reordained monks from Sri Lanka headed by [MEDHAṆKARA AND ÑĀNAGAMBHĪRA](#) and at their prompting made their reformed Sinhalese [NIKĀYA](#) the only orthodox fraternity in the kingdom. The [PADAENG CHRONICLE](#) states that the senior monk of Ayuthaya, Mahā Dhammasārada, ordered all younger monks laicized and reordained at the residence of Ñāṇagambhīra. The delegation resided at Ayuthaya for four years, during which time they reordained many local monks. Afterward, they traveled to Chiangmai and other northern city-states to propagate their reforms.

[boruo](#). (C) (般若). Alternate Chinese transcription for Sanskrit [PRAJÑĀ](#) (wisdom); the preferred transcription is [BORE](#). See [BORE](#) for related Chinese terms and [PRAJÑĀ](#) for Sanskrit equivalents.

[Bo tree](#). See [BODHI TREE](#).

[Brag dkar rta so](#). (Drakar Taso). In Tibetan, lit. “White Rock Horse Tooth”; a complex of meditation caves and small temples located close to the Nepalese border in the [SKYID GRONG](#) valley of southwestern Tibet. It was one of the primary meditation retreats of the eleventh-century yogin [MILA RAS PA](#), who was born nearby and later spent many years in the area in strict meditation retreat, especially at the site called Dbu ma rdzong (Uma dzong), “Fortress of the Central [Channel].” In the sixteenth century, a small monastery was founded at Brag dkar rta so by the [’BRUG PA BKA’ BRGYUD](#) master [LHA BTSUN RIN CHEN RNAM](#)

[RGYAL](#), and the location became an important xylographic printing house specializing in the biographies of [BKA' BRGYUD](#) masters. The center also became the seat of an important incarnation lineage, the Brag dkar rta so incarnations.

[Brag yer pa](#). [alt. Yer pa; G.yer pa] (Drak Yerpa). A complex of meditation caves and temples northeast of [LHA SA](#), regarded as one of the premier retreat locations of central Tibet. The ancient hermitage complex was founded by queen Mong bza' khri lcam (Mongsa Tricham) and her children and was inhabited during the imperial period by Tibet's religious kings [SRONG BTSAN SGAM PO](#), [KHRI SRONG LDE BTSAN](#), and [RAL PA CAN](#). The Indian sage [PADMASAMBHAVA](#) is said to have spent some seven months in retreat there and hid numerous treasure texts ([GTER MA](#)) in the area. Brag yer pa is considered one of his three primary places of attainment (grub gnas), together with [CHIMS PHU](#) and Shel brag (Sheldrak). Lha lung Dpal gyi rdo rje (Lhalung Palgyi Dorje), assassin of King [GLANG DAR MA](#), is said to have spent more than twenty-two years in retreat there. Brag yer pa later gained prominence under the influence of the [BKA' GDAMS](#) sect after the Bengali scholar [ATIŚA](#) passed some three years at the site.

[Brahmā](#). [alt. Mahābrahmā] (T. Tshangs pa; C. Fantian; J. Bonten; K. Pömch'ön 梵天). An Indian divinity who was adopted into the Buddhist pantheon as a protector of the teachings ([DHARMAPĀLA](#)) and king of the [BRAHMALOKA](#) (in the narrow sense of that term). A particular form of the god Brahmā, called [SAHĀMPATI](#), plays a crucial role in the inception of the Buddhist dispensation or teaching ([ŚĀSANA](#)). During the seven weeks following his enlightenment, the newly awakened buddha [GAUTAMA](#) was unsure as to whether he should teach, wondering whether there would be anyone in this world who would be able to duplicate his experience. Brahmā descended to earth and convinced him that there were persons “with little dust in their eyes” who would be able to understand his teachings. The Buddha then surveyed the world to determine the most suitable persons to hear the [DHARMA](#). Seeing that his former meditation teachers had died, he chose the “group of five” ([PAÑCAVARGIKA](#)) and proceeded to [RSIPATANA](#), where he taught his first sermon, the “Turning of the Wheel of the Dharma” ([DHARMAKAKRĀPRAVARTANASŪTRA](#); P. [DHAMMACAKKĀPĀVATTANASUTTA](#)). Because of this intervention, Brahmā is considered one of the main dharmapālas. [BUDDHAGHOSA](#) explains, however, that the compassionate Buddha never had any hesitation about teaching the dharma but felt that if he were implored by the god Brahmā, who was revered in the

world, it would lend credence to his mission. Brahmā is depicted with four faces and four arms, and his primary attributes are the lotus and the [CAKRA](#). The figure of Brahmā also fused with early Indian [BODHISATTVAS](#) such as [PADMAPĀNI](#) ([AVALOKITEŚVARA](#)). In Tibet the dharmapāla [TSHANGS PA DKAR PO](#) is a fusion of Brahmā and [PE HAR RGYAL PO](#).

[brahmacharya](#). (P. brahmachariya; T. tshangs spyod; C. fanxing; J. bongyō; K. pōmhaeng 梵行). In Sanskrit, lit. “holy lifeway” or “religious life”; a term used most typically to mean “celibacy,” viz., a religious way of life based on renunciation and chastity, and by extension to the monks and ascetics who follow that way of life. Within the Brahmanical tradition, brahmacharya refers to unmarried students of the Vedas, but the term was adopted by the Buddhists to refer more broadly to a religious mendicant’s celibate way of life. Cf. [PĀRĀJIKĀ](#).

[Brahmajālasuttanta](#). (C. Fandong jing; J. Bondōkyō; K. Pōmdong kyōng 梵動經) In Pāli, “Discourse on [BRAHMA](#)’s Net”; the first sutta of the [DĪGHANIKĀYA](#) (a separate [DHARMAGUPTAKA](#) recension appears as the twenty-first [SŪTRA](#) in the Chinese translation of the [DĪRGHĀGAMA](#)). While dwelling in the Ambalaṭṭhikā grove, the Buddha preaches this sermon to the ascetic Supiyya and his disciple Brahmaddatta, in order to allay their disagreement over the merits and demerits of the Buddha. The Buddha first explains that there are some who praise him for his observation of moral precepts (sīla; S. [ŚĪLA](#)), which, he notes, are merely abstentions from wrongdoing. These he elaborates in increasing detail in three sections and concludes by saying that those who judge him by these abstentions have only a trivial understanding of his virtues. The Buddha then describes sixty-two theories regarding the existence of the self (attan; S. [ĀTMAN](#)) advocated by other recluses (samaṇa, S. [ŚRAMANA](#)) and brāhmaṇas, all of which he rejects. These he classifies as the doctrines of eternalism (sassatavāda, see S. [ŚĀŚVATADRSTI](#)), semi-eternalism (ekaccasassatavāda), extensionism (antānantavāda), equivocation or eel-wriggling (amarāvikkhepavāda), causeless originationism (adhiccasamuppannavāda), the belief in conscious existence after death (saññīvāda), unconscious existence after death (asaññīvāda), existence after death that is neither conscious or unconscious (nevasaññīnāsaññīvāda), annihilationism ([UCCHEDAVĀDA](#)), and hedonism (diṭṭhadhammanibbānavāda). All of these theories the Buddha rejects as examples of wrong views (diṭṭhi, S. [DRSTI](#)), which are advocated by other recluses and brāhmaṇas through their contact with, and experience of, sensory objects. Because of their wrong views,

these theories produce craving (taṇhā, S. [TRSNĀ](#)) and grasping ([UPĀDĀNA](#)), which in turn fuel the process of becoming ([BHAVA](#)) and leads to continued rebirth ([JĀTI](#)), old age and death ([JARĀMARANA](#)), sorrow (śoka), lamentation (parideva), pain ([DUHKHA](#)), grief (daurmanasya), and despair (upāyāsa) (see [PRATĪTYASAMUTPĀDA](#)). The *Brahmajālasuttanta* is valued by scholars as a source for understanding the range of philosophical views present in India at the time of the early Buddhist community.

[brahmakāyika](#). (P. brahmāpārisajjā; T. tshangs ris; C. fanzhong tian; J. bonshuten; K. pōmjung ch'ōn 梵衆天). In Sanskrit, “brahmā’s retainers”; the lowest of the three heavens that constitute the first concentration ([DHYĀNA](#)) of the realm of subtle materiality ([RŪPADHĀTU](#)) in the Buddhist cosmological system. In Pāli, the term brahmakāyika seems to be used at times for a general term for all the inhabitants of the [BRAHMALOKA](#); the inhabitants of the lowest of the three heavens are instead called brahmāpārisajjā (the “assembly of [BRAHMĀ](#)”). However, brahmakāyika more commonly refers to the lowest of the three heavens, whose inhabitants are divinities ([DEVA](#)) who are subordinates of the god Brahmā. As with the other inhabitants of the realm of subtle materiality, the divinities there have only three sense organs: of sight, hearing, and touch. Also as with all the heavens of the subtle-materiality realm, one is reborn as a divinity there through mastering during one’s meditative practice in a preceding lifetime the same level of dhyāna as those divinities.

[brahmaloka](#). (T. tshangs pa’i ’jig rten; C. fanjie; J. bonkai; K. pōmgye 梵界). In Sanskrit and Pāli, the “[BRAHMĀ](#) worlds.” In its narrowest sense, brahmaloka refers to the first three heavens of the realm of subtle materiality ([RŪPADHĀTU](#)), whose denizens live perpetually immersed in the bliss of the first meditative absorption ([DHYĀNA](#); P. jhāna): [BRAHMAKĀYIKA](#) (heaven of Brahmā’s followers), [BRAHMAPUROHITA](#) (heaven of Brahmā’s vassals), and [MAHĀBRAHMĀ](#) (heaven of Brahmā himself). The ruler of these three heavens is named either Brahmā or Mahābrahmā, and he mistakenly believes that he is the creator of the universe. In a more general sense, the brahmaloka can also refer collectively to all the heavens of both the realm of subtle materiality and the immaterial realm ([ĀRŪPYADHĀTU](#)). The two realms are divided into twenty heavens, the top four of which comprise the immaterial realm. Denizens of the immaterial realm have no physical dimension but are entirely mental and are perpetually immersed in one of the four immaterial absorptions ([ĀRŪPYĀVACARADHYĀNA](#)). The realm of subtle

materiality is divided into sixteen heavens, the top five of which are called the “pure abodes” ([ŚUDDHĀVĀSA](#)), where nonreturners ([ANĀGĀMIN](#)) are reborn. When the time is right, inhabitants of the pure abodes descend to earth in the guise of brāhmaṇas to leave portents of the advent of future buddhas so that they can be recognized when they appear in the human realm. One heaven in the realm of subtle materiality is reserved for unconscious beings (S. *asaṃjñisattva*; P. *asaññasatta*) who pass their entire lives (which can last eons) in dreamless sleep, only to die the moment they awaken. As with the immaterial realm, the realm of subtle materiality is also divided into four broad strata that correspond to the four form-based meditative absorptions ([RŪPĀVACARADHYĀNA](#)) and the denizens of these strata perpetually experience the bliss of the corresponding dhyāna. Regardless of the particular heaven they occupy, all inhabitants of the brahmaloka are all classified as Brahmā gods and live in splendor that far exceeds that of the divinities in the lower sensuous realm of existence ([KĀMADHĀTU](#)).

[Brahmanimantanikasutta](#). (C. Fantian qing fo jing; J. Bonten shōbutsukyō; K. Pōmch’ōn ch’ōngbul kyōng 梵天請佛經). In Pāli, “Discourse on the Invitation of a [BRAHMĀ](#)”; the forty-ninth sutta of the [MAJJHIMANIKĀYA](#), preached by the Buddha to a gathering of monks at the [JETAVANA](#) Grove in the town of Sāvatti (S. [ŚRĀVASTĪ](#)). (A separate [SARVĀSTIVĀDA](#) version appears as the seventy-eighth [SŪTRA](#) in the Chinese translation of the [MADHYAMĀGAMA](#).) The Buddha recounts to his disciples how he once visited the divine abode of the brahmā god Baka to dissuade him of the wrong view of eternalism (S. [ŚĀŚVATADRSTI](#)). Because Baka had lived a very long time as lord of his realm—so long that his memory had failed him—the wrong view occurred to him that everything in his heaven was permanent, everlasting, and eternal; that nothing was beyond it; that nothing in his heaven was born, grew old, or died; that nothing passed away or reappeared; and that beyond his heavenly realm there was no escape. The Buddha tells Baka he knows more than Baka knows, that there are in fact other heavens more resplendent than his, and that because of their awakening, the Buddha and his disciples are quite beyond and free from all realms of existence.

[brahmapurohita](#). (T. tshangs pa’i mdun na ’don; C. fanfu tian; J. bonhoten; K. pōmbo ch’ōn 梵輔天). In Sanskrit and Pāli “brahmā’s ministers”; the second of the three heavens that constitute the first concentration ([DHYĀNA](#)) of the realm of subtle materiality ([RŪPADHĀTU](#)) in the Buddhist cosmological system. The

inhabitants of this heaven are divinities ([DEVA](#)) who serve as the attendants, ministers, and officials of the god [BRAHMĀ](#). As with the other inhabitants of the realm of subtle materiality, the divinities there have only three physical sense organs: of sight, hearing, and touch. As with all the heavens of the subtle-materiality realm, one is reborn as a god there through mastering during one's meditative practice in a preceding lifetime the same level of dhyāna as those divinities.

[Brahmā's Net Sūtra](#). See [FANWANG JING](#); cf. [BRAHMAJĀLASUTTANTA](#).

[brahmavihāra](#). (T. tshangs pa'i gnas; C. fānzhu; J. bonjū; K. pŏmju 梵住). In Sanskrit and Pāli, “divine abidings,” or “highest religious state.” This is a classification of four meditative topics used for the cultivation of tranquility meditation ([ŚAMATHĀ](#)): loving-kindness ([MAITRĪ](#); P. mettā), compassion ([KARUNĀ](#)), empathetic joy ([MUDITĀ](#)), and equanimity or impartiality ([UPEKSĀ](#); P. upekkhā). The meditator is taught to take up each of the divine abidings in the same way: starting with the first brahmavihāra, for example, filling his mind with loving-kindness, he pervades the world with it, first in one direction; then in a second direction; then a third and a fourth; then above, below, and all around; always identifying himself with all beings and keeping himself free from hatred and ill will. In the same way, he develops compassion, empathetic joy, and equanimity. These four factors are taken up as objects of meditation to counter the influence of specific unwholesome ([AKUŚALA](#)) states of mind: viz., loving-kindness counteracts hostility ([VYĀPĀDA](#)), compassion counters harmfulness ([VIHIMSA](#)), empathetic joy counters dissatisfaction or envy regarding others achievements (arati), and equanimity counters both the desire and hostility arising from sensuality (kāmarāgavyāpāda) as well as the desire to win the approval of others (anunaya). Of these divine abidings, the first three are capable of producing the first three of the four meditative absorptions ([DHYĀNA](#)); the fourth divine abiding is the only one capable of producing the fourth meditative absorption. The four divine abidings are listed in the [VISUDDHIMAGGA](#) as four of the forty meditative topics ([KAMMATTHĀNA](#)) that may be pursued by the meditator. The *Visuddhimagga* notes they are useful only for the cultivation of tranquility (P. samatha; S. śamatha), and not for the cultivation of insight (P. [VIPASSANĀ](#); S. [VIPAŚYANĀ](#)). Taken as objects of concentration and extended in meditation to all beings without limit, the divine abidings also come to be known as the “boundless states” ([APRAMĀNA](#)).

Brāhmī. In Sanskrit, “Holy Script”; name for one of the two predominant scripts (along with [KHAROṢṬHĪ](#)) used in the [GANDHĀRA](#) region of northwest India; Buddhist texts using this script are found in Sanskritized Gāndhārī and other Prakrit vernaculars (known as [BUDDHIST HYBRID SANSKRIT](#)). Buddhist documents were written in the Kharoṣṭhī script at least as early as the first half of the first century CE; these are now generally conceded to be the oldest extant Indian and Buddhist documents, although stone and coin inscriptions and edicts in Aśokan Brāhmī date from considerably earlier. Documents using the Brāhmī script date from about one or two centuries later, during the second or third centuries CE; the latest Brāhmī documents date from the eighth century CE, around the time that Buddhism begins to vanish from the Gandhāra region. The Brāhmī manuscripts are often written on palm leaves, while many of the Kharoṣṭhī manuscripts instead use birch bark. The greatest cache of Brāhmī manuscripts discovered so far are extensive fragments of a Sanskrit recension of the [DIRGHĀGAMA](#) (“Long Discourses”; see also [DĪGHANIKĀYA](#)) attributed to the [SARVĀSTIVĀDA](#) school or its [MŪLASARVĀSTIVĀDA](#) offshoot. Aśokan-period Brāhmī has ten vowels and thirty-eight consonants and is written like all Indian alphabets from left to right; Kharoṣṭhī is written from right to left and appears to be based on an Aramāic script. In the modern period, the Brāhmī script was deciphered by James Prinsep (1799–1840) of the Asiatic Society of Bengal. Brāhmī is also related to the [SIDDHAM](#) script used in East Asian for transcribing Sanskrit [DHĀRANĪs](#) and [MANTRAS](#).

’Bras spungs. (Drepung). In Tibetan, literally “Rice Heap”; one of the three monastic seats ([GDAN SA GSUM](#)) of the [DGE LUGS](#) sect of Tibetan Buddhism; located eight kilometers west of the Tibetan capital of [LHA SA](#). The monastery is named after the Dhanyakataṅka stūpa in [AMARĀVATĪ](#) in southern India, where the Buddha is said to have first taught the [KĀLACAKRATANTRA](#). It was founded in 1416 by [’JAM DBYANGS CHOS RJE BKRA SHIS DPAL LDAN](#), one of [TSONG KHA PA](#)’s leading disciples, and after only a few years in operation already housed over 2,000 monks. In the early sixteenth century, the second [DALAI LAMA](#) Dge ’dun rgya mtsho (Gendün Gyatso, 1475–1542) became the monastery’s abbot; in 1530, he established a residence and political institution there called the [DGA’ LDAN PHO BRANG](#) or “Palace of [TUSITA](#).” Following him, Bsod nam grags pa (Sönam Drakpa, 1478–1554) became the abbot. Thereafter, until the ascendancy of the Dalai Lamas, the most powerful religious dignitaries in the monastery were the Dalai Lamas and the reincarnations of Bsod nam grags pa. In the

seventeenth century, under the direction of the fifth Dalai Lama [NGAG DBANG BLO BZANG RGYA MTSHO](#), the Dga' ldan pho brang (also known as the gzims khang 'og ma or “lower chambers” to distinguish it from the “upper chambers,” gzims khang gong ma, where the incarnations of Bsod nams grags pa resided), was moved to the [PO TALA](#) palace. There it functioned as the seat of the Tibetan government until the Chinese occupation of Tibet in 1959. The monastery is an enormous complex of assembly halls, temples, chapels, living quarters and mountain hermitages. At the time of the fifth Dalai Lama, 'Bras spungs housed over 10,000 monks divided into seven (and later four) colleges (grwa tshang), more than fifty regional dormitories (khams tshan), and occupied an area of some 180,000 square feet, easily forming the largest monastery in Tibet. At the height of its florescence, 'Bras spungs drew applicants from all quarters of the Tibetan cultural world including the far east and northeast in A mdo, as well as Mongolia, Kalmykia, and Buryatia. The monastery was large enough to accommodate individuals of a wide range of capacities and interests. A large percentage of its monks engaged in little formal intellectual study, instead choosing to work for the institution as laborers, cooks, and ritual assistants. Even so, 'Bras spungs's numerous monastic colleges also attracted some of Tibet's most talented and gifted scholars, producing a line of elite academicians and authors. The complex was sacked a number of times, first by the King of Gtsang (Tsang) during a civil war in 1618, then by the Mongol army in 1635, and again by Lha bzang Khan in 1706. It was most recently plundered by the People's Liberation Army during the Chinese Cultural Revolution but opened again in 1980 with five hundred monks.

[brhatphala](#). (P. vehapphala; T. 'bras bu che; C. guangguo tian; J. kōkaten; K. kwanggwa ch'ōn 廣果天). In Sanskrit, “great fruition,” the third and lowest of the eight heavens of the fourth concentration ([DHYĀNA](#)) of the realm of subtle materiality ([RŪPADHĀTU](#)); in Pāli sources, this is the lowest of the seven heavens of the fourth [DHYĀNA](#) of the realm of subtle materiality ([RŪPADHĀTU](#)). The heaven is so called because it is the greatest fruition among all places of rebirth in [SAMSĀRA](#) for ordinary persons ([PRTHAGJANA](#)) who have not achieved the state of [ĀRYAPUDGALA](#) or noble person. As with all the heavens of the subtle-materiality realm, one is reborn as a god there through mastering during one's meditative practice in a preceding lifetime the same level of dhyāna as those divinities.

['Bri gung bka' brgyud](#). (Drigung Kagyü). A subsect of the [BKA' BRGYUD](#) sect

of Tibetan Buddhism, counted among the “four major and eight minor Bka’ brgyud subsects” ([BKA’ BRGYUD CHE BZHI CHUNG BRGYAD](#)). The lineage stems from the twelfth-century meditation master [’JIG RTEN GSUM MGON](#), who founded the sects seat at [’BRI GUNG MTHIL](#) monastery in 1179, from which the lineage derives its name. Although the ’Bri gung bka’ brgyud wielded political power at times during the thirteenth century, members of the tradition are primarily renowned as great meditators. The sect established prominent retreat centers around Mount [KAILASA](#) in western Tibet and [LA PHYI](#) in the south. It has remained an active Bka’ brgyud subsect under the guidance of its principal reincarnate teachers, the Che tshang and Chung tshang lamas. The former has established an exile seat in Dehra Dun, Uttar Pradesh in northern India, with numerous affiliated centers in India, Nepal, and the West, while the latter remains in Tibet.

[’Bri gung mthil](#). (Drigung Til). An important monastery affiliated with the [’BRI GUNG BKA’ BRGYUD](#) sect of Tibetan Buddhism, located northeast of the Tibetan capital of [LHA SA](#). A hermitage was initially established at the site in 1167 by Mi nyag sgom ring (Minyak Gomring), a disciple of the influential Bka’ brgyud hierarch [PHAG MO GRU PA RDO RJE RGYAL PO](#). In 1179 Phag mo gru pa’s disciple [’JIG RTEN GSUM MGON](#), founder of the ’Bri gung bka’ brgyud sect, constructed a monastery there, deriving its name (literally “back of a female yak”) from the contour of the surrounding ridge. The institution was renowned for its excellence in meditative training and gained great political power during the thirteenth century when it rivaled even the [SA SKYA](#) establishment. ’Bri gung mthil was sacked by the Mongol-backed Sa skyas in 1290 but was rebuilt and later flourished as an active, though politically insignificant, religious center for the ’Bri gung bka’ brgyud teachings. One of central Tibet’s most famous sky-burial sites is affiliated with the monastery.

[Brin](#). (Drin) A village and its surrounding region of the Rongshar Valley in southern Tibet, close to the Nepalese border, chiefly associated with the eleventh-century Tibetan [YOGIN MI LA RAS PA](#). According to the yogin’s biographies, the region was home to numerous patrons, and many of his favored retreat caves are located here. Also spelled Ding ma brin, or Brin thang.

[’Brog mi Shākya Ye shes](#). (Drogmi Shākya Yeshe) (c. 992–1072?). Tibetan scholar and founder of the [SA SKYA](#) sect of Tibetan Buddhism; one of the foremost translators of the new traditions ([GSAR MA](#)) in Tibet. Also known as

'Brog mi Lo tsā ba (“Drokmi the Translator”), 'Brog mi traveled to Nepal and India and studied for thirteen years under numerous masters and at the monastic university of [VIKRAMAŚILA](#). After returning to Tibet, he translated a variety of Sanskrit works, including important tantric treatises and commentaries. Chief among these were the [HEVAJRATANTRA](#) and the [RDO RJE TSHIG RKANG](#) (“Vajra Verses”) of the adept [VIRŪPA](#). He received the latter in Tibet from the Indian master Gyadhara (d. 1103) and it formed a scriptural basis for the seminal Sa skya tradition known as [LAM 'BRAS](#), or “path and result.” His chief disciple, [DKON MCHOG RGYAL PO](#), is credited with founding [SA SKYA](#) monastery.

['Brom ston Rgyal ba'i 'byung gnas](#). (Dromton Gyalwe Jungne) (1004–1064). The foremost Tibetan disciple of the Bengali scholar [ATIŚA](#), and central figure in the founding of the [BKA' GDAMS](#) sect of Tibetan Buddhism during the period known as the later dissemination ([PHYI DAR](#)) of Buddhism in Tibet. Born in central Tibet, he began his education at an early age. Toward the middle years of his life, news of Atiśa’s arrival in western Tibet reached him, and he set out on the arduous journey to meet the master. 'Brom ston pa became an early and close student of Atiśa and made arrangements for his Indian guru’s tour of central Tibet in 1045. After Atiśa’s death, 'Brom ston pa established [RWA SGRENG](#) monastery in 1056, consolidating his career as translator and teacher at this important religious institution. He is remembered especially for the firm austerity of his religious practice. 'Brom ston pa’s instructions, as recorded in Bka’ gdams pa works such as the *Bka’ gdams gtor bu* (“Bka’ gdams Miscellanea”), perhaps wary of the potential abuses of tantric practice, instead emphasize meditation on impermanence and compassion coupled with adherence to strict ethical principles and monastic discipline.

[brtan](#) [alt. bstan] **[ma bcu gnyis](#)**. (denma chunyi). A group of twelve pre-Buddhist Tibetan deities converted to Buddhism by [PADMASAMBHAVA](#). The site of their subjugation is said to have been either Kha la brag (Kaladrak) or 'U yug, although individual members have variant legends. They are considered to be subordinate to the [BKRA SHIS TSHE RING MCHED LNGA](#), “five long-life sisters,” and, like that group of deities, frequently appear in the retinue of [DPAL LDAN LHA MO](#). Their status in the world is ambiguous, considered by some to be enlightened, by others to be mundane. Rdo rje g.yu sgron ma (Dorje Yudronma) is generally considered to be their leader, though sometimes Rdo rje grags mo rgyal (Dorje Drakmo Gyel) is given that honor. All members are said to take possession of

female mediums, some of whom were sponsored by the powerful [DGE LUGS](#) monasteries of [SE RA](#) and ['BRAS SPUNGS](#). The brtan ma are divided into three groups of four members each: the bdud mo (dumo) (female [BDUD](#)), gnod sbyin (nöjin) (female [YAKSA](#)), and sman mo (menmo). Their names, without the epithet “Rdo rje” (i.e., “Vajra”) are Kun grags ma, G.ya’ ma skyong, Kun bzang mo, and Bgegs kyi gtso in the group of bdud mo; Spyan gcig ma, Dpal gyi yum, Drag mo rgyal, and Klu mo dkar in the group of gnod sbyin chen mo; and Bod khams skyong, Sman gcig ma, G.yar mo sil, and G.yu sgron ma in the group of sman mo. There are numerous variations in the names.

['Brug chen incarnations](#). (Drukchen). An important “incarnate lama” ([SPRUL SKU](#)) lineage of Tibetan masters, esteemed as prominent teachers of the ['BRUG PA BKA' BRGYUD](#) sect of Tibetan Buddhism. The recognized line began in the fifteenth century, although the first embodiment is held to be [GTSANG PA RGYA RAS YE SHES RDO RJE](#) who lived several centuries earlier. Perhaps most famous among the 'Brug chen incarnations was the fourth, [PADMA DKAR PO](#), an exceptional scholar and prolific author and historian. The current 'Brug chen incarnation established a residence in India following the Chinese occupation of Tibet. The lineage includes:

1. Gtsang pa rgya ras Ye shes rdo rje (1161–1211)
2. Chos rje Kun dga' dpal 'byor (Chöje Kunga Paljor, 1426–1476)
3. 'Jam dbyangs chos grags (Jamyang Chödrak, 1477–1523)
4. Padma dkar po (1527–1592)
5. 'Phags bsam dbang po (Paksam Wangpo, 1593–1641)
6. Mi pham dbang po (Mipam Wangpo, 1641–1717)
7. Phrin las shing rta (Trinle Shingta, 1718–1766)
8. Kun gzigs chos kyi snang ba (Kunsik Chökyi Nangwa, 1767–1822)
9. 'Jigs med mi 'gyur dbang rgyal (Jikme Migyur Wangyal, 1823–1883)
10. Mi pham chos kyi dbang po (Mipam Chökyi Wangpo, 1884–1930)
11. Bstan 'dzin mkhyen rab dge legs dbang po (Tendzin Khyenrap Gelek Wangpo, 1931–1960)
12. 'Jigs med padma dbang chen (Jikme Pema Wangchen, b. 1963).

['Brug pa bka' brgyud](#). (Drukpa Kagyü). A lineage counted among the four major and eight minor [BKA' BRGYUD](#) subsects ([BKA' BRGYUD CHE BZHI CHUNG BRGYAD](#)) of Tibetan Buddhism, which maintained an active presence throughout central and western Tibet and became a predominant tradition in neighboring Bhutan. Its practitioners were widespread and renowned for their simple lifestyle and intensive meditative practices. For this reason, a Tibetan proverb arose that

said, “Half of the people are ’Brug pas. Half of the ’Brug pas are beggars. Half of the beggars are saints.” The lineage originated with [GLING RAS PA PADMA RDO RJE](#) (1128–1188), student of renowned Bka’ brgyud master [PHAG MO GRU PA RDO RJE RGYAL PO](#), and his disciple [GTSANG PA RGYA RAS YE SHES RDO RJE](#). The sect eventually divided into three branches, known as (1) Upper ’Brug (stod ’brug), established by Gtsang pa rgya ras’s disciple [RGOD TSHANG PA MGON PO RDO RJE](#); (2) Middle ’Brug (bar ’brug), established by Gtsang pa rgya ras’s disciple Lo ras pa Dar ma [alt. Grags pa] dbang phyug (Lorepa Darma Wangchuk) (1187–1250); and (3) Lower ’Brug (smad ’brug) established by Gtsang pa rgya ras himself. It was the Middle ’Brug tradition that was transmitted to Bhutan by [ZHAB DRUNG NGAG DBANG RNAM RGYAL](#).

[’Brug pa kun legs](#). (Drukpa Kunlek) (1455–1529). Also known as ’Brug smyon pa, “the Drukpa madman”; stories about his exploits, similar to the exploits of A khu ston pa (Aku Tönpa), are much beloved in Tibetan society; they draw on Tibetan folk narratives, the Indian [SIDDHA](#) tradition, and the Tibetan holy madman (smyon pa) tradition, poking fun at powerful interests and figures of religious authority, particularly monks, and often referring obliquely to esoteric tantric practices; the stories often suggest he engages in profane sexual and scatological activities in order to awaken people from ignorance to an understanding of Buddhist truths. The historical ’Brug pa kun leg (his given name was Kun dga’ legs pa; ’Brug pa is short for [’BRUG PA BKA’ BRGYUD](#), a [BKA’ BRYUD](#) subsect) was born into the noble Rgya (Gya) lineage of [RWA LUNG](#); he was a student of Lha btsun Kun dga’ chos kyi rgya mtsho and possibly the Bhutanese saint and [RNYING MA](#) treasure revealer ([GTER STON](#)) [PADMA GLING PA](#). His lineage was carried on after his death by his son. In his autobiography he describes himself as a difficult and contrary person from an early age; he was an adept at the practice of [MAHĀMUDRĀ](#). Later biographies of Kun dga’ legs pa give anachronistic accounts of him making fun of [SA SKYA PANDITA](#) and [TSONG KHA PA](#), iconic figures in Tibetan Buddhism, describe his appetite for barley beer and his fantastic love life; some accounts say he was the paramour of over five thousand women whom he enlightened by his teaching and practice. There is a small monastery of ’Brug pa kun legs with a phallic symbol in Bhutan where he is especially revered.

[Bsam gtan mig sgron](#). (Samten Mikdrön). In Tibetan, literally “Lamp of the Eye of Concentration”; the title of a ninth-century treatise by [GNUBS CHEN SANGS](#)

[RGYAS YE SHES](#) that discusses four main philosophical approaches prevalent during the early spread ([SNGA DAR](#)) of Buddhism in Tibet. These include (1) the gradual path (*rim gyis pa*); (2) the sudden path (*cig car ba*); (3) the tradition of [MAHĀYOGA](#); and (4) the [RDZOGS CHEN](#) teachings. The text is an important source for understanding the range of meditative practice and theory in Tibet in the period after the [BSAM YAS DEBATE](#) and before the persecution of Buddhism under King [GLANG DAR MA](#). The work makes clear reference to the teachings of the Chinese [CHAN](#) school in its discussion of the sudden teachings (see [DUNJIAO](#)).

Bsam yas. (Samye). Tibet's first Buddhist monastery, constructed on the north bank of the Gtsang po (Tsangpo) River in central Tibet, probably circa 779. The Tibetan king [KHRI SRONG LDE BTSAN](#) invited the renowned Indian Buddhist preceptor [ŚĀNTARAKSITA](#) to found the institution and ordain Tibet's first monks. According to traditional accounts, local spirits hostile to Buddhism blocked the completion of the project. Unable to continue his work, Śāntarakṣita convinced the Tibetan ruler to invite the powerful Indian tantric master [PADMASAMBHAVA](#) to his kingdom in order to subdue these autochthonous spirits. Padmasambhava reached the site and, from atop the nearby hill called He po ri, he subjugated the demons, binding them by oath to become protectors of the dharma ([DHARMAPĀLA](#)). The Bsam yas complex was subsequently constructed in the form of a [MANDALA](#) arranged in the shape of the universe according to Buddhist cosmological accounts, based on the model of [ODANTAPURĪ](#), a Pāla-dynasty monastery located in the present-day Indian state of Bihar. At the center stands the main basilica, serving as Mount [SUMERU](#), surrounded by chapels representing the four continents and eight subcontinents in the four cardinal directions, all of which is ringed by a massive wall capped with a thousand [STŪPAs](#). According to Tibetan and Chinese sources, in about 797 the monastery served as the venue for a great dispute between proponents of Indian and Chinese Buddhist perspectives on enlightenment and meditation. The outcome of this famous [BSAM YAS DEBATE](#), in which the Indian view is said to have prevailed, greatly influenced the development of Buddhism in Tibet, which subsequently became a tradition that looked more to India than China for inspiration. Bsam yas was a religiously and politically vibrant institution from its inception up to the tenth century, after which its influence waned under [BKA' GDAMS](#), [SA SKYA](#), and eventually [DGE LUGS](#) control. Bsam yas's central basilica is renowned for its art and its architectural design, said to be a fusion of styles from India, China, Tibet, and Central Asia. The complex suffered on numerous occasions due to fires and, most recently, at

the hands of the Chinese military during the Cultural Revolution. Extensive reconstruction and renovations were begun in the 1980s and Bsam yas remains an important pilgrimage destination and a potent symbol of Tibet's Buddhist heritage.

Bsam yas debate. An important event in the early dissemination ([SNGA DAR](#)) of Buddhism in Tibet. During the reign of the king [KHRI SRONG LDE BRTSAN](#) at the end of the eighth century, there were two Buddhist factions at court, a Chinese faction led by the Northern Chan ([BEI ZONG](#)) monk Heshang [MOHEYAN](#) (the Chinese transcription of "Mahāyāna") and an Indian faction associated with the recently deceased [ŚĀNTARAKṢITA](#) who, with the king and [PADMASAMBHAVA](#), had founded the first Tibetan monastery at [BSAM YAS](#). According to traditional accounts, Śāntarakṣita foretold of dangers and left instructions in his will that his student [KAMALAŚĪLA](#) be called from India. A conflict seems to have developed between the Indian and Chinese partisans (and their allies in the Tibetan court) over the question of the nature of enlightenment, with the Indians holding that enlightenment takes place as the culmination of a gradual process of purification, the result of combining ethical practice ([ŚĪLA](#)), meditation ([SAMĀDHI](#)), and wisdom ([PRAJÑĀ](#)). The Chinese spoke against this view, holding that enlightenment was the intrinsic nature of the mind itself rather than the goal of a protracted path of practice. Therefore, to recognize the presence of this innate nature of enlightenment, one need only enter a state of awareness beyond distinctions; all other practices were superfluous. According to both Chinese and Tibetan records, a debate was held between Kamalaśīla and Moheyan at Bsam yas, circa 797, with the king himself serving as judge. According to Tibetan records (contradicted by Chinese accounts), Kamalaśīla was declared the winner and Moheyan and his party were banished from Tibet, with the king proclaiming that the [MADHYAMAKA](#) school of Indian Buddhist philosophy (to which Śāntarakṣita and Kamalaśīla belonged) would thereafter be followed in Tibet. Kamalaśīla died shortly after the debate, supposedly assassinated by members of the Chinese faction. Scholars have suggested that although a controversy between the Indian and Chinese Buddhists (and their Tibetan partisans) occurred, it is unlikely that a face-to-face debate took place or that the outcome of the controversy was so unequivocal. The "debate" may instead have been an exchange of statements; indeed, Kāmaśīla's third [BHĀVANĀKRAMA](#) seems to derive from this exchange. It is also important to note that, regardless of the merits of the Indian and Chinese philosophical positions, China was Tibet's

chief military rival at the time, whereas India posed no such threat. The debate's principal significance derives from the fact that from this point on, Tibet largely sought its Buddhism from India; no school of Chinese Buddhism subsequently exerted any major influence in Tibet. It is said that when he departed, Moheyan left behind one shoe, indicating that traces of his view would remain in Tibet; some scholars have suggested possible connections between Chan positions and the [RDZOGS CHEN](#) teachings that developed in the ninth century. In Tibetan polemics of later centuries, it was considered particularly harsh to link one's opponent's views to the antinomian views of Moheyan. Moheyan himself was transformed into something of a trickster figure, popular in Tibetan art and drama. This event is variously referred to in English as the Council of Samye, the Council of Lha sa, and the Samye Debate. See also [DUNWU](#).

[bsdus grwa](#). (dudra). A distinctively Tibetan genre of monastic textbook (used widely in [DGE LUGS](#) monasteries) that introduces beginners to the main topics in [PRAMĀNA](#) (T. tshad ma) and [ABHIDHARMA](#). The genre probably originated with the summaries (bsdus pa) of important pramāṇa texts composed by the translator [RNGOG BLO LDAN SHES RAB](#) of [GSANG PHU NE'U THOG](#) monastery. [PHYWA PA CHOS KYI SENG GE](#) is credited with originating the distinctively Tibetan dialectical form that strings together a chain of consequences linked by a chain of reasons that distinguishes bsdus grwa. Beginners are introduced to the main topics in abhidharma and pramāṇa using this formal language, a language that has been heard in Tibetan debate institutions ([RTSOD GRWA](#)) down to the present day.

[bshad grwa](#). (shedra). In Tibetan, lit. “commentarial institution” or simply “teaching institute”; a part of a monastic complex devoted to the study of scripture, sometimes contrasted with a meditation center (sgrub khang, literally “practice house”). The institution possibly originates with [SA SKYA PANDITA](#) who in his *Mkhas pa la 'jug pa'i sgo* proposed a model of intellectual inquiry based on exposition, composition, and debate. In a traditional bshad grwa, the teacher explains line by line an authoritative Indian text, often referring to a Tibetan commentary; this may be followed by a formal period of debate; the teacher then calls on the monks during the next class to give an explanation of the part of the Indian text they have learned. The bshad grwa is contrasted with the [RTSOD GRWA](#) (tsödra) “debating institution,” the origins of which may go back to the model of study followed in [BKA' GDAMS](#) monasteries like [GSANG PHU NE'U THOG](#). The best known rtsod grwa are the six great [DGE LUGS](#) monasteries of pre-1959 Tibet,

which rarely emphasized the ability to give an explanation of the Indian text, but rather followed strict debating periods where particular points of doctrine were investigated in great detail. In the rtsod grwa, debate was raised to a high level, forming a central part of the curriculum, and the examination system that provided access to important and remunerative ecclesiastical postings in the Dge lugs establishment was based almost entirely on debating, as distinct from the ability to give a full commentary on an Indian text. The bshad grwa appears to have gained particular importance in areas of Khams, in Eastern Tibet, after the rise of the so-called [RIS MED](#) (rime) movement in the nineteenth century; of particular note there is the Khams bye bshad grwa in the [RDZONG GSAR](#) region of [SDE DGE](#), and the considerable number of new bshad grwa opened by learned monks from the Khams region as annexes of older monasteries that earlier were devoted entirely to ritual. See [RDZONG GSAR](#).

[Bsod noms rgya mtsho](#). (Sönam Gyatso) (1543–1588). A Tibetan Buddhist prelate officially identified as the third [DALAI LAMA](#), although he was the first to actually hold the title. Recognized as an accomplished scholar and Buddhist master, he served as the abbot of ['BRAS SPUNGS](#) Monastery. In 1578 he traveled to Mongolia at the invitation of the Tūmed ruler Altan Khan, and served as religious instructor to the court. He convinced the Mongols to ban blood sacrifice and other indigenous rites in favor of Buddhist practice. In return, the Mongol Khan bestowed upon his guru the title “Dalai Lama,” literally translating the Tibetan’s name rgya mtsho (“ocean”) into the Mongolian equivalent dalai. The name Dalai Lama was posthumously applied to Bsod noms rgya mtsho’s two previous incarnations, [DGE 'DUN GRUB](#) and Dge 'dun rgya mtsho (Gendün Gyatso), who became respectively the first and second members of the lineage. Bsod noms rgya mtsho traveled widely throughout eastern Tibet and China, teaching and establishing monastic centers.

[Bsod noms rtse mo](#). (Sönam Tsemo) (1142–1182). A renowned scholar of the [SA SKYA](#) sect of Tibetan Buddhism, considered one of the five Sa skya forefathers ([SA SKYA GONG MA RNAM LNGA](#)). He was born the second son of the great Sa skya founder [SA CHEN KUN DGA' SNYING PO](#). His brother was another of the Sa skya forefathers, Grags pa rgyal mtshan (Drakpa Gyaltsen). He was the uncle of [SA SKYA PANDITA](#). Bsod noms rtse mo was a devoted student of [PHYWA PA CHOS KYI SENG GE](#), studying [MADHYAMAKA](#) and [PRAMĀNA](#) with him over the course of eleven years. Bsod noms rtse mo was famous for his commentarial

work on Indian tantra, which he categorized in works such as his *Rgyu sde spyi rnam par bzhag pa* (“A General Presentation on the Divisions of Tantra”).

[bstan 'gyur](#). (tengyur). In Tibetan, “the translated treatises,” or [ŚĀSTRA](#) collection; referring to the second of the two major divisions of the Tibetan Buddhist canon, along with the [BKA' 'GYUR](#), or “translated word [of the Buddha].” The bstan 'gyur collection contains approximately 225 volumes of commentarial literature and independent works, comprising more than 3,500 texts, most of which were written by Indian Buddhist exegetes. It exists in numerous editions, but was less frequently printed than its companion collection, the bka' 'gyur. Subjects covered include hymns of praise (stotra), [SŪTRA](#) commentaries, works on [PRAJÑĀPĀRAMITĀ](#), [MADHYAMAKA](#) and [YOGĀCĀRA](#) philosophies, [ABHIDHARMA](#), and [VINAYA](#), [TANTRA](#) commentaries, and technical treatises on logic, grammar, poetics, medicine, and alchemy.

[bstan rim](#). (tenrim). In Tibetan, “stages of the doctrine”; a genre of Tibetan Buddhist literature similar to the “stages of the path” ([LAM RIM](#)), of which it is a precursor. Bstan rim texts present a systematic and comprehensive outline of Tibetan Buddhist thought, although they generally differ from “stages of the path” works by referring strictly to [MAHĀYĀNA](#) doctrine and avoiding the typology of three spiritual levels of individuals (skyes bu gsum): these are, following the explanation of [TSONG KHA PA](#) in his [LAM RIM CHEN MO](#), the individual whose practice leads to a good rebirth, a middling type of individual whose practice leads to [NIRVĀNA](#), and the great person whose Mahāyāna practice as a [BODHISATTVA](#) leads to buddhahood for the sake of all beings. However, the differences between bstan rim and lam rim texts are often blurred; the [THAR PA RIN PO CHE'I RGYAN](#) (“Jewel Ornament of Liberation”) by [SGAM PO PA BSOD NAMS RIN CHEN](#), for example, is often designated as a “stages of the path” work, although it might more precisely be classified as “stages of the doctrine.” Early examples of bstan rim treatises were written at [GSANG PHU NE'U THOG](#) monastery by [RNGOG BLO LDAN SHES RAB](#) and his followers.

[btsan](#). (tsen). A class of Tibetan harmful deities that antedate the introduction of Buddhism. The btsan are said to be subservient to the converted ['BAR BA SPUN BDUN](#), although they continue to be seen as malicious disease-causing demons. As such, they are sometimes the object of the wrath of the dharma-protectors ([DHARMAPĀLA](#)), who carry snares designed to catch them. There are numerous subcategories of btsan, including combinations with other spirits, such as klu

btsan and lha btsan; as well as listings according to their abodes: e.g., sa btsan, who live in the soil, brag btsan, who live in rock faces, and so forth.

Bu chu. In Tibetan, one of the four “extra taming temples” or “extra pinning temples” ([YANG 'DUL GTSUG LAG KHANG](#)) said to have been constructed during the time of the Tibetan king [SRONG BTSAN SGAM PO](#) to pin down the limbs of the demoness (T. *srin mo*) who was impeding the introduction of Buddhism into Tibet. The temple is located in Kong po and pins down her right elbow.

bucidi sanguan. (J. *fushidai no sangan*; K. *pulch'aje samgwan* 不次第三觀). See [SANGUAN](#).

Budai. (J. *Hotei*; K. *P'odae* 布袋) (d. 916). A legendary Chinese monk, whose name literally means “Hemp Sack”; also occasionally referred to as Fenghua Budai, Changtingzi, and Budai heshang. He is said to have hailed from Fenghua county in Ningbo prefecture of Zhejiang province. Budai is often depicted as a short figure with an enormous belly and a staff or walking stick on which he has hung a hemp bag or sack (*budai*), whence derives his name. Budai wandered from one town to the next begging for food, some of which he saved in his sack. This jolly figure is remembered as a thaumaturge who was particularly famous for accurately predicting the weather. On his deathbed, Budai left the following death verse, which implied he was in fact a manifestation of the [BODHISATTVA MAITREYA](#): “Maitreya, true Maitreya, *His thousands, hundreds, and tens of millions of manifestations*, From time to time appear among his fellow men, / But remain unrecognized by his fellow men.” Budai is also associated in China with [ANGAJA](#), the thirteenth of the sixteen [ARHATS](#) (see [SODASASTHAVIRA](#)) who serve as protector figures. Angaja had been a snake wrangler before he ordained, so whenever he went into the mountains, he carried a cloth bag with him to catch snakes, which he would release after removing their fangs so they would not injure people. For this reason, he earned the nickname “Cloth-Bag Arhat” (Budai *luohan/heshang*). In Zhejiang province, many images of Budai were made for worship, and an image of Budai installed in the monastery of [MANPUKUJI](#) on Mt. Ōbaku in Japan is still referred to as that of the bodhisattva Maitreya. The local cult hero and thaumaturge Budai was quickly appropriated by the [CHAN](#) community as a trickster-like figure, leading to Budai often being as called the “Laughing Buddha.” In Japan, Budai is also revered as one of the seven gods of virtue (see [SHICHIFUKUJIN](#)). It is Budai who is commonly depicted in all manner of kitschy knickknacks and called the “Fat Buddha.” He has never been

identified with, and is not to be mistaken for, [ŚĀKYAMUNI](#) Buddha.

buddha. (T. sangs rgyas; C. fo; J. butsu/hotoke; K. pul 佛). In Sanskrit and Pāli, “awakened one” or “enlightened one”; an epithet derived from the Sanskrit root √budh, meaning “to awaken” or “to open up” (as does a flower) and thus traditionally etymologized as one who has awakened from the deep sleep of ignorance and opened his consciousness to encompass all objects of knowledge. The term was used in ancient India by a number of different religious groups, but came to be most strongly associated with followers of the teacher [GAUTAMA](#), the “Sage of the [ŚĀKYA](#) Clan” ([ŚĀKYAMUNI](#)), who claimed to be only the most recent of a succession of buddhas who had appeared in the world over many eons of time ([KALPA](#)). In addition to Śākyamuni, there are many other buddhas named in Buddhist literature, from various lists of buddhas of the past, present, and future, to “buddhas of the ten directions” (daśadigbuddha), viz., everywhere. Although the precise nature of buddhahood is debated by the various schools, a buddha is a person who, in the far distant past, made a previous vow ([PŪRVAPRANIDHĀNA](#)) to become a buddha in order to reestablish the dispensation or teaching ([ŚĀSANA](#)) at a time when it was lost to the world. The path to buddhahood is much longer than that of the [ARHAT](#)—as many as three incalculable eons of time ([ASAMKHYEYAKALPA](#)) in some computations—because of the long process of training over the [BODHISATTVA](#) path ([MĀRGA](#)), involving mastery of the six or ten “perfections” ([PĀRAMITĀ](#)). Buddhas can remember both their past lives and the past lives of all sentient beings, and relate events from those past lives in the [JĀTAKA](#) and [AVADĀNA](#) literature. Although there is great interest in the West in the “biography” of Gautama or Śākyamuni Buddha, the early tradition seemed intent on demonstrating his similarity to the buddhas of the past rather than his uniqueness. Such a concern was motivated in part by the need to demonstrate that what the Buddha taught was not the innovation of an individual, but rather the rediscovery of a timeless truth (what the Buddha himself called “an ancient path” [S. purāṇamārga, P. purāṇamagga]) that had been discovered in precisely the same way, since time immemorial, by a person who undertook the same type of extended preparation. In this sense, the doctrine of the existence of past buddhas allowed the early Buddhist community to claim an authority similar to that of the Vedas of their Hindu rivals and of the [JAINA](#) tradition of previous tīrthaṅkaras. Thus, in their biographies, all of the buddhas of the past and future are portrayed as doing many of the same things. They all sit cross-legged in their mother’s womb; they are all born in the “middle

country” (madhyadeśa) of the continent of [JAMBUDVĪPA](#); immediately after their birth they all take seven steps to the north; they all renounce the world after seeing the four sights ([CATURNIMITTA](#); an old man, a sick man, a dead man, and a mendicant) and after the birth of a son; they all achieve enlightenment seated on a bed of grass; they stride first with their right foot when they walk; they never stoop to pass through a door; they all establish a [SAMGHA](#); they all can live for an eon if requested to do so; they never die before their teaching is complete; they all die after eating meat. Four sites on the earth are identical for all buddhas: the place of enlightenment, the place of the first sermon that “turns the wheel of the dharma” ([DHARMAKAKRAPRAVARTANA](#)), the place of descending from [TRĀYASTRIMŚA](#) (heaven of the thirty-three), and the place of their bed in [JETAVANA](#) monastery. Buddhas can differ from each other in only eight ways: life span, height, caste (either brāhmaṇa or [KSATRIYA](#)), the conveyance by which they go forth from the world, the period of time spent in the practice of asceticism prior to their enlightenment, the kind of tree they sit under on the night of their enlightenment, the size of their seat there, and the extent of their aura. In addition, there are twelve deeds that all buddhas (dvādaśabuddhakārya) perform. (1) They descend from [TUSITA](#) heaven for their final birth; (2) they enter their mother’s womb; (3) they take birth in [LUMBINĪ](#) Garden; (4) they are proficient in the worldly arts; (5) they enjoy the company of consorts; (6) they renounce the world; (7) they practice asceticism on the banks of the [NAIRAÑJANĀ](#) River; (8) they go to the [BODHIMANDA](#); (9) they subjugate [MĀRA](#); (10) they attain enlightenment; (11) they turn the wheel of the dharma; and (12) they pass into [PARINIRVĀNA](#). They all have a body adorned with the thirty-two major marks ([LAKSANA](#); [MAHĀPURUSALAKSANA](#)) and the eighty secondary marks ([ANUVYAÑJANA](#)) of a great man ([MAHĀPURUṢA](#)). They all have two bodies: a physical body ([RŪPAKĀYA](#)) and a body of qualities ([DHARMAKĀYA](#); see [BUDDHAKĀYA](#)). These qualities of a buddha are accepted by the major schools of Buddhism. It is not the case, as is sometimes suggested, that the buddha of the mainstream traditions is somehow more “human” and the buddha in the [MAHĀYĀNA](#) somehow more “superhuman”; all Buddhist traditions relate stories of buddhas performing miraculous feats, such as the [ŚRĀVASTĪ MIRACLES](#) described in mainstream materials. Among the many extraordinary powers of the buddhas are a list of “unshared factors” ([ĀVENIKA|BUDDHA|DHARMA](#)) that are unique to them, including their perfect mindfulness and their inability ever to make a mistake. The buddhas have ten powers specific to them that derive from their unique range of knowledge (for the list, see [BALA](#)). The buddhas also are

claimed to have an uncanny ability to apply “skill in means” ([UPĀYAKAUŚALYA](#)), that is, to adapt their teachings to the specific needs of their audience. This teaching role is what distinguishes a “complete and perfect buddha” ([SAMYAKSAMBUDDHA](#)) from a “solitary buddha” ([PRATYEKABUDDHA](#)) who does not teach: a solitary buddha may be enlightened but he neglects to develop the great compassion ([MAHĀKARUNĀ](#)) that ultimately prompts a samyaksambuddha to seek to lead others to liberation. The Mahāyāna develops an innovative perspective on the person of a buddha, which it conceived as having three bodies ([TRIKĀYA](#)): the [DHARMAKĀYA](#), a transcendent principle that is sometimes translated as “truth body”; an enjoyment body ([SAMBHOGAKĀYA](#)) that is visible only to advanced bodhisattvas in exalted realms; and an emanation body ([NIRMĀNAKĀYA](#)) that displays the deeds of a buddha to the world. Also in the Mahāyāna is the notion of a universe filled with innumerable buddha-fields ([BUDDHAKSETRA](#)), the most famous of these being [SUKHĀVATĪ](#) of Amitābha. Whereas the mainstream traditions claim that the profundity of a buddha is so great that a single universe can only sustain one buddha at any one time, Mahāyāna [SŪTRAS](#) often include scenes of multiple buddhas appearing together. See also names of specific buddhas, including [AKSOBHYA](#), [AMITĀBHA](#), [AMOGHASIDDHI](#), [RATNASAMBHAVA](#), [VAIROCANA](#). For indigenous language terms for buddha, see [FO](#) (C); [HOTOKE](#) (J); [PHRA PHUTTHA JAO](#) (Thai); [PUCH'Ö\(NIM\)](#) (K); [SANGS RGYAS](#) (T).

[Buddhabhadra](#). (C. Fotuobatuoluo; J. Butsudabatsudara; K. Pult'abaltara 佛陀跋陀羅) (359–429). Important early translator of Indian Buddhist texts into Chinese, also known by the Chinese translation of his name, Juexian, or “Enlightened Sage” (the Chinese above is the more common transcription of his Sanskrit name). According to the “Biographies of Eminent Monks” ([GAOSEN ZHUAN](#)), Buddhabhadra was born in north India and joined the [SAMGHA](#) after losing both his parents at an early age. Buddhabhadra studied various scriptures and was adept in both meditation and observing the precepts; he was also renowned for his thaumaturgic talents. At the behest of a Chinese monk named [ZHIYAN](#), Buddhabhadra traveled to China along the southern maritime route. Upon learning of the eminent Kuchean monk [KUMĀRAJĪVA](#)'s arrival in Chang'an, Buddhabhadra went to the capital in 406 to meet him. Due to a difference of opinion with Kumārajīva, however, Buddhabhadra left for [LUSHAN](#), where he was welcomed by [LUSHAN HUIYUAN](#) and installed as the meditation instructor in Huiyuan's community; Buddhabhadra came to be known as one of the eighteen

worthies of Lushan. He devoted the rest of his career to translating such scriptures as the [DAMODUOLUO CHAN JING](#), *Guanfo sanmei hai jing*, and [AVATAMSAKASŪTRA](#), to name just a few. Buddhahadra also translated the [MAHĀSĀMGHIKA VINAYA](#) with the assistance of [FAXIAN](#) and contributed significantly to the growth of Buddhist monasticism in China.

[buddhābhiṣeka](#). In Sanskrit, “buddha [image] consecration.” See [ABHISEKA](#); [DIANYAN](#); [NETRAPRATISTHĀPANA](#).

[Buddhabhūmiśāstra](#). (C. Fodijing lun; J. Butsujikyōron; K. Pulchigyōng non 佛地經論). In Sanskrit, “Exposition of the Stage of Buddhahood”; an influential commentary on the [BUDDHABHŪMISŪTRA](#), attributed to Bandhuprabha (Qinguang; d.u.), a disciple of [DHARMAPĀLA](#) (530–561), and collaborators. The commentary is extant only in a seven-roll Chinese translation made by [XUANZANG](#) and his translation team in 649–650.

[Buddhabhūmisūtra](#). (T. Sangs rgyas kyi sa’i mdo; C. Fodi jing; J. Butsujikyō; K. Pulchi kyōng 佛地經). In Sanskrit, “Scripture on the Stage of Buddhahood,” an important [MAHĀYĀNA](#) scripture on the experience of enlightenment. The sūtra begins with a description of the [PURE LAND](#) in which the scripture is taught and its audience of [BODHISATTVAS](#), mahāŚrāvakas, and [MAHĀSATTVAS](#). The text goes on to describe the five factors that exemplify the stage of buddhahood (buddhabhūmi). The first of these is (1) the wisdom of the [DHARMADHĀTU](#), which is likened to space ([ĀKĀŚA](#)) itself, in that it is all-pervasive and uncontained. The next two factors are (2) mirror-like wisdom, or great perfect mirror wisdom ([ĀDARŚAJÑĀNA](#)), in which the perfect interfusion between all things is seen as if reflected in a great mirror, and (3) the wisdom of equality, or impartial wisdom ([SAMATĀJÑĀNA](#)), which transcends all dichotomies to see everything impartially without coloring by the ego. The scripture then describes (4) the wisdom of specific knowledge ([PRATYAVEKSANĀJÑĀNA](#)) and (5) the wisdom of having accomplished what was to be done ([KRTYĀNUSTHĀNAJÑĀNA](#)), both of which are attained as a result of the subsequently attained wisdom ([TATPRSTHALABDHAJÑĀNA](#)); these two types of knowledge clarify that the dharmadhātu is a realm characterized by both emptiness ([ŚUNYATĀ](#)) and compassion ([KARUNĀ](#)). Finally, similes are offered to elucidate the nature of these wisdoms. The Chinese translation, in one roll, was made by [XUANZANG](#) and his translation team in 645 CE. In tantric Buddhism, these five wisdoms or knowledges ([JÑĀNA](#)) are linked with the five “buddha families” (see

[PAÑCATATHĀGATA](#)).

[buddha bodies](#). See [BUDDHAKĀYA](#).

[buddhacakṣus](#). (P. buddhacakkhu; T. sangs rgyas kyi spyan; C. foyan; J. butsugen; K. puran 佛眼). In Sanskrit, “buddha eye”; one of the five eyes or five sorts of vision ([PAÑCACAKṢUS](#)) similar to the five (or six) “clairvoyances” or “superknowledges” ([ABHIJÑĀ](#)). In mainstream Buddhist materials, the buddha eye is one of the five sorts of extraordinary vision of a buddha and includes the other four sorts of vision: fleshly eye ([MĀMSACAKṢUS](#), P. māṅsacakkhu), divine eye ([DIVYACAKṢUS](#), P. dibbacakkhu), wisdom eye ([PRAJÑĀCAKṢUS](#), P. paññācakkhu), and all-seeing eye (samantacakṣus, P. samantacakkhu). In Mahāyāna texts, the buddha eye is described as the eye that knows all dharmas in the full awakening of final enlightenment ([ANUTTARASAMYAKSAMBOHI](#)).

[Buddhacarita](#). (T. Sangs rgyas kyi spyod pa; C. Fosuoqing zan; J. Butsushogyōsan; K. Pulsohaeng ch’an 佛所行讚). In Sanskrit, “Acts [viz., Life] of the Buddha”; the title of two verse compositions written in the first and second centuries CE that were intended to serve as a complete biography of the historical Buddha. The first was by the monk Saṅgharakṣa (c. first century CE), whose work survives today only in its Chinese translation. The second version, which became hugely popular across Asia, was composed by the well-known Indian philosopher–poet [AŚVAGHOŚA](#) (c. second century), who was supposedly an opponent of Buddhism until he converted after losing a debate with the [VAIBHĀSIKA](#) teacher [PĀRŚVA](#). Because of the early date of Aśvaghoṣa’s epic poem, it is of great importance for both the history of Indian Buddhism, as well as the study of classical Indian linguistics and thought. Aśvaghoṣa’s version of the Buddha’s life begins with a description of his parents—King [ŚUDDHODANA](#) and Queen [MĀYĀ](#)—and ends with the events that immediately follow his death, or [PARINIRVĀNA](#). His text is written in the style of high court poetry, or kāvya. In keeping with this style, the *Buddhacarita* is characterized by lengthy digressions and elaborate descriptions. For example, one entire canto is devoted to a detailed description of the sight of the women sleeping in the palace that precedes [GAUTAMA](#)’s renunciation (pravrajya; see [PRAVRAJITA](#)). Canto XII provides an invaluable outline of the ancient Indian Sāṃkhya philosophical system. The *Buddhacarita* has served an important role within the Buddhist tradition itself, as the canonical works do not offer a systematic, chronological account of the Buddha’s life from his birth through his death. Only the first half of the

Buddhacarita is extant in its original Sanskrit; the remainder survives in Tibetan and Chinese translations.

Buddhadāsa. (1906–1993). Prominent Thai monk, Buddhist reformer, teacher of meditation, and ecumenical figure. Born the son of a merchant in the village of Pum Riang in southern Thailand, he was educated at Buddhist temple schools. It was customary for males in Thailand to be ordained as Buddhist monks for three months at the age of twenty and then return to lay life. Buddhadāsa decided, however, to remain a monk and quickly gained a reputation as a brilliant thinker, meditator, and teacher. He dwelled for several years in the Thai capital of Bangkok to further his studies but grew disillusioned with the prevailing practices of the [SAMGHA](#) in the city, which he perceived to be lax and corrupt. In 1932, he returned home to an abandoned monastery near his native village to live a simple life, practice meditation, and teach the dharma. He named his monastery Wat Suan Mokkhabalārāma (Garden of the Power of Liberation), which is usually abbreviated to Suan Mokkh, the Garden of Liberation. The monastery became one of the first [VIPASSANĀ](#) (S. [VIPAŚYANĀ](#)) (insight meditation) centers in southern Thailand. Buddhadāsa spent most of his life at this forest monastery overlooking the sea. Although his formal scholastic training was limited, Buddhadāsa studied Pāli scriptures extensively, in particular the [SUTTAPITAKA](#), to uncover their true meaning, which he felt had become obscured by centuries of commentarial overlays, ritual practices, and monastic politics. A gifted orator, his numerous sermons and talks were transcribed and fill an entire room of the National Library in Bangkok. In his writings, many of which are his transcribed sermons, he eschewed the formal style of traditional scholastic commentary in favor of a more informal, and in many ways controversial, approach in which he questioned many of the more popular practices of Thai Buddhism. For example, he spoke out strongly against the practice of merit-making in which lay people offer gifts to monks in the belief that they will receive material reward in their next life. Buddhadāsa argued that this traditionally dominant form of lay practice only keeps the participants in the cycle of rebirth because it is based on attachment, whereas the true form of giving is the giving up of the self. Instead, Buddhadāsa believed that, because of conditioned origination ([PRATĪTYASAMUTPĀDA](#)), people are naturally connected through a shared environment and are in fact capable of living harmoniously together. The hindrance to such a harmony comes from attachments to “I” and “mine,” which must therefore be severed. Modern and ecumenical in

perspective, Buddhadāsa sought to strip traditional Buddhism of what he regarded as obscurantism and superstition, and present the Buddha’s teachings in a rational scientific idiom that acknowledged kindred teachings in other religions. Buddhadāsa’s interpretations of the dharma have had a great impact on contemporary Buddhist thought in Thailand and are especially influential among the urban intelligentsia, social reformers, and environmentalists. His teachings are often cited as foundational by advocates of engaged Buddhism. The monastery he founded has become a venue for the training of foreign monks and nuns and for interfaith dialogue between Buddhists of different traditions, as well as between Buddhists and adherents of other religions.

Buddhadatta. (fl. c. fifth century CE). A prominent Pāli scholar-monk from South India who is presumed by the tradition to have been a personal acquaintance of the preeminent Pāli commentator [BUDDHAGHOSA](#). Buddhadatta lived and wrote his several works at Bhūtamangalagāma monastery in the Cōḷa country (Tamil Nadu) of South India, although it is also said he trained at the [MAHĀVIHĀRA](#) in [ANURĀDHAPURA](#) in Sri Lanka. Buddhadatta is best known as the author of the [ABHIDHAMMĀVATĀRA](#), the oldest of the noncanonical Pāli works on [ABHIDHAMMA](#) (S. [ABHIDHARMA](#)). The text is a primer of Pāli abhidhamma, divided into twenty-four chapters called niddesa (S. nirdeśa; “exposition”), which displays many affinities with Buddhaghosa’s [VISUDDHIMAGGA](#). Other works attributed to Buddhadatta include the *Vinayavinicchaya*, the *Uttaravinicchaya*, and the *Rūpārūpavibhāga*. Some authorities also attribute to him the *Madhuratthavilāsinī* and the *Jinālakāra*.

buddhadharma. (P. buddhadhamma; T. sangs rgyas pa’i chos; C. fofa; J. buppō; K. pulpōp 佛法). In Sanskrit, “the teachings of the Buddha”; one of the closest Indian equivalents to what in English is called “Buddhism,” along with [DHARMAVINAYA](#) (teaching and discipline), [BUDDHĀNUŚĀSANA](#) (teaching, dispensation, or religion of the Buddha), and [ŚĀSANA](#) (teaching or dispensation). ¶ This term is also used with reference to the “unshared factors” ([ĀVENIKA|BUDDHA|DHARMA](#)), a list of eighteen (or sometimes as many as 140) special qualities (dharma) that are unique to the buddhas, such as their perfect mindfulness and their inability to make a physical or verbal mistake, or for all the qualities that together make up a buddha.

buddhadhātu. (T. sangs rgyas kyi khams; C. foxing; J. busshō; K. pulsōng 佛性). In Sanskrit, “buddha-element,” or “buddha-nature”; the inherent potential of all

sentient beings to achieve buddhahood. The term is also widely used in Buddhist Sanskrit with the sense of “buddha relic,” and the term [DHĀTU](#) alone is used to mean “buddha-element” (see also [GOTRA](#), [KULA](#)). The term first appears in the [MAHĀYĀNA](#) recension of the [MAHĀPARINIRVĀNASŪTRA](#), now available only in Chinese translation, which states that all sentient beings have the “buddha-element” ([FOXING](#)). (The Chinese translation foxing literally means “buddha-nature” and the Chinese has often been mistakenly back-translated as the Sanskrit buddhatā; buddhadhātu is the accepted Sanskrit form.) The origin of the term may, however, be traced back as far as the [ASTASĀHASRIKĀPRAJÑĀPĀRAMITĀ](#), one of the earliest Mahāyāna [SŪTRAS](#), where the fundamental substance of the mind is said to be luminous (prakṛtiś cittasya prabhāsvarā), drawing on a strand of Buddhism that has its antecedents in such statements as the Pāli [AṄGUTTARANIKĀYA](#): “The mind, O monks, is luminous but defiled by adventitious defilements” (pabhassaraṃ idaṃ bhikkhave cittaṃ, tañ ca kho āgantukehi upakkilesehi upakkiliṭṭhaṃ). Because the [BODHISATTVA](#) realizes that the buddha-element is inherent in him at the moment that he arouses the aspiration for enlightenment ([BODHICITTOTPĀDA](#)) and enters the [BODHISATTVAYĀNA](#), he achieves the profound endurance ([KSĀNTI](#)) that enables him to undertake the arduous training, over not one, but three, incalculable eons of time ([ASAMKHYEYAKALPA](#)), that will lead to buddhahood. The buddhadhātu is a seminal concept of the Mahāyāna and leads to the development of such related doctrines as the “matrix of the tathāgatas” ([TATHĀGATAGARBHA](#)) and the “immaculate consciousness” ([AMALAVIJÑĀNA](#)). The term is also crucial in the development of the teachings of such indigenous East Asian schools of Buddhism as [CHAN](#), which telescope the arduous path of the bodhisattva into a single moment of sudden awakening ([DUNWU](#)) to the inherency of the “buddha-nature” (foxing), as in the Chan teaching that merely “seeing the nature” is sufficient to “attain buddhahood” ([JIANXING CHENGFO](#)).

[buddha field](#). See [BUDDHAKSETRA](#).

[Buddhaghosa](#). (S. Buddhaghōṣa) (fl. c. 370–450 CE). The preeminent Pāli commentator, who translated into Pāli the Sinhalese commentaries to the Pāli canon and wrote the [VISUDDHIMAGGA](#) (“Path of Purification”), the definitive outline of [THERAVĀDA](#) doctrine. There are several conflicting accounts of Buddhaghosa’s origins, none of which can be dated earlier than the thirteenth century. The Mon of Lower Burma claim him as a native son, although the best-

known story, which is found in the [CŪLAVAMSA](#) (chapter 37), describes Buddhaghosa as an Indian brāhmaṇa who grew up in the environs of the [MAHĀBODHI](#) temple in northern India. According to this account, his father served as a purohita (brāhmaṇa priest) for King Saṅgāma, while he himself became proficient in the Vedas and related Brahmanical sciences at an early age. One day, he was defeated in a debate by a Buddhist monk named Revata, whereupon he entered the Buddhist [SAMGHA](#) to learn more about the Buddha's teachings. He received his monk's name Buddhaghosa, which means "Voice of the Buddha," because of his sonorous voice and impressive rhetorical skills. Buddhaghosa took Revata as his teacher and began writing commentaries even while a student. Works written at this time included the *Ñāṇodaya* and [ATTHASĀLINĪ](#). To deepen his understanding (or according to some versions of his story, as punishment for his intellectual pride), Buddhaghosa was sent to Sri Lanka to study the Sinhalese commentaries on the Pāli Buddhist canon (P. tipīṭaka; S. [TRIPITAKA](#)). These commentaries were said to have been brought to Sri Lanka in the third century BCE, where they were translated from Pāli into Sinhalese and subsequently preserved at the [MAHĀVIHĀRA](#) monastery in the Sri Lankan capital of [ANURĀDHAPURA](#). At the Mahāvihāra, Buddhaghosa studied under the guidance of the scholar-monk Saṅghapāla. Upon completing his studies, he wrote the great compendium of Theravāda teachings, *Visuddhimagga*, which summarizes the contents of the Pāli tipīṭaka under the threefold heading of morality (sīla; S. [ŚĪLA](#)), meditative absorption ([SAMĀDHI](#)), and wisdom (paññā; S. [PRAJÑĀ](#)). Impressed with his expertise, the elders of the Mahāvihāra allowed Buddhaghosa to translate the Sinhalese commentaries back into Pāli, the canonical language of the Theravāda tipīṭaka. Attributed to Buddhaghosa are the [VINAYA](#) commentaries, [SAMANTAPĀSĀDIKĀ](#) and *Kaṅkhāvitarāṇī*; the commentaries to the [SUTTAPIṬAKA](#), [SUMAṄGALAVILĀSINĪ](#), [PAPAÑCASŪDANĪ](#), [SĀRATTHAPPAKĀSINĪ](#), and [MANORATHAPŪRANĪ](#); also attributed to him is the [PARAMATTHAJOTIKĀ](#) (the commentary to the [KHUDDAKAPĀTHA](#) and [SUTTANIPĀTA](#)). Buddhaghosa's commentaries on the [ABHIDHAMMAPITAKA](#) (see [ABHIDHARMA](#)) include the [SAMMOHAVINODANĪ](#) and [PAÑCAPPAKARANATTHAKATHĀ](#), along with the *Aṭṭhasālinī*. Of these many works, Buddhaghosa is almost certainly author of the *Visuddhimagga* and translator of the commentaries to the four nikāyas, but the remainder are probably later attributions. Regardless of attribution, the body of work associated with Buddhaghosa was profoundly influential on the entire subsequent history of Buddhist scholasticism in the Theravāda traditions of Sri Lanka and Southeast Asia.

Buddhaguhya. (fl. c. 760) (T. Sangs rgyas gsang ba). Sanskrit proper name of the author of a detailed commentary on the [MAHĀVAIROCANĀBHISAMBODHISŪTRA](#) (“Great Vairocana’s Enlightenment Discourse”); his commentary (*Mahāvairocanābhisambodhi-vikurvitādhiṣṭhāna-vaipulyasūtreन्द्रarāja-nāma-dharmaparyāyabhāṣya*), and his *Tantrārthā-vatāra* (“Introduction to the Meaning of the Tantras”) are said to have been the primary resource for Tibetan translators of tantra during the earlier spread of the doctrine ([SNGA DAR](#)). He is claimed to have been the teacher of [VIMALAMITRA](#). His views on [KRIYĀTANTRA](#) and [CARYĀTANTRA](#) are considered authoritative by later Tibetan writers.

buddhahood. See [BUDDHAYĀNA](#); [BODHISATTVAYĀNA](#).

buddhakāya. (T. sangs rgyas sku; C. foshen; J. busshin; K. pulsinn 佛身). In Sanskrit, literally “body of the buddha.” Throughout the history of the Buddhist tradition, there has been a great deal of debate, and a good many theories, over the exact nature of a buddha’s body. In the Pāli [NIKĀYAS](#) and the Sanskrit [ĀGAMAS](#), we find a distinction made between various possible bodies of [ŚĀKYAMŪNI](#) Buddha. There are references, for example, to a pūtikāya, or corruptible body, which was born from the womb of his mother; a [MANOMAYAKĀYA](#), or mind-made body, which he uses to visit the heavens; and a [DHARMAKĀYA](#), the buddhas’ corpus of unique qualities ([ĀVENIKA|BUDDHA|DHARMA](#)), which is worthy of greater honor than the other two bodies and is the body of the buddha in which one seeks refuge ([ŚARANA](#)). Perhaps the most popular of these theories on the nature of the buddhakāya is the [MAHĀYĀNA](#) notion of the “three bodies,” or [TRIKĀYA](#). According to this doctrine, a buddha is indistinguishable from absolute truth, but will still appear in various guises in the relative, conditioned world in order to guide sentient beings toward enlightenment. To distinguish these differing roles, Mahāyāna thus distinguishes between three bodies of a buddha. First, a buddha has a dharmakāya, which is identical to absolute reality. Second, a buddha has a [SAMBHOGAKĀYA](#), or “enjoyment body,” which resides in a buddha land ([BUDDHAKSETRA](#)); this is the body that is visible only to the [BODHISATTVAS](#). Finally, a buddha possesses a [NIRMĀNAKĀYA](#), a “transformation” or “emanation body,” which are the various earthly bodies that a buddha makes manifest in order to fulfill his resolution to help all different types of sentient beings; this type of body includes the Buddha who achieved enlightenment beneath the [BODHI TREE](#). These are many other theories of the buddhakāya that have developed within the tradition.

buddhakṣetra. (T. sangs rgyas zhing; C. focha; J. bussetsu; K. pulch'al 佛刹). In Sanskrit, “buddha field,” the realm that constitutes the domain of a specific buddha. A buddhakṣetra is said to have two aspects, which parallel the division of a world system into a [BHĀJANALOKA](#) (lit. “container world,” “world of inanimate objects”) and a [SATTVALOKA](#) (“world of sentient beings”). As a result of his accumulation of merit ([PUNYASAMBHĀRA](#)), his collection of knowledge ([JÑĀNASAMBHĀRA](#)), and his specific vow ([PRANIDHĀNA](#)), when a buddha achieves enlightenment, a “container” or “inanimate” world is produced in the form of a field where the buddha leads beings to enlightenment. The inhabitant of that world is the buddha endowed with all the [BUDDHADHARMAS](#). Buddha-fields occur in various levels of purification, broadly divided between pure ([VIŚUDDHABUDDHAKSETRA](#)) and impure. Impure buddha-fields are synonymous with a world system ([CAKRAVĀDA](#)), the infinite number of “world discs” in Buddhist cosmology that constitutes the universe; here, ordinary sentient beings (including animals, ghosts, and hell beings) dwell, subject to the afflictions ([KLEŚA](#)) of greed ([LOBHA](#)), hatred ([DVEṢA](#)), and delusion ([MOHA](#)). Each cakravāda is the domain of a specific buddha, who achieves enlightenment in that world system and works there toward the liberation of all sentient beings. A pure buddha-field, by contrast, may be created by a buddha upon his enlightenment and is sometimes called a [PURE LAND](#) ([JINGTU](#), more literally, “purified soil” in Chinese), a term with no direct equivalent in Sanskrit. In such purified buddha-fields, the unfortunate realms ([APĀYA](#), [DURGATI](#)) of animals, ghosts, and hell denizens are typically absent. Thus, the birds that sing beautiful songs there are said to be emanations of the buddha rather than sentient beings who have been reborn as birds. These pure lands include such notable buddhakṣetras as [ABHIRATI](#), the buddha-field of the buddha [AKṢOBHYA](#), and [SUKHĀVATĪ](#), the land of the buddha [AMITĀBHA](#) and the object of a major strand of East Asian Buddhism, the so-called pure land school (see [JŌDOSHŪ](#), [JŌDO SHINSHŪ](#)). In the [VĪMALAKĪRTINIRDEŚA](#), after the buddha reveals a pure buddha land, [ŚĀRIPUTRA](#) asks him why [ŚĀKYAMUNI](#)’s buddha-field has so many faults. The buddha then touches the earth with his toe, at which point the world is transformed into a pure buddha-field; he explains that he makes the world appear impure in order to inspire his disciples to seek liberation.

buddhakula. (T. sangs rgyas rigs; C. rulai jia; J. nyoraike; K. yŏrae ka 如來家). In Sanskrit, “buddha family”; synonymous with [GOTRA](#) (“lineage”); buddhakula and gotra, like [BUDDHADHĀTU](#) and [TATHĀGATAGARBHA](#) refer to the potential

inherent in all sentient beings to achieve buddhahood. The [RATNAGOTRAVIBHĀGA](#) describes a confluence of three necessary factors: the altruistic effort that buddhas make out of their great compassion ([MAHĀKARUṆĀ](#)) to disseminate their doctrines; the ultimate nature of beings that is purified of any essential defilement; and, last, buddhakula or gotra, i.e., belonging to a lineage that does not lead to endless rebirth or to a final end in the limited [NIRVĀNA](#) of [HĪNAYĀNA](#) adepts, but rather to the royal state of a buddha. The defining mark of the buddhakula is the seed of great compassion (mahākaruṇā). Because of the confluence of these three factors, all beings are said to have the [TATHĀGATAGARBHA](#), which in this interpretation of the compound means the womb or embryo of a tathāgata. In tantric Buddhism, there are typically five (but sometimes more and sometimes less, depending on the tantra) buddha families (see [PAÑCAJINA](#), [PAÑCATATHĀGATA](#)), the families of [VAIROCANA](#), [AKSOBHYA](#), [RATNASAMBHAVA](#), [AMITĀBHA](#), and [AMOGHASIDDHI](#). These buddhas (regarded as the final purification and transformation of the five [SKANDHAS](#)) are the forms in which adepts with differing personality types, those in whom the five [KLEŚAS](#) of delusion ([MOHA](#)), hatred ([DVESA](#)), pride ([MĀNA](#)), desire ([RĀGA](#)), and jealousy ([ĪRSYĀ](#)), respectively, predominate, reach the goal. The five buddha families are also connected with the five [YOGĀCĀRA](#) knowledges or wisdoms ([JÑĀNA](#)) (see [BUDDHABHŪMISŪTRA](#); [PAÑCAJÑĀNA](#)).

Buddhamitra. (C. Fotuomiduoluo; J. Butsudamitsutara; K. Pult'amiltara 佛陀蜜多羅). In Sanskrit, literally “Friend of the Buddha”; one of the Indian patriarchs listed in Chinese lineage records. He is variously listed in Chinese sources as the ninth (e.g., in the [LIDAI FABAO JI](#) and [BAOLIN ZHUAN](#)), the eighth (e.g., [FU FAZANG YINYUAN ZHUAN](#)), or the fifteenth (e.g., [LIUZU TAN JING](#)) patriarch of the Indian tradition. He is said to have been born into the vaiśya caste of agriculturalists, in the kingdom of Daigya. His master was the patriarch [BUDDHANANDI](#). According to tradition, when Buddhamitra was fifty years old, Buddhanandi was passing by the house in which Buddhamitra lived; seeing a white light floating above the house, Buddhanandi immediately recognized that his successor was waiting inside. Buddhamitra is also said to be one of the teachers of the Indian Buddhist philosopher [VASUBANDHU](#) and is considered the author of a work known as the *Pañcadvāradhyānasūtramahārthadharmā*.

Buddhanandi. (C. Fotuonanti; J. Butsudanandai; K. Pult'ananje 佛陀難提). In Sanskrit, literally “Joy of the Buddha”; one of the Indian patriarchs listed in

Chinese lineage records. He is variously listed in Chinese sources as the eighth (e.g., in the [LIDAI FABAO JI](#) and [BAOLIN ZHUAN](#)), the seventh (e.g., [FU FAZANG YINYUAN ZHUAN](#)), or the fourteenth (e.g., [LIUZU TAN JING](#)) patriarch of the Indian tradition. He is said to hail from the Indian country of Kamala, and is a member of the Gautama family. According to some records (e.g., [BAOLIN ZHUAN](#)), his master was the patriarch [VASUMITRA](#).

[buddha-nature](#). See [BUDDHADHĀTU](#); [FOXING](#).

[buddhānuśāsana](#). In Sanskrit, “the dispensation of the Buddha.” See [ŚĀSANA](#); [BUDDHAVACANA](#).

[buddhānusmṛti](#). (P. buddhānussati; T. sangs rgyas rjes su dran pa; C. nianfo; J. nenbutsu; K. yōmbul 念佛). In Sanskrit, “recollection of the Buddha”; one of the common practices designed to develop concentration, in which the meditator reflects on the meritorious qualities of the Buddha, often through contemplating a series of his epithets. The oldest list of epithets of the Buddha used in such recollection, which is found across all traditions, is worthy one ([ARHAT](#)), fully enlightened ([SAMYAKSAMBUDHA](#)), perfect in both knowledge and conduct (vidyācaraṇasampanna), well gone ([SUGATA](#)), knower of all worlds (lokavid), teacher of divinities (or kings) and human beings (śāstr devamanuṣyānaṃ), buddha, and [BHAGAVAT](#). Buddhānusmṛti is listed among the forty meditative exercises ([KAMMATTHĀNA](#)) discussed in the [VISUDDHIMAGGA](#) and is said to be conducive to gaining access concentration ([UPACĀRASAMĀDHI](#)). In East Asia, this recollection practice evolved into the recitation of the name of the buddha [AMITĀBHA](#) (see [NIANFO](#)) in the form of the phrase namo Amituo fo (“homage to Amitābha Buddha”; J. [NAMU AMIDABUTSU](#)). This recitation was often performed in a ritual setting accompanied by the performance of prostrations, the burning of incense, and the recitation of scriptures, all directed toward gaining a vision of Amitābha’s [PURE LAND](#) ([SUKHĀVATĪ](#)), which was considered proof that one would be reborn there. Nianfo practice was widely practiced across schools and social strata in China. In Japan, repetition of the phrase in its Japanese pronunciation of namu Amidabutsu (homage to Amitābha Buddha) became a central practice of the Japanese Pure Land schools of Buddhism (see [JŌDOSHŪ](#), [JŌDO SHINSHŪ](#)).

[buddhapāda](#). (T. sangs rgyas kyi zhabs; C. fozu; J. bussoku; K. pulchok 佛足). In Sanskrit and Pāli, lit. “the feet of the Buddha”; typically referring to “the Buddha’s footprints,” which became objects of religious veneration in early

Buddhism. There are typically three kinds of footprints of the Buddha, all of which are treated as a type of relic ([ŚARĪRA](#), [DHĀTU](#)). At the incipiency of the tradition, the Buddha's footprints were a popular aniconic representation of the Buddha; the oldest of these, from the [BHĀRHUT](#) reliquary mound ([STŪPA](#)), dates to the second century BCE. The second are natural indentations in rock that are said to have been made by the Buddha's feet; an example is the Sri Lankan mountain known as Śrī Pāda, or "Holy Foot," which is named after an impression in the rock of the mountain's summit that the Sinhalese people believe to be a footprint of [GAUTAMA](#) Buddha. Both these first and second types are concave images and are presumed to be a sign of the Buddha's former presence in a specific place. Such footprints are also often important as traditional evidence of a visit by the Buddha to a distant land. The third form of footprint are convex images carved in stone, metal, or wood (or in some cases painted), which represent the soles of the Buddha's feet in elaborate detail and are often covered with all manner of auspicious symbols. They may bear the specific physical marks ([LAKSANA](#)) said to be present on the feet of a fully awakened being, such as having toes that are all the same length, or having dharma-wheels ([DHARMAKAKRA](#)) inscribed on the soles (see [MAHĀPURUṢALAKSANA](#)). In the Pāli tradition, there is a practice of making buddhapāda in which the central wheel is surrounded by a retinue (parivāra) of 108 auspicious signs, called [MAṄĀLA](#). Symbolically, the footprints point to the reality of the Buddha's erstwhile physical presence in our world. At the same time, the footprints also indicate his current absence and thus may encourage the observer to reflect on nonattachment. Veneration of the Buddha's footprints occurs throughout the Buddhist world but is particularly popular in Sri Lanka, Burma, and Thailand. Of his footprints, tradition reports that the Buddha said, "In the future, intelligent beings will see the scriptures and understand. Those of less intelligence will wonder whether the Buddha appeared in the world. In order to remove their doubts, I have set my footprints in stone."

[Buddhapālita](#). (T. Sangs rgyas bskyang) (c. 470–540). An Indian Buddhist scholar of the [MADHYAMAKA](#) school, who is regarded in Tibet as a key figure of what was dubbed the *[PRĀSAṄGIKA](#) school of Madhyamaka. Little is known about the life of Buddhapālita. He is best known for his commentary on [NĀGĀRJUNA](#)'s [MŪLAMADHYAMAKAKĀRIKĀ](#), a commentary that was thought to survive only in Tibetan translation, until the recent rediscovery of a Sanskrit manuscript. Buddhapālita's commentary bears a close relation in some chapters

to the [AKUTOBHAYĀ](#), another commentary on Nāgārjuna's *Mūlamadhyamakakārikā* of uncertain authorship, which is sometimes attributed to Nāgārjuna himself. In his commentary, Buddhapālita does not adopt some of the assumptions of the Buddhist logical tradition of the day, including the need to state one's position in the form of an autonomous inference ([SVATANTRĀNUMĀNA](#)). Instead, Buddhapālita merely states an absurd consequence ([PRASAṄGA](#)) that follows from the opponent's position. In his own commentary on the first chapter of Nāgārjuna's text, [BHĀVAVIVEKA](#) criticizes Buddhapālita's method, arguing for the need for the Madhyamaka adept to state his own position after refuting the position of the opponent. In his commentary on the same chapter, [CANDRAKĪRTI](#) in turn defended the approach of Buddhapālita and criticized Bhāvaviveka. It was on the basis of these three commentaries that later Tibetan exegetes identified two schools within Madhyamaka, the [SVĀTANTRIKA](#), in which they included Bhāvaviveka, and the Prāsaṅgika, in which they included Buddhapālita and Candrakīrti.

[buddhapātramudrā](#). (T. sangs rgyas kyi lhung bzed phyag rgya; C. foboyin; J. buppatsuin; K. pulbarin 佛鉢印). In Sanskrit, “the gesture of the Buddha's begging bowl.” In this symbolic posture or gesture ([MUDRĀ](#)), the Buddha holds a begging bowl ([PĀTRA](#)) that sits in his lap. In some variations, the hands hold a jewel, or ornate treasure box, instead. In esoteric rituals, variations of this mudrā may be used for a number of different outcomes. For example, one Chinese indigenous [SŪTRA](#) (see [APOCRYPHA](#)) suggests that forming and holding this gesture will cure stomach ailments. In another Japanese ritual, this mudrā is used to invite autochthonous deities to join the audience in attendance. The buddhapātramudrā is typically associated with images of the Buddha [AMITĀBHA](#), whose begging bowl is filled with the nectar of immortality ([AMRTA](#)).

[buddhatā](#). (S). See [BUDDHADHĀTU](#).

[Buddhatrāta](#). (C. Fotuoduoluo; J. Butsudatara; K. Pult'adara 佛陀多羅). Proper name of the putative translator of the [YUANJUE JING](#) (*Dafangguang yuanjue xiuduoluo liaoyi jing*; “Book of Perfect Enlightenment”). According to the [KAIYUAN SHIJIAO LU](#), Zhisheng's catalogue of Chinese Buddhist scriptural translations, Buddhatrāta hailed from Kashmir (see [KASHMIR-GANDHĀRA](#)) and translated this text, in 693, at [BAIMASI](#) outside the Chinese capital of Luoyang. Although Zhisheng's attribution is followed by all subsequent cataloguers, this scripture is now generally recognized to be an indigenous Chinese Buddhist

scripture (see [APOCRYPHA](#)) from the eighth century CE, so his ascription is dubious. There are a few other works attributed to a Buddhatrāta in the Chinese catalogues, including a vinaya text and a commentary to the [YULANBEN JING](#), but it is unclear whether these are the same Buddhatrāta; nothing else is known about his life or activities in China.

[buddhavacana](#). (T. *sangs rgyas kyi bka'*; C. *foyu*; J. *butsudo*; K. *purō* 佛語). In Sanskrit and Pāli, “word of the Buddha”; those teachings accepted as having been either spoken by the Buddha or spoken with his sanction. Much traditional scholastic literature is devoted to the question of what does and does not qualify as the word of the Buddha. The [SŪTRAPITAKA](#) and the [VINAYAPITAKA](#) of the Buddhist canon ([TRIPITAKA](#)), which are claimed to have been initially redacted at the first Buddhist council (see [COUNCIL, FIRST](#)), held in [RAJAGRHA](#) soon after the Buddha’s death, is considered by the tradition—along with the [ABHIDHARMAPITAKA](#), which was added later—to be the authentic word of the Buddha; this judgment is made despite the fact that the canon included texts that were spoken, or elaborated upon, by his direct disciples (e.g., separate versions of the [BHADDEKARATTASUTTA](#), which offer exegeses by various disciples of an enigmatic verse the Buddha had taught) or that included material that clearly postdated the Buddha’s death (such as the [MAHĀPARINIRVĀNASŪTRA](#), which tells of the events leading up to, and immediately following, the Buddha’s demise, or the *Nāradasutta*, which refers to kings who lived long after the Buddha’s time). Such material could still be considered buddhavacana, however, by resort to the four references to authority ([MAHĀPADEŚA](#); [CATURMAHĀPADEŚA](#)). These four types of authority are found listed in various [SŪTRAS](#), including the eponymous Pāli *Mahāpadesasutta*, and provide an explicit set of criteria through which to evaluate whether a teaching is the authentic buddhavacana. Teachings could be accepted as authentic if they were heard from four authorities: (1) the mouth of the Buddha himself; (2) a [SAMGHA](#) of wise elders; (3) a group of monks who were specialists in either the dharma (dharmadhara), vinaya (vinayadhara), or the proto-abhidharma (mātrkādhara); or (4) a single monk who was widely learned in such specializations. The teaching should then be compared side by side with the authentic [SŪTRA](#) and [VINAYA](#); if found to be compatible with these two strata of the canon and not in contradiction with reality ([DHARMATĀ](#)), it would then be accepted as the buddhavacana and thus marked by the characteristics of the Buddha’s words (buddhavacanalakṣaṇa). Because of this dispensation, the canons of all schools of Buddhism were never really closed, but could continue

to be reinvigorated with new expressions of the Buddha’s insights. In addition, completely new texts that purported to be from the mouths of the buddha(s) and/or [BODHISATTVAS](#), such as found in the [MAHĀYĀNA](#) or [VAJRAYĀNA](#) traditions, could also begin to circulate and be accepted as the authentic buddhavacana since they too conformed with the reality (dharmatā) that is great enlightenment ([MAHĀBODHI](#)). For example, a Mahāyāna sūtra, the *Adhyāśayasañcodanasūtra*, declares, “All which is well-spoken, Maitreya, is spoken by the Buddha.” The sūtra qualifies the meaning of “well spoken” (subhāṣita), explaining that all inspired speech should be known to be the word of the Buddha if it is meaningful and not meaningless, if it is principled and not unprincipled, if it brings about the extinction and not the increase of the afflictions ([KLEŚA](#)), and if it sets forth the qualities and benefits of [NIRVĀNA](#) and not the qualities and benefits of [SAMSĀRA](#). However, the authenticity of the Mahāyāna sūtras (and later the tantras) was a topic of great contention between the proponents of the Mahāyāna and mainstream schools throughout the history of Indian Buddhism and beyond. Defenses of the Mahāyāna as buddhavacana appear in the Mahāyāna sūtras themselves, with predictions of the terrible fates that will befall those who deny their authenticity; and arguments for the authenticity of the Mahāyāna sūtras were a stock element in writings by Mahāyāna authors as early as [NĀGĀRJUNA](#) and extending over the next millennium. Related, and probably earlier, terms for buddhavacana are the “teaching of the master” (S. *śāstuh śāsanam*) and the “dispensation of the Buddha” (*buddhānuśāsanam*). See also [APOCRYPHA](#), [DAZANGJING](#), [GTER MA](#).

[Buddhavaṃsa](#). In Pāli, “The Chronicle of the Buddhas”; the fourteenth book of the [KHUDDAKANIKĀYA](#) of the Pāli [SUTTAPITAKA](#). A work in verse, it contains the life histories of twenty-five buddhas, concluding with that of the historical Buddha, Gotama (S. [GAUTAMA](#)). Details of each buddha are given, such as the species of the [BODHI TREE](#) under which he sat at the time of attaining enlightenment, as well as the name that the future buddha Gotama assumed under each previous buddha. The final chapter concerns the distribution of the relics (*saṛīra*; S. [ŚARĪRA](#)) of Gotama Buddha. According to Theravāda tradition, the *Buddhavaṃsa* was preached at the request of the Buddha’s disciple Sāriputta (S. [ŚĀRIPUTRA](#)), following the Buddha’s display of the “jeweled-walk” (*ratanacaṅkama*) miracle, which is the name of the chronicle’s first chapter. The *Madhuratthavilāsinī* is the Pāli commentary to the *Buddhavaṃsa*.

buddhavarṣa. (P. buddhavassa; T. sangs rgyas kyi lo; C. foji; J. butsuki; K. pulgi 佛紀). In Sanskrit, “Buddhist Era.” The term used for the Buddhist calendar calculated from the date of the final demise (S. [PARINIRVĀNA](#); P. parinibbāna) of the Buddha. There is general agreement among Buddhist traditions that the Buddha died in his eightieth year, but no consensus as to the date of his death and hence no agreement regarding the commencement of the Buddhist era. Dates for the parinirvāṇa given in texts and inscriptions from across Buddhist Asia range from 2420 BCE to 290 BCE. One of the more commonly used dates is 544/543 BCE, which is the year asserted for the Buddha’s death by the [THERAVĀDA](#) tradition of Sri Lanka and Southeast Asia. Use of the Theravāda calendar most likely originated in Sri Lanka, where it is attested in inscriptions dating from as early as the first century BCE. The same calendar appears in Burmese inscriptions beginning in the eleventh century, which coincides with that country’s adoption of Theravāda Buddhism as its dominant faith. The earliest known record of its use in India is likewise relatively late, and dates from the thirteenth century in an inscription erected at [BODHGAYA](#). Since at least the fifth century, the Theravāda traditions have asserted that the religion of the Buddha (P. buddhasāsana; see [ŚĀSANA](#)) would endure for five thousand years. Accordingly, in 1956 the halfway point in the life span of the religion was presumed to have been reached, an event that was celebrated with considerable millenarian overtones throughout the Theravāda world in the Buddha Jayantī (“Celebration of Buddhism”). A historically significant feature of the Theravāda calendar is that it places the coronation of the Mauryan emperor [AŚOKA](#) 218 years after the parinirvāṇa of the Buddha. This contrasts with another ancient Buddhist calendar tradition, preserved primarily in Sanskrit sources, which instead places Aśoka’s coronation one hundred years after the parinirvāṇa. The two calendars have come to be designated in modern scholarship as the “long chronology” and “short chronology,” respectively. According to the long chronology, the Buddha’s dates would be 566–486 BCE. According to the short chronology, they would be 448–368 BCE. The precise dating of the Buddha’s parinirvāṇa has been a contested issue among scholars for well over a century, and both the long and the short chronologies, as well as permutations thereof, have had their supporters. At present, there is widespread consensus, based primarily on Greek accounts and Aśoka’s own inscriptions, that Aśoka ascended to the Mauryan throne in c. 265 BCE, or approximately sixty years later than what is reported in the long chronology. Scholars who accept this dating, but who still adhere to the Theravāda claim that the Buddha died 218 years before this event,

therefore place the parinirvāṇa at c. 480 BCE. This is known as the “corrected long chronology” and is the theory upheld by many contemporary scholars of Indian Buddhism. Recently however, a number of historians have argued, based primarily on a reevaluation of evidence found in the [DĪPAVAMSA](#), that the short chronology is the earlier and more accurate calendar, and that the parinirvāṇa should be moved forward accordingly to between c. 400 and 350 BCE. Many contemporary traditions of East Asian Buddhism now also follow the modern Theravāda system in which the Buddha’s parinirvāṇa is calculated as 544/543 BCE.

[Buddhāvataṃsakasūtra](#). In Sanskrit, “Scripture of the Garland of Buddhas.” See [AVATAMSAKASUTRA](#).

[buddhayāna](#). (T. sangs rgyas kyi theg pa; C. fo sheng; J. butsujiō; K. pul sŭng 佛乘). In Sanskrit, “buddha vehicle,” the conveyance leading to the state of buddhahood. In general, the buddhayāna is synonymous with both the [BODHISATTVA YĀNA](#) and the [MAHĀYĀNA](#), although in some contexts it is considered superior to them, being equivalent to a supreme [EKAYĀNA](#). When this path is perfected, the adept achieves the full range of special qualities unique to the buddhas ([ĀVENIKĀ|BUDDHA|DHARMA](#)), which result from mastery of the perfections ([PĀRAMITĀ](#)). This understanding of the term buddhayāna and its significance is explained in chapter two of the [SADDHARMAPUNĀRIKASŪTRA](#) (“Lotus Sūtra”). There, the Buddha compares three means of salvation to three carts promised to children in an effort to convince them to come out from a burning house. The three carts are said to correspond to the three vehicles ([TRĪYĀNA](#)). The first is the [ŚRĀVAKAYĀNA](#), the vehicle for [ŚRĀVAKAS](#) (“disciples”), in which teachings were learned from a buddha and which culminates in becoming a “worthy one” ([ARHAT](#)). Next is the [PRATYEKABUDDHAYĀNA](#), the vehicle of the [PRATYEKABUDDHA](#) or “solitary buddha,” those who strive for enlightenment but do not rely on a buddha in their last life. The third is the bodhisattvayāna, the path followed by the [BODHISATTVA](#) to buddhahood. In the parable in the “Lotus Sūtra,” the Buddha uses the prospect of these three vehicles to entice the children to leave the burning house; once they are safely outside, they find not three carts waiting for them but instead a single magnificent cart. The Buddha then declares the three vehicles to be a form of skillful means ([UPĀYAKAUŚĀLYA](#)), for there is in fact only one vehicle (ekayāna), also referred to as the buddha vehicle (buddhayāna). Later exegetes, especially

in East Asia, engaged in extensive scholastic investigation of the relationships between the terms bodhisattvayāna, buddhayāna, and ekayāna.

[Buddhayaśas](#). (C. Fotuoyeshe; J. Butsudayasha; K. Pult'ayasa 佛陀耶舍) (d.u.; fl. c. early fifth century). A monk from Kashmir (see [KASHMIR-GANDHĀRA](#)) who became an important early translator of Indic Buddhist texts into Chinese. Buddhayaśas is said to have memorized several million words worth of both mainstream and Mahāyāna materials and became a renowned teacher in his homeland. He later taught the [SARVĀSTIVĀDA VINAYA](#) to the preeminent translator [KUMĀRAJĪVA](#) and later joined his star pupil in China, traveling to the capital of Chang'an at Kumārajīva's invitation in 408. While in China, he collaborated with the Chinese monk [ZHU FONIAN](#) (d.u.) in the translation of two massive texts of the mainstream Buddhist tradition: the [SIFEN LŪ](#) ("Four-Part Vinaya," in sixty rolls), the vinaya collection of the [DHARMAGUPTAKA](#) school, which would become the definitive vinaya used within the Chinese tradition; and the [DĪRGHĀGAMA](#), also generally presumed to be associated with the Dharmaguptakas. Even after returning to Kashmir four years later, Buddhayaśas is said to have continued with his translation work, eventually sending back to China his rendering of the *Ākāśagarbhasūtra*.

[buddhi](#). (T. blo; C. siwei; J. shiyui; K. sayu 思惟). In Sanskrit and Pāli, "intelligence," "comprehension," or "discernment"; referring specifically to the ability to fashion and retain concepts and ideas (related etymologically to the words buddha and [BODHI](#), from the root √budh "to wake up"). In Buddhist usage, buddhi sometimes denotes a more elevated faculty of mind that surpasses the rational and discursive in its ability to discern truth. Buddhi is thus a kind of intuitive intelligence, comprehension, or insight, which can serve to catalyze wisdom ([PRAJÑĀ](#)) and virtuous ([KUŚALA](#)) actions. According to some strands of [MAHĀYĀNA](#) philosophy, this discernment is an inherent and fundamental characteristic of the mind, which is essentially free of all mistaken discriminations and devoid of distinction or change. In such contexts, buddhi is often associated with the original nature of the mind. See [RIG PA](#).

[Buddhism](#). See [BUDDHADHARMA](#); [BUDDHAVACANA](#); [DHARMAVINAYA](#); [ŚĀSANA](#).

[Buddhist Councils](#). See [SAMGĪTI](#) and listings under [COUNCIL, FIRST](#), etc.

[Buddhist Hybrid Sanskrit](#). A term coined by the Sanskritist [FRANKLIN](#)

[EDGERTON](#), who compiled the definitive grammar and dictionary of the language, to refer to the peculiar Buddhist argot of Sanskrit that is used both in many Indic [MAHĀYĀNA](#) scriptures, as well as in the [MAHĀVASTU](#), a biography of the Buddha composed within the [LOKOTTARAVĀDA](#) subgroup of the [MAHĀSĀMĠHIKA](#) school. Edgerton portrays Buddhist Hybrid Sanskrit texts as the products of a gradual Sanskritization of texts that had originally been composed in various Middle Indic dialects ([PRAKRIT](#)). Buddhist Hybrid Sanskrit (BHS) texts were not wholesale renderings of vernacular materials intended to better display Sanskrit vocabulary, grammar, and syntax, but rather were ongoing, and often incomplete, reworkings of Buddhist materials, which reflected the continued prestige of Sanskrit within the Indic scholarly community. This argot of Sanskrit is sometimes called the “[GĀTHĀ](#) dialect,” because its peculiarities are especially noticeable in Mahāyāna verse forms. Edgerton describes three layers of Buddhist Hybrid Sanskrit based on the extent of their hybridization (and only loosely chronological). The first, and certainly earliest, class consists solely of the *Mahāvastu*, the earliest extant BHS text, in which both the prose and verse portions of the scripture contain many hybridized forms. In the second class, verses remain hybridized, but the prose sections are predominantly standard Sanskrit and are recognizable as BHS only in their vocabulary. This second class includes many of the most important Mahāyāna scriptures, including the [GANDAVYŪHA](#), [LALITAVISTARA](#), [SADDHARMAPUNDIRĪKASŪTRA](#), and [SUKHĀVATĪVYŪHASŪTRA](#). In the third class, both the verse and prose sections are predominantly standard Sanskrit, and only in their vocabulary would they be recognized as BHS. Texts in this category include the [ASTASĀHASRIKĀPRAJŅĀPĀRAMITĀ](#), [BODHISATTVABHŪMI](#), [LĀNKĀVATĀRASŪTRA](#), [MŪLASARVĀSTIVĀDA VINAYA](#), and [VAJRACCHEDIKĀPRAJŅĀPĀRAMITĀSŪTRA](#).

[bugongye](#). (C) (不共業). See [GONG BUGONG YE](#).

[Bukai nanshin](#). (J) (霧海南針). See [MUKAI NANSHIN](#).

[Bukkoku Kokushi](#). (J) (佛國國師). See [KŌHŌ KENNICHI](#).

[buli wenzi](#). (J. furyūmonji; K. pullip muncha 不立文字). In Chinese, lit. “not establishing words and letters”; a line summarizing the [CHAN](#) school’s unique sense of its own pedigree, as a school of Buddhism that does not rely on the scriptural teachings of Buddhism but has a direct connection through the “buddhas and patriarchs” ([FOZU](#)) to the mind of the Buddha himself. The saying

is later attributed to the school's traditional founder, [BODHIDHARMA](#). According to [GUIFENG ZONGMI](#)'s [CHANYUAN ZHUQUANJI DUXU](#), the Indian monk Bodhidharma taught that the mind was the [DHARMA](#) and he transmitted this teaching from mind to mind ([YIXIN CHUANXIN](#)) without establishing words or letters. This phrase also often appears together with three other phrases: [JIAOWAI BIECHUAN](#) (“a special transmission outside the teachings”), [ZHIZHI RENXIN](#) (“directly pointing to the human mind”), and [JIANXING CHENGFO](#) (“seeing one's own nature and becoming a buddha”). They appear together for the first time in the [ZUTING SHIYUAN](#) compiled in 1108 and soon became a normative teaching in the subsequent [CHAN](#), [SŌN](#), [THIÊN](#), and [ZEN](#) traditions. As a radical interpretation of the notion of [UPĀYA](#), the phrase *buli wenzi* remains to this day a controversial and frequently debated topic. Song-dynasty exponents of “lettered Chan” ([WENZI CHAN](#)), such as [JUEFAN HUIHONG](#) (1071–1128), decried the bibliophobic tendencies epitomized in this line and advocated instead that Chan insights were made manifest in both Buddhist [SŪTRAS](#) as well as in the uniquely Chan genres of discourse records ([YULU](#)), lineage histories (see [CHUANDENG LU](#)), and public-case anthologies ([GONG'AN](#)).

[Bum thang](#). A district of central Bhutan. Considered one of the country's most sacred regions, it was the birthplace of [PADMA GLING PA](#) and is home to numerous important monasteries including [GTAM ZHING](#), Sku rje (Kuje), and Byams pa lha khang (Jampa Lhakang).

[Bunkyo hifuron](#). (文鏡秘府論). In Japanese, “A Mirror on Literature and a Treasury of Marvels Treatise”; a work on classical Chinese poetics and prosody, composed by the Japanese [SHINGONSHŪ](#) monk [KŪKAI](#), probably in the early ninth century. The work was intended to serve as a vade mecum on classical Chinese writing style and literary allusions for Japanese ranging from novice monks who needed to know how to parse Buddhist [MANTRAS](#) and [DHĀRANĪs](#) to diplomats or scribes who had to compose elegant Chinese prose and verse. The treatise is titled a “mirror on literature” because it describes correct Chinese style and a “treasury of marvels” because it serves as a literary compendium and thesaurus. The text is significant not only because of its impact on the development of Japanese classical-Chinese writing, but also because its extensive extracts of original Chinese sources (most now lost) stand as a valuable resource for the study of Tang literature.

[Burnouf, Eugène](#). (1801–1852). French orientalist and seminal figure in the

development of Buddhist Studies as an academic discipline. He was born in Paris on April 8, 1801, the son of the distinguished classicist Jean-Louis Burnouf (1775–1844). He received instruction in Greek and Latin from his father and studied at the Lycée Louis-le-Grand. He entered the École des Chartes in 1822, receiving degrees in both letters and law in 1824. He then turned to the study of Sanskrit, both with his father and with Antoine Léonard de Chézy (1773–1832). In 1826, Burnouf published, in collaboration with the young Norwegian-German scholar Christian Lassen (1800–1876), *Essai sur le pâli* (“Essay on [PALI](#)”). After the death of Chézy, Burnouf was appointed to succeed his teacher in the chair of Sanskrit at the Collège de France. His students included some of the greatest scholars of day; those who would contribute to Buddhist studies included Philippe Edouard Foucaux (1811–1894) and FRIEDRICH MAX MÜLLER. Shortly after his appointment to the chair of Sanskrit, the Société Asiatique, of which Burnouf was secretary, received a communication from BRIAN HOUGHTON HODGSON, British resident at the court of Nepal, offering to send Sanskrit manuscripts of Buddhist texts to Paris. The receipt of these texts changed the direction of Burnouf’s scholarship for the remainder his life. After perusing the [ASTASĀHASRIKĀPRAJÑĀPĀRAMITĀ](#) and the [LALITAVISTARA](#), he decided to translate the [SADDHARMAPUNĀRĪKASŪTRA](#). Having completed the translation, he decided to precede its publication with a series of studies. He completed only the first of these, published in 1844 as *Introduction à l’histoire du Bouddhisme indien*. This massive work is regarded as the foundational text for the academic study of Buddhism in the West. It contains Burnouf’s highly influential analyses of various aspects of Sanskrit Buddhism as he understood them from the works received from Hodgson. It also contains hundreds of pages of translations of previously unknown works, drawn especially from the [DIVYĀVADĀNA](#) and the [AVADĀNAŚATAKA](#). Burnouf died, apparently of kidney failure, on May 28, 1852. His translation of the *Saddharmapuṇḍarīka*, *Le Lotus de la bonne loi*, appeared that same year.

[Bu ston chos ’byung](#). (Butön Chöjung). A history of Buddhism in India and Tibet composed in 1322 by the Tibetan polymath [BU STON RIN CHEN GRUB](#). The full name of the work is *Bde bar gshegs pa’i bstan pa’i gsal byed chos kyi ’byung gnas gsung rab rin po che’i mdzod*; it is available in English in the 1931–1932 translation of major parts by [EUGÈNE OBERMILLER](#), done in collaboration with Mongolian monks educated in Tibetan monasteries. The text is in two parts: a history and an important general catalogue of Tibetan Buddhist canonical

literature, one of the first of its kind. The first chapter of the *Chos 'byung* draws on the [VYĀKHYĀYUKTI](#) and is a general discussion of the exposition and study of Buddhist doctrine. The second chapter is a traditional history dealing with the spread of the doctrine in the human world, the three turnings of the wheel of [DHARMA](#) ([DHARMAKAPRAVARTANA](#)), the councils ([SAMGĪTI](#)), the collection of the Buddhist doctrine into authoritative scriptures, the date of the Buddha, the followers who came after him, and the decline of the doctrine in India. The history of Buddhism in Tibet is divided into a section on the earlier ([SNGA DAR](#)) and later spread ([PHYI DAR](#)) of the doctrine. The third section is the general catalogue of Buddhist canonical literature in Tibetan translation. It is divided into [SŪTRAS](#) and [TANTRAS](#), then again into the words of the Buddha (bka') and authoritative treatises (bstan bcos). The words of the Buddha are subdivided based on the three turnings of the wheel of the dharma with a separate section on [MAHĀYĀNA](#) sūtras; treatises are divided into treatises explaining specific works of the Buddha (again subdivided based on the three turnings of the wheel of the dharma), general expositions, and miscellaneous treatises. Bu ston similarly divides the tantras into words of the Buddha and authoritative treatises and deals with both under the division into four “sets” (sde) of [KRIYĀ](#), [CARYĀ](#), and [YOGA](#), and [MAHĀYOGA](#) tantras. This latter division is again subdivided into method ([UPĀYA](#)), wisdom ([PRAJÑĀ](#)), and both (ubhaya) tantras. In [MKHAS GRUB DGE LEGS DPAL BZANG](#)'s explanation (*Rgyud sde spyi'i rnam bzhaq*), a work based on Bu ston's model, but incorporating the influential scheme of [TSONG KHA PA](#), the divisions of mahāyoga are subsumed under the general category of [ANUTTARAYOGATANTRA](#) (highest yoga tantra). The tantric commentaries are organized following the same schema.

[Bu ston rin chen grub](#). (Butön Rinchen Drup) (1290–1364). A Tibetan scholar, translator, and encyclopedist, renowned for systematizing the Tibetan Buddhist canon into its present form. According to Tibetan hagiographies, Bu ston was born into a lineage of tantric practitioners and considered a reincarnation of the Kashmiri master [ŚĀKYAŚRĪBHADRA](#). Having mastered tantric ritual at an early age, he then received ordination at the age of eighteen. He trained under numerous teachers, studying all branches of Buddhist learning and eventually earned a reputation especially for his knowledge of the [KĀLACAKRATANTRA](#). At age thirty, Bu ston accepted the abbacy of [ZHWA LU](#) monastery in central Tibet, where he authored and taught his most influential works; his entire corpus fills twenty-eight volumes in one edition. Bu ston's tenure at Zhwa lu was so

influential that it provided the name for a new lineage, the so-called Zhwa lu pa (those of Zhwa lu) or the Bu lugs tshul (the tradition of Bu ston). In about 1332 Bu ston completed his famous history of Buddhism ([BU STON CHOS 'BYUNG](#)) and it was during this time that, based on previous canonical lists, he began to reformulate a classification system for organizing the Tibetan canon. Bu ston was not the only editor (among them were Dbu pa blo gsal and Bcom ldan rig pa'i ral gri), but he was the most important figure in the final redaction of the [BKA' 'GYUR](#) and [BSTAN 'GYUR](#); he compared manuscripts from the two major manuscript collections at [SNAR THANG](#) and 'Tshal, added other works not found there, eliminated indigenous Tibetan works, decided on criteria for inclusion in the canon, standardized terminology, and decided on categories under which to include the many volumes. It is customary in modern works to include Bu ston in the [SA SKYA](#) sect and indeed his explanations of the [ABHISAMAYĀLAMKĀRA](#) and the [ABHIDHARMASAMUCCAYA](#), among others, are considered authoritative by that sect. But his influence is not limited to that sect; for example, [TSONG KHA PA](#)'s commentary on the perfection of wisdom ([LEGS BSHAD GSER 'PHRENG](#)), and his explanation of the different types of tantra ([SNGAGS RIM CHEN MO](#)) (both authoritative texts in the [DGE LUGS](#) sect) borrow heavily from Bu ston's work. Bu ston is one of several key figures in the history of Tibetan Buddhism to be referred to as kun mkhyen, or "all knowing."

[butsudan](#). (佛壇). In Japanese, literally "buddha platform"; a platform on which an image of a buddha and/or [BODHISATTVA](#) is placed and worshipped; also known as [SHŪMIDAN](#) ("SUMERU platform"). A butsudān can be made of stone, clay, or wood and can take the shape of a lotus platform, niche, or portable shrine. According to the [BAIZHANG QINGGUI](#), a butsudān houses the image of the [SAMBHOGAKĀYA](#) of the Buddha. The *Nihon shoki* also notes that the practice of making butsudān had spread widely among Japanese commoners as early as the Nara and Heian periods. Nowadays, butsudān are owned by most households and take the form of a portable shrine that houses icons, sacred objects of a particular school or sect, and mortuary tablets, known as *ihai*, for deceased family members. They are thus used primarily for private worship and mortuary practice.

[Buttō Kokushi](#). (J) (佛燈國師). See RANKEI DŌRYŪ.

[Byams chos sde lnga](#). In Tibetan, "the five books of Maitreya" said to have been presented to [ASAṄGA](#) by the bodhisattva [MAITREYA](#) in the [TUSITA](#) heaven;

they are the [MAHĀYĀNASŪTRĀLAMKĀRA](#), [ABHISAMAYĀLAMKĀRA](#), [MADHYĀNTAVIBHĀGA](#), [DHARMADHARMATĀVIBHĀGA](#), and the [RATNAGOTRAVIBHĀGA](#) (*Uttaratantra*). See [MAITREYANĀTHA](#).

Byang chub 'od. (Jangchup Ö) (late tenth century). Grandnephew of King [YE SHES 'OD](#) who successfully invited the Indian Buddhist monk and scholar [ATIŚA DĪPAMKARAŚRĪJÑĀNA](#) to Tibet. During the second half of the tenth century, Ye shes 'od (also known as Song nge) became the king of Mnga' ris (Ngari), now the far western region of Tibet. He sent a number of Tibetans to Kashmir (see [KASHMIR-GANDHĀRA](#)) to study Buddhism, among them the translator [RIN CHEN BZANG PO](#) whose return to Tibet in 978 marks the beginning of the later spread of Buddhism ([PHYI DAR](#)). (Others date the beginning to the start of the second [MŪLASARVĀSTIVĀDA](#) ordination line, which began at about the same period.) According to a well-known story, Ye shes 'od wanted to invite the foremost Indian Buddhist scholar of the day, Atiśa, to Tibet and traveled to the Qarluq (T. gar log) kingdom (probably to [KHOTAN](#) in present-day Chinese Xianjiang province), to raise funds. He was captured by the chieftain and held for ransom. Ye shes 'od sent a letter to his nephew Byang chub 'od, saying that rather than use money for a ransom to free him, he should use any money collected for his release to invite Atiśa. Ye shes 'od died in captivity, but Byang chub 'od succeeded in convincing Atiśa to come to Tibet where he had a great influence, particularly on the earlier followers of the [BKA' GDAMS](#) sect. The history of this period becomes more important in later Tibetan history when [TSONG KHA PA](#), the founder of the [DGE LUGS](#) sect, described Atiśa as the perfect teacher in his seminal work the [LAM RIM CHEN MO](#). In the seventeenth century, when the Dge lugs rose to political power under the fifth [DALAI LAMA](#) and his supporters, Byang chub 'od and Atiśa were incorporated into a complex founding myth legitimating Dge lugs ascendancy and the [DGA' LDAN PHO BRANG](#) government.

Byōdōin. (平等院). A famous Japanese temple located in Uji, south of Kyōto, now associated with the [TENDAISHŪ](#) and [JŌDOSHŪ](#) sects. Byōdōin is especially famous for its Phoenix Hall (Hōōdō), which houses a magnificent image of [AMITĀBHA](#) made by the artist Jōchō (d. 1057). The hall, the statue, and fifty-two other small sculptures of [BODHISATTVA](#)s making offerings of music to the central Amitābha statue have been designated as national treasures. The Byōdōin Amitābha image is highly regarded as a representative piece of the refined art of the Fujiwara period (894–1185). Byōdōin was originally a villa that belonged to

the powerful regent Fujiwara no Michinaga (966–1027). The private villa was later transformed by Michinaga's son Yorimichi (992–1074) into a temple in 1052, and the Phoenix Hall was constructed the following year. Many halls dedicated to the buddha Amitābha were built in this period by powerful aristocrats who were influenced by the growing belief in the notion of mappō (see [MOFA](#)), or “the demise of the dharma,” wherein the only means of salvation was the practice of nenbutsu, the recitation of Amitābha's name (see also [NIANFO](#); [BUDDHĀNUSMRTI](#)). The monk Myōson (d. 1063), originally the abbot of another temple called [ONJŌJI](#), was installed as the first abbot of Byōdōin.

Caitika. (S). See [CAITYA](#).

caitta. [alt. caitasika] (P. cetasika; T. sems byung; C. xinsuo; J. shinjo; K. simso 心所). In Sanskrit, “mental concomitants” or “mental factors.” In the [ABHIDHARMA](#), the term encompasses those mental factors that accompany, in various combinations, the mind ([CITTA](#)) and its six sensory consciousnesses ([VIJÑĀNA](#)), viz., visual (lit. eye), auditory (ear), olfactory (nose), gustatory (tongue), tactile (body), and mental. The [VAIBHĀSIKA](#) school of [SARVĀSTIVĀDA](#) abhidharma lists forty-six caittas, the Pāli [ABHIDHAMMA](#) lists fifty-two (called [CETASIKA](#)), while the mature [YOGĀCĀRA](#) system of [MAHĀYĀNA](#) abhidharma gives a total of fifty-one specific mental concomitants, listed in six categories. The first, mental concomitants of universal application ([SARVATRAGA](#)), includes the five factors of sensory contact ([SPARŚA](#)), sensations ([VEDANĀ](#)), intention or volition ([CETANĀ](#)), perception ([SAMJÑĀ](#)), and attention ([MANASKĀRA](#)). The second category, five concomitants that are of specific application ([VINIYATA](#)) in spiritual progress, includes mindfulness ([SMRTI](#)), concentration ([SAMĀDHI](#)), and wisdom ([PRAJÑĀ](#)). The third category, salutary ([KUŚALA](#)) factors, includes nine positive mental states such as faith ([ŚRADDHĀ](#)), lack of greed ([ALOBHA](#)), lack of hatred ([ADVESA](#)), and vigor ([VĪRYA](#)). The fourth category, the primary afflictions ([KLEŚA](#)), includes six negative mental states such as sensuality ([RĀGA](#)), aversion ([PRATIGHA](#)), pride ([MĀNA](#)), and doubt ([VICIKITSĀ](#)). The fifth category, secondary afflictions ([UPAKLEŚA](#)), includes twenty lesser forms of negative mental states, such as envy ([ĪRSYĀ](#)), harmfulness ([VIHIMSĀ](#)), and carelessness ([PRAMĀDA](#)). The sixth and final category, mental concomitants of indeterminate ([ANİYATA](#)) quality, includes the four factors of remorse ([KAUKRTYA](#)), torpor ([MIDDHA](#)), thought ([VITARKA](#)), and analysis ([VICĀRA](#)). See also [CETASIKA](#).

caitya. (P. cetiya; T. mchod rten; C. zhiti; J. shidai; K. chiye 支提). In Sanskrit, “cairn,” “tumulus,” “sanctuary,” or “shrine.” The term is used sometimes to refer to a Buddhist reliquary, or [STŪPA](#), sometimes to a cave or sanctuary that enshrines a stūpa, and sometimes to local or non-Buddhist shrines. Where a distinction is made between caitya and stūpa, a stūpa contains a relic ([ŚARĪRA](#)) of

the Buddha or an eminent saint, while a caitya does not and is erected solely as a commemorative shrine. Many early Indian cave monasteries, such as [ELLORĀ](#), included a rectangular caitya hall as a central assembly room, with three naves and a stūpa in the apse as the object of worship. Early on, these caitya halls were superseded by rooms that instead enshrined a buddha image, the standard form subsequently found in Buddhist monasteries. The [VAJRACCHEDIKĀPRAJÑĀPĀRAMITĀSŪTRA](#) famously declares that any place where even a four-lined stanza from the sūtra is taught will become a caitya for divinities and humans.

[Caitya](#). [alt. Caitika; Caityaśaila] (P. Cetiyaavāda; T. Mchod rten pa; C. Zhiduoshanbu; J. Seitasanbu/Seitassenbu; K. Chedasanbu 制多山部). In Sanskrit, “The Caitya Worshippers”; one of the three main subgroups of the [MAHĀSĀMĠHIKA](#) school of mainstream Buddhism, along with the [KAUKKUTIKA](#) and [LOKOTTARAVĀDA](#) [alt. Ekavyavahārika]. Inscriptional evidence places the school in the Andhra region of India in the early second century CE, suggesting their possible association with the groups that Pāli materials refer to collectively as the [ANDHAKĀ](#). The Caitya school seems to have been named after its distinctive practice of worshipping shrines and sanctuaries ([CAITYA](#)). The founder of the school is presumed to have been a second [MAHĀDEVA](#), who led a reconsideration of the five propositions about the qualities of an [ARHAT](#) offered by an earlier [MAHĀDEVA](#), whom Buddhist sources from northern India consider to have fomented the initial schism of the mainstream Buddhist schools between the Mahāsāṃghika and the [STHAVIRANIKĀYA](#).

[Cakkavattisīhanādasutta](#). (C. Zhuanlun shengwang xiuxing jing; J. Tenrinjō shugyōkyō; K. Chōllyun sōngwang suhaeng kyōng 轉輪聖王修行經). In Pāli, “Discourse on the Lion’s Roar of the Wheel-Turning Emperor”; the twenty-sixth sutta of the [DĪGHANIKĀYA](#) (a separate [DHARMAGUPTAKA](#) recension appears as the sixth [SŪTRA](#) in the Chinese translation of the [DĪRGHĀGAMA](#) and a separate Sarvāstivāda recension as the seventieth sūtra in the Chinese translation of the [MADHYAMĀGAMA](#)); the scripture is known especially for being the only sutta in the Pāli canon that mentions the name of the Buddha’s successor, Metteya ([MAITREYA](#)). Before a gathering of monks at the town of Mātulā in [MAGADHA](#), the Buddha tells the story of a universal or wheel-turning monarch (cakkavattin; S. [CAKRAVARTIN](#)) named Daḷhanemi, wherein he explains that righteousness and order are maintained in the world so long as kings observe their royal duties.

Dalhanemi's successors, unfortunately, gradually abandoned their responsibilities, leading to immorality, strife, and the shortening of life spans from eighty thousand years to a mere ten; the sutta thus attributes the origins of evil in the world to the neglect of royal duty. Upon reaching this nadir, people finally recognize the error of their ways and begin anew to practice morality. The observance of morality leads to improved conditions, until eventually a universal monarch named Saṅkha appears, who will prepare the way for the advent of the future-Buddha Metteya (Maitreya).

cakra. (P. cakka; T. 'khor lo; C. lun; J. rin; K. yun 輪). In Sanskrit, “wheel,” “disc,” or “circle”; a frequent symbol used to represent various aspects of Buddhism, from the Buddha, to the [DHARMA](#), to Buddhist notions of kingship. When the Buddha first taught his new religion, it is said that he “turned the wheel of dharma” ([DHARMAKAPRAVARTANA](#)) and the eight-spoked “wheel of dharma” ([DHARMAKAKRA](#)) is subsequently used as a symbol for both the teachings as well as the person who rediscovered and enunciated those teachings. The [ABHIDHARMAKOŚABHĀSYA](#) explains that the noble eightfold path ([ĀRYĀSTĀNGAMĀRGA](#)) is like a wheel because it is similar in terms of the hub that is the support of the wheel, the spokes, and the containment rim. Right speech, action, and livelihood are like the hub, because they are the training in morality that provides support for concentration ([DHYĀNA](#)) and wisdom ([PRAJÑĀ](#)). Right view, thought, and effort are like spokes, because they are the training in wisdom. Right mindfulness and concentration are like the rim because the spokes of right view and so forth provide the objective support ([ĀLAMBAṆA](#)) in a one-pointed manner in dependence on them. The dharmacakra appears in some of the earliest Buddhist art, often as an iconographic symbol standing in for the Buddha himself. The sign of a thousand-spoked wheel on the palms of the hands and the soles of the feet is one of the thirty-two major marks of a great man ([MAHĀPURUSALAKSANA](#)), which is said to adorn the body of both a Buddha and a “wheel-turning emperor” ([CAKRAVARTIN](#)), his secular counterpart. A cakravartin's power is said to derive from his wheel of divine attributes, which rolls across different realms of the earth, bringing them under his dominion. The realm of [SAMSĀRA](#) is sometimes depicted iconographically in the form of a wheel, known as the “wheel of existence” ([BHAVAKAKRA](#)), with a large circle divided into the six realms of existence ([SADGATI](#)), surrounded by an outer ring representing the twelve links of dependent origination ([PRATĪTYASAMUTPĀDA](#)). ¶ The term cakra is also important in Buddhist [TANTRA](#), especially in

[ANUTTARAYOGATANTRA](#). According to various systems of tantric physiognomy, a central channel ([AVADHŪTĪ](#)) runs from either the tip of the genitals or the base of the spine to either the crown of the head or the point between the eyebrows, with a number of “wheels” (cakra) along its course. In one of the systems, these wheels are located at the point between the eyebrows, the crown of the head, the throat, the heart, the navel, the base of the spine, and the opening of the sexual organ. Running parallel to the central channel to the right and left are two channels, both smaller in diameter, the [LALANĀ](#) and the [RASANĀ](#). It is said that the right and left channels wrap around the central channel, forming knots at the cakras. Much tantric practice is devoted to techniques for loosening these knots in order to allow the winds ([PRĀNA](#)) or energies that course through the other channels to flow freely and enter into the central channel. The cakras themselves are essential elements in this practice and other tantric meditative practices, with seed syllables ([BĪJA](#)), spells ([MANTRA](#)), deities, and diagrams ([MANDALA](#)) visualized at their center. The cakras themselves are often described as open lotus blossoms, with varying numbers of petals in different colors.

[Cakrasamvara](#). (T. 'Khor lo bde mchog). See [CAKRASAMVARATANTRA](#)

[Cakrasamvaratantra](#). (T. 'Khor lo bde mchog gi rgyud). In Sanskrit, the “Binding of the Wheel Tantra” an important Buddhist tantra, often known simply as the Cakrasamvara (T. 'Khor lo bde mchog). The text is extant in Sanskrit and in a Tibetan translation in seven hundred stanzas, which is subdivided into fifty-one sections; it is also known by the name *Śrītherukābhīdhāna* (a name appearing at the end of each section), and commonly known in Tibet as the *Cakrasamvara Laghutantra* (“short tantra” or “light tantra”) or *Mūlatantra* (“root tantra”) because, according to legend, there was once a longer text of one hundred thousand stanzas. The main deity of the tantra is [HERUKA](#) (also known as Cakrasamvara) and his consort is [VAJRAVĀRĀHĪ](#). Historically, the tantra originated as part of a literature that focused on a class of female divinities called [YOGINĪ](#) or [DĀKINĪ](#). It and its sister tantra, the [HEVAJRATANTRA](#), probably appeared toward the end of the eighth century, and both show the influence of the *Sarvabuddhasamayoga-ḍākinījālasamvaratantra* (referred to by Amoghavajra after his return from India to China in 746 CE). All are classed as yoginītantras. The use of skulls, the presence of the [KHATVĀNGA](#) staff, and the references to sites holy to Śaivite Kāpālikas (those who use skulls) point to a very close relationship between the Śaiva Kāpālika literature and the

early yoginītantras, such that some scholars have suggested an actual appropriation of the Śaiva literature by Buddhists outside mainstream Buddhist practice. Other scholars suggest this class of tantric literature originates from a [SIDDHA](#) tradition, i.e., from individual charismatic yogins and yoginīs with magical powers unaffiliated with particular religions or sects. Among the four classes of tantras—[KRIYĀTANTRA](#), [CARYĀTANTRA](#), [YOGATANTRA](#), and [ANUTTARAYOGATANTRA](#)—the *Cakrasaṃvaratantra* is included in the last category; between the father tantras ([PITRATANTRA](#)) and mother tantra ([MĀTRATANTRA](#)) categories of anuttarayogatantras, it is classified in the latter category. The siddhas Luipa and [SARAHĀ](#) are prominent in accounts of its origin and transmission, and the siddha [NĀROPA](#) is of particular importance in the text’s transmission in India and from there to Tibet. Like many root tantras, the text contains very little that might be termed doctrine or theology, focusing instead on ritual matters, especially the use of [MANTRA](#) for the achievement of various powers ([SIDDHI](#)), especially the mundane ([LAUKIKA](#)) powers, such as the ability to fly, become invisible, *etc.* The instructions are generally not presented in a systematic way, although it is unclear whether this is the result of the development of the text over time or the intention of the authors to keep practices secret from the uninitiated. Later commentators found references in the text to elements of both the stage of generation ([UTPATTIKRAMA](#)) and stage of completion ([NISPANNAKRAMA](#)). The *Dākārṇavatāntra* is included within the larger category of tantras related to the Cakrasaṃvara cycle, as is the *Abhidhanottara* and the *Samvarodayatantra*. The tantra describes, in greater and less detail, a [MANDALA](#) with goddesses in sacred places in India (see [PĪTHA](#)) and the process of [ABHISEKA](#). The practice of the [MĀYĀDEHA](#) (T. sgyu lus, “illusory body”) and [CANDĀLĪ](#) (T. gtum mo, often translated as “psychic heat”) are closely associated with this tantra. It was translated twice into Tibetan and is important in all three new-translation ([GSAR MA](#)) Tibetan sects, i.e., the [SA SKYA](#), [BKA’ BRGYUD](#), and [DGE LUGS](#). Iconographically, the Cakrasaṃvara maṇḍala, starting from the outside, has first eight cremation grounds ([ŚMAŚĀNA](#)), then a ring of fire, then [VAJRAS](#), then lotus petals. Inside that is the palace with five concentric placement rings going in toward the center. In the center is the main deity Heruka with his consort Vajravārāhī trampling on [BHAIRAVA](#) and his consort Kālarātri (deities associated with Śaivism). There are a number of different representations. One has Heruka (or Cakrasaṃvara) dark blue in color with four faces and twelve arms, and Vārāhī with a single face and two hands, red and naked except for bone ornaments. In the next circles are twenty-four vīras

(heroes) with their consorts (related with the twenty-four pīṭha), with the remaining deities in the maṇḍala placed in different directions in the outer circles.

[cakravāda](#). [alt. cakravāla] (P. cakkavāla; T. 'khor yug ri; C. tiewei shan; J. tetchisen; K. ch'ŏrwi san 鐵圍山). In Sanskrit, “ring of mountains”; the proper name of the eight ranges of metallic mountains that are presumed in Buddhist cosmology to surround the world system of the sensuous realm ([KĀMALOKA](#)) and thus sometimes used by metonymy to designate the entire universe or “world system.” Eight concentric mountain ranges are said to surround the central axis of the world system, Mount [SUMERU](#) or Mount Meru. The seven innermost ranges are made of gold, and seven seas fill the valleys between these concentric ranges. In some representations, the mountain ranges are in the form a circle; in others, they are in the form of a square, consistent with the shape of Mount Sumeru. Located in a vast ocean that exists beyond these seven innermost concentric rings are laid out the four continents, including [JAMBUDVĪPA](#) (the Rose-Apple Continent) to the south, where human beings dwell; [VIDEHA](#) to the east; [GODĀNĪYA](#) to the west; and [UTTARAKURU](#) to the north. At the outer perimeter of the world system is a final range of iron mountains, which surrounds and contains the outermost sea. The universe was presumed to be occupied by an essentially infinite number of these cakravāda world systems, each similarly structured, and each world system was the domain of a specific buddha, where he achieved enlightenment and worked toward the liberation of all sentient beings. See also [BUDDHAKSETRA](#).

