[ganshijue](#). (J. kanshiketsu; K. kōnsigwŏl 乾屎橛). In Chinese, “dried shit stick,” a [CHAN](#) expression attributed to [LINJI YIXUAN](#) (d. 867), who dismissed the buddha-nature, or [FOXING](#) (what he calls the “true man of no rank”; C. [WUWEI ZHENREN](#)), as being nothing more than a “dried shit stick,” i.e., “useless.” This expression becomes a famous meditative topic ([HUATOU](#)) used in Chan questioning meditation (see [KANHUA CHAN](#)). It also appears in a [GONG’AN](#) exchange attributed to the Tang-dynasty monk [YUNMEN WENYAN](#) (864–949): Once when Yunmen was asked, “What is the Buddha?” he replied, “A dried shit stick.” This gong’an appears as case no. 21 in the [WUMEN GUAN](#) (“Gateless Checkpoint”). This phrase has sometimes been translated as “dried turd,” but the term refers to the toilet utensil, not the excrement.

[ganthadhura](#). In Pāli, lit. the “burden of book learning,” often rendered as the “duty of study,” a term used to describe the monastic vocation of scriptural study. The term is often paired with [VIPASSANĀDHURA](#), the “burden of insight,” referring to the vocation of meditation. Although each of these vocations may be pursued by a monk, in the [THERAVĀDA](#) tradition it has historically typically been the case that a monk chooses one over the other. In Sri Lanka, for example, the more scholarly pursuit of scriptural study is sometimes perceived as the more prestigious course to be undertaken by younger monks, while those who ordain late in life undertake the vocation of meditation. See also [PARIYATTI](#).

[ganying](#). (J. kannō; K. kamŭng 感應). In Chinese, “sympathetic resonance,” or “stimulus and response,” a seminal concept in traditional Chinese philosophy, which is appropriated in early Chinese Buddhism to explain the Buddhist concepts of action ([KARMA](#)) and grace (i.e., the “response” of a buddha or [BODHISATTVA](#) to a supplicant’s invocation, or “stimulus”). Ganying is a mode of seemingly spontaneous (although not “uncaused”) response that occurs naturally

in a universe conceived holistically in terms of pattern or “principle” ([LI](#)) and interdependent order. The notion itself is deceptively simple: objects belonging to the same category or class are conceived as resonating spontaneously with each other, just as would two identically tuned strings on a pair of zithers. The notion of resonance was used in traditional Chinese philosophy to explain or rationalize the mechanism behind the elaborate system of correlated categories generally known as five-phase (wuxing) thought—viz., the primary elements of metal, wood, water, fire, and soil. According to early Chinese cosmology, the underlying principles and patterns of the universe seemingly give rise to, or resonate spontaneously with, correlative manifestations in the physical world. The Chinese conception of the universe as an interconnected harmonious whole finds expression in theories concerning the cyclic progression of the five phases and yin (dark) and yang (light), as well as in elaborate prescriptions pertaining to the ritual life of the court. The universe, according to this view, is in a state of continual motion and flux. The patterns of change are the result of the cyclic interactions between the five phases and the forces (or vital energies, C. qi) of yin and yang, which tend naturally in the direction of rhythmic balance and harmony. Humans do not stand apart from the natural universe but rather constitute a fundamental and integral part of this whole. Early Buddhist thinkers in China adapted the mechanism of sympathetic resonance to explain in Chinese terms how an action (karman) performed in one time period could evoke a corresponding response, or fruition ([VIPĀKA](#)), in another. In addition, sympathetic resonance was used by early Chinese Buddhist thinkers to make sense of the notion of grace. In this later sense, sentient beings’ faith ([ŚRADDHĀ](#)) and/or roots of virtue ([KUSĀLAMŪLA](#)) would invoke a “sympathetic response” in the minds of the buddhas and bodhisattvas, which prompts them to respond accordingly with salvific grace. In the [PURE LAND](#) traditions, sentient beings’ recitation of the name of [AMITĀBHA](#) (see [NIANFO](#)) creates a sympathetic response in the mind of that buddha, which prompts him in turn to bring them to his pure land, where they may become enlightened. The rubric of ganying is just as prevalent in popular religious tracts in China, where it refers to the principle of moral retribution—the belief that one’s good and evil deeds will result in corresponding rewards and punishments. While the Chinese notion of moral retribution (bao) meted out in this life or the next was indebted to Buddhist notions of karman and rebirth, in the premodern period, such retribution emerged as a fundamental principle of Chinese popular religious belief and practice, irrespective of one’s specific religious affiliation. This doctrine was

propagated through innumerable tales of miraculous retribution—such as “numinous attestation” (*lingyan*), “responsive attestation” (*yingyan*), or “numinous response” (*lingying*), and so on—that “attested” (*yan*) to the reality of the “numinous” or “supernatural” (*ling*) and the inevitability of divine justice.

[Gaofeng heshang Chanyao](#). (J. Kōhō oshō Zen’yō/Kōbō oshō Zen’yō; K. Kobong hwasang Sōnyo 高峰和尚禪要). In Chinese, “Master Gaofeng’s Essentials of [CHAN](#),” often known by its abbreviated title *Chanyao* (J. Zenyō; K. Sōnyo), “Essentials of Chan.” The text is best known for its exposition of the “three essentials” ([SANYAO](#)) of Chan questioning meditation ([KANHUA CHAN](#)): the great faculty of faith, great fury, and great doubt ([YIQING](#)). The text was republished in Korea in 1399, where it became widely read as a primer on the practice of [GONG’AN](#) meditation. Since the seventeenth century, Korean Buddhist seminaries (*kangwŏn*) have included the *Chanyao/Sōnyo* as one of the four books in the [SAJIP](#) (Fourfold Collection), the core of the Korean monastic curriculum.

[Gaofeng Yuanmiao](#). (J. Kōhō Genmyō; K. Kobong Wōnmyo 高峰原妙) (1238–1295). Yuan-dynasty Chinese [CHAN](#) monk in the [YANGQI PAI](#) of the [LINJI ZONG](#). Gaofeng was a native of Suzhou in present-day Jiangsu province. He was ordained at the age of fourteen and two years later began his studies of [Tiantai](#) thought and practice under Fazhu (d.u.) at the monastery of Miyinsi. He later continued his studies under Chan master [Wuzhun Shifan](#)’s disciples Duanqiao Miaolun (1201–1261) and Xueyan Zuqin (1215–1287). Gaofeng trained in Chan questioning meditation ([KANHUA CHAN](#)), and Xueyan Zuqin taught him the necessity of contemplating his meditative topic ([HUATOU](#)) not just while awake, but also during dreams, and even in dreamless sleep. (In his own instructions on [GONG’AN](#) practice, Gaofeng eventually used the same question Zuqin had asked him: “Do you have mastery of yourself even in dreamless sleep?”) In 1266, Gaofeng went into retreat at Longxu in the Tianmu mountains of Linan (in present-day Zhejiang province) for five years, after which he is said to have had a great awakening when the sound of a falling pillow shattered his doubt ([YIQING](#)). In 1274, he began his residence at a hermitage on Shuangji peak in Wukang (present-day Zhejiang province), and in 1279 he began teaching at Shiziyan on the west peak of the Tianmu mountains. He subsequently established the monasteries of Shizisi and Dajuesi, where he attracted hundreds of disciples, including the prominent [Zhongfeng Mingben](#) (1263–1323). He was given the posthumous title Chan Master Puming Guangji (Universal

Radiance and Far-reaching Salvation). Gaofeng is most renowned for his instruction on the “three essentials” ([SANYAO](#)) of kanhua Chan practice: the great faculty of faith, great fury, and great doubt. Gaofeng’s teachings are recorded in his discourse record, the *Gaofeng dashi yulu*, and his [GAOFENG HESHANG CHANYAO](#), better known as simply the *Chanyao* (“Essentials of Chan”; K. Sōnyo), which has been a principal text in Korean monastic seminaries since at least the seventeenth century. Gaofeng is also known for his famous gong’an: “Harnessing the moon, the muddy ox enters the sea.”

[Gaoseng zhuan](#). (J. Kōsōden; K. Kosŭng chŏn 高僧傳). In Chinese “Biographies of Eminent Monks,” also known as the *Liang gaoseng zhuan*, a collection of biographies of famous and/or archetypal monks compiled by the monk Huijiao (497–554) of the Liang dynasty. The *Gaoseng zhuan* contains the biographies of nearly five hundred monks (253 full biographies and 243 miscellaneous figures) who were active in China from 67 to 519 CE. In compiling his collection, Huijiao drew upon various sources, including epigraphy, oral interviews, and extant literary works. He categorized the biographies into ten sections: translators, exegetes, thaumaturges (shenyi), meditators, [VINAYA](#) masters, self-immolators (wangshen), chanters of scriptures, benefactors, hymnodists (jingshi), and propagators (changdao). Huijiao’s collection became the standard followed in subsequent biographical collections, such as [DAOXUAN](#)’s [XU GAOSENG ZHUAN](#) and [ZANNING](#)’s [SONG GAOSENG ZHUAN](#).

[garanbō](#). (伽藍法). In Japanese, lit. “temple dharma,” viz., “temple lineage.” Garanbō refers to the practice of inheriting the lineage of a temple (i.e., the lineage of the temple’s founder) regardless of the monastic lineage one might have inherited earlier from one’s teacher. By the Edo period, most temples and monasteries belonging to the [ZENSHŪ](#) in Japan required monks to follow the garanbō system. Through the garanbō system, monasteries built by the founder of a lineage were able to secure financial and spiritual support from a network of temples belonging to that lineage.

[garbhadhātu](#). (S). See [TAIZŌKAI](#).

[Garland Sutra](#). See [AVATAMSAKASŪTRA](#).

[garuda](#). (P. garuḍa/garuḷa; T. khyung/mkha’ lding; C. jialouluo; J. karura; K. karura 迦樓羅). In Sanskrit and Pāli, mythical “golden-winged bird,” one of the

eight classes of nonhuman beings ([ASTASENĀ](#)) who are often in attendance during [ŚĀKYAMUNI](#)'s sermons. In traditional Indian mythology, the garuḍa was a golden-winged bird who was the deification of the sun's brilliance; thus, like the phoenix in Western mythology, it served as a symbol of fire or flame. Garuḍas served as the mount of Viṣṇu and were the mortal enemies of [NĀGAs](#) and snakes. The garuḍa was said to be fantastic in size, with a massive wingspan (some texts say as wide as 330 [YOJANAs](#)), and carried either a wish-fulfilling gem ([CINTĀMANI](#)) or a talisman around its neck. Its wings were said to be adorned with marvelous gems, and it had a huge gullet that would allow it slowly to digest enormous amounts of food. Garuḍas are sometimes portrayed in Buddhist art as having the head and wings of an eagle and the body of a man. [JĀTAKA](#) stories describe garuḍas as giant birds, massive in both size and strength, which are capable of splitting the ocean by flapping their wings, creating an enormous breeze known as the garuḍa wind. The [SAMYUTTANIKĀYA](#) mentions that garuḍas roost in the forest of silk-cotton trees, and their nests are in danger of being crushed by Sakka's (S. [ŚĀKRA](#); [INDRA](#)) chariot as it speeds through the forest. Garuḍas eat only flesh and are the enemies of nāgas, which are their main food. In the jātakas, garuḍas are said to live on the nāga island of Seruma (also called, simply, [NĀGADĪPA](#)). With their garuḍa wind, they can lift into the air nāgas that are a thousand fathoms long, uprooting the banyan trees around which the snakes wrap themselves. Besides possessing impressive strength, garuḍas are also described in the jātakas as having supernatural powers, such as in the *Sussondī Jātaka*, where garuḍas use their special powers to plunge the whole city into darkness in order to carry off Queen Sussondī. Garuḍas were formerly considered to be wrathful creatures but, after having been converted by the Buddha, they now protect his teachings. In both mainstream and [MAHĀYĀNA](#) materials, garuḍas are said to pay homage to the Buddha as one of a group of eight mythical classes of nonhuman beings (aṣṭasenā): divinities ([DEVA](#)), nāgas, demons ([YAKSA](#)), celestial musicians ([GANDHARVA](#)), demigods ([ASURA](#)), half-human half-horse (or half-bird) celestial musicians ([KIMNARA](#)), and snake spirits ([MAHORĀGA](#)). In Buddhist tantra garuḍas are a [DHARMAPĀLA](#) and appear in the [PARIVĀRA](#) (retinue) of various tantric deities, as both companion and mount. In tantric Buddhism there exists a group known as the pañcagaruḍa (khyung rigs lnga): the garuḍas of the Buddha, karma, ratna, vajra, and padma families.

[gate gate pāragate pārasamgate bodhi svāhā](#). (T. ga te ga te pā ra ga te pā ra saṃ ga te bo dhi svā hā; C. jiedi jiedi boluojiedi boluosengjiedi puti sapohe; J.

gyatei gyatei haragyatei harasōgyatei boji sowaka; K. aje aje paraaje parasūngaje moji sabaha 揭帝揭帝波羅揭帝波羅僧揭帝菩提薩婆訶). A Sanskrit [MANTRA](#) contained in the [PRAJÑĀPĀRAMITĀHRDAYASŪTRA](#) (“Heart Sūtra”). At the conclusion of the [SŪTRA](#), the [BODHISATTVA AVALOKITEŚVARA](#) says to [ŚĀRIPUTRA](#), “Therefore, the mantra of the perfection of wisdom is the mantra of great wisdom, the unsurpassed mantra, the unequalled mantra, the mantra that completely pacifies all suffering. Because it is not false, it should be known to be true. The mantra of the perfection of wisdom is stated thus: gate gate pāragate pārasaṃgate bodhi svāhā.” Although most mantras are not translatable, this one can be roughly rendered into English as “gone, gone, gone beyond, gone completely beyond, enlightenment, svāhā” (svāhā is an interjection, meaning “hail,” commonly placed at the end of a mantra). “Gate” in the mantra is most probably a vocative of gatā addressed to the goddess [PRAJÑĀPĀRAMITĀ](#) (the iconographic representation of perfect wisdom); hence, the mantra may be addressed to Prajñāpāramitā and mean, “You who have gone, gone, gone beyond,” etc. Given the ubiquity of the *Prajñāpāramitāhrdayasūtra* in [MAHĀYĀNA](#) Buddhism and its frequent ritual chanting by monks in both East Asia and Tibet, the mantra has been the subject of extensive commentary. Thus, some commentators correlate the first five words with the five paths ([PAÑCAMĀRGA](#)) to buddhahood: the first “gate” indicates the path of accumulation ([SAMBHĀRAMĀRGA](#)); the second “gate,” the path of preparation ([PRAYOGAMĀRGA](#)); “pāragate,” the path of vision ([DARŚANAMĀRGA](#)); “pārasaṃgate,” the path of cultivation ([BHĀVANĀMĀRGA](#)); and [BODHI](#), the adept path ([AŚAIKSAMĀRGA](#)). Such an interpretation is in keeping with the Indian scholastic view of the [PRAJÑĀPĀRAMITĀ](#) sūtras, where it is said that the sūtras have two teachings, one explicit and one implicit. The explicit teaching is emptiness ([ŚŪNYATĀ](#)) and the implicit teaching is the various realizations ([ABHISAMAYA](#)) of the bodhisattva along the path to buddhahood. From this perspective, everything in the sūtra up to the mantra provides the explicit teaching and the mantra provides the implicit teaching. Other commentators state that the first part of the sūtra (up to the mantra) is intended for bodhisattvas of dull faculties and that the mantra is intended for bodhisattvas of sharp faculties ([TĪKSNENDRIYA](#)). Some of the commentators include “it is thus” (tadyathā) in the mantra and add om̐ at the beginning. Although the presence of [DHĀRANĪ](#) is relatively common in Mahāyāna sūtras, something that is explicitly called a mantra is not, leading some commentators to consider whether the *Prajñāpāramitāhrdayasūtra* should be classified as a sūtra or a [TANTRA](#).

gāthā. (T. tshigs su bcad pa; C. ji; J. ge; K. ke 偈). In Sanskrit and Pāli, “odes” or “religious verse,” typically listed as the fourth of the Pāli ninefold ([NAVAṄGĀ\[PĀVACANA\]](#)) and Sanskrit twelvefold ([DVĀDAŚĀṄGA\[PRAVACANA\]](#)) divisions of the traditional genres of Buddhist literature as classified by composition style and content. Gāthās are often written in quatrains of four lines of eight syllables apiece. The gāthā genre is closely related to [GEYA](#), “verse narratives” or “verse interspersed with prose”; however, gāthā does not include the geya’s interspersed prose narration and is not necessarily the verse reiteration of a preceding prose narrative.

gati. (T. ’gro ba; C. qu; J. shu; K. ch’wi 趣). In Sanskrit and Pāli, “destiny,” “destination,” or “bourne,” one of the five or six places in [SAMSĀRA](#) where rebirth occurs. In ascending order, these bournes are occupied by hell denizens ([NĀRAKA](#)), hungry ghosts ([PRETA](#)), animals ([TIRYAK](#)), humans ([MANUSYA](#)), and divinities ([DEVA](#)); sometimes, demigods ([ASURA](#)) are added between humans and divinities as a sixth bourne. These destinies are all located within the three realms of existence ([TRILOKA\[DHĀTU\]](#)), which comprises the entirety of our universe. At the bottom of the sensuous realm ([KĀMADHĀTU](#)) are located the denizens of the eight hot and cold hells (nāraka), of which the lowest is the interminable hell (see [AVICI](#)). These are said to be located beneath the continent of [JAMBUDVĪPA](#). This most illfated of existences is followed by hungry ghosts, animals, humans, demigods, and the six sensuous-realm divinities, who live on [MOUNT SUMERU](#) or in the heavens directly above it. Higher levels of the divinities occupy the upper two realms of existence. The divinities of the [BRAHMALOKA](#), whose minds are perpetually absorbed in one of the four meditative absorptions ([DHYĀNA](#)), occupy seventeen levels in the realm of subtle materiality ([RŪPADHĀTU](#)). Divinities who are so ethereal that they do not require even a subtle material foundation occupy four heavens in the immaterial realm ([ĀRŪPYADHĀTU](#)). The divinities in the immaterial realm are perpetually absorbed in formless trance states, and rebirth there is the result of mastery of one or all of the immaterial dhyānas ([ĀRŪPYĀVACARADHYĀNA](#)). The bottom three destinies, of hell denizens, hungry ghosts, and animals, are referred to as the three evil bournes ([DURGATI](#)); these are destinies where suffering predominates because of the past performance of primarily unvirtuous actions. In the various levels of the divinities, happiness predominates because of the past performance of primarily virtuous deeds. By contrast, the human destiny is thought to be ideally suited for religious training because it is the only bourne where both suffering and

happiness can be readily experienced in the proper balance (not intoxicated by pleasure or racked by pain), allowing one to recognize more easily the true character of life as impermanent ([ANITYA](#)), suffering ([DUHKHA](#)), and nonself ([ANĀTMAN](#)). Some schools posit a transitional “intermediate state” ([ANTARĀBHAVA](#)) of being between past and future lives within these destinies. See also [DAŚADHĀTU](#).

[Gautama](#). (P. Gotama; T. Go ta ma; C. Jutan; J. Kudon; K. Kudam 瞿曇). The family name of the historical Buddha, also known as [ŚĀKYAMUNI](#) Buddha. He was a member of the [ŚĀKYA](#) tribe of what is today southern Nepal (hence his epithet Śākyamuni, “Sage of the Śākyas”). Within that group, his family or clan ([GOTRA](#)) was Gautama. His name means “descendants of Gotama” in Sanskrit, with Gotama (lit. “Excellent Cow”) being the name of several brāhmaṇas of ancient India, including a poet of the *R̥g Veda*. Thus, the name of the Buddha’s tribe or ethnic group was Śākyā, the name of his family or clan was Gautama, and his given name was [SIDDHĀRTHA](#). In Pāli literature, he is more commonly referred to as Gotama Buddha; in Mahāyāna texts, Śākyamuni Buddha is more common.

[Gautamī, Mahāprajāpatī](#). See [MAHĀPRAJĀPATĪ](#).

[Gavāmpati](#). (P. Gavampati; T. Ba glang bdag; C. Jiaofanboti/Niuzhu; J. Kyōbonhadai/Goshu; K. Kyobōmbaje/Uju 憍梵波提/牛主). In Sanskrit and Pāli sources, the name of an [ARHAT](#) disciple of the Buddha. His name literally means “Lord of Cattle,” after a previous lifetime in which he owned many head of cattle. (The Chinese both transcribe, and translate, his name.) Gavāmpati was a companion of the Buddha’s sixth disciple, [YAŚAS](#); he followed his friend into the order and like him also became an arhat. Gavāmpati was known for his special ability in supernatural powers ([RDDHI](#)), which he used in one instance to stem advancing floodwaters that were endangering the lives of the monks. Gavāmpati is said to have been summoned to attend the first Buddhist council (see [COUNCIL, FIRST](#)) of arhats following the Buddha’s [PARINIRVĀNA](#), but decided to pass into [NIRVĀNA](#) rather than attend; as a result of his death, a rule was made that none of the arhats invited to the council were allowed to die until the conclusion of the council. In the eponymous *Gavampatisutta* (in the Pāli [SAMVUTTANIKĀYA](#)), the elder explains that the understanding of suffering (P. dukkha; S. [DUHKHA](#)) subsumes all four of its aspects: its implications, its production, its cessation, and the path leading to its cessation. The Sanskrit text *Mahākarmavibhaṅga* also

speaks of an Ārya Gavāṃpati who converted the inhabitants of Suvāṇṇabhūmi (P. [SUVANNABHŪMI](#)) for a distance of one hundred [YOJANAS](#). ¶ In Burma, Mon legend has it that the novice Gavāṃpati invited the Buddha to preach the dhamma (S. [DHARMA](#)) to the people of Suvāṇṇabhūmi in Lower Burma. The Buddha complied with his request, converting many inhabitants of that border region. The Buddha promised Sirimāsoka, the king of Suvāṇṇabhūmi, that after his parinibbāna (S. parinirvāṇa), Gavāṃpati would carry thirty-two tooth relics to the kingdom so that the king might enshrine them in pagodas for the faithful to worship. The Mons identify their homeland in Lower Burma with Suvāṇṇabhūmi, and date the initial foundation of Buddhism in their region to the Buddha's visit and the arrival of the tooth relics. This Gavāṃpati legend finds no parallel in Pāli sources and most likely derives from Sanskrit sources.

[Gayā-Kāśyapa](#). (P. Gayā-Kassapa; T. Ga ya 'od srung; C. Qieye Jiashe; J. Gaya Kashō; K. Kāya Kasōp 伽耶迦葉). A matted-hair ascetic who was ordained with his two brothers and became an early enlightened disciple of the Buddha. According to the Pāli account, the three brothers were fire worshippers, who practiced austerities on the banks of the Nerañjarā (S. [NAIRAÑJANĀ](#)) river. Gayā-Kāśyapa dwelt at Gayāsīsa with two hundred disciples, while his older brother [URUVILVĀ-KĀŚYAPA](#) (P. Uruvela-Kassapa), dwelled upriver at Uruvelā with five hundred disciples, and the middle brother [NADĪ-KĀŚYAPA](#) (P. Nadī-Kassapa) with three hundred disciples. All three brothers were devoted to the observance of brahmanical fire rituals. Gayā-Kāśyapa also observed the practice of bathing three times in the river in order to wash away sins during the festival of Gayāphaggu. Not long after his enlightenment, the Buddha visited the hermitage of Uruvilvā-Kāśyapa with the intention of converting him and his disciples. Uruvilvā-Kāśyapa mistakenly believed that he was already an arahant (S. [ARHAT](#)) himself and was liberated from the bonds of rebirth. Knowing that Uruvilvā-Kāśyapa could be dissuaded from his false views by a display of yogic power, the Buddha performed numerous magical feats to demonstrate his mastery of iddhi (S. [RDDHI](#)), including subduing a fire serpent ([NĀGA](#)) without being burned, a scene depicted in Indian rock carvings. Using his ability to read Uruvilvā-Kāśyapa's mind, the Buddha was able to dispel his view that he was an arahant and converted him and his disciples. As part of their conversion, they shaved off their long locks and threw them in the river. When Uruvilvā-Kāśyapa's younger brothers Gayā-Kāśyapa and Nadī-Kāśyapa saw all the hair floating downstream, they came to investigate. They in turn accepted the Buddha as their teacher and

entered the order of monks ([SAMGHA](#)), bringing all their disciples along with them. As a result, the Buddha’s community gained a thousand monks. Because of their previous devotions to fire rituals, after their ordination, the Buddha preached to all these new monks the renowned “Fire Sermon” ([ĀDITTAPARIYĀYASUTTA](#)), whereupon the three brothers and their disciples attained arahantship. Gayā-Kāśyapa earned the merit to encounter the Buddha and attain arahantship in a previous life during the time of the buddha Sikhī (S. Sikkhī), when, as a hermit, he encountered that previous buddha walking in the woods and offered him fruit.

[gcod](#). (chö). A Tibetan term, from the verb “to cut” or “to sever;” a Tibetan tantric practice for severing attachment. The full name of the practice is bdud kyi gcod yul, or “the demon to be severed,” and is a Tibetan tantric practice in which the meditator, through visualization, offers his or her body to an assembly of benevolent and malevolent deities as a means of accumulating merit and eliminating attachment to the body. The tradition of gcod, together with that of [ZHI BYED](#) or “pacification,” is commonly classified among eight important tantric traditions and transmission lineages that spread throughout Tibet, the so-called “eight great conveyances that are lineages of achievement” ([SGRUB BRGYUD SHING RTA CHEN PO BRGYAD](#)). The practice was originally promulgated by the twelfth-century female adept [MA GCIG LAB SGRON](#), who described it as a practice that severs (gcod) attachment to one’s body, dualistic thinking, and conceptions of hope and fear. Although usually practiced by solitary meditators in isolated and frightening locations, gcod liturgies are also performed by monastic assemblies—both accompanied by the ritual music of the hand drum (see [DAMARU](#)) and the human leg-bone trumpet. The meditation, rooted in [PRAJÑĀPĀRAMITĀ](#) and [MAHĀMUDRĀ](#), involves the visualized offering of the adept’s body, flesh, blood, bones, and organs, as food for a vast assembly of beings, including local spirits and demons. It is also commonly used as a ritual for healing or protection.

[Gcung ri bo che](#). (Chung Riwoche). A residence of the renowned Tibetan adept [THANG STONG RGYAL PO](#), founded by the master between the years 1449 and 1456. Situated west of Ding ri on the banks of the Gtsang po (Tsangpo) river, it is one of several large multichapel [STŪPAS](#) located in central Tibet. Others include the Rgyal rtse sku ’bum, Jo nang sku ’bum, Byams pa gling sku ’bum, and Rgyang bum mo che. The seven-story structure contains murals inspired by

the cross-cultural fusion of styles at [ZHWA LU](#) monastery, marking an important period in the history of Tibetan painting.

[Gdams ngag mdzod](#). (Dam Ngak Dzö). In Tibetan, lit. “Treasury of Practical Instructions,” an encyclopedic and systematic presentation of the practical instructions (S. [UPADEŚA](#); T. gdams ngag) of tantra according to numerous traditions of Tibetan Buddhist teaching, compiled and edited by the nineteenth-century master [’JAM MGON KONG SPRUL BLO GROS MTHA’ YAS](#). The collection, encompassing ten volumes, forms one of Kong sprul’s five treasuries ([KONG SPRUL MDZOD LNGA](#)) and illustrates his nonsectarian ([RIS MED](#)) perspective by including instructions from all traditions counted among the so-called “eight great conveyances that are lineages of attainment” ([SGRUB BRGYUD SHING RTA CHEN PO BRGYAD](#)).

[gdan sa gsum](#). (den sa sum). In Tibetan, lit. “three seats” or “three foundations,” a term that refers to the three principal monasteries of the [DGE LUGS](#) sect of Tibetan Buddhism in the [LHA SA](#) area: [DGA’ LDAN](#), [’BRAS SPUNGS](#), and [SE RA](#). [TSONG KHA PA](#), with the patronage of the powerful Phag mo gru family, founded Dga’ ldan monastery in 1409; two followers of Tsong kha pa, [’JAM DBYANGS CHOS RJE BKRA SHIS DPAL LDAN](#) and Byams chen chos rje Shākya ye shes (1354–1435), founded ’Bras spungs (1416) and Se ra (1419) monasteries, respectively, apparently at Tsong kha pa’s urging. These three monasteries developed into the institutional center of Dge lugs power and influence.

[Gdan sa mthil](#). (Den sa til). A monastery in southern Tibet, north of Rtsed thang (Tsetang), founded in 1158 by the influential [BKA’ BRGYUD](#) hierarch [PHAG MO GRU PA RDO RJE RGYAL PO](#). It became a powerful political center during the late fourteenth and fifteenth centuries under the patronage of the Phag mo gru family.

[geli](#). (J. kyakuryaku; K. kyōngnyōk 隔塵). In Chinese, “separation,” a term used in the [HUAYAN](#) and [TIANTAI](#) traditions to refer to the understanding of reality in terms of the discriminative phenomena of the conventional realm. “Separation” is distinguished from “consummate interfusion” (C. [YUANRONG](#)), which refers to the ultimate state of reality wherein all individual phenomena are perceived to be perfectly interfused and completely harmonized with one another. See [YUANRONG](#).

geli sandi. (J. *kyakuryaku no santai*; K. *kyōngnyōk samje* 隔歷三諦). In Chinese, “differentiated three truths,” also known as the “sequential three truths” (*cidi sandi* 次第三諦). See [SANDI](#), [YUANRONG](#).

Gengo. (J) (玄悟). See [MUKAN FUMON](#).

genjō kōan. (C. *xiancheng gong’an*; K. *hyōnsōng kongan* 現[見]成公案). In Japanese, lit. “presently manifest case,” or “actualized case,” deriving from a term in Chinese law for an “open and shut case,” or someone “caught dead to rights.” The term is sometimes used in the [CHAN](#) school to refer to the universality of buddhahood in all aspects of the mundane world and, for this reason, is occasionally interpreted (rather too freely) as the “kōan of everyday life.” Genjō kōan is one of the seminal terms in the writings of [DŌGEN KIGEN](#) (1200–1253), the putative founder of the [SŌTOSHŪ](#) of Japanese [ZEN](#), and is the title of a treatise written in 1233 that was later anthologized as the first roll of the sixty-and the seventy-five-roll recensions of his magnum opus, the [SHŌBŌGENZŌ](#) (“Treasury of the True Dharma Eye”). The term seems to have first been used by the Tang Chan master Muzhou Daoming (780–877), and more often later by such Song Chan masters as [HONGZHI ZHENGJUE](#) (1091–1157) and [YUANWU KEQIN](#) (1063–1135). Dōgen deploys the term to criticize the [RINZAI](#) ([LINJI](#)) usage of kōan (C. [GONG’AN](#)) as a means of catalyzing a breakthrough into awakening, thus making genjō kōan a polemical device for distinguishing his presentation of Zen thought and practice from rival schools. Although Dōgen never directly defines it, in his usage, genjō kōan indicates the way in which all things are constantly manifesting their inherent buddhahood in the here and now; thus, Buddhist cultivation entails simply performing a single practice, such as seated meditation (J. [ZAZEN](#)), so completely that the enlightenment inherent in that practice becomes “an open and shut case.”

Genshin. (源信) (942–1017). Japanese [TENDAISHŪ](#) monk, scholar, and artist, popularly known as [ESHIN SŌZU](#) (Head Monk of Eshin) because he spent much of his life at the monastery of Eshin at [YOKAWA](#) on [HIEIZAN](#). Genshin was born in Yamato province (present-day Nara prefecture), but after losing his father at a young age, he was put in the care of the Tendai center on Mt. Hiei. It is believed that during his teens he formally joined the institution and became a student of the Tendai reformer [RYŌGEN](#) (912–985). Genshin first gained a name for himself in 974 due to his sterling performance in an important debate at Mt. Hiei. Eventually, Genshin retired to the secluded monastery of Shuryōgon’in in

Yokawa, where he devoted the rest of his life primarily to scholarship. Genshin wrote on a wide array of Buddhist topics related to both Tendai and [PURE LAND](#) practices and is also regarded as the founder of the Eshin school of Tendai, which espoused the notion that everyone is inherently awakened (J. [HONGAKU](#)). While it is uncertain if any of his art is extant, Genshin was both a sculptor and painter, and his paintings of the buddha Amida (S. [AMITĀBHA](#)) welcoming believers into the [PURE LAND](#), referred to as raigōzu, helped to popularize this subject in Japan. The most influential of Genshin's works was the [ŌJŌ YŌSHŪ](#) ("Collection of Essentials on Going to Rebirth" [in the pure land]), written in 985, one of the first Japanese treatises on the practice of nenbutsu (C. [NIANFO](#)) and the soteriological goal of rebirth in the pure land, playing an important role in laying the groundwork for an independent pure land tradition in Japan a century later. The *Ōjō yōshū* offers a systematic overview of pure land thought and practice, using extensive passages culled from various scriptures and treatises, especially the writings of the Chinese pure land monks [DAOCHUO](#) and [SHANDAO](#). Genshin contends that the practice of nenbutsu is relatively easy for everyone and is appropriate for people during the dharma-ending age (mappō; see [MOFA](#)), especially as a deathbed practice. The *Ōjō yōshū* was also one of the few texts written in Japan that made its way to China, where it influenced the development of pure land Buddhism on the mainland. Japanese Buddhists have long debated whether Genshin should be primarily viewed as affiliated with either the Tendai or pure land schools. In fact, however, this distinction was not relevant during Genshin's own lifetime, since an independent pure land tradition did not yet exist at that point. Given the Tendai notion that all beings can attain buddhahood through a variety of means, an argument he supports in his *Ichijō yōketsu* ("Essentials of the One Vehicle"), Genshin asserts that nenbutsu (C. nianfo) practice is the best method for reaching this goal. Pure land practice for Genshin therefore fits under the larger umbrella of Tendai thought. Nonetheless, Genshin's presentation of pure land beliefs and practice offered a foundation for the development of pure land Buddhism in Japan, notably in its influence on [HŌNEN](#) (1133–1212) and [SHINRAN](#) (1173–1263); for this reason, the [JŌDO SHINSHŪ](#) school considers Genshin to be the sixth patriarch in its lineage.

[Ge sar](#). A legendary king who is the hero of the most famous Tibetan cycle of epic poetry, traditionally sung by bards; it is said to be the longest work of literature in the world. The songs recount the birth and adventures of Ge sar, the king of the land of Gling. The name Ge sar apparently derives from Zoroastrian

sources and stories of Ge sar appear in a number of Central Asian languages. It is unclear whether Ge sar was a historical figure; elements of the songs seem to derive from the period of the later dissemination ([PHYI DAR](#)) of Buddhism to Tibet, although the earliest version of the songs in the form they are known today dates to the fifteenth century. In the songs, the world has fallen into chaos and various gods such as Brahmā and [ŚAKRA](#), and various Buddhist figures, such as [PADMASAMBHAVA](#) and the buddha [AMITĀBHA](#), decide that a hero should descend into the world to restore order. That hero is Ge sar, who defeats many foes, including the evil king of Hor.

[Geshe Rabten](#). See [RABTEN, GESHE](#).

[Geshe Wangyal](#). See [WANGYAL, GESHE](#).

[geteng Chan](#). (J. kattōzen; K. kaltŭng Sŏn 葛藤禪). In Chinese, “kudzu Chan”, a term for convoluted conceptual descriptions of [CHAN](#) doctrine or elaborate belletristic accounts of Chan, which are compared to the creeping vines of the kudzu plant. Just as the kudzu plant completely entangles everything in its vicinity, creating an impenetrable mass of vines, so too do the creeping tendrils of conceptualization (cf. [PRAPAÑCA](#)) entangle the mind, eventually overwhelming it. The term is often used as a synonym for the “lettered chan” ([WENZI CHAN](#)) approach championed by [JUEFAN HUIHONG](#) (1071–1128) of the Northern Song dynasty.

[gewai Chan](#). (J. kakugai no Zen/kakuge no Zen; K. kyōgoe Sŏn 格外禪). In Chinese, lit. “unconventional Chan” (lit. “the Chan that goes beyond all conventions”), referring to one of the styles of practice and pedagogy associated with the [CHAN ZONG](#); often considered to be equivalent to the supreme vehicle Chan ([ZUISHANGSHENG CHAN](#); K. ch’oesangsŭng Sŏn) that is transmitted by the patriarchs ([ZUSHI](#)). This form of Chan is said to transcend all conventional standards and styles because its approach transcends all explanations that rely upon language. Based on its fundamental distrust of the ability of language to convey truth, this form of Chan is said to use “unconventional words” (gewai ju; K. kyōgoe ku) in its teachings, i.e., absurdities, contradictions, negations, double negations, etc., so that its listeners will come to realize the limits of language itself and thereby seek instead true knowledge that transcends verbal explanations. In addition to this unconventional usage of language, gewai Chan also uses nonverbal expressions, such as shouting and beatings, and many other

illocutionary means of teaching. The ideas implicit in this form of Chan are formulated in the well-known phrases retrospectively attributed to [BODHIDHARMA](#) by the Chan masters of the Song dynasty: “a separate transmission outside the teaching” ([JIAOWAI BIEZHUAN](#)), “mind-to-mind transmission” ([YIXIN CHUAN XIN](#)), “no establishment of words and letters” ([BULI WENZI](#)), and “directly pointing to the human mind” ([ZHIZHI RENXIN](#)). The idea of unconventional Chan also was at times used polemically, i.e., to refer to a form of Chan superior to the more expository style of its opponents, which was denigrated as “theoretical Chan” (yili Chan) or “lettered Chan” ([WENZI CHAN](#)).

geya. (P. geyya; T. dbyangs bsnyad; C. qiye; J. giya; K. kiya 祇夜). In Sanskrit, “verse narrations,” or “songs”; the verse summaries, sometimes with preceding prose material, included in the Buddhist scriptures. The geya are typically listed as the second of the Pāli ninefold ([NAVANĠA](#)) and Sanskrit twelvefold ([DVĀDAŚĀNĠA](#)) divisions of the traditional genres of Buddhist literature as classified by composition style and content. These verses are sometimes written in the traditional Sanskrit [ŚLOKA](#) form, with four lines of eight syllables apiece. The geya genre is closely related to [GĀTHĀ](#), religious verse, but may in some cases be distinguished by being the verse reiteration of a preceding prose narrative or by sometimes having verse interspersed with prose narration.

geyi. (J. kakugi; K. kyōgūi 格義). In Chinese, “matching concepts,” or “categorized concepts”; geyi has typically been explained as a method of translation and exegesis that was supposedly popular during the incipency of Buddhism in China. It has been presumed that Buddhist translators of the Wei and Jin dynasties borrowed terms and concepts drawn from indigenous Chinese philosophy (viz., “Daoism”) to “match” (ge) the “meaning” (yi) of complicated and poorly understood Sanskrit Buddhist terminology. For instance, translators borrowed the term wuwei, used in both Chinese Daoist and Confucian writings to refer to “nonaction” or “nondeliberative activity,” to render the seminal Buddhist concept of [NIRVĀNA](#). Misunderstandings were rife, however, since the matches would as often distort the Buddhist denotations of terms as clarify them. The technique of geyi has often been assumed by scholars to demonstrate that early Buddhism in China drew from the indigenous Daoist tradition in its initial attempts to make its message intelligible to its new Chinese audience. This view would correspondingly suggest that Daoism provided the inspiration for much of early Buddhist writing in China. This practice of drawing parallels to native

Chinese concepts was criticized as early as the fourth century by the translator and cataloguer [DAO'AN](#) (312–385), who lobbied for the creation of a distinctive Chinese Buddhist vocabulary. Eventually Chinese Buddhists created their own neologisms for Buddhist technical terms, or resorted to transcription (viz., using Sinographs phonetically to transcribe the sound of the Sanskrit words) in order to render particularly significant, or polysemous, terms: e.g., using the transcription *niepan*, rather than the translation *wuwei*, as the standard rendering for *nirvāṇa*. In fact, however, the term *geyi* is quite rare in Chinese Buddhist literature from this incipient period. In the few instances where the term is attested, *geyi* seems instead to refer to Chinese attempts to cope with the use of lengthy numerical lists of seminal factors found in Indian Buddhist doctrinal formulations. This Indian proclivity for categorization is seldom evident in traditional Chinese philosophy and it would have been an extraordinary challenge for Chinese Buddhists to learn how to employ such lists skillfully. Against the received understanding of *geyi* as “matching concepts,” then, the term may instead mean something more akin to “categorized concepts,” referring to this Buddhist proclivity for producing extensive numerical lists of dharmas. See also [FASHU](#).

[Ghanavyūha](#). (T. Rgyan stug po bkod pa/Stug po bkod pa; C. Dasheng miyan jing; J. Daijō mitsugongyō; K. Taesŭng mirōm kyōng 大乘密嚴經). In Sanskrit, the “Dense Array” scripture, now extant only in Chinese and Tibetan translations. This sūtra discusses rebirth in the “dense-array [PURE LAND](#)” of the buddha [VAIROCANA](#), which is known also in the [AVATAMSAKASŪTRA](#) (C. *Huayan jing*) as the lotus-womb (C. *huazang*; S. *kusumatalagarbhavyūhālaṃkāra*) world. Like the [LAṆKĀVATĀRASŪTRA](#), the *Ghanavyūha* expounds upon the doctrines of the matrix of buddhahood ([TATHĀGATAGARBHA](#)) and the storehouse consciousness ([ĀLAYAVIJÑĀNA](#)) and teaches that all phenomena emerge from the storehouse consciousness. The Chinese recension of the sūtra is divided into eight chapters, which describe [ŚĀKYAMUNI](#) Buddha’s visit to Vairocana’s pure land, where he ascends Vairocana’s throne to speak the dharma to the [BODHISATTVA](#) Vajragarbha. Vajragarbha asks for an explanation of absolute truth ([PARAMĀRTHASATYA](#)), which Śākyamuni describes in terms of the nonproduction ([ANUTPĀDA](#)) and nonextinction (*anuccheda*) of the *tathāgatagarbha*. Vajragarbha then explains to other bodhisattvas the characteristics of the *tathāgatagarbha* and *ālayavijñāna*. Two Chinese translations, both in three rolls, were made: the first time c. 676–688 by Divākara, which was most influential within the tradition;

the second by [AMOGHA VAJRA](#) (705–774). There is also a Tibetan translation, which is composed of nine chapters and differs slightly from the Chinese.

ghaṇṭā. (T. dril bu; C. jianzhi; J. kenchi; K. kōnch'i 桴稚). In Sanskrit, “gong”; a resonant instrument used in Buddhist monasteries to announce the time of events, or to assemble the congregation. According to such texts as the [MAHĪŚĀSAKA VINAYA](#), ghaṇṭās are to be sounded when it is time to recite [SŪTRAS](#) and to assemble [SAMGHA](#) members for meals and other activities, or to announce the time of the [UPOSADHA](#) observance. Ghaṇṭās are also ritual bells used in tantric liturgy. When used in conjunction with the [VAJRA](#), the ghaṇṭā is said to represent wisdom ([PRAJÑĀ](#)), while the vajra represents method ([UPĀYA](#)).

Ghost Festival. See [YULANPEN](#).

ghrānavijñāna. (P. ghānaviññāṇa; T. sna'i rnam par shes pa; C. bishi; J. bishiki; K. pisik 鼻識). In Sanskrit, “olfactory consciousness” or “nose consciousness”; one of the five consciousnesses of physical objects (along with those of the eye, ear, tongue, and body) and one of the six sensory consciousnesses (adding the mental consciousness, or [MANOVIJÑĀNA](#)). The olfactory consciousness perceives olfactory objects or fragrances ([GANDHA](#)). Like the other consciousnesses of physical objects, an olfactory consciousness is produced through the contact ([SPARŚA](#)) between an olfactory sensory object (gandha) and the olfactory sense base or nose sense organ ([GHRĀNENDRIYA](#)) and in dependence on three conditions ([PRATYAYA](#)): the object condition ([ĀLAMBANAPRATYAYA](#)), in this case, a fragrance; a dominant condition ([ADHIPATIPRATYAYA](#)), here, the olfactory sense base (ghrāṇendriya); and the immediately preceding condition ([SAMANANTARAPRATYAYA](#)), a prior moment of consciousness. The olfactory consciousness is counted as one of the six sensory consciousnesses ([VIJÑĀNA](#)) and eighteen elements ([DHĀTU](#)).

ghrānāyatana. (P. ghānāyatana; T. sna'i skye mched; C. bichu; J. bisho; K. pich'ō 鼻處). In Sanskrit, “olfactory sense base,” or “base of cognition”; the olfactory sense base or nose sense organ ([GHRĀNENDRIYA](#)) as it occurs in the list of the twelve sense fields ([ĀYATANA](#)), which are called “bases of cognition” because each pair of sense base and sense object produces its respective sensory consciousness. In this case, the contact ([SPARŚA](#)) between an olfactory sensory object ([GANDHA](#)) and the olfactory sense base (ghrāṇendriya) produces an olfactory consciousness ([GHRĀNAVIJÑĀNA](#)).

ghrāṇendriya. (P. ghānindriya; T. sna'i dbang po; C. bigen; J. bikon; K. pigŭn 鼻根). In Sanskrit, “olfactory sense base” or “nose sense organ,” the physical organ located in the nose that makes it possible to perceive fragrances ([GANDHA](#)). This sense base is not the nose itself, but a form of subtle materiality ([RŪPA](#)) located within the nose and invisible to the naked eye; it is said to be shaped like two hollow needles at the root of the nostrils. If this sense organ is absent or damaged, the sense of smell does not function. The olfactory sense base serves as the dominant condition ([ADHIPATIPRATYAYA](#)) for the production of olfactory consciousness ([GHRĀNAVIJÑĀNA](#)). The olfactory sense base is counted among the six sense bases or sense organs ([INDRIYA](#)), the twelve sense fields ([ĀYATANA](#)), and eighteen elements ([DHĀTU](#)).

Gilgit. A region on the northwestern frontier of [KASHMIR](#) in northern Pakistan, also the name of the township where the river Gilgit meets the Indus; a trade route passed through the region, giving it strategic importance. Some associate Gilgit with a region the Tibetans call Bru sha. Its rulers (especially the Turuṣka) supported Buddhism at a number of times during its history, particularly between the sixth and eighth centuries; it fell under the control of the Tibetan kingdom for a time in the late eighth century. A [STŪPA](#) discovered in Gilgit in 1931 yielded one of the largest troves ever discovered of Indian Buddhist manuscripts, associated especially with the [MŪLASARVĀSTIVĀDA](#) offshoot of the [SARVĀSTIVĀDA](#) school and with the [MAHĀYĀNA](#). The discoveries included manuscripts of significant portions of the [MŪLASARVĀSTIVĀDA VINAYA](#), and numerous Mahāyāna texts, including the [SADDHARMAPUNḌARĪKASŪTRA](#) and various [PRAJÑĀPĀRAMITĀ](#) sūtras.

Ginsberg, Allen. (1926–1997). American Beat poet and Buddhist born in Newark, New Jersey. Ginsberg attended Columbia University with the intent of becoming a labor lawyer, but soon fell in with a group that included students such as [JACK KEROUAC](#), and nonstudents, such as William Burroughs, with whom he shared common interests, both literary and otherwise. In 1948, he had a transformative vision while reading William Blake in his Harlem apartment. He moved to San Francisco where he joined the burgeoning poetry movement. In October 1955, he read his most famous work, *Howl*, at the Six Gallery. By his own account, Ginsberg was first introduced to Buddhism in letters he received from Kerouac, in which his friend wrote of suffering as the fundamental fact of existence. He began to read the works of [DAISETZ TEITARO SUZUKI](#), whom he

later met in New York in the company of Kerouac. Ginsberg was intimately involved in the various cultural movements of the 1960s, collaborating with Timothy Leary, Bob Dylan, and Ken Kesey, and protesting actively against the Vietnam War. In 1962, he traveled to India with [GARY SNYDER](#), visiting [BODHGAYĀ](#) and [SĀRNĀTH](#); he also had an audience with the fourteenth [DALAI LAMA](#), who had arrived from Tibet just three years earlier. After experimenting with various forms of Hindu practice, Ginsberg met the Tibetan lama [CHÖGYAM TRUNGPA](#) in 1970, and remained his disciple until Trungpa's death, helping to found the Jack Kerouac School of Disembodied Poetics at Trungpa's Naropa Institute in Boulder, Colorado; in his last years, Ginsberg became a disciple of another Tibetan lama, Gelek Rinpoche. Buddhist themes figure prominently in much of Ginsberg's poetry.

Gishin. (義眞) (781–833). Japanese monk who was the first head (zasu) of the [TENDAISHŪ](#). At a young age, Gishin became the student of the Japanese monk [SAICHŌ](#), who dwelled on [HIEIZAN](#). He later went to the monastery of [DAIANJI](#) and studied the [VINAYA](#) under the Chinese vinaya master [GANJIN](#). Gishin also studied Chinese under Jiken (d.u.) of [TŌDAIJI](#). In 804, the novice Gishin followed his teacher Saichō to China where he primarily served as an interpreter for his teacher. That same year, Saichō and Gishin arrived at the monastery of Guoqingsi on Mt. Tiantai (in present-day Zhejiang province). There, Gishin was ordained, receiving the full monastic precepts. The next year, both Saichō and Gishin received the “perfect teaching” (C. [YUANJIAO](#)) [BODHISATTVA](#) precepts (engyō bosatsukai) of the [FANWANG JING](#) from the reputed seventh patriarch of the [TIANTAI](#) tradition Daosui (d.u.) at the monastery of Longxingsi. Before their return to Japan that year, both Saichō and Gishin purportedly received initiation into the “two realms” ([RYŌBU](#)) of the [KONGŌKAI](#) (vajradhātu) and [TAIZŌKAI](#) (garbadhātu) [MANDALAS](#) from a certain Shunxiao (d.u.) during their sojourn in Yuezhou (present-day Zhejiang province). After Saichō's death in 823, Gishin was given permission to construct a [MAHĀYĀNA](#) precepts platform (daijō kaidan) at his monastery of [ENRYAKUJI](#). In 832, he was appointed the first head (zasu) of the Tendai school on Mt. Hiei.

Glang dar ma. (Langdarma) (r. c. 838–842). The forty-second king of the imperial Tibetan dynasty and, according to traditional sources, an infamous persecutor of Buddhism. Tibetan Buddhist histories portray Glang dar ma as a villainous figure who assassinated his brother, King [RAL PA CAN](#), in 838 in order

to seize the throne. For the next four years, he is said to have engaged in the suppression of Buddhist institutions in favor of the indigenous [BON](#) priests. While his rule did interrupt the process of translating and disseminating Indian Buddhist literature that had commenced during the previous century, recent scholarship maintains that Glang dar ma's persecution amounted to withdrawing state patronage from the increasingly powerful monastic institutions. According to Buddhist chronicles, his reign came to an abrupt end with his assassination in 842 at the hands of the cleric Lha lung Dpal gyi rdo rje. This marked the termination of the royal lineage and the demise of the Tibetan empire, traditionally understood as the end of the early dissemination of Buddhism ([SNGA DAR](#)) and portrayed as the beginning of a dark period that lasted for more than a century.

[Glang 'khor](#). (Langkor). A site in central Tibet associated principally with the eleventh-century Indian adept [PHA DAM PA SANGS RGYAS](#). The small temple of Glang 'khor, located in a village of the same name near the town of Ding ri, marks the location where Pha dam pa sangs rgyas disseminated his teachings on pacification ([ZHI BYED](#)) and severance ([GCOD](#)), primarily to his foremost Tibetan disciple [MA GCIG LAB SGRON](#).

[Glass Palace Chronicle](#). See [HMANNAN MAHAYAZAWIN-DAW-GYI](#).

[Gling ras pa Padma rdo rje](#). (Lingrepa Pema Dorje) (1128–1188). A Tibetan [YOGIN](#) venerated as a founder of the '[BRUG PA BKA' BRGYUD](#) sect of Tibetan Buddhism; also known as Gling chen ras pa (Lingchen Repa) and Gling rje ras pa (Lingje Repa). He trained under the renowned [BKA' BRGYUD](#) master [PHAG MO GRU PA RDO RJE RGYAL PO](#) at [GDAN SA MTHIL](#) monastery and later spent numerous years in solitary meditation retreat. He consecrated the site upon which his principal disciple, [GTSANG PA RGYA RAS YE SHES RDO RJE](#), founded the important 'BRUG PA monastery of [RWA LUNG](#).

[Gnam lcags bar ba](#). (Namchak Barwa). In Tibetan, “Blazing Meteor”; a mountain located in southern Tibet considered to demarcate the western border of the famed hidden land ([SBAS YUL](#)) of [PADMA BKOD](#) and venerated as the repository of numerous hidden treasure texts ([GTER MA](#)). Treasure revealers ([GTER STON](#)) who were active in the area include Sangs rgyas gling pa (Sangye Lingpa, 1340–1396) and Bdud 'dul rdo rje (Dudul Dorje, 1615–1672). According to one explanation of the region's sacred geography, the mountain

forms the left breast of the deity [VAJRAVĀRĀHĪ](#).

Gnas chung. (Nechung). In Tibetan, lit. “Small Place,” a monastery serving as the seat of the [GNAS CHUNG ORACLE](#), Tibet’s state oracle, located near [’BRAS SPUNGS](#) monastery outside [LHA SA](#). According to tradition, on the advice of [ŚĀNTARAŚITA](#), [KHRI SRONG SDE BTSAN](#) invited the tantric thaumaturge [PADMASAMBHAVA](#) to Tibet to subdue spirits hostile to the introduction of Buddhism. Padmasambhava appointed a powerful spirit [PE HAR](#) as the protector of Buddhism of Tibet in general and of [BSAM YAS](#) monastery in particular. The main place (T. gnas chen) of Pe har is in Bsam yas, and a smaller shrine dedicated to his worship (and to the worship of [RDO RJE GRAGS LDAN](#), the chief form in which Pe har carries out his work in Tibet) was located on the site of the present Gnas chung monastery. The monastery became important during the time of the fifth [DALAI LAMA](#) (1617–1682) and his regent [SDE SRID SANGS RGYAS RGYA MTSHO](#), who completed an extensive expansion of the monastery in 1683 as part of a strategy to legitimize the new government of Tibet (the [DGA’ LDAN PHO BRANG](#)). They expanded the role of Pe har and made Nechung monastery the seat of Tibet’s state oracle, introducing new invocations and rituals as an integral part of the monastery’s practices. In the late nineteenth century, O rgyan Phrin las chos ’phel, a lama from [SMIN GROL GLING](#) monastery, introduced a number of [RNYING MA](#) tantric practices to the monastery; his incarnations are called the Gnas chung sprul skus.

Gnas chung oracle. (Nechung). The state oracle of Tibet, known as the Gnas chung chos rje, traditionally based at [GNAS CHUNG](#) monastery outside of [LHA SA](#). During the time of the fifth [DALAI LAMA](#), [PE HAR](#) rgyal po shifted residence from [BSAM YAS](#) to Gnas chung monastery. It is said that, at that time, the medium of Pe har, in a form known as Rdo rje grags ldan, saved the Tibetan people by uncovering a Nepalese plot to poison Tibetan wells. The oracle played an important role in contentious successions of the sixth and seventh Dalai Lamas, acting as a voice of the Tibetans against Chinese interests and predicting the birth of the seventh Dalai Lama in Li thang in Khams, and again assisting in the nineteenth century in the discovery of the thirteenth Dalai Lama. The oracle briefly lost favor due to erroneous predictions regarding the 1904 British invasion of Tibet, but regained his status by exposing a plot against the thirteenth Dalai Lama’s life and then predicting his death in 1933. The oracle was consulted in the search for the current fourteenth Dalai Lama, and in matters

relating to the 1950 Chinese Communist invasion of Tibet and subsequent events of the Chinese occupation, leading up to the Dalai Lama's escape into exile in 1959. In exile the Gnas chung chos rje has continued to play his traditional role of advising the Tibetan government.