[cakravāla](#). (S). See [CAKRAVĀDA](#).

[cakravartin](#). (P. cakkavattin; T. 'khor lo sgyur ba'i rgyal po; C. zhuanlun wang; J. tenrin'ō; K. chŏllyun wang 轉輪王). In Sanskrit, lit. “wheel-turning emperor” or “universal monarch”; a monarch who rules over the entire universe ([CAKRAVĀDA](#)), commonly considered in Buddhism to be an ideal monarch who rules his subjects in accordance with the [DHARMA](#). Just as with a buddha, only one cakravartin king can appear in a world system at any one time. Also like a buddha, a cakravartin is endowed with all the thirty-two major marks of a great man ([MAHĀPURUSALAKSANA](#)). Hence, when the future buddha [GAUTAMA](#) was born with these marks, seers predicted that he had two possible destinies: to become a cakravartin if he remained in the world, or a buddha if he renounced it. A cakravartin's power derives from a wheel or disc of divine attributes ([CAKRA](#))

that rolls across different realms of the earth, bringing them under his dominion. The [ABHIDHARMAKOŚABHĀŚYA](#) lists four classes of cakravartin, depending on the basic element from which his disc is forged: (1) a suvarṇacakravartin (referred to in some texts as a caturdvīpakacakravartin, or “cakravartin of four continents”), whose wheel is gold, who reigns over all the four continents of a world system (see [CAKRAVĀDA](#)), and who conquers the world through the spontaneous surrender of all rival kings whose lands his wheel enters; (2) a rūpyacakravartin, whose wheel is silver, who reigns over three continents (all except [UTTARAKURU](#)), and who conquers territory by merely threatening to move against his rivals; (3) a tāmracakravartin, whose wheel is copper, who reigns over two continents ([JAMBUDVĪPA](#) and [VIDEHA](#)), and who conquers territory after initiating battle with his rivals; (4) an ayaścakravartin, whose wheel is iron, who reigns over one continent (Jambudvīpa only), and who conquers territory only after extended warfare with his rivals. Some texts refer to a balacakravartin or “armed cakravartin,” who corresponds to the fourth category. The cakravartins discussed in the sūtras typically refers to a suvarṇacakravartin, who conquers the world through the sheer power of his righteousness and charisma. He possesses the ten royal qualities (rājadharmā) of charity, good conduct, nonattachment, straightforwardness, gentleness, austerity, nonanger, noninjury, patience, and tolerance. A cakravartin is also said to possess seven precious things ([RATNA](#)): a wheel (cakra), an elephant ([HASTINĀGA](#)), a horse (aśva), a wish-granting gem ([MANI](#)), a woman (strī), a financial steward or treasurer ([GRHAPATI](#)), and a counselor (pariṇāyaka). Various kings over the course of Asian history have been declared, or have declared themselves to be, cakravartins. The most famous is the Mauryan emperor [AŚOKA](#), whose extensive territorial conquests, coupled with his presumed support for the dharma and the [SAMGHA](#), rendered him the ideal paradigm of Buddhist kingship.

[cakṣurāyatana](#). (P. cakkhāyatana; T. mig gi skye mched; C. yanchu; J. gensho; K. anch’ō 眼處). In Sanskrit, “visual sense base” or “base of cognition”; the visual sense base or eye sense organ ([CAKṢURINDRIYA](#)) as it occurs in the list of the twelve sense fields ([ĀYATANA](#)). These āyatanas are also called “bases of cognition,” because each pair of sense base and sense object produces its respective sensory consciousness. In this case, the contact ([SPARŚA](#)) between a visual sensory object ([RŪPA](#)) and the visual sense base (cakṣurindriya) produces a visual consciousness ([CAKṢURVIJÑĀNA](#)).

cakṣurindriya. (P. cakkhundriya; T. mig gi dbang po; C. yangen; J. genkon; K. an'gūn 眼根). In Sanskrit, “visual sense base” or “eye sense organ”; the physical organ located in the eye that makes it possible to see forms ([RŪPA](#)). This sense base is not the eyeball itself, but a subtle type of materiality that is located within the eye and invisible to the naked eye. It is said to be shaped like the bud of a flax flower. If this sense organ is absent or damaged, vision is not possible. The visual sense base serves as the dominant condition ([ADHIPATIPRATYAYA](#)) for the production of visual consciousness ([CAKSURVIJÑĀNA](#)). The visual sense base is counted among the six sense bases or sense organs ([INDRIYA](#)), the twelve bases of cognition ([ĀYATANA](#)), and eighteen sensory elements ([DHĀTU](#)).

cakṣurvijñāna. (P. cakkhuviññāṇa; T. mig gi rnam par shes pa; C. yanshi; J. genshiki; K. ansik 眼識). In Sanskrit, “visual consciousness” or “eye consciousness”; one of the five types of consciousness of physical objects (along with those of the ear, nose, tongue, and body) and one of the six sensory consciousnesses (adding the mental consciousness, or [MANOVIJÑĀNA](#)). The visual consciousness perceives forms ([RŪPA](#)), i.e., colors and shapes. Like the other consciousness of physical objects, visual consciousness is produced through the contact ([SPARŚA](#)) between a visual sensory object ([RŪPA](#)) and the visual sense base or eye sense organ ([CAKSURINDRIYA](#)), and in dependence on three conditions ([PRATYAYA](#)): the object condition ([ĀLAMBANAPRATYAYA](#)), in this case, a form; a dominant condition ([ADHIPATIPRATYAYA](#)), here, the visual sense base (cakṣurindriya); and the immediately preceding condition ([SAMANANTARAPRATYAYA](#)), a prior moment of consciousness. The visual consciousness is counted as one of the six sensory consciousnesses ([VIJÑĀNA](#)) and eighteen sensory elements ([DHĀTU](#)).

cakṣus. (P. cakkhu; T. mig; C. yan; J. gen; K. an 眼). In Sanskrit, lit. “eye”; the base associated with the full range of types of vision ([DARŚANA](#)), from sensory perception that occurs via the visual base ([ĀYATANA](#)), through extrasensory perception that was a product of meditative development ([YOGIPRATYAKṢA](#)). Buddhist literature often refers to five types of “eyes” (pañcacakṣus), viz., the physical eye (māṃsacakṣus), which is the sense base (āyatana) associated with visual consciousness; the divine eye ([DIVYACAKṢUS](#)), the vision associated with the divinities ([DEVA](#)) in the heavens or the spiritual power ([ABHIJÑĀ](#)) of clairvoyance; the wisdom eye (prajñācakṣus), which is the insight ([PRAJÑĀ](#)) that derives from mainstream Buddhist practices; the dharma eye (dharmacakṣus)

that is exclusive to the [BODHISATTVAS](#); and the buddha eye (buddhacakṣus), which subsumes all other four. The cakṣus is said to be impossible to perceive with the naked eye and differs from the gross physical eyeball that is called the basis of the faculty.

[Cāmadevīvamsa](#). In Pāli, “History of Queen Cāma”; a chronicle in mixed prose and verse written by Mahāthera Bodhiraṃsi at Lamphun (Haripuñjaya) in northern Thailand, sometime between 1460 and 1530 CE. The text recounts the accession of Queen Cāma to the throne of Haripuñjaya in the seventh century CE and the introduction of [THERAVĀDA](#) Buddhism as the state religion under her patronage. The work begins with an account of the legendary visit by the Buddha to the site of Lamphun, where he prophesied the city’s future greatness, and goes on to describe its founding under the direction of various sages. The narrative concludes with accounts of the reigns of kings after Queen Cāma, culminating with Ādityarājā who flourished in the eleventh century.

[cāmara](#). (S). See [VĀLAVYAJANA](#).

[candālī](#). (T. gtum mo; C. zhantuoli; J. sendari; K. chōndari 旃陀利). In Sanskrit, “fierce woman.” In ordinary usage, this is a term for an outcaste or low-caste woman. However, in [ANUTTARAYOGATANTRA](#), it refers to a meditation practice sometimes described in English as “inner heat” or “psychic heat.” It is one of the “six yogas of Nāropa” ([NA RO CHOS DRUG](#)) but it figures in many practices of the completion stage ([NISPANNAKRAMA](#)). In this practice, the meditator imagines a seed syllable ([BĪJA](#)) in the middle of the central channel ([AVADHŪTĪ](#)) at the navel [CAKRA](#). As the meditator concentrates on the letter, it begins to glow with bright light and emits intense heat. That heat rises slowly up the central channel, first to the cakra at the heart, then to the cakra at the throat, and finally to the cakra at the crown of the head. When it reaches the crown of the head, the heat of the inner fire begins to melt the white drop ([BINDU](#)) located there, causing it to begin to melt. As it melts, it descends through the central channel, first to the cakra at the throat, then to the cakra at the heart, the cakra at the navel, and finally to the cakra at the end of the central channel. As the drop moves slowly down through each cakra, a different type of bliss is experienced. This practice is said to produce physical heat in the body; according to tradition, yogins in Tibet, most notably [MI LA RAS PA](#), were able to survive the cold in mountain caves through this practice.

[Candasāra Buddha](#). One of the most sacred of Burmese Buddha images. See [ARAKAN BUDDHA](#).

[Candragarbhapariprcchā](#). (T. Zla ba'i snying pos zhus pa'i mdo; C. Yuezang fen; J. Gatsuzōbun; K. Wōlchang pun月藏分). In Sanskrit, “Dialogue with Candragarbhā”; a [MAHĀYĀNA](#) sūtra that is important, especially in East Asia and Tibet, for its prediction of the demise of the dharma ([MOFA](#); [SADDHARMAVIPRALOPA](#)); also known as the *Candragarbhāsūtra*. There are three versions of the text, in Chinese, Khotanese, and Tibetan. In the Tibetan version, the [BODHISATTVA](#) Candragarbhā asks the Buddha how and when his dharma will disappear. The Buddha replies that it will last for two thousand years, in four periods of five hundred years each. During the first period, his dharma will be taught and people will put it into practice and achieve liberation. In the second period, very few will be able to achieve liberation. In the third, the dharma will be taught but no one will put it into practice. In the fourth the guardian deities will stop protecting Buddhists from disease, famine, and warfare, and monks will begin to engage in commerce. In the Chinese version, the Buddha explains that his teaching will last for one thousand five hundred years, with five hundred years of “true dharma” and one thousand years of “semblance dharma” ([XIANGFA](#)).

[Candragomin](#). (T. Btsun pa zla ba). Fifth-century CE Indian lay poet and grammarian, who made substantial contributions to Sanskrit grammar, founding what was known as the Cāndra school. A junior contemporary of the great Kālidāsa, Candragomin was one of the most accomplished poets in the history of Indian Buddhism. His play *Lokānanda*, which tells the story of the [BODHISATTVA](#) king Mañicūḍa, is the oldest extant Buddhist play and was widely performed in the centuries after its composition. He was a devotee of [TĀRĀ](#) and composed several works in her praise. Tibetan works describe him as a proponent of [VIJÑĀNAVĀDA](#) who engaged in debate with [CANDRAKĪRTI](#), but there is little philosophical content in his works that can be confidently ascribed to him. Among those works are the “Letter to a Disciple” (*Śiṣyalekha*), the “Confessional Praise” (*Deśanāstava*), and perhaps the “Twenty Verses on the Bodhisattva Precepts” (*Bodhisattvasaṃvaraviṃśaka*).

[Candrakīrti](#). (T. Zla ba grags pa) (c. 600–650). An important [MADHYAMAKA](#) master and commentator on the works of [NĀGĀRJUNA](#) and [ĀRYADEVĀ](#), associated especially with what would later be known as the [PRĀSĀNGIKA](#) branch of

Madhyamaka. Very little is known about his life; according to Tibetan sources, he was from south India and a student of Kamalabuddhi. He may have been a monk of [NĀLANDĀ](#). He wrote commentaries on Nāgārjuna's [YUKTISASTIKĀ](#) and [ŚŪNYATĀSAPTATI](#) as well as Āryadeva's [CATUḤŚATAKA](#). His two most famous and influential works, however, are his [PRASANNAPADĀ](#) ("Clear Words"), which is a commentary on Nāgārjuna's [MŪLAMADHYAMAKAKĀRIKĀ](#), and his [MADHYAMAKĀVATĀRA](#) ("Entrance to the Middle Way"). In the first chapter of the *Prasannapadā*, he defends the approach of [BUDDHAPĀLITA](#) against the criticism of [BHĀVAVIVEKA](#) in their own commentaries on the *Mūlamadhyamakakārikā*. Candrakīrti argues that it is inappropriate for the Madhyamaka to use what is called an autonomous syllogism ([SVATANTRAPRAYOGA](#)) in debating with an opponent and that the Madhyamaka should instead use a consequence ([PRASAṄGA](#)). It is largely based on Candrakīrti's discussion that Tibetan scholars retrospectively identified two subschools of Madhyamaka, the [SVĀTANTRIKA](#) (in which they placed Bhāvaviveka) and the Prāsaṅgika (in which they placed Buddhapālita and Candrakīrti). Candrakīrti's other important work is the *Madhyamakāvātāra*, written in verse with an autocommentary. It is intended as a general introduction to the *Mūlamadhyamakakārikā*, and provides what Candrakīrti regards as the soteriological context for Nāgārjuna's work. It sets forth the [BODHISATTVA](#) path, under the rubric of the ten bodhisattva stages ([BHŪMI](#); [DAŚABHŪMI](#)) and the ten perfections ([PĀRAMITĀ](#)). By far the longest and most influential chapter of the text is the sixth, dealing with the perfection of wisdom ([PRAJÑĀPĀRAMITĀ](#)), where Candrakīrti discusses the two truths ([SATYADVAYA](#)), offers a critique of [CITTAMĀTRA](#), and sets forth the reasoning for proving the selflessness of phenomena ([DHARMANAIRĀTMYA](#)) and the selflessness of the person ([PUDGALANAIRĀTMYA](#)), using his famous sevenfold analysis of a chariot as an example. Candrakīrti seems to have had little influence in the first centuries after his death, perhaps accounting for the fact that his works were not translated into Chinese (until the 1940s). There appears to have been a revival of interest in his works in India, especially in Kashmir, in the eleventh and twelfth centuries, at the time of the later dissemination ([PHYI DAR](#)) of Buddhism to Tibet. Over the next few centuries, Candrakīrti's works became increasingly important in Tibet, such that eventually the *Madhyamakāvātāra* became the locus classicus for the study of Madhyamaka in Tibet, studied and commented upon by scholars of all sects and serving as one of the "five texts" ([GZHUNG LNKA](#)) of the [DGE LUGS](#) curriculum. ¶ There appear to be later Indian authors who were called, or called

themselves, Candrakīrti. These include the authors of the *Trīśaraṇasaptati* and the *Madhyamakāvatāraprajñā*, neither of which appears to have been written by the author described above. Of particular importance is yet another Candrakīrti, or Candrakīrtipāda, the author of the *Pradīpoddyotana*, an influential commentary on the [GUHYASAMĀJATANTRA](#). Scholars often refer to this author as Candrakīrti II or “the tantric Candrakīrti.”

[caṅkrama](#). (P. caṅkama; T. ’chag pa; C. jingxing; J. kyōgyō/kinhin; K. kyōnghaeng 經行). In Sanskrit, lit. “walking”; referring to both the physical act of walking itself and, by extension, composed, meditative walking, as well as the mendicant life of wandering as a vocation. Caṅkrama is the most active of the four postures ([IRYĀPATHA](#)), and is one of the specific objects of mindfulness of the body (see [SMRTYUPASTHĀNA](#)). Caṅkrama also refers to walking in a calm, collected manner, while maintaining one’s object of meditation. Finally, caṅkrama refers to the wandering, “homeless” life (see [PRAVRAJITA](#)) of the Indian recluse, which was the model for the Buddhist [SAMGHA](#). In East Asia, in addition to walking meditation per se, the term is also used to describe short periods of walking that break up extended periods of seated meditation ([ZUOCHAN](#)). In Korean meditation halls, for example, a three-hour block of meditation practice will be divided into three fifty-minute blocks of seated meditation, punctuated by ten-minutes of walking meditation. The Japanese [ZEN](#) tradition reads these Sinographs as kinhin.

[canon](#). A term used generically to designate Buddhist scriptural collections in a whole range of canonical Asian languages, including the Indic “three baskets” ([TRIPITAKA](#)), the East Asian “scriptures of the great repository” ([DAZANGJING](#)), and the Tibetan [BKA’ ’GYUR](#) and [BSTAN ’GYUR](#). Beyond these canons, Buddhists in these various traditions also typically used their own local collections of texts, collections that often were quite distinct from those of the officially sanctioned canons. See also [KORYŎ TAEJANGGYŎNG](#); [TAISHŌ SHINSHŪ DAIZŌKYŌ](#); [SŪTRA](#); [ŚĀSTRA](#); [BODHISATTVAPITAKA](#); [APOCRYPHA](#).

[Cantong qi](#). (J. Sandōkai; K. Ch’amdong kye 參同契). A famous verse attributed to the Chinese [CHAN](#) master [SHITOU XIQIAN](#). Along with the [BAOJING SANMEI](#), the *Cantong qi* is revered in the Chinese [CAODONG ZONG](#) and Japanese [SŌTŌSHŪ](#) traditions as the foundational scripture of the tradition. The *Cantong qi* is relatively short (forty-four five-character stanzas, for a total of 220 Sinographs), but Shitou’s verse is praised for its succinct and unequivocal expression of the

teaching of nonduality. The Sinograph “can” in the title means to “consider,” “compare,” or “differentiate”; it thus carries the connotation of “difference” and is said to refer to the myriad phenomena. The Sinograph “tong” means “sameness” and is said to refer to the oneness of all phenomena. The Sinograph “qi” means “tally” and is said to refer to the tallying of oneself and all phenomena. The title might be alluding to an earlier verse bearing the same title, which is attributed to the renowned Daoist master Wei Boyang. The *Cantong qi* also seems to be the root source from which were derived core concepts in the “five ranks” ([WUWEI](#)) doctrine, an emblematic teaching of the mature Caodong school.

Caodong zong. (J. Sōtōshū; K. Chodong chong 曹洞宗). One of the so-called “five houses and seven schools” ([WU JIA QI ZONG](#)) of the mature Chinese [CHAN](#) tradition. The school traces its own pedigree back to the sixth patriarch ([LIUZU](#)) [HUINENG](#) via a lineage that derives from [QINGYUAN XINGSI](#) and [SHITOU XIQIAN](#), but its history begins with the two Tang-dynasty Chan masters who lend their names to the school: [DONGSHAN LIANGJIE](#) and his disciple [CAOSHAN BENJI](#). The name of this tradition, Caodong, is derived from the first characters of the two patriarchs’ names, viz., Caoshan’s “Cao” and Dongshan’s “Dong.” (The disciple’s name is said to appear first in the school’s name purely for euphonic reasons.) One of the emblematic teachings of the Caodong tradition is that of the “five ranks” ([WUWEI](#)), taught by Dongshan and further developed by Caoshan, which was a form of dialectical analysis that sought to present the full panoply of [MAHĀYĀNA](#) Buddhist insights in a compressed rubric. During the Song dynasty, the Caodong school also came to be associated with the contemplative practice of “silent illumination” ([MOZHAO CHAN](#)), a form of meditation that built upon the normative East Asian notion of the inherency of buddhahood (see [TATHĀGATAGARBHA](#)) to suggest that, since enlightenment was the mind’s natural state, nothing needed to be done in order to attain enlightenment other than letting go of all striving for that state. Authentic Chan practice therefore entailed only maintaining this original purity of the mind by simply sitting silently in meditation. The practice of silent illumination is traditionally attributed to [HONGZHI ZHENGJUE](#) (see MOZHAO MING) and ZHENGXIE QINGLIAO, who helped revive the moribund Caodong lineage during the late eleventh and early twelfth centuries and turned it into one of the two major forces in mature Song-dynasty Chan. The silent-illumination technique that they championed was harshly criticized by teachers in the rival [LINJI ZONG](#), most notably Hongzhi’s

contemporary [DAHUI ZONGGAO](#). In Japan, the [ZEN](#) master [DŌGEN KIGEN](#) is credited with transmitting the Caodong lineage to the Japanese isles in the thirteenth century, where it is known as the [SŌTŌSHŪ](#) (the Japanese pronunciation of Caodong zong); it became one of the three major branches of the Japanese Zen school, along with [RINZAISHŪ](#) and [ŌBAKUSHŪ](#). In Korea, just one of the early Nine Mountains schools of [SŌN](#) (see [KUSAN SŌNMUN](#)), the Sumisan school, is presumed to trace back to a teacher, Yunju Daoying (d. 902), who was also a disciple of Dongshan Liangjie; the Caodong school had no impact in the subsequent development of Korean Sŏn, where Imje (C. Linji zong) lineages and practices dominated from the thirteenth century onwards.

[Caoqishan](#). (C) (曹溪山). See [CAOXISHAN](#).

[Caoshan Benji](#). (J. Sōzan Honjaku; K. Chosan Ponjŏk 曹山本寂) (840–901). Chinese [CHAN](#) master and reputed cofounder of the [CAODONG](#) line of Chan; also known as Danzhang. Caoshan was a native of Quanzhou in present-day Fujian province. After leaving home at age eighteen and fully ordaining at twenty-five, Caoshan visited the Chan master [DONGSHAN LIANGJIE](#) and became his disciple. Caoshan was later invited to Mt. Heyu in Fuzhou (present-day Jiangxi province), and there he established his unique style of Chan. He later renamed the mountain Mt. Cao (or Caoshan) after the sixth patriarch [HUINENG](#)'s own residence of [CAOXISHAN](#). Caoshan's line of Chan came to be known as Caodong, which is derived eponymously from the first Sinograph in both Caoshan and Dongshan's names. One of the most emblematic teachings of the Caodong tradition is that of the "five ranks" ([WUWEI](#)), taught by Dongshan and further developed by Caoshan, a form of dialectical analysis that [JUEFAN HUIHONG](#) (1071–1128) considered to be the origin of "lettered Chan" ([WENZI CHAN](#)). Caoshan was later given the posthumous title Great Master Yunzheng. Although Caoshan had many disciples, his own lineage did not survive into the Song dynasty and the Caodong line was carried on by the lineage of Yunju Daoying (d. 902), a fellow student of Dongshan.

[Caoxi baolin zhuan](#). (C) (曹溪寶林傳). See [BAOLIN ZHUAN](#).

[Caoxishan](#). [alt. Caoqishan] (J. Sōkeizan; K. Chogyesan 曹溪山). A sacred mountain in the south of China, located in Shaozhou, present-day Guangdong province, and closely associated with the [CHAN ZONG](#). According to legend, an Indian brāhmaṇa who arrived at the mountain in 502 was so moved by the taste

of its spring water that he suggested that a monastery be constructed there. The monastery was built and named Baolinsi, or Bejeweled Forest Monastery. The brāhmaṇa also predicted that a great teacher would one day preach the [DHARMA](#) at the monastery and awaken beings as numerous as the trees in the forest. This tale may be attributed to followers of the legendary sixth patriarch ([LIUZU](#)) of the Chan school, [HUINENG](#), who purportedly arrived at Baolinsi in 677. Upon his arrival, Huineng is also said to have established separate quarters for meditative practice within the monastery's compounds, which later came to be known as Huoguo Yuan or [NANHUASI](#). The mountain's name of Caoxi is sometimes also used as a toponym of Huineng, its most famous inhabitant. Caoxishan (in its Korean pronunciation of Chogyesan) is also an important Buddhist mountain in Korea and is the site of the famous practice monastery of [SONGGWANGSA](#). See also [CHOGYE CHONG](#).

[Caoyuan Daosheng](#). (J. Sōgen Dōshō; K. Chowŏn Tosaeng 曹源道生) (d. 1192). A Chinese [CHAN](#) master of the [LINJI ZONG](#). Caoyuan was a native of Nanjian in present-day Fujian province. He later became a student of the eminent Chan master MI'AN XIANJIE and made a name for himself at the monastery of Ruguosi in Jiangxi province. Caoyuan subsequently resided at such monasteries as Guifengsi and Qianfusi, also in Jiangxi province. Those in his lineage are sometimes specifically referred to as the Caoyuan branch of the Linji lineage. Caoyuan's teachings are found in his *Caoyuan heshang yulu* and *Caoyuan Sheng chanshi yuyao*.

[Cao Zhi](#). (曹植) (192–232). Reputed founder of the distinctive Chinese style of Buddhist chanting. See [FANBAI](#).

[Cāpālacaitya](#). (P. Cāpālacetiya; T. Tsa pa la mchod rten; C. Zhepoluo ta; J. Shabara no tō; K. Ch'abara t'ap 遮婆羅塔) In Sanskrit, "Cāpāla shrine"; the site near the city of [VAISĀLĪ](#) where the Buddha [GAUTAMA](#) announced his intention to die and enter [PARINIRVĀNA](#). According to the Pāli [MAHĀPARINIBBĀNASUTTANTA](#), on an excursion to the shrine with his attendant, [ĀNANDA](#), the Buddha mentioned that, because he had fully mastered the four bases of psychic power (P. iddhipāda, S. [RDDHIPĀDA](#)), he had the ability to extend his life "for an eon or until the end of the eon" (P. kappa; S. [KALPA](#)). (The Pāli commentaries take "eon" here to mean "his full allotted lifespan," not a cosmological period.) Although he raised this prospect a second and third time, Ānanda did not take the hint, and the Buddha finally "consciously and deliberately" renounced his remaining

lifespan and proclaimed he would pass away in three months' time. When the earth quaked at his decision, Ānanda finally realized what had happened and earnestly entreated the Buddha to extend his lifespan. However, the Buddha refused, enumerating the many occasions in the past when the Buddha had made the same statement and Ānanda had failed to make the request. Ānanda would later explain that he had been distracted by [MĀRA](#). For his error, Ānanda was publicly censured by his colleagues at the time of the first Buddhist council following the Buddha's death (see [COUNCIL, FIRST](#)). The Cāpāla shrine was probably some sort of pre-Buddhist tree shrine; it was almost certainly not a Buddhist reliquary or commemorative tumulus ([CAITYA](#)).

carita. (T. spyod pa; C. xing; J. gyō; K. haeng 行). In Sanskrit and Pāli, “conduct,” “behavior,” or “temperament”; an alternative form is Sanskrit caryā (P. cariyā). As “behavior,” carita is typically bifurcated into either good (sucarita) or bad (S. duścarita; P. ducarita) conduct. As “temperament,” carita is used to indicate six general character types, which are predominantly biased toward the negative temperaments of greedy ([RĀGA](#)), hateful (S. [DVESA](#); P. dosa), and deluded ([MOHA](#)), or the more positive temperaments of faithful (S. [ŚRADDHĀ](#); P. saddhā), intelligent ([BUDDHI](#)), and discursive (S. [VITARKA](#); P. vitakka), a taxonomy found in the [VISUDDHIMAGGA](#). The first three types of temperaments are negative and thus need to be corrected. (1) A greedy temperament is constantly searching out new sensory experiences and clings to things that are not beneficial. (2) A hateful temperament is disaffected, always finding imaginary faults in others; along with the intelligent temperament, he is less prone to clinging than the other character types. (3) A deluded temperament is agitated and restless, because he is unable to make up his mind about anything and follows along with others' decisions. The latter three types of temperaments are positive and thus need to be enhanced. (4) A faithful temperament is like a greedy type who instead cultivates wholesome actions and clings to what is beneficial. (5) An intelligent temperament is like a hateful type who performs salutary actions and points out real faults; along with the hateful temperament, he is less prone to clinging than the other character types. (6) A discursive temperament is characterized by a restlessness of mind that constantly flits from topic to topic and vacillates due to his constant conjecturing; if these discursive energies can be harnessed, however, that knowledge may lead to wisdom. The *Visuddhimagga* also provides detailed guidelines for determining a person's temperament by observing their posture, their preferences in food, and the sort of

mental concomitants with which they are typically associated. This knowledge of temperaments is important as a tool of practice ([BHĀVANĀ](#)), because in the *Visuddhimagga*'s account of visualization (P. [KASINA](#)) exercises, the practitioner is taught to use an appropriate kasiṇa device or meditation topic (P. [KAMMATTHĀNA](#)) either to mitigate the influence of the negative temperaments or enhance the influence of the positive ones. Thus, a practitioner with a greedy temperament is advised to emphasize the cemetery contemplations on foulness (S. [ĀSUBHABHĀVANĀ](#); P. asubhabhāvanā) and mindfulness of the body (S. [KĀYĀNUPAŚYANĀ](#); P. kāyānupassanā; see also [SMRTYUPASTHĀNA](#)); the hateful temperament, the four divine abidings ([BRAHMAVIHĀRA](#)) and the four color kasiṇas (of blue, yellow, red, white); the deluded temperament, mindfulness of breathing (S. [ĀNĀPĀNASMRTI](#); P. ānāpānasati); the discursive temperament, also mindfulness of breathing; the faithful temperament, the first six recollections (S. [ANUSMRTI](#); P. anussati), viz., of the Buddha, the [DHARMA](#), the [SAMGHA](#), morality, generosity, and the divinities; and the intelligent temperament, the recollections of death and peace, the analysis of the four elements, and the loathsomeness of food. Suitable to all six temperaments are the other six kasiṇas (viz., of earth, water, fire, air, light, and empty space) and the immaterial absorptions (S. [ĀRŪPYĀVACARADHYĀNA](#); P. arūpāvacarajhāna). ¶ In the [MAHĀYĀNA](#), caryā, carita, and related terms (e.g., Sanskrit compounds such as duścara) refer specifically to the difficult course of action that a [BODHISATTVA](#) pursues in order to reach the goal of enlightenment. These actions include the unending search or pilgrimage for a teacher, the sacrifices required to meet with an authentic teacher who can teach Mahāyāna doctrines (see [SADĀPRARUDITA](#), [SUDHANA](#)), and the difficult practices of charity, such as giving away all possessions, including family members and even one's body (see [DEHADĀNA](#); [SHESHEN](#)). The [JĀTAKAMĀLĀ](#) of Śura, the [BODHICARYĀVATĀRA](#) of ŚĀNTIDEVA, and to a certain extent the [BUDDHACARITA](#) of [AŚVAGHOŚA](#) set forth a model of the authentic bodhisattva's behavior for aspirants to emulate. In Buddhist [TANTRA](#), caryā refers to a code of ritual purity, and to an esoteric practice called "yoga with signs" ([SANIMITTAYOGA](#)) followed by [CARYĀTANTRA](#) practitioners.

[Cariyāpitaka](#). In Pāli, "The Basket of Conduct"; fifteenth book of the [KHUDDAKANIKĀYA](#) of the Pāli [SUTTAPITAKA](#). According to traditional accounts, the text was preached by Gotama (S. [GAUTAMA](#)) Buddha immediately after the [BUDDHAVAMSA](#) at the request of Sāriputta (S. [ŚĀRIPUTRA](#)). Centuries later, the missionary [MAHINDA](#) is said to have converted thousands of Sri Lankans to

Buddhism when he recited it in [ANURĀDHAPURA](#). Divided into three chapters (vagga), the book contains thirty-five stories in verse of previous lives of the Buddha. These stories recount and extol the ten perfections (P. pāramī, S. [PĀRAMITĀ](#)) that Gotama developed while striving for enlightenment through many lives as a bodhisatta (S. [BODHISATTVA](#)). The stories in this collection are called cariyā (“conduct,” or “act”), whence the name of the text, and in content they parallel corresponding prose narratives found in the [JĀTAKA](#). The Pāli tradition recognizes ten perfections as requisite for attaining buddhahood: generosity ([DĀNA](#)), morality (sīla, S. [ŚĪLA](#)), renunciation (nekkhamma, S. [NAISKRAMYA](#)), wisdom (paññā, S. [PRAJÑĀ](#)), energy (viriya, S. [VĪRYA](#)), patience (khanti, S. [KSĀNTI](#)), truthfulness (sacca, S. [SATYA](#)), resolution (adhiṭṭhāna, S. [ADHISTHĀNA](#)), loving-kindness (mettā, S. [MAITRĪ](#)) and equanimity (upekkhā, S. [UPEKSĀ](#)). Of these ten, only seven are enumerated in this text. The first vagga is comprised of ten stories concerning the perfection of generosity. The second vagga has ten stories concerning morality. The third vagga contains fifteen stories, five of which are devoted to renunciation, six to truthfulness, two to loving-kindness, and one each to the perfections of resolution and equanimity. A commentary to the text, attributed to [DHARMAPĀLA](#), is included in the [PARAMATTHADĪPANĪ](#).

Carus, Paul. (1852–1919). An early supporter of Buddhism in America and the proponent of the “religion of science”: a faith that claimed to be purified of all superstition and irrationality and that, in harmony with science, would bring about solutions to the world’s problems. Carus was born in Ilsenberg in Harz, Germany. He immigrated to America in 1884, settling in LaSalle, Illinois, where he assumed the editorship of the Open Court Publishing Company. He attended the World Parliament of Religions in Chicago in 1893 and became friends with several of the Buddhist delegates, including [DHARMAPĀLA](#) and [SHAKU SŌEN](#), who were among the first to promote his writing. Later, Shaku Sōen’s student, [DAISETZ TEITARO SUZUKI](#), would spend eleven years working with and for Carus in LaSalle. In 1894, Carus published *The Gospel of Buddha according to Old Records*, an anthology of passages from Buddhist texts drawn from contemporary translations in English, French, and German, making particular use of translations from the Pāli by [THOMAS W. RHYS DAVIDS](#), as well as translations of the life of the Buddha from Chinese and Tibetan sources. Second only to Edwin Arnold’s *Light of Asia* in intellectual influence at the time, *The Gospel* was arranged like the Bible, with numbered chapters and verses and a

table at the end that listed parallel passages from the New Testament. *The Gospel* was intended to highlight the many agreements between Buddhism and Christianity, thereby bringing out “that nobler Christianity which aspires to the cosmic religion of universal truth.” Carus was free in his manipulation of his sources, writing in the preface that he had rearranged, retranslated, and added emendations and elaborations in order to make them more accessible to a Western audience; for this reason, the translated sources are not always easy to trace back to the original literature. He also makes it clear in the preface that his ultimate goal is to lead his readers to the Religion of Science. He believed that both Buddhism and Christianity, when understood correctly, would point the way to the Religion of Science. Although remembered today for his *Gospel*, Carus wrote some seventy books and more than a thousand articles. His books include studies of Goethe, Schiller, Kant, and Chinese thought.

[caryā](#). (S). See [CARITA](#).

[Caryāgītikosa](#). (T. Spyod pa'i glu'i mdzod). In Sanskrit, “Anthology of Songs on Practice”; a collection of fifty songs, dating from the eighth through the twelfth centuries, that represent some of the oldest examples of specifically tantric literature written in an Indian vernacular language (see [APABHRAṢĀ](#)). The manuscript was discovered in Nepal in 1907 and published in 1916, and contained four sections. The first section in the collection, *Caryācaryābhiniścaya*, was written in the Bengali vernacular, while the three other sections were written in Eastern Apabhraṣā, a late Middle Indic dialect from the Bengal region. The original manuscript of the *Caryāgītikosa* contained sixty-nine folios, which included the fifty songs, with exegeses in Sanskrit. By the time of the text’s rediscovery, however, five folios were lost, leaving sixty-four folios containing the text of forty-six full songs and the first six lines of another ten-lined song. The names of twenty-three different authors are ascribed to the songs themselves; the authorship of the Sanskrit commentary to the Bengali songs is attributed to Munidatta. The songs were handed down orally before they were committed to writing, and even today they are sung in the Buddhist communities of Nepal, Tibet, and other neighboring areas of the Himālayas. Most of the songs deal with gaining release from the bondage of the illusory world and enjoying the great bliss of enlightenment, by employing worldly similes drawn from marriage and such daily activities as fermenting wine and rowing a boat.

caryātantra. (T. spyod rgyud). In Sanskrit, “performance tantra”; in a traditional fourfold division of tantric practices and texts, it is the second of the four, ranked above [KRIYĀTANTRA](#) and below [YOGATANTRA](#) and [ANUTTARAYOGATANTRA](#). According to the Indian commentator [BUDDHAGUHYA](#), this class of tantras derives its name from the fact that it set forth an equal “performance” of both external rituals and internal yoga. This also explains the placement of this class of tantras between *kṛīya* and yoga. The most important tantra in the performance class is the [MAHĀVAIROCANĀBHISAMBODHI](#). There are three buddha families ([BUDDHAKULĀ](#)) in caryātantra: [TATHĀGATAKULĀ](#), [PADMAKULĀ](#), and [VAJRAKULĀ](#). According to Tibetan exegetes, caryātantra for the most part does not set forth practices for meditating upon oneself as a buddha but rather prescribes methods for gaining feats ([SIDDHI](#)).

catuḥpratisarana. See [PRATISARANA](#).

catuḥsamgrahavastu. See [SAMGRAHAVASTU](#).

catuḥsamudācāra. See [CATURKARMA](#).

Catuḥśataka. (T. Bzhi brgya pa; C. Guang Bai lun ben; J. Kōhyakuronpon; K. Kwang Paengnon pon 廣百論本). In Sanskrit, “Four Hundred [Stanzas]”; the magnum opus of [ĀRYADEVA](#), a third century CE Indian monk of the [MADHYAMAKA](#) school of [MAHĀYĀNA](#) philosophy and the chief disciple of [NĀGĀRJUNA](#), the founder of that tradition. The four-hundred verses are divided into sixteen chapters of twenty-five stanzas each, which cover many of the seminal teachings of Madhyamaka philosophy. The first four of the sixteen chapters are dedicated to arguments against erroneous conceptions of permanence, satisfaction, purity, and a substantial self. In chapter 5, Āryadeva discusses the career of a [BODHISATTVA](#), emphasizing the necessity for compassion ([KARUNĀ](#)) in all of the bodhisattva’s actions. Chapter 6 is a treatment of the three afflictions ([KLEŚĀ](#)) of greed or sensuality ([LOBHA](#) or [RĀGA](#)), hatred or aversion ([DVESA](#)), and delusion ([MOHA](#)). Chapter 7 explains the need to reject sensual pleasures. In chapter 8, Āryadeva discusses the proper conduct and attitude of a student of the [TATHĀGATA](#)’s teaching. Chapters 9 through 15 contain a series of arguments refuting the erroneous views of other Buddhist and non-Buddhist schools. These refutations center on Āryadeva’s understanding of emptiness ([ŚŪNYATĀ](#)) as the fundamental characteristic of reality. For example, in chapter 9, Āryadeva argues against the conception that anything, including

liberation, is permanent and independent of causes. In chapter 11, Āryadeva argues against the [SARVĀSTIVĀDA](#) claim that dharmas exist in reality in the past, present, and future. Chapter 16, the final chapter, is a discussion of emptiness and its centrality to the Madhyamaka school and its doctrine. There is a lengthy and influential commentary on the text by [CANDRAKĪRTI](#), entitled *Catuḥśatakaṭīkā*; its full title is *Bodhisattvayogacaryācatuḥśatakaṭīkā*. The *Catuḥśataka* was translated into Chinese by [XUANZANG](#) and his translation team at [DACIENSI](#), in either 647 or 650–651 CE. The work is counted as one of the “three treatises” of the Chinese [SAN LUN ZONG](#), where it is treated as Āryadeva’s own expansion of his *[ŚATAŚĀSTRA](#) (C. [BAI LUN](#): “One Hundred Treatise”); hence, the Chinese instead translates the title as “Expanded Text on the One Hundred [Verse] Treatise.” Some have speculated, to the contrary, that the *Śataśāstra* is an abbreviated version of the *Catuḥśataka*. The two works consider many of the same topics, including the nature of [NIRVĀNA](#) and the meaning of emptiness in a similar fashion and both refute Sāṃkhya and Vaiśeṣika positions, but the order of their treatment of these topics and their specific contents differ; the *Śataśāstra* also contains material not found in the *Catuḥśataka*. It is, therefore, safer to presume that these are two independent texts, not that one is a summary or expansion of the other. It is possible that the *Śataśāstra* represents Kumārajīva’s interpretation of the *Catuḥśataka*, but this is difficult to determine without further clarity on the Indian text that Kumārajīva translated.

[catuḥsatyadharmacakra](#). (T. bden bzhi’i chos ’khor; C. sidi falun; J. shitai hōrin; K. saje pōmnyun 四諦法輪). In Sanskrit, lit. “the dharma wheel of the four truths”; the wheel of the dharma ([DHARMAKAKRA](#)) delivered in [RSIPATANA](#). In this first turning of the wheel of dharma, the Buddha set in motion a wheel with twelve aspects, by setting forth the four noble truths three separate times. He addressed the original group of five disciples ([PAÑCAVARGIKA](#)), telling them that they should not fall into extremes of asceticism or indulgence, and laid out for them the eightfold noble path ([ASTĀNGIKAMĀRGA](#)). He set forth the four truths the first time by saying that the five aggregates ([SKANDHA](#)) qualified by birth, aging, sickness, and death are the noble truth of suffering, craving is the noble truth of their origination, the elimination of that craving is the noble truth of their cessation, and that the eightfold noble path is the noble truth of the path leading to their cessation. He set forth the four truths a second time when, in the same extended discourse, he said, “I knew well that the truth of suffering was what I had to comprehend; I knew well that the truth of the origin was what I had to

eliminate; I knew well that the truth of cessation was what I had to realize; and I knew well that the truth of the path was what I had to cultivate.” He then set forth the four truths a third and final time when he said, “I comprehended the truth of suffering, I eliminated the true origin of suffering, I realized the true cessation of suffering, and I cultivated the true path.” There are twelve aspects to this triple wheel because for each of the three stages there is (1) a vision that sees reality directly with the wisdom eye that is free from contaminants, (2) a knowledge that is free from doubt, (3) an understanding of the way things are, and (4) an intellectual comprehension of an idea never heard of before. ¶ The [SAMDHINIRMOCANASŪTRA](#) calls the triple turning of the catuḥsatyadharmacakra with its twelve aspects the “first turning of the wheel.” According to its commentaries, it is a demonstration that all dharmas, the skandhas, sense-fields ([ĀYATANA](#)), elements ([DHĀTU](#)), and so forth, exist. This teaching is provisional ([NEYĀRTHA](#)) because it must be interpreted in order to understand what the Buddha really means. A second “middle” dispensation, called “the dharma wheel of signlessness” ([ALAKSANADHARMACAKRA](#)), is the teaching of the Mahāyāna doctrine, as set forth in the [PRAJÑĀPĀRAMITĀ SŪTRAS](#), that all dharmas, even buddhahood and [NIRVĀNA](#), are without any intrinsic nature ([NIHŠVABHĀVA](#)). The first turning of the wheel is directed toward the [ŚRĀVAKAS](#) and [PRATYEKABUDDHAS](#), who tremble at this doctrine of emptiness ([ŚŪNYATĀ](#)). The second turning is also not a final, definitive ([NĪTĀRTHA](#)) teaching. The ultimate teaching is the final turning of the wheel of dharma, called “the dharma wheel that makes a fine delineation” (*[SUVIBHAKTADHARMACAKRA](#)), i.e., the *Samdhinirmocanasūtra* itself. Here the Buddha, through his amanuensis Paramārthasamudgata, sets forth in clear and plain language what he means: that dharmas are endowed with three natures ([TRISVABHĀVA](#)) and each of those is, in a distinctive way, free from intrinsic nature (niḥsvabhāva). The doctrine of the first, middle, and final wheels of dharma is not intended to be a historical presentation of the development of Buddhist doctrine, but the first turning does loosely equate to the early teachings of the Buddha, the second to early Mahāyāna, and the third to the emergence of the later [YOGĀCĀRA](#) school of Mahāyāna philosophy. In Tibet, there is no argument over this first turning of the wheel of dharma: it is always understood to refer to the basic teachings of the Buddha for those of a [HĪNAYĀNA](#) persuasion. There is, however, substantial argument over the status of the second and third turnings of the wheel.

*[catuḥśrāvakanikāya](#). (T. nyan thos rtsa ba’i sde pa bzhi). In Sanskrit, “four

main [ŚRĀVAKA](#) schools”; according to [BHĀVAVIVEKA](#)’s [PRAJÑĀPRADĪPA](#), the [SARVĀSTIVĀDA](#), [STHAVIRANIKĀYA](#), [MAHĀSĀMGHIKA](#), and [SAMMITĪYA](#) schools. The *Prajñāpradīpa* identifies a total of eighteen śrāvaka schools by again dividing these main schools into seven, five, three, and three, respectively. See also [MAINSTREAM BUDDHIST SCHOOLS: SAMAYABHEDOPARACANACAKRA](#).

[Catuhstava](#). (T. Bstod pa bzhi). In Sanskrit, “Four Songs of Praise”; a set of four devotional hymns attributed to the Indian monk [NĀGĀRJUNA](#), the founder of the [MADHYAMAKA](#) school of [MAHĀYĀNA](#) philosophy. More than four such hymns have survived, so it is uncertain which were the original four. The four hymns now included in this set are entitled [LOKĀTĪTASTAVA](#) (“Hymn to He Who Transcends the World”), [NIRAUPAMYASTAVA](#) (“Hymn to He Who Is Unequaled”), [ACINTYASTAVA](#) (“Hymn to the Inconceivable”), and [PARAMĀRTHASTAVA](#) (“Hymn to the Ultimate”). These verses are addressed to the Buddha himself, in honor of his virtues and various aspects of his enlightenment. The author praises the Buddha for his supreme insight, his compassion, and his efforts to awaken all beings. The hymns also contain many important aspects of the philosophy of the Madhyamaka school. For example, verses five through ten of the *Lokātītastava* are used to explain the interdependence, and therefore inessential nature, of each of the five aggregates ([SKANDHA](#)).

***[caturāpattidvāra](#)**. (T. ltung ba’i sgo bzhi / sdom pa nyams pa’i rgyu bzhi; C. si fanzui men; J. shibonzaimon; K. sa pŏmjoe mun 四犯罪門). In Sanskrit, “the four doors through which transgression comes.” According to the [BODHISATTVABHŪMI](#), the best way to guard against transgression (āpatti) is to block these four doors. The first door is not knowing boundaries relative to which transgression does, or does not, occur; to counteract it, one should know the moral code (S. [PRĀTIMOKSA](#)) well. The second is knowing the code, but not respecting virtuous persons; to counteract it, one should conquer pride and have respect. The third is having respect but being heedless ([PRAMĀDA](#)); to counteract it, one must be guided by one’s conscience ([APRAMĀDA](#)). The fourth door is when one has knowledge, respect, and a conscience but where [KLEŚA](#) (affliction) predominates; to counteract it, one must apply an antidote (S. [PRATIPAKSA](#)) and focus on reducing the powers of the kleśas.

[caturapramāna](#). In Sanskrit, “four boundless states.” See [APRAMĀNA](#); [BRAHMAVIHĀRA](#).

***Caturaśītisiddhapravṛtti.** (T. Grub thob brgyad bcu rtsa bzhi'i lo rgyus). In Sanskrit, “The Lives of the Eighty-four Siddhas”; a tantric doxography ascribed to the early twelfth-century Indian author [ABHAYADATTAŚRĪ](#). The original Sanskrit version has been lost, but the text is preserved in Tibetan translation. The work records brief vitae for the great [SIDDHAS](#) (or mahāsiddhas) of Indian tantric Buddhism, who are commonly enumerated in a list of eighty-four. While the list varies, according to Abhayadattaśrī’s work, the eighty-four siddhas include Lūyipa, Līlapa, [VIRŪPA](#), Ḍombipa, Śavaripa, [SARAHA](#), Kankaripa, Mīnapa, Goraksa, Caurāṅgi, Vīnapa, Śāntipa, Tantipa, Camaripa, Khaḍgapa, [NĀGĀRJUNA](#), Kāṅḥapa, Kaṅaripa, Thaganapa, [NĀROPA](#), Śalipa, [TILOPA](#), Catrapa, Bhadrapa, Dhukhandi, Ajokipa, Kalapa, Dhombipa, Kaṅkana, Kambala, Ṭeṅgipa, Bhandhepa, Tandhepa, Kukkuripa, Kucipa, Dharmapa, Mahipa, Acinta, Babhahi, Nalina, Bhusuku, [INDRABHŪTI](#), Mekopa, Koṭali, Kaṃparipa, Jālandhari, [RĀHULA](#), Dharmapa, Dhokaripa, Medhina, Paṅkaja, Ghaṅḍhapa, Yogipa, Caluki, Gorura, Lucika, Nigūṇa, Jayānanda, Pacari, Campaka, Bhikṣana, Telopa, Kumaripa, Caparipa, Maṅibhadrā, Mekhalā, Kanakhalā, Kalakala, Kantali, Dhahuli, Udheli, Kapalapa, Kirava, Sakara, Sarvabhakṣa, Nāgabodhi, Dārika, Putali, Panaha, Kokali, Anaṅga, Lakṣmīnkarā, Samudra, and Vyali. See [MAHĀSIDDHA](#).

caturkarman. (T. las bzhi). In Sanskrit, “four activities”; the four types of activities set forth in the Buddhist tantras. It is a general rubric for the classification of rituals, based on the means or the goal of the ritual. The four types are activities of pacification ([ŚĀNTICĀRA](#)), activities of increase ([PAUSTIKA](#)), activities of control ([VAŚĪKARANA](#)), and wrathful activities ([ABHICĀRA](#)).

caturlakṣana. (T. mtshan nyid bzhi; C. sixiang; J. shisō; K. sasang 四相). In Sanskrit, “four marks of existence”; also known as the four “conditioned marks” ([SAMSKRTALAKSANA](#)). These four characteristics governing all conditioned objects are “origination” or birth ([JĀTI](#)), “maturation” or continuance ([STHITI](#)), “senescence” or decay ([JARĀ](#)), and “desinence” or extinction, viz., death ([ANITYA](#)). In the [SARVĀSTIVĀDA](#) school, these four were treated as “forces dissociated from thought” ([CITTAVIPRAYUKTASAMSKĀRA](#)), which exerted real power over compounded objects, escorting an object along from one force to another, until the force “desinence” extinguishes it; this explanation was necessary in order to explain how factors that the school presumed continued to exist in all three time periods of past, present, and future nevertheless still

appeared to undergo change. Some Sarvāstivāda [ABHIDHARMA](#) texts, however, accept only three characteristics, omitting continuance. See also [DHARMAMUDRĀ](#); [LAKSANA](#).

[caturmahāpadeśa](#). In Sanskrit, “four resorts to authority.” See [MAHĀPADEŚA](#).

[caturmahārāja](#). (S). See [LOKAPĀLA](#).

[cāturmahārājakāyika](#). (P. cātummahārājikā; T. rgyal chen rigs bzhi; C. sitianwang tian; J. shitennōten; K. sach’ōn wang ch’ōn 四天王天). In Sanskrit, “heaven of the assemblage of the four great kings”; the lowest of all the heavens in Buddhist cosmology and the lowest of the six heavens located in the sensuous realm ([KĀMADHĀTU](#)). The heaven is located on the upper slopes of [MOUNT SUMERU](#) and is presided over by four kings, one in each of the cardinal directions. The four kings are [DHRTARĀSTRA](#) in the east; [VIRŪDHAKA](#) in the south; [VIRŪPĀKSA](#) in the west; and [VAISRAVANA](#) in the north. These four are known collectively as the [LOKAPĀLAS](#), or protectors of the world. There are many divinities ([DEVA](#)) inhabiting this heaven: [GANDHARVAS](#) in the east, [KUMBHĀNDAS](#) in the south, [NĀGAS](#) in the west, and [YAKSAs](#) in the north. As vassals of [ŚAKRO DEVĀNĀM INDRAH](#) (lit. “Śakra, the lord of the gods”; see [INDRA](#); [ŚAKRA](#)), the four heavenly kings serve as protectors of the dharma ([DHARMAPĀLA](#)) and of sentient beings who are devoted to the dharma. They are said to have protected the Buddha from the time that he entered his mother’s womb and also to have presented him with his alms bowl after his enlightenment. They survey their respective quadrants of the world and report on the deeds of humans to the divinities of the [TRĀYASTRIMŚA](#) heaven.

[caturmudrā](#). (T. phyag rgya bzhi; C. siyin; J. shiin; K. sain 四印). In Sanskrit, lit. “four seals” or “four assertions”; the Tibetan translation *lta ba bkar btags kyi phyag rgya bzhi* literally means “the four seals that mark a view as the word [of the Buddha],” i.e., that mark a philosophical system or certify a doctrine as being Buddhist. The four seals are: all compounded factors ([SAMSKRTADHARMA](#)) are impermanent ([ANITYATĀ](#)), all contaminated things are suffering ([DUHKHA](#)), all things are devoid of any perduring self ([ANĀTMAN](#)), and [NIRVĀNA](#) is peace (*śānta*). In the [MAHĀYĀNASŪTRĀLAMKĀRA](#), the four seals are connected with the three “gates to deliverance” ([VIMOKSAMUKHA](#)), which mark the transition from the compounded ([SAMSKRTA](#)) realm of [SAMSĀRA](#) to the un compounded ([ASAMSKRTA](#)) realm of [NIRVĀNA](#). “All compounded factors are impermanent” and

“all contaminated things are suffering” are the cause of the [SAMĀDHI](#) of wishlessness ([APRANIHITA](#)). “All phenomena are selfless” is the cause of the samādhi of emptiness ([ŚŪNYATĀ](#)). “Nirvāṇa is peace” is the cause of the samādhi of signlessness ([ĀNIMITTA](#)).

[caturnimitta](#). (P. catunimitta; T. mtshan ma bzhi; C. sixiang; J. shisō; K. sasang 四相). In Sanskrit, the “four signs,” “sights,” or “portents,” which were the catalysts that led the future buddha [SIDDHĀRTHA GAUTAMA](#) to renounce the world (see [PRAVRAJITA](#)) and pursue liberation from the cycle of birth and death ([SAMSĀRA](#)): specifically, an old man, a diseased man, a dead man, and a religious mendicant ([ŚRAMANA](#)). According to the many traditional biographies of the Buddha, eight brāhmaṇa seers predicted at the time of his birth that, were Gautama to see all four of these portents, he would be led inexorably toward renunciation of his royal heritage. His father, [ŚUDDHODANA](#), who wanted Siddhārtha to succeed him, sought to shield the prince from these sights. While distracting his son with all the sensual pleasures available in his palaces, the prince, at the age of twenty-nine, eventually became curious about the world beyond the palace and convinced his father to allow him to go out in his chariot, accompanied by the charioteer [CHANDAKA](#). On four successive chariot rides, the prince saw an old man, a sick man, a corpse being taken to the charnel ground, and a mendicant. Gautama eventually determined to go forth (pravrajita) into homelessness after witnessing the four portents. The first three sights demonstrated to Gautama the vanity of life and the reality of suffering ([DUHKHA](#)), and the sight of a religious mendicant provided him with the prospect of freedom of mind and a model to follow in finding a way leading to liberation. Some versions of the Buddha’s biography refer only to the first three of these signs. In some versions, it is said that the four sights were not actually an old man, sick man, corpse, and mendicant, but apparitions of these created by the gods in order to spur the bodhisattva to renounce the world. In the [LALITAVISTARA](#), it is the prince himself who creates the old man, the sick man, the corpse, and the mendicant, and then asks his charioteer who they are, pretending not to know the answer. Biographies of previous buddhas, such as [VIPĀŚYIN](#), typically mention the role similar encounters played in their own renunciations.

[caturthābhiṣeka](#). (T. dbang bzhi pa; C. disi guanding; J. daishi kanjō; K. chesa kwanjōng 第四灌頂). In Sanskrit, “fourth empowerment”; the fourth of the four empowerments or initiations employed in [ANUTTARAYOGATANTRA](#), the other

three being the vase empowerment ([KALĀŚĀBHĪSEKA](#)), the secret empowerment ([GUHYĀBHĪSEKA](#)), and the knowledge of the consort empowerment ([PRAJÑĀJÑĀNĀBHĪSEKA](#)). After having engaged in sexual union with a consort in the third empowerment, in this fourth and final empowerment, the practitioner seeks to attain the state of innate bliss (sahajānanda) with the mind of clear light ([PRABHĀSVARACITTA](#)), in a vision like the natural color of the autumn sky at dawn, free from moonlight, sunlight, and darkness. The initiation is also called the “word empowerment” (Śabdābhīṣeka) because the teacher will identify this state for the disciple.

[caturyonī](#). (S). See [YONĪ](#).

[caturyuga](#). In Sanskrit, “four eons.” See [YUGA](#).

[catuṣkoṭi](#). (T. mu bzhi; C. siju fenbie; J. shiku funbetsu; K. sagu punbyōl 四句分別). In Sanskrit, “four antinomies” or “four alternatives”; a dialectical form of argumentation used in Buddhist philosophy to categorize sets of specific propositions, i.e., (1) A, (2) B, (3) both A and B, (4) neither A nor B; or (1) A, (2) not A, (3) both A and not A, 4) neither A nor not A. For instance, something may be said to (1) exist, (2) not exist, (3) both exist and not exist, and (4) neither exist nor not exist. Or, 1) everything is one, (2) everything is many, (3) everything is both one and many, 4) everything is neither one nor many. In the sūtra literature, the catuṣkoṭi is employed to categorize the speculative philosophical propositions of non-Buddhists ([TĪRTHIKA](#)) in a list of fourteen “indeterminate” or “unanswered” ([AVYĀKRTA](#)) questions to which the Buddha refused to respond. These questions involve various metaphysical assertions that were used in traditional India to evaluate a thinker’s philosophical pedigree. In the case of ontology, for example: (1) Is the world eternal? (2) Is the world not eternal? (3) Is the world both eternal and not eternal? (4) Is the world neither eternal nor not eternal? Or, in the case of soteriology, for a [TATHĀGATA](#), or an enlightened person: (1) Does the tathāgata exist after death? (2) Does the tathāgata not exist after death? (3) Does the tathāgata both exist and not exist after death? (4) Does the tathāgata neither exist nor not exist after death? Because of the conceptual flaws inherent in any prospective answer to these sets of questions, the Buddha refused to answer them and his silence is sometimes interpreted to mean that his teachings transcend conceptual thought ([PRAPAÑCA](#)). This transcendent quality of Buddhist philosophy is displayed in the [MADHYAMAKA](#) school, which seeks to ascertain the conceptual flaws inherent in

any definitive philosophical proposition and show instead that all propositions—even those made by Buddhists—are “empty” (sūnya). [NĀGĀRJUNA](#), the founder of the Madhyamaka school, analyzes many philosophical positions in terms of a catuṣkoṭi to demonstrate their emptiness. In analyzing causality, for example, Nāgārjuna in the opening lines of his [MŪLAMADHYAMAKAKĀRIKĀ](#) analyzes the possible philosophical positions on the connection between cause ([HETU](#)) and effect ([PHALA](#)) as a catuṣkoṭi: (1) cause and effect are identical, as the Sāṃkhya school claims; (2) cause and effect are different, as the Buddhists propose; (3) cause and effect are both identical and different, and thus the effect is both continuous with as well as emergent from the cause, as the [JAINA](#) school claims; (4) cause and effect are neither identical nor different, and thus things occur by chance, as the materialists and skeptics advocate. Nāgārjuna instead reveals the absurd consequences inherent in all of these positions to show that the only defensible position is that cause and effect are “empty”; thus, all compounded things are ultimately unproduced ([ANUTPĀDA](#)) and empty of intrinsic existence ([NIHṢVABHĀVA](#)). Classifications of teachings using the catuṣkoṭi are widely found in Buddhist literature of all traditions.

[catuṣkuśalamūla](#). (T. dge rtsa bzhi; C. si shangen; J. shizenkon; K. sa sŏn'gŭn 四善根). In Sanskrit, “four spiritual faculties”; an alternate name for the four “aids to penetrations” ([NIRVEDHABHĀGĪYA](#)), the full name of which is the nirvedhabhāgīya-kuśalamūla.

[catvāro yonayah](#). See [YONI](#).

[catvāry āryasatyāni](#). (P. cattāri ariyasaccāni; T. 'phags pa'i bden pa bzhi; C. si shengdi; J. shishōdai; K. sa sŏngje 四聖諦). In Sanskrit, “four noble truths.” See [FOUR NOBLE TRUTHS](#).

[causality](#). See [PRATĪTYASAMUTPĀDA](#); [HETUPRATYAYA](#).

[cause](#). See [HETU](#).

[causes and conditions](#). See [HETUPRATYAYA](#).

[celestial bodhisattva](#). An English term coined to describe [BODHISATTVAS](#) appearing in the [MAHĀYĀNA](#) pantheons, who are objects of specific types of devotions or cultic practices. These include [AVALOKITEŚVARA](#), [MAÑJUŚRĪ](#),

[VAJRAPĀNI](#), [KSITIGARBHA](#), and [SAMANTABHADRA](#), among many others. See also [ASTAMAHOPIPUTRA](#).

celibacy. See [BRAHMACARYA](#); [PĀRAJIKĀ](#).

central channel. See [AVADHŪTĪ](#).

cessation. See [NIRODHA](#).

cetanā. (T. sems pa; C. si; J. shi; K. sa 思). In Sanskrit and Pāli, “intention,” “volition,” or “stimulus”; one of the omnipresent mental factors ([MAHĀBHŪMIKĀ](#); [SARVATRAGA](#)) that accompanies each moment of consciousness; intention directs the mind toward either salutary ([KUŚĀLA](#)), unsalutary ([AKUŚĀLA](#)), or neutral ([AVYĀKRTA](#)) objects. Intention is of crucial importance in the theory of action ([KARMAṆ](#)), where the intent defines the eventual quality of the action: “Action is volition, for after having intended something, one accomplishes action through body, speech, and mind.” Hence, cetanā functions as both the stimulus and driving force behind all action, framing the ways in which beings choose to interact with the world at large and coordinating the functioning of the various mental concomitants ([CAITTA](#)) that are necessary in order to respond accordingly. In this sense, in a simile drawn from the [ATTHASĀLINĪ](#), cetanā functions like a general, who commands and coordinates the activities of all the soldiers on the battlefield. The emphasis on cetanā in the larger sense of intention is sometimes identified as a Buddhist innovation in [KARMAṆ](#) theory, where the intention motivating a deed plays a significant role in the positive or negative karmic weight of the deed itself.

cetasika. In Pāli, “mental concomitant” or “mental factor”; the Pāli equivalent of the Sanskrit term caitasika (see [CAITTA](#)). Mental concomitants are factors associated with the arising of consciousness ([CITTA](#) or viññāṇa; S. [VIJÑĀNA](#)). According to the Pāli [ABHIDHAMMA](#), there are fifty-two mental concomitants, of which twenty-five are either karmically salutary or neutral, fourteen are karmically unsalutary, and thirteen are simply neutral. Out of the fifty-two types of cetasikas, seven are invariably associated with all moments of consciousness—viz., consciousness cannot arise without these seven all being present: (1) sensory contact or sense impression (phassa; S. [SPARŚA](#)), (2) sensation or feeling ([VEDANĀ](#)), (3) perception or conception (saññā; S. [SAMJÑĀ](#)), (4) volition ([CETANĀ](#)), (5) concentration ([SAMĀDHI](#)), (6) vitality ([JĪVITA](#)), and (7) attention,

viz., the advertence of the mind toward an object (manasikāra; S. [MANASKĀRA](#)). See also [CAITTA](#); List of Lists.

Cetiyaḡiri. In Pāli, “Shrine Mountain”; name given to the mountain of [MISSAKAPABBATA](#) (see [MIHINTALE](#)) in Sri Lanka, because of the many shrines and reliquaries (P. cetiya; S. [CAITYA](#)) located there; also called Cetiyaḡabbata. The Sinhalese king [DEVĀNAMPIYATIṢṢA](#) built a monastery for the elder [MAHINDA](#) atop the mountain. Relics acquired from [AŚOKA](#) and from Sakka (S. [ŚAKRA](#)), king of the gods, were temporarily kept at that site; a sapling from the southern branch of the [BODHI TREE](#) brought to Sri Lanka from India by the elder nun, [SAṄGHAMITṬĀ](#), was also planted there. Mahinda dwelt for several years at Cetiyaḡiri and passed away there; his remains were cremated at the site and a reliquary (P. thūpa; S. [STŪPA](#)) erected over them. In the first century BCE, King KaṇirajānutiṣṢa once had sixty monks from Cetiyaḡiri executed for treason. Over time, Cetiyaḡiri became an important monastic center, and the Chinese pilgrim [FAXIAN](#) records that when he visited the site in the early fifth century, there were more than two thousand monks in residence.

Cetokhilaṣutta. (C. Xinhui jing; J. Shinnekyō; K. Simye kyōng 心穢經). In Pāli, “Discourse on Mental Obstructions”; the sixteenth sutta of the [MAJJHIMANIKĀYA](#) (a separate Sarvāstivāda recension appears as the 206th sūtra in the Chinese translation of the [MADHYAMĀGAMA](#); a recension of unidentified affiliation also occurs in the Chinese translation of the [EKOTTARĀGAMA](#)), preached by the Buddha to a gathering of monks in the [JETAVANA](#) grove in the town of Sāvatti ([ŚRĀVASTĪ](#)). The Buddha describes five mental obstructions and five fetters that constitute impediments to overcoming suffering. The five obstructions include (1) doubt about the teacher, the Buddha; (2) doubt about the dhamma ([DHARMA](#)); (3) doubt about the [SAMGHA](#); (4) doubt about the value of morality (sīla; S. [ŚĪLA](#)), meditative concentration ([SAMĀDHI](#)), and wisdom (paññā; S. [PRAJÑĀ](#)); 5) ill will and animosity toward one’s fellow monks. The five fetters include (1) attachment to sensual desires, (2) attachment to a sense of self, (3) attachment to material possessions, (4) excessive sleeping and eating, and (5) adopting the life of renunciation merely for the limited goal of a blissful existence in the heavens.

cetoparyāyābhijñāna. (S). See [PARACITTAJÑĀNA](#).

cetovimukti. (P. cetovimutti; T. sems rnam par grol ba; C. xin jietuo; J. shingedatsu; K. sim haet’al 心解脫). In Sanskrit, “liberation of mind”; a

meditative concept associated with the mastery of any of the four meditative absorptions (P. [JHĀNA](#); S. [DHYĀNA](#)). Cetovimukti results in the temporary suppression of the contaminants (P. āsava; S. [ĀSRAVA](#)) through the force of concentration ([SAMĀDHI](#)). It is also associated with the acquisition of the “superknowledges” (P. abhiññā; S. [ABHIJÑĀ](#)). Cetovimukti alone is insufficient to bring about the attainment of enlightenment ([BODHI](#)) or the cessation of rebirth and must therefore be complemented by the “liberation through wisdom” (P. paññāvimutti; S. prajñāvimukti; see [PRAJÑĀVIMUKTA](#)).

[Chach'o.](#) (K) (自超). See [MUHAK CHACH'O.](#)

['Chad ka ba Ye shes rdo rje.](#) (Chekawa Yeshe Dorje) (1102–1176). A scholar of the [BKA' GDAMS](#) sect of Tibetan Buddhism, most famous for his influential work on the practice of “mind training” ([BLO SBYONG](#)) called [BLO SBYONG DON BDUN MA](#) (“The Seven Points of Mind Training”). He is also known as Dge bshes Mchad kha ba (Geshe Chekawa).

[Chaiya.](#) One of the oldest cities in Thailand, located south of Bangkok, and famous for its Buddhist archaeological remains. The city was a center of the kingdom of [ŚRĪVIJAYA](#), a [MAHĀYĀNA](#) Buddhist empire that dominated the island of Sumatra, the Malay peninsula, and parts of Thailand and Java from the seventh through the thirteenth centuries. Mahāyāna monasteries still exist at the city, which were constructed during this period, such as Wat Hua Wieng and Wat Keu. Chaiya monasteries display a unique architectural style: the tops of the structures have five towers, with a large tower on the center and four smaller towers on the corners. Strong Indian Gupta influences are seen in a sculpture of the Buddha under the hooded protection of the [NĀGA](#) king and in depictions of Mahāyāna deities, in particular, [AVALOKITEŚVARA](#). The city thrived until the thirteenth century, when Śrīvijaya fell to invasion from neighboring kingdoms.

[Chajang.](#) (慈藏) (d.u.; fl. c. 590–658/alt. 608–686). Korean [VINAYA](#) master (yulsa) of the Silla dynasty. Born into the royal “true bone” (chin'gol) class of the Silla aristocracy, Chajang lost his parents at an early age and was ordained at the monastery of Wōnnyōngsa. Chajang traveled to China in 636 and during his sojourn on the mainland made a pilgrimage to [WUTAISHAN](#), where he had a vision of the [BODHISATTVA MAÑJUŚRĪ](#). Returning to Silla Korea in 643, he is said to have brought back a set of the Buddhist canon and packed the boat on which he returned with Buddhist banners, streamers, and other ritual items. He is also

claimed to have returned with treasures he had received directly from Mañjuśrī, including [ŚĀKYAMUNI](#) Buddha's own gold-studded monk's robe (K. *kasa*; [KASĀYA](#)) wrapped in purple silk gauze, as well as the Buddha's skull bone and finger joint. Back in Silla, Chajang began looking for the place where Mañjuśrī had told him the relics should be enshrined. After a long search, he finally found the spot in 646, where he constructed a "Diamond Precept Platform" (Kūmgang kyedan) and enshrined one portion of the Buddha's relics. This platform was the origin of the important Korean monastery of [T'ONGDOSA](#), which became the center of vinaya practice in Korea. Chajang is also said to have established [SINHŪNGSA](#), [WŎLCHŎNGSA](#), and [HWANGNYONGSA](#) and supervised the construction of the famous nine-story wooden pagoda at Hwangnyongsa, which was completed in 645. He was also appointed the state overseer of the [SAMGHA](#) (taeukt'ong), the top ecclesiastical office in the Silla Buddhist institution. Chajang was in charge of regulations concerning the conduct of monks and nuns all over the country, as well as overseeing at a state level the repair and maintenance of temples, the correct attention to the details of Buddhist ceremonial ritual, and the proper display of Buddhist religious images. His concern to improve the discipline and decorum of Korean monks led to his emphasis on vinaya study and practice, and he did much to encourage the study and dissemination of the vinaya in Korea, including writing commentaries to the [SARVĀSTIVĀDA](#) and [DHARMAGUPTAKA](#) vinayas. Chajang also instituted the [UPOSADHA](#) rite of having monks recite the [PRĀTIMOKSA](#) once every fortnight on full-and new-moon days. For his efforts, Chajang was revered by later generations as a teacher of the Dharmaguptaka vinaya (known in East Asia as the "Four-Part Vinaya"; see [SIFEN LŪ](#)) and the founder of the Korean analogue to the Chinese [NANSHAN LŪ ZONG](#) of [DAOXUAN](#). In 650, at Chajang's suggestion, the Silla court adopted the Tang Chinese calendrical system, an important step in the Sinicization of the Korean monarchy. Various works attributed to Chajang include the *Amit'a kyōng ŭigi* ("Notes on the [AMITĀBHASŪTRA](#)"), *Sabun yul kalma sagi* ("Personal Notes on the Karman Section of the Four-Part Vinaya"), and *Kwanhaeng pŏp* ("Contemplative Practice Techniques"); none of his writings are extant.

chakpŏp. (作法). In Korean, lit. "to create [DHARMA](#)"; a generic term for Korean Buddhist rituals, and especially ritual dances, such as the butterfly dance ([NABICH'UM](#)), cymbal dance ([PARACH'UM](#)), and the dharma drum dance ([PŎPKOCH'UM](#)). Outdoor performances, called toryanggye chakbŏp, might include

the butterfly dance (nabich'um) performed together with an accompaniment of ritual chanting (PÖMP'AE) and a traditional band.

'cham. A Tibetan term for precisely choreographed ritual dances usually performed by a group of monks in a monastery courtyard and generally coinciding with a major monastic festival or important religious event. In many cases, the dancers are dressed in elaborate costumes, including painted masks, with the performance involving varied routines during the course of several days. Some dances, such as the zhwa nag (black hat) dance, symbolize the subjugation of forces inimical to Buddhism. Others may represent episodes from the life of Buddhist personalities, including [PADMASAMBHAVA](#) and [MILARASPA](#), or aspects of their spiritual attainment. Monks generally begin to train while quite young, although the most experienced performers practice 'cham as a form of active meditation. The dances are most often public events, performed before crowds of lay Buddhists from surrounding villages. Most performances are therefore a combination of religious ritual and social gathering and nearly every large dance festival will include several jester figures to keep the public entertained during slow periods in the program. See also [LHAMO](#).

Chan. (J. Zen; K. Sŏn; V. Thiên 禪). In Chinese, the “Meditation,” or Chan school ([CHAN ZONG](#)); one of the major indigenous schools of East Asian Buddhism. The Sinograph “chan” is the first syllable in the transcription channa, the Chinese transcription of the Sanskrit term [DHYANA](#) (P. [JHANA](#)); thus chan, like the cognate term chanding (chan is a transcription and ding a translation, of dhyāna), is often translated in English simply as “meditation.” For centuries, the title [CHANSHI](#) (meditation master) was used in such sources as the “Biography of Eminent Monks” ([GAOSEN ZHUAN](#)) to refer to a small group of elite monks who specialized in the art of meditation. Some of these specialists adopted the term chan as the formal name of their community (Chan zong), perhaps sometime during the sixth or seventh centuries. These early “Chan” communities gathered around a number of charismatic teachers who were later considered to be “patriarchs” ([ZUSHI](#)) of their tradition. The legendary Indian monk [BODHIDHARMA](#) was honored as the first patriarch; it was retrospectively claimed that he first brought the Chan teachings to China. Later Chan lineage histories (see [CHUANDENG LU](#)) reconstructed elaborate genealogies of such patriarchs that extended back to [MAHĀKĀŚYAPA](#), the first Indian patriarch, and ultimately to the Buddha himself; often, these genealogies would even go back to all of the seven

buddhas of antiquity ([SAPTABUDDHA](#)). Six indigenous patriarchs (Bodhidharma, [HUIKE](#), [SENGCAN](#), [DAOXIN](#), [HONGREN](#), and [HUINENG](#)) are credited by the established tradition with the development and growth of Chan in China, but early records of the Chan school, such as the [LENGQIE SHIZI JI](#) and [LIDAI FABAO JI](#), reveal the polemical battles fought between the disparate communities to establish their own teachers as the orthodox patriarchs of the tradition. A particularly controversial dispute over the sixth patriarchy broke out between the Chan master [SHENXIU](#), the leading disciple of the fifth patriarch Hongren, and [HEZE SHENHUI](#), the purported disciple of the legendary Chinese monk Huineng. This dispute is often referred to as the “sudden and gradual debate,” and the differing factions came to be retrospectively designated as the gradualist Northern school ([BEI ZONG](#); the followers of Shenxiu) and the subitist Southern school ([NAN ZONG](#); the followers of Huineng). The famous [LIUZU TANJING](#) (“Platform Sūtra of the Sixth Patriarch”), composed by the followers of this putative Southern school, is an important source for the history of this debate. Following the sixth patriarch, the Chan lineage split into a number of collateral lines, which eventually evolved into the so-called “five houses and seven schools” ([WU JIA QI ZONG](#)) of the mature Chan tradition: the five “houses” of [GUIYANG](#) (alt. Weiyang), [LINJI](#), [CAODONG](#), [YUNMEN](#), and [FAYAN](#), and the subsequent bifurcation of Linji into the two lineages of [HUANGLONG](#) and [YANGQI](#), giving a total of seven schools. ¶ The teachings of the Chan school were introduced to Korea perhaps as early as the end of the seventh century CE and the tradition, there known as [SŎN](#), flourished with the rise of the Nine Mountains school of Sŏn ([KUSAN SŎNMUN](#)) in the ninth century. By the twelfth century, the teachings and practices of Korean Buddhism were dominated by Sŏn; and today, the largest Buddhist denomination in Korea, the [CHOGYE CHONG](#), remains firmly rooted in the Sŏn tradition. The Chan teachings were introduced to Japan in the late twelfth century by [MYŌAN EISAI](#) (1141–1215); the Japanese tradition, known as [ZEN](#), eventually developed three major sects, [RINZAISHŪ](#), [SŌTŌSHŪ](#), and [ŌBAKUSHŪ](#). The Chan teachings are traditionally assumed to have been transmitted to Vietnam by [VINĪTARUCI](#) (d. 594), a South Indian brāhmaṇa who is claimed (rather dubiously) to have studied in China with the third Chan patriarch [SENGCAN](#) before heading south to Guangzhou and Vietnam. In 580, he is said to have arrived in Vietnam and settled at Pháp Vân monastery, where he subsequently transmitted his teachings to Pháp Hiên (d. 626), who carried on the Chan tradition, which in Vietnamese is known as [THIÊN](#). In addition to the Vinītaruci lineage, there are two other putative lineages of Vietnamese Thiên,

both named after their supposed founders: [VÔ NGÔN THÔNG](#) (reputedly a student of [BAIZHANG HUAIHAI](#)), and [THAO ĐƯƠNG](#) (reputedly connected to the [YUNMEN ZONG](#) lineage in China). Chan had a presence in Tibet during the early dissemination ([SNGA DAR](#)) of Buddhism, and the Chan monk [MOHEYAN](#) was an influential figure at the Tibetan court in the late eighth century, leading to the famous [BSAM YAS DEBATE](#).

[chanda](#). (T. 'dun pa; C. yu; J. yoku; K. yok 欲). In Sanskrit and Pāli, “zeal” or “desire to act”; one of the ten mental factors or mental concomitants ([CAITTA](#)) of wide extent ([MAHĀBHŪMIKA](#)) that the [VAIBHĀSIKA](#) school of [SARVĀSTIVĀDA ABHIDHARMA](#) says accompany all consciousness activity; alternatively, it is listed as one of the five [VINIYATA](#) or pratiniyama mental factors of specific application according to the [YOGĀCĀRA](#) school, and one of the six pakīṇṇaka (miscellaneous) [CETASIKAS](#) of the Pāli abhidhamma. Chanda plays an important role in motivating all wholesome (and unwholesome) activity, and is particularly important in the cultivation of [ŚAMATHA](#) (serenity or calm abiding). According to the [MADHYĀNTAVIBHĀGA](#), there are eight forces that counteract five hindrances ([NĪVARANA](#)) to reaching Śamatha. Chanda is called the ground of all eight forces because, based on [ŚRADDHĀ](#) (faith or confidence), it leads to a resolute effort (vyāyāma) to apply [SMṚTI](#) (mindfulness), [SAMPRAJANYA](#) (circumspection), and [UPEKṢĀ](#) (equanimity) to reach the final goal.

[Chandaka](#). (P. Channa; T. 'Dun pa; C. Cheni; J. Shanoku; K. Ch'anik 車匿). The charioteer and groom of [SIDDHĀRTHA GAUTAMA](#), who accompanied the [BODHISATTVA](#) prince on two momentous occasions. First, Chandaka drove the prince's chariot when he ventured outside the palace, where he was confronted with the four portents ([CATURNIMITTA](#)), encountering on separate occasions an old man, a sick man, a corpse, and a mendicant. Having been confronted with these realities, the prince resolved to go forth in search of liberation from birth and death. According to the story, during his youth, the prince had never seen an old person, a sick person, or a corpse before and so asked Chandaka what each was. Chandaka's explanation that old age, sickness, and death were the ultimate fate of all humans led the prince to decide to renounce his royal inheritance and go out in search of a state beyond aging, sickness, and death. Second, Chandaka accompanied the prince on his ride into renunciation as a mendicant (see [PRAVRAJITA](#)). When Gautama left his father's palace in [KAPILAVASTU](#) to lead the homeless life, Chandaka departed with him, together with Gautama's noble

steed, [KANTHAKA](#). Once outside the city, after cutting off his topknot, the prince removed his jewelry and handed it over to Chandaka, exchanged clothes with him, and then ordered his groom to return to the palace with his horse and inform his father that he would not return to the city until his quest for enlightenment was fulfilled. Kaṇṭhaka was so grief-stricken at his master's departure that he died on the spot, and Chandaka, crushed at both losses, asked for permission to join the prince in mendicancy but was refused. (Some accounts state instead that Chandaka feared for his life if he returned alone with all the prince's possessions, and so left the worldly life that very night.) Chandaka was eventually ordained by the Buddha. Because he was so swollen with pride at his close relationship with his former charge Gautama, it is said that he was arrogant in accepting discipline from his colleagues and was ostracized from the order more than once, in one case for siding with nuns in a dispute with monks, in another for repeatedly reviling [ŚĀRIPUTRA](#) and [MAHĀMAUDGALYĀYANA](#). In the account of the Buddha's final days in the [MAHĀPARINIBBĀNASUTTANTA](#), the Buddha's last disciplinary act before he died was to pass the penalty of brahmadaṇḍa (lit. the "holy rod") on Chandaka, which required that he be ostracized by his fellow monks. When the Buddha's attendant [ĀNANDA](#) went to Chandaka to announce the penalty, it is said that Chandaka finally was contrite and became an [ARHAT](#) on the spot.

[Changansa](#). (長安寺). In Korean, "Monastery of Extended Peace"; was one of the major monasteries on the Korean sacred mountain of [KŪMGANGSAN](#) (Diamond Mountains), now in North Korea. There are two different accounts of the monastery's foundation: it was built either by an unidentified figure during the rule of the Silla king Pōphŭng (r. 514–540) or by the Koguryō monk Hyeryang (d.u) in 551, which he was proselytizing in the Silla dynasty. The monastery was frequently rebuilt with state support. Especially elaborate was the reconstruction project sponsored in 1323 by the empress Ki (d.u.), a Koryō native and consort of Emperor Shundi (r. 1333–1368) of the Mongol Yuan dynasty, on behalf of the emperor and her son, the prince. The Chosŏn-dynasty Sŏn monk [SŌSAN HYUJŎNG](#) (1520–1604) and his disciple SAMYONG YUCHŎNG (1544–1610) are both said to have practiced at Changansa. During the Korean War (1950–1953), most of the monastery burned to the ground and the campus has yet to be restored.

[changjwa purwa](#). (S. naiṣyadika; P. nesajjika; T. cog bu pa; C. changzuo buwo;

J. jōza/chōza fuga 長坐不臥). In Korean, “constantly sitting without lying down.” This practice is the last of a list of twelve or thirteen voluntarily ascetic practices (see [DHUTANGA](#)) sanctioned by the Buddha, and is used as a countermeasure ([PRATIPAKSA](#)) against sloth and torpor (P. thīnamiddha; S. [STYĀNA-MIDDHA](#)). In Korean Sōn (C. [CHAN](#)) monasteries, this is typically the only one of the list of the ascetic practices that is still in general practice. Although the practice of never lying down is recommended during intensive periods of practice during the summer and winter meditative retreats (kyōlche; see [JIEZHI](#)), in some cases, the practice is carried out for months or years at a time. Unlike ascetics in the Chinese and Tibetan traditions, however, Korean monks never use physical supports to prop up the body. During periods of “ferocious effort” ([YONGMAENG CHŎNGJIN](#)), typically the one-week period during the winter meditation retreat preceding the enlightenment day of the Buddha (the eighth day of the twelfth lunar month), the monks and nuns in the meditation hall often undertake changjwa purwa for the entire seven days.

[Changlu Zongze](#). (J. Chōro Sōsaku; K. Changno Chongsaek 長蘆宗蹟) (d.u.; fl. c. late eleventh to early twelfth centuries). Chinese [CHAN](#) monk of the [YUNMEN ZONG](#). Little is known about his life, but Changlu is said to have been a native of Yongnian in Luozhou, in present-day Henan province. Changlu also seems to have had a close relation to the disciples of Tianyi Yihuai (993–1064), himself a disciple of the Yunmen Chan master [XUEDOU CHONGXUAN](#). Changlu eventually became a student of Tianyi’s disciples Fayun Faxiu (1027–1090) and Changlu Yingfu (d.u.), and later inherited the latter’s lineage. Changlu Zongze is most famous for his compilation of the influential text on Chan monastic regulations or “rules of purity” ([QINGGUI](#)), the [CHANYUAN QINGGUI](#), during his tenure at the Chan monastery Hongji chanyuan in 1103. When a revised edition of the *Chanyuan qinggui* was published in 1202, the meditation manual [ZUOCHAN YI](#), probably composed by Changlu or his colleagues, was included. Changlu is also remembered as a [PURE LAND](#) adept renowned for his rigorous practice of [NIANFO](#), the recitation of the name of the buddha [AMITĀBHA](#). He later moved to Changlu in present-day Jiangxi province, whence he acquired his toponym. Changlu was later given the title Chan master Cijue (Compassionate Enlightenment).

[Changuan cejin](#). (J. Zenkan sakushin; K. Sōn’gwan ch’aekchin 禪關策進). In Chinese, “Spurring Advancement through the Chan Barrier”; composed by the [CHAN](#) master [YUNQI ZHUHONG](#) in 1600. The text has long been used in Chan

monasteries as a primer in meditation. From various Chan lineage histories ([CHUANDENG LU](#)) and recorded sayings ([YULU](#)), Yunqi compiled over a hundred anecdotes and legends about Chan masters that cogently demonstrated the value of diligence and intense practice. The *Changuan cejin* consists of two general collections. The first collection itself is further divided into two sections, entitled “Zhuzu fayu jieyao” (“Essential Selections of Dharma Talks by Various Masters”) and “Zhuzu kugong jielüe” (“Brief Selections of the Painful Effort of Various Masters”). The first section consists largely of public lectures delivered by famous Chan masters, with Yunqi’s own evaluation and notes appended at the end of each lecture. Similarly, the second section consists largely of stories of courageous efforts in practice made by various monks of the past, again with Yunqi’s evaluations appended at the end of each story. The second collection, entitled “Zhujing yinzheng jielüe” (“Brief Selections of Verified Passages from Various Scriptures”), also consists of short passages quoted from various scriptures, with Yunqi’s evaluation appended at the end of each passage.

[changzhu](#). (J. jōjū; K. sangju 常住). In Chinese, lit. “constantly abiding”; this term refers, first, to the doctrine of the eternality of the Buddha’s “three bodies” ([TRIKĀYA](#)), especially as elaborated in the [ŚRĪMĀLĀDEVĪSIMHANĀDASŪTRA](#) and the [MAHĀPARINIRVĀNASŪTRA](#). According to this doctrine, it is not just the “dharma body” ([DHARMAKĀYA](#)) of the Buddha that is eternal; rather, these sūtras explain that even his “enjoyment body” ([SAMBHOGAKĀYA](#)) and “emanation body” ([NIRMĀNAKĀYA](#)) also perish and are imperishable. Second, in the East Asian traditions, changzhu refers to the communal, shared property and equipment within the monastic compound. Such communal property was not permitted to be appropriated for private, personal use, but was intended to be the common possession of the entire monastic community and was therefore subjected to the collective oversight of the [SAMGHA](#). The monastic office in charge of overseeing, allocating, maintaining the common monastic property was, by extension, also called the changzhu.

[Chanlin baoxun](#). (J. Zenrin hōkun; K. Söllim pohun 禪林寶訓). In Chinese, “Treasured Instructions of the Chan Grove”; edited by the [CHAN](#) monk Jingshan (d.u.) and published in 1378. Jingshan expanded upon an earlier collection of one hundred or so anecdotes that the eminent Chan master [DAHUI ZONGGAO](#) and Longxiang Shigui (d. 1149) had culled from the recorded sayings ([YULU](#)) and biographies of various Chan masters. Jingshan’s edition contains more than three

hundred anecdotes, which he divided into two rolls. The *Chanlin baoxun* was a popular text and numerous commentaries and annotations, such as Dajian Jiaoding's (d.u.) *Chanlin baoxun yinyi*, Xingsheng's (d.u.) *Chanlin baoxun niansong*, and Pinji Zhixiang's (d.u.) *Chanlin baoxun bishuo*, were appended to the end of some editions of the text.

Chanlin sengbao zhuan. (J. Zenrin sōbōden; K. Sōllim sŭngbo chŏn 禪林僧寶傳). In Chinese, “Chronicles of the SAMGHA Jewel in the Forests of CHAN”; compiled in the twelfth century by the “lettered Chan” (WENZI CHAN) monk JUEFAN HUIHONG (1071–1128). Huihong intended for this chronicle to serve as a supplement to his own “Biographies of Eminent Monks” (GAOSEN ZHUAN), which is no longer extant. Huihong collected the biographies of over a hundred eminent Chan masters who were active in the lettered Chan movement between the late Tang and early Song dynasties, appending his own comments to each biography. Huihong's collection is said to have been pared down to eighty-one biographies by the Chan master DAHUI ZONGGAO. Later, Dahui's disciple Jinglao (d.u.) of Tanfeng added a biography of WUZU FAYAN, the teacher of Dahui's own master YUANWU KEQIN, and two other masters to the conclusion of Huihong's text, giving a total of eighty-four biographies in the extant collection. A postscript by XUTANG ZHIYU appears at the end of the compilation. Unlike Chan “lamplight histories” (CHUANDENG LU), which are typically arranged according to principal and collateral lineages, the monks treated in this compilation are listed according to their significance in the origin and development of the “lettered Chan” movement; Huihong's treatment undermines the neat charts of master–disciple connections deriving from the lamplight histories, which have become so well known in the literature. In Japan, a copy of the *Chanlin sengbao zhuan* was published as early as 1295 and again in 1644.

Chanmen guishi. (J. Zenmon kishiki; K. Sōnmun kyusik 禪門規式). In Chinese, “Pure Regulations of the Gate of Chan”; a synopsis of the eminent CHAN master BAIZHANG HUAIHAI's legendary text on monastic regulations (BAIZHANG QINGGUI). This text appears in the official Chan lineage history JINGDE CHUANDENG LU, written in 1004, as an appendix to its biography of Baizhang. The *Chanmen guishi* speaks of such unique Chan practices as establishing the dharma hall in lieu of the Buddha Hall, the emphasis on the abbot's quarters (FANGZHANG) and the SAMGHA hall (SENGTANG), and the ritual of entering the abbot's room (rushu). As Baizhang's original text is now lost (if, in fact, it ever

existed), the *Chanmen guishi* serves as an important source for the study of Baizhang’s putative innovations in monastic regulations.

[Chanmen miyao jue](#). (C) (禪門秘要訣/決). See [ZHENGDAO GE](#).

[Chan miyaofa jing](#). (J. Zenpiyōhōkyō; K. Sōn piyobōp kyōng 禪秘要法經). In Chinese, “Scripture on the Essential Techniques of Meditation”; translated by [KUMARAJIVA](#). The scripture details the practice of meditation, visualization, and controlling the breath. Among the different meditative practices discussed in the text, the meditations on foulness ([AŚUBHABHĀVANĀ](#)) serves as the foundational practice.

[Chan Preface](#). See [CHANYUAN ZHUQUANJI DUXU](#).

[chanshi](#). (J. zenji; K. sōnsa 禪師). In Chinese, lit. “[DHYĀNA](#) master,” “meditation master,” and, later, “[CHAN](#) master.” Various “biographies of eminent monks” ([GAOSEN ZHUAN](#)) collections mention specialists of meditation known as chanshi, many of whom appear in a section typically entitled “practitioners of meditation” (xichan). Teachers of the [Tiantai](#), [Pure Land](#), and [Sanjie Jiao](#) are often referred to as chanshi. After the rise of the [Chan](#) school in China, the term typically referred more specifically to the eminent teachers of this specific tradition. Often the formal title of chanshi (Chan master) was bestowed upon exceptional teachers by the monarchs of China, Korea, and Japan.

[Chanxian](#). (C) (禪賢). See [ZHIKONG CHANXIAN](#).

[Chanyao](#). (J. Zen’yō; K. Sōnyo 禪要). In Chinese, “Essentials of Chan.” See [GAOFENG HESHANG CHANYAO](#).

[Chanyuan qinggui](#). (J. Zen’on shingi; K. Sōnwŏn ch’ōnggyu 禪苑清規). In Chinese, “Pure Rules of the Chan Garden”; compiled by the [Chan](#) master [Changlu Zongze](#), in ten rolls. According to its preface, which is dated 1103, the *Chanyuan qinggui* was modeled on [Baizhang Huaihai](#)’s legendary “rules of purity” ([Qinggui](#)) and sought to provide a standardized set of monastic rules and an outline of institutional administration that could be used across all Chan monasteries. As the oldest extant example of the qinggui genre, the *Chanyuan qinggui* is an invaluable source for the study of early Chan monasticism. It was the first truly Chinese set of monastic regulations that came to rival in

importance and influence the imported [VINAYA](#) materials of Indian Buddhism and it eventually came to be used not only in Chan monasteries but also in “public monasteries” ([SHIFANG CHA](#)) across the Chinese mainland. The *Chanyuan qinggui* provides meticulous descriptions of monastic precepts, life in the [SAMGHA](#) hall ([SENGTANG](#)), rites and rituals, manners of giving and receiving instruction, and the various institutional offices at a Chan monastery. A great deal of information is also provided on the abbot and his duties, such as the tea ceremony. Semi-independent texts such the [ZUOCHAN YI](#), a primer of meditation, the *Guijing wen*, a summary of the duties of the monastic elite, and the *Baizhang guisheng song*, Zongze’s commentary on Baizhang’s purported monastic code, are also appended at the end of the *Chanyuan qinggui*. The Japanese pilgrims [MYŌAN EISAI](#), [DŌGEN KIGEN](#), and [ENNI BEN’EN](#) came across the *Chanyuan qinggui* during their visits to various monastic centers in China and, upon their return to Japan, they used the text as the basis for the establishment of the Zen monastic institution. Copies of a Chinese edition by a certain Yu Xiang, dated 1202, are now housed at the Tōyō and Kanazawa Bunkō libraries. The *Chanyuan qinggui* was also imported into Korea, which printed its own edition of the text in 1254; the text was used to reorganize Korean monastic institutions as well.

[Chanyuan zhuquanji duxu](#). (J. Zengen shosenshū tojo; K. Sōnwŏn chejŏnjip tosŏ 禪源諸詮集都序). In Chinese, lit., “Prolegomenon to the ‘Collected Writings on the Source of Chan’”; composed by the [CHAN](#) and [HUAYAN](#) exegete [GUIFENG ZONGMI](#) sometime between 828 and 835; typically known by its abbreviated title of “Chan Prolegomenon” (C. Duxu; J. Tojo; K. Tosŏ) and often referred to in English as the “Chan Preface.” The text is a comprehensive overview of the Chan collection (*Chanyuan zhuquanji*), which is said to have been one hundred rolls (juan) in length, but is now entirely lost. Pei Xiu’s (787?–860) own preface to Zongmi’s “Prolegomenon” describes this collection as a massive anthology of essential prose and verse selections drawn from all the various Chan schools, which was so extensive that Pei says it deserves to be designated as a separate “Chan basket” (Chanzang; see [PITAKA](#)), complementing the other “three baskets” ([TRIPITAKA](#)) of the traditional Buddhist canon. In order to provide a comprehensive overview of this massive collection of Chan material, Zongmi seeks to assess in his “Prolegomenon” the teachings of eight representative schools of Tang-dynasty Chan: [JINGZHONG ZONG](#), Northern school ([BEI ZONG](#)), [BAOTANG ZONG](#), Nanshan Nianfo men Chan zong, the Shitou school of [SHITOU](#)

[XIQIAN](#) (which would eventually evolve into the [CAODONG](#) and [YUNMEN](#) schools), [NIUTOU ZONG](#), the Heze school of [HEZEI SHENHUI](#), and the [HONGZHOU ZONG](#) (or “Jiangxi” as it is called in the text) of [MAZU DAOYI](#). In an effort to bridge both the ever-growing gap between the contending Chan lineages and also their estranged relations with the doctrinal schools (C. jiao, see K. [KYO](#)) that derive from the written scriptures of Buddhism, Zongmi provides in his “Prolegomenon” an overarching hermeneutical framework (see [JIAOXIANG PANSHI](#)) through which to evaluate the teachings of both the Chan and doctrinal schools. This framework is built around a series of polarities, such as the three core teachings of the scriptures and the three axiomatic perspectives of Chan, the words of the Chan masters and the mind of the Buddha, sudden awakening and gradual practice, and original enlightenment ([BENJUE](#)) and nonenlightenment. In order to demonstrate the continuities between Chan and jiao, Zongmi proceeds to demonstrate how various doctrinal traditions align with the three core teachings of the scriptures and how the eight representative Chan schools correlate with the three axiomatic perspectives of Chan. He then correlates the three doctrinal teachings with the three Chan perspectives, thus demonstrating the fundamental correspondence between the Chan and the scriptures. The last polarity he examines, that between original enlightenment and nonenlightenment, also enables Zongmi to outline an etiology of both delusion and awakening, which provides the justification for a soteriological schema that requires an initial sudden awakening followed by continued gradual cultivation ([DUNWU JIANXIU](#)). Zongmi’s luster faded in China during the Song dynasty, but his vision of the Chan tradition as outlined in his “Prolegomenon” was extremely influential in [YONGMING YANSHOU](#)’s [ZONGJING LU](#); indeed, it is now believed that the Zongjing lu subsumes a substantial part of Zongmi’s lost “Chan Canon” (viz., his *Chanyuan zhuquanji*). Zongmi and his “Prolegomenon” found a particularly enthusiastic proponent in Korean Sŏn in the person of [POJO CHINUL](#), who placed Zongmi’s preferred soteriological schema of sudden awakening followed by gradual cultivation at the core of Korean Sŏn practice. Zongmi’s works continued to be widely read in Korea after Chinul’s time and, since the seventeenth century, Korean Buddhist seminaries (kangwŏn) included the “Prolegomenon” (K. Tosŏ) in the [SAJIP](#) (“Fourfold Collection”), the four key texts of the Korean monastic curriculum.

[Chanyue Guanxiu](#). (J. Zengetsu Kankyū; K. Sŏnwŏl Kwanhyu 禪月貫休) (832–912). A Chinese [CHAN](#) monk famous as a poet and painter. His [CHANYUE JI](#)

(“Collection of the Moon of Meditation”) is one of the two most important collections of Chan poetry, along with the [HANSHAN SHI](#). His rendering of the sixteen [ARHAT](#) protectors of Buddhism ([SODĀŚASTHAVIRA](#)) became the standard Chinese presentation. His vivid portrayal of the arhats offers an extreme, stylized rendition of how the Chinese envisioned “Indians” (fan) or “Westerners” (hu), and gives each of his subjects a distinctive bearing and deportment and unique phrenological features and physical characteristics; these features are subsequently repeated routinely in the Chinese artistic tradition.

[Chanyue ji](#). (J. Zengetsu shū; K. Sŏnwŏl chip 禪月集). In Chinese, “Collection of the Moon of Meditation”; a popular anthology of poetry by the poet and painter monk [CHANYUE GUANXIU](#) (832–912), otherwise known by his sobriquet of Chanyue dashi (Great Master Meditation Moon), whence the collection acquired its name. The *Chanyue ji* is said to have originally consisted of twenty-five or twenty-six rolls, of which only eleven are extant. A copy was made in 923 and again in 1240. Along with the [HANSHAN SHI](#), the *Chanyue ji* is often considered one of the most lucid collections of [CHAN](#) poetry and is thus favored by many monks within the Chan tradition.

[Chan zong](#). (J. Zenshū; K. Sŏn chong 禪宗). The Chan, or Meditation, school. See [CHAN](#).

[Chan zong Yongjia ji](#). (J. Zenshū Yōkashū; K. Sŏnjong Yŏngga chip 禪宗永嘉集). In Chinese, “Collection of Yonjia of the Chan School,” attributed to the [CHAN](#) master [YONGJIA XUANJUE](#); also known as the *Yongjia ji*, *Yongjia chanzong ji*, and *Yongjia chanji*. This text was an influential collection of poems that delineated the fundamental principles of meditation and the proper means of practice. The collection consists of ten major sections: (1) “intent and formalities in appreciating the way,” (2) “haughtiness in keeping moral precepts ([ŚĪLA](#)),” (3) “the pure cultivation of the three modes of action,” (4) “song of [ŚAMATHA](#),” (5) “song of [VIPĀŚYANĀ](#),” (6) “song of [UPEKSĀ](#),” (7) “gradual cultivation of the three vehicles,” (8) “principle and phenomena are nondual,” (9) “letters of encouragement to a friend,” and (10) “vows.” There is a famous commentary on this text by the Song-dynasty monk Xingding (d.u.) entitled the (*Chan zong*) *Yongjia ji zhu*. In 1464, a vernacular Korean translation of Xingding’s text, with translation and commentary attributed to King Sejo (1455–1468) of the Chosŏn dynasty, was published in Korea by the official Bureau of Scriptural Publication; this was one of the earliest texts composed in the new vernacular writing system

of Han'gūl.

[Chaoyuan](#). (J. Chōgen; K. Ch'owōn 超元). See [DAOZHE CHAOYUAN](#).

[Chapada](#). A Mon disciple of Uttarajīva Thera who introduced reformed Sinhalese Buddhism into the Pagan empire of Burma during the reign of King Narapatisithu (r. 1173–1210 CE). According to the [KALYĀNĪ INSCRIPTIONS](#) (1479), where his story is first told, Chapada traveled to Sri Lanka as a twenty-year-old novice in the company of his preceptor, Uttarajīva, shortly after the [THERAVĀDA](#) tradition of the island kingdom had been reformed by Parākramabāhu I in accordance with the orthodox standards of the [MAHĀVIHĀRA](#). Chapada was given the [UPASAMPADĀ](#) higher ordination by both Uttarajīva and other patriarchs of the Sinhalese saṅgha (S. [SAMGHA](#)), thus becoming the first monk from Burma to be ordained into the Mahāvihāra tradition. The joint ceremony is described as having symbolized the essential unity of the Burmese-Mon and Sinhalese monastic lineages. Despite this initial ecumenism, when Chapada returned to Burma after ten years of study on the island, he and his cohorts refused to join with the existing saṅgha of Pagan, and instead organized themselves into a separate monastic fraternity at the capital. The fraternity thus established became known as the Sīhaḷa saṅgha, while the older “unreformed” congregation of monks of Pagan came to be known as the Ariya Arahanta saṅgha. The Sīhaḷa saṅgha founded by Chapada continued to fragment so that by the end of the Pagan empire (late thirteenth century), there were at least ten separate monastic fraternities in Burma. The “Kalyānī Inscriptions” decry this disunity as a factor that ultimately weakened the vitality of the religion.

[Chengguan](#). (J. Chōkan; K. Chingwan 澄觀) (738–839). Putative fourth patriarch of the Chinese [HUAYAN](#) tradition; also known as Daxiu, Huayan pusa, Huayan shuzhu, and Qingliang [GUOSHI](#). Chengguan is said to have entered the monastery in 746 under the guidance of a monk named Tizhen (d.u.). Although little is known of Chengguan's early training, he is supposed to have studied a broad range of scriptures and commentaries including the [PRAJÑĀPĀRAMITĀ SŪTRAS](#), [MAHĀPARINIRVĀNASŪTRA](#), [DASHENG QIXIN LUN](#), [YOGĀCĀRABHŪMIŚĀSTRA](#), and others. In 757, he received the full monastic precepts from a certain Tanyi (d.u.) of the [NANSHAN LŪ ZONG](#) and studied for several years under Tanyi's prominent disciple [JINGXI ZHANRAN](#). Chengguan is also said to have studied [CHAN](#) during this period under various masters. After his training under Fashen (718–778), second-generation disciple of the Huayan master [FAZANG](#),

Chengguan left for [WUTAISHAN](#), the earthly abode of the [BODHISATTVA MAÑJUŚRĪ](#), in 776. Chengguan was a prolific exegete, whose writings amount to over four hundred rolls in total. Chengguan is best known for his massive commentary on [ŚIKSĀNANDA](#)'s new translation of the [AVATAMSAKASŪTRA](#), entitled the [*Dafangguang fo*] [HUAYAN JING SHU](#), in sixty rolls. This work rivaled and may even have surpassed in influence the most popular commentary on the *Avatamsakasūtra* of his day, viz., Fazang's [HUAYAN JING TANXUAN JI](#). Chengguan also wrote a comprehensive autocommentary to his commentary, entitled the [HUAYAN JING SUISHU YANYI CHAO](#), in a total of ninety rolls. In these works, Chengguan expands upon the Huayan master [DUSHUN](#)'s work on the notion of the realm of reality ([DHARMADHĀTU](#)), the [HUAYAN FAJIE GUANMEN](#). Chengguan approached the dharmadhātu from four interrelated perspectives, viz., the dharmadhātu of phenomena ([SHI FAJIE](#)), dharmadhātu of principle ([LI FAJIE](#)), the dharmadhātu of the mutual nonobstruction between principle and phenomena ([LISHI WU'AI FAJIE](#)), and the dharmadhātu of the mutual nonobstruction between phenomenon and phenomena ([SHISHI WU'AI FAJIE](#)). As the premier Huayan exegete of his generation, Chengguan also was summoned to the Tang capital of Chang'an in 796 to collaborate with the northwest Indian monk [PRAJÑA](#) in preparing a new translation of the [GANDAVYŪHA](#), the forty-roll final chapter of the *Avatamsakasūtra*. Among Chengguan's many disciples, the [CHAN](#) and Huayan exegete [GUIFENG ZONGMI](#) is most famous.

[Chengshi lun](#). (S. **Tattvasiddhi*; J. Jōjitsuron; K. Sōngsil non 成實論). In Chinese, "Treatise on Establishing Reality"; a summary written c. 253 CE by the third century CE author [HARIVARMAN](#) of the lost [ABHIDHARMA](#) of the [BAHUŚRUTIYA](#) school, a branch of the [MAHĀSĀMGHIKA](#). (The Sanskrit reconstruction **Tattvasiddhi* is now generally preferred over the outmoded **Satyasiddhiśāstra*). The *Tattvasiddhi* is extant only in [KUMĀRAJĪVA](#)'s Chinese translation, made in 411–412, in sixteen rolls (juan) and 202 chapters (pin). The treatise is especially valuable for its detailed refutations of the positions held by other early [MAINSTREAM BUDDHIST SCHOOLS](#); the introduction, for example, surveys ten different grounds of controversy separating the different early schools. The treatise is structured in the form of an exposition of the traditional theory of the [FOUR NOBLE TRUTHS](#), but does not include listings for different factors ([DHARMA](#)) that typify many works in the abhidharma genre. The positions advocated in the text are closest to those of the [STHAVIRANIKĀYA](#) and [SAUTRĀNTIKA](#) schools, although, unlike the Sthaviranikāya, the treatise accepts

the reality of “unmanifest materiality” ([AVIJÑAPTIRŪPA](#)) and, unlike Sautrāntika, rejects the notion of an “intermediate state” ([ANTARĀBHAVA](#)) between existences. Harivarman opposes the [SARVĀSTIVĀDA](#) position that dharmas exist in past, present, and future, the Mahāsāṃghika view that thought is inherently pure, and the [VĀTSĪPUTRĪYA](#) premise that the “person” ([PUDGALA](#)) exists. The *Chengshi lun* thus hones to a “middle way” between the extremes of “everything exists” and “everything does not exist,” both of which it views as expediciencies that do not represent ultimate reality. The text advocates, instead, the “voidness of everything” (*sarvaśūnya*) and is therefore sometimes viewed within the East Asian traditions as representing a transitional stage between the mainstream Buddhist schools and Mahāyāna philosophical doctrine. The text was so widely studied in East Asia, especially during the fifth and sixth centuries, that reference is made to a *Tattvasiddhi school of exegesis (C. Chengshi zong; J. Jōjitsushū; K. Sōngsilchong); indeed, the Jōjitsu school is considered one of the six major schools of Japanese Buddhist scholasticism during the Nara period.

[Chengshi zong](#). (J. Jōjitsushū; K. Sōngsil chong 成實宗). In Chinese, “*Tattvasiddhi school” of scholastic exegesis. See [CHENGSHILUN](#).

[Cheng weishi lun](#). (S. *Vijñaptimātratāsiddhi; J. Jōyūshikiron; K. Sōng yusik non 成唯識論). In Chinese, “Demonstration of Consciousness-Only”; a magnum opus of Sino-Indian [YOGĀCĀRA](#) Buddhism and the foundational text of the Chinese WEISHI, or [FAXIANG](#), school. The text is often cited by its reconstructed Sanskrit title *[VIJÑAPTIMĀTRATĀSIDDHI](#), and its authorship attributed to [DHARMAPĀLA](#) (530–561), but the text as we have it in Chinese translation has no precise analogue in Sanskrit and was never used within the Indian or Tibetan traditions. Its Chinese translator [XUANZANG](#) (600/602–664), one of the most important figures in the history of Chinese Buddhist scholasticism, traveled to India in the seventh century, where he specialized in Yogācāra doctrine at [NĀLANDĀ](#) monastic university under one of Dharmapāla’s disciples, [ŚĪLABHADRA](#) (529–645). At Nālandā, Xuanzang studied [VASUBANDHU](#)’s [TRIMŚĪKĀ](#) (*Triṃśīkāvijñaptimātratā[siddhi]kārikā*), the famous “Thirty Verses on Consciousness-Only,” along with ten prose commentaries on the verses by the prominent Yogācāra scholiasts Dharmapāla, [STHIRAMATI](#), Nanda, Citrabhānu, Guṇamati, Jinamitra, Jñānamitra, Jñānacandra, Bandhuśrī, Śuddhacandra, and Jinaputra. After his return to China in 645, Xuanzang set to work translating this massive amount of new material into Chinese. Rather than translate in their

entirety all ten commentaries, however, on the advice of his translation team Xuanzang chose to focus on Dharmapāla's exegesis, which he considered orthodox, rather than muddy the waters in China with the divergent interpretations of the other teachers. As a foil for Dharmapāla's interpretation, Xuanzang uses the commentaries by Sthiramati, Nanda, and occasionally Citrabhānu, but he typically concludes any discussion with Dharmapāla's definitive view. This decision to rely heavily on Dharmapāla's interpretation probably comes from the fact that Xuanzang's own Indian teacher, Śīlabhadra, was himself a pupil of Dharmapāla. ¶ The *Cheng weishi lun* is principally concerned with the origination and removal of ignorance ([AVIDYĀ](#)), by clarifying the processes by which erroneous perception arises and enlightened understanding is produced. Unlike the writings of [STHIRAMATI](#), which understood the bifurcation of consciousness into subject and object to be wholly imaginary, the *Cheng weishi lun* proposed instead that consciousness in fact always appears in both subjective and objective aspects, viz., a "seeing part" (*darśanabhāga*) and a "seen part" (*nimittabhāga*). The apparent dichotomy between inner self and external images is a supposition of mentality ([MANAS](#)), which in turn leads to the various afflictions ([KLEŚA](#)), as the mind clings to those images it likes and rejects those it dislikes; thus, suffering ([DUHKHA](#)) is created and the cycle of rebirth ([SAMSĀRA](#)) sustained. Both the perceiving self and the perceived images are therefore both simply projections of the mind and thus mere-representation ([VIJÑAPTIMĀTRA](#)) or, as Xuanzang translated the term, consciousness-only (*WEISHI*). This clarification of the perceptual process produces an enlightened understanding that catalyzes a transmutation of the basis ([ĀŚRAYAPARĀVṚTTI](#)), so that the root consciousness ([MŪLAVIJÑĀNA](#)), or [ĀLAYAVIJÑĀNA](#), no longer serves as the storehouse of either wholesome or unwholesome seeds ([BĪJA](#)), thus bringing an end to the subject-object bifurcation. In the course of its discussion, the *Cheng weishi lun* offers an extensive treatment of the Yogācāra theory of the eight consciousnesses ([VIJÑĀNA](#)) and especially the storehouse consciousness (*ālayavijñāna*) that stores the seeds, or potentialities, of these representational images. The text also offers an overview of the three-nature ([TRISVABHĀVA](#)) theory of vijñaptimātra as imaginary ([PARIKALPITA](#)), dependent ([PARATANTRA](#)), and perfected ([PARINISPANNA](#)). Finally, the *Cheng weishi lun* provides such exhaustive detail on the hundred dharmas ([BAIFA](#)) taxonomical system of the Yogācāra that it has been used within the tradition as a primer of Yogācāra dharma theory.

Cheng weishi lun shu ji. (J. Jōyuishikiron jukki; K. Sōng yusik non sulgi 成唯識論述禮). In Chinese, “Explanatory Notes on the [CHENG WEISHI LUN](#)” (**Vijñaptimātratāsiddhi*); by the Chinese [YOGĀCĀRA](#) monk [KUIJI](#) and probably compiled sometime between 659 and 682. In his preface, Kuiji praises [VASUBANDHU](#) and his [TRIMŚIKĀ](#), [DHARMAPĀLA](#)’s **Vijñaptimātratāsiddhi* (C. *Cheng weishi lun*) and [XUANZANG](#) for translating [DHARMAPĀLA](#)’s text. Then, as do most commentaries of that period, Kuiji expounds upon the title of Dharmapāla’s text. In his subsequent introduction, Kuiji largely divides his commentary into five sections. In the first section, he ascertains the period in the Buddha’s life to which the teachings belong (see [JIAOXIANG PANSHI](#); [PANJIAO](#)) and discusses its audience, the [BODHISATTVAS](#). In the second section, Kuiji discusses the tenets of the *Cheng weishi lun*, which he subsumes under the notion of “mind-only” ([CITTAMĀTRA](#)). In third section, Kuiji demonstrates that the *Cheng weishi lun* belongs to the “one vehicle” ([EKAYĀNA](#)) and the [BODHISATTVAPITAKA](#). In the fourth section, short biographies and dates of the ten masters of the [YOGĀCĀRA](#) are provided. Kuiji then provides a detailed analysis of the *Cheng weishi lun* itself in the last section. Several commentaries on Kuiji’s text have been written throughout the ages in East Asia. The *Cheng weishi lun shu ji* also exerted a considerable amount of influence on Silla-period Korean Buddhism and among the Nara schools of early Japanese Buddhism (see [NARA BUDDHISM, SIX SCHOOLS OF](#)).

Chian. (K) (志安). See [HWANSŎNG CHIAN](#).

Chijang. (C. Dizang 地藏) (628–726). A Korean monk of the Silla dynasty, also known as [KIM KYOGAK](#), who was closely associated with the cult of [KSITIGARBHA](#) (K. Chijang) on the Chinese sacred mountain of [JIUHUASHAN](#). According to his biography in the [SONG GAOSENG ZHUAN](#) (“Biographies of Eminent Monks Compiled During the Song Dynasty”); Kim was a scion of the Silla royal family, who ordained as a Buddhist monk at around the age of twenty-three and then traveled to Tang China on pilgrimage. Eventually arriving at Jiuhuashan in southeastern China, Chijang ended up residing there for some seventy-five years. Chijang is said to have spent his time in meditation, surviving by eating only rice that he cooked together with “white soil” (perhaps lime or gypsum). Deeply moved by his asceticism, the laity decided to build a large monastery for him. Around 780 CE, Zhang Gongyan brought the new name plaque for Chijang’s monastery, designating it Huachengsi, and many laypeople

made the arduous journey from Silla Korea to visit. In the summer of 803 CE, at the age of ninety-nine, Chijang bid farewell to his congregation, sat down in full lotus position, and passed away. His corpse was placed in seated position inside a coffin but even after three years it had not decayed and his face still looked as if he were alive. People eventually came to believe that he was the manifestation of his namesake, the [BODHISATTVA KSITIGARBHA](#) (K. Chijang). A shrine hall, named Dizang dian (K. Chijang chŏn), was built on the site where he died, which could only be reached by pulling oneself by rope up eighty-one precarious stone steps.

[Chikchisa](#). (直指寺). In Korean, “Direct Pointing Monastery”; the eighth district monastery ([PONSA](#)) of the contemporary [CHOGYE CHONG](#) of Korean Buddhism, located on Mount Hwangak in North Kyŏngsang province. The monastery purports to have been founded in 418 CE by the Koguryŏ monk Ado (fl. c. 418). There are three different stories about how the monastery got its name. The first version states that the name originated when Ado pointed directly at Mount Hwangak and said, “At that place, a large monastery will be established.” The second story says that a monk called Nŭngyŏ (fl. c. 936) laid out the monastery campus using only his hands and without using any other measuring devices; hence, the monastery was given the name “Direct Measuring” (chikchi). A third story connects the name to the famous line concerning the soteriological approach of the [SŎN](#) or [CHAN](#) school: “direct pointing to the human mind” (K. chikchi insim; C. [ZHIZHI RENXIN](#)). With the support of the Koryŏ king Taejo (r. 918–943), Nŭngyo restored the monastery in 936; major renovations followed in the tenth century and again during the Chosŏn dynasty. In 1595, during the Japanese Hideyoshi invasions, all its buildings except the Ch’ŏnbul Chŏn (Thousand Buddhas Hall), Ch’ŏnwang Mun (Heavenly Kings Gate), and Chaha Mun (Purple-Glow Gate) were burned to the ground. The monastery was rebuilt in a massive construction project that began in 1602 and lasted for seventy years. The monastery enshrines many treasures, including a seated figure of the healing buddha [BHAIJAGURU](#) and a hanging picture of a Buddha triad (Samjonbul [T’AENGHWA](#)). Two three-story stone pagodas are located in front of the main shrine hall ([TAEUNG CHŎN](#)) and other three-story pagodas are located in front of the Piro chŏn ([VAIROCANA](#) Hall).

[Chikchi simch’e yojŏl](#). (K) (直指心體要節). See [PULCHO CHIKCHI SIMCH’E YOJŎL](#).

[’Chi med lha khang](#). (Chime Lhakang). A small temple founded in 1499 near

Punakha in central Bhutan, dedicated to the mad [YOGIN 'BRUG PA KUN LEGS](#), who is believed to have stayed there.

[Chims](#) [alt. Mchims] 'Jam pa'i dbyangs.(d. 1267). A Tibetan scholar who is renowned as the author of the *Chos mngon pa mdzod kyi tshig le'ur byas pa'i 'grel pa mngon pa'i rgyan*, better known by its abbreviation *Chims mdzod*, an extensive commentary on Vasubandhu's [ABHIDHARMAKOSĀBHĀSYA](#). His commentary was widely used for detailed study of [ABHIDHARMA](#) in large [DGE LUGS](#) monasteries in Tibet.

Chims phu. [alt. Mchims phu]. A conglomeration of meditation caves and hermitages on the side of a low ridge near **BSAM YAS** monastery south of **LHA SA**; also known as Mchims phu. It forms one of central Tibet's most important and active pilgrimage sites. The location's principal cave, Brag dmar ke'u tshang (Drakmar Ke'utsang), is one of eight major centers connected with **PADMASAMBHAVA**, and is considered the representation of the Indian master's speech. It is identified as the place where Padmasambhava first gave the instructions known as the "eight transmitted precepts of attainment" (**SGRUB PA BKA' BGYAD**) to his eight main disciples, including the Tibetan king **KHRI SRONG LDE BTSAN**. It is also the location where Padmasambhava resurrected Khri srong lde btsan's young daughter **PADMA GSAL**, and gave her the teachings of the **MKHA' 'GRO SNYING THIG** for the first time. The Chims phu complex also contains a natural representation of Padmasambhava's pure land, **ZANGS MDOG DPAL RI**, the glorious copper-colored mountain, as well as meditation caves of **YE SHES MTSHO RGYAL**, **VAIROCANA**, and **KLONG CHEN RAB 'BYAMS**, who died there. Many of the caves and hermitages at Chims phu are still used for meditation retreat by Tibetan men and women.

Chin'gak Hyesim. (眞覺慧諶) (1178–1234). Korean **SŎN** master during the Koryŏ dynasty, also known as Yŏngŭl and Muŭija. Although he sought to ordain as a monk at an early age, his mother adamantly opposed his wish and he instead studied to become a Confucian literatus. It was not until 1202, after his mother's death, that he finally was able to join the **SUSŎNSA** community established by **POJO CHINUL** and become his principal disciple. Hyesim was known for his intense style of practice: he is said, for example, to have been so absorbed in his meditation while he was at **CHIRISAN** that snow had piled up to his head. Although Chinul had decided to pass the leadership of his community on to Hyesim in 1208, Hyesim declined and went into hiding on Chirisan. In 1210, when Chinul passed away, some of his disciples notified the king of their master's death and he issued a royal decree, ordering Hyesim to return to Susŏnsa and succeed Chinul. Hyesim thus became the second teacher of the Susŏnsa community. He spent the rest of his life building the community and teaching the kanhwa Sŏn (see **KANHUA CHAN**), or "questioning meditation," technique that Chinul had first championed in Korea. Hyesim compiled the first indigenous kongan (C. **GONG'AN**) collection, the **SŎNMUN YŎMSONG CHIP**, and the emphasis on kanhwa Sŏn in subsequent Korean Buddhist practice owes much to

his fervent advocacy of the technique. Hyesim passed away at the age of fifty-seven and received the posthumous title Chin'gak kuksa (State Preceptor Authentic Enlightenment). His other works include the [CHOGYE CHIN'GAK KUKSA ÖROK](#) and the *Sönmun gangyo*.

[Chin'gam Hyeso](#). (眞鑑慧昭) (774–850). A Korean [SÖN](#) master and pilgrim during the Silla dynasty, also known as Chin'gam Sönsa. Hyeso is famous for introducing a traditional Indian Buddhist chanting style (K. pömp'ae; C. [FANBAI](#)) to Korea. In 804, Hyeso accompanied the official embassy to China, where he studied under a disciple of the eminent [CHAN](#) master [MAZU DAOYI](#) in the [HONGZHOU](#) school of early Chan. In China, Hyeso is said to have been often referred to as the Sage of the East (Dongfang shengren) and the Black-Headed Ascetic (Heidoutuo) because of his dark skin. In 810, Hyeso received full monastic precepts at the monastery of [SHAOLINSI](#) on [SONGSHAN](#), where he met a fellow Korean monk TOŪI. Hyeso later traveled to Zhongnanshan, where he practiced [ŚAMATHA](#) and [VIPAŚYANĀ](#) meditation for three years. In 830, he returned to Korea and became the king's personal teacher. He later established the monasteries of Changbaeksa on Söraksan and Okch'önsa on [CHIRISAN](#), where he constructed an image hall for the sixth patriarch ([LIUZU](#)) [HUINENG](#). King Chönggang (r. 886–887) gave him the posthumous title Chin'gam (True Mirror) and changed the name of his monastery from Okch'önsa to [SSANGGYESA](#) (Paired Brooks Monastery). Hyeso is also renowned for introducing tea and tea culture to the Korean peninsula and green tea from the mountains surrounding [SSANGGYESA](#) is still renowned in Korea for its quality. Chin'gam Hyeso is also reputed to have introduced the distinctive “Indian style” of chanting to Korea around 830, and current pömp'ae specialists trace their lineage back to him.

[Chinhŭng wang](#). (眞興王) (534/540–576). Twenty-fourth king of the Korean Silla dynasty; his secular name was Kim Kongnŭngjong and his dharma name, Pöbun (Dharma Cloud). He succeeded King Pöphŭng at the age of seven and reigned for thirty-six years (r. 540–576). Later in his life he became a Buddhist monk and promoted the propagation of Buddhism in Silla. Following his footsteps, his queen, Lady Sado, also entered the [SAMGHA](#) and received the dharma name Myoju (Sublime Dwelling); she resided at a monastery called Yönghŭngsa. King Chinhŭng's reign is considered to be a turning point in the development of Buddhism in Silla. King Chinhŭng ordered the construction of the royal monastery Hŭngnyunsa, and after its completion allowed commoners

for the first time to enter the saṃgha. At his request, the hundred high-seat ceremony (paekkojwa pŏphoe) for the recitation of the [RENWANG JING](#) as well as the eight restrictions festival ([P'ALGWANHOE](#); cf. C. [BAGUAN ZHAI](#)) were held for the first time in Silla. [HWANGNYONGSA](#), the grandest monastery in Korea, was also built during his reign.

[Chinjong](#). (K) (震鐘). See [YONGSŎNG CHINJONG](#).

[Chinmyŏng Honwŏn](#). (眞明混元) (1191–1271). A Korean [SŎN](#) master during the Koryŏ dynasty. Honwŏn was ordained in 1203 and studied under various teachers before visiting the Sŏn master [CHIN'GAK HYESIM](#). He began his training in Sŏn ([CHAN](#)) meditation under Hyesim's disciple Mongyŏ (d. 1252), who became the third state preceptor (kuksa, C. [GUOSHI](#)) to lead the [SUSŎNSA](#) community established by [POJO CHINUL](#). Honwŏn eventually became Mongyŏ's disciple. In 1245, Honwŏn was invited by the powerful military commander Ch'oe U (d. 1249) to the newly founded monastery of Sŏnwŏnsa that he had established in the Koryŏ capital of Kaesŏng. There, Honwŏn attracted many talented disciples including [CH'UNGGYŎNG CH'ŎNYŎNG](#). When Mongyŏ passed away in 1252, Honwŏn became the fourth state preceptor of Susŏnsa, but he quickly abdicated this position to his disciple Ch'ŏnyŏng in 1259 to become the personal teacher of the king (wangsa). He was later given the posthumous title Chinmyŏng (True Illumination).

[Chinp'yo](#). (眞表) (fl. c. eighth century). Korean [VINAYA](#) master (yulsa) during the Silla dynasty. Chinp'yo was a native of Mangyŏng county in Wansan province (present-day Chŏnju). According to legend, Chinp'yo is said to have been a student of a certain dharma master named Sungje (d.u.) of the monastery of [KŬMSANSA](#), and was himself responsible for a major expansion of the monastery that took place between 762 and 766. Sungje, who purportedly studied under the eminent Chinese monk [SHANDAO](#), informed Chinp'yo of his vision of [MAÑJUŚRĪ](#) on [WUTAISHAN](#), after which Chinp'yo decided to devote himself to the practice of body-discarding repentance (mangsinch'am) at Pusaŭiam (Inconceivable Hermitage). In 740, after seven nights of ascetic repentance, Chinp'yo had a vision of the [BODHISATTVA KṢITIGARBHA](#). Chinp'yo continued his training at the monastery Yŏngsansa, where he had a vision of the bodhisattva [MAITREYA](#). From Maitreya, Chinp'yo received the divination scripture, [ZHANCHA SHANE YEBAO JING](#), and 189 divination sticks made of sandalwood, two of which were said to have been made of Maitreya's fingers. In 766, he began teaching at

Kūmsansa, where he installed six gilded images of Maitreya in the main shrine hall ([TAEUNG CHŎN](#)). King Kyōngdōk (r. 742–764) later invited Chinp’yo to the palace and received the bodhisattva precepts (K. posal kye, C. [PUSA JIE](#)). Chinp’yo had many disciples, among whom Yōngsim (d.u.) is most famous.

Chinul. (K) (知訥). See [POJO CHINUL](#).

chinyōng. (C. zhenying; J. shin’ei 眞影). In Korean, lit. “true image”; viz., a “monk’s portrait.” Although the term is known throughout the East Asian Buddhist traditions, it is especially associated with Korea; the related term [DINGXIANG](#) (J. chinzō, lit. “head’s appearance”) is more typically used within the Chinese and Japanese traditions. The employment of the term chinyōng in Korea is a late Chosŏn dynasty development; different terms were used in Korea before that era to refer to monk’s portraits, including chinhyōng (“true form”), sinyōng (“divine image”), chinyong (“true appearance”) and yōngja (“small portrait image”). “Chin” (“true”) in the compound refers to the inherent qualities of the subject, while “yōng” (“image”) alludes to his physical appearance; thus, a chinyōng is a portrait that seeks to convey the true inner spirituality of the subject. Images of eminent masters who had been renowned patriarchs of schools, courageous monk soldiers, or successful fund-raisers were enshrined in a monastery’s portrait hall. These portraits were painted posthumously—and, unlike Chinese dingxiang portraits, typically without the consent of the subjects—as one means of legitimizing the dharma-transmission lineage of their religious descendants; this usage of portraits is seen in both meditation ([SŎN](#)) and doctrinal ([KYO](#)) monasteries. Korean monk portraits were not given out to individual disciples or lay adherents, as occurred in Chinese and Japanese Buddhism, where dozens and even hundreds of portraits were produced by and for a variety of persons. In the context of the Korean Sŏn school, the pictures additionally enhanced the Sŏn Buddhist emphasis on the direct spiritual transmission (see [YINKE](#)) between master and disciple. The development of monk portraiture was closely tied to annual commemorative practices in Buddhist monasteries, which sought to maintain the religious bonds between the dharma ancestors and their descendants.

Chion’in. (知恩院). In Japanese, “Knowing Beneficence Cloister”; the headquarters of the [JŌDOSHŪ](#), or [PURE LAND](#) school of Japanese Buddhism, which was founded by [HŌNENS](#) (1133–1212); located in the Higashiyama district of Kyōto. Chion’in was the site where Hōnen taught and where he died after a long

period of fasting. His disciple Genchi (1183–1238) built the complex in his honor in 1234 and, still today, a statue of Hōnen is enshrined in the founder’s hall. Most of the monastery was destroyed by fire in 1633, but the third Tokugawa shōgun rebuilt the monastery in the middle of the seventeenth century with the structures present today. These include the main gate, or sanmon, built in 1619 and the largest gate of this type in Japan at seventy-nine feet tall. The oldest building on the monastery campus is the hondō, or main Buddha hall, built in 1633, which can hold three thousand people. Guesthouses from 1641 are roofed in the Irimoya style, and the roof beams on many of the buildings are capped with the Tokugawa three-hollyhock leaf crest. Various hallways in the monastery have also been built with “nightingale floors” (J. *uguisubari*)—floorboards with metal ends that rub on metal joints when someone walks across them, making them extremely squeaky. This flooring was specifically designed to sound an alarm in case any assassin might try to sneak into the sleeping quarters when the Tokugawa family stayed over at the monastery. The monastery’s bell was cast in 1633 and weighs seventy-four tons; it is so massive that it takes seventeen monks to ring it when it is rung annually on New Year’s Day.

Chirisan. (智異山). In Korean, “Mountain of the Wise and Extraordinary [Bodhisattva]” (though the term more probably means “round mountain”; see below); a Buddhist sacred mountain and the second highest mountain in Korea (its highest peak is Ch’onwangbong at 5,745 ft./1,915 m.) after Hallasan. Chirisan is located on the southern end of the Paektu taegan, the marchmount that is regarded geographically and spiritually as the geomantic “spine” of the Korean peninsula, and is the widest and highest section of the Sobaeksan subrange. Chiri Mountain stretches across the three southernmost provinces of the Korean peninsula: North Chōlla, South Chōlla, and South Kyōngsang and has been considered a place where the [BODHISATTVA MAÑJUŚRĪ](#) is constantly preaching. Because of this association, Buddhists have traditionally interpreted the Chinese characters used to transcribe the mountain’s name Chiri as deriving from the -ri in the Sino-Korean transcription of Mañjuśrī’s name (K. Munsusari) combined with the character *chi(-ji)* in his epithet “He of Great Wisdom” (Taeji); the near-homophone *i* (“extraordinary”) was ultimately substituted for the character -ri to indicate that Mañjuśrī represents himself in various “extraordinary” guises in order to save sentient beings. Recent research by historical linguists has, however, called this Buddhist parsing of the name into

question. One of the earliest names found in Korean sources for the mountain is Turyu (lit. “Head Flowing”), which seems to be a transcription using Sinographs of the indigenous Korean word *turu* (now the adverb “widely” but previously used as an adjective meaning “round”), which in the local dialect changed from *turuto turi*, *tŭri*, *tiri*, to finally *chiri*. Hence, Chirisan is actually the transcription of an indigenous Korean word meaning “round mountain,” referring to the many rounded peaks, punctuated by winding valleys, that dominate the massif. Chirisan’s steepest summit is Ch’onwangbong Peak (5,745 ft/1,915 m) in the north, but its principal peaks include Songnisan (3,171 ft./1,057 m) in the south, Nogodan (4,521 ft/1,507 m) in the west, and Panyabong (5,271 ft/1,751 m) in the north central region of the massif. Chirisan has long been considered one of the “three spiritual mountains” (*samsinsan*) of Korea, along with [KŬMGANGSAN](#) and Hallasan, and has been a major center of Buddhist practice on the peninsula. There are currently 350 to 400 monasteries and hermitages on Chirisan, the three largest of which are [HWAÖMSA](#), [SSANGGYESA](#), and [CHÖNŪNSA](#). Chiri Mountain is now protected as a national park, the first such designation made in Korea.

[chiroutuan](#). (J. *shakunikudan*; K. *chögyuktan* 赤肉團). In Chinese, “lump of red (viz., raw) flesh”; a [CHAN](#) expression attributed to [LINJI YIXUAN](#) (d. 867) to refer to the physical body that is constantly buffeted by the senses. Linji contrasts this lump of flesh with the “true man of no rank” (C. [WUWEI ZHENREN](#)), which is equivalent to the sentience, or numinous awareness ([LINGZHI](#)), that enables sensory experience.

[Ch’obalsim chagyöng mun](#). (初發心自警文). In Korean, “Personal Admonitions to Neophytes Who Have First Aroused the Mind,” a primer of three short texts used to train Korean postulants and novices in the basics of Buddhist morality and daily practice, compiled during the middle of the Chosŏn dynasty (1392–1910). The title of the primer is constructed by combining elements from its three constituent texts: (1) [POJO CHINUL](#)’s (1158–1210) *Kye ch’osim hagin mun* (“Admonitions to Neophytes”), a vade mecum for monastic conduct directed to novices, monks, and [SŎN](#) monks residing in the meditation hall; (2) [WÖNHYO](#)’s (617–686) [PALSIM SUHAENG CHANG](#) (“Arouse Your Mind and Practice”) (-balsim is the first two Sinographs in the title of *Palsim suhaeng chang*); and (3) Yaun Kagu’s (fl. c. 1376) *Chagyöng* or *Chagyöng mun* (“Self-Admonitions”), a set of ten behavioral codes to follow in religious development. The *Ch’obalsim Chagyöng mun* continues today to be among the very first works read by male

and female postulants in the monastic community.