[gnas skor ba](#). (nekorwa). In Tibetan, lit. "going around a [sacred] place," generally translated as "pilgrimage," a pervasive practice of Tibetan Buddhism. Tibetan pilgrimage is most often a communal practice, involving a group of persons of the same family, the same village, or the same monastery, in some cases led by one or more monks or lamas who provide information and religious instruction along the route. Pilgrimage is undertaken to accrue merit and to expiate transgressions, but it also plays an important social and economic role in Tibetan society. Once the pilgrimage begins, pilgrims will do everything possible not to turn back; failure to complete the journey is thought to be like breaking a vow. Pilgrims generally traverse the pilgrimage route on foot; it is said that more merit is accrued if one walks rather than travels on horseback. The length of the pilgrimage varies according to the distance traveled, the season, the number of mountain passes to be crossed, and the number of sites to be visited. The trip can sometimes take several years, especially if the pilgrims perform prostrations along the entire route. Pilgrims make offerings at the monasteries and temples they visit, both on behalf of themselves but also for relatives who have not made the journey. Monasteries offer pilgrims ceremonial scarves (*kha btags*), blessed pills, and sometimes also food and lodging. Among the most important destinations for pilgrims is the city of [LHA SA](#). There are eight famous mountains and mountain ranges, including Mount [KAILĀSA](#) in western Tibet and Dag pa shel ri (the Crystal Mountain) in [TSA RI](#), a site sacred to [CAKRASAMVARA](#) on the border with eastern Nepal, and further afield the sacred sites in India ([BODHGAYĀ](#), [SĀRNĀTH](#), etc.) and in China ([WUTAISHAN](#), etc.). See also [MAHĀSTHĀNA](#).

[gnosis](#). See [JÑĀNA](#).

[Gnubs chen Sangs rgyas ye shes](#). (Nupchen Sangye Yeshe) (c. 832–962). A Tibetan Buddhist master revered as one of the twenty-five original disciples of the Indian tantric adept [PADMASAMBHAVA](#). He is the author of the [BSAMGTAN MIGSGRON](#), an early text explaining, among other systems, [RDZOGS CHEN](#). According to traditional biographies, he was born in to the Gnubs (Nup) clan, an important clan that provided ministers to the kings in central Tibet. In his youth, he studied

with Padmasambhava and numerous other masters in India, Nepal, and northwest India. He later made seven trips to Nepal and India, collecting and translating tantric texts. He is considered to be the chief recipient of the [ANUYOGA](#) teachings. Other sources state that he frightened away king [GLANG DAR MA](#) with his magical powers when the king threatened his community of practitioners. ZHI BA 'OD and others criticized the [RNYING MA PA](#) for claiming an Indian origin for texts that they alleged had in fact been composed by Gnubs chen Sangs rgyas ye shes.

[Gnyan chen thang lha](#). (Nyenchen Tangla). An important Tibetan mountain god, sometimes said to be an emanation of [VAJRAPĀNI](#), despite being a worldly [DHARMAPĀLA](#). He was subdued by [PADMASAMBHAVA](#); some accounts say that his domestication occurred in four settings, with Padmasambhava in four different guises: first in the heavens, with Padmasambhava assuming the guise of Vajrapāni; the second at He po ri near [BSAM YAS](#), with Padmasambhava in the form of Padma [HERUKA](#); the third time on the very peak of Bsam yas monastery, with Padmasambhava in the form of [VAJRAHŪMKĀRA](#); and finally as Padmasambhava himself. His connection with Bsam yas is furthered by his identification with a [NĀGA](#) king named Zur phud lnga pa; this serpent king was asked by Padmasambhava to be the protector of the monastery, but he refused, recommending instead that Padmasambhava travel to Hor and bring back [PE HAR RGYAL PO](#) for the job. Gnyan chen thang lha is said to be the chief of all [SA BDAG](#) (earth spirits) in central Tibet and the protector of Dmar po ri, the hill in [LHA SA](#) on which the [PO TA LA](#) stands, although his principal seat is in northern Tibet, at the mountain range that bears his name. Gnyan chen thang lha appears as a member of numerous groupings of Tibetan deities, often as their leader. He is the leader of the 360 mountain gods, the chief of the ser bdag bco brgyad (the eighteen masters of hail), and one of the mgrur lha bcu gsum of the [BON](#) pantheon. He is also called Thang lha yar shur, Thang lha yab shur, Yar shur gnyan gyi lha, and Gter bdag gnyan chen thang lha.

[Go bo rab 'byams pa Bsod nams seng ge](#). [alt. Go rams pa Bsod nams seng ge] (1429–1489). A renowned philosopher and logician of the [SA SKYA](#) sect of Tibetan Buddhism, he studied at [NA LAN DRA](#) (founded in 1435 by [RONG STON SMRA BA'I SENG GE](#)) then [NGOR](#) (founded in 1429 by Ngor chen [KUN DGA' BZANG PO](#)), where he later became the sixth abbot. His complete works in five volumes, included in the set of works of the great masters of the Sa skya sect, present the

authoritative interpretation of statements by the five Sa skya hierarchs ([SA SKYA GONG MA RNAM LNGA](#)) on important topics in [ABHIDHARMA](#) and epistemology ([PRAMĀNA](#)). Particularly highly regarded are his works on [MADHYAMAKA](#) and the thought of [DHARMAKĪRTI](#), as well as his explanation of Sa skya Paṇḍita's [SDOM GSUM RAB DBYE](#), a core text of the Sa skya curriculum explaining the three [ŚRĀVAKA](#), [BODHISATTVA](#), and tantric moral codes, written as a corrective to the work of his contemporary [SHĀKYA MCHOGLDAN](#).

godānīya. (P. goyāniya; T. ba lang spyod; C. qutuoni; J. kudani; K. kudani 瞿陀尼). One of the four continents of our world system, located to the west of Mount [SUMERU](#), also known as aparagodānīya or “western godānīya.” According to the [ABHIDHARMAKOŚABHĀSYA](#), this continent is circular in shape and is twenty-five thousand leagues ([YOJANA](#)) in diameter. It is flanked by two smaller islands, sāthā and uttaramantriṇa. The inhabitants of the continent are said to be sixteen cubits tall and have a life span of five hundred years. The continent is home to a wish-granting cow, which provides the inhabitants with whatever they wish; this feature may account for the name of the continent, which means, “using cattle.”

Godāvari. (S). One of the twenty-four sacred sites associated with the [CAKRASAMVARATANTRA](#). See [PĪTHA](#).

Goddard, Dwight. (1861–1939). American popularizer of Buddhism and author of the widely read *A Buddhist Bible*. He was born in Massachusetts and educated in both theology and mechanical engineering. Following the death of his first wife, he enrolled at Hartford Theological Seminary and was ordained as a minister in the Congregational Church. He went to China as a missionary and it was there that he visited his first Buddhist monastery. After holding pastoral positions in Massachusetts and Chicago, he left the ministry to become a mechanical engineer. An invention that he sold to the government made him independently wealthy and allowed him to retire in 1913. He traveled to China several times in the 1920s, where he met a Lutheran minister who was seeking to promote understanding between Buddhists and Christians. Goddard first learned of Zen Buddhism from a Japanese friend in New York in 1928 and later traveled to Japan where he met [DAISETZ TEITARO SUZUKI](#) and practiced [ZAZEN](#) for eight months in Kyōto. Upon his return to America, Goddard attempted in 1934 to form an American Buddhist community, called the Followers of the Buddha. With property in Vermont and California, the organization was to include a celibate monkhood, called the Homeless Brothers, supported by lay members.

Goddard also published a Buddhist magazine, *Zen, A Magazine of Self-Realization*, before bringing out, with his own funds, what would become his most famous work, *A Buddhist Bible*, in 1932. The purpose of the anthology was to “show the unreality of all conceptions of the personal ego” and inspire readers to follow the path to buddhahood. It was Goddard’s conviction that Buddhism was the religion most capable of meeting the problems of European civilization. Commercially published in 1938, the contents of *A Buddhist Bible* were organized by the language of a text’s origins and contained works that had not been translated into English before. The works came mostly from Chinese, translated by the Chinese monk Wai-tao, in collaboration with Goddard. Tibetan selections were drawn from [W. Y. EVANS-WENTZ](#). *A Buddhist Bible* is not without its eccentricities. For example, Goddard rearranged the [VAJRACCHEDIKĀPRAJÑĀPĀRAMITĀSŪTRA](#) (“Diamond Sūtra”) into a more “sensible” order, and he included in his anthology a classic of Chinese philosophy, the *Daode jing* (*Tao te ching*). Goddard also composed his own treatise to provide practical guidance in meditation, which he felt was difficult for Europeans and Americans. As one of the first anthologies of Buddhist texts widely available in the West, and especially because it was one of the few that included [MAHĀYĀNA](#) works, *A Buddhist Bible* remained widely read for decades after its publication.

[Goddess of Mercy](#). See [GUANYIN](#).

[Godenshō](#). (御伝鈔). In Japanese, “Biographical Notes,” an important early biography of [SHINRAN](#) (1163–1273), in two rolls; written in 1295 by his great-grandson [KAKUNYO](#) (1270–1351), the third abbot of [HONGANJI](#). Godenshō is the abbreviated title of this work favored in [JŌDO SHINSHŪ](#) communities; its full title is *Honganji Shōnin Shinran den e* (“Biography with Illustrations of the Honganji Sage Shinran”). This text is often paired with illustrations in a version that is presumed to have been composed by Kakunyo’s son Zonkaku (1290–1373) and painted by Jōga Hogen. As few documents survive from Shinran’s time, this biography is especially important in detailing the events in Shinran’s life, and all later biographies draw upon it. One of the most important features of the Godenshō is its identification of Shinran as being an earthly manifestation of [AMITĀBHA](#).

[gohonzon](#). (御本尊). In Japanese, “object of devotion.” See [DAI-GOHONZON](#).

Gokulika. (S). See [KAUKKUTIKA](#).

Golden Light Sūtra. See [SUVARNAPRABHĀSOTTAMASŪTRA](#).

Gombojab. (T. Mgon po skyabs). (fl. eighteenth century). An important Mongolian scholar and translator, renowned for his knowledge of the four languages of the Qing dynasty: Chinese, Tibetan, Manchu, and Mongol. He was appointed by Emperor Yongzheng as director of the School of the Tibetan Language (Xi fan xue zong guan) and provided translations from Tibetan into Chinese for the Chinese canon (including a work by the fifth [DALAI LAMA](#) on the seven medicine buddhas) as well as a work on the correct proportions of Buddha images. He translated from Chinese into Tibetan [XUANZANG](#)'s account of his journey to the West, the [DA TANG XIYU JI](#). His most influential work was the “History of Buddhism in China” (*Rgya nag chos 'byung*), which remained a major Tibetan source on Chinese history and Buddhism. It had three parts: a general geographical and historical description of China, a history of Buddhism in China based on “Lives of Eminent Monks” ([GAO SENG ZHUAN](#)), and a Tibetan translation of the catalogue (C. [JINGLU](#)) of the Chinese Buddhist canon (C. [DAZANGJING](#)). The work also contained historical information on Buddhism in Mongolia. Other works include a book on [WUTAISHAN](#) in Tibetan; the story of the sandalwood Buddha, also in Tibetan; a Tibetan–Mongolian dictionary; and a work in Mongolian on the proper pronunciation of Sanskrit. Lesser works include a Tibetan–Chinese glossary of medicines for Mongolian visitors to Chinese pharmacies.

gong'an. (J. kōan; K. kongan 公案). In Chinese, “public case,” or “precedent”; better known in the West by its Japanese pronunciation kōan, a word that has now entered common English parlance as “koan.” Gong'an was originally a legal term, referring to the magistrate's (gong) table (an), which by metonymy comes to refer to a legal precedent or an authoritative judgment; the term also comes to mean simply a “story” (gong'an in vernacular Chinese refers to the genre of detective stories). The term is widely used in the [CHAN](#) school in a way that conveys both denotations of a legal precedent and a story. The study of gong'an seems to have had its beginnings in the practice, probably dating from the late-Tang dynasty, of commenting on the exchanges or “ancient precedents” (guce) culled from Chan genealogical histories (e.g., [JINGDE CHUANDENG LU](#)) and the recorded sayings or discourse records ([YULU](#)) of the Chan masters of the past. Commenting on old cases (niangu), often using verses ([SONGGU](#)), seems to have

become a well-established practice by the early Song dynasty, as more recorded sayings began to include separate sections known as nianggu and songgu. Perhaps one of the most famous collections of verse commentaries on old cases is the Chan master [XUEDOU CHONGXIAN](#)'s *Xuedou heshang baice songgu*, which now exists only as part of a larger influential collection of gong'an known as the [BIYAN LU](#). Other famous gong'an collections, such as the [CONGRONG LU](#) and [WUMEN GUAN](#), were compiled during the Song dynasty and thereafter. These collections often shared a similar format. Each case (bence), with some exceptions, begins with a pointer ([CHUISHI](#)), a short introductory paragraph. The actual case, often a short anecdote, is interspersed with interlinear notes known as "annotations" or "capping phrases" (C. zhuoyu/zhuyu; see J. [JAKUGO](#)). After the case, a prose commentary (pingchang), verse commentary (songgu), and subcommentary on the verse commentary follow. Traditionally, 1,700 specific gong'an are said to have been in circulation in the Chan school. Although this number does have antecedents within the tradition, there are no fixed numbers of cases included in Chan gong'an anthologies; for example, a late Qing-dynasty collection, the 1712 *Zongjian falin*, includes 2,720 gong'an, which were claimed to be all the gong'an then in active use within the tradition. Whatever the number, there seems not to have been any kind of systematic curriculum within the Chinese Chan or Korean Sŏn traditions using this full panoply of gong'an. The creation of a pedagogical system of training involving mastery of a series of many different kōans is commonly attributed to [HAKUIN EKAKU](#) (1685–1769) in the Japanese [RINZAISHŪ](#) of [ZEN](#). The widespread reference to 1,700 gong'an in Western-language materials may derive from accounts of Japanese government attempts in 1627 to routinize the Rinzai monastic curriculum, by promulgating a regulation requiring all Zen abbots to master 1,700 cases as part of their training. ¶ The literary endeavor of studying old cases also gave rise to new forms of meditation. The Chan master [DAHUI ZONGGAO](#) in the [YANGQI PAI](#) of the [LINJI ZONG](#) systematized a practice in which one focuses on what he termed the "meditative topic" ([HUATOU](#)), which in some contexts refers to the "keyword," or "critical phrase" of a gong'an story. For instance, the famous huatou "[WU](#)" (no) that Dahui used as a meditative topic was derived from a popular gong'an attributed to [ZHAOZHOU CONGSHEN](#): A student asked Zhaozhou, "Does a dog have buddha nature, or not?," to which Zhaozhou replied "wu" (no; lit., "it does not have it") (see [WU GONG'AN](#); [GOUZI WU FOXING](#)). This new practice was called the "Chan of observing the meditative topic" or, more freely, "questioning meditation" ([KANHUA CHAN](#)). During the Song dynasty, students also began to

seek private instruction on gong'an from Chan masters. These instructions often occurred in the abbot's quarters ([FANGZHANG](#)). ¶ The active study of gong'an in Korean [SŎN](#) begins with [POJO CHINUL](#) and his disciple [CHIN'GAK HYESIM](#), who learned of Dahui's kanhua Chan largely through the writings of their Chinese counterpart. Hyesim was also the first Korean Sŏn monk to compile his own massive collection of cases, titled the [SŎNMUN YŎMSONG CHIP](#). The use of cases was later transmitted to Japan by pilgrims and émigré monks, where kōan study became emblematic of the Rinzaishū. Because rote memorization of capping phrases came to take precedence over skilled literary composition in classical Chinese, the Japanese compiled large collections of capping phrases, such as the [ZENRIN KUSHŪ](#), to use in their training.

[gong bugong ye](#). (S. *sādhāraṇāsādhāraṇakarman; T. thun mong dang thun mong ma yin pa'i las; J. gūfugūgō; K. kong pulgong ōp 共不共業). In Chinese, “collective [KARMAN](#) and individual karman.” In both the [MAHĀYĀNA](#) and [ABHIDHARMA](#) literature, a distinction is made between collective (or communal, shared) action (sādhāraṇakarman) and individual (or unshared) action (asādhāraṇakarman). The former is the combined and mixed force of multiple individual's karman, which creates and conditions the shared physical habitat in which those sentient beings live (cf. [BHĀJANALOKA](#)). The latter is individual-specific and produces karmic effects that could only be reaped by the primary agent of that karman. However, there is an overlap between collective and individual karman, as the two interact with and, to an extent, influence one another. According to the [YOGĀCĀRABHŪMISĀSTRA](#), for example, such geographical features as rivers and mountains are products of “absolute collective karman” (gong zhong gong); but other physical objects like homes and private lands are of “individuated instances of collective karman” (gong zhong bugong), since they are personal property enjoyed by the primary agent. Other possible combinations of collective and individual karman are also outlined in the same text (cf. [ER BAO](#) and [ER SHIJIAN](#)).

[gongde yuan](#). (J. kudokuin; K. kongdŏk wŏn 功德院). In Chinese, “merit cloister,” a semiprivate Buddhist institution common during the Tang and Song dynasties. These merit cloisters were sometimes private monasteries established on the burial grounds of elite Chinese families; in many cases, however, they were not new temples at all but instead appendages to officially sanctioned monasteries. Once the merit cloister was established on the monastery's grounds,

the family could then claim the entire monastery as its own, transfer title of its landed estate to the monastery—and, like a premodern tax shelter, avoid paying property taxes to the government—but still retain control over the entire property. Unlike public monasteries, where offerings made by private donors became the permanent property of the monastery, the merit cloister was a hybrid institution: donated lands were considered to be the monastery’s property in the eyes of the government, but the families in reality retained effective control over the disposition of those lands, even using the tax-free income they generated to acquire still more property for the family. The family that established the merit cloister also retained control over the administration of the monastery, including the right to hire, and fire, the abbot. As one transnational example, Huiyinsi (Ocean Seal Monastery) in the Southern Song capital of Hangzhou effectively became a merit cloister for the ruling family of the Korean Koryŏ dynasty (918–1392). [ÜICH’ŎN](#) (1055–1101), the prominent monk and fourth son of the Koryŏ king Munjong (r. 1047–1083), studied at Huiyinsi with the Huayan teacher Jingyuan (1011–1088). After Üich’ŏn’s death, the Koryŏ dynasty continued to provide an annual stipend to Huiyinsi to maintain a virtual merit cloister for the deceased prince, and retained the authority at certain points in the monastery’s history to appoint its abbot. Koryŏ support was so substantial and continuous that the monastery came to be better known by its nickname Gaolisi (Korea Monastery).

[gongye](#). (C) (共業). See [GONG BUGONG YE](#).

[Gopaka](#). (T. Sbed byed). One of the [SODAŚASTHAVIRA](#) (“the sixteen elders”) in the Tibetan enumeration. See [SODAŚASTHAVIRA](#).

[gotra](#). (P. gotta; T. rigs; C. zhongxing; J. shushō; K. chongsŏng 種姓/種性). In Sanskrit, “family” or “lineage,” used in a figurative sense. The [VINAYA](#) explains that those in a noble family or line are those monks who are content with their robes, with whatever they receive in their begging bowls, and with low-quality bedding, and who take pleasure in forsaking the unwholesome ([AKUŚALA](#)) and cultivating the wholesome ([KUŚALA](#)). In the Pāli [ABHIDHAMMA](#), the moment when one’s concentration or insight moves from one “family” to another is called “change of lineage” ([GOTRABHŪ](#)). In Mahāyāna literature (especially that associated with the [YOGĀCĀRA](#)), gotra refers to a destiny, almost in the sense of a spiritual disposition, that prompts one to follow a particular path to enlightenment. There is typically a list of five such spiritual destinies

(pañcagotra) found in Yogācāra literature: (1) the [TATHĀGATA](#) lineage, for those destined to become buddhas; (2) the [PRATYEKABUDDHA](#) lineage, for those destined to become [ARHATS](#) via the [PRATYEKABUDDHAYĀNA](#); (3) the [ŚRĀVAKA](#) lineage, for those who will become arhats via the [ŚRĀVAKAYĀNA](#); (4) those of indefinite ([ANİYATA](#)) lineage, who may change from any of three vehicles to another; and (5) those without lineage (agotra), who are ineligible for liberation or who have lost the prospect of becoming enlightened by being “incorrigibles” ([ICCHANTIKA](#)). Another division of lineage is into [PRAKRTISTHAGOTRA](#) (naturally present) and [SAMUDĀNĪTAGOTRA](#) (developed). According to the [YOGĀCĀRABHŪMIŚĀSTRA](#), the former refers to one’s innate potential for spiritual achievement; the latter refers to the specific individual habits one can develop that will help speed the mastery of that potential. See also [FAXIANG ZONG](#); [ŚRĀVAKABHŪMI](#).

gotrabhū. In Pāli, “entering the lineage (of the noble ones),” or “maturity moment,” the momentary, transitional state of consciousness that takes the [NIRVĀNA](#) element (P. nibbānadhātu) as its object for the first time. At that moment, the adept is no longer an ordinary unenlightened “worldling” (P. puthujjana; S. [PRTHAGJANA](#)) and will transition in the following moment onto the path of the enlightened “noble ones” (P. ariya; [ĀRYA](#)) as a “stream-enterer” (P. sotāpanna; S. [SROTAĀPANNA](#)). Gotrabhū belongs to the class of mental processes called javana, or “impulsion moments.”

gotrabhūñāna. In Pāli, “change-of-lineage knowledge,” a specific type of knowledge (P. ñāṇa; S. [JÑĀNA](#)) included in the category “purity of knowledge and vision” ([ÑĀNADASSANAVISUDDHI](#)), which is the seventh and final purity (P. [VISUDDHI](#)) to be developed along the path to liberation. Change-of-lineage knowledge takes as its object the unconditioned [NIRVĀNA](#) element (P. nibbānadhātu), by virtue of which the practitioner leaves the lineage of ordinary worldlings (P. puthujjanagotta; cf. S. [PRTHAGJANA](#); [GOTRA](#)) and enters the lineage of the noble ones (P. ariyagotta; S. āryagotra). Change-of-lineage knowledge itself is reckoned as a transitional moment of consciousness in that it has not yet entered onto any one of the four supramundane or noble paths (P. ariyamagga; S. [ĀRYAMĀRGA](#)), viz., that of the stream-enterer (P. sotāpanna; S. [SROTAĀPANNA](#)), once-returner (P. sakadāgāmi; S. [SAKRDĀGĀMIN](#)), nonreturner ([ANĀGĀMI](#)) or worthy one (P. arahant; S. [ARHAT](#)). Immediately following the occurrence of change-of-lineage knowledge there arises a moment of consciousness called

[MAGGACITTA](#), or “path consciousness,” that signals the practitioner’s actual entry into the noble path. It is this path consciousness that, technically speaking, constitutes the aforementioned “purity of knowledge and vision.” At this point, if the practitioner has entered the path of the stream-enterer, he has permanently uprooted the first three of ten fetters ([SAMYOJANA](#)) that bind beings to the cycle of existence, viz., (1) belief in the existence of a self in relation to the body (P. sakkāyadiṭṭhi; S. [SATKĀYADRSTI](#)), (2) doubt about the efficacy of the path (P. vicikicchā; S. [VICIKITSA](#)), and (3) belief in the efficacy of rites and rituals (P. sīlabbataparāmāsa; S. [ŚĪLAVRATAPARĀMARŚA](#)). Having become a stream-enterer, the practitioner is destined never again to be reborn in any of the three unfortunate realms ([DURGATI](#)) of the hells, hungry ghosts, or animals, and is guaranteed to attain nirvāṇa in at most seven more lifetimes.

[gouzi wu foxing](#). (J. kushi mubusshō; K. kuja mu pulsōng 狗子無佛性). In Chinese, “a dog has no buddha-nature”; a [CHAN](#) expression that becomes a famous meditative topic ([HUATOU](#)) and is used as the subject of a Chan “questioning meditation” (see [KANHUA CHAN](#)). This phrase refers to a [GONG’AN](#) exchange attributed to the Tang-dynasty monk [ZHAOZHOU CONGSHEN](#) (778–897): Once when Zhaozhou was asked, “Does a dog have buddha-nature ([FOXING](#)), or not?” Zhaozhou answered, “No” (lit. “It does not have it.”). This gong’an exchange is the famous “no” ([WU](#)) huatou, the first case of the [WUMEN GUAN](#) (“Gateless Checkpoint”), which is often the initial meditation topic given to neophyte Chan monks in the [LINJI ZONG](#) and Linji-oriented traditions in China, Korea, and Japan.

[Govinda, Lama Anagarika](#). (1898–1985). Born Ernst Lothar Hoffmann in Kassel, Germany, he served in the German army during World War I, after which he continued his studies at Freiburg University in Switzerland. He became interested in Buddhism while living with expatriate European and American artists on the Italian island of Capri, during which time he published his first book, *The Basic Ideas of Buddhism and Its Relationship to Ideas of God* (1920). In 1928, he sailed for Ceylon, where he studied meditation and Buddhist philosophy briefly with the German-born [THERAVĀDA](#) monk [ÑĀNATILOKA MAHĀTHERA](#) (who gave him the name Govinda), before leaving to travel in Burma and India. While visiting Darjeeling in the Himalayas in 1931, he was driven by a spring snowstorm to a Tibetan monastery at Ghoom, where he met Tomo (Gro mo) Geshe Rimpoche, a [DGE LUGS PA](#) lama. Govinda later held brief

teaching positions at the University of Patna and at Shantiniketan, publishing essays in *The Mahā Bodhi*, the journal of the [MAHĀBODHI SOCIETY](#), as well as various Theosophical journals. His lectures at Patna resulted in his book *The Psychological Attitude of Early Buddhist Philosophy* (1961) and his lectures at Shantiniketan led to *Psycho-Cosmic Symbolism of the Buddhist Stūpa*. While at Shantiniketan he met a Parsi woman, Rati Petit (who assumed the name Li Gotami), whom he would marry in 1947. In 1942, he was interned by the British at Dehra Dun along with other German nationals, including Heinrich Harrer. During 1947–1948, Lama Govinda and Li Gotami traveled to some of the temples of western Tibet. During their travels, they met a lama named Ajorepa Rimpoche, who, according to Govinda, initiated them into the [BKA' BRGYUD](#) order. Returning from Tibet, Lama Govinda and Li Gotami set up permanent residence in India, publishing *Foundations of Tibetan Mysticism* in 1960. He spent the last two decades before his death in 1985 lecturing in Europe and the United States. His last years were spent in a home in Mill Valley, California, provided by the San Francisco Zen Center.

[gozan](#). (五山). In Japanese, “five mountains”; a medieval Japanese ranking system for officially sponsored [ZEN](#) monasteries, which may derive from Chinese institutional precedents. Large and powerful public monasteries in China known as “monasteries of the ten directions” ([SHIFANGCHA](#)) came under the control of the Chinese state during the Song dynasty and were designated either as [VINAYA](#) or [CHAN](#) monasteries. Government administration of these monasteries eventually ceased, but it is widely believed that five major Chan monasteries in Zhejiang province (ranked in the order of [WANSHOUSI](#), Lingyinsi, Jingdesi, Jingci Bao'en Guangxiaosi, and Guanglisi) were selected to be protected and governed by the state, largely through the efforts of the Chan master [DAHUI ZONGGAO](#) and his disciples. Whether this is indeed the beginning of a “five-mountain ranking system” is unclear, but by the Yuan dynasty the term was clearly in use in China. The implementation of this system in Japan began under the rule of the Kamakura shōgun Hōjō Sadatoki (1271–1311). Five illustrious [RINZAISHŪ](#) monasteries in Kamakura, including [KENCHŌJI](#) and [ENGAKUJI](#), were granted gozan status and given a specific rank. A reordering of the gozan ranks occurred when Emperor Godaigo (1288–1339) came to power in 1333. The powerful Zen monasteries in Kyōto, [NANZENJI](#) and [DAITOKUJI](#), replaced Kenchōji and Engakuji as the top-ranking monasteries, and the monastery of TŌFUKUJI was added to the gozan system. The gozan ranks were

changed again several times by the Ashikaga shogunate. By the Muromachi period, some three hundred official monasteries (kanji) were ranked either gozan, jissatsu (ten temples), or shozan (many mountains). The term gozan also came to denote the prosperous lineages of [MUSŌ SOSEKI](#) and [ENNI BEN'EN](#), who populated the gozan monasteries; monks in these lineages were particularly renowned for their artistic and literary talents in classical Chinese and brushstroke art. There seems also to have been a five-mountain convent system (amadera gozan or niji gozan) for Japanese nuns, which paralleled the five-mountain monastery system of the monks, but little is known about it.

[gradual enlightenment](#). See [JIANWU](#).

[graduated discourse](#). See [ANUPUBBIKATHĀ](#).

[grāhyagrāhakavikalpa](#). (T. gzung ba dang 'dzin pa'i rnam par rtog pa; C. suoqu nengqu fenbie; J. shoshunōshu funbetsu; K. soch'wi nūngch'wi punbyōl 所取能取分別). In Sanskrit, “discrimination between the grasped and the grasper,” or “false conception of apprehended and apprehender,” a specific kind of discrimination ([VIKALPA](#)) used in the [YOGĀCĀRA](#) school to refer to the misconception that there is an inherent bifurcation between a perceiving subject (grāhaka) and its perceived objects (grāhya). This bifurcation occurs because of false imagining ([ABHŪTAPARIKALPA](#)), the tendency of the relative ([PARATANTRA](#)) nature ([SVABHĀVA](#)) to project both a false sense of a perceiving self and of perceived objects that are external to it. By relying on these false imaginings to construct our sense of what is real, we inevitably subject ourselves to continued suffering ([DUHKHA](#)) within the cycle of rebirth [SAMŚĀRA](#). Overcoming this bifurcation leads to the nondiscriminative wisdom ([NIRVIKALPAJÑĀNA](#)), which marks the inception of the path of vision ([DARŚANAMĀRGA](#)).

['Gram](#). (Dram). In Tibetan, one of the four “edge-taming temples” or “edge-pinning temples” ([MTHA' 'DUL GTSUG LAG KHANG](#)) said to have been constructed during the time of the Tibetan king [SRONG BTSAN SGAM PO](#) to pin down the limbs of the demoness (T. srin mo) who was impeding the introduction of Buddhism into Tibet. The temple is located on the right ru or flank in Gtsang to the west of [LHA SA](#), and pins down her left shoulder.

[Gr̥dhrakūtaparvata](#). (P. Gijjhakūtapabbata; T. Bya rgod phung po'i ri; C. Lingjiushan; J. Ryōjusen; K. Yōngch'uksan [alt. Yōngch'wisan/Yōngch'usan] 靈

鷲山). In Sanskrit, “Vulture Peak,” one of the five hills surrounding the city of [RAJAGRHA](#), a favored site of [GAUTAMA](#) Buddha and several of his most important disciples in mainstream Buddhist materials and the site where the Buddha is said to have delivered many renowned sūtras in the [NIKĀYAS](#) and [ĀGAMAS](#); in the [MAHĀYĀNA](#), Gṛdhrakūṭa is also the location where [ŚĀKYAMUNI](#) Buddha is purported to have preached such important Mahāyāna scriptures as the [SADDHARMAPUNDIRĪKASŪTRA](#) (“Lotus Sūtra”) and the perfection of wisdom sūtras ([PRAJÑĀPĀRAMITĀ](#)). The hill was so named either because it was shaped like a vulture’s beak or a flock of vultures, or because vultures roosted there. In another legend, the peak is said to have received its name when, in an attempt to distract [ĀNANDA](#) from his meditation, the demon [MĀRA](#) turned himself into a frightening vulture; Ānanda, however, was unswayed by the provocation and eventually became enlightened. In one of the most famous episodes in the life of the Buddha, his evil cousin [DEVADATTA](#), in attempting to kill the Buddha, instead wounded him when he hurled a boulder down on him from the hill, cutting his toe; for this and other “acts that bring immediate retribution” ([ĀNANTARYAKARMAN](#)), Devadatta fell into [AVĪCI](#) hell. Because many important Mahāyāna sermons are said to have been spoken on the peak, some schools—specifically the Japanese [NICHIRENSHŪ](#)—believe that the mountain itself is a [PURE LAND](#). Other sources state that because of the sūtras set forth there, the peak has become a [STŪPA](#), and like the Buddha’s seat ([VAJRĀSANA](#)) in [BODHGAYĀ](#), it will not be destroyed by fire at the end of the [KALPA](#). Although beings in the intermediate state ([ANTARĀBHAVA](#)) are said to be able to pass through mountains, they are not able to pass through Vulture Peak. The first Buddhist council (see [COUNCIL, FIRST](#)), in which a group of five hundred [ARHATS](#) met to recite the Buddha’s teaching after his death, is said to have been held in a cave on Vulture Peak.

[greed](#). See [LOBHA](#).

Grhadevatā. (S). One of the twenty-four sacred sites associated with the [CAKRASAMVARATANTRA](#). See [PĪTHA](#).

grhapati. (P. gahapati; T. khyim bdag; C. zhangzhe/jushi; J. chōja/koji; K. changja/kōsa 長者/居士). In Sanskrit, “householder” or “pater familias,” typically used to refer to an affluent lay supporter of Buddhism. The grhapati were wealthy gentry or businessmen, who were often classed together with priests (brāhmaṇa) and warriors (kṣatriya) to refer to respectable society in traditional India. The Buddha often uses grhapati in address to mean something close to “gentlemen” or “sirs.” The term is also often seen in compound with śreṣṭhin (“distinguished”) to indicate wealthy merchants or guild leaders (S. śreṣṭhigrhapati; P. seṭṭhigahapati). Finally, grhapati appears in lists of the seven “jewels” ([RATNA](#)) associated with a wheel-turning monarch ([CAKRAVARTIN](#)): his role is to locate unclaimed possessions or wealth through his “divine eye” ([DIVYACAKSUS](#)), which the king can then appropriate for the crown. In this capacity, grhapati has sometimes been translated as a “financial steward,” or “treasurer,” although his role is really more that of a thaumaturgic treasure hunter than a quotidian accountant. Although [GRHASTHA](#) or “householder” is sometimes used interchangeably with grhapati, grhapati seems to connote an especially wealthy and influential householder who is a patron of Buddhism.

grhastha. (P. gahaṭṭha; T. khyim na gnas pa; C. zaijia; J. zaike; K. chaega 在家). In Sanskrit, lit. “householder,” a married male who has a family and supports his household through his labor. The householder is often contrasted with the [ŚRAMANA](#) or [BHIKSU](#), who has renounced the life of the householder and the social entanglements it entails (see [PRAVRAJITA](#)). The term is often translated simply as “layman” to indicate this distinction from the Buddhist clergy. It is important to note, however, that a householder is not necessarily an [UPĀSAKA](#), a term also often translated as “layman,” but perhaps better rendered as “lay [male] disciple.” An upāsaka is a householder who has at minimum taken refuge in the three jewels ([RATNATRAYA](#)), and who may also hold any of the five upāsaka precepts (see [PAÑCAŚĪLA](#)). Householders play important roles in Buddhism, primarily by providing alms to the [SAMGHA](#). The Buddha offered specific teachings for them, generally consisting of advice on how to live an ethical life and accumulate merit so that they will be reborn in heaven (see P. [ANUPUBBIKATHĀ](#), the “graduated discourse”). A number of householders figure prominently in the canon, including the Buddha’s wealthy patron

[ANĀTHAPINDADA](#). Although among the Buddha’s disciples, householders generally do not practice or excel at meditation, there are some exceptions, most notably [CITTA](#). It is said that householders who excel at the practice of meditation achieve the state of the [ANĀGĀMIN](#). Pāli texts state that a layperson who becomes an [ARHAT](#) must be ordained as a monk or nun within seven days or die; the body of a layperson, unpurified by monastic vows, is considered incapable of supporting such a state of enlightenment. Although *gṛhastha* is sometimes used interchangeably with [GRHAPATI](#), the latter term seems to connote an especially wealthy and influential householder who is a patron of Buddhism.

[Gro bo lung](#). (Drowolung). Residence of the Tibetan translator [MAR PA CHOS KYI BLO GROS](#) and the surrounding area, located in the southern Tibetan region of [LHO BRAG](#) close to the Bhutanese border.

[Grum pa rgyang](#). (Drumpa gyang). In Tibetan, one of the four “edge-taming temples” or “edge-pinning temples” ([MTHA’ ’DUL GTSUG LAG KHANG](#)) said to have been constructed during the time of the Tibetan king [SRONG BTSAN SGAM PO](#) to pin down the limbs of the demoness (T. *srin mo*) who was impeding the introduction of Buddhism into Tibet. The temple is located at Lha rtse on the auxiliary flank (*ru lag*) and pins down her left hip.

[gsang ba’i rnam thar](#). (*sang we nam tar*). In Tibetan, “secret autobiography,” one of the three types of [RNAM THAR](#) (sacred biography or autobiography), focusing on a subject’s religious experiences, visions, and past-life experiences, with the author often writing from the perspective of an omniscient subject. They are called secret not because they are hidden away from general readership, but because of the esoteric tantric practices that form part of the subject matter. A well-known example of secret autobiography is [’JIGS MED GLING PA](#)’s *Gsang ba chen po nyams snang gi rtogs brjod chu zla’i gar mkhan* (translated as “Dancing Moon”), at least one purpose of which was demonstrating the authenticity of the [KLONG CHEN SNYING THIG](#), a [GTER MA](#) (treasure text) that he revealed.

[Gsang phu ne’u thog](#). (Sangphu Ne’utok). A monastery associated with the [BKA’ GDAMS](#) sect established south of [LHA SA](#) in 1073 by [RNGOG LEGS PA’I SHES RAB](#); for many centuries one of the premier institutions of learning in central Tibet. The abbacy passed to the scholar and translator [RNGOG BLO LDAN SHES RAB](#), Legs pa’i shes rab’s nephew, on his thirty-fifth birthday. Blo ldan shes rab’s

translations and summaries (bsdus don) of all the major works of [DHARMAKĪRTI](#), together with the commentaries of [DHARMOTTARA](#), as well as his two major commentaries (rnam bshad) established Gsang phu as the unchallenged center for the study of epistemology (T. tshad ma; S. [PRAMĀNA](#)) until [SA SKYA PANDITA](#)'s masterly presentation of Dharmakīrti's thought in about 1219 in his [TSHAD MA RIGS GTER](#); it criticized some aspects of the Gtsang phu tradition. Most illustrious of the line of pramāṇa scholars after Rngog at [GSANG PHU](#) was [PHYWA PA CHOS KYI SENG GE](#) who is credited with originating the distinctively Tibetan [BSDUS GRWA](#) genre of textbook (used widely in [DGE LUGS](#) monasteries) that introduces beginners to the main topics in [ABHIDHARMA](#) in a particular dialectical form that strings together a chain of consequences linked by a chain of reasons. Gtsang phu was also the center of [PRAJÑĀPĀRAMITĀ](#) studies based on the [ABHISAMAYĀLAMKĀRA](#), originating again with Blo ldan shes rab's translation, summary, and a major commentary. It attracted great masters of various sectarian affiliations including [DUS GSUM MKHYEN PA](#), the first [KARMA PA](#). The monastery divided into two colleges in the twelfth century; Gnyal [alt. Mnyal] zhig 'Jam pa'i rdo rje (fl. c. 1200) was abbot during Sa skya Paṇḍita's early years. Gnyal zhig's students passed on the traditions down to [ZHWA LU](#) monastery and to [BU STON RIN CHEN GRUB](#) and his followers. Like many former Bka' gdams institutions, it faded into obscurity with the rise of the [DGE LUGS](#) sect.

gsar ma. (sarma). In Tibetan, “new,” and taken to mean, “followers of the new translations,” in contradistinction to the [RNYING MA](#), the “old” or “followers of the old translations.” Tibetan historians describe the dissemination of Buddhism to Tibet as occurring in two waves, the first, called the earlier dissemination ([SNGA DAR](#)), beginning in the seventh century and ending with the persecutions of Buddhism under King [GLANG DAR MA](#) in the ninth century. The second wave, called the latter dissemination ([PHYI DAR](#)), is generally marked by the return of the Tibetan translator [RIN CHEN BZANG PO](#) from India and the new translations undertaken by him and others of [TANTRAS](#) that had been translated in the earlier period and the translations of a range of texts not previously translated. These are called the “new translations.” By extension, the sects that developed subsequently based on the translations of these texts are called collectively the “new sects” (gsar ma), identified as the three sects of [BKA' BRGYUD](#), [SA SKYA](#), and [BKA' GDAMS](#) (later [DGE LUGS](#)). Those who continued to rely on the earlier translations (which included works that some members of the new sects would

claim to be apocryphal) came to be known as the “old sect” ([RNYING MA](#)).

Gtam zhing. (Tamshing). A monastery founded in 1501–1505 by the Bhutanese treasure revealer ([GTER STON](#)) [PADMA GLING PA](#), located in the Chos skor valley of Bum thang, central Bhutan; its full name is Gtam zhing lhun grub chos gling. The monastery contains some of the oldest extant mural painting in Bhutan, executed based upon the iconographic canons laid down by Padma gling pa himself.

Gter bdag gling pa. (Terdak Lingpa) (1646–1714). Also known as Smin gling Gter dag gling pa 'Gyur med rdo rje, an important monk and lama of the [RNYING MA](#) sect of Tibetan Buddhism and brother of the prominent teacher Lo chen Dharma shrī. He studied widely with masters of the major traditions of Tibetan Buddhism and was a close associate of the fifth [DALAI LAMA](#), both receiving teachings from him and giving teachings to him. As his name Gter bdag (“Lord of Treasure”) suggests, he was an important [GTER STON](#), or discoverer of treasure texts ([GTER MA](#)). In addition to discovering important treasure texts, he compiled and commented upon the [BKA' MA](#). In 1676, he founded the monastery of [SMIN GROL GLING](#), which would become one of the six major monasteries of the Rnying ma sect.

gter ma. (terma). In Tibetan, “hidden treasures” or “treasure text,” a source of Tibetan Buddhist and [BON](#) sacred objects, including a wide range of manuscripts, relics, statuary, and ritual implements from earlier periods. Such treasure texts have been found in caves, mountains, lakes, valleys, or sequestered away in monasteries, sometimes within a pillar. Whether gter ma are [BUDDHAVACANA](#), i.e., authentic words of the Buddha (or a buddha) or whether they are [APOCRYPHA](#), is contested. In the [RNYING MA](#) canon, a division is made between gter ma and [BKA' MA](#), the latter made up of commonly authenticated canonical works. Some gter ma are authentic (although proper criteria for authenticity is a subject of debate in both traditional and modern sources), and some are clearly forgeries and fabricated antiquities. Gter ma are of three types: sa gter (“earth treasure”), dgongs gter (“mind treasure”), and dag snang (“pure vision”). Those physically discovered in caves and so on are sa gter; they may be revealed in a public gathering (khrom gter) or found privately (gsang gter) and then shown to others; they may be accompanied by a prophecy (lung bstan; gter lung; see [VYĀKARANA](#)) of the discovery, made at the time of concealment; the gter ma may have a guardian (gter srung), and the revealer ([GTER STON](#)) is often

assisted by a [DĀKINĪ](#). Dgongs gter are discovered in the mindstream of the revealer, placed there as seeds to be found, coming from an earlier lifetime, often as a direct disciple of [PADMASAMBHAVA](#). Dag snang are discovered by the revealer through the power of the innate purity of the mind. Gter ma are associated most closely with the [RNYING MA](#) sect, although not exclusively so. The basic account of gter ma, in which myth and historical fact are interwoven, relates that prior to the persecution of Buddhism by [GLANG DAR MA](#) (reigned c. 838–842), [PADMASAMBHAVA](#) hid many teachings, often dictated to [YE SHES MTSHO RGYAL](#), as treasures to be discovered in later times in order to ensure the continuation of the doctrine and to provide appropriate teachings for future generations. The first Tibetan gter ma appear sometime after the start of the second dispensation ([PHYI DAR](#)), c. 1000, with the rise of the new ([GSAR MA](#)) sects of [BKA' GDAMS](#), [SA SKYA](#), and [BKA' BRGYUD](#), who in many cases call into question the authenticity of earlier Tibetan practices and translations. Gter ma became more common in the thirteenth and early fourteenth centuries. Prominent among the revealers is [PADMA LAS 'BREL RTSAL](#), a shadowy figure who revealed the [RDZOGS CHEN SNYING THIG](#) that [KLONG CHEN RAB 'BYAMS PA](#) then systematized into the definitive [RDZOGS CHEN](#) teachings. Klong chen pa's scholarly presentation was again made more accessible through a series of gter ma (called the [KLONG CHEN SNYING THIG](#)) discovered by ['JIGS MED GLING PA](#). These are the basis of the rdzogs chen teachings as they are commonly found today in most branches of the Rnying ma sect. According to traditional accounts, Padmasambhava taught a system of meditation called the [MKHA' 'GRO SNYING THIG](#) (“Heart Essence of the Dākinī”) to [PADMA GSAL](#), the daughter of king [KHRI SRONG SDE BTSAN](#), in whose heart he had inscribed a sacred syllable after bringing her back from the dead. They were discovered there by Padma las 'brel rtsal and Klong chen pa, who are her reincarnations. Besides this widely acknowledged tradition, there are numerous other gter ma that form the basis of practices and rituals in specific Rnying ma monasteries. For example, the main line of teachings and consecrations ([ABHISEKA](#)) in the [DPAL YUL](#) monastery in the Khams region of eastern Tibet, and in its reestablished Indian branch near Mysore in South India, is based on gter ma teachings combining Rnying ma and Bka' brgyud practices, revealed by Mi 'gyur rdo rje and redacted by [KARMA CHAGS MED](#); the gter ma discovered by [PADMA GLING PA](#) are held in great reverence by the ['BRUG PA BKA' BRGYUD](#) sect in Bhutan; and the secret teachings of the fifth [DALAI LAMA](#) (1617–1682) that later locate and legitimate the role of the Dalai Lamas in the Dge lugs pa sect originated in gter ma that he revealed. The

different gter ma were brought together in a quasi-canonical form by ['JAM MGON KONG SPRUL BLO GROS MTHA' YAS](#) in his [RIN CHEN GTER MDZOD](#) (“Treasury of Precious Treasure Teachings”). It is believed that the sacred and even political space of Tibet is empowered through the discovery of gter ma and, by extension, that the religious practice of a region is empowered through the discovery of treasures within it.

[gter ston](#). (tertön). In Tibetan, lit., “treasure revealer,” a person who discovers [GTER MA](#) or “treasure,” Tibetan Buddhist and [BON](#) sacred objects, including a wide range of manuscripts, relics, statuary, and ritual implements, which are presumed to have been buried in earlier periods for discovery later. See [GTER MA](#).

[gter ston rgyal po lnga](#). (tertön gyalpo nga). A Tibetan term, lit. “the five kingly treasure revealers,” referring to a list of five renowned treasure revealers ([GTER STON](#)) believed to be reincarnations of the king [KHRI SRONG LDE BTSAN](#). The list is found most often in writings of the [RNYING MA](#) sect of Tibetan Buddhism. The five include:

1. [NYANG RAL NYI MA 'OD ZER](#)
2. [GURU CHOS KYI DBANG PHYUG](#)
3. [RDO RJE GLING PA](#)
4. [PADME GLING PA](#)
5. ['JAM DBYANGS MKHYEN BRTSE DBANG PO](#)

gtong len. (tonglen). In Tibetan, lit. “giving and taking”; a well-known **BLO SBYONG** (mind training) practice. In this practice, as the meditator inhales, he or she imagines all the suffering of all beings, in the form of smoke, darkness, and various frightening creatures, being lifted from the bodies of all beings and entering the meditator’s body. Then, as he or she exhales, the meditator imagines all of his or her own happiness and merit (**PUNYA**) going out to all beings in the form of light and descending upon them. The practice is considered to be one of the techniques for developing **BODHICITTA** and is often set forth in connection with the practice of exchanging self and other (**PARĀTMAPARIVARTANA**) described in the eighth chapter of the **BODHICARYĀVATĀRA** of **ŚĀNTIDEVA**. See **BLO SBYONG TSHIG BRGYAD MA**.

gtor ma. (torma). The Tibetan translation of the Sanskrit term bali (offering, tribute), an offering of food to propitiate a deity. There are ritual texts (S. balividhi) for constructing and offering gtor ma, differing based on the purpose of the offering and the status of the recipient. In Tibet the gtor ma is always a distinctive conical shape, and became a canvas for extremely ornate butter sculpture. The spectacular gtor ma ritual culminated in the gtor bzlog (tordok) or gtor rgyag (torgyak) on the last day of the Tibetan year, during which the monastic assembly would march out with the gtor ma. All negativities and bad spirits of the departing year are drawn to the offering, which is then hurled into a blazing pyre accompanied by a cacophony of instruments and the loud bangs of firecrackers. On the last of the fifteen days of festivities celebrating lo gsar (new year) in **LHA SA**, the bco lnga mchod pa competition to judge the best gtor ma was held; it is reported that some gtor ma were so high that ladders had to be used to reach the top; they were decorated with extremely ornate butter sculptures, including figures manipulated like puppets with hidden strings. There are a variety of gtor mas in Tibet, usually made of barley flour with butter if they are expected to last and be eaten, or with water if they are to be thrown out; they may be painted red if the recipient protector or deity is wrathful, and clear or whitish in color if in a peaceful form.

Gtsang pa rgya ras Ye shes rdo rje. (Tsangpa Gyare Yeshe Dorje) (1161–1211). The founder of the **’BRUG PA BKA’ BRGYUD** sect of Tibetan Buddhism, and considered to be the first in the line of **’BRUG CHEN INCARNATIONS** that begins historically with Chos rje Kun dga’ dpal’ ’byor (Chöje Kunga Paljor, 1426/8–1476). His works include the *Rten ’brel rab bdun* (“Seven Auspicious

Dharmas”) and the *Ro snyom skor drug* (“Six Spheres of Equal Taste”), said to be teachings concealed as [GTER MA](#) (treasure) by [RAS CHUNG PA](#), the disciple of [MI LA RAS PA](#) and discovered by Gtsang pa rgya ras. These works were systematized by [PADMA DKAR PO](#), a prolific author and scholar, and fourth in the line of reincarnations. The students of Gtsang pa rgya ras founded three ’Brug pa bka’ brgyud subsects; of the three, the so-called Bar ’Brug (middle Drukpa) was passed down through Gtsang pa rgya ras’s family to the fourth incarnation, Padma dkar po. Of the two candidates to the lineage throne on his death, [ZHABS DRUNG NGAG DBANG RNAM RGYAL](#) fell afoul of strong political forces in Dbus (central Tibet) and was forced to flee to Bhutan where he founded the southern sect (Lho ’brug bka’ brgyud) and became both the spiritual and temporal head of the country. The name of Bhutan, ’Brug yul (Drukpa Lands), stems from that time.

[Gtsang smyon Heruka](#). (Tsangnyön Heruka) (1452–1507). Tibetan iconoclast, best known as Gtsang smyon, the “madman of Gtsang”; revered especially for his literary works, including the biography of eleventh-century master [MILA RAS PA](#). Gtsang smyon Heruka began his career as a monk, receiving Buddhist ordination at the age of seven. He studied various systems of tantra and meditation under his chief guru, the Bka’ brgyud master Shes rab ’byams pa, and later under several Sa skya teachers. Discouraged by the limitations of life as a monk and scholar, he adopted the life of a wandering [YOGIN](#), engaging in the unusual behavior for which he earned the appellation smyon pa, “madman.” His actions have been interpreted as part of a fifteenth-century reaction and reform movement against the growing wealth and power of elite incarnation lineages and religious institutions of his day. He and other “mad yogins” affiliated with the Bka’ brgyud sect, such as ’BRUG BA KUN LEGS, and the lesser known Dbu smyon Kun dga’ bzang po (1458–1532), sought to reemphasize the importance of meditation and retreat over strict adherence to monastic discipline or intellectual study—a tradition reaching back to the renowned Bka’ brgyud founder, Mi la ras pa. Gtsang smyon Heruka himself spent many years visiting the meditation caves and retreat sites associated with Mi la ras pa. He also attempted to preserve important Bka’ brgyud instruction lineages that were in danger of being lost, and toward the end of his life compiled an enormous thirteen-volume synthesis of the aural instructions (snyan brgyud) stemming from three of Mi la ras pa’s principal disciples, [RAS CHUNG PA](#), [RDO RJE GRAGS](#), [SGAM PO PA](#), [BSOD NAMS RIN CHEN](#), and Ngan rdzongs rdo rje rgyal po (late

eleventh century). He visited Nepal on several occasions, directing the renovation of [SVAYAMBHŪ STŪPA](#), one of the Kathmandu Valley's principal Buddhist pilgrimage centers. He is perhaps best remembered as the author of the widely read [MI LA RAS PA'I RNAM THAR](#) ("Life of Milarepa") and [MI LA RAS PA'I MGUR 'BUM](#) ("Hundred Thousand Songs of Milarepa"), as well as a biography of Milarepa's guru [MARPA CHOS KYI BLO GROS](#).

[Guanding jing](#). (J. Kanjōgyō; K. Kwanjōng kyōng 灌頂經). In Chinese, "Consecration Scripture." Although the *Guanding jing* claims to be a translation by Śrīmitra (d. 343), the scripture is almost certainly an indigenous Chinese scripture (see [APOCRYPHA](#)) composed in the mid-fifth century. The *Guanding jing* is largely a collection of twelve semi-independent scriptures on magical spells ([DHĀRANĪ](#)). They are the (1) spells of the 72,000 spirit kings that protect [BHIKSU](#); (2) spells of the 120,000 spirit kings that protect [BHIKSŪNĪ](#)s; (3) protective spells of the three refuges and five precepts to be carried on one's person; (4) protective spells of the hundred-knotted spirit kings; (5) incantations of spirit kings who guard one's surroundings; (6) the circumstances of tombs and the spells of the four quarters; (7) devil-subduing seals and great spells; (8) great spells of Mañiratna; (9) summoning the dragon kings of the five directions and treating pestilent infections; (10) the oracle of Brahmā; (11) rebirth in the ten pure lands of one's desire; and (12) eliminating faults and transcending life and death. The twelfth scripture is currently the oldest extant Chinese version of the [BHAIṢAJYAGURUSŪTRA](#). The *Guanding jing* also contains one of the earliest extant Chinese descriptions of a full Buddhist consecration ([ABHISEKA](#)) ritual, and serves as an important source for studying the influence of Daoism on early Buddhism.