Chodang chip. (C. Zutang ji; J. Sodōshū 祖堂集). In Korean, “Patriarchs’ Hall Collection”; one of the earliest “lamplight histories” ([CHUANDENG LU](#)), viz., lineage records, of the [CHAN](#) tradition, compiled in 952 by the monks Jing (K. Chǒng) (d.u.) and Yun/Jun (K. Un/Kyun) (d.u.) of the monastery of Chaojingsi in Quanzhou (in present-day Fujian province). The *Chodang chip* builds on an earlier Chan history, the [BAOLIN ZHUAN](#), on which it seems largely to have been based. According to one current theory, the original text by Jing and Yun was a short work in a single roll, which was expanded into ten rolls early in the Song dynasty and subsequently reissued in twenty rolls in the definitive 1245 Korean edition. The anthology includes a preface by the compilers’ teacher and collaborator Zhaoqing Shendeng/Wendeng (884–972), also known as the Chan master Jingxiu, who also appends verse panegyrics after several of the biographies in the collection. The *Chodang chip* provides biographies of 253 figures, including the seven buddhas of the past ([SAPTATATHĀGATA](#)), the first Indian patriarch ([ZUSHI](#)) [MAHĀKĀŚYAPA](#) up to and including the sixth patriarch ([LIUZU](#)) of Chan in China, [HUINENG](#), and monks belonging to the lineages of Huineng’s putative disciples [QINGYUAN XINGSI](#) and [NANYUE HUAIRANG](#). In contrast to the later [JINGDE CHUANDENG LU](#), the *Chodang chip* mentions the lineage of Qingyuan before that of Nanyue. In addition to the biographical narrative, the entries also include short excerpts from the celebrated sayings and dialogues of the persons it covers. These are notable for including many features that derive from the local vernacular (what has sometimes been labeled “Medieval Vernacular Sinitic”); for this reason, the text has been the frequent object of study by Chinese historical linguists. The *Chodang chip* is also significant for containing the biographies of several Silla-dynasty monks who were founders of, or associated with, the Korean “Nine Mountains School of Sōn” ([KUSAN SŌNMUN](#)), eight of whom had lineage ties to the Chinese [HONGZHOU ZONG](#) of Chan that derived from [MAZU DAOYI](#); the anthology in fact offers the most extensive body of early material on the developing Korean Sōn tradition. This emphasis suggests that the two compilers may themselves have been expatriate Koreans training in China and/or that the extant anthology was substantially reedited in Korea. The *Chodang chip* was lost in China after the Northern Song dynasty and remained completely unknown subsequently to the Chinese Chan and Japanese Zen traditions. However, the 1245 Korean edition was included as a supplement to the Koryō Buddhist canon ([KORYŌ](#)

[TAEJANGGYÖNG](#)), which was completed in 1251 during the reign of the Koryŏ king Kojong (r. 1214–1259), and fortunately survived; this is the edition that was rediscovered in the 1930s at the Korean monastery of [HAEINSA](#). Because the collection is extant only in a Koryŏ edition and because of the many Korean monks included in the collection, the *Chodang chip* is often cited in the scholarly literature by its Korean pronunciation.

[Ch’oesangsŭng non](#). (K) (最上乘論). Original Korean title of the *Xiuxin yao lun*. See [XIUXIN YAO LUN](#).

[Chogye Chin’gak kuksa ōrok](#). (曹溪眞覺國師語錄). In Korean, “Recorded Sayings of the National Master Chin’gak of Mt. Chogye”; a collection of the sayings of the Korean [SŎN](#) master [CHIN’GAK HYESIM](#). As the first and oldest recorded saying ([YULU](#)) collection in Korea, the *Chogye Chin’gak kuksa ōrok* has served as an important source for studying the early history of kongan studies in that region (see [GONG’AN](#)). The oldest extant edition of the text dates to 1526. The collection consists largely of Hyesim’s various public lectures (e.g., [SHANGTANG](#), shizhong, and [FAYU](#)), private lessons ([DUJIS](#), xiaocan, and [AGYO](#)), and letters to his students. Many of his lectures are concerned with the famous kongan attributed to [ZHAOZHOU CONGSHEN](#), wherein Zhaozhou offers the reply “wu” (“no”) to the question, “Does a dog have buddha nature, or not?” (see [GOUZI WU FOXING](#)).

[Chogye chong](#). (曹溪宗). In Korean, the “Chogye order”; short for Taehan Pulgyo Chogye chong (Chogye Order of Korean Buddhism); the largest Buddhist order in Korea, with and some fifteen thousand monks and nuns and over two thousand monasteries and temples organized around twenty-five district monasteries ([PONSA](#)). “Chogye” is the Korean pronunciation of the Chinese Caoxi, the name of the mountain ([CAOXISHAN](#)) where the sixth patriarch ([LIUZU](#)) of [CHAN](#), [HUINENG](#), resided; the name is therefore meant to evoke the order’s pedigree as a predominantly Chan (K. [SŎN](#)) tradition, though it seeks also to incorporate all other major strands of Korean Buddhist thought and practice. The term Chogye chong was first used by the Koryŏ monk [ŬICHŎN](#) to refer to the “Nine Mountains school of Sŏn” ([KUSAN SŎNMUN](#)), and the name was used at various points during the Koryŏ and Chosŏn dynasties to designate the indigenous Korean Sŏn tradition. The Chogye order as it is known today is, however, a modern institution. It was formed in 1938 during the Japanese colonial administration of Korea, a year after the monastery of T’aegosa was

established in central Seoul and made the new headquarters of Chosŏn Buddhism (Chosŏn Pulgyo ch'ongbonsan). This monastery, later renamed [CHOGYESA](#), still serves today as the headquarters of the order. The constitution of the order traces its origins to Toŭi (d. 825), founder of the Kajisan school in the Nine Mountains school of Sŏn; this tradition is said to have been revived during the Koryŏ dynasty by [POJO CHINUL](#), who provided its soteriological grounding; finally, the order's lineage derives from [T'AEGO POU](#), who returned to Korea at the very end of the Koryŏ dynasty with dharma transmission in the contemporary Chinese [LINJI ZONG](#). In 1955, following the end of the Korean War, Korean Buddhism entered into a decade-long "purification movement" (chŏnghwa undong), through which the celibate monks (pigu sŭng) sought to remove all vestiges of Japanese influence in Korean Buddhism, and especially the institution of married monks (taech'ŏ sŭng). This confrontation ultimately led to the creation of two separate orders: the Chogye chong of the celibate monks, officially reconstituted in 1962, and the much smaller [T'AEGO CHONG](#) of married monks.

[Chogye order](#). See [CHOGYE CHONG](#).

[Chogyesa](#). (曹溪寺). In Korean, "Chogye Monastery"; the administrative headquarters of the [CHOGYE CHONG](#), the largest Buddhist order in contemporary Korea, and its first district monastery ([PONSA](#)). In an attempt to unify Korean Buddhist institutions during the Japanese colonial period, Korean Buddhist leaders prepared a joint constitution of the [SŌN](#) and [KYO](#) orders and established the Central Bureau of Religious Affairs (Chungang Kyomuwŏn) in 1929. Eight years later, in 1937, the Japanese government-general decided to help bring the Buddhist tradition under centralized control by establishing a new headquarters for Chosŏn Buddhism (Chosŏn Pulgyo Ch'ongbonsan) in the capital of Seoul. With financial and logistical assistance from the Japanese colonial administration, the former headquarters building of a proscribed Korean new religion, the Poch'ŏn'gyo, was purchased, disassembled, and relocated from the southwest of Korea to the site of Kakhwangsa in the Chongno district of central Seoul. That new monastery was given the name T'aegosa, after its namesake [T'AEGO POU](#), the late-Koryŏ Sŏn teacher who received dharma transmission in the Chinese [LINJI ZONG](#). After the split in 1962 between the celibate monks of the Chogye chong and the married monks (taech'ŏ sŭng), who organized themselves into the [T'AEGO CHONG](#), T'aegosa was renamed Chogyesa, from the name of the

mountain where the sixth patriarch ([LIUZU](#)) of Chan, [HUINENG](#), resided (see [CAOXISHAN](#)). This monastery continues to serve today as the headquarters of the Chogye chong. In addition to the role it plays as the largest traditional monastery in the city center of Seoul, Chogyesa also houses all of the administrative offices of the order.

[chöl](#). Vernacular Korean term for a Buddhist “monastery” and the indigenous Korean equivalent of the Sino-Korean term sach’al (see, e.g., [SAMBO SACH’AL](#)). The derivation of the term is uncertain: some historical linguists derive it by metonymy as a place where “bows” (chöl) are performed; others scholars, from the Pāli/Prakrit term THERA (elder). Cf. [TERA](#).

[Ch’önch’aek](#). (天頊) (1206–?). The fourth patriarch of the Korean White Lotus Society (PAENGNŶON KYŎLSA) during the middle of the Koryŏ dynasty; also known as State Preceptor Chinjŏng (“True Calmness” or “True Purity,” using homophonous Sinographs). Ch’önch’aek was a descendent of a Koryŏ merit official, who devoted himself to Confucian studies from a young age and passed the civil-service examinations at the age of twenty. At twenty-three, he became a monk under the tutelage of State Preceptor [WŎNMYO YOSE](#) (1163–1245), the founder of the White Lotus Society (cf. [BAILIAN SHE](#)) at Mount Mandŏk in T’amjin county (present-day Kangjin in South Chŏlla province), and subsequently assisted his teacher Yose in the Society’s campaign. In 1244, Ch’önch’aek traveled to Mimyŏnsa on Mount Kongdŏk in Sangju county (present-day Mun’gyŏng in North Kyŏngsang province) to open and lead the society there at the request of the renowned magistrate of Sangju, Ch’oe Cha (1188–1260). The Kongdŏksan branch of the society was called the East White Lotus; the Mandŏksan branch was by contrast called the South White Lotus. In the late 1250s or early 1260s, Ch’önch’aek returned to Mandŏksan to become the fourth patriarch of the White Lotus Society. He later retired to Yonghyŏram (Dragon Cavity Hermitage) on Mount Tŏngnyong, south of Mandŏksan, where he continued an active correspondence with literati. Indeed, Ch’önch’aek maintained close associations with several of the famous literati of his time and invited them to participate in the activities of the White Lotus Society. Ch’önch’aek’s thought reflects the historical realities of Korea during the Mongol invasion. In his letters to civil and military officials, Ch’önch’aek opined that killing the invading Mongol army would be an appropriate act for a [BODHISATTVA](#), because it would stop the invaders from performing evil actions

that would lead them to endless suffering in the hells. His *Haedongjŏn hongnok* (“Extended Record of the Transmission [of Buddhism] in Korea”), a four-roll collection of miracle tales related to worship of the [SADDHARMAPUNḌARĪKASŪTRA](#) (“Lotus Sūtra”), sought to popularize that scripture also in order to help bring peace to the Korean peninsula. Ch’ŏnch’aek’s literary talent was so renowned that the famous Chosŏn literatus Chŏng Yagyong (1762–1836) counted him among the three greatest writers of the Silla and Koryŏ dynasties. Ch’ŏnch’aek’s works, none of which are extant in full, include the *Haedongjŏn hongnok* and his literary collection, the *Hosan nok* (“Record of Lakes and Mountains”). Authorship of the [SŎNMUN POJANGNOK](#) is attributed to Ch’ŏnch’aek, although this attribution is still in question.

Chongfasi. (崇法寺). In Chinese, “Esteeming the Dharma Monastery”; Song dynasty name for [WUZHENSI](#).

Chŏngho. (K) (鼎鎬). See [HANYŎNG](#).

Ch’ŏnghŏ Hyujŏng. (清虛休靜) (1520–1604). Korean [SŎN](#) master of the Chosŏn dynasty; best known to Koreans by his sobriquet Sŏsan taesa (lit. the Great Master “West Mountain,” referring to Mt. Myohyang near present-day P’yŏngyang in North Korea). Hyujŏng was a native of Anju in present-day South P’yŏngan province. After losing his parents at an early age, Hyujŏng was adopted by the local magistrate of Anju, Yi Sajŭng (d.u.), and educated at the Sŏnggyun’gwan Confucian academy. In 1534, Hyujŏng failed to attain the chinsa degree and decided instead to become a monk. He was ordained by a certain Sungin (d.u.) on [CHIRISAN](#) in 1540, and he later received the full monastic precepts from Hyuong Ilsŏn (1488–1568). Hyujŏng later became the disciple of the Sŏn master Puyong Yŏnggwan (1485–1571). In 1552, Hyujŏng passed the clerical exams ([SŬNGKWA](#)) revived by [HŎUNG POU](#), who later appointed Hyujŏng the prelate (p’ansa) of both the [SŎN](#) and [KYO](#) traditions. Hyujŏng also succeeded Pou as the abbot of the monastery Pongŭnsa in the capital, but he left his post as prelate and spent the next few years teaching and traveling throughout the country. When the Japanese troops of Hideyoshi Toyotomi (1536/7–1598) invaded Korea in 1592, Hyujŏng’s disciple Kihŏ Yŏnggyu (d. 1592) succeeded in retaking the city of Ch’ŏngju, but died shortly afterward in battle. Hyujŏng himself was then asked by King Sŏnjo (r. 1567–1608) to lead an army against the invading forces. His monk militias (ŭisŭnggun) eventually played an important role in fending off the Japanese troops. When the king subsequently

gave Hyujŏng permission to retire, the master left his command in the hands of his disciple [SAMYŎNG YUJŎNG](#); he died shortly thereafter. Hyujŏng is said to have had more than one thousand students, among whom Yujŏng, P’yŏnyang Ŭn’gi (1581–1644), Soyo T’aenŭng (1562–1649), and Chŏnggwan Ilsŏn (1533–1608) are best known. Hyujŏng left a number of writings, including the [SŎN’GA KWIGAM](#), which is one of the most widely read works of the Korean Buddhist tradition. Other important works include the *Samga kwigam*, *Sŏn’gyo sŏk*, *Sŏn’gyo kyŏl*, and *Sŏlsŏn ũi*. In these works, Hyujŏng attempted to reconcile the teachings of the Sŏn and Kyo traditions of Buddhism, as well as the doctrines of Buddhism and Confucianism.

[Chonghŏn](#). (K) (宗憲). See [MANAM CHONGHŎNS](#).

[Chŏnghye Kyŏlsa](#). (定慧結社). In Korean, the “[SAMĀDHI](#) and [PRAJÑĀ](#) Society”; an important Korean “retreat society” (kyŏlsa; C. JIESHI) during the Koryŏ dynasty. The first Samādhi and Prajñā Society was established by the Korean [SŎN](#) master [POJO CHINUL](#) at the monastery of Kŏjosa on Mt. Kong in 1188. At the invitation of a monk by the name of Tŭkchae (d.u.), Chinul and a handful of monks gathered at Kŏjosa in 1188 and formally began their retreat two years later in 1190. Throughout the retreat, Chinul continued to invite willing participants, both clergy and laity, to join the community. Among the most renowned of these recruits was the Korean [CHŎNT’AE CHONG](#) ([TIAN TAI ZONG](#)) adept [WŎNMYO YOSE](#) (1163–1240). Seven years later, in 1197, the community had grown to such a size that Chinul began looking for a larger, more suitable site to relocate the community. A small, dilapidated monastery known as Kilsangsa on Mt. Songgwang was chosen as the new site, and reconstruction of the temple began immediately. King Hŭijong (r. 1204–1211) later renamed Kilsangsa [SUSŎNSA](#), or Sŏn Cultivation Community; it is now the major monastery of [SONGGWANGSA](#), the so-called Saṃgha-Jewel monastery (Sŭngbo sach’al) of Korean Buddhism. Chinul’s first composition, the *Kwŏn su Chŏnghye kyŏlsa mun* (“Encouragement to Practice: The Compact of the Samādhi and Prajñā Society”), written in 1290, provides the rationale behind the establishment of the community and critiques [PURE LAND](#) adepts who claim that buddhahood cannot be achieved in the present lifetime.

[chongjŏng](#). (宗正). In Korean, “supreme patriarch” (lit. “primate of the order”); the spiritual head of the [CHOGYE CHONG](#) (Chogye order) of Korean Buddhism. The term chongjŏng first began to be used in Korean Buddhism during Japanese

colonial rule (1910–1945) and has continued to be employed since 1954 when the celibate monks (pigu sŭng) established an independent Chogye order, which eventually excluded the married monks (taech'ŏ sŭng) who had dominated monastic positions during the colonial period. A Korean Supreme Court ruling in 1962 ultimately gave the celibate monks title to virtually all the major monasteries across the nation and led to the Chogye order's official re-establishment as the principal ecclesiastical institution of Korean Buddhism, with the chongjŏng serving as its primate. The married monks subsequently split off from the Chogye order to form the independent [T'AEGO CHONG](#). ¶ To be selected as chongjŏng, a candidate must be a minimum of sixty-five years of age and have been a monk for at least forty-five years; his rank in the Chogye order must be that of Taejongsa (great master of the order), the highest of the Chogye order's six ecclesiastical ranks. To select the chongjŏng, a committee of seventeen to twenty-five monks is appointed, which includes the Chogye order's top executive (ch'ongmuwŏnjang), council representative (chonghoe ũijang), and head vinaya master (hogye wiwŏnjang); the selection is finalized through a majority vote of the committee members. The chongjŏng is initially appointed for a five-year term and is eligible for reappointment for one additional term. The contemporary Chogye order counts Wŏnmyŏng Hyobong (1888–1966), appointed in 1962, as its first chongjŏng.

[Chŏngjung Musang](#). (C. Jingzhong Wuxiang; J. Jōshu Musō 淨衆無相) (680–756, alt. 684–762). Korean-Chinese [CHAN](#) master of the Tang dynasty; because he was of Korean heritage, he is usually called Musang in the literature, following the Korean pronunciation of his dharma name, or Master Kim (K. Kim hwasang; C. Jin heshang), using his Korean surname. Musang is said to have been the third son of a Silla king and was ordained in Korea at the monastery of Kunnamsa. In 728, he arrived in the Chinese capital of Chang'an (present-day Xi'an) and had an audience with the Tang emperor Xuanzong (r. 712–756), who appointed him to the monastery of Chandingsi. Musang subsequently traveled to Chu (in present-day Sichuan province) and became a disciple of the monk Chuji (alt. 648–734, 650–732, 669–736), who gave him dharma transmission at the monastery of Dechunsi in Zizhou (present-day Sichuan province). He later resided at the monastery of Jingzhongsi in Chengdu (present-day Sichuan province; later known as [WANFOSI](#)), which gave him his toponym Chŏngjung (C. Jingzhong). Musang became famous for his ascetic practices and meditative prowess. Musang also began conferring a unique set of precepts known as the

three propositions ([SANJU](#)): “no recollection” (*wuji*), which was equated with morality ([ŚĪLA](#)); “no thought” ([WUNIAN](#)) with concentration ([SAMĀDHI](#)); and “no forgetting” (*mowang*) with wisdom ([PRAJÑĀ](#)). He also taught a practice known as [YINSHENG NIANFO](#), a method of reciting the name of the Buddha by extending the length of the intonation. Musang’s prosperous lineage in Sichuan came to be known as the [JINGZHONG ZONG](#) line of Chan. Musang seems to have taught or influenced several renowned Chan monks, including [HEZE SHENHUI](#) (668–760), [BAOTANG WUZHU](#) (714–774), and [MAZU DAOYI](#) (707–786); he also played an important role in transmitting Chan to Tibet in the 750s and 760s.

[ch’ongnim](#). ([叢林](#)). In Korean, lit., “dense grove”; a large, ecumenical monastery. In Korea, the term *ch’ongnim* is used in the contemporary [CHOGYE CHONG](#) to refer to a handful of major monasteries that are able to provide training in the full range of practices that exemplify the major strands of the Korean Buddhist tradition, including [SŎN](#) meditation, [KYO](#) (and especially *Hwaŏm*, C. [HUAYAN](#)) doctrine, [PURE LAND](#) recitation of the buddha [AMITĀBHA](#)’s name (K. *yŏmbul*; see [NIANFO](#)), and [VINAYA](#) (monastic discipline) observance. While most monasteries are primarily devoted to one or another of these types of training, a *ch’ongnim* serves as a center where all can be practiced. These monasteries thus typically are larger comprehensive training centers, with a meditation hall (*sŏnbang*) and a monks’ seminary or lecture hall (*kangwŏn*) on the campus; additionally, their spiritual head is called a *pangjang* (C. [FANGJANG](#)) rather than the usual *chosil* (“occupant of the patriarchs’ room”). A monastery designated as a *ch’ongnim* receives a second name, most of which designate the mountain at which they are located. The five current Korean *ch’ongnims* are [HAEINSA](#) (also known as the *Haein Ch’ongnim*), [SONGGWANGSA](#) (*Chogye Ch’ongnim*), [T’ONGDOSA](#) (*Yŏngch’uk Ch’ongnim*), [SUDŎKSA](#) (*Tŏksung Ch’ongnim*), and [PAEGYANGSA](#) (*Kobul Ch’ongnim*). See also [CONGLIN](#).

[Ch’ŏnt’ae chong](#). (C. *Tiantai zong*; J. *Tendaishū* 天台宗). In Korean, “Altar of Heaven order”; a new order of Korean Buddhism, founded in 1966 by *Wŏn’gak Sangwŏl* (1911–1974). Despite the order’s name, which evokes that of the Chinese [TIANTAI ZONG](#), the *Ch’ŏnt’ae chong* is not heavily beholden to traditional *Tiantai* (K. *Ch’ŏnt’ae*) doctrine and practice but is a thoroughly modern order, which seeks to respond to contemporary religious and social concerns. The school professes “*aeguk Pulgyo*” (*patriotic Buddhism*), which purports to contribute to the development of the nation through personal

cultivation and social-welfare activities. Its primary method of spiritual cultivation involves the repetitive recitation of the name of Kwanseŭm posal ([AVALOKITEŚVARA](#) bodhisattva), based in part on the constant-action [SAMĀDHI](#) (K. sanghaeng sammae; C. changxing sanmei), one of the four kinds of samādhi attributed to the Chinese [TIANTAI](#) monk [TIANTAI ZHIYI](#) (538–597). The Ch’önt’ae order introduced a few distinctive elements that distinguish it from other Korean Buddhist orders, e.g., (1) all its followers, whether monks, nuns, or lay people, participate together in a one-month retreat each summer and winter, although monks and nuns have an additional fifty-five day retreat period that immediately follows the winter retreat; (2) monks observe the tradition of shaving their heads, while nuns keep their hair in a small chignon in order to distinguish themselves from laywomen. Since its inception, the order has emphasized lay activities: it encourages lay people to involve themselves in administrative affairs, such as temple finance; it founded the Kŭmgang Buddhist seminary, which offers a two-year program to educate lay people on Tiantai and general Buddhist doctrines and a one-year program to train lay propagators of Buddhism (p’ogyosa); finally, the order has also established Kŭmgang University (Geumgang Daehakkyo), which offers a full range of majors in both Buddhism and secular topics. The order is also active in social activities, such as the promotion of social welfare and environmental preservation. Its major temples are the Kuinsa headquarters founded by Sangwŏl in 1945 in North Ch’ungch’ŏng province; and Samgwangsa, founded in 1969 in Pusan. The school also has overseas branches in Canada, the United States, Denmark, and Mongolia.

[Ch’öntae marhak Unmuk hwasang kyŏngch’aek](#). (天台末學雲默和尚警策). In Korean, “Admonitions of the Preceptor Unmuk, a Latter-day Scholar of Ch’önt’ae/Tiantai,” in one roll, by the late-Koryŏ monk Unmuk (d.u.; fl. late fourteenth century?). See [UNMUK](#).

[Ch’önt’ae sagyo ũi](#). (C. Tiantai sijiao yi; J. Tendai shikyōgi 天台四教儀). In Korean, the “Principle of the Fourfold Teachings of the Tiantai [School],” composed by the Korean monk Ch’egwan (d. 970); an influential primer of [TIANTAI ZONG](#) (K. Chönt’ae chong) doctrine. The loss of the texts of the Tiantai tradition in China after the chaos that accompanied the fall of the Tang dynasty prompted the king of the Wuyue kingdom to seek copies of them elsewhere in East Asia. King Kwangjong (r. 950–975) of the Koryŏ dynasty responded to the Wuyue king’s search by sending the monk Ch’egwan to China in 961. In order

to summarize the major teachings of the Tiantai school, Ch'egwan wrote this one-roll abstract of [Tiantai Zhiyi's Sijiao yi](#), which also draws on other of Zhiyi's writings, including his [FAHUA XUANYI](#). Ch'egwan's text is especially known for its summary of Zhiyi's doctrinal classification schema (see [JIAOXIANG PANSHI](#)) on the different (chronological) stages of the Buddha's teaching career and the varying methods he used in preaching to his audiences; these are called the "five periods and eight teachings" ([WUSHI BAJIAO](#)). The five periods correspond to what the Tiantai school considered to be the five major chronological stages in the Buddha's teaching career, each of which is exemplified by a specific scripture or type of scripture: (1) [HUAYAN \(AVATAMSAKASŪTRA\)](#), (2) [ĀGAMA](#), (3) [VAIPULYA](#), (4) [PRAJÑĀPĀRAMITĀ](#), and (5) [SADDHARMAPUNĀRĪKASŪTRA](#) and [MAHĀPARINIRVĀNASŪTRA](#). The different target audiences of the Buddha's message lead to four differing varieties of content in these teachings (huafa): (1) the [PITAKA](#) teachings, which were targeted at the two-vehicle adherents ([ER SHENG](#)) of disciples ([ŚRĀVAKA](#)) and solitary buddhas ([PRATYEKABUDDHA](#)); (2) the common teachings, which were intended for both two-vehicle adherents and neophyte bodhisattvas of the [MAHĀYĀNA](#); (3) the distinct teachings, which targeted only bodhisattvas; (4) the perfect or consummate teachings ([YUANJIAO](#)), which offered advanced bodhisattvas an unvarnished assessment of Buddhist truths. In speaking to these audiences, which differed dramatically in their capacity to understand his message, the Buddha is said also to have employed four principal techniques of conversion (huayi), or means of conveying his message: sudden, gradual, secret, and indeterminate. Ch'egwan's text played a crucial role in the revitalization of the Tiantai tradition in China and has remained widely studied since. The *Ch'önt'ae sagyo ũi* was also influential in Japan, where it was repeatedly republished. Numerous commentaries on this text have also been written in China, Korea, and Japan.

[Ch'önŭng](#). (K) (處能). See [PAEKKOK CH'ÖNŬNG](#).

[Chönŭnsa](#). (泉隱寺). In Korean, "Monastery of the Hidden Fount"; one of the three major monasteries located on the Buddhist sacred mountain of [CHIRISAN](#). The monastery is said to have been founded in 828 by an Indian monk named Tōgun (d.u.) and was originally named Kamnosa (either "Sweet Dew Monastery" or "Responsive Dew Monastery"), after a spring there that would clear the minds of people who drank its ambrosial waters. During the Koryŏ

dynasty, Chönŭnſa was elevated to the status of first Sŏn monastery of the South, during the rule of Ch'ŭngnyŏl wang (r. 1275–1308). Most of the monastery was destroyed during the Japanese Hideyoshi invasion (1592–1598). In 1679, a Sŏn monk named Tanyu (d.u.) rebuilt the monastery, but changed the name to Chönŭn (Hidden Fount), because the spring had disappeared after a monk killed a snake that kept showing up around it. Subsequently, fires of unknown origin repeatedly occurred in the monastery, which stopped only after hanging up a board with the name of the monastery written in the “water” calligraphic style by Wŏn'gyo Yi Kwangsa (1705–1777), one of the four preeminent calligraphers of the Chosŏn dynasty.

Ch'ŏnyŏng. (K) (天英). See [CH'UNGGYŎNG CH'ŐNYŎNG](#).

Chŏryo. (K) (節要). See [PŎPCHIP PYŎRHAENG NOK CHŎRYO PYŎNGIP SAGI](#).

chōsan. (朝參). In Japanese, lit. “morning meditation”; the morning-period [ZAZEN](#) that begins the day at a Japanese [ZEN](#) monastery.

Chos 'byung mkhas pa'i dga' ston. (Chöjung Kepe Gatön). In Tibetan, “A Scholar’s Feast of Doctrinal History”; the title of a seminal historical study of Indian and Tibetan Buddhism, composed between 1545 and 1564 by the renowned scholar [DPA' BO GTSUG LAG PHRENG BA](#). Due to the author’s lineage affiliation as an incarnation ([SPRUL SKU](#)) of the [BKA' BRGYUD](#) sect, the text emphasizes the history and doctrine of the [KARMA BKA' BRGYUD](#), tracing lines of transmission and doctrinal development, although it also addresses other Tibetan traditions more cursorily. There is an extensive section on Tibet’s early imperial period, likely written on the basis of first-hand access to many original documents, ledgers, royal receipts, and historical notes, all long since lost. This religious history is therefore held by both Tibetan and Western scholars to be an authoritative and historically reliable source. It is also known as the *Lho brag chos 'byung* (“The Lho brag History of the Doctrine”) in reference to the author’s principal seat in the region of Lho brag in southern Tibet. Its complete title is *Dam pa'i chos kyi 'khor los bsgyur ba rnams kyi byung ba gsal bar byed pa mkhas pa'i dga' ston*.

Chos grub. (Chö drup) (C. Facheng 法成) (c. 755–849). Tibetan translator of Chinese Buddhist texts into Tibetan during the early ninth century; he worked at the Chinese outpost of [DUNHUANG](#) along the [SILK ROAD](#). At the command of

King [RAL PA CAN](#), Chos grub translated what the Tibetans know as the “Great Chinese Commentary” on the [SAMDHINIRMOCANASŪTRA](#), a massive exegesis to this important [YOGĀCĀRA](#) text that was composed by the Korean commentator [WÖNCH’ÜK](#); Chos grub’s rendering was an important source for [TSONG KHA PA](#)’s *Drang nges* [LEGS BSHAD SNYING PO](#) (“Essence of Eloquence on the Definitive and Provisional”). Chos grub was also the translator of the Chinese apocryphon [YULANBEN JING](#) (“Book of the Yulan Vessel”), an influential text on the “Ghost Festival” ([YULANBEN](#)).

[Chos kyi ’byung gnas](#). (Chökyi Jungne) (1700–1774). Tibetan Buddhist scholar recognized as the eighth [TAI SITU](#) incarnation, remembered for his wide learning and his editorial work on the Tibetan Buddhist canon. He traveled extensively throughout his life, maintaining strong relationships with the ruling elite of eastern Tibet and the Newar Buddhists of the Kathmandu Valley. Born in the eastern Tibetan region of [SDE DGE](#), Chos kyi ’byung gnas was recognized as a reincarnate lama ([SPRUL SKU](#)) by the eighth [ZHWA DMAR](#), from whom he received his first vows. He would go on to study with [KAH THOG](#) Rigs ’dzin Tshe dbang nor bu (1698–1755), from whom he learned about [GZHAN STONG](#) (“other emptiness”). At the age of twenty-one, he accompanied several important Bka’ brgyud hierarchs, the Zhwa dmar and the twelfth [KARMA PA](#), to Kathmandu, a journey that was to have a profound impact on the young Si tu’s life. He returned to eastern Tibet in 1724, where he was received favorably by the king of Sde dge, Bstan pa tshe ring (Tenpa Tsering, 1678–1738). Under the latter’s patronage, Chos kyi ’byung gnas founded [DPAL SPUNGS](#) monastery in 1727, which became the new seat for the Si tu lineage (they are sometimes called the Dpal spungs si tu). Between the years 1731 and 1733, he undertook the monumental task of editing and correcting a new redaction of the [BKA’ ’GYUR](#) section of the Tibetan Buddhist canon, to be published at the printing house of Sde dge. Although in his day Tibetan knowledge of Indian linguistic traditions had waned, Chos kyi ’byung gnas devoted much of his later life to the study of Sanskrit grammar and literature, which he had first studied with Newar paṇḍitas during his time in Kathmandu. He sought out new Sanskrit manuscripts in order to establish more precise translations of Sanskrit works already translated in the Tibetan canon; he is esteemed in Tibet for his knowledge of Sanskrit grammar. In addition to his prolific scholarly work, Chos kyi ’byung gnas was an accomplished painter as well as a gifted physician, much sought after by the aristocracy of eastern Tibet. In 1748, he visited Nepal once again, where he

translated the *Svayambhūpurāṇa*, the legends concerning the [SVAYAMBHŪ STŪPA](#), into Tibetan. He was received amicably by the rulers Jayaprakāśamalla (1736–1768) of Kathmandu, Raṇajitamalla (1722–1769) of what is now Bhaktapur, and Pṛthvīnārāyaṇa Śāha, who would unify the Kathmandu Valley under Gorkhali rule several decades later. Chos kyi 'byung gnas' collected writings cover a vast range of subjects including lengthy and detailed diaries and an important history of the [KARMA BKA' BRGYUD](#) sect coauthored by his disciple Be lo Tshe dbang kun khyab (Belo Tsewang Kunkyap, b. 1718). He is retrospectively identified as an originator of what would become known as Khams [RIS MED](#) movement, which gained momentum in early nineteenth century Sde dge.

[Chosŏn Pulgyo t'ongsa](#). (朝鮮佛教通史). In Korean, “A Comprehensive History of Chosŏn Buddhism”; compiled by the Buddhist historian Yi Nūnghwa (1868–1943). Yi's *Chosŏn Pulgyo t'ongsa* is the first modern attempt to write a comprehensive history of Korean (or Chosŏn as it was then known) Buddhism. The text was first published by Sinmun'gwan in 1918. The first volume narrates the history of Korean Buddhism from its inception during the Three Kingdoms period up until the time of the Japanese occupation. Information on the temples and monasteries established by Koreans and a report on the current number of monks and nuns are also appended to end of this volume. The second volume narrates the history of Buddhism in India after the Buddha's death. The compilation of the canon ([TRIPITAKA](#); [DAZANGJING](#)) and the formation of the various schools and traditions are provided in this volume. The third and final volume provides a commentary on some of the more important events described in volume one. Yi relied heavily on biographies of eminent monks and stele inscriptions. Yi's text is still considered an important source for studying the history of Korean Buddhism.

[Chosŏn Pulgyo yusin non](#). (朝鮮佛教唯新論). In Korean, “Treatise on the Reformation of Korean Buddhism”; composed by the Korean monk-reformer [HAN YONGUN](#) in 1910. While sojourning in Japan, Han personally witnessed what to him seemed quite innovative ways in which Japanese Buddhists were seeking to adapt their religious practices to modern society and hoped to implement similar ideas in Korea. This clarion call for Buddhist reform was one of the first attempts by a Korean author to apply Western liberalism in the context of Korean society. Han attributed many of the contemporary problems Korean Buddhism was facing to its isolation from society at large, a result of the

centuries-long persecution Buddhism had suffered in Korea at the hands of Confucian ideologues during the previous Chosŏn dynasty (1392–1910). To help restore Buddhism to a central place in Korean society and culture, Han called for what were at the time quite radical reforms, including social and national egalitarianism, the secularization of the [SAMGHA](#), a married clergy, expanded educational opportunities for monks, the transfer of monasteries from the mountains to the cities, and economic self-reliance within the monastic community. Both the Japanese government-general and the leaders of the Korean Buddhist community rebuffed most of Han’s proposals (although several of his suggestions, including a married clergy, were subsequently co-opted by the Japanese colonial administration), but the issues that he raised about how to make Buddhism relevant in an increasingly secularized and capitalist society remain pertinent even to this day.

[Chos rgyam Drung pa](#). See [TRUNGPA, CHÖGYAM](#).

[Ch’oŭi Ŭisun](#). (草衣意恂) (1786–1866). Korean [SŎN](#) master of the Chosŏn period; also known as Ilchiam (“One-Finger Hermitage”). He received the full monastic precepts and the name Ch’oŭi from the monk Wanho Yunu (1758–1826). Ch’oŭi became Yunu’s disciple, and made a name for himself as an influential Sŏn master. Ch’oŭi is perhaps most renowned for his efforts to revitalize the art of tea in Korea. He developed the tea ceremony as a form of religious practice and is known for synthesizing the tea ceremony and Sŏn practice, as exemplified in his slogan *ta sŏn ilgi* (“tea and Sŏn are a single taste”). Ch’oŭi also wrote several guides to growing, preparing, and drinking tea, such as the *Tongdasong* and the *Tasin chŏn*, which is based on the Chinese classic *Wanbao quanshu*. Ch’oŭi’s other writings include a collection of his poetry, the *Ch’oŭi shigo*, and a biography of the eminent Korean monk Chinmuk Irok (1562–1633), the *Chinmuk chosa yujŏkko*. Among his writings, the *Sŏnmun sabyŏn manŏ* (“Prolix Discourse on Four Distinctive Types in the Sŏn School”) in particular played a major role in determining the future of Sŏn discourse in Korea. The text was written as a critique of [PAEKPA KŪNGSŎN](#)’s equally influential text, the *Sŏnmun sugyŏng* (“Hand Mirror on the Sŏn School”).

[chuandeng lu](#). (J. dentōroku; K. chŏndŭng nok 傳燈錄). In Chinese, “transmission of the lamplight record”; a generic term for a genre of historical writing associated with the [CHAN](#) school, or more specifically to the most representative text of that genre, the [JINGDE CHUANDENG LU](#). These so-called

“lamp” or “lamplight histories” (denglu) include the [CHODANG CHIP](#) (C. *Zutang ji*), [CHUANFA ZHENGZONG JI](#), *Tiansheng guangdeng lu*, *Wudeng huiyuan* (“Collected Essentials of the Five Lamplight Histories”), and others. These texts were composed primarily to establish a genealogical map of Chan orthodoxy and to reinforce the legitimacy for the lineages, teachings, and practices of the various Chan lines. These mature Chan histories were strongly influenced by earlier genealogical histories compiled during the Tang dynasty, such as the [CHUAN FABAO JI](#), [LENGQIE SHIZI JI](#), [LIDAI FABAO JI](#), and [BAOLIN ZHUAN](#). In these earlier texts, contending groups of masters and their disciples wove together intricate lineages that they traced back to the legendary Indian founder of Chan, [BODHIDHARMA](#), and his immediate successors. These texts began using the metaphor of a “lamplight” (deng) being transmitted from lamp to lamp to suggest the wordless, mind-to-mind transmission ([YIXIN CHUANXIN](#)) of the Buddha’s insight from master to disciple and down through the generations. These chuangdeng lu also came to serve another important purpose as the primary source of the stories about the interactions between masters and students, from which important precedents or cases ([GONG’AN](#)) were collected for contemplation or testing of meditative experience.

[chuanfa](#). (J. denbō/denpō; K. chōnpōp 傳法). In Chinese, lit., “transmit the dharma”; the transmission from master to disciple that constitutes the genealogy or lineage of different schools of Buddhism. See [CHUANDENG LU](#); [CHUANFA ZHENGZONG JI](#); [FASI](#); [YINKE](#).

[Chuan fabao ji](#). (J. Denbōhōki; K. Chōn pōppo ki 傳法寶紀). In Chinese, “Annals of the Transmission of the Dharma Jewel”; compiled c. 713 by the layman Du Fei (d.u.) for followers of the so-called Northern School ([BEI ZONG](#)) of [CHAN](#). Along with the [LENGQIE SHIZI JI](#), the *Chuan fabao ji* is probably one of the earliest Chan chronicles that delineate the theory of the “transmission of the lamplight” (see [CHUANDENG LU](#)). The narrative of transmission that appears in the *Chuan fabao ji* seems to be based on an epitaph for the monk Faru (638–689), which is the oldest extant document outlining the transmission of the lamplight theory (written in 689). According to Faru’s epitaph and the *Chuan fabao ji*, the wordless teaching of Chan that [ŚĀKYAMUNI](#) transmitted to his disciple [ĀNANDA](#) was inherited by [BODHIDHARMA](#), [HUIKE](#), [SENGCAN](#), [DAOXIN](#), [HONGREN](#), Faru, and finally by [SHENXIU](#). The *Chuan fabao ji* is largely comprised of the biography of these figures.

[chuanfa ji](#). (J. denbōge/denpōge; K. chōnpöp ke 傳法偈). In Chinese, “dharma-transmission [GĀTHĀ](#).” See [YIJ](#).

[Chuanfa zhengzong ji](#). (J. Denbōshōshūki; K. Chōnpöp chōngjong ki 傳法正宗禮). In Chinese, “Record of the Orthodox Tradition’s Transmission of the Dharma”; edited by [FORI QISONG](#) (1007–1072) and published in 1591; an influential history of the [CHAN](#) tradition, the *Chuanfa zhengzong ji* largely follows the genealogies delineated in the [JINGDE CHUANDENG LU](#), with the crucial difference of accepting a roster of only twenty-four, not twenty-eight, patriarchs ([ZUSHI](#)) in the Chan tradition. In its first roll, the *Chuanfa zhengzong ji* begins with the biography of the Buddha, and follows in the next few rolls with the biographies of his successors, starting with [MAHĀKĀŚYAPA](#) and the twenty-four Indian patriarchs of Chan, continuing through to the sixth Chinese patriarch [HUINENG](#). In rolls seven and eight, approximately thirteen hundred short biographies of monks who trace their lineages back to Huineng are provided. The last roll offers more than two hundred biographies of important meditators, ascetics, and Chan masters who predate Huineng, as well as brief notes on monks who thus do not belong to the “orthodox” Chan lineage outlined above. One of the primary purposes of this text was to argue against the dominant “twenty-eight Indian patriarchs” model borrowed from the apocryphal [FUFAZANG YINYUAN ZHUAN](#) (the model used, for instance, in the *Jingde chuangdeng lu*) and substantiate instead the alternative paradigm of twenty-four Indian patriarchs.

[Chuanxin fayao](#). (J. Denshinhōyō; K. Chōnsim pōbyo 傳心法要). In Chinese, “Essential Teachings on the Transmission of the Mind”; by the [CHAN](#) master [HUANGBO XIYUN](#), also known as the *Huangboshan Duanji chanshi chuanxin fayao*. Huangbo’s prominent lay disciple Pei Xiu’s (787?–860) preface to the text was prepared in 857. Pei Xiu, the powerful Tang-dynasty minister of state, is said to have recorded the lectures delivered by Huangbo at the monasteries of Longxingsi and Kaiyuansi, and edited his notes together as the *Chuanxin fayao* and [WANLING LU](#). The two texts seem to have circulated together until the eleventh century. The central tenet of the *Chuanxin fayao* is the teaching of the “one mind” ([YIXIN](#)). Since everything, including buddhas and sentient beings, are all considered to be aspects of the one mind, Huangbo’s use of this term underscores the fundamental unity of all things. Huangbo also likens this mind to space, a common metaphor for emptiness ([ŚŪNYATĀ](#)). Chan practice entails

bringing an end to the discriminative process of thought, so that this one mind will be made manifest. Since all beings are inherently endowed with this one mind, which is complete in and of itself, there is no need to develop a series of practices, such as the six [PĀRAMITĀs](#), or to amass stores of merit ([PUNYA](#)), in order to perfect that one mind. Simply awakening to that one mind will itself be sufficient to transform an ignorant sentient being into an enlightened buddha.

[Chu dbar](#). (Chubar). A Tibetan name for the region of the Rongshar Valley in southern Tibet close to the Nepalese border, chiefly associated with the eleventh-century Tibetan [YOGIN MI LA RAS PA](#); also spelled Chu 'bar. According to Mi la ras pa's biographies, many of the yogin's favored retreat sites were located in the Chu dbar area, a short distance from the famed enclave of [LA PHYI](#). Foremost among these was 'Bri Ice phug (Driche puk), or "Dri's Tongue Cave," which served as the site for his cremation. Many of Mi la ras pa's patrons hailed from Chu dbar and the neighboring village [BRIN](#), both of which later came under the administrative control of '[BRI GUNG BKA' BRGYUD](#) hierarchs. The region is also home to Chu dbar monastery, which was eventually directed by the tenth [KARMA PA](#) Chos dbying rdo rje (Chöying Dorje, 1604–1674), but was destroyed during the Cultural Revolution. Nearby is Mt. Tseringma (Nepalese: Gaurishanker) which, together with four surrounding peaks, is believed to be the divine residence of the five long-life sister goddesses ([TSHE RING MCHED LNGA](#)) who were converted to Buddhism and became disciples of Mi la ras pa.

[chuin'gong](#). (主人公). In Korean, lit. "master" or "owner"; a term used within the [SŎN](#) and [CHAN](#) tradition to refer to "buddha-nature" (C. [FOXING](#)) or "true mind" (C. zhenxin). See [ZHURENGONG](#).

[chuishi](#). (J. *suiji*; K. *susi* 垂示). In Chinese, lit "giving instructions," viz., a "pointer"; also known as *shizhong* (instructing the assembly), *chuiyu* (giving words), and *suoyu* (searching for words). In order to measure the depth of a student's understanding, [CHAN](#) masters often challenged him with a question, word, or phrase. This process of interrogation was referred to as *chuishi*. In various case ([GONG'AN](#)) collections, such as the [BIYAN LU](#), the term *chuishi* also began to refer to the introductory words, or "pointers," placed before the actual case (bence). These introductory words often included questions and anecdotes. Similarly, the [CONGRONG LU](#) used the term *shizhong* to refer to these introductory words.

chūkai. (抽解). In Japanese, “to take off”; referring to the rest period between meditation periods for monks practicing in the sōdō, or [SAMGHA](#) hall. In between meditation sessions, monks are allowed to leave the [SAMGHA](#) hall and take off their robes to lie down and rest.

chukpi. (竹篔). In Korean, “bamboo clacker”; an instrument used in Korea to mark the beginning and end of Buddhist ceremonies and meditation sessions. The instrument is a hollow stick of bamboo split down the middle, which, when struck, produces a clacking noise. The chukpi is typically clacked three times to signal the beginning and end of a ceremony or meditation session. Cf. [MOKT’AK](#).

Chulalongkorn. (Thai). See [RĀMA V](#).

Ch’unggyōng Ch’ōnyōng. (冲鏡天英) (1215–1286). Korean monk of the Koryō dynasty and fifth patriarch of the [SUSŌNSA](#) community established by [POJO CHINUL](#). Ch’unggyōng was ordained by [CHIN’GAK HYESIM](#) in 1229 and passed the national clerical examinations ([SŪNGKWA](#)) in 1236. He subsequently began his studies under Hyesim’s disciple Mongyō (d. 1252), and he later became the student of Mongyō’s disciple [CHINMYŌNG HONWŌN](#). Ch’unggyōng continued studying with his teacher while they were living at the monastery of Sōnwōnsa and in the Susōnsa community. When Chinmyōng stepped down as patriarch of Susōnsa in 1256, the king gave Ch’unggyōng the title of Great Sōn Master (taesōnsa) and appointed him as Chinmyōng’s successor. The community flourished under Ch’unggyōng’s supervision. He passed away at the monastery of Pulgaesa in 1286 and was succeeded as patriarch of the Susōnsa community by his chief disciple [MIRAM CH’UNGJI](#).

Chunghyangsōng. (K) (衆香城). “City of Multitudinous Fragrances”; city where the [ASTASĀHASRIKĀPRAJÑĀPĀRAMITĀ](#) says the [BODHISATTVA DHARMODGATA](#) lived and taught the perfection of wisdom ([PRAJÑĀPĀRAMITĀ](#)); an alternate name for the Korean “Diamond Mountains.” See [GANDHAVATĪ](#), [KŪMGANGSAN](#); [DHARMODGATA](#).

Ch’ungji. (K) (冲止). See [MIRAM CH’UNGJI](#).

Chungwōn. (K) (重遠). See [HANAM CHUNGWŌN](#).

Chu sanzang jijī. (J. Shutsusanzōki shū; K. Ch’ul samjang kijip 出三藏禮集). In

Chinese, “Compilation of Notices on the Translation of the [TRIPITAKA](#)”; edited by the monk [SENGYOU](#) (445–518) and published around 515. The *Chu sanzang jiji* is the first extant scriptural catalogue ([JINGLU](#)) and incorporates in its listings an even earlier catalogue by [DAO'AN](#) (312–385), the [ZONGLI ZHONGJING MULU](#), which is now lost. The *Chu sanzang jiji* consists of five principal sections: (1) a discussion on the provenance of translated scriptures, (2) a record of (new) titles and their listings in earlier catalogues, (3) prefaces to scriptures, (4) miscellaneous treatises on specific doctrines, and (5) biographies of translators. Sengyou’s catalogue established the principal categories into which all subsequent cataloguers would classify scriptures, including new or old translations, anonymous or variant translations, [APOCRYPHA](#), anonymous translations, [MAHĀYĀNA](#) and [HĪNAYĀNA](#) literature divided according to the three divisions of the [TRIPITAKA](#), and so forth. The roster of texts includes translations of scriptures and commentaries from the Han to the Liang dynasties and compares the listings of these various translations in official scriptural catalogues in order to determine their authenticity. Short biographies of the various translators are also provided. Sengyou also discusses indigenous Buddhist literature, such as biographical and historiographical collections, scriptural prefaces, and the catalogues themselves, in order to provide subsequent generations with guidance on how properly to transmit Buddhist literature. Sengyou’s text is as an important source for studying the early history of translation work and indigenous scriptural creation (see [APOCRYPHA](#)) in Chinese Buddhism.

[cibu/cibu tong](#). (祠部/祠部簡). In Chinese, “tonsure certificate” and “tonsure-certificate canister.” Monks and nuns in China were subject to governmental supervision through tonsure certificates (*cibu*) and either annual and/or triennial registration. Starting as early as 729 during the Tang dynasty, the Chinese state required monks to register their ordinations, with one copy of the registration kept at the central Bureau of Sacrifices and the other at the local government office. By the Song dynasty, monks could no longer be ordained by a monastery without having first received official government permission, and anyone not formally registered would be laicized. Tonsure certificates were issued by the Bureau of Sacrifices (*Cibu*), the name thus referring to the government office that issued them. Tonsure certificates are traditionally presumed to have first been issued in 747 during the Tang dynasty, and were required in order to hold any kind of monastic position. Certificates imprinted with a postulant’s name

were typically issued only after a candidate had passed a required set of monastic examinations; blank certificates were sometimes simply sold on the open market, with the number varying according to the revenue needs of the state. The price of blank certificates in particular varied widely, sometimes becoming so expensive that monasteries had to take up donations in order to fund their postulants' registrations. Such tonsure certificates became an important revenue source for the Chinese state, rivaling the taxes placed on salt and commercial activity, and were a valuable commodity because they came with a substantial tax exemption. Tonsure certificates were kept in a special canister known as the *cibu tong*, which the [CHANYUAN QINGGUI](#) ("Pure Rules from the Chan Grove") lists as one of the standard requisites that a Chinese monk should carry with him as he traveled from monastery to monastery. By requiring that all monks receive and carry such tonsure certificates, the government ensured that the Buddhist ecclesia remained under strict government regulation.

[cidi sandi](#). (J. *shidai no santai*; K. *ch'aje samje* 次第三諦). In Chinese, "sequential three truths"; also known as the "differentiated three truths" ([GELI SANDI](#)). See [SANDI](#), [YUANRONG](#).

[cidi sanguan](#). (J. *shidai sangan*; K. *ch'aje samgwan* 次第三觀). In Chinese, the "sequential threefold contemplation." See [SANGUAN](#).

[cidi xingbu men](#). (次第行布門). In Chinese, the "approach of sequential practices." See [YUANRONG](#).

[Ci'en \(dashi\) Kuiji](#). (慈恩[大師]窺基). See [KUIJI](#).

[Ci'en xuepai](#). (C) (慈恩學派). In Chinese, "The Ci'en Scholastic Lineage" of the Chinese [YOGĀCĀRA](#) school, which is associated with [KUIJI](#). See [FAXIANG ZONG](#).

[Cihang](#). (慈航) (1895–1954). Chinese monk during the Republican Era and prominent disciple of the influential Buddhist reformer [TAIXU](#); his mummified remains continue to be a major focus of relic worship in Taiwan. Cihang was first educated in the traditional Chinese Buddhist exegetical traditions of the [CHAN](#), [Tiantai](#), and [PURE LAND](#) schools before beginning his studies in 1927 at Taixu's modern Buddhist academy in Minnan. It was there that Cihang was exposed to, and inspired by, Taixu's reformist ideals, and began his own active

missionary career. Cihang's achievements as a missionary included establishing various Chinese Buddhist organizations and lecturing on Buddhism throughout Southeast Asia, including the Philippines, Singapore, Burma, and Malaysia, where he was credited with promoting a type of "socially engaged Buddhism." Cihang was also the founder and editor of the Buddhist monthly *Renjian* ("Human Realm"), and served as abbot of various monasteries. Most notably, Cihang founded the renowned Mile Neiyuan ([MAITREYA](#) Buddhist Academy) in Taiwan for training young clergy who had recently relocated from the Chinese mainland, so that they would be able to minister to new Taiwanese converts to Buddhism. Cihang's classes on [YOGĀCĀRA](#) and other [MAHĀYĀNA](#) traditions in and outside of the academy were influential on the way Chinese Buddhism spread, developed, and took root in Taiwan after the retreat of the Kuomintang (Guomindang) from the Chinese mainland in 1949. Cihang's mummified remains—in the form of his largely intact body—continue to be a source of great fascination and controversy in Taiwan. In addition to the many debates within both the secular and religious communities concerning his "whole-body relic" ([QUANSHEN SHELĪ](#)), a new cult of relic worship began in earnest as soon as the existence of his mummified body became publicized. Cihang's pious followers undertook extra measures to ensure the lasting preservation of his body. Cihang's mummy, still sitting in a meditative posture, remains on display inside the memorial building (Cihang guan) dedicated to him.

[Cimin Hui](#) ([J. Jimin Enichi](#); [K. Chamin Hyeil](#) 慈愍慧日) (680–748). Founder of the Cimin lineage of Chinese [PURE LAND](#) Buddhism. Inspired by his meeting with the pilgrim and translator [YIJING](#) (635–713), Hui also traveled to India between 702 and 719, where he is said to have studied with Indian teachers about [SUKHĀVATĪ](#), the pure land of [AMITĀBHA](#) and had a vision in which the [BODHISATTVA AVALOKITEŚVARA](#) personally instructed him in pure land teachings. After Hui returned to China, he taught an ecumenical approach to pure land practice, which combined the practices of meditation, recitation, and discipline. Because Hui's approach differs markedly from that offered by [LUSHAN HUIYUAN](#) (334–416) and [TANLUAN](#) (476–542), his teachings are sometimes considered to constitute a separate Cimin line of the Chinese pure land tradition. Hui also made a concerted effort to respond to critiques of pure land practice made by adepts within the [CHAN ZONG](#), who disparaged the pure land approach as an expedient intended for spiritually inferior practitioners. The Tang emperor Xuanzong (r. 712–756) bestowed on Hui the posthumous title of Cimin

Sanzang ([TREPITAKA](#) Compassionate Sympathy) for his service in transmitting the pure land teaching. Cimin's combination of recitation of the Buddha's name ([NIANFO](#)) with meditation subsequently influenced the nianfo Chan of [YONGMING YANSHOU](#) (904–975).

[cintāmaṇi](#). (T. yid bzhin nor bu; C. ruyi baozhu; J. nyoihōju; K. yōi poju 如意寶珠). In Sanskrit, “wish-fulfilling gem”; in Indian mythology a magical jewel possessed by [DEVAS](#) and [NĀGAs](#) that has the power to grant wishes. The term is often as a metaphor for various stages of the path, including the initial aspiration to achieve buddhahood ([BODHICITTOTPĀDA](#)), the rarity of rebirth as a human being with access to the dharma, and the merit arising from the teachings of the Buddha. According to the *Ruyi baozhu zhuanlun mimi xianshen chengfo jinlunzhouwang jing* (also known simply as the *Jinlunzhouwang jing*), which describes in great detail the inexhaustible merit of this gem, the *cintāmaṇi* is rough in shape and is comprised of eleven precious materials, including gold and silver, and has thirty-two pieces of the Buddha's relics ([ŚARĪRA](#)) at its core, which give it its special power. In the [DAZHIDU LUN](#), the gem is said to derive from the brain of the dragon king (nāgarāja), the undersea protector of Buddhism, or, alternatively, to be the main jewel ornamenting the top of his head. The text claims that it has the power to protect its carrier from poison and fire; other texts say that the *cintāmaṇi* has the capacity to drive away evil, clarify muddy water, *etc.* This gem is also variously said to come from the head of a great makara fish (as in the [RATNAKŪTASŪTRAS](#)) or the heart of a [GARUDA](#) bird (as in the [GUAN WULIANGSHOU JING](#)). Other texts suggest that while the king of the gods, [INDRA](#), was fighting with the demigods ([ASURA](#)), part of his weapon dropped to the world and became this gem. The bodhisattvas [AVALOKITEŚVARA](#) and [KSITIGARBHA](#) are also depicted holding a *cintāmaṇi* so that they may grant the wishes of all sentient beings.

[cintāmayīprajñā](#). (P. *cintāmayapaññā*; T. *bsam pa las byung ba'i shes rab*; C. *sihui*; J. *shie*; K. *sahye* 思慧). In Sanskrit, “wisdom derived from reflection [or analysis]”; the second of the three types of wisdom, together with [ŚRUTAMAYĪPRAJÑĀ](#) (wisdom derived from what is heard, viz., study) and [BHĀVANĀMAYĪPRAJÑĀ](#) (wisdom generated by cultivation or meditation). Building upon what one has learned through *śrutamayīprajñā*, the practitioner deepens that knowledge by reflecting upon its significance and its application in understanding the nature of this world and beyond. This reflection may involve a

certain level of mental attention and concentration, but not yet full meditative calmness ([ŚAMATHA](#)). This level of understanding is therefore not as profound as the third and final stage of wisdom, bhāvanāmayīprajñā, where the knowledge first learned and subsequently developed over the preceding two stages of wisdom is now authenticated at the level of [VIPAŚYANĀ](#).

[cishi song](#). (J. jiseiju; K. sase song 辭世頌). In Chinese, lit., “taking leave of the world hymn”; alternate name for a “bequeathed verse.” See [YIII](#).

[Citipati](#). (T. Dur khrod bdag po). In Sanskrit, “Lord of the Funeral Pile”; a pair of male and female dancing skeletons associated with the [CAKRASAMVARATANTRA](#) and who are often depicted as protectors of [VAJRAYOGINĪ](#). They are also called śrīśmaśānādhipati or “lords of the charnel ground” and are regarded as enlightened beings and emanations of [CAKRASAMVARA](#). They are also propitiated for wealth and for protection from thieves. According to legend, they are the spirits of two Indian ascetics who were murdered by thieves while practicing austerities in a charnel ground ([ŚMAŚĀNA](#)). They each hold a daṇḍa or staff made of bone and a [KAPĀLA](#) and dance on corpses in [ARDHAPARYAṅKA](#) pose, either in [YAB YUM](#) posture or side by side. They are not to be confused with the skeleton dancers in Tibetan ['CHAM](#) performances, who represent servants of [YAMA](#), the deity of death.

[citta](#). (T. sems; C. xin; J. shin; K. sim 心). In Sanskrit and Pāli, “mind,” “mentality,” or “thought”; used broadly to refer to general mentality, citta is the factor ([DHARMA](#)) that is present during any type of conscious activity. Citta is contrasted with the physical body or materiality ([RŪPA](#)), and is synonymous in this context with “name” (NĀMA), as in the term [NĀMARŪPA](#). In this sense, citta corresponds to the last four of the five aggregates ([SKANDHA](#)), excluding only the first aggregate, of materiality ([RŪPA](#)), i.e., sensation ([VEDANĀ](#)), perception ([SAMJÑĀ](#)), conditioning factors ([SAMSKĀRA](#)), and consciousness ([VIJÑĀNA](#)). (Where the correspondences on this list are further refined, the first three of these mentality aggregates correspond to the mental concomitants, viz., [CAITTA](#), while citta is restricted to the last aggregate, that of consciousness, or vijñāna.) Citta in this broad sense is synonymous with both mentality ([MANAS](#)) and consciousness (vijñāna): mind is designated as citta because it “builds up” (cinoti) virtuous and nonvirtuous states; as manas, because it calculates and examines; and as vijñāna, because it discriminates among sensory stimuli. Mind as “consciousness” refers to the six consciousnesses (ṣaḍvijñāna): the five

sensory consciousnesses of the visual ([CAKSURVIJÑĀNA](#)), auditory ([ŚROTRAVIJÑĀNA](#)), olfactory ([GHRĀNAVIJÑĀNA](#)), gustatory ([JIHVĀVIJÑĀNA](#)), and tactile ([KĀYAVIJÑĀNA](#)), along with the mental consciousness ([MANOVIJÑĀNA](#)). In some strands of [MAHĀYĀNA](#) thought, such as [YOGĀCĀRA](#), mind is instead considered to encompass not only mentality but all dharmas, and the distinction between mentality and materiality is presumed to be merely nominal; Yogācāra is thus sometimes called the school of [CITTAMĀTRA](#), or “mind-only.” Citta as mentality serves as one of the four foundations of mindfulness ([SMRTYUPASTHĀNA](#)) in Buddhist meditative training, and refers to various general states of mind, e.g., a mind (citta) that is depressed, distracted, developed, concentrated, or freed. Citta is also used to signify mind itself in distinction to various sets of mental concomitants (caitta) that accompany the basic sensory consciousnesses. The [DHAMMASAṄGANI](#), the first of the seven books of the Pāli [ABHIDHAMMAPITAKA](#), classifies citta as the first of a fourfold division of factors into mind (citta), mental concomitants (P. [CETASIKA](#)), materiality or form (rūpa), and [NIRVĀNA](#) (P. nibbāna). In this text’s treatment, a moment of consciousness (citta) will always arise in association with a variety of associated mental factors (P. cetasika), seven of which are always present during every moment of consciousness: (1) sensory contact or sense impression (P. phassa; S. [SPARŚA](#)), (2) feeling or sensation ([VEDANĀ](#)), (3) perception or conception (P. saññā; S. [SAMJÑĀ](#)), (4) volition ([CETANĀ](#)), (5) concentration ([SAMĀDHI](#)), (6) vitality ([JĪVITA](#)), and (7) attention, viz., the advertence of the mind toward an object (P. manasikāra; S. [MANASKĀRA](#)). The [SARVĀSTIVĀDA ABHIDHARMA](#) instead divides all dharmas into five groups: mind (citta), mental concomitants (caitta), materiality (rūpa), forces dissociated from thought ([CITTAVIPRAYUKTASAMSKĀRA](#)), and the unconditioned ([ASAMSKRTA](#)). In this system, ten specific factors are said universally to accompany all conscious activity and are therefore called “factors of wide extent” or “omnipresent mental factors” ([MAHĀBHŪMIKA](#)): (1) sensation (vedanā); (2) volition (cetanā); (3) perception (saṃjñā); (4) zeal or “desire-to-act” ([CHANDA](#)) (5) sensory contact (sparśa); (6) discernment (mati); (7) mindfulness ([SMRTI](#)); (8) attention (manaskāra); (9) determination ([ADHIMOKṢA](#)); (10) concentration (samādhi). According to the system set forth by [ASANGA](#) in his [ABHIDHARMASAMUCCAYA](#), this list is divided into two sets of five: the five omnipresent ([SARVATRAGA](#)) mental factors (vedanā, saṃjñā, cetanā, sparśa, and manaskāra) and the five determining (pratiniyama) mental factors (chanda, adhimokṣa, smṛti, samādhi, and prajñā). ¶ In the experience of enlightenment ([BODHI](#)), the citta is said to be “freed” from the “point of view” that is the self

([ATMAN](#)). The citta is then no longer subject to the limitations perpetuated by ignorance ([AVIDYĀ](#)) and craving ([TRSNĀ](#)) and thus becomes nonmanifesting (because there is no longer any projection of ego into the perceptual process), infinite (because the mind is no longer subject to the limitations of conceptualization), and lustrous (because the ignorance that dulls the mind has been vanquished forever). Scriptural statements attest to this inherent luminosity of the citta, which may be revealed through practice and manifested in enlightenment. For example, in the Pāli [ANGUTTARANIKĀYA](#), the Buddha says, “the mind, O monks, is luminous” (P. pabhassaraṃ idaṃ bhikkhave cittaṃ). Such statements are the strands from which the Mahāyāna subsequently derives such concepts as the inherent quality of buddhahood ([BUDDHADHĀTU](#); C. [FOXING](#)) or the embryo of the [TATHĀGATA](#)s ([TATHĀGATAGARBHA](#)) that is said to be innate in the mind.

Citta. A lay follower of the Buddha, mentioned in Pāli sources as being foremost among laymen who preached the [DHARMA](#); also known as Cittaḡahapati. Citta was treasurer for the township of Macchikāsaṇḡa in the kingdom of Kāsī. When he was born, the sky rained flowers of many hues, hence his name which means variegated color. Citta was converted to Buddhism when he encountered the elder Mahānāma (S. [MAHĀNĀMAN](#)) while the latter was sojourning in Macchikāsaṇḡa. Citta was greatly impressed by the monk’s demeanor and built a monastery for him in his park named Ambāṡakārāma. There, listening to Mahānāma preach on the subject of the six senses, he attained to state of a nonreturner ([ANĀGĀMIN](#)). On one occasion, Citta visited the Buddha in the company of two thousand laypeople, bringing with him five hundred cartloads of offerings. When he bowed at the Buddha’s feet, flowers in a variety of colors rained down from the heavens. Like Mahānāma, the Buddha preached a sermon on the six senses to him. Citta distributed offerings for a fortnight, the gods continuously refilling the carts. Citta was endowed with a great intellect and was a gifted speaker. His conversations with members of the order are recorded in the “Citta Saṃyutta” of the Pāli [SAMYUTTANIKĀYA](#), and he is also described as having refuted the views of non-Buddhist teachers, such as Nigaṡṡha Nātaputta (S. [NIRGRANTHA-JŅĀTĪPUTRA](#), viz., Mahāvīra), the eminent [JAINA](#) teacher, and Acela Kassapa. Although he was not an [ARHAT](#), he possessed the analytical knowledge (P. paṡisambhidā; S. [PRATISAMVID](#)) of a learner (P. sekha). It was for these aptitudes that he earned preeminence. On his deathbed, divinities visited him and encouraged him to seek rebirth as a heavenly king, but

he refused, stating that such an impermanent reward was not his goal. He then preached to them, and to all the kinfolk who had gathered around him, before passing away. Together with [HATTHAKA ĀLAVAKA](#), Citta is upheld as an ideal layman worthy of emulation.

[cittaikāgratā](#). (P. cittekaggatā; T. sems rtse gcig pa; C. xin yijing xing; J. shin ikkyō shō; K. sim ilgyōng sōng 心一境性). In Sanskrit, “one-pointedness of mind”; a deep state of meditative equipoise in which the mind is thoroughly concentrated on the object of meditation. In the progression of the four meditative absorptions associated with the subtle-materiality realm ([RŪPĀVACARADHYĀNA](#)), the first absorption ([DHYĀNA](#)) still involves the first two of the five constituents of dhyāna ([DHYĀNĀNGA](#)): i.e., the application of thought to the meditative object ([VITARKA](#)) and sustained attention to that object ([VICĀRA](#)). As concentration deepens from the second dhyāna onward, applied and sustained thought vanish and the meditator moves from the mental “isolation” or “solitude” ([VIVEKA](#)) that characterizes the first dhyāna, to the true one-pointedness of mind (cittaikāgratā) that characterizes all higher stages of dhyāna; in this state of one-pointedness, the mind is so completely absorbed in the meditative object that even these most subtle varieties of thinking have disappeared.

[cittamahābhūmika](#). In Sanskrit, “omnipresent mental factors.” See [MAHĀBHŪMIKA](#), [SARVATRAGA](#).

[cittamātra](#). (T. sems tsam; C. weixin; J. yuishin; K. yusim 唯心). In Sanskrit, lit. “mind-only”; a term used in the [LAṆKĀVATĀRASŪTRA](#) to describe the notion that the external world of the senses does not exist independently of the mind and that all phenomena are mere projections of consciousness. Because this doctrine is espoused by the [YOGĀCĀRA](#), that school is sometimes referred to as cittamātra. The doctrine is closely associated with the eight consciousness ([VIJÑĀNA](#)) theory set forth in the “Viniścayasamgrahaṇī” of the [YOGĀCĀRABHŪMIŚĀSTRA](#) and in the [MAHĀYĀNASAMGRAHA](#) and [ABHIDHARMASAMUCCAYA](#) that are supplemental to that work. In East Asia, these texts are associated with the name of the Mahāyāna writer [ASAṄGA](#) and his quasi-mythological teacher [MAITREYA](#) or [MAITREYANĀTHA](#). According to this theory, there are not only six consciousnesses (vijñāna), viz., the visual, auditory, olfactory, gustatory, and tactile consciousnesses, and the mental consciousness (manovijñāna) well known to canonical Buddhism; there are two further consciousnesses, called the

afflicted mind ([KLISTAMANAS](#)) and the storehouse consciousness ([ĀLAYAVIJÑĀNA](#)). The ālayavijñāna is also known as the sarvabīja, or the consciousness that carries all the seeds or potentialities ([BĪJA](#)). The Cittamātra school holds that mental states leave a residual impression that is carried by the ālayavijñāna. These impressions ([VĀSANĀ](#)) literally “perfume” or “suffuse” this underlying consciousness, where they lie dormant as seeds. Among the many categories of seeds, two are principal: the residual impressions giving rise to a new form of life ([VIPĀKA](#)) in the six realms of existence, and the residual impression that is basic ignorance causing all ordinary mental states to appear in a distorted way, i.e., bifurcated into subject and object. Vasubandhu, who is said to have been converted to the Cittamātra doctrine by his brother Asaṅga, argues in his [TRIMŚIKĀ](#) (*Triṃśikāvijñaptimātratā[siddhi]kārikā*), the famous “Thirty Verses on Consciousness-Only,” that there could not possibly be an atomic basis for objects known by mind. In the absence of an atomic basis, only the ripening of the residual impressions left on the ālayavijñāna can account for the variety of mental states and experience, and only this doctrine of mind-only can properly account for the purification of mind and the final attainment of [BODHI](#). The object and subject share the same mental nature because they both arise from the residual impressions left on the ālayavijñāna, hence the doctrine of cittamātra, mind-only.

[cittasamprayuktasamskāra](#). (T. sems dang mtshungs ldan gyi ’du byed; C. xinxiangying fa; J. shinsōbō; K. sim sangŭng pŏp 心相應法). In Sanskrit, “conditioned forces associated with thought”; an [ABHIDHARMA](#) term synonymous with the mental concomitants ([CAITTA](#)), the dharmas that in various combinations accompany mind or thought ([CITTA](#)). The [ABHIDHARMAKOŚABHĀSYA](#), for example, explains that mind and its concomitants always appear in conjunction with one another and cannot be independently generated. These factors are “associated” because of five equalities that they share with mind, i.e., equality as to (1) support ([ĀŚRAYA](#)), in this context, meaning the six sensory bases; (2) object ([ĀLAMBANA](#)), viz., the six sensory objects; (3) aspect ([ĀKĀRA](#)), the aspects of sensory cognition; (4) time (kāla), because they occur simultaneously; and (5) the number of their substance ([DRAVYA](#)), because mind and its concomitants are in a one-to-one association. The different schools of [ABHIDHARMA](#) enumerate various lists of such forces. The [VAIBHĀSIKA](#) school of [SARVĀSTIVĀDA](#) abhidharma lists forty-six cittasamprayuktasamskāras, while the mature [YOGĀCĀRA](#) system of [MAHĀYĀNA](#) scholasticism gives a total of fifty-one, listed

in six categories. The Vaibhāṣika and Yogācāra schools also posited a contrasting category of “conditioned forces dissociated from thought” ([CITTAVIPRAYUKTASAMSKĀRA](#)), which served to account for specific types of complex moral and mental processes (such as where both physicality and mentality were temporarily suspended in higher meditative absorptions), and anomalous doctrinal problems. (The Pāli equivalent cittasampayuttasaṅkhāra is attested, but only rarely, in Pāli commentarial literature; it does not appear in canonical [ABHIDHAMMA](#) texts. This doctrinal category therefore has no significance in the [THERAVĀDA](#) abhidhamma.) For more detailed discussion, see [CAITTA](#); and for the complete lists, see [SEVENTY-FIVE DHARMAS OF THE SARVĀSTIVĀDA SCHOOL](#) and [ONE-HUNDRED DHARMAS OF THE YOGĀCĀRA SCHOOL](#) in the List of Lists.

[cittasamtāna](#). [alt. cittasamtati] (P. cittasantāna; T. sems rgyud/sems rgyun; C. xin xiangxu; J. shinsōzoku; K. sim sangsok 心相續). In Sanskrit, “mental continuum.” The notion of a continuum is employed in the [ABHIDHARMA](#) traditions to clarify that there is continuity between an action ([KARMA](#)) that an individual undertakes and its eventual effect ([VIPĀKA](#)) as well as continuity between one lifetime and the next, without going so far as to posit a perduring self ([ĀTMAN](#)). In the theory of karman, the fruition of action is experienced by the mental continuum (cittasamtāna) of the being who initially performed the action, not by another; thus in mainstream Buddhism one can neither receive the fruition of another’s karman, nor redeem another’s actions. This notion of a mental continuum also serves to counter annihilationist interpretations (see [UCCHEDAVĀDA](#); [UCCHEDĀNTA](#)) of the quintessential Buddhist doctrine of nonself ([ANĀTMAN](#)): there may be no permanent, underlying substratum of being that we can designate a self or soul, but this does not negate the continuity that pertains in the flow of moral cause and effect or the possibility of rebirth. Hence, there can be rebirth, moral efficacy, and spiritual progress despite the lack of a permanent self. See also [BHAVAṄGASOTA](#); [SAMTĀNA](#).

[cittaviprayuktasamskāra](#). (T. sems dang ldan pa ma yin pa’i ’du byed; C. xin buxiangying fa; J. shinfusōōbō; K. sim pulsangŭng pŏp 心不相應法). In Sanskrit, “conditioned forces dissociated from thought”; forces that are associated with neither materiality ([RŪPA](#)) nor mentality ([CITTA](#)) and thus are listed in a separate category of factors ([DHARMA](#)) in [ABHIDHARMA](#) materials associated with the [SARVĀSTIVĀDA](#) school and in the hundred-dharmas ([BAIFA](#)) list of the [YOGĀCĀRA](#)

school. These conditioned forces were posited to account for complex moral and mental processes (such as the states of mind associated with the higher spheres of meditation, where both physicality and mentality were temporarily suspended), and anomalous doctrinal problems (such as how speech was able to convey meaning or how group identity was established). A standard listing found in the [DHARMASKANDHA](#) and [PRAKARANĀPĀDA](#), two texts of the Sarvāstivāda abhidharma canon, includes sixteen dissociated forces: (1) possession ([PRĀPTI](#)); (2) equipoise of nonperception ([ASAMJÑĀSAMĀPATTI](#)); (3) equipoise of cessation ([NIRODHASAMĀPATTI](#)); (4) nonperception (āsamjñika); (5) vitality ([JĪVITA](#)); (6) homogeneity (sabhāgatā); (7) acquisition the corporeal basis (*āśrayapratilābha); (8) acquisition of the given entity (*vastuprāpti); (9) acquisition of the sense spheres (*āyatanaprāpti); the four conditioned characteristics ([SAMSKRTALAKṢANA](#)), viz., (10) origination, or birth ([JĀTI](#)); (11) continuance, or maturation ([STHITI](#)); (12) senescence, or decay ([JARĀ](#)); and (13) desinence, or death (anityatā); (14) name set (nāmakāya); (15) phrase set (padakāya); 16) syllable set (vyañjanakāya). The later treatise [ABHIDHARMAKOŚABHĀSYA](#) includes only fourteen, dropping numbers 7, 8, 9 and adding nonpossession ([APRĀPTI](#)). These listings, however, constituted only the most generic and comprehensive types employed by the [VAIBHĀSIKA](#) school of Sarvāstivāda abhidharma; the cittaviprayuktasamskāras thus constituted an open category, and new forces could be posited as the need arose in order to resolve thorny doctrinal issues. The four conditioned characteristics (samskṛtalakṣaṇa) are a good example of why the cittaviprayuktasamskāra category was so useful in abhidharma-type analysis. In the Sarvāstivāda treatment of causality, these four characteristics were forces that exerted real power over compounded objects, escorting an object along from origination, to continuance, to senescence or decay, until the force “desinence,” or death finally extinguishes it; this rather tortured explanation was necessary in order to explain how factors that the school presumed continued to exist in all three time periods ([TRIKĀLA](#)) of past, present, and future nevertheless still appeared to undergo change. The [YOGĀCĀRA](#) school subsequently includes twenty-four cittaviprayuktasamskāras in its list of one hundred dharmas (see [BAIFA](#)), including such elements as the state of an ordinary being (pṛthagjanatva), time ([KĀLA](#)), place (deśa), and number (saṃkhyā).

[cittavisuddhi](#). (S. cittaviśuddhi). In Pāli, “purity of mind”; according to the [VISUDDHIMAGGA](#), the second of seven “purities” ([VISUDDHI](#)) to be developed

along the path to liberation. Purity of mind refers to the eight meditative absorptions (P. [JHĀNA](#); S. [DHYĀNA](#)) or attainments ([SAMĀPATTI](#)) belonging to the subtle-materiality realm (rūpāvacara) and the immaterial realm (ārūpyāvacara). Meditative absorption belonging to the subtle-materiality realm (P. rūpāvacarajhāna; S. [RŪPĀVACARADHYĀNA](#)) is subdivided into four stages, each of which is characterized by an increasing attenuation of consciousness as the meditator progresses from one stage to the next. Meditative absorption belonging to the immaterial realm (P. arūpāvacarajhāna; S. [ĀRŪPYĀVACARADHYĀNA](#)) is likewise subdivided into four stages, but in this case it is the object of meditation that becomes attenuated from one stage to the next. In the first immaterial absorption, the meditator sets aside the perception of materiality and abides in the sphere of infinite space (P. ākāśānañcāyatana; S. [ĀKĀŚĀNANTYĀYATANA](#)). In the second immaterial absorption, the meditator sets aside the perception of infinite space and abides in the sphere of infinite consciousness (P. viññāṇañcāyatana; S. [VIJÑĀNĀNANTYĀYATANA](#)). In the third immaterial absorption, the meditator sets aside the perception of infinite consciousness and abides in the sphere of nothingness (P. ākiñcaññāyatana; S. [ĀKIÑCANYĀYATANA](#)). In the fourth immaterial absorption, the meditator sets aside the perception of nothingness and abides in the sphere of neither perception nor nonperception (P. nevasaññānāsaññāyatana; S. [NAIVASAMJÑĀNĀSAMJÑĀYATANA](#)). To this list of eight absorptions is added “access” or “neighborhood” “concentration” (P. [UPACĀRASAMĀDHI](#)), which is the degree of concentration present in the mind of the meditator just prior to entering any of the four jhānas.

cīvara. (T. chos gos; C. yi; J. e/koromo; K. ūi 衣). In Pāli and Sanskrit, “monastic robe”; the generic term for the robes worn by Buddhist monks, nuns, female probationers, and male and female novices. The cīvara may be made of cotton, wool, linen, or silk. Initially, the robe was to be made of rags discarded in the rubbish heap (S. pāṃsukūla; P. paṃsukūla) or from funeral shrouds. The rule was amended by the Buddha to allow monks also to accept cloth offered by the laity. A full set of monastic robes is comprised of three robes (S. [TRICĪVARA](#); P. ticīvara): the larger outer robe (S. [SAMGHĀTĪ](#); P. saṅghāṭī), the upper robe (S. [UTTARĀSAMGA](#); P. uttarāsaṅga), and the lower robe or waist-cloth (S. [ANTARVĀSAS](#); P. antaravāsaka). The antarvāsas is the smallest of the three robes: normally made of one layer of cloth, it is worn about the waist and is intended to cover the body from the navel to the middle of the calf. The uttarāsaṅga is worn over one or both shoulders, depending on whether one is inside or outside the

monastery grounds, and is large enough to cover the body from the neck to the middle of the calf; it too is normally made of one layer of cloth. The saṃghāṭī or outer robe is the same size as the uttarāsaṃga but is normally made of two layers of cloth rather than one; it is worn over one or both shoulders, depending on whether one is inside or outside the monastery grounds. The saṃghāṭī was required to be tailored of patches, ranging in number from nine up to twenty-five, depending on the [VINAYA](#) recension; this use of patches of cloth is said to have been modeled after plots of farmland in [MAGADHA](#) that the Buddha once surveyed. All three robes must be dyed a sullied color, interpreted as anything from a reddish-or brownish-yellow saffron color to an ochre tone (see [KĀSĀYA](#)). Robes were one of the four major requisites (S. [NĪŚRAYA](#); P. nissaya) of the monks and nuns, along with such basics as a begging bowl and lodging, and were the object of the [KATHINA](#) ceremony in which the monastics were offered cloth for making new sets of robes at the end of each rains' retreats ([VARŚĀ](#)).

[conglin](#). (J. sōrin; K. ch'ongnim 叢林). In Chinese, a “dense grove”; also known as chanlin, or “[CHAN](#) grove”; the term translates the Sanskrit vana (trees) or vindhyavana (grove). The term conglin is a metaphorical reference to the monastic grounds: like trees densely gathered in a grove, monks quietly gather together in a monastery to train together. More specifically, the term refers to the monastic training grounds of Chan, [SŌN](#), and [ZEN](#) monks. In Korea, the term [CH'ONGNIM](#) is used in the contemporary [CHOGYE CHONG](#) to refer to a handful of larger monasteries that are able to provide training in the full range of practices that exemplify the major strands of the Korean Buddhist tradition. While most Korean monasteries are primarily devoted to one or another of these types of training, the ch'ongnims offer a center where all can be practiced together.

[Conglin dashi](#). (C) (叢林大士). See [FU DASHI](#).

[Congrong lu](#). (J. Shōyōroku; K. Chongyong nok 從容錄). In Chinese,

“Encouragement (Hermitage) Record”; edited by Chan master Wansong Xingxiu (1165–1246). Also known as the *Congrong an lu* and *Wansong laoren pingzhang Tiantong Jue heshang songgu Congrong an lu* (“Encouragement Hermitage Record of the Prose Commentaries by Old Man Wansong on the Case and Verse [Collection] by Master Jue of Tiantong”). In 1223, while residing at the hermitage Congrong’an at the monastery of Bao’ensi near Yanjing, Wansong was asked by the famous layman and statesman Yelü Chucai (1190–1244) to expound upon an earlier collection of one hundred cases ([GONG’AN](#)) and their verse commentaries ([SONGGU](#)) prepared by the Chan master [HONGZHI ZHENGJUE](#). In the *Congrong lu*, Wansong added some introductory words (shizhong; see [CHUISHI](#)), prose commentaries (pingchang), and capping phrases ([ZHUYU](#)) to Hongzhi’s collection. The *Congrong lu* is considered one the most important scriptures of the [CAODONG ZONG](#) lineage of Chan and demonstrates definitively that the Caodong school (J. [SŌTOSHŪ](#)) employed gong’ans (J. koan) as part of its training.

[Conze, Edward](#). [Eberhard (Edward) Julius Dietrich Conze] (1904–1979). An influential Anglo-German Buddhist scholar and practitioner, Edward Conze was born in London, the son of the then German vice consul, but was raised in Germany. He attended the universities of Cologne, Bonn, and Hamburg, where he studied both Western and Indian philosophy and Buddhist languages, including Sanskrit, Pāli, and Tibetan. Conze was raised as a Protestant, but he also explored Communism and had a strong interest in Theosophy. Because of his deep opposition to the Nazi ideology, he became persona non grata in Germany and in 1933 moved to England. Although initially active with English socialists, he eventually became disillusioned with politics and began to study the works of [DAISETZ TEITARO SUZUKI](#), whom he came to consider his informal spiritual mentor. Conze taught at various universities in the UK between 1933 and 1960, expanding the range of his visiting professorships to the USA and Canada in the 1960s. However, the Communist affiliations of his youth and his outspoken condemnation of the Vietnam War put him at odds with American authorities, prompting him to return to England. Conze was especially enamored

of the perfection of wisdom ([PRAJÑĀPĀRAMITĀ](#)) texts and the related [MADHYAMAKA](#) strand of Buddhist philosophy and became one of foremost scholarly exponents of this literature of his day. He saw Buddhism and especially Madhyamaka philosophy as presenting an “intelligible, plausible, and valid system” that rivaled anything produced in the West and was therefore worthy of the close attention of Western philosophers. He translated several of the major texts of the prajñāpāramitā, including *The Perfection of Wisdom in Eight Thousands Lines and Its Verse Summary* (1973), and *The Large Sutra on Perfect Wisdom with the Divisions of the Abhisamayālaṅkāra* (1975), as well as the [VAJRACCHEDIKĀPRAJÑĀPĀRAMITĀSŪTRA](#) (“Diamond Sūtra”) and the [PRAJÑĀPĀRAMITĀHRDAYASŪTRA](#) (“Heart Sūtra”). His compilation of terminology derived from this translation work, *Materials for a Dictionary of the Prajñāpāramitā Literature* (1967), did much to help establish many of the standard English equivalencies of Sanskrit Buddhist terms. Conze also wrote more general surveys of Buddhist philosophy and history, including *Buddhism: Its Essence and Development* (1951) and *Buddhist Thought in India* (1962).

[Council, 1st](#). The term translated as “council” is [SAMGĪTI](#), literally “recitation,” the word used to describe the communal chanting of the Buddha’s teaching. The term suggests that the purpose of the meeting was to recite the [TRIPITAKA](#) in order to codify the canon and remove any discrepancies concerning what was and was not to be included. The first Buddhist council is said to have been held in a cave

at [RĀJAGRHA](#) shortly after the Buddha's passage into [PARINIRVĀNA](#), although its historicity has been questioned by modern scholars. There are numerous accounts of the first council and much scholarship has been devoted to their analysis. What follows draws on a number of sources to provide a general description. The accounts agree that, in the [SAMGHA](#), there was an elderly monk named [SUBHADRA](#), a former barber who had entered the order late in life. He always carried a certain animus against the Buddha because when Subhadra was a layman, the Buddha supposedly refused to accept a meal that he had prepared for him. After the Buddha's death, Subhadra told the distraught monks that they should instead rejoice because they could now do as they pleased, without the Buddha telling them what they could and could not do. [MAHĀKĀŚYAPA](#) overheard this remark and was so alarmed by it that he thought it prudent to convene a meeting of five hundred [ARHATS](#) to codify and recite the rules of discipline ([VINAYA](#)) and the discourses ([SŪTRA](#)) of the Buddha before they became corrupted. With the patronage of King [AJĀTAŚATRU](#), a meeting was called. At least one arhat, [GAVĀMPATI](#), declined to participate, deciding instead to pass into nirvāṇa before the council began. This led to an agreement that no one else would pass into nirvāṇa until after the conclusion of the council. At the time that the council was announced, [ĀNANDA](#), the Buddha's personal attendant and therefore the person who had heard the most discourses of the Buddha, was not yet an arhat and would have been prevented from participating. However, on the night before the council, he fortuitously finished his practice and attained the status of arhat. At the council, Mahākāśyapa presided. He interrogated [UPĀLI](#) about the rules of discipline ([PRĀTIMOKSA](#)) of both [BHIKSUS](#) and [BHIKSUNĪs](#). He then questioned Ānanda about each of the discourses the Buddha had delivered over the course of his life, asking in each case where and on whose account the discourse had been given. In this way, the [VINAYAPITAKA](#) and the [SŪTRAPITAKA](#) were established. (In many accounts, the [ABHIDHARMAPITAKA](#) is not mentioned, but in others it is said the abhidharmapiṭaka was recited by Mahākāśyapa or by Ānanda.) Because of his extraordinary powers of memory, Ānanda was said to be able to repeat sixty thousand words of the Buddha without omitting a syllable and recite fifteen thousand of his stanzas. It was at the time of his recitation that Ānanda informed the council that prior to his passing the Buddha told him that after his death, the saṃgha could disregard the minor rules of conduct. Since he had neglected to ask the Buddha what the minor rules were, however, it was decided that all the rules would be maintained. Ānanda was then chastised for (1) not asking what the minor rules were, (2) stepping on the Buddha's robe

while he was sewing it, (3) allowing the tears of women to fall on the Buddha's corpse, (4) not asking the Buddha to live for an eon ([KALPA](#)) or until the end of the eon although the Buddha strongly hinted that he could do so (see [CĀPĀLACAITYA](#)), and (5) urging the Buddha to allow women to enter the order. (There are several versions of this list, with some including among the infractions that Ānanda allowed women to see the Buddha's naked body.) The entire vinayaṭaka and sūtraṭaka was then recited, which is said to have required seven months. According to several accounts, after the recitation had concluded, a group of five hundred monks returned from the south, led by a monk named Purāṇa. When he was asked to approve of the dharma and vinaya that had been codified by the council, he declined, saying that he preferred to remember and retain what he had heard directly from the mouth of the Buddha rather than what had been chanted by the elders. Purāṇa also disputed eight points of the vinaya concerning the proper storage and consumption of food. This incident, whether or not it has any historical basis, suggests that disagreements about the contents of the Buddha's teaching began to arise shortly after his death.

[Council, 2nd](#). The second council was held at [VAIŚĀLI](#), some one hundred years after the Buddha's death. It is said that the monk [YAŚAS](#) was traveling in Vaiśālī when he observed the monks from the city, identified as [VRJIPUTRAKAS](#), receiving alms in the form of gold and silver directly from the laity, in violation of the disciplinary prohibition against monks' handling gold and silver. He also found that the monks had identified ten points in the [VINAYA](#) that they considered were sufficiently minor to be ignored, despite the decision at the first council (see [COUNCIL, FIRST](#)) not to disregard any of the minor precepts. The ten violations in question were: (1) carrying salt in an animal horn; (2) eating when the shadow of the sundial is two fingerbreadths past noon; (3) after eating, traveling to another village on the same day to eat another meal; (4) holding several assemblies within the same boundary ([SĪMĀ](#)) during the same fortnight observance; (5) making a monastic decision with an incomplete assembly and subsequently receiving the approval of the absent monks; (6) citing precedent as a justification for violating monastic procedures; (7) drinking milk whey after mealtime; (8) drinking unfermented wine; (9) using mats with fringe; and (10) accepting gold and silver. Yaśas informed the monks that these were indeed violations of the disciplinary code, at which point the monks are said to have offered him a share of the gold and silver they had collected; when he refused,

they expelled him from the order. Yaśas sought support of several respected monks in the west, including [ŚĀNAKAVĀSIN](#) and [REVATA](#), and together with other monks, they travelled together to Vaiśālī. Once there, Revata went to Sarvagāmin, the senior-most monk in the order, who was said to have been a disciple of [ĀNANDA](#). However, when Revata questioned him about the ten points, the elder monk refused to discuss them in private. At Revata's suggestion, a jury of eight monks was appointed, with four representatives from each party. Revata was selected as one of four from the party declaring the ten practices to be violations, and it was Revata who publicly put the questions to Sarvagāmin. In each case, he said that the practice in question was a violation of the vinaya. Seven hundred monks then gathered to recite the vinaya. Those who did not accept the decision of the council held their own convocation, which they called the [MAHĀSĀMĠHIKA](#), or "Great Assembly." This event is sometimes referred to as "the great schism." The second council is generally accepted as a historical event. ¶ Some accounts make [MAHĀDEVA](#) a participant at the second council, which is said to have resulted in the schism of the [SAMĠHA](#) into the conservative [STHAVIRANIKĀYA](#) and the more liberal Mahāsāmḡhika. However, the chief points of controversy that led to the convening of the council seem not to have been Mahādeva's five theses, but rather these ten relatively minor rules of monastic discipline. If Mahādeva was a historical figure, it is more likely that he was involved in a later schism that occurred within the Mahāsāmḡhika, as a result of which the followers of Mahādeva formed the [CAITYA](#) sect. See also [SAMĠITI](#).

[Council, 3rd](#). The third council is said to have been held at [PĀTALIPUTRA](#) under the patronage of the Mauryan Emperor [AŚOKA](#). According to Pāli sources, Aśoka's lavish support of the Buddhist [SAMĠHA](#) had prompted many non-Buddhist mendicants and brāhmaṇas to don the robes of Buddhist monks in order to receive alms. With the legitimate saṃgha unable to forcibly remove the false monks from their midst, the [UPOSADHA](#) ceremony was suspended. The emperor sent a minister to order the monks to continue to perform the ceremony. When they refused, he beheaded a number of monks, only stopping when he was about to behead the emperor's ordained brother. The emperor eventually summoned the distinguished monk [MOGGALIPUTTATIṢṢA](#), who taught him the correct [DHARMA](#) and [VINAYA](#) in order that Aśoka might intervene on behalf of the legitimate party. Aśoka interrogated the saṃgha and, using the authority of the state, defrocked those found to be false monks. With the saṃgha thus purified of corruption, Moggaliputtatissa selected a group of one thousand monks from a

total of sixty thousand and convened a council to rehearse the Buddha's teachings as preserved in the Pāli tipitaka (S. [TRIPITAKA](#)) and its commentaries ([ATTHAKATHĀ](#)). At that same time, Moggaliputtatissa composed the [KATHĀVATTHU](#), the seventh and last book of the Pāli abhidhammapitaka, in order to refute various heretical Buddhist views; he also declared the dharma as it was understood by the [VIBHAJYAVĀDA](#) to be orthodox. At the conclusion of the council, Moggaliputtatissa dispatched missionaries to nine neighboring lands to propagate the newly purified teaching. Since accounts of this council only appear in Pāli sources, the historicity of this council has been questioned by modern scholars. It is possible that such a council occurred only within the [STHAVIRANIKĀYA](#) tradition, but perhaps a century later, in the last half of the second century BCE, at which time the *Kathāvattu* was compiled. See also [SAMGĪTI](#).

[Council, 4th](#). Two different events are referred to as the fourth council. According to the account of the Chinese pilgrim [XUANZANG](#), four hundred years after the Buddha's death, King [KANISKA](#) called an assembly of five hundred [ARHATS](#), either in [GANDHĀRA](#) or [KASHMIR](#), to compile the canon once again. Under the direction of the monk [VASUMITRA](#), the [SARVĀSTIVĀDA](#) monks compiled the [VINAYA](#) and composed the [ABHIDHARMAMAHĀVIBHĀSĀ](#). This council is not now considered to have been a historical event and the *Mahāvibhāṣā* was likely composed long after the reign of Kaniṣka. The second event that is known as the fourth council took place in Sri Lanka under King [VATTAGĀMANI ABHAYA](#) in 25 BCE. Up until this time the canon (P. tipitaka, S. [TRIPITAKA](#)) had been maintained entirely orally, with different monastic families of monks responsible for its recitation (see [DHARMABHĀNAKA](#)). Fearing that famine and social discord might lead to the death of those monks and hence the loss of the canon, the king convened a council at the [MAHĀVIHĀRA](#) in the capital of [ANURĀDHAPURA](#), where the canon was recited by five hundred monks and then inscribed onto palm leaves. According to tradition this was the first time that the canon was committed to writing. See also [SAMGĪTI](#).

[Council, 5th](#). What Burmese Buddhism regards as the fifth council was convened in 1868, when King [MINDON MIN](#) summoned 2,400 learned monks from throughout the kingdom to Mandalay to revise and recite the Pāli tipitaka. The recitation of the canon lasted over a period of seven months. In 1871, the revised Burmese canon was inscribed in Burmese script on 729 stone slabs that

were erected, each in its own shrine, in concentric rings around the massive Kuthodaw Pagoda (Pagoda of Great Merit). The entire complex occupies fourteen acres and is situated to the northeast of the fortified city at the base of Mandalay Hill. Nearby is the Sandamuni Pagoda, constructed along a similar plan; it enshrines 1,171 slabs on which are inscribed the Pāli commentaries.

[Council, 6th](#). What the [THERAVĀDA](#) school calls the sixth council was held in Rangoon from 1954 to 1956, commemorating the 2,500th anniversary of the Buddha's passage into [PARINIRVĀNA](#). The convocation was sponsored by the Burmese government under Prime Minister U Nu. A special cave was constructed for the purpose, since the first council was also said to have been held in a cave. At this event, attended by some two thousand five hundred monks from eight Theravāda countries, the Pāli canon was edited and recited, with discrepancies among versions in the various Southeast Asian scripts noted and corrected. [MAHASI SAYADAW](#) was appointed to the dual position of pucchaka (questioner) and osana (editor). See also [SAMGĪTI](#).

[Council of Bsam yas](#). See [BSAM YAS DEBATE](#).

[Council of Lha sa](#). See [BSAM YAS DEBATE](#).

[craving](#). See [TRSNĀ](#); TANHĀ; cf. [LOBHA](#).

[Csoma de Kőrös, Alexander](#). (1784–1842). Early European scholar of Tibet and its Buddhist culture. Csoma de Kőrös was born in Transylvania, to a family descended from Magyar nobility. He developed an early interest in the origins of his Hungarian ancestry, which led him to dedicate himself to learning more about the history of the Hungarian language. Through his studies in Arabic, he eventually came to the conclusion that Hungarian had developed in the Tarim Basin of modern Xinjiang province in China, and so in 1819 he set out on foot for Yarkand in Turkestan. He crossed the mountains into Ladakh and reached [KASHMIR](#) in 1822. There, he spent a year travelling between Srinagar and Leh (the capital of Ladakh) in the hopes of finding a caravan to join in order to make his way to Yarkand. On one of these journeys, Csoma de Kőrös met William Moorcroft, a veterinarian working for the British government. Moorcroft suggested that Csoma de Kőrös' research might benefit more from traveling to [LHA SA](#) to learn about Tibetan language and literature. Although he never reached Lha sa, Csoma de Kőrös spent nine years in monasteries in Ladakh and

Zanskar learning Tibetan and studying Tibetan Buddhist texts. He devoted much of his research time to mastering Buddhist terminology. In 1830, he left for Calcutta, where he would live for eleven years. In Calcutta, Csoma de Kőrös worked for the British East Indian Company through the Asiatic Society cataloguing Tibetan texts that were sent by [BRIAN HOUGHTON HODGSON](#) (1800–1894). He also published the first Tibetan grammar and dictionary in English, a translation of a ninth-century catalogue of Buddhist terminology, the [MAHĀVYUTPATTI](#), and a number of scholarly articles on the Tibetan canon. He died of malaria in Darjeeling (1842) as he continued his search for the ancestral homeland of the Hungarian people. Although Csoma de Kőrös was not a Buddhist, he was declared a [BODHISATTVA](#) by Taishō University in Tokyo in 1933 and is often described as the “Father of Tibetology.”

[Cūḍapanthaka](#). (P. Cūḷapanthaka/Cullapantha; T. Lam phran bstan; C. Zhutubantuojia; J. Chūdahantaka; K. Chudobant’akka 注荼半托迦). An eminent [ARHAT](#) declared in Pāli sources as foremost among the Buddha’s disciples in his ability to create mind-made bodies ([MANOMAYAKĀYA](#)) and to manipulate mind (cittavivatta). Cūḍapanthaka was the younger of two brothers born to a merchant’s daughter from [RĀJAGRHA](#) who had eloped with a slave. Each time she became pregnant, she wanted to return home to give birth to her children, but both were born during her journey home. For this reason, the brothers were named “Greater” Roadside (Mahāpanthaka; see [PANTHAKA](#)) and “Lesser” Roadside. The boys were eventually taken to Rājagrha and raised by their grandparents, who were devoted to the Buddha. The elder brother Panthaka often accompanied his grandfather to listen to the Buddha’s sermons and was inspired to be ordained. He proved to be an able monk, skilled in doctrine, and eventually attained arhatship. He later ordained his younger brother Cūḍapanthaka but was gravely disappointed in his brother’s inability to memorize even a single verse of the dharma. Panthaka was so disappointed that he advised his brother to leave the order, much to the latter’s distress. Once, the Buddha’s physician [JĪVAKA](#) invited the Buddha and his monks to a morning meal. Panthaka gathered the monks together on the appointed day to attend the meal but intentionally omitted Cūḍapanthaka. So hurt was Cūḍapanthaka by his brother’s contempt that he decided to return to lay life. The Buddha, knowing his mental state, comforted the young monk and taught him a simple exercise: he instructed him to sit facing east and, while repeating the phrase “rajoharaṇam” (“cleaning off the dirt”), continue to wipe his face with a clean cloth. As

Cūḍapanthaka noticed the cloth getting dirty from wiping off his sweat, he gained insight into the reality of impermanence ([ANITYA](#)) and immediately attained arhatship and was equipped with the four analytical knowledges ([PRATISAMVID](#)), including knowledge of the entire canon ([TRIPITAKA](#)). (According to other versions of the story, he came to a similar realization through sweeping.) Thereafter Cūḍapanthaka became renowned for his vast learning, as well as for his supranormal powers. He was a master of meditative concentration ([SAMĀDHI](#)) and of the subtle-materiality absorptions ([RŪPĀVACARADHYĀNA](#)). He could simultaneously create a thousand unique mind-made bodies ([MANOMAYAKĀYA](#)), while other meditative specialists in the order could at best produce only two or three. ¶ Cūḍapanthaka is also traditionally listed as the last of the sixteen arhat elders ([SODĀŚASTHAVIRA](#)), who were charged by the Buddha with protecting his dispensation until the advent of the next buddha, [MAITREYA](#). In [CHANYUE GUANXIU](#)'s standard Chinese depiction, Cūḍapanthaka sits among withered trees, his left hand raised with fingers slightly bent, and his right hand resting on his right thigh, holding a fan.

[Cūḷadhammasamādānasutta](#). (C. Shoufa jing; J. Juhōkyō; K. Subōp kyōng 受法經). In Pāli, “Shorter Discourse on Undertaking the Dharma”; the forty-fifth sutta of the [MAJJHIMANIKĀYA](#) (a separate [SARVĀSTIVĀDA](#) recension appears as the 174th sūtra in the Chinese translation of the [MADHYAMĀGAMA](#)); preached by the Buddha to a gathering of monks in the [JETAVANA](#) Grove at Sāvatti (S. [ŚRAVASTĪ](#)). The Buddha describes four ways of undertaking things in this life and the good and bad consequences that accrue to one who follows these ways. The first way is to live happily in the present, but suffer a painful consequence in the future, e.g., when a person wantonly indulges in sensual pleasures in the present life and, as a result, is reborn into a woeful state later. The second way is to live a painful existence in the present, and suffer a painful consequence in the future; this is the case with ascetics who mortify their flesh only to be reborn in a woeful state. The third way is to live a painful existence in the present, but enjoy a happy consequence in the future; this is the case with a person who suffers in this life due to greed, hatred, and delusion but nevertheless strives to lead a blameless life and is consequently reborn in a happy existence as a human or lesser divinity ([DEVA](#)). The fourth way is to live happily in the present, and enjoy a happy consequence, as is the case with a person who cultivates the meditative absorptions ([JHĀNA](#); S. [DHYĀNA](#)); he is happy in the present life and is rewarded with a happy rebirth as a [BRAHMĀ](#) divinity. An expanded version of this sermon

is found in the [MAHĀDHAMMASAMĀDĀNASUTTA](#), or “Longer Discourse on Undertaking the Dharma,” also contained in the *Majjhimanikāya*.

[Cūḷadukkhakkhandhasutta](#). (C. Kuyin jing; J. Kuongyō; K. Koḥm kyōng 苦陰經). In Pāli, “Shorter Discourse on the Mass of Suffering”; the fourteenth sutta in the [MAJJHIMANIKĀYA](#) (a separate [SARVĀSTIVĀDA](#) recension appears as the one hundredth sūtra in the Chinese translation of the [MADHYAMĀGAMA](#)); preached by the Buddha to the Sakiyan prince Mahānāma at Kapilavatthu (S. [KAPILAVASTU](#)). The Buddha explains the full implications of sensual pleasures, the advantages of renouncing them, and the path needed to escape from their influence. In a discussion with [JAINA](#) ascetics, he describes how greed, ill-will, and ignorance cause moral defilement and misery.

[Cūḷagopālakasutta](#). In Pāli, “Shorter Discourse on the Cowherd”; the thirty-fourth sutta in the [MAJJHIMANIKĀYA](#) (separate recensions appear, but without title, in the Chinese translations of the [EKOTTARĀGAMA](#) and [SAMYUKTĀGAMA](#)); preached by the Buddha to an assembly of monks at Ukkācelā in the land of the Vajji (S. Vṛji). The Buddha explains that if monks are not equipped with the requisite skills in understanding this world and the next, the realm of death and the deathless, etc., the teachings cannot be expected to prosper. He uses the example of an unskillful cowherd under whose guidance a herd is led across a river, only to meet with destruction before they reach the other shore.

[Cūḷagosīngasutta](#). (C. Niujiāosuoluolin jing; J. Gokakusararingyō; K. Ugaksararim kyōng 牛角娑羅林經). In Pāli, “Shorter Discourse in Gosīṅga Park”; the thirty-first sutta in the [MAJJHIMANIKĀYA](#) (a separate [SARVĀSTIVĀDA](#) recension appears as the 185th sūtra in the Chinese translation of the [MADHYAMĀGAMA](#); there is also a recension of uncertain affiliation that appears without title in the Chinese translation of the [EKOTTARĀGAMA](#)). The Buddha visits the eminent monks, Anuruddha (S. [ANIRUDDHA](#)), Nandiya, and Kimila while the three are residing in the Gosīṅga grove. The monks describe to him how they carry out their daily activities in cooperation with one another and the Buddha praises them for their harmonious lifestyle, declaring it to be an adornment to the grove.

[Cūḷahatthipadopamasutta](#). (C. Xiangjiyu jing; J. Zōshakuyugyō; K. Sangjōgyu kyōng 象跡喻經). In Pāli, “Shorter Discourse on the Simile of the Elephant’s Footprint”; the twenty-seventh sutta in the [MAJJHIMANIKĀYA](#) (a separate [SARVĀSTIVĀDA](#) recension appears as the 146th sūtra in the Chinese translation of

the [MADHYAMĀGAMA](#)), preached by the Buddha to the brāhmaṇa Jāṇussoṇi at the [JETAVANA](#) grove in the city of Sāvatti ([ŚRĀVASTĪ](#)). Jāṇussoṇi asks the Buddha whether a person could infer something of the virtues of the Buddha and his teachings in the same way that a hunter can infer the size of an elephant from its footprint. The Buddha responds that the virtues of the Buddha and his teachings could only be fully comprehended by following the teachings oneself until one has attained the final goal of [NIRVĀNA](#); this is just as with a hunter, who can only truly know the size of an elephant by following its tracks and seeing it directly at its watering hole. The Buddha then provides a systematic outline of his path of training, from morality (sīla, S. [ŚĪLA](#)), through the four meditative absorptions (jhāna; S. [DHYĀNA](#)), to the three higher knowledges (tevijjā; S. [TRIVIDYĀ](#)).

Cūḷaniddesa. In Pāli, “Shorter Exposition,” second part of the *Niddesa* (“Exposition”), an early commentarial work on the [SUTTANIPĀTA](#) included in the Pāli [SUTTAPITAKA](#) as the eleventh book of the [KHUDDAKANIKĀYA](#); also written as *Cullaniddesa*. Attributed by tradition to the Buddha’s chief disciple, Sāriputta (S. [ŚĀRIPUTRA](#)), the *Niddesa* is divided into two sections: the [MAHĀNIDDESA](#) (“Longer Exposition”), and *Cūḷaniddesa*. The *Mahāniddesa* comments on the sixteen suttas (S. [SŪTRA](#)) of the [AṬṬHAKAVAGGA](#) chapter of the *Suttanipāta*, while the *Cūḷaniddesa* comments on the sixteen suttas of the Parāyaṇavagga chapter and on the *Khaggavisānasutta* (see [KHADGAVISĀNA](#)). The *Mahāniddesa* and *Cūḷaniddesa* do not comment on any of the remaining contents of the *Suttanipāta*, a feature that has suggested to historians that at the time of their composition the *Aṭṭhakavagga* and *Parāyaṇavagga* were autonomous anthologies not yet incorporated into the *Suttanipāta*, and that the *Khaggavisānasutta* likewise circulated independently. The exegesis given to the *Suttanipāta* by the *Mahā-* and *Cūḷaniddesa* displays the influence of the Pāli [ABHIDHAMMA](#) (S. [ABHIDHARMA](#)) and passages from it are frequently quoted in the [VISUDDHIMAGGA](#). Both parts of the *Niddesa* are formulaic in structure, a feature that appears to have been designed as a pedagogical aid to facilitate memorization. In Western scholarship, there has long been a debate regarding the dates of these two compositions, with some scholars dating them as early as the third century BCE, others to as late as the second century CE. The *Mahā-* and *Cūḷaniddesa* are the only commentarial texts besides the [SUTTAVIBHAṄGA](#) of the [VINAYAPITAKA](#) to be included in the Sri Lankan and Thai recensions of the Pāli canon. In contrast, the Burmese canon includes two additional early commentaries, the [NETTIPAKARANA](#) and [PETAKOPEDESA](#), as books sixteen and seventeen in its version of the

Khuddakanikāya.

Cūlasaccakasutta. In Pāli, “Shorter Discourse to Saccaka”; thirty-fifth sutta contained in the [MAJJHIMANIKĀYA](#) (two separate recensions appear, but without title, in the Chinese translations of the [EKOTTARĀGAMA](#) and [SAMYUKTĀGAMA](#)); preached by the Buddha to the wandering ascetic Saccaka in the Mahāvana forest outside the city of Vesālī (S. [VAISĀLĪ](#)). Saccaka maintained that that the five aggregates (P. khandha; S. [SKANDHA](#)) of materiality ([RŪPA](#)), sensations ([VEDANĀ](#)), perception (P. saññā; S. [saṃjñā](#)), conditioning factors (P. saṅkhāra; S. [SAMSKĀRA](#)), and consciousness (P. viññāṇa; S. [VIJÑĀNA](#)) are one’s self (P. attan; S. [ĀTMAN](#)), and that it was this self that experienced the results of good and bad deeds (P. kamma; S. [KARMAN](#)). The Buddha refutes this view by pointing out that all of the aggregates are impermanent (P. anicca; S. [ANITYA](#)), unsatisfactory or suffering (P. dukkha; S. [DUHKHA](#)), nonself (P. anatta; S. [ANĀTMAN](#)) and beyond one’s control.

Cūlasāropamasutta. In Pāli, “Shorter Discourse on the Simile of the Heartwood”; thirtieth sutta in the [MAJJHIMANIKĀYA](#) (a separate unidentified recension appears, without title, in the Chinese translation of the [EKOTTARĀGAMA](#)), preached by the Buddha to the brāhmaṇa Piṅgalakoccha at the [JETAVANA](#) Grove in the town of Sāvatti (S. [ŚRĀVASTĪ](#)). Piṅgalakoccha asks whether the six mendicant teachers (P. samaṇa ; [ŚRAMANA](#)) who were the Buddha’s rivals were, as they claimed, all buddhas themselves. The Buddha responds by explaining that, whereas the religious practices set forth by his rivals could lead to fame and profit and to the attainment of supranormal powers (P. abhiññā; S. [ABHIJÑĀ](#)), these were but like the leaves and twigs of a tree. Only the holy life (P. brahmacariya; S. [BRAHMACARYA](#)) set forth by the Buddha leads to the status of arahant (S [ARHAT](#)), which is like the heartwood of a tree.

Cūlasīhanādasutta. (C. Shizhou jing; J. Shishikukyō; K. Sajahu kyōng 師子吼經). In Pāli, “Shorter Discourse on the Lion’s Roar”; eleventh sutta in the [MAJJHIMANIKĀYA](#) (a [SARVĀSTIVĀDA](#) recension appears as the 103rd sūtra in the Chinese translation of the [MADHYAMĀGAMA](#); a separate recension of unidentified affiliation appears, without title, in the Chinese translation of the [EKOTTARĀGAMA](#)), preached by the Buddha to a group of monks in the [JETAVANA](#) grove in the city of Sāvatti (S. [ŚRĀVASTĪ](#)). The Buddha explains how only in his teachings can one attain any of the four degrees of sanctity (see [ĀRYAPUDGALA](#)): stream-enterer, once-returner, nonreturner, and perfected [ARHAT](#); all other

teachings lack these. Also, only in his teachings are found a rejection of all notions of a perduring self (P. *atta*; S. [ĀTMAN](#)).

[Cūlāssapurasutta](#). (C. *Mayi jing*; J. *Meyūkyō*; K. *Maṃp kyōng* 馬邑經). In Pāli, “Shorter Discourse at Assapura”; the fortieth sutta in the [MAJJHIMANIKĀYA](#) (a separate [SARVĀSTIVĀDA](#) recension appears as the 183rd sūtra in the Chinese translation of the [MADHYAMĀGAMA](#)); preached by the Buddha to a group of monks dwelling in the market town of Assapura in the country of the Aṅgans. The people of Assapura were greatly devoted to the Buddha, the [DHARMA](#), and the [SAMGHA](#) and were especially generous in their support of the community of monks. In recognition of their generosity, the Buddha advised his monks that the true path of the recluse is not concerned with mere outward purification through austerities but rather with inward purification through freedom from passion and mental defilements. The dedicated monk should therefore devote himself to the path laid down by the Buddha until he has abandoned twelve unwholesome states of mind: (1) covetousness, (2) ill will, (3) anger, (4) resentment, (5) contempt, (6) insolence, (7) envy, (8) greed, (9) fraud, (10) deceit, (11) evil wishes, and (12) wrong view. Having abandoned these twelve, the monk should then strive to cultivate the divine abidings ([BRAHMAVIHĀRA](#)) of loving-kindness, compassion, sympathetic joy, and equanimity; through those virtues, the monk attains inner peace and thereby practices the true path of the recluse.

[Cūlatanhāsankhayasutta](#). In Pāli, “Shorter Discourse on the Destruction of Craving”; the thirty-seventh sutta in the [MAJJHIMANIKĀYA](#) (two separate recensions appear, but without title, in the Chinese translations of the [EKOTTARĀGAMA](#) and [SAMYUKTĀGAMA](#)), preached by the Buddha to Sakka (S. [ŚAKRA](#)), king of the gods, in the city of Sāvatti (S. [ŚRĀVASTĪ](#)). Sakka inquires how the Buddha trained himself so that he achieved the destruction of craving and reached the ultimate goal of liberation, whereby he became foremost among humans and gods. In response, the Buddha describes how a householder, after renouncing the world, trains himself to purify his mind of mental defilements and reaches the final goal. Mahāmoggallāna ([MAHĀMAUDGALYĀYANA](#)) overhears the sermon and travels to the heaven of the thirty-three (P. *tāvatiṃsa*; S. [TRĀYASTRIMŚĀ](#)) to find out whether Sakka had correctly understood the meaning of the Buddha’s words. While there, Sakka gives Mahāmoggallāna a tour of his magnificent palace, which the king explains was constructed following the defeat of the demigods ([ASURA](#)).

Cūlavagga. [alt. Cullavagga]. In Pāli, “Lesser Chapter”; one of the sections of the Pāli “basket of discipline” ([VINAYAPITAKA](#)). The second major division of the Pāli [VINAYA](#), the [KHANDHAKA](#) (Collections), is subdivided between the [MAHĀVAGGA](#) (“Great Chapter”) and the *Cūlavagga*. The *Cūlavagga* includes twelve sections, in two parts that differ markedly in length and scope. The first part (chaps. 1–10) covers a variety of disciplinary regulations and relatively minor rules of monastic etiquette, ranging from transactions (P. saṅghakamma; S. [SAMGHAKARMA](#)) for imposing penance and probation on monks to methods of settling disputes within the order, apportioning lodging, handling schism within the order, and proper procedures for the ordination of nuns (P. bhikkhunī; S. [BHIKSUNĪ](#)). The second part (chaps. 11–12) continues the *Mahāvagga*’s narrative on the history of the [SAMGHA](#), relating events that followed the Buddha’s [PARINIRVĀNA](#), including the first council at [RĀJAGRHA](#) shortly after his death and the second council at [VAIŚĀLĪ](#) a century or so later (see [COUNCIL, FIRST](#); [COUNCIL, SECOND](#)).

Cūlavamsa. In Pāli, “The Shorter Chronicle”; a historical chronicle of Sri Lanka and a continuation of the [MAHĀVAMSA](#). Written in segments by several authors beginning in the thirteenth century and continuing through the eighteenth century, the text offers a synopsis of the history of the island and its religion from the reign of Sirimeghavaṇṇa (362–390 CE) to that of Sirivikkamarājasīha (1798–1815 CE).

Cūlavedallasutta. (C. Fale biqiuni jing; J. Hōraku bikunikyō; K. Pōmnak piguni kyōng 法樂比丘尼經). In Pāli, “Shorter Discourse on Points of Doctrine”; the forty-fourth sutta in the [MAJJHIMANIKĀYA](#) (a separate [SARVĀSTIVĀDA](#) recension appears as the 210th sūtra in the Chinese translation of the [MADHYAMĀGAMA](#); the entire discourse is also subsumed in the Tibetan translation of Śamathadeva’s commentary to the [ABHIDHARMAKOŚABHĀSYA](#)), expounded by the nun Dhammadinnā (S. [DHARMADINNĀ](#)) to her former husband, the householder Visākha, at the Veḷuvana (S. [VENUVANAVIHĀRA](#)) bamboo grove in Rājagaha (S. [RAJAGRHA](#)). Visākha approached Dhammadinnā and questioned her concerning a number of points of doctrine preached by the Buddha. These questions included: what is the nature of this existing body (P. sakkāya; S. satkāya); what is its origin ([SAMUDAYA](#)), its cessation ([NIRODHA](#)), and the path (P. magga; S. [MĀRGA](#)) leading to its cessation; how does wrong view concerning this body (P. sakkāyadiṭṭhi; S. [SATKĀYADRSTĪ](#)) arise and how is it removed; what is the noble

eightfold path; what is concentration ([SAMĀDHI](#)); what are bodily, verbal, and mental formations; what is the attainment of cessation (nirodha); what is sensation ([VEDANĀ](#)); what are the underlying tendencies with regard to pleasant, painful, and neutral sensations and how should these be overcome; and what are the counterparts of pleasant, painful, and neutral sensations. Dhammadinnā answered all of the questions put to her to the satisfaction of the householder Visākha—proving why the Buddha considered her foremost among his nun disciples in the gift of preaching.

[Cullavagga](#). (P). See [CŪLAVAGGA](#).

Cunda. (T. Skul byed; C. Zhuntuo; J. Junda; K. Chunda 準陀). In Sanskrit and Pāli, the proper name of a metalworker famous, or perhaps infamous, for having offered the Buddha his final meal before his demise. According to the Pāli account, the Buddha was traveling to Kusinārā (S. [KUŚINAGARĪ](#)) and interrupted his journey to rest at Cunda’s mango grove in Pāvā. Cunda paid his respects to the Buddha and invited him and his followers for the morning meal the next day. Cunda prepared for them sweet rice, cakes, and [SŪKARAMADDAVA](#), literally “tender boar” or “soft boar’s [food].” There has been much debate, both in the tradition and among modern scholars, as to the meaning of this term. It is unclear whether it means something soft that is consumed by boars (such as a type of mushroom, truffle, or bamboo shoots that had been trampled by boars) or some kind of pork dish. The Indian and Sinhalese commentators prefer, although not unanimously, the latter interpretation. Some East Asian recensions of Cunda’s story state that he offered the Buddha mushrooms rather than pork for his last meal, thus preserving the idea that the Buddha was vegetarian. At the meal, the Buddha announced that he alone should be served the dish, and what was left over should be buried, for none but a buddha could survive eating it. This has led some modern interpreters to suggest that the meal had been poisoned, but no such implication appears in traditional commentaries. Shortly thereafter, the Buddha became afflicted with the dysentery from which he would eventually die. Shortly before his death, the Buddha instructed his disciple [ĀNANDA](#) to visit Cunda and reassure the layman that he was blameless; in fact, he should rejoice at the great merit he earned for having given the Buddha his last meal. In an earlier meeting, Cunda remarked to the Buddha that he approved of Brahmanical rites of purification, to which the Buddha responded with a sermon on the threefold defilement and purification of the body, the fourfold defilement and

purification of speech, and the threefold defilement and purification of the mind. Although Cunda is not recorded as having ever reached any degree of spiritual attainment, he did have his doubts removed by the Buddha, whom he regarded as his teacher. There are a variety of different transcriptions of the name in Chinese, of which the above is among the most common.

Cundī. (T. Skul byed ma; C. Zhunti; J. Juntei; K. Chunje 准提). In Sanskrit, the name Cundī (with many orthographic variations) probably connotes a prostitute or other woman of low caste but specifically denotes a prominent local ogress ([YAKSINĪ](#)), whose divinized form becomes the subject of an important Buddhist cult starting in the eighth century. Her worship began in the Bengal and Orissa regions of the Indian subcontinent, where she became the patron goddess of the Pāla dynasty, and soon spread throughout India, and into Sri Lanka, Southeast Asia, and Tibet, eventually making its way to East Asia. Cundī was originally an independent focus of cultic worship, who only later (as in the Japanese [SHINGONSHŪ](#)) was incorporated into such broader cultic practices as those focused on the “womb [MANDALA](#)” (see [TAIZŌKAI](#)). Several scriptures related to her cult were translated into Chinese starting in the early eighth century, and she lends her name to both a [MUDRĀ](#) as well as an influential [DHĀRAṆĪ](#): namaḥ saptānāṃ samyakṣambuddhakoṭīṇāṃ tadyathā: oṃ cale cule cunde svāhā. The dhāraṇī attributed to Cundī is said to convey infinite power because it is in continuous recitation by myriads of buddhas; hence, an adept who participates in this ongoing recitation will accrue manifold benefits and purify himself from unwholesome actions. The efficacy of the dhāraṇī is said to be particularly pronounced when it is recited before an image of Cundī while the accompanying Cundī mudrā is also being performed. This dhāraṇī also gives Cundī her common epithet of “Goddess of the Seventy Million [Buddhas],” which is sometimes mistakenly interpreted (based on a misreading of the Chinese) as the “Mother of the Seventy Million Buddhas.” The texts also provide elaborate directions on how to portray her and paint her image. In Cundī’s most common depiction, she has eighteen arms (each holding specific implements) and is sitting atop a lotus flower ([PADMA](#)) while being worshipped by two ophidian deities.

cyutyupapādānusmṛti. (S). See [CYUTYUPAPATTIJÑĀNA](#).

cyutyupapattijñāna. [alt. cyutyupapādānusmṛti] (P. cutūpapātañña; T. ’chi ’pho ba dang skye ba rjes su dran pa; C. shengsizhi; J. shōjichi; K. saengsaji 生死)

智). In Sanskrit, lit., “recollection of the disappearance [in one life] and rebirth [in another],” viz., “insight into the future rebirth destinies” of all other beings, a by-product of the “divine eye” ([DIVYACAKṢUS](#)), or clairvoyance, and the second of the “three knowledges” ([TRIVIDYĀ](#)). This recollection comes as a by-product of the enlightenment experience of a “worthy one” ([ARHAT](#)), and is an insight achieved by the Buddha during the second watch of the night of his own enlightenment. Through his enlightenment, the adept realizes not only that himself and all beings have been governed by the association between past actions ([KARMAṆ](#)) and their fruitions ([VIPĀKA](#)) throughout all their past lives; but through this insight, he also realizes that all other beings continue to be governed by their actions, and he is able to observe where beings will be reborn in the future as well. Specifically, one who possesses this insight sees the disappearance and arising of beings as low or noble, beautiful or ugly, etc., according to their good and evil deeds ([KARMAṆ](#)) performed through body, speech, and mind. Those who revile the noble ones ([ĀRYAPUDGALA](#)), hold perverse views ([MITHYĀDRSTI](#)), and act in accordance with perverse views are observed to be reborn in lower realms of existence, e.g., in baleful destinies ([APĀYA](#); [DURGATI](#)) such as the hells. Those who honor the noble ones, hold right views, and act in accordance with right views are observed to be reborn in higher realms of existence, e.g., in pleasant destinies such as the heavens. This ability is also listed as one of the superknowledges ([ABHIJÑĀ](#)).

Da banniepan jing jijie. (J. Daihatsunehangyō jūge; K. Tae panyōlban kyōng chiphae 大般涅槃經集解). In Chinese, “Compilation and Explanation of the [MAHĀPARINIRVĀNASŪTRA](#)”; compiled by the monk Baoliang (444–509); the oldest and most comprehensive collection of commentaries on the *Mahāparinirvāṇasūtra*, in a total of seventy-one rolls. The *Da banniepanjing jijie* explicates the title and content of each chapter of the sūtra by quoting the words and sayings of different commentators, of whom Baoliang is but one. The influential Chinese commentaries on the *Mahāparinirvāṇasūtra* by [JIZANG](#) and [GUANDING](#) rely heavily upon this work.

Dabei zhou. (J. Daihiju; K. Taebi chu 大悲咒). In Chinese, “Great Compassion Spell,” also known as the Qianshou zhou; an esoteric code ([DHĀRAṆĪ](#)) associated with the [BODHISATTVA AVALOKITEŚVARA](#) in his guise as [MAHĀKARUNIKA](#), which is widely used liturgically in East Asian Buddhism, especially in funeral ceremonies. See the extensive treatment of this dhāraṇī in [QIANSHOU JING](#), s.v.

Daci’ensi. (J. Daijionji; K. Taejaūnsa 大慈恩寺). In Chinese, the “Beneficence of Great Compassion Monastery” or “Great Maternal Grace Monastery”; a major scholastic center during the Sui and Tang dynasties, located in the imperial capital of Chang’an (present-day Xi’an). Originally founded in 589 CE during the Sui dynasty as Wulousi (Free of Contaminants Monastery), it was later rebuilt in 648 CE during the Tang by the prince who would later become the Gaozong emperor (r. 649–683). The monastery was rebuilt to honor the prince’s deceased mother, Empress Wende (601–636 CE), in whose memory it was given its new name. The monastery became best known as the base for the translation bureau established by the pilgrim and scholar [XUANZANG](#) (600/602–664 CE) and his collaborators, including [WŌNCH’ŪK](#) (C. Yuance) and [KUIJI](#). At the monastery, Xuanzang and his team translated much of the scholastic literature of Indian Buddhism, including the [ABHIDHARMAMAHĀVIBHĀSĀ](#), *[ABHIDHARMANYĀYĀNUSĀRA](#), NYĀYAMUKHA, and [CHENG WEISHI LUN](#). In 652 CE, Xuanzang commissioned a pagoda, named the [DAYAN TA](#) (Great Wild Goose Pagoda), in order to house the numerous Sanskrit manuscripts and Buddhist images he had brought back with him from his sojourn in India; the originally five-story stone pagoda is still a major tourist attraction in Xi’an.

dade. (J. daitoku; K. taedŏk 大德). In Chinese, “great virtue”; a reference to spiritual virtuosi, such as buddhas, [BODHISATTVAS](#), and eminent monks. During the Tang dynasty, the special title *dade* was given periodically to ten worthy monks. The term *dade* also was used as a second-person pronoun in certain periods. Elderly monks were also sometimes referred to as *dade*, especially in the [CHAN](#) tradition. In Korea, the term continues to be used to designate an official monastic office that is occupied by the most senior monks of the [CHOGYE CHONG](#), whose only primary duty is to advise the order through their “great virtue” and help in the selection of the most senior members of the ecclesiastical hierarchy. See also [SŪNGKWA](#).

[Dafangguang yuanjue xiuduoluo liaoyi jing.](#) (大方廣圓覺修多羅了義經). In Chinese, “The Expanded Sūtra of Perfect Enlightenment, a Book of Definitive Meaning ([NĪTĀRTHA](#))”; the extended Chinese title of the [YUANJUE JING](#) (“Book of Perfect Enlightenment”). See [YUANJUE JING](#).

[dāgoba.](#) Also *dāgaba*; the Sinhalese word for [STŪPA](#). See [STŪPA](#).

[Dag pa shel ri.](#) (T). See [TSA RI](#).

[Daguan Zhenke.](#) (J. Takkan Shinka; K. Talgwan Chin’ga 達觀真可) (1543–1603). Chinese [CHAN](#) master of the Ming dynasty, also known as [ZIBO](#). Daguan was a native of Jugu prefecture in Jiangsu province. He was ordained at age sixteen and is said to have attained awakening after reading the following verse by the layman Zhang Zhuo (d.u.), a disciple of the Chan master SHISHUANG QINGZHU: “Cutting off deluded thoughts increases maladies ever more,/ Heading out toward true suchness is also heresy” (duanji wangxiang zhongzeng bing,/ quxiang zhenru yishi xie). Like his influential contemporaries [HANSHAN DEQING](#) and [YUNQI ZHUHONG](#), he was renowned for his advocacy of [NIANFO](#) Chan, in which Chan meditative practice was combined with the invocation or recitation of the name of the buddha [AMITĀBHA](#). Daguan was known as one of the four great monks of the Ming dynasty along with Hanshan Deqing (1546–1623), Yunqi Zhuhong (1535–1615), and [OUYI ZHIXU](#) (1599–1655). Daguan’s teachings are recorded in the *Zibo zunzhe quanji* and *Zibo laoren shiji*.

[Dahong Bao’en.](#) (J. Daikō Hōon; K. Taehong Poŭn 大洪報恩) (1058–1111). Chinese [CHAN](#) master of the [CAODONG](#) lineage. Dahong was a native of Liyang in present-day Henan province. Raised in a traditional family, he became an

official at an early age, but later abandoned the position, with the court's permission, in order to ordain as a monk. He studied under the Chan master [TOUZI YIQING](#) and became his disciple. Dahong was later invited by the prime minister to lecture at the famed monastery of [SHAOLINSI](#). In response to still another request, he moved to Mt. Dahong in Suizhou prefecture (present-day Hubei province), whence he acquired his toponym, and became the first Chan monk to convert a [VINAYA](#) monastery into a Chan center, which he named Chongning Baoshou Chanyuan. Dahong also became close friends with the powerful and outspoken statesman [ZHANG SHANGYING](#) (1043–1122). Dahong is known to have composed several texts including a history of the Caodong tradition, *Caodong zongpai lu*, and manuals for conferring the precepts, such as the *Shou puti xinjie wen* and *Luofa shoujie yiwen*; none of these texts are extant.

[Dahong Shousui](#). (J. Daikō Shusui; K. Taehong Susu 大洪守遂) (1072–1147). Chinese [CHAN](#) master in the [CAODONG](#) lineage. Dahong was a native of Suining in present-day Sichuan province. He was ordained at the age of twenty-seven and became the student of [DAHONG BAO'EN](#) of Mt. Dahong and acquired the same toponym. In 1118, the title Great Master Jingyan (Pure and Strict) was bestowed upon him. After the invasion of Jin dynasty troops, Dahong moved south and became the abbot of the monastery Shuinan Chanyuan. Later he moved back to Mt. Dahong where he and his seven hundred disciples devoted themselves to its restoration.

[Dahui Pujue chanshi shu](#). (J. Daie Fukaku zenji sho; K. Taehye Pogak sōnsa sō 大慧普覺禪師書). In Chinese, “[CHAN](#) Master Dahui Pujue's Letters”; also known as the *Dahui shumen*, [DAHUI SHUZHUANG](#), [SHUZHUANG](#), and *Dahui shu*. Its colophon is dated to 1166. In reply to the letters he received from his many students, both ordained and lay, the Chan master [DAHUI ZONGGAO](#) wrote back with detailed instructions on meditation practice, especially his signature training in “observing the meditative topic,” or more freely “questioning meditation” ([KANHUA CHAN](#)); after his death, his letters were compiled and edited in two rolls by his disciples Huiran and Huang Wenchang. Numerous editions of this collection were subsequently printed in China, Korea, and Japan. Many practitioners of Chan, [SŌN](#), and [ZEN](#) favored the *Dahui Pujue chanshi shu* for its clarity, intelligibility, and uniquely personal tone. The text was especially influential in the writings of the Korean Sōn master [POJO CHINUL](#) (1158–1210), who first learned about the Chan meditative technique of kanhua Chan from its

pages and who attributed one of his three awakenings to his readings of Dahui. Dahui's letters were formally incorporated into the Korean Sŏn monastic curriculum by at least the seventeenth century, as one of books in the "Fourfold Collection" ([SAJIP](#)), where it is typically known by its abbreviated title of "Dahui's Letters" (K. TAEHYE SŎJANG) or just "Letters" (K. SŎJANG; C. Shuzhuang). The Japanese monk and historian [MUJAKU DŌCHŪ](#) (1653–1744) also wrote an important commentary to the text, known as the *Daiesho kōrōju*.

[Dahui Pujue chanshi zongmen wuku](#). (J. Daie Fukaku zenji shūmon muko; K. Taehye Pogak sŏnsa chongmun mugo 大慧普覺禪師宗門武庫). In Chinese, "[CHAN](#) Master Dahui Pujue's Arsenal of the Tradition," edited in one roll by the monk Daoqian (d.u.); also known by the abbreviated titles *Dahui wuku* and *Zongmen wuku*. The preface to the text is dated 1186. Daoqian edited together over a hundred of his teacher [DAHUI ZONGGAO](#)'s stories, anecdotes, inscriptions, and poems. The wide range of material that appears in the *Dahui Pujue chanshi zongmen wuku* serves as an important source for the study of the lives and thoughts of eminent monks and laymen, some of whom would otherwise no longer be known to us. Most of the stories, however, concern the deeds and words of Dahui's teachers [YUANWU KEQIN](#) and Dantang Wenzhun (1061–1115), Yuanwu's teacher [WUZU FAYAN](#), and Dantang's teacher [ZHENJING KEWEN](#).

[Dahui shuzhuang](#). (J. Daie shojō; K. Taehye sŏjang 大慧書狀). See [DAHUI PUJUE CHANSHI SHU](#).

[Dahui's Letters](#). See [DAHUI PUJUE CHANSHI SHU](#).

[Dahui Zonggao](#). (J. Daie Sōkō; K. Taehye Chonggo 大慧宗杲) (1089–1163). Influential Song-dynasty Chinese [CHAN](#) master in the [LINJI ZONG](#); also known as Miaoxi, Yunmen, Tanhui, or more typically just Dahui (J. Daie; K. Taehye). Dahui was a native of Ningguo in Xuanzhou (present-day Anhui province). After studying at [LUSHAN](#) and Mt. Dong, Dahui became the student of the Chan master DANTANG WENZHUN; in 1115, aware of his impending death, Dantang encouraged Dahui to continue his studies under [YUANWU KEQIN](#). Before approaching Yuanwu, Dahui visited the Chan master [JUEFAN HUIHONG](#), at which time he also met the powerful statesman and layman [ZHANG SHANGYING](#). In 1124, while Yuanwu was serving under imperial orders as abbot of the monastery of Tianningsi in Dongjing, Dahui became his disciple and later inherited his Linji lineage. At the recommendation of the current grand

councilor, Dahui was given the title Fori Dashi (Great Master Buddha Sun). After Yuanwu returned to his home province of Sichuan, Dahui moved to the hermitage of Yunmen'an in Haihun (present-day Jiangxi province) to avoid the invading forces of the Jin dynasty. In 1134, Dahui moved again to the hermitage of Yangyuan in Fujian province, where he launched a harsh critique against the practice of “silent-illumination Chan” ([MOZHAO CHAN](#)), championing instead the “investigation of the meditative topic” ([KANHUA CHAN](#)) method of meditation. Dahui later served as abbot of the powerful monastery Nengren Chanyuan on Mt. Jing (see [WANSHOUSI](#)) and revitalized the teachings of the Chan master [LINJI YIXUAN](#). While a truce with the rival Jin dynasty was being negotiated, Dahui was accused of collaborating with Jin forces, for which he was exiled to Hengzhou in present-day Hunan province. During this period, Dahui composed his magnum opus, [ZHENGFA YANZANG](#). After he was absolved of his alleged crime of treason, Dahui began his residence on Mt. Ayuwang and befriended the [CAODONG ZONG](#) Chan master [HONGZHI ZHENGJUE](#), who was the preeminent advocate of the “silent-illumination” technique that Dahui so harshly criticized, suggesting that this professional disagreement did not affect their personal ties. Dahui later returned to his post at Nengren Chanyuan and became the teacher of Emperor Xiaozong (r. 1162–1189), who gave him the title Chan Master Dahui (Great Wisdom). He was also given the posthumous title Chan Master Pujue (Universal Enlightenment), the name typically used in his publications. Dahui’s teachings are recorded in his *Dahui chanshi yulu*, [DAHUI PUJUE CHANSHI SHU](#), and [DAHUI PUJUE CHANSHI ZONGMEN WUKU](#).

[Daianji](#). (大安寺). In Japanese, “Great Peace Monastery”; one of the seven great monasteries of the ancient Japanese capital of Nara ([NANTO SHICHIDAJI](#)). Daianji was founded in the Asuka area and, according to internal monastery records, was originally the Kudara no Ōdera (Great Paekche Monastery) that was founded by Emperor Jomei in 639. When this monastery burned down in 642, Empress Kōgyoku had it rebuilt and renamed it Daianji. If this identification with Kudara no Ōdera is correct, Daianji has the distinction of being the first monastery in Japan founded by the court. The monastery moved to Nara in 716, following the relocation of the capital there in 710. The Koguryō monk Tohyōn (J. Tōgen, fl. c. seventh century) lived at Daianji during the seventh century, where he wrote the *Nihon segi*, an early historical chronicle, which is no longer extant. Daianji was also the residence of the Indian monk [BODHISENA](#) (704–760), who lived and taught there until the end of his life. Bodhisena performed the “opening the

eyes” (C. [KAIYAN](#); J. [KAIGEN](#); [NETRAPRATIṢṬHĀPANA](#)) ceremony for the 752 dedication of the great buddha image of Vairocana ([NARA DAIBUTSU](#); Birushana Nyorai) at [TŌDAIJI](#), another of the great Nara monasteries. Daianji was also home to the Korean monk [SIMSANG](#) (J. Shinjō, d. 742) from the Silla kingdom, who was instrumental in introducing the teachings of the Kegon (C. [HUAYAN](#); K. Hwaōm) school of Buddhism to Japan. Since the time of another famous resident, [KŪKAI](#) (774–835), Daianji has been associated with the [SHINGONSHŪ](#) of Japanese Buddhism. Daianji was at times quite grand, with two seven-story pagodas and many other buildings on its campus. After a fire destroyed much of the monastery in the 1200s, rebuilding was slow and the renovated structures were damaged once again by an earthquake in 1449. Daianji’s fireproof treasury holds nine wooden images from the eighth century, including three different representations of the [BODHISATTVA AVALOKITEŚVARA](#), including both his representations as [AMOGHAPĀŚA](#) (J. Fukū Kenjaku) and his thousand-armed manifestation ([SĀHASRABHUJASĀHASRANETRĀVALOKITEŚVARA](#)), as well as two of the four heavenly kings (S. [CĀTURMAHĀRAJAKĀYIKA](#); J. shitennō). The monastery also retains two famous images that are brought out for display for one month each year: in March, [HAYAGRĪVA](#), and in October, the eleven-headed Avalokiteśvara (Jūichimen Kannon).

daibutsu. (大佛). In Japanese, “great buddha”; referring to colossal wooden or cast-bronze buddha images, such as the forty-eight-foot-high image of [VAIROCANA](#) enshrined at [TŌDAIJI](#) and the image of [AMITĀBHA](#) in Kāmakura. As a specific example, see [NARA DAIBUTSU](#).

dai-gohonzon. (大御本尊). In Japanese, lit. “great object of devotion”; the most important object of worship in the [NICHIREN SHŌSHŪ](#) school of Japanese Buddhism. The dai-gohonzon is a plank of camphor wood that has at its center an inscription of homage to the title of the [SADDHARMAPUNḌARĪKASŪTRA](#) (“Lotus Sūtra”)—[NAMU MYŌHŌ RENGEKYŌ](#), as well as the name of [NICHIREN](#) (1222–1282), surrounded by a cosmological chart ([MANDALA](#)) of the Buddhist universe, written in Nichiren’s own hand in 1279. By placing namu Myōhōrengekyō and his name on the same line, the school understands that Nichiren meant that the teachings of the *Saddharmapuṇḍarīkasūtra* and the person who proclaimed those teachings (Nichiren) are one and the same (ninpō ikka). The dai-gohonzon has been enshrined at [TAISEKIJI](#), the administrative head temple of Nichiren Shōshū, since the temple’s foundation in 1290; for this reason, the temple remains the

major pilgrimage center for the school's adherents. The dai-gohonzon itself, the sanctuary (kaidan) where it is enshrined at Kaisekiji, and the teaching of namu Myōhōrengekyō, are together called the “three great esoteric laws” ([SANDAI HIHŌ](#)), because they were hidden between the lines of the *Saddharmapuṇḍarīkasūtra* until Nichiren discovered them and revealed them to the world. Transcriptions of the maṇḍala, called simply [GOHONZON](#), are inscribed on wooden tablets in temples or on paper scrolls when they are enshrined in home altars. See also [DAIMOKU](#).

[Daigu Sōchiku](#). (大愚宗築) (1584–1669). Japanese [ZEN](#) master of the [RINZAISHŪ](#) lineage. Daigu was born in Mino, present-day Gifu prefecture. In his twenties, Daigu went on a pilgrimage around the country with several other young monks, including [GUDŌ TŌSHOKU](#) and Ungo Kiyō (1582–1659), in search of a teacher. In his thirties, Daigu built the monastery of Nansenji in the capital Edo, which he named after his home temple in Mino. He also founded the monasteries of Enkyōji in Kinkō (present-day Shiga prefecture) and Enichiji in Tanba (present-day Hyōgo prefecture). Daigu was active in restoring dilapidated temples. In 1656, he was invited as the founding abbot of the temple Daianji in Echizen (present-day Fukui prefecture). During the Tokugawa period, temples were mandated by the bakufu to affiliate themselves with a main monastery (honzan), thus becoming a branch temple (matsuji). The temples that Daigu built or restored became branch temples of [MYŌSHINJI](#). Daigu's efforts thus allowed the influence of Myōshinji, where he once served as abbot, to grow. Along with Gudō, Daigu also led a faction within Myōshinji that rejected the invitation of the Chinese Chan master [YINYUAN LONGQI](#) to serve as abbot of the main temple.

[daijue ermiao](#). (待絶二妙). In Chinese, “marvelous in comparison and marvelous in its own right.” In the [Tiantai](#) school's system of doctrinal classification (see [JIAOXIANG PANSHI](#)), Buddhist teachings and scriptures were classified into four modes of instruction (according to their different doctrinal themes; see [Tiantai Bajiāo](#)) and five periods (according to the presumed chronological order by which the Buddha propounded them; see [Wushi](#)). The most sophisticated pedagogical mode and the culminating chronological period are called, respectively, “the perfect teaching” ([YUANJIAO](#)) and the “Fahua-Niepan period.” The teachings and scriptures associated with the highest mode and the culminating period—the paradigmatic example being the [Saddharmapuṇḍarīkasūtra](#) (“Lotus Sūtra”) and the teachings it embodied for

the Tiantai school—are called truly “marvelous” for two reasons. First, they are “marvelous in comparison to the teachings and scriptures of all other ‘modes’ and ‘periods’” (xiangdai miao) because they are the definitive expressions of the Buddha’s teachings; second, they are also “marvelous in their own right” (juedai miao), i.e., they are wonderful and profound in an absolute sense, and not just comparatively.

daimoku. (題目). In Japanese, lit. “title” of a scripture; the term comes to be used most commonly in the [NICHIRENSHŪ](#) and associated schools of Japanese Buddhism to refer specifically to the title of the [SADDHARMAPUNḌARĪKASŪTRA](#) (“Lotus Sūtra”). The title is presumed to summarize the gist of the entire scripture, and the recitation of its title in its Japanese pronunciation (see [NAMU MYŌHŌRENĠEKYŌ](#)) is a principal religious practice of the Nichiren and [SŌKKA GAKKAI](#) schools. Recitation of the title of the *Saddharmapuṇḍarīkasūtra* is called specifically the “daimoku of the essential teaching” (honmon no daimoku) in the Nichiren school. The Japanese reformer [NICHIREN](#) (1222–1282) advocated recitation of this daimoku as one of the “three great esoteric laws” ([SANDAI HIHŌ](#)), and he claimed it exemplified mastery of wisdom ([PRAJÑĀ](#)) in the three trainings ([TRISĪKSĀ](#)).

Dainichi(bō) Nōnin. (大日[房]能忍) (d.u.). Japanese monk of the late Heian and early Kamakura eras; his surname was Taira. Nōnin is the reputed founder of the short-lived [ZEN](#) sect known as the [DARUMASHŪ](#), one of the earliest Zen traditions to develop in Japan. Nōnin was something of an autodidact and is thought to have achieved awakening through his own study of scriptures and commentaries, rather than through any training with an established teacher. He taught at the temple of Sanbōji in Suita (present-day Ōsaka prefecture) and established himself as a Zen master. Well aware that he did not have formal authorization ([YINKE](#)) from a Chan master in a recognized lineage, Nōnin sent two of his disciples to China in 1189. They returned with a portrait of [BODHIDHARMA](#) inscribed by the Chan master [FOZHAO DEGUANG](#) (1121–1203) and the robe of Fozhao’s influential teacher [DAHUI ZONGGAO](#). Fozhao also presented Nōnin with a portrait of himself (see [DINGXIANG](#)), on which he wrote a verse at the request of Nōnin’s two disciples. Such bestowals suggested that Nōnin was a recognized successor in the [LINJI](#) lineage. In 1194, the monks of [HIEIZAN](#), threatened by Nōnin’s burgeoning popularity, urged the court to suppress Nōnin and his teachings as an antinomian heresy. His school did not survive his death, and

many of his leading disciples subsequently became students of other prominent teachers, such as [DŌGEN KIGEN](#); this influx of Nōnin’s adherents introduced a significant Darumashū component into the early [SŌTŌSHŪ](#) tradition. Nōnin was later given the posthumous title Zen Master Shinpō [alt. Jinhō] (Profound Dharma).

[Daiō Kokushi](#). (J) (大應國師). See [NANPO JŌMYŌ](#).

[Daitō Kokushi](#). (J) (大燈國師). See [SŌHŌ MYŌCHŌ](#).

[Daitokuji](#). (大德寺). A famous Japanese [ZEN](#) monastery in Kyōto; also known as Murasakino Daitokuji. After his secluded training at the hermitage of Ungoan in eastern Kyōto in 1319, the Japanese [RINZAI](#) Zen master [SŌHŌ MYŌCHŌ](#), or Daitō Kokushi, was invited by his uncle Akamatsu Norimura to Murasakino located in the northeastern part of Kyōto. There a dharma hall was built and inaugurated by Daitō in 1326. Daitō was formally honored as the founding abbot (kaizan; C. [KAISHAN](#)) and he continued to serve as abbot of Daitokuji until his death in 1337. In an attempt to control the influential monasteries in Kyōto, Emperor Godaigo (1288–1339), who was a powerful patron of Daitō and Daitokuji, decreed in 1313 that only those belonging to Daitō’s lineage could become abbot of Daitokuji and added Daitokuji to the official [GOZAN](#) system. Two years later, Daitokuji was raised to top rank of the gozan system, which it shared with the monastery [NANZENJI](#). These policies were later supported by retired Emperor Hanazono (1297–1348), another powerful patron of Daitō and his monastery. Daitokuji was devastated by a great fire in 1453 and suffered further destruction during the Ōnin War (1467–1477). The monastery was restored to its former glory in 1474, largely through the efforts of its prominent abbot [IKKYŪ SŌJUN](#). A famous sanmon gate was built by the influential tea master Sen no Rikyū. During its heyday, Daitokuji had some twenty-four inner cloisters (tatchū), such as Ikkyū’s Shinjuan and Rikyū’s Jukōin and over 173 subtemples (matsuji).

[daiyu](#). (J. daigo; K. taeŏ 代語). In Chinese, “substitute reply.” When a [CHAN](#) master asks a question to the assembly and answers his own question before anyone else responds, his or her response is known as the “substitute reply.”

[dāka](#). (T. mkha’ ’gro). In Sanskrit, a donor or sacrifice; in tantric Buddhism, another name for a [VĪRA](#) “hero”; the male counterpart of a [DĀKINĪ](#), particularly in the [GANACAKRA](#), a ritual tantric feast that may have originated as an actual

assembly of t ntrikas engaged in antinomian behavior, including ingesting ritually impure foods and engaging in sexual relations. In Tibetan, the term dpa' bo (v ira) or “hero” is typically used instead of mkha' 'gro (d aka), although the latter term appears in traditional lists of the beings invited to the gaṇacakra (T. tshogs). In the title of such tantras as the [D K RṆAVAMAH YOGIN TANTRA](#) and the [VAJRAD KATANTRA](#), d aka seems to be used as an abbreviation of [D KIN ](#).

[D k rṇavamah yogin tantra](#). [alt. D k rṇavat ntra] (T. Mkha' 'gro rgya mtsho rnal 'byor ma'i rgyud). In [APABHRAM SA](#), an early medieval Indian vernacular based on Sanskrit, literally, “D k[in ] Ocean Yogin  Tantra”; the yogin , or “mother,” tantras are a subdivision of [ANUTTARAYOGATANTRA](#). A manuscript of the tantra is extant in the Nepalese National Archives; the Tibetan translation is by Jayasena and Dharma yon tan. It is one of the four [CAKRASAMVARATANTRA](#) explanatory (v akhy ) tantras.

[d kin ](#). (T. mkha' 'gro ma; C. tuzhini; J. dakini; K. tojini 茶枳尼). In Sanskrit, a cannibalistic female demon, a witch; in [ ANTIDEVA](#)'s [BODHICARY VAT RA](#), a female hell guardian (narakap l ); in tantric Buddhism, d kin s, particularly the vajrad kin , are guardians from whom t ntrikas obtain secret doctrines. For example, the [VAJRABHAIKAVA](#) adept L litavajra is said to have received the [YAM NTAKA](#) tantras from vajrad kin s, who allowed him to bring back to the human world only as many of the texts as he could memorize in one night. The d kin  first appears in Indian sources during the fourth century CE, and it has been suggested that they evolved from local female shamans. The term is of uncertain derivation, perhaps having something to do with “drumming” (a common feature of shamanic ritual). The Chinese, Japanese, and Korean give simply a phonetic transcription of the Sanskrit. In Tibetan, d kin  is translated as “sky goer” (mkha' 'gro ma), probably related to the Sanskrit khecara, a term associated with the [CAKRASAMVARATANTRA](#). Here, the d kin  is a goddess, often depicted naked, in semi-wrathful pose (see [VAJRAYOGIN ](#)); they retain their fearsome element but are synonymous with the highest female beauty and attractiveness and are enlightened beings. They form the third of what are known as the “inner” three jewels ([RATNATRAYA](#)): the guru, the [YI DAM](#), and the d kin s and protectors ([DHARMAP LA](#); T. chos skyong). The archetypical Tibetan wisdom or knowledge d kin  (ye shes mkha' 'gro) is [YE SHES MTSHO RGYAL](#), the consort of [PADMASAMBHAVA](#). D kin s are classified in a variety of ways, the most common being mkha' 'gro sde lnga, the female buddhas equivalent to the

[PAÑCATATHĀGATA](#) or five buddha families ([PAÑCAKULA](#)): Buddhaḍākinī [alt. Ākāśadhātviśvarī; Sparśavajrā] in the center of the maṇḍala, with Locanā, Māmakī, Pāṇḍaravāsini, and [TĀRĀ](#) in the cardinal directions. Another division is into three: outer, inner, and secret ḍākinīs. The first is a [YOGINĪ](#) or a [YOGIN](#)'s wife or a regional goddess, the second is a female buddha that practitioners visualize themselves to be in the course of tantric meditation, and the last is nondual wisdom ([ADVAYAJÑĀNA](#)). This division is also connected with the three bodies ([TRIKĀYA](#)) of Mahāyāna Buddhism: the [NIRMĀNAKĀYA](#) (here referring to the outer ḍākinīs), [SAMBHOGAKĀYA](#) (meditative deity), and the [DHARMAKĀYA](#) (the knowledge ḍākinī). The word ḍākinī is found in the title of the explanation (vākhyā) tantras of the yoginī class or mother tantras included in the *Cakrasaṃvaratantra* group.

[Dalada Maligawa](#). (Sinhalese). See [TOOTH RELIC](#).

[Dalai Lama](#). (T. Dā la'i bla ma). An honorific title given to members of a prominent Tibetan incarnation ([SPRUL SKU](#)) lineage belonging to the [DGE LUGS](#) sect of Tibetan Buddhism. The Dalai Lamas are traditionally revered as earthly manifestations of [AVALOKITEŚVARA](#), the [BODHISATTVA](#) of compassion and protector of Tibet. Although the term has become widely known outside the region, Tibetans most frequently refer to the Dalai Lama as Rgyal ba rin po che (Gyalwa Rinpoche) “Precious Conqueror,” Sku mdun (Kundun) “The Presence,” or Yid bzhin nor bu (Yishin Norbu) “Wish-fulfilling Gem.” The name originated during the sixteenth century when [ALTAN KHAN](#), ruler of the Tümed Mongols, bestowed the title on the Dge lugs teacher [BSOD NAMS RGYA MTSHO](#) by translating the prelate’s name rgya mtsho (“ocean”) into Mongolian as dalai. The name thus approximately means “ocean teacher.” It is not the case, as is often reported, that the Dalai Lamas are so named because their wisdom is as vast as the ocean. After Bsod noms rgya mtsho, all subsequent incarnations have rgya mtsho as the second component of their name. At the time of his meeting with the Altan Khan, Bsod noms rgya mtsho was already a recognized incarnate lama of the Dge lugs. Bsod noms rgya mtsho became the third Dalai Lama and two of his previous incarnations were posthumously recognized as the first and second holders of the lineage. From that time onward, successive incarnations have all been known as the Dalai Lama. Although writings outside Tibet often describe the Dalai Lama as the head of the Dge lugs sect, that position is held by a figure called the [DGA' LDAN KHRI PA](#), the “Throneholder of Ganden Monastery.” The

fourteen Dalai Lamas are:

1. Dge 'dun grub (Gendün Drup, 1391–1475)
2. Dge 'dun rgya mtsho (Gendün Gyatso, 1475–1542)
3. Bsod nams rgya mtsho (Sönam Gyatso, 1543–1588)
4. Yon tan rgya mtsho (Yönten Gyatso, 1589–1617)
5. Ngag dbang blo bzang rgya mtsho (Ngawang Losang Gyatso, 1617–1682)
6. Tshangs dbyangs rgya mtsho (Tsangyang Gyatso, 1683–1706?)
7. Skal bzang rgya mtsho (Kalsang Gyatso, 1708–1757)
8. 'Jam dpal rgya mtsho (Jampal Gyatso, 1758–1804)
9. Lung rtogs rgya mtsho (Lungtok Gyatso, 1805–1815)
10. Tshul khriims rgya mtsho (Tsultrim Gyatso, 1816–1837)
11. Mkhas grub rgya mtsho (Kedrup Gyatso, 1838–1855)
12. 'Phrin las rgya mtsho (Trinle Gyatso, 1856–1875)
13. Thub bstan rgya mtsho (Tupten Gyatso, 1876–1933)
14. Bstan 'dzin rgya mtsho (Tenzin Gyatso, b. 1935)

The first Dalai Lama, [DGE 'DUN GRUB](#), was known as a great scholar and religious practitioner. A direct disciple of [TSONG KHA PA](#), he is remembered for founding [BKRA SHIS LHUN PO](#) monastery near the central Tibetan town of Shigatse. The second Dalai Lama, Dge 'dun rgya mtsho, was born the son of a [RNYING MA YOGIN](#) and became a renowned tantric master in his own right. ¶ It is with the third Dalai Lama, [BSOD NAMS RGYA MTSHO](#), that the Dalai Lama lineage actually begins. Recognized at a young age as the reincarnation of Dge 'dun rgya mtsho, he was appointed abbot of ' [BRAS SPUNGS](#) monastery near [LHA SA](#) and soon rose to fame throughout central Asia as a Buddhist teacher. He served as a religious master for the Mongol ruler Altan Khan, who bestowed the title “Dalai Lama,” and is credited with converting the Tümed Mongols to Buddhism. Later in life, he traveled extensively across eastern Tibet and western China, teaching and carrying out monastic construction projects. ¶ The fourth Dalai Lama, Yon tan rgya mtsho, was recognized in the person of the grandson of Altan Khan's successor, solidifying Mongol-Tibetan ties. ¶ While the first four Dalai Lamas served primarily as religious scholars and teachers, the fifth Dalai Lama, [NGAG DBANG BLO BZANG RGYA MTSHO](#), combined religious and secular activities to become one of Tibet's preeminent statesmen. He was a dynamic political leader who, with the support of Gushi Khan, defeated his opponents and in 1642 was invested with temporal powers over the Tibetan state, in addition to his religious role, a position that succeeding Dalai Lamas held until 1959. A learned and prolific author, he and his regent, [SDE SRID SANGS RGYAS RGYA MTSHO](#), were largely responsible for the identification of the Dalai Lamas with the bodhisattva

Avalokiteśvara. The construction of the [PO TA LA](#) palace began during his reign (and was completed after this death). He is popularly known as the “Great Fifth.” ¶ The sixth Dalai Lama, [TSHANGS DBYANGS RGYA MTSHO](#), was a controversial figure who chose to abandon the strict monasticism of his predecessors in favor of a life of society and culture, refusing to take the vows of a fully ordained monk ([BHIKSU](#)). He is said to have frequented the drinking halls below the Po ta la palace. He constructed pleasure gardens and the temple of the [NAGAs](#), called the [KLU KHANG](#), on the palace grounds. He is remembered especially for his poetry, which addresses themes such as love and the difficulty of spiritual practice. Tibetans generally interpret his behavior as exhibiting an underlying tantric wisdom, a skillful means for teaching the dharma. His death is shrouded in mystery. Official accounts state that he died while under arrest by Mongol troops. According to a prominent secret biography ([GSANG BA’I RNAM THAR](#)), however, he lived many more years, traveling across Tibet in disguise. ¶ The seventh Dalai Lama, SKAL BZANG RGYA MTSHO, was officially recognized only at the age of twelve, and due to political complications, did not participate actively in affairs of state. He was renowned for his writings on tantra and his poetry. ¶ The eighth Dalai Lama, ’Jam dpal rgya mtsho (Jampal Gyatso, 1758–1804), built the famous [NOR BU GLING KHA](#) summer palace. ¶ The ninth through twelfth Dalai Lamas each lived relatively short lives, due, according to some accounts, to political intrigue and the machinations of power-hungry regents. According to tradition, from the death of one Dalai Lama to the investiture of the next Dalai Lama as head of state (generally a period of some twenty years), the nation was ruled by a regent, who was responsible for discovering the new Dalai Lama and overseeing his education. If the Dalai Lama died before reaching his majority, the reign of the regent was extended. ¶ The thirteenth Dalai Lama, [THUB BSTAN RGYA MTSHO](#), was an astute and forward-looking political leader who guided Tibet through a period of relative independence during a time of foreign entanglements with Britain, China, and Russia. In his last testament, he is said to have predicted Tibet’s fall to Communist China. ¶ The fourteenth and present Dalai Lama, Bstan ’dzin rgya mtsho, assumed his position several years prior to reaching the age of majority as his country faced the Chinese invasion of Tibet in 1950. In 1959, he escaped into exile, establishing a government-in-exile in the Himalayan town of Dharamsala ([DHARMAŚĀLA](#)) in northwestern India. Since then, he has traveled and taught widely around the world, while also advocating a nonviolent solution to Tibet’s occupation. He was born in the A mdo region of what is now Qinghai province in China to a farming family, although his older

brother had already been recognized as an incarnation at a nearby important Dge lugs monastery ([SKU 'BUM](#)). On his becoming formally accepted as Dalai Lama, his family became aristocrats and moved to Lha sa. He was educated traditionally by private tutors (yongs 'dzin), under the direction first of the regent Stag brag rin po che (in office 1941–1950), and later Gling rin po che Thub bstan lung rtogs rnam rgyal (1903–1983) and Khri byang rin po che Blo bzang ye shes (1901–1981). His modern education was informal, gained from conversations with travelers, such as the Austrian mountaineer Heinrich Harrer. When the Chinese army entered the Kham region of eastern Tibet in 1951, he formally took over from the regent and was enthroned as the head of the [DGA' LDAN PHO BRANG](#) government. In the face of Tibetan unrest as the Chinese government brought Tibet firmly under central control, the Dalai Lama fled to India in 1959; the Indian government accorded the Dalai Lama respect as a religious figure but did not accept his claim to be the head of a separate state. In 1989, the Dalai Lama was awarded the Nobel Peace Prize, an event that increased his prominence around the world. He is the author of many books in English, most of them the written record of lectures and traditional teachings translated from Tibetan.

[damaru](#). (T. ḍa ma ru). In Sanskrit, the name of an hourglass-shaped, two-sided hand drum, used in tantric liturgy. Two small strikers are attached to strings at the drum's waist, making a rattling sound as they strike the alternate faces when the drum is rotated back and forth in the upraised right hand. This type of drum appears in pictograms from as early as the Indus Valley civilization and is commonly used by street performers in India. The Śaivite ḍamaru, slightly extended in the middle, is called *cang te'u* in Tibetan. The Buddhist ḍamaru comes in a number of sizes, from the small drum about four inches in diameter, up to the large drum used in [GCOD](#) (severance) practice, which is up to sixteen inches in diameter. The true [KAPĀLA](#) (skull) ḍamaru used by tāntrikas is fashioned from two human craniums facing outward and joined together by human bone; an ornate tail made of brocade with the five colors signifying the [PAÑCATATHĀGATA](#) is attached to the waist of the drum and hangs down when the drum is played. The large *gcod mnga* used in *gcod* practice is made of wood; it is shaken slowly and rhythmically while chanting, accompanied by intermittent blasts through a *rkang gling* (kangling), a trumpet-like instrument ideally fashioned from a human leg bone. See also [DRUM](#).

dam can. (damchen). In Tibetan, “bound by oath”; a term for the pre-Buddhist Tibetan deities, also called ordinary or mundane ([LAUKIKA](#)) deities, who have been subjugated and made to take a solemn oath ([SAMAYA](#)) to protect Buddhism. According to traditional accounts, the Tibetan king [KHRI SRONG SDE BTSAN](#) encountered many hindrances during the construction of the first Buddhist monastery in Tibet at [BSAM YAS](#). The Indian teacher [ŚĀNTARAKSITA](#) advised the king to invite [PADMASAMBHAVA](#) to subdue the malevolent spirits; these spirits, referred to generally as the “eight classes of gods and demons” (lha srin sde brgyad; see [ASTASENĀ](#)), include the [BRTAN MA BCU GNYIS](#), various local deities (yul lha) inhabiting mountain passes, plains, and peaks, and the spirits of powerful deceased persons (rgyal po). Illustrative is the account of the subjugation of the powerful rgyal po spirit [RDO RJE GRAGS LDAN](#) (in some accounts the emissary of a powerful spirit called [PE HAR RGYAL PO](#)), who becomes an important protector, particularly of the [RNYING MA](#) sect, and through the [GNAS CHUNG](#) oracle a protector of the Tibetan state.

Dam can chos rgyal. (Damchen Chögyal). A popular Tibetan form of [YĀMA](#), the first person to die, hence the ruler of the kingdom of the dead. He is the chief [DHARMAPĀLA](#) in the retinue of [VAJRABHAIRAVA](#), a [YAMĀNTAKA](#) deity popular in the [DGE LUGS](#) sect because of its association with [TSONG KHA PA](#). He serves as the [DHARMAPĀLA](#) of [DGA' LDAN PHUN TSHOGS GLING](#) (formerly [JO NANG PHUN TSHOGS GLING](#), the [JO NANG](#) seat of [TĀRANĀTHA](#)) in central Tibet. He has one face of an angry bull, two hands holding a staff and a pāśa (noose), an erect phallus, and stands on a water buffalo, which itself is lying atop a human figure.

Đàm Lưư. (曇榴) (1933–1999). A prominent Vietnamese nun, born on April 8, 1933, in Hà Đông province (in northern Vietnam). At the age of two, she visited Cự Đà Temple with her parents but refused to leave and so spent her childhood there. In 1948, she took novice precepts and was sent to study Buddhism at various temples in North Vietnam. In 1951, she received full ordination as a nun and, in 1952, followed her teacher to South Vietnam when he was appointed abbot of Dược Sư Temple in Gò Vấp. After completing her baccalaureate degree, she moved to Phước Hòa Temple in Saigon. In 1964, she earned a scholarship to study social work in West Germany. While in Freiburg, she divided her time between her studies and assisting Vietnamese orphans in Germany. After returning to South Vietnam in 1969, she was appointed director of Lumbini Orphanage in Saigon. In 1977, she escaped from Vietnam and, in

1979, settled in San José, California. In 1991, she founded Đức Viêñ Temple, which has subsequently served as a site for Buddhist practice and a center for many Vietnamese cultural activities. Until her death in 1999, Đầm Lữ oversaw the training of many young nuns and encouraged them to enroll in colleges and universities in North America, as well as in India and Taiwan. She also gave financial assistance to various Buddhist colleges in Vietnam.

[Damoduoluo chan jing](#). (J. Darumatara zenkyō; K. Talmadara sōñ kyōng 達摩多羅禪經). In Chinese, the “Dhyāna Sūtra of Dharmatrāta”; a scripture on meditation ([DHYĀNA](#)) attributed to the [SARVĀSTIVĀDA](#) teacher [DHARMATRĀTA](#) (c. fourth century CE) and translated into Chinese by [BUDDHABHADRA](#) in the early fifth century. Buddhahadra arrived in the Chinese capital of Chang’an in 406 and briefly stayed at [LUSHAN HUIYUAN](#)’s (334–416) monastery on [LUSHAN](#), where he translated the text at the latter’s request. The *Damoduoluo chan jing* describes the transmission of the oral teachings of the Buddha from master to disciple and details the various practices of meditation ([GUAN](#)) such as mindfulness of breathing (S. [ĀNĀPĀNASMṚTI](#); P. ānāpānasati) and meditation on the foul ([ĀSUBHABHĀVANĀ](#)), as well as the categories of, [SKANDHA](#), [ĀYATANA](#), and [DHĀTU](#). The text includes a listing of patriarchs of the tradition before and after Dharmatrāta, which begins with [MAHĀKĀŚYAPA](#) and [ĀNANDA](#), continues through [MADHYĀNTIKA](#), [ŚĀNAKAVĀSIN](#), [UPAGUPTA](#), [VASUMITRA](#), and Saṃgharakṣa, leading up to Dharmatrāta, who is then followed in turn by Puṇyamitra. This lineage seems to derive from the [SARVĀSTIVĀDA](#) school in the [KASHMIR-GANDHĀRA](#) region and suggests that the notion of a teaching genealogy as a central part of Buddhist religious identity has its start in the Indian tradition. Prefaces to the *Damoduoluo chan jing* by Lushan Huiyuan and Huiguan subsequently connect versions of this lineage to [BODHIDHARMA](#), the putative founder of the [CHAN](#) school in East Asia, suggesting this text exerted some influence in the rise of transmission lineages within the early Chan tradition.

[dāna](#). (T. sbyin pa; C. bushi; J. fuse; K. posi 布施). In Sanskrit and Pāli, “giving,” “generosity,” or “charity”; one of the most highly praised of virtues in Buddhism and the foundational practice of the Buddhist laity, presumably because of its value in weaning the layperson from attachment to material possessions while providing essential material support to the [SAMGHA](#). It is the chief cause of prosperity in future lives and rebirth as a divinity ([DEVA](#)) in one of the heavens of the sensuous realm ([KĀMADHĀTU](#)). There are numerous stories in the [AVADĀNA](#)

and [JĀTAKA](#) literatures that illustrate the virtues of giving, the most famous being that of Prince Viśvaṃtara (P. [VESSANTARA](#)), whose generosity was so profound that he gave away not only all his worldly possessions but even his wife and children. In other stories, [BODHISATTVA](#)s often give away their body or parts of their body (see [DEHADĀNA](#); [SHESHEN](#)). The immediate karmic result of the practice of giving is said to be wealth in the future, especially as a divinity in one of the heavens. Giving, especially to the [SAMGHA](#), is presumed to generate merit ([PUNYA](#)) that will accrue to the benefit of the donor in both this and future lifetimes; indeed, giving is the first in a standard list of meritorious acts, along with morality ([ŚĪLA](#)) and religious development ([BHĀVANĀ](#)). In the “graduated discourse” (S. [ANUPŪRVIKATHĀ](#); P. [ANUPUBBIKATHĀ](#)) that the Buddha commonly used in instructing the laity, the discourse on giving (dānakathā) was even more fundamental than the succeeding discourses on right conduct (śīlakathā) and the joys of rebirth in the heavens (svargakathā). Eight items are typically presumed to make appropriate offerings: food, water, clothing, vehicles, garlands, perfume, beds and dwellings, and lights. In yet another enumeration, there are three kinds of dāna: the “gift of material goods” ([AMISADĀNA](#)); the gift of fearlessness ([ABHAYADĀNA](#)), and the “gift of the dharma” ([DHARMADĀNA](#)). Of all gifts, however, the greatest was said to be the “gift of the dharma” (dharmadāna), viz., spiritual instruction that will lead not just to better rebirths but to liberation from [SAMŚĀRA](#); it is this gift that the saṃgha offers reciprocally to the laity. In [MAHĀYĀNA](#) soteriology, giving is listed as the first of the six perfections ([PĀRAMITĀ](#)) cultivated on the bodhisattva path (see [DĀNAPĀRAMITĀ](#)). According to the Pāli tradition, dāna is the first of ten perfections (P. pāramī). In some schools, a being who is incapable of even the modicum of detachment that is required to donate one’s possessions through charity is thought to have eradicated his wholesome spiritual faculties ([SAMUCCHINNAKUŚĀLAMŪLA](#); see also [ICCHANTIKA](#)) and to have lost for an indeterminate period any prospect of enlightenment.

[Dānapāla](#). (C. Shihu; J. Segō; K. Siho 施護) (d.u.; fl. c. 980 CE). In Sanskrit, lit. “Protector of Giving”; one of the last great Indian translators of Buddhist texts into Chinese. A native of Oḍḍiyāna in the [GANDHĀRA](#) region of India, he was active in China during the Northern Song dynasty. At the order of the Song Emperor Taizhong (r. 960–997), he was installed in a translation bureau to the west of the imperial monastery of Taiping Xingguosi (in Yuanzhou, present-day Jiangxi province), where he and his team are said to have produced some 111

translations in over 230 rolls. His translations include texts from the [PRAJÑĀPĀRAMITĀ](#), [MADHYAMAKA](#), and tantric traditions, including the [ASTASĀHASRIKĀPRAJÑĀPĀRAMITĀ](#), [SUVARŅAPRABHĀSOTTAMASŪTRA](#), [SARVATATHĀGATATATTVASAMGRAHA](#), [HEVAJRATANTRA](#), [NĀGĀRJUNA](#)'s [YUKTISASTIKĀ](#) and [DHARMADHĀTUSTAVA](#), and [KAMALAŚĪLA](#)'s [BHĀVANĀKRAMA](#), as well as several [DHĀRANĪ](#) texts.

[dānapāramitā](#). (P. dānapāramī; T. sbyin pa'i pha rol tu phyin pa; C. bushi boluomi; J. fuseharamitsu; K. posi paramil 布施波羅蜜). In Sanskrit, the “perfection of giving”; the first of the six [or ten] perfections ([PĀRAMITĀ](#)) cultivated on the [BODHISATTVA](#) path. According to the Pāli tradition, dāna is the first of ten perfections (P. PĀRAMĪ). Three kinds of [DĀNA](#) are often enumerated in this context: the “gift of material goods” ([ĀMISADĀNA](#)); the “gift of fearlessness” ([ABHAYADĀNA](#)) and the “gift of the dharma” ([DHARMADĀNA](#)). Giving ([DĀNA](#)) is perfected on the first of the ten stages ([DAŚABHŪMI](#)) of the bodhisattva path, [PRAMUDITĀ](#) (joyful), where the bodhisattva's vision into the emptiness ([ŚŪNYATĀ](#)) of all things motivates him to perfect the practice of giving, learning to give away those things most precious to him, including his wealth, his wife, and family, and even his very body (see [DEHADĀNA](#); [SHESHEN](#)). Thanks to his understanding of emptiness ([ŚŪNYATĀ](#)), the bodhisattva masters the perfection of giving by realizing there is no donor, no recipient, and no gift. It is with this insight that ordinary giving becomes perfected giving. The perfection of giving brings an end to the obstruction of the common illusions of the unenlightened (pṛthagjanatvāvaraṇa; C. yishengxing zhang), leading in turn to the awareness of universal suchness (sarvatragatathatā; C. bianxing zhenru). See [DAŚABHŪMI](#), [VESSANTARA](#).

[dānapati](#). (T. sbyin pa'i bdag po/sbyin bdag; C. tanyue/shizhu; J. dan'otsu/seshu; K. tanwöl/siju 檀越/施主). In Sanskrit and Pāli, lit. “master of giving,” viz., a “generous donor”; a “patron” of individual monks and nuns, or of the [SAMGHA](#) as a whole. Being a willing dānapati is also one of the expectations of a wise ruler. Among the disciples of the Buddha, the most famous dānapati was [ANĀTHAPINDADA](#). In Tibet, the denotation of the term is extended to include those who commission prayers, rituals, and particularly public discourses by well-known teachers. For large public discourses there is a primary sbyin bdag (jindak), who at the start ritually offers to the teacher a small statue of the Buddha, a religious book, and a [STŪPA](#) (together called the maṅḍal rten gsum)

representing the body, speech, and mind of the Buddha, while holding a white scarf (kha btags), along with a small gift. The primary sbyin bdag is the person who originally asked the teacher to give the discourse, and whose request was accepted; it is not necessarily the person who actually sponsored the event. At the end of the teaching, the primary sbyin bdag heads a line of all those who have contributed (also called sbyin bdag) who give gifts to the teacher. The Chinese use both the translation shizhu (lit. “master of giving”) and the transcription tanyue, which transcribes a Prakrit form of the Indic term.

[danka seido](#). (檀家制度). In Japanese, “parish-household system”; danka (parish household) is synonymous with [DANNA](#), and the more common form after the mid-Tokugawa period. See [DANNA](#).

[danna](#). (檀那). This Japanese term is originally a transcription of the Sanskrit term [DĀNA](#), or “giving.” When referring to a patron of a monk, nun, or monastery, the term danna is used with reference to a “donor” (J. dan’otsu, dan’ochi, dannotsu; S. [DĀNAPATI](#)) or “parish temple” ([DANKA](#)). During the Tokugawa period (1603–1868), the Japanese shogunate required every family to register at and support a local temple, called the [DANNADERA](#), which in turned entitled that family to receive funerary services from the local priest. The dannadera, also called the [BODAIJI](#) and dankadera, thus served as a means of monitoring the populace and preventing the spread in Japan of subversive religions, such as Christianity and the banned Nichiren–Fuju–Fuse sect of the [NICHIREN](#) school. By requiring each Japanese family to be registered at a specific local temple and obligating them to provide for that temple’s economic support and to participate in its religious rituals, all Japanese thus became Buddhist in affiliation for the first time in Japanese history.

[dannadera](#). (J) (檀那寺). In Japanese, “parish temple”; a Japanese Buddhist institutional system that reached its apex in the sixteenth and seventeenth centuries. See [DANNA](#).

[dantadhātu](#). (S/P). See [TOOTH RELIC](#).

[dao](#). (J. dō; K. to 道). In Chinese, Lit. “way” or “path”; a polysemous term in Chinese, which in Buddhist texts is used variously as the translation for terms related to “path” ([MĀRGA](#)) and “awakening” ([BODHI](#)); thus, “cultivating the way” (xiudao) means “practicing Buddhism” and “entering the way” (rudao) comes to

be used as the equivalency in Chinese Buddhist texts for the idea of attaining enlightenment. But *dao* also has numerous other usages, including as a translation for the [DHARMA](#) as teachings (*dao* or *daofa*), the dharmas as factors (e.g., *daopin* for the [BODHIPĀKSIKADHARMA](#)), and the realms of rebirth (e.g., *edao* as one of the translations of unfortunate destinies, viz., [DURGATI](#) or [APĀYA](#)). In the premodern period, *dao* is also one of the closer Chinese equivalents for what in the West would simply be called “religion,” so that the compound [DAOREN](#) (“person of the way”) refers more generally to an accomplished adherent of a religion; in [DAOSU](#), the term refers generically to a “religious” (*dao*) or renunciant, especially in distinction to a layperson (*su*), *etc.* The term is still often seen transcribed in English as *tao* or *Tao*, using the older Wade–Giles transcription. In East Asian Buddhist texts, *dao* only rarely refers to the religious tradition of Daoism/Taoism.

[Dao’an](#). (J. Dōan; K. Toan 道安) (312–385). In Chinese, “Peace of the Way”; monk-exegete and pioneer of Buddhism during the Eastern Jin dynasty. A native of Fuliu in present-day Hebei province, at the age of eleven he became a student of the famous Kuchean monk and thaumaturge [FOTUDENG](#). Fleeing from the invasions of the so-called northern barbarians, Dao’an and his teacher relocated frequently, with Dao’an finally settling down in the prosperous city of Xiangyang in Hubei province, where he taught for fifteen years. Learning of Dao’an’s great reputation, the Former Qin ruler Fu Jian (338–385) amassed an army and captured Xiangyang. After the fall of Xiangyang, Fu Jian invited Dao’an to the capital of Chang’an and honored him as his personal teacher. Dao’an later urged Fu Jian to invite the eminent Central Asian monk [KUMĀRAJĪVA](#) to China. In order to determine the authenticity and provenance of the various scriptural translations then being made in China, Dao’an compiled an influential catalogue of scriptures known as the [ZONGLI ZHONGJING MULU](#), which was partially preserved in the [CHU SANZANG JIJ](#). He also composed various prefaces and commentaries, and his exegetical technique of dividing a scripture into three sections ([SANFEN KEJING](#))—“preface” (*xufen*), “text proper” (*zhengzongfen*), and “dissemination section” (*liutongfen*)—is still widely used even today in East Asian scriptural exegesis. In Dao’an’s day, the Indian [VINAYA](#) recensions had not yet been translated into Chinese, so Dao’an took it upon himself to codify an early set of indigenous monastic regulations known as the *Sengni quifan fofa xianzhang* (no longer extant) as a guide for Chinese monastic practice. Also traced to Dao’an is the custom of monks and nuns abandoning

their secular surnames for the surname [SHI](#) (a transcription of the Buddha’s clan name [ŚĀKYA](#); J. Shaku; K. Sök; V. Thích), as a mark of their religious ties to the Buddha’s lineage. Among his many disciples, [LUSHAN HUIYUAN](#) is most famous.

[daochang](#). (J. dōjō; K. toryang 道場). In Chinese, literally “place of the way”; [daochang](#) is the Chinese translation for the Sanskrit technical term [BODHIMANDA](#), the “seat of enlightenment” or “platform of enlightenment,” viz., the place under the [BODHI TREE](#) where the Buddha sat when he achieved enlightenment. The term is now used more generally by various religious and secular groups to refer to a place of worship, practice, and training. In Korean monasteries, the toryang typically refers to the large open courtyard in front of the main shrine hall ([TAEUNG CHŎN](#)).

[Daochuo](#). (J. Dōshaku; K. Tojak 道綽) (562–645). Chinese monk and putative second patriarch of the [JINGTU](#) (pure land) tradition; also known as Chan Master Xihe (West River). Daochuo was a native of Bingzhou in present-day Shanxi province. He left home at an early age and studied the [MAHĀPARINIRVĀNASŪTRA](#). According to legend, in 609, Daochuo is said to have been inspired by [TANLUAN](#)’s epitaph to continue the latter’s efforts to further [PURE LAND](#) thought and practice. Daochuo is then said to have devoted himself to the practice of [NIANFO](#), the invocation of the name of the buddha [AMITĀBHA](#), and the daily recitation of the [SUKHĀVATĪVYŪHASŪTRA](#). Daochuo is perhaps more famous than even Tanluan for advocating the practice of recitation of the Buddha’s name ([NIANFO](#)) over all other practices. He is also known for using small beans (xiaodou) to keep count of the number of recitations; some believe his habit of using counting beans is the origin of rosaries ([JAPAMĀLĀ](#)) in China. The influential pure land treatise [ANLE JI](#) is attributed to Daochuo.

[daofeng](#). (J. tōfū; K. top’ung 刀風). In Chinese, lit. “knife wind”; an allegory for the disintegrating forces that cause the dissolution of the world at the end of an eon according to Buddhist cosmology (see [KALPA](#)), or the end of a person’s physical life (when the “primary elements,” the [MAHĀBHŪTA](#), from which the body is believed to be composed, disintegrate).

[Đạo Hạnh](#). (道行) (died 1117). Vietnamese monk, popularly known as Từ Đạo Hạnh; [CHAN](#) master and thaumaturge, whose miraculous exploits have captured the imagination of Vietnamese Buddhists for centuries. His personal name was Từ Lô. The Thiên Uyển Tập Anh relates that as a young man he was a free

spirit who harbored great aspirations. He befriended people of various social backgrounds and was a serious student, passing the royal examination for *tăng quan* (monk officers). After his father was killed by a sorcerer, Đạo Hạnh went to Mount Từ Sơn to live in seclusion and devoted himself to chanting the “Great Compassion” *DHĀRANĪ* (see [DABEL ZHOU](#)) daily. After chanting it 108,000 times, he gained magical powers and avenged his father’s death. He later began to wander to various Buddhist monasteries in search of enlightenment; eventually, under the guidance of Sùng Phạm (1004–1087), he gained realization. He is said to have tamed mountain snakes and wild beasts, burned his finger to pray for rain, and blessed water with mantras to cure disease. It is believed that Đạo Hạnh used his magical powers to reincarnate himself as the son of King Lý Nhân Tông (r. 1072–1127) and was eventually enthroned as King Lý Thần Tông (r. 1128–1138). In northern Vietnam, the story of Đạo Hạnh is still reenacted during festivals.

[Daojiao yishu](#). (J. *Dōkyō gisū*; K. *Togyo ũich’u* 道教義樞). In Chinese, “The Pivotal Meaning of the Teachings of the [DAO](#)”; a text attributed to the Daoist priest Meng Anpai (d.u.); an encyclopedic work that provides a detailed explanation of thirty-seven matters of Daoist doctrine, five of which are now lost. Among the thirty-seven concepts explained in the text, there are concepts borrowed directly from Buddhism, such as the dharma body ([DHARMAKĀYA](#)), three jewels ([RATNATRAYA](#)), three vehicles ([TRİYĀNA](#)), three realms of existence ([TRILOKA \[DHĀTUI\]](#)), knowledge of external objects, and the [PURE LAND](#) of [SUKHĀVATĪ](#). The text also employs Buddhist terms, concepts, and classificatory systems throughout. The greatest Buddhist influence on this text came from the [SAN LUN ZONG](#) and especially from the teachings of the Sanlun master [JIZANG](#). The *Daojiao yishu* was, in fact, written to demonstrate the sophistication of Daoist thought in response to Buddhist criticisms during the Tang dynasty. This text influenced the compilation of many later Daoist works, such as the *Yunji qiqian*.

[Daokai](#). (C) (道楷). See [FURONG DAOKAI](#).

[Daolong](#). (C) (道隆). See [LANXI DAOLONG](#).

[daoren](#). (J. *dōnin*; K. *toin* 道人). In Chinese, lit. “person of the way”; a “religious adherent” or “a religious.” The term is used by many different religious and secular groups in China to refer generally to any person who has perfected a path

of cultivation and training or attained a special skill or knowledge. Among Buddhists, the term has also come to refer more generally to anyone who has made some progress in following the Buddha's path (dao; S. [MĀRGA](#)) to enlightenment. In East Asian Buddhist texts, the term daoren only rarely refers to a "Daoist adherent"; most commonly it refers to a Buddhist adherent or generically to any "religious."

Daosheng. (C) (道生). See [CAOYUAN DAOSHENG](#).

Daosheng. (J. Dōshō; K. Tosaeng 道生) (355–434). Influential Chinese monk during the Eastern Jin dynasty and renowned scholar of the [MAHĀPARINIRVĀNASŪTRA](#); also known as [ZHU DAOSHENG](#). Daosheng was a native of Julu in present-day Hebei province. He became a student of the monk Zhu Fatai (320–387), changing his surname to Zhu in his honor. Daosheng received the full monastic precepts in his nineteenth year and took up residence at the monastery of Longguangsi in Jianye. Later, he moved to [LUSHAN](#), where he studied under the eminent monk [LUSHAN HUIYUAN](#). Daosheng also continued his studies under the famed translator and [MADHYAMAKA](#) scholar [KUMĀRAJĪVA](#), and was later praised as one of Kumārajīva's four great disciples. In 409, Daosheng returned to Jianye and made the controversial claim that even incorrigibles ([ICCHANTIKA](#)) may eventually attain enlightenment and that buddhahood is attained in an instant of awakening ([DUNWU](#)). For these claims, Daosheng was harshly criticized by the community of scholars in Jianye, which prompted Daosheng to return to Lushan once more. His interpretations were eventually corroborated in subsequent Chinese translations of the [MAHĀPARINIRVĀNASŪTRA](#) and become emblematic of many important strands of indigenous Chinese Buddhism. Daosheng's teachings are quoted in many of his contemporaries' works and Daosheng himself is known to have composed numerous treatises and commentaries, including the *Foxing dangyou lun* ("Buddha Nature Perforce Exists"), *Fashen wuse lun* ("[DHARMAKĀYA](#) Lacks Form"), *Fo wu jingtu lun* ("The Buddha has no Pure Land"), and *Fahua jing yishu* (a commentary on the [SADDHARMAPUNḌARĪKASŪTRA](#)).

daosu. (道俗). In Chinese, "the religious and the laity." See [DAO](#); [DAOREN](#).

daotong. (J. dōtsū; K. tot'ong 道通). In Chinese, lit. "penetrate the way"; a term used by many different Chinese religious and secular groups to refer generally to the act of "penetrating," attaining, accomplishing, or completing a path of

cultivation and training. Daotong can also refer to the state of perfection achieved through such practice.

daotu. (J. *tōzu*; K. *todo* 刀塗). In Chinese, lit. “destiny of knives,” viz., “butchery”; a descriptive term to refer to the realm of animals ([TIRYAK](#)). This rebirth destiny ([GATI](#)) is typically depicted in Buddhist cosmology as highly undesirable, one of the reasons being that many animals inevitably suffer the fate of being butchered to feed others. The Sanskrit *tiryaggati* literally means the destiny of those who go horizontally, i.e., on all four legs, rather than standing up straight.

Daoxin. (J. *Dōshin*; K. *Tosin* 道信) (580–651). Chan monk and reputed fourth patriarch of the [CHAN](#) tradition. Although Daoxin’s birthplace is not certain, some sources say he was a native of Qizhou in present-day Hubei province, while others mention Henei in Henan province. Little is known of his early training, but early Chan sources such as the [LENGQIE SHIZI JI](#) and [CHUAN FABAO JI](#) claim that Daoxin studied under [SENGCAN](#), the putative third patriarch of Chan and supposed successor to [BODHIDHARMA](#) and [HUIKE](#), his connection to this dubious figure is tenuous at best, however, and is probably a retrospective creation. The earliest biography of Daoxin, recorded in the [XU GAOSENG ZHUAN](#) (“Supplementary Biographies of Eminent Monks”), not only does not posit any connection of Daoxin to the preceding three patriarchs but does not even mention their names. The *Chuan fabao ji* states that Daoxin was fully ordained in 607, after his purported period of study under Sengcan. Daoxin is subsequently known to have resided at the monastery of Dalinsi on [LUSHAN](#) in Jiangxi province for ten years. At the invitation of the inhabitants of his native Qizhou, Daoxin moved again to Mt. Shuangfeng in Huangmei (perhaps in 624), where he remained in seclusion for about thirty years. He is therefore sometimes known as Shuangfeng Daoxin. During his residence at Mt. Shuangfeng, Daoxin is claimed to have attracted more than five hundred students, among whom [HONGREN](#), the fifth patriarch of Chan, is most famous. The lineage and teachings attributed to Daoxin and Hongren are typically called the East Mountain Teachings ([DONGSHAN FAMEN](#)) after the easterly peak of Mt. Shuangfeng, where Hongren dwelled. Daoxin was given the posthumous title Chan Master Dayi (Great Physician) by Emperor Daizong (r. 762–779) of the Tang dynasty. According to the *Lengqie shizi ji*, Daoxin composed the *Pusajie zuofa* (“Method of Conferring the [BODHISATTVA](#) Precepts”), which is no longer extant, and the

Rudao anxin yaofangbian famen (“Essentials of the Teachings of the Expedient Means of Entering the Path and Pacifying the Mind”), which is embedded in the *Lengqie shizi ji*. This latter text employs the analogy of a mirror from the *Banzhou sanmei jing* (S. [PRATYUTPANNABUDDHASAMMUKHĀVASTHITASAMĀDHISŪTRA](#)) to illustrate the insubstantiality of all phenomena, viz., one’s sensory experiences are no more substantial than the reflections in a mirror. The text then presents the “single-practice [SAMĀDHI](#)” ([YIXING SANMEI](#)) as a practical means of accessing the path leading to [NIRVĀNA](#), based on the *Wenshushuo bore jing* (“Perfection of Wisdom Sūtra Spoken by Manjuśrī”). Single-practice samādhi here refers to sitting in meditation, the supreme practice that subsumes all other practices. In single-practice samādhi, the meditator contemplates every single aspect of one’s mental and physical existence until one realizes they are all empty, and “guards that one without deviation” (*shouyi buyi*).

Daoxuan. (J. Dōsen; K. Tosōn 道宣) (596–667). Chinese [VINAYA](#) master and reputed patriarch of the Nanshan vinaya school ([NANSHAN LŪ ZONG](#)); also known as Fabian. Daoxuan was a native of Wuxing in present-day Zhejiang province (or, according to another report, Runzhou in Jiangsu province). Daoxuan became a monk at age fifteen and studied monastic discipline under the vinaya master Zhishou. He later moved to [ZHONGNANSHAN](#) and established the monastery of Nanquansi. Daoxuan was also a prolific writer. In 626, he composed the *Sifen lü shanfan buque xingshi chao*, one of the most influential commentaries on the [SIFEN LŪ](#) (“Four-Part Vinaya”) of the [DHARMAGUPTAKA](#) school. The next year, he composed the *Sifen lü shi pini yichao* and the [XU GAOSENG ZHUAN](#), *Shijia fangzhi*, [JI GUJIN FODAO LUNHENG](#), and other texts in the following years. When the monastery [XIMINGSI](#) was established in 658 by Emperor Gaozong (r. 649–683) in the Tang capital of Chang’an, Daoxuan was invited to serve as its abbot. In 664, while at Ximingsi, Daoxuan compiled a comprehensive catalogue of scriptures known as the [DA TANG NEIDIAN LU](#) and, in continuation of his earlier *Ji gujin fodao lunheng*, wrote a collection of essays in defense of Buddhism entitled the [GUANG HONGMING JI](#).

Daoyi. (C). See [MAZU DAOYI](#).

Daozhe Chaoyuan. (J. Dōsha Chōgen; K. Toja Ch’owōn 道者超元) (1630–1698). Chinese [CHAN](#) and [ZEN](#) master in the [LINJI](#) lineage. Daozhe was a native of Xinghua prefecture in present-day Fujian province. He became a student of

Gengxin Xingmi (1603–1659), a direct disciple of the Chan master [FEIYIN TONGRONG](#) and, after inheriting Gengxin’s lineage, became a dharma cousin of the renowned Chan master [YINYUAN LONGQI](#). In 1651, Daozhe traveled to Nagasaki, Japan, where he served as abbot of the monastery Sōfukuji for the next five years. During his stay in Japan, a number of important Buddhist figures visited him for instruction, including the monks Dokuan Genkō (1630–1698), Kengan Zen’etsu (1618–1690), EGOKU DŌMYŌ, Chōon Dōkai (1628–1695), and [BANKEI YŌTAKU](#). Unlike his compatriot Yinyuan, who continued to reside in Japan, Daozhe returned to China in 1658 and died shortly thereafter. Daozhe played an important role in preparing the ground for Yinyuan’s later establishment of the [ŌBAKUSHŪ](#) in Japan.

[Dari jing shu](#). (J. Dainichikyōsho; K. Tael kyōng so 大日經疏). In Chinese, “Commentary on the [MAHĀVAIROCANASŪTRA](#)”; dictated by [ŚUBHAKARASIMHA](#) and committed to writing with additional notes by his disciple [YIXING](#). After Yixing’s death, the *Dari jing shu* was further edited and expanded by the monks Zhiyan (d.u.) and Wengu (d.u.), and this new edition is known as the [DARI JING YISHI](#). Both editions were transmitted to Japan (the *Dari jing shu* by [KŪKAI](#), *Dari jing yishi* by [ENNIN](#)) and they seem to have circulated without a determinate number of volumes or fixed title. [SAICHŌ](#), for example, cites a fourteen-roll edition of the *Dari jing shu*, and Kūkai cites a twenty-roll edition; Ennin cites a fourteen-roll edition of the *Dari jing yishi*, and [ENCHIN](#) cites a ten-roll edition. Those belonging to the Tōmitsu line of Kūkai’s [SHINGON](#) tradition thus began to exclusively paraphrase the twenty-roll edition of the *Dari jing shu*, while those of the Taimitsu line of the [TENDAI](#) tradition relied solely on the version Ennin had brought back from China. The exact relation between the two editions remains a matter for further study. The first two rolls of the *Dari jing shu*, known more popularly in Japan as the “Kuchi no sho,” provide notes and comments on the first chapter of the [MAHĀVAIROCANĀBHISAMBODHISŪTRA](#) and serve as an important source for the study of the *Mahāvairocanasūtra*’s central doctrines. Numerous studies and commentaries on the Kuchi no sho exist. The rest of Yixing’s commentary, known as the “Oku no sho,” is largely concerned with matters of ritual and art (see [MANDALA](#)). Further explanations of the Oku no sho were primarily transmitted from master to disciple as an oral tradition in Japan; twelve such oral traditions are known to exist. The *Dari jing shu* played an important role in the rise of esoteric Buddhism (see [TANTRA](#)) in East Asia, and particularly in Japan.

Dari jing yishi. (J. Dainichikyō gishaku; K. Taeil kyōng ūisōk 大日經義釋). In Chinese, “Interpretation of the Meaning of the **MAHĀVAIROCANĀBHISAMBODHISŪTRA**.” The monks Zhiyan (d.u.) and Wengu (d.u.) further edited and expanded upon the famous commentary on the *Mahāvairocanābhisambodhisūtra*, the **DARI JING SHU**. The *Dari jing shu* was dictated by **ŚUBHAKARASIMHA** and written down by his disciple **YIXING**, with further notes. Both texts were transmitted to Japan (the *Dari jing shu* by **KŪKAI** and *Dari jing yishi* by **ENNIN**); monks connected with the Taimitsu strand of the **TENDAI** tradition exclusively relied on the *Dari jing yishi* that Ennin had brought back from China. The eminent Japanese monk **ENCHIN** paid much attention to the *Dari jing yishi* and composed a catalogue for the text known as *Dainichigyō gishaku mokuroku*, wherein he details the provenance of the text and the circumstances of its arrival in Japan. Enchin also discusses three different points on which the *Dari jing yishi* was superior to the *Dari jing shu*. These points were further elaborated in his other commentaries on the *Dari jing yishi*. Few others besides Enchin have written commentaries on this text. In China, the Liao dynasty monk Jueyuan (d.u.) composed a commentary entitled the *Dari jing yishi yanmi chao*.

Dar ma mdo sde. (Darma Dode, eleventh century). Chief son of the renowned Tibetan translator **MAR PA CHOS KYI BLO GROS**. According to Mar pa’s traditional biographies, he originally intended to make Dar ma mdo sde the principal heir to his most important teachings, especially the practice of transferring consciousness into—and thereby reanimating—a corpse (GRONG ’JUG). The son, however, died as a youth in an equestrian accident. As he was about to die, Mar pa gave him the instructions, and Dar ma mdo sde transferred his consciousness into the corpse of a nearby pigeon, who then flew to India, where he again transferred his consciousness into the corpse of a young brāhmaṇa child. The revived brāhmaṇa grew up to become a tantric adept named **TI PHU PA** (“Pigeon Man”) and became an important link in the transmission of the nine aural lineage cycles of the formless ḍākinīs (**LUS MED MKHA’ ’GRO SNYAN RGYUD CHOS SKOR DGU**) for the **BKA’ BRGYUD** sect of Tibetan Buddhism. According to some traditions, the translator **RWA LO TSĀ BA RDO RJE GRAGS PA** used black magic to cause Dar ma mdo sde’s fatal accident.

darśana. (P. dassana; T. mthong ba; C. jian; J. ken; K. kyōn 見). In Sanskrit, lit. “seeing,” viz., “vision,” “insight,” or “understanding.” In a purely physical

sense, darśana refers most basically to visual perception that occurs through the ocular sense organ. However, Buddhism also accepts a full range of sensory and extrasensory perceptions, such as those associated with meditative development (see [YOGIPRATYAKSA](#)), that also involve “vision,” in the sense of directly perceiving a reality hidden from ordinary sight. Darśana may thus refer to the seeing that occurs through any of the five types of “eyes” ([CAKSUS](#)) mentioned in Buddhist literature, viz., (1) the physical eye ([MĀMSACAKSUS](#)), the sense base ([AYATANA](#)) associated with visual consciousness; (2) the divine eye ([DIVYACAKSUS](#)), the vision associated with the spiritual power ([ABHIJÑĀ](#)) of clairvoyance; (3) the wisdom eye ([PRAJÑĀCAKSUS](#)), which is the insight that derives from cultivating mainstream Buddhist practices; (4) the dharma eye ([DHARMAKAKSUS](#)), which is exclusive to the [BODHISATTVA](#)s; and (5) the buddha eye ([BUDDHACAKSUS](#)), which subsumes all the other four. When used in its denotation of “insight,” darśana often appears in the compound “knowledge and vision” ([JÑĀNADARŚANA](#)), viz., the direct insight that accords with reality ([YATHĀBHŪTA](#)) of the three marks of existence ([TRILAKSANA](#))—impermanence ([ANITYA](#)), suffering ([DUHKHA](#)), and nonself/insubstantiality ([ANĀTMAN](#))—and one of the qualities perfected on the path leading to the state of “worthy one” ([ARHAT](#)). Darśana is usually considered to involve awakening ([BODHI](#)) to the truth, liberation ([VIMUKTI](#)) from bondage, and purification ([VÍSUDHI](#)) of all afflictions ([KLEŚA](#)). The perfection of knowledge and vision ([jñānadarśanapāramitā](#)) is also said to be an alternate name for the perfection of wisdom ([PRAJÑĀPĀRAMITĀ](#)), one of the six perfections ([PĀRAMITĀ](#)) of the bodhisattva path. In the fivefold structure of the Buddhist path, the [DARŚANAMĀRGA](#) constitutes the third path. The related term “view” ([DRSTI](#)), which derives from the same Sanskrit root $\sqrt{drś}$ (“to see”), is sometimes employed similarly to darśana, although it also commonly conveys the more pejorative meanings of dogma, heresy, or extreme or wrong views regarding the self and the world, often as propounded by non-Buddhist philosophical schools. Darśana is also sometimes used within the Indian tradition to indicate a philosophical or religious system, a usage still current today.

[darśanamārga](#). (T. mthong lam; C. jiandao; J. kendō; K. kyōndo 見道). In Sanskrit, “path of vision”; the third of the five paths ([PAÑCAMĀRGA](#)) to liberation and enlightenment, whether as an [ARHAT](#) or as a buddha. It follows the second path, the path of preparation ([PRAYOGAMĀRGA](#)) and precedes the fourth path, the path of meditation or cultivation ([BHĀVANĀMĀRGA](#)). This path marks the adept’s

first direct perception of reality, without the intercession of concepts, and brings an end to the first three of the ten fetters ([SAMYOJANA](#)) that bind one to the cycle of rebirth: (1) belief in the existence of a self in relation to the body ([SATKĀYADRSTI](#)), (2) belief in the efficacy of rites and rituals ([ŚILAVRATAPARĀMARŚA](#)) as a means of salvation, and (3) doubt about the efficacy of the path ([VICIKITSĀ](#)). Because this vision renders one a noble person ([ĀRYA](#)), the path of vision marks the inception of the “noble path” (āryamārga). According to the Sarvāstivāda soteriological system, the darśanamārga occurs over the course of fifteen moments of realization of the [FOUR NOBLE TRUTHS](#), with the sixteenth moment marking the beginning of the [BHĀVANĀMĀRGA](#). There are four moments of realization for each of the four truths. The first moment is that of doctrinal acquiescence ([DHARMAKSĀNTI](#)) with regard to the sensuous realm ([KĀMADHĀTU](#)). In that moment, the afflictions ([KLEŚA](#)) of the sensuous realm associated with the truth of suffering are abandoned. This is followed by a moment of doctrinal knowledge ([DHARMAJÑĀNA](#)) of the truth of suffering with regard to the sensuous realm, which is the state of understanding that the afflictions of that level have been abandoned. Next comes a moment of realization called subsequent acquiescence (anvayaḥśānti), in which the afflictions associated with the truth of suffering in the two upper realms, the realm of subtle materiality ([RŪPADHĀTU](#)) and the immaterial realm ([ĀRŪPYADHĀTU](#)) are abandoned; there is finally a moment of subsequent knowledge (anvayañāna) of the truth of suffering with regard to the two upper realms. This sequence of four moments—doctrinal acquiescence and doctrinal knowledge (which are concerned with the sensuous realm) and subsequent acquiescence and subsequent knowledge (which are concerned with the two upper realms)—is repeated for the remaining truths of origin, cessation, and path. In each case, the moments of realization called acquiescence are the time when the afflictions are actually abandoned; they are called uninterrupted paths ([ANANTARYAMĀRGA](#)) because they cannot be interrupted or impeded in severing the hold of the afflictions. The eight moments of knowledge are the state of having realized that the afflictions of the particular level have been abandoned. They are called paths of liberation ([VIMUKTIMĀRGA](#)). An uninterrupted path, followed by a path of liberation, are likened to throwing out a thief and locking the door behind him. The sixteenth moment in the sequence—the subsequent knowledge of the truth of the path with regard to the upper realms—constitutes the first moment of the next path, the bhāvanāmārga. For a [BODHISATTVA](#), the attainment of the path of vision coincides with the inception of the first

[BODHISATTVABHŪMI](#) (see also [DAŚABHŪMI](#)). The [ABHIDHARMASAMUCCAYA](#) explains that the bodhisattva's path of vision is also a direct perception of reality and is focused on the four noble truths; unlike the mainstream account, however, all three realms are considered simultaneously, and the sixteenth moment is not the first instant of the path of cultivation (*bhāvanāmārga*). The [YOGĀCĀRA](#) system is based on their doctrine of the falsehood of the subject/object bifurcation. The first eight instants describe the elimination of fetters based on false conceptualization ([VIKALPA](#)) of objects, and the last eight the elimination of fetters based on the false conceptualization of a subject; thus the actual path of vision is a direct realization of the emptiness ([ŚŪNYATĀ](#)) of all dharmas (*sarvadharmasūnyatā*). This view of the *darśanamārga* as the first direct perception ([PRATYAKSA](#)) of emptiness is also found in the [MADHYAMAKA](#) school, according to which the bodhisattva begins to abandon the afflictive obstructions ([KLEŚĀVARANA](#)) upon attaining the *darśanamārga*. See also [DHARMAKSĀNTI](#); [JIEWU](#); [DUNWU JIANXIU](#).

[Darumashū](#). (達摩宗). In Japanese, the “[BODHIDHARMA](#) sect”; one of the earliest Japanese Buddhist [ZEN](#) sects, established in the tenth century by [DAINICHI NŌNIN](#); the sect takes its name from the putative founder of the [CHAN](#) tradition, Bodhidharma. Little was known about the teachings of the *Darumashū* until the late-twentieth century apart from criticisms found in the writings of its contemporary rivals, who considered the school to be heretical. Criticisms focused on issues of the authenticity of Nōnin's lineage and antinomian tendencies in Nōnin's teachings. A recently discovered *Darumashū* treatise, the *Jōto shōgakuron* (“Treatise on the Attainment of Complete, Perfect Enlightenment”), discusses the prototypical Chan statement “mind is the buddha,” demonstrating that a whole range of benefits, both worldly and religious, would accrue to an adept who simply awakens to that truth. As a critique of the *Darumashū* by Nōnin's rival [MYŌAN EISAI](#) states, however, since the school posits that the mind is already enlightened and the afflictions ([KLEŚA](#)) do not exist in reality, its adherents claimed that there were therefore no precepts that had to be kept or practices to be followed, for religious cultivation would only serve to hinder the experience of awakening. The *Darumashū* also emphasized the importance of the transmission of the patriarchs' relics (J. *shari*; S. [ŚARĪRA](#)) as a mark of legitimacy. Although the *Darumashū* was influential enough while Nōnin was alive to prompt other sects to call for its suppression, it did not survive its founder's death, and most of Nōnin's leading disciples

affiliated themselves with other prominent teachers, such as [DŌGEN KIGEN](#). These Darumashū adherents had a significant influence on early [SŌTŌSHŪ](#) doctrine and self-identity and seem to have constituted the majority of the Sōtōshū tradition into its third generation of successors. ¶ Darumashū, as the Japanese pronunciation of the Chinese term Damo zong (Bodhidharma lineage), can also refer more generally to the [CHAN/SŌN/ZEN](#) school, which traces its heritage back to the founder and first Chinese patriarch, Bodhidharma.

[daśabhūmi](#). (T. sa bcu; C. shidi; J. jūji; K. sipchi 十地). In Sanskrit, lit., “ten grounds,” “ten stages”; the ten highest reaches of the bodhisattva path ([MĀRGA](#)) leading to buddhahood. The most systematic and methodical presentation of the ten [BHŪMIS](#) appears in the [DAŚABHŪMIKASŪTRA](#) (“Ten Bhūmis Sūtra”), where each of the ten stages is correlated with seminal doctrines of mainstream Buddhism—such as the four means of conversion ([SAMGRAHAVASTU](#)) on the first four bhūmis, the [FOUR NOBLE TRUTHS](#) ([CATVĀRY ĀRYASATYĀNI](#)) on the fifth bhūmi, and the chain of dependent origination ([PRATĪTYASAMUTPĀDA](#)) on the sixth bhūmi, etc.—as well as with mastery of one of a list of ten perfections ([PĀRAMITĀ](#)) completed in the course of training as a bodhisattva. The list of the ten bhūmis of the *Daśabhūmikasūtra*, which becomes standard in most Mahāyāna traditions, is as follows: (1) [PRAMUDITĀ](#) (joyful) corresponds to the path of vision ([DARŚANAMĀRGA](#)) and the bodhisattva’s first direct realization of emptiness ([ŚŪNYATĀ](#)). The bodhisattva masters on this bhūmi the perfection of giving ([DĀNAPĀRAMITĀ](#)), learning to give away those things most precious to him, including his wealth, his wife and family, and even his body (see [DEHADĀNA](#)); (2) [VIMALĀ](#) (immaculate, stainless) marks the inception of the path of cultivation ([BHĀVANĀMĀRGA](#)), where the bodhisattva develops all the superlative traits of character incumbent on a buddha through mastering the perfection of morality ([ŚĪLAPĀRAMITĀ](#)); (3) [PRABHĀKARĪ](#) (luminous, splendrous), where the bodhisattva masters all the various types of meditative experiences, such as [DHYĀNA](#), [SAMĀPATTI](#), and the [BRAHMAVIHĀRA](#); despite the emphasis on meditation in this bhūmi, it comes to be identified instead with the perfection of patience ([KSĀNTIPĀRAMITĀ](#)), ostensibly because the bodhisattva is willing to endure any and all suffering in order to master his practices; (4) [ARCISMATĪ](#) (radiance, effulgence), where the flaming radiance of the thirty-seven factors pertaining to enlightenment ([BODHIPĀKSIKADHARMA](#)) becomes so intense that it incinerates obstructions ([ĀVARANA](#)) and afflictions ([KLEŚA](#)), giving the bodhisattva inexhaustible energy in his quest for enlightenment and thus

mastering the perfection of vigor or energy ([VĪRYAPĀRAMITĀ](#)); (5) [SUDURJAYĀ](#) (invincibility, hard-to-conquer), where the bodhisattva comprehends the various permutations of truth ([SATYA](#)), including the four noble truths, the two truths ([SATYADVAYA](#)) of provisional ([NEYĀRTHA](#)) and absolute ([NĪTĀRTHA](#)), and masters the perfection of meditative absorption ([DHYĀNAPĀRAMITĀ](#)); (6) [ABHIMUKHĪ](#) (immediacy, face-to-face), where, as the name implies, the bodhisattva stands at the intersection between [SAMSĀRA](#) and [NIRVĀNA](#), turning away from the compounded dharmas of saṃsāra and turning to face the profound wisdom of the buddhas, thus placing him “face-to-face” with both the compounded ([SAMSKRTA](#)) and un compounded ([ASAMSKRTA](#)) realms; this bhūmi is correlated with mastery of the perfection of wisdom ([PRAJÑĀPĀRAMITĀ](#)); (7) [DŪRAṄGAMĀ](#) (far-reaching, transcendent), which marks the bodhisattva’s freedom from the four perverted views ([VIPARYĀSA](#)) and his mastery of the perfection of expedients ([UPĀYAPĀRAMITĀ](#)), which he uses to help infinite numbers of sentient beings; (8) [ACALĀ](#) (immovable, steadfast), which is marked by the bodhisattva’s acquiescence or receptivity to the nonproduction of dharmas ([ANUTPATTIKADHARMAKSĀNTI](#)); because he is now able to project transformation bodies ([NIRMĀNAKĀYA](#)) anywhere in the universe to help sentient beings, this bhūmi is correlated with mastery of the perfection of aspiration or resolve ([PRANIDHĀNAPĀRAMITĀ](#)); (9) [SĀDHUMATĪ](#) (eminence, auspicious intellect), where the bodhisattva acquires the four analytical knowledges ([PRATISAMVID](#)), removing any remaining delusions regarding the use of the supernatural knowledges or powers ([ABHIJÑĀ](#)), and giving the bodhisattva complete autonomy in manipulating all dharmas through the perfection of power ([BALAPĀRAMITĀ](#)); and (10) [DHARMAMEGHĀ](#) (cloud of dharma), the final bhūmi, where the bodhisattva becomes autonomous in interacting with all material and mental factors, and gains all-pervasive knowledge that is like a cloud producing a rain of dharma that nurtures the entire world; this stage is also described as being pervaded by meditative absorption ([DHYĀNA](#)) and mastery of the use of codes ([DHĀRANĪ](#)), just as the sky is filled by clouds; here the bodhisattva achieves the perfection of knowledge ([JÑĀNAPĀRAMITĀ](#)). As the bodhisattva ascends through the ten bhūmis, he acquires extraordinary powers, which [CANDRAKĪRTI](#) describes in the eleventh chapter of his [MADHYAMAKĀVATĀRA](#). On the first bhūmi, the bodhisattva can, in a single instant (1) see one hundred buddhas, (2) be blessed by one hundred buddhas and understand their blessings, (3) live for one hundred eons, (4) see the past and future in those one hundred eons, (5) enter into and rise from one hundred [SAMĀDHI](#)s, (6) vibrate one hundred worlds, (7) illuminate one

hundred worlds, (8) bring one hundred beings to spiritual maturity using emanations, (9) go to one hundred [BUDDHAKSETRA](#), (10), open one hundred doors of the doctrine ([DHARMAPARYĀYA](#)), (11) display one hundred versions of his body, and (12) surround each of those bodies with one hundred bodhisattvas. The number one hundred increases exponentially as the bodhisattva proceeds; on the second bhūmi it becomes one thousand, on the third one hundred thousand, and so on; on the tenth, it is a number equal to the particles of an inexpressible number of buddhakṣetra. As the bodhisattva moves from stage to stage, he is reborn as the king of greater and greater realms, ascending through the Buddhist cosmos. Thus, on the first bhūmi he is born as king of [JAMBUDVĪPA](#), on the second of the four continents, on the third as the king of [TRĀYATRIMŚA](#), and so on, such that on the tenth he is born as the lord of [AKANISTHA](#). ¶ According to the rather more elaborate account in chapter eleven of the [CHENG WEISHI LUN](#) (**Vijñaptimātratāsiddhi*), each of the ten bhūmis is correlated with the attainment of one of the ten types of suchness ([TATHATĀ](#)); these are accomplished by discarding one of the ten kinds of obstructions (āvaraṇa) by mastering one of the ten perfections (pāramitā). The suchnesses achieved on each of the ten bhūmis are, respectively: (1) universal suchness (sarvatragatathatā; C. bianxing zhenru), (2) supreme suchness (paramatathatā; C. zuisheng zhenru), (3) ubiquitous, or “supreme outflow” suchness (paramaṇiṣyandatathatā; C. shengliu zhenru), (4) unappropriated suchness (aparigrahatathatā; C. wusheshou zhenru), (5) undifferentiated suchness (abhinnajātīyatathatā; C. wubie zhenru), (6) the suchness that is devoid of maculations and contaminants (asaṃkliṣṭāvyavadātathatā; C. wuranjing zhenru), (7) the suchness of the undifferentiated dharma (abhinnatathatā; C. fawubie zhenru), (8) the suchness that neither increases nor decreases (anupacayāpacayatathatā; C. buzengjian), (9) the suchness that serves as the support of the mastery of wisdom (jñānaśītasamṇīśrayatathatā; C. zhizizai suoyi zhenru), and (10) the suchness that serves as the support for mastery over actions (kriyādivaśītasamṇīśrayatathatā; C. yezizai dengsuoyi). These ten suchnesses are obtained by discarding, respectively: (1) the obstruction of the common illusions of the unenlightened (pṛthagjanatvāvaraṇa; C. yishengxing zhang), (2) the obstruction of the deluded (mithyāpratipattyāvaraṇa; C. xiexing zhang), (3) the obstruction of dullness (dhandhatvāvaraṇa; C. andun zhang), (4) the obstruction of the manifestation of subtle afflictions (sūkṣmakleśasamudācārāvaraṇa; C. xihuo xianxing zhang), (5) the obstruction of the lesser [HĪNAYĀNA](#) ideal of parinirvāṇa (hīnayānaparinirvāṇāvaraṇa; C.

xiasheng niepan zhang), (6) the obstruction of the manifestation of coarse characteristics (sthūlanimittasamudācārāvaraṇa; C. cuxiang xianxing zhang), (7) the obstruction of the manifestation of subtle characteristics (sūkṣmanimittasamudācārāvaraṇa; C. xixiang xianxing zhang), (8) the obstruction of the continuance of activity even in the immaterial realm that is free from characteristics (nirnimittābhisamskācārāvaraṇa; C. wuxiang jiaxing zhang), (9) the obstruction of not desiring to act on behalf of others' salvation (parahitacaryākāmanāvaraṇa; C. buyuxing zhang), and (10) the obstruction of not yet acquiring mastery over all things (fa weizizai zhang). These ten obstructions are overcome by practicing, respectively: (1) the perfection of giving (dānapāramitā), (2) the perfection of morality (śīlapāramitā), (3) the perfection of forbearance (kṣāntipāramitā), (4) the perfection of energetic effort (vīryapāramitā), (5) the perfection of meditation (dhyānapāramitā), (6) the perfection of wisdom (prajñāpāramitā), (7) the perfection of expedient means (upāyapāramitā), (8) the perfection of the vow (to attain enlightenment) (prañidhānapāramitā), (9) the perfection of power (balapāramitā), and (10) the perfection of knowledge (jñānapāramitā). ¶ The eighth, ninth, and tenth bhūmis are sometimes called “pure bhūmis,” because, according to some commentators, upon reaching the eighth bhūmi, the bodhisattva has abandoned all of the afflictive obstructions ([KLEŚĀVARANA](#)) and is thus liberated from any further rebirth. It appears that there were originally only seven bhūmis, as is found in the [BODHISATTVABHŪMI](#), where the seven bhūmis overlap with an elaborate system of thirteen abidings or stations (vihāra), some of the names of which (such as pramuditā) appear also in the standard bhūmi schema of the *Daśabhūmikasūtra*. Similarly, though a listing of ten bhūmis appears in the [MAHĀVASTU](#), a text associated with the [LOKOTTARAVĀDA](#) subsect of the [MAHĀSĀMGHIKA](#) school, only seven are actually discussed there, and the names given to the stages are completely different from those found in the later *Daśabhūmikasūtra*; the stages there are also a retrospective account of how past buddhas have achieved enlightenment, rather than a prescription for future practice. ¶ The daśabhūmi schema is sometimes correlated with other systems of classifying the bodhisattva path. In the five levels of the Yogācāra school's outline of the bodhisattva path ([PAÑCAMĀRGA](#); C. wuwei), the first bhūmi (pramuditā) is presumed to be equivalent to the level of proficiency (*prativedhāvasthā; C. tongdawei), the third of the five levels; while the second bhūmi onward corresponds to the level of cultivation (C. xiuxiwei), the fourth of the five levels. The first bhūmi is also correlated with the path of vision ([DARŚANAMĀRGA](#)), while the second and higher

bhūmis correlate with the path of cultivation ([BHĀVANĀMĀRGA](#)). In terms of the doctrine of the five acquiescences (C. ren; S. kṣānti) listed in the [RENWANG JING](#), the first through the third bhūmis are equivalent to the second acquiescence, the acquiescence of belief (C. xinren; J. shinnin; K. sinin); the fourth through the sixth stages to the third, the acquiescence of obedience (C. shunren; J. junnin; K. sunin); the seventh through the ninth stages to the fourth, the acquiescence to the nonproduction of dharmas (anutpattikadharmakṣānti; C. wushengren; J. mushōnin; K. musaengin); the tenth stage to the fifth and final acquiescence, to extinction (jimieren; J. jakumetsunin; K. chōngmyōrin). [FAZANG](#)'s [HUAYANJING TANXUAN JI](#) ("Notes Plumbing the Profundities of the [AVATAMSAKASŪTRA](#)") classifies the ten bhūmis in terms of practice by correlating the first bhūmi to the practice of faith ([ŚRADDHĀ](#)), the second bhūmi to the practice of morality ([ŚĪLA](#)), the third bhūmi to the practice of concentration ([SAMĀDHI](#)), and the fourth bhūmi and higher to the practice of wisdom ([PRAJÑĀ](#)). In the same text, Fazang also classifies the bhūmis in terms of vehicle ([YĀNA](#)) by correlating the first through third bhūmis with the vehicle of humans and gods (rentiansheng), the fourth through the seventh stage to the three vehicles ([TRIYĀNA](#)), and the eighth through tenth bhūmis to the one vehicle ([EKAYĀNA](#)). ¶ Besides the list of the daśabhūmi outlined in the *Daśabhūmikasūtra*, the [MAHĀPRAJÑĀPĀRAMITĀSŪTRA](#) and the [DAZHIDU LUN](#) (**Mahāprajñāpāramitāśāstra*) list a set of ten bhūmis, called the "bhūmis in common" (gongdi), which are shared between all the three vehicles of [ŚRĀVAKAS](#), [PRATYEKABUDDHAS](#), and bodhisattvas. These are the bhūmis of: (1) dry wisdom (śuklavīdarśanābhūmi; C. ganhuidi), which corresponds to the level of three worthies (sanxianwei, viz., ten abidings, ten practices, ten transferences) in the śrāvaka vehicle and the initial arousal of the thought of enlightenment (prathamacittotpāda) in the bodhisattva vehicle; (2) lineage (gotrabhūmi; C. xingdi, zhongxingdi), which corresponds to the stage of the "aids to penetration" ([NIRVEDHABHĀGĪYA](#)) in the śrāvaka vehicle, and the final stage of the ten transferences in the fifty-two bodhisattva stages; (3) eight acquiescences (aṣṭamakabhūmi; C. barendi), the causal incipiency of stream-enterer ([SROTAĀPANNA](#)) in the case of the śrāvaka vehicle and the acquiescence to the nonproduction of dharmas (anutpattikadharmakṣānti) in the bodhisattva path (usually corresponding to the first or the seventh through ninth bhūmis of the bodhisattva path); (4) vision (darśanabhūmi; C. jiandi), corresponding to the fruition or fulfillment ([PHALA](#)) level of the stream-enterer in the śrāvaka vehicle and the stage of nonretrogression ([AVAIVARTIKA](#)), in the bodhisattva path (usually corresponding to the completion of the first or the eighth bhūmi); (5)

diminishment (tanūbhūmi; C. baodi), corresponding to the fulfillment level (phala) of stream-enterer or the causal incipiency of the once-returner (sakṛdāgāmin) in the śrāvaka vehicle, or to the stage following nonretrogression before the attainment of buddhahood in the bodhisattva path; (6) freedom from desire (vītarāgabhūmi; C. liyudi), equivalent to the fulfillment level of the nonreturner in the śrāvaka vehicle, or to the stage where a bodhisattva attains the five supernatural powers ([ABHIJÑĀ](#)); (7) complete discrimination (kṛtāvibhūmi), equivalent to the fulfillment level of the [ARHAT](#) in the śrāvaka vehicle, or to the stage of buddhahood (buddhabhūmi) in the bodhisattva path (buddhabhūmi) here refers not to the fruition of buddhahood but merely to the state in which a bodhisattva has the ability to exhibit the eighteen qualities distinctive to the buddhas ([ĀVENIKA|BUDDHA|DHARMA](#)); (8) pratyekabuddha (pratyekabuddhabhūmi); (9) bodhisattva (bodhisattvabhūmi), the whole bodhisattva career prior to the fruition of buddhahood; (10) buddhahood (buddhabhūmi), the stage of the fruition of buddhahood, when the buddha is completely equipped with all the buddhadharmas, such as omniscience ([SARVĀKĀRAJÑATĀ](#)). As is obvious in this schema, despite being called the bhūmis “common” to all three vehicles, the shared stages continue only up to the seventh stage; the eighth through tenth stages are exclusive to the bodhisattva vehicle. This anomaly suggests that the last three bhūmis of the bodhisattvayāna were added to an earlier śrāvakayāna seven-bhūmi scheme. ¶ The presentation of the bhūmis in the [PRAJÑĀPĀRAMITĀ](#) commentarial tradition following the [ĀBHISAMAYĀLAMKĀRA](#) uses the names found in the *Daśabhūmikasūtra* for the bhūmis and understands them all as bodhisattva levels; it introduces the names of the ten bhūmis found in the *Dazhidu lun* as levels that bodhisattvas have to pass beyond (S. atikrama) on the tenth bodhisattva level, which it calls the buddhabhūmi. This tenth bodhisattva level is not the level of an actual buddha, but the level on which a bodhisattva has to transcend attachment (abhiniveśa) to not only the levels reached by the four sets of noble persons ([ĀRYAPUDGALA](#)) but to the bodhisattvabhūmis as well. See also [BHŪMI](#).

[Daśabhūmikasūtra](#). (T. Sa bcu pa'i mdo; C. Shidi jing/Shizhu jing; J. Jūjikyō/Jūjūkyō; K. Sipchi kyōng/Sipchu kyōng 十地經/十住經). In Sanskrit, “Scripture of the Ten Stages”; the definitive scriptural account of the ten “grounds” or “stages” ([DAŚABHŪMI](#)) at the upper reaches of the [BODHISATTVA](#) path ([MĀRGA](#)). In the sūtra, each of the ten stages is correlated with seminal doctrines of mainstream Buddhism, as well as with mastery of one of a list of ten

perfections ([PĀRAMITĀ](#)) completed in the course of training as a bodhisattva. The sūtra appears as one of the chapters of the [AVATAMSAKASŪTRA](#) and also circulated as an independent text. For a full treatment, see [DAŚABHŪMI](#); [BHŪMI](#).

[Daśabhūmivyākhyāna](#). (T. Sa bcu pa'i rnam par bshad pa; C. Shidijing lun; J. Jūjikyōron; K. Sipchigyōng non 十地經論). In Sanskrit, “Explanation of the [DAŚABHŪMIKASŪTRA](#)”; a commentary on the *Daśabhūmikasūtra* attributed to the Indian exegete [VASUBANDHU](#). The work served as the basis for the Chinese [DI LUN ZONG](#), “School of *Di lun* Exegetes,” a lineage of Buddhist scholiasts who studied this text. (*Di lun* is an abbreviation of the *Shidijing lun*, the Chinese translation of the *Daśabhūmivyākhyāna*.) The school is considered to be one of the earliest of the indigenous scholastic traditions of East Asian [MAHĀYĀNA](#) Buddhism, and its thought draws on strands of Indic thought that derive from both the [YOGĀCĀRA](#) and [TATHĀGATAGARBHA](#) traditions.

[daśadhātu](#). (T. [gzugs can gyi] kham bcu; C. shijie; J. jikkai; K. sipkye 十界). In Sanskrit, “ten elements”; an [ABHIDHARMA](#) classification referring to the five physical sense organs (eyes, ears, nose, tongue, and body) plus the five sense objects (visual, auditory, olfactory, gustatory, and tactile objects). ¶ In [MAHĀYĀNA](#) Buddhism, and especially in the East Asian [TIANTAI](#) schools, the term was appropriated to refer to ten “realms” or “destinies” of being; in East Asian Buddhism, this denotation is by far the most common. These destinies are, from the bottom up, the six rebirth destinies ([GATI](#)) in [SAMŚĀRA](#), viz., (1) hells (naraka; see [NĀRAKA](#)), (2) hungry ghosts ([PRETA](#)), (3) animals ([TIRYAK](#)), (4) demigods ([ASURA](#)), (5) human beings ([MANUSYA](#)), and (6) divinities ([DEVA](#)), plus the four destinies of enlightened beings, viz., (7) disciples of the Buddha ([ŚRĀVAKA](#)), (8) solitary buddhas ([PRATYĒKABUDDHA](#)), (9) [BODHISATTVAS](#), and (10) buddhas. According to Tiantai doctrine, since these ten destinies are mutually pervasive (C. shijie haju), each of these realms pervades, and is pervaded by, all the nine other realms; hence, the potential for buddhahood is inherent even in the most dire destiny in the hells.

[daśadiś](#). [alt. diśā] (P. dasadisā; T. phyogs bcu; C. shifang; J. jippō; K. sibang 十方). In Sanskrit, “ten directions”; the four cardinal directions (north, east, south, west), the four intermediate directions (northeast, southeast, southwest, northwest), plus the zenith and the nadir. By covering every possible direction, the “ten directions” therefore comes to be used by extension to mean “everywhere,” in the sense of an all-pervasive completeness or

comprehensiveness, whether of activities, states, or occurrences. The [MAHĀYĀNA](#) tradition presumes that there are innumerable world systems in all the ten directions (S. daśadiglokadhātu; C. shifang shijie), as well as innumerable “buddhas of the ten directions” (daśadigbuddha). See also [SHIFANG CHA](#); [PĀPADEŚANĀ](#).

[daśaśīla](#). (P. dasasīla; T. tshul khrims bcu; C. shijie; J. jikkai; K. sipkye 十戒). In Sanskrit, “ten precepts”; an expansion and enhancement of the five lay precepts ([PAÑCAŚĪLA](#)), which all male novices ([ŚRĀMANERA](#)) and female novices ([ŚRĀMANERIKĀ](#)) were required to follow as part of their training; also known as the “restraints for novices” ([ŚRĀMANERASAMVARA](#)). The ten are framed in terms of training rules ([ŚIKSĀPADA](#)), viz., “I undertake the training rule to abstain from”: (1) killing; (2) stealing; (3) sexual activity; (4) false speech; (5) intoxicants; (6) eating after midday; (7) dancing, singing, music, and other unseemly forms of entertainment; (8) using garlands, perfumes, and unguents to adorn the body; (9) using high and luxurious beds and couches; and (10) handling money. On full-and new-moon days ([UPOSADHA](#)), the laity have the option of taking all these precepts except the tenth; numbers 7 and 8 were then combined to give a set of eight precepts to be specially followed on these retreat days (S. upośadhaśīla; P. uposathasīla) as a sort of temporary renunciation. In the [MŪLASARVĀSTIVĀDA VINAYA](#) followed in Tibet, these ten precepts are expanded to thirty-six.

[Dasheng dayi zhang](#). (J. Daijō daigishō; K. Taesŭng taeŭi chang 大乘大義章). In Chinese “Compendium of the Great Purport of the Mahāyāna,” in three rolls; also known as the *Jiumoluoshi fashi dayi*, or “The Great Purport of the Great Master [KUMĀRAJĪVA](#).” The *Dasheng dayi zhang* is a compendium of letters that Kumārajīva wrote in reply to [LUSHAN HUIYUAN](#)’s inquiries about [MAHĀYĀNA](#) doctrine. There are a total of eighteen categories of questions that are concerned largely with the nature of the dharma body ([DHARMAKĀYA](#)), emptiness ([ŚŪNYATĀ](#)), and the mind ([CITTA](#)). The *Dasheng dayi zhang* is a valuable source for studying the development of Mahāyāna thought in China.

[Dasheng faxiang jiao](#). (C) (大乘法相教). See [HUAYAN WUJIAO](#).

[Dasheng fayuan yilin zhang](#). (J. Daijō hōon girinjō; K. Taesŭng pōbwōn ūirim chang 大乘法苑義林章). In Chinese, “(Edited) Chapters on the Forest of Meaning of the Dharma-Garden of [MAHĀYĀNA](#)”; composed by the eminent Chinese monk

[KUIJI](#). This treatise consists of twenty-nine chapters in seven rolls, but a thirty-three chapter edition is known to have been transmitted to Japan in the second half of the twelfth century. Each chapter is concerned with an important doctrinal matter related to the [YOGĀCĀRABHŪMIŚĀSTRA](#). Some chapters, for instance, discuss the various canons ([PITAKA](#)), two truths ([SATYADVAYA](#)), five faculties ([INDRIYA](#)), the sixty-two views ([DRSTĪ](#)), eight liberations ([ASTAVIMOKSA](#)), and buddha-lands ([BUDDHAKSETRA](#)), to name but a few. Because of its comprehensive doctrinal coverage, the *Dasheng fayuan yilin zhang* has served as an invaluable source of information on early [YOGĀCĀRA](#) thought in China.

[Dasheng poxiang jiao](#). (C) (大乘破相教). See [HUAYAN WUJIAO](#).

[Dasheng qixin lun](#). (S. *Mahāyānaśraddhotpādaśāstra; J. Daijō kishinron; K. Taesŭng kisin non 大乘起信論). In Chinese, “Treatise on the Awakening of Faith According to the [MAHĀYĀNA](#)”; attributed to the Indian author [ĀŚVAGHOSA](#), but now widely assumed to be an indigenous Chinese text (see [APOCRYPHA](#)) composed in the sixth century; typically known in English as simply the “Awakening of Faith.” Since its composition, the text has remained one of the most influential treatises in all of East Asian Buddhism. The earliest and most widely used “translation” (c. 550) is attributed to the famous [YOGĀCĀRA](#) scholar [PARAMĀRTHA](#), although some scholars have speculated that Paramārtha may in fact have composed the treatise after his arrival in China, perhaps even in Sanskrit, and then translated it into Chinese. The author of the *Dasheng qixin lun* sought to reconcile two of the dominant, if seemingly incompatible, strands in Mahāyāna Buddhism: [TATHĀGATAGARBHA](#) (embryo or womb of the buddhas) thought and the [ĀLAYAVIJÑĀNA](#) (storehouse consciousness) theory of consciousness. Tathāgatagarbha thought taught that all sentient beings have the potential to achieve enlightenment because that enlightenment is in fact inherent in the minds of sentient beings. What that doctrine did not seem to explain well to the East Asians, however, was why sentient beings who were inherently enlightened would have become deluded in the first place. Ālayavijñāna theory, by contrast, posited that the foundational recesses of the mind serve as a storehouse of the essentially infinite numbers of potentialities or seeds ([BĪJA](#)) of all past actions, including unsalutary deeds; this interpretation suggested to the East Asians that mental purity was not innate and that enlightenment therefore had to be catalyzed by some external source, such as “hearing the dharma,” which would then prompt a “transformation of the basis” ([ĀŚRAYAPARĀVṚTTI](#))

that could lead to purity of mind. The ālayavijñāna thus explained the intractability of ignorance and delusion, but did not seem to offer ready accessibility to enlightenment. In its search for common ground between these two doctrines, the *Dasheng qixin lun* instead describes the mind as being comprised of two distinct, but complementary, aspects: true thusness ([ZHENRU](#); S. [TATHATĀ](#)) and production-and-cessation (shengmie), which correspond respectively to ultimate truth ([PARAMĀRTHASATYA](#)) and conventional truth ([SAMVRTISATYA](#)) or the unconditioned ([ASAMSKRTA](#)) and conditioned ([SAMSKRTA](#)) realms. Since the mind that is subject to production and cessation (which the treatise identifies with ālayavijñāna) remains always grounded on the mind of true thusness (which the treatise identifies with tathāgatagarbha), the mind is therefore simultaneously deluded and enlightened. This distinction between this enlightened essence of the mind as “true thusness” and its various temporal manifestations as “production and cessation” is also described in terms of “essence” ([TI](#)) and “function” ([YONG](#)). From the standpoint of the buddhas and sages, the mind of the sentient being is therefore seen as being perpetually in a state of “original enlightenment” or “intrinsic enlightenment” ([BENJUE](#); see also [HONGAKU](#)), while from the standpoint of sentient beings that same mind is seen as being deluded and thus in need of purification through a process of “actualizing enlightenment” ([SHIJUE](#)). Actualizing enlightenment involves the cultivation of calmness (ji; S. [ŚAMATHA](#)) and insight (guan; S. [VIPAŚYANĀ](#)), as well as the development of no-thought ([WUNIAN](#)), aspects of training that receive extensive discussion in the treatise. Once the process of actualizing enlightenment is completed, however, the student realizes that the enlightenment achieved through cultivation is in fact identical to the enlightenment that is innate. Hence, the difference between these two types of enlightenment is ultimately a matter of perspective: the buddhas and sages see the innate purity of the tathāgatagarbha as something intrinsic; ordinary persons ([PRTHAGJANA](#)) see it as something that must be actualized through practice. Some East Asian Buddhists, such as [WŌNHYO](#) (617–686), seem to have presumed that the [KŪMGANG SAMMAE KYŌNG](#) (S. **Vajrasamādhisūtra*) was the scriptural source of the *Dasheng qixin lun*’s emblematic teaching of the one mind and its two aspects, even though we now know that that scripture was a Korean apocryphon that was not composed until over a century later. The most important commentaries to the *Dasheng qixin lun* are Wŏnhyo’s [TAESŬNG KISIN NON SO](#) and [TAESŬNG KISIN NON PYŎLGI](#), [FAZANG](#)’s [DASHENG QIXIN LUN YI JIS](#), and [JINGYING HUIYUAN](#)’s *Dasheng qixin lun yishu*.

[Dasheng qixin lun yi ji](#). (J. Daijō kishinron giki; K. Taesŭng kisin non ũi ki 大乘起信論義禮). In Chinese, “Notes on the Meaning of the ‘Awakening of Faith According to the Mahāyāna’”; composed by the Chinese [HUAYAN](#) monk [FAZANG](#). In addition to exegeses by [WŌNHYO](#) (see [TAESŬNG KISIN NON SO](#)) and [JINGYING HUIYUAN](#), this commentary has been traditionally regarded as one of the three great commentaries on the [DASHENG QIXIN LUN](#). Fazang’s commentary relies heavily upon that by Wōnhyo. Throughout the centuries, numerous other commentaries on the *Dasheng qixin lun* appeared in China, and most of them are based on Fazang’s work. According to this commentary, the *Dasheng qixin lun* speaks of one mind, two gates, three greats, four faiths, and five practices. Fazang also categorizes the entire history of Buddhism into four traditions: (1) the tradition of grasping at the characteristics of dharmas (i.e., the [HĪNAYĀNA](#)), (2) the tradition of no characteristics and only true emptiness (i.e., the [PRAJÑĀPĀRAMITĀ SŪTRAS](#) and the [MADHYAMAKA](#)), (3) the tradition of [YOGĀCĀRA](#) and consciousness-only (i.e., the [SAMDHINIRMOCANASŪTRA](#) and [YOGĀCĀRABHŪMIŚĀSTRA](#)), and (4) the tradition of conditioned origination from the [TATHĀGATAGARBHA](#) (i.e., the [LAŅKĀVATĀRASŪTRA](#) and *Dasheng qixin lun*). The notion of “conditioned origination from the tathāgatagarbha” (rulaizang yuanqi) reflects the author’s Huayan training deriving from the [AVATAMSAKASŪTRA](#) and its notion of “nature origination” ([XINGQI](#)).

[Dasheng wusheng fangbian men](#). (J. Daijō mushō hōbenmon; K. Taesŭng musaeng pangp’yōn mun 大乘無生方便門). In Chinese, “Expedient Means of [Attaining] Nonproduction according to the [MAHĀYĀNA](#)”; a summary of the teachings of the Northern School ([BEI ZONG](#)) of [CHAN](#). Several different recensions of this treatise were discovered at [DUNHUANG](#); the text is also known as the *Dasheng wufangbian Beizong* (“Five Expedient Means of the Mahāyāna: the Northern School”). These different editions speak of five expedient means ([UPĀYA](#)): (1) a comprehensive explanation of the essence of buddhahood (corresponding to the [DASHENG QIXIN LUN](#)), (2) opening the gates of wisdom and sagacity (viz., the [SADDHARMAPUNDARĪKASŪTRA](#)), (3) manifesting the inconceivable dharma (the [VIMALAKĪRTINIRDEŚĀ](#)), (4) elucidating the true nature of dharmas (*Sūtra of [the god] Siyi*), and (5) the naturally unobstructed path to liberation (the [AVATAMSAKASŪTRA](#)). Although this arrangement of scriptures bears a superficial resemblance to a taxonomy of texts (see [JIAOXIANG PANSHI](#)), a common feature of Chinese Buddhist polemics and exegesis, this listing was not intended to be hierarchical. The explanation of the five expedient means occurs

largely in dialogic format. Unlike the *Dasheng wufangbian Beizong*, the *Dasheng wusheng fangbian men* also provides a description of the method of conferring the [BODHISATTVA](#) precepts ([PUSA JIE](#)). In its discussions of both the five expedient means and the bodhisattva precepts, great emphasis is placed on the need for purity of mind.

[Dasheng xuanlun](#). (J. Daijō genron; K. Taesŭng hyōn non 大乘玄論). In Chinese, “Profound Treatise on the [MAHĀYĀNA](#)”; one of most influential treatises of the [SAN LUN ZONG](#), the Chinese branch of the [MADHYAMAKA](#) school of Indian philosophy; composed by [JIZANG](#), in five rolls. The treatise is primarily concerned with eight general topics: the two truths ([SATYADVAYA](#)), eight negations, buddha-nature ([FOXING](#)), [EKAYĀNA](#), [NIRVĀNA](#), two wisdoms, teachings, and treatises. The section on teachings explains the notions of sympathetic resonance ([GANYING](#)) and the [PURE LAND](#). Explanations of Madhyamaka epistemology, the “four antinomies” ([CATUSKOTI](#)), and the [MŪLAMADHYAMAKAKĀRIKĀ](#) appear in the last section on treatises.

[Dasheng yi zhang](#). (J. Daijō gishō; K. Taesŭng ũi chang 大乘義章). In Chinese, “Compendium of the Purport of Mahāyāna”; compiled by [JINGYING HUIYUAN](#); a comprehensive dictionary of Buddhist numerical lists that functions as a virtual encyclopedia of [MAHĀYĀNA](#) doctrine. Huiyuan organized 249 matters of doctrine into five sections: teachings, meanings, afflictions, purity, and miscellaneous matters (this last section is no longer extant). Each section is organized numerically, much as are some [ABHIDHARMA](#) treatises. The section on afflictions begins, for instance, with the meaning of the two hindrances and ends with the 84,000 hindrances. These various listings are then explained from a Mahāyāna perspective, with corroboration drawn from quotations from scriptures, treatises, and the sayings of other teachers. The *Dasheng yi zhang* serves as an important source for the study of Chinese Mahāyāna thought as it had developed during the Sui dynasty (589–618).

[dashi](#). (J. daiji; K. taesa 大事). In Chinese, the “great enterprise” or “great matter”; often seen also as the “one great matter” (C. yidashi). The Chinese term *dashi* appears in [KUMĀRAJĪVA](#)’s translation of the [SADDHARMAPUNĀRĪKASŪTRA](#) (“Lotus Sūtra”) regarding the reason why the buddhas appear in the world, but has no precise relation there to a specific Sanskrit term; possible equivalencies might be *mahākṛtya*, “the great action,” or *mahānuśaṃsa*, “the great blessing.” According to the [MAHĀYĀNA](#) tradition, the Buddha taught most of his teachings

as provisional, transitional, and adaptive instructions that catered to the special contingencies of the spiritually less advanced. However, the Buddha’s ultimate concern is the revelation of an ultimate and overriding message, the “great enterprise.” Different Mahāyāna scriptures and schools interpret this ultimate message differently and often purport uniquely to convey that message. For example, according to the *Saddharmapuṇḍarīkasūtra* and the [TIANTAI ZONG](#), the “great enterprise” is the revelation of the one vehicle ([EKAYĀNA](#)), through which all individuals without exception are able to enter the Mahāyāna path and realize the knowledge and vision of perfect buddhahood. According to the [MAHĀPARINIRVĀNASŪTRA](#), it is the eternal, absolute characteristics of the buddha-nature ([FOXING](#); [BUDDHADHĀTU](#)). According to the [SUKHĀVATĪVYŪHASŪTRA](#) and the [PURE LAND](#) schools, it is the revelation of the paradisiacal pure land of [SUKHĀVATĪ](#) and the “original vows” of [AMITĀBHA](#) Buddha. And, finally, in the [CHAN ZONG](#), the “great enterprise” refers to the general process of awakening to one’s own original nature and becoming a buddha ([JIANXING CHENGFO](#)).

’das log. (delok). In Tibetan, literally “returned from beyond”; referring to an individual who dies but then returns to life, describing the horrors and suffering of the lower realms of rebirth ([DURGATI](#)). In Tibetan culture, such individuals are generally women and their testimony to the reality of karmic retribution often becomes a strong exhortation to practice virtue and to adopt such religious activities as reciting the famous six-syllable [MANTRA](#) ([OM MANI PADME HŪM](#)) of [AVALOKITEŚVARA](#).

Da Song seng shi lüe. (J. Dai Sō sōshiryaku; K. Tae Song sŭng sa nyak 大宋僧史略). In Chinese, “Abbreviated History of the [SAMGHA](#), [compiled during] the Great Song [Dynasty]”; compiled by the monk [ZANNING](#), in three rolls. Zanning began to write this institutional history of Buddhism in 978 and finished it in 999. In the first roll, Zanning describes the life of [ŚĀKYAMUNI](#) Buddha and the transmission of Buddhism to China. He also provides a brief history of monasteries, translation projects, and scriptural exegeses, as well as an explanation of the ordination procedure and the practice of repentance. The first roll ends with a history of the [CHAN](#) school. The second roll delineates the organization of the Buddhist monkhood and its recognition by the court in China. The last roll offers a history of Buddhist retreat societies, precept platforms ([SĪMĀ](#)), and émigré monks; in addition, it provides an explanation of the significance of bestowing the purple robe (of a royal master) and receiving

the appellation of “great master” (dashi). As one of the earliest attempts to provide a comprehensive account of the history of Buddhism across Asia, the *Da Song seng shi lue* serves as an invaluable source for the study of premodern Buddhist historiography.

[Dasuttarasutta](#). (S. Daśottarasūtra; C. Shishang jing; J. Jūjōkyō; K. Sipsang kyōng 十上經). In Pāli, “Discourse on Expanding Decades,” or “Tenfold Series”; the thirty-fourth, and last, sutta of the [DĪGHANIKĀYA](#). Several fragments of the Sanskrit recension of the text, the *Daśottarasūtra*, were discovered in [TURFAN](#) and these appear to represent the same [SARVĀSTIVĀDA](#) recension that was translated in Chinese by [AN SHIGAO](#) (*Chang ahan shibaofa jing*) sometime between 148 and 170 CE; this was one of the earliest Chinese renderings of a Buddhist scripture. A [DHARMAGUPTAKA](#) recension also appears as the tenth sūtra in the Chinese translation of the [DĪRGHĀGAMA](#). According to this Pāli version, this scripture was preached by Sāriputta ([ŚĀRIPUTRA](#)) in Campā to a congregation of five hundred monks. For the edification of his listeners, and so that they might more easily be liberated and attain nibbāna ([NIRVĀNA](#)), Sāriputta presents a systematic outline of the dhamma ([DHARMA](#)), using a schema of numerical classification that organizes the doctrine into groups ranging from a single factor (e.g., “the one thing to be developed,” viz., mindfulness of the body) up to groups of ten (e.g., the ten wholesome ways of action). This sūta thus provides one of the first canonical recensions of the “matrices” (P. mātikā; S. [MĀTRKĀ](#)) that are thought to mark the incipency of abhidhamma (S. [ABHIDHARMA](#)) exegesis, and its exegetical style is closely connected to that used in the [SAṄĠĪTISUTTA](#) (S. *Samgītisūtra*); several of its exegetical categories are also reproduced in the [SAMĠĪTIPARYĀYA](#) of the Sarvāstivāda abhidharma.

[Da Tang neidian lu](#). (J. Dai Tō naitenroku; K. Tae Tang naejōn nok 大唐內典錄). In Chinese, “The Great Tang Record of Inner [viz., Buddhist] Classics”; a catalogue of the Buddhist canon compiled by the Chinese monk [DAOXUAN](#) (596–667). While preparing an inventory of scriptures for the newly established library at the monastery of [XIMINGSI](#), Daoxuan was unsatisfied with the quality of existing scriptural catalogues ([JINGLU](#)) and decided to compile his own. Daoxuan’s catalogue draws heavily on earlier catalogues, such as the [LIDAI SANBAO JI](#), [CHU SANZANG JIJ](#), *Fajing lu*, and *Renshou lu*. The *Da Tang neidian lu* consists of ten major sections. The first section is the comprehensive catalogue of scriptures, which more or less corresponds to the list found in the *Lidai*

sanbao ji. The second section, a taxonomy of scriptures, also largely corresponds to the *Renshou lu*. The third section lists the actual contents of Ximingsi's library and thus serves as an important source for studying the history of this monastery and its scriptural collection. The fourth section provides a list of texts appropriate for recitation. The fifth section deals with texts that contain mistakes and discusses their significance. The sixth section lists texts composed in China. The seventh and eighth sections cover miscellaneous texts and [APOCRYPHA](#) (162 in total). The ninth section lists previous scriptural catalogues of the past, and the tenth section discusses the virtues of reciting scriptures.

[Da Tang Xiyu ji](#). (J. Dai Tō Saiiki ki; K. Tae Tang Sōyōk ki 大唐西域記). In Chinese, “The Great Tang Record of [Travels to] the Western Regions”; a travelogue of a pilgrimage to India by the Chinese translator and exegete [XUANZANG](#) (600/602–664) written in 646 at the request of the Tang emperor Taizong and edited by the monk Bianji (d. 652). Xuanzang was already a noted Buddhist scholiast in China when he decided to make the dangerous trek from China, through the Central Asian oases, to the Buddhist homeland of India. Xuanzang was especially interested in gaining access to the full range of texts associated with the [YOGĀCĀRA](#) school, only a few of which were then currently available in Chinese translation. He left on his journey in 627 and eventually spent fourteen years in India (629–643), where he traveled among many of the Buddhist sacred sites, collected manuscripts of Buddhist materials as yet untranslated into Chinese, and studied Sanskrit texts with various eminent teachers, most notably [DHARMAPĀLA](#)'s disciple [ŚĪLABHADRA](#), who taught at the Buddhist university of [NĀLANDĀ](#). The *Da Tang xiyu ji* provides a comprehensive overview of the different countries that Xuanzang visited during his travels in India and Central Asia, offering detailed descriptions of the geography, climate, customs, languages, and religious practices of these various countries. Xuanzang paid special attention to the different ways in which the teachings of Buddhism were cultivated in different areas of the Western Regions. The *Da Tang xiyu ji* thus serves as an indispensable tool in the study of the geography and Buddhist history of these regions. Xuanzang's travelogue was later fictionalized in the narrative *Xiyou ji* (“Journey to the West”), written c. 1592 during the Ming dynasty and attributed to Wu Cheng'en. The *Xiyou ji* is one of the greatest of Chinese vernacular novels and is deservedly famous for its fanciful accounts of the exploits of the monk-pilgrim, here called Sanzang ([TREPITAKA](#)), and especially of his protector, Monkey. See also [CHENG WEISHILUN](#).

[Da Tang Xiyu qiufa gaoseng zhuan.](#) (J. Dai Tō Saiiki guhō kōsōden; K. Tae Tang Sōyōk kubōp kosūng chōn 大唐西域求法高僧傳). In Chinese, “The Great Tang Biographies of Eminent Monks who Sought the Dharma in the Western Regions”; compiled by the Chinese pilgrim and translator [YIJING](#) (635–713). Yijing’s record, modeled after other texts in the “eminent monks” ([GAOSEN](#)[G ZHUAN](#)) genre, provides biographies of fifty-six contemporary and near-contemporary East Asian monks who made the arduous journey from China to the Buddhist homeland of India. Forty-nine of the pilgrims discussed are Chinese and seven are identified as Korean. Yijing’s account of his own pilgrimage to Sumatra and India appears independently in his [NANHAI JIGUI NEIFA ZHUAN](#).

[Dāthāvamsa.](#) In Pāli, “History of the Tooth Relic”; a Pāli chronicle in verse, attributed to Dhammakitti, that records the history of the Buddha’s [TOOTH RELIC](#) before its c. fourth century CE arrival in Sri Lanka; also known as the *Dantadhātuvamsa*. The work begins with an account of the previous buddha Dīpaṅkara (S. [DIPAMKARA](#)), followed by the story of Gotama (S. [GAUTAMA](#)) Buddha, his visit to Sri Lanka, his decease (P. parinibbāna; S. [PARINIRVĀNA](#)), and the distribution of his relics (P. saṅgā; S. [SĀRĪRA](#)). The history of the Tooth Relic at the city of Dantapura in the Indian kingdom of Kalinga follows. Finally, there is a detailed accounting of the circumstances that culminated in the relic’s arrival at Sri Lanka during the reign of Sirimeghavanna in the fourth century CE and the building of a shrine to house it.

[Datong heshang.](#) (大通和尚). See [SHENXIU](#).

[David-Néel, Alexandra.](#) (1868–1969). A famous traveler to Tibet. Born Alexandra David to a bourgeois family in Paris, she was educated in a Calvinist convent before studying Indian and Chinese philosophy at the Sorbonne and the Collège de France. In 1888, she traveled to London, where she became interested in Theosophy. In 1891, she journeyed to Ceylon and India (where she studied Vedānta) and traveled as far as Sikkim over eighteen months. Upon returning to France, she began a career as a singer and eventually was offered the position of female lead in the Hanoi Opera. Some years later, in Tunis, she met and married a railroad engineer, Philippe Néel, who insisted that she retire from the stage. She agreed to do so if he would finance a one-year trip to India for her. He ended up not seeing his wife again for another fourteen years. David-Néel became friends with [THOMAS](#) and [CAROLINE RHYS DAVIDS](#) in London,

leading scholars of [THERAVĀDA](#) Buddhism, and corresponded with the [ZEN](#) scholar [DAISETZ TEITARO SUZUKI](#), before publishing her first book on Buddhism in 1911, entitled, *Le modernisme bouddhiste et le bouddhisme du Bouddha*. She continued to Sikkim, where she met the thirteenth [DALAI LAMA](#) in Darjeeling in 1912, while he was briefly in residence there after fleeing a Chinese invasion of Tibet. David-Néel spent two years in retreat receiving instructions from a [RNYING MA](#) hermit-lama. In 1916, the British expelled her from Sikkim, so she traveled to Japan, where she was the guest of D. T. Suzuki. From there she went to China, traveling west in the company of a young Sikkimese monk named Yongden. Disguised as a pilgrim, she arrived in [LHA SA](#) in 1924, presumably the first European woman to reach the Tibetan capital. She returned to France as a celebrity the following year. She published the best-selling book *My Journey to Lhasa*, followed by a succession of books based on her travels in Tibet and her study and practice of Tibetan Buddhism. She built a home in Digne, which she named Samten Dzong, “Fortress of Concentration.” David-Néel made one final trip to Asia as World War II began, but spent the rest of her life writing in Digne, where she died at the age of one hundred.

[Daxiu Zhengnian](#). (J. Daikyū Shōnen; K. Taehyu Chōngnyōm 大休正念) (1215–1289). Chinese [CHAN](#) master in the [LINJI ZONG](#). A native of Wenzhou in present-day Zhejiang province, Daxiu began his training under the [CAODONG](#) master Donggu Miaoguang (d. 1253) of Linyinsi, and later became the disciple of Shiqi Xinyue (d. 1254). In 1269, Daxiu left for Japan, where he received the patronage of the powerful regent Hōjō Tokimune (1251–1284). In Kamakura, Daxiu established the monastery Jōchiji, which came to be ranked fourth in the Kamakura [GOZAN](#) system. Daxiu also served as abbot of the monasteries [ZENKŌJI](#), Juhukuji, and [KENCHŌJI](#). In 1288, Daxiu became the abbot of [ENGAKUJI](#), but passed away the next year in 1289. He was given the posthumous title Zen Master Butsugen (“Source of the Buddhas”). His teachings can be found in the *Daikyū oshō goroku*.

[Dayang Jingxuan](#). (J. Taiyō Kyōgen; K. Taeyang Kyōnghyōn 大陽警玄) (942–1027). Chinese [CHAN](#) master in the [CAODONG ZONG](#). A native of Jiangxia in present-day Hubei province, Dayang was ordained at the monastery of Chongxiaosi in Jinleng by his uncle, who had also become a monk. After traveling throughout China, Dayang visited the Chan master Liangshan Yuanguan (d.u.) in Dingzhou prefecture (present-day Sichuan province) and

became his disciple. Later, he became a student of the Caodong monk Huijian (d.u.) and took over his lecture seat on Mt. Dayang, which became his toponym. Before his death, Dayang entrusted his portrait ([DINGXIANG](#)), leather shoes, and patched robe to his friend Fushan Fayuan (991–1067) of the [LINJI ZONG](#) in hopes of continuing his Caodong lineage and the incumbent annual memorial services to the patriarchs in his line. Fushan in turn transferred these items to his student [TOZI YIQING](#), who embraced Dayang’s line and became a Caodong lineage holder. Dayang was bestowed the posthumous title Great Master Ming’an (“Illuminating Peace”). His teachings are recorded in the *Dayang Ming’an dashi shibaban miaoyu*.

[Dayan ta](#). (大雁塔). In Chinese, “Big Wild Goose Pagoda.” See [DACI’ENSI](#).

[dazangjing](#). (J. daizōkyō; K. taejanggyōng 大藏經). In Chinese, “scriptures of the great repository”; the term the Chinese settled upon to describe their Buddhist canon, supplanting the Indian term [TRIPITAKA](#) (“three baskets”). The myriad texts of different Indian and Central Asian Buddhist schools were transmitted to China over a millennium, from about the second through the twelfth centuries CE, where they were translated with alacrity into Chinese. Chinese Buddhist texts therefore came to include not only the tripiṭakas of several independent schools of Indian Buddhism, but also different recensions of various [MAHĀYĀNA](#) scriptures and Buddhist [TANTRAS](#), sometimes in multiple translations. As the East Asian tradition developed its own scholarly traditions, indigenous writings by native East Asian authors, composed in literary Chinese, also came to be included in the canon. These materials included scriptural commentaries, doctrinal treatises, biographical and hagiographical collections, edited transcriptions of oral lectures, Chinese–Sanskrit dictionaries, scriptural catalogues ([JINGLU](#)), and so on. Because the scope of the Buddhist canon in China was therefore substantially broader than the traditional tripartite structure of an Indian tripiṭaka, the Chinese coined alternative terms to refer to their collection of Buddhist materials, including “all the books” (yiqie jing), until eventually settling on the term dazangjing. The term dazangjing seems to derive from a Northern Song-dynasty term for an officially commissioned “great library” (dazang) that was intended to serve as a repository for “books” (jing) sanctioned by the court. Buddhist monasteries were the first places outside the imperial palaces that such officially sanctioned libraries were established. These collections of the official canonical books of Chinese Buddhism were arranged

not by the [VINAYA](#), [SŪTRA](#), [ABHIDHARMA](#), and [ŚĀSTRA](#) categories of India, but in shelf lists that were more beholden to the categorizations used in court libraries. The earliest complete Buddhist canons in China date from the fifth century; by the eighth century, these manuscript collections included over one thousand individual texts in more than five thousand rolls. By the tenth century, woodblock printing techniques had become sophisticated enough that complete printed Buddhist canons began to be published, first during the Song dynasty, and thence throughout East Asia. The second xylographic canon of the Korean Koryŏ dynasty, the [KORYŎ TAEJANGGYŎNG](#), was especially renowned for its scholarly accuracy; it included some 1,514 texts, in 6,815 rolls, carved on 81,258 individual woodblocks, which are still housed today in the scriptural repository at the monastery of [HAEINSA](#). The second Koryŏ canon is arranged with pride of place given to texts from the Mahāyāna tradition:

1. Major Mahāyāna scriptures (K 1–548), beginning with the [PRAJÑĀPĀRAMITĀ](#), followed by the [MAHĀRATNAKŪTASŪTRA](#), and continuing through all the major Mahāyāna sūtras and sūtra collections, from the [AVATAMSAKASŪTRA](#), to the [MAHĀPARINIRVĀNASŪTRA](#), [SAMDHINIRMOCANASŪTRA](#), and [LĀNKĀVATĀRASŪTRA](#)
2. Mahāyāna śāstras and scriptural commentaries, beginning with the [DAZHIDU LUN](#) (**Mahāprajñāpāramitāśāstra*) (K 549–646)
3. [ĀGAMA](#) collections and [HĪNAYĀNA](#) sūtras (K 647–888)
4. Vinaya materials (K 889–937)
5. Abhidharma texts (K 938–977)
6. [AVADĀNA](#) and [JĀTAKA](#) tales and miscellaneous materials (K 978–1034)
7. Biographies of individual monks, starting with [AŚVAGHOSA](#), [NĀGĀRJUNA](#), *etc.* (K 1035–1049)
8. Rosters of numerical lists and scriptural catalogues (K 1050–1064)
9. Travelogues and “Biographies of Eminent Monks” anthologies (K 1065–1086)
10. Miscellaneous sūtras, [DHĀRANĪ](#) scriptures and dhāraṇī anthologies (K

1087–1242)

11. Other miscellaneous sūtras (K 1243–1496)

12. References, Chan anthologies, indigenous Korean works (K 1497–1514)

The second Koryŏ canon was used as the basis of the modern Japanese [TAISHŌ SHINSHŪ DAIZŌKYŌ](#) (“New Edition of the Buddhist Canon Compiled during the Taishō Reign Era”), edited by [TAKAKUSU JUNJIRO](#) and Watanabe Kaikyoku and published using movable-type printing between 1924 and 1935, which has become the standard reference source for East Asian Buddhist materials. The *Taishō* canon includes 2,920 texts in eighty-five volumes (each volume is about one thousand pages in length), along with twelve volumes devoted to iconography, and three volumes of bibliography and scriptural catalogues. The *Taishō*’s arrangement is constructed following modern scholarly views regarding the historical development of the Buddhist scriptural tradition, with mainstream Buddhist scriptures opening the canon, followed by Indian Mahāyāna materials, indigenous Chinese writings, and Japanese writings:

1. [ĀGAMA](#) (vols. 1–2, nos. 1–151)
2. [AVADĀNA](#) (vols. 3–4, nos. 152–219)
3. [PRAJÑĀPĀRAMITĀ](#) (vols. 5–8, nos. 220–261)
4. [SADDHARMAPUNḌARĪKA](#) (vol. 9, nos. 262–277)
5. [AVATAMSAKA/GANDAVYŪHA](#) (vols. 9–10, nos. 278–309)
6. [RATNAKŪTASŪTRA](#) (vols. 11–12, nos. 310–373)
7. [MAHĀPARINIRVĀNA](#) (vols. 12, nos. 374–396)
8. MAHĀSAMNIPĀTA (vol. 13, nos. 397–424)
9. Miscellaneous sūtras (vols. 14–17, nos. 425–847), e.g.,
[YOGĀCĀRABHŪMIŚĀSTRA](#) (nos. 602–620)

[RATNAMEGHASŪTRA](#) (nos. 658–660)

[SUVARNAPRABHĀSOTTAMASŪTRA](#) (nos. 663–665)

[TATHĀGATAGARBHASŪTRA](#) (nos. 666–667)

[LAṆKĀVATĀRASŪTRA](#) (nos. 670–672)

[SAMDHINIRMOCANASŪTRA](#) (nos. 675–679)

[BUDDHABHŪMISŪTRA](#) (no. 680)

[GHANAVYŪHA](#) (nos. 681–682)

10. Esoteric Buddhism (vols. 18–21, nos. 848–1420), e.g.,

[SARVATATHĀGATATATTVASAMGRAHA](#) (vol. 18, no. 866)

[MAHĀMĀYŪRĪ](#) (vol. 19, no. 982–988)

11. [VINAYA](#) (vols. 22–24, nos. 1421–1506), e.g.:

[MAHĪŚĀSAKA](#) (nos. 1421–1424)

[MAHĀSĀMGHIKA](#) (nos. 1425–1427)

[DHARMAGUPTAKA](#) (nos. 1428–1434)

[SARVĀSTIVĀDA](#) (nos. 1435–1441)

[MŪLASARVĀSTIVĀDA](#) (nos. 1442–1459)

Mahāyāna-Bodhisattva (nos. 1487–1504)

12. Commentaries to Sūtras (vols. 24–26, nos. 1505–1535), e.g.,

Āgamas (nos. 1505–1508)

Mahāyāna sūtras (nos. 1509–1535)

13. [ABHIDHARMA](#) (vols. 26–29, nos. 1536–1563), e.g.:
[JÑĀNAPRASTHĀNA](#) (nos. 1543–1544)
[MAHĀVIBHĀSĀ](#) (nos. 1545)
Vibhāṣā (nos. 1546–1547)
[ABHIDHARMAKOŚABHĀSYA](#) (nos. 1558–1559)
14. [MADHYAMAKA](#) (vol. 30, nos. 1564–1578), e.g.,
[MŪLAMADHYAMAKAKĀRIKĀ](#) (no. 1564)
[ŚATAŚĀSTRA](#) (no. 1569)
15. [YOGĀCĀRA](#) (vols. 30–31, nos. 1579–1627), e.g.,
[YOGĀCĀRABHŪMIŚĀSTRA](#) (no. 1579)
*Vijñaptimātratāsiddhiśāstra ([CHENG WEISHI LUN](#); no. 1585)
[MAHĀYĀNASAMGRAHA](#) (nos. 1592–1598)
16. Treatises (vol. 32, nos. 1628–1692), e.g.,
[SŪTRASAMUCCAYA](#) (no. 1635)
[ŚIKSĀSAMUCCAYA](#) (no. 1636)
[DASHENG QIXIN LUN](#) (nos. 1667–1668)
17. Chinese sūtra commentaries (vols. 33–39)
18. Chinese vinaya commentaries (vols. 40)
19. Chinese śāstra commentaries (vols. 40–44)
20. Chinese sectarian writings (vols. 44–48), e.g.,

[HUAYAN](#) school (vol. 45, nos. 1866–1890)

[TIANTAI](#) school (vol. 46, nos. 1911–1950)

[PURE LAND](#) school (vol. 47, nos. 1957–1984)

[CHAN](#) school (vols. 47–48, nos. 1985–2025)

21. Histories (vols. 49–52, nos. 2026–2120), e.g.,

[FOZU TONGJI](#) (vol. 49, no. 2035)

[GAOSEN ZHUAN](#) collections (vols. 50–51, nos. 2059–2066)

[GUANG HONGMINGJI](#) (vol. 52, no. 2103)

22. Encyclopedias and references (vols. 53–54, nos. 2121–2136), e.g.,

[FAYUAN ZHULIN](#) (vol. 53, no. 2122)

[YIQIEJING YINYI](#) (vol. 54, no. 2128)

23. Non-Buddhist schools (vol. 54, nos. 2137–2144), e.g.,

Samkhyakārikā (vol. 54, no. 2137)

24. Scriptural Catalogues (vol. 55, nos. 2145–2184), e.g.,

[KAIYUAN SHIJIAO LU](#) (vol. 55, no. 2152)

25. Japanese Buddhist writings (vols. 56–84)

26. Buddhist apocrypha and fragments (vol. 85)

27. Iconography (vols. 86–92)

28. Bibliography and catalogues (vols. 93–100)

Even though the *Taishō* is often considered to be the definitive East Asian canon, it does not offer truly critical editions of its texts. The second Koryō

canon's reputation for accuracy was so strong that the Japanese editors adopted it wholesale as the *textus receptus* for the modern *Taishō* edition of the canon, i.e., where there was a Koryō edition available for a text, the *Taishō* editors simply copied it verbatim, listing in footnotes alternate readings found in other canons, but not attempting to evaluate the accuracy of those readings or to establish a critical edition. Hence, to a large extent, the *Taishō* edition of the *dazangjing* is a modern typeset edition of the xylographical Koryō canon, with an updated arrangement of its contents based on modern historiographical criteria.

[Dazhidu lun](#). (J. Daichidoron; K. Taejido non 大智度論). In Chinese, “Treatise on the Great Perfection of Wisdom”; an important Chinese text that is regarded as the translation of a Sanskrit work whose title has been reconstructed as **Māhāprajñāpāramitāsāstra* or **Mahāprajñāpāramitopedesa*. The work is attributed to the [MADHYAMAKA](#) exegete [NĀGĀRJUNA](#), but no Sanskrit manuscripts or Tibetan translations are known and no references to the text in Indian or Tibetan sources have been identified. The work was translated into Chinese by the [KUCHA](#) monk [KUMĀRAJĪVA](#) (344–413) between 402 and 406; it was not translated into Chinese again. Some scholars speculate that the work was composed by an unknown Central Asian monk of the [SARVĀSTIVĀDA](#) school who had “converted” to [MADHYAMAKA](#), perhaps even Kumārajīva himself. The complete text was claimed to have been one hundred thousand ślokas or one thousand rolls (zhan) in length, but the extant text is a mere one hundred rolls. It is divided into two major sections: the first is Kumārajīva's full translation of the first fifty-two chapters of the text; the second is his selective translations from the next eighty-nine chapters of the text. The work is a commentary on the [PAÑCAVIṂŚATISĀHASRIKĀPRAJÑĀPĀRAMITĀSŪTRA](#), and is veritable compendium of Buddhist doctrine, replete with quotations from a wide range of Indian texts. Throughout the translation, there appear frequent and often substantial interlinear glosses and interpolations, apparently provided by Kumārajīva himself and targeting his Chinese readership; it is the presence of such interpolations that has raised questions about the text's Indian provenance. In the first thirty-four rolls, the *Dazhidu lun* provides a detailed explanation of the basic concepts, phrases, places, and figures that appear in the *Pañcaviṁśatisāhasrikāprajñāpāramitā* (e.g., [BHAGAVAT](#), [EVAM MAYĀ ŚRUTAM](#), [RĀJAGRHA](#), buddha, [BODHISATTVA](#), [ŚRĀVAKA](#), [ŚĀRIPUTRA](#), [ŚŪNYATĀ](#), [NIRVĀNA](#), the six [PĀRAMITĀ](#), and ten [BALA](#)). The scope of the commentary is extremely broad,

covering everything from doctrine, legends, and rituals to history and geography. The overall concern of the *Dazhidu lun* seems to have been the elucidation of the concept of buddhahood, the bodhisattva career, the [MAHĀYĀNA](#) path (as opposed to that of the [HĪNAYĀNA](#)), [PRAJÑĀ](#), and meditation. The *Dazhidu lun* thus served as an authoritative source for the study of Mahāyāna in China and was favored by many influential writers such as [SENGZHAO](#), [TIANAI ZHIYI](#), [FAZANG](#), [TANLUAN](#), and [SHANDAO](#). Since the time of the Chinese scriptural catalogue [KAIYUAN SHIJIAO LU](#) (730), the *Dazhidu lun*, has headed the roster of [ŚĀSTRA](#) materials collected in the Chinese Buddhist canon ([DAZANGJING](#); see also [KORYŎ TAEJANGGYŎNG](#)); this placement is made because it is a principal commentary to the [PRAJÑĀPĀRAMITĀ](#) sūtras that open the [SŪTRA](#) section of the canon. Between 1944 and 1980, the Belgian scholar [ÉTIENNE LAMOTTE](#) published an annotated French translation of the entire first section and chapter 20 of the second section as *Le Traité de la Grande Vertu de Sagesse*, in five volumes.