[Guang hongming ji](#). (J. Kōgumyōshū; K. Kwang hongmyōng chip 廣弘明集). In Chinese, "Expanded Collection on the Propagation and Clarification [of Buddhism]," a collection of materials pertaining to the propagation and protection of Buddhism in China, compiled by [DAOXUAN](#) in 644 CE. As the title indicates, the *Guang hongming ji* is an updated version of the [HONGMING JI](#) compiled by [SENGYOU](#). Daoxuan's text, however, differs from Sengyou's in several respects. Unlike the *Hongming ji*, which focused on treatises written by the [SAMGHA](#), Daoxuan's text also cites non-Buddhist texts written by Daoists, monks' petitions to the court, court documents, imperial decrees, poetry, and songs. While the *Hongming ji* was primarily concerned with the Buddhists'

attempts to protect their tradition from the attack of the Confucian elite who dominated the courts of the Five Dynasties, the *Guang hongming ji* had less to do with the Confucians than the Daoist priests of the Tang dynasty. Among the various sources cited in the *Guang hongming ji* are the Daoist renegade Zhen Luan's *Xiaodao lun* ("Laughing at the Dao Treatise") and [DAO'AN](#)'s *Erjiao lun* ("Two Teachings Treatise"). The *Guang hongming ji* serves as an important source not only for understanding the different ways in which Chinese Buddhists sought to defend their "foreign" religion, but also for information on the relationship between Buddhism and Daoism in medieval China.

[Guangshengsi](#). (廣勝寺). In Chinese, "Monastery of Vast Triumph"; located in the Zhaocheng county seat in southern Shanxi province, the monastery's foundation legend traces its history back to 147 CE. The monastery is comprised of two monastic compounds, called the lower (xiasi) and upper (shangsi) Guangsheng monasteries. The upper monastery was rebuilt in 769 CE during the Tang, when the Taizong emperor (r. 762–779 CE) bestowed upon it the current name of Guangsheng or "Vast Triumph." Upper Guangsheng monastery was known for housing both Buddhist relics and two editions of the Buddhist canon ([DAZANGJING](#)), one dating from the Jin dynasty (1115–1234 CE), the other from the Yuan (1271–1368 CE). Lower Guangsheng monastery was originally an independent monastery. It is unique in that its main shrine hall, which dates from 1319 CE during the Yuan dynasty, was not specifically Buddhist or Daoist but was instead dedicated to a local god—Mingying Wang, the King of Righteous Response. The monastery was later subsumed by its neighbor, Upper Guangsheng monastery, and since the Ming dynasty (1368–1644 CE) has been known as Lower Guangsheng monastery.

[Guangxiaosi](#). (光孝寺). In Chinese, "Radiant Filiality Monastery"; located in Guangzhou, it was formerly the residence of Prince Zhao Jiande of the Western Han dynasty. In 401 CE, during the Eastern Jin dynasty (317–420), the [GANDHĀRA](#) monk, Dharmayaśas (Tanmoyeshe), is said to have converted the residence into a monastery. When [BODHIDHARMA](#) (c. early fifth century), the legendary founder of the [CHAN](#) school, traveled to China, he is said to have arrived in Guangzhou and visited the monastery before proceeding north. But the monk most closely associated with Guangxiaosi was a native of the region, [HUINENG](#) (638–713 CE), the putative sixth patriarch ([LIUZU](#)) of Chan Buddhism. Chan doxographies state that Huineng initially arrived at the monastery, which

was then called Faxingsi, as a novice during the 660s. Huineng’s arrival coincided with an ongoing debate among some resident monks: when the breeze blew a banner located nearby, was it the breeze or the banner that moved? Huineng famously replied that it was actually the minds of the two monks that moved. The story is commemorated in a hall constructed at the monastery named Banner Hall. Huineng is said to have accepted his monastic vows under a [BODHI TREE](#) located at the monastery, thus fulfilling a prophecy made over a century earlier, and later became its abbot. Huineng’s monastery was renamed Guangxiaosi during the Song dynasty; by the Yuan dynasty, it had achieved fame for being the former residence of Zhao Jiande, as well as for housing the aforementioned bodhi tree and Banner Hall. During the Ming dynasty, the monastery was favored by poets seeking refuge from the summer heat. Three of the Pearl River delta’s most celebrated poets, Ou Daren, Li Minbiao, and Liang Youyu, founded a poetry society while residing at the monastery. Guangxiaosi was rebuilt during the Qing dynasty (1644–1911 CE) in its present form. The monastery is also famous for housing the first iron [STŪPAs](#) in China, which still exist. The west courtyard houses the square West Iron Pagoda, which was cast in 963 CE, during the Five Dynasties period. Only three of the original seven stories still exist. The East Iron Pagoda, cast in 967 CE, was also seven stories high and is preserved on the monastery grounds.

[Guan Puxian pusa xingfa jing](#). (J. Kan Fugen bosatsu gyōbōkyō; K. Kwan Pohyōn posal haengbōp kyōng 觀普賢菩薩行法經). In Chinese, “Sūtra on the Procedures for Visualizing the Bodhisattva [SAMANTABHADRA](#)”; one of the “Three [Sister] Sūtras of the ‘Lotus’” ([FAHUA SANBU \[JING\]](#)), along with the [WULIANG YI JING](#) (“Sūtra of Immeasurable Meanings”) and the [SADDHARMAPUNḌARĪKASŪTRA](#) (“Lotus Sūtra”) itself. The extant text, in one roll, was translated into Chinese by Dharmamitra (356–442) sometime between 424 and 442; two earlier translations, neither of which is extant, are mentioned in the scriptural catalogues ([JINGLU](#)): the *Puxian guan jing* by *Gītāmītra (c. fourth century) and the *Guan Puxian pusa jing*, attributed to [KUMĀRAJĪVA](#). There is no extant Sanskrit recension of the scripture. While the *Wuliang yi jing* is presumed to be the prequel to the *Saddharmapuṇḍarīkasūtra*, the *Guan Puxian pusa xingfa jing* is usually considered its sequel, being similar in content to the twenty-eighth and final chapter of the *Saddharmapuṇḍarīkasūtra*. In this scripture, the Buddha provides a detailed account of a meditation that will generate a vision of the bodhisattva Samantabhadra in all his glory, including the majesty of the snowy-

white elephant on which he rides. Once Samantabhadra is visible, he will then reveal to the meditator all the buddhas of the ten directions, as well as various other pure lands and bodhisattvas. The scripture concludes with Samantabhadra's explanation of how to conduct a repentance ritual that will purify the six sense organs, thus ensuring that the meditator will never again engage in unwholesome acts ([AKUŚALA-KARMA](#)) and will no longer be subject to rebirth in the three realms of existence ([TRILOKA\[DHĀTU\]](#)).

[Guanshiyin](#). (J. Kanzeon; Kwanseūm 觀世音). In Chinese, “Perceiver of the World’s Sounds”; one of the popular Chinese translations of the name of the bodhisattva [AVALOKITEŚVARA](#). See [GUANYIN](#).

[Guan Wuliangshou jing](#). (S. *Amitāyurdhyānasūtra; J. Kan Muryōjūkyō; K. Kwan Muryangsu kyōng 觀無量壽經). In Chinese, “Sūtra on the Visualization of [the Buddha of] Immeasurable Life”; often called simply the *Guan jing*, or “Visualization Scripture.” Along with the [AMITĀBHASŪTRA](#) and [SUKHĀVATĪVYŪHASŪTRA](#), the *Guan Wuliangshou jing* has been considered one of the three central scriptures of the [PURE LAND](#) tradition(s) ([JINGTU SANBU JING](#)). The *Guan jing* was extremely influential in East Asian Buddhism for advocating specific types of visualizations or contemplations (*guan*) on the person of the buddha [AMITĀBHA](#) (C. Wuliangshou; S. Amitāyu), and for encouraging oral recitation of Amitābha’s name (*chengming*; see [NIANFO](#)). Early commentaries on the scripture were written by [SHANDAO](#) (613–681), an important Chinese exponent of pure land practice, as well as by [Tiantai Zhiyi](#) (538–597), and [Jingying Huiyuan](#) (523–592), all attesting to the text’s centrality to the East Asian Buddhist tradition. Although the *Guan Wuliangshou jing* purports to be a translation by the monk [KĀLAYAŚAS](#) (fl. c. 383–442), no Sanskrit or Tibetan recension is known to have ever existed; Uighur versions of the *Guan Wuliangshou jing* are extant, but they are translations of the Chinese version. The scripture also contains specific Chinese influences, such as references to earlier Chinese translations of pure land materials and other contemplation sūtras (*guan jing*), which has suggested to some scholars that the text might be a Chinese indigenous composition (see [APOCRYPHA](#)). It is now generally accepted that the scripture outlines a visualization exercise that was practiced in Central Asia, perhaps specifically in the [TURFAN](#) region, but includes substantial Chinese admixtures. ¶ The *Guan Wuliangshou jing* tells the story of prince [AJĀTAŚATRU](#) who, at the urging of [DEVADATTA](#), imprisons his father, king [BIMBISĀRA](#), and

usurps the throne. After Ajātaśatru learns that his mother, queen [VAIDEHĪ](#), has been surreptitiously keeping her husband alive by sneaking food in to him, he puts her under house arrest as well. The distraught queen prays to the Buddha for release from her suffering and he immediately appears in her chambers. Vaidehī asks him to show her a land free from sorrow and he displays to her the numerous buddha fields ([BUDDHAKSETRA](#)) throughout the ten directions ([DAŚADIŚ](#)) of the universe. Queen Vaidehī, however, chooses to be reborn in the buddha [AMITĀBHA](#)'s pure land of [SUKHĀVATĪ](#), so the Buddha instructs her in sixteen visualizations that ensure the meditator will take rebirth there, including visualizations on the setting sun, the lotus throne of Amitābha, Amitābha himself, as well as the bodhisattvas [AVALOKITEŚVARA](#) and [MAHĀSTHĀMAPRĀPTA](#). The visualizations largely focus on the details of sukhāvātī's beauty, such as its beryl ground, jeweled trees, and pure water. In the last three visualizations, the Buddha expounds the nine grades of rebirth ([JIUPIN](#)) in that land, which became a favorite topic among exegetes in China, Korea, and Japan. The *Guan Wuliangshou jing* has also exerted much influence in the realm of art. A number of exquisite mural representations of sukhāvātī and the sixteen contemplations adorn the walls of the [DUNHUANG](#) cave complex, for example.

[Guanxiu](#). (J. Kankyū; K. Kwanhyu 貫休). See [CHANYUE GUANXIU](#).

[Guanyin](#). (J. Kannon; K. Kwanŏm 觀音). In Chinese, “Perceiver of Sounds,” an abbreviation of the longer name Guanshiyin (J. Kanzeon; K. Kwanseŏm; Perceiver of the World's Sounds); the most famous and influential [BODHISATTVA](#) in all of East Asia, who is commonly known in Western popular literature as “The Goddess of Mercy.” Guanyin (alt. Guanshiyin) is the Chinese translation of [AVALOKITEŚVARA](#), the bodhisattva of compassion; this rendering, popularized by the renowned Kuchean translator [KUMĀRAJĪVA](#) in his 405–406 CE translation of the [SADDHARMAPUNĀRĪKASŪTRA](#) (“Lotus Sūtra”), derives from an earlier form of this bodhisattva's name, Avalokitasvara, which is attested in some Sanskrit manuscripts of this scripture; Kumārajīva interprets this name as “gazing” (avalokita; C. guan) on the “sounds” (svara; C. yin) [of this wailing “world” (C. shi) of suffering]. Avalokitasvara was supplanted during the seventh century CE by the standard Sanskrit form Avalokiteśvara, the “gazing” (avalokita) “lord” (īśvara); this later form is followed in [XUANZANG](#)'s Chinese rendering Guanzizai (J. Kanjizai; K. Kwanjajae), as found in his 649 CE translation of the [PRAJÑĀPĀRAMITĀHRDAYASŪTRA](#) (“Heart Sūtra”). The primary textual source for

Guanyin worship is the twenty-fifth chapter of the *Saddharmapuṇḍarīkasūtra*; that chapter is devoted to the bodhisattva and circulated widely as an independent text in East Asia. The chapter guarantees that if anyone in danger calls out Guanshiyin's name with completely sincerity, the bodhisattva will "perceive the sound" of his call and rescue him from harm. Unlike in India and Tibet, Avalokiteśvara took on female form in East Asia around the tenth century. In traditional China, indigenous forms of Guanyin, such as [BAIYI GUANYIN](#) (White-Robed Guanyin), Yulan Guanyin (Guanyin with Fish Basket), [SHUIYUE GUANYIN](#) (Moon in Water Guanyin), Songzi Guanyin (Child-Granting Guanyin), [MALANG FU](#), as well as Princess [MIAOSHAN](#), became popular subjects of worship. Guanyin was worshipped in China by both monastics and laity, but her functions differed according to her manifestation. Guanyin thus served as a protectress against personal misfortune, a symbol of Buddhist ideals and restraint, or a granter of children. Various religious groups and lay communities also took one of her various forms as their patroness, and in this role, Guanyin was seen as a symbol of personal salvation. Beginning in the tenth century, these different manifestations of Guanyin proliferated throughout China through indigenous sūtras (see [APOCRYPHA](#)), secular narratives, miracle tales, monastic foundation legends, and images. In later dynasties, and up through the twentieth century, Guanyin worship inspired both male and female religious groups. For example, White Lotus groups (see [BAILIAN SHE](#); [BAILIAN JIAO](#)) during the Song dynasty included members from both genders, who were active in erecting [STŪPAs](#) and founding cloisters that promoted Guanyin worship. In the twentieth century, certain women's groups were formed that took Princess Miaoshan's refusal to marry as inspiration to reject the institution of marriage themselves and, under the auspices of a Buddhist patron, pursue other secular activities as single women. ¶ In Japan, Kannon was originally introduced during the eighth century and took on additional significance as a female deity. For example, Kannon was often invoked by both pilgrims and merchants embarking on long sea voyages or overland travel. Invoking Kannon's name was thought to protect travelers from seven different calamities, such as fire, flood, storms, demons, attackers, lust and material desires, and weapons. Moreover, Kannon worship in Japan transcended sectarian loyalties, and there were numerous miracle tales concerning Kannon that circulated throughout the Japanese isles. ¶ In Korea, Kwanŭm is by far the most popular bodhisattva and is also known there as a deity who offers succor and assistance in difficult situations. The cult of Kwanŭm flourished initially under the patronage of the aristocracy in both the Paekche and Silla kingdoms,

and historical records tell of supplications made to Kwanūm for the birth of children or to protect relatives who were prisoners of war or who had been lost at sea. Hence, while the cult of [AMITĀBHA](#) was principally focused on spiritual liberation in the next life, Kwanūm instead was worshipped for protection in this life. Still today, Kwanūm is an object of popular worship and a focus of ritual chanting in Korean Buddhist monasteries by both monks and, especially, laywomen (and usually chanted in the form Kwanseūm).

[Guanzizai](#). (J. Kanjizai; K. Kwanjajae 觀自在). In Chinese, “Gazing Lord”; later Chinese translation of the name of the bodhisattva [AVALOKITEŚVARA](#). See [GUANYIN](#).

[Gudō Tōshoku](#). (愚堂東寔) (1579–1661). Japanese [ZEN](#) master in the [RINZAISHŪ](#). Gudō Tōshoku was born in Mino, present-day Gifu prefecture. In his twenties, he went on a pilgrimage around the country with several other young monks, such as [DAIGU SŌCHIKU](#) and Ungo Kiyō (1582–1659), in search of a teacher. Gudō later travelled to Shōtakuin, a memorial chapel (tatchū) at the Rinzaï monastery of [MYŌSHINJI](#), where he found a teacher by the name of Yōzan Keiyō (1559–1626). Gudō later became Yōzan’s [DHARMA](#) heir (see [FASI](#)). In 1614, Gudō became the abbot of a dilapidated monastery named Zuiganji in his native Mino. He was also invited as the abbot of the nearby monastery of Shōdenji. In 1621, he was once again invited to restore Daisenji, another dilapidated monastery in Mino. With the support of powerful local patrons, Gudō was able to restore all these monasteries. In 1628, he became the abbot of Myōshinji and served as abbot a total of three times. During his stay at Myōshinji, Gudō led a faction within the monastery that opposed tendering an invitation to the Chinese Chan master [YINYUAN LONGQI](#) to serve as abbot of the monastery. Yinyuan instead was invited to Uji in 1661 to establish a new monastery, [MANPUKUJI](#), which led to the foundation of the [ŌBAKUSHŪ](#) of Japanese Zen. Gudō later returned to his efforts to restore monasteries throughout the country. During the Tokugawa period, monasteries were mandated by the military government (bakufu) to affiliate themselves with a main monastery (honzan), thus becoming branch temples (matsuji). The monasteries that Gudō restored became branch temples of Myōshinji. Through Gudō’s efforts, the influence of Myōshinji thus grew extensively. The influential Zen master [HAKUIN EKAKU](#) traced his lineage back to Gudō through the latter’s disciple Shidō Bunan (1603–1676) and Shidō’s disciple Dōkyō Etan (1642–1721). Gudō later received the honorary title Daien

Hōkan kokushi (State Preceptor Great and Perfect Jeweled Mirror). His teachings can be found in the *Hōkanroku*.

Gu ge. The name of a kingdom in Mnga' ris (western Tibet) founded by descendants of the royal line that fled after the breakup of the central Tibetan kingdom following the rule and assassination of [GLANG DAR MA](#). The kingdom lasted until the sixteenth century, with its capitals at Rtsa rang, [THO LING](#), and [DUNG DKAR](#); it reached its zenith during the tenth to thirteenth centuries. During the second half of the tenth century, the king of the Gu ge kingdom Lha bla ma [YE SHES 'OD](#), a strong supporter of Buddhism, sent the translator [RIN CHEN BZANG PO](#) and a number of other Tibetans to India to study Buddhism. Rin chen bzang po's return in 978 marks the beginning of the later spread of Buddhism ([PHYI DAR](#)). Ye shes 'od's nephew [BYANG CHUB 'OD](#) successfully invited the famous Indian teacher [ATIŚA DĪPAMKARĀŚRĪJÑĀNA](#) to Tibet; under him and his successors, temple building and scholarship flourished. The sculpture and wall paintings executed by artists from Kashmir and other areas, whom they invited to decorate the temples in their capitals as well as at ALCHI, TA PHO, and numerous smaller shrines, are still extant. Because of their remoteness, and because some of the areas formerly part of the Gu ge kingdom are now under the political jurisdiction of India, many of the temples from that period have escaped destruction and contain some of the most important examples of Buddhist art from that period.

guhyābhiṣeka. (T. gsang dbang; C. mimi guanding; J. himitsukanjō; K. pimil kwanjōng 秘密灌頂). In Sanskrit, “secret empowerment,” the second of the four empowerments or initiations employed in the [ANUTTARAYOGA](#) tantras, the other three being the vase empowerment ([KALĀŚĀBHISEKA](#)), which precedes the secret empowerment (guhyābhiṣeka), and the knowledge of the consort empowerment ([PRAJÑĀJÑĀNĀBHISEKA](#)) and the fourth empowerment ([CATURTHĀBHISEKA](#)), which both follow it. The secret empowerment is intended for initiates who have already received the full vase empowerment. In the secret empowerment, the disciple presents his master with a fully qualified consort. The consort, representing wisdom ([PRAJÑĀ](#)), and the master, representing method ([UPĀYA](#)), then unite sexually. A drop of the fluid that results from their union, called [BODHICITTA](#), is then placed on the tongue of the disciple, who swallows it. In the next empowerment, “the knowledge of the consort,” the disciple then engages in sexual union with the same consort, inducing increasing levels of bliss. Although

later monastic exegetes would interpret these empowerments symbolically, it appears that they were actually practiced as the tantric systems developed in India, and they continued to be practiced among certain groups of adepts in Tibet.

[Guhyagarbhatantra](#). (T. Gsang ba'i snying po'i rgyud). In Sanskrit, the “Secret Essence Tantra,” a central text of the [RNYING MA](#) sect of Tibetan Buddhism and the [RDZOGS CHEN](#) tradition. The tantra is regarded as an expression of the enlightened intention of the primordial [DHARMAKĀYA](#), the buddha [SAMANTABHADRA](#). It is a work of Indic origin, appearing around mid-eighth century, probably after the [GUHYASAMĀJATANTRA](#). It is unclear whether the text was called *Guhyagarbha* at the time of its composition or whether that title was added later. In [DUNHUANG](#) documents, it is usually referred to as the *Māyājālatantra*. By the time of a late tenth-century manuscript, it is called the *Guhyagarbhatantra*. The later Tibetan tradition identifies the *Guhyagarbha* as the root tantra of the [MAHĀYOGA](#) class, as well as the main tantra of the [MĀYĀJĀLA](#) cycle of tantras, a group of eighteen mahāyoga tantras. The *Guhyagarbha* was particularly influential in late eighth- and early ninth-century Tibet, when it was a principal inspiration for the early rdzogs chen movement. Its Māyājāla [MANDALA](#) of one hundred deities (forty-two peaceful and fifty-eight wrathful) was widely employed. In the [PHYI DAR](#) period, the tantra was condemned by a number of [GSAR MA](#) figures (especially the eleventh-century translator 'Gos khug pa lhas btsas) as an apocryphal Tibetan creation, probably because of its importance in the Rnying ma sect and in the still-developing rdzogs chen tradition. However, a Sanskrit copy of the tantra was discovered at [BSAM YAS](#) and verified by [ŚĀKYAŚRĪBHADRA](#). In the thirteenth century, Lcom ldan rig ral ordered a new translation on the basis of the manuscript. Major commentators include Rong zom chos bzang (eleventh century) and [KLONG CHEN RAB 'BYAMS](#), and eventually, two schools of interpretations formed, the Rong klong lugs and the Zur lugs. The tantra exists in three distinct versions: in twenty-two, forty-six, and eighty-two chapters. The shorter version is considered the root tantra and is the subject of most commentary.

[guhyamantrayāna](#). (T. gsang sngags kyi theg pa). In Sanskrit, “secret [MANTRA](#) vehicle,” a synonym for the [VAJRAYĀNA](#), used especially in Tibet. According to the contextual etymology, tantric practice is secret both in the sense that it is not taught openly and because it remains secret, i.e., not understood, by those who

are not suitable vessels for it. In this context, mantra is glossed to mean “mind protection,” in the sense that it protects the mind from ordinary appearances. The *guhyanmantrayāna* is regarded as one of the two branches of the [MAHĀYĀNA](#), together with the [PĀRAMITĀYĀNA](#).

[Guhyasamājatantra](#). (T. Gsang ba 'dus pa'i rgyud; C. Yiqie rulai jingang sanye zuishang mimi dajiaowang jing; J. Issainyorai kongōsangōsaijōhimitsu daikyōōgyō; K. Ilch'e yōrae kūmgang samōp ch'oesang pimil taegyowang kyōng 一切如來金剛三業最上秘密大教王經). In Sanskrit, “Secret Assembly Tantra”; referred to in Tibet as the “king of tantras” (rgyud kyi rgyal po), it is among the most important of what later come to be called [ANUTTARAYOGATANTRAS](#), or highest yoga tantras. It is also classified as a “father tantra” ([PITRTANTRA](#)). The text was likely composed sometime between about 750 and 850 CE. It consists of eighteen chapters, the last of which is a supplement, referred to as the uttatantra. The *Guhyasamāja* is one of the earliest tantras to present overtly antinomian practices, notably of a sexual nature, as well as the practices of ingesting impure substances. The text begins with a surprising rendition of the opening line of a Buddhist sūtra (see [EVAM MAYĀ ŚRUTAM](#)), when it states, “Thus have I heard. At one time the Bhagavān was residing in the vaginas of the women who are the vajra essence of the body, speech, and mind of all the tathāgatas.” Such passages led to the development of sophisticated hermeneutical systems for interpreting the tantras to discover their hidden meaning. Important Indian commentaries on this tantra include the [PAÑCAKRAMA](#) attributed to [NĀGĀRJUNA](#), the *Caryāmelāpakapradīpa* attributed to [ĀRYADEVA](#), and the *Pradīpoddyotana* attributed to [CANDRAKĪRTI](#). In the [MANDALA](#) associated with the Ārya tradition of commentary (deriving from Nāgārjuna) there are thirty-two deities. The central deity of the maṇḍala is Guhyasamāja, a manifestation of [AKSOBHYA](#), surrounded by [VAIROCANA](#) in the east, [RATNASAMBHAVA](#) (or Ratnaketu) in the south, [AMITĀBHA](#) in the west, and [AMOGHASIDDHI](#) in the north, each in sexual union with a consort. The central deity is blue in color, with three faces and six arms. Seated in the posture of sexual union, he embraces his consort Sparśavajra. In addition, there are the ten “fierce kings” (krodharāja), eight bodhisattvas, and four goddesses. Like other tantras of its class, the [SĀDHANAS](#) of the Guhyasamāja set forth the practice of the stage of generation ([UTPATTIKRAMA](#)) and the stage of completion ([NISPANNAKRAMA](#)), with its attendant sexual yogas, toward the achievement of an illusory body (MĀYĀKĀYA). The text was translated into Chinese by Dānapāla

around 1002, but was not particularly influential in East Asian Buddhism, where its explicit sexual language offended more prudish Confucian sensibilities. It was translated into Tibetan in the eleventh century by [RIN CHEN BZANG PO](#) and Śraddhākaravarman. In Tibet, the tantra was highly influential, ranking in importance with the [HEVAJRATANTRA](#), [CAKRASAMVARATANTRA](#), and [KĀLACAKRATANTRA](#).

[Guhyasiddhi](#). (T. Gsang ba grub pa). A tantric work by Padmavajra or Devacandra, probably written in the ninth century; it praises the [GUHYASAMĀJATANTRA](#) and posits the bliss of sexual union as a prerequisite for attaining the highest, essenceless state that is beyond the contemplation even of the Buddha.

[Guifeng Zongmi](#). (J. Keihō Shūmitsu; K. Kyubong Chongmil 圭峰宗密) (780–841). Chinese [CHAN](#) master and historian; putative fifth patriarch of the [HUAYAN](#) tradition and successor in the Heze school of [CHAN](#); best known for positing the fundamental harmony between the scriptural teachings of Buddhism and Chan practice. Zongmi was a native of Xichong in present-day Sichuan province. Although little is known of his early life, Zongmi is said to have received a classical Confucian education. In 804, Zongmi encountered the monk Daoyuan (d.u.), purportedly a fourth-generation lineage holder of the Heze line of Chan (see [HEZE SHENHUI](#)), and became his student. During this period, Zongmi also carried on his studies of the [YUANJUE JING](#). In 808, Zongmi received the full monastic precepts from Daoyuan, who then recommended the monk Nanyin Weizhong (d. 821) as a suitable teacher. In 810, Zongmi met the monk Lingfeng (d.u.), a disciple of the Huayan monk [CHENGGUAN](#), at the monastery of Huijuesi. Two years later Zongmi began his studies of the [AVATAMSAKASŪTRA](#) under [CHENGGUAN](#) in Chang'an. In 816, Zongmi began his residence at the monastery of Zhijusi on [ZHONGNANSHAN](#) and in 821 he retired to the temple Caotangsi on Gui peak (Guifeng), whence he acquired his toponym. There, Zongmi devoted himself to such works as his influential commentary on the *Yuanjue jing*, the *Yuanjue jing dashu*. In 828, Zongmi was invited to the palace and given a purple robe and the title Dade (Great Virtue). During his stay at the capital he met many important statesmen including Pei Xiu (787–860). Zongmi was a prolific writer whose works include commentaries on the *Avatamsakasūtra*, [VAJRACCHEDIKĀPRAJÑĀPĀRAMITĀSŪTRA](#), [DASHENG QIXIN LUN](#), [MAHĀPARINIRVĀNASŪTRA](#), [SIFEN LŪ](#) (“Four-Part Vinaya”), and others. He also

composed a massive, 100-roll history of the Chan school, the *Chanyuan zhuquanji* (“Collected Writings on the Source of Chan”), only the prolegomenon to which is extant (see [CHANYUAN ZHUQUANJI DUXU](#)). Zongmi’s writings were extremely influential in the mature Korean [SŎN](#) school and, especially, in the thought and practice of [POJO CHINUL](#) (1158–1210), who drew on Zongmi to advocate an accord between the traditions of Sŏn (C. Chan; meditation) and Kyo (C. [JIAO](#); doctrine). See also [LINGZHI](#); [FANZHAO](#).

[guiku](#). (J. kikutsu; K. kwigul 鬼窟). In Chinese, “ghost cave,” a [CHAN](#) Buddhist expression referring to a fallacious kind of meditative state or spiritual understanding, wherein the practitioner mistakes the nihilistic void he experiences for the realization of emptiness ([ŚUNYATA](#)), stagnant inactivity for tranquility, or gratuitous sensory deprivation for freedom from mental afflictions. Those misled or mired in this trap often profess denial of, or apathy toward, conditioned reality as well as its causal and karmic laws and the apparent suffering that sentient beings experience. For these reasons, this is also called “the pit of spurious liberation” (jia jietuo keng) and is one of the dangers about which Chan teachers vehemently caution their students. By extension, the fallacious view that there is no fruition of action and that ultimate reality consists of utter vacuity is called *guijian*—“the view of a ghost,” who dwells in the aforementioned cave.

[Guishan jingce](#). [alt. Weishan jingce] (J. Isan kyōsaku [alt. keisaku]; K. Wisan kyōngch’aek 滙山警策). In Chinese, “Guishan’s Admonitions,” also known as the *Guishan Dayuan chanshi jingce*. This treatise by the [CHAN](#) master [GUISHAN LINGYOU](#) (771–853) warns novices against laziness and lays out in straightforward fashion the proper manner of cultivating oneself. Along with the [YIJIAO JING](#) and the [SISHI’ER ZHANG JING](#), the *Guishan jingce* has been cherished by the [CHAN](#) tradition for its simple and accessible style of writing. Sometime during the late Tang and early Song dynasties, the three texts were edited together as the [FOZU SANJING](#) (“The Three Scriptures of the Buddhas and Patriarchs”) and were recommended to neophytes in Chan practice. (Note in this and following entries that both pronunciations for the Sinograph Gui/Wei are attested in Chinese dictionaries of historical phonology, but in modern times the character is more commonly pronounced Wei.) **[Guishan Lingyou](#)**. [alt. Weishan Lingyou] (J. Isan Reiyū; K. Wisan Yōngu 滙山靈祐) (771–853). Chinese [CHAN](#) master and cofounder of the [GUIYANG ZONG](#) of the mature Chan tradition.

Guishan was a native of Fuzhou prefecture in present-day Fujian province. He was ordained at the age of fifteen and studied [SŪTRA](#) and [VINAYA](#) at Longxingsi in Hangzhou prefecture (present-day Zhejiang province). Later, Guishan became the disciple of the eminent Chan master [BAIZHANG HUAHAI](#) (720–814) of Hongzhou prefecture (present-day Jiangxi province). Along with [HUANGBO XIYUN](#) (d. 850?), Guishan became one of Baizhang’s most prominent disciples and an emblematic teacher of Tang-dynasty Chan. He later moved to Guishan, whence he acquired his toponym, and taught more than forty close disciples. Among his disciples, the most important is [YANGSHAN HUIJI](#) (807–883). The names of the mountains on which Guishan and his student Yangshan resided were used collectively to refer to their prosperous Chan lineage, the Guiyang. He was later bestowed the title Chan master Dayuan (Great and Perfect). His teachings are recorded in the *Tanzhou Guishan Lingyou chanshi yulu* and [GUISHAN JINGCE](#).

[Guiyang zong](#). [alt. Weiyang zong] (J. Igyōshū; K. Wiang chong 滙仰宗). In Chinese, the “Guiyang school,” one of the “five houses” (wu jia; see [WU JIA QI ZONG](#)), or distinct schools, that developed within the mature Chinese [CHAN](#) lineage during the late-Tang dynasty, or c. ninth century CE. The Guiyang school is named after its cofounders, [GUISHAN LINGYOU](#) (771–853) and [YANGSHAN HUIJI](#) (807–883), whose lineage derives from the [HONGZHOU](#) school of [MAZU DAOYI](#) (709–788) and [BAIZHANG HUAHAI](#) (720–814). The Guiyang school is recognized for its distinctive pedagogical style, which privileged nonverbal expressions of enlightenment over verbal descriptions. For example, once Lingyou’s teacher, Huaihai, placed a water jug before the assembly of monks and asked them, “If you don’t call this a water jug, what can you call it?” Lingyou’s response was to kick over the jug and walk away. This combination of action and silence was said to be the way in which the Guiyang school would express the relationship between essence ([TI](#)) and function ([YONG](#)). The Guiyang school is also known for its use of circular figures, including an intricate set of ninety-seven circular symbols that Yangshan Huiji used to express different aspects of Buddhist ontology and soteriology. Although the Guiyang zong did not survive into the Song dynasty as an active lineage, it remained an integral part of the retrospective imagining of the Chan tradition that took place during the Song.

[guna](#). (T. yon tan; C. gongde; J. kudoku; K. kongdōk 功德). In Sanskrit and Pāli, lit. “string,” or “strand,” by extension a “quality” or “spiritual virtue.” In the

sense of a “quality,” or “constituent part,” the term appears in lists such as the five “strands” or “aspects” of “sensuality” (kāmaguṇa), viz., the sensual pleasures associated with the five physical senses. Guṇa as “spiritual virtue” or “meritorious quality” (S. guṇa; C. gongde) is sometimes contrasted with “merit” (S. [PUNYA](#); C. fude), i.e., practices that lead to worldly rewards and/or better rebirths but not necessarily to enlightenment. In general, such religious deeds as building monasteries, erecting [STŪPAS](#), making images of the Buddha, transcribing sūtras, and chanting all help to generate merit that can lead to better quality of life in this and other existences but will not in themselves produce the spiritual virtue (guṇa) that will be sufficient to bring about liberation from the cycle of rebirth ([SAMSĀRA](#)). See also [GUNAPĀRAMITĀ](#).

[Guṇabhadra](#). (C. Qiuṇabatuoluo; J. Gunabaddara; K. Kunabaltara 求那跋陀羅) (394–468). Indian scholiast and major translator of Buddhist scriptures into Chinese during the Liu Song period (420–479). Born in central India into a brāhmaṇa family, he is said to have studied in his youth the five traditional Indian sciences, as well as astronomy, calligraphy, mathematics, medicine, and magic. He was converted to Buddhism and began systematically to study Buddhist texts, starting with the [ABHIDHARMA](#) and proceeding through the most influential [MAHĀYĀNA](#) texts, such as the [MAHĀPRAJÑĀPĀRAMITĀSŪTRA](#) and [AVATAMSAKASŪTRA](#). Around 435, he departed from Sri Lanka for China, arriving in Guangzhou by sea. In China, he devoted himself to teaching and translating Buddhist scriptures, carrying out most of his translations of Mahāyāna and mainstream Buddhist texts while residing at Qiyuansi in Jiankang and Xinsi in Jingzhou. He translated a total of fifty-two scriptures in 134 rolls, including the [SAMYUKTĀGAMA](#) and the [PRAKARANAPĀDA \[ŚĀSTRA\]](#), both associated with the [SARVĀSTIVĀDA](#) school, such seminal Mahāyāna texts as the [ŚRĪMĀLĀDEVĪSIMHANĀDASŪTRA](#) and the [LĀNKĀVATĀRASŪTRA](#). In the [LENGQIE SHIZI JI](#), a [CHAN](#) genealogical history associated with the Northern school ([BEI ZONG](#)) of the early Chan tradition, Guṇabhadra is placed before [BODHIDHARMA](#) in the Chan patriarchal lineage, perhaps because of his role in translating the *Lānkāvātārasūtra*, an important scriptural influence in the early Chan school.

[Guṇānanda](#). (1823–1890). Also known as Migettuwatte Guṇānanda Thera; prominent figure in the Buddhist revival in Ceylon (now Sri Lanka) during the 1860s. Born into a wealthy Buddhist family in Mohottiwatta (Migettuwatta), near Balapitiya in southern Sri Lanka, as a child he studied the Bible and

Christianity with a Roman Catholic priest at a local church. He was ordained as a novice Buddhist monk in 1835 and received full ordination in 1844. Guṇānanda is best known for his involvement in five debates between Christian missionaries and Buddhist monks. (He was a contemporary of [SUMAṄGALA](#), who helped him prepare for the debates.) An impressive orator, Guṇānanda's extensive knowledge of both Christian and Buddhist doctrine allowed him to present a nuanced critique of Christianity and the superiority of Buddhism. The last of the debates, between Guṇānanda and Reverend David de Silva, took place at Panadura over two days in 1873, with an audience of some five to seven thousand spectators. The audience included the ten-year-old David Hevavitarne, who would later become [ANAGĀRIKA DHARMAPĀLA](#). An edited transcript of the debate, known as the *Pānaduravādaya*, was published in English in the book *Buddhism and Christianity Face to Face* in 1878. This book inspired Colonel [HENRY STEEL OLCOTT](#) and Madame [HELENA PETROVNA BLAVATSKY](#), founders of the Theosophical Society, to travel to Ceylon, where they played active roles in the revival of Buddhism. Guṇānanda wrote many articles and edited three texts on Buddhism. He also sought to revive Sinhala language and literature.

guṇapāramitā. (T. yon tan pha rol tu phyin pa; C. gongde boluomi; J. kudokuharamitsu; K. kongdōk paramil 功德波羅蜜). In Sanskrit, “the perfection of qualities,” referring to the four salutary qualities of the [TATHĀGATAGARBHA](#): permanence, purity, bliss, and self, as described in the [ŚRĪMĀLĀDEVĪSIMHANĀDASŪTRA](#). These qualities are in distinction to the four perverted views ([VIPARYĀSA](#)), where ignorant sentient beings regard the conditioned realm of [SAMSĀRA](#) as being permanent, pure, blissful, and self when in fact it is impermanent ([ANITYA](#)), impure (aśubha), suffering ([DUHKHA](#)), and not-self ([ANĀTMAN](#)). More specifically, according to the *Ratnagoṭravibhāgavyākya*, sentient beings assume that all the conditioned phenomena they experience are permanent and real: they consider their own bodies to be pure, regard their five aggregates ([SKANDHA](#)) as having a perduring self ([ĀTMAN](#)), falsely imagine permanence in the transitory, and mistakenly regard saṃsāra as a source of real happiness. In order to counter these attachments, the Buddha therefore taught that saṃsāra is impermanent, impure, suffering, and not-self. However, the *Ratnagoṭravibhāgavyākya* says it would be wrong to assume that these four qualities also apply to the tathāgatagarbha or the [DHARMAKĀYA](#); the Buddha teaches that it is endowed with the four guṇapāramitā, or perfect qualities, of permanence, purity, bliss, and self. The [FOXING LUN](#)

(“Buddha-Nature Treatise”) additionally presents the *guṇapāramitā* as resulting from the perfection of four soteriological practices, e.g., bliss refers to the condition of being free from suffering, which is experienced through cultivating a [SAMĀDHI](#) that overcomes wrong conceptions of emptiness ([ŚŪNYATĀ](#)); permanence indicates the endless variety of acts that bodhisattvas cultivate on the path of great compassion ([MAHĀKARUNĀ](#)), *etc.* This positive valorization of the qualities of the tathāgatagarbha serves to counteract any mistaken tendency toward nihilism that might be prompted by the apophatic language used within the [PRAJÑĀPĀRAMITĀ](#) literature or the [MADHYAMA](#) school.

Guṇaprabha. (T. Yon tan ’od; C. Deguang/Junabolapo; J. Tokkō/Kunaharaba; K. Tōkkwang/Kunaballaba 德光/瞿拏鉢刺婆) (d.u.; c. seventh century). Indian [YOGĀCĀRA](#) scholar and [VINAYA](#) specialist. In the Tibetan tradition, he is considered one of the most important of the Indian scholars because of his exposition of the vinaya. In the list of the “six ornaments and two supreme ones of [JAMBUDVĪPA](#),” the six ornaments are [NĀGĀRJUNA](#) and [ĀRYADEVA](#), [ASAṄGA](#) and [VASUBANDHU](#), and [DIGNĀGA](#) and [DHARMAKĪRTI](#); the two supreme ones are Guṇaprabha and [ŚĀKYAPRABHA](#). Guṇaprabha is said to have been an adviser to King Harṣa, who unified most of northern India following the demise of the Gupta empire. Born into a brāhmaṇa family in [MATHURĀ](#) during the seventh century, Guṇaprabha is said to have first studied the [MAHĀYĀNA](#) teachings and wrote several treatises on [YOGĀCĀRA](#). He is known as the author of the *Bodhisattvabhūmivṛtti*, a commentary on the [BODHISATTVABHŪMI](#), the *Bodhisattvaśīlaparivartabhāṣya*, an expansion of that commentary, and the *Pañcaskandhavivaraṇa*, an exegesis of [VASUBANDHU](#)’s work. Subsequently, this same Guṇaprabha seems to have abandoned Yogācāra for [ŚRĀVAKAYĀNA](#) teachings and thereafter devoted several of his works to critiquing various aspects of the Mahāyāna. (There is some controversy as to whether Guṇaprabha the Yogācāra teacher is the same as Guṇaprabha the vinaya specialist, but prevailing scholarly opinion now accepts that they are identical.) Taking up residence at a monastery in Mathurā, he became a master of the vinaya, with a specialty in the monastic code of the [MŪLASARVĀSTIVĀDA](#) school (see [MŪLASARVĀSTIVĀDA VINAYA](#)). His most influential work is the [VINAYASŪTRA](#). Despite its title, the work is not a sūtra (in the sense of a work ascribed to the Buddha) but is instead an authored work composed of individual aphoristic statements (sūtra). The text offers a summary or condensation of the massive Mūlasarvāstivāda vinaya. At approximately one quarter the length of this larger

vinaya, Guṇaprabha's abridgment seems to have functioned as a kind of primer on the monastic code, omitting lengthy passages of scripture and providing the code of conduct that monks were expected to follow. In this sense, the text is an important work for determining what lived monastic practice may actually have been like in medieval India. The *Vinayasūtra* became the most important vinaya text for Tibetan Buddhism, being studied in all of the major sects; in the [DGE LUGS](#), it is one of the five books (GZHUNG LNKA) that served as the basis of the monastic curriculum. According to legend, Guṇaprabha traveled to the [TUṢITA](#) heaven in order to discuss with [MAITREYA](#) his remaining doubts regarding ten points of doctrine. The accounts of this trip say that Guṇaprabha did not learn anything, either because Maitreya was not an ordained monk and hence was unable to teach him anything or because Maitreya saw that Guṇaprabha did not require any additional teaching. [XUANZANG](#) writes about Guṇaprabha in his [DA TANG XIYU JI](#) ("Great Tang Dynasty Record of [Travels to] the Western Regions").

[Guṇavarman](#). (C. Qiunabamo; J. Gunabatsuma; K. Kunabalma 求那跋摩) (367–431 CE). A Kashmiri monk who was an important early translator of Buddhist [VINAYA](#) and [BODHISATTVA](#) preceptive materials into Chinese. He was a prince of Kubhā, who was ordained at the age of twenty and eventually became known as a specialist in the Buddhist canon ([TREPITAKA](#)). Upon his father's death, he was offered the throne, but refused, and instead embarked on travels throughout Asia to preach the dharma, including to Java, where he helped to establish the Buddhist tradition. Various miracles are associated with the places he visited, such as fragrance wafting in the air when he meditated and a dragon-like creature who was seen ascending to heaven in his presence. In 424 CE, Guṇavarman traveled to China and was invited by Emperor Wen of the Liu Song dynasty to come to the capital in Nanjing. Upon his arrival, a monastery was built in his honor and Guṇavarman lectured there on various sūtras. During his sojourn in China, he translated some eighteen rolls of seminal Buddhist texts into Chinese, including the [BODHISATTVABHŪMI](#), and several other works associated with the [BODHISATTVAŚĪLA](#), the [DHARMAGUPTAKA VINAYA](#) ([SIFEN LŪ](#)), and monastic and lay precepts. Guṇavarman was a central figure in founding the order of nuns ([BHIKSUNĪ](#)) in China and he helped arrange the ordination of several Chinese nuns whose hagiographies are recorded in the [BIQUNI ZHUAN](#).

[Guoqing bailu](#). (J. Kokusei hyakuroku; K. Kukch'ōng paengnok 國清百錄). In

Chinese, “One Hundred Records from Guoqing [Monastery],” compiled by the [Tiantai Zong](#) monk [Guanding](#). Although the title refers to one hundred records, the *Guoqing bailu* in fact contains 104 documents that Guanding compiled in memory of his teacher [Tiantai Zhiyi](#). These documents include Zhiyi’s letters, memorial tablets, imperial decrees, ritual manuals, and monastic rules. The *Guoqing bailu* provides a wealth of information on Zhiyi’s thought and career.

guoshi. (J. kokushi; K. kuksa 國師). In Chinese, “state preceptor,” a high ecclesiastical office in East Asian Buddhist religious institutions. The first record of a “state preceptor” in China occurs during the reign of Emperor Wenxian (r. 550–559) of the Northern Qi dynasty, who is said to have appointed the monk Fachang (d.u.) as a guoshi after listening to his disquisition at court on the [Mahāparinirvānasūtra](#). During the Tang dynasty, many renowned monks were appointed as guoshi, including [Fazang](#) (643–712) as the Kangzang guoshi, [Chengguan](#) (738–839) as the Qingliang guoshi, and [Nanyang Huizhong](#) (d. 775) as the Nanyang guoshi. In Japan, the term kokushi was used during the Nara period to refer to the highest ecclesiastical office accredited to each province (koku) by the central government. In Korea, kuksa were appointed from the Silla through early Chosŏn dynasties and the term referred to a senior monk who served as a symbolic religious teacher and adviser to the state. The kuksa system appears to have become firmly established in Korea during the Koryŏ dynasty, which treated Buddhism as a virtual state religion. The first king of the Koryŏ dynasty, Wang Kŏn (T’aejo, r. 918–943), established a system of “royal preceptors” (wangsa) for his own religious edification, in distinction to the “state preceptors” who ministered to the government more broadly. The institution of ecclesiastical examinations ([Sŭngkwa](#)) during the reign of the king Kwangjong (r. 949–975) further systematized the appointments of both kuksa and wangsa. The kuksa and wangsa were compared to the parents of sentient beings and were thus placed at a status higher than even the king himself in state ceremonies. A monk could be posthumously appointed as a kuksa, and it was common during the Koryŏ dynasty for the king to reverentially appoint his wangsa as a kuksa following his spiritual adviser’s death. Because Confucian ideologues during the late Koryŏ criticized the political roles played by kuksa and wangsa as examples of the corruption of Buddhism, the offices were eventually abolished during the reign of the third king of the Confucian-oriented Chosŏn dynasty, T’aejong (r. 1400–1418).

guru. (T. bla ma; C. shi; J. shi; K. sa 師). In Sanskrit, lit. “heavy,” hence “venerable” and thus “religious guide or teacher.” In mainstream Buddhism, the [UPĀDHYĀYA](#) (novice monk’s preceptor) takes the role of the guru; the preceptor and disciple are said to be like father and son; the preceptor teaches the disciple and gives him his robes and alms bowl. In MAHĀYĀNA SŪTRA literature, the increased importance of the guru is evident in the story of [SADĀPRARUDITA](#) and his teacher [DHARMODGATA](#), from whom he seeks to learn the [PRAJÑĀPĀRAMITĀ](#), and in the [GANDAVYŪHA](#) section of the [ĀVATAMSAKASŪTRA](#), which recounts [SUDHANA](#)’s spiritual journey in search of enlightenment through a series of fifty-three spiritual mentors ([KALYĀNAMITRA](#), a word often synonymous with guru). In tantric Buddhism, the guru is of greatest importance: the first of the [SAMAYAS](#) (tantric vows) is not to despise one’s guru, who is considered to be the equal of all the [TATHĀGATAS](#). The [GURUPAÑCĀŚIKĀ](#) (“Fifty Verses on the Guru”) explains the proper conduct students should observe in the presence of a tantric guru. In Tibetan Buddhism, the ritual worship of a guru is crucially important, supported by the doctrine that it is only through one’s guru that one hears the Buddha’s teaching; for only when the buddhas take the form of a personal guru can they convey the salvific doctrine to students. The ritual worship of the guru (see [GANACAKRA](#)) in the form of the entire Buddhist pantheon ([TSHOGS ZHING](#)) is common to all Tibetan sects.

Gu ru chos kyi dbang phyug. (Guru Chökyi Wangchuk) (1212–1270). Also known as Gu ru chos dbang (Guru Chöwang); a Tibetan Buddhist master who was considered to be the second of the “five kingly treasure revealers” ([GTER STON RGYAL PO LNGA](#)) and the reincarnation of [NYANG RAL NYI MA ’OD ZER](#). According to traditional accounts, at the time of his birth, his father was reading the [MAÑJUŚRĪNĀMASAMGĪTĪ](#) (“Litany of the Names of Mañjuśrī”) and had just reached the words “lord of doctrine”; hence, the infant was given the name Chos kyi dbang phyug (lit. “lord of doctrine”). A gifted youth, he studied both the ancient ([RNYING MA](#)) and new ([GSAR MA](#)) traditions of [SŪTRA](#) and [TANTRA](#), including the doctrinal systems of pacification ([ZHID BYED](#)), severance ([GCOD](#)), [MAHĀMUDRĀ](#), and [RDZOGS CHEN](#). At twenty-two, he discovered a set of treasure texts ([GTER MA](#)), the first of thirteen great collections of treasures attributed to him. He established a seat in the southern Tibetan region of [LHO BRAG](#), and was later renowned by masters of other religious sects such as [BU STON RIN CHEN GRUB](#). His teachings also spread to Nepal through his Newar disciple Bharo Gtsug ’dzin.

gurudharma. (P. gurudhamma/garudhamma; T. lci ba'i chos; C. jingfa; J. kyōhō; K. kyōngbōp 敬法). In Sanskrit, “weighty” or “deferential” “rules,” a list of eight special precepts the Buddha issued as a condition of admitting women to the Buddhist order, which explicitly subordinates the [BHIKSUNĪ](#) to the [BHIKSU SAMGHA](#). According to traditional accounts, the Buddha was initially reluctant to admit women into the order, for fear that their presence would exacerbate the decline of the dharma (see [SADDHARMAVIPRALOPA](#); [MOFA](#)). It was only after the earnest pleas of his aunt and stepmother, [MAHĀPRAJĀPATĪ GAUTAMĪ](#), and the continued requests of his attendant, [ĀNANDA](#), that the Buddha is said to have relented and ordained his aunt as the first [BHIKSUNĪ](#). (Ānanda’s support for the ordination of women would be one of the charges brought against him at the first Buddhist council (see [COUNCIL, FIRST](#)), following the Buddha’s [PARINIRVĀNA](#).) As a condition of ordination, however, the Buddha required that women would have to accept the following list of eight “deferential rules” (the lists vary slightly by [VINAYA](#) tradition): (1) Although seniority within the order of monks was based on the length of time since ordination (see [JIELA](#)), a nun who had been ordained for even a hundred years must rise and pay respects to a monk ordained for a day; (2) a nun must not spend the annual rains retreat ([VARŚĀ](#)) in a place where there are no monks; (3) nuns must ask the order of monks for instruction in the dharma and for the appropriate time to hold the fortnightly confession assembly ([UPOSADHA](#)) (an alternative rendering of this rule says, “Every half month the nuns must request a monk to give them the exhortation to keep the eight rules, and they should ask him when the confession rite should be performed”); (4) after the rains retreat, a nun should perform the rite of confessing any infractions ([PRAVĀRANĀ](#)) that they have seen, heard, or suspected to both the order of monks and the order of nuns; (5) a nun who has committed an important infraction, or who fails to comply with any of the gurudharmas, must submit to the [MĀNATVA](#) discipline of probationary penance from both orders before she is reinstated before a quorum of twenty monks and twenty nuns; (6) women are required to receive ordination in both orders, in contrast to men, who need only be ordained in the bhikṣusaṃgha (other lists add that a woman must train for a period of two years as a probationary postulant, or [ŚIKSAMĀNĀ](#), before seeking her dual ordination); (7) a nun should never abuse or revile a monk in any way; and (8) although a monk may point out a nun’s transgressions, it is forbidden for a nun ever to admonish a monk. Some modern Buddhist reform movements have advocated the repeal of the eight deferential precepts for exemplifying an outmoded and sexist model of monasticism.

Gurupañcāśikā. (T. Bla ma lnga bcu pa). In Sanskrit, “Fifty Verses on the GURU,” a short work attributed to one AŚVAGHOŚA (a tenth-century figure not to be confused with the earlier poet) that details the proper conduct students observe in the presence of a tantric guru. Respect for one’s tantric guru was the first point in the code of tantric morality (T. rig ’dzin gyi sdom pa) (see SDOM GSUM). The *Gurupañcāśikā* sets forth the proper physical behavior and deferential language that should be employed in the presence of one’s guru in order to avoid incurring serious infractions.

Guru Rin po che. A devotional title for PADMASAMBHAVA. The name, mixing Sanskrit and Tibetan, literally means “precious teacher” and is the appellation of Padmasambhava most commonly used by Tibetans.

guruyoga. (T. bla ma’i mal ’byor). The practice of GURU devotion, considered especially important in tantric practice, in which one’s teacher is regarded as a buddha. In Tibetan Buddhism, guruyoga is included in a series of preliminary practices (SNGON ’GRO) to be undertaken before receiving a consecration. According to such works as DPAL SPRUL’s KUN BZANG BLA MA’I ZHAL LUNG (“Words of My Perfect Teacher”), guruyoga includes reciting one hundred thousand repetitions of the name MANTRA of one’s guru, visualized in the form of an enlightened being (in the case of that text, PADMASAMBHAVA). Guruyoga also includes the proper attitude toward a guru, as set forth in the GURUPAÑCĀŚIKĀ and expanded on at length at the beginning of works of the LAM RIM-type genre. See also GANACAKRA.

G.ya’ bzang bka’ brgyud. (Yasang Kagyü). One of the four major and eight minor subsects of the Bka’ brgyud sect of Tibetan Buddhism (BKA’ BRGYUD CHEN BZHI CHUNG BRGYAD), originating with Zwa ra ba Skal ldan ye shes seng ge (Sarawa Kalden Yeshe Senge, d. 1207), a disciple of the BKA’ BRGYUD hierarch PHAG MO GRU PA RDO RJE RGYAL PO.

Gyer sgom Tshul khriims seng ge. (Gyergom Tsultrim Senge) (1144–1204). A Tibetan student of the BKA’ BRGYUD hierarch PHAG MO GRU PA RDO RJE RGYAL PO, considered the founder of the SHUG GSEB BKA’ BRGYUD—one of the four major and eight minor subsects of the Bka’ brgyud sect of Tibetan Buddhism (BKA’ BRGYUD CHEN BZHI CHUNG BRGYA). He founded the retreat center located at SHUG GSEB nunnery, south of LHA SA.

[Gyi jo lo tsā ba Zla ba'i 'od zer](#). (Gyijo lotsāwa Dawe Öser) (c. eleventh century). A Tibetan translator renowned as the first scholar to render the [KĀLACAKRATANTRA](#) into Tibetan. The year in which this project was completed, 1027, marks the beginning of the modern Tibetan calendar. Gyi jo lo tsā ba composed translations of many other tantric works still preserved in both the [BKA' 'GYUR](#) and [BSTAN 'GYUR](#) sections of the Tibetan Buddhist canon.