[Dazhu Huihai](#). (J. Daiju Ekai; K. Taeju Hyehae 大珠慧海) (d.u.). Chinese [CHAN](#) master of the Tang dynasty. Dazhu was a native of Jianzhou in present-day Fujian province, who was tonsured by a certain Daozhi at the monastery Dayunsi in Yuezhou (present-day Zhejiang province). He later studied under the eminent Chan master [MAZU DAOYI](#) for six years and inherited his [HONGZHOU](#) lineage. Dazhu then returned to Yuezhou where he devoted himself to teaching. Dazhu is most famous for his work the [DUNWU RUDAO YAOMEN LUN](#), one of the definitive accounts in the [CHAN ZONG](#) of the notion of “sudden awakening” ([DUNWU](#)).

[Dazu shike](#). (大足石刻). In Chinese, “Dazu rock carvings”; a series of Chinese religious sculptures and carvings located on the steep hillsides of Dazu County, in Sichuan province near the city of Chongqing. The Dazu grottoes are considered one of the four greatest troves of rock sculptures in China, along with the [LONGMEN](#) grottoes in [LUOYANG](#), the [MOGAO](#) Caves in [DUNHUANG](#), and the [YUNGANG](#) grottoes in Shanxi province. Listed by UNESCO as a World Heritage Site in 1999, the Dazu rock carvings consist of seventy-five sites, all under state protection, which contain some fifty thousand statues, along with epigraphs and inscriptions numbering over one hundred thousand inscribed Sinographs. There are five sites that are particularly large and well preserved: Baodingshan (Treasure Peak Mountain), Beishan (North Mountain), Nanshan (South Mountain), Shizhuanshan (Rock-Carving Mountain), and Shimenshan (Stone-

Gate Mountain). Among the five major sites, the grottoes on Baodingshan and Nanshan are the largest in scale, the richest in content, and the most refined in artistic skill, although other sites are also noteworthy for their many statues integrating Buddhism, Confucianism, and Daoism. The earliest carvings of the Dazu grottoes were begun in the early seventh century during the Tang dynasty, but the main creative period began in the late ninth century, when Wei Junjing, the prefect of Changzhou, initiated the carvings on Beishan. Even after the collapse of the Tang dynasty, his example continued to be emulated by local gentry, government officials, Buddhist monks and nuns, and ordinary people. From the late Tang dynasty through the reign of the Song Emperor Gaozong (r. 1127–1131), some ten thousand sculptures of Buddhist figures were carved at the site in varied styles. The most famous carving on Beishan is a Song-dynasty statue of [GUANYIN \(AVALOKITEŚVARA\)](#). In the twelfth century, during the Song dynasty, a Buddhist monk named Zhao Zhifeng began to work on the sculptures and carvings on Baodingshan, dedicating seventy years of his life to the project. He produced some ten thousand Buddhist statues, as well as many carvings depicting scenes from daily life that bear inscriptions giving religious rules of behavior, teaching people how to engage in correct moral action. Along with [EMEISHAN](#), Baodingshan became one of the most sacred Buddhist sites in Sichuan. Although the Dazu grottoes primarily contain Buddhist statues, they also include Daoist, Confucian, and historical figures, as well as many valuable inscriptions describing people's daily lives, which make the Dazu grottoes unique. The Yungang grottoes, created during the fourth and fifth centuries, represent an early stage of Chinese cave art and were greatly influenced by Indian culture. The Longmen grottoes, begun in the fifth century, represent the middle period of cave art, blending Indian and Chinese characteristics. The Dazu grottoes represent the highest level of grotto art in China and demonstrate breakthroughs in both carving technique and subject matter. They not only provide outstanding evidence of the harmonious synthesis of Buddhism, Daoism, and Confucianism in Chinese local religious practice but also mark the completion of the localization process of China's grotto art, reflecting great changes and developments in China's folk religion and rock carvings. The Dazu grottoes are thus remarkable for their high aesthetic quality, their rich diversity of style and subject matter (including both secular and religious topics), and the light that they shed on everyday life in China.

[Dbang phyug rdo rje](#). (Wangchuk Dorje) (1556–1603). A revered Tibetan

Buddhist master, recognized as the ninth [KARMA PA](#). A prolific author, Dbang phyug rdo rje wrote three important treatises on [MAHĀMUDRĀ](#) that remain central [BKA' BRGYUD](#) texts: [PHYAG CHEN NGAS DON RGYA MTSHO](#) (“Mahāmudrā: Ocean of Definitive Meaning”), [PHYAG CHEN MA RIG MUN GSAL](#) (“Mahāmudrā: Eliminating the Darkness of Ignorance”), and [PHYAG CHEN CHOS SKU MDZUB TSHUGS](#) (“Mahāmudrā: Pointing Out the [DHARMAKĀYA](#)”). He traveled throughout Mongolia and Bhutan and established several monasteries in Sikkim. One of these, Rum theg monastery located near Gangtok, became the Karma pa’s main seat when the sixteenth Karma pa [RANG 'BYUNG RIG PA'I RDO RJE](#) (Rangjung Rikpe Dorje) fled into exile in 1959.

[dbu ma chen po](#). (uma chenpo) [alt. dbu ma pa chen po]. In Tibetan, “great [MADHYAMAKA](#)”; a term central to the “self empty, other empty” ([RANG STONG GZHAN STONG](#)) debate in Tibetan Buddhism, on the question of which Indian masters are the true representatives of the Madhyamaka. According to the [DGE LUGS](#) view, among the three turnings of the wheel of the dharma as described in the [SAMDHINIRMOCANASŪTRA](#), the second wheel, generally identified with the view of emptiness as set forth in the [PRAJÑĀPĀRAMITĀ](#) sūtras and propounded by the Madhyamaka, is definitive ([NĪTĀRTHA](#)), while the third wheel, generally identified with [YOGĀCĀRA](#) and [TATHĀGATHAGARBHA](#) teachings, is provisional ([NEYĀRTHA](#)). Other sects, most notably the [JO NANG PA](#), as well as certain [BKA' BRGYUD](#) and [RNYING MA](#) thinkers, especially of the so-called [RIS MED](#) movement, disagreed, asserting that the third wheel is the definitive teaching while the second wheel is provisional. (Both agree that the first wheel, setting forth the [FOUR NOBLE TRUTHS](#) to [ŚRĀVAKAS](#), is provisional.) For the Dge lugs pas, the highest of all Buddhist doctrines is that all phenomena in the universe are empty of an intrinsic nature ([SVABHĀVA](#)); emptiness is the lack of any substantial existence. The Dge lugs pas are therefore proponents of “self-emptiness” (rang stong), arguing that that each object of experience is devoid of intrinsic nature; the unenlightened wrongly believe that such a nature is intrinsic to the object itself. In reality, everything, from physical forms to the omniscient mind of a buddha, is equally empty, and this emptiness is a nonaffirming negation ([PRASAJYAPRATISEDHA](#)), an absence with nothing else implied in its place. Furthermore, this emptiness of intrinsic nature is the ultimate truth ([PARAMĀRTHASATYA](#)). The Jo nang pa’s look to the third wheel, especially to those statements that describe the nonduality of subject and object to be the consummate nature ([PARINISPANNA](#)) and the understanding of that nonduality as

the highest wisdom, described as eternal, self-arisen, and truly established. This wisdom exists autonomously and is thus not empty in the way that emptiness is understood by the Dge lugs. Instead, this wisdom consciousness is empty in the sense that it is devoid of all defilements and conventional factors, which are extraneous to its true nature. Hence, the Jo nang pas speak of “other emptiness” (gzhan stong) the absence of extrinsic and extraneous qualities. For the Dge lugs pas, the supreme interpreter of the doctrine of emptiness (as they understand it) is [CANDRAKĪRTI](#). The Jo nang pas do not dispute the Dge lugs reading of Candrakīrti but they deny Candrakīrti the rank of premier expositor of [NĀGĀRJUNA](#)’s thought. For them, Candrakīrti teaches an emptiness that is a mere negation of intrinsic existence, which they equate with nihilism. They also do not deny that such an exposition is found in Nāgārjuna’s philosophical treatises ([YUKTIKĀYA](#)). However, they claim that those works do not represent Nāgārjuna’s final view, which is expressed instead in his devotional corpus ([STAVAKĀYA](#)), notably the [DHARMADHĀTUSTAVA](#), and, according to some, in the works of [VASUBANDHU](#), the author of two defenses of the prajñāpāramitā sūtras. Those who would deny the ultimate existence of wisdom, such as Candrakīrti, are classed as “one-sided Madhyamakas” (phyogs gcig pa’i dbu ma pa) as opposed to the great Madhyamakas among whom they would include the Nāgārjuna of the hymns and [ĀRYADEVĀ](#) as well as thinkers whom the Dge lugs classify as Yogācāra or [SVĀTANTRIKA MADHYAMAKA](#): [ASAṄGA](#), Vasubandhu, [MAITREYANĀTHA](#), and [ŚĀNTARAKSITA](#).

[Deb ther dmar po](#). (Depter Marpo). In Tibetan, lit. “The Red Annals”; an influential Tibetan religious and political history written by ’Tshal pa Kun dga’ rdo rje (1309–1364). The work shows evidence of Mongolian influence, likely due to the strong Tibeto-Mongolian ties at the time. The title word deb ther is likely a Mongolian loan word and, although it became a subgenre in Tibetan literature, this appears to be the first instance of its usage. The text is also known as the *Hu lan deb ther*, where hu lan derives from the Mongolian word for “red.”

[Deb ther dmar po gsar ma](#). (Depter Marpo Sarma). In Tibetan, lit. “The New Red Annals”; a Tibetan historical work written by the famed [DGE LUGS](#) scholar Paṅ chen Bsod nams grags pa (1478–1554). The text was intended as a supplement to the [DEB THER DMAR PO](#) (“Red Annals”) written almost a century previously, and covers the political and religious history of Tibet, with information about India, China, Mongolia, and the fabled land of [ŚAMBHALA](#).

[Deb ther sngon po](#). (Depter Ngonpo). In Tibetan, lit. “The Blue Annals”; a Tibetan historical work written by ’Gos lo tsā ba Gzhon nu dpal (1392–1481) between 1476 and 1478. It provides a broad history of Buddhism in Tibet, divided into sections covering various periods and transmission lineages. It is especially valued for its detailed history of the transmission of specific texts and practices from India to Tibet. It was one of the first comprehensive Tibetan works to be translated into English, by the Russian scholar [GEORGE ROERICH](#) and the Tibetan savant [DGE ’DUN CHOS ’PHEL](#).

[dehadāna](#). (T. lus kyi sbyin pa; C. sheshen; J. shashin; K. sasin 捨身). In Sanskrit, “gift of the body,” a form of charity ([DĀNA](#)) in which one gives away one’s body or a part of one’s body. Stories of such gifts abound in both the [JĀTAKA](#) and [AVADĀNA](#) literature, where a bodhisattva will give away a body part (including the head) or sacrifice his life as a way of easing others’ suffering. Among the more famous stories are that of King [ŚIBI](#), who cuts off some of his own flesh to ransom the life of a dove from a hawk, Prince Mahāsattva who commits suicide by jumping off a cliff in order that his corpse can feed a starving tigress and her cubs, and King Candraprabha who gives his head to an evil brāhmaṇa. Such gifts are often counted among the bodhisattva’s fulfillment of the perfection of giving ([DĀNAPĀRAMITĀ](#)), but it is sometimes said that a bodhisattva who has not yet understood emptiness ([ŚŪNYATĀ](#)) should not make such a gift. The person who asks for the body part is often the god [ŚAKRA](#) in disguise, and the body part that was offered is then often restored upon making an “asseveration of truth” ([SATYAVACANA](#)). See also [SHESHEN](#).

[Demiéville, Paul](#). (1894–1979). Distinguished French Buddhologist and Sinologist. He was born in Lausanne, Switzerland, and educated in Bern, Munich, and London. He began his study of Chinese at King’s College, London, in 1915, continuing in Paris, studying Chinese with Edouard Chavannes and Sanskrit with [SYLVAIN LÉVI](#). In 1919, he became a member of the *École française d’Extrême-Orient*, spending 1920–24 in Hanoi, 1924–26 teaching Sanskrit and philosophy at Amoy University in Xiamen, China, and 1926–30 in Tokyo, where he served as editor-in-chief of the Buddhist dictionary *HŌBŌGIRIN*, which had been founded by Lévi and [TAKAKUSU JUNJIRŌ](#). Returning to Paris, Demiéville held positions at the *École des langues orientales vivantes* and the *École pratique des hautes études*, before being appointed to succeed Henri Maspero in the chair of Chinese language and literature at the *Collège de France*, where he spent the remainder of his academic career. The majority of his publications, on a remarkable range of Buddhological and Sinological topics, were published as articles (many quite substantial) in journals such as *Bulletin de l’École française d’Extrême-Orient*, *T’oung Pao* (where he served as editor), and in *Hōbōgirin*. Many of these later writings were gathered into two collections, *Choix d’études sinologiques* and *Choix d’études bouddhiques*. Demiéville published a detailed study of the Chinese version of the [MILINDAPAÑHA](#) and worked extensively on the [DUNHUANG](#) manuscripts. Two of his monographs are particularly well known, *Entretiens de Lin-tsi* (1972) on the Chan master [LINJI](#) and *Le Concile de Lhasa* (1952), still regarded as the definitive study on the [BSAM YAS DEBATE](#).

[Dengyō Daishi](#). (J) (傳教大師). See [SAICHŌ](#).

[Denkōroku](#). (傳光錄). In Japanese, “Record of the Transmission of the Light”; a text also known by its full title, *Keizan oshō denkōroku* (“A Record of the Transmission of the Light by Master Keizan”). The anthology is attributed by Sōtō tradition to [KEIZAN JŌKIN](#), but was most probably composed posthumously by his disciples. The *Denkōroku* is a collection of pithy stories and anecdotes concerning fifty-two teachers recognized by the Japanese [SŌTOSHŪ](#) as the patriarchs of the school, accompanied by the author’s own explanatory

commentaries and concluding verses. Each chapter includes a short opening case (honsoku), which describes the enlightenment experience of the teacher; a longer section (called a *kien*) offering a short biography and history of the teacher, including some of his representative teachings and exchanges with students and other teachers; a prose commentary (teishō; C. [TICHANG](#)) by the author; and a concluding appreciatory verse (*juko*). The teachers discussed in the text include twenty-seven Indian patriarchs from [MAHĀKĀŚYAPA](#) to Prajñātāra; six Chinese patriarchs from [BODHIDHARMA](#) through [HUINENG](#); seventeen Chinese successors of Huineng in the [CAODONG ZONG](#), from [QINGYUAN XINGSI](#) to [TIAN TONG RUJING](#); and finally the two Japanese patriarchs [DŌGEN KIGEN](#) and Kōun Ejō (1198–1280). The *Denkōroku* belongs to a larger genre of texts known as the [CHUANDENG LU](#) (“transmission of the lamplight records”), although it is a rigidly sectarian lineage history, discussing only the single successor to each patriarch with no treatment of any collateral lines.

[Deqing](#). (德清). See [HANSHAN DEQING](#).

[Deshan Xuanjian](#). (J. Tokusan Senkan; K. Tōksan Sōn’gam 德山宣鑑) (780/2–865). Chinese [CHAN](#) master of the Tang dynasty; famous for the fearsome “blows” (*bang*) through which he expressed his understanding of enlightenment, similar to the terrifying shouts (he) of Chan master [LINJI YIXUAN](#) (see [BANGHE](#)). A native of Jiannan in present-day Sichuan province, Deshan first studied the scriptures and the [VINAYA](#), and became famous as a teacher of the [VAJRACCHEDIKĀPRAJÑĀPĀRAMITĀSŪTRA](#) (“Diamond Sūtra”). According to his hagiography, he was determined to defeat the Chan masters of the south with his knowledge of the sūtra, but on his way in Lizhou (present-day Hunan province), Deshan was rendered speechless by the following question from an old woman: “The ‘Diamond Sūtra’ says that neither the past mind, present mind, nor future mind can be grasped; so which mind does the elder desire to refresh?” He later became a student of the Chan master Longtan Chongxin (d.u.) and inherited his lineage. After his thirty-year residence at Lizhou, Deshan was forced by Emperor Wuzong’s (840–846) persecution of Buddhism (see [HUICHANG FANAN](#)) to hide on Mt. Dufu. He was later invited by the governor of Wuleng (present-day Hunan province) to reside on Deshan (“Mount Virtue”), whence he acquired

his toponym. Deshan's most famous disciple was [XUEFENG YICUN](#), and their joint lineage leads ultimately to the mature Chan schools of the [YUNMEN ZONG](#) and [FAYAN ZONG](#).

[Desideri, Ippolito](#). (1684–1733). Jesuit missionary to Tibet. He was born in the town of Pistoia in Tuscany in 1684 and entered the Jesuit order in 1700, studying at the Collegio Romano. Following two years of instruction in theology, he requested permission to become a missionary, departing for India in 1712 and reaching Goa the following year. Assigned to the Tibet mission, Desideri and another priest, the Portuguese Manoel Freyre, traveled by ship, horseback, and on foot to Leh, the capital of Ladakh, the westernmost Tibetan domain. Setting out for [LHA SA](#), they were able to survive the difficult seven-month journey thanks to the protection of a Mongolian princess who allowed the two priests to join her caravan. They reached the Tibetan capital on March 18, 1716. After just a month in Lha sa, Desideri's companion decided to return to India. Desideri received permission from the ruler of Tibet, the Mongol warlord Lha bzang Khan, to remain in Tibet. He arranged for Desideri to live at [RA MO CHE](#), and then at [SE RA](#) monastery. His notes from his studies indicate that he worked through textbooks on elementary logic through to the masterworks of the [DGE LUGS](#) sect, including the [LAM RIM CHEN MO](#) of [TSONG KHA PA](#), which Desideri would eventually translate into Italian (the translation is lost). He would go on also to write a number of works in Tibetan, both expositions of Christianity and refutations of Buddhism. The most substantial of these was his unfinished "Inquiry into the Doctrines of Previous Lives and of Emptiness, Offered to the Scholars of Tibet by the White Lama called Ippolito" (*Mgo skar [sic] gyi bla ma i po li do zhes bya ba yis phul ba'i bod kyi mkhas pa rnams la skye ba snga ma dang stong pa nyid kyi lta ba'i sgo nas zhu ba*). Desideri remained in Tibet until 1721, when Tibet became a mission field of the Capuchins, requiring that the Jesuit abandon his work. After several years in India, he returned to Italy in 1727. Desideri arrived in Rome in the midst of the Rites Controversy, the question of whether non-Christian rituals (such as Chinese ancestor worship) had a place in the methods of the missionaries. As a Jesuit, Desideri was on the losing side of this debate. The last years of his life were consumed with composing long defenses of his work, as well as the remarkable account of his time in Tibet, the *Relazione de' viaggi all' Indie e al Thibet*. He died in Rome on April 13, 1733. Because of the suppression of the Jesuit order, Desideri's works remained largely unknown, both in Italian and Tibetan, until the twentieth

century.

desire. See [LOBHA](#); [RĀGA](#); [TRSNĀ](#).

detachment. See [VIVEKA](#).

deva. (T. lha; C. tian; J. ten; K. ch'ŏn 天). In Sanskrit and Pāli, lit., “radiant one” or “shining one”; a “divinity,” “heavenly being,” or “god,” as one of the five [alt. six] rebirth destinies ([GATI](#)) of [SAMSĀRA](#). When it is said that Buddhism has “gods” but no “God,” the devas are being referred to. The term deva derives from the Sanskrit root √div and is related etymologically to the English word “divinity.” Rebirth as a deva is considered to be the beneficial result of virtuous actions ([KARMAN](#)) performed in a previous lifetime, and all of the many heavenly realms in Buddhist cosmology are therefore salutary levels of existence. However, they are temporary abodes within saṃsāra, rather than eternal heavens. ¶ There are a total of twenty-seven [alt. twenty-six or twenty-eight] different categories of devas, which are subdivided according to where their abode ([DEVALOKA](#)) is located within the three realms of existence ([TRAIDHĀTUKA](#), trailokya), viz., the sensuous or desire realm ([KĀMADHĀTU](#)), the materiality or form realm ([RŪPADHĀTU](#)) and the immaterial or formless realm ([ĀRŪPYADHĀTU](#)). ¶ There are six heavens of the sensuous realm ([KĀMADHĀTU](#)). The first two are located on Mount [SUMERU](#); the other four are located in the sky above its summit. One is reborn into these heavens as a result of virtuous deeds done in the past, especially deeds of charity ([DĀNA](#)). They include six deva abodes:

1. The heaven of the four heavenly kings ([CĀTURMAHĀRĀJAKĀYIKA](#)) located on the slopes of Mount Sumeru
2. The heaven of the thirty-three [gods] ([TRĀYASTRIMŚA](#)), located on the summit of Mount Sumeru
3. The heaven of [YĀMA](#), also known as SUYĀMA (“where the seasons are always good”)
4. The heaven of the contented ([TUŚITA](#)), where the [BODHISATTVA ŚVETAKETU](#) resided before descending to earth to be reborn as prince [SIDDHĀRTHA](#) and where the future buddha [MAITREYA](#) currently resides
5. The heaven of the enjoyment of creation ([NIRMĀNARATI](#)), where the gods are

able to convert their mental and emotional desires into palpable physical pleasures

6. The heaven of the gods who have power over the creations of others, or the gods who partake of the pleasures created in other heavens ([PARANIRMITAVAŚAVARTIN](#))

The four heavenly kings of the first and lowest of the six heavens are [DHRTARĀSTRA](#) in the east, [VIRŪDHAKA](#) in the south, [VIRŪPAKṢA](#) in the west, and [VAIŚRAVANA](#) in the north. There are many devas inhabiting this heaven: [GANDHARVAS](#) in the east, [KUMBHĀNDAS](#) in the south, [NĀGAS](#) in the west, and [YAKSAS](#) in the north. As vassals of [ŚAKRO DEVĀNĀM INDRAH](#) (lit. “Śakra, the lord of the gods”; see [INDRA](#); [ŚAKRA](#); [DEVARĀJAN](#)), the four heavenly kings serve as protectors of the dharma ([DHARMAPĀLA](#)) and of sentient beings who are devoted to the dharma. They dwell at the four gates in each direction at the midslope of the world’s central axis, Mt. Sumeru. The thirty-three gods of the second heaven are the eight vāsava, two aśvina, eleven rudra, and twelve āditya. They live on the summit of Mt. Sumeru and are arrayed around the city of Sudarśana, the capital of their lord Śakra. Śakra is also known as Indra, the war god of the Āryans, who became a devotee of the Buddha as well as a protector of the dharma. The remaining four heavens are located in the sky above Mt. Sumeru. At the highest level of the sensuous realm, the paranirmitavaśavartin heaven, dwells [MĀRA](#), the Evil One. The four heavenly kings and the thirty-three gods are called the “divinities residing on the ground” (bhūmyavacaradeva) because they dwell on Mt. Sumeru, while the gods from the Yāma heaven up to the gods of the realm of subtle materiality are known as “divinities residing in the air” (antarikṣavāsin, antarīkṣadeva), because they reside in the sky above the mountain. The higher one ascends into the heavens of both the sensuous realm and the subsequent realm of subtle materiality, the larger and more splendid the bodies of those gods become and the longer their life spans. Related to the devas of the sensuous realm are the demigods or titans (S. [ASURA](#)), jealous gods whom Indra drove out of the heaven of the thirty-three; they now live in exile in the shadows of Mt. Sumeru. ¶ The heavens of the realm of subtle materiality (rūpadhātu) consist of sixteen (according to the [SARVĀSTIVĀDA](#) school), seventeen (the [SAUTRĀNTIKA](#) school), or eighteen (the [THERAVĀDA/STHAVIRANIKĀYA](#) school) levels of devas. These levels, which are collectively called the [BRAHMALOKA](#) (world of the Brahmā gods), are subdivided

into the four classes of the dhyāna or “concentration” heavens, and rebirth there is dependent on specific meditative attainments in previous lives. One of the most extensive accounts on these heavens appears in the [ABHIDHARMAKOŚABHĀSYA](#), which presents seventeen levels of the subtle-materiality devas. Whereas rebirth in the heavens of the sensuous realm are the result of a variety of virtuous deeds done in a previous life, rebirth in the heavens of the realm of subtle materiality or in the immaterial realm is the result of what is called a “nonfluctuating” or “unwavering” action ([ANIÑJYAKARMA](#)). Here, the only cause that will produce rebirth in one of these heavens is the achievement of the level of meditative concentration or absorption of that particular heaven in the immediately preceding lifetime. Such meditation is called a “nonfluctuating deed” because it always produces the effect of that particular type of rebirth. The first set of dhyāna heavens, where those who practiced the first meditative absorption in the previous lifetime are born, is comprised of three levels:

1. The heaven of Brahmā’s retainers ([BRAHMAKĀYIKA](#))
2. The heaven of Brahmā’s ministers ([BRAHMAPUROHITA](#))
3. The heaven of the great Brahmā himself ([MAHĀBRAHMĀ](#))

The inhabitants of these heavens lack olfactory and gustatory sense organs, and thus do not need to consume food, but do possess the other sense organs of sight, hearing, and touch, as well as mentality ([MANENDRIYA](#)). According to Buddhist accounts, Mahābrahmā, the inhabitant of the highest of the first dhyāna heavens, presumed himself to be the creator of the world and father of all beings, but after being taught by the Buddha he subsequently realized how arrogant had been his misapprehension; he became the Buddha’s follower and protector of his teachings (dharmapāla), along with the four heavenly kings and Śakra. The second set of dhyāna heavens, where those who practiced the second meditative absorption in their previous lifetime are reborn, is also comprised of three levels:

1. The heaven of lesser radiance ([PARĪTTĀBHA](#))
2. The heaven of immeasurable radiance ([APRAMĀNĀBHA](#))
3. The heaven of ultimate radiance ([ĀBHĀSVARALOKA](#))

These heavens are said to be equal in size to a small chiliocosm. The third set of dhyāna heavens, where those who practiced the third meditative concentration in the previous lifetime are reborn, is also comprised of three levels:

The heaven of lesser purity ([PARĪTTAŚUBHA](#))

The heaven of immeasurable purity ([APRAMĀNĀŚUBHA](#))

The heaven of pervasive purity ([ŚUBHAKRTSNA](#))

These heavens are said to be equal in size to a medium chiliocosm; its inhabitants also possess only the mind organ and experience great joy. The fourth set of dhyāna heavens, where those who practiced the fourth meditative concentration in the previous lifetime are reborn, is comprised of eight levels:

1. The cloudless heaven ([ANABHRAKA](#))
2. The heaven of blessed birth ([PUNYAPRASAVA](#))
3. The heaven of extensive fruition ([BRHATPHALA](#))
4. The heaven that is free from afflictions ([AVRHA](#))
5. The heaven that is not burning, or without torment ([ATAPA](#))
6. The heaven of perfect form ([SUDRŚA](#))
7. The heaven of perfect vision ([SUDARŚANA](#))
8. The highest heaven ([AKANISTHA](#))

In schemata where there are nine levels of the Brahmā heavens, a ninth nonperceptual heaven [asaṃjñika] is added to the list as an eighteenth heaven of the rūpadhātu. The last five heavens of the fourth dhyāna level (levels thirteen through seventeen) are collectively designated as the five pure abodes ([ŚUDDHĀVĀSAKĀYIKA](#)), and the divinities residing there are called the śuddhāvāsakāyika devas. In some interpretations, the śuddhāvāsa are said to be the abode of nonreturners ([ANĀGĀMIN](#)), the third of the four types of advanced adepts who are in their final rebirth before achieving arhatship (see [ARHAT](#)) and

thus need never again be reborn in the sensuous realm. Since nonreturners have removed the first five fetters ([SAMYOJANA](#)) associated with the sensuous realm and weakened the latter five, they are “nonreturners” to the sensuous realm and are instead reborn into the pure abodes, whence they will complete their practice and attain enlightenment, entering [NIRVĀNA](#) from that abode. The pure abodes therefore serve as a kind of way station for advanced spiritual beings ([ĀRYA](#)) in their last lives before final liberation. In the *Abhidharmakośabhāṣya*, the explanation of nonreturners differs: before they reach nirvāṇa they never take rebirth in the sensuous realm, but they may pass through each of the heavens, or skip one or more heavens, and enter into nirvāṇa, depending on their aptitude, in any heaven. Furthermore, certain persons with sharp faculties ([TĪKSNENDRIYA](#)) even enter nirvāṇa in the sensuous realm itself. In certain Mahāyāna interpretations, such as in the [ABHISAMAYĀLAMKĀRA](#) commentarial tradition, especially in Tibet, the pure abodes are adjacent to the fourth dhyāna, and the akaniṣṭha heaven pure abode is considered to be the abode of the enjoyment body ([SAMBHOGAKĀYA](#)) of a buddha. According to some accounts, the pure abodes remain empty for several eons ([KALPA](#)) when there are no buddhas. ¶ The heavens of the immaterial realm (*ārūpyadhātu*) are comprised of four classes of devas whose existence is entirely mental, no longer requiring a body or even a subtle material foundation for their ethereal states of mind. These heavens are:

1. The sphere of infinite space ([ĀKĀŚĀNANTYĀYATANA](#))
2. The sphere of infinite consciousness ([VIJÑĀNĀNANTYĀYATANA](#))
3. The sphere of nothing whatsoever, or absolute nothingness ([ĀKIṆCANYĀYATANA](#))
4. The sphere of neither perception nor nonperception ([NAIVASAMJÑĀNĀSAMJÑĀYATANA](#) [alt. [BHAVĀGRA](#)])

In each case, the name of the realm indicates the object of meditation of the beings reborn there. Hence, in the first, for example, the beings perceive only infinite space. Rebirth in these different spheres is based on mastery of the corresponding four immaterial meditative absorptions ([ĀRŪPYĀVACARADHYĀNA](#); *ārūpyasamāpatti*) in the previous life. While the devas of the sensuous realm and the realm of subtle materiality come to have larger and ever more splendid bodies at the more advanced levels of their heavens, the devas of the immaterial

realm do not have even the subtlest foundation in materiality; their existence is so refined that it is not even possible to posit exactly where they dwell spatially. In some schools, such as the Sarvāstivāda, the immaterial realm does not even exist as a discrete place: rather, when a being who has mastered the immaterial absorptions dies, he is reborn at the very same location where he passed away, except now he is “immaterial” or “formless” and thus invisible to coarser beings. According to the Theravāda, even a mind-made body ([MANOMAYAKĀYA](#)) is excluded from this realm, for the devas here possess only the mind base ([MANĀYATANA](#)), mental objects (P. dhammāyatana), the elements of mental consciousness (P. manoviññādhātu), and the element of mental objects (P. dhammadhātu), needing only three nutriments ([ĀHĀRA](#)) to survive—contact (P. phassa), mental cognition (P. manosañcetana), and consciousness (P. viññāṇa). The Buddha claims to have lived among the devas of the immaterial realm in certain of his previous lives, but without offering any detailed description of those existences. ¶ In all realms, devas are born apparitionally. In the sensuous realm, devas are born in their mother’s lap, appearing as if they are already five to ten years old at birth; by contrast, devas of the subtle-materiality and immaterial realms appear not to need the aid of parents; those in the subtle-materiality realm appear fully grown, while those in the immaterial realm do not appear at all, because they have no form. It is also said that, when devas are reborn, they are aware of their prior existence and of the specific [KARMA](#) that led to their rebirth in the heavenly realms. The different deva realms are also distinguished by differences in nutriment, sexuality, requisites, and life span. The devas of the lower heavens of the sensuous realm consume ordinary food; those in the upper spheres of the sensuous realm and the lower levels of the realm of subtle materiality feed only on sensory contact; the devas of the upper levels of the realm of subtle materiality feed only on contemplation; those in the immaterial realm feed on cognition alone. Sexual differentiation remains only in the sensuous realm: in the heaven of the four heavenly kings and the heaven of the thirty-three, the devas engage in physical copulation, the devas of the yāma heaven engage in sexual union by embracing one another, the devas of the tuṣita heaven by holding hands, those of the nirmāṇarati heaven by smiling at one another, and those of the paranirmitavaśavartin heaven by exchanging a single glance. Clothes are said to be used in all deva worlds except in the immaterial realm. The life spans of devas in the sensuous realm range from five hundred years for the gods of the heaven of the four heavenly kings to one thousand years for the trāyastriṃśa gods, two thousand years for the yāma gods, four thousand

years for the tuṣita gods, eight thousand years for the nirmāṇarati gods, and sixteen thousand years for the paranirmitavaśavartin gods. However, there is a range of opinion of what constitutes a year in these heavens. For example, it is said that in the tuṣita heaven, four hundred human years equal one day in the life of a god of that heaven. The life spans of devas in the realm of subtle materiality are measured in eons ([KALPA](#)). The life spans of devas in the immaterial realm may appear as essentially infinite, but even those divinities, like all devas, are subject to impermanence ([ANITYA](#)) and will eventually die and be subject to further rebirths once the salutary meditative deed that caused them to be reborn there has been exhausted. The sūtras say that for a deva of the sensuous realm, there are five portents of his impending death: the garlands of flowers he wears begin to fade, his clothes become soiled and his palace dusty, he begins to perspire, his body becomes opaque and loses its luster, and his throne becomes uncomfortable. At that point, the deva experiences a vision of his next place of rebirth. This vision is said to be one of the most horrible sufferings in saṃsāra, because of its marked contrast to the magnificence of his current life. There are also said to be four direct reasons why devas die: exhaustion of their life spans, their previous merit, their food, and the arising of anger. ¶ Rebirth as a deva is presumed to be the reward of virtuous karman performed in previous lives and is thus considered a salutary, if provisional, religious goal. In the “graduated discourse” (P. [ANUPUBBIKATHĀ](#); S. [ANUPŪRVIKATHĀ](#)) taught by the Buddha, for example, the Buddha uses the prospect of heavenly rebirth (svargakathā), and the pleasures accruing thereto, as a means of attracting laypersons to the religious life. Despite the many appealing attributes of these heavenly beings, such as their physical beauty, comfortable lives, and long life span, even heavenly existence is ultimately unsatisfactory because it does not offer a definitive escape from the continued cycle of birth and death (saṃsāra). Since devas are merely enjoying the rewards of their previous good deeds rather than performing new wholesome karman, they are considered to be stagnating spiritually. This spiritual passivity explains why they must be reborn in lower levels of existence, and especially as human beings, in order to further their cultivation. For these reasons, Buddhist soteriological literature sometimes condemns religious practice performed solely for the goal of achieving rebirth as a deva. It is only certain higher level of devas, such as the devas belonging to the five pure abodes (śuddhāvāsa), that are not subject to further rebirth, because they have already eliminated all the fetters (saṃyojana) associated with that realm and are destined to achieve arhatship. Nevertheless, over the history of

Buddhism, rebirth in heaven as a deva has been a more common goal for religious practice, especially among the laity, than the achievement of nirvāṇa. ¶ The sūtras include frequent reference to “gods and men” (S. devamanuṣya; C. tianren) as the objects of the Buddha’s teachings. Despite the fact that this is how most Buddhist traditions have chosen to translate the Sanskrit compound, “gods” here is probably meant to refer to the terrestrial divinities of “princes” or “kings,” rather than heavenly beings; thus, the compound should be more properly (if, perhaps, pedantically) rendered “princes and peoples.” Similarly, as the “divinities” of this world, buddhas, bodhisattvas, and arhats are also sometimes referred to as devas. See also [DEVALOKA](#); [DEVATĀ](#).

Devadatta. (T. Lhas sbyin; C. Tipodaduo; J. Daibadatta; K. Chebadalta 提婆達多). Sanskrit and Pāli proper name for a cousin and rival of the Buddha; he comes to be viewed within the tradition as the embodiment of evil for trying to kill the Buddha and split the [SAMGHA](#) ([SAMGHABHEDA](#)). Devadatta is said to have been the brother of [ĀNANDA](#), who would later become the Buddha’s attendant. According to Pāli sources, when Gotama ([GAUTAMA](#)) Buddha returned to Kapalivatthu ([KAPILAVASTU](#)) after his enlightenment to preach to his native clan, the Sākiyans ([ŚĀKYA](#)), Devadatta along with [ĀNANDA](#), Bhagu, Kimbila, [BHADDIYA-KĀLIGODHĀPUTTA](#), Anuruddha ([ANIRUDDHA](#)), and [UPĀLI](#) were converted and took ordination as monks. Devadatta quickly attained mundane supranormal powers (iddhi; S. [RDDHI](#)) through his practice of meditation, although he never attained any degree of enlightenment. For a period of time, Devadatta was revered in the order. Sāriputta ([ŚĀRIPUTRA](#)) is depicted as praising him, and the Buddha lists him among eleven chief elders. Devadatta, however, always seems to have been of evil disposition and jealous of Gotama; in the final years of the Buddha’s ministry, he sought to increase his influence and even usurp leadership of the saṃgha. He used his supranormal powers to win over the patronage of Prince Ajātasattu ([AJĀTAŚATRU](#)), who built for him a monastery at Gayāsīsa (Gayāśīṣa). Emboldened by this success, he approached the Buddha with the suggestion that the Buddha retire and pass the leadership of the saṃgha to him, whereupon the Buddha severely rebuked him. It was then that Devadatta conceived a plan to kill the Buddha even while he incited Ajātasattu to murder his father [BIMBISĀRA](#), king of [MAGADHA](#), who was the Buddha’s chief patron. At Devadatta’s behest, Ajātasattu dispatched sixteen archers to shoot the Buddha along a road, but the Buddha, using his supranormal powers, instead converted the archers. Later, Devadatta hurled a boulder down the slope of Mt. Gijjhakūṭa

([GRDHRAKŪTAPARVATA](#)) at the Buddha, which grazed his toe and caused it to bleed. Finally, Devadatta caused the bull elephant [NĀLAGIRI](#), crazed with toddy, to charge at the Buddha, but the Buddha tamed the elephant with the power of his loving-kindness (P. mettā; S. [MAITRĪ](#)). Unsuccessful in his attempts to kill the Buddha, Devadatta then decided to establish a separate order. He approached the Buddha and recommended that five austere practices ([DHUTANGA](#)) be made mandatory for all members of the saṃgha: forest dwelling, subsistence only on alms food collected by begging, use of rag robes only, dwelling at the foot of a tree, and vegetarianism. When the Buddha rejected his recommendation, Devadatta gathered around him five hundred newly ordained monks from Vesāli ([VAISĀLĪ](#)) and, performing the fortnightly uposatha ([UPOSADHA](#)) ceremony separately at Gayāsīsa, formally seceded from the Buddha's saṃgha. When the five hundred Vesāli monks were won back to the fold by Sāriputta ([ŚĀRIPUTRA](#)) and Moggallāna ([MAHĀMAUDGALYĀYANA](#)), Devadatta grew sick with rage, coughing up blood, and never recovered. It is said that toward the end of his life, Devadatta felt remorse and decided to journey to see the Buddha to ask him for his forgiveness. However, spilling the blood of a Buddha and causing schism in the saṃgha are two of the five “acts that brings immediate retribution” (P. ānantariyakamma; S. [ĀNANTARYAKARMAN](#)), viz., rebirth in hell. In addition, Devadatta is said to have beaten to death the nun [UTPALAVARNĀ](#) when she rebuked him for attempting to assassinate the Buddha. She was an arhat, and killing an arhat is another of the “acts that bring immediate retribution.” When Devadatta was on his way to visit the Buddha (according to some accounts, to repent; according to other accounts, to attempt to kill him one last time by scratching him with poisoned fingernails), the earth opened up and Devadatta fell into [AVĪCI](#) hell, where he will remain for one hundred thousand eons. His last utterance was that he had no other refuge than the Buddha, an act that, at the end of his torment in hell, will cause him to be reborn as the paccekabuddha ([PRATYEKABUDDHA](#)) Atthissara. In many [JĀTAKA](#) stories, the villain or chief antagonist of the [BODHISATTVA](#) is often identified as a previous rebirth of Devadatta. In the “Devadatta Chapter” of the [SADDHARMAPUNĀRIKASŪTRA](#) (“Lotus Sūtra”), the Buddha remarks that in a previous life, he had studied with the sage Asita, who was in fact Devadatta, and that Devadatta would eventually become a buddha himself. This statement was used in the Japanese [NICHIREN](#) school as proof that even the most evil of persons (see [ICCHANTIKA](#); [SAMUCCHINAKUŚĀLAMŪLA](#)) still have the capacity to achieve enlightenment. In their accounts of India, both [FAXIAN](#) and [XUANZANG](#) note the presence of

followers of Devadatta who adhered to the austere practices he had recommended to the Buddha.

devaloka. (T. lha'i 'jig rten; C. tianshijie/tianjie/tianshang; J. tensekai/tengai/tenjō; K. ch'ōnsegye/ch'ōn'gye/ch'ōnsang 天世界/天界/天上). In Sanskrit and Pāli, the “heavenly world,” the abodes of the divinities ([DEVA](#)); the highest and most salutary of the five or six rebirth destinies ([GATI](#)) of [SAMSĀRA](#). Rebirth as a deva is considered to be the beneficial result of virtuous actions ([KARMA](#)) performed in a previous lifetime, and all the devalokas are thus regarded as salutary levels of existence. There are a total of twenty-seven [alt. twenty-six or twenty-eight] different heavenly worlds (see [DEVA](#)), subdivided according to where their abode is located within the three realms of existence ([TRAI DHĀTUKA](#); trailokya), viz., the sensuous or desire realm ([KĀMADHĀTU](#)), the realm of subtle materiality or form ([RŪPADHĀTU](#)), and the immaterial or formless realm ([ĀRŪPYADHĀTU](#)). The devalokas in Buddhist cosmology seem to be an adaptation and enhancement of pre-Buddhistic Indian notions of the cosmos. For instance, the six heavens of the sensuous realm in the Buddhist schema seem to be developed from the “six spaces” (rajāmsi), the six subdivisions of the two upper strata of the Vedic cosmos. One of the earliest formulations of the Buddhist devalokas appears in the Buddha’s first sermon, the “Setting in Motion the Wheel of the Dharma” (P. [DHAMMACAKKAPPAVATTANASUTTA](#); S. [DHARMACAKRAPRAVARTANASŪTRA](#)), included in the Pāli [MAHĀVAGGA](#), where the seven heavens are said to be comprised of the six heavens of the sensuous realm and the heaven of the [BRAHMĀ](#) gods in the realm of subtle materiality. Even so, it appears that the early Buddhists were aware of the presence of even more devalokas, since the [ĀṄGUTTARANIKĀYA](#) notes that there are still more divinities even beyond those of the Brahmā heavens. A more or less complete roster of all the devalokas appears in the Pāli [SĀLEY YAKASUTTA](#), which enumerates twenty-five heavens extending throughout all three realms of existence. For an extended discussion of specific heavenly realms, see [DEVA](#).

devamāna. (T. lha'i nga rgyal). In Sanskrit, lit. “divine pride”; a term that appears in tantric literature in connection with the practice of deity yoga ([DEVATĀYOGA](#)). In general, pride ([MĀNA](#)) is regarded as a negative mental state, one of the root afflictions ([MŪLAKLEŚA](#)), and therefore an affliction to be abandoned. However, in one of the inversions typical of the tantric context, although one should abandon ordinary pride, one should cultivate pride in

oneself as being a deity, that is, in this case, as being a buddha. It is by imagining oneself to have the mind, body, abode, and resources of a buddha now that one is said to proceed quickly to the state of true buddhahood via the tantric path. Therefore, one should imagine oneself as having already achieved the goal that one is in fact seeking.

[Devānaṃpiyatissa](#). (r. 247–207 BCE). Sinhalese king who, according to the Sri Lankan tradition, was the ruler under whom the island kingdom of Sri Lanka first accepted Buddhism. According to these accounts, Devānaṃpiyatissa was a contemporary of the Indian emperor Asoka (S. [AŚOKA](#)), who is said to have encouraged Devānaṃpiyatissa to convert to Buddhism. Asoka dispatched his son, the Buddhist monk [MAHINDA](#) (S. Mahendra), as head of a delegation to Sri Lanka (Ceylon) in the third century BCE to minister to Devānaṃpiyatissa and the Sinhalese court. Mahinda preached for the king the [CŪLAHATTHIPADOPAMASUTTA](#) (“Shorter Discourse on the Simile of the Elephant’s Footprint”), the twenty-seventh sutta of the [MAJJHIMANIKĀYA](#), where the Buddha uses the simile of a woodsman tracking an elephant’s footprints to explain to his audience how to reach complete certainty regarding the truth of the path, which he calls the footprints of the Tathāgata. After hearing the discourse, Devānaṃpiyatissa converted and was accepted as a Buddhist layman ([UPĀSAKA](#)). The king offered Mahinda the Mahāmeghavana, a royal pleasure garden on the outskirts of the Sinhalese capital of [ANURĀDHAPURA](#), where he built the [MAHĀVIHĀRA](#), which thenceforth served as the headquarters of the major Theravāda fraternity on the island. It was also at Devānaṃpiyatissa’s behest that Asoka sent his daughter, the Buddhist nun [SANGHAMITTĀ](#) (S. Saṅghamitrā), to Sri Lanka to establish the order of nuns (P. bhikkhunī; S. [BHIKSUNĪ](#)) there. Saṅghamittā also brought with her a branch of the [BODHI TREE](#), which Devānaṃpiyatissa planted at Mahāmeghavana, initiating an important site of cultic worship that continued for centuries afterward. The evidence of the Aśokan edicts and Sanskrit [AVADĀNA](#) literature suggest that the Pāli [MAHĀVAMSA](#) account of the spread of Buddhism to Sri Lanka through the work of Devānaṃpiyatissa, whom Aśoka’s son Mahinda converted to Buddhism, is probably not meant to be a historical account, but was instead intended to lend prestige to the [THERAVĀDA](#) tradition.

[Devānām Priyah](#). [alt. Devapriya] (P. Devānaṃpiya; T. Lha rnam kyī dga’ bo; C. Tian’ai; J. Ten’ai; K. Ch’ōnae 天愛). In Sanskrit, “Beloved of the Gods”; Emperor [AŚOKA](#)’s name for himself in a number of his rock edicts (see [AŚOKA](#)

[PILLARS](#)).

[devarājan](#). (T. lha'i rgyal po; C. tianwang; J. tennō; K. ch'ōnwang 天王). In Sanskrit and Pāli, “king of the divinities ([DEVA](#))”; an epithet of [ŚAKRO DEVĀNĀM INDRAH](#), viz., “[ŚAKRA](#), the king of the gods,” who is also known as [INDRA](#) (Lord). Śakra resides in his capital city of Sudarśana, which is centered in the heaven of the thirty-three [gods] ([TRĀYĀSTRIMŚĀ](#)), the second of the six heavens of the realm of sensuality ([KĀMALOKA](#)). Southeast Asian Buddhism also drew on the Hindu cult of the devarājan (divine king), which identified the reigning monarch as an incarnation of the god Śiva. See also [BAYON](#).

[devatā](#). (T. lha; C. tianshen; J. tenjin; K. ch'ōnsin 天神). In Sanskrit and Pāli, “state of being a divinity,” referring to all classifications of heavenly beings or divinities ([DEVA](#)) in the abstract. Deriving from the principle that any being who is worshipped or to whom offerings are made may be called a devatā, the connotation of divinities was broadly expanded to include not only the higher gods of the heavenly realms ([DEVALOKA](#)) proper but also religious mendicants; domesticated animals; powerful earthly forces such as fire and wind; lesser gods such as [NĀGAS](#), [GANDHARVAS](#), and [YAKṢAS](#); and local ghosts and spirits, including devatās of homes, trees, and bodies of water. As Buddhism moved into new regions, various indigenous local deities thus came to be assimilated into the Buddhist pantheon by designating them as devatās.

[devatāyoga](#). (T. lha'i rnal 'byor). In Sanskrit, “deity yoga”; tantric practice in which a deity (often a buddha or bodhisattva) is visualized in the presence of the practitioner, the deity is propitiated through offerings, prayers, and the recitation of MANTRA, and is then requested to bestow [SIDDHI](#). Two types are sometimes enumerated: one in which the deity is visualized in front of the practitioner and another in which the practitioner imagines himself or herself to be the deity. According to [TSONG KHA PA](#), the practice of this latter type of deity yoga is the distinguishing characteristic of the [VAJRAYĀNA](#), differentiating it from the [PĀRAMITĀYĀNA](#). He argues that both forms of deity yoga are to be found in all classes of tantra: [KRIYĀ](#), [CARYĀ](#), [YOGA](#), and [ANUTTARAYOGA](#). Devatāyoga is a central feature of the two stages of anuttarayoga tantra ([UTPATTIKRAMA](#) and [NISPAṆNAKRAMA](#)); in the former “generation” stage, guided by a [SĀDHANA](#), the tāntrika visualizes a [MANDALA](#), with its central and surrounding deities. Through meditation on [ANĀTMAN](#) (nonself) or [ŚŪNYATĀ](#) (emptiness), the practitioner imagines himself or herself to be the central deity of the maṇḍala. In certain

forms of practice, the practitioner will also imagine the entire maṇḍala and its deities as residing within the practitioner's body. When the practitioner has developed the ability to visualize the maṇḍala and its deities in minute detail, one moves to the second "completion" stage (niṣpannakrama), in which the complex of [NĀDIS](#) (channels) and [CAKRAS](#) (wheels) of the human body are utilized to achieve buddhahood.

[devātideva](#). (T. lha'i yang lha; C. tian zhong tian; J. tenchūten; K. ch'ōn chung ch'ōn 天中天). In Sanskrit and Pāli, "god of gods"; an epithet of the Buddha, as someone whose divinity surpasses that of all other divinities and whose superiority is acknowledged by them, as, for example, when the infant prince [SIDDHĀRTHA](#) was taken to the temple by his father, King [ŚUDDHODANA](#), and the statues of the deities bowed down to the child; and later when, after his enlightenment, the god [BRAHMĀ](#) implored the Buddha to teach the dharma. Thus, although the Buddha was reborn as a human, he is superior to the gods because he discovered and taught the path to [NIRVĀNA](#), something that gods, despite their great powers, are unable to do.

[devāvatāra](#). (T. lha yul nas babs pa; C. tianxialai/Tianxiachu; J. tengesai/Tengesho; K. ch'ōnharae/Ch'ōnhach'ō 天下來/天下處). In Sanskrit, "descent from the realm of the divinities ([DEVA](#))"; a term that describes the Buddha's return to earth after he spent the rain's-retreat season ([VARŚĀ](#)) teaching the [ABHIDHARMA](#) to his mother in the heaven of the thirty-three ([TRĀYĀSTRIMŚĀ](#)). Because the Buddha's mother, [MAHĀMĀYĀ](#), had died seven days after his birth, she was not able to benefit from her son's teaching; she was reborn in the [TUSITA](#) heaven. Therefore, in the seventh year after his enlightenment, the Buddha magically ascended to the trāyāstrimśā, to which his mother descended, where he taught the abhidharma to his mother and the assembled divinities. He would descend briefly each day to collect alms and at that time would repeat to [ŚĀRIPTURA](#) what he had taught to the gods. Pining for the Buddha during his long absence from the world, King [PRASENAJIT](#) had a sandalwood statue of the Buddha carved; this statue was claimed to have been the first buddha image. The Buddha is said to have descended from the summit of Mount [SUMERU](#) to the continent of [JAMBUDVĪPA](#) on a stairway of gems that was flanked by stairways of gold and silver. Devāvatāra (Tianxiachu) is also the name of the city or country of [SĀṆKĀŚYA](#) (P. Saṅkassa), where this descent from the trayāstrimśā heaven occurred. This scene is commonly depicted in Buddhist iconography and is the

subject of an eponymous [SŪTRA](#).

Devīkota. (S). One of the twenty-four sacred sites associated with the [CAKRASAMVARATANTRA](#). See [PĪTHA](#).

dewachen. A phonetic rendering of the Tibetan bde ba can, the Tibetan translation of [SUKHĀVATĪ](#), the pure land of the buddha [AMITĀBHA](#). The term in this form was popularized by [HELENA PETROVNA BLAVATSKY](#) and appears in a variety of European and American books on Buddhism from the nineteenth century.

Dewa sanzan. (出羽三山). In Japanese, the “three mountains of Dewa”; referring to Mount Haguro, Mount Gassan, and Mount Yudono in what was once known as Dewa province (in modern-day Yamagata prefecture). The region is particularly important in [SHUGENDŌ](#) and has long been a place of pilgrimage; it was visited by [BASHŌ](#).

Dga’ ldan. (Ganden). The Tibetan translation of the Sanskrit [TUSITA](#), the joyous, or contented, heaven (see [DEVA](#)), which is the abode of the future buddha [MAITREYA](#). ¶ The short name for Dga’ ldan rnam rgyal gling (Ganden Namgyal Ling), one of the three chief monasteries (known as the [GDAN SA GSUM](#) or “three seats”) of the [DGE LUGS](#) sect of Tibetan Buddhism and one of the sect’s principal monasteries, located twenty-eight miles (forty-five kilometers) east of [LHA SA](#). Named after the tuṣita heaven, the monastery was established by the Dge lugs founder [TSONG KHA PA](#) in 1409 near a hill originally associated with the consecration rituals performed after the birth of the king [SRONG BTSAN SGAM PO](#). A nearby ridge was the favored picnic ground of the king’s royal wives. According to legend, the [JO BO](#) statue of Lha sa’s [JO KHANG](#) temple miraculously confirmed the location’s significance to Tsong kha pa. The great assembly hall was added in 1417, followed by the two colleges, Byang rtse (Jangtse) and Shar rtse (Shartse). Tsong kha pa died at Dga’ ldan in 1419 and was entombed there in a [STŪPA](#). Following Tsong kha pa’s death, the abbacy passed to two of his foremost disciples, first, [RGYAL TSHAB DAR MA RIN CHEN](#), then twelve years later to [MKHAS GRUB DGE LEGS DPAL BZANG](#). Thus, the tradition of the [DGA’ LDAN KHRI PA](#) or Throne Holder of Dga’ ldan was established. Because Dga’ ldan was the seat of Tsong kha pa and his two chief disciples, his followers were initially called Dga’ ldan pa’i lugs, “the system of Dga’ ldan.” This was shortened to Dga’ lugs and eventually to Dge lugs. Dga’ ldan monastery was traditionally

said to have 3,300 monks, although over the course of its history it often housed twice that number, forming a vast monastic complex. It was completely destroyed by the Chinese in the 1960s but has since been partially rebuilt. It has also been reestablished in exile in southern India.

[Dga' ldan khri pa](#). (Ganden Tripa). In Tibetan, lit. “Holder of the Dga' ldan Throne”; title of the head of the [DGE LUGS](#) sect of Tibetan Buddhism, who is regarded as the successor of [TSONG KHA PA](#). The first two Dga' ldan khri pas were Tsong kha pa's disciples; the first was [RGYAL TSHAB DAR MA RIN CHEN](#) and the second was [MKAS GRUB DGE LEGS DPAL BZANG](#). Together with Tsong kha pa, they are traditionally considered to be the founders of the Dge lugs sect. The fifteenth Dga' ldan khri pa Pan chen Bsod nams grags pa (Panchen Sönam Drakpa) (1478–1554) is known for his role during the terms of the third and fourth [DALAI LAMAS](#). At present, the Dga' ldan khri pa is selected by the Dalai Lama from a group of candidates who have already served in a number of specific positions in the major Dge lugs monasteries and tantric colleges; the term of office is generally seven years. It is not the case, as is often imagined, that the Dalai Lama is the head of the Dge lugs sect, or that the Dga' ldan khri pa is necessarily an incarnate lama ([SPRUL SKU](#)). According to the traditional system of selection, the monk who became the Dga' ldan khri pa had to rise through several ranks of the Dge lugs sect. First, he completed the prescribed course of study in one of the three [GDAN SA](#) (the major Dge lug monasteries in the [LHA SA](#) area) and achieved the highest degree in the Dge lugs academy, that of [DGE BSHEs](#) lha ram pa. He then entered one of the two Dge lugs tantric colleges in Lha sa (see [RGYUD STOD](#) and [RGYUD SMAD](#)) and became a dge bshes sngags ram pa (ngakrampa). Only a dge bshes sngags ram pa could become a dge skos (gekö) (disciplinarian) of a tantric college. Rgyud stod and Rgyud smad chose three disciplinarians each year, and the bla ma dbu mdzad (lama umdze), literally “leader of the chant,” i.e., vice abbot, was chosen from among the former dge skos and served for three years. Following that period, he became the abbot (mkhan po) of his tantric college for three years. The senior-most former abbot (mkhan zur) received the title Byang rtse chos rje, if he attended Rgyud smad, and Shar rtse chos rje if he attended Rgyud stod. (Byang rtse and Shar rtse are two colleges of Dga' ldan monastery.) Since the time of the eighth Dga' ldan khri pa these two alternated in the position of Dga' ldan khri pa. To date there have been 102 Dga' ldan khri pas.

Dga' ldan pho brang. (Ganden Podrang). In Tibetan, lit. “Palace of [TUSITA](#),” the name by which the central government of Tibet was known from the time of fifth [DALAI LAMA](#)'s ascension to power in the seventeenth century until 1959. The Dga' ldan pho brang was originally the residence or estate of Dge 'dun rgya mtsho (retrospectively named the second Dalai Lama) in '[BRAS SPUNGS](#) monastery. He was a learned and diplomatic figure who protected the interests of the fledgling [DGE LUGS](#) sect during a difficult period when its original patron, the Sne'u dong royal family, was in decline. The residence, originally called the Rdo khang sngon mo, was given to him by the Sne'u dong princes in 1518, when he was the unquestioned leader of the major emerging Dge lugs monasteries. From this point, the Dga' ldan pho brang became the seat of the Dalai Lamas. [NGAG DBANG BLO BZANG RGYA MTSHO](#), the fifth Dalai Lama, enlisted the help of the Qoshot Mongols and their leader, Gushri Khan, to decisively crush the [KARMA PA](#) and his patron, the King of Gtsang. From this point, the Dga' ldan pho brang came to designate not the residence of the Dalai Lama but the seat of the Dalai Lama's rulership of substantial regions of Tibet, from which he collected taxes. By extension, the term Dga' ldan pho brang has come to mean the government of Tibet during the reign of the Dalai Lamas. To consolidate Dge lugs power and prevent the the large Dge lugs monasteries ([GDAN SA GSUM](#)) from usurping his power, the fifth Dalai Lama moved the Dga' ldan pho brang into the [PO TA LA](#) palace, which then became the seat of the government he established.

Dga' ldan phun tshogs gling. (Ganden Puntsok Ling). A Tibetan monastery located in Gtsang province, founded by [TĀRANĀTHA](#) in 1615, who named it Rtag brtan phun tshogs gling. It was also known as [JO NANG PHUN TSHOGS GLING](#). He hired artists from Nepal to decorate it, eventually making it the most lavishly appointed monastery in central Tibet. Under Tāranātha, it became the primary seat of the [JO NANG](#) sect. After his death, the monastery was forcibly converted to a [DGE LUGS](#) establishment by order of the fifth [DALAI LAMA](#), who opposed the Jo nang and is said to have had a personal animosity against Tāranātha. The monastery was thus renamed Dga' ldan phun tshogs gling and the printing of the Jo nang texts held there was banned; permission to print them was not granted until the late nineteenth century.

Dga' rab rdo rje. (Garap Dorje). In Tibetan, the name of a semimythological figure in the early lineage of the [RNYING MA](#) sect's [RDZOGS CHEN](#) “great completion” teachings. The transmission of the teaching is said to have passed

from the primordial buddha [SAMANTABHADRA](#) (T. Kun tu bzang po) to [VAJRASATTVA](#), who transmitted it to the first human lineage holder, Dga' rab rdo rje; from him, rdzogs chen passed to [MAÑJŪŚRĪMITRA](#) and [ŚRĪSIMHA](#), and to the Tibetan translator Ba gor [VAIROCANA](#) (fl. c. 800 CE). See [RDZOGS CHEN](#).

dge bshes. (geshe). A Tibetan abbreviation for dge ba'i bshes gnyen, or “spiritual friend” (S. [KALYĀNAMITRA](#)). In early Tibetan Buddhism, the term was used in this sense, especially in the [BKA' GDAMS](#) tradition, where saintly figures like [GLANG RI THANG PA](#) are often called “geshe”; sometimes, however, it can have a slightly pejorative meaning, as in the biography of [MILLA RAS PA](#), where it suggests a learned monk without real spiritual attainment. In the [SA SKYA](#) sect, the term came to take on a more formal meaning to refer to a monk who had completed a specific academic curriculum. The term is most famous in this regard among the [DGE LUGS](#), where it refers to a degree and title received after successfully completing a long course of Buddhist study in the tradition of the three great Dge lugs monasteries in [LHA SA](#): ['BRAS SPUNGS](#), [DGA' LDAN](#), and [SE RA](#). According to the traditional curriculum, after completing studies in elementary logic and epistemology ([BSDUS GRWA](#)), a monk would begin the study of “five texts” (GZHUNG LNGA), five Indian [ŚĀSTRAS](#), in the following order: the [ABHISAMAYĀLAMKĀRA](#) of [MAITREYANĀTHA](#), the [MADHYAMAKĀVATĀRA](#) of [CANDRAKĪRTI](#), the [ABHIDHARMAKOŚABHĀSYA](#) of [VASUBANDHU](#), and the [VINAYASŪTRA](#) of [GUNAPRABHA](#). Each year, there would also be a period set aside for the study of the [PRAMĀNAVĀRTTIKA](#) of [DHARMAKĪRTI](#). The curriculum involved the memorization of these and other texts, the study of them based on monastic textbooks (yig cha), and formal debate on their content. Each year, monks in the scholastic curriculum (a small minority of the monastic population) were required to pass two examinations, one in memorization and the other in debate. Based upon the applicant's final examination, one of four grades of the dge bshes degree was awarded, which, in descending rank, are: (1) lha rams pa, (2) tshogs rams pa, (3) rdo rams pa; (4) gling bsre [alt. gling bseb], a degree awarded by a combination of monasteries; sometimes, the more scholarly or the religiously inclined would choose that degree to remove themselves from consideration for ecclesiastical posts so they could devote themselves to their studies and to meditation practice. The number of years needed to complete the entire curriculum depended on the degree, the status of the person, and the number of candidates for the exam. The coveted lha rams pa degree, the path to important offices within the Dge lugs religious hierarchy, was restricted to

sixteen candidates each year. The important incarnations ([SPRUL SKU](#)) were first in line, and their studies would be completed within about twelve years; ordinary monks could take up to twenty years to complete their studies and take the examination. Those who went on to complete the course of study at the tantric colleges of [RGYUD STOD](#) and [RYUD SMAD](#) would be granted the degree of *dge bshes sngags ram pa*.

[Dge 'dun chos 'phel](#). (Gendun Chopel) (1903–1951). A distinguished essayist, poet, painter, translator, historian, and philosopher; one of the most important Tibetan intellectuals of the first half of the twentieth century. He was born in the Reb kong region of A mdo, the son of a respected SNGAGS PA. At the age of five, he was recognized as the incarnation ([SPRUL SKU](#)) of an abbot of the famous [RNYING MA](#) monastery, [RDO RJE BRAG](#). Following his father's untimely death, he entered a local [DGE LUGS](#) monastery, eventually moving to [BLA BRANG BKRA' SHIS 'KHYIL](#). He gained particular notoriety as a debater but apparently criticized the monastery's textbooks (*yig cha*). In 1927, he traveled to [LHA SA](#), where he entered Sgo mang College of [BRAS SPUNGS](#) monastery. In 1934, the Indian scholar and nationalist Rahul Sankrityayan (1893–1963) arrived in Lha sa in search of Sanskrit manuscripts, especially those dealing with Buddhist logic. He enlisted Dge 'dun chos 'phel as his guide, just as he was completing the final examinations at the end of the long curriculum of the [DGE BSHES](#). After visiting many of the monasteries of southern Tibet, Sankrityayan invited Dge 'dun chos 'phel to return with him to India. Over the next decade, he would travel extensively, and often alone, across India and Sri Lanka, learning Sanskrit, Pāli, several Indian vernaculars, and English. He assisted the Russian Tibetologist, [GEORGE ROERICH](#), in the translation of the important fifteenth-century history of Tibetan Buddhism by 'Gos lo tsā ba, [DEB THER SNGON PO](#) (“The Blue Annals”). He visited and made studies of many of the important Buddhist archaeological sites in India, writing a guide (*lam yig*) that is still used by Tibetan pilgrims. He studied Sanskrit erotica and frequented Calcutta brothels, producing his famous sex manual, the *'Dod pa'i bstan bcos* (“Treatise on Passion”). During his time abroad, he also spent more than a year in Sri Lanka. In January 1946, after twelve years abroad, Dge 'dun chos 'phel returned to Lha sa. He taught poetry and also gave teachings on [MADHYAMAKA](#) philosophy, which would be published posthumously as the controversial *Klu sgrub dgongs rgyan* (“Adornment for [NĀGĀRJUNA](#)'s Thought”). Within a few months of his arrival in Lha sa, Dge 'dun chos 'phel was arrested by the government of the regent of the

young fourteenth Dalai Lama on the fabricated charge of counterfeiting foreign currency. Sentenced to three years, he served at least two, working on his unfinished history of early Tibet, *Deb ther dkar po* (“The White Annals”), and composing poetry. He emerged from prison a broken man and died in October 1951 at the age of forty-eight.

Dge ’dun grub. (Gendün Drup) (1391–1475). A revered scholar of the **DGE LUGS** sect of Tibetan Buddhism, posthumously recognized as the first **DALAI LAMA**. He was from the clan of Ngar tso in the region of Ru lug and received his early training at **SNAR THANG** monastery, where he earned fame for his erudition. In 1415, he traveled to central Tibet, where he became a close disciple of the Dge lugs polymath **TSONG KHA PA** in the years before the master’s death in 1419. He went on to serve as the abbot of **DGA’ LDAN** monastery. In 1447, Dge ’dun grub founded **BKRA SHIS LHUN PO** monastery, later the seat of the **PAN CHEN LAMAS** in the central Tibetan city of Gzhis ka rtse (Shigatse). After the Mongolian ruler Altan Khan bestowed the title Dalai Lama on **BSOD NAMS RGYA MTSHO** in 1578, Dge ’dun grub was posthumously identified as the lineage’s first incarnation. He was a renowned scholar, writing influential works on both **VINAYA** and **ABHIDHARMA**.

Dge lugs. (Geluk). In Tibetan, lit. “System of Virtue”; one of the four major sects of Tibetan Buddhism (see also **BKA’ BRYUD**, **SA SKYA**, **RNYING MA**). Originating among the disciples of **TSONG KHA PA**, it was originally referred to as the Dga’ ldan pa’i lugs (abbreviated as Dga’ lugs) “the system of those from Dga’ ldan Mountain,” where Tsong kha pa, with the patronage of the powerful Phag mo gru family, founded Ri bo **DGA’ LDAN** monastery in 1409. (The name Dge lugs may have originally been an abbreviation of Dga’ ldan pa’i lugs.) Within a few years of the founding of Dga’ ldan, two followers of Tsong kha pa, **’JAM DBYANGS CHOS RJE BKRA SHIS DPAL LDAN** and Byams chen chos rje Shākya ye shes (1354–1435), founded **’BRAS SPUNGS** (1416) and **SE RA** (1419) monasteries, respectively, apparently at Tsong kha pa’s urging. These three monasteries developed into the institutional center of Dge lugs power and influence; Tsong kha pa with his two most prominent followers, **RGYAL TSHAB DARMA RIN CHEN** (called Rgyal tshab rje) and **MKHAS GRUB DGE LEGS DPAL BZANG PO** (called Mkhas grub rje)—both important scholars in their own right—became the cultic center, called rje yab sras gsum (“the lord and his two spiritual sons”). **BKRA SHIS LHUN PO** monastery, the fourth great Dge lugs monastery, was founded

in Gzhis ka rtse (Shigatse) in 1447 by another of Tsong kha pa's followers, the scholarly and politically astute [DGE 'DUN GRUB](#), providing a basis for Dge lugs power in the west. Dge 'dun grub was posthumously recognized as the first [DALAI LAMA](#). The fifth Dalai Lama [NGAG DBANG BLO BZANG RGYA MTSHO](#) and [BLO BZANG CHOS KYI RGYAL MTSHAN](#), with the help of the Mongols, established the Dge lugs as the largest and most powerful Buddhist sect in Tibet. After the founding of the [DGA' LDAN PHO BRANG](#) government in 1642, the Dalai Lama was invested with temporal power, making the Dge lugs the de facto ruling party and bringing an end to the political instability that accompanied the rise of the sect during the sixteenth and seventeenth centuries. Blo bzang chos kyi rgyal mtshan became abbot of Bkra shis lhun po and began the lineage of powerful [PAN CHEN BLA MAS](#), after the Dalai Lamas, the second most powerful lineage of Dge lugs incarnate lamas (see [SPRUL SKU](#)). The influence of the Dge lugs sect over Tibet was based on an elaborate system of regional monasteries with ties to the four central Dge lugs monasteries; the two largest of the regional monasteries, [BLA BRANG BKRA SHIS DKYIL](#) and [SKU 'BUM](#) in A mdo, rivaled the central monasteries in size and stature. The sect is known for its scholastic curriculum, and for a rigorous examination system that culminates in the rank of [DGE BSHEs](#), providing a steady stream of abbots and incarnate lamas to administer the system in collaboration with the aristocratic elite under the oversight of the Dga' ldan pho brang government. In its rise to power, the Dge lugs incorporated doctrines and monasteries that were earlier separate and distinct traditions.

[Dge lugs pa](#). (Gelukpa). A person affiliated with the [DGE LUGS](#) sect of Tibetan Buddhism.

[Dge rgyas](#). (Gegye). In Tibetan, one of the four “extra taming temples” or “extra pinning temples” ([YANG 'DUL GTSUG LAG KHANG](#)) said to have been constructed during the time of the Tibetan king [SRONG BTSAN SGAM PO](#) to pin down the limbs of the demoness (T. srin mo) who was impeding the introduction of Buddhism into Tibet. The temple is located in Byams sprin (Jamtrin) and pins down her right knee.

[dgon pa](#). (gompa). In Tibetan, literally, “remote place”; the most common term for “monastery.” See [ARANYA](#).

[dgra lha](#). (dralha). In Tibetan, literally “enemy god”; a class of Tibetan deities that fights against the enemy of those who propitiate and worship them. Tibetans

speak of both a personal *dgra lha*, which abides on one’s right shoulder to protect one from enemies and promote one’s social status, as well as various groupings of *dgra lha* invoked in both Buddhist and [BON](#) ritual. *Dgra lha* is also a common epithet of wrathful [DHARMAPĀLAS](#) who protect the dharma against its enemies, both internal and external.

[dhamma](#). In Pāli, “factor,” “element,” “doctrine.” See [DHARMA](#).

[Dhammacakkappavattanasutta](#). (S. Dharmacakrapravartanasūtra; T. Chos ’khor bskor ba’i mdo; C. Zhuan falun jing; J. Tenbōringyō; K. Chŏn pŏmnyun kyŏng 轉法輪經). In Pāli, “Discourse on Turning the Wheel of the [DHARMA](#)”; often referred to as [GAUTAMA](#) Buddha’s “first sermon,” delivered after his enlightenment to the “group of five” ([PAÑCAVARGIKA](#); bhadravargīya), at the Deer Park (P. Migadāya; S. [MRGADĀVA](#)) in [RSIPATANA](#) near [SĀRNĀTH](#). In its Pāli version, the discourse appears in the [MAHĀVAGGA](#) section of the [VINAYA](#), which recounts the founding of the dispensation, rather than in the *suttapiṭaka* (S. [SŪTRAPITAKA](#)). (A separate [SARVĀSTIVĀDA](#) recension appears in the Chinese translation of the [SAMYUKTĀGAMA](#); there is also an early Chinese translation by [AN SHIGAO](#) that circulated independently.) Following his enlightenment, the Buddha considered who might be able to comprehend what he had experienced and remembered the “group of five” ascetics, with whom he had previously engaged in self-mortification practices ([TAPAS](#)). Although initially reticent to receive Gautama because he had abandoned his asceticism and had become “self-indulgent,” they soon relented and heard Gautama relate his realization of the deathless state. Their minds now pliant, the Buddha then “set rolling the wheel of the dharma” ([DHARMACAKRAPRAVARTANA](#)), which is the first enunciation of his liberation. In the sermon, the Buddha advocates a middle way (P. *majjhimapaṭipadā*; S. [MADHYAMAPRATIPAD](#)) between sensual indulgence and self-mortification, and equates the middle way to the noble eightfold path (P. *ariyāṭṭhaṅgikamagga*; S. [ĀRYĀSTĀṄGAMĀRGA](#)). He follows with a detailed account of the [FOUR NOBLE TRUTHS](#), the full knowledge and vision (P. *ñānadassana*; S. [JÑĀNADARŚANA](#)) of which leads to liberation. While listening to the discourse, [ĀJÑĀTAKAUNDINYA](#) (P. *Aññātakonḍañña*) understood the principle of causation—that all things produced will also come to an end—and achieved the first level of sanctity, that of stream-enterer (P. *sotāpanna*; S. [SROTAĀPANNA](#)). He was the first disciple to take ordination ([UPASAMPADĀ](#)) as a monk (P. [BHIKKHU](#); S. [BHIKSU](#)), following the simple “come, monk” formula (P. *ehi*

bhikkhu; S. [EHIBHIKSUKĀ](#)): “Come, monk, the dharma is well proclaimed; live the holy life for the complete ending of suffering.” Soon afterward, he was followed into the order by the rest of the “group of five” monks. The site where the first sermon was delivered—the Deer Park (Mṛgadāva) in Ṛṣipatana (P. Isipatana), the modern Sārnāth, near Vārāṇasī—subsequently became one of the four major Buddhist pilgrimage sites ([MAHĀSTHĀNA](#)) in India.

[Dhammacetī](#). (r. 1472–1492). Mon king of Rāmaññadesa (Lower Burma) whose capital was Pegu (Hanthawaddi). His regnal title, by which he is known in inscriptions, is Rāmādhīpatimahārājā. Dhammacetī conducted a purification of the Mon Sāsana of Rāmaññadesa between 1476 and 1479, during which time the entire Mon saṅgha ([SAMGHA](#)) was reordained according to Sihala procedures. The purification is recorded in the [KALYĀNĪ INSCRIPTIONS](#), erected in 1479 at the site of the Kalyāṇī Sīmā Hall in Pegu. The [SĪMĀ](#) hall was named after the Kalyāṇī River in Sri Lanka where, in 1476, a delegation of twenty-two Mon monks dispatched by Dhammacetī took reordination to form the nucleus of the reformed Mon saṅgha.

[Dhammadāyādasutta](#). (C. Qiufa jing; J. Guhōgyō; K. Kupōp kyōng 求法經). In Pāli, “Discourse on Heirs of the Dharma”; third sutta in the [MAJJHIMANIKĀYA](#) (a separate [SARVĀSTIVĀDA](#) recension appears as the eighty-eighth sūtra in the Chinese translation of the [MADHYAMĀGAMA](#); another recension of uncertain affiliation also appears in the Chinese translation of the [EKOTTARĀGAMA](#).) This sutta contains two discourses preached at the [JETAVANA](#) Grove in Sāvattī ([ŚRĀVASTĪ](#)), the first by the Buddha and the second by Sāriputta ([ŚĀRIPUTRA](#)). The Buddha urges his monks to give priority to the dharma, not to material possessions, and to receive as their true legacy from him the constituents of enlightenment (bodhipakkhiyadhamma; S. [BODHIPAKSIKADHARMA](#)), rather than the four requisites (nissaya; S. [NĪŚRAYA](#)) of mendicancy. Sāriputta advises the monks to live in solitude for the attainment of meditative absorption (jhāna; S. [DHYĀNA](#)) and to abandon greed ([LOBHA](#)), hatred (P. dosa; S. [DVEṢA](#)), and delusion ([MOHA](#)) in order to attain nibbāna ([NIRVĀNA](#)).

[Dhammakāya](#). (Thai, Thammakai). A Buddhist reform movement in Thailand that originated in 1916, when a monk named Luang Phor Sodh is said to have rediscovered a technique of meditation that had been lost since the time of the Buddha. The movement began to gain impetus in 1970, when one of the abbot’s disciples, a nun known as Khun Yay Upāsika, founded Wat Phra Dhammakāya.

Dhammakāya meditation practice consists of visualizing a small crystal sphere entering one's body through the nasal passage; the sphere settles in the solar plexus and eventually becomes transformed into a crystal image of the Buddha. While engaging in this visualization, the meditator is supposed to focus on the [MANTRA](#) "samma arahang." The practice is supposed to culminate in the ability to see a buddha image (the dhammakāya, or "truth body" of the Buddha; see [DHARMAKĀYA](#)) inside oneself, an experience compared to tasting [NIRVĀNA](#) in the present life. Meditation is the principal Dhammakāya practice, and the organization encourages its followers to meditate twice a day as a way of improving self-confidence and as a tool for success, well being, and fostering family life. Dhammakāya also offers group training courses for adults in the private and public sectors. Devotees dress in white, and temple buildings are simple in design. Dhammakāya is also known for organizing massive ceremonies involving several thousand monks and tens of thousands of laypeople on Buddhist holy days. Rather than following the traditional lunar calendar and practicing on the days of the waning and waxing moon, Dhammakāya practice is held every Sunday, with meditation in the morning, followed by a sermon on topics relevant to the problems and concerns of everyday life. Its adherents are also encouraged to take part in such activities as retreats, youth camps, and massive ordinations for college students during the summer break. The Dhammakāya movement also differs from mainstream Thai Buddhism in that it requires monks to be ordained for life rather than the temporary ordination that is common among Thai laymen. In addition to its massive [WAT](#) outside of Bangkok, it has established branches throughout Thailand and overseas. Many Thais, especially intellectuals who support the forest meditation tradition, criticize Dhammakāya for its "direct marketing" type of organization and its quick-fix solutions to complex problems.

[Dhammapada](#). (S. Dharmapada; T. Chos kyi tshigs su bcad pa; C. Faju jing; J. Hokkugyō; K. Pōpku kyōng 法句經). In Pāli, "Verses of Dharma"; the second book of the [KHUDDAKANIKĀYA](#) of the Pāli [SUTTAPITAKA](#). The *Dhammapada* is an anthology of verses, arranged topically, many of which are also found in other books of the Pāli canon, although it is unclear whether the *Dhammapada* was compiled from them. Some of the same verses are also found in [JAINA](#) and Hindu sources. The current Pāli text contains 423 verses divided into twenty-six chapters; the verses are broadly associated with the topic of each particular chapter, which have predominantly ethical themes. The verses and chapters are

sometimes arranged in pairs, e.g., “The Fool” and “The Sage,” “The World” and “The Buddha,” *etc.* As possible evidence of the popularity of the collection, there are several extant recensions of *Dharmapadas* in languages other than Pāli, including a [GĀNDHĀRĪ](#) version and several in Chinese translation that derive from Sanskrit or Middle Indic versions of the collection. The chapters and verses of these other recensions often bear little resemblance to the Pāli version, some having alternate arrangements of the chapters and verses, others having many more total verses in their collections. These differences suggest that such anthologies of gnomic verses were being made independently in disparate Buddhist communities throughout India and Central Asia, often borrowing liberally, and haphazardly, from earlier recensions. A version of the [UDĀNAVARGA](#) compiled by Dharmatrāta, a larger work containing all the verses from the *Dhammapada*, became a basic text of the [BKA' GDAMS](#) sect in Tibet; the Pāli version of the *Dhammapada* was translated into Tibetan by the twentieth-century scholar [DGE 'DUN CHOS 'PHEL](#). The *Dhammapada* has long been one of the most beloved of Buddhist texts in the West. Since its first translation into a Western language (Latin) in 1855 by the Danish scholar Victor Fausbøll (1821–1908), it has been rendered numerous times into English (well over fifty translations have been made) and other languages.

[Dhammapadaṭṭhakathā](#). In Pāli, “Commentary to the [DHAMMAPADA](#)”; attributed to [BUDDHAGHOSA](#). The text is comprised of stories similar to the [JĀTAKAS](#), recounting the occasions on which the verses of the *Dhammapada* were uttered. Many of the stories are also found in the [SUTTA](#) and [VINAYA PITAKAS](#), as well as in the jātika commentary, *Jātakatthavaṇṇanā*. The *Dhammapadaṭṭhakathā* appears in the Pali Text Society’s English translation series as *Buddhist Legends*.

[Dhammapāla](#). (d.u.). A celebrated Pāli commentator and author, Dhammapāla is known to have flourished sometime after the time of [BUDDHAGHOSA](#) (fl. fifth century CE), though his precise dates are uncertain. Numerous works are attributed to him, although the accuracy of these attributions is sometimes suspect because of the many Pāli authors who have the same name. The [SĀSANAVAMSA](#) states that Dhammapāla lived at Badaratittha in southern India. In several of his works, Dhammapāla records that he is a native of Kañcipuram and that he studied at the [MAHĀVIHĀRA](#) in the Sinhalese capital of [ANURĀDHAPURA](#). [THERAVĀDA](#) congregations affiliated with the Mahāvihāra existed among the

Tamils in South India, and it appears that he was familiar with their commentarial traditions. According to one legend, Dhammapāla was so renowned for his intelligence that the local king of Kañcipuram offered him his daughter in marriage. Being interested instead in a life of renunciation and scholarship, Dhammapāla prayed for his release before an image of the Buddha, whereupon the gods carried him away to a place where he could be ordained as a Buddhist monk. Seven of Dhammapāla's commentaries ([ATTHAKATHĀ](#)) are devoted to the [KHUDDAKANIKĀYA](#) division of the [SUTTAPITAKA](#); these include the [PARAMATTHADĪPANĪ](#) (a commentary on the [UDĀNA](#), [ITIVUTTAKA](#), [VIMĀNAVATTHU](#), [PETAVATTHU](#), [THERAGĀTHĀ](#), and [THERĪGĀTHĀ](#)), as well as exegeses of the *Vimānavatthu*, *Petavatthu*, *Itivuttaka*, and [CARIYĀPITAKA](#). He also wrote commentaries to the [NETTIPPAKARANA](#) and the [VISUDDHIMAGGA](#), the latter of which is titled the [PARAMATTHAMAÑJŪSĀ](#). Dhammapāla also wrote several subcommentaries (ṭīkā) on Buddhaghosa's exegeses of the Pāli canon, including the *Līnatthavannanā* on the [suttapitaka](#), and subcommentaries on the [JĀTAKA](#), the [BUDDHAVAMSA](#), and the [ABHIDHAMMAPITAKA](#).

[Dhammaruci Nikāya](#). The name of a Sri Lankan [THERAVĀDA](#) monastic order, which, according to Sinhalese chronicles, is named after a Vajjiputaka (S. [VRJIPUTRAKA](#)) monk named Dhammaruci. Dhammaruci is said to have brought his disciples from India to Sri Lanka, where they were welcomed by a group of monks at [ABHAYAGIRI](#) who had seceded from the [MAHĀVIHĀRA](#) when a monk named Mahātissa was expelled from the Mahāvihāra for inappropriate interaction with the laity. This secession is said to have occurred not long after the founding of Abhayagiri in the late first century BCE. The Dhammaruci Nikāya is considered a heterodox sect of Sri Lankan Theravāda because of disagreements over minor points in the [VINAYA](#). They nonetheless received royal patronage during several periods of Sri Lankan history. The Abhayagiri Nikāya, which maintained close ties with India and adopted some [MAHĀYĀNA](#) teachings, is sometimes referred to as the Dhammaruci Nikāya.

[Dhammasaṅgaṇi](#). [alt. Dhammasaṅgaṇī]. In Pāli, lit. "Enumeration (saṅgaṇī) of Factors (dhamma)"; the first of the seven books of the [THERAVĀDA ABHIDHAMMAPITAKA](#). The text undertakes a systematic analysis of all the elements of reality, or factors (dhamma; [S. DHARMA](#)), discussed in the [suttapitaka](#), organizing them into definitive rosters. The elaborate analysis of each and every element of existence provided by the *Dhammasaṅgaṇi* is considered to be

foundational to the full account of the conditional relations pertaining between all those dharmas found in the [PATTHĀNA](#), the last book of the Pāli abhidhamma. ¶ The *Dhammasaṅgaṇi* consists of an initial “matrix” (mātikā; [S. MĀTRKĀ](#)), followed by four main divisions: (1) mind ([CITTA](#)) and mental concomitants ([CETASIKA](#)), (2) materiality ([RŪPA](#)), (3) analytical summaries (nikkhepa; [S. NIKṢEPA](#)), and (4) exegesis ([ATTHAKATHĀ](#)). In the opening matrix, the complete list of subjects to be treated in both the *Dhammasaṅgaṇi*, as well as the entire abhidhammapiṭaka, is divided into three groups. (1) The triad matrix (tikamātikā) consists of twenty-two categories of factors (dhamma; [S. DHARMA](#)), each of which is treated as triads. For example, in the case of the matrix on wholesomeness (kusala; [S. KUŚALA](#)), the relevant factors are divided into wholesome factors (kusaladhamma; [S. kuśaladharmā](#)), unwholesome factors (akusaladhamma; [S. akuśaladharmā](#)), and neither wholesome nor unwholesome factors (avyākatadhamma; [S. AVYĀKRTADHARMA](#)). (2) The dyad matrix (dukamātikā) consists of one hundred categories of factors, treated as dyads. For example, in the matrix on cause ([HETU](#)), factors are divided between factors that are root causes (hetudhamma) and factors that are not root causes (na hetudhamma). (3) The dyad matrix from the sūtras (suttantikadukamātikā) consists of forty-six categories of factors found in the suttapiṭaka that are treated as dyads. According to the [ATTHASĀLINĪ](#), the commentary to the *Dhammasaṅgaṇi*, this section was added by Sāriputta ([S. ŚĀRIPUTRA](#)), one of the two main disciples of the Buddha, to facilitate understanding of the suttapiṭaka. Of the four main divisions of the *Dhammasaṅgaṇi* that follow this initial matrix, the first two, the division on mind and mental concomitants (cittuppādakaṇḍa) and the division on materiality (rūpakaṇḍa), expound upon the first category in the triad matrix, the matrix on wholesomeness, so as to provide a basis for the analysis of other categories of dharmas. The division on mind and mental concomitants contains the analysis of wholesome factors, unwholesome factors, and the first two of the four categories of factors that are neither wholesome nor unwholesome (avyākata; [S. AVYĀKRTA](#)), namely, resultant ([VIPĀKA](#)) and noncausative action (kiriya); the division on materiality (rūpakaṇḍa) treats the remaining two categories of avyākatadhammas, namely, materiality (rūpa) and nibbāna ([S. NIRVĀNA](#)), although nibbāna does not receive a detailed explanation. In the first division on wholesomeness in the triad category, each aspect is analyzed in relation to the various realms of existence: wholesome states of mind and mental concomitants: (1) pertaining to the sensuous realm ([KĀMĀVACARA](#)) (P. *kāmāvacara-aṭṭhamahācitta*), (2) pertaining to the realm of subtle materiality

(rūpāvacara) (P. rūpāvacarakusala), (3) pertaining to the immaterial realm (arūpāvacara) (P. arūpāvacarakusala), (4) leading to different levels of existence within the three realms, and (5) leading to liberation from the three realms (lokuttaracitta). The third division, the division on analytical summaries (nikkhepakāṇḍa), provides a synopsis of the classifications found in all the triads and dyads, organized in eight categories: roots (mūla), aggregates (khandha; S. [SKANDHA](#)), doors (dvāra), field of occurrence ([BHŪMI](#)), meaning (attha; S. [ARTHA](#)), doctrinal interpretation (dhamma), nomenclature (nāma), and grammatical gender (linga). The final division on exegesis (aṭṭhakathākāṇḍa) offers additional detailed enumeration of other triads and dyads.

Dhanapāla. [alt. Nālāgiri] (T. Nor skyong; C. Hucai/Shoucai; J. Gozai/Shuzai; K. Hojae/Sujae 護財/守財). In Sanskrit and Pāli, “Wealth Protector”; alternate name of a ferocious elephant whom the Buddha tamed with his loving-kindness ([MAITRĪ](#)) on the streets of [RĀJAGRHA](#). See [NĀLĀGIRI](#).

Dharamsala. See [DHARMAŚĀLA](#).

dhāraṇī. (T. gzungs; C. tuoluoni/zongchi; J. darani/sōji; K. tarani/ch’ongji 陀羅尼/總持). In Sanskrit, “mnemonic device,” “code.” The term is derived etymologically from the Sanskrit root √dhṛ (“to hold” or “to maintain”), thus suggesting something that supports, holds, or retains; hence, a verbal formula believed to “retain” or “encapsulate” the meaning of lengthier texts and prolix doctrines, thus functioning as a mnemonic device. It is said that those who memorize these formulae (which may or may not have semantic meaning) gain the power to retain the fuller teachings that the dhāraṇī “retain.” Commenting on the [BODHISATTVABHŪMISŪTRA](#), Buddhist exegetes, such as the sixth-century Chinese scholiast [JINGYING HUIYUAN](#), describe dhāraṇī as part of the equipment or accumulation ([SAMBHĀRA](#)) that [BODHISATTVAS](#) need to reach full enlightenment, and classify dhāraṇī into four categories, i.e., those associated with (1) teachings ([DHARMA](#)), (2) meaning ([ARTHA](#)), (3) spells ([MANTRA](#)), and (4) acquiescence ([KSĀNTI](#)). The first two types are involved with learning and remembering the teachings and intent of Buddhist doctrine and thus function as “codes.” In the [PRAJÑĀPĀRAMITĀ](#) literature, for example, a dhāraṇī can be a letter of the alphabet associated with a meaningful term: e.g., the letter “a” serves as code for remembering the term “ādy-anutpannatva” (“unproduced from the very beginning”). The third type (mantradhāraṇī) helps the bodhisattva to overcome adversity, counter baleful influences, and bestow protection (see [PARĪTTA](#)). The

fourth type assists the bodhisattva in acquiescing to the true nature of dharmas as unproduced ([ANUTPATTIKADHARMAKSĀNTI](#)), giving him the courage to remain in the world for the sake of all sentient beings. Dhāraṇī sometimes occur at the conclusion of a Mahāyāna sūtra as a terse synopsis of the fuller teaching of the sūtra, again drawing on their denotation as codes. The [DHARMAGUPTAKA](#) school of mainstream Buddhism, which may date to as early as the third or second century BCE, included a dhāraṇī collection (dhāraṇīpiṭaka) as an addition to the usual tripartite division of the Buddhist canon ([TRIPITAKA](#)), an indication of how widespread the use of dhāraṇī was across the Buddhist tradition. Dhāraṇī also appear often in Buddhist tantras and one prevailing theory in the scholarship had been that they were the root source from which tantric literature developed. The connection between dhāraṇī and the [TANTRAS](#) is tenuous, however, and seems not to be found before eighth-century materials. More likely, then, dhāraṇī should be treated as a pan-Buddhistic, rather than a proto-tantric, phenomenon. Indeed, the [DAZHIDU LUN](#) (**Mahāprajñāpāramitāsāstra*), attributed to [NĀGĀRJUNA](#), includes facility in dhāraṇī among the skills that all ordained monks should develop and mastery of ten different types of dhāraṇī as a central part of the training of bodhisattvas. See also [MANTRA](#).

dharma. (P. dhamma; T. chos; C. fa; J. hō; K. pŏp 法). In Sanskrit, “factor,” or “element”; a polysemous term of wide import in Buddhism and therefore notoriously difficult to translate, a problem acknowledged in traditional sources; as many as ten meanings of the term are found in the literature. The term dharma derives from the Sanskrit root √dhṛ, which means “to hold” or “to maintain.” In Vedic literature, dharma is often used to refer to the sacrifice that maintains the order of the cosmos. Indian kings used the term to refer to the policies of their realms. In Hinduism, there is an important genre of literature called the dharmasāstra, treatises on dharma, which set forth the social order and the respective duties of its members, in relation to caste, gender, and stage of life. Based on this denotation of the term, many early European translators rendered dharma into English as “law,” the same sense conveyed in the Chinese translation of dharma as fa (also “law”). ¶ In Buddhism, dharma has a number of distinct denotations. One of its most significant and common usages is to refer to “teachings” or “doctrines,” whether they be Buddhist or non-Buddhist. Hence, in recounting his search for truth prior to his enlightenment, the Buddha speaks of the dharma he received from his teachers. After his enlightenment, the Buddha’s first sermon was called “turning the wheel of the dharma”

([DHARMAKAPRAVARTANA](#)). When the Buddha described what he himself taught to his disciples, he called it the [DHARMAVINAYA](#), with the vinaya referring to the rules of monastic discipline and the dharma referring presumably to everything else. This sense of dharma as teaching, and its centrality to the tradition, is evident from the inclusion of the dharma as the second of the three jewels ([RATNATRAYA](#), along with the Buddha and the [SAMGHA](#), or community) in which all Buddhists seek refuge. Commentators specified that dharma in the refuge formula refers to the third and fourth of the [FOUR NOBLE TRUTHS](#): the truth of the cessation ([NIRODHASATYA](#)) of the causes that lead to suffering and the truth of the path ([MĀRGA](#)) to that cessation. Here, the verbal root of dharma as “holding” is evoked etymologically to gloss dharma as meaning something that “holds one back” from falling into states of suffering. A distinction was also drawn between the dharma or teachings as something that is heard or studied, called the scriptural dharma ([ĀGAMA](#)-dharma), and the dharma or teachings as something that is made manifest in the consciousness of the practitioner, called the realized dharma ([ADHIGAMA](#)-dharma). ¶ A second (and very different) principal denotation of dharma is a physical or mental “factor” or fundamental “constituent element,” or simply “phenomenon.” In this sense, the individual building blocks of our compounded ([SAMSKRITA](#)) existence are dharmas, dharma here glossed as something that “holds” its own nature. Thus, when Buddhist texts refer to the constituent elements of existence, they will often speak of “all dharmas,” as in “all dharmas are without self.” The term [ABHIDHARMA](#), which is interpreted to mean either “higher dharma” or “pertaining to dharma,” refers to the analysis of these physical and mental factors, especially in the areas of causation and epistemology. The texts that contain such analyses are considered to be one of the three general categories of the Buddhist canon (along with [SŪTRA](#) and vinaya), known as the [TRIPITAKA](#) or “three baskets.” ¶ A third denotation of the term dharma is that of “quality” or “characteristic.” Thus, reference is often made to dharmas of the Buddha, referring in this sense not to his teachings but to his various auspicious qualities, whether they be physical, verbal, or mental. This is the primary meaning of dharma in the term [DHARMAKĀYA](#). Although this term is sometimes rendered into English as “truth body,” dharmakāya seems to have originally been meant to refer to the entire corpus ([KĀYA](#)) of the Buddha’s transcendent qualities (dharma). ¶ The term dharma also occurs in a large number of important compound words. [SADDHARMA](#), or “true dharma,” appears early in the tradition as a means of differentiating the teachings of the Buddha from those of other, non-Buddhist,

teachers. In the [MAHĀYĀNA](#) sūtras, saddharma was used to refer, perhaps defensively, to the Mahāyāna teachings; one of the most famous Mahāyāna sūtras is the [SADDHARMAPUNĀRIKASŪTRA](#), known in English as the “Lotus Sūtra,” but whose full title is “White Lotus of the True Dharma Sūtra.” In Buddhist theories of history, the period after the death of the Buddha (often said to last five hundred years) is called the time of the true dharma. This period of saddharma is followed, according to some theories, by a period of a “semblance” of the true dharma ([SADDHARMAPRATIRŪPAKA](#)) and a period of “decline” ([SADDHARMAVIPRALOPA](#)). The term [DHARMADHĀTU](#) refers to the ultimate nature of reality, as does [DHARMATĀ](#), “dharma-ness.” It should also be noted that dharma commonly appears in the designations of persons. Hence, a [DHARMABHĀNAKA](#) is a preacher of the dharma, a [DHARMAPĀLA](#) is a deity who protects the dharma; in both terms, dharma refers to the Buddhist doctrine. A [DHARMARĀJAN](#) is a righteous king (see [CAKRAVARTIN](#)), especially one who upholds the teachings of the Buddha. For various rosters of dharmas, see the List of Lists appendix.

[dharmabhāṇaka](#). (P. dhammabhāṇaka; T. chos smra ba; C. shuofashi; J. seppōshi; K. sōlbōpsa 說法師). In Sanskrit, “reciter of the dharma”; a term used to describe a monastic vocation. Before the Buddhist canon was committed to writing, perhaps four hundred years after the Buddha’s death, the canon was transmitted orally within monastic families of reciters. In the Pāli tradition, “reciters” were typically assigned to memorize one specific subcategory of the canon, i.e., Mahājhimabhāṇaka (“reciters of the [MAJJHIMANIKĀYA](#)”), Jātakabhāṇaka (“reciters of the [JĀTAKA](#)”), etc. The term also occurs in the [MAHĀYĀNA](#) sūtras to describe a teacher of the Mahāyāna; indeed, such teachers may have played an important role in the dissemination of the Mahāyāna sūtras.

[dharmacakra](#). (P. dhammacakka; T. chos kyi ’khor lo; C. falun; J. hōrin; K. pōmnyun 法輪). In Sanskrit, “wheel of the [DHARMA](#)”; the eight-spoked wheel that symbolizes the teaching of the Buddha (eight representing the eightfold noble path, or [ĀRYĀSTĀṄGAMĀRGA](#)). Before human images of the Buddha began to be made in India due to Greek or [JAINA](#) influence, the Buddha was often represented visually by the dharmacakra, as a symbol of the “turning the wheel of the dharma” ([DHARMACAKRAPRAVARTANA](#)), viz., the dispensation that he set in motion at his first sermon in [SĀRNĀTH](#). In Indian mythology, one of the possessions of a “universal emperor,” or [CAKRAVARTIN](#) (literally, “wheel turner”), was a magical wheel that rolled around the world, bringing the lands it

entered under the king's domain. At his birth, it was prophesied that Prince [SIDDHĀRTHA](#) would become either a cakravartin or a buddha. His dharmacakra is seen as the counterpart of the more worldly wheel of the cakravartin, and the Buddha's teaching is thus described as his setting that wheel of the dharma in motion.

[dharmacakramudrā](#). (T. chos kyi 'khor lo'i phyag rgya; C. zhuan falun yin; J. tenbōrin'in; K. chōn bōmnyun in 轉法輪印). In Sanskrit, “wheel of dharma gesture,” sometimes referred to as the “teaching [MUDRĀ](#),” is commonly found in images of the buddha [ŚĀKYAMUNI](#) where it represents his teaching the dharma. Representations of other buddhas, such as [AMITĀBHA](#), [VAIROCANA](#), and [MAITREYA](#), may also exhibit this gesture. The dharmacakramudrā is formed with the left palm turned inward toward the body, in front of the chest, and the right palm turned outward. The index finger and thumb of each hand form circles that lightly touch each other. In an alternate position, the thumb and index fingers of the right hand may touch one of the left fingers. Occasionally, the right hand forms this gesture alone, with the left hand situated in the [DHYĀNAMUDRĀ](#).

[dharmacakrapravartana](#). (P. dhammacakkappavattana; T. chos 'khor bskor ba; C. zhuan falun; J. tenbōrin; K. chōn pōmnyun 轉法輪). In Sanskrit, “turning the wheel of the [DHARMA](#)”; a term used generally to describe the Buddha's teaching; specifically, it refers the Buddha's first sermon, delivered at the Deer Park (S. [MRGADĀVA](#)) in [RSIPATANA](#), the modern [SĀRNĀTH](#), as described in the Pāli [DHAMMACAKKAPPAVATTANASUTTA](#) (S. Dharmacakrapravartanasūtra), when he first declared the [FOUR NOBLE TRUTHS](#) (catvāry āryasatyāni) and the noble eightfold path ([ĀRYĀSTĀNGAMĀRGA](#)). As Buddhist doctrine expanded exponentially in size and complexity, Buddhists were hard put to explain the apparent divergences in the teachings found in various recensions of the sūtras. In order to account for the critical differences in these sūtra explications of the Buddhist teachings, different traditions began to suggest that the Buddha had actually “turned the wheel of the dharma” more than one time. Certain perfection of wisdom ([PRAJÑĀPĀRAMITĀ](#)) sūtras refer to the Buddha's teaching of the perfection of wisdom as the second turning of the wheel of dharma. The [SAMDHINIRMOCANASŪTRA](#) posits that the Buddha actually turned the wheel of the dharma three separate times, a description that came to figure prominently in [MAHĀYĀNA](#) scholastic literature: the first, called [CATUḤSATYADHARMAKAKRA](#), when he taught the four noble truths of the [HĪNAYĀNA](#) traditions; the second,

called the [ALAKṢANADHARMAČAKRA](#) (“dharma-wheel of signlessness”), when he taught the emptiness ([ŚŪNYATĀ](#)) doctrine as understood by the [MADHYAMAČAKRA](#) school; and a third, the [*SUVIBHAKTADHARMAČAKRA](#) (“dharma-wheel possessed of good differentiation”), when he taught the Yogācāra [TRISVABHĀVA](#) doctrine. The *Samdhinirmocanasūtra* claims that the teachings of the first two dharma-wheels were provisional ([NEYĀRTHA](#)), while the third was definitive ([NĪTĀRTHA](#)). This threefold taxonomy of the Buddhist teachings was one of the most influential hermeneutical schema (see [JIAOXIANG PANSHI](#)) created in the Mahāyāna and elicited extensive commentary in India, Tibet, and East Asia. Proponents of the Madhyamaka, who identified the second wheel with the [PRAJÑĀPĀRAMITĀSŪTRAS](#), claimed to the contrary that the second wheel was definitive and the first and third were provisional.

[Dharmacakrapravartanasūtra](#). In Sanskrit, “Setting in Motion the Wheel of the Dharma.” See [DHAMMACAKKAPPAVATTANASUTTA](#).

[dharmacakṣus](#). (P. dhammacakkhu; T. chos kyi mig; C. fayan; J. hōgen; K. pōban 法眼). In Sanskrit, “eye of dharma”; the enlightened capacity to cognize the inherent truth of impermanence ([ANITYA](#)). The term also frequently appears in the sūtras in the stock formula of comprehension, where an interlocutor’s “eye of dharma” opens as he or she understands the meaning of the Buddha’s instruction. As one of the [PAÑCACAKṢUS](#) (“five eyes”), it sees all that the noble persons ([ĀRYAPUDGALA](#)) see. See also [ABHIJÑĀ](#).

[dharmadāna](#). (P. dhammadāna; T. chos kyi sbyin pa; C. fashi; J. hōse; K. pōpsi 法施). In Sanskrit, “gift of dharma”; one of the two (or sometimes three) forms of giving ([DĀNA](#)) praised in the sūtras, along with the “gift of material goods” ([ĀMISADĀNA](#)). Occasionally, a third form of giving, the “gift of fearlessness” ([ABHAYADĀNA](#)), viz., helping others to become courageous, is added to the list. “The gift of dharma” means to share the Buddhist teachings with others through such means as delivering sermons, copying sūtras, encouraging others to cultivate the path ([MĀRGA](#)), and writing dictionaries.

[Dharmadharmatāvibhāga](#). (T. Chos dang chos nyid rnam par ’byed pa). In Sanskrit, “Distinguishing Dharma and Dharmatā”; a short [YOGĀCĀRA](#) work attributed to [MAITREYA](#) or [MAITREYANĀTHA](#); it survives only in Tibetan translation (in the [SDE DGE BSTAN ’GYUR](#), there are two translations); it is one of the five works of Maitreya ([BYAMS CHOS SDE LNKA](#)). The text explains [SAMSĀRA](#)

(= [DHARMA](#)) and the [NIRVĀNA](#) (= [DHARMATĀ](#)) attained by the [ŚRĀVAKA](#), [PRATYEKABUDDHA](#), and [BODHISATTVA](#); like the [MADHYĀNTAVIBHĀGA](#), it uses the three-nature ([TRISVABHĀVA](#)) terminology to explain that, because there is no object or subject, the transcendent is beyond conceptualization. It presents the paths leading to transformation of the basis ([ĀŚRAYAPARĀVṚTTI](#)), and enumerates ten types of [TATHATĀ](#) (suchness). There is a commentary by [VASUBANDHU](#), the *Dharmadharmatāvibhāgavṛtti*.

[dharmadhātu](#). (P. dhammadhātu; T. chos kyi dbyings; C. fajie; J. hokkai; K. pŏpkye 法界). In Sanskrit, “dharma realm,” viz., “realm of reality,” or “dharma element”; a term that has two primary denotations. In the [ABHIDHARMA](#) tradition, dharmadhātu means an “element of the dharma” or the “reality of dharma.” As one of the twelve [ĀYATANA](#) and eighteen [DHĀTU](#), the dharmadhātu encompasses every thing that is or could potentially be an object of cognition and refers to the “substance” or “quality” of a dharma that is perceived by the mind. Dhātu in this context is sometimes read as “the boundary” or “delineation” that separates one distinct dharma from the other. The [ABHIDHARMAKOŚABHĀSYA](#) lists the sensation aggregate ([VEDANĀ-SKANDHA](#)), the perception aggregate ([SAMJÑĀ-skandha](#)), the conditioning forces aggregate ([SAMSKĀRA-skandha](#)), unmanifest materiality ([AVIJÑAPTIRŪPA](#)), and unconditioned dharmas (viz., [NIRVĀNA](#)) to be the constituents of this category. ¶ In the [MAHĀYĀNA](#), dharmadhātu is used primarily to mean “sphere of dharma,” which denotes the infinite domain in which the activity of all dharmas takes place—i.e., the universe. It also serves as one of several terms for ultimate reality, such as [TATHATĀ](#). In works such as the [DHARMADHĀTUSTAVA](#), the purpose of Buddhist practice is to recognize and partake in this realm of reality. ¶ In East Asian Mahāyāna, there is a list of “ten dharmadhātus,” which are the six traditional levels of nonenlightened existence—hell denizens ([NĀRAKA](#)), hungry ghosts ([PRETA](#)), animals ([TIRYAK](#)), demigods ([ASURA](#)), humans ([MANUSYA](#)), and divinities ([DEVA](#))—together with the four categories of enlightened beings, viz., [ŚRĀVAKAS](#), [PRATYEKABUDDHAS](#), [BODHISATTVAS](#), and buddhas. ¶ The Chinese [HUAYAN](#) school recognizes a set of four dharmadhātus ([SI FAJIE](#)), that is, four successively more profound levels of reality: (1) the dharmadhātu of phenomena ([SHI FAJIE](#)); (2) the dharmadhātu of principle ([LI FAJIE](#)); (3) the dharmadhātu of the unimpeded interpenetration between phenomena and principle ([LISHI WU’AI FAJIE](#)); and (4) the dharmadhātu of unimpeded interpenetration of phenomenon and phenomena ([SHISHI WU’AI FAJIE](#)). ¶ In [YOGATANTRA](#), the dharmadhātu consists of the realms of vajradhātu

(see [KONGŌKAI](#)) and garbhadhātu (see [TAIZŌKAI](#)), categories that simultaneously denote the bivalence in cosmological structure, in modes of spiritual practice, and in the powers and qualities of enlightened beings. Dharmadhātu is believed to be the full revelation of the body of the cosmic buddha [VAIROCANA](#).

[dharmadhātuprakṛtijñāna](#). See [DHARMADHĀTUSVABHĀVAJÑĀNA](#).

[Dharmadhātustava](#). [alt. Dharmadhātustotra] (T. Chos dbyings bstod pa; C. Zan fajie song; J. San hokkaiju; K. Ch’an pöpkye song 讚法界頌). In Sanskrit, “Praise of the [DHARMADHĀTU](#),” a hymn in 101 stanzas attributed to [NĀGĀRJUNA](#). It is cited by [BHĀVAVIVEKA](#) as a work by Nāgārjuna, but its authorship has been questioned by scholars because its substantialist elements seem at odds with the doctrine of emptiness ([ŚŪNYATĀ](#)), as espoused by Nāgārjuna in works such as the [MŪLAMADHYAMAKĀRIKĀ](#). The text is also not counted among the “four hymns” ([CATUHSTAVA](#)), which can be more confidently ascribed to Nāgārjuna. However, in the Tibetan tradition, it is regarded as his work and is counted among his “devotional corpus” ([STAVAKĀYA](#)). Apart from a few stanzas quoted in extant Sanskrit works, the text is lost in the original Sanskrit and is preserved in Tibetan and Chinese (translated by [DĀNAPĀLA](#)). The *Dharmadhātustava* describes the nature of the realm of reality (dharmadhātu) as being pure in its essence but is hidden by the afflictions ([KLEŚA](#)); when those taints are removed, the nature of reality is made manifest. Many of the metaphors in the text are similar to those found in the [TATHĀGATAGARBHA](#) literature. However, the dharmadhātu is also described in ontological terms as the cause of [SAMSĀRA](#), uncreated, immovable, certain, pure, the seed, etc., descriptions that seem at odds with Nāgārjuna’s more famous views. In Tibet, this apparent contradiction figured prominently in the so-called [RANG STONG GZHAN STONG](#) debates, where the proponents of the rang stong position, especially the [DGE LUGS](#), saw Nāgārjuna’s exposition of emptiness to be his definitive position and explained the dharmadhātu as emptiness. The proponents of the gzhan stong position, most famously the [JO NANG](#), argued for a more substantialist reality that is not empty of its own nature ([SVABHĀVA](#)) but is devoid of adventitious defilements. They found support for this position in the *Dharmadhātustava*.

[dharmadhātusvabhāvajñāna](#). [alt. dharmadhātuprakṛtijñāna] (T. chos dbyings ye shes; C. fajie tixingzhi; J. hokkai taishōchi; K. pöpkye ch’esōngji 法界體性智). In Sanskrit, “the wisdom of the essential nature of the reality-realm”; one of five wisdoms of a buddha. The five are the wisdom of the essential nature of the

[DHARMADHĀTU](#) (dharmadhātuprakṛtijñāna or dharmadhātusvabhāvajñāna), the mirror-like wisdom ([ADARŚAJÑĀNA](#)), the wisdom of equality ([SAMATĀJÑĀNA](#)), the wisdom of specific knowledge ([PRATYAVEKṢANAJÑĀNA](#)), and the wisdom of having accomplished what was to be done ([KṚTYĀNUṢṬHĀNAJÑĀNA](#)). The five wisdoms are considered to derive from specific transformations of the nine types of consciousness ([VIJÑĀNA](#)), which occur when a cultivator consummates one's practice: dharmadhātuprakṛtijñāna is derived from the transformation of the ninth consciousness, the "immaculate consciousness" ([AMALAVIJÑĀNA](#)); adarśajñāna from the eighth, the "storehouse consciousness" ([ĀLAYAVIJÑĀNA](#)); samatājñāna from the seventh, "defiled mental consciousness" ([KLISTAMANAS](#)); the pratyavekṣañajñāna from the sixth, "mental consciousness" ([MANOVIJÑĀNA](#)); and kṛtyānuṣṭhānajñāna from the five sensory consciousnesses. The [YOGĀCĀRA](#) school initially discussed only the latter four types of wisdom, without the dharmadhātuprakṛtijñāna that derived from amalavijñāna. The full list of five wisdoms appears to derive from the "Sūtra of the Buddha Stage" (S. [BUDDHABHŪMISŪTRA](#); C. Fodi jing), which refers to five kinds of dharmas that are incorporated in the stage of great enlightenment, viz., the four earlier types of wisdom listed in Yogācāra materials, plus the pure dharmadhātu, corresponding to dharmadhātuprakṛtijñāna. In esoteric Buddhism, these wisdoms are personified as the five buddhas depicted in the diamond-realm [MANDALA](#) (vajradhātumaṇḍala). The five wisdoms of the diamond-realm (S. vajradhātu; see [KONGŌKAI](#)) represent the aspect of wisdom of the [DHARMAKĀYA](#) buddha, Mahāvairocana (see [VAIROCANA](#)). In contrast, the womb-realm (garbhadhātu; see [TAIZŌKAI](#)) is interpreted as the store or womb of Mahāvairocana Buddha, that is, the fundamental principle underlying those five types of wisdom. These are represented by Mahāvairocana in the center, [AKṢOBHYA](#) in the east, [RATNASAMBHĀVA](#) in the south, [AMITĀBHA](#) in the west and [AMOGHASIDDHI](#) or [ŚĀKYAMUNI](#) in the north.

[Dharmadinnā](#). (P. Dhammadinnā; T. Chos kyis sbyin; C. Tanmotina biqiuni/Fale biqiuni; J. Donmadaina bikuni/Hōraku bikuni; K. Tammajena piguni/Pōmnak piguni 曇摩提那比丘尼/法樂比丘尼). An eminent [ARHAT](#) nun, declared by the Buddha to be foremost among his nun disciples in the gift of preaching. According to Pāli sources, she was married to a rich merchant of Rājagaha (S. [RĀJAGRHA](#)) named [VISĀKHA](#). Visākha was a lay disciple of the Buddha, but his behavior toward his wife changed after he became a nonreturner ([ANĀGĀMIN](#)). When he explained why, Dhammadinnā requested permission to renounce the

world and become a Buddhist nun. So highly did Visākha regard his wife's piety that he informed Bimbisāra, the king of [MAGADHA](#), who arranged for her to be carried to the nuns' convent on a golden palanquin. Dhammadinnā dwelled in solitude and soon became an arhat of the highest degree, equipped with the four analytical knowledges (paṭisambhidā; S. [PRATISAMVID](#)), which included knowledge of the entire Buddhist canon. When she returned to Rājagaha to venerate the Buddha, her former husband Visākha approached her with questions on doctrine, which she easily answered. Visākha reported this to the Buddha, who praised Dhammadinnā's proficiency in preaching. Dhammadinnā's preeminence in preaching was a result of a vow she made during the time of the past buddha Padumuttara, when she witnessed a nun who was praised for her eloquence and vowed to achieve the same.

[Dharmagupta](#). (C. Damojiduo; J. Darumagyūta; K. Talmagūpta 達摩笈多) (d. 619). A South Indian monktranslator who traveled to China during the Sui dynasty; sometimes known by his abbreviated name Jiduo. Arriving in the Chinese capital of Chang'an in 590, he set to translating several scriptures into Chinese, including sūtras on the buddha [BHAIŚAJYAGURU](#), one of the later recensions of the [SADDHARMAPUNĀRIKASŪTRA](#), which he cotranslated with [JÑANAGUPTA](#), and Vasubandhu's commentary on the [VAJRACCHEDIKĀPRAJÑĀPĀRAMITĀSŪTRA](#). Some ten different translations are attributed to him. He should be distinguished from the Dharmagupta (c. third century BCE) who was the eponymous founder of the [DHARMAGUPTAKA](#) school.

[Dharmaguptaka](#). (T. Chos sbas pa; C. Fazangbu/Tanwudebu; J. Hōzōbu/Donmutokubu; K. Pōpchangbu/Tammudōkpu 法藏部/曇無德部). In Sanskrit, "Adherents of Dharmagupta"; one of the eighteen traditional "mainstream" (that is, non-[MAHĀYĀNA](#)) schools of early Indian Buddhism. There are various theories on the origin of the school in Buddhist literature. The [SARVĀSTIVĀDA](#) treatise [SAMAYABHEDOPARACANĀCAKRA](#) states that the Dharmaguptaka separated from the [MAHĪŚĀSAKA](#) school, one of the collateral branches of the Sarvāstivāda school (probably sometime around the late second or early first centuries BCE), while inscriptional evidence and Tibetan sources instead suggest it was one strand of the [VIBHAJYAVĀDA](#) (P. Vibhajjavāda) school, a collateral line of the [STHAVIRANIKĀYA](#) that was most active in [KASHMIR-GANDHĀRA](#), and Sri Lanka. There is inscriptional evidence from the northwest of the Indian subcontinent for the continued existence of the school into the seventh

century. The school is named after the eponymous teacher Dharmagupta (c. third century BCE), even though the school itself traces its lineage back to [MAHĀMAUDGALYĀYANA](#) (P. Mahāmoggallāna), one of the two main disciples of the Buddha. Unlike the typical tripartite division of the canon ([TRIPITAKA](#)), viz., [SŪTRAPITAKA](#), [VINAYAPITAKA](#), and [ABHIDHARMAPITAKA](#), the Dharmaguptaka canon is said to have consisted of five divisions, adding to the usual three a collection on [BODHISATVA](#) doctrines and practices ([BODHISATTVAPITAKA](#)) and a [DHĀRANĪ](#) collection (dhāraṇīpiṭaka). Some of the distinctive tenets of the school are (1) the Buddha is not included among the members of the [SAMGHA](#) and thus a gift given to him is superior to offerings made to the community as a whole; (2) there are four characteristics ([CATURLAKSANA](#)) of compounded things—origination, maturation, decay, and extinction—of which the first three were conditioned ([SAMSKRTA](#)) and the last unconditioned ([ASAMSKRTA](#)); (3) the path of the buddhas and bodhisattvas is distinct from that of the [ŚRĀVAKAS](#); (4) non-buddhists ([TĪRTHIKA](#)) cannot attain the five kinds of superknowledge ([ABHIJÑĀ](#)); (5) the body of an [ARHAT](#) is free from the contaminants ([ANĀSRAVA](#)). Because of their views about the Buddha’s superiority to the broader saṃgha, the school also emphasized the extraordinary merit accruing from offerings made to a [STŪPA](#), which was considered to be the contemporary representation of the Buddha because of the relics ([ŚARĪRA](#)) it enshrined. Due to the convergence of some of the school’s doctrines with those of the [MAHĀSĀMGHIKA](#), it has been suggested that the school may have had its origins within the Sthaviranikāya but was subsequently influenced by Mahāsāṃghika ideas. One of the enduring influences of the Dharmaguptaka school in Buddhist history comes from its vinaya, which came to be adopted widely throughout East Asia; this so-called “Four-Part Vinaya” ([SIFEN LŪ](#), *Dharmaguptaka vinaya) was translated into Chinese in 405 by [BUDDHAYAŚAS](#) (c. fifth century CE) and is still used today in the East Asian Buddhist traditions. The recension of the [DĪRGHĀGAMA](#) (C. *Chang Ahan jing*) that was translated into Chinese in 413 CE by Buddhayaśas and [ZHU FONIAN](#) is also attributed to the Dharmaguptaka school.

[dharma heir](#). See [FASI](#).

[dharmajñāna](#). (S). See [DHARMAKSĀNTI](#).

[Dharmākara](#). (T. Chos kyi ’byung gnas; C. Fazang biqiu; J. Hōzō biku; K. Pōpchang pigu 法藏比丘). The bodhisattva-monk ([BHIKSU](#)) who became the buddha [AMITĀBHA](#). According to the longer [SUKHĀVATĪVYŪHASŪTRA](#) (C.

Wuliangshoujing), in the distant past, Dharmākara was a monk under the tutelage of the buddha [LOKEŚVARARĀJA](#). At Dharmākara’s request, Lokeśvararāja described and displayed millions of buddha-fields ([BUDDHAKSETRA](#)) to the monk. Dharmākara then selected the best qualities of each and concentrated them in his conception of a single buddha-field, which he described to Lokeśvararāja in terms of forty-eight vows. The most important of these vows for the [PURE LAND](#) tradition is the eighteenth, in which he vows that all beings who call upon him (with the possible exception of those who have committed the five [ANANTARYAKARMAN](#), the heinous crimes that bring immediate retribution, or who have slandered the [DHARMA](#)) will be reborn in his pure land of [SUKHĀVATĪ](#). Since Dharmākara was eventually successful in his quest and became the buddha Amitābha, his vows have been fulfilled and all sentient beings therefore have access to his buddha land.

[dharmakāya](#). (T. chos sku; C. fashen; J. hosshin; K. pōpsin 法身). In Sanskrit, often translated as “truth body,” one of the two (along with the [RŪPAKĀYA](#)) or three (along with the [SAMBHOGAKĀYA](#) and [NIRMĀNAKĀYA](#)) bodies of a buddha. In early discussions of the true nature of the Buddha, especially regarding the person of the Buddha to whom one goes for refuge ([ŚARANA](#)), the term dharmakāya seems to have been coined to refer to the corpus or collection ([KĀYA](#)) of the auspicious qualities ([DHARMA](#)) of the Buddha, including his wisdom, his compassion, his various powers, etc.; it also referred to the entire corpus (kāya) of the Buddha’s teachings (dharma). In the [MAHĀYĀNA](#), the term evolved into a kind of cosmic principle that was regarded as the true nature of the Buddha and the source from which his various other forms derived. In the perfection of wisdom ([PRAJÑĀPĀRAMITĀ](#)) commentarial tradition, a dispute arose over the interpretation of the eighth chapter of the [ABHISAMAYĀLAMKĀRA](#), with [VIMUKTISENA](#) arguing that the [SVĀBHĀVAKĀYA](#) is the ultimate nature of a buddha and [HARIBHADRA](#) arguing that there are two aspects of the dharmakāya: a [JÑĀNADHARMAKĀYA](#) (knowledge truth body), i.e., the nondual omniscient knowledge of a buddha, and a svābhāvakāya. Later commentators in India and Tibet explored the ramifications of this distinction at length. See also [TRIKĀYA](#).

[Dharmakīrti](#). (T. Chos kyi grags pa; C. Facheng; J. Hōshō; K. Pōpch’ing 法稱) (c. 600–670 CE). Indian Buddhist logician, who was one of the most important and influential figures in the history of Buddhist philosophy. Dharmakīrti was the author of a series of seminal works building on his predecessor [DIGNĀGA](#)’s

[PRAMĀNASAMUCCAYA](#) (“Compendium on Valid Knowledge”), defending it against criticism by Brahmanical writers and explaining how accurate knowledge could be gleaned (see [PRAMĀNA](#)). His “seven treatises on pramāṇa” (T. [TSHAD MA SDE ’DUN](#)) are the [PRAMĀNAVĀRTTIKA](#) (“Commentary on Valid Knowledge”) and [PRAMĀNAVINIŚCAYA](#) (“Determination of Valid Knowledge”), as well as the [NYĀYABINDU](#) (“Drop of Reasoning”), the *Hetubindu* (“Drop of Reasons”), the *Sambandhaparīkṣā* (“Analysis of Relations”), the *Samtānāntarasiddhi* (“Proof of Other Mental Continuums”), and the *Vādanyāya* (“Reasoning for Debate”). Dharmakīrti proposed a causal efficacy connecting the sense object and sensory perception as the basis of reliable perception ([PRATYAKSA](#)), thereby attempting to remove the potential fallacy in Dignāga’s acceptance of the infallibility of sense data themselves. Dharmakīrti wrote explanations of many of his own works, and [DHARMOTTARA](#), Śākyamati, [PRAJÑĀKARAGUPTA](#), and Manorathanandin, among others, wrote detailed commentaries on his works. He had a profound influence on the exchange between subsequent Indian Buddhist writers, such as [ŚĀNTARAKSITA](#), [KAMALAŚĪLA](#), and [HARIBHADRA](#), and contemporary Brahmanical Naiyāyika and Mīmāṃsaka thinkers. His work subsequently became the focus of intense study in Tibet, first in [GSANG PHU NE’U THOG](#) monastery where [RNGOG BLO LDAN SHES RAB](#) and later [PHYWA PA CHOS KYI SENG GE](#) established through their commentaries on the [PRAMĀNAVINIŚCAYA](#) an influential tradition of interpretation; it was questioned by [SA SKYA PANDITA](#) in his [TSHAD MA RIGS GTER](#), giving rise to a second line of interpretation more in line with Dharmakīrti’s original works. There is a question of Dharmakīrti’s philosophical affiliation, with elements in his works that reflect both [SAUTRĀNTIKA](#) and [YOGĀCĀRA](#) doctrinal positions.

[Dharmakīrtiśrī](#). (T. Chos kyi grags pa dpal). Buddhist paṇḍita better known by his Tibetan name Gser gling pa (Serlingpa), “The Man from Suvarṇadvīpa”; also known as Kulānta (T. Rigs sbyin). He was a [GURU](#) of [ATIŚA](#), who traveled by sea to Suvarṇadvīpa (generally regarded as referring to the region of lower Burma, the Malay Peninsula, and Sumatra) in order to study with him. Atiśa is said to have praised him as his supreme teacher of [BODHICITTA](#). His doctrinal affiliation was said to be [YOGĀCĀRA](#). He is the author of the *Durbodhāloka*, a widely cited subcommentary on [HARIBHADRA](#)’s [ABHISAMAYĀLAMKĀRAVIVRTI](#). The *Durbodhāloka* is only extant in Tibetan translation and was written later than the [PRASPHUTAPADĀ](#) of Dharmamitra. It is the only extant Buddhist scholastic text

from that period by a writer from that region.

[dharmakṣānti](#). (T. chos bzod; C. faren; J. hōnin; K. pōbin 法忍). In Sanskrit, “acquiescence,” “receptivity,” or “forbearance” ([KSĀNTI](#)) to the “truth” or the “doctrine” ([DHARMA](#)); a term that occurs in [SARVĀSTIVĀDA](#) descriptions of the path of vision ([DARŚANAMĀRGA](#)). In this path schema, the path of vision consists of fifteen thought moments, with a subsequent sixteenth moment marking the beginning of the path of cultivation ([BHĀVANĀMĀRGA](#)). There are four moments of “acquiescence” to, or realization of, the “dharmas” of each of the [FOUR NOBLE TRUTHS](#) (catvāry āryasatyāni). The first moment is that of acquiescence to the truth of suffering with regard to the sensuous realm ([KĀMADHĀTU](#)); in this moment, the afflictions ([KLEŚA](#)) of the sensuous realm associated with the truth of suffering are abandoned. This is followed by a moment of doctrinal knowledge (dharmajñāna) of the truth of suffering with regard to the sensuous realm, which is the understanding that the kleśas of that realm associated with the truth of suffering have been abandoned. This is then followed by a moment of subsequent acquiescence (anvayaḥṣānti) to the truth of suffering in which the kleśas of the upper realms of existence (the [RŪPADHĀTU](#) and [ĀRŪPYADHĀTU](#)) associated with the truth of suffering are abandoned. This is followed finally by a fourth moment, called subsequent knowledge (anvayañāna) of the truth of suffering, which is the understanding that the kleśas of the two upper realms associated with the truth of suffering have been abandoned. This same fourfold sequence is repeated for the truth of origin, the truth of cessation, and the truth of the path. The sixteenth moment, that is, the moment of subsequent knowledge (anvayañāna) of the truth of the path ([MĀRGASATYA](#)) is, in effect, the knowledge that all of the kleśas of both the subtle-materiality realm and the upper immaterial realm that are associated with the four truths have been abandoned. This moment marks the beginning of the path of cultivation (bhāvanāmārga). The term is also sometimes an abbreviation for the receptivity to the nonproduction of dharmas ([ANUTPATTIKADHARMAKṢĀNTI](#)). For an explanation of dharmakṣānti and the other instants from a Mahāyāna perspective, based on the [ABHIDHARMASAMUCCAYA](#), see [DARŚANAMĀRGA](#).

[Dharmakṣema](#). (C. Tanwuchen; J. Donmuseu; K. Tammuch’am 曇無讖) (385–433 CE). Indian Buddhist monk who was an early translator of Buddhist materials into Chinese. A scion of a brāhmaṇa family from India, Dharmakṣema became at the age of six a disciple of Dharmayaśas (C. Damoyeshe; J.

Donmayasha) (d.u.), an [ABHIDHARMA](#) specialist who later traveled to China c. 397–401 and translated the *Śāriputrābhidharmaśāstra*. Possessed of both eloquence and intelligence, Dharmakṣema was broadly learned in both monastic and secular affairs and was well versed in mainstream Buddhist texts. After he met a meditation monk named “White Head” and had a fiery debate with him, Dharmakṣema recognized his superior expertise and ended up studying with him. The monk transmitted to him a text of the [MAHĀPARINIRVĀNASŪTRA](#) written on bark, which prompted Dharmakṣema to embrace the [MAHAYĀNA](#). Once he reached the age of twenty, Dharmakṣema was able to recite over two million words of Buddhist texts. He was also so skilled in casting spells that he earned the sobriquet “Great Divine Spell Master” (C. Dashenzhou shi). Carrying with him the first part of the *Mahāparinirvāṇasūtra* that he received from “White Head,” he left India and arrived in the [KUCHA](#) kingdom in Central Asia. As the people of Kucha mostly studied [HĪNAYĀNA](#) and did not accept the Mahāyāna teachings, Dharmakṣema then moved to China and lived in the western outpost of [DUNHUANG](#) for several years. Juqu Mengxun, the non-Chinese ruler of the Northern Liang dynasty (397–439 CE), eventually brought Dharmakṣema to his capital. After studying the Chinese language for three years and learning how to translate Sanskrit texts orally into Chinese, Dharmakṣema engaged there in a series of translation projects under Juqu Mengxun’s patronage. With the assistance of Chinese monks, such as Daolang and Huigao, Dharmakṣema produced a number of influential Chinese translations, including the *Dabanniepan jing* (S. *Mahāparinirvāṇasūtra*; in forty rolls), the longest recension of the sūtra extant in any language; the *Jinguangming jing* (“Sūtra of Golden Light”; S. [SUARNAPRABHĀSOTTAMASŪTRA](#); in four rolls); and the *Pusa dichu jing* (S. [BODHISATTVABHŪMISŪTRA](#); in ten rolls). He is also said to have made the first Chinese translation of the [LANKĀVATĀRASŪTRA](#) (C. *Ru Lengqie jing*), but his rendering had dropped out of circulation at least by 730 CE, when the Tang Buddhist cataloguer ZHISHENG (700–786 CE) compiled the [KAIYUAN SHIJIAO LU](#). The Northern Wei ruler Tuoba Tao, a rival of Juqu Mengxun’s, admired Dharmakṣema’s esoteric expertise and requested that the Northern Liang ruler send the Indian monk to his country. Fearing that his rival might seek to employ Dharmakṣema’s esoteric expertise against him, Juqu Mengxun had the monk assassinated at the age of forty-nine. Dharmakṣema’s translation of Indian Buddhist texts into Chinese had a significant impact on Chinese Buddhism; in particular, the doctrine that all beings have the buddha-nature ([FOXING](#)), a teaching appearing in Dharmakṣema’s translation of the

Mahāparinirvāṇasūtra, exerted tremendous influence on the development of Chinese Buddhist thought.

dharmameghā. (T. chos kyi sprin; C. fayun di; J. hōunji; K. pōbun chi 法雲地). In Sanskrit, “cloud of dharma,” the tenth and final “ground” or stage (**BHŪMI**) of the **BODHISATTVA** path, just prior to the attainment of buddhahood. On the dharmameghā bhūmi, the bodhisattva is at the point of attaining the dharmabody (**DHARMAKĀYA**) that is as vast as the sky, becomes autonomous in interacting with all material and mental factors, and gains all-pervasive knowledge, which causes the excellent dharma to fall like rain from a cloud, nurturing the entire world and increasing the harvest of virtue for sentient beings. This stage is also described as being pervaded by meditative absorption (**DHYĀNA**) and mastery of the use of **DHĀRANĪ**, just as the sky is filled with clouds. According to the **CHENG WEISHI LUN** (**Vijñaptimātratāsiddhiśāstra*; chap. 11), each of the ten stages of the bodhisattva path leads to the attainment of one of the ten types of suchness (**TATHATĀ**); these are accomplished by discarding one of the ten kinds of obstructions (**ĀVARANA**) through practicing one of the ten perfections (**PĀRAMITĀ**). In the case of the dharmameghā bhūmi, the obstruction of not yet acquiring mastery over all dharmas (fa wei zizai zhang) is removed through the perfection of knowledge (**JÑANAPĀRAMITĀ**), leading to the suchness that serves as the support for mastery over action (ye zizai deng suoyi zhenru; *kriyādivaśītāsaṃniśrayatathatā) and the ability of the bodhisattva to ripen the minds of sentient beings. The tenth stage thus removes any remaining delusions regarding the use of the supernatural knowledges or powers (**ABHIJÑĀ**) or the subtle mysteries, giving the bodhisattva complete autonomy in manipulating all dharmas. As the culminating stage of the “path of cultivation” (**BHĀVANĀMĀRGA**), the dharmameghā bhūmi still contains the last and most subtle remnants of the cognitive obstructions (**JÑEYĀVARANA**). These obstructions will be completely eradicated through the adamant-like concentration (**VAJROPAMASAMĀDHI**), which marks the transition to the “ultimate path” (**NISTHĀMĀRGA**), or “path where no further training is necessary” (**AŚAIKSAMĀRGA**), i.e., an eleventh stage of the buddhas (**TATHĀGATABHŪMI**) that is sometimes also known as the “universally luminous” (samantaprabhā).

dharmamudrā. (P. dhammamuddā; T. chos [rtags] kyi phyag rgya; C. fayin; J. hōin; K. pōbin 法印). In Sanskrit, “the seal” or “distinguishing mark” (**MUDRĀ**) “of the dharma.” This mark may refer either to the objective qualities of all

phenomena or to the doctrinal insights that distinguish either the definitive teachings ([NĪTĀRTHA](#)) of Buddhism from the provisional teachings ([NEYĀRTHA](#)), or the Buddhist teachings from non-Buddhist ([TĪRTHIKA](#)) ones. In the mainstream traditions, there are generally presumed to be three distinguishing marks of all phenomena or three doctrinal features that constitute the genuine Buddhist teachings. In one typology, the “three marks” refer to “all compounded things are characterized by impermanence” ([ANITYA](#)) “all existing things are characterized by the lack of a self” ([ANĀTMAN](#)) and “nirvāṇa is characterized by uncompounded quiescence”; in an alternate typology, the third mark is replaced by the typical “all experiences are characterized by unsatisfactoriness” ([DUHKHA](#)). In the [MAHĀYĀNA](#), one or four marks are typically listed. In the first case, the “true distinguishing mark corresponding to the true nature of all things” (yi shixiang yin) is taken to be the only true dharmamudrā. In the second case, the dharmamudrā of “all dharmas are empty in their self-nature” ([NIHŠVABHĀVA](#); [ŚŪNYATĀ](#)) is added to either group of the three marks of the mainstream tradition listed earlier to make four dharmamudrās. In Tibet, the usual locution is “four seals that mark a doctrine as the word [of the Buddha]” (lta ba bka’ btags kyi phyag rgya bzhi). See [CATURMUDRĀ](#).

[dharmanairātmya](#). (T. chos kyi bdag med; C. fawuwo; J. hōmuga; K. pōmmua 法無我). In Sanskrit, “insubstantiality of dharmas,” viz., the lack of self in all the phenomena in the universe, a second, and more advanced, level of emptiness ([ŚŪNYATĀ](#)) than the insubstantiality of the person ([PUDGALANAIRĀTMYA](#)). The doctrine of nonself ([ANĀTMAN](#)) is a fundamental tenet of Buddhism and is directed primarily at the denial of any notion of a perduring soul. Sentient beings ([SATTVA](#)) are viewed as merely a collection of aggregates ([SKANDHA](#)) or elements of reality ([DHARMA](#)), which are temporarily concatenated through an impersonal, causal process; thus, the person ([PUDGALA](#)) is lacking any eternal self (pudgalanairātmya). The mainstream Buddhist [ABHIDHARMA](#) schools began to compile extensive lists of the elements of reality (dharma) from which the compounded things of this world were comprised, and the [SARVĀSTIVĀDA](#) school was especially known for propounding the view that all these dharmas were real and existed throughout all the three time periods ([TRIKĀLA](#)) of the past, present, and future (the school’s name literally means “those who say that all exists,” S. sarvam asti). This view that dharmas were permanent, while compounded things were not, was strongly critiqued by the [MAHĀYĀNA](#) tradition as the unwarranted intrusion into Buddhism of a notion of permanence ([NITYA](#)). The [MADHYAMAKA](#)

school in particular was well known for its thoroughgoing denial of the substantiality not only of the compounded person, but of the constituents of reality as well (dharmanairātmya). The selflessness of dharmas is synonymous with the emptiness (śūnyatā) of dharmas, and the fact that all things in existence are devoid of intrinsic nature (S. [NIHŠVABHĀVA](#)). It was furthermore said in the Mahāyāna that in order to achieve buddhahood, the [BODHISATTVA](#) had to gain direct realization of both pudgalanairātmya as well as the more subtle dharmanairātmya; there was disagreement over whether the [ARHAT](#) had to gain understanding of dharmanairātmya in order to achieve [NIRVĀNA](#).

[dharmānusārin](#). (P. dhammānusāri; T. chos kyi rjes su 'brang ba; C. suifaxing; J. zuihōgyō; K. subōphaeng 隨法行). In Sanskrit, “follower of the dharma,” one who arrives at a realization of the dharma or truth through his or her own analysis of the teachings; contrasted with “follower of faith” ([ŚRADDHĀNUSĀRIN](#)) whose religious experience is grounded in the faith or confidence in what others tell him about the dharma. The [SARVĀSTIVĀDA](#) (e.g., as described in the [ABHIDHARMAKOŚABHĀSYA](#)) and [THERAVĀDA](#) (e.g., [VISUDDHIMAGGA](#)) schools of mainstream Buddhism both recognize seven types of noble ones ([ĀRYA](#), P. ariya), listed in order of their intellectual superiority: (1) follower of faith (S. śraddhānusārin; P. saddhānusāri); (2) follower of the dharma (S. dharmānusārin; P. dhammānusāri); (3) one who is freed by faith (S. [ŚRADDHĀVIMUKTA](#); P. saddhāvimutta); (4) one who has formed right view (S. [DRSTIPRĀPTA](#); P. diṭṭhippatta), by developing both faith and wisdom; (5) one who has bodily testimony (S. [KĀYASĀKSIN](#); P. kāyasakkhi), viz., through the temporary suspension of mentality in the absorption of cessation ([NIRODHASAMĀPATTI](#)); (6) one who is freed by wisdom (S. [PRAJÑĀVIMUKTA](#); P. paññāvimutta), by freeing oneself through analysis; and (7) one who is freed both ways (S. [UBHAYATOBHĀGAVIMUKTA](#); P. ubhatobhāgavimutta), by freeing oneself through both meditative absorption and wisdom. According to the Sarvāstivāda [VAIBHĀSIKA](#) school of [ABHIDHARMA](#), an [ARHAT](#) whose liberation is grounded in faith may be subject to backsliding from that state, whereas those who are dharmānusārin are unshakable ([AKOPYA](#)), because they have experienced the knowledge of nonproduction ([ANUTPĀDAJÑĀNA](#)), viz., that the afflictions (kleśa) can never occur again, the complement of the knowledge of extinction ([KSAYAJÑĀNA](#)). ¶ The Theravāda school, which does not accept this dynamic interpretation of an arhat’s spiritual experience, develops a rather different interpretation of these types of individuals. [BUDDHAGHOSA](#) explains in his

[VISUDDHIMAGGA](#) that one who develops faith by contemplating the impermanent nature of things is a follower of faith at the moment of becoming a stream-enterer (sotāpanna; S. [SROTAĀPANNA](#)) and is one who is freed by faith at the subsequent moments of the fruition of the path; one who is tranquil and develops concentration by contemplating the impermanent nature of things is one who has bodily testimony at all moments; one who develops the immaterial meditative absorptions (arūpajhāna; S. [ARŪPĀVACARADHYĀNA](#)) is one freed both ways; one who develops wisdom is one who follows the dharma (dhammānusāri) at the moment of entry into the rank of stream-enterer and is one who has formed right view at the subsequent moments of path entry. When one achieves highest spiritual attainment, one is called freed by wisdom. In another classification of six individuals found in the Pāli [CŪLAGOPĀLAKASUTTA](#), dhammānusāri is given as the fifth type, the other five being the worthy one (arahant; S. [ARHAT](#)), nonreturner (anāgāmi; S. [ANĀGĀMIN](#)), once-returner (sakadāgāmi; S. [SAKRDĀGĀMIN](#)), stream-enterer (sotāpanna; S. srotaāpanna), and follower of faith (saddhānusāri). The Indriyasamyutta in the [SAMYUTTANIKĀYA](#) also mentions these same six individuals and explains their differences in terms of their development of the five spiritual faculties ([INDRIYA](#)): faith, energy, mindfulness, concentration, and wisdom. An arahant has matured the five faculties; a nonreturner has all five faculties, but they are slightly less developed than in the arahant; a once-returner is slightly less developed than a nonreturner; a stream-enterer slightly less than a once-returner; a dhammānusāri slightly less than a stream-enterer; and a saddhānusāri slightly less than a dhammānusāri. The saddhāvimutta and dhammānusāri are also distinguished depending on when they reach higher spiritual attainment: one who is following faith at the moment of accessing the path (maggakkhana) is called saddhāvimutta, one liberated through faith; the other, who is following wisdom, is called dhammānusāri, one who is liberated by wisdom at the moment of attainment (phalakkhana). ¶ The dharmānusārin is also found in the list of the members of the saṃgha when it is subdivided into twenty ([VIMŚATIPRABHEDASAMGHA](#)). Among the dharmānusārin there are candidates for the fruit of stream-enterer (SROTAĀPANNAPRATIPANNAKA), once-returner ([SAKRDĀGĀMIPRATIPANNAKA](#)), and nonreturner (ANĀGĀMIPRATIPANNAKA). The Mahāyāna carries over the division of dharmānusārin and śraddhānusārin into its discussion of the path to enlightenment. The [PAÑCAVIMŚATISĀHASRIKĀPRAJÑĀPĀRAMITĀ](#) takes the seven types of noble ones (ārya) listed in order of intellectual superiority, and the eight noble beings (stream-enterer and so on) as examples for bodhisattvas at different

stages of the path; the dharmānusārin more quickly reaches the [AVAIIVARTIKA](#) (irreversible) stage, the śraddhānusārin more slowly, based on the development of wisdom ([PRAJÑĀ](#)) that has forbearance for the absence of any ultimately existing goal to be reached, and skillful means ([UPĀYA](#)) that places pride of place on the welfare of others ([PARĀRTHA](#)).

[Dharmapada](#). (S). See [DHAMMAPADA](#).

[dharmapāla](#). (P. dhammapāla; T. chos skyong; C. fahu; J. hōgo; K. pŏpho 法護). In Sanskrit, “protector of the [DHARMA](#)”; in Mahāyāna and tantric texts, dharmapālas are divinities, often depicted in wrathful forms, who defend Buddhism from its enemies and who guard Buddhist practitioners from various forms of external and internal dangers. The histories of many Buddhist nations often involve the conversion of local deities into dharma protectors. In Tibet, for example, the worship of dharmapālas is said to have begun in the early eighth century CE at the instigation of [PADMASAMBHAVA](#) (c. eighth century), when he was invited to the country by the Tibetan king [KHRI SRONG LDE BTSAN](#). On his arrival, Padmasambhava is said to have used his powers to subdue baleful local deities he encountered along the way and spared only those who promised to become dharmapālas. In Tibetan Buddhism, dharmapālas are divided into two groups, the mundane (’jig rten pa), who are worldly deities who protect the dharma, and the supramundane (’jig rten las ’das pa), enlightened beings who appear in wrathful form to defend the dharma. The eight types of nonhuman beings ([ASTASENĀ](#)) are also sometimes listed as dharma-protectors, viz., [GARUDA](#), [DEVA](#), [NĀGA](#), [YAKSA](#), [GANDHARVA](#), [ASURA](#), [KIMNARA](#), and [MAHORĀGA](#).

[Dharmapāla](#). (T. Chos skyong; C. Hufa; J. Gohō; K. Hobŏp 護法) (530–561). One of the ten great [YOGĀCĀRA](#) philosophers of Indian Buddhism. He was born in southern India in the middle of the sixth century CE, to the family of a high government minister. At around the age of twenty, on the evening that he was to be married, he ran away to a mountain monastery to become a monk. After mastering the teachings of both mainstream and [MAHĀYĀNA](#) Buddhism, Dharmapāla traveled extensively, becoming renowned for his debating skills. Later, he studied under the [YOGĀCĀRA](#) specialist and logician [DIGNĀGA](#) (d.u.) at [NĀLANDĀ](#), where he became chief instructor despite his youth. His teaching focused especially on Yogācāra doctrine, and he produced many excellent disciples. [XUANZANG](#) (600/602–664), one of the most important figures in the history of Chinese Buddhist scholasticism, traveled to India in the seventh

century, where he studied Dharmapāla's doctrines at Nālandā under one of his principal disciples, [ŚĪLABHADRA](#) (529–645), and brought Dharmapāla's scholastic lineage back to China. Xuanzang edited and translated some of the materials he had collected in India into the [CHENG WEISHI LUN](#) (**Vijñaptimātratāsiddhiśāstra*; “Demonstration of Consciousness-Only”), a synopsis of ten separate commentaries on [VASUBANDHU](#)'s [TRIMŚIKĀ](#) (“Thirty Verses”) but heavily focused on the insights of Dharmapāla, which Xuanzang considered orthodox. Unlike [STHIRAMATI](#), who understood the bifurcation of consciousness into subject and object to be wholly imaginary, Dharmapāla proposed instead that consciousness always appears in both subjective and objective aspects, viz., a “seeing part” (*darśanabhāga*) and a seen part (*nimittabhāga*). His interpretations regarding the nature of consciousness became predominant in the Chinese [FAXIANG](#) (alt. Weishi) school of Yogācāra, which was developed by Xuanzang and his two main disciples, [WŌNCH'ŪK](#) and [KUIJI](#). Dharmapāla retired to Asambodhi monastery at the age of twenty-nine and passed away at the age of thirty-one.

[Dharmapāla, Anagārika](#). (1864–1933). An important figure in the revival of Buddhism in Sri Lanka and the dissemination of Buddhism in the West. Born Don David Hēvāvirtarne in Sri Lanka, at that time the British colony of Ceylon, he was raised in the English-speaking middle class of Colombo and educated in Christian schools run by Anglican missionaries, where he is said to have memorized large portions of the Bible. His family was Buddhist, however, and in 1880, at the age of sixteen, he met [HENRY STEEL OLCOTT](#) and [MADAME BLAVATSKY](#), founders of the Theosophical Society, during their visit to Sri Lanka in support of Buddhism. In 1881, he took the Buddhist name Dharmapāla, “Protector of the Dharma,” and in 1884 was initiated into the Theosophical Society by Colonel Olcott, later accompanying Madame Blavatsky to the headquarters of the Society in Adyar, India. Under the initial patronage of Theosophists, he studied Pāli, choosing to adopt the lifestyle of a celibate lay religious. Prior to that time in Sri Lanka, the leadership in Buddhism had been provided exclusively by monks and kings. Dharmapāla established a new role for Buddhist laypeople, creating the category of the anagārika (meaning “homeless wanderer”), a layperson who studied texts and meditated, as did monks, but who remained socially active in the world, as did laypeople. Free from the restrictions incumbent on the Sinhalese monkhood, yet distinct from ordinary laity, he regarded this new lifestyle of the anagārika as the most suitable

status for him to work for the restoration and propagation of Buddhism. A social reformer, rationalist, and religious nationalist, he promoted rural education and a reformist style of Buddhism, stripped of what he considered extraneous superstitions, as a means of uplifting Sinhalese society and gaining independence for his country as a Buddhist nation. While he was in India in 1891, he was shocked to see the state of decay of the great pilgrimage sites of India, all then under Hindu control, and most especially of [BODHGAYA](#), the site of the Buddha's enlightenment. In that same year, he joined a group of leading Sri Lankan Buddhists to found the [MAHĀBODHI SOCIETY](#), which called on Buddhists from around the world to work for the return of important Indian Buddhist sites to Buddhist control, and one of whose aims was the restoration of the [MAHĀBODHITEMPLE](#) at Bodhgayā. This goal only came to fruition in 1949, well after his death, when the newly independent Indian government granted Buddhists a role in administering the site. His influential Buddhist journal, *The Mahā-Bodhi*, also established in 1891, continues to be published today. A gifted orator, in 1893 Anagārika Dharmapāla addressed the World's Parliament of Religions, held in conjunction with the Columbian Exhibition in Chicago, drawing much acclaim. Although he was one of several Buddhist speakers, his excellent English and Anglican education made him an effective spokesperson for the dharma, demonstrating both its affinities with, and superiority to, Christianity. In 1925, he founded the British Mahā Bodhi Society in London and a year later established the first [THERAVĀDA](#) monastery in the West, the London Buddhist Vihāra. In 1931, he was ordained as a monk (bhikkhu; [BHIKSU](#)), taking the name Devamitta. He died in 1933 at [SĀRNĀTH](#), site of the Buddha's first sermon.

[dharmaparyāya](#). (P. dhammapariyāya; T. chos kyi rnam grangs; C. famen; J. hōmon; K. pōmmun 法門). In Sanskrit, lit. “method” or “sequence of the doctrine,” denoting both “ways of teaching the dharma” as well as the “dharma discourse” itself. As implied in the Pāli interpretation of the term as “an explanation of one thing that stands for many,” these dharmaparyāya may entail types of discourse (P. kathā) that are both indirect (P. sapariyāya), and thus not meant to be taken literally, as when the Buddha refers to a person (P. puggala; S. [PUDGALA](#)) or a self (P. atta; S. [ĀTMAN](#)); and direct (P. nippariyāya), and thus able to be construed literally and without interpretation. Since the term involves ways of framing the instruction to fit the needs of the target audience, dharmaparyāya has close connections to [UPĀYAKAUŚALYA](#), “skill in means,” or “stratagems.” The

Chinese translation *famen* means literally “dharma gate,” implying an “approach to dharma,” a “way of accessing the dharma,” or sometimes simply a “teaching.”

[dharmaprīti](#). (P. *dhammapīti*; T. *chos la dga' ba*; C. *faxi*; J. *hōki*; K. *pōphŭi* 法喜). In Sanskrit, “joy of the dharma”; the uplifting feelings of joy or enthusiasm that derive from properly observing the precepts (i.e., to be morally “blameless” and thus harboring no regrets or shame) and from hearing, understanding, or practicing the dharma. Depending on its intensity, this joy may manifest itself in several different ways, ranging from a radiant complexion, horripilation (the body hair standing on end), and goose bumps, to ecstatic physical levitation. In the context of meditative training, such joy is said to be conducive to the development of concentration ([SAMĀDHI](#)) and serenity ([PRAŚRABDHI](#)).

[dharmarājan](#). (P. *dhammarājā*; T. *chos kyi rgyal po*; C. *fawang*; J. *hōō*; K. *pōbwang* 法王). In Sanskrit, “king of dharma”; one of the epithets of the Buddha used generally across traditions. The term *dharmarājan* is also used to designate a monarch with faith in the [BUDDHADHARMA](#), who rules in accordance with Buddhist, or simply broader religious, principles. Some monarchs have claimed the appellation for themselves, and many have been so designated posthumously, most notably [AŚOKA](#). In certain Mahāyāna contexts, *dharmarājan* is also a title for King [YAMA](#), so named because he administers punishments to moral transgressors in the netherworld according to the law of karmic retribution. In Tibet, the term is used to refer to the three kings credited with the introduction of Buddhism into Tibet: [SRONG BRITSAN SGAM PO](#), [KHRI SRONG LDE BRITSAN](#), and [RAL PA CAN](#). The term was also used as a reverential title that the Chinese imperial court bestowed on eminent Tibetan lamas ([BLA MA](#)), beginning in the Mongol period. In Sikkim, during the Rnam rgyal dynasty (1642–1975), the king was referred to as the *chos rgyal*, the Tibetan translation of *dharmarājan*.

[Dharmarakṣa](#). (C. *Zhu Fahu*; J. *Jiku Hōgo*; K. *Ch'uk Pōpho* 竺法護) (c. 233–310). One of the most prolific translators in early Chinese Buddhism, who played an important role in transmitting the Indian scriptural tradition to China. Presumed to be of Yuezhi heritage, *Dharmarakṣa* was born in the Chinese outpost of [DUNHUANG](#) and grew up speaking multiple languages. He became a monk at the age of eight and in his thirties traveled extensively throughout the oasis kingdoms of Central Asia, collecting manuscripts of [MAHĀYĀNA](#) scriptures in a multitude of Indic and Middle Indic languages, which he eventually brought back with him to China. Because of his multilingual ability, *Dharmarakṣa* was

able to supervise a large team in rendering these texts into Chinese; the team included scholars of Indian and Central Asian origin, as well as such Chinese laymen as the father-and-son team Nie Chengyuan and Nie Daozhen. Some 150 translations in over three hundred rolls are attributed to Dharmarakṣa, including the first translation of the [SADDHARMAPUNDIRĪKASŪTRA](#), the [VIMALAKĪRTINIRDEŚA](#), the [LALITAVISTARA](#), the [BHADRAKALPIKASŪTRA](#), and some of the [PRAJÑĀPĀRAMITĀ](#) literature. Although many of Dharmarakṣa's pioneering renderings were later superseded by the fourth-century retranslations of [KUMĀRAJĪVA](#), Dharmarakṣa is generally considered the most important translator of the early Chinese Buddhist saṃgha.

[Dharmaśālā](#). [alt. Dharmshala, Dharmsala, Dharamsala]. A former British hill station in the foothills of the Himalayas that has become the seat of the Tibetan government in exile; located in the northern Indian state of Himachal Pradesh, in the upper reaches of the Kangra Valley, with the Dhauladhar Mountains as its backdrop. The Kangra Valley is rich in Buddhist archaeological sites. In the seventh century, the Chinese monk-pilgrim [XUANZANG](#) recorded that there were fifty monasteries in the region with some two thousand monks in residence. Most evidence of Buddhism vanished a century later, however, amid an upsurge of Brahmanical revivalism. Today, Dharmaśālā is renowned as the “[LHA SA](#) of India,” because it is the headquarters of the Tibetan government in exile and the seat of the fourteenth [DALAI LAMA](#). The town is populated by Tibetan refugees and several institutes have been established to preserve the artistic, cultural, and religious traditions of Tibet, including the Library of Tibetan Works and Archives. Rnam rgyal (Namgyel) monastery, located in upper Dharmaśālā, is the personal monastery of the Dalai Lama.

[Dharmasaṃgīti](#). (T. Chos yang dag par sdud pa; C. Faji jing; J. Hōjūkyō; K. Pöpchip kyōng 法集經). In Sanskrit, “Recitation of Dharma,” a [SŪTRA](#) that contains references to doctrines that become emblematic of [MAHĀYĀNA](#) and especially [YOGĀCĀRA](#) thought, such as the notion of the nominal reality of all dharmas and the eight levels of consciousness ([VIJÑĀNA](#)). The sūtra does not survive in Sanskrit, and is extant only in Tibetan and Chinese. The Chinese translation was made by the Indian monk [BODHIRUCI](#) (fl. sixth century) in 515 CE, during the Northern Wei dynasty, at its capital Luoyang. The *Dharmasaṃgīti*, translated in six rolls, is one of over thirty Mahāyāna sūtras and treatises that Bodhiruci translated during his sojourn in China, most of which

reflect the latest developments in Indian Mahāyāna. Besides the *Dharmasaṃgīti*, Bodhiruci's translations that were related to the developing Yogācāratradition include the [LANKĀVATĀRASŪTRA](#), the [SAMDHINIRMOCANASŪTRA](#), and the [SHIDIJING LUN](#); his translation of the latter treatise led to the development of the Yogācāra-influenced [DILUN ZONG](#) in China.

[dharmaśārīra](#). (T. chos sku'i ring bsrel; C. fa[shen] sheli; J. hosshinshari/hōshari; K. pōp[sin] sari 法[身]舍利). In Sanskrit, “relics of the dharma [body]”; the Buddha's incorporeal relics, viz., his scriptures, verses, and doctrines, or the immutable truth “embodied” therein. “Relics” ([ŚARĪRA](#)) literally means “body,” but in Buddhist usage comes to refer most often to the sacred physical relics found in the cremated remains of the Buddha or of an eminent monk. In contrast to these physical relics remaining after cremation, “the relics of the dharma [body]” refers to the corpus of Buddhist literature and/or the [DHARMAVINAYA](#) embodied therein that were left behind by the Buddha as his incorporeal legacy; therefore they can be worshiped as śārīra. As the [SADDHARMAPUNĀRĪKASŪTRA](#) (“Lotus Sūtra”), for example, notes, “Wherever this sūtra is spoken, read, recited, written out, or stored, one should build a [STŪPA](#) of the seven jewels ([RATNA](#)), making it high, broad, and adorned. It is not necessary to place śārīra in it. Why is this? Within it already is the complete body of the [TATHĀGATA](#). To this stūpa one should make offerings of all kinds of flowers, incenses, beads, silk canopies, banners, vocal and instrumental music, honoring and praising it.”

[Dharmaskandha\[pādaśāstra\]](#). (T. Chos kyi phung po; C. Fayun zu lun; J. Hōunsokuron; K. Pōbon chok non 法蘊足論). In Sanskrit, “Aggregation of Factors,” or “Collection of Factors”; one of the two oldest works in the [SARVĀSTIVĀDA ABHIDHARMA](#), along with the [SAMGĪTIPARYĀYA](#), and traditionally placed as the third of the six “feet” (pāda) of the [JÑĀNAPRASTHĀNA](#), the central treatise in the Sarvāstivāda [ABHIDHARMAPĪTAKA](#). The text is attributed to [ŚĀRĪPUTRA](#) or [MAHĀMAUDGALYĀYANA](#). It is considered an early work, with some scholars dating it as early as c. 300 BCE. It draws principally from the [ĀGAMA](#) scriptures to provide an account of Buddhist soteriological practices, as well as the afflictions that hinder spiritual progress. In coverage, the closest analogues to the *Dharmaskandha* are the [VIBHAṄGA](#) of the Pāli *abhidhammapīṭaka* and the first half of the *Śāriputrābhidharmaśāstra* (probably associated with the [DHARMAGUPTAKA](#) school), but it appears to be the most primitive of the three in

the way it organizes [DHARMA](#) classifications, listing them as sense-fields or bases ([ĀYATANA](#)), aggregates ([SKANDHA](#)), and elements ([DHĀTU](#)), rather than the standard Sarvāstivāda listing of aggregates, bases, and elements (as is also found in the Pāli abhidhamma). The exposition of dharmas in the first half of the text follows the primitive arrangement of the thirty-seven factors pertaining to enlightenment ([BODHIPĀKSIKADHARMA](#)), probably the earliest of the [MĀTRKĀ](#) (matrices) listings that were the origin of the abhidharma style of dharma analysis. The *Dharmaskandha* provides one of the earliest attempts in Sarvāstivāda literature to organize the constituents of the path ([MĀRGA](#)) and introduce the crucial innovation of distinguishing between a path of vision ([DARŚANAMĀRGA](#)) and a path of cultivation ([BHĀVANĀMĀRGA](#)). This distinction would be of crucial importance in the mature systematizations of the path made by the [VAIBHĀSIKAS](#) and would profoundly influence later [MAHĀYĀNA](#) presentations of the path. The second half of the text covers various other classification schema, including the āyatanas and dhātus. The sixteenth chapter synthesizes these two divisions, and focuses especially on the afflictions ([KLEŚA](#)) and their removal. Despite being one of the earliest of the Sarvāstivāda abhidharma texts, the mature tradition considers the *Dharmaskandha* to be one of the “feet” (pāda) of the [JÑĀNAPRASTHĀNA](#), the central treatise in the Sarvāstivāda abhidharmapiṭaka. The *Dharmaskandha* does not survive in an Indic language and is only extant in a Chinese translation made by [XUANZANG](#)’s translation team in 659 CE.

[Dharmāśoka](#). (S). See [AŚOKA](#).

[dharmatā](#). (T. chos nyid; C. faxing; J. hosshō; K. pōpsōng 法性). In Sanskrit, “the nature of reality,” or “the nature of things,” interpreted in Chinese as the “dharma-nature”; the intrinsic nature ([SVABHĀVA](#)) of dharmas, which is constant ([NITYA](#)) and transcends all discriminative phenomena. Dharmatā is also sometimes used to mean “the way things are,” and is used interchangeably with other terms that have the connotation of “the real nature of things,” such as “suchness,” or “things as they are” ([TATHATĀ](#)), dharma realm ([DHARMADHĀTU](#)), emptiness ([ŚŪNYATĀ](#)), the “real end” ([BHŪTAKOTI](#)), ultimate truth ([PARAMĀRTHASATYA](#)), etc., and is sometimes used in compound with those terms. Dharmatā is said to be that which constantly exists in the world (nityasthita), whether or not the [TATHĀGATAS](#) appear to rediscover it. The [DAZHIDU LUN](#) explains that dharmatā is that unitary characteristic that combines both the

generic characteristics (zongxiang) and the distinctive characteristics (biexiang) of objects (see [LIUXIANG](#)). In the East Asian Buddhist traditions, the dharma-nature, which is described as constant, equipoised, absolute, and essential reality, is contrasted with phenomenal characteristics, which are changing, discriminative, relative, and mere conventional reality. According to the East Asian [YOGĀCĀRA](#) tradition of the [FAXIANG ZONG](#), the dharma-nature refers to reality itself, while phenomenal characteristics refer to the three natures ([TRISVABHĀVA](#)) of imaginary ([PARIKALPITA](#)), dependent ([PARATANTRA](#)), and consummate ([PARINISPANNA](#)); alternatively, dharma nature means the true suchness ([BHŪTATATHATĀ](#); zhenru) of pariniṣpannasvabhāva, and phenomenal characteristics refer to the dependent nature (paratantrasvabhāva) of all dharmas. Certain strands of Mahāyāna Buddhism also view dharmatā as one aspect of the dharma body ([DHARMAKĀYA](#)), bifurcating the dharmakāya between the dharma body as the true nature of things (*dharmatā–dharmakāya; C. faxing fashen) and dharma body as skill in means (*upāya–dharmakāya; C. fangbian fashen). The former refers to the dharma body that is free from appearances, viz., the constant dharma that is neither created nor destroyed; the latter refers to both the enjoyment body ([SAMBHOGAKĀYA](#)) and transformation body ([NIRMĀNAKĀYA](#)), which take on phenomenal appearances in order to guide sentient beings. Because dharmatā was considered to be the ultimate nature of reality, it also came to be viewed as the foundational nature of even deluded sentient beings. This notion that dharmatā was thus in some sense the original nature of sentient beings eventually evolved into the related notions of the embryo or womb of the buddhas ([TATHĀGATAGARBHA](#)) or the buddha-nature ([BUDDHADHĀTU](#); [FOXING](#)), which posit that enlightenment is somehow innate in the minds of sentient beings. The [HUAYAN](#) school eventually comes to distinguish buddha-nature (foxing), which is the innate prospect sentient beings have of achieving buddhahood, from dharmatā, which is considered the principle of true suchness (bhūtatahatā) that underlies even inanimate objects. When dharmatā means “the nature of things,” it is referring to dependent origination ([PRATĪTYASAMUTPĀDA](#)).

[dharmātmagraha](#). (T. chos kyi bdag ’dzin; C. fawozhi; J. hōgashū; K. pōbajip 法我執). In Sanskrit, the “conception of a self with regard to phenomena”; a term that is used in combination with [PUDGALĀTMAGRAHA](#), the “conception of a self with regard to persons.” In the [MAHĀYĀNA](#) philosophical schools, the false notion of self ([ĀTMAN](#)) is expanded beyond that of a permanent soul inherent in each person, to that of a broader sense of an independent existence or intrinsic

existence ([SVABHĀVA](#)) that is falsely imagined to exist in all objects of experience. Sentient beings are thus said to falsely imagine the presence of such a self in two broad categories: persons ([PUDGALA](#)) and all other phenomena ([DHARMA](#)). Wisdom ([PRAJÑĀ](#)) entails understanding the lack of self in both of these categories, referred to as the lack of self of persons ([PUDGALANAIRĀTMYA](#)) and the lack of self of phenomena ([DHARMANAIRĀTMYA](#)). Among the soteriological theories of [YOGĀCĀRA](#) and [MADHYAMAKA](#) there are differences of opinion as to whether the false conception of the selfhood of persons is more easily uprooted than the conception of the selfhood of phenomena. In addition, although all Mahāyāna philosophical schools agree that both forms of the conception of self must be uprooted by the [BODHISATTVA](#) in order to become a buddha, there are differences of opinion as to whether both must be uprooted by the [ŚRĀVAKA](#) and [PRATYEKABUDDHA](#) in order to become an [ARHAT](#).

[dharma transmission](#). See [CHUANFA](#); [FASI](#); [YINKE](#).

[Dharmatrāta](#). (T. Chos skyob; C. Damoduoluo; J. Darumatara; K. Talmadara 達摩多羅). The proper name of two well-known masters of the [ABHIDHARMA](#). ¶ The first Dharmatrāta (fl. c. 100–150 CE), sometimes known to the tradition as the Bhadanta Dharmatrāta and commonly designated Dharmatrāta I in the scholarship, was a Dārṣṭāntika from northwest India. This Dharmatrāta, along with [VASUMITRA](#), [Ghoṣa\[ka\]](#), and [Buddhadeva](#), was one of the four great [ĀBHIDHARMIKAS](#) whom Xuanzang says participated in the Buddhist council ([SAMGĪTI](#)) conveyed by the [KUSHAN](#) king [KANISKA](#) (r. c. 144–178 CE), which was headed by [PĀRŚVA](#) (see [COUNCIL, FOURTH](#)). The views of these four masters are represented in the [ĀBHIDHARMAMAHĀVIBHĀSĀ](#), a massive commentary on [KĀTYĀYANĪPUTRA](#)'s [JÑĀNAPRASTHĀNA](#), which functions as a virtual encyclopedia of [SARVĀSTIVĀDA](#) abhidharma. ¶ A second Dharmatrāta (fl. c. fourth century CE), known as Dharmatrāta II, is also the putative author of the [SAMYUKTĀBHIDHARMAHRDAYA](#) (C. *Za apitan xinlun*; “The Heart of Scholasticism with Miscellaneous Additions”), the last of a series of expository treatises that summarized Sarvāstivāda abhidharma philosophy as it was then prevailing in [BACTRIA](#) and [GANDHĀRA](#); the text was based on Dharmasresthin's [ĀBHIDHARMAHRDAYA](#). Dharmatrāta II also composed the *Pañcavastuvibhāṣā* (C. *Wushi piposha lun*; “Exposition of the FiveFold Classification”), a commentary on the first chapter of Vasumitra's [PRAKARANAPĀDA](#), one of the seven major texts of the Sarvāstivāda [ĀBHIDHARMAPITAKA](#), which was also translated by

Xuanzang in 663; it involves a discussion of the mature Sarvāstivāda fivefold classification system for dharmas: materiality ([RŪPA](#)), mentality ([CITTA](#)), mental constituents ([CAITTA](#)), forces dissociated from thought ([CITTAVIPRAYUKTASAMSKĀRA](#)), and the unconditioned ([ASAMSKRTA](#)). The [DAMODUOLUO CHAN JING](#), a meditation manual that proved influential in early Chinese Buddhism, is also attributed to him.

dharmavinaya. (P. dhammavinaya; T. chos 'dul ba; C. falü; J. hōritsu; K. pōmnyul 法律). In Sanskrit, the “teaching” ([DHARMA](#)) and “discipline” ([VINAYA](#)) expounded by the Buddha and recommended to his followers as the highest refuge and spiritual guide after his demise. The compound dharmavinaya, with dharma referring to the Buddha’s discourses ([SŪTRA](#)) and vinaya referring to monastic discipline, appears to be an early term used prior to the development of the [ABHIDHARMA](#) as a separate category of teachings and the tripartite division of the Buddhist canon ([TRIPITAKA](#)). Dharmavinaya is one of the terms (along with [BUDDHADHARMA](#)) within the tradition that is closest to what in the West is called “Buddhism.” Generally, the sūtras and the vinaya were collectively called dharmavinaya; the Chinese term falü may also less precisely refer only to the monastic precepts (see [PRĀTIMOKṢA](#)) and does not always denote two separate categories.

dharmāyatana. (P. dhammāyatana; T. chos kyi skye mched; C. fachu; J. hōsho/hosho; K. pōpch'ō 法處). In Sanskrit, “the sense-field of mental objects,” that is, objects of the mind or mental phenomena ([DHARMA](#)) as they occur in the list of twelve sense faculties or “bases of cognition” ([ĀYATANA](#)), which serve as the bases for the production of consciousness, viz., the six internal sense bases, or sense organs (eye, ear, nose, tongue, body, and mind) and the six external sense objects (forms, sounds, odors, tastes, tangible objects, and mental phenomena). The contact ([SPARŚA](#)) between the mental sense base ([MANENDRIYA](#)) and its corresponding mental object (dharma) leads to mental consciousness ([MANOVIJÑĀNA](#)). Although the other organs ([INDRIYA](#)) are limited to their respective objects (the eye to forms, the ear to sounds, etc.), any phenomenon may be a dharmāyatana because it can be an object of thought.

Dharmodgata. (T. Chos 'phags; C. Faqi pusa; J. Hōki bosatsu; K. Pōpki posal 法起菩薩). In Sanskrit, “Elevated Dharma,” or “Dharma Arising,” the name of a [BODHISATTVA](#) whom the [ĀVATAMSAKASŪTRA](#) describes as residing in the Diamond (S. [VAJRA](#)) Mountains. According to the Chinese translations of the *Avataṃsakasūtra*, Dharmodgata lives in the middle of the sea in the Diamond Mountains (C. Jingangshan; J. [KONGŌSAN](#); K. [KŪMGANGSAN](#)), where he preaches the dharma to his large congregation of fellow bodhisattvas. The [ĀSTASĀHASRIKĀPRAJÑĀPĀRAMITĀ](#) also says that Dharmodgata (his name there is transcribed as C. Tanwujian, J. Donmukatsu, and K. Tammugal) preaches the [PRAJÑĀPĀRAMITĀ](#) three times daily at the City of Fragrances (S. Gandhavatī; C.

Zhongxiangcheng; J. Shukōjō; K. Chunghyangsōng), now used as the name of one of the individual peaks at the Korean [KŪMGANGSAN](#). Since the Chinese Tang dynasty and the Korean Silla dynasty, East Asian Buddhists have presumed that Dharmodgata resided at the Diamond Mountains, just as the bodhisattva [MAÑJUŚRĪ](#) lived at [WUTAISHAN](#). In his [HUAYAN JING SHU](#), [CHENGGUAN](#)'s massive commentary to the *Avataṃsakasūtra*, Chengguan explicitly connects the sūtra's mention of the Diamond Mountains to the Kūmgangsan of Korea. At Kūmgangsan, there are many place names associated with Dharmodgata and several legends and stories concerning him have been transmitted. Records explain that [P'YOHUNSA](#), an important monastery at Kūmgangsan, at one time had an image of Dharmodgata enshrined in its main basilica (although the image is now lost). According to the Japanese ascetic tradition of [SHUGENDŌ](#), the semilegendary founder of the school, [EN NO OZUNU](#) (b. 634), is considered to be a manifestation of Dharmodgata, and his principal residence, Katsuragi Mountain in Nara prefecture, is therefore also sometimes known as the Diamond Mountains ([KONGŌSAN](#)).

[Dharmottara](#). (T. Chos mchog) (fl. eighth century). Indian author of a number of works on [PRAMĀNA](#), the most important of which are his detailed commentary on [DHARMAKĪRTI](#)'s [PRAMĀNAVINIŚCAYA](#) and a shorter commentary on his [NYĀYABINDU](#). A contemporary or student of [PRAJÑĀKARAGUPTA](#), Dharmottara was influential in the transmission of [PRAMĀNA](#) (T. tshad ma) studies in Tibet. [RNGOG BLO LDAN SHES RAB](#)'s translation of Dharmakīrti's *Pramānaviniścaya* and *Nyāyabindu* into Tibetan together with Dharmottara's commentaries and his own explanations laid the foundations for the study of pramāṇa in [GSANG PHU NE'U THOG](#) monastery. This importance continued unchallenged until [SA SKYA PANDITA](#)'s detailed explanation of Dharmakīrti's ideas based on all his seven major works, particularly his [PRAMĀNAVĀRTTIKA](#), opened up a competing tradition of explanation.

[dhātu](#). (T. khams; C. jie; J. kai; K. kye 界). In Sanskrit and Pāli, “element”; a polysemous term with wide application in Buddhist contexts. ¶ In epistemology, the dhātus refer to the eighteen elements through which sensory experience is produced: the six sense bases, or sense organs ([INDRIYA](#); viz., eye, ear, nose, tongue, body, and mind); the six corresponding sense objects ([ĀLAMBANA](#); viz., forms, sounds, odors, tastes, tangible objects, and mental phenomena); and the six sensory consciousnesses that result from contact ([SPARŚA](#)) between the

corresponding base and object ([VIJÑĀNA](#); viz., visual, auditory, olfactory, gustatory, tactile, and mental consciousnesses). As this list makes clear, the eighteen dhātus also subsume the twelve [ĀYATANA](#) (sense-fields). The dhātus represent one of the three major taxonomies of dharmas found in the sūtras (along with [SKANDHA](#) and āyatana), and represent a more primitive stage of dharma classification than the elaborate analyses found in much of the mature [ABHIDHARMA](#) literature (but cf. [DHARMASKANDHA](#)). ¶ In cosmology, dhātu is used in reference to the three realms of existence ([TRILOKADHĀTU](#)), which comprise all of the phenomenal universe: the sensuous realm ([KĀMADHĀTU](#)), the subtlemateriality realm ([RŪPADHĀTU](#)), and the immaterial realm ([ĀRŪPYADHĀTU](#)). The three realms of existence taken together comprise all of [SAMSĀRA](#), and are the realms within which beings take rebirth. In this cosmological sense, dhātu is synonymous to [AVACARA](#) (sphere, domain); see [AVACARA](#) for further details. ¶ In a physical sense, dhātu is used to refer to the constituent elements of the physical world (see [MAHĀBHŪTA](#)), of which four are usually recognized in Buddhist materials: earth, water, fire, and wind. Sometimes two additional constituents are added to the list: space ([ĀKĀŚA](#)) and consciousness ([VIJÑĀNA](#)). ¶ The term dhātu may also refer to an “elemental physical substance,” that is, the physical remains of the body, and this context is synonymous with [ŚARĪRA](#) (relic), with which it is often seen in compound as śarīradhātu (bodily relic). Sometimes three types of relics are differentiated: specific corporeal relics (śarīradhātu), relics of use (pāribhogikadhātu), and relics of commemoration (uddeśikadhātu). In a further development of this usage, in the [RATNAGOTRAVIBHĀGA](#), dhātu is synonymous with [GOTRA](#), the final element that enables all beings to become buddhas; see [BUDDHADHĀTU](#).

[Dhātukathā](#). In Pāli, “Discourse on Elements”; traditionally listed as the third of the seven canonical books of the [THERAVĀDA](#) abhidhammapiṭaka, and probably deriving from the middle stratum of Pāli abhidhamma literature, after the earlier [VIBHAṄGA](#) and [PUGGALAPAÑÑATTI](#), but before the later [KATHĀVATTHU](#); the proposed dating varies widely, but the first century BCE is its terminus ad quem. The *Dhātukathā* presents a psychological analysis of noble states of mind, supplementing the subject matter of the [DHAMMASAṄGANI](#). Its fourteen chapters are presented in catechetic style, describing the relationship that pertains between specific factors (dhamma; S. [DHARMA](#)) and the three broader categories of the aggregates (khandha; S. [SKANDHA](#)), elements ([DHĀTU](#)), and sense-fields ([ĀYATANA](#)). In its analysis of the relationships that pertain between these various

factors and categories, rigorous definitions of each factor are provided. The analytical approach taken in the text—e.g., whether a specific factor is both included and not included in a particular category, etc.—anticipates the sophisticated logical analysis found later in the four antinomies ([CATUṢKOTI](#)). The *Dhātukathā* is reminiscent in style and exegetical approach to the [SARVĀSTIVĀDA DHĀTUKĀYA](#), and may derive from a common urtext, although there are few similarities in their respective contents.

[Dhātukāya\[pādaśāstra\]](#). (T. Khams kyi tshogs; C. Jieshen lun; J. Kaishinron; K. Kyesin non 界身論). In Sanskrit, “Collection of Elements”; traditionally placed as the fifth of the six “feet” (pāda) of the [JÑĀNAPRASTHĀNA](#), the central treatise in the [SARVĀSTIVĀDA ABHIDHARMAPITAKA](#). The text, which is attributed to either [VASUMITRA](#) or [PŪRNA](#), probably dates from the middle stratum of Sarvāstivāda abhidharma materials, together with the [VIJÑĀNAKĀYA](#), and probably the [PRAJÑAPTIBHĀSYA](#) and [PRAKARAṆAPĀDA](#) as well; the first century BCE is the terminus ad quem for its composition. As its title suggests, the *Dhātukāya* is a collection of various schemata for organizing the diverse mental concomitants ([CAITTA](#)) that had been listed in previous [ABHIDHARMA](#) materials. The text is in two major sections, the first of which, the *mūlavastuvarga, provides a roster of ninety-one different types of mentality ([CITTA](#)) and mental concomitants (caitta) in fourteen different lists of factors ([DHARMA](#)). The second major section, the *vibhajyavarga, provides a series of analyses that details the intricate interrelationships among the various factors included in these dharma lists. The text concludes with an analysis of each individual factor in terms of its association with, or dissociation from, the eighteen elements ([DHĀTU](#)), twelve sense-fields ([ĀYATANA](#)), and five aggregates ([SKANDHA](#)). The idiosyncratic lists of dharmas found in the *Dhātukāya* are ultimately standardized in the later *Prakaraṇapāda*. Because the *Dhātukāya*’s preliminary rosters are ultimately superseded by the more developed and comprehensive treatment of dharmas found in the *Prakaraṇapāda*, the *Dhātukāya* is less commonly read and consulted within the later Sarvāstivāda tradition and is, in fact, never cited in the [ABHIDHARMAMAHĀVIBHĀSĀ](#), the Sarvāstivāda’s encyclopedic treatment of doctrine. The fact that the Chinese tradition ascribes authorship of both of these texts to Vasumitra suggests that the *Prakaraṇapāda* may have been intended to be the definitive and complete systematization of dharmas that are outlined only tentatively, and incompletely, in the *Dhātukāya*. The *Dhātukāya* is reminiscent in style and exegetical approach to the Pāli [PATHĀNA](#) and especially the

[DHĀTUKATHĀ](#) (both of which may derive from a common urtext), although there are few similarities in their respective contents. The *Dhātukāya* does not survive in an Indic language and is only extant in a Chinese translation made by [XUANZANG](#)'s translation team in 663 CE. The text is said to have been composed originally in six thousand ślokas, although the recension Xuanzang translated apparently derived from an abbreviated edition in 830 ślokas.

[Dhītika](#). (S). See [DHRTAKA](#).

[Dhṛtaka](#). [alt. Dhītika] (C. Tiduojia; J. Daitaka; K. Chedaga 提多迦). The fifth of the twenty-eight Indian patriarchs of Buddhism listed in the [LIDAI FABAO JI](#), the important lineage history of the [CHAN](#) school. Dhṛtaka is said to have been a disciple of [UPAGUPTA](#) and is best known for having converted to Buddhism the religious teacher Micchaka [alt. Mikkaka], who became his successor and the sixth patriarch, along with his eight thousand followers.

[Dhṛtarāṣṭra](#). (P. Dhataratṭha; T. Yul 'khor srung; C. Chiguo Tian; J. Jikokuten; K. Chiguk Ch'ōn 持國天). In Sanskrit, “He whose Empire is Unyielding,” or “He who Preserves the Empire”; one of the four “great kings” of heaven ([CATURMAHĀRĀJA](#)), who are also known as “world guardians” ([LOKAPĀLA](#)); he is said to be a guardian of the [DHARMA](#) and of sentient beings who are devoted to the dharma. Dhṛtarāṣṭra guards the gate that leads to the east at the midslope of the world's central axis of Mount [SUMERU](#); this gate leads to pūrvavideha (see [VIDEHA](#)), one of the four continents (dvīpa), which is located in the east. Dhṛtarāṣṭra and his fellow great kings reside in the first and lowest of the six heavens of the sensuous realm of existence ([KĀMADHĀTU](#)), the heaven of the four great kings ([CATURMAHĀRĀJAKĀYIKA](#)). Dhṛtarāṣṭra is a vassal of [ŚAKRO DEVĀNĀM INDRAH](#) (see [INDRA](#); [ŚAKRA](#)), the king of the gods, who is lord of the heaven of the thirty-three divinities ([TRĀYASTRIMŚA](#)), the second of the six sensuous-realm heavens, which is located at the peak of Mount [SUMERU](#). Among the eight classes of demigods, Dhṛtarāṣṭra rules over the “heavenly musicians” ([GANDHARVA](#)) and the “stinking hungry demons” (pūtana). Dhṛtarāṣṭra and the four heavenly kings were originally indigenous Indian or Central Asian deities, who were eventually “conquered” by the Buddha and incorporated into Buddhism; they seem to have been originally associated with royal ([KSĀTRIYA](#)) lineages, and their connections with royal warfare are evidenced in the suits of armor they come to wear as their cult is transmitted from Central Asia to China, Korea, and Japan. According to the *Dhāraṇīsamuccaya*, Dhṛtarāṣṭra is to be

depicted iconographically with his sword in his left hand and his right fist akimbo on his waist.

[dhūtaguṇa](#). [alt. dhūta/dhuta]. In Buddhist Hybrid Sanskrit, “austerities.” See [DHUTAṄGA](#).

[dhutaṅga](#). [alt. dhūtaṅga] (S. dhūtaguṇa/dhūta/dhuta; T. sbyang pa’i yan lag; C. toutuo[xing]; J. zuda[gyō]; K. tut’a[haeng] 頭陀[行]). In Pāli, lit. “limbs of scrupulousness,” viz., “austerities,” or “ascetic practices.” The term is alternately known as simply dhuta/dhūta in both Pāli and Sanskrit; the [BUDDHIST HYBRID SANSKRIT](#) term dhūtaguṇa means the “qualities” ([GUNA](#)) of the “purified” (dhuta) person, viz., an “ascetic.” Dhūtaṅga refers to a specific set of thirteen ascetic practices that the Buddha authorized monks to adopt voluntarily for the purposes of cultivating contentedness with little, detachment, energy, and moderation. These austerities are not enjoined on monks and nuns by the [VINAYA](#), but are rather optional practices that monastics were sanctioned to adopt for limited periods of time in order to foster sensory restraint ([INDRIYASAMVARA](#)), an important constituent of morality ([ŚĪLA](#)). Based on the Buddha’s own failed experiments with extreme mortification of the flesh (see [TAPAS](#)) as a practice conducive to enlightenment while he was a [BODHISATTVA](#), this specific set of practices was considered to provide a middle way ([MADHYAMAPRATIPAD](#)) between self-mortification and sensual indulgence. The thirteen authorized practices are (1) wearing patched robes made from discarded cloth rather than from cloth donated by laypeople; (2) wearing only three robes; (3) going for alms; (4) not omitting any house while on the alms round, rather than begging only at those houses known to provide good food; (5) eating only what can be eaten in one sitting; (6) eating only food received in the alms bowl ([PĀTRA](#)), rather than more elaborate meals presented to the [SAMGHA](#); (7) refusing more food after indicating one has eaten enough; (8) dwelling in the forest; (9) dwelling at the root of a tree; (10) dwelling in the open air, using only a tent made from one’s robes as shelter; (11) dwelling in a charnel ground ([ŚMAŚĀNA](#)); (12) satisfaction with whatever dwelling one has; and (13) sleeping in a sitting position without ever lying down (see [CHANGJWA PURWA](#)). The comparable Mahāyāna list of twelve dhūtaguṇas is essentially the same, dropping the two practices involving eating (5, 6) and adding an additional rule on wearing only garments made of coarse hemp and wool. The [VISUDDHIMAGGA](#) recommends these ascetic practices especially to those of either greedy ([RĀGA](#)) or deluded

([MOHA](#)) temperaments ([CARITA](#)), because greed and delusion both wane through, respectively, the continued practice of asceticism and the clarification of what is important in life; sometimes a person of hateful temperament is also said to benefit, because conflict abates as one becomes content with little. The Buddha offered this authorized list of voluntary practices after explicitly rejecting a more severe set of austerities proposed by his cousin and rival [DEVADATTA](#) that would have been mandatory for all members of the saṃgha: forest dwelling (see [ARAÑÑAVASI](#)), subsistence on gathered alms food only, use of rag robes only, dwelling at the foot of a tree, and strict vegetarianism. With the growth of settled monasticism, the practice of the austerities waned, although asceticism continues to be a major prestige factor within the Buddhist lay and monastic communities. In their accounts of India, both [FAXIAN](#) and [XUANZANG](#) note the presence of followers of Devadatta who adhered to the austere practices he had recommended to the Buddha. The dhutaṅgas should be distinguished from [TAPAS](#), “severe austerities,” or [DUSKARACARYĀ](#), “difficult feats” of religious virtuosity, practices that do not necessarily involve the authorized types of ascetic practices. See also [THUDONG](#).

[dhyāna](#). (P. jhāna; T. bsam gtan; C. chan/chanding; J. zen/zenjō; K. sŏn/sŏnjŏng 禪/禪定). In Sanskrit, “meditative absorption,” specific meditative practices during which the mind temporarily withdraws from external sensory awareness and remains completely absorbed in an ideational object of meditation. The term can refer both to the practice that leads to full absorption and to the state of full absorption itself. Dhyāna involves the power to control the mind and does not, in itself, entail any enduring insight into the nature of reality; however, a certain level of absorption is generally said to be necessary in order to prepare the mind for direct realization of truth, the destruction of the afflictions ([KLEŚA](#)), and the attainment of liberation ([VIMUKTI](#)). Dhyāna is classified into two broad types: (1) meditative absorption associated with the realm of subtle materiality ([RŪPĀVACARADHYĀNA](#)) and (2) meditative absorption of the immaterial realm ([ĀRŪPYĀVACARADHYĀNA](#)). Each of these two types is subdivided into four stages or degrees of absorption, giving a total of eight stages of dhyāna. The four absorptions of the realm of subtle materiality are characterized by an increasing attenuation of consciousness as one progresses from one stage to the next. The deepening of concentration leads the meditator temporarily to allay the five hindrances ([NĪVARANA](#)) and to put in place the five constituents of absorption ([DHYĀNĀṄGA](#)). The five hindrances are: (1) sensuous desire ([KĀMACCHANDA](#)),

which hinders the constituent of onepointedness of mind ([EKĀGRATĀ](#)); (2) malice ([VYĀPĀDA](#)), hindering physical rapture ([PRĪTI](#)); (3) sloth and torpor ([STYĀNA-MIDDHA](#)), hindering applied thought ([VITARKA](#)); (4) restlessness and worry ([AUDDHATYA-KAUKRTYA](#)), hindering mental ease ([SUKHA](#)); and (5) skeptical doubt ([VICIKITSĀ](#)), hindering sustained thought ([VICĀRA](#)). These hindrances thus specifically obstruct one of the specific factors of absorption and, once they are allayed, the first level of the subtlemateriality dhyānas will be achieved. In the first dhyāna, all five constituents of dhyāna are present; as concentration deepens, these gradually fall away, so that in the second dhyāna, both types of thought vanish and only prīti, sukha, and ekāgratā remain; in the third dhyāna, only sukha and ekāgratā remain; and in the fourth dhyāna, concentration is now so rarified that only ekāgratā is left. Detailed correlations appear in meditation manuals describing specifically which of the five spiritual faculties ([INDRIYA](#)) and seven constituents of enlightenment ([BODHYAṄGA](#)) serves as the antidote to which hindrance. Mastery of the fourth absorption of the realm of subtle materiality is required for the cultivation of the supranormal powers ([ABHIJÑĀ](#)) and for the cultivation of the four ārūpyāvacaradhyānas, or meditative absorptions of the immaterial realm. The immaterial absorptions themselves represent refinements of the fourth rūpāvacaradhyāna, in which the “object” of meditation is gradually attenuated. The four immaterial absorptions instead are named after their respective objects: (1) the sphere of infinite space ([ĀKĀŚĀNANTYĀYATANA](#)), (2) the sphere of infinite consciousness ([VIJÑĀNĀNANTYĀYATANA](#)), (3) the sphere of nothingness ([ĀKIṆCANYĀYATANA](#)), and (4) the sphere of neither perception nor nonperception ([NAIVASAMJÑĀNĀSAMJYYATANA](#)). Mastery of the subtlemateriality realm absorptions can also result in rebirth as a divinity ([DEVA](#)) in the subtlemateriality realm, and mastery of the immaterial absorptions can lead to rebirth as a divinity in the immaterial realm (see [ANIṆJYAKARMAṆ](#)). Dhyāna occurs in numerous lists of the constituents of the path, appearing, for example, as the fifth of the six perfections ([PĀRAMITĀ](#)). The term [CHAN](#) (J. zen), the name adopted by an important school of indigenous East Asian Buddhism, is the Chinese phonetic transcription of the Sanskrit term dhyāna. See also [JHĀNA](#); [SAMĀDHI](#); [SAMĀPATTI](#).

[dhyānamudrā](#). (T. mnyam bzhag gi phyag rgya; C. dingyin; J. jōin; K. chōngin 定印). In Sanskrit, “gesture of meditation”; also sometimes written as dhyānimudrā. This [MUDRĀ](#) is formed with both hands resting in the lap, the back of the right hand resting on the palm of the left and both thumbs lightly touching.

In this version, the right hand represents the world of enlightenment, which subdues the world of appearance symbolized by the left hand, or, alternatively, the absolute realm of reality in which [NIRVĀNA](#) and [SAMŚĀRA](#) are nondual. This gesture may also be made with the left hand only, while the right hand is positioned in another mudrā. This gesture is commonly found in images of [ŚĀKYAMUNI](#) and [AMITĀBHA](#) buddhas and is also a basic hand position used in the practice of meditation.

[dhyānāṅga](#). (P. jhānaṅga; T. bsam gtan gyi yan lag; C. chanzhi; J. zenshi; K. sōnji 禪支). In Sanskrit, the “constituents of meditative absorption” ([DHYĀNA](#)); according to mainstream Buddhist materials, five factors that must be present in order to enter into the first meditative absorption of the subtle-materiality realm ([RŪPĀVACARADHYĀNA](#)): (1) applied thought ([VITARKA](#)), (2) sustained thought ([VICĀRA](#)), (3) physical rapture ([PRĪTI](#)), (4) mental ease ([SUKHA](#)), and (5) onepointedness ([EKĀGRATĀ](#); cf. [CITTAIKĀGRATĀ](#)) or equanimity ([UPEKŚĀ](#)). Each constituent results from the temporary allayment of a specific mental hindrance ([NĪVARANA](#)): vitarka allays sloth and torpor ([STYĀNA-MIDDHA](#)); vicāra allays skeptical doubt ([VICIKITSĀ](#)); prīti allays malice ([VYĀPĀDA](#)); sukha allays restlessness and worry ([AUDDHATYA-KAUKRTYA](#)); and ekāgratā allays sensuous desire ([KĀMACCHANDA](#)). Each higher dhyāna has a decreasing number of factors, with both types of thought dropping away in the second dhyāna, physical rapture dropping away in the third, and mental ease vanishing in the fourth, when only onepointedness remains. The [ABHIDHARMAKOŚABHĀṢYA](#) and related [MAHĀYĀNA](#) accounts say the first dhyāna has five branches: applied and sustained thought, rapture, bliss, and [SAMĀDHI](#) (meditative stabilization); the second, four branches: rapture, bliss, samādhi, and [PRASĀDA](#) (calm clarity); the third, five branches: equanimity, [SMRTI](#) (recollection), [SAMPRAJANYA](#) (introspection), happiness, and onepointedness; and the fourth, four branches: equanimity, recollection, an equanimous feeling that is neither painful nor pleasant, and samādhi. See also [DHYĀNA](#); [NĪVARANA](#).

[dhyānapāramitā](#). (P. jhānapāramī; T. bsam gtan gyi pha rol tu phyin pa; C. jinglü boluomiduo; J. jōryoharamita; K. chōngnyō paramilta 靜慮波羅蜜多). In Sanskrit, the “perfection of meditative absorption” or “concentration”; the fifth of the six [alt. ten] perfections ([PĀRAMITĀ](#)) cultivated on the [BODHISATTVA](#) path. It is perfected on the fifth of the ten stages ([DAŚABHŪMI](#)) of the bodhisattva path, [SUDURJAYĀ](#) (invincibility), where the bodhisattva comprehends the various

permutations of truth ([SATYA](#)), including the [FOUR NOBLE TRUTHS](#), the provisional ([NEYĀRTHA](#)) and definitive ([NĪTĀRTHA](#)), etc., and masters infinite numbers of samādhis.

[dhyānasamāpatti](#). [alt. samāpattidhyāna] (P. jhānasamāpatti; T. bsam gtan snyoms 'jug; C. xiude ding; J. shutokujō; K. sudŭk chŏng 修得定). In Sanskrit, “meditative absorption attained through cultivation”; one of the two types of meditative absorption, along with “innate meditative absorption” ([DHYĀNOPAPATTI](#)). Whereas “innate meditative absorption” is attained once one is reborn into the “field of meditative concentration” (dhyānabhūmi), i.e., the subtlemateriality realm ([RŪPADHĀTU](#)) or the immaterial realm ([ĀRŪPYADHĀTU](#)), this “meditative absorption attained by cultivation” is the meditative state attained in the “field of distraction” (asamāhitatva) of the sensuous realm ([KĀMADHĀTU](#)) through meditative practice. Rebirth into the subtlemateriality or immaterial realms is presumed to occur as the reward for having performed in the preceding lifetime cultivation of the subtlematerial absorptions ([RŪPĀVACARADHYĀNA](#)) or immaterial absorptions ([ĀRŪPYĀVACARADHYĀNA](#)). The [ABHIDHARMAKOŚABHĀSYA](#) and related [MAHĀYĀNA](#) accounts parse the compound dhyānasamāpatti as a dual compound (dvandva) and construe dhyāna as referring to the four levels of the dhyānas of the subtlemateriality realm and samāpatti to the four levels of dhyāna of the immaterial realm.

[dhyānibuddha](#). In Sanskrit, “meditation buddhas”; a term used to refer to the five central buddhas of [VAJRAYĀNA](#) Buddhism: [AKSOBHYA](#), [AMITĀBHA](#), [AMOGHASIDDHI](#), [RATNASAMBHAVA](#), and [VAIROCANA](#) (see [PAÑCATATHĀGATA](#)). Although these five buddhas commonly appear as a group, the collective designation of them as dhyānibuddhas does not seem to be attested in a Buddhist textual source. The term first appears in the essays of [BRIAN HOUGHTON HODGSON](#), British Resident at the Court of Nepal in the early nineteenth century, who may have learned the term from his Newari informant, the pundit Amṛtānanda. Hodgson distinguished these more celestial buddhas from the mānuṣibuddhas, or human buddhas, buddhas such as [ŚĀKYAMUNI](#) who appear on earth as the human manifestations of the dhyānibuddhas. Through Hodgson, the term was widely used in Europe in the nineteenth century, and was appropriated by [HELENA PETROVNA BLAVATSKY](#), who explained in *The Secret Doctrine* that there are not five but seven dhyānibuddhas.

[dhyānopapatti](#). (C. shengde ding; J. shōtokujō; K. saengdŭk chŏng 生得定). In

Sanskrit, “innate meditative absorption”; one of the two types of meditative absorption ([DHYĀNA](#)), along with “meditative absorption attained through cultivation” ([DHYĀNASAMĀPATTI](#)). The innate type of meditative absorption refers to the state of deep concentration that is possessed congenitally by a being who is born into either the subtle-materiality realm ([RŪPADHĀTU](#)) or the immaterial realm ([ĀRŪPYADHĀTU](#)). For this reason, the subtle-materiality and the immaterial realms are termed “fields of meditative concentration” (dhyānabhūmi), while the sensuous realm ([KĀMADHĀTU](#)) is the “field of distraction” (asamāhitatva).

[Dhyānottarapatala](#). (T. Bsam gtan phyi ma rim par phye ba). In Sanskrit, the “Chapter on the Subsequent Stages of Concentration”; a brief work in seventy-four verses regarded as a chapter of the lost *Vajroṣṇīṣatantra*. It also is related to the fifth chapter of the [MAHĀVAIROCANĀBHISAMBODHISŪTRA](#). The work, preserved only in Tibetan, is classified as a [KRIYĀTANTRA](#), and provides instruction on [MANTRA](#) recitation and yogic breath practice ([PRĀNĀYĀMA](#)), which are to be undertaken subsequent to the practice of [DHYĀNA](#). There is a detailed commentary on the text by [BUDDHAGUHYA](#).

[diamond maṇḍala](#). See [KONGŌKAI](#).

[Diamond Mountains](#). See [KŪMGANGSAN](#).

[Diamond Sūtra](#). See [VAJRACCHEDIKĀPRAJÑĀPĀRAMITĀSŪTRA](#).

[dianyan](#). (J. tengen; K. chŏman 點眼). In Chinese, lit. “dotting the eyes,” also known as “opening the eyes” ([KAIYAN](#); T. spyan phye); a consecration ceremony for a buddha image ([BUDDHĀBHISEKA](#)) that serves to make the icon come alive. The term refers to a ceremony, or series of ceremonies, that accompanies the installation of a buddha image or painting, which specifically involves dotting the pupils onto the inert eyes of the icon in order to animate it. Until this ceremony is performed, the icon remains nothing more than an inert block of wood or lump of clay; once its eyes are dotted, however, the image is thought to become invested with the power and charisma of a living buddha. The related term kaiyan has the same denotation, but may in some contexts refer more broadly to “opening up the eyes” of an image by ritually dropping eye drops into its eyes. Both dianyan or kaiyan occurred in conjunction with esoteric Buddhist rituals. The *Yiqie rulai anxiang sanmei yigui jing* provides an elaborate set of instructions on how to consecrate buddha images, in which “dotting the eyes”

accompanies the performance of other esoteric practices, such as [MANTRA](#) and [MUDRĀ](#). When a bodhisattva wonders why buddha images are installed if the [DHARMAKĀYA](#) of a buddha has no physical form, the Buddha replies that images are used as an expedient for guiding neophytes who have first aroused the thought of enlightenment ([BODHICITTOTPĀDA](#)). In Korea, where this term *chōman* is typically used for this ceremony rather than *kaean* (C. *kaiyan*), there were different “dotting the eyes” consecrations for different types of Buddhist images and requisites, including images of a buddha, [ARHAT](#), the ten kings of hell (*shiwang*), and the kings of heaven, as well as in conjunction with ceremonies for erecting a [STŪPA](#) or offering robes ([KASĀYA](#)). Through these *chōman* ceremonies, Buddhist artifacts are transformed from mere physical objects into spiritually sanctioned religious items imbued with spiritual efficacy. The Korean *Chinōn chip* (“Mantra Anthology”), extant in several editions of which the oldest is dated 1476, includes a “mantra for dotting the eyes” (*chōman mun*) along with its Sanskrit and Chinese transliterations. In Japan, this ceremony is usually called *kaigen* (C. *kaiyan*) rather than *tengen*. In Chinese [CHAN](#) texts, “dotting the eyes” of a buddha image is also sometimes used as a metaphor for a Chan adept’s final achievement of awakening. See also [NETRAPRATISTHĀPANA](#).

[dianzuo](#). (J. *tenzo*; K. *chōnjwa* 典座). In Chinese, lit. “in charge of seating”; the term that comes to be used for a cook at a Buddhist monastery, who supervises the preparation and distribution of meals. In Indian [VINAYA](#) texts, the term was used to designate a “manager,” the service monk (S. [VAIYĀPRTYA\[KARA\]](#); P. *veyyāvaccakara*) who assigned seating at assemblies and ceremonies and arranged for the distribution of material objects or donations in addition to food. In the pilgrimage records of [YIJING](#) in India and [ENNIN](#) in China, the term always referred to a “manager,” not someone who worked in the monastic kitchen. But sometime after the tenth century, during the Northern Song dynasty, the term came to be used in Chinese monasteries to refer to the cook. In East Asian [CHAN](#) monasteries, the cook and five other officers, collectively known as the [ZHISHI](#) (J. *chiji*), oversaw the administration of the monastic community. Typically, the *dianzuo* position was considered a prestigious position and offered only to monks of senior rank. The Japanese Zen monk [DŌGEN KIGEN](#) wrote a famous essay on the responsibilities of the cook entitled *Tenzo kyōkun* (“Instructions to the Cook”). Cf. [DRAVYA MALLAPUTRA](#).

[Diêu Nhân](#). (妙仁) (1042–1113). The only nun whose biography is recorded in

the Vietnamese lineage history [THIÊN UYÊN TẬP ANH](#). Diệu Nhân’s personal name was Lý Ngọc Kiều. She came from Phù Đông village, Tiên Du prefecture in northern Vietnam, the eldest daughter of Lord Phụng Yết. She was raised in the imperial palace by King Lý Thánh Tông (r. 1054–72) and married a man named Lê, a provincial governor. Upon his death, she vowed not to remarry and, moved by the Buddhist teaching on impermanence, decided to give away all her belongings and enter the Buddhist order. She studied under the monk Chân Không of Phù Đông District who gave her the sobriquet Diệu Nhân. Diệu Nhân devoted herself to keeping the precepts and practicing meditation and was highly revered among nuns. Later, Chân Không appointed her head of the Hương Hải Convent.

[Dīghanikāya](#). In Pāli, “Collection of Long Discourses”; the first division of the Pāli [SUTTAPITAKA](#). It is comprised of thirty-four lengthy suttas ([SŪTRA](#)) arranged rather arbitrarily into three major sections: “morality” (*sīlakkhandā*), comprising suttas 1–14; “great division” (*mahāvagga*), comprising suttas 14–23; and the “charlatan” (*pāṭikavagga*), comprising suttas 24–34. Among the suttas contained in the *Dīghanikāya* are such renowned and influential scriptures as the [AGGAÑÑASUTTA](#), [MAHĀPARINIBBĀNASUTTA](#), [SĀMAÑÑAPHALASUTTA](#), and the [SATIPATTHĀNASUTTA](#). The Pāli tradition asserts that the texts of the *Dīghanikāya* were first recited orally during the first Buddhist council ([SAMGĪTI](#); see [COUNCIL, FIRST](#)) following the Buddha’s death and were officially transcribed into written form in Sri Lanka during the reign of King [VATTAGĀMANI ABHAYA](#) in the first century BCE. An analogous recension of the “Long Discourses” appears in the Sanskrit [DĪRGHĀGAMA](#) (all but three of its thirty sūtras have their equivalents in Pāli). Fragments of the Sanskrit recension, which is associated with the [SARVĀSTIVĀDA](#) school or its [MŪLASARVĀSTIVĀDA](#) offshoot, were rediscovered in Afghanistan in the 1990s. Before that rediscovery, only a Chinese translation of the *Dīrghāgama* survived, which was attributed to the [DHARMAGUPTAKA](#) school; the translation was finished in 413 CE. Although all three recensions of this collection have a tripartite structure, only the first section of the Pāli, the *sīlakkhandā*, has a counterpart in the Sarvāstivāda and Dharmaguptaka recensions. The *Dīghanikāya* appears in the Pali Text Society’s English translation series as *Dialogues of the Buddha*.

[Dignāga](#). [alt. Dinnāga] (T. Phyogs glang; C. Chenna; J. Jinna; K. Chinna 陳那) (c. 480–c. 540). Indian monk regarded as the formalizer of Buddhist logic

([NYĀYA](#); [HETUVIDYĀ](#)). Dignāga was an influential innovator in Buddhist inferential reasoning or logical syllogisms ([PRAYOGA](#); [SĀDHANA](#)), an important feature of Indian philosophy more broadly, which occupies a crucial place in later Indian and Tibetan philosophical analysis. The Indian Nyāya (Logic) school advocated that there were five necessary stages in syllogistic reasoning: (1) probandum or proposition ([PRATIJÑĀ](#)), “The mountain is on fire”; (2) reason ([HETU](#)), “because there is smoke,” (3) analogy (udāharaṇa), “Whatever is smoky is on fire, like a stove, but unlike a lake”; (4) application (upanāya), “Since this mountain is smoky, it is on fire”; (5) conclusion (nigamana), “The mountain is on fire.” Using the same example, Dignāga by contrast reduced the syllogism down to only three essential steps: (1) probandum or proposition ([PAKSA](#)), “the mountain is on fire”; (2) reason (hetu), “because there is smoke”; (3) exemplification (dṛṣṭānta), “whatever is smoky is on fire, like a stove,” and “whatever is not on fire is not smoky, like a lake,” or, more simply, “like a stove, unlike a lake.” Dignāga is also the first scholiast to incorporate into Buddhism the Vaiśeṣika position that there are only two valid means of knowledge ([PRAMĀNA](#)): direct perception ([PRATYAKSA](#), which also includes for Buddhists the subcategory of [YOGIPRATYAKSA](#)) and inference ([ANUMĀNA](#)). Dignāga’s major works include his [PRAMĀNASAMUCCAYA](#) (“Compendium on Valid Means of Knowledge”), [ĀLAMBANAPARĪKṢĀ](#) (“Investigation of the Object”), and *Nyāyamukha* (“Primer on Logic”), which is available only in Chinese translation. See also [DHARMAKĪRTI](#).

[Dil mgo mkhyen brtse](#). [alt. Ldil go] (Dilgo Kyentse) (1910–1991). One of the most highly revered twentieth-century teachers of the [RNYING MA](#) sect of Tibetan Buddhism, renowned both for his scholarship and meditative mastery of [RDZOGS CHEN](#) practices. His full name was Rab gsal zla ba gzhan dga’. Born in eastern Tibet, he was recognized at the age of twelve as the mind incarnation of the illustrious nineteenth-century savant [’JAM DBYANGS MKHYEN BRTSE DBANG PO](#) and enthroned at [ZHE CHEN](#) monastery. He studied under a number of masters, including the fourth Zhe chen Rgyal tshabs and [’JAM DBYANGS MKHYEN BRTSE CHOS KYI BLO GROS](#), and then spent close to thirteen years in solitary meditation retreat. At the suggestion of his teachers, he married while in his mid-twenties and fathered several children. Escaping the Communist invasion of Tibet in 1959, he fled to Bhutan where he was invited to live as the spiritual master of the royal family. A prolific author, Dil mgo mkhyen brtse was recognized as a modern-day treasure revealer ([GTER STON](#)) and eventually served a period of time

as the spiritual head of the Rnying ma. In the early 1980s he founded a new Zhen chen monastery in Kathmandu where his grandson, recognized as the monastery's throne holder, the seventh Rab 'byams incarnation, resides. On December 29, 1995, a young boy named O rgyan bstan 'dzin 'jigs med lhun grub (Orgyan Tendzin Jikme Lhundrup, b. 1993) was enthroned as Dil mgo mkhyen brtse's reincarnation in a ceremony at [MĀRATIKA](#) cave in eastern Nepal.

[Di lun zong](#). (J. Jironshū; K. Chi non chong 地論宗). In Chinese, “School of *Di lun* Exegetes”; a lineage of Buddhist scholastics who studied the *Di lun*, an abbreviation of the *Shidijing lun*, or [DAŚABHŪMIVYĀKHYĀNA](#), a commentary on the [DAŚABHŪMIKASŪTRA](#) attributed to the Indian exegete [VASUBANDHU](#). The school is considered one of the earliest of the indigenous scholastic traditions of Chinese [MAHĀYĀNA](#) Buddhism, and its thought draws on strands of Indic thought that derive from both the [YOGĀCĀRA](#) and [TATHĀGATAGARBHA](#) traditions. At the Northern Wei capital of Luoyang, [BODHIRUCI](#), Ratnamati (d.u.), and Buddhaśānta (d.u.) began the translation of the *Daśabhūmivyākhyāna* into Chinese in 508. However, disagreements between the collaborators over the nature of [ĀLAYAVIJÑĀNA](#) (viz., whether it was pure, impure, or both) led them to produce different translations. This controversy about the real nature of this eighth storehouse consciousness derived from [VASUBANDHU](#)'s ambiguous position in his commentary. In some passages, Vasubandhu implied that the ālayavijñāna was the tainted source from which [SAMŚĀRA](#) arises and thus impure; in others, he implied instead that the ālayavijñāna was coextensive with suchness ([TATHATĀ](#)) and thus fundamentally pure. Those who studied Bodhiruci's rendering came to be known as the Northern Di lun school, while the followers of Ratnamati's version were known as the Southern Di lun school. The Northern Di lun school advocated that the ālayavijñāna was only provisionally real ([SAMVRTISATYA](#)) and was impure; it was a tainted source that produced only defiled dharmas. By contrast, the southern branch advocated that the ālayavijñāna was fundamentally pure but came to be associated with impure elements: it was the functioning of suchness and thus pure, but it also was subject to the same laws of conditioned origination ([PRATĪTYASAMUTPĀDA](#)) as the sensory consciousnesses and thus impure. The two contrasting renderings of the treatise were later edited together by the Southern Di lun monk Huiguang (468–537), also known as [VINAYA](#) master Guangtong, and it is this edition in twelve rolls that we have today. Studies of the *Shidijing lun* continued with Fashang (495–580), Huishun (d.u.), [JINGYING HUIYUAN](#), and others. Interest in the

theories of the *Shidijing lun* largely waned, as new [YOGĀCĀRA](#) texts from India were introduced to China by the pilgrim and translator [XUANZANG](#) and the work of [HUAYAN](#) scholars such as [FAZANG](#) on the [AVATAMSAKASŪTRA](#) (within which the *Daśabhūmikasūtra* is incorporated) began to gain prominence. Despite being superseded by these later schools, however, the positions of the Southern Di lun school lived on in the Huayan school of the mature Chinese tradition, while the Northern Di Lun school positions were taken up by the Chinese Yogācāra tradition of the [FAXIANG ZONG](#). See also [SHE LUN ZONG](#).

[dingxiang](#). (J. chinzō; K. chōngsang 頂相). In Chinese, lit. “mark on the forehead” or “head’s appearance.” The term dingxiang was originally coined as the Chinese translation of the Sanskrit term [USNĪSA](#), but the term also came to be used to refer to a portrait or image of a monk or nun. Written sources from as early as the sixth century, such as the [GAOSEN ZHUAN](#) (“Biographies of Eminent Monks”), recount the natural mummification of eminent Buddhist monks, and subsequently, the making of lifelike sculptures of monks made from ashes (often from cremation) mixed with clay. The earliest extant monk portraits date from the ninth century and depict the five patriarchs of the esoteric school (C. Zhenyan; J. [SHINGONSHŪ](#)); these portraits are now enshrined in the collection of [TOJI](#) in Kyoto, Japan. Another early example is the sculpture of the abbot Hongbian in cave 17 at [DUNHUANG](#). Dingxiang portraits were largely, but not exclusively, used within the [CHAN](#), [SŌN](#), and [ZEN](#) traditions, to be installed in special halls prepared for memorial and mortuary worship. After the rise of the [SHIFANGCHA](#) (monasteries of the ten directions) system in the Song dynasty, which guaranteed the abbacy to monks belonging to a Chan lineage, portraits of abbots were hung in these image halls to establish their presence in a shared spiritual genealogy. The portraits of the legendary Indian monk [BODHIDHARMA](#) and the Chan master [BAIZHANG HUAHAI](#) were often placed at the center of these arrangements, symbolizing the spiritual and institutional foundations of Chan. The practice of inscribing one’s own dingxiang portrait before death also flourished in China; inscribed portraits were presented to disciples and wealthy supporters as gifts and these portraits thus functioned as highly valued commodities within the Buddhist religious community. The practice of preparing dingxiang portraits was transmitted to Japan. Specifically noteworthy are the Japanese monk portrait sculptures dating from the Kamakura period, known for their lifelike appearance. The making of dingxiang portraits continues to flourish even to this day. In Korea, the related term [CHINYŎNG](#) (“true image”) is more

commonly used to refer to monks' portraits.

[Dīnāga](#). See [DIGNĀGA](#).

[Dīpaṃkara](#). (P. Dīpaṅkara; T. Mar me mdzad; C. Dingguang rulai; J. Jōkō nyorai; K. Chōnggwang yōrae 定光如來). In Sanskrit, “Maker of Light”; a buddha of the past, who preceded the current buddha [ŚĀKYAMUNI](#) in the succession lineage of buddhas. It was in the presence of this buddha that the hermit [SUMEDHA](#), who would eventually become [ŚĀKYAMUNI](#) Buddha, made his initial vow ([PŪRVAPRANIDHĀNA](#)) to attain buddhahood and received the prophecy ([VYĀKARANA](#)) of his enlightenment. Dīpaṃkara is sometimes presumed to be the fourth in a line of twenty-seven buddhas preceding Śākyamuni, but the first to have met the [BODHISATTVA](#) who would become the current Buddha. He is therefore sometimes referred to as the first of twenty-four previous buddhas, or the fourth of twenty-eight, the last being Śākyamuni. Later enumerations found in Sanskrit and Chinese Mahāyāna texts count as many as eighty-one predecessor buddhas. Dīpaṃkara is said to have lived on earth for one hundred thousand years, three thousand of which he passed before he met a worthy recipient of his dharma. His name is explained by the legend of his birth. According to the [MAHĀVASTU](#), he was born on an island that miraculously appeared in a bathing tank as his mother neared childbirth, at which point a great many lamps appeared. An alternate name of this buddha, Dvīpaṃkara, means “Island Maker.” He is frequently depicted to the left of Śākyamuni Buddha and [MAITREYA](#) in a triad of the three buddhas of the past, present, and future. His right hand is commonly in the “gesture of fearlessness” ([ABHAYAMUDRĀ](#)), and he either stands or sits.

[Dīpaṃkaraśrījñāna](#). See [ATIŚA DĪPAMKARAŚRĪJÑĀNA](#).

[Dīpavaṃsa](#). In Pāli, the “Island Chronicle”; the earliest surviving Pāli chronicle of Sri Lanka. Written in verse, the *Dīpavaṃsa* is based on a collation of earlier Sinhalese commentaries passed down in the [MAHĀVIHĀRA](#) tradition. In its present form, it probably dates from the fourth-century CE. The bulk of the work concerns the history of [THERAVĀDA](#) Buddhism in Sri Lanka from the conversion of the Sinhalese king [DEVĀNAMPIYATIṢṢA](#) by the elder [MAHINDA](#) in the third-century BCE to the reign of king Mahāsenā in the fourth-century CE. Immensely important to the development of Theravāda historiography, the *Dīpavaṃsa* contains the earliest Pāli accounts of the Indian emperor [AŚOKA](#) and his

patronage of the third Buddhist council (see [COUNCIL, THIRD](#)) at Pāṭaliputta (S. [PĀTALIPUTRA](#)). It also reports on the dispatch of missionaries to nine foreign lands at the command of [MOGGALIPUTTATIṢṢA](#), the leader of the third council. These lands included Sīhaḷadīpa (Sri Lanka) and Suvannabhūmi, the latter variously identified by Buddhist geographers as Lower Burma, the Malay Peninsula, and/or Thailand. The *Dīpavaṃsa* provided the basic outline and contents for the later [MAHĀVAMSA](#), and it is quoted in the *Bāhiraṇidāna*, the historical introduction to the [VINAYA](#) commentary ([SAMANTAPĀSĀDIKĀ](#)). A critical edition and English translation of the *Dīpavaṃsa* was produced by Hermann Oldenberg in 1879, entitled *The Dipavaṃsa: An Ancient Buddhist Historical Record*.

[Dīrghāgama](#). (T. Lung ring po; C. Chang Ahan jing; J. Jōagongyō; K. Chang Aham kyōng 長阿含經). In Sanskrit, “The Collection of Long Scriptures”; the Sanskrit scriptural collection ([ĀGAMA](#)) that is analogous to the Pāli [DĪGHANIKĀYA](#). (All but three of the *Dīrghāgama*’s thirty [SŪTRAS](#) have equivalents in the Pāli *Dīghanikāya*.) The Sanskrit recension was long lost and survived only in a Chinese translation made in 413 CE by [BUDDHAYAŚAS](#) and [ZHU FONIAN](#); that Chinese recension is attributed to the [DHARMAGUPTAKA](#) school. In the 1990s, however, extensive fragments of a Sanskrit recension of the *Dīrghāgama* in [BRĀHMĪ](#) script were discovered in Afghanistan, a recension that is instead associated with the [SARVĀSTIVĀDA](#) school or its [MŪLASARVĀSTIVĀDA](#) offshoot. These fragments, which constitute about fifty-five percent of the complete manuscript, are the object of intensive scholarly investigation. Small fragments of this same Sarvāstivāda or Mūlasarvāstivāda recension have also been discovered in Central Asia. All three major recensions of the *Dīrghāgama* (including the Pāli *Dīghanikāya*) have a tripartite structure, but two of the three sections in the Sarvāstivāda manuscript are radically different from the other two recensions, suggesting that it comes from an independent textual lineage. In the Sarvāstivāda Sanskrit recension, part one, the “six sūtra section” (ṣaṭsūtrakanipāta), and part two, the “section on pairs” (yuganipāta), have no counterpart in the Pāli or Dharmaguptaka recensions. Part three, the “section on morality” (śīlaskandhanipāta), has an analogue in the other two recensions, but the titles and sequence of the incorporated sūtras differs. The first section of the Sarvāstivāda *Dīrghāgama* with its six major sūtras—the *Daśottarasūtra* (P. [DASUTTARASUTTA](#)), *Arthavistarāsūtra*, *Samgītīsūtra* (P. [SANGĪTISUTTA](#)), *Catuspariṣatsūtra*, *Mahāvādānasūtra* (P. [MAHĀPADĀNASUTTANTA](#)), and

[MAHĀPARNIRVĀNASŪTRA](#) (P. [MAHĀPARINIBBĀNASUTTANTA](#))—was not preserved in the Afghan manuscripts and is extant only in fragments from Central Asia, where it was popular in its own right and often circulated independently.

[disciple](#). See [ŚRĀVAKA](#).

[ditthivisuddhi](#). In Pāli, “purity of understanding”; the third of seven purities (P. visuddhi; S. [VIŚUDDHI](#)) that are to be developed along the path to liberation according to [THERAVĀDA](#) Buddhist soteriological theory. In the [VISUDDHIMAGGA](#), purity of understanding refers to correct knowledge according to reality ([YATHĀBHŪTA](#)) of the nature of mentality and materiality ([NĀMARŪPA](#)) through reliance on discriminative wisdom, having overcome all mistaken belief in the existence of a perduring soul (attan; S. [ĀTMAN](#)). The ordinary person (puggala; S. [PUDGALA](#)) and, indeed, all of the phenomenal universe or realm of rebirth ([SAMSĀRA](#)) are comprised merely of mentality and materiality. Mind and matter, whether taken singly or together, do not constitute a self; but there is also no self existing apart from mind and matter that possesses them as their controller. Rather, the self is to be correctly regarded as merely a conventional expression (vohāradesanā) that does not designate a real, existing thing. The purity of understanding thus reveals that everything that exists is selfless (anattā; S. [ANĀTMAN](#)). Such an understanding of the selflessness of mind and matter penetrates the veil of conventional truth (sammutisacca; S. [SAMVRTISATYA](#)) and apprehends ultimate truth (paramatthasacca; S. [PARAMĀRTHASATYA](#)).

[divine ear](#). See [DIVYAŚROTRA](#).

[divine eye](#). See [DIVYACAKSUS](#).

[divyacaksus](#). (P. dibbacakkhu; T. lha’i mig; C. tianyan; J. tengen; K. ch’ōnan 天眼). In Sanskrit, lit. “divine eye,” viz., “clairvoyance”; one of the five (or six) superknowledges ([ABHIJÑĀ](#)) and one of the three “knowledges” ([TRIVIDYĀ](#)). The divine eye refers to the ability to observe things from afar, as well as to see the “mind-made bodies” ([MANOMAYAKĀYA](#)) that are the products of meditation or enlightenment. It also provides the ability to observe where beings will be reborn after they die (S. [CYUTYUPAPĀDĀNUMRTI](#)), the second of the [TRIVIDYĀ](#). One who possesses this power sees the disappearance and arising of beings as low or noble, beautiful or ugly, etc., according to their wholesome and unwholesome deeds ([KARMAN](#)) in body, speech, and mind. Those who revile the noble ones

([ĀRYAPUDGALA](#)), hold perverse views ([MITHYĀDRSTI](#)), and act in accordance with perverse views are observed to be reborn in lower realms of existence, or in painful realms such as the hells. Those who honor the noble ones, hold right views, and act in accordance with right views are observed to be reborn in higher realms of existence, and in pleasant realms such as the heavens. On the night of his enlightenment, the Buddha gained the divine eye during the second watch of the night. This superknowledge is considered to be a mundane ([LAUKIKA](#)) achievement and is gained through refinement of the fourth stage of meditative absorption ([DHYĀNA](#); [RŪPĀVACARADHYĀNA](#)).

[divyaśrotra](#). (P. dibbasota; T. lha'i rna ba; C. tian'er; J. tenni; K. ch'ōni 天耳). In Sanskrit, lit. “divine ear,” viz., “clairaudience”; one of the five (or six) superknowledges ([ABHIJÑĀ](#)). With the divine ear, one can hear heavenly and earthly sounds both far and near just as if one were a divinity. This superknowledge is considered to be a mundane ([LAUKIKA](#)) achievement and is gained through refinement of the fourth stage of meditative absorption ([DHYĀNA](#); [RŪPĀVACARADHYĀNA](#)).

[Divyāvadāna](#). In Sanskrit, “Divine Exploits”; a collection of thirty-eight “heroic tales” or “narratives” ([AVADĀNA](#)). Avadānas are the tenth of the twelvefold ([DVĀDAŚĀṄGA](#)[[PRAVACANA](#)]) categorization of the traditional genres of Buddhist literature and relate the past and present deeds of a person, either lay or ordained, who in some specific fashion exemplifies Buddhist ethics and practice. The present characters in the stories in the *Divyāvadāna* are often identified as persons whom the Buddha encountered in a former life. Thus, its tales have a narrative structure similar to [JĀTAKA](#) stories, in which an event in the present offers an opportunity to recount a story from the past, which in turn illuminates details regarding present circumstances. Themes that run throughout the *Divyāvadāna* include the realization of positive or negative consequences of action ([KARMA](#)), the importance of moral discipline, and the great merit ([PUNYA](#)) that can be accrued through service or reverence offered to the buddhas or to sites related to the buddhas, such as a [STŪPA](#). The *Divyāvadāna* includes thirty-six avadānas and two [SŪTRAS](#). Famous stories found in the *Divyāvadāna* collection include the *Pūrṇāvadāna*, the story of the monk [PŪRNA](#), and the [AŚOKĀVADĀNA](#), which recounts the birth, life, and reign of King [AŚOKA](#), the monarch whom the Buddhist tradition considers the great protector of the religion. Although the style and language of the works vary tremendously, more

than half of the tales also appear in the [MŪLASARVĀSTIVĀDA VINAYA](#). Given their debt to vinaya literature, it is not surprising that many of the tales in the *Divyāvadāna* often make reference to points of monastic discipline ([VINAYA](#)). This association with the Mūlasarvāstivāda vinaya suggests that these stories could date as far back as the beginning of the Common Era. However, the oldest extant manuscript of the *Divyāvadāna* dates only to the seventeenth century, and there is no reference to a text by that title in a Buddhist source prior to that date. There also is no Tibetan or Chinese translation of the text, although many of its stories are found in the Tibetan and Chinese canons. (For example, twenty-one of the thirty-eight stories of the collection are found in the vinaya section of the Tibetan canon.) This has led some scholars to conclude that, although the stories themselves are quite old, the particular compilation as the *Divyāvadāna* may be rather late. A number of stories from the *Divyāvadāna* were translated by [EUGÈNE BURNOUF](#) in his 1844 *Introduction à l'histoire du Bouddhisme indien*. The first Sanskrit edition of the entire text was undertaken in 1866 by Edward B. Cowell and Robert A. Neil. The *Divyāvadāna* legends had a significant influence on Buddhist art and were often the subject of Buddhist sculptures and paintings. For instance, in the “Sahasodgata” chapter of this collection, the Buddha describes the “wheel of existence” ([BHAVACAKRA](#)), which became a popular subject of painting in many of the Buddhist traditions.

[Diyu bian\[xiang\]](#). (J. Jigoku hen[sō]; K. Chiok pyŏn[sang] 地獄變[相]). In Chinese, “transformation tableaux of the hells”; pictorial representations of scenes from various hells, which were used as dramatic visual aids in storytelling and preaching. Often graphic and gory, these paintings depict the denizens of hells ([NĀRAKA](#)) as being variously devoured by beasts, boiled in cauldrons, inundated in rivers of blood, having their limbs amputated, *etc.* In East Asia, one of the earliest reported examples of this type of transformation tableaux ([BIANXIANG](#)) was in the form of paintings made on the walls of the Jingong monastery in 736 by the famous Tang-dynasty artist Wu Daozi. Legend has it that the sensationalized depictions of the hells in this transformation tableaux so shocked the butchers of the Tang capital that they all switched professions. See also [AMITUO JINGTU BIAN](#); [JINGTU BIAN](#).

[dkar po chig thub](#). (karpo chiktup). In Tibetan, “self-sufficient white [remedy]” or “white panacea”; in Tibetan pharmacology, a single remedy that has the ability to effect a cure by itself alone. In Tibetan Buddhism, the term was used as

a metaphor to describe certain doctrines or methods said to be self-sufficient for bringing about awakening. Although found in various contexts, the term is best known from its use by members of the [DWAGS PO BKA' BRGYUD](#), including [SGAM PO PA BSOD NAMS RIN CHEN](#) and his nephew's disciple [BLA MA ZHANG](#). This method is often equated with the introduction to the nature of mind (sems kyi ngo sprod) or the direct realization of the mind's true nature, and is deeply rooted in the tradition of [MAHĀMUDRĀ](#) transmitted by Sgam po pa. In Sgam po pa's own words, "I value the realization of the nature of mind as better than excellent meditation." Some Tibetan scholars, most notably [SA SKYA PANDITA KUN DGA' RGYAL MTSHAN](#), rejected the notion that any single method or factor (even insight into [ŚŪNYATĀ](#), or emptiness) could be soteriologically sufficient. He also argued that the fruit of mahāmudrā practice could never be gained through wholly nonconceptual means. Nor, he argued, could it be gained outside of strictly tantric practice, in contrast to Sgam po pa's tradition, which advocated both [SŪTRA](#) and [TANTRA](#) forms of mahāmudrā. Such arguments often disparagingly associate dkar po chig thub with the subitism of [MOHEYAN](#), the Chinese [CHAN](#) protagonist in the [BSAM YAS DEBATE](#), who is known to have also used the metaphor.

[Dkon mchog rgyal po](#). (Könchok Gyalpo) (1034–1102). A Tibetan master renowned as the founder of the [SA SKYA](#) sect of Tibetan Buddhism. He was a member of the 'Khon clan and a descendent of one of the first seven Tibetans to be ordained as a Buddhist monk ([SAD MI BDUN](#)). He studied primarily under the translator ['BROG MI SHĀKYA YE SHES](#), receiving teachings and initiations of the new translations ([GSAR MA](#)), particularly the [HEVAJRATANTRA](#). He was also instructed in the doctrine of "path and result" ([LAM 'BRAS](#)), which had originally been transmitted by the great Indian adept [VIRŪPA](#). In 1073, Dkon mchog rgyal po founded [SA SKYA](#) monastery, one of the sect's principal institutions, and the seat of Tibetan political power for nearly a century; he also served as its first abbot. His son, [SA CHEN KUN DGA' SNYING PO](#), became another important Sa skya hierarch and served as the monastery's third abbot.

[Dōchū](#). (J) (道忠). See [MUJAKU DŌCHŪ](#).

[Dōgen Kigen](#). (道元希玄) (1200–1253). Japanese [ZEN](#) monk who is regarded as the founder of the [SŌTŌSHŪ](#). After losing both his parents at an early age, Dōgen became the student of a relative, the monk Ryōkan (d.u.), who lived at the base of [HIEIZAN](#), the headquarters of the [TENDAI](#) school (C. [TIANTAI](#)) in 1212; Ryōkan

subsequently recommended that Dōgen study at the famed training center of Senkōbō. The next year, Dōgen was ordained by Kōen (d.u.), the abbot of the powerful Tendai monastery of [ENRYAKUJI](#). Dōgen was later visited by the monk Kōin (1145–1216) of Onjōji, who suggested the eminent Japanese monk [MYŌAN EISAI](#) as a more suitable teacher. Dōgen visited Eisai at his monastery of [KENNINJI](#) and became a student of Eisai's disciple Myōzen (1184–1225). In 1223, Dōgen accompanied Myōzen to China as his attendant and made a pilgrimage to various important monastic centers on Mts. Tiantong, Jing, and Yuwang. Before returning to Japan in 1227, Dōgen made another trip in 1225 to Mt. Tiantong to study with the [CAODONG ZONG](#) Chan master [Tiantong Rujing](#) (1162–1227), from whom he is said to have received dharma transmission. During his time there, Dōgen overheard Rujing scolding a monk who was sleeping, saying, “The practice of zazen (C. [ZUOCHAN](#)) is the sloughing off of body and mind. What does sleeping accomplish?” Dōgen reports that he experienced awakening upon hearing Rujing's words “sloughing off body and mind” ([SHINJIN DATSURAKU](#)), a phrase that would figure prominently in his later writings. The phrase, however, is not common in the Chan tradition, and scholars have questioned whether Dōgen's spoken Chinese was up to the task of understanding Rujing's oral instructions. Dōgen also attributes to Rujing's influence the practice of [SHIKAN TAZA](#), or “just sitting,” and the notion of the identity of practice and attainment: that to sit correctly in meditative posture is to enact one's own buddhahood. After Rujing's death, Dōgen returned to Japan, famously reporting that he had learned only that noses are vertical and eyes are horizontal. He returned to Kenninji, but relocated two years later in 1229 to the monastery of Anyōin in Fukakusa. In 1233, Dōgen moved to Kōshōji, on the outskirts of Kyōto, where he established one of the first monasteries in Japan modeled on Song-dynasty Chan monastic practice. Dōgen resided there for the next ten years and attracted a large following, including several adherents of the [DARUMASHŪ](#), who became influential in his burgeoning community. When the powerful monastery of Tōfukuji was established by his [RINZAISHŪ](#) rival [ENNI BEN'EN](#), Dōgen moved again to remote area of Echizen (present-day Fukui prefecture), where he was invited to reside at the newly established monastery of Daibutsuji; Dōgen renamed the monastery [EIHEIJI](#) in 1246. There, he composed several chapters of his magnum opus, [SHŌBŌGENZŌ](#) (“Treasury of the True Dharma Eye”). In 1253, as his health declined, Dōgen entrusted Eiheiji to his successor Koun Ejō (1198–1280), a former disciple of the Darumashū founder [DAINICHIBŌ NŌNIN](#), and left for Kyōto to seek medical treatment. He died that same year. Dōgen was a

prolific writer whose work includes the [FUKAN ZAZENGI](#), [EIHEI SHINGI](#), *Eihei kōroku*, [BENDŌWA](#), [HŌKYŌKI](#), GAKUDŌ YŌJINSHU, *Tenzo kyōkun*, and others. Dōgen’s voluminous oeuvre has been extremely influential in the modern construction of the Japanese Zen tradition and its portrayal in Western literature. See also [GENJŌ KŌAN](#); [SHIKAN TAZA](#).

dohā. (T. nyams mgur). In Sanskrit, the name of a meter in poetry; hence, a name for a poetic form of religious expression most commonly employing this meter, which began to appear as early as the seventh century CE. These verses are of varying lengths, usually in rhymed couplets, and are composed in [APABHRAMŚA](#), an early medieval protovernacular from northeastern India. These songs offer an expression of the beauty and simplicity of tantric experience (the Tibetan translation means “song of experience”). There are collections of dohā by the [SIDDHAS TILOPA](#), Kṛṣṇācārya (Kāṇha), and [SARAHA](#) (see [MAHĀSIDDHA](#)); Saraha’s [DOHĀKOŚA](#) (“Treasury of Dohā Verses”) was especially influential in Tibet. In the early [BKA’ BRGYUD](#) tradition, the songs (mgur) of [MIL LA RAS PA](#) (see [MIL LA’ IMGUR ’BUM](#)) show the influence of dohā.

Dohākośa. [alt. Dohākośagīti] (T. Do ha mdzod). In Sanskrit, “Treasury of Dohā Verses”; a collection of [DOHĀ](#) verses sung by [SARAHA](#) (perhaps fl. in the tenth century, one of the eighty-four [MAHĀSIDDHAS](#)); the verses express the immediacy of the ultimate spiritual experience and the inadequacy of language to convey it, often using sarcasm to mock social conventions. At the same time, the work is based on the traditional tantric premise that meditative practice, motivated by [BODHICITTA](#), and undertaken with devotion to one’s [GURU](#), can bring about the bliss of enlightenment within the present lifetime. The order and number of the verses vary significantly among the different versions of the text, reflecting the interests and views of the Nepalese or Tibetan compilers and exegetes. The verses were transmitted sixteen times to Tibet and gave rise to a large and varied commentarial literature; Advayavajra’s (1007–1085) *Dohākośapañjikā* is extant in Sanskrit. See also [DO HA SKOR GSUM](#).

Dōhaku. (J) (道白). See [MANZAN DŌHAKU](#).

Dōhan. (道範) (1179–1252). A Kamakura-period [SHINGON](#) scholar-monk from [KŌYASAN](#), who wrote extensively on the works of [KŪKAI](#) and [KAKUBAN](#). He is well known for his esoteric writings on the [PURE LAND](#), especially the *Himitsu nenbutsushō* (“Compendium on the Secret Contemplation of Buddha”). Dōhan

was ordained at the age of fourteen under Myōnin (1148–1229) at Shōchiin, and he later studied under [KAKUKAI](#) at Keōin. In 1237, Dōhan was appointed head administrator of Shōchiin. In 1243, a violent dispute erupted between Kongōbuji and Daidenbōin, which resulted in the exile of Dōhan and around thirty other Kōyasan elders. Dōhan’s travel diary, *Nankai rurōki* (“Record of Wandering by the Southern Sea”), records his time in exile on the island of Shikoku, traveling to many sites associated with Kūkai. One of his dharma lectures from his time in exile survives as *Dōhan goshōsoku* (“Dōhan’s Letter”), a short discussion of [AJKAN](#), or contemplation of the letter “a.” In 1249, Dōhan was pardoned by imperial decree and permitted to return to Kōyasan, where he passed away in 1252.

[Do ha skor gsum](#). (Doha korsum). In Tibetan, “Three Cycles of Spiritual Songs”; a collection of spiritual songs ([DOHĀ](#)) composed by the Indian sage [SARAHĀ](#). Originally recorded in an eastern [APABHRAMŚĀ](#) dialect, they were later compiled and translated into Tibetan. The title refers to the work’s three chapters: “king dohās,” “queen dohās,” and “people dohās,” although there is some debate as to whether the divisions were Saraha’s own or a later Tibetan innovation. See also [DOHĀKOŚĀ](#).

[Dokuan Genkō](#). (独庵玄光) (1630–1698). Japanese [ZEN](#) monk in the [SŌTŌSHŪ](#). Dokuan was ordained by the monk Tenkoku (d.u.) at the temple of Kōdenji in his hometown of Saga. After traveling around the country on pilgrimage, Dokuan visited the émigré Chinese [CHAN](#) monk [DAOZHE CHAOYUAN](#) in Nagasaki and studied under him for eight years. When Daozhe returned to China in 1658, Dokuan continued his training under the Zen master Gesshū Sōrin (1614–1687) at Kōtaiji in Nagasaki and remained at Kōtaiji after Gesshū’s death. Dokuan was a prolific writer whose work includes the *Gohōshū*, *Shūi sanbō kannō den*, and the *Zenaku genken hōō hen*.

[dokusan](#). (C. ducan; K. tokch’am 獨參). In Japanese, lit. a “private consultation” between a [ZEN](#) student and master, which is conducted in the privacy of the master’s room. This consultation is an important element of training in the Japanese [RINZAISHŪ](#), and allows the master to check the progress of the student in his meditation, and the student to ask questions regarding his practice. Dokusan is also the formal occasion where the student is expected to express his understanding of a specific Zen kōan ([GONG’AN](#)) so that the master can gauge his development (see J. [JAKUGO](#); C. [ZHUOYU](#)).

[Dol po pa Shes rab rgyal mtshan](#). (Dolpopa Sherap Gyaltzen) (1292–1361). An innovative and controversial Tibetan Buddhist scholar, who is regarded as an early master of the [JO NANG](#) lineage. He is best known for promulgating the view of extrinsic emptiness ([GZHAN STONG](#)), for his writings on the [KĀLACAKRATANTRA](#), and for constructing a massive multiroom [STŪPA](#) temple ([SKU 'BUM](#)) above [JO NANG PHUN TSHOGS GLING](#) monastery. He was born in the region of Dol po in present-day northwestern Nepal, from which his toponym (literally “the man from Dol po”) is derived. Although his family was affiliated with the [RNYING MA](#) sect of Tibetan Buddhism, he formed an early connection with the [SA SKYA](#) teacher Skyi ston 'Jam dbyangs grags pa rgyal mtshan (Gyidön Jamyang Drakpa Gyaltzen, d.u.). As a seventeen-year-old novice monk, Dol po pa fled his home, against the wishes of his parents and without their knowledge, in order to study with this master. He arrived first in the nearby region of Mustang and in 1312 continued on to the Tibetan monastery of [SA SKYA](#) itself. He was a gifted student, mastering a broad range of [MAHĀYĀNA](#) subjects in a short period of time. His erudition was so great that while still in his early twenties he earned the title “omniscient” (kun mkhyen), an epithet by which he was known for the rest of his life. He was ordained as a [BHIKSU](#) in 1314, going on to study with leading masters from various sects, including the third [KARMA PA](#). He spent several years in strict meditation retreat, during which time he began to formulate his understanding of extrinsic emptiness. In 1326 he formally ascended the abbatial throne at Jo nang, dividing his time between meditative retreats and teaching the monastic community. In 1333, Dol po pa completed construction of the sku 'bum chen po stūpa, one of the largest in Tibet. Dol po pa developed a rich new vocabulary for discussing his controversial notion of extrinsic emptiness. Public reaction was mixed, and many Sa skya scholars in particular appear to have felt betrayed by this new doctrine, which seemed to contradict their own. Among his major works written at this time was the *Ri chos nges don rgya mtsho* (“The Ocean of Definitive Meaning: A Mountain Dharma”). Another of Dol po pa’s major projects was a revised translation and reinterpretation of the *Kālacakrantra* and [VIMALAPRABHĀ](#), both important sources for his major doctrinal theories. In 1338, Dol po pa retired from his position at Jo nang, after which he remained in isolated retreat, in part to discreetly avoid an invitation to the court of the Mongol ruler Toghon Temür (r. 1333–1370). By the end of his life, Dol po pa ranked as one of the leading masters of his time. During a 1358 trip to [LHA SA](#) toward the end of his life, the

halls in which he taught literally collapsed from the enormous size of the crowds in attendance. On his return to Jo nang, he visited the monastery of [ZHWA LU](#), home of another leading scholar and Kālacakra expert of the day, [BU STON RIN CHEN GRUB](#). According to several accounts, Bu ston declined the opportunity to debate, but Dol po pa uttered the opening exclamation for debate as he departed, which cracked the walls of Bu ston's residence. While Dol po pa's views were considered unorthodox, even heterodox, particularly in the [DGE LUGS](#) sect, his works made a lasting impression on the landscape of Buddhism in Tibet.

[Ḍombī Heruka](#). A tantric adept counted among the eighty-four [MAHĀSIDDHAS](#), often depicted riding a tiger with his consort. As recorded in his hagiographies, he was originally king of the Indian region of [MAGADHA](#) and received teachings on the [HEVAJRATANTRA](#) from the [SIDDHA VIRŪPA](#). These he practiced for twelve years in secret while continuing to skillfully administer his kingdom. He then secretly took a low-caste musician, a ḍombī, as his consort and continued his practice of [TANTRA](#) with her. (The word heruka is rendered khrag thung, “blood drinker,” in Tibetan.) When his subjects discovered their king's transgression of customary social and caste restrictions, Ḍombī Heruka abdicated the throne and disappeared with his consort into the jungle, where they continued to practice tantric yoga for twelve years. Later, the kingdom was wrought with famine and the subjects searched for their former king to request his assistance. Ḍombī Heruka then emerged from the jungle astride a tigress, brandishing a snake in one hand. Displaying miraculous signs of his mastery, he denied the subjects' request and departed for the celestial realms. Ḍombī Heruka is an important member of the lineage of the *Hevajatantra* and, according to some accounts, was a disciple of [NĀROPA](#) as well as a teacher of [ATIŚA DĪPAMKARĀŚRĪJÑĀNA](#). Seventeen texts attributed to him are preserved in the [BSTAN 'GYUR](#) section of the Tibetan Buddhist canon. He is also known as Ḍombīpa.

[Donglinsi](#). (J. Tōrinji; K. Tongnimsa 東林寺). In Chinese, “Eastern Grove Monastery”; located in the forest on the eastern side of [LUSHAN](#), a Buddhist sacred mountain in Jiangxi province. The monastery was founded between 380 CE and 386 CE by the early advocate of [PURE LAND](#) visualization [LUSHAN HUIYUAN](#) (334–416 CE) and became an important early center of Buddhism in China, especially of the White Lotus retreat society ([BAILIAN SHE](#)). The monastery also hosted such monks as Saṃghadeva, who translated important works of [ABHIDHARMA](#) and [SARVĀSTIVĀDA](#) scholasticism, and [BUDDHABHADRA](#)

(359–429). Donglinsi continued to be a center of Buddhist activity during subsequent dynasties and its influence reached its zenith during the Tang dynasty, when it attracted both monks and leading literati, such as the renowned Tang poet [BO JUYI](#) (772–846 CE).

[Dongshan famen](#). (J. Tōzan hōmon; K. Tongsan pōmmun 東山法門). In Chinese, lit. “East Mountain Dharma Gate” or “East Mountain Teachings”; one of the principal early [CHAN](#) schools, which is associated with the putative fourth and fifth patriarchs of the tradition, [DAOXIN](#) (580–651) and [HONGREN](#) (602–675). The name of the school is a toponym for the location of Hongren’s monastery, at Huangmei in Qizhou (present-day Hubei province). “East Mountain” refers to the easterly of the “twin peaks” of Mount Shuangfeng, where Hongren taught after the death of his master Daoxin, who had taught on the westerly peak; the term “East Mountain Teachings,” however, is typically used to refer to the tradition associated with both masters. The designations Dongshan famen and Dongshan jingmen (East Mountain Pure Gate) first appear in the [LENGQIE SHIZI JI](#) (“Records of the Masters and Disciples of the Laṅkā[vatāra]”) and were used in the Northern school of Chan ([BEI ZONG](#)) by [SHENXIU](#) (606?–706) and his successors to refer to the lineage and teachings that they had inherited from Daoxin and Hongren. ¶ Although later Chan lineage texts list Daoxin and Hongren as respectively the fourth and the fifth Chan patriarchs, succeeding [BODHIDHARMA](#), [HUIKE](#), and [SENGCAN](#), the connection of the East Mountain lineage to these predecessors is tenuous at best and probably nonexistent. The earliest biography of Daoxin, recorded in the [XU GAOSENG ZHUAN](#) (“Supplementary Biographies of Eminent Monks”), not only does not posit any connection between Daoxin and the preceding three patriarchs, but does not even mention their names. This connection is first made explicit in the c. 713 [CHUAN FABAO JI](#) (“Annals of the Transmission of the Dharma-Jewel”), one of the earliest Chan “transmission of the lamplight” ([CHUANDENG LU](#)) lineage texts. Unlike many of the Chan “schools” that were associated with a single charismatic teacher, the “East Mountain Teachings” was unusual in that it had a single, enduring center in Huangmei, which attracted increasing numbers of students. Some five or six names of students who studied with Daoxin survive in the literature, with another twenty-five associated with Hongren. Although Hongren’s biography in the *Chuan fabao ji* certainly exaggerates when it says that eight to nine out of every ten Buddhist practitioners in China studied under Hongren, there is no question that the number of students of the East Mountain

Teachings grew significantly over two generations. ¶ The fundamental doctrines and practices of the East Mountain Teachings can be reconstructed on the basis of the two texts: the RUDAO ANXIN YAO FANGBIAN FAMEN (“Essentials of the Teachings of the Expedient Means of Entering the Path and Pacifying the Mind”) and the [XIUXIN YAO LUN](#) (“Treatise on the Essentials of Cultivating the Mind”), ascribed respectively to Daoxin and Hongren. The *Rudao anxin yao fangbian famen*, which is included in the *Lengqie shizi ji*, employs the analogy of a mirror from the *Banzhou sanmei jing* (S. [PRATYUTPANNABUDDHASAMMUKHĀVASTHITASAMĀDHISŪTRA](#)) to illustrate the insubstantiality of all phenomena, viz., one’s sensory experiences are no more substantial than the reflections in a mirror. The text then presents the “single-practice [SAMĀDHI](#)” ([YIXING SANMEI](#)) as a practical means of accessing the path leading to [NIRVĀNA](#), based on the *Wenshushuo bore jing* (“Perfection of Wisdom Sūtra Spoken by [MAÑJUŚRĪ](#)”). Single-practice samādhi here refers to sitting in meditation, the supreme practice that subsumes all other practices; it is not one samādhi among others, as it is portrayed in the [MOHE ZHIGUAN](#) (“Great Calming and Contemplation”). Single-practice samādhi means to contemplate every single aspect of one’s mental and physical existence until one realizes they are all empty, just like the reflections in the mirror, and “to guard that one without deviation” (*shouyi buyi*). The *Xiuxin yao lun*, which is attributed to Hongren, stresses the importance of “guarding the mind” (*SHOUXIN*). Here, the relationship between the pure mind and the afflictions ([KLEŚA](#)) is likened to that between the sun and clouds: the pure mind is obscured by afflictions, just as the sun is covered by layers of clouds, but if one can guard the mind so that it is kept free from false thoughts and delusions, the sun of [NIRVĀNA](#) will then appear. The text suggests two specific meditation techniques for realizing this goal: one is continuously to visualize the original, pure mind (viz., the sun) so that it shines without obscuration; the other is to concentrate on one’s own deluded thoughts (the clouds) until they disappear. These two techniques purport to “guard the mind” so that delusion can never recur. The East Mountain Teachings laid a firm foundation for the doctrines and practices of later Chan traditions like the Northern school.

[Dongshan Liangjie](#). (J. Tōzan Ryōkai; K. Tongsan Yanggae 洞山良价) (807–869). Chinese [CHAN](#) master of the Tang dynasty and reputed founder of the [CAODONG](#) lineage of Chan; also known as Xinfeng. Dongshan was a native of Yuezhou in present-day Zhejiang province. He left home at an early age and

became the student of the Chan master Lingmo (747–818). Having received full monastic precepts from a certain [VINAYA](#) master Rui on [SONGSHAN](#), Dongshan visited the Chan masters [NANQUAN PUYUAN](#) and [GUISHAN LINGYOU](#) and later continued his studies under Yunyan Tancheng (782–841). Dongshan is said to have attained awakening under Yunyan’s guidance and eventually inherited his lineage. During the [HUICHANG FANAN](#), Dongshan remained in hiding until the persecution ran its course, eventually reemerging at Xinfeng tong in Jiangxi province. With the support of his followers, Dongshan later established the monastery Guangfusi (later renamed Puli yuan) on Mt. Dong (Dongshan), whence he acquired his toponym. Among his many disciples, Yunju Daoying (d. 902) and [CAOSHAN BENJI](#) are most famous. Dongshan was renowned for his poetry and verse compositions and his teaching of the “five ranks” ([WUWEI](#)). His teachings are recorded in the *Dongshan yulu* (“The Record of Dongshan”), but the most famous of his works is the [BAOJING SANMEI](#) (“Jeweled-Mirror Samādhi”), a definitive verse on enlightenment and practice from the standpoint of the [CAODONGZONG](#). The *Baojing sanmei* emphasizes the “original enlightenment” ([BENJUE](#); cf. [HONGAKU](#)) of sentient beings and the futility of seeking that enlightenment through conscious thought. Instead, the song urges its audience to allow one’s inherently pure, enlightened nature to “silently illuminate” itself through meditation (see [MOZHAO CHAN](#)), as the Buddha did under the [BODHI TREE](#).

[Dongshan Shouchu](#). (J. Tōsan Shusho; K. Tongsan Such’o 洞山守初) (910–990). Successor in the Chinese [YUNMEN](#) lineage of the [CHAN](#) school. See [MA SANJIN](#).

[Dongta lü zong](#). (J. Tōtō Risshū; K. Tongt’ap yul chong 東塔律宗). In Chinese, the “East Pagoda [VINAYA](#) School”; one of the three major exegetical traditions of the [DHARMAGUPTAKA](#) school’s [SIFEN LÜ](#) (“Four-Part Vinaya”); the other traditions are [DAOXUAN](#)’s [NANSHANLÜ ZONG](#) (South Mountain) and Fali’s [XIANGBU LÜ ZONG](#) (Xiang Region) vinaya schools. The reputed patriarch of the Dongta tradition is the vinaya master [HUAISU](#). This exegetical tradition derived its name from Huaisu’s residence near the east pagoda of the monastery of Xidayuansi in the Chinese capital of Chang’an. Huaisu’s disciple Fashen (d.u.) firmly established his teacher’s *Sifen lü kaizong ji* (composed in 682), also known as the “new commentary” (xinshu), as the authoritative commentary on the “Four-Part Vinaya.” The tradition thrived under Emperor Daizong (r. 762–779), thanks to the grand councilor’s support of Huaisu, but was subsequently

eclipsed by the Nanshan school.

Dongyang dashi. (C) (東陽大士). See [FU DASHI](#).

doors of liberation. See [VIMOKSAMUKHA](#).

Dorzhiev, Agvan. (T. Ngag dbang rdo rje) (1854–1938). Influential Mongol-Russian monk in the Tibetan Buddhist tradition; born in the Siberian region of Buryatia to a semi-nomadic Buddhist family. As a child, Dorzhiev was introduced to Buddhism at the monastery at Atsagat, receiving his first tantric empowerment ([ABHISEKA](#)) at the age of thirteen. He continued his education in Urga after his father died in 1868, at which time there were thirteen thousand monks in the city. For a time he was married to a woman named Kholintsog and worked in the local government. In 1873, he began his first journey to [LHA SA](#) and spent a few months in eastern China. Because of his linguistic and academic prowess, he was sent to ['BRAS SPUNGS](#) monastery, where he became a scholar at Sgo mang (Gomang) College. In 1880, he settled in Lha sa, and rapidly completed his [DGE BSHES](#) degree. By 1888, he was teaching logic, debate, and language at 'Bras spungs. At this time, the thirteenth [DALAI LAMA](#) was twelve or thirteen years old, and Dorzhiev became one of his religious teachers and political advisors. Dorzhiev displayed great ability in political diplomacy and served as the only emissary between Russia and Tibet for many years. He feared that British influence in Tibet could be detrimental to the future of the country, and advised the Dalai Lama to initiate relations between Lha sa and St. Petersburg as a counter. In 1898, Prince Ukhtomsky summoned him to St. Petersburg, where he met with Tsar Nicholas II. From there, he traveled to Paris, where he lectured on Buddhism at the Musée Guimet. He then went to Kalmykia and Buryatia before returning to Lha sa. Dorzhiev sought to improve the quality of Buddhist practice in Russia, specifically in Buryatia and Kalmykia, where he opened monasteries, initiated monks, and opened a school for Tibetan Buddhist doctors. In 1915 he opened a temple and monastery in St. Petersburg, the first in the West. Dorzhiev was arrested at the onset of the “Red Terror” of 1918, but was soon released. Buddhism remained comparatively inviolable over the next decade, although other Russian religions suffered. Dorzhiev wrote his memoirs in Tibetan around 1924. In 1922, an “All-Buryat Buddhist Congress” was held, followed by a 1927 “Congress of Soviet Buddhists” in Moscow. Russian Buddhism entered a bleak period after the death of Lenin in 1924; in 1930, an antireligion campaign began in Buryatia, during which the aged Dorzhiev was

placed under house arrest. He wrote his will in 1937, at which time he left house arrest in Leningrad and traveled to Ulan Udé, Buryatia. In Ulan Udé, he was arrested and interrogated before being sent to the prison hospital, where he died in January of 1938.

dosa. (P. *dosa*; T. *skyon/zhe sdang*; C. *guo*; J. *ka*; K. *kwa* 過). In Sanskrit, “fault”; a general term for a mental or physical defect, used also as a synonym for affliction ([KLEŚA](#)). In addition, the classical Sanskrit term [DVESA](#) (P. *dosa*), “anger,” is frequently written as *doṣa* in [BUDDHIST HYBRID SANSKRIT](#).

Dōshō. (道昭) (629–700). Japanese monk and reputed founder of the Japanese Hossō ([YOGĀCĀRA](#)) school in the seventh century. A native of Kawachi province, Dōshō became renowned for his strict adherence to the precepts while he was residing at the monastery of Gangōji. In 653, Dōshō made a pilgrimage to China, where he studied under the Chinese monk–translator and Yogācāra scholar [XUANZANG](#). In 660, Dōshō returned to Gangōji and devoted the rest of his life to the dissemination of the Yogācāra teachings that he had brought back with him from China.

doubt. See [VICIKITSĀ](#); [YIQING](#).

[Dpa’ bo Gtsug lag phreng ba](#). (Pawo Tsuklak Trengwa) (1504–1566). A renowned master and historian of the [KARMA BKA’ BRGYUD](#) sect of Tibetan Buddhism, second in the line of [DPA’ BO INCARNATIONS](#). Born in the region of Snye thang (Nyethang), south of [LHA SA](#) in central Tibet, Gtsug lag phreng ba was recognized at the age of five as the embodiment of his predecessor, Dpa’ bo Chos dbang lhun grub (Pawo Chöwang Lhundrup). At nine, he received monastic ordination from the fourth [ZHWA DMAR](#), Chos grags ye shes (Chödrak Yeshe, 1453–1524), and he later studied with masters such as Dwags po paṇḍita Chos rgyal Bstan pa’i rgyal mtshan (Chögyal Tenpe Gyaltzen, b. fifteenth century), the mad yogin of central Tibet Dbus smyon Kun dga’ bzang po (Ü Nyön Kunga Sangpo, 1458–1532) Heruka. At the age of twenty-nine he received the name Gtsug lag phreng ba from the eighth [KARMA PA MI BSKYOD RDO RJE](#). He was active throughout his life in the southern Tibetan region of [LHO BRAG](#); he became the abbot of [LHA LUNG](#) monastery and later renovated [SRAS MKHAR DGU THOG](#), the famed site of [MI LA RAS PA](#)’s tower, commissioning many religious paintings, adding a large a golden roof and constructing a large monastic complex. Among Gtsug lag ’phreng ba’s major literary works is the famous

history of Indian and Tibetan Buddhism [CHOS 'BYUNG MKHAS PA'I DGA' STON](#), composed between 1544 and 1564.

[Dpa' bo incarnations](#). (Pawo). A lineage of incarnate lamas ([SPRUL SKU](#)), members of the [KARMA BKA' BRGYUD](#) sect of Tibetan Buddhism and traditionally responsible for the propitiation of the sect's protector deities. The second incarnation, [DPA' BO GTSUG LAG 'PHRENG BA](#), was a renowned scholar and historian. The incarnation line includes:

1. Chos dbang lhun grub (Chöwang Lhundrup, 1440–1503)
2. Gtsug lag phreng ba (Tsuklak Trengwa, 1504–1566)
3. Gtsug lag rgya mtsho (Tsuklak Gyatso, 1568–1630)
4. Gtsug lag kun bzang (Tsuklak Kunsang, b.1633)
5. Gtsug lag 'phrin las rgya mtsho (Tsuklak Trinle Gyatso, 1650–1699)
6. Gtsug lag chos kyi don grub (Tsuklak Chökyi Döndrup, 1701–1718?)
7. Gtsug lag dga' ba (Tsuklak Gawa, 1718–1781)
8. Gtsug lag chos kyi rgyal po (Tsuklak Chökyi Gyalpo, d.u.)
9. Gtsug lag nyin byed (Tsuklak Nyinje, d. 1911)
10. Gtsug lag smra ba'i dbang phyug (Tsuklak Mawe Wangchuk, 1912–1991)
11. Gtsug lag smra ba'i rta dbyang (Tsuklak Mawe Tayang, b. 1993)

[Dpal brtsegs](#). (Paltsek) (fl. late eighth-early ninth centuries). A translator ([LO TSÄ BA](#)) during the early spread of Buddhism in Tibet; a native of 'Phan yul of the Ska ba (Kawa) clan; translator of a large number of [VINAYA](#), [PRAJÑĀPĀRAMITĀ](#), and tantric texts, and the author of the *Lta ba'i rim pa'i man ngag* (also known as *Snang ba bcu bdun*) and *Chos kyi rnam grangs kyi brjed byang*, a work that mainly consists of a list of standard Buddhist terms. See also [YE SHES SDE](#); [KLU'IRGYAL MTSAN](#).

Dpal ldan lha mo. (S. Śrīdevī). In Tibetan, “Glorious Goddess”; a literal translation of the Sanskrit name for a form of a female divinity ubiquitous in the northeast and mountainous regions of the Indian subcontinent. In her usual form, she has one face, is wrathful, holds a kaḍga (sword) and [KAPĀLA](#) (skull cup), and rides a barren mule above a churning ocean of blood. The mule has an eye in his rump, caused by an arrow shot by her husband after she killed their son and used his skin as a saddle. She is found in the retinue (parivāra) of the Sarvavighnavināyaka (Obstacle-Removing) [MAHĀKĀLA](#), but as a central figure she is surrounded by a large retinue that includes the goddesses Ākāśāmbarā, Svayambhu-rājñī, and Nīleśvarī. She is always a supramundane ([LOKOTTARA](#)) being and is considered to be a protector of all Tibet; in this role she is seen as a wrathful form of [TĀRĀ](#). In the [DGE LUGS](#) sect, she is an important protector, particularly as the main protectress of the [DALAI LAMAS](#); she is propitiated daily in rituals and a [THANG KA](#) of her is always kept in the presence of the Dalai Lama. Each Dalai Lama would try to visit her sacred lake, [LHA MO BLA MTSHO](#), at least once during his life to receive visions on the water’s surface regarding his future activities and death, a tradition said to date back to the first Dalai Lama, [DGE ’DUN GRUB](#). The lake is also believed to display signs concerning the future rebirth of the Dalai Lama and [PAN CHEN LF](#). Most recently, in 1933 the regent of Tibet, Rwa sgreng Rin po che, saw visions in the lake that indicated the birthplace and circumstances of the fourteenth Dalai Lama. At Tibetan Buddhist temples, long lines of ordinary people are often seen at the chapel of Dpal ldan lha mo carrying small bottles of chang (barley beer) or black tea as offerings for her.

Dpal sprul Rin po che. (Patrul Rinpoche) (1808–1887). One of the most important teachers of the [RNYING MA](#) sect of Tibetan Buddhism during the nineteenth century, famous for his great humility and simple lifestyle. Recognized as an incarnate lama ([SPRUL SKU](#)) while a child, Dpal sprul Rin po che trained under the great ascetic ’Jigs med rgyal ba’i myu gu (Jigme Gyalwe Nyugu), himself a disciple of the renowned treasure revealer ([GTER STON](#)) [’JIGS MED GLING PA](#), from whom he received instructions on the [KLONG CHEN SNYING THIG](#), “Heart Essence of the Great Expanse.” He later studied with many other great masters, including [MDO MKHYEN RTSE YE SHES RDO RJE](#), mind emanation (thugs sprul) of ’Jigs med gling pa. Although he established himself as one of the foremost scholars of his time, Dpal sprul Rin po che emulated the renunciate lifestyle of his masters, wandering from place to place with few possessions,

often in the guise of an ordinary beggar. He was known for his exceptional kindness, treating both king and pauper with equal compassion. The author of numerous commentaries and treatises on Buddhist philosophy and doctrine, he is perhaps best known for his [KUN BZANG BLA MA'I ZHAL LUNG](#) (“Words of My Perfect Teacher”), an explanation of the preliminary practices of the klong chen snying thig. Together with other great lamas of eastern Tibet, Dpal sprul Rin po che was also an active participant in the so-called [RIS MED](#) (nonsectarian) movement, which sought to cut through the rampant sectarian controversies of the time. According to one account, when asked what religious affiliation he maintained, Dpal sprul Rinpoche famously remarked that he was only a follower of the Buddha. He is also known as Rdza Dpal sprul (Dza Patrul) and O rgyan 'jigs med chos kyi dbang po.

Dpal spungs. (Palpung). A large fortress-like monastic compound located near [SDE DGE](#) in the eastern Tibetan region of Khams belonging to the [BKA' BRGYUD](#) sect of Tibetan Buddhism and serving as the seat of the [TAI SI TU INCARNATION](#) lineage; its full name is Dpal spungs thub brtan chos 'khor gling (Palpung Tupten Chökorling). The center was established in 1727 by the eighth Si tu [CHOS KYI 'BYUNG GNAS](#), a great Bka' brgyud scholar, historian, and linguist, with support from Derge's ruler Bstan pa tshe ring (Tenpa Tsering, 1678–1738). Prior to this, the Si tu line mainly resided at the nearby Karma dgon monastery. Dpal spungs was also home to the nineteenth-century luminary ['JAM MGON KONG SPRUL BLO GROS MTHA' YAS](#) and became one of the largest and most powerful Bka' brgyud institutions in eastern Tibet. An important monastic college ([BSHAD GRWA](#)) and several centers for practicing the traditional three-year meditation retreat are located nearby. Not far from Dpal spungs is one of the region's premier retreat locations, Tsa 'dra Rin chen brag—a locale reckoned to be equivalent in spiritual power to the famed region of [TSA RI](#) in southern Tibet. The founding of Dpal spungs coincides with the start of the so-called [RIS MED](#) (nonsectarian) movement in Khams.

Dpal yul. (Payul). The Tibetan short name of a monastery in Khams (now part of the Chinese province of Sichuan). The name is an abbreviation of Dpal yul rnam rgyal byang chub chos gling, one of the four main [RNYING MA](#) monasteries in eastern Tibet, the others being [KAH THOG](#), [RDZOGS CHEN](#), and [ZHE CHEN](#); founded in 1665 by Kun bzang shes rab (1636–1699). The monastery specializes in the [GTER MA](#) (treasure text) teachings of [KARMA CHAGS MED](#); members of the

monastery follow a set course of preliminary practices and engage in a three-year retreat. The monastery, destroyed during the Chinese Cultural Revolution (1966–76), has been rebuilt and currently houses about three hundred monks. The eleventh khri 'dzin (throne-holder) Thub bstan legs bshad chos kyi sgra dbyangs, Penor Rin po che (1932–2009), established a new monastery called Rnam grol gling with great success near Bylakuppe in South India; at present it is the largest Rnying ma institution outside Tibet, with perhaps as many as five thousand monks and nuns. The present throne-holder is the fifth Karma sku chen (b. 1970).

[Drang nges legs bshad snying po](#). See [LEGS BSHAD SNYING PO](#).

[dravya](#). (T. rdzas; C. shishi; J. jitsuji; K. silsa 實事). In Sanskrit “substance,” “constituent,” or “real entity”; a term with wide-ranging use in Buddhism, from the “ingredients” of a medicine or magic potion to “substance” in an ontological sense. The various schools of Indian Buddhism made use of the term in different ways. Although the term is virtually unknown in Pāli materials (where the equivalent is dabba), including its abhidhamma literature, in the [VAIBHĀSIKA](#) school of the [SARVĀSTIVĀDA ABHIDHARMA](#), dravya became virtually synonymous with [DHARMA](#). The Vaibhāṣikas conceived that all things that were “real entities” ([DRAVYA](#)) had unique characteristics of their own ([SVALAKṢANA](#)), were not subject to any further division, and had specific modes of being (what the Vaibhāṣikas termed their “own being,” or [SVABHĀVA](#)). All material objects were said to be composed of eight dravya: earth, water, fire, air, form, smell, taste, and touch. In [MAHĀYĀNA](#), the [YOGĀCĀRA](#) school argued that because there is no external world, there were no physical constituents; only consciousness ([VIJÑĀNA](#)) possessed dravya. By contrast, the [MADHYAMAKA](#) school, in keeping with its doctrine of emptiness ([ŚŪNYATĀ](#)), saw dravya as almost a synonym of inherent existence ([SVABHĀVA](#)) and said that all things were ultimately devoid of dravya. See also [DRAVYASAT](#).

[Dravya Mallaputra](#). (P. Dabba Mallaputta; C. Tapomoluo; J. Tōbamara; K. Tappamara 沓婆摩羅). An important [ARHAT](#), whom the Buddha declared to be foremost among his monk disciples in service (S. [VAIYĀPRTYA\[KARA\]](#); P. veyyāvaccakara) to the community of monks, specifically in assigning residence quarters and arranging meals. According to Pāli sources, Dravya (P. Dabba) belonged to the Malla clan and had a most unusual birth: he was born to his mother while her corpse was burning on the funeral pyre and was discovered

lying amid the ashes after the flames were extinguished. He was seven when he first saw the Buddha and immediately asked his grandmother to allow him to join the order. She gave her consent and he became an arhat while he was being ordained as a novice. Because he was already enlightened, he was given the higher ordination as a [BHIKSU](#) while he was still only seven years old. Wishing to be useful, Dravya assumed the task of assigning night lodgings to visiting monks. So diligent and efficient was the young boy that he quickly became famous. Monks used to arrive late in the evening intentionally so they could witness his special thaumaturgic skill: he would burst into flames and use his body as a lamp to show his guests to their quarters. Dravya appears to have had several encounters with the infamous “group of six” (S. [SADVĀRGIKA](#)), a notorious band of recalcitrant malefactors in the order. Twice these monks falsely accused him of seducing women, and once for neglecting his duties, but Dravya was vindicated of all charges. Dravya was fated to die young and had a premonition of his own demise. With his death imminent, he bid farewell to the Buddha and passed away in his presence amid a marvelous display of [RDDHI](#) power. Cf. [DIANZUO](#).