[Gyōgi](#). (行基) (668–749). Japanese monk of the Hossō ([FAXIANG ZONG](#)) tradition; his name is sometimes also seen transcribed as Gyōki, although Gyōgi is to be preferred. Gyōgi was a native of Ōtori in Izumi no kuni (present Sakai-shi, Ōsaka prefecture). He was ordained in 682, perhaps at the monastery of [YAKUSHIJI](#), by the eminent monk [DŌSHŌ](#). Almost two decades later, Gyōgi is said to have taken the rather unconventional route of directly preaching to the public in the capital and the countryside. He also became famous for building monasteries, bridges, roads, and irrigation systems. As a large number of the taxable population sought ordination from Gyōgi, in 717 the court issued an edict banning private ordination, leaving temple grounds, and performing rites for the sick without official sanction. The court then increased its control of the Buddhist [SAMGHA](#) by requiring government certification (kokuchō) of all ordinations. The court's hostile attitude toward Gyōgi later changed and in 743 he was asked to assist in the construction of the great [VAIROCANA](#) statue at [TŌDAIJI](#). Shortly thereafter, Gyōgi was appointed by Emperor Shōmu (r. 724–749) as the supreme priest (daisōjō) of the office of priestly affairs (sōgō) in 745.

[Gyōnen](#). (凝然) (1240–1321). Japanese monk associated with the Kegonshū doctrinal school ([HUAYAN ZONG](#)). Gyōnen was a scion of the Fujiwara clan, one of the most influential aristocratic families in Japan, who ordained at sixteen and subsequently moved to [TŌDAIJI](#), where he eventually became abbot. At Tōdaiji, he lectured frequently on the [AVATAMSAKASŪTRA](#), the central text of the Kegonshū, and was also invited to lecture on [FAZANG](#)'s [WUJIAO CHANG](#) at the imperial court, which awarded him the honorary title of state preceptor (J. kokushi; C. [GUOSHI](#)). Gyōnen wrote over 125 works, all in literary Chinese, which ran the gamut from [SŪTRA](#) exegesis, to biography, to ritual music. Gyōnen's interest in Buddhist doctrine was not limited to the Kegon school. His most famous work is his [HASSHŪ KŌYŌ](#) (“Essentials of the Eight Traditions”), which provides a systematic overview of the history and doctrines of the eight major schools that were dominant in Japanese Buddhism during the Nara and

Heian periods. Gyōnen's portrayal of Japanese Buddhism as a collection of independent schools identified by discrete doctrines and independent lines of transmission had a profound impact on Japanese Buddhist studies into the modern period.

gzhan stong. (shentong). In Tibetan, “other-emptiness” or “extrinsic emptiness”; as contrasted with [RANG STONG](#) “self-emptiness” or “intrinsic emptiness.” [DOL PO PA SHES RAB RGYAL MTSHAN](#), the third [KARMA PA RANG 'BYUNG RDO RJE](#), and [TĀRANĀTHA](#) are the best-known proponents of this position. For a detailed discussion see [RANG STONG GZHAN STONG](#).

Hachiman. (八幡). In Japanese, “God of Eight Banners,” a popular [SHINTŌ](#) deity ([KAMI](#)), who is also considered a “great [BODHISATTVA](#)”; also known as Hachiman jin. Although his origins are unclear, Hachiman can at least be traced back to his role as the tutelary deity of the Usa clan in Kyūshū during the eighth century. Hachiman responded to an oracle in 749, vouchsafing the successful construction of the Great Buddha ([DAIBUTSU](#)) image at [TŌDAIJI](#) and quickly rose in popularity in both Kyūshū and the Nara capital. In 859, the Buddhist monk Gyōkyō established the Iwashimizu Hachiman Shrine near the capital of Kyōto that was dedicated to the deity. Hachiman’s oracles continued to play decisive roles in Nara politics, leading to a worship cult devoted to him. The Hachiman cult expanded throughout the Heian period (794–1185), and in 809, he was designated a “great bodhisattva” (daibosatsu) by drawing on the concept of [HONJI SUJAKU](#) (buddhas or bodhisattvas appearing in the world as gods). Hachiman also came to be considered a manifestation of the semi-legendary ancient sovereign Ōjin and was likewise seen as guardian of the monarch. From the eleventh century, the Minamoto warrior clan also linked itself with Hachiman. Through this patronage, Hachiman became increasingly associated with warfare. During the Meiji persecution of Buddhism in 1868, which separated the gods from the buddhas and bodhisattvas ([SHINBUTSU BUNRI](#)), Hachiman was divorced from his Buddhist identity and recast as a purely Shintō deity. Currently, there are approximately 25,000 Hachiman shrines across Japan.

Haedong kosŭng chŏn. (海東高僧傳). In Korean, “Lives of Eminent Korean Monks,” putatively compiled in 1215 by the monk Kakhun (d.u.), abbot of the monastery of Yŏngt’ongsa, and the only such indigenous biographical collection of its kind (see [GAOSEN ZHUAN](#)) extant in Korea. A copy of the *Haedong kosŭng chŏn* was ostensibly discovered by the monk Hoegwang Sasŏn (1862–1933; also known as Yi Hoegwang) amid a pile of old documents housed at a “certain” monastery in North Kyŏngsang province. A critical edition of this copy was published by Ch’oe Namsŏn (1809–1957) in the magazine *Pulgyo* (“Buddhism”) in 1927; the original document has never been seen again. The published recension of the *Haedong kosŭng chŏn* contains only the first two chapters, on yut’ong, or propagators of the religion. The first chapter is largely concerned with the history of the transmission of Buddhism from India to China and Korea.

This roll contains the biographies of eight Korean monks and briefly mentions three others. The second roll contains the biographies of ten eminent Silla monks who made pilgrimages to India and China (e.g., [WŎN'GWANG](#) and [ANHAM](#)) and also mentions the activities of eleven other figures; large portions of this roll are derived from the Chinese hagiographical anthology [XU GAOSENG ZHUAN](#). There is also considerable overlap between the *Haedong kosŭng chŏn* and Iryŏn's (1206–1289) supposedly contemporaneous Buddhist history [SAMGUK YUSA](#) (“Memorabilia of the Three Kingdoms”). These several overlaps in material, as well as issues involving the provenance of the manuscript discovered by Yi Hoegwang, raise concerns about the authenticity of the *Haedong kosŭng chŏn* that have yet to be resolved.

[Haeinsa](#). (海印寺). In Korean, “Ocean-Seal Monastery,” or “Oceanic-Reflection Monastery”; the twelfth district monastery ([PONSA](#)) of the contemporary [CHOGYE CHONG](#) of Korean Buddhism, located on Kaya Mountain, in Hapch'ŏn, South Kyŏngsang province. Along with [SONGGWANGSA](#) and [T'ONGDOSA](#), Haeinsa is considered to be one of the “three-jewel monasteries” ([SAMBO SACH'AL](#)) which represent one of the three jewels of Buddhism ([RATNATRAYA](#)); Haeinsa is traditionally designated the “Dharma-Jewel Monastery” (Pŏppo sach'al) because of its pair of scriptural repositories, which house the woodblocks of the second Koryŏ-dynasty carving of the Buddhist canon ([KORYŎ TAEJANGGYŎNG](#); see also [DAZANGJING](#)). These paired halls are placed on top of a hill overlooking the main buddha hall in order to accentuate Haeinsa's role as a surrogate for the [DHARMA](#). Haeinsa was established in 802 to celebrate the successful healing of King Aejang's (r. 800–808) queen by the two monks Sunŭng (d.u.) and Yijŏng (d.u.). The woodblock canon carved in the first half of the thirteenth century was moved to Haeinsa during the reign of King T'aejo (r. 1392–1398). In 1392, King T'aejo also repaired Haeinsa's old pagoda, and King Sejo (r. 1455–1468) later repaired the library halls housing the canon (Changgyŏnggak). The monastery went through extensive repairs again for three years from 1488 to 1490, but most of its treasures of old (with the fortunate exception of the woodblocks) were lost in a series of fires that broke out in the compounds between the years 1862 and 1874. Most of the buildings that stand today were rebuilt after those conflagrations.

[Haein to](#). (K) (海印圖). See [HWAŎM ILSŬNG PŎPKYE TO](#).

haibutsu kishaku. (排佛毀釋). In Japanese, “abolishing Buddhism and destroying [the teachings of] [ŚĀKYAMUNI](#)”; a slogan coined to describe the extensive persecution of Buddhism that occurred during the Meiji period (1868–1912). The rise of Western-derived notions of nationalism, kokugaku (national learning), and [SHINTŌ](#) as a new national ideology raised serious questions about the role of Buddhism in modern Japan. Buddhism was characterized as a foreign influence and the institution suffered the disestablishment of thousands of temples, the desecration of its ritual objects, and the defrocking of monks and nuns. When an edict was issued separating Shintō from Buddhism in 1868 (see [SHINBUTSU BUNRI](#)), Buddhist monasteries and temples where local deities ([KAMI](#)) were worshipped as manifestations of a buddha or [BODHISATTVA](#) (see [HONJI SUJAKU](#)) sustained the most damage. The forced separation of Shintō and Buddhism eventually led to the harsh criticism of Buddhism as a corrupt and superstitious institution. Buddhists sought to counter the effects of these attacks through a rapid transformation of the [SAMGHA](#) in order to make their religion more relevant to the needs of modern, secular society.

haihui. (J. kaie; K. haehoe 海會). In Chinese, lit. “oceanic congregation,” referring, e.g., to congregations of sages, divinities, bodhisattvas, etc., that are said to be as vast as the ocean. “A congregation that is [as vast as] the ocean” is a common motif in [MAHĀYĀNA](#) sutras, whose expositions are typically attended by astronomical numbers of beings. Such “oceanic congregations” also sometimes refer to the extraordinary entourages of celestial buddhas. For example, “the oceanic congregation of [SUKHĀVATĪ](#)” (jile haihui) usually involves a religious vision of the buddha [AMITĀBHA](#) and the infinite numbers of inhabitants resident in his [PURE LAND](#). Congregations in Chan monasteries (see [CONGLIN](#)) are also called a “congregation that is [as vast as the confluence of rivers in] the ocean” to symbolize the coming together of many sincere practitioners.

Haimavata. (P. Hemavataka; T. Gangs ri'i sde; C. Xueshanbu; J. Sessenbu; K. Sōlsanbu 雪山部). In Sanskrit, “Inhabitants of the Himālayas,” one of the traditional eighteen schools of the mainstream Indian Buddhist tradition, alternatively associated with either the [MAHĀSĀMGHIKA](#), [SARVĀSTIVĀDA](#), or [STHAVIRANIKĀYA](#) traditions. The name of the school is generally regarded as deriving from school’s location in the Himalayan region. There are various theories on the origin of this school. The Pāli [DĪPAVAMSA](#) states that the

Haimavata arose during the second century after the Buddha's death, and lists it separately along with the schools of Rājagirīya, Siddhārthika, [PŪVAŚAILA](#), Aparāśaila (the four of which were collectively designated as the [ANDHAKĀ](#) schools by [BUDDHAGHOSA](#) in the introduction to his commentary on the [KATHĀVATTHU](#)) and Apararājagirika, but without identifying their respective origins. According to northwest Indian tradition, a view represented in the Sarvāstivāda treatise [SAMAYABHEDOPARACANACAKRA](#) (C. *Yibuzong lun lun*) by [VASUMITRA](#) (c. first to second centuries, CE), the Haimavata is considered the first independent school to split off from the Sthaviranikāya line. [KUIJI](#)'s commentary to the *Samayabhedoparacanacakra* explains the name pejoratively to refer to the desolation of the freezing breeze coming down from the Himālayas, in contrast to the prosperity that accompanies the Sarvāstivāda teachings. However, given that the Haimavata school does not seem to have been particularly influential (even if had been part of the original Sthaviranikāya line) and that, moreover, all the other Sthavira lineages are posited to derive from the Sarvāstivāda by this tradition, the account of the *Samayabhedoparacanacakra* is usually dismissed as reflecting Sarvāstivāda polemics more than historical fact. The *Samayabhedoparacanacakra* also attributes to the Haimavata school [MAHĀDEVA](#)'s five propositions about the status of the [ARHAT](#), the propositions that prompted, at the time of the second Buddhist council (see [COUNCIL, SECOND](#)), the schism in the [SAMGHA](#) between the [STHAVIRA](#) and the nascent Mahāsāṃghika order. These five propositions were: the arhats (1) are still subject to sexual desire ([RĀGA](#)); (2) may have a residue of ignorance (ajñāna); (3) retain certain types of doubt (kāṅkṣā); (4) gain knowledge through others' help; and finally, (5) have spiritual experience accompanied by an exclamation, such as "aho." It is probably because of this identification with Mahādeva's propositions that [BHĀVAVIVEKA](#) (c. 490–570) classified the Haimavata among the Mahāsāṃghika. Other doctrines that Vasumitra claimed were distinctive to the Haimavata were (1) a [BODHISATTVA](#) is an ordinary person ([PRTHAGJANA](#)); (2) a bodhisattva does not experience any desire ([KĀMA](#)) when he enters the mother's womb; (3) non-Buddhists ([TĪRTHIKA](#)) cannot develop the five kinds of supernatural powers ([ABHIJÑĀ](#)); and (4) the divinities ([DEVA](#)) cannot practice a religious life ([BRAHMACARYA](#)). Vasumitra asserts that these and other of its views were similar to those of the Sarvāstivāda, thus positing a close connection between the doctrines of the two schools.

[Hakuin Ekaku](#). (白隱慧鶴) (1685–1769). Japanese [ZEN](#) master renowned for

revitalizing the [RINZAISHŪ](#). Hakuin was a native of Hara in Shizuoka Prefecture. In 1699, Hakuin was ordained and received the name Ekaku (Wise Crane) from the monk Tanrei Soden (d. 1701) at the nearby temple of Shōinji. Shortly thereafter, Hakuin was sent by Tanrei to the temple of Daishōji in Numazu to serve the abbot Sokudō Fueki (d. 1712). Hakuin is then said to have lost faith in his Buddhist training and devoted much of his time instead to art. In 1704, Hakuin visited the monk Baō Sōchiku (1629–1711) at the temple Zuiunji in Mino province. While studying under Baō, Hakuin is said to have read the [CHANGUAN CEJIN](#) by [YUNQI ZHUHONG](#), which inspired him to further meditative training. In 1708, Hakuin is said to have had his first awakening experience upon hearing the ringing of a distant bell. That same year, Hakuin met Dōju Sōkaku (1679–1730), who urged him to visit the Zen master Dōkyō Etan (1642–1721), or Shōju Rōnin, at the hermitage of Shōjuan in Iiyama. During one of his begging rounds, Hakuin is said to have had another important awakening after an old woman struck him with a broom. Shortly after his departure from Shōjuan, Hakuin suffered from an illness, which he cured with the help of a legendary hermit named Hakuyū. Hakuin’s famous story of his encounter with Hakuyū was recounted in his [YASENKANNA](#), *Orategama*, and *Itsumadegusa*. In 1716, Hakuin returned to Shōinji and devoted much of his time to restoring the monastery, teaching students, and lecturing. Hakuin delivered famous lectures on such texts as the [VIMALAKĪRTINIRDEŚA](#), [SADDHARMAPUNĀRĪKASŪTRA](#), [VAJRACCHEDIKĀPRAJÑĀPĀRAMITĀSŪTRA](#), [BIYAN LU](#), [BAOJING SANMEI](#), [DAHUI PUJUE CHANSHI SHU](#), and [YUANREN LUN](#), and the recorded sayings ([YULU](#)) of [LINJI YIXUAN](#), [WUZU FAYAN](#), and [XUTANG ZHIYU](#). He also composed a number of important texts during this period, such as the *Kanzan shi sendai kimon*, *Kaian kokugo*, and *SOKKŌROKU KAIEN FUSETSU*. Prior to his death, Hakuin established the monastery of Ryūtakuji in Mishima (present-day Shizuoka prefecture). Hakuin was a strong advocate of “questioning meditation” (J. *kanna Zen*; C. [KANHUA CHAN](#)), which focused on the role of doubt in contemplating the *kōan* ([GONG’AN](#)). Hakuin proposed that the sense of doubt was the catalyst for an initial [SATORI](#) (awakening; C. [WU](#)), which had then to be enhanced through further *kōan* study in order to mature the experience. The contemporary Rinzai training system involving systematic study of many different *kōans* is attributed to Hakuin, as is the famous *kōan*, “What is the sound of one hand clapping?” (see [SEKISHU KŌAN](#)). Hakuin was a prolific writer who left many other works as well, including the *Dokugo shingyō*, *Oniazami*, *Yabukōji*, *Hebiichigo*, *Keisō dokuzui*, *Yaemugura*, and *Zazen wasan*. Hakuin also produced many prominent

disciples, including TŌREI ENJI, Suiō Genro (1716–1789), and GASAN JITŌ. The contemporary Japanese Rinzai school of Zen traces its lineage and teachings back to Hakuin and his disciples.

Hamhō Tūkt’ong. (K) (涵虛得通). See [KIHWA](#).

Hanam Chungwŏn. (漢岩重遠) (1876–1951). First supreme patriarch ([CHONGJŎNG](#)) of the Korean Buddhist [CHOGYE CHONG](#) (between 1941 and 1945), before the split between the Chogye order and [T’AEGO CHONG](#); he is also known as Pang Hanam, using his secular surname. In 1899, Hanam went to the hermitage Sudoam in Ch’ŏngamsa to study with [KYŎNGHŎ SŎNGU](#), the preeminent [SŎN](#) master of his generation. In 1905, after three years of lecturing throughout the country, Hanam became the Sŏn master of Naewŏn Meditation Center at the monastery of [T’ONGDOSA](#). In 1926, he moved to Sangwŏnsa on Odae Mountain, which remained his primary residence for the rest of his life. Hanam’s best-known work is the biography he wrote of his teacher Kyŏnghŏ; some twenty-three correspondences between him and his teacher are also still extant. More recently, in 1995, a collection of Hanam’s own dharma talks was published as the *Hanam ilbal nok* (“Hanam’s One-Bowl Record”). Hanam’s “five regulations for the [SAMGHA](#),” which he promulgated when he first arrived at Sangwŏnsa, outlined what he considered to be the main constituents of Korean Buddhist practice: (1) Sŏn meditation, (2) “recollection” of the Buddha’s name (K. yŏmbul; C. [NIANFO](#)), (3) doctrinal study, (4) ritual and worship, and (5) maintaining the monastery. Hanam was a strong advocate for the revitalization of “questioning meditation” (K. kanhwa Sŏn; C. [KANHUA CHAN](#)) in Korean Buddhism, although he was more flexible than many Korean masters—who typically used [ZHAOZHOU CONGSHEN](#)’s “No” (K. mu; C. wu) gong’an (see [WU GONG’AN](#); [GOUZI WU FOXING](#)) exclusively—in recommending also a variety of other Chan cases. Hanam also led a move to reconceive “recitation of the Buddha’s name,” a popular practice in contemporary Korean Buddhism, as “recollection of the Buddha’s name,” in order better to bring out the contemplative dimensions of yŏmbul practice and its synergies with gong’an meditation. During the four years he was supreme patriarch of the Chogye order, Hanam was especially adept at avoiding entanglement with the Japanese colonial authorities, refusing, for example, to visit the governor-general in the capital of Seoul but accepting visits from Japanese authorities who came to Sangwŏnsa to “pay respects” to him. Hanam’s emphasis on the monastic context of Sŏn

practice was an important influence in post-liberation Korean Buddhism after the end of World War II.

Hannya shingyō hiken. (般若心經秘鍵). In Japanese, “Secret Key to the [PRAJÑĀPĀRAMITĀHRDAYASŪTRA](#)”; attributed to the Japanese [SHINGONSHŪ](#) monk [KŪKAI](#). According to its colophon, Kūkai composed the *Hannya shingyō hiken* upon imperial request during a great epidemic in 818, but an alternative theory rejects the colophon’s claim and dates the text to 834. The *Hannya shingyō hiken* claims that the *Prajñāpāramitāhrdaya*, the famous “Heart Sūtra,” is actually an esoteric scripture (see [TANTRA](#)) that explicates the “great mind-[MANTRA SAMĀDHI](#)” of the [BODHISATTVA](#) Prajñā. The treatise first provides a synopsis of the scripture and an explanation of its title, followed by a detailed interpretation of its teachings, in a total of five sections (each corresponding to a certain part of the scripture). In its first section, entitled “the complete interpenetration between persons and [DHARMAS](#),” the treatise describes the practice of the bodhisattva [ĀVALOKITEŚVARA](#) in terms of five factors (cause, practice, attainment, entrance, and time). The next section, entitled “division of the various vehicles,” divides the different vehicles ([YĀNA](#)) of Buddhism into the vehicles of construction, destruction, form, two, and one, and also mentions the vehicles of [SAMANTABHADRA](#) (see [HUAYAN ZONG](#)), [MAÑJUŚRĪ](#) (see [SANLUN ZONG](#)), [MAITREYA](#) (see [YOGĀCĀRA](#)), [ŚRĀVAKAS](#), [PRATYEKABUDDHAS](#), and Avalokiteśvara (see [Tiantai ZONG](#)). In the third section, entitled “benefits attained by the practitioner,” the treatise discusses seven types of practitioners (Huayan, Sanlun, Yogācāra, śrāvaka, pratyekabuddha, Tiantai, and Shingon) and four varieties of dharmas (cause, practice, attainment, and entrance). The fourth section, entitled “clarification of the [DHĀRANĪ](#),” explains the [MANTRA](#) “[GATE GATE PĀRAGATE PĀRASAMGATE BODHI SVĀHĀ](#)” in terms of its name, essence, and function, and also divides it into four types, which are associated with the śrāvaka, pratyekabuddha, [MAHĀYĀNA](#), and esoteric (himitsu) vehicles. The fifth section, entitled “secret mantra,” further divides the spell into five different types and explains the attainment of [BODHI](#) within the various vehicles. Commentaries on this treatise were written by [DŌHAN](#) (1178–1252), Saisen (1025–1115), [KAKUBAN](#) (1095–1143), Innyū (1435–1519), Donjaku (1674–1742), and others.

Hanshan. (J. Kanzan; K. Hansan 寒山) (d.u.; fl. mid-eighth century). In Chinese, “Cold Mountain”; sobriquet of a legendary Tang dynasty poet and iconoclast of near-mythic status within Chinese Buddhism. The [HANSHAN SHI](#), one of the best-

loved collection of poems in the Chinese Buddhist tradition, is attributed to this obscure figure. Hanshan (Cold Mountain) is primarily known as a hermit who dwelled on Mt. Tiantai, in present-day Zhejiang province. References to Hanshan are scattered throughout the discourse records ([YULU](#)) of various Chan masters and biographies of eminent monks ([GAOSEN ZHUAN](#)). Hanshan also became a favored object in brushstroke art ([BOKUSEKI](#)), in which he is often depicted together with [SHIDE](#) and [FENGGAN](#). Together, these three iconoclasts are known as the “three recluses of Guoqing [monastery].”

[Hanshan Deqing](#). (J. Kanzan Tokusei; K. Kamsan Tōkch’ōng 憨山德清) (1546–1623). In Chinese, “Crazy Mountain, Virtuous Clarity”; Ming-dynasty Chinese [CHAN](#) master of the [LINJI ZONG](#); also known as Chengyin. Hanshan was a native of Quanjiao in Jinling (present-day Nanjing in Jiangsu province). He entered the monastery at age eleven and was ordained at the age of eighteen. Hanshan then studied under the monks Yungu Fahui (d.u.) and Fangguang (d.u.) of Mt. Funiu and later retired to [WUTAISHAN](#). In 1581, Hanshan organized an “unrestricted assembly” ([WUZHE DAHUI](#)) led by five hundred worthies ([DADE](#)) on Mt. Wutai. In 1587, Hanshan received the patronage of the empress dowager, who constructed on his behalf the monastery Haiyinsi in Qingzhou (present-day Shandong province) and granted the monastery a copy of the Buddhist canon. Hanshan, however, lost favor with Emperor Shenzong (r. 1572–1620) and was sent to prison in Leizhou (present-day Guangdong province). In 1597, Hanshan reestablished himself on [CAOXISHAN](#), where he devoted most of his time to restoring the meditation hall, conferring precepts, lecturing on scriptures, and restructuring the monastic regulations. In 1616, he established the Chan monastery of Fayunsi on [LUSHAN](#)’s Wuru Peak. In 1622, Hanshan returned to Mt. Caoxi and passed away the next year. Hanshan was particularly famous for his cultivation of Chan questioning meditation ([KANHUA CHAN](#)) and recollection of the Buddha’s name ([NIANFO](#)). Along with [YUNQI ZHUHONG](#) (1535–1615), [DAGUAN ZHENKE](#) (a.k.a. Zibo) (1542–1603), and [OUYI ZHIXU](#) (1599–1655), Hanshan was known as one of the four great monks of the Ming dynasty. Hanshan was later given the posthumous title Chan master Hongjue (Universal Enlightenment). His teachings are recorded in the *Hanshan dashi mengyou quanji*.

[Hanshan shi](#). (J. Kanzan shi; K. Hansan si 寒山詩). In Chinese, “Cold Mountain’s Poems,” attributed to the legendary Chinese iconoclast [HANSHAN](#)

(Cold Mountain); also known as *Hanshan shiji*. Sometime between 766 and 779, Hanshan is presumed to have retired to Mt. Tiantai (in present-day Zhejiang province), where he composed his famous poetry. The poems of the legendary monks [FENGGAN](#) and [SHIDE](#) are also included at the end of Hanshan's poetry collection. During the Song dynasty, the *Hanshan shi* was also known as the *Sanyin ji* ("Collection of the Three Recluses"). The *Hanshan shi* was widely read for its sharp satire of his times and its otherworldliness. The earliest edition was published in 1189 at the monastery of Guoqingsi on Mt. Tiantai.

[Hanthawaddi](#). (Burmese). See [PEGU](#).

[Hanyǒng Chǒngho](#). (漢永鼎鎬) (1870–1948). Korean monk renowned for his efforts to revitalize Buddhist education during the Japanese colonial period. Hanyǒng Chǒngho studied the Confucian classics when young and entered the [SAMGHA](#) at seventeen. He became a disciple of Sǒryu Ch'ǒmyǒng (1858–1903), from whom he received the dharma name Hanyǒng. In 1909, he traveled to Seoul and helped lead the Buddhist revitalization movement, along with fellow Buddhist monks [HAN YONGUN](#) and Kǔmp'a Kyǒngho (1868–1915). In 1910, shortly after Japan's formal annexation of Korea, Hoegwang Sasǒn (1862–1933) and others signed a seven-item treaty with the Japanese [SŌTOSHŪ](#), which sought to assimilate Korean Buddhism into the Sōtō order. In response to this threat to Korean Buddhist autonomy, Hanyǒng Chǒngho helped Han Yongun and other Korean Buddhist leaders establish the [IMJE CHONG](#) order in Korea. In 1913, he published the journal *Haedong Pulgyo* ("Korean Buddhism") in order to inform the Buddhist community of the need for revitalization and self-awareness. Beginning with his teaching career at Kodǔng Pulgyo Kangsuk in 1914, he devoted himself to the cause of education and went on to teach at various other Buddhist seminaries (kangwǒn) throughout the country. His many writings include the *Sǒngnim sup'il* ("Jottings from Stone Forest"), *Chǒngsǒn Ch'imunjiphwa* ("Selections from *Stories of Admonitions*"), and *Chǒngsǒn Yǒmsong sǒrhwa* ("Selections from the YŌMSONG SŌRHWA"), a digest of the most-famous Korean kongan (C. [GONG'AN](#)) collection.

[Han Yongun](#). (韓龍雲) (1879–1944). Korean monk, poet, and writer, also known by his sobriquet Manhae or his ordination name Pongwan. In 1896, when Han was sixteen, both his parents and his brother were executed by the state for their connections to the Tonghak ("Eastern Learning") Rebellion. He subsequently joined the remaining forces of the Tonghak Rebellion and fought against the

Chosŏn-dynasty government but was forced to flee to Oseam hermitage on Mt. Sŏrak. He was ordained at the monastery of Paektamsa in 1905. Three years later, as one of the fifty-two monastic representatives, he participated in the establishment of the Wŏn chong (Consummate Order) and the foundation of its headquarters at Wŏnhŭngsa. After returning from a sojourn in Japan, where he witnessed Japanese Buddhism's attempts to modernize in the face of the Meiji-era persecutions, Han Yongun wrote an influential tract in 1909 calling for radical changes in the Korean Buddhist tradition; this tract, entitled [CHOSŎN PULGYO YUSIN NON](#) ("Treatise on the Reformation of Korean Buddhism"), set much of the agenda for Korean Buddhist modernization into the contemporary period. After Korea was formally annexed by Japan in 1910, Han devoted the rest of his life to the fight for independence. In opposition to the Korean monk Hoegwang Sasŏn's (1862–1933) attempt to merge the Korean Wŏn chong with the Japanese [SŌTOSHŪ](#), Han Yongun helped to establish the [IMJE CHONG](#) (Linji order) with its headquarters at [PŎMŎSA](#) in Pusan. In 1919, he actively participated in the March First independence movement and signed the Korean Declaration of Independence as a representative of the Buddhist community. As a consequence, he was sentenced to three years in prison by Japanese colonial authorities. In prison, he composed the *Chosŏn Tongnip ũi sŏ* ("Declaration of Korea's Independence"). In 1925, three years after he was released from prison, he published a book of poetry entitled *Nim ũi ch'immuk* ("Silence of the Beloved"), a veiled call for the freedom of Korea (the "beloved" of the poem) and became a leader in resistance literature; this poem is widely regarded as a classic of Korean vernacular writing. In 1930, Han became publisher of the monthly journal *Pulgyo* ("Buddhism"), through which he attempted to popularize Buddhism and to raise the issue of Korean political sovereignty. Han Yongun continued to lobby for independence until his death in 1944 at the age of sixty-six, unable to witness the long-awaited independence of Korea that occurred a year later on August 15th, 1945, with Japan's surrender in World War II.

[Haribhadra](#). (T. Seng ge bzang po) (c. 800). Indian Buddhist exegete during the Pāla dynasty, whom later Tibetan doxographers associate with the [YOGĀCĀRA](#)-*[SVĀTANTRIKA](#) syncretistic strand of Indian philosophy. He may have been a student of [ŚĀNTARAKSITA](#) and was a contemporary of [KAMALAŚĪLA](#); he himself lists Vairocana-bhadra as his teacher. Haribhadra is known for his two commentaries on the [ASTASĀHASRIKĀPRAJÑĀPĀRAMITĀSŪTRA](#) ("[PRAJÑĀPĀRAMITĀ](#)

in Eight Thousand Lines’): the longer [ABHISAMAYĀLAMKĀRĀLOKĀ-Prajñāpāramitāvyaḥyā](#), and its summary, the [ABHISAMAYĀLAMKĀRAVIVṚTI](#). He is also known for his recasting of the twenty-five-thousand-line version of the prajñāpāramitā ([PAÑCAVIṂŚATISĀHASRIKĀPRAJÑĀPĀRAMITĀSŪTRA](#)) in a work entitled the *Le’u brgyad ma* in Tibetan. Each of these works is based on the interpretative scheme set forth in the [ABHISAMAYĀLAMKĀRA](#) (“Ornament for Clear Realizations”), a guide to the *Pañcaviṁśati* that Haribhadra explicitly attributes to [MAITREYA](#). His *Abhisamayālamkāralokā* builds upon [PRAMĀNA](#), [MADHYAMA](#), and [ABHIDHARMA](#) literature and was extremely influential in Tibet; its summary (known as “’grel pa don gsal” in Tibetan) is the root text (rtsa ba) for commentaries in the [GSANG PHU NE’U THOG](#) monastery tradition originating with [RNGOG BLO LDAN SHES RAB](#). It is the most widely studied prajñāpāramitā commentary in Tibetan Buddhism to the present day. Haribhadra is known for his explanation of a [JÑĀNADHARMAKĀYA](#) (knowledge truth-body) in addition to a [SVĀBHĀVAKĀYA](#), viz., the eternally pure [DHARMADHĀTU](#) that is free from duality. He is characterized as an alīkākāravādin (“false-aspectarian”) to differentiate him from Kamalaśīla, a satyākāravādin (“true-aspectarian”) who holds that the objects appearing in the diverse forms of knowledge in a buddha’s all-knowing mind are truly what they seem to be. He cites [DHARMAKĪRTI](#) frequently but appears to accept that scripture ([ĀGAMA](#)) is also a valid authority ([PRAMĀNA](#)). There are two principal commentaries on his work, by Dharmamitra and Dharmakīrtiśrī. Buddhaśrījñāna (or simply Buddhajñāna) was his disciple. The *Subodhinī*, a commentary on the [RATNAGUNASAMCAYAGĀTHĀ](#), is also attributed to him.

Hārītī. (T. ’Phrog ma; C. Guizimushen; J. Kishimojin; K. Kwijamosin 鬼子母神). In Sanskrit, Hārītī, “the mother of demons,” is a ravenous demoness (alternatively called either a yakṣiṇī or a rākṣasī), who is said to eat children. At the pleading of her victims’ distraught mothers, [ŚĀKYAMUNI](#) Buddha kidnapped one of Hārītī’s own five hundred children and hid the child in his begging bowl ([PĀTRA](#)) so she would experience the same kind of suffering she had caused other parents; realizing the pain she had brought others prompted her to convert to Buddhism. Subsequently, Hārītī came to be recognized specifically as a protector of both pregnant women and children, and laywomen made pilgrimages to sites associated with her and her manifestations. More generally, Hārītī is also thought to protect the [SAMGHA](#) and, indeed, all sentient beings ([SATTVA](#)), from depredations by evil spirits. Monasteries may have a small shrine

to Hārītī near the entrance gate or kitchen, where monks and nuns will leave a small offering of food to her before meals. She is often paired with her consort Pāñcika ([KUBERA](#)), one of the twenty-eight [YAKṢA](#) generals in [VAIŚRAVANA](#)'s army, who fathered her five hundred children; indeed, all demons (yakṣa) are said to be the “sons of Hārītī” (Hārītīputra). The couple is commonly depicted surrounded by young children, offering the laity a positive portrayal of marital fidelity and reproductive fecundity, which contrasts with the world-renouncing stereotypes of Buddhism.

Harivarman. (T. Seng ge go cha; C. Helibamo; J. Karibatsuma; K. Haribalma 訶梨跋摩). Indian Buddhist exegete who probably lived between the third and fourth centuries CE (c. 250–350 CE). Harivarman was a disciple of Kumāralabdha and is the author of the [CHENGSHI LUN](#) (**Tattvasiddhi*; “Treatise on Establishing Reality”), a summary of the lost [ABHIDHARMA](#) of the [BAHUŚRUTIYA](#) school, a branch of the [MAHĀSĀMGHIKA](#) school of the mainstream Buddhist tradition. The **Tattvasiddhi*, extant only in Chinese translation as the *Chengshi lun*, is especially valuable for its detailed refutations of the positions held by other early [ŚRĀVAKAYĀNA](#) schools; the introduction, e.g., surveys ten different bases of controversy that separate the different early schools. The treatise is structured in the form of an exposition of the traditional theory of the [FOUR NOBLE TRUTHS](#), but does not include the listings for different factors ([DHARMA](#)) that typify many works in the abhidharma genre. The positions that Harivarman advocates are closest to those of the [STHAVIRANIKĀYA](#) and [SAUTRĀNTIKA](#) schools, although, unlike the Pāli texts, he accepts the reality of “unmanifest materiality” ([AVIJÑAPTIRŪPA](#)) and, unlike Sautrāntika, rejects the notion of an “intermediate state” ([ANTARĀBHAVA](#)) between existences. Harivarman opposes the [SARVĀSTIVĀDA](#) position that dharmas exist in both past and future, the [MAHĀSĀMGHIKA](#) view that thought is inherently pure, and the [VĀTSĪPUTRIYA](#) premise that the “person” ([PUDGALA](#)) exists in reality. Harivarman seems to hone to a middle way between the extremes of “everything exists” and “everything does not exist,” both of which he views as expediciencies that do not represent ultimate reality. Harivarman advocates, instead, the “emptiness of everything” (sarva-[ŚŪNYATĀ](#)) and is therefore sometimes viewed within the East Asian traditions as representing a transitional stage between the mainstream Buddhist schools and [MAHĀYĀNA](#) philosophical doctrine.

Hasshū kōyō. (八宗綱要). In Japanese, “Essentials of the Eight Traditions”; an

influential history of Buddhism in Japan composed by the Japanese [KEGONSHŪ](#) (C. [HUAYAN ZONG](#)) monk [GYŌNEN](#) (1240–1321). Gyōnen first divides the teachings of the Buddha into the two vehicles of [MAHĀYĀNA](#) and [HĪNAYĀNA](#), the two paths of the [ŚRĀVAKA](#) and [BODHISATTVA](#), and the three baskets ([PITAKA](#)) of [SŪTRA](#), [VINAYA](#), and [ABHIDHARMA](#). He then proceeds to provide a brief history of the transmission of Buddhism from India to Japan. Gyōnen subsequently details the division of the Buddha’s teachings into the eight different traditions that dominated Japanese Buddhism during the Nara (710–794) and Heian (794–1185) periods. This outline provides a valuable summary of the teachings of each tradition, each of their histories, and the development of their distinctive doctrines in India, China, and Japan. The first roll describes the Kusha (see [ABHIDHARMAKOŚABHĀSYA](#)), Jōjitsu (*Tattvasiddhi; see [CHENGSHI LUN](#)), and [RITSU](#) (see [VINAYA](#)) traditions. The second roll describes the Hossō (see [FAXIANG ZONG](#); [YOGĀCĀRA](#)), Sanron (see [SAN LUN](#)), [TENDAI](#) (see [TIANTAI](#)), Kegon (see [HUAYAN](#)), and [SHINGON](#) traditions. Brief introductions to the [ZENSHŪ](#) and [JŌDOSHŪ](#), which were more recent additions to Japanese Buddhism, appear at the end of the text. The *Hasshū kōyō* has been widely used in Japan since the thirteenth century as a textbook of Buddhist history and thought. Indeed, Gyōnen’s portrayal of Japanese Buddhism as a collection of independent schools identified by discrete doctrines and independent lineages of transmission had a profound impact on Japanese Buddhist studies into the modern period.

[hastināga](#). (P. hatthināga; C. longxiang; J. ryūzō; K. yongsang 龍象). In Sanskrit, “elephant,” often referring to an especially magnificent or noble elephant, but sometimes parsed, especially in translation, as the dual compound “elephants and [NĀGAS](#)”; a metaphor for a highly advanced Buddhist practitioner. (The Chinese characters translate the compound as “dragons and elephants.”) Hastināgas were said to be synonymous with religious virtuosi or worthies ([DADE](#)), because dragons and elephants were respectively the most powerful animals in water (and in the water vapor of clouds) and on land. In the East Asia [CHAN](#) (J. Zen; K. Sŏn) tradition, “dragons and elephants” as advanced adepts are contrasted with [YUNSHUI](#) (J. unsui; K. unsu), lit. “clouds and water,” referring to itinerant practitioners and especially novice monks, who were expected to travel to various monasteries to learn from different teachers as part of their training. In Korean monasteries, the “dragons and elephants” (yongsang; C. longxiang) roster is a list of monastic duties, along with the assigned incumbents of the offices, that is posted during the retreat periods (K. kyŏlche; C. [JIEZHI](#)) of winter

and summer.

Hatthaka Ālavaka. An eminent lay disciple of the Buddha, declared by him to be foremost among laymen who attract followers by means of the four means of conversion (S. [SAMGRAHAVASTU](#)). According to the Pāli account, he was the son of the king of Ālavī, and received his name Hatthaka (which in Pāli means “handed over” as a child), because he had once been given to the Buddha by an ogre (S. [YAKSA](#)), who, in turn, handed him back to the king. The ogre, the yakkha Ālavaka, was going to eat the boy but was converted by the Buddha and persuaded to release him, instead. When he grew up, Hatthaka heard the Buddha preach and became a nonreturner (S. [ANĀGĀMIN](#)). A gifted preacher, Hatthaka had a following of five hundred disciples who always accompanied him. The suttapiṭaka records several conversations he had with the Buddha. On one occasion, after the Buddha asked him how he was able to gather such a large following around him, Hatthaka responded that it was through four means of conversion: giving gifts, kind words, kind deeds, and equality in treatment. It was for this capacity that Hatthaka won eminence. The Buddha declared him to be endowed with eight qualities: faith, virtue, conscientiousness, shame, the ability to listen, generosity, wisdom, and modesty. When he died, Hatthaka was reborn as a divinity in avihā heaven in the subtle materiality realm ([RŪPALOKA](#)), where he was destined to attain final nibbāna (S. [NIRVĀNA](#)). Once, he visited the Buddha from his celestial world but collapsed in his presence, unable to support his subtle material body on earth; the Buddha instructed him to create a gross material body, by means of which he was then able to stand. He told the Buddha that he had three regrets upon his death: that he had not seen the Buddha enough, that he had not heard the [DHARMA](#) enough, and that he had not served the [SAMGHA](#) enough. Together with the householder [CITTA](#) (Cittagahapati), Hatthaka Ālavaka is upheld as an ideal layman, who is worthy of emulation.

Hayagrīva. (T. Rta mgrin; C. Matou Guanyin; J. Batō Kannon; K. Madu Kwanūm 馬頭觀音). In Sanskrit, “Horse-Necked One”; an early Buddhist deity who developed from a [YAKSA](#) attendant of [AVALOKITEŚVARA](#) into a tantric wrathful deity important in the second diffusion of Buddhism in Tibet. The name “Hayagrīva” belonged to two different Vedic deities, one an enemy of VIṢṆU, another a horse-headed avatāra, or manifestation, of that deity. Eventually the two merged, whence he was absorbed into the Buddhist pantheon. In early Buddhist art, Hayagrīva frequently appears as a smallish yakṣa figure attending

Avalokiteśvara, Khasarpaṇa, [AMOGHAPĀŚA](#), and [TARĀ](#); by the mid-seventh century, however, Hayagrīva had merged with Avalokiteśvara to become a wrathful form of that bodhisattva. He appears in this new form, Hayagrīva–Avalokiteśvara, in the Avalokiteśvara sections of the *Dhāraṇīsamgraha* (where his [DHĀRANĪs](#) are said to be effective in destroying mundane obstacles) and later Chinese translations of the *Amoghapāśahṛdaya*, as well as in the [MAHĀVAIROCANASŪTRA](#). While he does appear with a horse’s head in Japan (where he is considered a protective deity of horses), Hayagrīva is customarily shown with a horse head emerging from his flaming hair. In the tantric pantheon, Hayagrīva initially occupied outer rings of the [MANDALA](#), but eventually came to be considered a [YI DAM](#) in his own right, a transformation that would grant him the status of a fully enlightened being. In Mongolia he is worshipped as the god of horses. In Tibet he is primarily worshipped as a [LOKOTTARA](#) (supramundane) [DHARMAPĀLA](#) (dharma protector).

Heart Sūtra. See [PRAJÑĀPĀRAMITĀHRDAYASŪTRA](#).

heaven. See [DEVA](#); [SVARGA](#).

Helin Xuansu. (J. Kakurin Genso; K. Hangnim Hyōnso 鶴林玄素) (668–752). Chinese [CHAN](#) master in the [NIUTOU ZONG](#), also known as Daoqing or Masu (from his secular surname Ma). Helin was ordained at the monastery of Changshousi in present-day Jiangsu province, but later in his life moved to Youqisi, where he became a disciple of the fifth-generation Niutou successor Zhiwei (646–722). At another monk’s request, Helin moved once again to the monastery of Helinsi on Mt. Huanghe in Yunzhou prefecture, whence he acquired his toponym. He died without any symptoms of illness in 752 at the age of eighty-four. He was subsequently given the posthumous title Chan master Dalü (Great Discipline). He claims among his disciples Jingshan Daoqin (714–792) and [FAHAI](#), whom the Dunhuang edition of the [LIUZU TAN JING](#) (“Platform Sūtra of the Sixth Patriarch”) states is the compiler of the text.

hells. See [NĀRAKA](#) (hell denizens).

Hemis Monastery. A monastery located about twenty-five miles (forty km.) southeast of Leh, the capital of Ladakh. Hemis Monastery is sited just south of the Indus River, within present-day Hemis National Park. The largest monastery in the kingdom of Ladakh, Hemis Monastery was founded in the mid-

seventeenth century by Stag tsang ras pa (Taktsang Repa), who was supported by King Seng ge rnam rgyal (Senge Namgyal, 1570–1642), one of the most important kings in the history of Ladakhi Buddhism. Hemis is central to the ['BRUG PA BKA' BRGYUD](#) community in the region, and the two-day ['CHAM](#) (sacred dance) festival that is held each summer in honor of [PADMASAMBHAVA](#) is widely known throughout the area.

[hengchao](#). (J. ōchō; K. hoengch'o 横超). In Chinese, “the expeditious (lit. horizontal) deliverance/escape.” In the [PURE LAND](#) traditions, it is said that deliverance through the aid of “other power” ([TARIKI](#))—i.e., by relying on the vows and saving grace of the buddha [AMITĀBHA](#)—is a faster and easier approach to enlightenment than is that found in traditional Buddhist soteriological systems. Since the mainstream conception of transcendence from the round of rebirth ([SAMSĀRA](#)) involves a tortuous (lit. vertical) ascent ([SHUCHAO](#)) through successive levels of ever-deeper meditative absorptions ([DHYĀNA](#)) and ever-more-daunting spiritual fruitions ([PHALA](#)), pure land followers argue that their method “cuts horizontally across the three realms of existence” (hengchao sanjie) and bypasses the difficult sequential stages of mainstream approaches. The pure land “shortcut” is conceptualized as a “horizontal” approach partly because, by traveling “westward” instead of “upward”—i.e., being reborn into the western pure land (see [SUKHĀVATĪ](#))—one is more easily liberated from the round of rebirth.

[Heruka](#). (T. Khrag 'thung; C. Xilujia; J. Kiruoka; K. Hūiroga 嚩嚩迦). Sanskrit proper name of a spirit that perhaps originally was associated with cremation grounds ([ŚMAŚĀNA](#)) and was a form of Śiva (Maheśvara). The name appears commonly in tantric Buddhism as a generic name for a buddha appearing in a wrathful ([KRODHA](#)) aspect, especially in the form of [CAKRASAMVARA](#), and either with or without a consort. The name is translated into Chinese and Tibetan as “blood drinker,” an interpretation not reflected in the Sanskrit. Heruka also appears in the [HEVAJRATANTRA](#) as the name of a deity who is essentially the same as Hevajra. See also [CAKRASAMVARATANTRA](#).

[heshang](#). (J. oshō; K. hwasang 和尚). In Chinese, “monk,” one of the most common Chinese designations for a senior Buddhist monk. The term is actually an early Chinese transcription of the Khotanese translation of the Sanskrit [UPĀDHYĀYA](#), meaning “preceptor.” The transcription heshang originally was used in Chinese to refer specifically to the upādhyāya, the monk who

administered the precepts at the ordination of either a novice ([ŚRĀMANERA](#)) or fully ordained monk ([BHIKSU](#)), but over time the term entered the vernacular Chinese lexicon to refer more generically to any senior monk. The term heshang has several variant readings in Japanese, depending on the sectarian affiliation: it is read [OSHŌ](#) in the [JŌDO](#) and [ZEN](#) schools; [WAJŌ](#) in the Hossō (C. [FAXIANG ZONG](#)), [SHINGON](#), and [RITSU](#) schools; and kashō in the [TENDAI](#) school.

hetu. (T. rgyu; C. yin; J. in; K. in 因). In Sanskrit and Pāli, “cause.” In one of the first accounts of the Buddha’s teachings, he was said to have “set forth the causes of things that have causes and also set forth their cessation.” The process of causality is provisionally divided between [hetu](#) and [PRATYAYA](#), “causes and conditions”: [hetu](#) designates the main or primary cause of production, which operates in conjunction with [pratyaya](#), the concomitant conditions or secondary, supporting causes; these two together produce a specific “fruition” or result ([PHALA](#)): thus, the fruition of a tree is the result of a primary cause ([hetu](#)), its seed; supported by such subsidiary conditions as soil, sunlight, and water; and only when all the relevant causes and conditions in their totality are functioning cooperatively will the prospective fruition or effect occur. ¶ The [JÑĀNAPRASTHĀNA](#), the central text of the [SARVĀSTIVĀDA ABHIDHARMA](#), designates six specific types of [hetu](#): (1) the “cause as a reason for being” ([KĀRANAHE TU](#)), the efficient cause or generic cause, referring to causation in its broadest possible sense, in which every conditioned dharma serves as the generic, indirect cause for the creation of all things except itself; (2) the coexistent cause ([SAHABHŪHE TU](#)), where dharmas simultaneously condition one another, as with a material element ([MAHĀBHŪTA](#)) and its derivatives, or a dharma and its four conditioned characteristics ([SAMSKRTALAKSANA](#)); (3) associative cause ([SAMPRAYUKTAHE TU](#)), wherein mental events cannot exist in isolation but instead mutually condition one another; (4) homogenous cause ([SABHĀGAHE TU](#)), wherein cause is always antecedent to its incumbent effect, ensuring that apple seeds always produce apples, wholesome causes lead to wholesome effects, etc.; (5) all-pervasive, or universally active, cause ([SARVATRAGAHE TU](#)), wherein afflictions ([KLEŚA](#)) produce not only identical types of subsequent afflictions but also serve as the root cause of all other afflictions, obstructing a person’s capacity to intuit empirical reality; (6) retributive cause ([VIPĀKAHE TU](#)), i.e., the unwholesome dharmas and wholesome dharmas associated with the contaminants ([ĀSRAVA](#)) that produce subsequent “retribution,” viz., pleasant, unpleasant, or neutral effects, or ultimately rebirth. ¶ In Indian Buddhist logic,

the *hetu* also refers to the second step, or “reason,” in a syllogism ([SĀDHANA](#)): e.g., “The mountain is on fire,/because there is smoke,/like a stove (and unlike a lake)”; see also [LIṄGA](#).

hetupratyaya. (P. *hetupaccaya*; T. *rgyu rkyen*; C. *yin yuan*; J. *innen*; K. *in yŏn* 因緣). In Sanskrit, “causes and conditions,” or “causality”; one of the cardinal teachings of Buddhism, which applies to all aspects of the physical, emotional, and spiritual realms. In the Buddhist account of this causal process, [HETU](#) designates the main or primary cause of production and [PRATYAYA](#) are the subsidiary factors that contribute to the production of an effect, or “fruit” ([PHALA](#)), from that cause. In the production of a sprout from a seed, e.g., the seed would be the cause (*hetu*), such factors as light and moisture would be conditions (*pratyaya*), and the sprout itself would be the result or “fruit” (*phala*). Given the centrality of the doctrine of causality of Buddhist thought, detailed lists and descriptions of causes and conditions appear in all strata of Buddhist literature (see separate entries on [HETU](#) and [PRATYAYA](#)). ¶ The [VIJÑĀNAKĀYA](#), the fifth book of the [SARVĀSTIVĀDA](#) school of [ABHIDHARMA](#), lists *hetupratyaya*, the “condition qua cause” or “causal condition,” as the first in a list of four specific types of *pratyaya*. In this type, a condition serves as the direct cause of an effect; thus, a seed would be the *hetupratyaya* of a sprout. In the Sarvāstivāda list of the six types of causes (*hetu*), all except the “efficient cause” or “generic cause” ([KĀRANAHETU](#)) are subsumed under the *hetupratyaya*. ¶ The [PATTHĀNA](#), the seventh book of the [PĀLI ABHIDHAMMA](#), also recognizes *hetupaccaya*, or “root condition,” as the first in a list of twenty-four conditions. The “root condition” is described as the condition upon which all mental states depend, just as a tree depends on its root. These root conditions are greed ([LOBHA](#)), hatred (P. *dosa*, S. [DVESA](#)), and delusion ([MOHA](#)) in the case of unwholesome ([AKUŚALA](#)) mental states, or greedlessness (*alobha*), hatelessness (*adosa*), and nondelusion (*amoha*) in the case of wholesome ([KUŚALA](#)) mental states. Without the presence of these roots, the respective mental states cannot exist.

hetuvidyā. (T. *gtan tshigs kyi rig pa*; C. *yinming*; J. *inmyō*; K. *inmyŏng* 因明). In Sanskrit, the “science of reasoning,” hence “logic and dialectics”; in Indian Buddhism, the term refers generally to a scholarly tradition that begins with [DIGNĀGA](#) and [DHARMAKĪRTI](#), a tradition known for an epistemological theory based on two means of knowledge ([PRAMĀNA](#))—direct perception ([PRATYAKSA](#)) and inference ([ANUMĀNA](#))—and rejecting [ĀGAMA](#), i.e., the authority of the

scriptures, specifically the Vedas. Much of hetuvidyā focuses on the correct form of the syllogism ([PRAYOGA](#)) that underpins correct inference.

Hevajra. (T. Kye rdo rje; C. Jingangwang; J. Kongōō; K. Kūmgangwang 金剛王). An important Indian tantric deity in the [ANUTTARAYOGA](#) class of tantras, who is the central figure in the [HEVAJRATANTRA MANDALA](#). The cult of Hevajra developed in India at least by the eighth century, the date generally given for that [TANTRA](#). A number of Indian images from the eleventh century have been identified as [HERUKA](#) Hevajra, although the identification is uncertain. The tantric deity Hevajra is most commonly depicted as dark blue in color and naked. One of his most common forms is the Kapāladhārin (“Skull Bearing”) Hevajra, with four legs, eight faces with three eyes each, and sixteen hands, each of which holds a skull cup. Each face has three bloodshot eyes, four fangs, and a protruding tongue. The skulls in his right hands hold various animals and the skulls in his left hand hold various deities. He is often depicted in sexual union with his consort is Nairātmyā (“Selflessness”), who holds a curved knife and skull cup, the couple surrounded by a retinue of eight yoginīs. There are eight famous forms of Hevajra: four called the body ([KĀYA](#)), speech (vāc), mind ([CITTA](#)), and heart (hṛdaya) Hevajras, as described in the *Hevajratantra* (the Kapāladhārin Hevajra corresponds to the heart Hevajra); and the body, speech, mind, and heart Hevajras, as described in the *Samputatantra*. His name literally means “Hey, Vajra.”

Hevajratantra/Hevajradākinijālasamvaratantra. (T. Kye rdo rje'i rgyud; C. Dabei kongzhi jingang dajiao wang yigui jing; J. Daihi kūchi kongō daikyōō gikikyō; K. Taebi kongji kūmgang taegyo wang ūigwe kyōng 大悲空智金剛大教王儀軌經). An important Indian Buddhist [TANTRA](#), classified as an [ANUTTARAYOGATANTRA](#), and within that group, a [YOGINĪTANTRA](#) and a mother tantra ([MĀTRATANTRA](#)). Likely composed in the eighth century, the work consists of seven hundred fifty stanzas written in a mixture of Sanskrit and [APABHRAMŚA](#); it is traditionally said to be a summary of a larger work in five hundred thousand stanzas, now lost. The tantra is presumed to derive from the [SIDDHA](#) movement of north India, and the central deity, [HEVAJRA](#), is depicted as a naked siddha. Like most tantras, the text is particularly concerned with ritual, especially those that result in the attainment of worldly ([LAUKIKA](#)) powers. It famously recommends the use of “intentional language” or “coded language” ([SANDHYĀBHĀSĀ](#)) for tantric practitioners. The widespread [ANUTTARAYOGA](#)

system of the channels ([NĀDĪ](#)), winds ([PRĀNA](#)), and drops ([BINDU](#)), and the various levels of bliss achieved through the practice of sexual yoga is particularly associated with the *Hevajratantra*. It sets forth the so-called four joys, the greatest of which is the “innate” or “natural” ([SAHAJA](#)) joy. A Chinese translation of the *Hevajratantra* was made in 1055 by Dharmapāla, but neither the text nor its central deity gained particular popularity in East Asian Buddhism. The text was much more important in Tibet. The tantra was rendered into Tibetan by the Sa skya translator '[BROG MI SHĀKYA YE SHES](#) in the early eleventh century and popularized by [MAR PA](#), whose Indian master [NĀROPA](#) wrote a well-known commentary to the text. The scriptures associated with the *Hevajratantra* were the basis for the Indian adept [VIRŪPA](#)'s [LAM 'BRAS](#) (“path and result”) systematization of tantric doctrine. This practice is central in the [SA SKYA](#) tradition of Tibetan Buddhism. The *Samputatantra* is regarded as an explanatory tantra of the Hevajra. There are a number of important commentaries to this tantra written in the Indian tradition and dozens composed in Tibet.