[dravyasat](#). (T. rdzas yod; C. shi you; J. jitsuu; K. sil yu 實有). In Sanskrit, “substantially existent,” or “existent in substance”; a term used in Buddhist philosophical literature to describe phenomena whose inherent nature is more real than those designated as [PRAJÑAPTISAT](#), “existent by imputation.” The contrast drawn in doctrinal discussions between the way things appear to be and the way they exist in reality appears to have developed out of the early contrast drawn between the false view ([MITHYĀDRSTI](#)) of a perduring self ([ĀTMAN](#)) and five real aggregates ([SKANDHA](#)). The five aggregates as the real constituents of compounded things were further elaborated into the theory of factors ([DHARMA](#)), which were generally conceived as dravyasat, although the [ABHIDHARMA](#) schools differed regarding how they defined the term and which phenomena fell into which category. In the [SARVĀSTIVĀDA](#) abhidharma, for example, dharmas are categorized as dravyasat because they have “inherent existence” ([SVABHĀVA](#)), while all compounded things, by contrast, are prajñaptisat, or merely conventional constructs that derive from dravyasat. In the [MADHYAMAKA](#) school of [MAHĀYĀNA](#) scholasticism, however, all things are considered to lack any inherent existence ([NIHŠVABHĀVA](#)). Therefore, Madhyamaka asserts that even dharmas are marked by emptiness ([ŚŪNYATĀ](#)) and thus nothing is “substantially existent” (dravyasat). In contrast to the Madhyamaka’s exclusive rejection of

anything being dravyasat, the [YOGĀCĀRA](#) school maintained that at least one thing, the flow of consciousness or the process of subjective imputation ([VIJÑĀPTI](#)), was substantially existent (dravyasat). For Yogācāra followers, however, the reason that the flow of consciousness is dravyasat is not because it is free from causal conditioning and thereby involves inherent existence (svabhāva), but because the Yogācāra denies the ontological claim that causal conditioning involves the absence of svabhāva, or vice versa. Thus the flow of consciousness, even though it is causally conditioned, may still be conceived as “substantially existent” (dravyasat) because its inherent existence is “dependent” ([PARATANTRA](#)), one of the three natures ([TRISVABHĀVA](#)) recognized in the school. Another strand of Mahāyāna thought that asserts there is something that is substantially existent is the doctrine of the buddha-nature ([BUDDHADHĀTU](#)) or [TATHĀGATAGARBHA](#). As the potentiality inherent in each sentient being to become a buddha, the tathāgatagarbha is sometimes said to be both empty (of all afflictions) and nonempty (of all the attributes and qualities inherent in enlightenment). In this context, there has been some dispute as to whether the buddhadhātu or tathāgatagarbha should be conceived as only dravyasat, or as both dravyasat and prajñaptisat.

'dre. Tibetan term for a class of baleful spirits that includes what might be termed demons, ghosts, and goblins in English.

Droṇa. (P. Doṇa; T. Bre bo; C. Xiangxing poluomen; J. Kōshō baramon; K. Hyangsōng paramun 香姓婆羅門). A renowned brāhmaṇa who is remembered for resolving the dispute that arose over control of the Buddha’s relics following his cremation. Droṇa was a brāhmaṇa with many disciples who came upon the Buddha once while traveling. After hearing the Buddha’s discourse, he became a once-returner ([ANĀGĀMIN](#)) and wrote an extended verse eulogizing the Buddha. Droṇa was revered by the secular rulers of his day, so while he was sojourning in the city of [KUŚINAGARĪ](#) (P. Kusinārā), he was able to mediate among the various competing groups concerning who would take charge of the Buddha’s relics ([ŚARĪRA](#)) following the teacher’s cremation. His solution was to divide the relics into eight parts, which he distributed among the factions to take back to their regions for enshrinement. After the division of the relics into eight shares, there remained the ashes from the cremation fire and the bucket (droṇa) that Droṇa had used to divide the relics. Droṇa received permission to keep the bucket himself and erected a reliquary [STŪPA](#) in Kuśinagarī to house the vessel that had

temporarily held the relics. A young brāhmaṇa who arrived late for the division of the relics received the ashes and built a tenth stūpa to house them.

drsti. (P. diṭṭhi; T. Ita ba; C. jian; J. ken; K. kyōn 見). In Sanskrit, “view” or “opinion”; nearly always used pejoratively in Buddhism to refer to a “wrong view.” In the [ATTHAKAVAGGA](#) chapter of the [SUTTANIPĀTA](#), which seems to belong to the earliest stratum of Pāli Buddhist literature, the Buddha offers a rigorous indictment of the dangers inherent in “views” and displays a skepticism about religious dogmas in general, seeing them as virulent sources of attachment that lead ultimately to conceit, quarrels, and divisiveness. Some scholars have suggested that the thoroughgoing critique of views may have been the core teaching of Buddhism and might have served as the prototype of the later [MADHYAMAKA](#) logical approach of reductio ad absurdum, which sought to demonstrate the fallacies inherent in any philosophical statement. A standardized list of five types of wrong views (pañca-drṣṭi) is commonly found in the literature: (1) the view that there is a perduring self, or soul, that exists in reality ([SATKĀYADRSTI](#)); (2) extreme views ([ANTAGRĀHDRSTI](#)), viz., in permanence or annihilation (dhruvoccheda); (3) fallacious views ([MITHYĀDRSTI](#)), the denial of or disbelief in the efficacy of [KARMA](#), rebirth, and causality; (4) the rigid attachment to views ([DRSTIPARĀMARŚA](#)), viz., mistakenly and stubbornly clinging to one’s own speculative views as being superior to all others; and (5) the rigid attachment to the soteriological efficacy of rites and rituals ([ŚĪLAVRATAPARĀMARŚA](#)). There are numerous other kinds of wrong views listed in the literature. Views are also commonly listed as the second of the four attachments ([UPĀDĀNA](#)), along with the attachments to sensuality ([KĀMA](#)), the soteriological efficacy of rites and rituals (śīlavrata), and mistaken notions of a perduring soul ([ĀTMAVĀDA](#)). Views are also the third of the four contaminants ([ĀSRAVA](#)), along with sensuality ([KĀMA](#)), the desire for continued existence ([BHAVA](#)), and ignorance ([AVIDYĀ](#)).

drṣṭiparāmarśa. (P. diṭṭhiparāmāsa; T. Ita ba mchog tu ’dzin pa; C. jianqu; J. kenju; K. kyōnch’wi 見取). In Sanskrit, “attachment to (wrong) views”; the fourth of the five types of wrong views ([DRSTI](#)), along with the view that there exists in reality a perduring self, or soul ([SATKĀYADRSTI](#)); extreme views ([ANTAGRĀHDRSTI](#)), viz., in permanence or annihilation; fallacious views ([MITHYĀDRSTI](#)); and the rigid attachment to the soteriological efficacy of rites and rituals ([ŚĪLAVRATAPARĀMARŚA](#)). Drṣṭiparāmarśa suggests that a person

mistakenly and stubbornly clings to one's own speculative views as being correct and superior to all others. In practice, the term refers specifically to the stubborn attachment to self-view (satkāyadr̥ṣṭi), extreme views (antagrāhadr̥ṣṭi), and false views (mithyādr̥ṣṭi).

dr̥ṣṭiprāpta. (P. diṭṭhippatta; T. mthong bas thob pa; C. jianzhi/jiande; J. kenji/kentoku; K. kyōnji/kyōndūk 見至/見得). In Sanskrit, “one who has attained understanding” or “one who attains through seeing”; one of the seven noble persons ([ĀRYAPUDGALA](#); P. ariyapuggala) listed in the [MAJJHIMANIKĀYA](#); parallel to the [DHARMĀNUSĀRIN](#) (P. dhammānusāri), or “follower of the dharma.” The dr̥ṣṭiprāpta is one in the list of the members of the [SAMGHA](#) when it is subdivided into twenty ([VIMŚATIPRABHEDASAMGHA](#)). Among the dr̥ṣṭiprāpta, there are recipients of the fruit of stream-enterer ([SROTAĀPANNAPHALASTHA](#)), once-returned ([SAKRDĀGĀMIPHALASTHA](#)), and nonreturner ([ANĀGĀMIPHALASTHA](#)). The dharmānusārin and dr̥ṣṭiprāpta are characterized as having keen faculties ([TĪKSNENDRIYA](#)), unlike the [ŚRADDHĀNUSĀRIN](#) and [ŚRADDHĀVIMUKTA](#) who have dull faculties ([MRDVINDRIYA](#)).

drum. (S. dundubhi, mṛdaṅga; P. dundubhi, mutiṅga; T. rnga bo che; C. gu; J. ku; K. ko 鼓). Drums and other percussion instruments are used in many Buddhist cultures to signal the events of the daily monastic schedule, to call the monks and nuns to assembly, and in Buddhist liturgical activities. Drums also appear frequently in Buddhist literature as a symbol of the power of the dharma to encourage good and frighten away evil. In Chinese monasteries, a drum is beaten at dawn and dusk to gather the monastic residents for services; a “cloud drum,” viz., a drum ornamented with clouds, calls the monks to the midday meal; and a bathing drum is used to announce bath time in [CHAN](#) monasteries. The Chinese typically use four instruments to mark the schedule of events in a monastery: the dharma drum, temple bell, cloud-shaped gong, and wooden fish (C. muyu = K. [MOKTAK](#)). Especially interesting is the wooden fish, a wooden percussion instrument carved in the shape of a fish that is used for calling the monks to meals and to mark time during chanting. Because a fish's eyes are always open day and night, the wooden fish is a subtle admonition to monks and nuns to remain ever vigilant about their practice. Drums are often used together with other instruments during Buddhist liturgical activities. Small drums, bells, and gongs, for example, are used to mark time during Buddhist rituals and while chanting the Buddha's name (C. [NIANFO](#)). ¶ Drums often appear in conjunction

with heavenly divinities ([DEVA](#)) in Buddhist literature. Dundubhisvara-rāja is the lord of the sound of celestial drums, viz., the thunder. Meghasvara-rāja, a son of Mahābhijñābhibhu, is the ruler of the cloud drums in the [SADDHARMAPUNDIRIKASŪTRA](#). The heavenly drum in the [TRĀYASTRIMŚA](#) heaven spontaneously emits a sublime sound without being struck; it warns the divine inhabitants that even their lives are impermanent and subject to the law of causality. Drums are a common metaphor for the Buddha or dharma in Buddhist literature. “Great Drum of the Dharma” is one of the epithets of a Buddha, since he exhorts sentient beings to perform wholesome actions and frightens away baleful influences and demons. The [YOGĀCĀRABHŪMISĀSTRA](#) describes one of the characteristics of the divine voice of a Buddha as being like the thunderous sound of a heavenly drum. The drum of dharma is also likened to both a noxious drum that helps to repress unwholesome action and evil, as well as a heavenly drum that offers kind and gentle encouragement to sentient beings to perform wholesome deeds. The noxious drum is likened also to the buddha-nature (C. [FOXING](#)), which can help overcome all evil. There are many variant Sanskrit names for drums and percussion instruments, including bherī, ghaṭṭita, [GHANTA](#), dundubha, and paṇava. See also [MOKT’AK](#); [DAMARU](#).

[Drumavikalpapraveśadhāranī](#). (S). See [AVIKALPAPRAVEŚADHĀRANĪ](#).

[duanzhu](#). (C) (短珠). In Chinese, “short rosary.” See [JAPAMĀLĀ](#).

[Du Fei](#). (C) (杜朮). See [CHUAN FABAO JI](#).

[duḥkha](#). (P. dukkha; T. sdug bsngal; C. ku; J. ku; K. ko 苦). In Sanskrit, “suffering” or “unsatisfactoriness”; the first of the [FOUR NOBLE TRUTHS](#) ([CATVĀRY ĀRYASATYĀNI](#)) of Buddhism and a concept foundational to Buddhism’s worldview and religious practice. The emblematic description of duḥkha, as found in the first noble truth, is, “Birth is suffering, aging is suffering, sickness is suffering, death is suffering. To be conjoined with what one dislikes is suffering and to be separated from what one likes is suffering. Not to get what one wants is suffering. In short, grasping at the five aggregates ([SKANDHA](#)) is suffering.” Suffering thus not only includes the suffering that will invariably be associated with ordinary life, such as birth, aging, disease, and death, but also subsumes a full range of mental, emotional, and spiritual dissatisfactions, and ultimately is seen to be inherent to life itself. The teaching of suffering therefore seeks to change one’s ordinary perspectives on the things of this world as objects worthy

of pursuit, so that instead one realizes their nature of impermanence ([ANITYA](#)), suffering, and nonself ([ANĀTMAN](#)), viz., the three marks of existence ([TRILAKSANA](#)). Through this sort of systematic attention ([YONISOMANASKĀRA](#)), even the pleasures of life are ultimately realized to be “unsatisfactory,” because, like all compounded things, they are impermanent and thus inevitably destined to pass away. This awareness of suffering produces a sense of the “dangers” ([ĀDĪNAVA](#)) inherent in this world and prompts the practitioner to turn away from this world and toward the radical nonattachment that is [NIRVĀNA](#). ¶ Many types of duḥkha are enumerated in the literature, including forms specific to each of the six realms of rebirth ([GATI](#)). Most common are lists of three, four, and eight types of suffering. The three major categories of suffering are: (1) “misery caused by (physical and mental) suffering” ([DUHKHADUHKHATA](#)), viz., the full range of unpleasant or painful sensations ([VEDANĀ](#)) that are associated with either the physical body or the mind; (2) “misery caused by change” ([VIPARINĀMADUHKHATA](#)), i.e., pleasant sensations may be a cause of suffering because they do not perdure and eventually turn into pain; (3) “misery caused by conditioning” ([SAMSKĀRADUHKHATA](#)), i.e., sensations that are neither painful nor pleasant may still be a cause of suffering because they are impermanent and thus undependable; because of past [KARMAN](#), suffering may always occur unexpectedly in the next moment. The four types of suffering are the suffering associated with birth (jātiduḥkha), senescence or aging (jarāduḥkha), sickness (vyādhiduḥkha), and death (maraṇāduḥkha); various sūtras describe the Buddha’s quest for enlightenment as motivated by the impulse to overcome these four types of sufferings. The eight types of suffering comprise the above four types plus an additional four: “the suffering of being separated from persons and things one likes” (priyaviprayogaduḥkha), “the suffering of being associated with persons and things one dislikes” (apriyasamprayogaduḥkha), “the suffering of not getting what one wants” (yad api icchayā paryeṣamāṇo na labhate tad api duḥkham), and “the suffering inherent in the five aggregates that are objects of clinging” (saṃkṣepeṇa pañcopādānaskandhaduḥkha). In addition to these three typical categories of suffering, there are other lists, from the eighteen types of suffering listed in the *Śāriputrābhidharmaśāstra* (*Shelifu apitan lun*) to the one hundred and ten types enumerated in the [YOGĀCĀRABHŪMIŚĀSTRA](#). [NĀGĀRJUNA](#)’s [SUHRLLEKHA](#) gives a list of six sufferings: uncertainty, insatiability, casting off bodies repeatedly, repeated rebirth, repeatedly descending from high to low, and having no companions when dying and being reborn. Tibetan sources stress the role that meditation on suffering plays in producing a feeling of disgust

([NIRVEDA](#); T. nges 'byung), that is, the preliminary turning away from the things of this world and turning toward nirvāṇa.

[duḥkhaduḥkhatā](#). (P. dukkhadukkhatā; T. sdug bsngal gyi sdug bsngal; C. kuku; J. kuku; K. kogo 苦苦). In Sanskrit, “misery caused by (physical and mental) suffering”; one of the three principal categories of suffering ([DUHKHA](#)), along with “suffering caused by conditioning” ([SAMSKĀRADUHKHATĀ](#)), and “suffering caused by change” ([VIPARIṆĀMADUHKHATĀ](#)). Misery caused by suffering is defined as the full range of unpleasant and painful sensations ([VEDANĀ](#)) that rack the body and mind. The specific constituents of misery caused by suffering vary in different texts but typically include, among the physical components, birth ([JĀTI](#)), aging ([JARĀ](#)), disease (vyādhī), death (maraṇā), and physical pain (duḥkha) and, among the mental and emotion components, sorrow (śoka), lamentation (parideva), despair (daurmanasya), irritation (upāyāsa), being associated with persons and things that one dislikes, being dissociated from persons and things that one likes, and being unable to get what one wants. Many texts explain in great detail how these ordinary experiences involve or generate duḥkha. For example, according to the [VISUDDHIMAGGA](#), the suffering associated with birth indicates all kinds of discomfort and pain to which a fetus is subject during gestation: the unpleasant conditions of stench, darkness, and physical constraint in the mother’s womb, the nauseating feelings produced when the mother moves, and the excruciating pain that the newborn suffers during the birth process. By contrast, the “misery caused by conditioning” (samskāraduḥkhatā) means that sensations that are neither painful nor pleasant may still be a cause of suffering because they are impermanent and thus undependable. The “misery caused by change” (vipariṇāmaduḥkhatā) means that even pleasant sensations may be a cause of suffering because they do not endure.

[duḥkhasatya](#). (P. dukkhasacca; T. sdug bsngal gyi bden pa; C. kudi; J. kutai; K. koje 苦諦). In Sanskrit, “truth of suffering,” or “true suffering,” the first of the [FOUR NOBLE TRUTHS](#) ([CATVĀRY ĀRYASATYĀNI](#)), set forth in the Buddha’s first sermon ([DHAMMACAKKAPPĀVATTANASUTTA](#)), where he enumerated eight types of suffering (see [DUHKHA](#)) and identified as suffering the five aggregates ([SKANDHA](#)) that are produced by contaminated ([ĀSRAVA](#)) actions ([KARMA](#)) and afflictions ([KLEŚA](#)). Thus, the minds and bodies of ordinary sentient beings, as well as the environments they inhabit, which are also the byproducts of the actions of these

beings, are forms of suffering. The term satya in Sanskrit can mean “truth” in the abstract sense, but it can also have the more concrete meaning of a fact, a reality, or a constituent of experience. In this sense, the constituents of [SAMSĀRA](#), both sentient beings and their environments, can be called “true sufferings.” More generally, the truth of suffering encompasses the three forms of suffering: (1) “misery caused by (physical and mental) suffering” ([DUHKHADUHKHATĀ](#)), (2) “misery caused by change” ([VIPARINĀMADUHKHATĀ](#)), and (3) “misery caused by conditioning” ([SAMSKĀRADUHKHATĀ](#)), as well as the specific sufferings of the six realms ([GATI](#)) of rebirth. Each of the four truths has four aspects ([ĀKĀRA](#)), which are specific objects of [SAMĀDHI](#) on the mainstream Buddhist path. The four aspects of the truth of suffering are impermanence ([ANITYA](#)), misery (duḥkha), emptiness (śūnya; see [ŚŪNYATĀ](#)), and nonself (anātmaka; see [ANĀTMAN](#)). The five aggregates are forms of suffering because they are impermanent in the sense that they are constantly disintegrating; by meditating on the impermanence of mind and body, one overcomes the wrong view that they are permanent. The five aggregates are miserable in the sense that they are produced by contaminated actions and afflictions and thus are subject to the three types of suffering; by meditating on their misery one overcomes the wrong view that they are pure and pleasurable. The five aggregates are empty and nonself in the sense that they lack a permanent self and are not the possessions of such a self. By meditating on their emptiness and lack of selfhood, one overcomes the wrong view that a self is present among the five aggregates.

[duiji](#). (J. taiki; K. taegi 對機). In Chinese, lit. teaching “in accord with capacity”; an abbreviation of the phrase [duiji shuofa](#), or “speaking the [DHARMA](#) in accord with [the student’s] capacity,” referring to the Buddha’s propensity to tailor his message through stratagems ([UPĀYA](#)) in order to respond to the specific needs of his audience and his listeners’ ability to understand him. The term comes to be used in the [CHAN](#) school to refer to a formal exchange between a Chan master and disciple that takes place in the master’s room (see [FANGZHANG](#)). This exchange between master and disciple is typically a “private” affair, for the master’s answers are designed to respond to the spiritual capacity of that specific student. These exchanges constitute much of the content of the discourse records ([YULU](#)) of Chan, [SŌN](#), and [ZEN](#) masters.

[duiji shuofa](#). (J. taiki seppō; K. taegi sōlbop 對機說法). In Chinese, “speaking the dharma in accord with [the student’s] capacity.” See [DUIJI](#).

dukkha. In Pāli, “suffering.” See [DUHKHA](#).

Dung dkar. (Dungkar). A valley in western Tibet (Mnga’ ris) about thirty kilometers from [THO LING](#) with 1,150 caves, most of which were used as dwellings but twenty of which are cave temples with mural paintings. The area appears to have become the capital of the Pu rang [GU GE](#) kingdom at the beginning of the twelfth century, and the cave temples with mural paintings and mud sculptures were probably founded by the descendents of the Gu ge royal family during that period. Of the three main caves, the most important has statues of the seven buddhas of the past ([SAPTATATHĀGATA](#)) and the future buddha [MAITREYA](#), a ceiling mural of the [VAJRADHĀTU MANDALA](#), and walls covered with bodhisattvas. Another has a [GUHYASAMĀJA MANDALA](#), suggesting development at a later period. The caves have been documented a number of times, first by [GIUSEPPE TUCCI](#) in the 1930s.

Dunhuang. (J. Tonkō; K. Tonhwang 敦煌). A northwest Chinese garrison town on the edge of the Taklamakan desert in Central Asia, first established in the Han dynasty and an important stop along the ancient [SILK ROAD](#); still seen written also as Tun-huang, followed the older Wade–Giles transcription. Today an oasis town in China’s Gansu province, Dunhuang is often used to refer to the nearby complex of approximately five hundred Buddhist caves, including the [MOGAO KU](#) (Peerless Caves) to the southeast of town and the [QIANFO DONG](#) (Caves of the Thousand Buddhas) about twenty miles to the west. Excavations to build the caves at the Mogao site began in the late-fourth century CE and continued into the mid-fourteenth century CE. Of the more than one thousand caves that were hewn from the cliff face, roughly half were decorated. Along with the cave sites of [LONGMEN](#) and [YUNGANG](#) further east and [BEZEKLIK](#) and [KIZIL](#) to the west, the Mogao grottoes contain some of the most spectacular examples of ancient Buddhist sculpture and wall painting to be found anywhere in the world. Legend has it that in 366 CE a wandering monk named Yuezun had a vision of a thousand golden buddhas at a site along some cliffs bordering a creek and excavated the first cave in the cliffs for his meditation practice. Soon afterward, additional caves were excavated and the first monasteries established to serve the needs of the monks and merchants traveling to and from China along the Silk Road. The caves were largely abandoned in the fourteenth century. In the early twentieth century, Wang Yuanlu (1849–1931), self-appointed guardian of the Dunhuang caves, discovered a large cache of ancient manuscripts and

paintings in Cave 17, a side chamber of the larger Cave 16. As rumors of these manuscripts reached Europe, explorer-scholars such as SIR MARC AUREL STEIN and [PAUL PELLIOT](#) set out across Central Asia to obtain samples of ancient texts and artwork buried in the ruins of the Taklamakan desert. Inside were hundreds of paintings on silk and tens of thousands of manuscripts dating from the fifth to roughly the eleventh centuries CE, forming what has been described as the world's earliest and largest paper archive. The texts were written in more than a dozen languages, including Chinese, Tibetan, Sanskrit, Sogdian, Uighur, Khotanese, Tangut, and [TOCHARIAN](#) and consisted of paper scrolls, wooden tablets, and one of the world's earliest printed books (868 CE), a copy of the [VAJRACCHEDIKĀPRAJÑĀPĀRAMITĀSŪTRA](#) (“Diamond Sūtra”). In the seventh-century, a Tibetan garrison was based at Dunhuang, and materials discovered in the library cave also include some of the earliest documents in the Tibetan language. This hidden library cave was apparently sealed in the eleventh century. As a result of the competition between European, American, and Japanese institutions to acquire documents from Dunhuang, the material was dispersed among collections world-wide, making access to all the manuscripts difficult. Many items have still not been properly catalogued or conserved and there are scholarly disputes over what quantity of the materials are modern forgeries. In 1944 the Dunhuang Academy was established to document and study the site and in 1980 the site was opened to the public. In 1987 the Dunhuang caves were listed as a UNESCO World Heritage site and today are being preserved through the efforts of both Chinese and international groups.

[dunjiao](#). (J. tongyō; K. ton'gyo 頓教). In Chinese, “sudden teachings,” or “subitism”; a polemical term used by [HOZE SHENHUI](#) in the so-called “Southern school” ([NAN ZONG](#)) of Chan to disparage his rival “Northern school” ([BEI ZONG](#)) as a gradualist, and therefore inferior, presentation of Chan teachings and practice. Unlike the Northern school's more traditional soteriological approach, which was claimed to involve gradual purification of the mind so that defilements would be removed and the mind's innate purity revealed, the Southern school instead claimed to offer immediate access to enlightenment itself (viz., “sudden awakening”; see [DUNWU](#)) without the necessity of preparatory practices or conceptual mediation. See also [LIUZU TAN JING](#). ¶ The “sudden teaching” (dunjiao) was also the fourth of the five classifications of the teachings in the Huayan school (see [HUAYAN WUJIAO](#)), as outlined by [DUSHUN](#) and [FAZANG](#) (643–712). In a Huayan context, the sudden teachings were ranked

as a unique category of subitist teachings befitting sharp people of keen spiritual faculties (S. [TĪKṢNENDRIYA](#)), which therefore bypassed systematic approaches to enlightenment. Huayan thus treats the Chan school's touted methods involving sudden enlightenment (*dunwu*) and its rejection of reliance on written texts ([BULI WENZI](#)) as inferior to the fifth and final category of the “perfect” or “consummate teaching” ([YUANJIAO](#)), which was reserved for the [HUAYAN ZONG](#).

[dunwu](#). (J. *tongo*; K. *tono* 頓悟). In Chinese, “sudden awakening,” or “sudden enlightenment”; the experience described in the [CHAN](#) school that “seeing the nature” ([JIANXING](#)) itself is sufficient to enable the adept to realize one's innate buddhahood ([JIANXING CHENGFO](#)). The idea of a subitist approach ([DUNJIAO](#)) to awakening was also used polemically by [HOZE SHENHUI](#) in the so-called “Southern school” ([NAN ZONG](#)) of Chan to disparage his rival “Northern school” ([BEIZONG](#)) as a gradualist, and therefore inferior, presentation of Chan soteriological teachings. Although debates over gradual vs. sudden enlightenment are most commonly associated with the East Asian Chan schools, there are also precedents in Indian Buddhism. The so-called [BSAM YAS DEBATE](#), or “Council of [LHA SA](#),” that took place in Tibet at the end of the eighth century is said to have pitted the Indian monk [KAMALAŚĪLA](#) against the Northern Chan monk [HESHANGMOHEYAN](#) in a debate over gradual enlightenment vs. sudden enlightenment. ¶ In two-tiered path ([MĀRGA](#)) schemata, such as “sudden awakening [followed by] gradual cultivation” ([DUNWU JIANXIU](#)), this initial experience of sudden awakening constitutes an “understanding–awakening” ([JIEWU](#)), in which the adept comes to know that he is not a deluded sentient being but is in fact a buddha. (In this context, the understanding–awakening is functionally equivalent to the path of vision [[DARŚANAMĀRGA](#)] in [ABHIDHARMA](#) path systems.) But this sudden awakening is not sufficient in itself to generate the complete, perfect enlightenment of buddhahood ([ANUTTARASAMYAKSAMBODHI](#)), where one is able to manifest all the potential inherent in that exalted state. That realization comes only through continued gradual cultivation (*jianxiu*) following this initial sudden awakening, so that one will learn not only to be a buddha but to act as one as well. That point where knowledge and action fully correspond marks the final “realization–awakening” ([ZHENGWU](#)) and is the point at which buddhahood is truly achieved. See also [WU](#); [JIANWU](#).

[dunwu jianxiu](#). (J. *tongo zenshu*; K. *tono chōmsu* 頓悟漸修). In Chinese, “sudden

awakening [followed by] gradual cultivation”; a path ([MĀRGA](#)) schema emblematic of such [CHAN](#) masters as [GUIFENG ZONGMI](#) (780–841) in the Chinese Heze school of Chan, and [POJO CHINUL](#) (1158–1210) of the Korean [CHOGYE](#) school of Sōn. In this outline of the Chan mār̥ga, true spiritual practice begins with an initial insight into one’s true nature (viz., “seeing the nature”; [JIANXING](#)), through which the Chan adept comes to know that he is not a deluded sentient being but is in fact a buddha. This experience is called the “understanding–awakening” ([JIEWU](#)) and is functionally equivalent to the path of vision ([DARŚANAMĀRGA](#)) in [ABHIDHARMA](#) path systems. Simply knowing that one is a buddha through this sudden awakening of understanding, however, is not sufficient in itself to generate the complete, perfect enlightenment of buddhahood ([ANUTTARASAMYAKSAMBOODHI](#)) and thus to ensure that one will always be able to act on that potential. Only after continued gradual cultivation (*jianxiu*) following this initial understanding–awakening will one remove the habituations([VĀSANĀ](#)) that have been engrained in the mind for an essentially infinite amount of time, so that one will not only be a buddha, but will be able to act as one as well. That point where knowledge and action fully correspond marks the final “realization-awakening” ([ZHENGWU](#)) and is the point at which buddhahood is truly achieved. This soteriological process is compared by Zongmi and Chinul to that of an infant who is born with all the faculties of a human being (the sudden understanding–awakening) but who still needs to go a long process of maturation (gradual cultivation) before he will be able to live up to his full potential as an adult human being (realization–awakening). See also [WU](#).

[Dunwu rudaο yaomen lun](#). (J. Tongo nyūdō yōmonron; K. Tono ipto yomun non 頓悟入道要門論). In Chinese, “Treatise on the Essential Gate of Entering the Way through Sudden Awakening,” composed by the Tang dynasty [CHAN](#) master [DAZHU HUIHAI](#) (d.u.); also known as the *Dunwu yaomen*. The monk Miaoxie (d.u.) discovered this text in a box and published it in 1369 together with Dazhu’s recorded sayings that he selectively culled from the [JINGDE CHUANDENG LU](#). Miaoxie’s edition is comprised of two rolls. The first roll contains Dazhu’s text the *Dunwu rudaο yaomen lun*, and the second contains his sayings, which Miaoxie entitled the *Zhufang menren canwen yulu*. A preface to this edition was prepared by the monk Chongyu (1304–1378). The *Dunwu rudaο yaomen lun* focuses on the notion of “sudden awakening” ([DUNWU](#)) and attempts to explicate various doctrinal concepts, such as [ŚĪLA](#), [DHYĀNA](#), [PRAJÑĀ](#), [TATHATĀ](#), [BUDDHA-](#)

[NATURE \(FOXING\)](#), and “no-thought” ([WUNIAN](#)), from the perspective of sudden awakening. The text explains sudden awakening as the “sudden” (dun) eradication of deluded thoughts and “awakening” ([WU](#)) to nonattainment or the fundamental absence of anything that needs to be achieved. Citing such scriptures as the [LANKĀVATĀRASŪTRA](#) and [VIMALAKĪRTINIRDEŚA](#), the text also contends that the mind itself is the foundation of cultivation and practice. The primary method of cultivation discussed in the text is seated meditation ([ZUOCHAN](#)), which it describes as the nonarising of deluded thoughts and seeing one’s own nature ([JIANXING](#)). The *Dunwu rudao yaomen lun* also contends that sudden awakening begins with the perfection of giving ([DĀNAPĀRAMITĀ](#)).

[dūraṅgamā](#). (T. ring du song ba; C. yuanxing di; J. ongyōji; K. wŏnhaeng chi 遠行地). In Sanskrit, “gone afar,” or “transcendent”; the seventh of the ten “stages” or “grounds” ([BHŪMI](#)) of the bodhisattva path ([MĀRGA](#)). The name of this stage is interpreted to mean that the bodhisattva has here reached the culmination of moral discipline ([ŚĪLA](#)) and hereafter proceeds to focus more on meditation ([SAMĀDHI](#)) and wisdom ([PRAJÑĀ](#)). This stage marks the bodhisattva’s freedom from the four perverted views ([VIPARYĀSA](#)) and his mastery of the perfection of expedients ([UPĀYAKAUŚALYA](#)), which he uses to help infinite numbers of sentient beings. Although at this stage the bodhisattva abides in signlessness ([ĀNIMITTA](#)), he does not negate the conventions that create signs, thereby upholding the conventional nature of phenomena. He remains at this stage until he is able to abide spontaneously and effortlessly in the signless state. According to [CANDRAKĪRTI](#) in his [MADHYAMAKĀVĀTĀRA](#), at this stage the bodhisattva, in each and every moment, is able to enter into and withdraw from the equipoise of cessation ([NIRODHASAMĀPATTI](#)) in which all elaborations ([PRAPAÑCA](#)) cease. For Candrakīrti, at the conclusion of the seventh stage, the bodhisattva is liberated from rebirth, having destroyed all of the afflictive obstructions ([KLEŚĀVARANA](#)). The seventh stage is thus the last of the impure bhūmis. The bodhisattva then proceeds to the three pure stages (the eighth, ninth, and tenth bhūmis), over the course of which he abandons the obstructions to omniscience ([JÑEYĀVARANA](#)).

[durbhāsita](#). (P. dubbhāsita; T. nyes par smra ba; C. eshuo; J. akusetsu; K. aksŏl 惡說). In Sanskrit, “mischievous talk”; a supplementary category of ecclesiastical offenses. See [DUSKRTA](#); [PRĀTIMOKSA](#); [VINAYA](#).

[durgati](#). (P. duggati; T. ngan ’gro; C. equ; J. akushu; K. akch’wi 惡趣). In Sanskrit, “unfortunate destinies.” These destinies refer to the unfortunate or

unfavorable rebirths ([APĀYA](#)) that occur as a consequence of performing demeritorious actions ([AKUŚĀLAKARMA](#)). Typically a list of three (or sometimes four) such destinies is found in the literature: (1) a denizen of hell (S. [NĀRAKA](#); P. nerayika), (2) an animal (S. [TIRYAK](#); P. tiracchāna), (3) a hungry ghost (S. [PRETA](#); P. peta), and (4) a demigod or titan ([ASURA](#)). According to the [ABHIDHARMAKOSĀBHĀSYA](#), the eight hot and eight cold hells are the lowest place beneath [JAMBUDVĪPA](#); the pretas are ruled by [YAMA](#) and primarily live in a region five hundred yojanas (a [YOJANA](#) is the distance a pair of bulls can pull a cart in a day) below; animals primarily live on the land, in the water, and in the air. The life spans of beings in the unfortunate destinies are longest in the hells and shortest for animals. The life span of the least-painful, topmost hell is five hundred years calculated as follows: fifty human days makes a day in the life of the lowest level sensuous realm ([KĀMADHĀTU](#)) divinity who lives five hundred years; one day in the topmost hell is equal to the life span of that god. The length of life span becomes even more dire for the lower hells. A day for a preta who lives for five hundred years is one month for a human being. Animal life spans range widely, some seeming almost evanescent by human standards, others, such as the [NĀGA](#), supposedly able to live for an eon ([KALPA](#)). See also [APĀYA](#); [BHAVACAKRA](#).

[Dus gsum mkhyen pa](#). (Dusum Kyenpa) (1110–1193). A renowned Tibetan master recognized as the first in the lineage of [KARMA PA](#) incarnations and early founder of the [KARMA BKA' BRGYUD](#) sect of Tibetan Buddhism. He was born in the Tre shod region of eastern Tibet and at the age of sixteen was ordained by a monk of the [BKA' GDAMS](#) sect and received tantric instruction from a disciple of [ATIŚA DĪPAMKARASRĪJŪNĀNA](#). He went on to study [MADHYAMAKA](#) and the [KĀLACAKRATANTRA](#) with some of the leading scholars of the day. At the age of thirty, Dus gsum mkhyen pa met his principal [GURU](#), [SGAM PO PA BSOD NAMS RIN CHEN](#), from whom he received many teachings, including so-called “heat yoga” (gtum mo; see [CANDĀLĪ](#)). He also studied with [MILA RAS PA](#)'s renowned disciple [RAS CHUNG PA](#). He devoted himself to the teachings that would become the hallmark of the Bka' brgyud, such as the six yogas of [NĀROPA](#) and [MAHĀMUDRA](#), but he also received teachings from a number of Bka' gdams and [SA SKYA](#) masters. He went on to found three important Bka' brgyud monasteries: Kam po gnas nang in 1164, KARMA DGON in 1184, both in eastern Tibet, and [MTSHUR PHU](#) northwest of [LHA SA](#) in 1187. The latter became a powerful central-Tibetan institution as the primary seat of the Karma pas up to 1959. It is said that at the

age of sixteen Dus gsum mkhyen pa received a hat woven from the hair of one hundred thousand [DĀKINĪs](#). This hat has been passed down to subsequent Karma pas, and seen in the so-called “black hat ceremony” (zhwa nag).

[Dushun](#). (J. Tojun; K. Tusun 杜順) (557–640). Chinese monk thaumaturge, meditator, and exegete who is recognized by tradition as the founder and putative first patriarch of the [HUAYAN ZONG](#) of East Asian Buddhism; also known as Fashun. Dushun was a native of Wengzhou in present-day Shaanxi province. He became a monk at the age of seventeen and is said to have studied meditation under a certain Weichen (d.u.) at the monastery of Yinshengsi. Later, he retired to the monastery of Zhixiangsi on [ZHONGNANSHAN](#), where he devoted himself to study of the [AVATAMSAKASŪTRA](#). The monk [ZHIYAN](#) (602–668) is presumed to have studied under Dushun at Zhixiangsi and subsequently came to be recognized as Dushun’s formal successor. Some fourteen different works have been ascribed to Dushun at various points in history, but it is now presumed that only two of these can definitively be associated with him: the *Huayan yisheng shixuan men* (“The Ten Arcane Gates of the One Vehicle of the *Avatamsaka*”), which was composed by Dushun’s successor, Zhiyan, supposedly from his teacher’s oral teachings; and the [HUAYAN FAJIE GUANMEN](#), one of the foundational texts of the nascent Huayan school. (Some scholars have proposed that this text may have been excerpted from [FAZANG](#)’s *Fa putixin zhang*, and only later attributed to Dushun, but this hypothesis is not widely accepted.) Dushun is also portrayed as an advocate of various Sui-and Tang-dynasty cults associated with [MAÑJUŚRĪ](#) and [AMITĀBHA](#) that were popular among the laity. Because of the sweeping scope of his religious career, Dushun is sometimes considered to be emblematic of the emerging “new Buddhism” of sixth-and seventh-century China, which sought to remake Buddhism into forms that would be more accessible to an indigenous audience.

[dusi](#). (J. tsūsu; K. tosa 都寺/司). In Chinese, “prior’s assistant,” or later “prior”; a principal administrative post in a [CHAN](#) monastery, the officer in charge of supplies and finances and the main staff person of the prior ([JIANYUAN](#)). Along with the rector ([WEINUO](#)), cook ([DIANZUO](#)), superintendent ([ZHISUI](#)), comptroller ([JIANSI](#)), and assistant comptroller ([FUSI](#)), the prior is one of the six stewards ([ZHISHI](#)) at an East Asian Chan monastery. The comptroller and assistant comptroller are usually under the prior’s direct supervision, and the prior himself is second only to the abbot ([ZHUCHI](#)) in administrative rank.

duṣkaracaryā. (P. dukkarakārikā; T. dka' ba spyod pa; C. kuxing; J. kugyō; K. kohaeng 苦行). In Sanskrit, “difficult feats” of religious practice, referring especially to the extreme asceticism in which Śākyamuni Buddha engaged as the [BODHISATTVA](#), prior to finding the middle way ([MADHYAMAPRATIPAD](#)) between mortification of the flesh and sensual indulgence. For the authorized list of ascetic practices, see [DHUTAṄGA](#).

duṣkrta. (P. dukkaṭa; T. nyes byas; C. ezuo/tujiluo; J. akusa/tokira; K. akchak/tolgilla 惡作/突吉羅). In Sanskrit, “wrongdoing”; a general category for the least serious of ecclesiastical offenses; for this reason, the term is also rendered in Chinese as “minor misdeed” (xiaoguo) or “light fault” (qingguo). In some recensions of the [VINAYA](#), such as the Pāli, wrongdoings are treated as a category supplementary to the eight general classifications of rules and regulations appearing in the monastic code of conduct ([PRĀTIMOKṢA](#)). The eight are: (1) [PĀRĀJIKĀ](#) (“defeat,” entailing expulsion from the order in some vinaya recensions); (2) [SAMGHĀVAŚEṢA](#) (requiring a formal meeting and temporary suspension from the order); (3) [ANİYATA](#) (undetermined or indefinite offenses); (4) [NAIHSARGIKAPĀYATTIKA](#) (offenses entailing expiation and forfeiture); (5) [PĀYATTIKA](#) (offenses entailing confession and forfeiture); (6) [PRATIDEŚANĪYA](#) (offenses that are to be publicly acknowledged); (7) [ŚAIKṢADHARMA](#) (minor rules of training); and (8) [ADHIKARANA](#) (rules for settling disputes). Other such supplementary categories include [STHŪLĀTYAYA](#) (various grave, but unconsummated offenses), and [DURBHĀṢITA](#) (mischievous talk). In such treatments, the duṣkrta category typically is said to entail deliberate disobeying of any of the śaikṣadharmas, which involve a whole range of possible transgressions of monastic decorum and public conduct, such as improperly wearing one’s robes, misconduct during alms round ([PINDAPĀTA](#)), or incorrect toilet habits. In addition, failed attempts to break any of rules in the relatively minor categories of the pāyattika, or pratideśanīya are a duṣkrta, while failed attempts to break the much more serious pārājika and saṃghāvaśeṣa rules are both a duṣkrta and a sthūlātyaya. Finally, various offenses that are not specifically treated in a formal rule in the prātimokṣa may also be treated as a duṣkrta, e.g., striking a layperson, which is not specifically enjoined in the prātimokṣa, although striking a monk is. Other vinayas, however, such as the [DHARMAGUPTAKA VINAYA](#) (C. *Sifen lü*), list the duṣkrta offenses as one of the five categories of precepts, along with pārājika, saṃghāvaśeṣa, pāyattika, and pratideśanīya; alternatively, the Dharmaguptaka vinaya also lists seven

categories of precepts, which include the preceding five categories, plus stūlātyaya and durbhāṣita. In such categorizations, the duṣkṛta essentially replace the śaikṣadharmā rules of other vinayas. These duṣkṛta offenses are typically said to be expiated through confession; more specifically, the Dharmaguptaka vinaya stipulates that a deliberate wrongdoing should be confessed to a single monk or nun, while an accidental case of wrongdoing may simply be repented in the mind of the offender. Similarly, the [MŪLASARVĀSTIVĀDA VINAYA](#) includes the 112 duṣkṛta in the 253 [PRĀTIMOKṢA](#) rules recited during the [UPOṢADHA](#) confession. In [MAHĀYĀNA](#) discussions of bodhisattva precepts (according to [AṢAṄGA](#) and others, these are a second set of precepts that supplement the prātimokṣa rules but do not contradict them), all offenses except the eighteen involving defeat (pārājika) [alt. mūlāpatti, T. rtsa ltung] are classified as “minor offenses” (C. qing gouzui; T. nyas byas), i.e., duṣkṛta. There are, for instance, forty-two types of duṣkṛta discussed in the [BODHISATTVABHŪMI](#) (*Pusa dichi jing*), forty-eight in the [FANWANG JING](#), and fifty in the *Pusa shanjie jing*. In tantric Buddhism, gross infractions (sthūla) are any form of behavior that does not constitute defeat (mūlāpatti), but are a weaker form of the infraction.

[Dus Idan](#). (T). See [KĀLIKA](#).

[Duṭṭhagāmaṇī](#). [alt. Sinhalese: Dutugūmunu] (r. 101–77 BCE). Sinhalese king best known for restoring Sinhalese suzerainty over the entire island of Sri Lanka after his first century BCE defeat of King Eḷāra of the predominantly Hindu Damiḷas (Tamil). According to the [MAHĀVAMSA](#), Duṭṭhagāmaṇī had been a monk in his previous life, when he vowed to be reborn as a [CAKRAVARTIN](#). As king, he went to war against the enemies of the dharma, carrying a spear with a relic of the Buddha attached to it. The battle ended when he killed the enemy king, the pious but non-Buddhist Eḷāra. After his victory, he planted his spear in the earth. When he attempted to extract it, he failed, and so decided to have a [STŪPA](#) built around it, making the instrument of his victory a site for merit-making. Like [AŚOKA](#), Duṭṭhagāmaṇī was troubled by the carnage he had caused, specifically the death of sixty thousand of his enemies. But a delegation of [ARHATS](#) assured him that, because his victims were not Buddhists, he had only accrued the negative [KARMA](#) of having killed just one and a half persons. As a result of meritorious deeds, Duṭṭhagāmaṇī is said to have been reborn in the [TUSITA](#) heaven, awaiting rebirth as a disciple of [MAITREYA](#). The story of Duṭṭhagāmaṇī continues to be told in Sri Lanka, and was deployed during the late-twentieth

century to defend the violence of Sinhalese Buddhists against non-Buddhist Tamils. After his victory over Eḷāra at his capital of [ANURĀDHAPURA](#), the king began a series of construction projects in support of Buddhism, culminating in the [MAHĀTHŪPA](#), the great stūpa [alt. Ruwanwelisaya], at the site where the Buddha is thought to have made his third visit to the island of Sri Lanka. Duṭṭhagāmaṇī fell ill before this massive project was completed, but according to legend his brother Saddhātissa draped the site in white cloth so that the king could visualize it in all its glory prior to his death.

[Dutugūmunu](#). (Sinhalese). See [DUTTHAGĀMANĪ](#).

[Duxu](#). (C) (都序). See [CHANYUAN ZHUQUANJI DUXU](#).

[*Dvādaśamukhaśāstra](#). (S). See [SH'ERMEN LUN](#).

[dvādaśāṅga\[pravacana\]](#). (T. gsung rab yan lag bcu gnyis; C. shi'erbu jing; J. jūnibukyō; K. sibibu kyōng 十二部經). In Sanskrit, “twelve categories”; the twelve traditional divisions of the Buddha’s teachings based on content and literary style, according to Sanskrit Buddhist sources. The Sanskrit list adds three more genres—framing stories or episodes ([NIDĀNA](#)), heroic tales or narratives ([AVADĀNA](#)), and instructions ([UPADEŚA](#))—to the nine divisions (P. [NAVANĠA\[PĀVACANA\]](#)) listed in mainstream Buddhist sources: discourses ([SŪTRA](#)), aphorisms in mixed prose and verse ([GEYA](#)), prophetic teachings or expositions ([VYĀKARANA](#)), verses ([GĀTHĀ](#)), utterance or meaningful expressions ([UDĀNA](#)), fables ([ITIVRTTAKA](#)), tales of previous lives ([JĀTAKA](#)), marvelous events ([ADBHUTADHARMA](#)), and catechisms or works of great extent ([VAIPULYA](#)). In Sanskrit sources, these twelve are called vacana or pravacana (P. pāvacana), viz., the words of the Buddha. See also [AṅGA](#).

[Dvāranikāya](#). See [DWAYA](#).

[dvārapāla](#). (T. sgo bsrungs pa; C. shoumenren; J. shumonnin; K. sumunin 守門人). In Sanskrit, “gatekeepers”; Indian Buddhist wrathful deities (see [YAKSA](#)), who protect the entrances to monasteries, marking the passage from mundane to sacred space. Four names generally appear in the literature: Vajrāṅkuśa, Vajrapāśa, Vajrasphoṭa, and Vajrāveśa/Vajraghaṇṭa. Statues of dvārapāla are often placed on either side of a monastery’s main gate and the entrances to holy sanctuaries. They are typically depicted as male warriors, carrying weapons or

emblems, and wrathful in appearance, sometimes with two fangs at each corner of mouth, and displaying imposing strength that can frighten away evil spirits and baleful influences before they can disturb the quietude of the monastery. Dvārapāla are connected with dragon or snake spirits ([NĀGA](#)) and are often depicted in South Asia with sacred threads (upavīta) in the guise of snakes encircling their waists or knees. They are mighty in battle and can uproot trees or hurl mountaintops to thwart their enemies. They are also skilled in magic and can transform themselves into all sorts of shapes, whether human or nonhuman, in order better to protect their monastery. ¶ Dvārapāla also guard the four gates of the [MANDALA](#). [MAÑJUŚRĪ](#) in the [GARBHADHĀTU](#) maṇḍala is portrayed with two guardians of the dharma, called the Durdharṣadvārapāla, to his sides. They are typically portrayed standing with one hand raised, eyes bulging, and naked to the waist. Sometimes they are portrayed with the right hand raised, holding a long club. See also [DHARMAPĀLA](#).

[Dvāravatī](#). Name given to the Mon civilization that flourished in the region of present-day Thailand from roughly the sixth through the eleventh centuries, occupying chiefly the Menam valley and extending northward to Lamphun. Little is known of the political organization of Dvāravatī, that is, whether it was an empire that had one or more capitals, or whether it was instead a collection of autonomous city-states. The geographic distribution of urban sites suggests an economy based on control of trade routes, particularly across the Three Pagodas Pass into Burma, northward up the Chaophraya River toward Chiangmai, and eastward into Cambodia. The chief Dvāravatī centers of the Menam valley were U Thong, Lopburi, Khu Bua, and Nakhon Pathom. In the north near Lamphun was the kingdom of Haripuñjaya, which, according to the Thai chronicles, was founded in the seventh century by sages and governed by a heroic Mon queen named Cāma (cf. [CĀMADEVĪVAMSA](#)). Common at all of the sites are inscriptions written in Mon, with a smaller number in Sanskrit and Pāli. The sites are typically fortified with moats and earthen walls and display extensive Buddhist remains, which include ruins of monasteries, temples, and pagodas and stone and bronze sculpture and statuary. Much of Dvāravatī art shows strong Indian influence reminiscent of the Amaravatī and Gupta styles, while in later centuries a distinctive Khmer influence becomes evident. The overall religious culture of the Dvāravatī civilization appears to have been mixed, with evidence of multiple forms of Buddhism, Brahmanism, and indigenous cults receiving patronage. By the mid-eleventh century, the cities occupying the eastern portion of the

Dvāravatī cultural zone were absorbed by the expanding Khmer empire of Angkor, while in the west they fell to the newly emergent Burmese empire of Pagan. Haripuñjaya alone retained a degree of autonomy until the thirteenth century, when it was conquered by the northern Thai kingdom of Lānā (Lan Na).

[dvātrimśadvaralakṣana](#). (T. mtshan gsum bcu so gnyis; C. sanshi'er xiang; J. sanjūnisō; K. samsibi sang 三十二相). In Sanskrit, the “thirty-two marks” unique to a buddha or [CAKRAVARTIN](#) king. See [MAHĀPURUṢALAKṢANA](#).

[Dvedhāvitakkasutta](#). (C. Nian jing; J. Nengyō; K. Yōm kyōng 念經). In Pāli, “Discourse on Two Kinds of Thoughts”; the nineteenth sutta contained in the [MAJJHIMANIKĀYA](#) (a separate [SARVĀSTIVĀDA](#) recension appears as the 102nd sūtra in the Chinese translation of the [MADHYAMĀGAMA](#)); preached by the Buddha to his disciples gathered at the [JETAVANA](#) Grove in the town of Sāvasthi ([ŚRĀVASTĪ](#)). The Buddha explains that thoughts can be divided into two categories: unsalutary (P. akusala; S. [AKUŚALA](#)) thoughts associated with sensual desire, ill will, and harmfulness; and salutary (P. kusala; S. [KUŚALA](#)) thoughts associated with renunciation, non-ill will, and harmlessness. He describes his own practice prior to his enlightenment as discerning between these two types of thoughts and recognizing the advantages that come from developing the salutary and the disadvantages of the unsalutary. He advises his monks to examine their minds in the same way so that they too would develop salutary thoughts and overcome unsalutary thoughts.

[dveṣa](#). (P. dosa; T. zhe sdang; C. chen; J. shin; K. chin 瞋). In Sanskrit, “aversion,” “ill will,” or “hatred”; it is frequently written [DOṢA](#) in [BUDDHIST HYBRID SANSKRIT](#); closely synonymous also to “hostility” ([PRATIGHA](#)). “Aversion” is one of the most ubiquitous of defilements and is listed, for example, among the six fundamental “afflictions” ([KLEŚA](#)), ten “fetters” ([SAMYOJANA](#)), ten “proclivities” ([ANUŚAYA](#)), five “hindrances” ([NĪVARANA](#)), and “three poisons” ([TRIVISA](#)). It is also one of the forty-six mental factors ([CAITTA](#)) according to the [VAIBHĀSIKA](#) school of [SARVĀSTIVĀDA ABHIDHARMA](#), one of the fifty-one according to the [YOGĀCĀRA](#) school, and one of fifty-two in the Pāli abhidhamma. In Buddhist psychology, when contact with sensory objects is made “without introspection” ([ASAMPRAJANYA](#)), “passion” ([RĀGA](#)) or “greed” ([LOBHA](#)), “aversion,” and/or “delusion” ([MOHA](#)) arise as a result. In the case of “aversion”—which is a psychological reaction that is associated with repulsion,

resistance, and active dislike of a displeasing stimulus—one of the possible derivative emotions typically ensue. These derivative emotions—which include “anger” ([KRODHA](#)), “enmity” ([UPANĀHA](#)), “agitation” ([PRADĀSA](#)), “envy” ([ĪRSYĀ](#)), “harmfulness” ([VIHIMSĀ](#))—all have “aversion” as their common foundation.

[Dwags lha sgam po](#). (Daklha Gampo). The site of an important [BKA' BRGYUD](#) monastic complex in the Dwags po (Dakpo) region of south-central Tibet, founded in 1121 by [SGAM PO PA BSOD RNAM RIN CHEN](#). Flanked by an unusual range of mountains, the location was originally developed by the Tibetan king [SRONG BTSAN SGAM PO](#), who constructed one of his many “taming temples” (mtha' 'dul) there in order to pin down the head of the supine demoness (srin mo) believed to be hindering the spread of Buddhism in Tibet. It is said that [PADMASAMBHAVA](#) later hid several treasure texts ([GTER MA](#)) in the surrounding peaks, foremost among which was the [BAR DO THOS GROL CHEN MO](#), or “Liberation Through Hearing in the Intermediate State,” usually known in English as *The Tibetan Book of the Dead*, which was unearthed by the treasure revealer ([GTER STON](#)) [KARMA GLING PA](#). Dwags lha sgam po is best known, however, as the seat of the important Bka' brgyud hierarch Sgam po pa and under his direction it became an active center for meditative retreats. His numerous disciples, from whom stem the four major and eight minor Bka' brgyud subsects, include the first [KARMA PA DUS GSUM MKHYEN PA](#) and [PHAG MO GRU PA RDO RJE RGYAL PO](#). Following Sgam po pa's death, the complex was directed by masters in his familial lineage, and later, Sgam po pa's incarnation lineage, including lamas such as [DWAGS PO BKRA SHIS RNAM RGYAL](#). It was destroyed by the invading Dzungar Mongol army in 1718 and rebuilt, only to be completely destroyed once again during the Chinese Cultural Revolution (1966–1976). Several small chapels have since been renovated.

[Dwags po Bka' brgyud](#). (Dakpo Kagyü). The main branch of the [BKA' BRGYUD](#) sect of Tibetan Buddhism stemming from [MAR PA CHOS KYI BLO GROS](#), [MILA RAS PA](#), and [SGAM PO PA BSOD NAMS RIN CHEN](#). It refers to the various Bka' brgyud branches, known as the four major and eight minor Bka' brgyud subsects ([BKA' BRGYUD CHE BZHI CHUNG BRGYAD](#)) that formed and flourished due to the activities of Sgam po pa and his immediate disciples. The name Dwags po Bka' brgyud is derived from Sgam po pa's main seat, [DWAGS LHA SGAM PO](#), located in the Dwags po region of southern Tibet.

[Dwags po Bkra shis rnam rgyal](#). (Dakpo Tashi Namgyal) (1512/13–1587). An

abbot of the Tibetan monastery of [DWAGS LHA SGAM PO](#), founded by [SGAM PO PA BSOD NAMS RIN CHEN](#), from which he receives his toponym. In his early years he studied with [SA SKYA](#) teachers and was abbot of [NA LAN DRAMONASTERY](#). He is known in particular for his writing on the [HEVAJRATANTRA](#) and [MAHĀMUDRĀ](#); his *Nges don phyag rgya chen po'i sgom rim gsal bar byed pa'i legs bshad zla ba'i 'od zer* is a definitive text of mahāmudrā, giving a presentation of the graduated stages of [HĪNĀYĀNA](#) and [MAHĀYĀNA](#) practices and a scholarly explanation of mahāmudrā. Among his students was the scholar [PADMA DKAR PO](#), the fourth head of the [BRUG PA BKA' BRYUD](#) sect and the systematizer of its teachings.

[Dwags po thar rgyan](#). (T). See [THAR PA RIN PO CHE'IRGYAN](#).

[Dwaya](#). (P. Dvāra). The third largest monastic fraternity (B. [GAING](#); P. gaṇa, cf. [NIKĀYA](#)) of modern Myanmar (Burmese) Buddhism, following the [THUDHAMMA](#) (P. Sudhammā) and the [SHWEGYIN](#) fraternities. The Dwaya fraternity was founded as a dissident group within the Burmese saṅgha (S. [SAMGHA](#)) in the mid-nineteenth century by the Okpo Sayadaw, U Okkamwuntha (P. Okkaṃvaṃsa), who hailed from the Okpo region between Yangon (Rangoon) and Bago (Pegu) in Lower Burma. During his lifetime, Lower Burma was conquered by the British with the result that many Buddhist monks fled north to seek the protection of the Burmese crown. The Okpo Sayadaw recommended against this move, claiming that if the saṅgha strictly observed the [VINAYA](#), it did not need royal protection but could resist the political and religious encroachments of the British and their Christian missionaries on its own. This led him to challenge the authority of the Burmese king to direct saṅgha affairs in the British-controlled south. In 1857, he seceded from the royally backed Thudhamma fraternity and established an independent ordination line that came to be known as the Dwaya Gaing. The fraternity derives its name from the Okpo Sayadaw's interpretation of the correct way to take refuge in the three jewels (P. ratanattaya; S. [RATNATRAYA](#)), viz., not through one's literal acts (P. kamma; S. [KARMA](#)) of body, speech, and mind, but rather through the "doors" (B. dwaya; P. dvāra) or "intentions" that inform one's acts of body, speech, and mind. True worship thus derives from correct mental volition ([CETANĀ](#)), not from ritual acts themselves. The Dwaya fraternity is well-known for its strict interpretation of the vinaya, and sectarian aloofness. Dwaya monks are not allowed to handle money or even to use umbrellas, preferring instead large fans made of palmyra leaf; they also are prohibited from living, eating, or otherwise associating with members of other

monastic fraternities. Following the Okpo Sayadaw's death, the fraternity split into rival factions. As of 1980, the Burmese Ministry of Religious Affairs officially recognizes three independent Dwaya gaing.

'Dzam gling rgyas bshad. (Dzamling gyeshe). In Tibetan, “An Extensive Exposition on the World”; one of the first works in Tibetan to present a systematic geographical and cultural description of the world, although that world is substantially limited to the sacred Buddhist geography of India, Nepal, and Tibet. The text was composed in 1820 (1830 according to one source) by the fourth Bstan po No mon han (Tsenpo Nomonhan) incarnation of [SMIN GROL GLING](#) 'Jam dpal chos kyi bstan 'dzin 'phrin las (Jampal Chökyi Tendzin Trinle, 1789–1838). The complete title is *'Dzam gling chen po'i rgyas bshad snod bcud kun gsal me long*.

'Dzam thang. A monastic complex in eastern Tibet founded in 1658 in the 'Dzam thang region of A mdo; the major monastic seat of the [JO NANG](#) tradition following the suppression of the Jo nang sect in central Tibet by the fifth [DALAI LAMA](#). Following the death of [TARANĀTHA](#), the fifth Dalai Lama forcibly converted the main seat of the Jo nang sect at Phun tshogs gling in central Tibet into a [DGE LUGS](#) monastery (see [DGA' LDAN PHUN TSHOGS GLING](#)) in 1658 and sealed the works of [DOL PO PA](#) and [TARANĀTHA](#) as heretical. Long unknown to modern scholarship, the tradition flourished in the far east of Tibet since that time. Important masters from the monastery are Thub bstan dge legs rgya mtsho (Tupten Gelek Gyatso) (1844–1904) from 'Bam mda', who studied with the luminaries of the Khams [RIS MED](#) movement; and Ngag dbang blo gros grags pa (1920–1975) and his disciple Ngag dbang yon tan rgya mtsho, who died in 2002. In the early twenty-first century, there were about fifteen hundred residents of the monastic complex.

e. (C) (阿). Sinograph adopted in Chinese Buddhist texts to transcribe the Sanskrit and Middle Indic phoneme “a.” Following common practice in Buddhist studies, Chinese transcriptions using this character are listed under “A,” e.g., Emituo is listed as Amituo, emaluo as amaluo, *etc.*

Ebisu. (J) (惠比須). See [SHICHIFUKUJIN](#).

Edgerton, Franklin. (1885–1963). American scholar of Sanskrit; born in Le Mars, Iowa, he received his undergraduate education at Cornell. He then studied at Munich and Jena before returning to the United States, where he studied Sanskrit and comparative philology at Johns Hopkins. Edgerton taught at the University of Pennsylvania, before moving to Yale in 1926 as Salisbury Professor of Sanskrit. He remained there for the remainder of his academic career, retiring in 1953. Edgerton’s great contribution to Buddhist studies was the 1953 publication of his *Buddhist Hybrid Sanskrit Grammar and Dictionary* and his *Buddhist Hybrid Sanskrit Reader*, the result of some three decades of work. Edgerton coined the term [BUDDHIST HYBRID SANSKRIT](#) to describe the language of [PRAKRIT](#), mixed Sanskrit, and Sanskrit that occurs in many Buddhist Sanskrit texts, especially the MAHĀYĀNA SŪTRA literature. Prior to Edgerton, this language was sometimes called the Gāthā dialect because it occurred frequently in the verses, or [GĀTHĀ](#), in the Mahāyāna sūtras. Edgerton divided Buddhist Hybrid Sanskrit into three classes based on the degree of hybridization within a given text. Since its publication, Edgerton’s work, and the entire category of Buddhist Hybrid Sanskrit itself, has been the subject of much scholarly debate, but Edgerton’s dictionary remains widely used.

ehibhiksukā. (P. ehi bhikkhu; T. dge slong tshur shog; C. shanlai bichu; J. zenrai bisshu; K. söllae p’ilch’u 善來苾芻). In Sanskrit, the “come, monk” formula; the oldest of the four types of ordination ([UPASAMPADĀ](#)), the ehibhikṣukā was primarily performed at the inception of the Buddhist dispensation before the establishment of a formal procedure for admission into the order; for this reason, many of the Buddha’s most famous early disciples

were called the ehibhikṣu [UPĀLI](#), *etc.* Early in his teaching career, when a disciple sought to enter formally the Buddha’s incipient order, the Buddha would ordain them via this simple formula, the full form of which is “Come, monk, the [DHARMA](#) is well proclaimed; live the holy life for the complete ending of suffering.” Some women were also ordained as nuns following a parallel exhortation. In the [AVADĀNA](#) literature, when the Buddha ordains monks with this famous phrase, the following description of the new monks often appears, “No sooner had the [BHAGAVAT](#) pronounced these words than they found themselves shaved, covered with the robe and provided with the alms-bowl and the pitcher that ends in the beak of a bird; having beard and hair of seven days, they appeared with the proper aspect of monks who had received ordination a hundred years ago.”

[eight auspicious symbols](#). See [ASTAMAṄGALA](#).

[eight bodhisattvas](#). See [ASTAMAHOPAPUTRA](#).

[eight classes of nonhuman beings](#). In Sanskrit, [ASTASENĀ](#); a listing of eight types of mythical and semi-mythical beings associated with the sensuous realm ([KĀMADHĀTU](#)); they are often listed as being in attendance when the Buddha speaks the [MAHĀYĀNA SŪTRAS](#). There are various lists, but a standard grouping includes divinities ([DEVA](#)), serpent deities ([NĀGA](#)), demons ([YAKSA](#)), titans ([ASURA](#)), demigod musicians ([GANDHARVA](#)), mythical birds ([GARUDA](#)), half-horse/half-men ([KIMNARA](#)), and great snakes ([MAHORĀGA](#)). For fuller treatments, see [ASTASENĀ](#) and entries for the individual beings.

[eighteen arhats](#). Cf. [SODĀŚASTHAVIRA](#).

[eight episodes in the life of a buddha](#). See [BAXIANG](#).

[eight extremes](#). (S. [aṣṭānta](#); T. [mtha’ brgyad](#); C. [babu](#); J. [happu](#); K. [p’albul](#) 八不). The antinomies of production and cessation, eternity and annihilation, sameness and difference, and coming and going, which constitute the eight deluded views of sentient beings. See [ASTĀNTA](#); [BABU](#).

[eightfold path](#). (S. [aṣṭāṅgamārga](#); P. [aṭṭhaṅgikamagga](#); T. [lam yan lag brgyad](#); C. [bazhengdao](#); J. [hasshōdō](#); K. [p’alchōngdo](#) 八正道). One of the basic formulations of the Buddhist path ([MĀRGA](#)) to enlightenment, comprised of the

following: (1) right views ([SAMYAGDRSTI](#); P. sammādiṭṭhi), (2) right intention ([SAMYAKSAMKALPA](#); P. sammāsankappa), (3) right speech ([SAMYAGVĀC](#); P. sammāvācā), (4) right conduct ([SAMYAKKARMĀNTA](#); P. sammākammanta), (5) right livelihood ([SAMYAGĀJĪVA](#); P. sammājīva), (6) right effort ([SAMYAGVYĀYĀMA](#); P. sammāvāyāma), (7) right mindfulness ([SAMYAKSMRTI](#); P. sammāsati), and (8) right concentration ([SAMYAKSAMĀDHI](#); P. sammāsamādhi). For a full treatment of this formulation, see [ĀRYĀSTĀNGAMĀRGA](#) s.v..

[Eiheiji](#). (永平寺). In Japanese, “Eternal Peace Monastery.” Eiheiji is currently the headquarters (honzan) of the [SŌTŌSHŪ](#). Eiheiji was founded by the Zen master [DŌGEN KIGEN](#). A lay follower named Hatano Yoshishige offered his property in Echizen as a site for the new monastery and invited Dōgen to lead the community. In 1243, Dōgen moved to Echizen and resided in a dilapidated temple named Kippōji. In the meantime, Hatano and others began constructing a new [DHARMA](#) hall and [SAMGHA](#) hall (see C. [SENGTANG](#)), which they quickly finished by 1244. The new monastery was named Daibutsuji and renamed Eiheiji by Dōgen in 1246. The name Eihei is said to derive from the Han-dynasty reign period, Yongping (58–75 CE; J. Eihei), when Buddhism first arrived in China. In 1248, the mountain on which Eiheiji is located was renamed Mt. Kichijō. In 1372, Eiheiji was declared a shusse dōjō, an official monastery whose abbot is appointed by the state. In 1473, Eiheiji was devastated by war and fire, and reconstruction efforts began in 1487. Since its foundation, Eiheiji has continued to serve as one of the most important Zen institutions in Japan.

[Eihei shingi](#). (永平清規). In Japanese, “Pure Rules for [EIHEI\(JI\)](#)”; a collection of essays on the [ZEN](#) monastic codes or “pure rules” ([QINGGUI](#)), composed by [DŌGEN KIGEN](#). The work is composed in two rolls, in six major sections. The Tenzo Kyōkun section, composed while Dōgen was still residing at Koshōji in

1237, discusses the duties of the cook. The [BENDŌHŌ](#) details the daily duties at the monastery of Daibutsuji and the practices, such as meditation, carried out in the [SAMGHA](#) hall (see C. [SENGTANG](#)). The *Fu shukuhanpō* explains the proper method of preparing and consuming rice gruel. The *Shuryō shingi* of 1249 describes the proper deportment of monks in training at Eihei-ji's shuryō. The *Tai taiko goge jarihō*, composed in 1244, deals with the proper ritual decorum or means of respecting a master ([ĀCĀRYA](#)). The final section, the *Chiji shingi*, from 1246, details the duties of the officers of the monastery. In 1667, these essays were edited together and published by Kōshō Chidō (d. 1670), the thirtieth abbot of Eihei-ji. The fiftieth abbot, Gentō Sokuchū (1729–1807), republished Kōshō's edited volume with minor corrections in 1794.

[Eikan](#). (J) (永觀). See [YŌKAN](#).

[Eisai](#). (榮西). See [MYŌAN EISAI](#).

[Eison](#). [alt. Eizon] (叡尊) (1201–1290). In Japanese, “Lord of Sagacity”; founder of Shingon Risshū, a Kamakura-period school that combined the esoteric teachings of the [SHINGONSHŪ](#) with [VINAYA](#) disciplinary observance. After beginning his career as a monk at the age of eleven, he initially studied Shingon teachings at DAIGOJI in Kyōto and in 1224 moved to [KŌYASAN](#), the mountain center of esoteric teachings and practices. In 1235, while studying vinaya at [SAIDAIJI](#), Eison came to realize the centrality of the [PRĀTIMOKSA](#) precepts to a monastic vocation; however, since the custom of full monastic ordination (J. *gusokukai*) had died out in Japan long before, he was unable to be properly ordained. Eison decided that his only recourse was to take the precepts in a self-administered ceremony (J. *jisei jukai*) before an image of the Buddha. Eison and three other monks conducted such a self-ordination at [TŌDAIJI](#) in 1236, after which he traveled around the country, ordaining monks and lecturing on the Buddhist precepts, before eventually returning to Saidaiji to stay. That monastery is now regarded as the center of the Shingon Risshū school. Eison is also known for his extensive charitable activities and his attempts to disseminate the recitation of the [MANTRA](#) of light (J. *kōmyō shingon*) among the laity. When the Mongols invaded Japan in 1274 and 1281, Eison performed esoteric rituals on behalf of the court to ward off the invasions. Among Eison's works are the *Bonmōkyō koshakuki bugyō monjū*, a sub-commentary to the *Pōmmanggyōng kojōkki*, the Korean [YOGĀCĀRA](#) monk [T'AEHYŌN](#)'s (d.u.) commentary on the [FANWANG JING](#); and the *Kanjingaku shōki*, his autobiography, compiled at the age

of eighty-six. Eison was given the posthumous name Kōshō Bosatsu (Promoting Orthodoxy [BODHISATTVA](#)).

[Ekādaśamukhāvalokiteśvara](#). (T. Spyan ras gzigs bcu gcig zhal; C. Shiyimian Guanyin; J. Jūichimen Kannon; K. Sibilmŷon Kwanŷm 十一面觀音). In Sanskrit, “Eleven-Headed [AVALOKITEŚVARA](#),” one of the most common iconographic forms of the [BODHISATTVA](#) of compassion. While theories abound about why he has eleven heads, it is likely that the ten small bodhisattva heads topped by a buddha head represent the ten stages ([DAŚABHŪMI](#)) of the bodhisattva path, along with the final attainment of buddhahood. The facial expressions of these heads range from kind to ferocious and were meant to symbolize the bodhisattva’s various abilities to destroy illusions and help all sentient beings attain liberation. According to legend, Avalokiteśvara was so exhausted and desperate after trying to save innumerable beings that his skull shattered. [AMITĀBHA](#) came to help him and formed new heads from the pieces, which he then arranged on [AVALOKITEŚVARA](#)’s head like a crown, finally putting an image of his own head at the very top. While this eleven-headed form is frequently found in later Buddhist art in Tibet, Nepal, and East Asia, an image from the Indian cave site of [KĀNHERI](#) is the only extant artistic evidence that this iconographic form is originally of Indian provenance.

[ekāgratā](#). In Sanskrit, “one-pointedness.” See [CITTAIKĀGRATĀ](#).

[Ekajatā](#). [alt. Ekajaṭī] (T. Ral gcig ma; C. Dujimu; J. Dokukeimo; K. Tokkyemo 獨髻母). In Sanskrit, “Having One Lock of Hair,” an emanation of [AKSOBHYA](#); she is often depicted in that Buddha’s crown, with a single lock or knot of hair on her head. The wrathful goddess Mahācīnakrama-[TĀRĀ](#) or Ugra-Tārā (who is dark and short, with a protruding belly, fanged, with three eyes, a lolling tongue, and a single tawny-colored knot of hair) is iconographically identical to several forms of the Ekajaṭā worshiped in later Hinduism. According to one tradition, this form of Tārā was originally a pre-Buddhist Tibetan goddess who entered into Buddhist [TANTRA](#) with the tantric [NĀGĀRJUNA](#) in the seventh century. In the [RNYING MA](#) sect, in particular, she is said to be a form of [DPAL LDAN LHA MO](#) and is called Sngags srung (protectress of the [MANTRAS](#)). In this form, she is the protector of the [RDZOGS CHEN](#) tantras; she has a single eye, one sharp tooth, a single breast, and a single lock of hair above her head, and she wields a trisūla (trident) and [KAPĀLA](#) (skull cup). She also serves as the consort of several forms of [MAHĀKĀLA](#) and [YAMA](#) and is also found as a member of the [PARIVĀRA](#)

(retinue) of Dpal ldan lha mo. In other forms, she has one face and two or four hands and twelve faces and twenty-four hands.

Ekaku. (J) (慧鶴). See [HAKUIN EKAKU](#).

ekavīcika. (T. bar chad gcig pa; C. yijian; J. ikken; K. ilgan 一間). In Sanskrit, “one who has a single obstacle,” a particular sort of [SAKRDĀGĀMIPHALASTHA](#) who is one of the twenty members of the [ĀRYASAMGHA](#) (see [VIMŚATIPRABHEDASAMGHA](#)). According to the [ABHIDHARMAKOŚABHĀSYA](#), these sorts of once-returners are those who have eliminated the seventh and eighth sets of afflictions ([KLEŚA](#)) that cause rebirth in the sensuous realm ([KĀMADHĀTU](#)). These are impediments to the first [DHYĀNA](#), which the mundane ([LAUKIKA](#)) path of meditation ([BHĀVANĀMĀRGA](#)) removes. They receive the name ekavīcika because they will take only one more rebirth in the sensuous realm before they become [ARHATS](#). They are also ānupūrvīn (those who reach the four fruits of the noble path in a series), and [ANĀGĀMIPHALAPRATIPANNAKA](#), because they will reach the third fruit of nonreturner before they reach the final fruit of arhat.

Ekavyavahārika. (P. Ekabbohārika; T. Tha snyad gcig pa'i sde; C. Yishuobu; J. Issetsubu; K. Ilsōlbu 一説部). In Sanskrit, “Those who Make a Single Utterance,” an alternate name for the [LOKOTTARAVĀDA](#) collateral line of the [MAHĀSĀMGIKA](#) school of mainstream Buddhism. See [LOKOTTARAVĀDA](#).

ekavyūhasamādhī. (S). See [YIXING SANMEI](#).

ekayāna. (T. theg pa gcig pa; C. yisheng; J. ichijō; K. ilsūng 一乘). In Sanskrit, lit. “one vehicle” or “single vehicle.” “Vehicle” literally means “conveyance” or “transportation,” viz., the conveyance that carries sentient beings from [SAMSĀRA](#) to [NIRVĀNA](#); the term may also refer to the actual person who reaches the destination of the path. The doctrine of a single vehicle is set forth in certain MAHĀYĀNA SŪTRAS, most famously, the [SADDHARMAPUNĀRĪKASŪTRA](#) (“Lotus Sūtra”), which declares that the three vehicles of the [ŚRĀVĀKA](#) (disciple), [PRATYĒKABUDDHA](#) (solitary buddha), and [BODHISATTVA](#) are actually just three expedient devices ([UPĀYAKAUŚĀLYA](#)) for attracting beings to the one buddha vehicle, via which they all become buddhas. It is important to note that, although it is often claimed that a central tenet of the [MAHĀYĀNA](#) is that all sentient beings will eventually achieve buddhahood, this view is not universally set forth in the Mahāyāna sūtras and philosophical schools. A number of important sūtras,

notably the [SAMDHINIRMOCANASŪTRA](#), maintained that there are three final vehicles and that those who successfully followed the path of the śrāvaka and pratyekabuddha would eventually become [ARHATS](#) and would not then go on to achieve buddhahood (cf. [GOTRA](#); [BUDDHADHĀTU](#)). This position was also held by such major [YOGĀCĀRA](#) figures as [ASAṄGA](#). In the *Saddharmapuṇḍarīkasūtra*, however, the Buddha reveals that his earlier teachings of the three vehicles were in fact three expedient forms suited to specific beings' capacities; the sūtra's exposition of the one buddha vehicle is said to be the unifying, complete, and final exposition of his teachings. Since this one-vehicle teaching is the teaching that leads to buddhahood, it is synonymous with the "buddha vehicle" ([BUDDHAYĀNA](#)), the "great vehicle" ([MAHĀYĀNA](#)), and sometimes the "bodhisattva vehicle" ([BODHISATTVAYĀNA](#)). In East Asia, there was substantial consideration given to the precise relations among these terms. Thus, the [FAXIANG](#) school of Chinese [YOGĀCĀRA](#) interprets the "one vehicle" of the three-vehicle system as being equivalent to the bodhisattva vehicle, while the [HUAYAN](#) and [TIANAI](#) schools distinguish between the one buddha vehicle and the bodhisattva vehicle that is included within the three vehicles. The Faxiang school also distinguishes between two levels of the ekayāna, the "inclusive" Mahāyāna (sheru dasheng) and the "derivative" Mahāyāna (chusheng dasheng). According to the explanation of [KUIJI](#) (632–682), the first is an expedient like that used in the *Saddharmapuṇḍarīkasūtra* to attract people of indeterminate nature to the one buddha vehicle. Because this type of sentient being is incapable of immediately attaining buddhahood, this teaching does not fully correspond to the meaning of the ekayāna. However, because all members of the *Saddharmapuṇḍarīkasūtra*'s audience have the potential to become buddhas through hearing this teaching, it is still considered to be true and effective. The second type means that all teachings of the Buddha are "born from" or "derive from" a single Mahāyāna teaching; Kuiji says that this type corresponds to the teaching of the [ŚRĪMĀLĀDEVĪSIMHANĀDASŪTRA](#) and the [MAHĀPARINIRVĀNASŪTRA](#).

[Ekottarāgama](#). [alt. Ekottarikāgama] (P. *Āṅguttaranikāya*; T. *Gcig las 'phros pa'i lung*; C. *Zengyi ahan jing*; J. *Zōichiagongyō*; K. *Chūngil aham kyōng* 增壹阿含經). In Sanskrit, "Numerically Arranged Discourses," the Sanskrit analogue of the Pāli [ĀṅGUTTARANIKĀYA](#), in which the collected sūtras are putatively arranged sequentially in numbered lists of "ones," "twos," etc.; the extant version of this collection, however, has a pronounced topical arrangement like the [SAMYUTTANIKĀYA](#). The collection probably dates from sometime between the

second century and the first part of the fourth century CE. The *Ekottarāgama*'s sectarian affiliation remains in dispute. Some scholars have attributed it to the [MAHĀSĀMĠHIKA](#) school of the mainstream Buddhist tradition, but this attribution has been called into question because certain passages of the text contradict established Mahāsāṃghika doctrine (such as the standard Mahāsāṃghika assertion that [ARHATS](#) are subject to backsliding) and show serious inconsistencies with the Mahāsāṃghika [VINAYA](#). Because of these issues, other scholars have instead ascribed the text to the [PRAJÑAPTIVĀDA](#), an offshoot of the Mahāsāṃghika. Because of some seeming consistencies between the *Ekottarāgama* and [DHARMAGUPTAKA](#) doctrine and because the text refers to 250 [PRĀTIMOKSA](#) rules for monks, a number that corresponds to the Dharmaguptaka recension of that code, it is possible that the collection may belong to the Dharmaguptaka school. The text is only extant in a Chinese recension, *Zengyi Ahan jing*, translated by Gautama Saṃghadeva in 397 during the Eastern Jin dynasty, in fifty-one rolls. It contains translations of only 471 sūtras, far fewer than the 2,198 suttas in the Pāli *Aṅguttaranikāya*.

element. See [MAHĀBHŪTA](#); [DHĀTU](#).

Ellorā. [alt. Elūrā]. Among the many cave complexes scattered throughout Asia, perhaps the most famous are Ellorā and [AJANTĀ](#) in India; [YUNGANG](#), [DUNHUANG](#), and [DAZU](#) in China; and [SÖKKURAM](#) in Korea. The site of Ellorā is located near Ajantā, eighteen miles north of the present-day city of Aurangabad, in the state of Maharashtra. From the sixth through the tenth centuries, there were thirty-four caves carved out of the solid rock of its cliffs. Twelve of these caves date from c. 600 to 730 CE and are Buddhist in orientation. They are rather modest in comparison to the site's Hindu and [JAINA](#) caves, which were built at a later date. As monks and nuns built retreats at the site, cave complexes were dug into the base of the cliffs. Some of these excavations were plain cells; others were more elaborate sanctuaries, adorned with paintings, statues, and bas-reliefs. Constructed in the late-seventh or early-eighth centuries, the three-storied Cave 12 was probably one of the last Buddhist caves created at Ellorā. While the central shrine on each floor shows a buddha flanked by the two [BODHISATTVAS](#) [AVALOKITEŚVARA](#) and [VAJRAPĀNI](#), it is especially noteworthy that Cave 12's interior artistic scheme also illustrates the early development of diagrams ([MANDALA](#)), both in two-dimensional relief and three-dimensional sculpture. The so-called eight-bodhisattva maṇḍala (aṣṭabodhisattvamaṇḍala) is depicted on

each floor. In addition, in some sections of the cave, the eight bodhisattvas ([ASTAMAHOPAPUTRA](#)) surround a central buddha in a nine-square diagram. The maṇḍalas shown in this cave attest to the highly developed ritual environments at Ellorā and also demonstrate that over the course of time artistic imagery was used in the service of specific Buddhist beliefs. The developments documented in exceptional caves like this one were nurtured by lay patronage and royal support. Stylistically, the Ellorā caves are similar to those of neighboring Ajaṇṭā, and may have been crafted by sculptors who worked at that earlier cave site.

[Elūrā](#). See [ELLORĀ](#).

[Emeishan](#). (C. 峨嵋山/峨眉山). In Chinese, lit. “Delicate Eyebrows Mountain,” a mountain located in Sichuan province that is traditionally listed as one of the four sacred Buddhist mountains of China, along with [JIUHUASHAN](#) in Anhui province, [PUTUOSHAN](#) in Zhejiang, and [WUTAISHAN](#) in Shanxi. The name Emeishan is derived from its two peaks, which face each other and are said to look like the delicate eyebrows of a classic Chinese beauty. The mountain covers more than 58 square miles (150 square kilometers), and its tallest peak, Wanfo Ding (Myriad Buddhas Summit), is 10,167 feet (3,099 meters) high, over 3280 feet (1,000 meters) higher than the other three sacred Buddhist mountains of China. The charming scenery of Emeishan has won it since ancient times the name “the greatest beauty under heaven.” The patron [BODHISATTVA](#) of Emeishan is [SAMANTABHADRA](#) (C. Puxian pusa), who was said to have resided in Emeishan. Because of this connection, most monasteries on Emeishan house a statue of Samantabhadra. Emeishan is of exceptional cultural significance because Chinese tradition assumes it was the place where Buddhism first became established on Chinese territory and whence it spread widely. The first Buddhist monastery in China is said to have been built on Emeishan in the first century CE during the Eastern Han dynasty (25–220). There were once more than a hundred monasteries and temples located on the mountain, but only about twenty remain today. These active monasteries include Baoguosi, Wanniansi, Fuhusi, Leiyingzi, Xianfengsi, Qianfosi, Huazangsi on the Golden Summit, and the Xixiangshi (Elephant Washing Pool) hermitage. At the foot of Emeishan, Baoguosi, built between 1573 and 1619 during the Ming dynasty, is the largest surviving monastery, and is the center of Buddhist activity on the mountain. Wanniansi, originally named Puxiansi, is one of the major monasteries and houses an exquisite copper statue of Samantabhadra riding a white elephant;

made in 980 CE during the Song dynasty, the image is 24.11 feet (7.35 meters) high. The Jinding (Golden Summit), one of the mountain's main peaks, is 10,095 feet (3,077 meters) high and is the ideal place to view the sunrise, the sea of clouds, and strange atmospheric phenomena called Buddhist lights and sacred lamps. Emeishan is also a well-known nature preserve and is home to more than three thousand species of plants and two thousand species of animals, including groups of monkeys that often appear on the mountain roads. Near Emeishan is the remarkable Great Buddha of Leshan (C. [LESHAN DAFO](#)); the world's largest stone statue of [MAITREYA](#), this image is 233 feet (71 meters) high and was carved out of a hillside in the eighth century during the Tang dynasty. In 1996, UNESCO listed Emeishan and the Great Buddha of Leshan as a World Heritage Site.

[Emerald Buddha](#). See [PHRA KAEW MORAKOT](#).

[empowerment](#). See [ADHISTHĀNA](#).

[emptiness](#). See [ŚŪNYATĀ](#).

[Enchin](#). (圓珍) (814–891). Japanese monk affiliated with the [TENDAISHŪ](#) (C. [TIANTAI ZONG](#)) and reputed founder of the Jimon branch of the school. Enchin was a native of Sanuki in present-day Kagawa and a cousin of the [SHINGON](#) master [KŪKAI](#). At age fourteen, Enchin became the student of [GISHIN](#), the abbot of [ENRYAKUJI](#), and four years later received the full monastic precepts from him. For the next twelve years, Enchin remained in retreat on [HIEIZAN](#). In 853, Enchin traveled to Fuzhou, China, and stayed at the nearby monastery of Kaiyuansi. There he studied the Sanskrit [SIDDHAM](#) script under the Indian [TREPITAKA](#) Boredaluo (Prajñātāra?). Enchin later visited Yuezhou and Taizhou (present-day Zhejiang province), where he studied Tiantai doctrine and practice. In 855, Enchin entered the Chinese capital of Chang'an with his fellow Japanese monk Ensai (d. 877), where they are believed to have received the “dharma-transmission [ABHISEKA](#)” (denbō kanjō) from Faquan (d.u.) at the monastery of Qinglongsi, as well as the secret of teachings of the “two realms” ([RYŌBU](#)) from Prajñācakra (d.u.). Enchin then returned to Mt. Tiantai in Taizhou with the new translations of esoteric scriptures that he acquired in Chang'an. Enchin returned to Japan in 858 and resided at the monastery of Onjōji (see [MIIDERA](#)). In 866, Enchin became the fifth head (zasu) of Enryakuji and was given imperial permission to transform Onjōji into the official grounds of “dharma-transmission

abhiṣeka.” A schism between the lineages of Enchin and [ENNIN](#) over the issue of succession in 993 led to the split between Ennin’s Sanmon branch of Hieizan and Enchin’s Jimon branch of Onjōji. Enchin was later given the posthumous title Great Master Chishō (Realization of Wisdom).

Engakuji. ([圓覺寺](#)). A large monastery in Kamakura, Japan, that is currently the headquarters (honzan) of the Engakuji branch of the [RINZAISHŪ](#) of the [ZEN](#) tradition. Engakuji was once listed as a second-rank monastery in the influential [GOZAN](#) system. The monastery was established by the powerful regent Hōjō Tokimune (1251–1284) in 1282. When [LANXI DAOLONG](#), the prominent Chinese abbot of the influential monastery of [KENCHŌJI](#), died in 1274, Hōjō Tokimune immediately sought a replacement, and his envoys returned from China escorting the [CHAN](#) master [WUXUE ZUYUAN](#). Wuxue, who was serving as abbot of Kenchōji, was installed as the founding abbot (J. kaisan; C. [KAISHAN](#)) of the new monastery of Engakuji. In 1400, Engakuji was devastated by a great fire, but restoration efforts in 1625 refurbished the monastery to its current size and form. Since its foundation, Engakuji has remained a center of Zen culture and training in Japan.

enlightenment. See [ANUTTARASAMYAKSAMBOHI](#); [BODHI](#); [DUNWU](#); [NIRVĀNA](#); [WU](#).

Enni Ben’en. (C. Yuan’er Bianyuan [圓爾辨圓](#)) (1202–1280). Japanese [ZEN](#) master in the Chinese [LINJI ZONG](#) and Japanese [RINZAISHŪ](#). Enni was tonsured at the [TENDAI](#) monastery of Onjōji (see [MIIDERA](#)) at the age of seventeen, and received the full monastic precepts at the precepts platform (kaidan) in the monastery of [TŌDAJI](#). In 1235, Enni left for China and visited the [CHAN](#) masters Chijue Daochong (1169–1250), Xiaoweng Miaokan (1177–1248), and Shitian Faxun (1171–1245). Enni eventually visited the Chan master [WUZHUN SHIFAN](#) at the monastery of [WANSHOUSI](#) on Mt. Jing and inherited his Linji lineage. In 1241, Enni returned to Japan and began to teach at the capital Kyōto at the invitation of the powerful Fujiwara minister Kujō Michiie (1191–1252). In 1243, Enni was given the title Shōichi (Sacred Unity). Enni also won the support of the powerful regent Hōjō Tokiyori (1227–1263). Michiie later installed Enni as the founding abbot (J. kaisan; C. [KAISHAN](#)) of his powerful monastery of Tōfukuji. Enni also served as abbot of the Zen monastery of [KENNINJI](#) in Kyōto. In 1311, Enni was named State Preceptor Shōichi. His teachings are recorded in the *Shōichi Kokushi goroku* and *Shōichi kokushi kana hōgo*.

Ennin. (C. Yuanren 圓仁) (794–864). Japanese monk of the [TENDAISHŪ](#) (C. [Tiantai Zong](#)), who wrote a classic account of his ninth-century pilgrimage to China. A native of Tochigi prefecture, Ennin lost his father when young, and became a student of the eminent Japanese monk [Saichō](#) at the monastery of [Enryakuji](#) on [Hieizan](#). Ennin was ordained on Mt. Hiei in 814 and received the full monastic precepts three years later at the precepts platform (kaidan) on the grounds of the monastery of [Tōdaiji](#). In 838, Ennin traveled to China with his companions Engyō (799–852) and Jōkyō (d. 866), arriving in Yangzhou (present-day Jiangsu province) at the mouth of the Yangzi River. The next year, he visited the monastery of Kaiyuansi, where he received the teachings and rituals of the various [Kongōkai](#) (vajradhātu) deities from the monk Quanya (d.u.). Ennin also studied the Sanskrit [Siddham](#) script while in China. When adverse winds kept him from returning to Japan, he remained behind at the monastery of Fahuayuan on Mt. Chi in Dengzhou (present-day Shandong province). From there, Ennin made a pilgrimage to [Wutaishan](#) and studied Tiantai doctrine and practice. In 840, Ennin arrived in the capital of Chang’an, where he studied the kongōkai [Mandala](#) under Yuanzheng (d.u.) of the monastery of Daxingshansi. The next year, Ennin also studied the teachings of the [Taizōkai](#) (garbhadhātu) and [*Susiddhikarasūtra](#) under Yizhen (d.u.) of the monastery of Qinglongsi. In 842, Ennin furthered his studies of the taizōkai under Faquan (d.u.) at the monastery of Xuanfasi, siddham under Yuanjian (d.u.) of Da’anguosi, and siddham pronunciation under the Indian [Ācārya](#) Baoyue (d.u.). In 845, Ennin fled from the Huichang persecution of Buddhism (see [Huichang Fanan](#)) that then raged in Chang’an, and arrived back in Japan in 847. Ennin kept a detailed record of his sojourn in China in his famed diary, the [Nittō Guhō Junrei Gyōki](#) (translated into English as *A Pilgrimage to China in Search of the Law*). In 854, Ennin was appointed the head (zasu) of Enryakuji and three years later was allowed to perform the [Ryōbu Abhiseka](#) for Emperor Buntoku (r. 850–858) in the palace. Ennin promoted the Tendai/Tiantai teachings of the four kinds of [Samādhi](#) (sizhong sanmei), which he had brought back to Japan from China. He also made an effort to continue his teacher Saichō’s attempt to implement the use of the bodhisattva precepts (see [Fanwang Jing](#)) in Japan.

En no Gyōja. (J) (役行者). See [En no Ozunu](#).

En no Ozunu. (役小角) (b. 634). Also known as En no Gyōja (lit. “En the

Ascetic”), a semi-legendary figure associated with [SHUGENDŌ](#) (lit. the “Way of Cultivating Supernatural Power”) who is known for his shamanic abilities and mountain austerities. Practitioners of Shugendō, Japan’s tradition of mountain asceticism, regard him as their founder and view him as the archetypal ascetic. The earliest accounts of En no Ozunu appear in the *Shoku Nihongi* (797) and the *Nihon Ryōiki* (810–824). He subsequently became the subject of numerous medieval texts, although many of the details of his life are sketchy. Allegedly born in Chihara in present-day Nara prefecture, he spent three decades of practice in [KATSURAGISAN](#), where legend holds that he worked to convert malicious spirits. In 699, he was exiled to Izu (in present-day Shizuoka prefecture) by Emperor Monmu because of accusations made by his disciple, Karakuni no Muraji Hirotari that he was practicing sorcery. Shugendō considers En no Ozunu to be a manifestation of Hōki Bosatsu ([DHARMODGATA](#)), whose sphere of practice in the Katsuragi mountains includes [KONGŌSAN](#) (see also [KŪMGANGSAN](#)), the traditional residence of this [BODHISATTVA](#). In 1799, in conjunction with the alleged eleven hundredth anniversary of En no Ozunu’s death, Emperor Kōkaku bestowed on him the title Jinben Daibosatsu (Great Bodhisattva Mysterious Change).

[Enpō dentōroku](#). (延寶傳燈錄). In Japanese, “The Enpō Reign-Era Transmission of the Lamplight Record”; a late Japanese genealogical history of the [ZEN](#) school, written by the [RINZAISHŪ](#) monk Mangen Shibān (1626–1710) and completed in 1678 and published in 1706, in a total of 41 rolls. Like the earlier Chinese lamplight record [JINGDE CHUANDENG LU](#), which was named after the Chinese reign-era during which the text was compiled, Mangen used the Japanese reign-era Enpō to designate his collection. The text includes the biographies of over one thousand Zen clerics and lay practitioners in the major Zen lineages of the Japanese Rinzaishū and [SŌTOSHŪ](#), with excerpts from their sermons and verses. Because of its vast scope, the collection offers a comprehensive overview of the history of the Japanese Zen tradition up to Mangen’s time. In his preface, Shibān states that his source materials were these masters’ discourse records (J. goroku; C. [YULU](#)), biographies, and stele and pagoda inscriptions, which he had collected for over thirty years since his youth. Mangen subsequently collected the biographies of 1,662 Buddhist monks from a range of Japanese sects and compiled them into the [HONCHŌ KŌSŌDEN](#), completed in 1702 in a total of 75 rolls.

Enryakuji. (延暦寺). An important monastery located on [HIEIZAN](#) (Mt. Hiei), near Kyōto, Japan, which has served as the headquarters (honzan) of the [TENDAISHŪ](#) (C. [TIAN TAI ZONG](#)) since its foundation. Enryakuji, or Hieizanji, started from humble beginnings in 785, when the Japanese monk [SAICHŌ](#) built a straw hut on Mt. Hiei. Three years later he built Ichijō shikan'in, the famous main hall that later was named Konpon chūdō and is currently designated a national treasure (kokuhō). In 806, with Emperor Kanmu's (r. 781–806) support, Saichō's residence was firmly established as a powerful monastery, whose function was to protect the new capital Heijōkyō (present-day Kyōto) from the demons that threatened the capital from the northeast. In 822, the year of Saichō's death, the emperor granted permission to construct a [MAHĀYĀNA](#) precepts platform (daijō kaidan) at the site, and a year later the monastery was renamed Enryakuji. In 824, the monk [GISHIN](#) was appointed the first head (zasu) of Enryakuji and the Tendai school. In 828, the Mahāyāna precepts platform was constructed on Mt. Hiei, which gave the Tendai monks freedom from the monopoly over ordination that the powerful monasteries in Nara had wielded up to that time. In 834, the Shakadō was constructed in the Saitō (West Hall) subcomplex. In 848, [ENNIN](#) established the Shūryōgon'in complex at [YOKAWA](#) and in 858 the monk [ENCHIN](#) established the subtemple Onjōji (see [MIIDERA](#)) as his separate residence. A schism between the lineages of Enchin and Ennin over the issue of succession in 993 led to the split between Ennin's Sanmon branch of Mt. Hiei and Enchin's Jimon branch of Onjōji. This schism grew into a violent battle that involved the recruiting of so-called warrior monks ([SŌHEI](#)). In 1571, Oda Nobunaga (1534–1582) burned a large number of monasteries on Mt. Hiei to the ground, including Enryakuji. Enryakuji now largely consists of three independent subcomplexes known as the Tōdō (East Pagoda), Saitō (West Pagoda), and Yokawa.

er bao. (J. nihō; K. i po 二報). In Chinese, “two kinds of karmic retribution.” One's actions, or [KARMA](#), are said to lead to “retribution proper” (C. zheng bao; J. shōhō; K. chōngbo) and “adjunct retribution” (C. yi bao; J. ehō; K. ūibo). The former directly affects the individual, in that it creates and conditions one's physical body and psychological makeup (see [VIPĀKAPHALA](#)). The latter affects the individual in a less direct way, in that it creates and conditions the quality of one's possessions and property (e.g., homes, land, and personal acquaintances) and determines such external factors as the household and country into which one is reborn (see [ADHIPATIPHALA](#)). This expression is also sometimes used to refer to the buddhas of [MAHĀYĀNA](#); in that context, “retribution proper”

determines the longevity and other personal attributes of a given buddha, whereas “adjunct retribution” influences the relative desirability and objective features of his [PURE LAND](#) (cf. [GONG BUGONG YE](#) and [ER SHIJIAN](#)). See [BUDDHAKSETRA](#).

[er chao](#). (二超). In Chinese, “two modes of deliverance” or “escape.” See [HENGCHAO](#) and [SHUCHAO](#).

[er chi](#). (J. niji; K. i chi 二持). In Chinese, “two modes of observing the precepts”: the observance of prohibitive precepts (zhi chi) and the observance of exhortative precepts (zuo chi). The former refers to the “passive” restraint that comes from simply following the monastic regulations specified in the [VINAYA](#) proper. The latter refers to the “active” cultivation of virtue and “constructive” undertaking of those wholesome activities that are elaborated in the [SKANDHAKA](#) (P. Khandhaka) section of the vinaya (cf. [ER FAN](#)).

[er chu san hui](#). (J. nisho san’e; K. i ch’ō sam hoe 二處三會). In Chinese, “the two locations and three assemblies,” the sites where the Buddha is presumed to have preached the [SADDHARMAPUNḌARĪKASŪTRA](#); a [TIANTAI](#) term. The two locations are Vulture Peak ([GRDHRAKŪTAPARVATA](#)) and the heavenly realm ([DEVALOKA](#)). According to the account in the *Saddharmapuṇḍarīkasūtra*, the Buddha preached, first, chapters one through the middle of the eleventh chapter on Vulture Peak; continuing on to, second, the end of the twenty-second chapter in the heavens; and, finally, third, the twenty-third chapter to the end of the sūtra back at Vulture Peak.

[er de](#). (J. nitoku; K. i tōk 二德). In Chinese, “dual virtues” or “two meritorious qualities.” There are at least three different sets of “dual virtues”: (1) the virtue of wisdom (zhi de) and the virtue of cessation (duan de) (e.g., of ignorance, suffering, and the fetters), (2) the virtue of wisdom (zhi de) and the virtue of compassion (bei de), (3) virtues that are inherent (xing de, i.e., those inherent in one’s buddha-nature, or [FOXING](#)) and virtues that are cultivated (xiu de).

[er fan](#). (J. nibon; K. i pōm 二犯). In Chinese, “two kinds of transgressions [against precepts]”: the transgression of precepts through a failure to act (zhi fan), and the transgression of precepts through action (zuo fan). Through neglect, laziness, or a lack of motivation, one commits the former transgression when one is delinquent in cultivating the “exhortative precepts”—the undertaking of

wholesome activities. In contrast to the former’s “guilt due to passivity,” one’s active and willful breach of “prohibitive precepts” constitutes the latter transgression. Cf. [ER CHI](#).

[er he](#). (J. niwa; K. i hwa 二和). In Chinese, “two kinds of harmony.” The monastic community is exhorted to achieve both harmony in “principle” (li, viz., doctrinal or ideological consensus [lihe]) and harmony in “practice” (shi, viz., freedom from verbal, physical, economic, and institutional conflicts [shihe]). These two kinds of harmony are sometimes expanded to a list of six (liu he): harmony in observation of the precepts (jiehe), harmony in understanding (jianhe), harmony in sharing a residence (shenhe), harmony in sharing the requisites (lihe), harmony in verbal activity (kouhe), and harmony in mutual goodwill (yihe).

[er jia](#). (J. nika; K. i ka 二加). In Chinese, “two kinds of empowerment ([ADHISTHĀNA](#)) [of the Buddha]”: “manifest empowerment” (xian jia) and “covert empowerment” (min jia). Manifest empowerment is the direct, physical assistance provided by the Buddha through such acts as aiding and protecting the empowered with his psychic powers (S. [RDDHI](#)); verbally communicating with and speaking the dharma to them; displaying physical gestures, such as rubbing the disciple’s head, in order to increase the latter’s faith; verbal exhortation in order to enhance the eloquence (S. [PRATISAMVID](#)) of the empowered, *etc.* Because this type of empowerment is visible to all, it is manifest empowerment. Covert empowerment has been variously interpreted to be the Buddha’s telepathic assistance to his disciples, or his disciples’ ability to partake mystically in the Buddha’s powers by recollecting him or invoking his name. Because such empowerment is typically hidden from view, it is covert.

[er liu](#). (J. niru; K. i nyu 二流). In Chinese, “two currents”: going against the current (ni liu) and following the current (shun liu). The former means to turn against the powerful currents that drive the cycle of rebirth (see [SAMSĀRA](#)), by practicing the path ([MĀRGA](#)) and stopping the contaminants (see [ĀSRAVA](#)). The latter means to be unrestrained in one’s worldly pursuits, not undertake religious training, and thus following the currents of saṃsāra.

[er mi](#). (J. nimitsu; K. i mil 二密). In Chinese, “two aspects of esoteric Buddhism.” “Esoteric as to principle” (li mi) refers to the doctrines and conceptual understanding of esoteric Buddhism. “Esoteric as to practices” (shi

mi) refers to the physical enactment of the “esoteric principle,” either in tantric rituals and practices or in the Buddha’s unfathomable activities. The Japanese [TAIMITSU](#) sect of esoteric Buddhism (as advocated by Japanese [TENDAISHŪ](#)) regards the [SADDHARMAPUNĀRIKASŪTRA](#) and [MAHĀPARINIRVĀNASŪTRA](#) as representative of esoteric as to principle, whereas the sūtras promoted by [SHINGONSHŪ](#) are esoteric with regard to both principle and practices.

er quan. (J. nisen; K. i chŏn 二詮). In Chinese, “two modes of explication”: apophatic (negative) and kataphatic (positive) discourse. The former describes something by pointing to what the thing is not. For example, the Buddhist description of [NIRVĀNA](#) often employs “negative statement”—i.e., nirvāṇa is neither a kind of existence nor is it nonexistence; it can neither be characterized by any of the primary factors nor can it be localized. A “positive statement,” by contrast, delineates and defines something by pointing to what the thing is. For example, the Buddhist idea of right understanding may be described by a positive statement—i.e., it is the intellectual and intuitive acceptance of the law of conditionality, the reality of [KARMA](#) and rebirth, and the [FOUR NOBLE TRUTHS](#).

er ren. (J. ninin; K. i in 二忍). In Chinese, “the two kinds of forbearances ([KSĀNTI](#))”: The first is the endurance, patience, and forbearance a [BODHISATTVA](#) has toward sentient beings, referring to the ability to withstand insults and obstacles posed by them and to undertake altruistic deeds (sheng ren). The second is [ANUTPĀTIKADHARMAKSĀNTI](#), the receptivity to the fact that dharmas are unproduced (fa ren).

er ru. (J. ninyū; K. i ip 二入). In Chinese, “the two accesses,” or “two entrances.” The putative Indian founder of the [CHAN ZONG](#), [BODHIDHARMA](#), taught in his [ERRU SIXING LUN](#) (“Treatise on the Two Accesses and Four Practices”) that enlightenment could be gained by two complementary methods. The “access of principle” (li ru) was a more static approach to practice, which sought an intuitive insight into the [DHARMA](#) and a recognition of the fact that each and every person was innately endowed with the capacity for enlightenment. The “access of practice” (xing ru) was a set of four dynamic practices that teach the student how to act with correct understanding of [SAMSĀRA](#) and that ultimately culminates in the same understanding achieved through the access of principle. The four practices are: retribution of enmity, acquiescing to conditions, seeking nothing, and practicing in accord with the dharma. Later Chan adepts sometimes sought to ascribe to these two accesses the original inspiration for the Chan

notion of sudden enlightenment (see [DUNWU](#)), or the soteriological approach of sudden awakening followed by gradual cultivation (see [DUNWU JIANXIU](#)).

[Erru sixing lun](#). (J. Ninyū shigyōron; K. Iip sahaeng non 二入四行論). In Chinese, “Treatise on the Two Accesses and Four Practices,” attributed to the legendary Indian monk [BODHIDHARMA](#), putative founder of the [CHAN ZONG](#); regardless of the authenticity of this ascription, the text is legitimately regarded as the earliest text of the Chan school. The treatise provides an outline of “two accesses” ([ER RU](#)): the access of principle (liru) a more static approach to practice, which sought an intuitive insight into the [DHARMA](#) and a recognition of the fact that each and every person was innately endowed with the capacity for enlightenment. This was complemented by the access of practice (xingru), which was subdivided into four progressive practices: retribution of enmity, acquiescing to conditions, seeking nothing, and practicing in accord with the dharma. The treatise underscores the inherent purity of the practitioner, which it glosses as the dharma or principle, and betrays little evidence of features that come to characterize the later Chan tradition, such as the debate over sudden or gradual enlightenment, the rejection of traditional meditative techniques, *etc.* Numerous copies of this treatise were found in [DUNHUANG](#), and citations of this text are found in the [XU GAOSENG ZHUAN](#), [LENGQIE SHIZI JI](#), and [JINGDE CHUANDENG LU](#). The text was published in Korea as part of the [SŌNMUN CH’WARYO](#) and in Japan as the [SHŌSHITSU ROKUMONSHŪ](#). A preface to this relatively short treatise was prepared by the monk Tanlin (fl. 506–574) and some editions of the treatise also contain two letters attributed to Bodhidharma’s disciple [HUIKE](#).

[er sheng](#). (S. yānadvaya; J. nijō; K. i sŭng 二乘). In Chinese, “two vehicles,” referring to adherents of the “two vehicles” of disciples ([ŚRĀVAKA](#)) and solitary buddhas ([PRATYEKABUDDHA](#)), and thus often functionally equivalent to the “lesser vehicle” ([HĪNAYĀNA](#)). The Chinese translates literally the Sanskrit yānadvaya (two vehicles), but the Chinese term is often used as an abbreviated translation for the Sanskrit compound śrāvaka-pratyekabuddha (disciples and solitary buddhas). In many contexts, therefore, the term means “two-vehicle adherents,” in distinction to the [BODHISATTVA](#)s and buddhas of the [MAHĀYĀNA](#).

[er shijian](#). (J. niseken; K. i segan 二世間). In Chinese, lit. “the two kinds of worlds.” Following the [ABHIDHARMAKOŚABHĀSYA](#), the Chinese distinguish between the reality associated with the sentient and inanimate realms. The

sentient aspect of reality refers to the living beings who are endowed with consciousness ([SATTVALOKA](#)); the inanimate aspect is the physical environment in which sentient beings exist ([BHĀJANALOKA](#)). According to this cosmology, both the sentient and inanimate aspects of reality are created and conditioned by living beings' [KARMAN](#)—the former by the so-called individual karman and the latter by “collective karman.” (cf. [ER BAO](#) and [GONG BUGONG YE](#)).

[er shiwu yuantong](#). (J. nijūgoenzū; K. isibo wōnt'ong 二十五圓通). In Chinese, “twenty-five kinds of consummate interpenetration.” According to the [*ŚŪRAMGAMASŪTRA](#) (*Shoulengyan jing*), twenty-five of the Buddha's disciples and bodhisattvas have each mastered a concentration ([SAMĀDHI](#)) pertaining to one of the twenty-five objects of meditation. The latter include the six sensory objects (liu chen; S. [ĀLAMBANA](#)), the six sensory faculties (liu gen; S. [INDRIYA](#)), the six sensory consciousnesses (liu shi; S. [VIJÑĀNA](#)), and the seven primary elements (qi da). It is said that enlightenment is possible by accessing any of the twenty-five masteries even though the bodhisattva [AVALOKITEŚVARA](#)'s mastery over the “ear faculty,” or auditory sense-base, has been singled out as a particularly efficacious method for practice.

[er wozhi](#). (J. nigashū; K. i ajip 二我執). In Chinese, “two kinds of attachment to self” ([ĀTMAGRĀHA](#)): “self-attachment that arises from discriminatory cognition” (fenbie wozhi) and “innate self-attachment” (jusheng wozhi). The former is primarily an epistemic error resulting from improper thinking and exposure to fallacious doctrines ([MITHYĀDRSTI](#)); it is eradicated at the stage of stream-enterer ([SROTAĀPANNA](#)). The latter is primarily an affective, habitual, and instinctive clinging (conditioned for many lifetimes in the past) that may be present whether or not one subscribes to fenbie wozhi, the “view of self.” “Innate self-attachment” is only gradually attenuated through the successive stages of spiritual fruition until it is completely extinguished at the stage of the [ARHAT](#). See [FAZHI](#) and [PUDGALANAIRĀTMYA](#).

[er wuchang](#). (J. nimujō; K. i musang 二無常). In Chinese, “two kinds of impermanence” ([ANITYA](#)): “impermanence marked by a successive period” (xiangxu wuchang; T. bya rdzogs kyi skad cig ma) and “impermanence that occurs at every instant” (niannian wuchang; T. dus mtha'i skad cig pa). The former is visible when an episodic event or arbitrary length of time has elapsed, such as the ending of a human life, the waning daylight at dawn, the extinguishing light at candle's end, *etc.* The latter, by contrast, refers to the

inexorable change that is taking place anytime and anywhere, even before an arbitrary episodic event has come to an end (e.g., even before a person's biological death, the person “dies” every instant in the continuum of flux that defines his existence). Cf. [FENDUAN SHENGSI](#) and [BIANYI SHENGSI](#), respectively.

[er xiashi](#). (C) (二挾侍). See [ER XIESHI](#).

[er xieshi](#). (J. nikyōji; K. i hyōpsa 二脇士). In Chinese, “the two flanking attendants.” In Buddhist art and literature, [ŚĀKYAMUNI](#) and other buddhas are often depicted flanked by two companions, usually either [BODHISATTVAS](#) or disciples ([ŚRĀVAKA](#)). In the case of Śākyamuni, typically [ŚĀRIPUTRA](#) and [MAHĀMAUDGALYĀYANA](#), the bodhisattvas [MAÑJUŚRĪ](#) and [SAMANTABHADRA](#), or the disciples [ĀNANDA](#) and [MAHĀKĀŚYAPA](#) are at his sides. In the case of the buddha [AMITĀBHA](#), the bodhisattvas [AVALOKITEŚVARA](#) and [MAHĀSTHĀMAPRĀPTA](#) are his “two flanking attendants.” In the case of [BHAIŚAJYAGURU](#), the bodhisattvas Sunlight (C. Riguang; S. Sūryaprabha) and Moonlight (C. Yueguang; S. Candraprabha) are his ancillary companions. See [MCHOG ZUNG](#).

[er xu](#). (J. nijo; K. i sō 二序). In Chinese, the “two kinds of prefaces” appearing in most [SŪTRAS](#) according to Chinese Buddhist exegetical traditions. The first kind is the so-called generic preface (tongxu)—the phrase “thus have I heard” (C. rushi wowen; S. [EVAM MAYĀ ŚRUTAM](#)). The second kind is called the “specific preface” (biexu), which stipulates the particular location and audience of a sermon and is different between sūtras. See also [NIDĀNA](#).

[er yingshen](#). (J. niōjin; K. i ũngsin 二應身). In Chinese, “the two kinds of emanation bodies” ([NIRMĀNAKĀYA](#)): superior transformation body (sheng yingshen) and inferior transformation body (lie yingshen). In the [MAHĀYĀNA](#), the Buddha's magical “emanation body” (nirmāṇakāya) is said to correspond to the audience's karmic predispositions and spiritual attainments. The “superior transformation body”—with its celestial features and immeasurable longevity—is said to be only visible to highly advanced bodhisattvas (those who have attained the tenth [BHŪMI](#) or higher). All other beings have only access to the Buddha's “inferior transformation body.” See [SPRUL SKU](#).

[erzhong gongyang](#). (J. nishu no kuyō; K. ijong kongyang 二種供養). In Chinese, “two kinds of offerings” (S. [PŪJĀ](#)/pūjanā). There are several lists. (1) The offering that is in accord with principle ([LI](#) gongyang), and the offering that is in

accord with phenomena ([SHI](#) gongyang). The former is the “glorifying” of the three jewels ([RATNATRAYA](#)) by means of attaining spiritual realization and undertaking spiritual practice; the latter are offerings of material support. (2) The offering made to those who are freed from the fetters, or [SAMYOJANA](#) (chuchan gongyang), and the offering made to those who are still subject to the fetters (zaichan gongyang). (3) Material offerings (cai gongyang) and offerings of the [DHARMA](#) (fa gongyang): the former involves material goods; the latter involves the explication, promotion, implementation, and promulgation of the Buddhist teachings.

[erzhong sanguan](#). (J. nishu no sangan; K. ijong sangwan 二種三觀). See [SANGUAN](#).

[erzhong yuanli](#). (J. nishuonri; K. ijong wōlli 二種遠離). In Chinese, “two kinds of seclusion” (S. [VIRATI](#); [VIVEKA](#)): physical seclusion (shen yuanli) and seclusion of the mind (xin yuanli). Removing oneself from a distracting, unwholesome, and disquieting environment by leaving it behind constitutes “physical seclusion.” Seclusion of the mind usually refers to “guarding one’s senses” (see [INDRIYASAMVARA](#)) with mindfulness so that the mind will neither cling to nor be repulsed by, sensory stimuli; it also refers to the “withdrawal” from sensory stimulations and the collectedness of attention during meditative states (see [DHYĀNA](#)).

[er zong](#). (J. nishū; K. i chong 二宗). In Chinese, “the two [primary] scholastic traditions,” or “two [rival] tenets,” of which there are three different schemata. (1) kong zong vs. you zong: In this model, Buddhism is divided into the school that posits the insubstantiality of things (C. kong; S. [ŚŪNYATĀ](#)) and that which posits the substantiality of things (C. you; S. [BHAVA](#)), respectively. One such dichotomy involves the [BAHUŚRUTIYA](#), the school associated with the [CHENGSHI LUN](#) (**Tattvasiddhi*), which teaches the “emptiness of everything” (sarva-[ŚŪNYATĀ](#)), including factors ([DHARMANAIRĀTMYA](#)), and the [SARVĀSTIVĀDA](#) school, which assumes that things could be reduced to fundamentally real, indivisible factors ([DHARMA](#)) that exist independently and are endowed with unique, irreducible properties. (2) [XING ZONG](#) vs. [XIANG ZONG](#): In this model, Buddhist teaching is said to consist of the doctrine that deals with the “nature of things” (C. xing; this doctrine has been variously interpreted as being associated with the [MADHYAMAKA](#) and [TATHĀGATAGARBHA](#) schools), and the doctrine that deals with the “characteristics/phenomenal aspects of things” (C. xiang; this

doctrine has been variously interpreted to be associated with the [YOGĀCĀRA](#) and Sarvāstivāda schools), respectively. (3) kong zong vs. xing zong: In the third model, Buddhism is said to contain two antithetical strands of thought (that may or may not be ultimately complementary). One strand upholds the reality of “emptiness” (C. kong) and denies any “self” or substantiality in all dharmas. The other strand affirms a discoverable and real “essence” (C. xing) of dharmas. Traditionally, Madhyamaka has been identified to be the paradigmatic “school of emptiness,” and tathāgatagarbha to be the paragon of the “school of [real] nature.”

[Eshin Sōzu](#). (J) (惠心僧都). See [GENSHIN](#).

[evam mayā śrutam](#). (P. evaṃ me sutaṃ; T. 'di skad bdag gis thos pa; C. rushi wowen; J. nyozegamon; K. yōsi amun 如是我聞). In Sanskrit, “thus have I heard,” the stock phrase that begins most [SŪTRAS](#), certifying that the teachings about to be recounted were heard from the mouth of the Buddha (or, in some cases, were spoken with his sanction by insightful disciples). The “I” in the phrase is generally assumed to refer to the Buddha’s attendant [ĀNANDA](#), who recited the [SŪTRAPĪṬAKA](#) at the first Buddhist council (see [COUNCIL, FIRST](#)) following the Buddha’s [PARINIRVĀNA](#). In [MAHĀYĀNA](#) scholastic literature, however, where the argument is made that the Buddha taught many sūtras that were not heard by Ānanda, it is sometimes advocated that the “I” instead refers to a particular [BODHISATTVA](#) who serves as the interlocutor for the scripture, such as [MAÑJUŚRĪ](#). There is also some debate within scholarly circles, following the commentarial interpretations of certain Buddhist traditions, whether this stock opening should also include the phrase “at one time” (ekasmin samaye) that usually follows, viz., “thus I have heard at one time” or “thus I once heard” (evaṃ mayā śrutam ekasmin samaye). See also [ER XU](#); cf. [GUHYASAMĀJATANTRA](#).

[Evans-Wentz, Walter Y.](#) (1878–1965). American Theosophist, best known as the editor of [THE TIBETAN BOOK OF THE DEAD](#). Walter Wentz was born in Trenton, New Jersey, the son of a German immigrant and an American Quaker. As a boy he took an early interest in books on spiritualism he found in his father’s library, reading as a teen both *Isis Unveiled* and *The Secret Doctrine* by Madame [HELENA PETROVNA BLAVATSKY](#) of the Theosophical Society. He moved to California at the turn of the century, where in 1901, he joined the American section of the Theosophical Society. After graduating from Stanford University, Wentz went to Jesus College at Oxford in 1907 to study Celtic folklore. He later

traveled to Sri Lanka (Ceylon) and then on to India. In 1919, he arrived in the British hill station of Darjeeling, where he acquired a Tibetan manuscript. The manuscript was a portion of a cycle of treasure texts ([GTER MA](#)) discovered by [RATNA GLING PA](#), entitled “The Profound Doctrine of Self-Liberation of the Mind [through Encountering] the Peaceful and Wrathful Deities” (*Zab chos zhi khro dgongs pa rang grol*), said to have been discovered in the fourteenth century. Since he could not read Tibetan, Evans-Wentz took the text to [KAZI DAWA SAMDUP](#), the English teacher at a local school. Kazi Dawa Samdup provided Evans-Wentz with a translation of a portion of the text, which Evans-Wentz augmented with his own introduction and notes, publishing it in 1927 as *The Tibetan Book of the Dead*. Since its publication, various editions of the book have sold over 500,000 copies in English, making it the most famous Tibetan Buddhist text in the world. The text describes the process of death and rebirth, focusing on the intervening transition period called the [BAR DO](#), or “intermediate state” ([ANTARĀBHAVA](#)). The text provides instructions on how to recognize reality in the intermediate state and thus gain liberation from rebirth. Through listening to the instructions in the text being read aloud, the departed consciousness is able to gain liberation; the Tibetan title of the text, [BAR DO THOS GROL CHEN MO](#), means “Great Liberation in the Intermediate State through Hearing.” Evans-Wentz’s approach to the text reflects his lifelong commitment to Theosophy. Other translations that Kazi Dawa Samdup made for Evans-Wentz were included in *Tibetan Yoga and Secret Doctrines* (1935). In 1924, after Kazi Dawa Samdup’s death, Evans-Wentz visited his family in Kalimpong, from whom he received a manuscript translation of the [MI LA RAS PA’I RNAM THAR](#), a biography of [MILA RAS PA](#), which Evans-Wentz subsequently edited and published as *Tibet’s Great Yogi Milarepa* (1928). He returned to Darjeeling in 1935 and employed two Sikkimese monks to translate another work from the same cycle of texts as the *Bar do thos grol*, entitled “Self-Liberation through Naked Vision Recognizing Awareness” (*Rig pa ngo sprod gcer mthong rang grol*). During the same visit, he received a summary of a famous biography of [PADMASAMBHAVA](#). These works formed the last work in his series, *The Tibetan Book of the Great Liberation*, eventually published in 1954.

[exchange of self and other](#). See [PARĀTMAPARIVARTANA](#).

[expedient](#). See [UPĀYA](#).

[eye-opening ceremony](#). See [DIANYAN](#); [KAIYAN](#); [NETRAPRATISTHĀPANA](#).

Fachang. (C) (法常) (d.u.). In Chinese, “Constancy of the Dharma”; proper name of the first “state preceptor” appointed in China, during the reign of Emperor Wenxian (r. 550–559) of the Northern Qi dynasty. See [GUOSHI](#).

fachuang. (J. hōdō; K. pŏptang 法幢). In Chinese, “banner of dharma”; in its literal usage, this term refers to the banners that would be raised whenever dharma sermons, rituals, or festivals were held. By extension, the opening or founding of a monastery or lecture hall came to be called the “establishment of the dharma banner” (ji’an fachuang). Metaphorically, the proclamation or exposition of the Buddhist truths was also said to be like raising the dharma banner, which would terrify [MĀRA](#)’s legions, thus symbolizing the vanquishing of Buddhism’s ideological opponents.

Fafang. (法舫) (1904–1951). In Chinese, “Skiff of Dharma”; distinguished Chinese Buddhist scholar and activist who initiated some of the earliest ecumenical dialogues between Chinese [MAHĀYĀNA](#) and Sri Lankan [THERAVĀDA](#) Buddhists. Ordained at the age of eighteen, Fafang was one of the first students to study in the Chinese Buddhist Academy that [TAIXU](#) founded in Wuchang (Wuchang Foxue Yuan). He eventually taught at the academy, as well as at other leading Chinese Buddhist institutions of his time, contributing significantly to Taixu’s attempts to found international Buddhist research centers and libraries. He also was longtime chief editor of the influential and long-running Buddhist periodical *Haichao yin* (“Sound of the Tide”). In 1946, Fafang traveled to Sri Lanka after becoming proficient in Sanskrit, Pāli, Japanese, and English and studied Theravāda Buddhism with Kirwatatuduwe Prasekene. Among his later accomplishments, Fafang taught at the University of Sri Lanka, served as one of the chief editors for the compilation of Taixu’s collected works, founded one of the first Pāli learning centers in China, and created a student exchange program for Chinese and Sri Lankan monks.

Fahai. (J. Hōkai; K. Pŏphae 法海) (d.u.). In Chinese, “Sea of Dharma”: a disciple of [HUINENG](#), the sixth patriarch ([LIUZU](#)) of the [CHAN ZONG](#). Fahai is said to have been the head monk of the monastery of Tafansi in Shaozhou Prefecture, where Huineng is presumed to have delivered a sermon on the “sudden” teachings ([DUNJIAO](#)) of the Southern school ([NAN ZONG](#)) of Chan. Fahai is dubiously

credited with compiling the written record of this sermon, the [LIUZU TAN JING](#) (“Platform Sūtra of the Sixth Patriarch”). A rather late “brief preface” (luexu) to the *Liuzu tan jing* is also retrospectively attributed to Fahai. The story of this figure may have been based on a monk by the same name who was affiliated with the [NIUTOU ZONG](#) of Chan.

[Fahua anle xingyi](#). (J. Hokke anrakugyōgi; K. Pōphwa allak haengŭi 法華安樂行義). In Chinese, “Exegesis on the ‘Blissful Practice’ Section of the ‘Lotus Sūtra,’” treatise composed by [NANYUE HUISI](#) and one of the earliest texts of the nascent [Tiantai Zong](#). The text situated the [SADDHARMAPUNḌARĪKASŪTRA](#) at the locus of Tiantai teachings and outlined the archetypal contemplative techniques that were subsequently developed by [Tiantai Zhiyi](#). It contained both the incipient Tiantai understanding of the notion of “emptiness according to the [PRAJÑĀPĀRAMITĀ](#)” (bore kongxing) and the ritualistic elements of visualization and chanting that became central in subsequent iterations of Tiantai practice.

[Fahua chanfa](#). (J. Hokke senbō; K. Pōphwa ch’ambōp 法華懺法). In Chinese, “penance ritual according to the ‘Lotus Sūtra.’” Despite its name, this intensive twenty-one-day ritual was based as much on the *Guan Puxian pusa xingfa jing* (“The Sūtra on the Procedures for Visualizing the Bodhisattva [SAMANTABHADRA](#)”) as it was on the [SADDHARMAPUNḌARĪKASŪTRA](#). As explained in [Tiantai Zhiyi](#)’s *Fahua sanmei chanfa* (“Penance Ritual according to the Lotus Samādhi”), the goal of the ritual is to ensure visions of celestial buddhas and/or [BODHISATTVA](#)s, which were taken to be signs that the one’s unwholesome actions ([AKUŚALA-KARMA](#)) had been expiated. The penitent was required to refrain from lying down for the full duration of the ritual, by constantly alternating between walking and sitting postures. Demanding intense mental and physical devotion, the ritual involves extensive contemplation of the [Tiantai](#) teachings, making vows and supplications, uttering prescribed words of repentance, chanting the *Saddharmapuṇḍarīkasūtra* and performing intermittent circumambulation.

[fahua ermiao](#). (C) (法華二妙). See [DAIJUE ERMIAO](#).

[Fahua jing lüeshu](#). (J. Hokekyō ryakusho; K. Pōphwa kyōng yakso 法華經略疏). In Chinese, “A Brief Commentary on the ‘Lotus Sūtra,’” the earliest extant Chinese commentary on the [SADDHARMAPUNḌARĪKASŪTRA](#), though there is considerable controversy regarding its authenticity. The text is attributed to

[DAOSHENG](#) from the Liu-Song period (420–479), who was one of the direct disciples of the Kuchean translator [KUMĀRAJĪVA](#). Daosheng claimed that the treatise combined the famous translator’s lectures notes on the *Saddharmapuṇḍarīkasūtra* with Daosheng’s own insights. If authentic, this commentary would be Daosheng’s only surviving work, offering a rare perspective into the way the *Saddharmapuṇḍarīkasūtra* was understood and interpreted by Kumārajīva and his circle of adherents. Employing expressions found in the Chinese “Book of Changes” (*Yijing*), this commentary discusses the notions of “consummate perfection” (yuan) and a peculiar [MAHĀYĀNA](#) definition of the “middle way” (C. zhongdao, [MADHYAMAPRATIPAD](#)), notions that were further elaborated by subsequent [TIANTAI](#) and [HUAYAN](#) exegetes.

[Fahua jing shu](#). (C) (法華經疏). See [FAHUA JING LÜESHU](#).

[Fahua jing yi ji](#). (J. Hokekyō giki; K. Pōphwa kyōng ūi ki 法華經義禮). In Chinese, “Notes on the Meaning of the ‘Lotus Sūtra,’” also known as “Commentary on the Meaning of the ‘Lotus Sūtra’” (*Fahua yi shu*), eight-roll text composed by Fayun (467–529). This commentary is the second-oldest extant treatise in Chinese on the [SADDHARMAPUNḌARĪKASŪTRA](#), after the [FAHUA JING LÜESHU](#). These two commentaries played an important role in shaping early [HUAYAN](#) and [TIANTAI](#) thought.

[Fahua sanbu \[jing\]](#). (J. Hokke sanbu[kyō]; K. Pōphwa sambu [kyōng] 法華三部[經]). In Chinese, “The Three [Sister] Sūtras of the ‘Lotus,’” and often referred to in English as the “Threefold ‘Lotus Sūtra.’” The three scriptures are: the [WULIANG YI JING](#) (“Sūtra of Immeasurable Meanings”); the [SADDHARMAPUNḌARĪKASŪTRA](#) (“Lotus Sūtra”) itself; and the [GUAN PUXIAN PUSA XINGFA JING](#) (“Sūtra on the Procedures for Visualizing the Bodhisattva [SAMANTABHADRA](#)”). They are called “sister sūtras” in East Asia because they seem to contain internal references to one other, which implied that they were propounded in this order during the final period of the Buddha’s ministry (according to the [TIANTAI](#) school’s temporal taxonomy of the scriptures; see [WUSHI](#)). The first of the three scriptures, the *Wuliang yi jing*, was presumed to be the prequel to the influential *Saddharmapuṇḍarīkasūtra* (although the text is now generally believed to be an indigenous Chinese composition, see [APOCRYPHA](#)); the last, the *Guan Puxian pusa xingfa jing*, was considered its sequel. The three texts are also called “sister sūtras” because they all figured prominently in Tiantai teachings, although the *Saddharmapuṇḍarīkasūtra* far

eclipsed the other two sūtras in importance in the school's exegetic tradition.

[Fahua wenju](#). (J. Hokke mongu; K. Pŏphwa mun'gu 法華文句). In Chinese, “Words and Phrases of the ‘Lotus Sūtra’”; a major commentary on the [SADDHARMAPUNḌARĪKASŪTRA](#), taught by [TIANTAI ZHIYI](#) and put into writing by his disciple Guanding (561–632), in alt. ten or twenty rolls. Along with the [MOHE ZHIGUAN](#) and the [FAHUA XUANYI](#), the *Fahua wenju* is considered one of Zhiyi's three great commentaries. The lectures that formed the basis of the *Fahua wenju* were delivered by Zhiyi in 587 at the monastery of Jinzhaisi in Jinling (present-day Jiangsu province), and they offered a thorough exegetical analysis of the *Saddharmapuṇḍarīkasūtra*. The *Fahua wenju* was incorporated in the Song-dynasty Buddhist canon at the recommendation of the Tiantai monk Ciyun Zunshi (964–1032) in 1024. The treatise employs a fourfold exegetical technique (sishi) unique to Zhiyi and his [TIANTAI ZONG](#), viz., exegesis via: (1) causes and conditions, (2) classification of the teachings (see [JIAOXIANG PANSHI](#)), (3) fundamentals and traces, and (4) contemplation on the mind. Throughout the *Fahua wenju*, the interpretations of other teachers, such as [DAOSHENG](#), are critiqued. An influential commentary on the *Fahua wenju* known as the *Fahua wenju ji* was prepared by [JINGXI ZHANRAN](#).

[Fahua wubai wen lun](#). (J. Hokke gohyakumonron; K. Pŏphwa obaek mun non 法華五百問論). In Chinese, “Treatise on Five Hundred Questions Regarding the ‘Lotus Sūtra,’” in three rolls; text composed by [JINGXI ZHANRAN](#) (711–782) to refute the Chinese [YOGĀCĀRA](#) school's (see [FAXIANG ZONG](#)) interpretation of the [SADDHARMAPUNḌARĪKASŪTRA](#). It is so named because it contains roughly five hundred entries offering rejoinders (mainly from a [TIANTAI](#) position) against hypothetical Faxiang argumentations. Questions such as whether one's spiritual potential is determined and fixed (see [GOTRA](#)), whether consciousness is fundamentally defiled or innately immaculate, and the relation between the different Buddhist “vehicles” ([YĀNA](#)) have been addressed in this polemical work.

[Fahua wuchong xuanyi](#). (J. Hokke gojūgengi; K. Pŏphwa ojung hyŏnŭi 法華五重玄義). In Chinese, “The Five Layers of Profound Meaning according to the *Fahua* ([TIANTAI](#)) [school],” a standardized set of interpretive tools devised by [TIANTAI ZHIYI](#) to be used in composing Buddhist scriptural commentaries. The five topics of exegesis that Zhiyi states should be covered in any comprehensive sūtra commentary are: (1) “explanation of the title [of the sūtra]” (shiming); (2)

“discernment of its main theme” (bianti); (3) “elucidation of its cardinal doctrine or main tenet” (mingzong); (4) “discussion of the sūtra’s intent or purpose” (lunyong); (5) “adjudication of its position in a hermeneutical taxonomy of the scriptures” (panjiao; see [JIAOXIANG PANSHI](#)). These five topics are covered in most East Asian sūtra commentaries written after Zhiyi’s time.

[Fahua xuanyi](#). (J. Hokke gengi; K. Pōphwa hyōnūi 法華玄義). In Chinese, “Profound Meaning of the ‘Lotus Sūtra,’” taught by the eminent Chinese monk [Tiantai Zhiyi](#) and put into writing by his disciple Guanding (561–632). Along with the [MOHE ZHIGUAN](#) and [FAHUA WENJU](#), the *Fahua xuanyi* is considered one of Zhiyi’s three great commentaries. The lectures that form the basis of the *Fahua xuanyi* were delivered by Zhiyi in 593, perhaps at the monastery of Yuquansi in Jingzhou (present-day Hubei province), and they are concerned with the thorough analysis of the [SADDHARMAPUNḌARĪKASŪTRA](#). The treatise is divided into two broader methods of interpretation: general (tongshi) and specific (bieshi). The general interpretation further consists of seven subtypes, such as a listing of the chapters, citations, provenance, and so forth. The specific interpretation consists of five subtypes (see [FAHUA WUCHONG XUANYI](#)): the interpretation of the title, determination of its main theme, clarification of its main tenet, discussion of its purpose, and classification of its teachings (panjiao; see [JIAOXIANG PANSHI](#)). Nearly two-thirds of the treatise is dedicated to the first two characters in the title of the Chinese translation of the *Saddharmapuṇḍarīka*, “subtle” (miao) and “dharma” (fa).