[Heze Shenhui](#). (J. Katakū Jinne; K. Hat'aek Sinhoe 荷澤神會) (684–758). Chinese [CHAN](#) master and reputed main disciple of the sixth patriarch [HUINENG](#); his collateral branch of Huineng's lineage is sometimes referred to as the Heze school. Shenhui was a native of Xiangyang in present-day Hubei province. He became a monk under the master Haoyuan (d.u.) of the monastery of Kuochangsi in his hometown of Xiangyang. In 704, Shenhui received the full monastic precepts in Chang'an, and extant sources provide differing stories of Shenhui's whereabouts thereafter. He is said to have become a student of [SHENXIU](#) and later visited Mt. [CAOXI](#) where he studied under Huineng until the master's death in 713. After several years of traveling, Shenhui settled down in 720 at the monastery of Longxingsi in Nanyang (present-day Henan province). In 732, during an “unrestricted assembly” ([WUZHE DAHUI](#)) held at the monastery Dayunsi in Huatai, Shenhui engaged a monk by the name of Chongyuan (d.u.) and publicly criticized the so-called Bei zong (Northern school) of Shenzhou's disciples [PUJI](#) and [XIANGMO ZANG](#) as being a mere collateral branch of [BODHIDHARMA](#)'s lineage that upheld a gradualist soteriological teaching. Shenhui also argued that his teacher Huineng had received the orthodox transmission of Bodhidharma's lineage and his “sudden teaching” ([DUNJIAO](#)). In 745, Shenhui is said to have moved to the monastery of Hezesi in Luoyang, whence he acquired his toponym. He was cast out of Luoyang by a powerful Northern school follower in 753. Obeying an imperial edict, Shenhui relocated to the monastery

of Kaiyuansi in Jingzhou (present-day Hubei province) and assisted the government financially by performing mass ordinations after the economic havoc wrought by the An Lushan rebellion in 755. He was later given the posthumous title Great Master Zhenzong (Authentic Tradition). Shenhui also plays a minor, yet important, role in the [LIUZU TAN JING](#) (“Platform Sūtra of the Sixth Patriarch”). A treatise entitled the [XIANZONGJI](#), preserved as part of the [JINGDE CHUANDENG LU](#), is attributed to Shenhui. Several other treatises attributed to Shenhui were also discovered at [DUNHUANG](#). Shenhui’s approach to Chan practice was extremely influential in [GUIFENG ZONGMI](#)’s attempts to reconcile different strands of Chan, and even doctrine, later in the Tang dynasty; through Zongmi, Shenhui’s teachings also became a critical component of the Korean Sōn master [POJO CHINUL](#)’s accounts of Chan soteriology and meditation.

[hibutsu](#). (秘仏). In Japanese, “secret buddha.” A hibutsu refers to a Buddhist icon in a Japanese monastery that is more or less kept out of public view. In some cases, the hibutsu icon is periodically brought out for public showing, but even then only once in perhaps several decades. The Amida (see [AMITĀBHA](#)) triad purportedly housed at the monastery of [ZENKŌJI](#) is one famous example of a hibutsu.

[Hieizan](#). (比叡山). In Japanese “Mt. Hiei,” a sacred mountain best known as the headquarters of the [TENDAISHŪ](#) (see [TIANTAI ZONG](#)). Mt. Hiei is located northeast of Kyōto on the border of present-day Kyōto and Shiga prefectures, and rises to 2,600 feet (848 meters). In 785, [SAICHŌ](#), founder of the Tendai school, left Nara for Hieizan after receiving ordination. Dissatisfied with the Nara Buddhist schools, he resided in a hut on the mountain and gradually attracted a small group of followers. In 788, Saichō built the hall Ichijō shikan’in (later renamed Konpon chūdō), which became incorporated into the larger monastery of [ENRYAKUJI](#), headquarters for the Tendai school. As Tendai Buddhism rose to dominance in medieval Japan, Hieizan became extremely influential not only in religious matters, but also in politics, the economy, and military affairs. In addition to Enryakuji and numerous other Tendai monasteries, the mountain also housed three aristocratic temples (monzeki), which further extended its ties to the court in Kyōto. Hieizan’s power was not maintained without its share of violence. Conflict erupted in the late tenth century with the nearby Tendai temple Onjōji, when succession over the position of head priest at Enryakuji broke down in armed disputes between [ENNIN](#) and [ENCHIN](#) and their respective

followers and warrior monks ([SŌHEI](#)). In order to wrest control of Hieizan's military and economic strength, Oda Nobunaga (1534–1582) led an attack on the mountain in 1571, burning many of its monasteries to the ground. The mountain's influence was further supplanted during the Tokugawa period when Tenkai (1536?–1643), a Tendai priest and advisor to Shōgun Tokugawa Ieyasu (1543–1616), presided over the construction of Kan'eiji in 1625, which the Shogunate ranked above Hieizan. Hieizan also served as home to many [KAMI](#), notably Ōbie and Kobie (Great and Small Hie), who developed close ties with Tendai monasteries as early as the Heian period (794–1185) through a process known as [SHINBUTSU SHŪGŌ](#) (“unity of spirits and buddhas”). [SHUGENDŌ](#) practices eventually took root on Hieizan as well. The practice of “circumambulating the mountain” ([KAIHŌGYŌ](#)), which reputedly dates back to the ninth century, consists of ascetics running a course around the mountain for as many as one thousand days.

[Higashi Honganjiha](#). (東本願寺派). In Japanese, “Eastern Honganji sect,” the second largest of the two major subsets of [JŌDO SHINSHŪ](#); also known as the [ŌTANIHA](#). See [HONGANJI](#); [ŌTANIHA](#).

[hihan Bukkyō](#). (C. pipan Fojiao; K. pip'an Pulgyo 批判佛教). In Japanese, “critical Buddhism.” A contemporary intellectual controversy fostered largely by the Japanese Buddhist scholars and [SŌTOSHŪ ZEN](#) priests Hakamaya Noriaki and Matsumoto Shirō and their followers. In a series of provocative essays and books, Hakamaya and Matsumoto have argued for a more engaged form of Buddhist scholarship that sought a critical pursuit of truth at the expense of the more traditional, accommodative approaches to Buddhist thought and history. “Critical” here refers to the critical analysis of Buddhist doctrines using modern historiographical and philological methodologies in order to ascertain the authentic teachings of Buddhism. “Critical” can also connote an authentic Buddhist perspective, which should be critical of intellectual misconstructions and/or societal faults. Critical Buddhists polemically dismiss many of the foundational doctrines long associated with East Asian Buddhism, and especially Japanese Zen, as corruptions of what they presume to have been the pristine, “original” teachings of the Buddha. In their interpretation, true Buddhist teachings derive from a critical perspective on the nature of reality, based on the doctrines of “dependent origination” ([PRATĪTYASAMUTPĀDA](#)) and “nonself” ([ANĀTMAN](#)); for this reason, the style of critical philosophical analysis used in the

[MADHYAMA](#) school represents an authentic approach to Buddhism. By contrast, more accommodative strands of Buddhism that are derived from such teachings as the “embryo of buddhahood” ([TATHĀGATAGARBHA](#)), buddha-nature ([FOXING](#)), and original enlightenment ([HONGAKU](#)) were considered heretical, because they represented the corruption of the pristine Buddhist message by Brahmanical notions of a perduring self ([ĀTMAN](#)). The Mahāyāna notion of the nonduality between such dichotomies as [SAMSĀRA](#) and [NIRVĀNA](#), the Critical Buddhists also claim, fostered a tendency toward antinomianism or moral ambiguity that had corrupted such Buddhist schools as [CHAN](#) or Zen and encouraged those schools to accept social inequities and class-based persecution (as in Sōtō Zen’s acquiescence to the persecution of Japanese “untouchables,” or burakumin). Opponents of “Critical Buddhism” suggest that efforts to locate what is “original” in the teachings of Buddhism are inevitably doomed to failure and ignore the many local forms Buddhism has taken throughout its long history; the “Critical Buddhism” movement is therefore sometimes viewed as social criticism rather than academic scholarship.

[hijiri](#). (聖). In Japanese, “holy man” or “saint.” The term hijiri is polysemous and may refer generally to an eminent monk or more specifically to those monks who have acquired great merit through rigorous cultivation. A hijiri may also refer to an ascetic monk who rejects monastic life in favor of a more reclusive, independent lifestyle and practice. Historically, the term hijiri was also often used to refer to itinerant preachers, who converted the masses by means of healing, divination, and thaumaturgy, as well as by building basic infrastructure, such as bridges, roads, and irrigation systems. The holy men of [KŌYASAN](#), the Kōya hijiri, and the saints of the [JISHŪ](#) tradition, the Yugyō hijiri, are best known in Japan. See also [ĀRYA](#).

[Himālaya](#). (S). One of the twenty-four sacred sites associated with the [CAKRASAMVARATANTRA](#). See [PĪTHA](#).

[Himavanta](#). In Pāli, “The Snowy Region,” one of nine adjacent lands (paccantadesa) converted to Buddhism by missionaries dispatched in the third century BCE by the elder [MOGGALIPUTTATISSA](#) at the end of the third Buddhist council (see [COUNCIL, THIRD](#)). Himavanta is identified with the Himalaya mountain range and is also known as Himavā or Himācala. This land was converted by the elder Majjhima, who preached the [DHAMMACAKKAPPAVATTANASUTTA](#) during his mission there. The third Buddhist

council ([SAMĠĪTI](#); see [COUNCIL, THIRD](#)), which was held in Pāṭaliputta (S. [PĀTALIPUTRA](#)) during the reign of King Asoka (S. [AŚOKA](#)), and the nine Buddhist missions it fostered, are known only in [STHAVIRANIKĀYA](#) sources and are first recorded in Pāli in the fifth-century [DĪPAVAṂSA](#). Himavanta was renowned as a refuge for ascetics and hermits and as an abode of solitary buddhas (P. *paccekabuddha*; S. [PRATYEKABUDDHA](#)).

[Himitsu mandara jūjūshinron](#). (秘密曼荼羅十住心論). In Japanese, “Ten Abiding States of Mind According to the Sacred [MANDALA](#)”; a treatise composed by the Japanese [SHINGONSHŪ](#) monk [KŪKAI](#); often referred to more briefly as the *Jūjūshinron*. In 830, Kūkai submitted this treatise in reply to Emperor Junna’s (r. 823–833) request to each Buddhist tradition in Japan to provide an explanation of its teachings. In his treatise, Kūkai systematically classified the various Buddhist teachings (see [JIAOXIANG PANSHI](#)) and placed them onto a spiritual map consisting of the ten stages of the mind (*jūjūshin*). The first and lowest stage of the mind (“the deluded, ram-like mind”) is that of ignorant beings who, like animals, are driven by their uncontrolled desires for food and sex. The beings of the second stage (“the ignorant, childlike, but tempered mind”) display ethical behavior consistent with the teachings of Confucius and the lay precepts of Buddhism. The third stage of mind (“the infantlike, fearless mind”) is the state in which one worships the various gods and seeks rebirth in the various heavens, as would be the case in the non-Buddhist traditions of India and in Daoism. The fourth stage (“recognizing only [SKANDHAS](#) and no-self”) corresponds to the [ŚRĀVAKAYĀNA](#) and the fifth stage (“mind free of karmic seeds”) to that of the [PRATYEKABUDDHAYĀNA](#). The sixth stage (“the mind of [MAHĀYĀNA](#), which is concerned with others”) corresponds to the [YOGĀCĀRA](#) teachings, the seventh (“mind awakened to its unborn nature”) to [MADHYAMAKA](#), the eighth (“mind of one path devoid of construction”) to [TIANTAI](#) (J. [TENDAI](#)), and the ninth (“mind completely devoid of self-nature”) to [HUAYAN](#) (J. Kegon). Kūkai placed his own tradition of Shingon at the last and highest stage of mind (“the esoteric and adorned mind”). Kūkai also likened each stage of mind to a palace and contended that these outer palaces surround an inner palace ruled by the buddha [MAHĀVAIROCANA](#). To abide in the inner palace one must be initiated into the teachings of Shingon by receiving consecration ([ABHISEKA](#)). Kūkai thus provided a Buddhist (or Shingon) alternative to ideal rulership. To demonstrate his schema of the mind, Kūkai frequently cites numerous scriptures and commentaries, which made his treatise extremely prolix; Kūkai later provided an

abbreviated version of his argument, without the numerous supporting references, in his HIZŌ HŌYAKU.

[hīnayāna](#). (T. theg pa dman pa; C. xiaosheng; J. shōjō; K. sosŭng 小乘). In Sanskrit, “lesser vehicle,” a pejorative term coined by the [MAHĀYĀNA](#) (“Great Vehicle”) tradition of Buddhism to refer to the (in their minds’ discredited) doctrines and practices of its rival [ŚRĀVAKAYĀNA](#) schools of the mainstream Buddhist tradition. Hīna has the negative connotations of “lesser,” “defective,” and “vile,” and thus the term hīnayāna is inevitably deprecatory. It should be understood that the term hīnayāna is never used self-referentially by the śrāvakayāna schools of mainstream Buddhism and thus should never be taken as synonymous with the [THERAVĀDA](#) school of contemporary Sri Lanka and Southeast Asian Buddhism. Hīnayāna does, however, have a number of usages in Buddhist literature. (1) Hīnayāna is used by proponents of the Mahāyāna to refer specifically to those who do not accept the Mahāyāna sūtras as being the authentic word of the Buddha ([BUDDHAVACANA](#)). (2) Hīnayāna is used in Mahāyāna literature to refer collectively to the paths of the [ŚRĀVAKAS](#) and the [PRATYEKABUDDHAS](#) (see also [ER SHENG](#)), i.e., those who, out of a desire to attain enlightenment for themselves alone, lack sufficient compassion to undertake the [BODHISATTVA](#) path leading ultimately to buddhahood. (3) Hīnayāna has been used both by traditional Buddhist exegetes and by modern scholars of Buddhism to refer to the non-Mahāyāna schools of Indian Buddhism, traditionally numbered as eighteen, which themselves each set forth the three paths of the śrāvaka, pratyekabuddha, and bodhisattva. See [MAINSTREAM BUDDHIST SCHOOLS](#).

[hindrance](#). See [ĀVARANA](#); [NĪVARANA](#).

[Hiuen Tsiang](#). (C). Obsolete transcription of the Chinese pilgrim and translator Xuanzang. See [XUANZANG](#).

[Hizō hōyaku](#). (秘藏寶鑰). In Japanese, “Jeweled Key to the Secret Treasury,” a text composed by the Japanese [SHINGONSHŪ](#) monk [KŪKAI](#). The *Hizō hōyaku* is a summary (one-fifth the length) of Kūkai’s dense magnum opus [HIMITSU MANDARA JŪJŪSHINRON](#). The title refers metaphorically to the “jeweled key” of the special teachings that will unlock the “secret treasury” that is the buddha-nature (C. [FOXING](#)) of all sentient beings. In contrast to the *Himitsu mandara jūjūshinron*, the *Hizō hōyaku* provides far fewer supporting references and introduces a fictional debate between a Confucian official and a Buddhist priest

and a set of questions and answers from the *Sōk Mahayōn non*.

Hmannan Mahayazawin-daw-gyi. In Burmese, “The Great Glass Palace Chronicle”; the best-known Burmese YAZAWIN, or royal chronicle, of the Konbaung dynasty (1752–1885). It was written by a committee of scholars headed by the royal minister and former saṅgharājā, Mahadhamma thin gyan, at Amarapura in 1831. It copies verbatim U Kala’s MAHAYAZAWIN GYI, making occasional alterations to the narrative and adding criticisms and learned observations. An interesting feature of this text is its criticism of the legend of SHIN UPAGOT (UPAGUPTA), a key element in the story of King Asoka (S. AŚOKA) found in the *Mahayazawin gyi*, as being inauthentic, because it is not attested in Pāli sources. The portion of the *Hmannan Mahayazawin-daw-gyi* that relates the ancient history of Burma from the founding of Tagaung to the fall of PAGAN to Chinese forces in 1284 CE has been translated by Pe Maung Tin and Gordon Luce as *The Glass Palace Chronicle of the Kings of Burma*.

Hodgson, Brian Houghton. (1801–1894). An early British scholar of Sanskrit Buddhism. He was born in Derbyshire. At age fifteen, he gained admission to Haileybury, the college that had been established by the East India Company in 1806 to train its future employees. He excelled at Bengali, Persian, Hindi, political economy, and classics. Following the standard curriculum of the company, after two years at Haileybury, he went to the College of Fort William in Calcutta to continue his studies. Once in India, he immediately began to suffer liver problems and was eventually assigned to Kathmandu as Assistant Resident and later Resident to the Court of Nepal. He began his studies of Buddhism at this time (Buddhism, although long dead in India, still flourished in the Newar community of the Kathmandu Valley). Working with the assistance of the distinguished Newar scholar Amṛtānanda, Hodgson published a number of essays on Buddhism in leading journals of the day. However, he is largely remembered for his collection and distribution of Sanskrit manuscripts. In 1824, he began accumulating Buddhist works in Sanskrit (and Tibetan) and dispatching them around the world, beginning with the gift of sixty-six manuscripts to the library of the College of Fort William in 1827 and continuing until 1845: ninety-four to the Library of the Asiatic Society of Bengal, seventy-nine to the Royal Asiatic Society, thirty-six to the India Office Library, seven to the Bodleian, eighty-eight to the Société Asiatique, and later fifty-nine more to Paris. A total of 423 works were provided. The manuscripts sent to Paris drew

the immediate attention of [EUGÈNE BURNOUF](#), who used them as the basis for his monumental 1844 *Introduction à l'histoire du Bouddhisme indien*. Hodgson's contributions to the study of Buddhism occurred in the early decades of his career; he later turned his attention to Himalayan natural history and linguistics, where he made important contributions as well.

Hokke gisho. (法華義疏). In Japanese, “Commentary on the [SADDHARMAPUNḌARĪKASŪTRA](#),” attributed to the Japanese prince [SHŌTOKU TAISHI](#) (574–622). Along with his commentaries on the [ŚRĪMĀLĀDEVĪSIMHANĀDASŪTRA](#) and [VĪMALAKĪRTINIRDEŚA](#), the *Hokke gisho* is known as one of the “three [SŪTRA](#) commentaries” (*sangyō gisho*) of Shōtoku Taishi. According to Shōtoku Taishi's biography, the *Hokke gisho* was composed in 615, but the exact dates of its compilation remain uncertain. The *Hokke gisho* relies on the Chinese monk Fayun's (467–529) earlier commentary, the *Fahua yiji*, to [KUMĀRAJĪVA](#)'s Chinese translation of the *Saddharmapundarīkasūtra*. Because of its attribution to Shōtoku Taishi, the *Hokke gisho* is considered an important source for studying the thought of this legendary figure in the evolution of Japanese Buddhism, but the extent of its influence on the early Japanese tradition remains a matter of debate.

Hōkōji. (J) (法興寺). See [ASUKADERA](#).

Hōkyōki. (寶慶禮). In Japanese, “Record from the Baoqing era,” a treatise attributed to Japanese [SŌTOSHŪ ZEN](#) master [DŌGEN KIGEN](#). The *Hōkyōki* was discovered after Dōgen's death by his disciple Koun Ejō (1198–1280) and a preface was prepared in 1750. The *Hōkyōki* is purportedly a record of Dōgen's tutelage under the Chinese [CAODONG ZONG](#) master [TIANTONG RUJING](#) during his sojourn in China during the Baoqing reign era (1225–1227) of the Southern Song dynasty. The *Hōkyōki* records specific instructions attributed to Rujing, including such topics as the “sloughing off body and mind” (J. [SHINJIN DATSURAKU](#)), seated meditation (J. *zazen*; C. [ZUOCHAN](#)), and his doctrinal teachings.

homa. (T. *sbyin sreg*; C. *humo*; J. *goma*; K. *homa* 護摩). In Sanskrit, “burnt offering,” an esoteric Buddhist ritual in which various offerings are consigned to flames. In the older Brahmanical traditions of the Indian subcontinent, burnt offerings were made through the medium of the deity [AGNI](#) (the god of fire) to the Vedic gods, in exchange for the boon of cattle and other forms of wealth.

These rituals were systematized first in the Brāhmaṇas, and subsequently in the Āraṇyaka literature, where the exoteric homa rituals were questioned and reconceptualized as inner worship. Buddhist [TANTRA](#) includes both an outer offering of grain and other materials into a fire, and an inner offering into the fire of transcendental wisdom. In the latter, the inner offering is done by visualizing a skull cup ([KAPĀLA](#)) atop a triangular fire in a hearth made of three skulls. Impure objects are visualized as melting into a bliss-producing nectar ([AMRTA](#)) that is then offered to one's [GURU](#) and to oneself visualized as the meditation deity. In Tibetan Buddhism, a homa ritual is often performed at the end of a meditation retreat as a means of purification.

[Honchō kōsōden](#). (本朝高僧伝). In Japanese, “Biographies of Eminent Clerics of Japan”; a late Japanese biographic collection, written by the [RINZAISHŪ ZEN](#) monk Mangen Shibān (1626–1710) in 1702, in a total of seventy-five rolls. The *Honchō kōsōden* includes the biographies of 1,662 Japanese priests affiliated with a variety of Buddhist sects (except, prominently, the [JŌDO SHINSHŪ](#) and [NICHIRENSHŪ](#)) from the sixth century onward. Unlike Shibān's 1678 [ENPŌ DENTŌROKU](#), which contains over one thousand biographies of only Zen clerics and lay practitioners, the *Honchō kōsōden* also discusses clerics from other schools of Japanese Buddhism. The biographies are divided into ten general categories: founders, exegetes, meditators, thaumaturges, [VINAYA](#) specialists, propagators, ascetics, pilgrims, scriptural reciters, and others. As the most comprehensive and voluminous Japanese collection of biographies of eminent clerics, the text is an indispensable work for research into the lineage histories of many of the most important schools of Japanese Buddhism. In 1867, the [SHINGONSHŪ](#) monk Hosokawa Dōkai (1816–1876) compiled a supplement to this collection, titled the *Zoku Nippon kōsōden* (“Supplement to the Eminent Clerics of Japan”), which including biographies of over two hundred clerics of the premodern period, in a total of eleven rolls.

[Hōnen](#). (法然) (1133–1212). Japanese monk regarded as the founder of the [JŌDOSHŪ](#), or [PURE LAND](#) school. Hōnen was a native of Mimasaka province. After his father's violent death, Hōnen was entrusted to his uncle, a monk at the nearby monastery of Bodaiji. Hōnen later headed for [HIEIZAN](#) in 1147 to receive ordination. He began his studies under the [TENDAISHŪ](#) (C. [TIANTAI ZONG](#)) monks Genkō (d.u.) and Kōen (d. 1169), but the corruption he perceived within the Tendai community at [ENRYAKUJI](#) led Hōnen to seek teachings

elsewhere. In 1150, he visited the master Eikū (d. 1179), a disciple of the monk [RYŌNIN](#), in Kurodani on Mt. Hiei, where he remained for the next twenty years. Under Eikū's guidance, Hōnen studied [GENSHIN](#)'s influential treatise, the [ŌJŌ YŌSHŪ](#) and became a specialist in the practice of nenbutsu ("recollecting the Buddha's name"; see C. [NIANFO](#)). Hōnen is also said to have devoted himself exclusively to the practice of invoking the name of the buddha [AMITĀBHA](#) (a type of nenbutsu) after perusing the Chinese monk [SHANDAO](#)'s influential commentary on the [GUAN WULIANGSHOU JING](#), the *Guan Wuliangshou jing shu*. In 1175, Hōnen left Mt. Hiei and established himself in the district of Higashiyama Yoshimizu in the capital Kyōto. His fame grew after his participation in the Ōhara discussion of 1186, which explored how pure land beliefs and practices could help overcome human suffering. Hōnen soon attracted many followers, including such prominent figures as the regent Kujō Kanezane (1149–1207). In 1198, Hōnen compiled his influential treatise, [SENCHAKUSHŪ](#). Due perhaps to his growing influence and his purported rejection of the Tendai teachings of original enlightenment ([HONGAKU](#)), the monks of Enryakuji began attacking Hōnen, banning his practice of nenbutsu in 1204. The monks of the Nara monastery of [KŌFUKUJI](#) also petitioned the retired emperor Gotoba (r. 1183–1198) to ban the practice in 1205. A scandal involving two of Hōnen's disciples led to his exile to Shikoku in 1207 and the execution of four of his disciples. He was later pardoned and returned to Kyōto in 1211. Due to illness, he died the next year in what is now known as the Seishidō in the monastery of Chion'in. Hōnen preached that, in the current degeneration age of the dharma (J. mappō; C. [MOFA](#)), the exclusive practice of nenbutsu was the only way through which salvation could be achieved. Due in part to Hōnen's advocacy, nenbutsu eventually became one of the predominant practices of Japanese Buddhism. Hōnen's preeminent disciple was [SHINRAN](#) (1173–1262), who further radicalized pure land practice by insisting that salvation was only possible through the grace of Amitābha, rather than through continuous nenbutsu practice.

[hongaku](#). (本覺). In Japanese, "original enlightenment." The notion that enlightenment was a quality inherent in the minds of all sentient beings ([SATTVA](#)) initially developed in East Asia largely due to the influence of such presumptive [APOCRYPHA](#) as the [DASHENG QIXIN LUN](#). The *Dasheng qixin lun* posited a distinction between the potentiality to become a buddha that was inherent in the minds of every sentient being, as expressed by the term "original enlightenment"

(C. [BENJUE](#); pronounced hongaku in Japanese); and the soteriological process through which that potential for enlightenment had to be put into practice, which it called “actualized enlightenment” (C. [SHIJUE](#); J. shikaku). This distinction is akin to the notion that a person may in reality *be* enlightened (original enlightenment), but still needs to learn through a course of religious training how to *act* on that enlightenment (actualized enlightenment). This scheme was further developed in numerous treatises and commentaries written by Chinese exegetes in the [DI LUN ZONG](#), [HUAYAN ZONG](#), and [TIAN TAI ZONG](#). ¶ In medieval Japan, this imported soteriological interpretation of “original enlightenment” was reinterpreted into an ontological affirmation of things just as they are. Enlightenment was thence viewed not as a soteriological experience, but instead as something made manifest in the lived reality of everyday life. Hongaku thought also had wider cultural influences, and was used, for example, to justify conceptually incipient doctrines of the identity between the buddhas and bodhisattvas of Buddhism and the indigenous deities ([KAMI](#)) of Japan (see [HONJI SUIGAKU](#); [SHINBUTSU SHŪGŌ](#)). Distinctively Japanese treatments of original enlightenment thought begin in the mid-eleventh century, especially through oral transmissions (kuden) within the medieval [TENDAISHŪ](#) tradition. These interpretations were subsequently written down on short slips of paper ([KIRIGAMI](#)) that were gradually assembled into more extensive treatments. These interpretations ultimately came to be attributed by tradition to the great Tendai masters of old, such as [SAICHŌ](#) (767–822), but connections to these earlier teachers are dubious at best and the exact dates and attributions of these materials are unclear. During the late Heian and Kamakura periods, hongaku thought bifurcated into two major lineages, the Eshin and Danna (both of which subsequently divided into numerous subbranches). This bifurcation was largely a split between followers of the two major disciples of the Tendai monk [RYŌGEN](#); [GENSHIN](#) (942–1017) of Eshin’in in [YOKAWA](#) (the famous author of the [ŌJŌ YŌSHŪ](#)); and Kakuun (953–1007) of Danna’in in the Eastern pagoda complex at [ENRYAKUJI](#) on [HIEIZAN](#). The Tendai tradition claims that these two strands of interpretation derive from Saichō, who learned these different approaches while studying Tiantai thought in China under Daosui (J. Dōsui/Dōzui; d.u.) and Xingman (J. Gyōman; d.u.), and subsequently transmitted them to his successors in Japan; the distinctions between these two positions are, however, far from certain. Other indigenous Japanese schools of Buddhism that developed later during the Kamakura period, such as the [JŌDOSHŪ](#) and [JŌDO SHINSHŪ](#), seem to have harbored more of a critical attitude toward the notion of original

enlightenment. One of the common charges leveled against hongaku thought was that it fostered a radical antinomianism, which denied the need for either religious practice or ethical restraint. In the contemporary period, the notion of original enlightenment has been strongly criticized by advocates of “Critical Buddhism” ([HIHAN BUKKYŌ](#)) as an infiltration into Buddhism of Brahmanical notions of a perduring self ([ĀTMAN](#)); in addition, by valorizing the reality of the mundane world just as it is, hongaku thought was said to be an exploitative doctrine that had been used in Japan to justify societal inequality and political despotism. For broader East Asian perspectives on “original enlightenment,” see [BENJUE](#).

Honganji. (本願寺). In Japanese, “Original Vow Monastery.” Honganji is the headquarters (honzan) of the [JŌDO SHINSHŪ](#) sect in Japan; it is located in the Shimogyō district of Kyōto. In 1277, Kakushinni (1224–1283), the daughter of the Japanese [PURE LAND](#) monk [SHINRAN](#), designated her father’s grave in the Ōtani district near Kyōto to be the primary memorial site for his worship. The site was later transformed into a temple, where an image of the buddha [AMITĀBHA](#) was installed. After a long period of factional disputes, the various groups of Shinran’s followers were reunited by the eighth head priest of Honganji, [RENNYO](#). In 1465, warrior monks from [HIEIZAN](#) razed Honganji and turned the site into one of their own branch temples (matsuji). In 1478, having gained enough support to counter any threat from Mt. Hiei, Rennyo moved Honganji to the Yamashina area of Kyōto. The move was completed in 1483 with the completion of the Amida hall. Under Rennyo’s leadership, Honganji became the central monastery of the Jōdo Shinshū tradition. Rennyo built a broad network of temples that was consolidated under the sole administration of Honganji. After a brief move to Ōsaka, Honganji was relocated to its current site in Kyōto on the order of Toyotomi Hideyoshi (1536–1598). A split occurred between two factions shortly thereafter, and ever since the early seventeenth century the Nishi (West) and Higashi (East) Honganji complexes have served as the religious centers of these two major branches of Jōdo Shinshū, the [NISHI HONGANJIHA](#) and the [HIGASHI HONGANJIHA](#) (also known as the [ŌTANIHA](#)).

Honggi. (K) (洪基). See [UDAM HONGGI](#).

Hongming ji. (J. Gummyōshū; K. Hongmyōng chip 弘明集). In Chinese, “Collection on the Propagation and Clarification [of Buddhism],” compiled by the monk [SENGYOU](#) (445–518) of the Liang dynasty sometime between 515 and

518. The *Hongming ji* is a fourteen-roll collection of Buddhist apologetics, prepared in response to growing criticisms of the religion by rival Confucians and Daoists, and to interference in Buddhism's religious affairs by the government. Against these challenges, the *Hongming ji* attempted to defend the authenticity of the translated scriptures of Buddhism and its seminal doctrines. In its explanation and defense of such concepts as buddha or [KARMAN](#), the *Hongming ji* drew not just on Buddhist sources, but also on the common terminology of its opponents. For this reason, the *Hongming ji* serves as an important source for studying the interactions between the different Chinese religious traditions and the process through which Buddhism was appropriated in early China. Sengyou's *Hongming ji* was expanded to thirty rolls by [DAOXUAN](#) in his *Guang hongming ji*.

Hongren. (J. Kōnin/Gunin; K. Hongin 弘忍) (601–674). Chinese Chan master and the reputed fifth patriarch of the Chan zong. Hongren was a native of Huangmei in Qizhou (present-day Hubei province). Little is known of his early life, but he eventually became the disciple of the fourth patriarch [DAOXIN](#). After Daoxin's death in 651, Hongren succeeded his teacher and moved to Mt. Fengmao (also known as Dongshan or East Mountain), the east peak of Mt. Shuangfeng (Twin Peaks) in Huangmei. Hongren's teachings thus came to be known as the "East Mountain teachings" ([DONGSHAN FAMEN](#)), although that term is later applied also to the lineage and teachings of both Daoxin and Hongren. After his move to Mt. Fengmao, disciples began to flock to study under Hongren. Although Hongren's biography in the [CHUAN FABAO JI](#) certainly exaggerates when it says that eight to nine out of every ten Buddhist practitioners in China studied under him, there is no question that the number of students of the East Mountain teachings grew significantly over two generations. The twenty-five named disciples of Hongren include such prominent figures as [SHENXIU](#), Zhishen (609–702), Lao'an (d. 708), Faru (638–689), Xuanze (d.u.), and [HUINENG](#), the man who would eventually be recognized by the mature Chan tradition as the sixth, and last, patriarch. The legendary account of Hongren's mind-to-mind transmission ([YIXIN CHUANXIN](#)) of the [DHARMA](#) to Huineng can be found in the [LIUZU TAN JING](#). Later, Emperor Daizong (r. 762–779) bestowed upon Hongren the title Chan master Daman (Great Abundance). The influential treatise [XIUXIN YAO LUN](#) ("Treatise on the Essentials of Cultivating the Mind") is attributed to Hongren; it stresses the importance of "guarding the mind" ([SHOUXIN](#)). In that text, the relationship between the pure mind and the afflictions

([KLEŚA](#)) is likened to that between the sun and the clouds: the pure mind is obscured by afflictions just as the sun is covered by layers of clouds; but if one can guard the mind so that it is kept free from false thoughts and delusions, the sun of [NIRVĀNA](#) will then appear. The text suggests two specific meditation techniques for realizing this goal: one is continuously to visualize the original, pure mind (viz., the sun) so that it shines without obscuration; the other is to concentrate on one's own deluded thoughts (the clouds) until they disappear. These two techniques purport to “guard the mind” so that delusion can never recur.

[Hongzan fahua zhuan](#). (C) (弘贊法華傳). See [FAHUA ZHUAN](#).

[Hongzhi Zhengjue](#). (J. Wanshi Shōgaku; K. Koengji Chōnggak 宏智正覺) (1091–1157). Chinese [CHAN](#) master in the [CAODONG ZONG](#). Hongzhi was a native of Xizhou in present-day Shanxi province, and later came to be known as the “Old Buddha of Xizhou.” At age ten, he entered the monastery of Jingmingsi under the monk Benzong (d.u.) and four years later received the full monastic precepts from Zhiqiong (d.u.) at Ciyunsi. Hongzhi then set out to visit various teachers throughout the country and first studied under the Chan master Kumu Facheng (1071–1128). Hongzhi eventually became a student of the Chan master Danxia Zichun (1064–1117) and inherited his Caodong lineage. In 1124, Hongzhi became the abbot of Puzhaosi in Sizhou (present-day Anhui province). After holding posts at various other monasteries, Hongzhi was finally invited to Mt. Tiantong (in present-day Zhejiang province) in 1129 and spent the next three decades restoring his monastery at that mountain site. The great [SAMGHA](#) hall ([SENGTANG](#)) that he constructed there is said to have housed more than twelve hundred monks. Hongzhi is thus often referred to as the reviver of Mt. Tiantong. Hongzhi is best known within the Chan tradition for teaching a style of meditation he called “silent-illumination chan” ([MOZHAO CHAN](#)). Hongzhi also maintained a lengthy and close relationship with his friend and rival, the eminent [LINJI ZONG](#) master [DAHUI ZONGGAO](#), who was a virulent critic of mozhao Chan. Hongzhi composed the [MOZHAO MING](#) and his teachings can be found in the *Hongzhi Jue chanshi yuyao*, *Hongzhi Jue chanshi yulu*, and *Hongzhi guanglu*. Hongzhi's famous verse commentaries on a hundred “old cases” (see [GONG'AN](#)) can be found in the [CONGRONG LU](#). Emperor Gaozong subsequently bestowed upon him the title Chan master Hongzhi (Expansive Wisdom).

[Hongzhou zong](#). (J. Kōshūshū; K. Hongju chong 洪州宗). The Hongzhou school

of Chinese [CHAN](#) derives its name from the Hongzhou region in Jiangxi province, where the Chan master [MAZU DAOYI](#) developed his unique style of Chan pedagogy. The name was first used by the Chan historian [GUIFENG ZONGMI](#) to refer primarily to those who traced their lineage back to Mazu and his immediate disciples. According to traditional accounts of their teachings, Chan masters in the Hongzhou line regarded all activities of everyday life as the very functioning of the buddha-nature ([FOXING](#)) itself. Since everything in the conditioned realm, therefore, was presumed to be a manifestation of the buddha-nature, Hongzhou adepts were said to claim that all actions, whether right or wrong, good or evil, and so forth, were equally the functioning of the enlightened mind. Zongmi criticized this view as promoting a dangerous antinomianism in Chan, which fostered unrestrained conduct (see [WU'AI XING](#)). Normative portrayals in Chan literature of iconoclastic masters striking their students, shouting, and pinching their students' noses derive from stereotypes fostered within the Hongzhou school. Largely through the efforts of Mazu's prominent disciples [BAIZHANG HUIHAI](#) and [NANQUAN PUYUAN](#), the Hongzhou line came to be the dominant Chan lineage in medieval China and eventually evolved into the [GUIYANG ZONG](#) and [LINJI ZONG](#) of the mature Chan tradition. The Hongzhou lineage was also extremely influential in Silla and Koryŏ-period Korea as well, where eight of the nine sites associated with the Korean Nine Mountains Sŏn school ([KUSAN SŌNMUN](#)) were founded during the ninth century by teachers who studied in China with Hongzhou masters.

[honji suijaku](#). (本地垂迹). In Japanese, “manifestation from the original state”; an indigenous Japanese explanation of the way in which the imported religion of Buddhism interacted with local religious cults. In this interpretation, an originally Indian buddha, [BODHISATTVA](#), or divinity (the “original ground,” or “state”; J. honji) could manifest or incarnate in the form of a local Japanese deity ([KAMI](#)) or its icon, which was then designated the “trace it dropped” (J. suijaku). The notion of honji suijaku was derived from the earlier Buddhist doctrine of multiple buddha bodies ([BUDDHAKĀYA](#)), especially the so-called transformation body ([NIRMĀNAKĀYA](#)). The honji suijaku doctrine thus facilitated the systematic incorporation of local deities within Buddhism, speeding the localization of Buddhism within the religious culture of Japan. A movement forcefully to separate from Buddhism the local deities, now known collectively as [SHINTŌ](#), occurred during the Meiji period (see [HAIBUTSU KISHAKU](#)). See also [SHINBUTSU SHŪGŌ](#).

honmon. (C. benmen; K. ponmun 本門). In Japanese, lit. “fundamental teaching” or “origin teaching”; the essential core of the [SADDHARMAPUNḌARĪKASŪTRA](#) (“Lotus Sūtra”), which is detailed in the latter fourteen of the scripture’s twenty-four chapters; in distinction to the [SHAKUMON](#) (lit. “trace teaching”), the provisional first half of the sūtra. The term is especially important in both the [TIANTAI](#) (J. TENDAI) and [NICHIREN](#)-oriented schools of East Asian Buddhism. The honmon is regarded as the teaching preached by the true Buddha, who attained buddhahood an infinite number of [KALPAS](#) ago. Traditionally, the sixteenth chapter of the *Saddharmapuṇḍarīkasūtra*, “The Longevity of the [TATHĀGATA](#),” is believed to constitute the central chapter of the honmon. In this chapter, the Buddha reveals his true identity: he became enlightened in the remote past, yet he appears to have a limited lifespan and to pass into [NIRVĀNA](#) in order to inspire sentient beings’ spiritual practice, since if they were to know about the Buddha’s eternal presence, they might not exert themselves. Honmon is also called the “effect” or “fruition” section of the scripture, since it preaches the omnipresence of the Buddha, which is a consequence of the long process of training that he undertook in the course of achieving enlightenment. The Tiantai master [TIANTAI ZHIYI](#) (538–597) first applied the two terms honmon and shakumon to distinguish these two parts of the *Saddharmapuṇḍarīkasūtra*; he compared the two teachings to the moon in the sky and its reflection on the surface of a pond, respectively. Zhiyi considered the honmon to be different from the shakumon and other scriptural teachings in that it alone revealed the fundamental enlightenment of the Buddha in the distant past. He thus argued that, even though the honmon and shakumon are inconceivably one, the timeless principle of enlightenment itself is revealed in the honmon and all other teachings are merely the “traces” of this principle. The Japanese Tendai tradition offered a slightly different understanding of honmon: despite the fact that [ŚĀKYAMUNI](#) Buddha attained buddhahood numerous eons ago, his manifestation in this world served as a metaphor for the enlightenment inherent in all living things. Tendai thus understood honmon to mean “original enlightenment” ([HONGAKU](#); see also C. [BENJUE](#)) and the dynamic phase of suchness ([TATHATĀ](#)) that accorded with phenomenal conditions, while “shakumon” was the “acquired enlightenment” (see C. [SHIJUE](#)) and the immutable phase of suchness as the unchanging truth. Most crucially, the Tendai tradition emphasized the superiority of honmon over shakumon. The two terms are also important in the various Nichiren-related schools of Japanese Buddhism. [NICHIREN](#) (1222–1282) maintained that *myōhōrengekyō*, the Japanese title ([DAIMOKU](#)) of the

Saddharmapuṇḍarīkasūtra, was in fact the true honmon of the sutra.

honmon no daimoku. (本門の題目). In Japanese, lit. “DAIMOKU of the essential teaching”; term used specifically in the NICHIREN and associated schools of Japanese Buddhism to refer to the essential teaching epitomized in the title of the SADDHARMAPUNḌARĪKASŪTRA (“Lotus Sūtra”). The title of the sūtra is presumed to summarize the gist of the entire scripture and it is recited in its Japanese pronunciation (see NAM MYŌHŌRENGEKYŌ) as a principal religious practice of the Nichiren and SŌKA GAKKAI schools. Recitation of the title of the *Saddharmapuṇḍarīkasūtra* was advocated as one of the “three great esoteric laws” (SANDAIHIHŌ) by the Japanese reformer NICHIREN (1222–1282) and was said to exemplify mastery of wisdom (PRAJÑĀ) in the three trainings (TRISIKSĀ).

Honwǒn. (K) (混元). See [CHINMYÖNG HONWÖN](#).

Hōōdō. (J) (鳳凰堂). See [BYŌDŌIN](#).

Horner, Isaline Blew. (1896–1981). British translator of Pāli texts, who published as I. B. Horner. She was born in Walthamstow, England, in 1896 and attended Newnham College at Cambridge in 1914. When she was twelve years of age, her grandmother had introduced her to the pioneering Pāli scholars [THOMAS RHYS DAVIDS](#) and [CAROLINE RHYS DAVIDS](#). Thomas Rhys Davids had founded the [PĀLI TEXT SOCIETY](#) in 1881; Horner would eventually become its fourth president in 1959. Horner traveled extensively in Sri Lanka (then Ceylon), India, and Burma. Over a four-decade-long career, Horner was a prolific editor and translator of Pāli texts. Her most significant contribution to the field of Pāli studies was a six-volume translation of the [VINAYAPITAKA](#), which she worked on from 1938–1966. Her most important original piece of scholarship was her book *Women under Primitive Buddhism: Laywomen and Almswomen*, which was published in 1930. Her account of Buddhist women and their roles in sixth century BCE India was the first of its kind to be published in the West and has served as an important source for the study of gender in Buddhism. Horner also published a study of the arahant/[ARHAT](#) in her book *The Early Buddhist Theory of Man Perfected* (1934).

Hōryūji. (法隆寺). In Japanese, “Dharma Flourishing Monastery.” Hōryūji is considered one of the seven great monasteries in former capital of Nara. The monastery is currently affiliated with the Shōtoku tradition and serves as the headquarters (honzan) of the Hossō school (C. [FAXIANG ZONG](#)). According to extant inscriptions, Empress Suiko (r. 592–628) and [SHŌTOKU TAISHI](#) (574–622) built Hōryūji in 607 to honor the deathbed wishes of retired Emperor Yōmei (r. 585–587). Prince Shōtoku’s estate in Ikaruga was chosen as the site for the construction project. A famous Shaka ([ŚĀKYAMUNI](#)) triad produced perhaps in the early seventh century is installed in its Golden Hall (Kondō). Hōryūji is also famous for its numerous ancient icons and ritual artifacts and also for its five-story pagoda and Golden Hall, which is one of the oldest standing wooden structures in Japan. The monastery is currently divided into eastern and western cloisters.

hotoke. (佛). A vernacular Japanese term for “buddha.” Colloquially, hotoke is

also used to refer to a deceased person or the soul of a deceased person.

Hottō Kokushi. (J) (法燈國師). See [SHINCHI KAKUSHIN](#).

Hōŷng Pou. (虛應普雨) (1515–1565). Korean [SŎN](#) monk of the mid-Chosŏn dynasty, also known as Naam. In 1530, Pou entered the hermitage of Mahayŏnam on [KŪMGANGSAN](#). In 1548, with the help of queen dowager Munjŏng (1501–1565), Pou became the abbot of the monastery of Pongŷnsa and, again with her help, he resuscitated the two traditions of [SŎN](#) (Meditation) and [KYO](#) (Doctrine) in Korea. In 1551, he was appointed the deputy chief of the Sŏn school (Sŏnjong p’ansa). With the help of some loyal officials, Pou also registered more than three hundred monasteries as officially sanctioned “pure monasteries” (chŏngch’al). Following the guidelines of the clerical certification system (toch’ŏpche), Pou reinstated the clerical exams ([SŪNGKWA](#)) and oversaw the selection of four thousand monks. He was later given the title Sŏn master Todae (Capital’s Greatest). In 1565, after the death of queen dowager Munjŏng, anti-Buddhist memorials to the throne led to Pou losing his clerical certification and he was exiled to, and eventually executed on, Cheju Island. His teachings are recorded in the *Hōŷngdang chip* and *Naam chapchŏ*. He also composed the influential treatises *Suwŏltoryang konghwabulsa yŏhwanbinju mongjung mundap* (usually abbreviated as *Mongjung mundap*) and *Kwŏnnyŏm yorok*.

hrī. (P. hiri; T. ngo tsha shes pa; C. can; J. zan; K. ch’am 慚). In Sanskrit, “decency,” “shame,” or “conscience,” one of the fundamental mental concomitants ([CAITTA](#)) presumed to accompany all wholesome actions ([KUŚALA](#)) and therefore listed as the fifth of the ten “omnipresent wholesome factors” (kuśala-[MAHĀBHŪMIKA](#)) in the [SARVĀSTIVĀDA ABHIDHARMA](#) and the second of eleven wholesome mental concomitants in the hundreddharma list (see [BAIFA](#)) of the [YOGĀCĀRA](#) school. It is also one of the twenty-five wholesome mental factors in the Pāli abhidhamma. “Decency” is often seen in compound with the term “modesty” or “fear” of wrongdoing ([APATRĀPYA](#)), where hrī refers to the pangs of moral conscience that one feels at the prospect of engaging in an immoral act, whereas apatrāpya refers to the fear of being blamed by others for engaging in such acts. This dual sense of “shame and blame” was thought to be foundational to progress in morality ([ŚĪLA](#)).

Hsüan-tsang. (C). Outmoded Wade-Giles transcription of the Chinese pilgrim and translator Xuanzang. See [XUANZANG](#).

[huafa sijiao](#). (C) (化法四教). See [TIANTAI BAJIAO](#).

[Huahu jing](#). (C) (化胡經). See [LAOZI HUAHU JING](#).

[Huaihai](#). (C) (懷海). See [BAIZHANG HUAIHAI](#).

[Huairang](#). (C) (懷讓). See [NANYUE HUAIRANG](#).

[Huaisu](#). (J. Kaiso; K. Hoeso 懷素) (634–707). Chinese [VINAYA](#) master of the Tang dynasty. Huaisu was ordained at the age of eleven by [XUANZANG](#), under whom he studied various [SŪTRAS](#) and [ŚĀSTRAS](#). After receiving his precepts, Huaisu studied the *Sifen lü xingshi chao* with its author, the renowned vinaya master [DAOXUAN](#). Huaisu also studied Fali’s *Sifen lü shu* under one of his major disciples. After studying the [SIFEN LÜ](#) (“Four-Part Vinaya”) of the [DHARMAGUPTAKA](#) school with these teachers, Huaisu decided to rectify what he considered flaws in earlier studies of the vinaya and composed the *Sifen lü kaizong ji*, in twenty rolls. Huaisu’s text soon came to be known as the “new commentary” (xinshu), and he and his followers came to be called the East Pagoda vinaya school ([DONGTA LÜ ZONG](#)) in distinction to Daoxuan’s [NANSHAN LÜ ZONG](#) (Mt. Nan vinaya school) and Fali’s [XIANGBU LÜ ZONG](#) (Xiang Region vinaya school). Huaisu also authored commentaries on the [ABHIDHARMAKOŚABHĀSYA](#), the Dharmaguptaka [BHIKSU](#) precepts and their ecclesiastical procedures (karmavācanā), and various other texts.

[Huangbo Xiyun](#). (J. Ōbaku Kiun; K. Hwangbyōk Hūiun 黃檗希運) (d. 850). Chinese [CHAN](#) master of the Tang dynasty. Huangbo was a native of Min in present-day Fujian province. Little is known of his early life, but he eventually became a monk on Mt. Huangbo in Fuzhou (present-day Fuzhou province). Huangbo later became the disciple of the eminent Chan master [BAIZHANG HUAIHAI](#), a first-generation successor to [MAZU DAOYI](#). After he left Baizhang’s side, Huangbo became the abbot of the monastery of Da’ansi where he trained many students. At the invitation of the powerful minister of state Pei Xiu (787–860), Huangbo left for Zhongling (present-day Jiangxi province) and began to reside on a local mountain that he renamed Mt. Huangbo, whence he acquired his toponym. During this period, Huangbo acquired many more disciples and established himself as a major Chan master. In 842, Huangbo relocated to the monastery of Longxingsi and again to Kaiyuansi in Wanling (present-day Anhui province) in 848. His most famous disciple is [LINJI YIXUAN](#) (d. 867) whose

lineage became the dominant Chan school in China, the eponymous [LINJI ZONG](#). Huangbo's teachings focus on the notion of the "one mind" ([YIXIN](#)) that vivifies all things, including enlightened buddhas and unenlightened sentient beings. Chan practice therefore involves simply bringing an end to all discriminative thought so that the one mind will be made manifest. Pei Xiu compiled his notes of Huangbo's lectures, which he titled the [CHUANXIN FAYAO](#). Huangbo received the posthumous title Chan master Duanji (Eradicating Limits).

[Huanglong Huinan](#). (J. Ōryō/Ōryū Enan; K. Hwangnyong Hyenam 黃龍慧南) (1002–1069). Song-dynasty Chan monk who is regarded as the founder of the [HUANGLONG PAI](#) collateral lineage of the [LINJI ZONG](#). He ordained as a monk at the age of eleven, eventually becoming a disciple of Shishuang Chuyuan (986–1039), a sixth-generation successor in the Linji school. He spent much of his life teaching at Mt. Huanglong in Xiushui county of Jiangxi province, whence he acquired his toponym. Huanglong was famous for employing three crucial questions to challenge his students and encourage their cultivation; these are known as "Huanglong's Three Checkpoints" (Huanglong sanguan): What conditioned your birth (viz., why were you born)? Why are my hands like the Buddha's? Why are my feet like a donkey's? His Huanglong lineage lasted for about one hundred fifty years, before being reabsorbed into the rival [YANGQI PAI](#).

[Huanglong pai](#). (J. Ōryōha/Ōryūha; K. Hwangnyong p'a 黃龍派). In Chinese, "Huanglong school"; collateral lineage of the [CHAN](#) school's [LINJI ZONG](#), one of the five houses and seven schools ([WU JIA QI ZONG](#)) of the Chan during the Northern Song dynasty (960–1126). The school's name comes from the toponym of its founder, [HUANGLONG HUINAN](#) (1002–1069), who taught at Mt. Huanglong in present-day Jiangxi province; Huinan was a disciple of Shishuang Chuyuan (986–1039), himself a sixth-generation successor in the Linji school. The Huanglong school was especially known for "lettered Chan" ([WENZI CHAN](#)), a style of Chan that valorized belle lettres, and especially poetry, in Chan practice. Many of the most influential monks in the Huanglong school exemplified a period when Chan entered the mainstream of Chinese intellectual life: their practice of Chan was framed and conceptualized in terms that drew from their wide learning and profound erudition, tendencies that helped make Chan writings particularly appealing to wider Chinese literati culture. [JUEFAN HUIHONG](#) (1071–1128), for example, decried the bibliophobic tendencies in Chan that were epitomized in the aphorism that Chan "does not establish words and

letters” ([BULI WENZI](#)) and advocated that Chan insights were in fact made manifest in both Buddhist sūtras and the uniquely Chan genres of discourse records ([YULU](#)), lineage histories (see [CHUANDENG LU](#)), and public-case anthologies ([GONG’AN](#)). Huanglong and [YUNMEN ZONG](#) masters made important contributions to the development of the Song Chan literary styles of songgu ([attaching] verses to ancient [cases]) and niangu (raising [and analyzing] ancient [cases]). Because of their pronounced literary tendencies, many Huanglong monks became close associates of such Song literati-officials as Su Shi (1036–1101), Huang Tingjian (1045–1105), and [ZHANG SHANGYING](#) (1043–1122). After the founder’s death, discord appeared within the Huanglong lineage: the second-generation master Baofeng Kewen (1025–1102) and his disciple Juefan Huihong criticized the practices of another second-generation master Donglin Changzong (1025–1091) and his disciples as clinging to silence and simply waiting for enlightenment; this view may have influenced the subsequent criticism of the [CAODONG ZONG](#) by [DAHUI ZONGGAO](#) (1089–1163), who trained for a time with the Huanglong master Zhantang Wenjun (1061–1115). The Huanglong pai was the first school of Chan to be introduced to Japan: by [MYŌAN EISAI](#) (1141–1215), who studied with the eighth-generation Huanglong teacher Xu’an Huaichang (d.u.). The Huanglong pai did not survive as a separate lineage in either country long after the twelfth century, as its rival [YANGQI PAI](#) came to prominence; it was eventually reabsorbed into the Yangqi lineage.

huatou. (J. watō; K. hwadu 話頭). In Chinese, “topic of inquiry”; in some contexts, “critical phrase” or “keyword.” The Song-dynasty [CHAN](#) master [DAHUI ZONGGAO](#), in the [LINJI ZONG](#), popularized a meditative technique in which he urged his students (many of whom were educated literati) to use a Chan case ([GONG’AN](#)) as a “topic of meditative inquiry” (huatou) rather than interpret it from purely intellectual or literary perspectives. Perhaps the most famous and most widely used huatou is the topic “no” ([WU](#)) attributed to the Chan master [ZHAOZHOU CONGSHE](#): A monk asked Zhaozhou, “Does a dog have buddha-nature ([FOXING](#)), or not?,” to which Zhaozhou replied “[WU](#)” (“no”; lit. “it does not have it”; see [GOUZI WU FOXING](#); [WU GONG’AN](#)). Because of the widespread popularity of this particular one-word topic in China, Korea, and Japan, this huatou is often interpreted as a “critical phrase” or “keyword,” in which the word “wu” is presumed to be the principal topic and thus the “keyword,” or “critical phrase,” of the longer gong’an exchange. Because Zhaozhou’s answer

in this exchange goes against the grain of East Asian Mahāyāna Buddhism—which presumes that all sentient beings, including dogs, are inherently enlightened—the huatou helps to foster questioning, or technically “doubt” ([YIQING](#)), the focus of a new type of Chan meditation called [KANHUA CHAN](#), “the Chan of investigating the huatou.” Huatou (which literally means “head of speech,” and thus “topic”) might best be taken metaphorically as the “apex of speech,” or the “point at which (or beyond which) speech exhausts itself.” Speech is of course initiated by thought, so “speech” in this context refers to all the discriminative tendencies of the mind, viz., conceptualization. By leading to the very limits of speech—or more accurately thought—the huatou acts as a purification device that frees the mind of its conceptualizing tendencies, leaving it clear, attentive, and calm. Even though the huatou is typically a word or phrase taken from the teachings of previous Chan masters, it is a word that is claimed to bring an end to conceptualization, leaving the mind receptive to the influence of the unconditioned. As Dahui notes, huatou produces a “cleansing knowledge and vision” (see [JÑĀNADARŚANA](#)) that “removes the defects of conceptual understanding so that one may find the road leading to liberation.” Huatou is thus sometimes interpreted in Chinese Buddhism as a type of meditative “homeopathy,” in which one uses a small dosage of the poison of concepts to cure the disease of conceptualization. Dahui’s use of the huatou technique was first taught in Korea by [POJO CHINUL](#), where it is known by its Korean pronunciation as hwadu, and popularized by Chinul’s successor, [CHIN’GAK HYESIM](#). Investigation of the hwadu remains the most widespread type of meditation taught and practiced in Korean Buddhism. In Japanese Zen, the use of the watō became widespread within the [RINZAISHŪ](#), due in large part to the efforts of [HAKUIN EKAKU](#) and his disciples.

[Huayan bu](#). (J. Keronbu; K. Hwaŏm pu 華嚴部). In Chinese, the “Huayan Division,” one of the four major divisions into which the [MAHĀYĀNA](#) section of the Chinese Buddhist canon (see [DAZANGJING](#)) is divided. This division contains primarily the different Chinese translations of the [AVATAMSAKASŪTRA](#) and its independent chapters. According to the scriptural catalogue ([JINGLU](#)) [KAIYUAN SHIJIAO LU](#), this division comprises twenty-six texts (in 187 rolls) that were catalogued along with the different recensions of the *Avataṃsakasūtra*.

[Huayan dashu](#). (C) (華嚴大疏). In Chinese, “Great Commentary to the *Huayan [Jing]*.” See [HUAYAN JING SHU](#).

Huayan fajie guanmen. (J. Kegon hokkai kanmon; K. Hwaŏm pŏpkye kwanmun 華嚴法界觀門). In Chinese, “Gate to the Discernments of the [DHARMADHĀTU](#) in the [AVATAMSAKASŪTRA](#),” a seminal text of the [HUAYAN ZONG](#), attributed to [DUSHUN](#), the putative first patriarch of the school. The *Fajie guanmen* no longer exists as an independent text but is extant only in citations found in other works, such as [FAZANG](#)’s *Fa putixin zhang* (“Treatise on Generating the Thought of Enlightenment”), the commentaries of [CHENGGUAN](#) and [ZONGMI](#), and [YONGMING YANSHOU](#)’s [ZONGJING LU](#). The *Fajie guanmen* largely consists of three “discernments” (guan), of true emptiness, the mutual nonobstruction between principle and phenomena, and total pervasion and accommodation. The text outlines some of the fundamental principles that will govern future doctrinal development within the Huayan school, including the causal relationship that pertains between principle ([LI](#)) and phenomena ([SHI](#)). The text is characterized by its validation of the reality of the phenomenal world, which is commonly considered to be one of the fundamental characteristics of indigenous Chinese Buddhism.

Huayan jing. (C) (華嚴經). See [AVATAMSAKASŪTRA](#).

Huayan jing ganying zhuan. (J. Kegongyō kannōden; K. Hwaŏm kyŏng kamŭng chŏn 華嚴經感應傳). In Chinese, “Record of Miraculous Responses to the [AVATAMSAKASŪTRA](#),” originally compiled by Huiying (a disciple of the [HUAYAN](#) patriarch [FAZANG](#)) and redacted by Hu Youzhen during the Tang dynasty (618–907). The “Record of Miraculous Responses” is a collection of miracle tales reportedly recounted by devotees of the *Avataṃsakasūtra*. Meant as a compilation of testimonial accounts of the magical efficacy of reciting, circulating, and revering the *Avataṃsakasūtra*, this work was the forerunner of analogous works created in subsequent dynasties in honor of the same scripture.

Huayan jing helun. (J. Kegongyō gōron; K. Hwaŏm kyŏng hap non 華嚴經合論). In Chinese, “A Comprehensive Exposition of the [AVATAMSAKASŪTRA](#),” a commentary written by [LI TONGXUAN](#) in the Tang dynasty (618–907), a reclusive lay Huayan adept and contemporary of the [HUAYAN](#) patriarch [FAZANG](#). The commentary is also known as the “Commentary to the New [Translation] of the *Avataṃsakasūtra*” (*Xin Huayan jing lun*), because it comments on [ŚIKSĀNANDA](#)’s “new” eighty-roll translation of the *Avataṃsakasūtra*, rather than Buddhahadra’s “old” sixty-roll rendering, which had been the focus of all earlier Huayan commentarial writing. Li Tongxuan’s “Exposition of the

Avataṃsakasūtra” contained ideas that were quite distinct from standard Huayan interpretations, such as the emphasis on the centrality of the preliminary soteriological stage of the “ten faiths” (shixin), rather than the “ten abodes” (shizhu) that had been stressed in previous Huayan accounts. Li’s work subsequently played a key role in the revitalization of the Chinese Huayan exegetical tradition, especially in the thought of the Huayan patriarch [CHENGGUAN](#). Li’s work dropped out of circulation soon after its composition, but after centuries in obscurity, the exposition was rediscovered by Chinese [CHAN](#) adepts during the Song dynasty, such as [DAHUI ZONGGAO](#), and by Korean [SŎN](#) adepts during the Koryŏ dynasty for the provocative parallels they perceived between Li Tongxuan’s treatment of Huayan soteriology and the Chan approach of sudden awakening ([DUNWU](#)). The Korean Sŏn exegete [POJO CHINUL](#) (1158–1210) was so inspired by the text that he wrote a three-roll abridgment of it entitled “Excerpts from the *Exposition of the Avataṃsakasūtra*” (*Hwaŏm non chŏryo*), which he used to demonstrate the parallels between the Huayan soteriological schema and his preferred meditative approach of “sudden awakening followed by gradual cultivation” (K. *tono chŏmsu*; C. [TUNWU JIANXIU](#)). In Japan, Li Tongxuan’s advocacy of meditating on the light emanating from the Buddha’s body was also a major influence on [MYŌE KŌBEN](#).

[Huayan jingnei zhangmendeng za kongmu zhang](#). (C) (華嚴經內章門等雜孔目章). See [KONGMU ZHANG](#).

[Huayan jing shu](#). (J. Kegongyōsho; K. Hwaŏm kyŏng so 華嚴經疏). In Chinese, “Commentary to the [AVATAMSAKASŪTRA](#)”; the sixty-roll work of the [HUAYAN](#) patriarch [CHENGGUAN](#), who is widely considered the principal force behind the revitalization of the Huayan exegetical tradition. Praised within the tradition as one of the two greatest commentaries on the *Avataṃsakasūtra*, along with [FAZANG](#)’s [HUAYAN TANXUAN JI](#), this work epitomizes Chengguan’s attempt to salvage what he perceived to be the orthodox teachings of the patriarch [FAZANG](#), whose intellectual legacy was presumed to have been misunderstood and misrepresented by some of his direct disciples. A comparable text aimed at resuscitating Huayan orthodoxy was Chengguan’s *Huayan xuantan*. *Huayan jing shu* is also sometimes used as an alternate title for Fazang’s *Huayan tanxuan ji*.

[Huayan jing souxuan ji](#). (J. Kegongyō sōgenki; K. Hwaŏm kyŏng suhyŏn ki 華嚴經搜玄禮). In Chinese, “Notes on Fathoming the Profundities of the [AVATAMSAKASŪTRA](#),” a ten-roll exegesis of the *Avataṃsakasūtra*, written by the

[HUAYAN](#) patriarch [ZHIYAN](#). Using the Huayan school’s idiosyncratic “Ten Profound Categories [of Dependent Origination]” (see [SHI XUANMEN](#)) to explain the intent of the sūtra, this work became the blueprint that [FAZANG](#) would later follow in writing his influential [HUAYAN JING TANXUAN JI](#).

[Huayan jing suishu yanyi chao](#). (J. Kegongyō zuisho engishō; K. Hwaōm kyōng suso yōnūi ch’o 華嚴經隨疏演義鈔). In Chinese, “Autocommentary to the Exegesis of the [AVATAMSAKASŪTRA](#),” a ninety-roll autocommentary by the Huayan patriarch [CHENGGUAN](#) to his own sixty-roll exegesis of the *Avatamsakasūtra*, the [HUAYAN JING SHU](#); this massive work provides the most exhaustive presentation of Chengguan’s thought in his oeuvre. In the autocommentary, Chengguan provides a general overview of the history and thought of the [HUAYAN](#) tradition, along with a painstaking line-by-line commentary to the text of the *Avatamsakasūtra*. Chengguan explains the rise of the Huayan teachings and offers a classification of teachings (see [JIAOXIANG PANSHI](#)). These sections are followed by an explanation of such seminal Huayan doctrines as the dependent origination of the [DHARMADHĀTU](#) ([FAJIE YUANQI](#)). Chengguan also outlines the different capacities of sentient beings and provides a summary of the teachings of the different exegetical traditions in China. A comparative study of the various Chinese translations of the *Avatamsakasūtra* follows, culminating in an analysis of the title of the sūtra. The autocommentary then follows with a detailed treatment of specific passages in the sūtra. Chengguan’s attempt to define clearly the boundaries between the different traditions of Buddhism, as well as his emphasis on a distinctively Huayan style of meditation, are noteworthy aspects of his commentary.

[Huayan jing tanxuan ji](#). (J. Kegongyō tangenki; K. Hwaōm kyōng t’amhyōn ki 華嚴經探玄禮). In Chinese, “Notes Plumbing the Profundities of the [AVATAMSAKASŪTRA](#),” [FAZANG](#)’s twenty-roll commentary to [BUDDHABHADRA](#)’s sixty-roll translation of the *Huayan jing* and one of the key texts that shaped the mature teachings of the [HUAYAN ZONG](#). Fazang’s commentary was especially beholden to [ZHIYAN](#)’s [HUAYAN JING SOUXUAN JI](#), which uses the idiosyncratic “Ten Profound Categories [of Dependent Origination]” (see [SHI XUANMEN](#)) of the Huayan school to explain the meanings of the sūtra. Fazang’s work was praised within the Huayan tradition as one of the two greatest commentaries to the *Avatamsakasūtra*, along with [CHENGGUAN](#)’s [HUAYAN JING SHU](#) and its accompanying autocommentary [HUAYAN JING SUISHU YANYI CHAO](#).

[Huayan jing zhigui](#). (J. Kegongyō shiki; K. Hwaŏm kyŏng chigwi 華嚴經旨歸). In Chinese, “A Guide to the [AVATAMSAKASŪTRA](#),” one of [FAZANG](#)’s several commentaries to the *Avatamsakasūtra*; its format is unique in that it explains ten aspects of the sūtra, each argued with ten theses or examples. The symbolic ten sections and one hundred theses/examples (ten sections times ten theses/examples) that make up the commentary are consistent with the [HUAYAN](#) school’s fascination with those two numbers, which were taken to represent notions such as “consummate interfusion” ([YUANRONG](#)) and “unimpeded interpenetration between all phenomena” (see [SHISHI WU’AI FAJIE](#)).

[Huayan jing zhuan\[ji\]](#). (J. Kegongyō den[ki]; K. Hwaŏm kyŏng chŏn[’gi] 華嚴經傳[禮]). In Chinese, “Notes on the Transmission of the [AVATAMSAKASŪTRA](#),” composed by the [HUAYAN](#) patriarch [FAZANG](#); Fazang did not finish the text before he passed away, so his disciples Huiyuan and Huiying completed it posthumously. The work offers a treatment of the pre-eighth century history of the *Avatamsakasūtra* in Chinese Buddhism, including discussions of the translators and translations of the sūtra, its circulation and instances of its recitation and explanation, commentaries, and other related texts relevant to the study of the scripture.

[Huayan Qingliang shu](#). (C) (華嚴清涼疏). In Chinese, “Qingliang’s [viz., Chengguan] Commentary to the *Huayan [Jing]*. See [HUAYAN JING SHU](#).

[Huayan sansheng](#). (J. Kegon no sanshō; K. Hwaŏm samsŏng 華嚴三聖). In Chinese, “the Three Sages of [HUAYAN](#),” refer to the three primary deities of the lotus-womb world (lianhuazang shijie; cf. [TAIZŌKAI](#)), the universe as described in the [AVATAMSAKASŪTRA](#), which contains infinitely layered cosmoses and interpenetrating realms. (1) [VAIROCANA](#) Buddha is considered to be the dharma body ([DHARMAKĀYA](#)) itself, who pervades the entire universe and from whom all other buddhas arose; he symbolizes the utmost fruition of bodhisattva practice. (2) [SAMANTABHADRA](#), an advanced [BODHISATTVA](#) depicted as standing to Vairocana’s right, symbolizes the profound aspiration and all-embracing practices undertaken by the bodhisattvas. (3) [MAÑJUŚRĪ](#), another advanced bodhisattva depicted as standing to Vairocana’s left, symbolizes the wisdom gleaned through mastering the bodhisattva path. The primary virtues represented by these two bodhisattvas are said to culminate in the perfection of the cosmic Vairocana. In the Huayan tradition, in particular, various other attributes and symbolisms are also attributed to the three deities.

Huayanshe. (J. Kegonsha; K. Hwaōmsa 華嚴社). In Chinese, the “Huayan Society,” founded by Nanchao of Hengzhou Longxing monastery in 822; it held regular congregations for the communal chanting of, and public lecturing on, the [AVATAMSAKASŪTRA](#). The famous poet [BO JUYI](#) (722–847) was a member of this prominent organization when it was at the height of its influence.

Huayan shiyi. (J. Kegon no jūi; K. Hwaōm sibi 華嚴十異). In Chinese, “Ten Distinctions of the [AVATAMSAKASŪTRA](#),” ten reasons why [HUAYAN](#) exegetes consider the *Avatamsakasūtra* to be superior to all other scriptures and thus the supreme teaching of the Buddha. (1) The “time of its exposition” was unique (shiyi): the sūtra was supposedly the first scripture preached after the Buddha’s enlightenment and thus offers the most unadulterated enunciation of his experience. (2) The “location of its exposition” was unique (chuyi): it is said that the [BODHI TREE](#) under which the sūtra was preached was the center of the “oceans of world systems of the lotus womb world” (S. padmagarbhakadhātu; C. lianhuazang shijie; cf. [TAIZŌKAI](#)). (3) The “preacher” was unique (zhuyi): The sūtra was supposedly preached by [VAIROCANA](#) Buddha, as opposed to other “emanation buddhas.” (4) The “audience” was unique (zhongyi): only advanced [BODHISATTVAS](#)—along with divinities and demigods who were in actuality emanations of the Buddha—were present for its preaching; thus, there was no division between [MAHĀYĀNA](#) and [HĪNAYĀNA](#). (5) The “basis” of the sūtra was unique (suoyiyi): its teaching was based on the one vehicle ([EKAYĀNA](#)), not the other provisional vehicles created later within the tradition. (6) The “exposition” of the sūtra was unique (shuoyi): the *Avatamsakasūtra* preached in this world system is consistent with the sūtra as preached in all other world systems; this is unlike other sūtras, which were provisional adaptations to the particular needs of this world system only. (7) The “status” of the vehicles in the sūtra were unique (weiyi): no provisional categorization of the three vehicles of Buddhism ([TRIYĀNA](#)) was made in this sūtra. This is because, according to the sūtra’s fundamental theme of “unimpeded interpenetration,” any one vehicle subsumes all other vehicles and teachings. (8) Its “practice” was unique (xingyi): the stages ([BHŪMI](#)) of the [BODHISATTVA](#) path are simultaneously perfected in this sūtra’s teachings, as opposed to having to be gradually perfected step-by-step. (9) The enumeration of “dharma gates,” or list of dharmas, was unique (famenyi): whereas other sūtras systematize doctrinal formulas using different numerical schemes (e.g., [FOUR NOBLE TRUTHS](#), eightfold path, etc.), this sūtra exclusively

employs in all its lists the number “ten”—a mystical number that symbolizes the sūtra’s infinite scope and depth. (10) Its “instantiation” was unique (*shiyi*): even the most mundane phenomena described in the *Avataṃsakasūtra* (such as trees, water, mountains, etc.) are expressions of the deepest truth; this is unlike other sūtras that resort primarily to abstract, philosophical concepts like “emptiness” (*ŚŪNYATĀ*) or “suchness” (*TATHATĀ*) in order to express their profoundest truths.

Huayan shiyi. (J. Kegon no jūgi; K. Hwaōm sibūi 華嚴十義). In Chinese, “Ten Meanings [propounded by] the Huayan [School].” A central thesis of *HUAYAN* philosophy is the “unimpeded interpenetration of all phenomena” (*shishi wu’ ai*; see *SHISHI WU’ AI FAJIE*). In order to provide some sense of what this “unimpeded interpenetration” entails, Huayan exegetes employed ten examples to explain how each constituent of a pair of concepts mutually validates and subsumes the other constituent: (1) the “teaching” and the “meaning” it designates (*jiaoyi*); (2) “phenomena” and their underlying “principle” (*lishi*); (3) “understanding” and its “implementation” (*jiexing*); (4) “causes” and their “results” (*yinguo*); (5) the “expounders” of the dharma and the “dharma” they expound (*renfa*); (6) the “distinction” and “unity” between distinct things (*fenqi jingwei*); (7) the “teacher,” his “disciple,” the “dharma” that is imparted from the former to the latter, and the “wisdom” that the disciple receives from that dharma (*shidi fazhi*); (8) the “dominant” and the “subordinate,” the “primary” and the “secondary,” and relations that pertain between things (*zhuban yizheng*); (9) the enlightened sages who “respond” to the spiritual maturity of their audiences and the audiences whose spiritual maturity “solicited” the appearance of the enlightened sages in the world (*suishenggen yushixian*); and (10) the spiritual “obstacles” and their corresponding “antidotes,” the “essence” of phenomena and their “functions” or “efficacy” (*nishun tiyong zizai*). Each constituent of the above ten dichotomies derives its contextualized meaning and provisional existence from its opposite, thereby illustrating the Huayan teaching of the interconnectedness and mutual interpenetration between all things.

Huayan wujiao. (J. Kegon no gokyō; K. Hwaōm ogyo 華嚴五教). In Chinese, “Huayan’s five classifications of the teachings.” The *HUAYAN ZONG* recognizes two different versions of this doctrinal-classification schema, which ranks different strands of Buddhist teachings. The best-known version was outlined by *DUSHUN* and *FAZANG*: (1) The *HĪNAYĀNA* teachings (*xiaojiao*; cf. *XIAOSHENG JIAO*), also known as the *śrāvakayāna* teaching (*shengwenjiao*), was pejoratively

referred to as “teachings befitting the [spiritually] obtuse” (yufa). The [ĀGAMAS](#) and the [ABHIDHARMAS](#) were relegated to this class, which supposedly dealt primarily with theories of elements ([DHĀTU](#)) and more basic concepts such as dependent origination ([PRATĪTYASAMUTPĀDA](#)). (2) The “elementary teaching [of Mahāyāna]” ([Dasheng] [SHIJIAO](#)). Within this category, two additional subgroups were differentiated. The first was the “initial teaching pertaining to emptiness” (kong shijiao), which encompassed the [PRAJÑĀPĀRAMITĀ](#) literature and exegetical traditions such as [MADHYAMAKA](#). This class of teachings was characterized by an emphasis (or, in Huayan’s polemical assessment, an overemphasis) on the doctrine of emptiness ([ŚŪNYATĀ](#)). The second subgroup, the “initial teaching pertaining to phenomena” (xiang shijiao), broaches the dynamic and phenomenal aspects of reality and did not confine itself to the theme of emptiness. [YOGĀCĀRA](#) and its traditional affiliate sūtras and commentaries were classified under this subgroup. Together, these two subgroups were deemed the provisional teachings (quanjiao) within the [MAHĀYĀNA](#) tradition. (3) The “advanced [Mahāyāna] teachings” ([Dasheng] [ZHONGJIAO](#)) focused on the way true suchness ([ZHENRU](#); S. [TATHATĀ](#)) was innately immaculate but could be activated in response to myriad conditions. The [DASHENG QIXIN LUN](#) (“Awakening of Faith”), [ŚRĪMĀLĀDEVĪSIMHANĀDASŪTRA](#), and [LĀNKĀVATĀRASŪTRA](#) are examples of texts belonging to this doctrinal category. The treatment in these texts of the one mind ([YIXIN](#)) and [TATHĀGATAGARBHA](#) thought was considered a more definitive rendition of the [MAHĀYĀNA](#) teachings than were the elementary teachings (shijiao). (4) The “sudden teachings” ([DUNJIAO](#)), which includes texts like the [VĪMALAKĪRTINIRDEŚĀ](#), was ranked as a unique category of subitist teachings befitting people of keen spiritual faculties ([TĪKSNENDRIYA](#)), and therefore bypasses traditional, systematic approaches to enlightenment. The [CHAN ZONG](#)’s touted soteriological methods involving sudden enlightenment ([DUNWU](#)) and its rejection of reliance on written texts led some Huayan teachers to relegate that school to this advanced, but still inferior, category of the teachings. Chan was thus superseded by, (5) the “perfect teachings” or “consummate teachings” ([YUANJIAO](#)). This supposedly most comprehensive and definitive strand of Buddhist teaching was reserved for the Huayan school and especially its definitive scripture, the [AVATAMSAKASŪTRA](#). ¶ The second version of five classifications was made by [GUIFENG ZONGMI](#) (780–841) in his [YUANREN LUN](#): (1) The “teachings pertaining to the human and heavenly realms” ([RENTIAN JIAO](#)) encompassed “mundane” ([LAUKIKA](#)) practices, such as the observation of the five precepts ([PAÑCAŚĪLA](#)) and the ten wholesome ways of action ([KUŚALA-](#)

[KARMAPATHA](#)); this classification was named because of its believed efficacy to lead practitioners to higher realms of rebirth. (2) The “[HĪNAYĀNA](#) teachings” ([XIAOSHENG JIAO](#)), which were similar to the previous “xiao jiao.” (3) The “dharma-characteristics teachings of [MAHĀYĀNA](#)” (Dasheng faxiang jiao), which was analogous to the aforementioned “elementary teaching pertaining to phenomena” (xiang shijiao) in the preceding classification scheme. (4) The “characteristics-negating teachings of [MAHĀYĀNA](#)” (Dasheng poxiang jiao) was analogous to the preceding “elementary teaching pertaining to emptiness.” (5) The “nature-revealing teaching of the one vehicle” (yisheng xiangxing jiao) was equivalent to the last three categories Fazang’s system combined together. See also [HUAYAN WUJIAO ZHANG](#).

[Huayan wujiao zhang](#). (J. Kegon gokyōshō; K. Hwaōm ogyo chang 華嚴五教章). In Chinese, “Essay on the Five [Categories of] Teachings According to Huayan” is one of the foundational treatises on the [HUAYAN ZONG](#); composed by [DUSHUN](#). The essay offers a systematic analysis and classification of all major Buddhist teachings according to their thematic differences, which were discussed in reference to such basic Huayan tenets as the ten profound meanings (see [HUAYAN SHIYI](#)) and the six aspects of phenomena ([LIUXIANG](#)). Dushun’s influential work is the foundation of the Huayan doctrinal taxonomy, which divided the Buddhist scriptures into five levels based on the profundity of their respective teachings: [HĪNAYĀNA](#) (viz., the [ĀGAMAS](#)), elementary [MAHĀYĀNA](#) (viz., [YOGĀCĀRA](#) and [MADHYAMAKA](#)), advanced Mahāyāna ([SADDHARMAPUNḌARĪKASŪTRA](#)), sudden teachings (typically [CHAN](#)), and perfect teachings ([AVATAMSAKASŪTRA](#)). See also [HUAYAN WUJIAO](#).

[Huayan youyi](#). (J. Kegon yūi; K. Hwaōm yuī 華嚴遊意). In Chinese, “An Excursion through the Meaning of the [AVATAMSAKASŪTRA](#),” a brief one-roll commentary on the *Avataṃsakasūtra*, composed by [JIZANG](#), between 597 and 599; it is reported to be a record of his oral lectures on the scripture delivered in Yangzhou. The work contains a rare [SAN LUN ZONG](#) perspective on the *Avataṃsakasūtra*, before the [HUAYAN ZONG](#)’s own influential commentaries came to monopolize the interpretation of the scripture. This work is of particular interest because it also critiqued contemporaneous exegetical traditions in both north and south China.

[Huayan zhao](#). (J. Kegon wa asa; K. Hwaōm cho 華嚴朝). In Chinese, “the morning [when] the *Huayan* [*Jing* was preached]”; the first half of a popular

expression describing the two major stages in the teaching career of the Buddha. According to Chinese Huayan legend, immediately following his enlightenment, the Buddha initially preached the [AVATAMSAKASŪTRA](#), or *Huayan jing*. “Morning” in this expression thus refers to the early stage of the Buddha’s preaching career, which was likened to the sun rising at dawn. This statement is typically followed by [NIEPAN XI](#), “dusk [when] the [MAHĀPARINIRVĀNASŪTRA](#) [was preached],” since, according to the same legend, the Buddha preached that scripture just before he passed away ([PARINIRVĀNA](#))—a time that was likened to the sun setting at dusk.

[Huayan zong](#). (J. Kegonshū; K. Hwaŏm chong 華嚴宗). In Chinese, “Flower Garland School,” an important exegetical tradition in East Asian Buddhism. Huayan takes its name from the Chinese translation of the title of its central scripture, the [AVATAMSAKASŪTRA](#) (or perhaps [BUDDHĀVATAMSAKASŪTRA](#)). The Huayan tradition is also sometimes referred to the Xianshou zong, after the sobriquet, Xianshou, of one of its greatest exegetes, [FAZANG](#). A lineage of patriarchs, largely consisting of the tradition’s great scholiasts, was retrospectively created by later followers. The putative first patriarch of the Huayan school is [DUSHUN](#), who is followed by [ZHIYAN](#), Fazang, [CHENGGUAN](#), and [GUIFENG ZONGMI](#). The work of these exegetes exerted much influence in Korea largely through the writings of [ŬISANG](#) (whose exegetical tradition is sometimes known as the Pusŏk chong) and [WŎNHYO](#). Hwaŏm teachings remained the foundation of Korean doctrinal exegesis from the Silla period onward, and continued to be influential in the synthesis that [POJO CHINUL](#) in the Koryŏ dynasty created between [SŎN \(CHAN\)](#) and [KYO](#) (the teachings, viz., Hwaŏm). The Korean monk [SIMSANG](#) (J. Shinjō; d. 742), a disciple of Fazang, who transmitted the Huayan teachings to Japan in 740 at the instigation of [RYŌBEN](#) (689–773), was instrumental in establishing the Kegon school in Japan. Subsequently, such teachers as [MYŌE KŌBEN](#) (1173–1232) and [GYŌNEN](#) (1240–1321) continued Kegon exegesis into the Kamakura period. In China, other exegetical traditions such as the [DI LUN ZONG](#), which focused on only one part of the *Avatamsakasūtra*, were eventually absorbed into the Huayan tradition. The Huayan tradition was severely weakened in China after the depredations of the [HUICHANG FANAN](#), and because of shifting interests within Chinese Buddhism away from sūtra exegesis and toward Chan meditative practice and literature, and invoking the name of the buddha [AMITĀBHA](#) (see [NIANFO](#)). ¶ The Huayan school’s worldview is derived from the central tenets of the imported Indian

Buddhist tradition, but reworked in a distinctively East Asian fashion. Huayan is a systematization of the teachings of the *Avatamsakasūtra*, which offered a vision of an infinite number of interconnected world systems, interfused in an all-encompassing realm of reality ([DHARMADHĀTU](#)). This profound interdependent and ecological vision of the universe led Huayan exegetes to engage in a creative reconsideration of the central Buddhist doctrine of dependent origination ([PRATĪTYASAMUTPĀDA](#)), which in their interpretation meant that all phenomena in the universe are mutually creating, and in turn are being mutually created by, all other phenomena. Precisely because in the traditional Buddhist view any individual phenomenon was devoid of a perduring self-nature of its own ([ANĀTMAN](#)), existence in the Huayan interpretation therefore meant to be in a constant state of multivalent interaction with all other things in the universe. The boundless interconnectedness that pertains between all things was termed “dependent origination of the dharmadhātu” ([FAJIE YUANQI](#)). Huayan also carefully examines the causal relationships between individual phenomena or events ([SHI](#)) and the fundamental principle or patterns ([LI](#)) that govern reality. These various relationships are systematized in Chengguan’s teaching of the four realms of reality (dharmadhātu): the realm of principle ([LI FAJIE](#)), the realm of individual phenomena ([SHI FAJIE](#)), the realm of the unimpeded interpenetration between principle and phenomena ([LISHI WU’AI FAJIE](#)), and the realm of the unimpeded interpenetration between phenomenon and phenomena ([SHISHI WU’AI FAJIE](#)). Even after Huayan’s decline as an independent school, it continued to exert profound influence on both traditional East Asian philosophy and modern social movements, including engaged Buddhism and Buddhist environmentalism.

[huayi sijiao](#). (C) (化儀四教). See [TIANTAI BAJIAO](#).

[huazhu](#). (J. keshu; K. hwaju 化主). In Chinese, lit. “chief of propagation,” originally referring to the Buddha himself, but later in East Asia a term for a “fund-raiser” at a Buddhist monastery. The fund-raiser was the equivalent of a director of development in a modern nonprofit organization, who would journey outside the monastery walls to cultivate potential new donors and maintain relations with current donors. The huazhu would also secure letters to the donors from the relevant authorities such as the abbot and convey the needs and wishes of the monastery to the donors. He also was in charge of inventorying the gifts that donors offered, arranging their transport back to the monastery, and paying

taxes on items received, where warranted.

Huê Trung. [alt. Tuệ Trung] (慧忠[上士]) (1230–1291). Vietnamese Buddhist teacher, more popularly known as Huê Trung Thượng sĩ (the Eminent Huê Trung); he was also one of the major literary figures of medieval Vietnam. His personal name was Trần Tung. He belonged to the Trần royal clan and was the older brother of Queen Nguyễn Thánh Thiên Cảm, the mother of Trần Nhân Tông (1258–1308). He himself was Lord Hưng Ninh, a general in the two battles against the Mongols in 1285 and 1288. Huê Trung was a lay disciple of Tiêu Diêu, a **THIÊN** (C. **CHAN**) master of the Yên Tử lineage. Although he never took ordination as a monk, he was a well-respected Chan master. Many Buddhists of his time were inspired by his unconventional behavior and approach to Chan philosophy and practice. He instructed Trần Nhân Tông on Chan Buddhism when the latter was crown prince. Huê Trung’s extant writings are collected in the *Huê Trung Thượng Sĩ Ngữ Lục* (“Recorded Sayings of the Eminent Huê Trung”).

hugui. (J. koki; K. hogwe 胡跪). In Chinese, “genuflect in foreign fashion,” a half-kneeling posture of respect, with one knee touching the ground, the opposite calf and knee raised off the ground, and the palms clasped in front of one’s chest in **AÑJALI**. The posture is characteristic of figures bearing gifts or making entreaties, as in the opening lines of Chinese translations of Indian scriptures, where the interlocutors are often said to “genuflect in foreign fashion” before asking a question of the Buddha.

huguo Fojiao. (J. gokoku Bukkyō; K. hoguk Pulgyo 護國佛教). In Chinese, “state-protection Buddhism,” referring to the sociopolitical role Buddhism played in East Asia to protect the state against war, insurrection, and natural disasters. The doctrinal justification for such a protective role for Buddhism derives from the “Guanshiyin pusa pumen pin” (“Chapter on the Unlimited Gate of the **BODHISATTVA AVALOKITEŚVARA**”) and the “Tuoluoni pin” (**DHĀRANĪ** chapter) of the **SADDHARMAPUNĀRIKASŪTRA** (“Lotus Sūtra”), the “Huguo pin” (“Chapter on Protecting the State”) of the **RENWANG JING** (“Scripture for Humane Kings”), and the “Zhenglun pin” (“Chapter on Right View”) of the **SUARNAPRABHĀSOTTAMASŪTRA** (“Golden Light Sūtra”). For example, the *Suvarṇaprabhāsottamasūtra* states that a ruler who accepts that sūtra and has faith in the dharma will be protected by the four heavenly kings (**CĀTURMAHĀRAJAKĀYIKA**); but if he neglects the dharma, the divinities will

abandon his state and calamity will result. The “Huguo pin” of the *Renwang jing* notes that “when the state is thrown into chaos, facing all sorts of disasters and being destroyed by invading enemies,” kings should set up in a grand hall one hundred buddha and bodhisattva images and one hundred seats, and then invite one hundred eminent monks to come there and teach the *Renwang jing*. This ritual, called the “*Renwang* Assembly of One-Hundred Seats” (C. *Renwang baigaozuo hui*; J. *Ninnō hyakukōzae*; K. *Inwang paekkojwa hoe*) would ward off any calamity facing the state and was held in China, Japan, and Korea from the late sixth century onward. In Japan, these three scriptures were used to justify the role Buddhism could play in protecting the state; and the Japanese reformist [NICHIREN](#) (1222–1282) cites the *Suvarṇaprabhāsottamasūtra* in his attempts to demonstrate that the calamities then facing Japan were a result of the divinities abandoning the state because of the government’s neglect of the true teachings of Buddhism. The notion of state protection also figured in the introduction of [ZEN](#) to Japan. In 1198, the [TENDAI](#) and [ZEN](#) monk [MYŌAN EISAI](#) (1141–1215) wrote his [KŌZEN GOKOKURON](#) (“Treatise on the Promulgation of Zen as a Defense of the State”), which explained why the new teachings of Zen would both protect the state and allow the “perfect teachings” (see [JIAOXIANG PANSHI](#)) of Tendai to flourish. ¶ “State-protection Buddhism” has also been posited as one of the defining characteristics of Korean Buddhism. There are typically four types of evidence presented in support of this view. (1) Such rituals as the *Inwang paekkojwa hoe* (*Renwang jing* recitation) were held at court at least ten times during the Silla dynasty and increased dramatically to as many as one hundred twenty times during the succeeding Koryŏ dynasty. (2) Monasteries and [STŪPAS](#) were constructed for their apotropaic value in warding off calamity. During the Silla dynasty, e.g., [HWANGNYONGSA](#) and its nine-story pagoda, as well as *Sach’ŏnwangsa* (Four Heavenly Kings Monastery), were constructed for the protection of the royal family and the state during the peninsular unification wars. During the succeeding Koryŏ dynasty, the [KORYŌ TAEJANGGYŎNG](#) (Korean Buddhism canon) was carved (twice) in the hopes that state support for this massive project would prompt the various buddhas and divinities ([DEVA](#)) to ward off foreign invaders and bring peace to the kingdom. (3) Eminent monks served as political advisors to the king and the government. For example, Kwangjong (r. 949–975), the fourth monarch of the Koryŏ dynasty, established the positions of *wangsa* (royal preceptor) and *kuksa* (state preceptor, C. [GUOSHI](#)), and these offices continued into the early Chosŏn dynasty. (4) Monks were sometimes at the vanguard in repelling foreign invaders, such as the *Hangmagun* (Defeating

Māra Troops) in twelfth-century Koryŏ, who fought against the Jurchen, and the Chosŏn monks [CH'ŎNGHŎ HYUJŎNG](#) (1520–1604) and [SAMYŎNG YUJŎNG](#) (1544–1610), who raised monks' militias to fight against the Japanese during the Hideyoshi invasions of the late sixteenth century. In the late twentieth century, revisionist historians argued that the notion of “state-protection Buddhism” in Korea may reflect as much the political situation of the modern and contemporary periods as any historical reality, and may derive from the concept of “chingo kokka” (protecting the state) advocated by Japanese apologists during the Buddhist persecution of the Meiji period (1868–1912).

[Huichang fanan](#). (J. Kaishō no hōnan; K. Hoech'ang pŏmnan 會昌法難). In Chinese, “Huichang persecution of the dharma”; one of the worst persecutions in the history of Chinese Buddhism, which took place during the Huichang reign era (843–844) of the Tang-dynasty emperor Wuzong (r. 840–846). Factional disputes at court, growing economic strains, and opposition from Confucian officials and Daoist priests seem to have helped precipitate the Huichang persecution. The illicit buying and selling of ordination certificates ([CIBU TONG](#)) in order to avoid taxation may also have been a contributing factor in the restrictions the government imposed on Buddhism. Emperor Wuzong conducted a census of the monastic community and the number of temples in order to begin systematically to attack the Buddhist institution and to reassess the size of the population that was exempt from taxation and corvée labor. Over 260,000 monks and nuns were defrocked and returned to lay life, ostensibly for practicing alchemy or violating the precepts; this move, however, also returned them to the tax roles. Subsequently, the state placed heavy restrictions on the numbers of ordinands and their age (no one under the age of forty was allowed to ordain). Hundreds of monasteries were destroyed and much of the wealth confiscated from those temples that escaped destruction. Thousands of Buddhist images were melted down to be made into coinage. As with most persecutions, the effects were most deeply felt in the capital and major cities, effects that weakened considerably the farther away one moved from centralized power. Buddhist schools that were based on the capital, such as the [HUAYAN ZONG](#) and the Northern school ([BEI ZONG](#)) of the [CHAN ZONG](#), were dealt such a severe blow that they were never able to fully recover. By contrast, schools located in isolated mountain sites in the countryside, such as other strands of the Chan school (e.g., [HONGZHOU ZONG](#)), were able to survive the persecution and subsequently flourish. Although the Huichang persecution indelibly scarred the

Chinese Buddhist community, Buddhism continued to flourish, and even prosper, after the death of Wuzong. See also [FANAN](#).

[Huiguang](#). (C) (慧光). See [DILUN ZONG](#).

[huiguang fanzhao](#). (J. ekō henjō; K. hoegwang panjo 迴/回光返照). In Chinese, “follow back the light and trace back the radiance,” the quality of introspection that is operative during all types of meditation, according to some strands of the [CHAN ZONG](#). See [FANZHAO](#).

[Huiguo](#). (J. Keika; K. Hyegwa 惠果) (746–805). Tang-dynasty Chinese monk, reputed seventh patriarch of esoteric Buddhism (J. [MIKKYO](#)), and a master especially of the [KONGŌKAI](#) and [TAIZŌKAI](#) transmissions. Huiguo was a native of Shaanxi province. He became a monk at an early age and went to the monastery of Qinglongsi in the Chinese capital of Chang’an, where he became a student of the master ([ĀCĀRYA](#)) [AMOGHAVAJRA](#)’s disciple Tanchen (d.u.). In 765, Huiguo received the full monastic precepts, after which he is said to have received the teachings on the [VAJRAŚEKHARASŪTRA](#) from Amoghavajra himself. Two years later, Huiguo is also said to have received instructions on the taizōkai and the [SUSIDDHIKARASŪTRA](#) from the obscure Korean monk Hyōnch’o (d.u.), a purported disciple of ācārya [ŚUBHAKARASIMHA](#). In 789, Huiguo won the support of Emperor Dezong (r. 779–805) by successfully praying for rain. Huiguo’s renown was such that he received disciples from Korea, Japan, and even Java. In 805, Huiguo purportedly gave instructions on the kongōkai and taizōkai to the eminent Japanese pilgrim [KŪKAI](#) during the three months prior to the master’s death, and eventually performed the consecration ritual ([ABHISEKA](#)) for his student. Kūkai thus claimed that Huiguo was the Chinese progenitor of the Japanese [SHINGONSHŪ](#). That same year, Huiguo passed away at his residence in the Eastern Pagoda cloister at Qinglongsi.

[Huihai](#). (C) (慧海). See [DAZHU HUIHAI](#).

[Huiji](#). (C) (慧寂). See [YANGSHAN HUIJI](#).

[Huikai](#). (C) (慧開). See [WUMEN HUIKAI](#).

Huike. (J. Eka; K. Hyega 慧可) (c. 487–593). “Wise Prospect”; putative second patriarch of the [CHAN ZONG](#). Huike (a.k.a. Sengke) was a native of Hulao (alt. Wulao) near Luoyang in present-day Henan province. When he was young, Huike is said to have mastered the Confucian classics and Daoist scriptures in addition to the Buddhist [SŪTRAS](#). He was later ordained by a certain Baojing (d.u.) on Mt. Xiang near Longmen, and received the full monastic precepts at Yongmusi. In 520, he is said to have made his famous visit to the monastery of [SHAOLINSI](#) on [SONGSHAN](#), where he became the disciple of the Indian monk and founder of Chan, [BODHIDHARMA](#). According to legend, Huike is said to have convinced the Indian master to accept him as a disciple by cutting off his left arm as a sign of his sincerity. (His biography in the [GAOSENZHUAN](#) tells us instead that he lost his arm to robbers.) Once Bodhidharma finally relented, Huike asked him to pacify his mind. Bodhidharma told him in response to bring him his mind, but Huike replied that he has searched everywhere for his mind but has not been able to find it anywhere. “Well, then,” said Bodhidharma, in a widely quoted response, “I’ve pacified it for you.” This brief encounter prompted Huike’s awakening experience. Later, Huike taught at the capital Ye (present-day Henan province), where he is said to have amassed a large following. In 550, Huike ostensibly transmitted Bodhidharma’s [DHARMA](#) to the obscure monk [SENGCAN](#) (the putative third patriarch of Chan) and later went into hiding during Emperor Wu’s (r. 560–578) persecution of Buddhism (574–578).

Huinan. (C) (慧南). See [HUANGLONG HUINAN](#).

Huineng. (J. Enō; K. Hyenŭng 慧能) (638–713). Chinese Chan master and reputed sixth patriarch ([LIUZU](#)) of the [CHAN ZONG](#). While little is known of the historical figure, the legendary Huineng of the [LIUZU TAN JING](#) (“Platform Sūtra of the Sixth Patriarch”) is an ubiquitous figure in Chan literature. According to his hagiography, Huineng was born in Xinzhou (present-day Guangdong province). As a youth, he cared for his poor mother by gathering and selling firewood. One day at the market he heard someone reciting the famous [VAJRACCHEDIKĀPRAJÑĀPĀRAMITĀSŪTRA](#) (“Diamond Sūtra”) and immediately decided to enter the monastery. Huineng subsequently visited [HONGREN](#), the fifth Chan patriarch, on East Mountain in Qizhou (present-day Hubei province). After spending eight years in the threshing room, the illiterate Huineng heard a monk reciting a verse that had just been posted on a wall of the monastery, a verse written secretly by Hongren’s senior disciple, [SHENXIU](#): “The body is the [BODHI](#)

[TREE](#), *The mind is like a bright mirror's stand. Be always diligent in polishing it, / Do not let any dust alight.*” Immediately recognizing that the writer’s understanding was deficient, Huineng in response composed a verse reply, which he asked a colleague to write down for him: “[BODHI](#) fundamentally has no tree, / The bright mirror also has no stand. *Fundamentally there is not a single thing*, Where could any dust alight?” After reading the verse the next day, Hongren secretly called Huineng to his room in the middle of the night and recited a line from the “Diamond Sūtra,” which prompted in Huineng a great awakening. Hongren then secretly transmitted the robe and bowl of Chan’s founder and first patriarch, [BODHIDHARMA](#), to Huineng, making him the sixth (and ultimately last) patriarch of the Chan school; but he ordered his successor to go into hiding, lest he be harmed by followers of Shenxiu. Huineng then fled south. In 677, he received the full monastic precepts from the dharma master Yinzong (d.u.) at the monastery of Faxingsi in Nanhai (present-day Guangdong province). The next year, Huineng relocated to the monastery of Baolinsi on [CAOXISHAN](#), the mountain that remains forever associated with him, where he attracted many students and followers. In 815, Emperor Xianzong (r. 805–820) bestowed upon him the posthumous title Chan master Dajian (Great Speculum). The monks [QINGYUAN XINGSI](#), [NANYUE HUAIRANG](#), [HEZE SHENHUI](#), and [YONGJIA XUANJUE](#) are said to have been Huineng’s preeminent disciples. Huineng is claimed to have been the founder of the so-called “Southern school” ([NAN ZONG](#)) of Chan, and to have instructed his students in the “sudden teachings” ([DUNJIAO](#)), the explication of which prompted much of the Chan school’s subsequent soteriological developments and intrasectarian polemics. Although we have little historical evidence about either Huineng the person or his immediate disciples, all the various strands of the mature Chan tradition retrospectively trace their pedigrees back to him, making the legend of the sixth patriarch one of the most influential in the development of the Chan school.

[Huiyuan](#). (C) (惠/慧遠). See [JINGYING HUIYUAN](#) or [LUSHAN HUIYUAN](#).

[Huizhong](#). (C) (慧忠). See [NANYANG HUIZHONG](#).

[hūmkāramudrā](#). (T. hūm mdzad kyi phyag rgya). In Sanskrit, “the gesture of

the syllable hūṃ”; this [MUDRĀ](#) is formed by crossing the left wrist in front of the right wrist at the level of the heart. This gesture is commonly found in depictions of semiwrathful tantric deities such as [SAMVARA](#), [HERUKA](#), [GUHYASAMĀJA](#), and [KĀLACAKRA](#) as well as [VAJRADHARA](#). In many instances, the right hand holds a [VAJRA](#), symbolizing method ([UPĀYA](#)), and the left a bell, symbolizing wisdom ([PRAJÑĀ](#)).

[Humphreys, Christmas](#). (1901–1983). Early British popularizer of Buddhism and founder of the Buddhist Society, the oldest lay Buddhist organization in Europe. Born in London in 1901, Humphreys was the son of Sir Travers Humphreys (1867–1956), a barrister perhaps best known as the junior counsel in the prosecution of the Irish writer Oscar Wilde (1854–1900). Following in his father’s footsteps, Humphreys studied law at Cambridge University and eventually became a senior prosecutor at the Old Bailey, London, the central criminal court, and later a circuit judge; he was also involved in the Tokyo war crimes trials as a prosecutor, a post he accepted so he could also further in Japan his studies of Buddhism. (Humphreys’s later attempts to inject some Buddhist compassion into his courtroom led to him being called the “gentle judge,” who gained a reputation for being lenient with felons. After handing down a six-month suspended sentence to an eighteen-year-old who had raped two women at knifepoint, the public outcry that ensued eventually led to his resignation from the bench in 1976.) Humphreys was interested in Buddhism from his youth and declared himself a Buddhist at age seventeen. In 1924, at the age of twenty-three, he founded the Buddhist Society, London, and served as its president until his death; he was also the first publisher of its journal, *The Middle Way*. Humphreys strongly advocated a nonsectarian approach to Buddhism, which embraced the individual schools of Buddhism as specific manifestations of the religion’s central tenets. His interest in an overarching vision of the whole of the Buddhist tradition led him in 1945 to publish his famous *Twelve Principles of Buddhism*, which has been translated into fourteen languages. These principles focus on the need to recognize the conditioned nature of reality, the truth of impermanence and suffering, and the path that Buddhism provides to save oneself through “the intuition of the individual.” A close associate of [DAISETZ TEITARO SUZUKI](#) and a contemporary of [EDWARD CONZE](#), Humphreys himself wrote over thirty semischolarly and popular books and tracts on Buddhism, including *Buddhism: An Introduction and Guide*, published in 1951.

[hundred dharmas](#). See [BAIFA](#).

[hundred-syllable mantra](#). See [VAJRASATTVA](#).

[Hundred Thousand Songs of Milarepa](#). See [MILA'IMGUR 'BUM](#).

[Hŭngch'ŏnsa](#). (興天寺). In Korean, “Flourishing Heaven Monastery”; the head monastery of the school of Doctrine ([KYO](#)) during the Chosŏn dynasty, located in Sŏngbuk-ku in the capital of Seoul. When Queen Sindŏk (d. 1395) died, King Taejo (r. 1392–1398) ordered in 1396 that this monastery be constructed to the east of the queen’s royal tomb. At the king’s command, a Sarigak (a three-story reliquary pavilion) and a Sarit’ap (a reliquary [STŪPA](#)) were erected at the north side of the monastery. Ceremonies to guide the spirit of the deceased queen, including the Uranbun ritual (see [ULLAMBANA](#)), were held during the seventh and eighth months. In 1408, Hŭngch'ŏnsa was officially affiliated with the Hwaŏm school (C. [HUAYAN ZONG](#)), but was designated a generic Kyo monastery in 1424, when the seven schools of Chosŏn-dynasty Buddhism were amalgamated into the two schools of Kyo (Doctrine) and [SŎN](#) (Meditation). The Buddhist canon (taejanggyŏng; C. [DAZANGJING](#); see [KORYŎ TAEJANGGYŎNG](#)) was enshrined at the monastery in the ninth month of 1440. The monastery burned to the ground in 1510, and its large bronze monastery bell was moved to Tŏksu Palace. At King Sŏnjo’s (r. 1567–1608) command, the monastery was reconstructed in 1569 at the old location of the Hamch’wi kiosk. The monastery’s name was changed to Sinhŭngsa in 1794, but then changed back to Hŭngch'ŏnsa in 1865. The monastery is known for its Kŭngnak pojŏn ([SUKHĀVATĪ](#) Hall) and [MYŎNGBU CHŎN](#) (Hall of Judgment), both of which are Seoul municipal cultural properties.

[Hŭngdŏksa](#). (興德寺). In Korean, “Flourishing Virtue Monastery”; the head monastery of the school of [SŎN](#) (Meditation) during the Chosŏn dynasty, located in Sŏdaemun-ku in the capital of Seoul. The monastery was constructed in 1401 at the command of the abdicated first king of Chosŏn, Taejo (r. 1392–1398), to the east of the king’s old residence; it was intended to serve as a source of blessings for his kingdom, his ancestors, his people, and his royal lineage. This monastery became the chief head monastery (tohoeso) in 1424, when the seven schools of Chosŏn-dynasty Buddhism were amalgamated into the two schools of [KYO](#) (doctrine) and [SŎN](#) (meditation). To the sides of the main shrine hall were two halls, one for Sŏn meditation, the other for doctrinal lectures. The monastery

was destroyed during the reign of King Yōnsan (r. 1494–1506) and never reconstructed.

[hungry ghost](#). See [PRETA](#).

[hutuktu](#). (T. ho thug thu). The Mongolian translation of “noble” ([ĀRYA](#)), used in Mongolia as a title for high lamas, especially incarnate lamas ([SPRUL SKU](#)).

[Huyền Quang](#). (玄光) (1254–1334). Third patriarch of the [TRUC LÂM](#) school of the Vietnamese [THIÊN](#) (C. Chan) tradition; his personal name was Lý Đạo Tái and he was a native of Giang Hạ (present-day Hà Bắc province). After passing the civil-service examination and serving as a scholar-official, he left home to become a monk in 1305, when he was already fifty-one years old. He first studied under Chan master Bảo Phác of Lê Vĩnh monastery and then became a follower of Trần Nhân Tông and, after the latter’s death, of Pháp Loa, who was thirty years his junior. After a short stint as abbot of Vân Yên monastery on Mount Yên Tử, he moved to Côn Sơn monastery. Huyền Quang was already seventy-seven years old when he succeeded Pháp Loa as the third patriarch of the Trúc Lâm school in 1331 but seems never to have had the ambition to lead the Buddhist order. He died at Côn Sơn in 1334. Huyền Quang was a talented poet, who left behind more than twenty poems, most of which deal with the beauty of the natural world.

[Huyin Daoji](#). (J. Koin Dōsai; K. Hoŭn Toje 湖隱道濟) (1150–1209). Chinese monk and thaumaturge who is associated with the [YANGQI PAI](#) of the [LINJI ZONG](#) of [CHAN](#) school; he is most commonly known in Chinese as [JIGONG](#) (Sire Ji) and sometimes as Jidian (Crazy Ji). A popular subject in vernacular Chinese fiction and plays, it has become difficult to separate the historical Jigong from the legend. Jigong is said to have been a native of Linhai in present-day Zhejiang province. He later visited the Chan master Xiatang Huiyuan (1103–1176), received the full monastic precepts at his monastery of Lingyinsi (present-day Jiangsu province), and became his disciple. After he left Xiatang’s side, Jigong is said to have led the life of an itinerant holy man. During this period, Jigong’s antinomian behavior, most notably his drinking and meat eating, along with his accomplishments as a trickster and wonderworker, became the subject of popular folklore. His unconventional behavior seems to have led to his ostracism from the [SAMGHA](#). Jigong later moved to the monastery of Jingcisi, where he died in 1209. His teachings are recorded in the *Jidian chanshi yulu* (first printed in

1569).

hwajaeng. (C. hezheng; J. wajō 和諍). In Korean, lit. “resolving disputes,” “reconciling doctrinal controversies”; a hermeneutical technique associated with the Silla scholiast [WŎNHYO](#) (617–686), which seeks to demonstrate that various Buddhist doctrines, despite their apparent differences and inconsistencies, can be integrated into a single coherent whole. This “ecumenical” approach is pervasive throughout Wŏnhyo’s works, though its basic principle is explained chiefly in his *Simmun hwajaeng non* (“Ten Approaches to the Reconciliation of Doctrinal Controversy”; only fragments are extant), [TAESŬNG KISILLON SO](#) (“Commentary to the ‘Awakening of Faith according to the Mahāyāna’”), and [KŬMGANG SAMMAEGYŎNG NON](#) (“Exposition of the *[VAJRASAMĀDHISŪTRA](#)”). Wŏnhyo was versed in the full range of Buddhist philosophical doctrines then accessible to him in Korea, including [MADHYAMAKA](#), [YOGĀCĀRA](#), [HWAŎM](#), and [TATHĀGATAGARBHA](#) thought, and hwajaeng was his attempt to demonstrate how all of these various teachings of the Buddha were part of a coherent heuristic plan within the religion. All the Buddha’s teachings were in fact representations of the one mind (K. *ilsim*; C. [YIXIN](#)); whatever doctrinal differences seem to exist between them result merely from the limitations inherent in conventional language to express the truth, not from substantive differences in the teachings themselves. One of the means through which Wŏnhyo seeks to demonstrate the truth of hwajaeng is to deploy the dichotomy of “analysis and synthesis” (*kaehap*)—lit. to “open up” all the various teachings for analysis and to “fold them together” into an overarching synthesis. This process of exegesis was then applied to the hermeneutical schema of “doctrines and essential” (*chongyo*)—i.e., the various doctrines of Buddhism and their essential truth. Buddhism’s essential truth (*yo*) is “opened up” (*kae*) for analysis into all its various doctrines, and those doctrines (*chong*) are then returned to the one mind when they are “folded together” (*hap*) into a synthesis. Many of Wŏnhyo’s scriptural commentaries use this hermeneutical technique in their exegeses, especially his seventeen exegetical commentaries (five of which are extant) that are titled *chongyo*, e.g., his *Yŏlban kyŏng chongyo* (“Doctrines and Essentials of the [MAHĀPARINIRVĀNASŪTRA](#)”). As one specific example, Wŏnhyo’s analysis of the [DASHENG QIXIN LUN](#) (“Awakening of Faith according to the Mahāyāna”) attempts to demonstrate how the emptiness ([ŚŪNYATĀ](#)) doctrine of the Madhyamaka—which Wŏnhyo characterizes as apophasis or lit. “destruction” (K. *p’a*, C. *po*)—may be reconciled with the representation-only ([VIJÑĀPTIMĀTRATĀ](#)) teachings

of the Yogācāra—which he characterizes as a kataphasis, or lit. “establishment” (K. ip, C. li)—by reducing them both to the single principle of the “one mind.” The Koryŏ monk [ŬICH'ŎN](#) (1055–1101) first posited that the notion of hwajaeng was emblematic of Wŏnhyo’s philosophical approach and petitioned his brother, King Sukchong (r. 1095–1105), to grant Wŏnhyo the posthumous title of Hwajaeng KUKSA (the state preceptor Resolving Controversy) in 1101. Since that time, Wŏnhyo has been viewed as the embodiment of hwajaeng thought in Korea and hwajaeng has often been portrayed as characteristic of a distinctively Korean approach to Buddhist thought.