[Fahua xuanzan](#). (T. Dam pa’i chos puṇḍa rī ka’i ’grel pa [rgya las bsgyur pa]; J. Hokke genzan; K. Pōphwa hyōnch’an 法華玄贊). In Chinese, “Profound Panegyric to the ‘Lotus Sūtra,’” a commentary to the [SADDHARMAPUNḌARĪKASŪTRA](#) composed by [Kuiji](#), whose unique [YOGĀCĀRA](#) perspective on the text set him at odds with the more influential commentaries written by earlier and contemporaneous [Tiantai](#) and [Huayan](#) exegetes. This commentary is still extant in both Chinese and, notably, a Tibetan translation.

[Fahua zhuan\[ji\]](#). (J. Hokke den[ki]; K. Pōphwa chōn[’gi] 法華傳[禮]). In Chinese, “Compendium of the ‘Lotus Sūtra,’” also known as the *Hongzan fahua zhuan[ji]*, was composed by Huixiang during the Tang dynasty. This work included much information regarding the translation, circulation, commentaries, epigraphy, illustrations, magical lore, and other aspects of the [SADDHARMAPUNḌARĪKASŪTRA](#). Several other comparable compendia devoted

exclusively to the *Saddharmapuṇḍarīkasūtra* are still extant (by authors from China, Korea, and Japan), testifying to the scripture's popularity throughout East Asia.

faith. See [ŚRADDHĀ](#); [XINXIN](#).

Fajie guanmen. (C) (法界觀門). See [HUAYAN FAJIE GUANMEN](#).

fajie jiachi. (J. hokkai kaji; K. pŏpkye kaji 法界加持). In Chinese “the empowerment of the [DHARMADHĀTU](#).” According to the [MAHĀVAIROCANĀBHISAMBODHISŪTRA](#), the buddhas, the [TANTRAS](#), and sentient beings ([SATTVA](#)) mutually pervade and “empower” ([ADHISTHĀNA](#)) each other. This mutual interfusion is what makes the dharmadhātu unfathomably profound and interconnected.

fajie yuanqi. (J. hokkai engi; K. pŏpkye yŏn'gi 法界緣起). In Chinese, “conditioned origination ([PRATĪYASAMUTPĀDA](#)) of the dharma-element ([DHARMADHĀTU](#)),” an East Asian theory of causality elaborated within the [HUAYAN](#) school. Unlike the Indian systematization of the twelvefold chain of pratīyasamutpāda, which views existence as an endless cycle of painful rebirths that begins with ignorance ([AVIDYĀ](#)) and ends with old age and death (jarāmaraṇa; see [JARĀ](#)), this Huayan vision of causality instead regards the infinitely interdependent universe as the manifestation of the truth to which the Buddha awakens. The term “fajie yuanqi” does not appear in the *Huayan jing* ([AVATAMSAKASŪTRA](#)) itself and seems to have been first coined by [ZHIYAN](#) (602–668), the “second patriarch” of the Huayan lineage. Zhiyan used fajie yuanqi to refer to the concurrency between cause (C. yin; S. [HETU](#)) and fruition (C. guo; S. [PHALA](#)), here meaning the “causal” practices (hsing) that are conducive to enlightenment and their “fruition” in the realization (zheng) of the quiescence that is [NIRVĀNA](#). As this Huayan theory of pratīyasamutpāda is elaborated within the tradition, it is broadened to focus on the way in which every single phenomenal instantiation of existence both contains, and is contained by, all other instantiations, so that one existence is subsumed by all existences (yi ji yiqie) and all existences by one existence (yiqie ji yi); in this vision, all things in the universe are thus mutually creative and mutually defining, precisely because they all lack any independent self-identity ([SVABHĀVA](#)). Each phenomenon constitutes a part of an organic whole that is defined by the harmonious relationship between each and every member: just as the whole is defined by all

of its independent constituents, each independent constituent is defined by the whole with which it is integrated. This relationship is called endless multiplication (*chongchong wujin*), because the process of mutual penetration and mutual determination (*xiangru xiangji*) is infinite. Due to this unlimited interdependence among all phenomena, this type of *pratītyasamutpāda* may also be termed “inexhaustible conditioned origination” (*wujin yuanqi*). This interdependence between one phenomenon and all other phenomena developed through *fajie yuanqi* is indicative also of the Huayan “dharmadhātu of the unimpeded interpenetration of phenomenon with phenomena” ([SHISHI WU’AI FAJIE](#)). The Huayan doctrines of the “ten profound mysteries” ([SHI XUANMEN](#)) and the “consummate interfusion of the six aspects” ([LIUXIANG YUANRONG](#)) also offer systematic elaborations of the doctrine of *fajie yuanqi*.

fala. (J. *hōrō*; K. *pōmnap* 法臘). In Chinese, “dharma age,” the number of years since one has been ordained as a novice or monk or nun. See [JIELA](#).

Famensi. (法門寺). In Chinese, “Dharma-Gate Monastery,” located approximately seventy miles outside the city of Chang’an (present-day Xi’an) in Shaanxi province, China. Though the exact dates of its construction are unknown, the monastery claims to have been built during the Eastern Han dynasty but more likely dates from the Northern Wei period (386–534). One of only four monasteries in China to house a relic ([ŚARĪRA](#)) of the Buddha, Famensi was particularly renowned for its four finger-bone relics, which were displayed in the Tang-dynasty capital several times during the seventh and eighth centuries. Famensi’s renowned thirteen-story, octagonal brick pagoda ([STŪPA](#)) collapsed in 1981 after a torrential rainfall, and excavations in 1987 revealed three secret stone chambers under the foundations, which had remained unopened since the ninth century. The chambers housed a large number of precious objects, including incense burners (see [GANDHAGHATIKĀ](#)), jewelry, and textile items, as well as 122 gold and silver objects that are exhaustively inventoried in two stone tablets written in 874 and left with the cache. An exquisite, gilded reliquary casket containing a nested series of smaller reliquaries was also discovered in the chamber. One of the purported finger-bone relics of the Buddha was found intact within the innermost reliquary; the other three were located elsewhere in the chambers.

faming. (T. *chos ming*; J. *hōmyō*; K. *pōmmyōng* 法名). In Chinese, “dharma name.” In East Asian Buddhism, the given name in one’s dharma lineage is

typically a new religious name—often consisting of two Sinographs for monks, nuns, and laymen, or sometimes three Sinographs for laywomen—that is conferred by the preceptor to a person who has undergone either the three refuges ([RATNATRAYA](#)) ceremony or monastic ordination. After ordination, monks and nuns no longer use their secular names but will subsequently be known only by their dharma names. In many East Asian traditions, following long-established Chinese practice going back to the time of [DAO'AN](#) (312–385), monks and nuns also often abandon their secular surname and take in its place the surname [SHI](#) (J. Shaku; K. Sŏk; V. Thích), a transliteration of the first syllable of [ŚĀKYA](#), the Buddha's own clan name, as a mark of their spiritual ties to the clan of the Buddha. In the case of monks and nuns and people of notable accomplishment, this dharma name is traditionally preceded by another cognomen or cognomina that alludes to one's lineage group, place of residence (such as one's home monastery or mountain), an imperially bestowed title, and/or other known virtues. ¶ In Tibet, two names are given and the first name is typically the first name of the preceptor; thus, those ordained by Bstan 'dzin rgya mtsho (Tenzin Gyatso) (the fourteenth Dalai Lama) will have Bstan 'dzin (Tenzin) as the first of their two dharma names.

[fanan](#). (J. hōnan; K. pŏmnan 法難). In Chinese, “calamities that befall the dharma,” referring to political persecutions of Buddhism, or other forms of systematic harassment of the religion and its adherents. Examples of such persecutions abound throughout Buddhist history. In India, e.g., there were Indian rulers who were hostile to Buddhism, such as King Puśyamitra (c. end of the second century BCE) and those of the Sena dynasty (c. eleventh to twelfth centuries), as well as Muslim generals and rulers who sacked Buddhist centers and forced the conversion of the local populace. In East Asia, China saw the systematic persecution by four emperors with Daoist affinities, as well as the infamous Huichang persecution ([HUICHANG FANAN](#)). More recent periods saw Japan's suppression of Buddhism during the Meiji period (beginning in 1868; cf. [SHINBUTSU BUNRI](#)) and the Korean Chosŏn dynasty's five centuries of persecution of Buddhism, which extended into the late nineteenth century. Related Chinese terms are feifo (“abolition of Buddhism”), miefo (“annihilation of Buddhism”), pofu (“destruction of Buddhism”), huifa (“damage to Buddhism”), and mie-Shi (“annihilation of [the teachings of] [ŚĀKYAMUNI](#)”).

[fanbai](#). (J. bonbai; K. pŏmp'ae 梵唄). In Chinese, lit., “the speech of [BRAHMĀ](#),”

Buddhist ritual chanting performed in a distinctively clear, melodious, and resonate voice; “fan,” lit. Brahmā, is generically used in China to refer to all things Indian, and “bai” is a transcription of the Sanskrit word bhāṣā, or “speech,” so fanbai means something like “Indian-style chanting.” Although the historical origins of fanbai are uncertain, according to legend, it derives from the singing of the heavenly musicians ([GANDHARVA](#)) or from the chants of Gadgadasvara (Miaoyin), a bodhisattva appearing in the [SADDHARMAPUNDIRIKASŪTRA](#) who eulogized the virtues of ŚĀKYAMUNI Buddha. An account in the [NANHAI JIGUI NEIFA CHUAN](#), a pilgrimage record written by the Chinese monk [YIJING](#) (635–713), who sojourned in India for twenty-five years, confirms that fanbai chanting was still popular on the Indian subcontinent during the seventh century. Fanbai was transmitted to China almost simultaneously with the introduction of Buddhism. The Chinese developed their own style of fanbai by at least the third century CE: Cao Zhi (192–232) of the Wei dynasty is said to have created it inspired by a fish’s movement, leading to the use of the term yushan (lit. “fish mountain”) as an alternate name for fanbai. According to the Korean [SAMGUK YUSA](#), the transmission of fanbai (K. pŏmp’ae) from China to Korea occurred perhaps as early as the first half of the seventh century; subsequently, the monk [CHIN’GAM HYESO](#) (774–850) is said to have introduced the Tang-Chinese style of fanbai to the Silla kingdom around 830. The [NITTŌ KYŪHŌ JUNREIGYŌKI](#) by [ENNIN](#) (794–864), a Japanese pilgrim monk who visited both Silla Korea and Tang China, reports that both Silla and Tang styles of pŏmp’ae were used in Korean Buddhist ceremonies. The Chosŏn monk Taehwi (fl. c. 1748), in his *Pŏmŭmjong po* (“The Lineage of the Brahmā’s Voice School”), traces his Korean lineage of pŏmp’ae monks back to the person of Chin’gam Hyeso. Fanbai was preserved orally in China and Korea, but was recorded in Japan using the Hakase neume style of notation. The fanbai chanting style involves special vocalization techniques with complex ornamentation that are thought to have been introduced from India, but uses lyrics that derive from Chinese verse; these lyrics are usually in non-rhyming patterns of five-or seven-character lines, making up four-line verses that praise the virtues of the Buddha. Vocables are sometimes employed in fanbai, unlike in sūtra chanting. The different fanbai chants are traditionally performed solo or by a chorus, often in a call and response format. Only in Korea has fanbai branched into two distinct types: hossori pŏmp’ae and chissori pŏmp’ae. Some pŏmp’ae texts can be performed only in one style, but others, such as porye and toryanggye, leave the choice to the performer. Hossori pŏmp’ae is performed in a melismatic style that

is elegantly simple, in a vocal style somewhat similar to Western music. By contrast, *chissori pŏmp'ae* is solemn, highly sophisticated, and utilizes a tensed throat and falsetto for high notes. Although *chissori pŏmp'ae* is considered to be a more important vocal musical form, there are only twelve extant compositions in this style. Owing to how texts and melodic phrases are organized, even though it uses a shorter text, *chissori pŏmp'ae* takes two or three times longer to complete than *hossori*. Of the two, only *hossori* can be accompanied by musicians or sung to accompany dance. Korean *pŏmp'ae* is also performed during Buddhist ceremonies such as [Yŏngsanjae](#).

[Fangshan shijing](#). (房山石經). In Chinese, “Lithic Scriptures of Fangshan,” the world’s largest collection of scriptures written on stone, located in the Fangshan district about forty miles southwest Beijing. The blocks are now stored on Shijingshan (Stone Scriptures Hill) in nine separate caves, among them the Leiyindong (Sound of Thunder Cave), near the monastery of [Yunjusi](#) (Cloud Dwelling Monastery). The carving of the lithic scriptures was initiated during the Daye era (604–617) by the monk Jingwan (d. 639) with the support of Empress Xiao (?-630) and her brother Xiao Yu (574–647). Among the scriptures carved during Jingwan’s lifetime were the [Saddharmapundarikasūtra](#) (“Lotus Sūtra”), the [Mahāparinirvānasūtra](#) (“Nirvāna Sūtra”), and the [Avatamsakasūtra](#) (“Flower Garland Sūtra”). The project continued up through the Tianqi era (1621–1627) of the Ming dynasty. The collection now includes 1,122 Buddhist scriptures carved on 14,278 lithographs, or stone slabs. The Fangshan canon is a product of the Chinese belief that Buddhism had entered the “dharma-ending age” ([MOFA](#); see [Saddharmavipralopa](#)): by carving the Buddhist canon on stone, this project was thus one way of helping to ensure that the Buddhist scriptures would survive the inevitable demise of the religion. Most of the scriptures in the Fangshan canon represent textual lineages that derive from recensions that circulated during the Tang and Khitan Liao dynasties. The monk Xuanfa (fl. c. 726–755) initiated a project to carve the entire canon after being presented with a copy of the handwritten Kaiyuan manuscript canon (see [Kaiyuan Shijiao lu](#)) by the Tang princess Jinxian (689–732). During the rule of the Khitan Liao emperors Shengzong (r. 983–1031), Xingzong (r. 1032–1054), and Daozong (r. 1055–1100), the new Qidan canon was carved on xylographs (viz., woodblocks), with the lithic carving of the same texts carried out in tandem at Yunjusi for several decades. By the late eleventh century, all nine caves had been filled to capacity. Consequently, in 1117, a pit was excavated in

the southwestern section of Yunjusi to bury a new set of carvings initiated by the monk Tongli (1049–1098); these texts were mostly commentarial and exegetical writings, rather than sūtra translations. By the time of the Jin dynasty (1115–1234), most of the mainstream Mahāyāna canonical scriptures had been carved. In the twelfth century, during the Song dynasty, the growing popularity of tantric materials and the [ĀGAMA](#)s prompted a supplementary carving project to add them to the Fangshan canon. However, the Fangshan Shijing does not exclusively contain Buddhist texts. In the third year of the Xuande era (1428) of the Ming dynasty, many Daoist scriptures were carved with an intent similar to that of the Buddhists: to ensure that these texts were transmitted to posterity. The Buddhist Association of China made rubbings of a substantial part of the extant lithographs in 1956. For modern historians, these rubbings offer a rich tapestry of information for studying the textual history of the Buddhist canon and the social history and culture of Buddhism in northern China. See also [DAZANGJING](#).

[fangsheng](#). (T. srog blu/tshe thar; J. hōjō; K. pangsaeng 放生). In Chinese, “releasing living creatures,” referring to the practice of buying captured animals, such as fish, turtles, or birds, and then setting them free; the focus of a ritual popular in East Asian Buddhism, the “ceremony of releasing living creatures” ([FANGSHENG HUI](#)). The Buddhist tradition asserts that merit ([PUNYA](#)) is produced by both actively pursuing wholesome actions ([KUŚALA-KARMAPATHA](#)) as well as refraining from unwholesome actions ([AKUŚALA-KARMAPATHA](#)); fangsheng is regarded as an enhancement of both types of action, by furthering the first lay precept ([ŚĪLA](#)) that forbids the unsalutary action of killing, as well as the [MAHĀYĀNA](#) precept that encourages the salutary act of vegetarianism. ¶ The two representative scriptures on fangsheng are the [FANWANG JING](#) (“Book of Brahmā’s Net”) and the [SUVARNAPRABHĀSOTTAMASŪTRA](#) (C. *Jinguangming jing*; “Sūtra of Golden Light”), the former providing the doctrinal basis for the practice of fangsheng, the latter a prototypical example of a fangsheng hui. The *Fanwang jing* says that because all sentient beings in the six destinies ([SADGATI](#); see also [GATI](#)) have at some time or other during the vastness of [SAMSĀRA](#) been one’s parents, a person should always strive to rescue creatures from people who would kill them in order to save them from their torment. The *Suvarṇaprabhāsottamasūtra* tells a story about Jalavāhana ([ŚĀKYAMUNI](#) Buddha in an earlier life), who saved ten thousand fish who were dying in a dried up pond by bringing water to refill it. He then recited for them the ten epithets of the buddha Ratnaśikhin/Ratnabhava, since he had been told that any creatures

who heard that Buddha's name at the time of their deaths would be reborn in the heavens. The fish were reborn as divinities in the [TRĀYASTRIMŚA](#) heaven, who then rained jewels down on the earth.¶ In China, the Buddhist custom of vegetarianism had started to pervade the culture by the Qi (479–501) and Liang (502–556) dynasties, a custom that encouraged the freeing of animals. In 619, an imperial decree prohibited fishing, hunting, and the slaughter of animals during the first, fifth, and ninth months of the year. A decree of 759 established eighty-one ponds for the release and protection of fish. Fangsheng appears to have been practiced not only by individual laypeople and monks. There is a record of the Liang dynasty monk Huiji (456–515) who practiced mendicancy so he could buy and release captured animals. [Tiantai Zhiyi](#) (538–597), the founder of the [Tiantai Zong](#), is known to have performed a formal ceremony for releasing animals in 575. Zhiyi lamented the fact that local folk made their living by catching fish, so he built a “pond where creatures could be released” (fangsheng chi) and preached to the freed fish the [Saddharmapundarikasūtra](#) and the *Suvarṇaprabhāsottamasūtra*. Zhiyi thus established the *Suvarṇaprabhāsottamasūtra* as the scriptural authority for fangsheng. Following Zhiyi, the fangsheng ceremony subsequently became one of the important rituals used within the Tiantai school. Ciyun Zunshi (964–1032) and [Siming Zhili](#) (960–1028), both Tiantai monks during the Song dynasty, were ardent advocates of fangsheng, who established ponds for releasing creatures and performed the ceremony of releasing creatures, especially in conjunction with celebrations of the Buddha's birthday. In the [Chan](#) school, [Yongming Yanshou](#) (904–975) and [Yunqi Zhuhong](#) (1535–1615) were among the most enthusiastic proponents of fangsheng. Zhuhong wrote works regarding the practice of vegetarianism, including the *Shirou* (“On Meat-Eating”) and the *Shasheng feirensuowei* (“Killing Is Not What Humans Are Supposed To Do”), and also composed tracts on the ritual practice of fangsheng, such as the *Fangsheng yi* (“Rite for Releasing Living Creatures”) and the *Jiesha fangsheng wen* (“Text on Prohibiting Killing and Releasing Living Creatures”). His *Fangsheng yi* is still considered today one of the standard sources for the Fangsheng ritual. Eventually, almost every large monastery in China had a pool for releasing fish and pens for the care of livestock that had been rescued from the butcher. Because these animals had been given Buddhist precepts, they were encouraged to observe them, with males and females segregated and carnivorous fish kept separately. Birds, turtles, and fish were more popular for release than domesticated animals because they required no further assistance. The pious

who delivered cows and pigs to the monastery, however, were required to contribute toward their sustenance. ¶ The practice was popular in other Buddhist countries. In medieval Japan the imperial government would order the capture of three times the number of fish needed to be released at a ceremony in order that the requisite number—often from one to three thousand—would still be alive by the time the ceremony took place. In such cases, the practice of releasing animals resulted in the unfortunate death of many before they could be liberated. Among Tibetan Buddhists, the killing of animals is normatively deplored, and protecting the life of even the tiniest insect (srog skyob) is a common practice; in the [LHA SA](#) region, a small Muslim community traditionally performed the task of killing and butchering animals; farmers and nomads butcher some of their animals each year. Vegetarianism (sha med) is admired, but not widespread in Tibet, except during the first two weeks of the fourth Tibetan month [SA GA ZLA BA](#) when, it is believed, the results of wholesome actions increase one hundred thousand times. Buying an animal destined for slaughter to protect one’s own life, or more commonly to protect the life of an important religious figure, is also common; that practice is known as *tshe thar*, lit., “liberating life” in Tibetan.

[fangsheng hui](#). (J. hōjōe; K. pangsang hoe 放生會). In Chinese, “ceremony for releasing living creatures,” a Buddhist ceremony held throughout East Asian Buddhism, usually on the fifteenth day of the eighth month of the lunar calendar or the third day of the third month. The practice of releasing animals is claimed to have been initially established as a formal ceremony by [TIAN TAI ZHI YI](#) (538–597), who followed the account presented in the [SUVARNAPRABHĀSOTTAMASŪTRA](#) (C. *Jingguangming jing*; “Sūtra of Golden Light”), which describes the practice of releasing captured animals ([FANGSHENG](#)), especially fish. The *Suvarṇaprabhāsottamasūtra* tells a story about Jalavāhana (Śākyamuni Buddha in an earlier incarnation), who saved ten thousand fish by bringing water to a dried-up pond. He then recited for them the ten epithets of the buddha Ratnaśikhin/Ratnabhava, since he had been told that any creatures who heard that buddha’s name at the time their deaths would be reborn in the heavens; he continued on to teach them the doctrine of conditioned origination ([PRATĪTYASAMUTPĀDA](#)). In 575, Zhiyi is said to have lamented the fact that local folk made their living by catching fish, so he built a “pond where creatures could be released” (fangsheng chi) and preached to the freed fish the [SADDHARMAPUNĀRIKASŪTRA](#) and the *Suvarṇaprabhāsottamasūtra*. The fangsheng ceremony subsequently became one of the important rituals within the

[Tiantai Zong](#), even though there is no extant record of its performance until it was revived by Luoxi Yiji (919–987), the fifteenth head of the Tiantai school. Public ceremonies of releasing animals were also held at court, particularly on the Buddha’s Birthday, and lay groups were organized at the local level to release animals. The Ming-dynasty monk [Yunqi Zhuhong](#)’s (1535–1615) *Fangsheng yi* (“Rite for Releasing Living Creatures”) is considered one of the standard sources for the fangsheng ritual. This ritual entails bestowing the three refuges ([Trisāraṇa](#)) on the creatures to be released, reciting the ten epithets of the buddha Ratnaśikhin/Ratnabhava, teaching the creatures the twelvefold chain of dependent origination (a difficult doctrine even for bipeds), and concluding with a repentance rite for the animals’ transgressions.

[fang yankou](#). (S. pretamukhāgnivālāyaśarakāra; J. hōenkō; K. pang yōmgu 放焰口). In Chinese, “releasing the burning mouths,” Chinese esoteric Buddhist ritual for those dead who have been reborn as hungry ghosts ([Preta](#)). The “burning mouths” refers specifically to hungry ghosts, whose tiny mouths and narrow gullets leave them congenitally incapable of filling their distended bellies; even worse, as they try to feed themselves such tiny morsels, the tidbits turn into fire, ash, and burning iron in their mouths. The ritual is performed by monks during the [Ullambana](#) festival for the dead or at the request of laypeople on behalf of their ancestors. The ritual typically takes five hours to complete and is always held in the evening when hungry ghosts can more easily travel from their realm of existence to attend. During the performance, the monks wear red or golden hats in the shape of a five-pointed crown, which symbolizes the five buddhas (S. [Pañcatathāgata](#)). At first, the five buddhas and other divinities are invited and offered “sweet dew” (C. ganlu; S. [Amṛta](#)), viz., water consecrated through the recitation of a [Mantra](#). After summoning all the inhabitants of the six realms of existence ([Sādgati](#)), the hungry ghosts are then released and feted; purged of their afflictions ([Kleśa](#)), they then pay homage to the three jewels ([Ratnatraya](#)) and make a vow to become [Bodhisattvas](#). Finally, after being taught the Buddhist teachings, they are sent on their way to the [Pure Land](#). The ritual is accompanied by such features as ringing hand bells, chanting mantras, and performing [Mudrā](#) in order symbolically to open both the gates of the hells and the throats of the hungry ghosts and to remove their karmic obstructions ([Karmāvaraṇa](#)). The ritual is supposed to have been created in response to a nightmare of the Buddha’s attendant [Ānanda](#): after dreaming one night about the horrible plight of the hungry ghosts, Ānanda asked the Buddha to help beings

avoid such a baleful rebirth and to rescue all the current residents of that bourne. The Buddha then recited [DHĀRAṆĪ](#) on all their behalves. The *Jiuba yankou egui tuoluoni jing* (S. *Pretamukhāgnivālāyaśarakāradhāraṇī*; T. *Yi dwags kha la me 'bar ma la skyabs mdzad pa'i gzungs*, “Dhāraṇī-Sūtra for Liberating the Burning Mouth Hungry Ghosts”), translated by [AMOGHAVAJRA](#) during the eighth century, includes the earliest version of the ritual. The fangyan kou is still performed today within the Chinese Buddhist community, especially in Taiwan and Hong Kong.

[fangzhang](#). (J. *hōjō*; K. *pangjang* 方丈). In Chinese, lit. “a square zhang,” the “abbot’s quarters” at a [CHAN](#) monastery. This term comes from the Chinese translation of the [VIMALAKĪRTINIRDEŚA](#), where it is said that the layman [VIMALAKĪRTI](#) was able to accomplish the miraculous feat of seating thirty-two thousand beings in his small room measuring only one square (fang) zhang (a Chinese measurement of length equivalent to a little more than three meters or ten feet) in size. The notion of a fangzhang was appropriated by the Chan tradition as the technical term for the abbot’s quarters at a Chan monastery. The abbot, a Chan master, would often have private interviews there with students and greet private visitors to the monastery. In some contexts, the “abbot’s quarters” comes by metonymy to refer to the abbot himself. Korean monasteries distinguish between a *chosil* (lit. occupant of the patriarch’s room), the Sōn master at a regular monastery, and a *pangjang*, the Sōn master at a [CH’ONGNIM](#), one of the large ecumenical monastic centers where the full panoply of Buddhist training is maintained, such as [HAEINSA](#) or [SONGGWANGSA](#). At the *ch’ongnim*, the *pangjang* is then considered the Sōn master who heads the practice centers in the monastery, while the *chuji* (C. [ZHUCHI](#); abbot) is the head of monastic administration.

[Fanwang jing](#). (J. *Bonmōkyō*; K. *Pōmmang kyōng* 梵網經). In Chinese, “Brahmā’s Net Sūtra,” the scripture is often cited by its reconstructed, but unattested, Sanskrit title, the **Brahmajālasūtra*. This scripture is reputed to have been translated by [KUMĀRAJĪVA](#) in 406, but it is most likely an indigenous Chinese scripture (see [APOCRYPHA](#)) composed during the middle of the fifth century. The *Fanwang jing*, in its current recension in two rolls, purports to be the tenth chapter of a much longer, 120-roll scripture titled the *Bodhisattvaśīlasūtra*, which is otherwise unknown. The first roll provides a description of the buddha [VAIROCANA](#) and the ten different stages of the

[BODHISATTVA](#) path. Because subsequent Chinese indigenous scriptures that were closely related to the *Fanwang jing*, such as the [PUSA YINLUO PENYE JING](#), provided more systematic presentations of these soteriological models, this first roll was not widely studied and was typically omitted in commentaries on the scripture. Far more important to the tradition is the second roll, which is primarily concerned with the “bodhisattva precepts” ([BODHISATTVAŚĪLA](#)); this roll has often circulated independently as [PUSAJE JING](#) (**Bodhisattvaśīlasūtra*; “The Book of the Bodhisattva Precepts”). This roll provides a list of ten major and forty-eight minor [MAHĀYĀNA](#) precepts that come to be known as the “Fanwang Precepts,” which became a popular alternative to the 250 monastic precepts of the [DHARMAGUPTAKA VINAYA](#) (also known as the [SIFEN LÜ](#)). Unlike the majority of rules found in other non-Mahāyāna vinaya codes, the bodhisattva precepts are directed not only at ordained monks and nuns, but also may be taken by laymen and laywomen. The *Fanwang jing* correlates the precepts with Confucian virtues such as filial piety and obedience, as well as with one’s buddha-nature ([FOXING](#)). Numerous commentaries on this text were composed, and those written by [FAZANG](#), Mingkuang (fl. 800 CE), and the Korean monk [T’AEHYŎN](#) (d.u.) were most influential. As the primary scriptural source in East Asia for the bodhisattva precepts, the *Fanwang jing* was tremendously influential in subsequent developments in Buddhist morality and institutions throughout the region. In Japan, for example, the [TENDAISHŪ](#) monk [SAICHŌ](#) (767–822) disparaged the [PRĀTIMOKSA](#) precepts of the traditional vinaya as being the precepts of [HĪNAYĀNA](#) adherents, and rejected them in favor of having all monastics take instead the [MAHĀYĀNA](#) precepts of the *Fanwang jing*. In Korea, all monastics and laypeople accept the bodhisattva precepts deriving from the *Fanwang jing*, but for monks and nuns these are still seen as complementary to their main monastic vows.

[fanzhao](#). (J. henshō; K. panjo 返照). In Chinese, “tracing back the radiance,” or “counter-illumination,” a description used in the [CHAN](#) school for the underlying process governing a variety of different types of meditation, referring specifically to the process of introspection or “counter-illumination” that moves the mind away from its attachment to sensory objects and back toward its fundamental source, called variously the “numinous awareness” ([LINGZHI](#)), buddha-nature ([BUDDHADHĀTU](#); C. [FOXING](#)), [TATHĀGATAGARBHA](#), or the [DHARMADHĀTU](#). “Tracing back the radiance” receives one of its most detailed treatments in the writings of the Korean Sŏn adept [POJO CHINUL](#) (1158–1210).

Chinul's Korean commentator Yōndam Yuil (1720–1799), e.g., defines the term as follows: “To trace back the radiance means to trace the radiance back to the numinous awareness of one's own mind.... It is like seeing the radiance of the sun's rays and following it back until you see the orb of the sun itself.” The original enlightenment ([BENJUE](#)) of the mind is naturally luminous, shining ever outward and allowing beings to experience their external world. This natural quality of luminosity is what is meant by “sentience,” and the very fact that “sentient” beings are conscious is proof that they are inherently enlightened. If this meditator can turn this radiance emanating from his mind back to its source, he would rediscover that luminous core of the mind and be instantly enlightened. This inherent radiance of the mind does not merely shine over the sense realms; in addition, as the mind's natural brightness is restored through meditative introspection, it comes virtually to shine through objects, exposing their inherent emptiness ([ŚŪNYATA](#)). Hence, numinous awareness is the quality that constitutes sentient beings' ultimate capacity to attain enlightenment. It serves as both the inherent faculty that allows meditation to develop and the quality of mind perfected through that meditation. By starting at the sensory level of what is seen, heard, etc., the meditator then trains to trace these sensory experiences back to their perceptual source in the quality of sentience itself, just as if he were following the rays emanating from the sun back to the sun itself; the perception of that sentience then constitutes “seeing the buddha-nature” ([JIANXING](#)), or the “understanding awakening” ([JIEWU](#)). The term is also known by its expanded form “follow back the light and trace back the radiance” ([HUIGUANG FANZHAO](#)), and various other permutations.

faqi. (S. *dharmabhājana; T. chos kyi snod; J. hōki; K. pōpki 法器). In Chinese, “dharma vessel” or “implement of dharma.” When referring to objects, faqi is the collective name for all the implements used either for ritual and liturgical purposes (e.g., bells, drums, and wooden fish) or for decorative purposes (e.g., canopies, banners, flower vases, censers, and lamps). The term is also used to refer to the few possessions allowable to a monk or nun, such as the begging bowl ([PĀTRA](#)), recitation beads ([JAPAMĀLĀ](#)), and the staff; see also [PARISKĀRA](#). One of the six forms of [AVALOKITEŚVARA](#), the Thousand-Hands and Thousand-Eyes emanation (S. [SĀHASRABHUJASĀHASRANETRĀVALOKITEŚVARA](#); C. Qianshou Qianyan Guanshiyin Pusa), is commonly depicted in abbreviated form with forty hands, each of which holds a different faqi (cf. T. phyag mtshan, lag cha). According to the *Nilakantha[ka]sūtra*, these forty faqi include weapons,

precious jewels, liturgical instruments, the sun and moon, and plants. The bodhisattva uses these various faqi to protect and save the sentient beings of the continent of [JAMBUDVĪPA](#). When used metaphorically to refer to a person, faqi is a term of praise, meaning “one who has been, or has the potential to be, molded into a vessel of the dharma,” or “someone who is suitably prepared to believe in and understand the teachings of Buddhism.” In the [CHAN](#) tradition, one who is capable of being entrusted with the store of the proper dharma eye ([ZHENFAYANZANG](#)), the sublime mind of [NIRVĀNA](#), is called a “dharma vessel.”

Faquin. (J. Hōkin; K. Pōphŭm 法欽) (714–792). In Chinese, “Dharma Reverence”; [CHAN](#) master in the [NIUTOU ZONG](#), also known as Daoqin. A chance encounter with the monk [HELIN XUANSU](#) when Faqin was twenty-eight is said to have resulted in his decision to become a monk. In 741, Faqin went to Mt. Jing, where he established a small hut to study. Faqin was later summoned in 768 by Emperor Daizong (r. 762–779) to give a lecture in the imperial palace. In honor of his achievements, the emperor bestowed upon him the title Great Master Guoyi (Foremost of the Country) and a plaque for Faqin’s monastery that bore the name Jingshansi, or Mt. Jing monastery, which later came to be known as [WANSHOUSI](#). Faqin had many famous disciples; in addition, masters in other Chan lineages, such as [XITANG ZHIZANG](#), [TIANHUANG DAOWU](#), and [DANXIA TIANRAN](#), also sought instruction from Faqin. In 790, Faqin moved to the hermitage Jingtuyuan at the monastery Rongxingsi, where he passed away two years later at the age of seventy-nine. Emperor Dezong (r. 779–805) later gave Faqin the posthumous title Chan master Dajue (Great Awakening).

Farong. (C) (法融). See [NIUTOU FARONG](#).

fashen sheli. (J. hosshinshari; K. pōpsin sari 法身舍利). In Chinese, “relics of the dharma body,” Buddhist scriptures that were enshrined in [STŪPAS](#) and worshipped as if they were physical remains. See [DHARMAŚARĪRA](#); [ŚARĪRA](#).

fashu. (J. hossū; K. pōpsu 法數). In Chinese, “enumerations of dharmas,” the numerical schemes involving successive integers used to organize and memorize Buddhist teachings, such as the one path, two truths, three refuges, [FOUR NOBLE TRUTHS](#), *etc.* This classificatory and mnemonic device is frequently employed in both [SŪTRAS](#) (such as the “Numerically-Arranged Discourses,” or [AṄGUTTARANIKĀYA/EKOTTARĀGAMA](#)) and [ŚĀSTRAS](#). East Asian exegeses, compendia, and concordances were also often arranged by, or composed

exclusively of, such sequential set of numerical headings. See also [GEYI](#).

Fashun. (C) (法順). See [DUSHUN](#).

fasi. (J. hōshi/hassu; K. pōpsa 法嗣). In Chinese, lit., “[DHARMA](#) heir”; a disciple who has received transmission (see [YINKE](#)) in his or her master’s lineage. Generally, a fasi refers to a disciple whose understanding has been certified by his teacher, thereby becoming his inheritor. Histories of the [CHAN](#) tradition, such as the [JINGDE CHUANDENG LU](#) can largely be characterized as the history of the dharma heirs of such thriving Chan lineages as the [LINJI ZONG](#), [CAODONG ZONG](#), *etc.* See also [CHUANFA](#); [PARAMPARĀ](#).

Faxian. (J. Hōken/Hokken; K. Pōphyōn 法顯) (c. 337–422). In Chinese, “Display of Dharma”; a Chinese monk pilgrim of the Eastern Jin dynasty, who is best known for his pilgrimage record of his travels to India, titled the [FAXIAN ZHUAN](#). The text, also known as the [FOGUO JI](#), (“Record of Buddhist Kingdoms”) is an invaluable source for understanding South Asian Buddhism in the early fifth century. Motivated by a desire to procure a complete recension of an Indian [VINAYA](#), in 399 Faxian left the Chinese capital of Chang’an for India, together with his fellow monks Hujing, Daozheng, and others. He left a detailed record of his journey through numerous kingdoms in Central Asia, his arduous path through the Himalayas, and various pilgrimage sites (see [MAHĀSTHĀNA](#)) in central India. He ended up staying for several years in India, studying Sanskrit and copying various [SŪTRAS](#) and vinayas such as the [MAHĀSĀMGHIKA](#) vinaya, [SAMYUKTĀGAMA](#), and [MAHĀPARINIRVĀNASŪTRA](#), before leaving for Sri Lanka. Taking the southern sea route home from Sri Lanka, Faxian’s ship was damaged in a typhoon and he was forced to stay on the island of Java for five months, finally returning to China in 413. Faxian brought back with him the new texts that he had collected overseas, and spent the rest of his life translating them into Chinese, several in collaboration with the Indian monk [BUDDHABHADRA](#).

Faxiang zong. (J. Hossōshū; K. Pōpsang chong 法相宗). In Chinese, “Dharma Characteristics School,” the third and most important of three strands of [YOGĀCĀRA](#)-oriented [MAHĀYĀNA](#) Buddhism to emerge in China, along with the [DI LUN ZONG](#) and [SHE LUN ZONG](#). The name Faxiang (originally coined by its opponents and having pejorative connotations) comes from its detailed analysis of factors ([DHARMA](#)) on the basis of the Yogācāra doctrine that all phenomena are transformations of consciousness, or “mere-representation”

([VIJÑAPTIMĀTRATĀ](#)). The school's own preferred name for itself was the WEISHI ZONG (Consciousness/Representation-Only School). Interest in the theories of the [SHIDIJING LUN](#) (viz., *Di lun*) and the [MAHĀLĀNASAMGRAHA](#) (viz., *She lun*) largely waned as new [YOGĀLĀRA](#) texts from India were introduced to China by the pilgrim and translator [XUANZANG](#) (600/602–664) and the work of [HUAYAN](#) scholars such as [FAZANG](#) (643–712) on the [AVATAMSAKASŪTRA](#) (within which the *Daśabhūmikasūtra* is incorporated) began to gain prominence. One of the reasons motivating Xuanzang's pilgrimage to India, in fact, was to procure definitive Indian materials that would help to resolve the discrepancies in interpretation of Yogācāra found in these different traditions. Because of the imperial patronage he received upon his return, Xuanzang became one of the most prominent monks in Chinese Buddhist history and attracted students from all over East Asia. The Faxiang school was established mainly on the basis of the [CHENG WEISHI LUN](#) (**Vijñaptimātratāsiddhi*; “The Treatise on the Establishment of Consciousness-Only”), a text edited and translated into Chinese by Xuanzang, based on material that he brought back with him from India. Xuanzang studied under [ŚĪLABHADRA](#) (529–645), a principal disciple of [DHARMAPĀLA](#) (530–561), during his stay in India, and brought Dharmapāla's scholastic lineage back with him to China. Xuanzang translated portions of Dharmapāla's **Vijñaptimātratāsiddhi*, an extended commentary on [VASUBANDHU](#)'s [TRIMŚILĀ](#) (“Thirty Verses on Consciousness-Only”). Dharmapāla's original exegesis cited the different interpretations of Vasubandhu's treatise offered by himself and nine other major scholiasts within the Yogācāra tradition; Xuanzang, however, created a précis of the text and translated only the “orthodox” interpretation of Dharmapāla. Xuanzang's disciple [KUIJI](#) (632–682) further systematized Xuanzang's materials by compiling the [CHENG WEISHI LUN SHUJI](#) (“Commentarial Notes on the **Vijñaptimātratāsiddhi*”) and the *Cheng weishi lun shuyao* (“Essentials of the **Vijñaptimātratāsiddhi*”); for his efforts to build the school, Kuiji is traditionally regarded as the first Faxiang patriarch. The Faxiang school further developed under Huizhao (650–714), its second patriarch, and Zhizhou (668–723), its third patriarch, but thereafter declined in China. ¶ The teachings of the Faxiang school were transmitted to Korea (where it is called the Pōpsang chong) and were classified as one of the five major doctrinal traditions (see [KYO](#)) of the Unified Silla (668–935) and Koryō (935–1392) dynasties. The Korean expatriate monk [WŌNCH'ŪK](#) (613–696) was one of the two major disciples of Xuanzang, along with Kuiji, and there are reports of intense controversies between Kuiji's Ci'en

scholastic line ([CI'EN XUEPAI](#)) and Wōnch'ūk's Ximing scholastic line ([XIMING XUEPAI](#)) due to their differing interpretations of Yogācāra doctrine. Wōnch'ūk's commentary to the [SAMDHINIRMOCANASŪTRA](#), the *Jieshenmi jing shu* (K. *Haesimmil kyōng so*), was transmitted to the [DUNHUANG](#) region and translated into Tibetan by [CHOS GRUB](#) (C. Facheng, c. 755–849) at the behest of the Tibetan king [RAL PA CAN](#) (806–838), probably sometime between 815 and 824. Wōnch'ūk's exegesis of the scripture proved to be extremely influential in the writings of [TSONG KHA PA](#) (1357–1419), and especially on his [LEGS BSHAD SNYING PO](#), where Wōnch'ūk's work is called the “Great Chinese Commentary.” ¶ The Japanese Hossōshū developed during the Nara period (710–784) after being transmitted from China and Korea, but declined during the Heian (794–1185) due to persistent attacks from the larger [TENDAI](#) (C. [TIANTAI](#)) and [SHINGON](#) (C. Zhenyan) schools. Although the Hossōshū survived, it did not have the wide influence over the Japanese tradition as did its major rivals. ¶ Faxiang is known for its comprehensive list of one hundred [DHARMAS](#), or “factors” ([BAIFA](#)), in which all dharmas—whether “compounded” or “uncompounded,” mundane or supramundane—are subsumed; this list accounts in large measure for its designation as the “dharma characteristics” school. These factors are classified into five major categories:

1. Eight dharmas concerning the mind ([CITTA](#))—the five sensory consciousnesses associated with the five senses, plus the mental consciousness ([MANOVIJÑĀNA](#)), ego-mentality ([MANAS](#)), and the “storehouse consciousness” ([ĀLAYAVIJÑĀNA](#)).
2. Fifty-one forces associated with thought ([CITTASAMPRAVAYUKTASAMSKĀRA](#)), such as “applied thought” ([VITARKA](#)), “sustained attention” ([VICĀRA](#)), and “envy” ([IRSLĀ](#)). These are mental concomitants ([CAITTA](#)).
3. Eleven “form” or “material” ([RŪPA](#)) dharmas, the eye organ, visual object, etc., and formal thought objects (dharmāyatānīka-rūpa).
4. Twenty-four forces dissociated from thought ([CITTAVIPRAYUKTASAMSKĀRA](#)). These are either subconscious or involuntary phenomena such as “life force” (jīvitendriya) and the “meditative trance wherein no perceptual activities remain” ([ASAMJÑĀSAMĀPATTI](#)), or abstract notions such as “possession” ([PRĀPTI](#)), which are nonetheless classified as real existents.
5. Six “uncompounded” ([ASAMSKRITA](#)) dharmas, such as “space” ([ĀLĀŚA](#)) and “suchness” ([TATHALĀ](#)), which are taken to be neither contingent on nor susceptible to causal forces, since they are unproduced by conditions and eternally unchanging.

All of these factors were seen by the Faxiang school as being simply projections of consciousness ([VIJÑAPTIMĀTRALĀ](#)). As noted earlier, consciousness ([VIJÑĀNA](#)) was itself subdivided into an eightfold schema: the six sensory consciousnesses (visual, auditory, gustatory, olfactory, tactile, and mental), plus the seventh ego consciousness (manas, or [KLISTAMANAS](#)), which invests these sensory experiences with selfhood, and an eighth “storehouse consciousness” ([Ālayavijñāna](#)), which stores the seeds or potentialities ([BĪJA](#)) of these experiences until they sprout as new cognition. One of the most controversial doctrines of the Faxiang school was its rejection of a theory of inherent enlightenment or buddhahood (i.e., [TATHĀGATAGARBHA](#)) and its advocacy of five distinct spiritual lineages or destinies ([PAÑCAGOTRA](#)): (1) the [TATHĀGATA](#) lineage ([GOTRA](#)), for those destined to become buddhas; (2) the [PRATYEKABUDDHA](#) lineage, for those destined to become [ARHATS](#) via the pratyekabuddha vehicle; (3) the [ŚRĀVAKAYĀNA](#) lineage, for those who will become arhats via the [ŚRĀVAKA](#) vehicle; (4) those of indefinite ([ANİYATA](#)) lineage, who may follow any of three vehicles; and (5) those without lineage (agotra), who are ineligible for liberation or who have lost the potential to become enlightened by becoming “incorrigibles” ([ICCHANTIKA](#)). The Faxiang school’s claim that beings belonged to these various lineages because of the seeds ([BĪJA](#)) already present in the mind seemed too fatalistic to its East Asian rivals. In addition, Faxiang’s acceptance of the notion that some beings could completely lose all yearning for enlightenment and fall permanently into the state of icchantikas so profoundly conflicted with the pervasive East Asian acceptance of innate enlightenment that it thwarted the school’s aspirations to become a dominant tradition in China, Korea, or Japan. Even so, much in the Faxiang analysis of consciousness, as well as its exegetical techniques, were incorporated into mainstream scholasticism in East Asia and continued to influence the subsequent development of Buddhism in the region.

[Faxian zhuan](#). (J. Hokken den; K. Pōphyōn chōn 法顯傳). In Chinese, “The Record of Faxian,” commonly known as the [FOGUO JI](#) (translated into English as *A Record of Buddhistic Kingdoms*), the record of the Chinese monk [FAXIAN](#)’s pilgrimage to India. Faxian left the Chinese capital of Chang’an in 399 and visited numerous cities and kingdoms in Central Asia, India, Sri Lanka, and the island of Java. He traveled to many sacred sites in India and Sri Lanka until his return to China in 413. Faxian left a fairly detailed record of the various ways in which Buddhism was practiced in these kingdoms. His record is replete with myths and legends associated with the pilgrimage sites he visited. Faxian’s

record also served as an authoritative guidebook for many pilgrims who later followed in his footsteps. As one of the earliest records of its kind, the *Faxian zhuan* serves as an indispensable tool for studying Buddhist pilgrimage, the state of Buddhism across the continent during the early fifth century, and the history of various kingdoms that once flourished in Asia. It was among the first Buddhist texts to be translated in Europe, published in Paris in 1836 as *Foë Kouë Ki ou Relation des royaumes bouddhiques: Voyage dans la Tartarie, dans l’Afghanistan et dans l’Inde, exécuté à la fin du IV^e siècle, par Ch’y Fă Hian*. The translation of the text was undertaken by Jean-Pierre Abel-Rémusat (1788–1832). The Chinese text is relatively short, but Abel-Rémusat provided detailed notes, in which he sought to identify and explain the many Buddhist persons, places, and doctrines that occur in Faxian’s work. Abel-Rémusat died in the cholera epidemic of 1832, when the book was only half-finished. Heinrich Julius von Klaproth (1783–1835) took over the project until his own death. It was completed by Ernest-Augustin Xavier Clerc de Landresse (1800–1862) and published in 1836. Until the publication of [EUGÈNE BURNOUF](#)’s *Introduction à l’histoire du Bouddhisme indien* in 1844, this was the most detailed study of Buddhism to be produced in Europe. Faxian’s text was translated into English by SAMUEL BEAL in 1869 and by James Legge in 1886.

[Faxing zong](#). (J. Hosshōshū; K. Pōpsōng chong 法性宗). In Chinese, “Dharma Nature school,” the intellectual tradition in East Asian Buddhism that was concerned with the underlying essence or “nature” (xing) of reality; contrasted with the “Dharma Characteristics School” ([FAXIANG ZONG](#)), the tradition that analyzed the different functions of various phenomena. The term “Faxing zong” was employed to refer to more advanced forms of the [MAHĀLĀNA](#), such as to the [MADHYAMAKA](#) teachings of the [SAN LUN ZONG](#), the [TATHĀGATAGARBHA](#) teachings, or to the last three of the five teachings in the Huayan school’s hermeneutical taxonomy (see [JIAOXIANG PANSHI](#)): viz., the advanced teaching of Mahāyāna (Dasheng zhongjiao), the sudden teaching ([DUNJIAO](#)), and the perfect teaching ([YUANJIAO](#)). By contrast, “Faxiang zong” was a pejorative term referring to the Chinese [YOGĀLĀRA](#) school that was established on the basis of the new Yogācāra texts introduced from India by [XUANZANG](#) (600/602–664) and elaborated upon in his lineage. The Huayan exegete [CHENGGUAN](#) (738–839) first used the term Faxing zong to differentiate it from the Faxiang zong. In his *Dafangguang fo huayanjing shu* (“Commentary on the [AVATAMSAKASŪTRA](#)”), Chengguan presents ten differences between the two schools of Faxing and Faxiang, and in

his own hermeneutic taxonomy, Chengguan polemically equates the elementary teaching of the Mahāyāna (Dasheng shijiao) with Faxiang, and the advanced (Dasheng zhongjiao) and perfect teachings (yuanjiao) of the Mahāyāna with the Faxing school. The contrast between “nature” (xing) and “characteristics” (xiang) was used in [FAZANG](#)’s (643–712) [HUAYAN WUJIAO ZHANG](#) as a means of reconciling the differences in the approaches taken by the Madhyamaka and Yogācāra schools. Although Fazang did not use the term Faxing zong himself, he did coin the term “Faxiang zong” to refer pejoratively to Xuanzang’s lineage of Yogācāra teachings. It appears, then, that Chengguan projected the concept of Faxing and Faxiang schools onto Fazang’s doctrinal notions as well, for Chengguan sometimes interprets Fazang’s notions of the “provisional” and “definitive” teachings (see [QUAN SHI](#)) as the Faxiang and the Faxing schools, respectively, or sometimes replaces a concept such as “true nature” (zhenxing) with the term faxing.

[Fayan Wenyi](#). (J. Hōgen Mon’eki; K. Pōban Munik 法眼文益) (885–958). Chinese [CHAN](#) master and reputed founder of the [FAYAN ZONG](#) of Chan. Fayan was a native of Yuhang in present-day Zhejiang province. At the age of six, he was ordained by the monk Quanwei (d.u.) of the monastery Xinding Zhitongyuan and later received the full monastic precepts at the monastery of KAIYUANSI in Yuezhou. Fayan first visited the Chan master Changqing Huiling (854–932); later, while staying at the monastery Dizangyuan on Mt. Shi (present-day Fujian province), he met Luohan Guichen (867–928) and eventually became his disciple. Later, Fayan arrived in Linchuan (present-day Jiangxi province) where he was invited by the steward to serve as abbot of the monastery of Chongshouyuan. Admired by the local ruler, Fayan was again invited as the abbot of the monastery of [BAO’ENSI](#) in Jinling (present-day Jiangsu province) and was given the title Chan master Jinghui (Pure Wisdom). Fayan later moved to the monastery of Qingliangyuan in Shengzhou (present-day Jiangsu province), which flourished under his guidance and the support of the ruler of the state of Wuye. He was also given the posthumous title Chan master Dafayan (Great Dharma Eye). Fayan composed the [ZONGMEN SHIGUI LUN](#) (“Treatise on the Ten Rules of the Tradition”), which outlines ten defects of Chan practice; the text is also important for being the first to name the so-called five houses (wu jia), viz., schools or lineages, of the mature Chan tradition (see [WU JIA QI ZONG](#)).

Fayan zong. (J. Hōgenshū; K. Pōban chong 法眼宗). In Chinese, the “Dharma Eye School,” one of the “five houses” (wu jia; see [WU JIA QI ZONG](#)), or distinct schools, that had developed with the mature Chinese [CHAN](#) lineage during the late Tang dynasty, c. ninth to tenth centuries CE. Chan genealogical histories (see [CHUANDENG LU](#)) speak of a lineage of monks that can be traced back to the eminent Chan master [FAYAN WENYI](#) (885–958), who himself inherited the lineage(s) of [XUEFENG YICUN](#) (822–908), [XUANSHA SHIBEI](#) (835–908), and their student Luohan Guichen (867–928). With the support of the ruler of the state of Wuyue, Fayan and his monastery of Qingliangyuan in Shengzhou (present-day Jiangsu province) flourished. Fayan’s prominent students [Tiantai Deshao](#) (891–972), [Baizhang Daoheng](#) (d. 991), [Guizong Yirou](#) (d.u.), and [Bao’en Fa’an](#) (d.u.) firmly established Fayan’s line in the area of Zhejiang and Fujian provinces. [Chengtian Daoyuan](#) (d.u.), the compiler of the influential genealogical history of Chan known as the [JINGDE CHUANDENG LU](#), also belongs to the Fayan line of Chan through his teacher [Tiantai Deshao](#). The Fayan line’s interest in harmonizing the iconoclastic aspects of Chan with the exegetical tradition of [HUAYAN](#) and the recitative practices of [PURE LAND](#) (see [NIANFO](#)) is best exemplified in the Fayan Chan master [YONGMING YANSHOU](#)’s magnum opus [ZONGJING LU](#). The works of Fayan masters also exerted much influence in Korean Sōn Buddhism. Although the Fayan zong did not survive into the Song dynasty as an active lineage, it remained an integral part of the retrospective imagining of the Chan tradition that took place during the Song.

fayou wowu zong. (J. hōugamushū; K. pōbyu amu chong 法有我無宗). In Chinese, “the school that posits that ‘[DHARMA](#)s are real but the self is nonexistent.’” The [HUAYAN ZONG](#) in particular uses this label polemically to denigrate the majority of the [ŚRĀVAKAYĀNA](#) or [HĪNAYĀNA](#) traditions. The latter group was presumed to have inferior doctrinal understanding, because it acknowledged that compounded things have no existent self, while positing (mistakenly) that the constituent dharmas that make up those illusory, compounded things are in fact real. So, e.g., while the hīnayāna may posit that there is no “self” to be found in a person because he/she is contingent on and comprised of a whole range of constituent factors (dharma), the physical and psychological aggregates (S. [SKANDHA](#)) that make up that person would be considered objectively real and not lacking a real substance. By contrast, Huayan exegetes would suggest that a distinguishing doctrinal theme in the [MAHĀLĀNA](#) tradition is the acknowledgment of the “emptiness” (S. [ŚŪNYALĀ](#)) or

“selflessness” (S. [ANĀTMAN](#)) of not just the individual person but also the constituent factors (dharma) from which that person is constructed. This supposedly superior doctrinal stance is advocated by “the school that posits that both self and dharmas are nonexistent” (wofa juwu zong). See also [PUDGALANAI RĀTMYA](#); [DHARMANAI RĀTMYA](#).

fayu. (J. hōgo; K. pōbō 法語). In Chinese, “dharma talk” or “religious discourse,” referring broadly to sermons by the Buddha or eminent teachers, teachings that accord with reality (yathābhūta), or talks on topics related to the dharma; rhyming verses or terse essays containing spiritual exhortations are also sometimes called fayū. In the [CHAN](#) zong, fayū refer to anecdotal conversations or formal lectures of the patriarchs and masters of the tradition. Chan fayū are typically in colloquial prose, and often offer transcripts of Chan masters’ spontaneous utterances on, or specific responses to, real-life contingencies. There are many such anthologies of Chan fayū in the literature, including both collections of the sayings of an individual master and anthologies of the sayings of multiple teachers. See also [YULU](#).

Fayuan zhulin. (J. Hōon jurin; K. Pōbwōn churim 法苑珠林). In Chinese, “A Grove of Pearls in the Garden of the Dharma,” compiled in 668 by the Tang-dynasty monk Daoshi (d. 683) of [XIMINGXI](#); a comprehensive encyclopedia of Buddhism, in one hundred rolls and one hundred chapters, based on the [DA TANG NEIDIAN LU](#) and [XU GAOSENG ZHUAN](#), which were compiled by Daoshi’s elder brother, the monk [DAOXUAN](#) (596–667). The encyclopedia provides definitions and explanations for hundreds of specific Buddhist concepts, terms, and numerical lists. Each chapter deals with a single category such as the three realms of existence ([TRILOKA|DHĀTU](#)), revering the Buddha, the [DHARMA](#), and the [SAMGHA](#), the monastery, relics ([ŚARĪRA](#)), repentance, receiving the precepts, breaking the precepts, and self-immolation ([SHESHEN](#)), covering these topics with numerous individual entries. The *Fayuan zhulin* is characterized by its use of numerous passages quoted from Buddhist scriptures in support of its explanations and interpretations. Since many of the texts that Daoshi cites in the *Fayuan zhulin* are now lost, the encyclopedia serves as an invaluable source for the study of medieval Chinese Buddhism.

Fazang. (J. Hōzō; K. Pōpchang 法藏) (643–712). Tang-dynasty Chinese monk and putative third patriarch of the [HUAYAN ZONG](#), also known as Xianshou, Dharma Master Guoyi (Nation’s Best), Great Master Xiangxiang (Fragrant

Elephant), and state preceptor ([GUOSHI](#)) Kang Zang. Fazang was the third-generation descendent of immigrants to China from the kingdom of [SOGDIANA](#) in Central Asia (the Greek Transoxiana) and thus used as his secular surname the ethnicon [KANG](#). At a young age, Fazang became a student of the Chinese monk [ZHIYAN](#), and studied the [AVATAMSAKASŪTRA](#). Fazang was also fluent in several Central Asian languages, and assisted the monks [ŚIKSĀNANDA](#) and [YIJING](#) in translating new recensions of the *Avataṃsakasūtra* (699) and the [LAṆKĀVATĀRASŪTRA](#) (704). Empress [WU ZETIAN](#) often requested Fazang to lecture on the *Avataṃsakasūtra* and its teachings on [PRATĪYASAMUTPĀDA](#). Fazang devoted the rest of his career to the study of the *Avataṃsakasūtra* and composing commentaries on the *Laṅkāvatārasūtra*, [FANWANG JING](#), [DASHENG QIXIN LUN](#), and other texts. Many of Fazang’s compositions sought to systematize his teacher Zhiyan’s vision of the *Avataṃsakasūtra* in terms drawn from indigenous Chinese Buddhist materials, such as the *Dasheng qixin lun*. In so doing, Fazang developed much of the specific doctrinal terminology and worldview that comes to be emblematic of the Huayan zong, making him the de facto founder of this indigenous school of Chinese Buddhist philosophy. Among Fazang’s many works, his [HUAYAN JING TANXUAN JI](#), [HUAYAN WUJIAO ZHANG](#), and his commentary to the *Dasheng qixin lun shu* (“Awakening of Faith According to the Mahāyāna”) are most famous. Fazang passed away while residing at the monastery of Da Qianfusi. Fazang remained close throughout his life to his Korean colleague [ŬISANG](#), the founder of the Korean Hwaŏm school, with whom he studied together under Zhiyan, and some of his correspondence with Ŭisang survives. [SIMSANG](#) (J. Shinjō) (d. c. 744), another Korean who is claimed to have been a direct disciple of Fazang, was the first transmitter of the Huayan teachings in Japan, and Simsang’s own disciple [RYŌBEN](#) [alt. Rōben] (689–773) is considered the founder of the Japanese Kegon school. For discussion of Fazang’s philosophical views, see also [HUAYAN ZONG](#); [INDRA’S NET](#); [SI FAJIE](#).

fazhan. (法戰). In Chinese, “dharma combat.” See [JIFENG](#).

Fazhao. (J. Hōshō; K. Pōpcho 法照) (d.u.). Tang-dynasty Chinese monk, now revered by followers of the Japanese [JŌDOSHŪ](#) and [JŌDO SHINSHŪ](#) as the fifth patriarch of the [PURE LAND](#) ([JINGTU ZONG](#)) tradition in China. Fazhao resided at [LUSHAN](#) early in his career, where he devoted himself to recitation of the name of the buddha [AMITĀBHA](#) (see [NIANFO](#)); there, Fazhao had a vision of [AMITĀBHA](#), who personally taught him about the pure land. Fazhao subsequently traveled to

the Chinese capital of Chang'an, where he developed the method of [WUHUI NIANFO](#), or “five-tempo intonation of [the name of] the Buddha.” When he demonstrated this practice in 767 at the monastery of Yunfengsi, the practice is said to have resulted in a series of miracles, such as the appearance of Amitābha amid the clouds, which in turn purportedly led Emperor Daizong (762–779) to invite Fazhao to the imperial palace. In addition to demonstrating the value of buddha-recitation practice, Fazhao also sought to explain pure land teachings in terms drawn from [TIANTAI](#) doctrine, bringing pure land beliefs into the mainstream of contemporary Buddhist intellectual discourse. Because of his success in propagating pure land teachings, his peers called Fazhao the “latter-day [SHANDAO](#).” Fazhao later moved to the monastery of Zhulinsi on [WUTAISHAN](#) and acquired the cognomen Wuhui fashi (Dharma Master Five-Tempo).

fazhi. (J. hōshū/hosshū; K. pŏpchip 法執). In Chinese, “attachment to factors”; in contrast to [ĀTMAGRĀHA](#), the attachment to a self, attachment to factors ([DHARMA](#)) refers to either a clinging to the constituent aggregates that make up a person as ultimately real, or an attachment to the Buddhist teachings themselves. In the former scenario, the [SARVĀSTIVĀDA](#), for example, rejects the reality of a self among the constituent factors ([DHARMA](#)) that constitute the person, but maintained that constituent parts themselves do have a perduring, ultimate reality. Rival Buddhist schools, most notably the [MADHYAMAKA](#) tradition, criticize such a view as being emblematic of an attachment to the dharmas. In the latter scenario, dharma-attachment is the clinging to Buddhist teachings and other heuristic devices as being ultimately real (cf. [PARAMĀRTHASATYA](#)). Various Buddhist scriptures tout the Buddhist teachings as skillful strategems ([UPĀYA](#)) that serve a provisional purpose. Buddhist teachings are likened to a raft that could be used to cross a river, but once having reached the other shore, the traveler should leave the raft behind lest it become a burden. Doctrinaire interpretations of, or an undue fascination with, the Buddhist teachings, especially when they are ill-suited for the present situation, is said to be a kind of dharma-attachment. Traditionally, two kinds of dharma-attachment are delineated: “dharma-attachment that arises from discriminatory cognition” (fenbie fazhi) and “inborn dharma-attachment” (jusheng fazhi). The former is primarily an epistemic error resulting from improper thinking and exposure to fallacious doctrines—it is eradicated at the path of vision ([DARŚANAMĀRGA](#)). The latter is primarily an affective, habitual, and instinctive clinging (conditioned by similar tendencies accrued from previous lives) that may be present whether or

not one subscribes to *fenbie fazhi*—the view of independent, irreducibly real dharmas. “Inborn dharma-attachment” is only gradually attenuated through the successive stages of the path of cultivation ([BHĀVANĀLĀRGA](#)). In Mahāyāna polemics, the so-called [HĪNAYĀNA](#) can only lead to the eradication of the attachment to self but never to the attachment to dharmas. Cf. [DHARMANAIRĀTMYA](#).

fazhu. (J. *hōshu/hosshu*; K. *pōpchu* 法主). In Chinese, “Lord of the [DHARMA](#),” a reverential epithet for the Buddha, e.g., “The World Honored One is the source of the dharma; the World Honored One is the lord of the dharma.” In addition, the term *fazhu* is used to refer to the chief officiant of a religious ritual or ceremony, and with reference to a teacher who give dharma lectures. In China during the Southern and Northern Dynasties (Nanbei chao) period (c. 420–589), *fazhu* was the title of a minor [SAMGHA](#) official who oversaw a monastery’s internal affairs. In modern Japan, the term is also used as a title for leaders of different Buddhist sects (when it is then pronounced as *hosshu* or *hossu*).

fazi. (J. *hōshu/hosshu*; K. *pōpcha* 法子). In Chinese, “progenies of the dharma,” an expression referring to Buddhist renunciants, viz., those who have entered homelessness and received ordination. They are said to have been reborn through “the mouth of the Buddha” and belong to the same “clan lineage” of the Buddha. Sometimes this term refers to all Buddhists, both clergy and laity. In another context and in East Asian monasteries, designated successors of the abbot are called *fazi*, “successors to the dharma [of the lineage].”

Fazun. (法尊) (T. *Blo bzang chos 'phags*) (1902–1980). Twentieth-century Chinese translator of Buddhist scriptures and scholar of Tibetan religious and political history. In 1920, Fazun was ordained as a novice on [WUTAISHAN](#). He became acquainted with Dayong (1893–1929), a student of [TAIXU](#)’s who introduced him to the techniques of Buddhist [TANTRA](#), at the time a popular strand of Buddhism in China in its Japanese ([MIKKYŌ](#)) and Tibetan forms. Fully ordained in Beijing in 1922, Fazun trained under Taixu’s patronage in the tenets of the [PURE LAND](#) and [TIANTAI](#) schools at the Wuchang Institute for Buddhist Studies. During the same years, Taixu urged Dayong to train in Japanese *mikkyō* on [KŌYASAN](#). Taixu’s aim was to verify and rectify the opinions about Buddhist tantra that circulated in China, where this form of Indian Buddhism had flourished at the Tang court. Upon his return, Dayong conferred on Fazun several [ABHISEKAS](#) of the lower tantric cycles that he had brought from Japan. He

also instructed Fazun in the *Mizong gangyao* (“Essentials of Tantra”), a primer for students of Buddhist tantra by the Japanese [SHINGONSHŪ](#) scholar Gonda Raifu (1846–1934) that Wang Hongyuan (1876–1937), a Chinese student of Gonda’s, had translated in 1918. After an introduction to the Tibetan tantric traditions by Bai Puren (1870–1927), a Mongolian lama stationed at Beijing’s Yonghe Gong, Dayong became gradually dissatisfied with Japanese mikkyō. With Taixu’s endorsement, he resolved to study Buddhist tantra in its Tibetan form. In 1924, Fazun joined Dayong’s Group for Learning the Dharma in Tibet (Liu Zang Xuefa Tuan), a team of some thirty Chinese monks who were studying the basics of the Tibetan language in Beijing. From 1925 to 1929, Fazun carried on his language learning in eastern Tibet and began his training in the classics of the [DGE LUGS](#) monastic curriculum, which in the ensuing years would become his main focus of translation. After Dayong’s passing in 1929, Fazun followed his Tibetan teacher, [DGE BSHES](#) A mdo, to central Tibet. He stayed at [’BRAS SPUNGS](#) monastery from 1930 to 1933. In 1934, Taixu asked Fazun to take on the position of director at the newly established Sino-Tibetan Institute (Hanzang Jiaoli Yuan) near Chongqing. The thirteenth [DALAI LAMA](#) also encouraged Fazun to spread [TSONG KHA PA](#)’s synthesis of the Buddhist teachings in China. Hence from 1935, under the Japanese occupation and during the Chinese civil war, Fazun served as an educator of young monks in Tibetan Buddhism and as a translator of Tibetan scriptures at the Sino-Tibetan Institute. These years of prolific translation work established Fazun as the foremost translator of Buddhism from Tibetan sources in the history of Chinese Buddhism. Among his translations are Tsong kha pa’s [LAM RIM CHEN MO](#) (*Putidao cidi guanglun*), [LEGS BSHAD SNYING PO](#) (*Bian liaoyi buliaoyi lun*), [SNGAGS RIM CHEN MO](#) (*Mizong daocidi lun*); [MAITREYA](#)’s [ABHISAMAYĀLAMKĀRA](#) (*Xianguan zhuangyan lun*); [CANDRAKĪRTI](#)’s [MADHYAMAKĀVATĀRA](#) (*Ru zhonglun*); and [ĀRYADEVA](#)’s [CATUHŚATAKA](#) (*Sibailun song*). Fazun also translated into Tibetan the [ABHIDHARMAMAHĀVIBLĀSA](#), extant in the two hundred rolls of [XUANZANG](#)’s Chinese rendering (*Da piposha lun*), by the title *Bye brag bshad mdzod chen mo*. In 1950, after the Communist authorities discontinued the activities of the Institute, Fazun moved to Beijing. The Committee for Minority Affairs appointed him as a translator of communist propaganda materials, including Chairman Mao’s *Xin minzhu zhuyi* (“New Democracy”) and *Lun renmin minzhu zhuanzheng* (“On the People’s Democratic Dictatorship”), for the education of the new generation of cadres in occupied Tibet. In 1966, as the Cultural Revolution set in, he was charged with expressing anti-Communist sentiments

during the 1930s. He was confined in a labor camp until his release in 1972. During the 1970s Fazun resumed his translation activity from Tibetan with [DHARMAKĪRTI](#)'s [PRALĀNAVĀRTTIKA](#) (*Shiliang lun*), [DIGNĀGA](#)'s [PRALĀNASAMUCCAYA](#) (*Jiliang lun*), and [ATĪŚA](#) [DĪPAMKARĀŚRĪJĀNA](#)'s [BODHIPATHAPRADĪPA](#) (*Putidao deng lun*). Fazun suffered a fatal heart attack in 1980. Because of his unsurpassed knowledge of Tibetan language, religion, and history, and his writing style inspired by [KUMĀRAJĪVA](#)'s and Xuanzang's Buddhist Chinese, Fazun is often referred to as "the Xuanzang of modern times."

[Feilaideng](#). (J. Hiraihō; K. Piraebong 飞来峰). In Chinese, "Flying-In Peak," site of Buddhist rock carvings and grottoes, located in front of [LINGYINSI](#) in Hangzhou, Zhejiang province. Feilaideng houses the most important sculptural works of Tibetan Buddhism found in Han Chinese territory. The name of the peak was inspired by a legend, according to which Vulture Peak ([GRDHRAKŪTAPARVATA](#)) flew to this location from India. There are more than three hundred carved images still in existence at the site, with eleven from the Five Dynasties period, more than two hundred from the Song dynasty, and around one hundred from the Yuan. The Song-dynasty images were mostly carved during the Xianping era (998–1003) under Emperor Zhenzong. Many of these figures are [ARHATS](#) (C. [LUOHAN](#)), but some works illustrate special themes, such as [XUANZANG](#)'s pilgrimage to India or [MAITREYA](#)'s "Hemp Sack" ([BUDAI](#)) form. The gilded, colorfully painted Yuan images are delicately carved and constitute a significant development in the history of Chinese sculpture. Nearly half of these images depict esoteric themes, with buddhas, bodhisattvas, female deities, and dharma protectors ([DHARMAPĀLA](#)). The image enshrined in Niche 25 is [VAJRADHARA](#). Also found here are images of [MAÑJUŚRĪ](#), [AVALOKITEŚVARA](#), and [VAJRASATTVA](#). The female deity [SITĀTAPATLĀ](#) is depicted in Niche 22; she was highly venerated by the Yuan rulers because she was believed to be able to destroy armies and overcome disasters.

[Feiyin Tongrong](#). (J. Hiin Tsūyō; K. Piün T'ongyong 費隱通容) (1593–1661). Chinese [CHAN](#) master in the [LINJI ZONG](#), who lived at the end of the Ming dynasty. Feiyin was a native of Min Prefecture in present-day Fujian province. After losing his father at age six and his mother at eleven, Feiyin entered the monastery two years later and became the student of a certain Huishan (d.u.) of Sanbaosi. Feiyin subsequently studied under the renowned Chan masters [ZHANRAN YUANDENG](#), Wuming Huijing, and Wuyi Yuanlai. In 1622, he departed

Jiangxi province for Mt. Tiantai, where he continued his studies under [MIYUN YUANWU](#). Feiyin eventually became Miyun's disciple and inherited his lineage. In 1633, Feiyin served as abbot of Wanfusi on Mt. Huangbo. He subsequently resided at such monasteries as Tianningsi and [WANSHOUSI](#) in Zhejiang province. His disciple [YINYUAN LONGQI](#) edited Feiyin's teachings together in the *Feiyin chanshi yulu*. Feiyin himself composed several texts including the Chan primer [ZUTING QIANCHUILLU](#) and the Chan history *Wudeng yantong*.

[fenbie fazhi](#). (C) (分別法執). See [ER FAZHI](#).

[fenbie wozhi](#). (C) (分別我執). See [ER WOZHI](#).

[fenduan shengsi](#). (J. bundanshōji; K. pundan saengsa 分段生死). In Chinese, “birth and death in punctuated succession,” one of the two types of rebirth ([SAMSĀRA](#)) described in the Chinese [FAXIANG](#) ([YOGĀLĀRA](#)) and [TIANTAI](#) schools; the other is “birth and death as alteration and change” ([BIANYI SHENGSI](#)). This type refers to the actual physical process of death and rebirth into new bodies, bodies that are the products of our previous actions ([KARMA](#)) and whose duration is therefore measured by the life span of the individual physical body.

[Fengfa yao](#). (J. Hōhōyō; K. Pongpōp yo 奉法要). In Chinese, “Essentials of Upholding the [DHARMA](#),” a short Buddhist catechism, composed by Xichao (336–377), a lay follower of the monk [ZHI DUN](#), which is preserved in the [HONGMING JI](#). The *Fengfa yao* provides a brief overview of a number of important doctrinal concepts and categories, such as the three refuges ([TRISĀRANA](#)), five precepts ([PAÑCAŚĪLA](#)), fasting, six recollections ([ANUSMRTI](#)), five rebirth destinies ([GATI](#)), five aggregates ([SKANDHA](#)), five hindrances ([NĪVARANA](#)), six sense bases ([INDRIYA](#)), mind ([CITTA](#)), [KARMA](#), patient endurance ([KSĀNTI](#)), [NIRLĀNA](#), six perfections ([PĀRAMILĀ](#)), [FOUR NOBLE TRUTHS](#), confession, doing good works, *etc.* These notions are sometimes explained with reference to Daoist thought and historical and mythical events in China. As such, the *Fengfa yao* is an important source for studying the manner in which Buddhist doctrine was understood in early China.

[Fenggan](#). (C) (風干). See [SHIDE](#).

[Fenollosa, Ernest Francisco \(Kano Yeitan\)](#). (1853–1908). An American proponent of Japanese Buddhism and Japanese art. Born in Salem,

Massachusetts, to a mother from Salem and a Spanish father, he was part of Boston's East Asian renaissance during the 1890s and one of the first students of the incipient discipline of art history. He studied philosophy at Harvard and attended the School of the Museum of Fine Arts, Boston. At the age of twenty-five, Fenollosa went to teach at the Imperial University in Japan, where his students introduced him to Buddhism. His interest in the religion grew through his visits to temples near Nara and Kyōto. Fenollosa also became interested in traditional Japanese art and met the aristocratic families who had been court painters during the Tokugawa shogunate. By 1882, Fenollosa was considered enough of an expert to lecture at the Ryuchikai Club and, in 1884, he was named an imperial commissioner of fine arts. Sakurai Keitaku Ajari, the head of the Hoyugin Temple at [MIIDERA](#), became Fenollosa's teacher of Buddhism. Fenollosa received the precepts of [TENDAI](#) Buddhism in 1885, making him one of the first Americans to practice [MAHĀLĀNA](#) Buddhism. During his time in Japan, he was adopted into the Kano family and received the name Kano Yeitan. He was also presented with the "Order of the Sacred Mirror" by the Meiji emperor. After returning to the United States in 1890, Fenollosa lectured and wrote about Buddhism, became the curator of Far Eastern Art at the Boston Museum of Fine Arts, and in 1893 published a poem called *East and West*. In 1895, he married his second wife, Mary McNeil Scott, and they returned together to Japan, where Fenollosa taught English at Tōkyō Higher Normal School. He and Mary remained in Japan until 1900. *Epochs of Chinese and Japanese Art*, his magnum opus, was published posthumously, with help from Ezra Pound.

fo. [alt. fotuo/futu] (J. butsu/budda/fuda; K. pul/pult'a/fudu/pudo 佛/佛陀/浮屠). In Chinese, the transcription of “buddha” and the term most often used to render the Sanskrit. Fo, the first syllable of the transcription, is ubiquitous in premodern Buddhist Chinese. (In premodern Chinese, the full transcription fotuo is more often found in the names of Indian figures, such as [BUDDHABHADRA](#), [BUDDHAYAŚAS](#), etc.) In modern Chinese, both colloquial and written, the compound fotuo is generally employed to refer to the Buddha. The pronunciations of the Sinographs fo-tuo have been tentatively reconstructed as *but-da in Early Middle Chinese (c. seventh century), demonstrating that, when the transcription was created, it was a close approximation of the original Sanskrit or Middle Indic phonology. The Sinograph is composed of the phonetic element fo and the semantic component “man”; thus, in a Buddhist context, the character can be construed to mean “the man whose name is fo.” Buddhist exegetes typically glossed fo with the Sinographs juezhe (“the awakened one”). Buddhist translators into Chinese often preferred to transcribe, rather than translate, especially sacred or polysemous Buddhist terms like [NIRVĀNA](#), [PĀRAMITĀ](#), or [SAMGHA](#); thus it was with the term buddha, where a semantic translation seems never to have been used in China. In the early centuries of the dissemination of Buddhism in China, several competing transcriptions of buddha were in use, such as the archaic form futu (reconstructed as *buw-dɔ) in the entry heading for fo above, which represented different stages in the phonology of premodern Chinese, or local dialectical variations. These were eventually superseded by fo when Buddhist translators and exegetes active in the region of the Chinese capital of Luoyang adopted it in their court-sponsored translations.

Fori Qisong. (J. Butsunichi Kaisū; K. Puril Kyesung 佛日契嵩) (1007–1072). In Chinese, “Buddha Sun, Accords with Loftiness”; renowned scholar-monk during the Song dynasty and fifth-generation successor in the [YUNMEN ZONG](#) of the Chan school. After entering the monastery in his seventh year and being ordained in his thirteenth year, he traveled widely throughout China to meet with the famous Chan masters of his age. He eventually received formal dharma transmission from Dongshan Xiaocong (d.u.) in the Yunmen school. Qisong served as abbot of Jinghuisi, a monastery located nearby the city of Hangzhou on Mt. Fori, hence his toponym. He was known as a severe abbot, and his presence led many of the less serious monks who had been residing there to leave the monastery. Around 1061, Qisong completed an early history of the Chan school titled *Chuanfa zhengzong ji* (“Essay on the Authentic Lineage of Dharma Transmission”), which contains the first reference to the five houses schema of the mature Chan school (see [WU JIA QI ZONG](#)): the [GUIYANG ZONG](#) (which Qisong says was virtually extinct in his day), [CAODONG ZONG](#) (which he says is barely extant), and the [LINJI ZONG](#), Yunmen zong, and [FAYAN ZONG](#) (all three of which he says were flourishing). Qisong also wrote a widely read and cited introduction to the Yuan-dynasty edition of the “Platform Sūtra of the Sixth Patriarch” ([LIUZU TAN JING](#)), the edition of that text most commonly used in the Chan school from that point forward. Qisong died in 1072 in his sixty-sixth year. Many relics ([ŚARĪRA](#)) remained after his cremation and near-contemporary records say that his eyes, tongue, and penis survived the flames. These relics were enshrined in a reliquary ([STŪPA](#)) at Lingyinsi in Hangzhou. We know of only one named disciple of Qisong’s, and the Yunmen school with which he was affiliated faded soon after his demise.

Fotudeng. [alt. Fotucheng] (J. Butsutochō/Buttochō; K. Pultoijing 佛圖澄) (232–348). A monk and thaumaturge, perhaps from the Central Asian kingdom of [KUCHA](#), who was a pioneer in the transmission of Buddhism to China. According to his hagiography in the [GAOSEN ZHUAN](#), Fotudeng was a foreign monk, whose

surname was [Bo](#), the ethnicon used for Kuchean monks; in some sources, his name is transcribed as Buddhasiṃha. He was talented at memorizing and expounding scriptures, as well as in debate. Fotudeng is said to have received training in Kashmir (see [KASHMIR-GANDHĀRA](#)) and to have arrived in China in 310 intending to spread the [DHARMA](#). Fotudeng is described as a skilled magician who could command spirits and predict the future. Despite his initial failure to establish a monastery in the Chinese capital of Luoyang, Fotudeng was able to convert the tyrannical ruler of the state of Later Zhao, Shi Le (r. 319–333), with a demonstration of his thaumaturgic skills. Fotudeng’s continued assistance of Shi Le won him the title Dareshang (Great Monk). After Shi Le’s general Shi Hu (r. 334–339) usurped the throne, Fotudeng was elevated to the highest status at the palace, and he continued to play the important role of political and spiritual advisor to the ruler. During his illustrious career as royal advisor, Fotudeng also taught many Buddhist disciples and is said to have established hundreds of monasteries. Among his disciples Zhu Faya (d.u.), [DAO’AN](#), and Chu Fatai (320–387) are most famous.

[four noble truths](#). (S. catvāry āryasatyāni; P. cattāri ariyasaccāni; T. ’phags pa’i bden pa bzhi; C. si shengdi; J. shishōdai; K. sa sōngje 四聖諦). Although the term “four noble truths” is well established in English-language works on Buddhism, it is a misleading translation of the original Sanskrit and Pāli terms. The term translated as “noble” ([ĀRYA](#)) refers not to the truths themselves, but to those who understand them; thus, the compound may more accurately, if less euphoniously, be rendered as “four truths [known by the spiritually] noble”; they are four facts known to be true by those “noble ones” with insight into the nature of reality, but not known by ordinary beings ([PRTHAGJANA](#)). The four truths are: suffering ([DUHKHA](#)), origination ([SAMUDAYA](#)), cessation ([NIRODHA](#)), and path ([MĀRGA](#)). The four noble truths are the subject of extensive exegesis in the tradition, but the four terms and the relationships among them may be summarized as follows. Existence in the realms that are subject to rebirth, called [SAMSĀRA](#), is qualified by suffering (duḥkha), the first truth (the Sanskrit term may also be rendered as “sorrow,” “pain,” or more generally “unsatisfactoriness”). The types of

sufferings that beings undergo in the various destinations of rebirth are enumerated at great length in Buddhist texts. In his first sermon delivered after his enlightenment (see [DHARMAKAPRAVARTANASŪTRA](#)), the Buddha identifies the following as forms of suffering: birth, aging, sickness, death, encountering what is unpleasant, separation from what is pleasant, not gaining what one desires, and the five [SKANDHAS](#). The second truth is the origination (samudaya), or cause, of suffering. In his first sermon, the Buddha identifies the cause of suffering as craving ([TRSNĀ](#)) or attachment; in his second sermon, the [ANATTALAKKHANASUTTA](#), said to have been delivered five days later, he suggests that the belief in self ([ĀTMAN](#)) is the cause of suffering. In other works, he lists two causes of suffering: unwholesome or unsalutary ([AKUŚALA](#)) actions ([KARMAN](#)) such as killing, stealing, and lying, and the unwholesome mental states (see [CAITTA](#)) that motivate unwholesome actions. These unwholesome mental states include greed ([LOBHA](#)), hatred ([DVEṢA](#)), and ignorance ([MOHA](#)), with ignorance referring here to an active misperception of the nature of the person and the world or, more technically, to an unsystematic attention ([AYONISŌMANASKĀRA](#)) to the true nature of things, leading to the following “inverted views” ([VIPARYĀSA](#)): seeing pleasure where there is actually pain, purity where there is impurity, permanence where there is impermanence, and self where there is no self. The third truth is the cessation (nirodha) of suffering, which refers to [NIRLĀNA](#), the “deathless” ([AMṚTA](#)) state that transcends all suffering. The fourth and final truth is that of the path (mārga) to the cessation of suffering. The path is delineated in exhaustive detail in Buddhist texts; in his first sermon, the Buddha describes an eightfold path ([ĀRLĀSTĀNGAMĀRGA](#)). The four truths therefore posit the unsatisfactory nature of existence, identify its causes, hold out the prospect of a state in which suffering and its causes are absent, and set forth a path to that state. Suffering is to be identified, its origin destroyed, its cessation realized, and the path to its cessation followed. The four truths demonstrate the importance of causality (see [HETUPRATYAYA](#)) in Buddhist thought and practice. Suffering is the effect of the cause, or origin, viz., “craving.” Cessation is the absence of suffering, which results from the destruction of suffering’s origin, craving. The path is the means by which one attains that cessation. The Buddha states in his first sermon that when he gained absolute and intuitive knowledge of the four truths, he achieved complete enlightenment and freedom from future rebirth. The four truths are also often described in terms of their sixteen aspects (ṣoḍaśākāra), which counteract four inverted views (viparyāsa) for each truth. For the truth of suffering, the four

aspects are knowledge that the aggregates ([SKANDHA](#)) are impermanent, suffering, empty, and selfless; these counteract seeing permanence, pleasure, mine ([MAMAKĀRA](#)), and I ([AHAMKĀRA](#)), respectively. For the truth of origination, the four aspects are knowledge that [KLEŚA](#)(affliction) and action (karman) are cause ([HETU](#)), origination (samudaya), producer (saṃbhava), and condition ([PRATYAYA](#)); they counteract the view that there is no cause, that there is a single cause, that the cause is transformation of a fundamental nature, and that the cause is a prior act of divine will, respectively. For the truth of cessation, the four aspects are knowledge that nirvāṇa is cessation ([NIRODHA](#)), peace (śānta), sublime (praṇīta), and a definite escape (niryāṇa); these counteract the view that there is no liberation, that liberation is suffering, that the pleasure of meditative absorption ([DHYĀNA](#)) is unmitigated, and that [NIRLĀNA](#) is not firmly irreversible. And for the truth of the path, the four aspects are knowledge that the eightfold noble path is a path (mārga), correct method ([UPĀYA](#)), practice ([PRATIPATTI](#)), and brings a definite escape (nairyāṇika); these counteract the view that there is no path, that this eightfold noble path is vile, that something else is also a path, and that this path is reversible. Some Mahāyāna sūtras say that those who are attached to ([ABHINIVEŚA](#)) the four noble truths as being essentially true do not understand the purport of the Buddha's doctrine; only the teaching of the third noble truth, [NIRLĀNA](#), is definitive ([NĪTĀRTHA](#)), the statements about the other truths require interpretation ([NEYĀRTHA](#)). See also [DARŚANAMĀRGA](#).

[four signs/sights](#). See [CATURNIMITTA](#).

[four truths, sixteen aspects of](#). See [FOUR NOBLE TRUTHS](#).

[foxing](#). (J. busshō; K. pulsŏng 佛性). In Chinese, “buddha-nature,” a translation of the Sanskrit term [BUDDHADHĀTU](#) (buddha-element). According to the East Asian [YOGĀLĀRA](#) tradition (see [FAXIANG ZONG](#)), there are “two kinds of buddha-nature” (er foxing), referring to the “buddha-nature of principle” (li foxing) and the “functional buddha-nature” (xing foxing), or literally, “buddha-nature of the nature.” The former type is said to be the true nature of factors ([DHARMA](#)), which is beyond production and cessation, birth and death, conceptualization and

designation—a “principle” (li) discoverable by all through wisdom. The latter type is a latent seed or potentiality ([BĪJA](#)) within the eighth storehouse consciousness ([ĀLAYAVIJÑĀNA](#)) that may, if it is activated and matured, eventually result in the achievement of buddhahood. According to the Faxiang school, the “buddha-nature of principle” is “universal” in the sense that all sentient beings partake in it. Only some sentient beings, however, are endowed with the “functional buddha-nature”; others are said to be devoid of the potential to achieve buddhahood for all eternity (see [ICCHANTIKA](#)). The [FOXING LUN](#), an important treatise on the buddha-nature and [TATHĀGATAGARBHA](#) thought, discusses three types of foxing: (1) “the buddha-nature that dwells in itself,” viz., that is inherent in the minds of deluded ordinary beings ([PRTHAGJANA](#)); (2) “the emergent buddha-nature,” which emerges as a result of practice, and which is initiated when the adept first generates the aspiration for enlightenment ([BODHICITTOTPĀDA](#)); and (3) “the attained buddha-nature,” which is achieved once the [BODHISATTVA](#) path ([MĀRGA](#)) is completed and the fruition of buddhahood attained. See also the extended coverage in [BUDDHADHĀTU](#).

[Foxing lun](#). (J. Busshōron; K. Pulsŏng non 佛性論). In Chinese, “Treatise on the Buddha-Nature,” an important exposition of the [MAHĀLĀNA](#) theories of buddha-nature ([FOXING](#)) and storehouse, womb, or matrix of the tathāgatas ([TATHĀGATAGARBHA](#)). Authorship of the treatise is traditionally attributed to the Indian scholiast [VASUBANDHU](#) (fl. c. mid-fourth to mid-fifth centuries CE), with the Chinese translation made by the Indian [YOGĀLĀRA](#) exegete [PARAMĀRTHA](#) (499–569). Scholars now generally accept, however, that the text at the very least displays the heavy editorial hand of Paramārtha and may in fact have been written by him. The text offers a tripartite account of the buddha-nature as “dwelling in itself,” “emergent,” and “attained” (see discussion in [FOXING](#), s.v.). It is also well known for its outline of three aspects of the tathāgatagarbha, as (1) the contained, (2) the concealed or hidden, and (3) the container. The “contained” means the “embryo” of enlightenment that is contained within the womb of the tathāgatas. “Concealment” denotes both the tathāgata as (a) an active agent of liberation, secreting himself inside the minds of ordinary sentient beings in order to motivate them toward enlightenment, and (b) a passive factor that is covered over and hidden by the afflictions ([KLEŚA](#)). As the “container,” the tathāgatagarbha is the fulfillment of the infinite numbers of meritorious qualities perfected by the buddhas. See also [RATNAGOTRAVIBHĀGA](#).

Foxin zong. (J. Busshinshū; K. Pulsim chong 佛心宗). In Chinese, “Buddha-Mind School”; a term used largely as a synonym for the [CHAN ZONG](#). According to the [BIYAN LU](#), for instance, [NĀGĀRJUNA](#), the fourteenth patriarch in the Chan patriarchal lineage, is said to have transmitted the Buddha-Mind School to the fifteenth patriarch Kānadeva. The term “buddha-mind” also functions in certain cases as a synonym for [BUDDHADHĀTU](#) ([FOXING](#)) or [TATHĀGATAGARBHA](#).

Fo yijiao jing. (佛遺教經). In Chinese, “Scripture on the Teachings Bequeathed by the Buddha.” See [YIJIAO JING](#).

Fozhao Deguang. (J. Busshō Tokkō; K. Pulcho Tōkkwang 佛照德光) (1121–1203). Chinese [CHAN](#) master in the [LINJI ZONG](#). Fozhao studied under [DAHUI ZONGGAO](#) at Mt. Ayuwang and took the name of the mountain, Yuwang, as his toponym. He later served as preceptor of Emperor Xiaozong (r. 1162–1189), from whom he received the title Chan master Fozhao. His conversations with the emperor were recorded in the *Fozhao chanshi qindui lu* and his teachings in the *Fozhao Guang heshang yuyao*.

fozu. (J. busso; K. pulcho 佛祖). In Chinese, “buddhas and patriarchs,” referring to the ancestors of the Buddhist tradition. Many traditions of Buddhism, especially those in East Asia, trace their pedigree back through an unbroken lineage of patriarchs (cf. [ZUSHI](#)) to the Buddha or buddhas. Positing such a succession of teachers directly connects the contemporary tradition both temporally and geographically to the founder of the religion himself and thus authenticates the school’s presentation of the Buddhist tradition. The buddhas in these rosters typically refer to the seven buddhas of antiquity ([SAPTATATHĀGATA](#)), the last of whom in the succession is [ŚĀKYAMUNI](#), the founder of the current dispensation ([ŚĀSANA](#)) of Buddhism. Śākyamuni in turn is followed by a succession of Indian patriarchs ([ZUSHI](#)), whose numbers vary: in East Asia, the [CHAN ZONG](#) ultimately accepts a list of twenty-eight Indian patriarchs, beginning with [MAHĀLĀŚYAPA](#) and ending with [BODHIDHARMA](#); the [Tiantai Zong](#) accepts twenty-four Indian patriarchs, beginning with Mahākāśyapa and ending with Siṃha bhikṣu. These Indian predecessors would then be followed in turn by a list of Chinese patriarchs, of whom six are best known in the Chan school (ending with the sixth patriarch, [LIUZU](#), [HUINENG](#)) and nine in the Tiantai school. Especially for a school like Chan, which claims not to base its presentation of Buddhism on the scriptures of the religion (see [BULI WENZI](#)) but instead on its direct connection to the mind of the Buddha (foxin), the

existence of such an unbroken lineage of “buddhas and patriarchs” is a principal means of legitimating the school. See also [FOZU TONGJI](#); [JINGDE CHUANDENG LU](#).

[Fozu sanjing](#). (J. Busso sangyō; K. Pulcho samgyōng 佛祖三經). In Chinese, “The Three Scriptures of the Buddhas and Patriarchs,” referring to a collection of three texts, [YIJIAO JING](#), [SISHI’ER ZHANG JING](#), and [GUISHAN JINGCE](#). The *Fozu sanjing* texts were compiled together sometime during the late Tang and early Song dynasties as an accessible primer of Buddhist doctrine and practice, recommended to all beginners in the [CHAN ZONG](#) for its simple and clear exposition of the Buddhist teachings. The earliest extant commentary on this compilation was composed by the [CAODONG ZONG](#) monk [DAHONG SHOUSUI](#) (1072–1147). Interestingly, the first two texts in the anthology are now presumed to be Chinese [APOCRYPHA](#), indigenous scriptures composed on the model of Indian scriptures, suggesting that they appealed to their Chinese audience in a way that translated Indian scriptures did not.

[Fozu tongji](#). (J. Busso tōki; K. Pulcho t’onggi 佛祖統紀). In Chinese, “Chronicle of the Buddhas and Patriarchs,” a massive history of Buddhism and [TIANTAI](#) orthodoxy written in the manner of an official chronicle, composed by ZHIPAN (1220–1275) in fifty-four rolls. The chronicle begins with the life of the Buddha, the division of his relics ([ŚARĪRA](#)), and the compilation of the Buddhist canon (see [TRIPITAKA](#); [DAZANGJING](#)). The fifth roll details the lives of the twenty-four Indian patriarchs, beginning with [MAHĀLĀŚYAPA](#) and ending with Simha bhikṣu. This theory of the twenty-four patriarchs is also found in [TIANTAI ZHIYI](#)’s magnum opus [MOHE ZHIGUAN](#), wherein it is stated that the transmission ends after Simha bhikṣu was killed by the tyrant Mihirakula, the king of Damiḷa. Rolls six and seven discuss the nine patriarchs in China, starting with Huiwen (d.u.), [NANYUE HUISI](#), Zhiyi, Guanding (561–632), Zhiwei (d. 680), Huiwei (634–713), and [JINGXI ZHANRAN](#); roll eight covers the rest in the series of patriarchs leading up to [SIMING ZHILI](#). The rest of the chronicle details the lives of worthy monks of other traditions. Other important charts and histories are provided in the last few rolls. The *Fozu tongji* thus serves as an important source for studying the history of the Tiantai tradition and the ways in which the school envisioned Buddhist orthodoxy during the Song dynasty.

[Frauwallner, Erich](#). (1898–1974). Austrian scholar of Sanskrit philology; professor at the University of Vienna and a member of the Austrian Academy of Sciences. Frauwallner wrote some twenty monographs on various strands of

Indian Buddhist literature, especially concerning the [VINAYA](#) and [ABHIDHARMA](#), and broader surveys of Indian philosophy. His works include his *The Earliest Vinaya and the Beginnings of Buddhist Literature* (1956) and *Abhidharmastudien* (translated into English as *Studies in Abhidharma Literature and the Origins of Buddhist Philosophical Systems*), which treats the analytical structure of early Buddhist abhidharma as the inception of systematic philosophical thought in Buddhism. Frauwallner was also one of the first Western scholars to explore the writings of [DHARMAKĪRTI](#) on Buddhist logic and epistemology and especially the [APOHA](#) theory, laying the foundation for [PRALĀNA](#) studies in Austria. Frauwallner, with other Indologists like Ludwig Alsdorf, were tainted by their association with Nazism and anti-Semitism; Frauwallner, however, later acknowledged the great contributions that the Alsatian Jewish scholar SYLVAIN LÉVI had made to Buddhist studies.

[Fu dashi](#). (J. Fu daishi; K. Pu taesa 傅大士) (497–569). In Chinese, “Great Layman Fu,” his secular name was Xi and he is also known as Shanhui, Conglin, and Dongyang dashi. Fu dashi was a native of Wuzhou in present-day Zhejiang province. At fifteen, he married and had two sons, Pujian and Pucheng. Originally a fisherman, he abandoned his fishing basket after hearing a foreign mendicant teach the dharma and moved to [SONGSHAN](#) (Pine Mountain). After attaining awakening beneath a pair of trees, he referred to himself as layman Shanhui (Good Wisdom) of Shuanglin (Paired Trees). While continuing with his severe ascetic practices, Fu and his wife hired out their services as laborers during the day and he taught at night, ultimately claiming that he had come from [TUSITA](#) heaven, where the future buddha [MAITREYA](#) was currently residing. He is said to have been summoned to teach at court during the reign of the Liang-dynasty emperor Wudi (r. 502–549). In 539, Fu dashi is said to have established the monastery Shuanglinsi at the base of Songshan. His collected discourses, verses, and poetry are preserved in the *Shanhui dashi yulu*, in four rolls, which also includes his own biography as well as those of four other monks who may have been his associates. Fu is also credited with inventing the revolving bookcase for scriptures, which, like a prayer wheel (cf. [MA NI 'KHOR LO](#)), could yield merit ([PUNYA](#)) simply by turning it. This invention led to the common practice of installing an image of Fu and his family in monastic libraries. In painting and sculpture, Fu dashi is typically depicted as a tall bearded man wearing a Confucian hat, Buddhist raiments, and Daoist shoes and accompanied by his wife and two sons.

[Fudōchi shinmyōroku](#). (不動智神妙錄). In Japanese, “Record of the Mental Sublimity of Immovable Wisdom,” a treatise on [ZEN](#) and sword fighting composed by the Japanese [RINZAISHŪ](#) monk [TAKUAN SŌHŌ](#) (1573–1645). In the first half of the seventeenth century, Takuan found himself in the middle of a political battle known as the “purple robe incident” (shi’e jiken), which, in 1629, ultimately led to his exile to Kaminoyama in Uzen (present-day Yamagata Prefecture). There, he composed this treatise on the proper use of the mind in Zen and sword fighting for the samurai sword master Yagyū Muneori (1571–1646), the personal instructor to the shōgun. Takuan first describes the afflictions that rise from ignorance ([AVIDLĀ](#)) as hindrances to proper sword fighting. Then he explains the “immovable wisdom” as the unclinging, unstopping mind. Takuan likens this unmoving state to the concept of “no-mind” (J. mushin; C. [WUXIN](#)) in the “Platform Sūtra” ([LIUZU TANJING](#)), wherein one’s movements are not calculated, but instinctual; thus, there should be no gap between mind and sword. The rest of the treatise expounds upon the proper means of attaining this state of no-mind.

[Fu fazang yinyuan zhuan](#). (J. Fuhōzō innenden; K. Pu pōpchang inyōn chōn 付法藏因緣傳). In Chinese, “History of the Transmission of the Dharma-Storehouse,” a lineage history of the Indian Buddhist patriarchs, purportedly translated in 472 by Kiṅkara (d.u.) and Tanyao (fl. 450–490) of the Northern Wei dynasty, but now known to be an indigenous Chinese composition, in six rolls. The *Fu fazang yinyuan zhuan* outlines the history of the transmission of the dharma-storehouse (fazang), viz., the lineage of teachers, following the [BUDDHA](#)’s [PARINIRLĀNA](#), beginning with the first patriarch of the tradition, the elder [MAHĀLĀŚYAPA](#), and ending with the beheading of the putative twenty-fourth patriarch, Siṃha bhikṣu, at the hand of the tyrant Mihirakula, the king of Damiṃa. This account of the Buddhist transmission lineage was adopted in [TIANTAI ZHIYI](#)’s magnum opus [MOHE ZHIGUAN](#) and exerted much influence over the development of the transmission histories of the the [TIANTAI ZONG](#) and the [CHAN ZONG](#) (see [CHUANDENG LU](#)). Both the Tiantai and Chan schools thus hold this text in high esteem, as offering documentary evidence for their sectarian accounts of the Buddhist transmission lineage. Despite the wide influence of the *Fu fazang yinyuan zhuan* within Chinese Buddhism, however, the text seems not to be a translation of an Indian original but is instead a Chinese composition (see [APOCRYPHA](#)). As the discussions of the text in the [DA TANG NIEDIAN LU](#) and [LIDAI SANBAO JI](#) both suggest, the *Fu fazang yinyuan zhuan* may have been compiled in

response to the persecution of Buddhism that occurred during the reign of the Northern Wei emperor Taiwu (r. 441–451). Later, after his successor, Emperor Wencheng (r. 452–465), had ascended to the throne and revived Buddhism, Tanyao and his collaborator Kiinkara were inspired to compose this book at the cave site of Beitai in order to clarify definitively the orthodox lineage of [ŚĀKYAMUNI](#) Buddha. The book also largely resembles Chinese recensions of the biography of King [AŚOKA](#) and thus probably could not have been a translation of an Indian text. Finally, many of the sources cited in the book are otherwise unknown and their authenticity is dubious. For all these reasons, it is now generally accepted that the text is of Chinese provenance.

[Fukan zazengi](#). (普勸坐禪儀). In Japanese, “General Advice on the Principles of Seated Meditation,” an important meditation manual composed by the eminent Japanese [ZEN](#) master [DŌGEN KIGEN](#). Although this treatise is traditionally dated to 1227, recent discoveries of a hitherto unknown copy of the *Fukan zazengi* suggest the date of 1233. The *Fukan zazengi* is a relatively short treatise on seated meditation ([ZAZEN](#)), which is also embedded in Dōgen’s magnum opus, the [SHŌBŌGENZŌ](#). The treatise underscores the need to practice seated meditation as a corrective against excessive indulgence in “words and letters,” viz., scholastic interpretations of Buddhist doctrine (cf. [BULI WENZI](#)). The explanation of how to perform seated meditation starts with preparing a quiet spot for practice and following a proper diet. The correct posture for meditation is then described. The actual practice of seated meditation begins with the regulation of breathing, which is followed by an injunction to stay aware of all thoughts that arise in the mind. The treatise then briefly explains the psychosomatic effects of meditation and the proper way to rise from seated meditation. The importance of seated meditation is reiterated at the end. Dōgen’s manual is in large part a revision of the Chinese Chan master [CHANGLU ZONGZE](#)’s influential primer of meditation, the [ZUOCHAN YI](#).

[Fukeshū](#). (普化宗). In Japanese, “Puhua Sect”; a secondary sect of the Japanese [ZEN](#) school, founded by [SHINCHI KAKUSHIN](#) (1207–1298). While Kakushin was in China studying under [WUMEN HUIKAI](#) (1183–1260), he is said to have met a layman, the otherwise-unknown Zhang Can (J. Chō San; d.u.), who claimed to be a sixteenth-generation successor of the little-known Tang-dynasty monk Puhua (J. Fuke; d.u.), supposedly an eccentric friend of [LINJI YIXUAN](#) and a successor of [MAZU DAOYI](#). Four lay disciples of Zhang’s accompanied Kakushin

when he returned to Japan, helping Kakushin to establish the sect. There is no evidence of the existence of a Puhua school in China apart from Kakushin's account, however, and the school seems to be a purely Japanese creation. During the Tokugawa era (1603–1867), in particular, the school attracted itinerant lay Zen practitioners, known as “clerics of emptiness” (kamusō), who played the bamboo flute (shakuhachi) as a form of meditation and wore a distinctive bamboo hat that covered their entire face as they traveled on pilgrimage around the country. Because masterless samurai (rōnin) and bandits began adopting Fuke garb as a convenient disguise during the commission of their crimes, the Meiji government proscribed the school in 1871 and it vanished from the scene.

[Fukurokuju](#). (J) (福祿壽). See [SHICHIFUKUJIN](#).

[full-lotus posture](#). See [VAJRAPARYAṆKA](#); [PADMĀSANA](#).

[Fumon](#). (J) (普門). See [MUKAN FUMON](#).

[Fumu enzhong jing](#). (J. Bumo onjūgyō; K. Pumo ūnjung kyōng 父母恩重經). In Chinese, “The Scripture on the Profundity of Parental Kindness,” an indigenous Buddhist scripture, composed in the seventh century that extols the virtues of filial piety (C. xiao). There are several different recensions of this sūtra, including one discovered in the caves of [DUNHUANG](#). The scripture denounces unfilial sons who, after their marriages, neglect and abuse their parents, and instead urges that they requite the kindness of their parents by making offerings at the ghost festival (C. [YULANBEN](#); S. [*ULLAMBANA](#)) and by copying this scripture and reciting it out loud. This text seems to be related to other earlier Chinese [APOCRYPHA](#), such as the *Fumu enzhong nanbao jing* (“The Scripture on the Difficulty of Requiting Parental Kindness”) and the [YULANPEN JING](#) (“Ullambana Scripture”), and displays the possible influence of the indigenous Confucian tradition. The *Fumu enzhong jing* continues to be one of the most popular scriptures in East Asian Buddhism and is frequently cited in the Buddhist literature of China, Korea, and Japan.

[Furong Daokai](#). (J. Fuyō Dōkai; K. Puyong Tohae 芙蓉道楷) (1043–1118). Chinese [CHAN](#) master in the [CAODONG ZONG](#), a native of Yizhou in present-day Shandong province. When he was young, Daokai is said to have trained to become a Daoist transcendent (shenxian). He later became a monk at the monastery Shushengyuan (or Shutaisi) in Jingshi, where he studied under a

monk named Dexian (d.u.); and, in 1074, he received the full monastic precepts. Daokai later became a disciple of the Chan master [TOUZI YIQING](#) at the Chan monastery of Haihui Chansi on Mt. Baiyun in Shuzhou prefecture (present-day Anhui province). In 1082, he established himself on Mt. Xiantong in Yizhou and in 1103 became the second abbot of the influential Chan monastery of Baoshou Chanyuan on Mt. Dahong (present-day Hubei province). A year later he relocated to the Chan monastery of Shifang Jingyin Chanyuan in Dongjing (present-day Henan province) and again to the nearby Tianningsi in 1107. The emperor offered him a purple robe and the title Chan Master Dingzhao ([DHYĀNA](#) Illumination), but Daokai declined. Later, a prominent lay follower built a hermitage for him on Furong island (present-day Shandong province), whence he acquired his toponym. The community at Furong quickly grew into a prominent monastery. In 1117, Daokai's hermitage was given the official plaque Huayan Chansi, thereby elevating it to an official “monastery of the ten directions” ([SHIFANGCHA](#)). Inheriting his lineage were twenty-nine disciples, of whom the most famous was Danxia Zichun (1064–1117). Furong's teachings are recorded in the *Furong Kai chanshi yuyao*.

[fushō Zen](#). (不生禪). In Japanese, “unborn Zen”; a form of [ZEN](#) meditation popularized by the [RINZAISHŪ](#) master [BANKEI YŌTAKU](#). The teaching of the “unborn” (fushō) functioned as the central theme of Bankei's vernacular sermons (kana hōgo). According to Bankei, the unborn is none other than buddha-nature ([FOXING](#)), or buddha mind, itself. As such, he emphatically notes that there is little need actually to seek buddhahood, since everyone is already born with the innate, unborn buddha mind. Bankei's teaching of unborn Zen was harshly criticized by the fellow Rinzai Zen master [HAKUIN EKAKU](#).

[fusi](#). (J. fūsu; K. pusa 副司). In Chinese, “assistant comptroller,” the third assistant to the prior ([JIANYUAN](#)) in an East Asian Buddhist monastery. Along with the rector ([WEINUO](#)), cook ([DIANZUO](#)), superintendent ([ZHISUI](#)), prior's assistant ([DUSI](#)), and comptroller ([JIANSI](#)), the assistant comptroller is one of the six stewards ([ZHISHI](#)) at an East Asian [CHAN](#) monastery.

[fuzangwu](#). (J. fukuzōmotsu; K. pokchangmul 腹藏物). In Chinese, “interred objects,” referring to items enshrined within the cavities of buddha images, a practice widespread in the Buddhist traditions of East Asia (if not throughout all of Buddhism). Typically the “lost-wax” casting process for creating iron or bronze images would leave a substantial cavity inside the image, in which could

be interred such sacred objects as written or printed scriptures, [DHĀRANĪ](#), and [MANTRA](#); smaller images of buddhas and bodhisattvas; information on the creation of the image, lists of sponsoring donors, and various dedications and vows; replicas of internal organs carved from wood or sown from cloth; or paddy rice, hulled rice, and soy beans as a form of permanent offering to the Buddha. The sealing of such things inside an image often took place as part of the consecration ritual for the image. Wooden images were also often carved in imitation of cast images in order to leave such an interment cavity. By serving as a repository of sacred objects, the image could thus serve not only as an object of worship but also play a role similar to that of a [STŪPA](#) or [CAITYA](#).

fuzi. (S. *vālavyajana*; P. *vālavījanī*; T. *nga yab*; J. *hossu*; K. *pulcha* 拂子). In Chinese, “fly whisk” or “chowrie,” a yak-tail fan that Buddhist monks used to keep flies and mosquitoes away, which comes to be a symbol of the office of [CHAN](#) master. The chowrie is presumed to have originally been used among followers of the [JAINA](#) tradition to shoo away flies without injuring them and came to be used widely throughout India. In the Chinese Chan tradition, the fly whisk (which in East Asia is usually made from a horse tail) became a symbol of the office or privilege of a Chan master and is one of the accoutrements he traditionally is depicted as holding in formal portraits. “Taking up the fly whisk” ([BINGFU](#)) is, by metonymy, a term used to refer to a formal Chan sermon delivered by a master. See also [VĀLAVYAJANA](#).

gaing. (P. *gaṇa*). In Burmese, lit. “group” or “association”; the Myanmar (Burmese) term for a monastic fraternity or denomination within the Burmese saṅgha (S. [SAMGHA](#)). Used in this sense, gaing is sometimes replaced with its Pāli equivalent [NIKĀYA](#). As of 1980, there are nine officially recognized monastic gaing registered with the Burmese government’s Ministry of Religious Affairs. The two largest are (1) [THUDHAMMA](#) (P. *Sudhammā*) and (2) [SHWEGYIN](#). Next is a smaller but stricter [DWAYA](#) fraternity, which is subdivided into: (3) Dhammanudhamma Maha Dwaya (P. *Dhammānudhamma Mahā Dvāra*), (4) Dhamma Vinayanuloma Mula Dwaya (P. *Dhamma Vināyanuloma Mūla Dvāra*), and (5) Anauk Kyaung Dwaya. The remaining gaing are: (6) Satubhummika Maha Thatipatan Hngetwin (P. *Catubhummika Mahā Satipaṭṭhāna*), (7) Weluwun, (P. *Veḷuvana*), (8) Ganawimotti Kuto (P. *Gaṇavimutti*), and (9) Dhammayutti Mahayin. Of these nine monastic gaing, the oldest is the Thudhamma, which traces its origins to an ecclesiastical council named the Thudhamma Thabin (P. *Sudhammā Sabhā*) that was established in 1782 by the Burmese king, [BODAWPAYA](#) (r. 1782–1819). The Thudhamma Council was organized to reform the Burmese saṅgha and unite its various factions under centralized control, a task at which it seems to have been relatively successful. The influence of the royally backed Thudhamma Council greatly diminished by the mid-nineteenth century as a consequence of the British conquest of Lower Burma during the first and second Anglo-Burmese Wars (1824–6 and 1852). It is following this territorial loss, during the reign of King [MINDON](#) (r. 1853–1878), that the Shwegyin, Dwaya, and Hngetwin gaing begin to coalesce into separate fraternities. All three were founded by ultra-orthodox scholar-monks who broke with the Thudhamma Council over issues of monastic discipline. The Dwaya Gaing, which had its center in British-controlled Lower Burma, later divided into the three separate fraternities recognized today. The Weluwun, another southern gaing, had similar beginnings except that it was established following the British conquest of Upper Burma and termination of the Burmese monarchy in 1885. The Shwegyin, Dwaya, Hngetwin, and Weluwun gaing thus all can be seen as ultimately descending from the Thudhamma. The Ganawimotti Kuto Gaing (lit., “Gaṇa-free”) regards itself as autonomous of gaing affiliation, as its name suggests. The Dhammayutti Mahayin Gaing, a late nineteenth-century Mon reform tradition, traces its lineage to the Thai [THAMMAYUT](#) order. ¶

Outside of the monastic context, the term gaing is most frequently used to refer to Burmese occult associations that follow a popular tradition known as the weikza-lam, lit. “path of esoteric knowledge.” Such an association is called a [WEIKZA](#) gaing and typically will be devoted to the cultivation of supranormal powers and virtual immortality through the application of various “sciences” (B. weikza, P. vijjā), such as alchemy and the casting of runes, that weikza-lam practitioners will have learned from their spiritual masters.

[gālavāsi](#). In Pāli, “town dweller”; in the [THERAVĀDA](#) tradition, a monk who lives in a village or town monastery and whose monastic vocation focuses on doctrinal study and teaching, or lit. “book work” (P. [GANTHĀDHURA](#)); such a monk is often contrasted with a “forest dweller” (P. [ARĀÑÑĀVĀSI](#)), who is principally dedicated to meditative training (P. [VIPASSANĀDHURA](#)). In Sri Lankan Buddhism, the emphases within the Buddhist order on study and meditation led to the evolution over time of these two major practice vocations. The gālavāsi were involved in studying and teaching the dhamma, especially within the lay community of the village, and thus helped to disseminate Buddhism among the people and maintain the institutions and history of the order. Because of their active engagement in society, the gālavāsi have thus historically enjoyed closer relations with the social elite. The araññavāsi, by contrast, remained in solitude in the forest to focus principally on their meditative practice. The araññavāsi were not necessarily hermits, but they lived a more secluded life than the gālavāsi, devoting most of their time to meditation, either individually or in smaller groups, and keeping their contact with the laity to a minimum. These two vocations have a long history and have continued within the saṅgha (S. [SAMGHA](#)) into modern times. In a sense, the Buddha himself was an araññavāsi for six years before he attained enlightenment; subsequently, he then passed much of his time as a gālavāsi, teaching people the dharma and encouraging them to practice to bring an end to their suffering. See also [PARIYATTI](#); [PATIPATTI](#).

[gaṇacakra](#). (T. tshogs kyi ’khor lo/tshogs). In Sanskrit, lit. “circle of assembly” or “feast”; originally, the term may have referred to an actual gathering of male and female tāntrikas engaging in antinomian behavior, including ingesting substances ordinarily deemed unclean, and sexual activities ordinarily deemed taboo. In Tibet, the gaṇacakra is typically a ritualized tantric liturgy, often performed by celibate monks, that involves visualizing impure substances and transforming them into a nectar ([AMRTA](#); [PAÑCĀMRTA](#)), imagining the bliss of

high tantric attainment, and mentally offering this to buddhas, bodhisattvas, and various deities (see T. [TSHOGS ZHING](#)) and to oneself visualized as a tantric deity. The ritual is regarded as a rapid means of accumulating the equipment ([SAMBHĀRA](#)) required for full enlightenment. In Tibet the word is inextricably linked with rituals for worshipping one's teacher ([GURUYOGA](#)) and in that context means an extended ritual performed on special days based on practices of highest yoga tantra ([ANUTTARAYOGATANTRA](#)). ¶ To start the gaṇacakra ritual, a large accumulation of food, including [GTOR MA](#), bread, sweets, and fruit is placed near the altar, often supplemented by offerings from participants; a small plate with tiny portions of meat, a small container of an alcoholic beverage, and yogurt mixed with red jam is placed in a small container nearby. After visualizing one's teacher in the form of the entire pantheon of buddhas, bodhisattvas, and so on, the gaṇacakra consists of worship on the model of the [BHADRACARĪPRANIDHĀNA](#), i.e., the seven-branch worship ([SAPTĀṄGAVIDHI](#)) of going for refuge, confessing transgressions, giving gifts, rejoicing, asking the teacher to turn the wheel of dharma, asking the buddhas not to pass into [NIRVĀNA](#), and, finally, dedicating the merit to full enlightenment (see [PARINĀMANĀ](#)). Following this, the participants visualize the nectar ([AMRTA](#)) and the bliss of high tantric attainment. Three participants then line up in front of the officiating master ([VAJRĀCĀRYA](#)) and ritually offer a plate with a gtor ma and other parts of the collected offerings, along with a tiny bit of meat, a slight taste of alcohol, and a drop of the mixed yogurt and jam. While singing tantric songs extolling the bliss of tantric attainment, the rest of the offerings are divided up equally among the other participants, who are also given a tiny bit of meat, a slight taste of alcohol, and a drop of the mixed yogurt and jam. The gaṇacakra forms the central part of the worship of the teacher (T. bla ma mchod pa) ritual and is a marker of religious identity in Tibetan Buddhism, because participants visualize their teacher in the form of the head of the particular sect, tradition, or monastery to which they are attached, with the historical buddha, and the tantric buddha telescoped into smaller and smaller figures in his heart; the entire pantheon of buddhas, bodhisattvas and so on are then arrayed around that form. A gaṇacakra is customarily performed at the end of a large [ABHISEKA](#) (consecration) or teaching on [TANTRA](#), where participants can number in the thousands.

[Gandavyūha](#). (T. Sdong po bkod pa; C. Dafanguang fo huayan jing; J. Daihōkō butsu kegongyō; K. Taebanggwang pul hwaōm kyōng 大方廣佛華嚴經).

In Sanskrit, loosely translatable as “Multivalent Array Scripture,” an important Sanskrit [SŪTRA](#) that served as a virtual “pilgrim’s progress” of [MAHĀYĀNA](#) Buddhism; later incorporated into the large scriptural omnibus, the [AVATAMSAKASŪTRA](#) or [BUDDHĀVATAMSAKASŪTRA](#), where the text becomes known as the “Entering the [DHARMADHĀTU](#)” chapter (C. Ru fajie pin; S. *Dharmadhātupraveśanaparivarta). The *Gaṇḍavyūha* describes the youth [SUDHANA](#)’s spiritual journey in search of enlightenment through a series of fifty-three spiritual mentors ([KALYĀNAMITRA](#)), who serve as the personification of the fifty-two stages of the bodhisattva path, or [MĀRGA](#) (Sudhana’s first and last teacher, the bodhisattva [MAÑJUŚRĪ](#), are the same, giving a total of fifty-three). At the conclusion of his journey, Sudhana has a vision of [SAMANTABHADRA](#) and fully merges with him. The text is especially influential for its description of the accomplishment of the conducts and vows (see [BHADRACARĪPRANIDHĀNA](#)) of Samantabhadra, who comes to be considered the patron bodhisattva of the [HUAYAN ZONG](#) of Chinese Buddhism. The first Chinese translation of the *Avataṃsakasūtra*, in sixty rolls and thirty-four chapters, was translated by the North Indian monk [BUDDHABHADRA](#) (359–429) between 418 and 421, but it included only a severely truncated version of the *Gaṇḍavyūha* chapter. The second translation, in eighty rolls and thirty-nine chapters, completed between 695 and 704 by the Khotanese monk [ŚIKSĀNANDA](#) (652–710), included the full chapter. Since the earlier version was still incomplete, however, a third translation, specifically of the *Gaṇḍavyūha* section, was translated in forty rolls as the *Dafangguang fo huayan jing (Avataṃsakasūtra)* by [PRAJÑA](#), between 795 and 798. The *Gaṇḍavyūha* is also included among the nine sacred books ([NAVAGRANTHA](#)) of the Newar tradition of Nepal.

gandha. (T. dri; C. xiang; J. kō; K. hyang 香). In Sanskrit and Pāli, “smell,” “odor,” or “fragrance,” the olfactory objects of the olfactory or nose consciousness ([GHRĀNAVIJÑĀNA](#)). The Sanskrit term has a more neutral sense than the pleasing “fragrance” or the unpleasant “smell” or “odor” in English. There are said to be two basic types of olfactory objects, the pleasant and the unpleasant, with each category further subdivided into two based on whether the fragrance of the pleasant or the odor of the unpleasant infuses other objects, like the fragrance of garlic, or does not, like the fragrance of sesame. A particular class of demigod, the [GANDHARVA](#), is said to consume fragrances.

gandhaghatikā. (T. spos snod; C. xianglu; J. kōro; K. hyangno 香爐). In

Sanskrit, “censer,” “incense burner”; a small stove with a perforated lid, both typically made of bronze or pottery, in which incense is burned as an offering during the performance of a ritual. In certain [VINAYA](#) traditions, such as the [DHARMAGUPTAKA](#) (see [SIFEN LÜ](#)), the censer is included in a list of eighteen requisites (S. aṣṭādaśadravya; see [PARISKĀRA](#); [NĪŚRAYA](#)) that monks were allowed to keep, along with tooth cleaners, soap, the three robes, water bottle, begging bowl, sitting mat, walking staff, water filter, handkerchief, knife, fire starter, tweezers, sleeping hammock, sūtras, vinaya texts, buddha images, and bodhisattva images.

[gandhakutī](#). (T. dri gtsang khang; C. xiangshi; J. kōshitsu; K. hyangsil 香室). In Sanskrit and Pāli, “perfumed chamber,” the name given to the Buddha’s personal dwelling place in [JETAVANA](#) monastery. Later in India, a room called the perfumed chamber, where an image of the Buddha was installed, became a standard component in many traditional Indian monasteries, symbolizing that the Buddha himself was in residence and presiding over the administration of the monastic institution. When [ĀNANDA](#) was asked by the Buddha to be his personal attendant, one of Ānanda’s conditions for acceptance was that he not be given his own “perfumed chamber,” to avoid any suspicion that he would receive special treatment as the Buddha’s attendant. See also [AJANTĀ](#).

[Gandhāra](#). (T. Sa ’dzin; C. Jiantuoluo; J. Kendara; K. Kōndara 健馱羅). An ancient center of Indic Buddhism, located in the northwest of the subcontinent in the region of present-day northern Pakistan and southeastern Afghanistan. The Gandhāra region included the entire Peshawar valley up to its border along the Indus River to the east and also extended to include the Swat valley and the region around Gandhāra’s central city of [TAKSAŚILA](#) (Taxila), located near what is today Peshawar, Pakistan. For the five centuries bracketing the beginning of the Common Era, Gandhāra was a cosmopolitan cultural center and a crossroads of the major trade routes between Europe, the Middle East, Central Asia, China, and the Indian subcontinent (see [SILK ROAD](#)). As traders from these various areas moved through Gandhāra, the region became a place of cultural exchange. Four major empires were centered in Gandhāra: the Indo-Greek, Indo-Scythian, Indo-Parthian, and [KUSHAN](#). Tradition claims that [AŚOKA](#) supported Buddhism in the Gandhāra region during the third century BCE, although the first physical evidence of Buddhism in the region dates from the second and first centuries CE. Gandhāra was conquered by Demetrius I of Bactria around 185 BCE and,

although Greek rule in the region was brief, Greek art and culture had an enduring effect on the Gandhāran community. Some of the oldest known Buddhist art comes from this region, more specifically the “Greco-Buddhist” style of sculpture that was a product of this period. The earliest iconographic representations of the Buddha, in fact, are thought by some art historians to come from second century BCE Gandhāra. During the first and second centuries CE, Gandhāra became the principal gateway through which Buddhism traveled to Persia, China, and the rest of Asia. Between the years 50 and 320 CE, the [KUSHANS](#) were pushed south out of Central Asia and occupied Gandhāra. Gandhāra, along with [KASHMIR](#), supported and housed a large [SARVĀSTIVĀDA](#) community, and Gandhāra was long recognized as a principal bastion of this important [MAINSTREAM BUDDHIST SCHOOL](#). Around the first or second century CE, when the Sarvāstivāda school was at its peak, the fourth Buddhist council (see [COUNCIL, FIRST](#)) is said to have taken place in Gandhāra, sponsored by [KANISKA I](#), the third king of the Kushan dynasty. According to traditional accounts, there were 499 monks in attendance, although that large number is probably intended to represent the importance of the convention rather than a literal count of the number of people present. [VASUMITRA](#) presided over the fourth council, with the noted poet and scholarly exegete [AŚVAGHOSA](#) assisting him. In addition to recording a new [VINAYA](#), the council also resulted in the compilation of a massive collection of Sarvāstivāda [ABHIDHARMA](#) philosophy, known as the [ABHIDHARMAMAHĀVIBHĀSĀ](#), or “Great Exegesis of Abhidharma,” which functions as a virtual encyclopedia of different scholastic perspectives on Buddhism of the time. The [VAIBHĀSIKA](#) school of Sarvāstivāda abhidharma exegesis, which based itself on this compilation, was centered in the regions of Gandhāra and Kashmir. The [KĀŚYAPĪYA](#) and [BAHUŚRUTĪYA](#) schools added to the significant presence of Buddhism in the region.

[Gāndhārī](#). A [PRAKRIT](#) language of the [GANDHĀRA](#) region of northwest India, which was one of the principal languages used in the early transmission of Buddhism into China. The transcriptions of Buddhist technical terminology found in many of the earliest Buddhist texts translated into Chinese indicate that these texts were written in the Gāndhārī language, not classical Sanskrit. These Chinese transcriptional data from Gāndhārī and other Prakrits have also been used by historical linguists to reconstruct early Chinese phonology and Han-dynasty spoken dialects. Gāndhārī exhibits some tendency toward metathesis (transposition) of syllables—e.g., G. jambodaṇa for S. jāmbūnada or P.

jambonada (“golden”)—a tendency that is noted in Chinese transcriptions. Gāndhārī also tends to show vocalic weakening, e.g., S. ajita > G. ayuda. The extant Gāndhārī corpus consists entirely of mainstream Buddhist materials with little evidence of the [MAHĀYĀNA](#).

[gandharva](#). (P. gandhabba; T. dri za; C. gantapo/zhongyun youqing; J. kendatsuba/chūun’ujō; K. kōndalba/chungon yujōng 乾闥婆/中蘊有情). A Sanskrit term whose folk etymology is “fragrance eaters”; in Buddhist cosmology it is most often translated as “celestial musicians”; in the context of the cycle of rebirth, gandharva refers to a “transitional being” that bridges the current and future existence. (The CJK uses a transcription for the former denotation, and the translation “intermediary being” for the latter.) In the Buddhist cosmological schema, gandharvas are a sort of demigod and one of the eight classes of beings ([ASTASENĀ](#)); they fly through space and serve as musicians in the heavenly court of [INDRA](#) or [ŚAKRA](#), the king of the gods, who presides over the heaven of the thirty-three ([TRĀYĀSTRIMŚĀ](#)) in the sensuous realm of existence ([KĀMADHĀTU](#)). According to Indian mythology, they are married to the celestial nymphs ([APSARAS](#)). The gandharvas get their name from the presumption that they subsist on fragrance ([GANDHA](#)). The term gandharva is also the designation given to the transitional being in the intermediate state ([ANTARĀBHAVA](#); see also [BAR DO](#)), the forty-nine-day period between rebirths in the five or six destinies ([GATI](#)) of [SAMSĀRA](#). Since the transitional being does not take solid food but subsists only on scent, it is also referred to as a gandharva. During this transitional period, the gandharva is searching for the appropriate place and parents for its next existence and takes the form of the beings in the realm where it is destined to be reborn.

[gandharvanagara](#). (T. dri za’i grong khyer; C. gantapo cheng; J. kendatsubajō/gendatsubajō; K. kōndalba sōng 乾闥婆城). In Sanskrit, “city of the [GANDHARVA](#),” a simile frequently employed in Buddhist literature for something that appears to be real but is not. The gandharvanagara is one of the standard similes used to illustrate the premise that all [DHARMAS](#) are illusory and unreal. Other similes include a dream, an illusion, a mirage, an echo, a hallucination, a reflection, an apparition, a flower in the sky ([KHAPUSPA](#)), and the core of a plantain tree. In [NĀGĀRJUNA](#)’s treatment of moral cause and effect, he concludes that the whole apparatus of the Buddhist teaching on [KARMA](#)—the afflictions ([KLEŚĀ](#); of greed, hatred, and delusion), specific actions, the different bodies

beings take depending on their actions, as well as the actors and receivers of the fruition of action—is all like a gandharvanagara, a ray of light or a spark, or a dream. There are several alternative transcriptions of the Sanskrit term in Chinese Buddhist literature. See also [ASTAMĀYOPAMĀ](#).

Gandhavamsa. In Pāli, “History of Books,” a traditional history of Pāli literature, written in Burma by a forest-dwelling monk named Nandapaññā. The text, which is in mixed prose and verse, is dated to the seventeenth century by some scholars and to the nineteenth century by others. The text discusses the arrangement of the tipīṭaka (S. [TRIPITAKA](#)) and the authorship of the commentaries, subcommentaries, and numerous extracanonical treatises on various topics, ranging from grammar to doctrine. While exceedingly short (the original manuscript consisted of only twelve palm leaves), the *Gandhavamsa* has proven invaluable for the historical understanding of the development of Pāli literature.

Gandhavatī. (T. Spos ldan ma; C. Zhongxiangcheng; J. Shukōjō; K. Chunghyangsong 衆香城). In Sanskrit, “City of [Multitudinous] Fragrances,” the city where the [ASTASĀHASRIKĀPRAJÑĀPĀRAMITĀ](#) says that the [BODHISATTVA DHARMODGATA](#) lived and taught the perfection of wisdom ([PRAJÑĀPĀRAMITĀ](#)); an alternate name for the Korean “Diamond Mountains” ([KŪMGANGSAN](#)).

gandhāyatana. (T. dri’i skye mched; C. xiangchu; J. kōsho; K. hyangch’ō 香處). In Sanskrit and Pāli, “olfactory sense field,” i.e., odor ([GANDHA](#)) as it occurs in the list of twelve sense faculties or “bases of cognition” ([ĀYATANA](#)), which serve as the bases for the production of consciousness, viz., the six internal sense bases, or sense organs (eye, ear, nose, tongue, body, and mind) and the six external sense objects (forms, sounds, odors, tastes, tangible objects, and mental phenomena). In the case of odor, the contact ([SPARŚA](#)) between the olfactory sense base ([GHRĀNENDRIYA](#)) and its corresponding olfactory sensory object (gandha) leads to olfactory consciousness ([GHRĀNAVIJÑĀNA](#)).

Gaṅgānadi. (T. Gang gā’i klung; C. Henghe; J. Gōga; K. Hangha 恒河). In Sanskrit and Pāli, the “Ganges River,” the major river in the north of India and, according to Buddhist cosmology, one of the four sacred rivers that flow through the southernmost continent of [JAMBUDVĪPA](#), along with the Sindhu, Vakṣu, and Sītā. Several of the important Indian kingdoms that supported the growth of Buddhism were based in the Ganges River valley, including [KOŚALA](#) in the

middle and [MAGADHA](#) in the lower Ganges valley. The Mauryan dynasty, including its most renowned ruler, [AŚOKA](#), had its capital at the city of [PĀTALIPUTRA](#) on the banks of the river, as did the Gupta dynasty that followed. The sand in the Ganges River ([GAṄĀNADĪVĀLUKĀ](#)) was reputed to be extremely fine in texture, and so is often used in similes in Buddhist texts to refer to an infinity, viz., “as numerous as the sands of the Ganges.”

[Gaṅgānadīvālukā](#). [alt. -vālikā] (T. Gang gā’i klung gi bye ma; C. Henghesha; J. Gōgasha; K. Hanghasa 恒河沙). In Sanskrit and Pāli, “sands of the Ganges,” viz., an “incalculable number.” The sands of the Ganges River were universally reputed to be extremely fine in texture, so the term is often used in similes in Buddhist texts to refer to an “infinity,” e.g., “for world systems as numerous as the sands of the Ganges” (Gaṅgānadīvālukāsamā lokadhātavaḥ), “eons as numerous as the sands of the Ganges” (Gaṅgānadīvālukāsamān kalpān).

[Gangōji](#). (J) (元興寺). See [ASUKADERA](#).

[Gangs ri thod dkar](#). (Gangri Tokar). In Tibetan, lit. “White Skull Snow Mountain,” a mountain and retreat hermitage above [SHUG GSEB](#) nunnery in central Tibet, near [LHA SA](#). The central meditation cave, O rgyan rdzongs, was a primary residence of the [RNYING MA](#) master [KLONG CHEN RAB ’BYAMS](#) and is the location where he composed, edited, and redacted many of his works on the Rnying ma teachings of [RDZOGS CHEN](#).

[Ganjin](#). (C. Jianzhen 鑑真) (688–763). Chinese [VINAYA](#) master and reputed founder of the [RISSHŪ](#) and the monastery of [TŌSHŌDAJI](#) in Japan; also known as Tōdai Wajō. Ganjin was a native of Guangling, Yangzhou, in present-day Jiangsu province. He studied [TIANTAI](#) thought and practice and the vinaya under the vinaya master Dao’an (654–717). Having returned to Yangzhou from his studies in Chang’an and Luoyang, he led an illustrious career at the monastery of Damingsi as a famous lecturer on the vinaya of the [NANSHAN LŪ ZONG](#), and is credited with the establishment of many monasteries. In 733, two monks from Nara, Eiei (d. 748) and Fushō (d.u.), arrived in China. While studying in Chang’an, they learned of Ganjin and headed for Damingsi in 742 to meet him. The next year, Ganjin made his first attempt to go to Japan. After four more failed attempts, Ganjin was finally able to arrive in Japan in 754. During his earlier attempts, Ganjin had lost his eyesight and Eiei had lost his life. Upon his arrival, he was warmly welcomed by retired Emperor Shōmu (r. 724–749) and

the Buddhist community in Japan. In the summer of 754, an ordination platform was prepared at the great Nara monastery of [TŌDAIJI](#), where Ganjin conferred the precepts on Emperor Shōmu and others. A precepts hall was constructed the next year in 755. In 756, Ganjin and [RYŌBEN](#) (689–773), the abbot of Tōdaiji, were appointed to senior ecclesiastical positions at court. A year after Empress Kōken (r. 749–758) abdicated the throne in 758, a new monastery, named Tōritsu Shōdaiji (alt. Tōshōdaiji), was built and granted to Ganjin. In 763, as death neared, Ganjin had a statue of himself made and installed in his quarters at Tōshōdaiji, which remains to this day.