[Hwangnyongsa](#). (皇/黃龍寺). In Korean, “royal,” or “Yellow Dragon Monastery” (“royal” and “yellow” are homophonous in Korean); an important Korean monastery located in the Silla-dynasty capital of Kyŏngju. The monastery was constructed between 553 and 569, during the reign of the Silla king Chinhŭng (r. 540–576) and was especially renowned for its sixteen-foot high image of [ŚĀKYAMUNI](#) Buddha (completed in 574) and its massive, nine-story pagoda ([STŪPA](#)), which was built in 645 during the reign of Queen Sŏndŏk (r. 632–647). In the winter of 1238, during the succeeding Koryŏ dynasty (918–1392), the entire monastery, including the buddha image and the pagoda, was totally destroyed by invading Mongol troops, and only the foundation stones currently remain. The site of the monastery was excavated by the Kyŏngju National Research Institute of Cultural Heritage between 1976 and 1983. Royal Dragon monastery flourished due to the support of the Silla royal family, which sought to use Buddhism as an unifying political ideology; The stories told concerning the foundation of the monastery, the image, and the pagoda all reflect this fact. The construction of the monastery is thus often cited as an example of “state-protection Buddhism” hoguk Pulgyo; C. [HUGUO FOJIAO](#)) in Korea. According to the [SAMGUK YUSA](#) (“Memorabilia of the Three Kingdoms”), in the second month of 553, King Chinhŭng was building a new palace to the south of his Dragon Palace and east of Wŏlsŏng palace, when a yellow dragon (hwangnyong) appeared at the site. Yellow dragons were popular autochthonous deities in Silla; hence, given the auspicious nature of this apparition, the king changed plans and instead built a Buddhist monastery on the site, which is called both Yellow Dragon and Royal Dragon monastery in the literature. When the Silla monk [CHAJANG](#) (d.u.; fl. c. 590–658) was training at [WUTAISHAN](#) in China, an emanation of the bodhisattva [MAÑJUŚRĪ](#) told him that Hwangnyongsa was constructed on the site of the dispensation of the previous buddha [KĀŚYAPA](#). Not

long after the monastery's completion, a ship with 57,000 pounds of iron and 30,000 ounces of gold aboard appeared at Sap'o Harbor in Hagok County (currently Kokp'o near Ulsan, on the southeast coast of the peninsula). The ship also carried an inscription, which said that the Indian king [AŚOKA](#), having tried and failed three times to forge a Śākyamuni triad from these metals, had finally decided to load the materials aboard ship, along with models of the images, and send them off in search of a land with the requisite metallurgical skill to craft such a statue. King Chinhŭng ordered his metallurgists to forge this sixteen-foot statue of the Buddha, and they succeeded on the first attempt in the third month of 574. Chajang also was told by [MAÑJUSŪ](#) that the queen belonged to the Indian [KṢATRIYA](#) caste. He was later told by a divine being that if a nine-story pagoda were constructed within the precincts of Royal Dragon monastery, the kingdoms bordering Silla would surrender and submit to Silla hegemony. Hearing Chajang's prediction, in 645, the queen built the pagoda, which was 224 feet tall and made entirely of wood. Chajang placed within its columns some of the relics ([ŚARĪRA](#)) of the Buddha that he had received at Wutaishan. (Another portion was enshrined at [T'ONGDOSŌ](#), where they remain still today.) It was said that the nine stories of the pagoda symbolized the nine kingdoms and tribal leagues surrounding Silla. During the time when Hwangnyongsa was constructed, the unification wars between the three Korean kingdoms of Silla, Koguryŏ, and Paekche were raging. The Silla monarchs at this time tried to justify their royal authority by relying on Buddhism, particularly by comparing the Silla rulers to the imported Buddhist notion of the ideal Buddhist ruler, or [CAKRAVARTIN](#) (wheel-turning emperor) and by positing that the royal family was genealogically related to the kṣatriya clan of the Buddha. These associations are also obvious in the personal names of Silla kings, queens, and other royal family members. For example, the names of the King Chinhŭng's two princes were Tongnyun (Copper Wheel) and Kŭmnyun (Gold Wheel), both specific types of cakravartins; additionally, King Chinp'yŏng's personal name was Paekchŏng and his queen's was Maya, the Sino-Korean translation and transcription, respectively, of the names of Śākyamuni Buddha's father and mother, [ŚUDDHODANA](#) and [MĀYĀ](#). The foundation of Hwangnyongsa was intimately associated with these attempts by the royal family to employ Buddhism as a tool for justifying and reinforcing its authority. The monastery sponsored the Inwang Paekkojwa hoe (Humane Kings Assembly of One-Hundred Seats), a state-protection (hoguk) rite based on the [RENWANGJING](#) ("Scripture for Humane Kings"), in the hopes that the power of the buddhadharma would protect and

promote the royal family and the kingdom. According to both the *Samguk yusa* and the *Samguk Sagi* (“Historical Records of the Three Kingdoms”), such a ceremony was held at Hwangnyongsa in 613 and 636, before the unification of the three kingdoms, as well as several times subsequently. Monks who resided at Hwangnyongsa also played important roles in Silla politics and religion. [WÖN'GWANG](#) (532–630), who composed the five codes of conduct for the “flower boys” (hwarang), an elite group of male aristocratic youths, may have written there a letter to ask Emperor Yangdi (r. 604–618) of the Sui dynasty to attack Koguryō on Silla’s behalf. Another resident, Chajang, encouraged the royal family to adopt Chinese official attire and the Chinese chronological era at the Silla court and was appointed kukt’ong (state superintendent), to supervise the entire Silla Buddhist ecclesia. Several other Hwangnyongsa monks, including Hyehun (fl. c. 640), Kangmyōng (fl. 655), and Hunp’il (fl. 879), were appointed to kukt’ong and other important Silla ecclesiastical positions. Finally, several important Silla scholar-monks resided at Hwangnyongsa, including [WÖNHYO](#) (617–686), who delivered his first public teaching of the [KŪMGANG SAMMAEGYÖNG NON](#) (“Exposition of the *Vajrasamādhisūtra*”) at the monastery.

[Hwansōng Chian](#). (喚醒志安) (1664–1729). Korean monk from the mid-Chosŏn dynasty. Hwansōng Chian was a disciple of Wōltam Sōlche (1632–1704) and of Moun Chinŏn (1622–1703), at the time was the most respected Hwaōm ([HUAYAN](#)) scholar in the kingdom. At Chinŏn’s request, Hwansōng Chian began to lecture on the [AVATAMSAKASŪTRA](#) in Chinŏn’s place. Chinŏn eventually entrusted his disciples to Chian, and Chian thus acquired a name for himself as a Hwaōm master. In 1725, he held a grand Hwaōm lecture and attracted more than fourteen hundred listeners. Given the suspicion Buddhist activities engendered during this time of the religion’s persecution, the government was deeply concerned about the potentially seditious impact of his lectures and consequently had him arrested and imprisoned. Chian was released after it was eventually revealed that he was falsely accused. Subsequently, a high Confucian official from Chōlla province petitioned for his arrest, and he was sent into exile on Cheju island, where he died seven days later on July 7, 1729. His writings include the *Sŏnmun ojong kangyo* and the *Hwansōng chip*.

[Hwaōm ilsŭng pŏpkye to](#). (C. Huayan yisheng fajie tu; J. Kegon ichijō hokkaizu 華嚴一乘法界圖). In Korean, “Diagram of the [DHARMADHĀTU](#) according to the One Vehicle of Hwaōm (C. [HUAYAN](#)),” composed by [ŬISANG](#) in 670 and

presented to his Chinese teacher, [ZHIYAN](#). Ŭisang first provides a wavelike diagram of the dharmadhātu (also sometimes referred to as the Haein to, or “Oceanic-Reflection Diagram”), which contains a verse in two hundred and ten Chinese characters summarizing the gist of the Huayan school’s interpretation of the [AVATAMSAKASŪTRA](#). The diagram and its subsumed verse are then followed by Ŭisang’s own (auto)commentary, itself divided into two major sections: the fundamental purport of the diagram and the detailed interpretation of the verse. In the diagram itself, the path meanders along a single line in order to show that all phenomena are interconnected through the single principle of the dharma nature. The diagram begins and ends at the same place in the center of the maze, to suggest that the inception of practice in the generation of the thought of enlightenment ([BODHICITTOTPĀDA](#)) and its consummation through enlightenment are identical. The diagram is broadly divided into four equal sections to demonstrate that the dharma nature is perfected through the four means of conversion ([SAMGRAHAVASTU](#): viz., giving, kind words, helpfulness, and cooperation). The single path that meanders through the diagram includes fifty-four curves to indicate the teachers that the pilgrim [SUDHANA](#) in the [GANDAVYŪHA](#) section of the *Avatamsakasūtra* consulted in the course of his training—and thus by extension the stages of the [BODHISATTVA](#) path. The “Hwaōm ilsŭng pōpkye to” served as the foundation of Hwaōm thought in Korea. There is some controversy over whether the verse itself may have in fact been composed by Zhiyan, with Ŭisang’s contribution being to create the diagram for the verse and write the commentary, but there is not currently a scholarly consensus concerning this issue.

[Hwaōmsa](#). (華嚴寺). In Korean, “Flower Garland Monastery”; the nineteenth of the major district monasteries ([PONSA](#)) in the contemporary [CHOGYE](#) order and the largest monastery on the Buddhist sacred mountain of [CHIRISAN](#). According to the Hwaōmsa monastery history, the monastery was founded in 544 by the obscure monk Yōn’gi (d.u.), an Indian monk who is claimed to have been the first figure to spread the teaching of the [AVATAMSAKASŪTRA](#) in Korea. (Five works related to the *Avatamsakasūtra* and the [DASHENG QIXIN LUN](#) are attributed to Yōn’gi in Buddhist catalogues, but none are extant.) In 645, during the Silla dynasty, the [VINAYA](#) master [CHAJANG](#) constructed at the monastery a three-story stone [STŪPA](#) with four lions at the base, in which to preserve the relics ([ŚARĪRA](#)) of the Buddha. The eminent scholiast [WŌNHYO](#) (617–686) is said to have taught at the monastery the “flower boys” (hwarang) group of Silla elite young men. In

677, the important vaunt courier in the Korean Hwaŏm school, [ŬISANG](#) (625–702), constructed a main shrine hall, the Changyukchŏn, where a gold buddha image six-chang (sixty feet) high was installed, and had inscribed the eighty-roll recension of the *Avatamsakasūtra* on the four stone walls of the hall; since his time, the monastery was known as one of the centers of the Hwaŏm school ([HUAYAN ZONG](#)) in Korea. In 1462, during the Chosŏn dynasty, Hwaŏmsa was raised to the status of a main monastery in the Sŏn school ([CHAN ZONG](#)) of Buddhism. The monastery burned down during the Japanese Hideyoshi invasion of (1592–1598) and was rebuilt several times afterward. In 1702, the Sŏn monk Kyeba (d.u.) built a new main shrine hall, Kakhwangjŏn, to replace the ruined Changyukchŏn, and the monastery was elevated to a main monastery of both the Sŏn and Kyo (Doctrine) schools. The monastery is the nineteenth of the major parish monasteries ([PONSA](#)) in the contemporary [CHOGYE](#) order.

[Hyech'o](#). (C. Huichao 慧[惠]超) (d.u.; c. 704–780). Korean monk from the Silla kingdom, best known as the writer of the [WANG O CH'ŎNCH'UKKUK CHŎN](#), translated into English as *Memoir of the Pilgrimage to the Five Regions of India*. After ordaining in Korea, Hyech'o left for China sometime around 721 and spent perhaps three years on the mainland before departing via the southern sea route for India (the Ch'ŏnch'ukkuk of his travel diary) in 724. After landing on the eastern coast of the subcontinent, Hyech'o subsequently spent about three years on pilgrimage to many of the Buddhist sacred sites, including [BODHGAYĀ](#), [KUSĪNAGARĪ](#), and [SĀRNĀTH](#), and visits to some of the major cities in north central India. He then traveled in both southern and western India before making his way toward the Northwest, whence he journeyed on into Kashmir, [GANDHĀRA](#), and Central Asia. Making his way overland across the Central Asian [SILK ROADS](#), Hyech'o arrived back in Chinese territory in December of 727. For the rest of his life, Hyech'o remained in China, collaborating with [AMOGHAVAJRA](#) (705–774) and perhaps [VAJRABODHI](#) (671–741) in translating esoteric Buddhist scriptures into Chinese (see [VAJRAYĀNA](#), [TANTRA](#), and [MIKKYŌ](#)). Hyech'o is mentioned prominently in Amoghavajra's will as one of his six greatest living disciples. In May 780, Hyech'o left the Chinese capital of Chang'an for the Buddhist pilgrimage site of [WUTAISHAN](#), where he seems to have spent the last months or years of his life.

[Hyeğŭn](#). (K) (慧勤). See [NAONG HYEĞŬN](#).

[Hyemyŏng chŏn](#). (K) (惠明殿). See [WANGNYUNSA](#).

Hyessim. (K) (慧諶). See [CHIN'GAK HYESIM](#).

Hyeso. (K) (慧昭). See [CHIN'GAM HYESO](#).

Hyeyöng. (惠永) (1228–1294). Korean monk of the Koryö dynasty. In 1238, Hyeyöng was ordained by Ch'ungyön (d.u.) at the monastery of Nambaegwölsa. Hyeyöng passed the Sön ([CHAN](#)) examinations held at [WANGNYUNSA](#) in 1244 and was subsequently given a position at Hüngdöksa. In 1259, he was given the title Samjung taesa, and four years later, he was elevated to the status of head seat (sujwa). In 1267, Hyeyöng moved to the temple Songnisa. Hyeyöng's reputation grew, and he was eventually elevated to the highest status of [SAMGHA](#) overseer (süngt'ong) in 1269. He also resided at such monasteries as [PULGUKSA](#), [T'ONGDOSA](#), and Chunghüngsa. In 1290, he led a mission of one hundred monks who specialized in copying Buddhist scriptures to Yuan China and delivered a lecture in the capital. He also copied the Buddhist canon in gold. In 1292, he was given the title Poja Kukchon (National Worthy whose Compassion is Universal) and was also given the title of samgha overseer of the five teachings (Ogyodo Süngtong). He resided at the monastery of Tonghwasa and remained there until his death in 1294. Hyeyöng composed a treatise entitled the *Paegüihae*.

Hyönjöng non. (顯正論). In Korean, “Treatise on the Exposition of Orthodoxy,” composed by the Chosön-dynasty monk [KIHWA](#) (1376–1433). In this one-roll treatise, composed probably sometime after 1398, Kihwa attempted to counter the anti-Buddhist polemic of Confucian scholars of his time (e.g., Buddhism as a foreign religion that is financially corrupt, socially parasitic, and philosophically nihilistic) by clarifying the truths of Buddhism. First, Kihwa explains that the nature of the mind is inherently pure and free from discrimination and thus implicitly transcending all religious differences. Kihwa then demonstrates that, despite their differences, Confucianism, Daoism, and Buddhism each exhibits in its own way the practice of “humaneness,” or “altruism,” toward others, which ensures that all beings have shared responsibility for each others' quality of life. In the course of his examination, Kihwa clarifies the various attitudes of Buddhists and Confucians toward religious teachings, societal obligations, harming life, drinking liquor, wealth accumulation, and so forth. Kihwa also defends the Buddhist practice of cremation and the notion of [KARMAN](#). Kihwa ultimately contends that a harmonious relation between Confucian and Buddhist teachings is required to regulate the family and govern the state.

Hyujǒng. (K) (休靜). See [CH'ŎNGHŎ HYUJŎNG.](#)

Icchānaṅgala. [alt. Icchānaṅkala]. Pāli name of a brāhmaṇa village in the Indian kingdom of [KOŚALA](#), on the outskirts of which was a grove where the Buddha preached the Pāli *Ambaṭṭhasutta* to the brāhmaṇa youth, Ambaṭṭhamānava. The Pāli [SUTTANIPĀTA](#) states that the town was the residence of several eminent brāhmaṇas. Elsewhere it is said that brāhmaṇas were in the habit of visiting the grove to discuss their interpretations of the Vedas. The Pāli *Vāseṭṭhasutta* states that two brāhmaṇa youths well versed in the Vedas, Vāseṭṭha and Bhāradvāja, once sought out the Buddha’s counsel to resolve a debate while the Buddha was sojourning at the town. In the [SAMYUTTANIKĀYA](#), the Buddha is described as having once spent a rains retreat (S. [VARŚĀ](#)) in solitude at the Icchānaṅgala grove while attended by a single disciple, the monk Nāgita. After a while, the local villagers discovered his presence and disturbed his solitude with constant visits and noise. At the end of the three months’ rains retreat, the Buddha preached the *Icchānaṅgalasutta* to a gathering of monks at the village, in which he described how he had spent his time while in solitary retreat practicing mindfulness on breathing ([ĀNĀPĀNASMṚTI](#)). He declares dedication to this practice to be a life lived according to the noble ([ĀRYA](#)) way and one that leads to the destruction of the contaminants ([ĀSRAVA](#)) and the attainment of [ARHAT](#)ship.

icchantika. (T. ’dod chen; C. yichanti; J. issendai; K. ilch’ōnje 一闍提). In Sanskrit, “incorrigibles”; a term used in the [MAHĀYĀNA](#) tradition to refer to a class of beings who have lost all potential to achieve enlightenment or buddhahood. The term seems to derive from the present participle icchant (desiring), and may be rendered loosely into English as something like “hedonist” or “dissipated” (denotations suggested in the Tibetan rendering ’dod chen (po), “subject to great desire”). (The Sinographs are simply a transcription of the Sanskrit.) The Mahāyāna [MAHĀPARINIRVĀNASŪTRA](#) states that persons become icchantika when they refuse to accept such basic principles as the law of causality, have lost their moral compass, are no longer concerned about either present actions or their future consequences, do not associate with spiritual mentors, and generally do not follow the teachings of the Buddha. In the [LAṆKĀVATĀRASŪTRA](#), an icchantika is defined as a being who is explicitly antagonistic to the “bodhisattva collection” (BODHISATTVAPIṬAKA) of the canon, viz., to Mahāyāna scriptures, and who falsely claims that those scriptures do not

conform to the [SŪTRA](#) and the [VINAYA](#). As a consequence of their disdain for the dharma, icchantikas were commonly assumed to be condemned to an indefinite period (and, according to some texts, an eternity) in the hells (see [NĀRAKA](#)). Certain bodhisattvas, such as [KSITIGARBHA](#), could, however, voluntarily choose to become icchantikas by renouncing all of their own wholesome faculties ([KUŚĀLAMŪLA](#)) in order to save even the denizens of the hells. In East Asia, there was a major debate about whether icchantikas were subject to eternal damnation or whether even they retained the innate capacity to attain enlightenment. The Chinese monk [DAOSHENG](#) (355–434) rejected the implication that Buddhism would condemn any class of being to hell forever. He went so far as to reject the accuracy of passages suggesting such a fate that appeared in the first Chinese rendering of the *Mahāparinirvāṇasūtra* made by [FAXIAN](#) and [BUDDHABHADRA](#) in 418. [DHARMAKṢEMA](#)'s subsequent translation of the sūtra in 421, however, affirmed Daosheng's view that the buddha-nature (C. [FOXING](#); S. [BUDDHADHĀTU](#)) was inherent in all beings, even icchantikas. The [FAXIANG](#) school of [YOGĀCĀRA](#) Buddhism was the only school of East Asian Buddhism that posited the existence of icchantikas, which it viewed as beings who had destroyed the pure seeds ([BĪJA](#)) innate in the mind through their heinous actions and thus had lost all hope of becoming buddhas. Virtually all other schools of East Asian Buddhism, however, asserted the doctrine of the universality of the buddha-nature in all sentient beings (and, in some cases, even in inanimate objects), and thus rejected any implication that icchantikas were bereft of all prospect of achieving buddhahood. See also [SAMUCCHINNAKUŚĀLAMŪLA](#); [QINIIZUI](#).

[ichinengi](#). (一念義). In Japanese, “the doctrine of a single recitation,” in the Japanese [PURE LAND](#) traditions, the practice of a single verbal recitation of the buddha [AMITĀBHA](#)'s name (J. nenbutsu; C. [NIANFO](#)). This doctrine refers to a position held by some of [HŌNEN](#)'s (1133–1212) major disciples in the early [JŌDOSHŪ](#), especially Jōkakuō Kōsai (1163–1247), and to a lesser extent [SHINRAN](#) (1163–1273). After Hōnen passed away, a debate emerged among his followers over whether salvation in Amitābha's pure land of [SUKHĀVATĪ](#) was attained through a “single recitation” of the Buddha's name, or “multiple recitations” (see [TANENGI](#)). The single-recitation position advocates that a single moment of faith would be sufficient to ensure rebirth in that pure land, because the person would then be receptive to Amitābha's grace. Due to this near-exclusive emphasis on the role of grace in effecting salvation, some of the proponents of single-recitation practice apparently engaged in antinomian behavior, such that the

doctrine of *ichinengi* came to be associated with subversive political activities. The degree to which this single moment of faith arises from the “self-power” ([JIRIKI](#)) of the aspirant or the “other-power” ([TARIKI](#)) of Amitābha was also debated. Although Shinran seems to have favored the single-recitation position, he also argued that neither the single-nor multiple-recitation position provided a comprehensive perspective on the prospect of salvation. (For the [JISHU](#) practice of *ippen nenbutsu*, the one-time invocation of the Buddha’s name as if it were the time of one’s death, see [IPPEN](#).) **ignorance**. See [AVIDYĀ](#).

[Ikeda Daisaku](#). (池田大作) (b. 1928). Third president of [SŌKA GAKKAI](#), Japan’s largest lay Buddhism organization, which is considered one of Japan’s “new religions.” Ikeda also helped found Sōka Gakkai International (SGI), which in 2008 claimed twelve million members in 192 countries and territories. He is a prolific author, who also founded a number of institutions, including Sōka University, the Kōmeitō political party, the Institute of Oriental Philosophy, and the Tōkyō Fuji Art Museum. Ikeda was born on January 2, 1928, in the Ota Ward of Tōkyō, to parents who cultivated and sold seaweed. After graduating from Fuji Junior College, he took employment under Toda Josei (1900–1958), the second president of Sōka Gakkai. Ikeda received intensive mentoring from Toda and accompanied him on most of his travels. Ikeda also helped carry out Toda’s propagation (*shakubuku*) campaigns. Ikeda served as the third president of Sōka Gakkai from 1960 to 1979 until disagreements with the [NICHIREN SHŌSHŪ](#) priesthood, notably its head priest, Nikken (b. 1922), led to his resignation from the organization. In 1991, poor relations with the priesthood culminated in his excommunication. While remaining as Sōka Gakkai’s spiritual leader, Ikeda has additionally served as the president of SGI since its founding in 1975. Throughout his career with Sōka Gakkai and SGI, Ikeda has met with both criticism and praise. At times, the organization’s aggressive proselytizing efforts have made Ikeda and Sōka Gakkai objects of suspicion, and its political activities have led to several scandals: the 1956 “Ōsaka incident” in which he was charged with election fraud after engineering the election of a Kōmeitō party member; and a 1979 controversy over the suppression of several publications that criticized Ikeda and Sōka Gakkai. At the same time, Ikeda is respected as a leader on human rights and peace issues. He has been a strong supporter of the United Nations and has engaged in discussions with political leaders around the world. The expansive growth of both Sōka Gakkai and SGI can in large measure be attributed to his leadership.

Ikkyū Sōjun. (一休宗純) (1394–1481). Japanese [ZEN](#) master in the [RINZAISHŪ](#), also known by his sobriquet Kyōun shi (Master Crazy Cloud). Materials on Ikkyū’s life are an often indistinguishable mixture of history and legend. Little is known of Ikkyū’s early years, but he is said to have been the illegitimate son of Emperor Gokomatsu (r. 1382–1392, 1392–1412). In 1399, Ikkyū was sent to the monastery of [ANKOKUJI](#) in Kyōto. In 1410, he left Ankokuji to study under Ken’ō Sōi (d. 1414), who belonged to the [MYŌSHINJI](#) branch of Rinzai Zen. After Ken’ō’s death in 1414, Ikkyū continued his studies under the monk Kasō Sōdon (1352–1428) in Katada (present-day Shiga prefecture) near Lake Biwa. Kasō gave him the name Ikkyū, which he continued to use. While studying under Kasō, Ikkyū had his first awakening experience and also acquired some notoriety for his antinomian behavior. Perhaps because of his rivalry with a fellow student named Yōsō Sōi (1378–1458), Ikkyū left Kasō shortly before his death and headed for the city of Sakai. During this transition period, Ikkyū is said to have briefly returned to lay life, marrying a blind singer and fathering a son. Ikkyū’s life in Sakai is shrouded in legend (most of which date to the Tokugawa period). There, he is said to have led the life of a mad monk, preaching in taverns and brothels. In 1437, Ikkyū is also said to have torn up the certificate of enlightenment that his teacher Kasō had prepared for him before his death. In 1440, Ikkyū was called to serve as the abbot of the monastery of [DAITOKUJI](#), but he resigned his post the next year. Ikkyū devoted much of his later life to his famous poetry and brushstroke art. Later, Ikkyū had a falling out with Yōsō, who as abbot secured Daitokuji’s prominent place in Kyōto. In 1455, Ikkyū published a collection of his poems, the *Jikaishū* (“Self-Admonishment Collection”), and publicly attacked Yōsō. In 1456, Ikkyū restored the dilapidated temple Myōshōji in Takigi (located halfway between Sakai and Kyōto). There, he installed a portrait of the Zen master Daitō (see [SŌHŌ MYŌCHŌ](#)). Ikkyū also began identifying himself with the Chinese Chan master [XUTANG ZHIYU](#), the spiritual progenitor of the Daitokuji lineage(s), by transforming portraits of Xutang into those of himself. In 1474, Ikkyū was appointed abbot of Daitokuji, which had suffered from a devastating fire during the Ōnin war, and he committed himself to its reconstruction, until his death in 1481. Among his writings, his poetry collection *Kyōunshū* (“Crazy Cloud Anthology”) is most famous. Also well known is his *Gaikotsu* (“Skeletons”), a work, illustrated by Ikkyū himself, about his conversations with skeletons. See also [WU’AI XING](#).

illusory body. See [MĀYĀDEHA](#).

Imje chong. (臨濟宗). The Korean pronunciation of the Chinese [LINJI ZONG](#); the name of a short-lived school of Korean Buddhism during the Japanese colonial period (1910–1945). In 1910, shortly after Japan’s formal annexation of Korea, Hoegwang Sasŏn (1862–1933, a.k.a. Yi Hoegwang) and other Korean monks signed a seven-item treaty with the Japanese [SŌTŌSHŪ](#), which would have assimilated their newly formed Wŏn chong (Consummate Order) of Korean Buddhism into the Sōtō order. In response to this threat to Korean Buddhist autonomy, such renowned monks as [HANYŎNG CHŎNGHO](#) (1870–1948), [HAN YONGUN](#) (1879–1944), and other Korean Buddhist leaders established the Imje chong, with its headquarters at the monastery of [PŎMŎSA](#) in Pusan. These monks adopted this name to demonstrate that they considered the practices of the Sōtō school to be anathema to the fundamentally Linji orientation of Korean Sŏn practice. Both the Wŏn chong and the Imje chong were ultimately disestablished in 1912 by the Japanese colonial administration after the promulgation of the 1911 Monastery Ordinance, in which all aspects of Korean Buddhist institutional life were brought under the administrative control of the Japanese government-general.

[impermanence](#). See [ANITYA](#).

[imwŏtko](#). (C. shi shenme; J. kore ikan; K. 이뭇고/si simma 是甚麼). In vernacular Korean (and specifically the dialect of Kyŏngsang province), “What is this?”; the foundational contemplative question (K. hwadu; C. [HUATOU](#)) used within the Korean [SŎN](#) (C. [CHAN](#)) tradition. This hwadu was taught by both [KYŎNGHŎ SŎNGU](#) (1849–1912) and [YONGSŎNG CHINJONG](#) (1864–1940) as part of their attempts to revive Korean kanhwa Sŏn (C. [KANHUA CHAN](#)) practice at the turn of the twentieth century. Imwŏtko is a dialectical contraction of the standard vernacular Korean phrase “Igŏsi muŏsin ko” (“What is this?”), which is the translation of the classical Chinese question “What is this?” (C. [SHI SHENME](#); K. si simma) that was frequently raised by teachers in the Chinese Chan tradition. For example, the sixth patriarch [HUINENG](#) (638–713) is said to have asked, “There is this one thing that supports the heavens above and opens the earth below. It is as bright as the sun and moon and as dark as a lacquer barrel. It is constantly inside all my activities. What is that thing?” And [MAZU DAOYI](#) (709–788) asked, “It is not mind, not buddha, not a thing. So, what is it?” Imwŏtko differs from the enigmatic expressions of the enlightenment experience that appear in many of the Sŏn exchanges between master and disciple; it is instead

presumed to ask the fundamental question about what existence itself means, such as what is my original face (K. pollae myŏnmok; C. [BENLAI MIANMU](#)). By asking this most basic of existential questions, imwŏtko is thought to generate the sensation of doubt (K. ũijŏng; C. [YIJING](#)) more readily than might the standard Sŏn [GONG'AN](#) and is often thus the first hwadu given to beginning meditators, and especially laypersons, in Korean Sŏn training. But because the doubt generated by imwŏtko may not be as intense and sustained as that generated by the standard kongan, monks and nuns will typically shift from imwŏtko to one of those cases as their meditation progresses.

[indeterminate questions](#). See [AVYĀKRTA](#).

Indra. (P. Inda; T. Dbang po; C. Yintuoluo/Di-Shi; J. Indara/Taishaku; K. Indara/Che-Sŏk 因陀羅/帝釋). In Sanskrit, Indra is an abbreviation for [ŚAKRO DEVĀNĀM INDRAH](#) (“[ŚAKRA](#), the king of the gods”). Indra is the Vedic king of the gods of the atmosphere or sky, who eventually becomes the chief of all divinities in Indian popular religion. Indra is incorporated into the Buddhist pantheon as a guardian of the [DHARMA](#) and the king of the [DEVA](#) realm. Indra is always depicted in Indian Buddhist iconography as subservient to the Buddha: he worships the Buddha, holds an umbrella over him to shield him from the sun, or carries his alms bowl for him. Indra presides over the heaven of the thirty-three divinities ([TRĀYĀSTRIMŚĀ](#)), the second of the six heavenly realms that exist within the sensuous realm ([KĀMADHĀTU](#)), located on the summit of [MOUNT SUMERU](#). In the middle of this heaven is found Indra’s royal city, Sudarśana, at the center of which is his royal palace, Vaijayanta. See also [INDRAJĀLA](#); [ŚAKRA](#).

Indrabhūti. (T. In dra bo dhi). There are at least three figures by this name known to the Indian and Tibetan traditions. Perhaps the most important is a semimythical king of [ODDIYĀNA](#) ([alt. Uḍḍiyāna], probably the Swat region of northwest India but also identified as Orissa) at the time of the miraculous birth of [PADMASAMBHAVA](#); according to tradition, he had no male heir, and so he installed Padmasambhava as crown prince. A second Indrabhūti is listed among the eighty-four [MAHĀSIDDHA](#) as a teacher of [TILOPA](#); he may be the Indrabhūti, closely associated with mahāsiddha Lawapa, who is first in the lineage list (T. gsan yig) of the [VAJRAYOGINĪ](#) practices of the Tibetan [SA SKYA](#) sect and a brother of Lakṣmīnkarā. There is also a ninth-century Indian king and tantric master, a student of Ācārya Kukurāja, who authored the *Cittaratnaviśodhana*, called Indrabhūti.

Indrajāla. (T. Dbang po'i dra ba; C. Yintuoluo wang/Di-Shi wang; J. Indaramō/Taishakumō; K. Indara mang/Che-Sōk mang 因陀羅網/帝釋網). In Sanskrit, “Indra’s net”; a metaphor used widely in the [HUAYAN ZONG](#) of East Asian Buddhism to describe the multivalent web of interconnections in which all beings are enmeshed. As depicted in the [AVATAMSAKASŪTRA](#), the central scripture of the Huayan school, above the palace of [INDRA](#), the king of the gods, is spread an infinitely vast, bejeweled net. At each of the infinite numbers of knots in the net is tied a jewel that itself has an infinite number of facets. A person looking at any single one of the jewels on this net would thus see reflected in its infinite facets not only everything in the cosmos but also an infinite number of other jewels, themselves also reflecting everything in the cosmos; thus, every jewel in this vast net is simultaneously reflecting, and being reflected by, an infinite number of other jewels. This metaphor of infinite, mutually reflecting jewels is employed to help convey how all things in existence are defined by their interconnection with all other things, but without losing their own independent identity in the process. The metaphor of Indra’s net thus offers a profound vision of the universe, in which all things are mutually interrelated to all other things, in simultaneous mutual identity and mutual intercausality. The meditation on Indra’s net (C. Diwang guan; J. Taimō kan; K. Chemang kwan) is the last of the six contemplations outlined by Fazang in his *Xiu Huayan aozhi wangjin huanyuan guan* (“Cultivation of the Inner Meaning of Huayan: The Contemplations That End Delusion and Return to the Source”), which helps the student to visualize the [DHARMADHĀTU](#) of the unimpeded interpretation between phenomenon and phenomena ([SHISHI WU’AI FAJIE](#)).

Indra’s net. See [INDRAJĀLA](#).

indriya. (T. dbang po; C. gen; J. kon; K. kūn 根). In Sanskrit and Pāli, “faculty,” “dominant,” or “predominant factor”; a polysemous term of wide import in Buddhist soteriological and epistemological literature. In the [SŪTRA](#) literature, indriya typically refers to the five or six sense bases: e.g., the visual, auditory, olfactory, gustatory, and tactile faculties associated with the physical sense organs and the mental base associated with the mind; in the case of the physical senses, the indriya are forms of subtle matter located within the organs of the eye, ear, nose, tongue, and body that enable the functioning of the senses. The mind ([MANAS](#)) is typically listed as a sixth, internal sensory faculty. The six sense faculties (ṣaḍindriya) are subsumed as well within the list of the twelve [ĀYATANA](#)

(sense-fields) and eighteen [DHĀTU](#) (elements). ¶ Indriya is also used soteriologically to describe the five “dominants” or “spiritual faculties” that are crucial to development along the path: faith ([ŚRADDHĀ](#)), effort ([VĪRYA](#)), mindfulness ([SMṚTI](#)), concentration ([SAMĀDHI](#)), and wisdom ([PRAJÑĀ](#)). These two denotations for indriya are subsumed by the [VAIBHĀSIKA](#) school of [SARVĀSTIVĀDA](#) abhidharma into a more extensive list of twenty-two faculties: (1–5) the five physical sense faculties, which are the predominant factors in the rise of the sensory consciousnesses, etc.; (6–7) the “female” (strīndriya) and “male” (puruṣendriya) faculties, which are the predominant factors in distinguishing sex organs and marking physical gender; (8) the “life force” (jīvitendriya; see [JĪVITA](#)), the predominant factor in birth and prolonging the physical continuum up through the “intermediate state” ([ANTARĀBHAVA](#)); (9) the mental faculty ([MANENDRIYA](#)), the predominant factor that governs both rebirth and the associations between an individual and the world at large; (10–14) the five faculties of sensation or feeling—viz., pleasure ([SUKHA](#)), suffering ([DUHKHA](#)), satisfaction (saumanasya), dissatisfaction (daurmanasya), and indifference ([UPEKSĀ](#))—the predominant factors with regard to contamination ([SAMKLEŚA](#)), for passions such as attachment, hatred, conceit, delusion, etc., attach themselves to these five sensations, creating bondage to worldly objects; (15–22) the eight faculties—viz., the five moral faculties of faith (śraddhā), energy (vīrya), mindfulness (smṛti), concentration (samādhi), and wisdom (prajñā), and the three immaculate faculties of (1) anājñātam ājñāsyāmī ’ndriyam (“the faculty of resolving to understand that which is yet to be understood”), (2) ājñātendriya (“the faculty of having understood”), and (3) ājñātāvīndriya (“the faculty of perfecting one’s understanding”)—which are the predominant factors regarding purification ([VIŚUDDHI](#)); this is because the five moral faculties are the predominant factors that purify beings of their bondage to worldly objects and offer access to [NIRVĀNA](#), and the three immaculate faculties are the predominant factors in the origin, duration, and enjoyment of nirvāṇa. ¶ Indriya is also used to refer to “three capacities” (see [TRĪNDRIYA](#)) of the disciples of the Buddha or of a particular teaching, based on their level of aptitude or capacity for understanding: viz., those of dull faculties ([MRDVINDRIYA](#)), those of intermediate faculties ([MADHYENDRIYA](#)), and those of sharp faculties ([TIKSNENDRIYA](#)).

[indriyasamvara](#). (T. dbang po sdom pa; C. genlüyi; J. konritsugi; K. kūnyurüi 根律儀). In Sanskrit and Pāli, “sensory restraint,” or “guarding the sense organs”; an important factor in the development of mindfulness ([SMṚTI](#), P. [SATI](#)) and

eventually concentration ([SAMĀDHI](#)), in which the meditator trains to see things as they actually are, rather than only in terms of oneself—i.e., as things we like, dislike, or are indifferent toward. In addition to its role in formal meditative training, *indriyasamvara* should also be maintained throughout the ordinary activities of everyday life, in order to control the inveterate tendency toward craving. Maintaining sensory restraint helps the meditator to control one’s reaction to the generic signs ([NIMITTA](#)) or secondary characteristics ([ANUVYAÑJANA](#)) of an object; instead, one halts the perceptual process at the level of simple recognition, simply noting what is seen, heard, *etc.* By not seizing on these signs and characteristics, perception is maintained at a level prior to an object’s conceptualization and the resulting proliferation of concepts ([PRAPAÑCA](#)) throughout the full range of one’s sensory experience. As the frequent refrain in the *sūtras* states, “In the seen, there is only the seen,” and not the superimpositions created by the intrusion of ego ([ĀTMAN](#)) into the perceptual process. Mastery of this technique of sensory restraint provides access to the signless ([ANIMITTA](#)) gate to deliverance ([VIMOKSAMUKHA](#)).

Inhŭi chŏn. (K) (仁熙殿). See [WANGNYUNSA](#).

in’in ekishi. (因院易師). In Japanese, “changing teachers in accordance with the temple.” Since the fifteenth century, members of the [SŌTŌSHŪ](#) of the [ZEN](#) tradition have participated in the practice of taking the lineage of the monastery where one was appointed abbot, even if that lineage was different from one’s own. The practice of inheriting the temple’s lineage was known as the “temple dharma lineage” ([GARANBŌ](#)), and the practice of switching lineages was called *in’in ekishi*. Basing his claims on the teachings found in the [SHŌBŌGENZŌ](#), the Sōtō Zen master [MANZAN DŌHAKU](#) attempted to reform this practice by asserting the importance of the direct, face-to-face transmission (*menju shihō*) from one master to his disciple (*isshi inshō*). In 1700, he made a request to the Agency of Temples and Shrine (*jisha bugyō*) to intervene in the *garanbō* system. Despite fierce opposition from such figures as [TENKEI DENSON](#) (1646–1735), the Tokugawa government banned the practice in 1703.

initiation. See [ABHISEKA](#).

inka. (印可). In Japanese, “certification.” See [YINKE](#).

insight meditation. See [VIPASSANĀ](#); [VIPAŚYANĀ](#).

Inwa. (Burmese). See [AVA](#).

ip’ansŭng. (理判僧). In Korean, “practice monk,” monks who engaged in meditation, scriptural study, and chanting; one of the two general types of Korean monastic vocations, along with [SAP’ANSŬNG](#), administrative monks, who were responsible for the administrative and financial affairs of the monastery. Ip’ansŭng traditionally enjoyed higher standing within the monastery than the administrative monks, and the meditation monks had generally more status than doctrinal specialists. During the post-1945 “Purification Movement” (Chŏnghwa undong) within the Korean [SAMGHA](#), the celibate monks called themselves ip’ansung, while pejoratively referring to married monks as sap’ansung.

Ippen. (一遍) (1239–1289). Japanese itinerant holy man ([HIJIRI](#)) and reputed founder of the [JISHU](#) school of the Japanese [PURE LAND](#) tradition. Due perhaps to his own antinomian proclivities, Ippen’s life remains a mixture of history and legend. Ippen was a native of Iyo in Shikoku. In 1249, after his mother’s death, Ippen became a monk at the urging of his father, a Buddhist monk, and was given the name Zuien. In 1251, Ippen traveled to Dazaifu in northern Kyūshū, where he studied under the monk Shōdatsu (d.u.). In 1263, having learned of his father’s death, Ippen returned to Iyo and briefly married. In 1271, Ippen visited Shōdatsu once more and made a pilgrimage to the monastery of [ZENKŌJI](#) in Shinano to see its famous Amida ([AMITĀBHA](#)) triad. His visit to Zenkōji is said to have inspired Ippen to go on retreat, spending half a year in a hut that he built in his hometown of Iyo. The site of his retreat, Sugō, was widely known as a sacred place of practice for mountain ascetics ([YAMABUSHI](#)). In 1272, Ippen set out for the monastery of [SHITENNŌJI](#) in Ōsaka, where he is said to have received the ten precepts. At this time, Ippen also developed the eponymous practice known as ippen nenbutsu (one-time invocation of the name [see [NIANFO](#)] of the buddha Amitābha), which largely consists of the uttering the phrase [NAMU AMIDABUTSU](#) as if this one moment were the time of one’s death. Ippen widely propagated this teaching wherever he went, and, to those who complied, he offered an amulet (fusan), which he said would assure rebirth in Amitābha’s pure land. From Shitennōji, Ippen made a pilgrimage to [KŌYASAN](#) and a shrine at [KUMANO](#), where he is said to have had a revelation from a local manifestation of Amitābha. Ippen then began the life of an itinerant preacher, in the process acquiring a large following now known as the Jishū. In 1279, Ippen began performing nenbutsu while dancing with drums and bells, a practice known as odori nenbutsu and

developed first by the monk [KŪYA](#). Ippen continued to wander through the country, spreading his teaching until his death. A famous set of twelve narrative hand scrolls known as the *Ippen hijiri e* (“The Illustrated Biography of the Holy Man Ippen”) is an important source for the study of Ippen’s life. Currently designated a Japanese national treasure (kokuhō), the *Ippen hijiri e* was completed in 1299 on the tenth anniversary of Ippen’s death. See also [ICHINENGI](#).

[īrsyā](#). (P. issā; T. phrag dog; C. ji; J. shitsu; K. chil 嫉). In Sanskrit, “envy” or “jealousy,” one of the forty-six mental concomitants ([CAITTA](#)) according to the [SARVĀSTIVĀDA](#) school of [ABHIDHARMA](#), one of the fifty-one according to the [YOGĀCĀRA](#) school and one of fifty-two according to the Pāli abhidhamma. Envy is the unwholesome displeasure one experiences when witnessing others’ virtues, gains, and rewards, or simply general well-being, and is the opposite of the salutary mental state of sympathetic joy ([MUDITĀ](#)), which is one of the four [BRAHMAVIHĀRAS](#). “Envy” is also taken to be one of the possible derivative emotions of “aversion” ([DVESA](#)) and cannot exist independent of that latter mental state.

[irwōnsang](#). (一圓相). In Korean, “one-circle symbol”; the central doctrinal concept and object of religious devotion in the modern Korean religion of [WŎNBULGYO](#), considered to be functionally equivalent to the notion of the [DHARMAKĀYA](#) buddha (pōpsinbul) in mainstream [MAHĀYĀNA](#) Buddhism. The founder of Wōnbulgyo, [PAK CHUNGBIN](#) (later known by his sobriquet [SOT’AESAN](#)), believed that worshipping buddha images, as symbols of the physical body of the buddha, no longer inspired faith in Buddhist adherents and was thus a hindrance to religious propagation in the modern age; he instead instructed Wōnbulgyo dharma halls to enshrine on their altars just the simple circle that is the irwōnsang. This irwōnsang was the “symbol” (sang) of the ineffable reality of the “unitary circle” (irwōn). In Sot’aesan’s view, different religions may have various designations for ultimate truth, but all of their designations ultimately refer to the perfect unity that is the irwōn. Sot’aesan described the irwōn as the mind-seal of all the buddhas and sages, the original nature of all sentient beings, and the ineffable realm of [SAMĀDHI](#) that transcends birth and death; but it simultaneously also served as the monistic source from which the phenomenal world in all its diversity arises. By understanding this irwōn through tracing the radiance of the mind back to its fundamental source (K. hoegwang panjo; see [HUIGUANG FANZHAO](#)),

Wōnbulgyo adherents seek to recognize the fundamental nonduality of, and unity between, all things in existence and thus master the ability to act with utter impartiality and selflessness in all their interactions with the world and society.

īryāpatha. (P. iriyāpatha; T. spyod lam; C. weiyi; J. igi; K. wiŭi 威儀). In Sanskrit, lit. “movement,” referring specifically to a set of four “postures,” “deportments,” or modes of physical activity, in progressive order of ease: walking ([CAṆKRAMA](#) [alt. gamana]; P. caram), standing (sthāna; P. ṭhāna, tiṭṭham), sitting (niṣaṇṇa; P. nisinna), and lying down (śaya/śayana; P. sayam/sayāna). Because the body was presumed typically to be always in one or another of these postures, they constituted specific objects of mindfulness of the body ([KĀYĀNUPAŚYANĀ](#); P. kāyānupassanā; see also [SMṚTYUPASTHĀNA](#)) and there are accounts of monks attaining the rank of [ARHAT](#) in each of the four postures. The īryāpatha figure prominently in [ĀNANDA](#)’s enlightenment experience. After striving in vain all night to perfect his practice before the start of the first Buddhist council (see [COUNCIL, FIRST](#)), where the canon was to be redacted, Ānanda had given up, only to become enlightened as he was in the process of lying down to rest—and thus technically *between* postures. ¶ The term īryāpatha can refer in other contexts to general behavior or “deportment” (but typically to religiously salutary deportment) or to a specific “course” of religious and/or ascetic practice.

Iryōn. (一然) (1206–1289). Korean monk-literatus during the Koryō dynasty, known as the author of the [SAMGUK YUSA](#) (“Memorabilia of the Three Kingdoms”), the source for much of the lore concerning the incipency and early development of Buddhism in Korea. Iryōn was born in [KYŎNGJU](#), the ancient capital of the Silla dynasty, became a monk while still a child, and passed the monk’s examination ([SŬNGKWA](#)) in the [SŎN](#) school at the age of twenty-two. Iryōn became a well-known literatus of both Buddhist and Confucian literature and was close to the royal family of the Koryō dynasty, including King Ch’ungnyōl (r. 1236–1308), who visited Iryōn at [KWANGMYŎNGSA](#) in 1282. The *Samguk yusa* was written ca. 1282–1289, during the period of Mongol suzerainty over Korea, which began in 1259. In his miscellany, Iryōn includes a variety of hagiographies of eminent monks in the early Korean Buddhist tradition, often drawing from local accounts of conduct (haengjang), rather than official biographies, and reams of material on early Korean Buddhist miracles and anomalies drawn from regional lore. In its emphasis on local narrative,

where Buddhism dominated, over official discourse, Iryōn's *Samguk yusa* contrasts with Kim Pusik's (1075–1151) earlier *Samguk sagi* ("Historical Records of the Three Kingdoms"), which included little information on Buddhism. Iryōn's funerary inscription refers to seven other works written by him, in over one hundred rolls; interestingly, however, the *Samguk yusa* is not included in that list, suggesting that it may have been published posthumously, perhaps sometime around 1310. The only other extant work of Iryōn's besides the *Samguk yusa* is his *Chungp'yōn Ch'odong owi* ("Five Ranks of the Caodong School, Revised"), in two (alt. three) rolls. No longer extant are his *Ŏrok* ("Discourse Record"; two rolls), *Kesong chapchō* ("Miscellany of Gāthās and Verses"; three rolls), and his massive *Sōnmun yōmsong sawōn* ("Chrestomathy of Selected Verses of the Sōn school"), in thirty rolls.

Ishin Sūden. (以心崇傳) (1569–1633). Japanese [ZEN](#) master in the [RINZAISHŪ](#). Sūden was born in Kii (present-day Wakayama prefecture) and, while still a youth, left home to become a monk at the Zen monastery of [NANZENJI](#). In 1608, he was appointed the scribe of the new shōgun Tokugawa Ieyasu (1543–1616). Sūden was put in charge of foreign correspondence and was also given the important title of sōroku, or registrar general of monks. As sōroku, Sūden established the *hatto* ("laws") for temples and monasteries and put them under the direct control of the bakufu government. Sūden thus came to be known as the *kokui no saishō*, or "black-robed minister." With the assistance of the bakufu, Sūden also restored Nanzenji to its former glory. *Konchi'in*, the name of Sūden's residences at both Nanzenji and Edo, came to be synonymous with Sūden and his policies. After Ieyasu's death, Sūden continued to assist the second shōgun Tokugawa Hidetada (1579–1632) in political and religious affairs. In 1626, Sūden was given the honorary title *Enshō Honkō kokushi* (State Preceptor Perfectly Illuminating, Original Radiance) from Emperor Gomizunoo (r. 1611–1629). His diary, the *Honkō kokushi nikki*, is a valuable source for studying the sociopolitical history of the early Tokugawa bakufu. Sūden also left a collection of poems known as the *Kanrin gohōshū*.

itivr̥ttaka. (P. *itivuttaka*; T. *de lta bu byung ba*). In Sanskrit, "fables"; one of the nine ([NAVANĠA](#)) (Pāli) or twelve ([DVĀDAŚĀNĠA|PRAVACANA|](#)) (Sanskrit) categories ([ANĠA](#)) of Buddhist scripture according to their structure or literary style. See also [ITIVUTTAKA](#).

Itivuttaka. In Pāli, lit., "This Was Said"; fourth of the fifteen books contained in

the [KHUDDAKANIKĀYA](#) of the Pāli [SUTTAPIṬAKA](#). The collection is comprised of 110 suttas, each prefaced with the words vuttaṃ hetamaṃ Bhagavatā (“This was said by the Blessed One”), rather than the more typical evamaṃ me sutamaṃ (“thus have I heard”; see [EVAM MAYĀ ŚRUTAM](#)). The suttas were preached to the slave woman Khujjutarā, who, to indicate that these were the Buddha’s words and not her own, introduced the suttas in this way when repeating them to her mistress.

J

Jagaddala. An important Buddhist monastery located in Naogaon district in modern Bangladesh. It was founded on the banks of the [GAṄGĀNADĪ](#) and Karatoya River in northern Bengal by King Rāmapāla (1077–1120). Reports from the early thirteenth century indicate that the monastery continued to flourish after the destruction of [ODANTAPURĪ](#) and [VIKRAMAŚĪLA](#), serving as a refuge for such renowned Vikramaśīla scholars as [ABHAYĀKARAGUPTA](#) and Śubhākaragupta. Vidyākara, the author of the *Subhāṣitaratnakośa*, a famous anthology of aphorisms, served as abbot of Jagaddala.

Jaina. In Sanskrit, lit., “followers of The Victor [[JINA](#)]”; one of the major early sects of Indian wandering religious ([ŚRAMANA](#)), a movement in the fifth-century BCE that included Buddhism among its groups. One of the founders of Jainism, [NIRGRANTHA-JÑĀTĪPUTRA](#) (P. Nigaṅṭha Nātaputta), who is also known by his title of [MAHĀVĪRA](#) (Great Victor) (d. c. 488 BCE), was a contemporary of the Buddha and figures prominently in Buddhist literature. The Buddhists classified the Jainas among the [TĪRTHIKA](#) groups, the adherents of non-Buddhist religions who are sometimes mistranslated as “heretics.” The Jainas were the śramaṇa group closest to Buddhism in its beliefs and practices, and the Buddha often used their teachings as a foil in order to present his own interpretations of important religious principles. Mahāvīra claimed to have achieved enlightenment and become one in a long line of jinas (“victors,” e.g., over ignorance) or tīrthaṃkaras (“ford-makers”) going back through twenty-four generations to Pārśva; this notion of an enlightened lineage of spiritual leaders is found also in Buddhism’s doctrine that the Buddha was the latest in a series of previous buddhas (see [SAPTATATHĀGATA](#)). The Jainas believed in a theory of [KARMAN](#), as did the Buddhists, but treated karman as a physical substance created through previous unwholesome actions, which constrained the soul and hindered its ability to rise above the physical world to the highest sphere of being; although the Buddhists accepted the notion of moral causality, as did the Jainas, they redefined karman instead as mental intention ([CETANĀ](#)). In order to free the soul from the bonds created through past actions, the Jainas held that the body had

therefore to be rigorously cleansed of this karmic substance. The foundation of this cleansing process was the five great vows, the basic Jaina code of moral discipline, which parallel the Buddhist five precepts ([PAÑCAŚĪLA](#)). The Jainas also practiced more severe austerities than did the Buddhists, including a stricture requiring “non-harming” ([AHIMSĀ](#)) of living creatures, rather than Buddhism’s somewhat more lenient prohibition against “killing” living creatures. The Jainas also demanded strict vegetarianism from their followers in order to avoid injuring sentient creatures, a requirement that the Buddha rejected when his rival in the order, [DEVADATTA](#), proposed it in his list of austerities (see [DHUTAṄGA](#)). The Buddha’s view was that monks were a “field of merit” ([PUNYAKSETRA](#)) for the laity and it was be inappropriate to refuse offerings of meat made to them, except in a very limited number of specific situations (such as if the monk, for example, knew that the animal had been killed specifically to feed him). The vegetarianism that is now prevalent in both [MAHĀYĀNA](#) Buddhism and wider Indian Hindu culture is almost certainly a result of Jaina influence and constitutes that religion’s most enduring contribution to Indian religion. One branch of the Jainas, the Digambara (lit. “Sky Clad”), took the prohibition against material possessions so strictly that their male adherents were forbidden from even wearing clothing; hence, the Jainas are often referred to in translations of Pāli materials as “naked ascetics.” The Jainas were the only one of the six major śramaṇa traditions to survive into the present day on the Indian subcontinent, until Buddhism was reintroduced in the twentieth century by [B. R. AMBEDKAR](#) (1891–1956). In Buddhist texts, the Jainas are most commonly referred to as [NIRGRANTHA](#), literally “freed from all ties.”

[jakugo](#). (C. zhuoyu/zhuyu; K. ch’agŏ 著語). In Japanese, “annotation,” “attached word,” or “capping phrase.” Such “annotations” abound in several early Chinese collections of [CHAN](#) “cases,” or [GONG’AN](#) (J. kōan), but they are most emblematic of the approach to kōan training taught in the Japanese [RINZAISHŪ](#) of [ZEN](#). The use of capping phrases in Japan is largely due to the influence of [SŌHŌ MYŌCHŌ](#) (1282–1337), who introduced them in his interpretations of kōans. “Capping phrases” are brief phrases that are intended to offer a comment upon a specific Zen case, or kōan, to express one’s own enlightened understanding, or to catalyze insight in another. These phrases were originally composed in literary Chinese and are taken as often from secular Chinese literature as they are from the Zen tradition’s own stories. These phrases range from as few as one word (e.g., Right!, Finished!) to parallel eight-character phrases (“But for the rule and

the compass, the square and the round could not be determined,/ But for the plumb-line, the straight and the crooked could not be rectified”), but they are rarely more than twenty-five Sinographs in total. In the Japanese Rinzai system of kōan meditative training, a student would demonstrate his understanding of the significance of a kōan by submitting to the teacher an (or even the) appropriate jakugo, often taken from such traditional anthologies of these phrases as the seventeenth-century [ZENRIN KUSHŪ](#) (“An Anthology of Phrases from the Zen Grove”). Once the student’s understanding of a specific kōan was “passed” by the Zen master, the student would then continue on through a whole sequence of other kōans, each answered in turn by another jakugo. See also [KIRIKAMI](#).

Jakushitsu Genkō. (C. Jishi Yuanguang 寂室元光) (1290–1367). Japanese [ZEN](#) monk in the [RINZAISHŪ](#) and founder of the Eigenji branch of the school. After entering the monastery at the age of thirteen, Jakushitsu studied under several Zen masters, including Yakuō Tokken (1244–1320) of [ZENKŌJI](#) in Kamakura, who administered to him the complete monastic precepts (gusokukai) of a [BHIKSU](#), and Yishan Yining (J. Issan Ichinei; 1247–1317) of [NANZENJI](#) in Kyōto, a Chinese [LINJI ZONG](#) monk who was active in Japan. Jakushitsu traveled to Yuan China in 1320 together with another Rinzai monk named Kaō Sōnen (d.1345). There, he studied with such eminent Linji Chan masters as [ZHONGFENG MINGBEN](#) (1263–1323), who gave him the cognomen Jishi (J. Jakushitsu), and Yuansou Xingduan (1255–1341). After returning to Japan in 1326, Jakushitsu spent the next twenty-five years traveling around the country as an itinerant monk, until 1362, when he assumed the abbacy of Eigenji, a monastery built for him by Sasaki Ujiyori (1326–1370) in Ōmi no kuni (present-day Shiga prefecture). The emperor subsequently invited him to stay at Tenryūji in Kyōto and [KENCHŌJI](#) in Kamakura, but he refused, choosing to remain at Eigenji for the remainder of his life. Jakushitsu is well known for his flute playing and his refined Zen poetry, which is considered some of the finest examples of the genre. He was given the posthumous title Ennō Zenji (Zen Master Consummate Response).

Jālandhara. (S). One of the twenty-four sacred sites associated with the [CAKRASAMVARATANTRA](#). See [PĪTHA](#).

Jāliyasutta. In Pāli, “Jāliya’s Sermon”; the seventh sutta of the [DĪGHANIKĀYA](#) (there is no equivalent recension in the Chinese translation of the [ĀGAMAS](#)); preached by the Buddha to the mendicant (paribbājaka) Jāliya and his

companion Maṇḍissa at the Ghositārāma monastery in Kosambī. The sermon is a disquisition on the virtues of leading the life of a mendicant and was given in response to a metaphysical question posed by Jāliya as to whether the soul and the body are one or different. The whole of this sermon is also subsumed within the *Mahālisutta* (the sixth sutta of the *Dīghanikāya*). The Buddha explains the benefits of Buddhist practice and the attainments beginning with taking refuge in the three jewels (P. *ratanattaya*; S. [RATNATRAYA](#)) of the Buddha, the [DHARMA](#), and the [SAMGHA](#), observing the precepts, renouncing the world to become a Buddhist monk, and controlling the senses with mindfulness (P. *sati*; S. [SMRTI](#)), to cultivating the four meditative absorptions (P. [JHĀNA](#); S. [DHYĀNA](#)), and developing the six higher knowledges or supranormal powers (P. *abhiññā*; S. [ABHIJÑĀ](#)). These include the following: (1) various magical powers (P. *iddhividhābhiññāna*; S. [RDDHIVIDHĀBHIJÑĀ](#)) such as the ability to pass through walls, (2) the divine ear (P. *dibbasota*; S. [DIVYAŚROTRA](#)), (3) the ability to know the minds of others (P. *cetopariyañāṇa/ paracittavijānanā*; S. *cetoparyāyābhiññāna/ PARACITTAJÑĀNA*), (4) the divine eye (P. *dibbacakkhu*; S. [DIVYACAKSUS](#)), (5) the recollection of former existences (P. *pubbenivāsānussati*; S. [PŪRVANIVĀSĀNUSMRTI](#)), and finally (6) the extinction of the contaminants (P. *āsavakkhaya*; S. [ĀSRAVAKSAYA](#)), which is equivalent to arahantship (see S. [ARHAT](#)) and liberation from the cycle of rebirth.

'ja' lus. (*jalu*). In Tibetan, “rainbow body.” In both Tibetan Buddhism and Bon, particularly in explanations of [RDZOGS CHEN](#), the physical body dissolves into light when the adept reaches the final goal (often attained through a practice called [THOD RGAL](#)). This dissolution may be in the form of a miraculous disappearance while meditating, but is more usually associated with the time of the adept’s death. The elements of the material body that remain at death depend upon the spiritual level of the deceased adept; the very highest leave no physical remnant at all, or in some explanations just hair and nails, and disappear with just a rainbow left behind. The colors in the rainbow body are sometimes associated with the transformation of the five aggregates ([SKANDHA](#)) into the colors of the five buddhas ([PAÑCATATHĀGATA](#)).

Jambhala. [alt. *Jambhāla*; *Jambhīra*] (T. *Dzambala*, *Rmug 'dzin*). In Sanskrit, a [YAKSA](#) god of wealth; the Buddhist parallel to [KUBERA](#), often equivalent to [VAISRAVANA](#). In his various forms, he always holds in his left hand a mongoose with a jewel in its mouth. His śakti is *Vasudharā*. Statues of Jambhala have been

found in Sri Lanka; he was also a popular figure in the Javanese Buddhist pantheon and is common in Tibet.

Jambudvīpa. (P. Jambudīpa; T. 'Dzam bu gling; C. Yanfuti; J. Enbudai; K. Yōmbuje 閻浮提). In Sanskrit, “The Rose-Apple Continent”; corresponding to India. Jambudvīpa is the southernmost of the four continents where human beings reside in this world, along with [VIDEHA](#) (to the east of the world’s axis mundi, [MT. SUMERU](#)), [GODĀNĪYA](#) (to the west), and [UTTARAKURU](#) (to the north). (Alternatively, Jambudvīpa is also said to be the central of seven continents that surround Mt. Sumeru.) At the center of Jambudvīpa is found the [VAJRĀSANA](#) (“diamond seat”), the spot where the buddhas realize their enlightenment; hence, Jambudvīpa is always the continent where buddhas spend their final lifetimes establishing their dispensations and is therefore the most auspicious site for beings to take rebirth. Also unique in this world, Jambudvīpa is ruled by a wheel-turning monarch ([CAKRAVARTIN](#)), the only continent that is so governed. Jambudvīpa is so named either because of the large number of rose-apple trees that grow there, or because of a large rose-apple tree at the top of Mt. Sumeru that is visible from there. It is shaped like a triangular cart, and has two subcontinents, cāmara and aparacāmara. On its eastern side are ten mountain ranges, the last and highest of which is the Himavanta (the Himālayas). From its deep lake Anavatapta flow its four major rivers: the [GAṄĀNADĪ](#) (the Ganges), Sindhu, Vakṣu, and Sītā. The life span of human beings in Jambudvīpa drops as low as ten years at the end of a [KALPA](#), increasing to incalculable years at the beginning of the eon (prāthamakalpika). The system of hells (see [NĀRAKA](#)) is located beneath Jambudvīpa.

Jambupati. In Pāli, lit. “Lord of the Rose Apple”; a type of buddha image found most commonly in the art of Burma (Myanmar) and its Shan state, in which the Buddha is adorned in the royal attire of a “wheel-turning monarch” ([CAKRAVARTIN](#)), wearing a magnificent crown and jewels, and seated on a throne. This image derives from a Southeast Asian Buddhist legend (which is apparently unknown in India) about an arrogant king named Jambupati, who terrorized his people. In order to convince him to repent of his unwholesome actions and practice compassion toward his subjects, the Buddha had himself adorned with full royal regalia and seated in a magnificent palace; when Jambupati was brought before the crowned Buddha, he was so humbled by the Buddha’s majesty that he repented of his arrogance and took the five precepts ([PAÑCAŚĪLA](#))

of a Buddhist layman ([UPĀSAKA](#)). In this royal form, the Buddha's [USNĪṢA](#) is often extended into a pronounced spire, perhaps suggesting the form of a [STŪPA](#). Jambupati Buddha images are most commonly seated in the “earth-touching gesture” ([BHŪMISPARŚAMUDRĀ](#)), although sometimes standing images are also found. The famous [ARAKAN BUDDHA](#), viz., the Mahāmuni image in Arakan (present-day Mandalay), is now crowned in the Jambupati style.

[’Jam dbyangs bzhad pa](#). (Jamyang Shepa). The name of a line of [SPRUL SKU](#) (incarnations) that are the head lamas of [BLA BRANG BKRA SHIS DKYIL](#) monastery in A mdo in northeastern Tibet, now part of the Chinese province of Gansu. The first, [’JAM DBYANGS BZHAD PA’I RDO RJE NGAG DBANG BRTSON ’GRUS](#), founded Bla brang; the second, Dkon mchog ’jig med dbang po (Könchok Jigme Wangpo, 1728–1791), was a prolific scholar and writer. There have been a total of six incarnations.

[’Jam dbyangs bzhad pa’i rdo rje Ngag dbang brtson ’grus](#). (Jamyang Shepe Dorje Ngawang Tsondrü) (1648–1722). The originator, and first in the line of [’JAM DBYANGS BZHAD PA SPRUL SKU](#) (incarnations) that are the head lamas of [BLA BRANG BKRA SHIS DKYIL](#) monastery in A mdo, northeastern Tibet, now part of Gansu province in northwest China. He arrived in [LHA SA](#) in 1668 and entered Sgo mang grwa tshang (monastic college) of [’BRAS SPUNGS](#) monastery. He received both his [ŚRĀMANERA](#) and [BHIKSU](#) ordinations from the fifth [DALAI LAMA](#). In 1676, he entered the tantric college of [RGYUD SMAD](#). A prolific writer, his collected works (gsung ’bum) in fifteen volumes include commentaries on the [GUHYASAMĀJATANTRA](#) and [VAJRABHAIRAVATANTRA](#), and long and detailed commentaries on [ABHIDHARMA](#), [PRAJÑĀPĀRAMITĀ](#), [VINAYA](#), and a range of issues in [MADHYAMAKA](#) and [YOGĀCĀRA](#) philosophy; these works replaced those of Gung ru Chos kyi ’byung gnas as the authoritative standard works (yig cha) studied in the Sgo mang college of ’Bras spungs monastery, and in the network of provincial monasteries associated with it. Among his most famous works is his doxography of the Indian philosophical schools, both Buddhist and non-Buddhist, known as *Grub mtha’ chen mo*. In the political turmoil that followed the death of the fifth [DALAI LAMA](#) in 1682 and the rule of [SDE SRID SANGS RGYAS RGYA MTSHO](#) in his name, ’Jam dbyangs bzhad pa was appointed abbot of Sgo mang in 1700. However, he came into conflict with the Sde srid over the latter’s attempt to force a change in the monastic curriculum at ’Bras spungs, stepping down from the abbacy. He developed a friendship with Lha bzang Khan, the

military ruler of central Tibet, accepting from him the hermitage of Pha bong kha located above [SE RA](#) monastery. He apparently sought to pacify the strained relations between the Sde srid and the Lha bzang Khan, but after the execution of the Sde srid by Mongolian forces in 1705, he left central Tibet for A mdo in 1709 where he founded Bla brang bkra shis dkyil. It grew into a huge monastery and a center of scholarship in its own right. The monastery attracted many Mongolian students and its influence was instrumental in consolidating the power of the [DGE LUGS](#) sect and the new [DGA' LDAN PHO BRANG](#) government over the A mdo regions.

['Jam dbyangs chos rje Bkra shis dpal ldan](#). (Jamyang Chöje Tashi Palden) (1379–1449). An important figure in the early history of the [DGE LUGS](#) sect. After studying at [GSANG PHU](#) and [BSAM YAS](#) monasteries, he became a follower of [TSONG KHA PA](#) and in 1414 founded ['BRAS SPUNGS](#), eventually the largest monastery in Tibet. Little is known about him, but his views came to be considered controversial and his writings were eventually lost to posterity. After the death of [RGYAL TSHAB DAR MA RIN CHEN](#) he was passed over as [DGA' LDAN KHRI PA](#) in favor of [MKHAS GRUB DGE LEGS DPAL BZANG](#).

['Jam dbyangs mkhyen brtse Chos kyi blo gros](#). (Jamyang Khyentse Chökyi Lodrö) (1893–1959). A Tibetan visionary closely associated with what is known as the [RIS MED](#) or nonsectarian movement, in eastern Tibet. He is sometimes known as Rdzong gsar mkhyen brtse (Dzongsar Khyentse) due to his affiliation with [RDZONG GSAR](#) monastery in Khams, eastern Tibet. He was recognized by ['JAM MGON KONG SPRUL](#) as one of five reincarnations of ['JAM DBYANGS MKHYEN BRTSE DBANG PO](#). At [KAH THOG](#) monastery, he studied both the treasure texts ([GTER MA](#)) discovered by his previous incarnation as well as the curriculum of Indian texts. At the age of fifteen, he was appointed abbot of Rdzongs gsar. This remained his base for much of his life, but he traveled widely, receiving instruction from [BKA' RGYUD](#), [SA SKYA](#), and [RNYING MA](#) teachers. At the age of fifty-six, he married and went into retreat in a hermitage above Rdzongs gsar but also continued to give teachings. In 1955, he made a final pilgrimage to the sacred sites of Tibet and then went to Sikkim, where he died in 1959. Over the course of his life, he served as a teacher to many of the twentieth century's greatest Tibetan Buddhist masters.

['Jam dbyangs mkhyen brtse dbang po](#). (Jamyang Khyentse Wangpo) (1820–1892). A celebrated Tibetan Buddhist luminary, considered to be the last of the

“five kingly treasure revealers” ([GTER STON RGYAL PO LNGA](#)). Together with [’JAM MGON KONG SPRUL BLO GROS MTHA’ YAS](#) and [MCHOG ’GYUR GLING PA](#), he was a leading figure in the [RIS MED](#) or nonsectarian movement in eastern Tibet. He was identified at age twelve as the incarnation ([SPRUL SKU](#)) of a prominent [SA SKYA](#) lama. Later in life, he would be recognized as the mind incarnation (thugs sprul) of the acclaimed eighteenth-century treasure revealer ([GTER STON](#)) [’JIGS MED GLING PA](#). He was a prolific author, collecting numerous “path and result” ([LAM ’BRAS](#)) teachings and discovering many important treasure texts. In addition to his editions of other works, his own collected works encompass twenty-four volumes. Among his best known works is a pilgrimage guide to central Tibet. ’Jam dbyangs mkhyen brtse dbang po taught extensively, primarily from his seat at [RDZONG GSAR](#) monastery in Khams, attracting numerous students and gaining patronage from the region’s most influential families; he served as chaplain at the Sde sge court. After his death, five “mkhyen brtse” (Khyentse) incarnations were recognized, including [’JAM DBYANGS MKHYEN BRTSE CHOS KYI BLO GROS](#) and [DIL MGO MKHYEN BRTSE](#).

[’Jam mgon kong sprul Blo gros mtha’ yas](#). (Jamgon Kongtrül Lodrö Thaye) (1813–1899). A renowned Tibetan Buddhist master, prolific scholar, and proponent of the [RIS MED](#) or nonsectarian movement, of eastern Tibet. He is often known as ’Jam mgon kong sprul (Jamgon Kongrtul) or simply Kong sprul. Born to a [BON](#) family in the eastern Tibetan region of Rong rgyab (Rongyap), ’Jam mgon kong sprul studied Bon doctrine as a youth, eventually receiving Buddhist ordination first in the [RNYING MA](#) and then the [BKA’ BRGYUD](#) sects of Tibetan Buddhism. He was a gifted pupil, studying under at least sixty different masters representing all the various sects and lineages of Tibet. Early experiences with the sectarianism and religious intolerance rampant in many Buddhist institutions of his time left him somewhat disaffected and were to have a profound impact on his later career. He resided at [DPAL SPUNGS](#) monastery near Derge, where his reputation as a brilliant scholar spread widely. When Kong sprul was in danger of being drafted into the provincial administrative offices, the ninth [TAI SI TU](#), Padma nyin byed (Pema Nyinje, 1774–1853), abbot of Dpal spungs, recognized him as the reincarnation of the former Si tu’s servant, thereby exempting him from government service. In his autobiography, Kong sprul himself appears to have looked upon this event with some dismay. Together with other luminaries of the period such as [’JAM DBYANG MKHYEN RTSE DBANG PO](#), [MCHOG ’GYUR GLING PA](#), and [MI PHAM RGYA MTSHO](#), Kong sprul strove to collect, compile, and

transmit a multitude of teachings and instruction lineages that were in danger of being lost. The impartial (*ris med*) approach with which he undertook this project has led him to be credited with spearheading a “nonsectarian” or “eclectic” movement in eastern Tibet. He was a proponent of the “other emptiness” ([GZHAN STONG](#)) view, which gained new impetus when his associate Blo gsal bstan skyong was able to arrange for the printing of the woodblocks preserved at [TĀRANĀTHA](#)’s former seat at [DGA’ LDAN PHUN TSHOGS GLING](#), works that had been banned since the time of the fifth [DALAI LAMA](#). ’Jam mgon kong sprul was a prolific author whose writings fill more than ninety volumes. These works are divided into the so-called [KONG SPRUL MDZOD LNGA](#) (Five Treasuries of Kongtrul), which cover the breadth of Tibetan Buddhist culture. Since the death of Blo gros mtha’ yas, a line of Kong sprul incarnations has been recognized and continues to play an important role within the [KARMA BKA’ BRGYUD](#) sect. The lineage is:

1. Kong sprul Blo gros mtha’ yas (Kongtrül Lodrö Thaye, 1813–1899)
2. Kong sprul Mkhyen brtse ’od zer (Kongtrül Khyentse Öser, 1904–1953)
3. Kong sprul Blo gros chos kyi seng ge (Kongtrül Lodrö Chökyi Senge, 1954–1992)
4. Kong sprul Blo gros chos kyi nyi ma (Kongtrül Lodrö Chökyi Nyima, b. 1995)

[Janapadakalyāṇī Nandā](#). (S. Janapandakalyāṇī Rūpanandā; T. Yul gyi bzang mo dga’ mo). In Pāli, “Nandā, the Prettiest in the Land”; one of three prominent nuns named Nandā mentioned in the Pāli canon (the others being [ABHIRŪPĀ NANDĀ](#) and [SUNDARĪ NANDĀ](#)), all of whom share similar stories. According to Pāli sources, Janapadakalyāṇī Nandā was a Sākiyan (S. [ŚĀKYA](#)) woman of great beauty, who was betrothed to the Buddha’s half-brother [NANDA](#). On their wedding day, the Buddha visited her fiancé Nanda’s palace in Kapilavasthu (S. [KAPILAVASTU](#)) and extended his felicitations. He caused Nanda to accompany him on his return to the monastery where he was staying and there asked Nanda to enter the order; Nanda reluctantly assented, but only after the Buddha used his supernatural powers to show him his prospects for enjoying heavenly maidens far more beautiful than his betrothed if he practiced well. Later, Nanda became an arahant (S. [ARHAT](#)). Janapadakalyāṇī was overcome with grief at Nanda’s ordination. Since she felt she had nothing else to live for, as soon as women were allowed to enter the order, she decided to become a nun under the leadership of Mahāpajāpatī (S. [MAHĀPRAJĀPATĪ](#)). Still attached to her own loveliness, for a long time Janapadakalyāṇī refused to visit the Buddha for fear

that he would speak disparagingly of physical beauty. When finally one day she went together with her companions to hear the Buddha preach, the Buddha, knowing her state of mind, created an apparition of an extraordinarily beautiful woman fanning him. Janapadakalyāṇī was transfixed by the beauty of the maiden, whom the Buddha then caused to age, die, and decompose right before her very eyes. As the Buddha described the impermanence of physical beauty, Janapadakalyāṇī attained stream-entry (P. sotāpatti; see [SROTAĀPANNA](#)) and, shortly thereafter, arahantship (see S. [ARHAT](#)). The source for the stories related to [JANAPADAKALYĀNĪ NANDĀ](#) are the [DHAMMAPADATTHAKATHĀ](#) and the *Udāya*, both texts known only to the Pāli tradition.

[Janapandakalyāṇi Rūpanandā](#). (S). See [JANAPADAKALYĀNĪ NANDĀ](#).

[Janavasabhasuttanta](#). (C. Shenisha jing; J. Janishakyō; K. Sanisa kyōng 闍尼沙經). In Pāli, the “Discourse on Janavasabha”; the eighteenth sutta of the [DĪGHANIKĀYA](#) (a Dharmaguptaka recension appears as the fourth sūtra in the Chinese translation of the [DĪRGHĀGAMA](#)). During the last year of his life, the Buddha addressed this discourse to his attendant [ĀNANDA](#), who wished to know the destinies of deceased lay disciples from the country of [MAGADHA](#). The Buddha replied that numerous lay disciples from Magadha had been reborn in the realms of the divinities ([DEVA](#)) as non-returners (S. [ANĀGĀMIN](#)), once-returners (S. [SAKRDĀGĀMIN](#)), and stream-enterers (S. [SROTAĀPANNA](#)) through their faith in the three jewels (S. [RATNATRAYA](#)) of the Buddha, the [DHARMA](#), and the [SAMGHA](#). The Buddha received this information from a divinity named Janavasabha, after whom the discourse is named, who in his preceding life had been King [BIMBISĀRA](#) of Magadha.

[janmanirmānakāya](#). (T. skye ba’i sprul sku). In Sanskrit, “created emanation body”; a form of the [NIRMĀNAKĀYA](#) in which a buddha, in order to subdue the afflictions ([KLEŚA](#)) of sentient beings, takes an animate form (such as that of a god, a deer, or a bird) or an inanimate form (such as a bridge or a tree). See also [UTTAMANIRMĀNAKĀYA](#); [SPRUL SKU](#); [TRIKĀYA](#).

[japa](#). (T. bzlas brjod; C. niansong; J. nenju; K. yōmsong 念誦). In Sanskrit and Pāli, “recitation”; usually oral recitations of invocations or [MANTRAS](#), often counted by fingering a rosary ([JAPAMĀLĀ](#)). The various merits forthcoming from specific numbers of such recitations are related in different scriptures. The number of such recitations to be performed in a single sitting is often related to

specific numerical lists, such as varying rosters of stages on the [BODHISATTVA](#) path. The recitation would then constitute a reenactment of the path, or a process of purification. Perhaps the most common number across traditions is 108, but these numbers range from as few as seven, to fourteen, twenty-one, twenty-seven, thirty-six, forty-two, or fifty-four, up to as many as 1,080. The common figure of 108 is typically said to correspond to a list of 108 proclivities or afflictions (see [KLEŚA](#)), although other texts say it refers instead to lists of 108 enlightened ones or 108 [SAMĀDHIS](#); 1,080 would then constitute these 108 across all the ten directions ([DAŚADIS](#)). (See also other explanations in [JAPAMĀLĀ](#), s.v.) [japamālā](#). (T. bzlas brjod kyi 'phreng ba; C. shuzhu/nianzhu; J. juzu/nenju; K. suju/yōmju 數珠/念珠). In Sanskrit and Pāli, lit. “garland for recitation,” thus “prayer beads” or “rosary”; a string of beads held usually in the right hand and fingered by adherents to keep count of the number of recitations made in the course of a worship service, [MANTRA](#) recitation, or meditation session. The beads are often made from sandalwood or seeds of the [BODHI TREE](#) (*Ficus religiosa*), the tree under which the Buddha gained enlightenment, although rosaries made from a range of other materials are also common; in some tantric practices, a rosary with beads made from human bone is used. The number of beads on a rosary varies widely. The most common number is 108, the significance of which receives widely varying explanations. One common interpretation is that this number refers to a list of 108 afflictions ([KLEŚA](#)); fingering all 108 beads in the course of a recitation would then be either a reminder to remain mindful of these afflictions or would constitute their symbolic purification. Alternatively, this 108 can refer to all of phenomenal existence, i.e., the eighteen elements ([DHĀTU](#)), viz., the six sense bases, six sense objects, and six sensory consciousnesses, in all of the six states of existence ([GATI](#)) ($18 \times 6 = 108$). In Tibetan Buddhism, the number 111 is sometimes used, based on the assumption that for each ten mantras recited, one will be mistaken and need to be repeated, thus adding an additional ten beads for 110. An additional bead is then added to account for the mistaken recitation among the additional ten. Thus, although a mantra might be recited 111 times, only 100 are counted. The Chinese [PURE LAND](#) advocate [DAOCHUO](#) (562–645) is famous for having used small beans (xiaodou) to keep track of the number of times he had recited the buddha [AMITĀBHA](#)'s name (see [NIANFO](#)); some believe his habit of using such counting beans is the origin of the East Asian japamālā. In many Buddhist traditions, carrying a rosary serves almost as a symbol of the faith. In East Asia, Buddhist monks and nuns, and even many lay adherents, will commonly wear the full-

length rosary around their necks. Rosaries of abbreviated lengths, which are more typically worn around the wrist, are sometimes designated duanzhu (J. tanju; K. tanju), or “short rosary.” These rosaries will be a maximum of fifty-four beads in length (half the usual length), which would require two repetitions to complete a full round of recitation, and a minimum of nine beads, which would take twelve repetitions. In Tibetan Buddhism, a short rosary is sometimes worn around the right hand while doing prostrations. The [CHAN](#) school often uses a short rosary with eighteen beads, requiring six repetitions. See also [JAPA](#).

jarā. (T. rga ba; C. lao; J. rō; K. no 老). In Sanskrit and Pāli, “senescence,” “aging,” or “decay.” Aging and death ([JARĀMARANA](#)) are one of the varieties of the suffering ([DUHKHA](#)) that is said to be inherent in the conditioned realm of existence and together constitute the last of the twelve links of dependent origination ([PRATĪYASAMUTPĀDA](#)). The future buddha is said to have left the life of the householder in search of a state beyond birth, aging, sickness, and death. In the [SARVĀSTIVĀDA ABHIDHARMA](#) system, senescence is treated as a “conditioned force dissociated from thought” ([CITTAVIPRAYUKTASAMSKĀRA](#)), which functions as one of the four conditioned characteristics ([SAMSKRTALAKSANA](#)) that is associated with all conditioned objects. Because the ontology of the Sarvāstivāda school, as its name implies, postulated that “everything exists” in all three time periods ([TRIKĀLA](#)) of past, present, and future, there had to be some mechanism to account for the apparent change that conditioned objects underwent through time. Therefore, along with the other three characteristics of origination ([JĀTI](#)), continuance ([STHITI](#)), and desinence ([ANITYATĀ](#); viz., death), aging was posited as a “conditioned force dissociated from thought,” which causes the active functioning (kāritra) of a conditioned object to degenerate, initiating the process that leads to its inevitable death. The very definition of conditioned objects is that they are subject to these conditioned characteristics, including this process of decay and change; this is what ultimately distinguishes them from the unconditioned ([ASAMSKRTA](#)), viz., [NIRVĀNA](#).

jarāmarana. (T. rga shi; C. laosi; J. rōshi; K. nosa 老死). In Sanskrit and Pāli, “aging and death”; the twelfth and final link in the chain of conditioned origination ([PRATĪYASAMUTPĀDA](#)), preceded by [JĀTI](#), the eleventh link. In some formulations of the twelve links of the chain, old age and death are presumed to occur in the last of a sequence of three lifetimes, with the first two links in the

chain, ignorance and predispositions, assigned to the previous lifetime; consciousness, name and form, sense fields, contact, sensation, thirst, grasping, and existence to the current lifetime, leading to future birth, old age, and death in the immediately following lifetime. ¶ In some compounds, jarāmaraṇa does not mean only “old age and death,” but is used as an abbreviation for the whole panoply of human existence, viz., “birth, old age, sickness, and death”; this accounts for its alternate translation as “birth and death” (shengsi) in Chinese. This usage of the term is found in two different types of jarāmaraṇa that are distinguished in the literature: (1) determinative birth-and-death ([PARICCHEDAJARĀMARANA](#)), referring to the physical existence of ordinary sentient beings, whose bodies are restricted in their longevity, appearance, and size; and (2) transfigurational birth-and-death ([PARINĀMIKAJARĀMARANA](#)), referring to the mind-made bodies ([MANOMAYAKĀYA](#)) of [ARHATS](#), [PRATYEKABUDDHAS](#), and great [BODHISATTVAS](#), who are able to change their appearance and life span at will.

jātaka. (T. skyes rabs; C. bensheng jing; J. honshōkyō; K. ponsaeng kyōng 本生經). In Sanskrit and Pāli, literally, “birth,” or “nativity”; a term used in Buddhism to refer by extension to narrative accounts of previous births or lives, especially of a buddha. The jātaka constitute one of the nine ([NAVAṄGAIPĀVACANA](#)) (Pāli) or twelve ([DVĀDAŚĀṄGAIPRAVACANA](#)) (Sanskrit) categories ([AṄGA](#)) of Buddhist scripture that are delineated according to their structure or literary style. There are hundreds of such stories (547 in the Pāli collection alone) and together they form one of the most popular genres of Buddhist literature. In a typical tale, [GAUTAMA](#) Buddha will recount a story from one of his past lives as a human or an animal, demonstrating a particular virtue, or perfection ([PĀRAMITĀ](#)), after which he will identify the other characters in the story as the past incarnations of members of his present audience. A jātaka story usually has five components: (1) an introduction, in which the Buddha recounts the circumstances leading up to the story to be recounted; (2) a prose narrative, in which the story from one of the Buddha’s past lives is related; (3) stanzas of poetry, which often contain the moral of the story; (4) a prose commentary on the stanzas; and (5) a conclusion that connects the past with the present, in which the Buddha identifies members of his current audience as incarnations in the present of the characters in the story from the past. ¶ The Pāli *Jātaka* is the tenth book of the [KHUDDAKANIKĀYA](#) of the [SUTTAPITAKA](#). The collection is comprised of 547 stories of former lives of Gotama Buddha while he was a bodhisatta (S. [BODHISATTVĀ](#)). The *Jātaka* itself is

made up entirely of short verses, but these are accompanied by prose commentary called the [JĀTAKATTHAKATHĀ](#), which recounts the relevant stories. Some of the *Jātakas* have been included in another collection contained in the [KHUDDAKANIKĀYA](#), the [CARIYĀPITAKA](#). In Sanskrit, the most famous jātika collection is the [JĀTAKAMĀLĀ](#) by Śūra. Over the course of the history of Buddhism and throughout the Buddhist world, jātakas have been one of the most popular forms of Buddhist literature, especially among the laity, due both to their entertaining plots and their edifying moral lessons. Scenes from various jātika stories are widely depicted in Buddhist art and occur among some of the earliest Buddhist stone carvings in India. Scholarship has demonstrated that the plots of many of the jātakas derive from Indian folklore, with the same story occurring in Hindu, [JAINA](#), and Buddhist works. In the Buddhist versions, the plot has been adapted by adding a prologue and epilogue that identifies the protagonist as the bodhisattva and the other characters as members of the Buddha’s circle in a former life; the hero’s antagonist in the story is often identified as [DEVADATTA](#) in a former life. In addition to their general popularity, individual jātakas have had great influence, such as the [VESSANTARA JĀTAKA](#) in Southeast Asia.

[Jātakamālā](#). (T. Skyes pa’i rabs kyi rgyud; C. Pusa benshengman lun; J. Bosatsu honjōmanron; K. Posal ponsaengman non 菩薩本生鬘論). In Sanskrit, “Garland of Birth Stories,” by the poet Śūra [alt. Āryaśūra; c. second-century CE], a collection of thirty-four [JĀTAKA](#) tales related in an elegant and elliptical literary style. Each story includes Śūra’s introduction relating the specific point of morality illustrated in the story. This narrative is in mixed prose and verse (a style that comes to be termed campū), with a variety of different meters employed. The beauty of Śūra’s literary renderings was so renowned that the *Jātakamālā* often came to be even more widely read than the *Jātaka* collections themselves. In Tibet it is a custom for a senior monk to give an explanation of one of the tales from the *Jātakamālā* on the opening day of the [SMON LAM CHEN MO](#) (Great Prayer Festival). ¶ The story surrounding the Chinese “translation” of the *Jātakamālā*, the *Pusa benshengman lun* (“Treatise on the Bodhisattva’s Garland of Birth Stories”), may be one of the strangest tales in the annals of the translation of Buddhist texts. As modern scholarship has shown, the Chinese “translators” had so much difficulty in construing Śūra’s elaborate style that they managed to produce an “apocryphal” scripture while having the Sanskrit text right in front of them. Working without dictionary or grammar, or the luxury of an Indian paṇḍita to help them construe the text, and apparently faced with an

impossible deadline, the translators simply resorted to forgery: where they found a few random words of Śūra's that they could construe, they lifted wholesale from other texts stories that happened to contain the same words. Except for the titles of some of the stories, there is almost nothing in the Chinese translation that corresponds to Śūra's Sanskrit.

[Jātakatthakathā](#). [alt. *Jātakatthavaṇṇanā*]. In Pāli, “Commentary on the [JĀTAKA](#),” is a prose exegesis of the verses included in the *Jātaka* collection. Authorship is traditionally attributed to [BUDDHAGHOSA](#), although the prose is a Pāli translation of a commentary written originally in Sinhalese. The commentary on each jātaka tale includes an introduction relating how the story came to be told and an epilogue correlating the major characters in the tale with the Buddha's current contemporaries. The commentary is preceded by a lengthy introduction, the [NIDĀNAKATHĀ](#), which recounts the buddha's previous birth as [SUMEDHA](#) and his last life as Siddhattha (S. [SIDDHĀRTHA](#)) from the time of his birth, through his enlightenment and early teaching, ending with the donation of [JETAVANA](#) by Anāthapiṇḍika (S. [ANĀTHAPINDADA](#)). The *Jātakatthakathā* appears in the Pali Text Society's English translation series as *Stories of the Buddha's Former Births*; the *Nidānakathā* appears separately as *The Story of Gotama Buddha*.

[jāti](#). (T. skye ba; C. sheng; J. shō; K. saeng 生). In Sanskrit and Pāli, “birth,” “origination.” Birth is one of the varieties of the suffering ([DUḤKHA](#)) that is inherent in the conditioned realm of existence and the eleventh of the twelve links in the chain of dependent origination ([PRATITYASAMUTPĀDA](#)). The future buddha is said to have left the life of the householder in search of a state beyond birth, aging, sickness, and death. In the [SARVĀSTIVĀDA ABHIDHARMA](#) system, origination is treated as a “conditioned force dissociated from thought” ([CITTAVIPRAYUKTASAMSKĀRA](#)), which functions as one of the four conditioned characteristics ([SAMSKRTALAKSANA](#)) that is associated with all conditioned objects. Because the ontology of the Sarvāstivāda school, as its name implies, postulated that “everything exists” in all three time periods ([TRIKĀLA](#)) of past, present, and future, there had to be some mechanism to account for the apparent change that conditioned objects underwent through time. Therefore, along with the other three characteristics of continuance ([STHITI](#)), senescence ([JARĀ](#)), and desinence ([ANITYATĀ](#); viz., death), origination was posited as a “conditioned force dissociated from thought,” which prepares an object to be produced and

thus pulls that object out of the future and into the present. The very definition of conditioned objects is that they are subject to these conditioned characteristics, including this process of production, and this is what ultimately distinguishes them from the unconditioned ([ASAMSKRĀ](#)), viz., [NIRVĀNA](#). In less technical contexts, beginning with the Buddha's first sermon (see [DHAMMACAKKAPPAVATTANASUTTA](#)), *jāti* appears in various lists of the sufferings of [SAMŚĀRA](#), with a variety of texts describing at length the pain experienced in the womb and during birth.

[jātismara](#). (P. *jātissara*; T. *tshe rabs dran pa*; C. *suming*; J. *shukumyō*; K. *sungmyōng* 宿命). In Sanskrit, “memory of previous births,” is synonymous with “recollection of past lives” ([PŪRVANIVĀSĀNUMŚRTI](#)); a supernatural power often mentioned in the early Buddhist scriptures as accessible to religious virtuosi. This talent is listed as the first of three knowledges ([TRIVIDYĀ](#)), the fourth of five or six supranormal powers ([ABHIJÑĀ](#)), and the eighth of the ten powers ([BALA](#)) of a [TATHĀGATA](#). In the context of the supranormal powers, this ability to remember one's past lives is considered to be a mundane ([LAUKIKA](#)) achievement that is gained through still more profound refinement of the fourth stage of meditative absorption ([DHYĀNA](#)). In other contexts, however, this power is accessible only to those who are [ARHATS](#), buddhas, or otherwise in no further need of training ([AŚAIKSA](#)). In later [MAHĀYĀNA](#) materials, however, bodhisattvas sometimes give even unenlightened ordinary beings ([PṚTHAGJANA](#)) this insight into their past lives as a way of inspiring them in their religious practice. In other Mahāyāna texts, such as the [SUVARNAPRABHĀSOTTAMASŪTRA](#) (“Golden Light Sūtra”), this talent is a by-product not of meditation but of specific types of ritual activity, a “blessing” ([ANUŚAMSA](#)) that accrues, for example, from formulaic exaltations of the qualities of the buddhas, recitation of lists of their names, repetitions of mnemonic codes ([DHĀRANĪ](#)), or copying of scriptures. The ability to remember one's past lives is said to extend back to hundreds, thousands, or even millions of one's previous births. On the night of his enlightenment, the Buddha remembered all of his previous births.

[jedi](#). [alt. *zedi*]. The Burmese pronunciation of Pāli *ceṭī/ceṭiya*, Sanskrit [CAITYA](#) or [STŪPA](#); an architectural structure at a monastery, usually in the shape of a cone, with a bell-shaped base, but sometimes obelisque in form, containing relics (S. [ŚARĪRA](#)) of revered monks or in some cases, of the buddha.

[Jeta](#). [alt. *Jetakumāra*]. (S. *Jetṛ*; T. *Rgyal byed*; C. *Zhituo taizi*; J. *Gida taishi*; K.

Kit'a t'aeja 祇陀太子). In [BUDDHIST HYBRID SANSKRIT](#) and Pāli, “Victorious”; a prince of the Indian kingdom of [ŚRĀVASTĪ](#) (P. Sāvasthi), commonly referred to as Jetakumāra (Prince Jeta), and original owner of the [JETAVANA](#) park. Prince Jeta was approached by the banker [ANĀTHAPINDADA](#) (P. Anāthapiṇḍika) who wished to purchase his park and donate it to the Buddha. Demanding that the banker cover the entire grounds with gold coins as the purchase price, Jeta finally consented once Anāthapiṇḍada had covered all but the entrance with eighteen crores (one hundred million) worth of coins. Jeta donated the entrance himself and then used the entire purchase price to erect a grand gateway over the entrance. Different explanations are given as to how the prince came to be so named: because he vanquished his enemies, because he was born during the reign of a victorious king, or because the name itself was thought to be auspicious for him. Sanskrit sources claim that Jeta was the son of King [PRASENAJIT](#) and was murdered by his half-brother Viḍuḍabha for refusing to participate in the extermination of the [ŚĀKYA](#) clan to which the Buddha belonged.

[Jetāri](#). (S). See [JITĀRI](#).

[Jetavana](#). (T. Rgyal byed kyi tshal; C. Zhishu Jigudu yuan; J. Giju Gikkodokuon; K. Kisu Kūpkodok wōn 祇樹給孤獨園). In Pāli and Sanskrit, “Prince Jeta’s Grove” (C. Zhishu), located in “Anāthapiṇḍika’s Park” (S. Anāthapiṇḍadārāma; P. Anāthapiṇḍikārāma; C. Jigudu yuan); a park located to the south of the city of [ŚRĀVASTĪ](#) (P. Sāvasthi), which was donated to the Buddha and his disciples by the banker [ANĀTHAPINDADA](#) (P. Anāthapiṇḍika). The park, which is also called Jetavanārāma, is named after its original owner, Prince Jeta (Jetakumāra), from whom Anāthapiṇḍada purchased it for an extraordinary price. Anāthapiṇḍada had invited the Buddha to Śrāvastī and resolved to provide him with a suitable residence during his sojourn in the city. Knowing that Jetakumāra’s park on the city’s outskirts was the loveliest place in town, he offered to buy the park from the prince. But Jeta was unwilling to sell the property and rebuffed Anāthapiṇḍada, stating that the banker would have to cover the entire site in coins if he wanted to buy it. Undeterred, Anāthapiṇḍada brought the case before the city fathers, who agreed that if he could gather Jeta’s stated purchase price, he would be entitled to Jetakumāra’s park. Anāthapiṇḍada had his servants bring cartloads of gold coins from his treasury, some eighteen crores in total, with which he was able to cover the entire grounds of the park,

except for the entrance. Impressed by the banker's generosity, Jetakumāra donated that spot himself, and with the vast purchase price he received, erected a grand entrance over it. Anāthapiṇḍada built numerous buildings at the park to serve the Buddha and the monastic community during the rains retreat ([VARSA](#)). Among these was the Buddha's own residence, the so-called perfumed chamber, or [GANDHAKUTI](#). The same spot had served as a monastery and rains-retreat residence for previous buddhas also, although the extent of the grounds varied. According to Pāli sources, during the time of the buddha Vipassī (S. [VIPASYIN](#)), the merchant Punabbasumitta built a monastery that extended a league, while during the time of the buddha Vessabhū, the merchant Sotthika built another that extended half a league. Anāthapiṇḍada's monastery covered eighteen karīsa (a square measure of land). Traditional sources often state that Jetavanārāma was [GAUTAMA](#) Buddha's favorite residence and he is said to have passed nineteen rains retreats there. After the laywoman [VIŚAKHĀ](#) built another grand monastery named Migāramātupāsāda in Śrāvastī, the Buddha would alternate between both residences, spending the day at one and the night at another. ¶ Jetavana also refers to a monastery built at [ANURĀDHAPURA](#) in the fourth-century CE by the Sinhala king [MAHĀSENA](#) for the elder Saṅghamitta. Saṅghamitta felt great animosity toward the monks of the [MAHĀVIHĀRA](#) sect, which prompted him to lobby the king to confiscate its property and pass it on to the Jetavana.

[Jewel Ornament of Liberation](#). See [THAR PA RIN PO CHE'I RGYAN](#).

[jhāna](#). In Pāli, “meditative absorption,” corresponding to the Sanskrit [DHYĀNA](#) (s.v.). Jhāna refers to the attainment of single-pointed concentration, whereby the mind is withdrawn from external sensory input and completely absorbed in an ideational object of meditation (see [KAMMATTHĀNA](#)). Jhāna involves the power to control the mind and does not, in itself, entail any enduring insight into the nature of reality; however, a certain level of concentration is generally said to be necessary in order to prepare the mind for direct realization of truth, the destruction of the afflictions, and the attainment of liberation. Jhāna is classified into two broad types: (1) meditative absorption of the subtle-materiality realm (P. rūpāvacarajhāna; S. [RŪPĀVACARADHYĀNA](#)) and (2) meditative absorption of the immaterial realm (P. arūpāvacarajhāna; S. [ARŪPYĀVACARADHYĀNA](#)). Each of these two types is subdivided into four stages or degrees of absorption, giving a total of eight stages of jhāna. These stages are sometimes called the eight “attainments” ([SAMĀPATTI](#)). The four absorptions of the subtle-materiality realm

are characterized by an increasing attenuation of consciousness as one progresses from one stage to the next. By entering into any one of the jhānas, the meditator temporarily overcomes the five hindrances ([NĪVARANA](#)) through the force of concentration. This is called “overcoming by repression” (P. vikkhambhanappahāna). The five hindrances are (1) “sensuous desire” ([KĀMACCHANDA](#)), which hinders one-pointedness of mind (P. cittekaggatā; S. [CITTAIKĀGRATĀ](#)); (2) “malice” (P. byāpāda; S. [VYĀPĀDA](#)), hindering rapture (P. pīti; S. [PRĪTI](#)); (3) “sloth and torpor” (P. thīnamiddha; S. [STHYĀNA-MIDDHA](#)), hindering applied thought (P. vitakka; S. [VITARKA](#)); (4) “restlessness and worry” (P. uddhaccakukkucca; S. [AUDDHATYA-KAUKRTYA](#)), hindering joy ([SUKHA](#)); and (5) “skeptical doubt” (P. vicikicchā; S. [VICIKITSĀ](#)), which hinders sustained thought ([VICĀRA](#)). These hindrances thus specifically obstruct one of the factors of absorption (P. jhānaṅga; S. [DHYĀNĀNGA](#)), and once they are allayed the first level of the subtle-materiality jhānas will be achieved. In the first jhāna, all five constituents of jhāna are present; as concentration deepens, these gradually fall away, so that in the second jhāna, both types of thought vanish and only pīti, sukha, and ekaggatā remain; in the third jhāna, only sukha and ekaggatā remain; and in the fourth jhāna, concentration is now so rarified that only ekaggatā is left. Detailed correlations appear in meditation manuals describing specifically which of the five spiritual faculties ([INDRIYA](#)) and seven constituents of enlightenment (P. bojjhaṅga; S. [BODHYAṅGA](#)) serve as the antidote to which hindrance. Mastery of the fourth absorption of the subtle-materiality realm is required for the cultivation of supranormal powers (P. abhiññā; S. [ABHIJÑĀ](#)) and for the cultivation of the four arūpāvacarajhānas, or meditative absorptions of the immaterial realm. The immaterial absorptions themselves represent refinements of the fourth rūpāvacarajhāna, in which the “object” of meditation is gradually attenuated. The four immaterial absorptions instead take as their objects: (1) the sphere of infinite space (P. ākāsānañcāyatana; S. [ĀKĀŚĀNANTYĀYATANA](#)), (2) the sphere of infinite consciousness (P. viññāṇaṅcāyatana; S. [VIJÑĀNĀNANTYĀYATANA](#)), (3) the sphere of nothingness (P. ākiñcaññāyatana; S. [ĀKIÑCANYĀYATANA](#)), and (4) the sphere of neither perception nor nonperception (P. nevasaññānāsaññāyatana; S. [NAIVASAMJÑĀNĀSAMJÑĀYATANA](#)). Mastery of the absorptions of either the subtle-materiality or immaterial realms results in rebirth in the corresponding heaven of each respective absorption.

[jia](#). (J. ke; K. ka 家). In Chinese, lit. “house” referring especially to the “five houses” (wu jia), viz., the five principal lineages of the mature [CHAN](#) school of

the Song dynasty. See [WU JIA QI ZONG](#).

Jianchusi. (建初寺). In Chinese, lit. “First-Built Monastery”; a monastery constructed during the Wu dynasty (222–264) of the Chinese Three Kingdoms Period (c. 220–280 CE); the monastery’s name Jianchu ostensibly derives from the fact that it was the first monastery to be built in southern China. The monastery was constructed by the Wu emperor to enshrine the relic ([ŚARĪRA](#)) of the Buddha that the Sogdian monk [KANG SENGHUI](#) brought to the kingdom of Wu during the first half of the third century. The relic was enshrined in one of the legendary [AŚOKA STŪPAs](#) that the emperor installed in Jianchusi. The monastery was abandoned and rebuilt on several occasions and is now known as [BAO’ENSI](#).

Jianfusi. (建福寺). In Chinese, “Establishing Blessings Monastery”; located in Luoyang, the capital of the Eastern Jin dynasty (217–420 CE) and reputed to be the first Buddhist convent in China. Originally a residence of the Jin dynasty’s minister of public works, he is said to have donated his residence out of respect toward Kang Minggan and Huizhan, two of the earliest Buddhist nuns appearing in Chinese records. According to the [BIQIUNI ZHUAN](#) (“Lives of the Nuns”), Kang Minggan was also responsible for naming the convent. “Blessings” in the convent’s name refers first to the fact that she considered the establishment of the convent to be a blessing for all Buddhist practitioners in China, both monastic and lay; secondly, the convent itself was a physical symbol of the act of bestowing blessings. Several nuns whose biographies are contained in the “Lives of the Nuns” resided there, including Fasheng (368–439 CE) of the Liu-Song dynasty (420–479 CE) who became a nun at age seventy. Another Liu-Song resident, Dao Qiong, was said to have displayed such exemplary skill in practice that an empress personally solicited her advice in religious matters. Dao Qiong later commissioned an image of a reclining buddha to be enshrined in the convent. Zhisheng (427–492 CE) of the Southern Qi dynasty (479–502 CE) also is said to have inspired royalty, the Qi heir-apparent Wenhui (458–493 CE), who often summoned her to the imperial palace to seek her guidance on religious matters.

jianhuo. (J. kenwaku; K. kyōnhok 見惑). In Chinese, “misapprehensions associated with views”; false impressions acquired and developed as a result of wrong views ([MITHYĀDRSTI](#)). These are the kinds of attachments, confused ways of thinking, and unwholesome mental states that are induced and facilitated by

fallacious views and conceptions, and a failure to grasp properly the [FOUR NOBLE TRUTHS](#) (catvāry āryasatyāni). These misapprehensions are therefore also called misapprehensions that “arise from discriminative cognition” (fengbie qi). And because it is said that at the moment when one attains the path of vision ([DARŚANAMĀRGA](#)), one is no longer under the sway of wrong views (mithyādr̥ṣṭi)—e.g., personality view ([SATKĀYADRSTI](#)), the extreme views of eternalism or annihilationism, belief in the spiritual efficacy of rituals and superstitions ([ŚĪLAVRATAPARĀMARŚA](#))—these misapprehensions are also called “the misapprehensions [eradicated at the stage of the path] of vision” (darśanaheya, one of the Sanskrit terms that jianhuo translates). Compared with “the misapprehensions [eradicated at the stage of the path] of cultivation” (see [SIHUO](#)), the jianhuo are crude and can be cut off at the relatively early stage of stream-entry ([SROTAĀPANNA](#)).

jiansi. (J. kansu 監司). In Chinese, “comptroller”; one of the six stewards (C. [ZHISHI](#)) at a [CHAN](#) monastery. Along with the prior (C. [DUSI](#)) and the assistant comptroller (C. [FUSI](#)), the comptroller is largely in charge of the monastery’s finances. He prepares the annual budget, monastic purchases, and ensures the availability of funds for the various feasts held at the monastery.

jianwu. (J. zengo; K. chōmo 漸悟). In Chinese, “gradual awakening” or “gradual enlightenment.” In contrast to “sudden awakening” ([DUNWU](#)), gradual awakening refers to the view that enlightenment is the result of a process of the purification of the mind over the course of a number of stages, which may occur over many lifetimes. Sudden enlightenment, in contrast, refers to the view that the mind is naturally pure (viz., “buddha-nature,” or [FOXING](#)) and that enlightenment entails an instantaneous recognition of this purity. Although debates over gradual vs. sudden enlightenment are most commonly associated in East Asia with the [CHAN ZONG](#), there are precedents in Indian Buddhism. In addition, the so-called [BSAM YAS DEBATE](#) or Council of [LHA SA](#) that took place in Tibet at the end of the eighth century is said to have pitted the Indian monk [KAMALAŚĪLA](#) against the Northern school ([BEI ZONG](#)) Chan monk [HESHANG MOHEYAN](#) in a debate over gradual enlightenment vs. sudden enlightenment. See also [WU](#); [DUNWU JIANXIU](#).

jianxing. (J. kenshō; K. kyōnsōng 見性). In Chinese, “see one’s nature”; an expression used in the [CHAN](#) school to refer to the recognition of one’s innate buddha-nature ([FOXING](#)), often through sudden awakening ([DUNWU](#)). This recognition of the fact that one is inherently a buddha constitutes enlightenment

([BODHI](#)) in some Chan systems. In two-tiered models of the [MĀRGA](#) followed in some Chan schools (see [DUNWU JIANXIU](#)), this initial insight into one’s true nature is called the “understanding–awakening” ([JIEWU](#)) and is functionally equivalent to the path of vision ([DARŚANAMĀRGA](#)) in [ABHIDHARMA](#) path systems; it is not, however, sufficient in itself to generate the complete, perfect enlightenment of buddhahood ([ANUTTARASAMYAKSAMBOODHI](#)). See also [KANHUA CHAN](#).

[jianxing chengfo](#). (J. kenshō jōbutsu; K. kyōnsōng sōngbul 見性成佛). In Chinese, lit. “see one’s nature and become a buddha”; a line summarizing the [CHAN](#) school’s unique approach to Buddhist meditative practice and attributed retrospectively to the school’s putative founder, [BODHIDHARMA](#). This phrase seems to have first appeared in Baoliang’s (444–509) *Niepan jing ji jie* but appears in conjunction with the meaning of Bodhidharma’s “coming from the West” ([XILAI YI](#)) for the first time in [HUANGBO XIYUN](#)’s [CHUANXIN FAYAO](#). The phrase jianxing chengfo appears together with another phrase, [ZHIZHI RENXIN](#) (“directly point to the human mind”), in the *Chuanxin fayao*; these two phrases would eventually appear together later with two other phrases, [BULI WENZI](#) (“without establishing words or letters”) and [JIAOWAI BIECHUAN](#) (“a special transmission outside the teachings”), in the [ZUTING SHIYUAN](#), compiled in 1108. These four phrases subsequently became a normative teaching within the Chan school and also the foundation on which the Chan traditions constructed their self-identities in China, Korea, and Japan.

[jianxiu](#). (J. zenshu/zenshū; K. chōmsu 漸修). In Chinese, “gradual cultivation.” See [DUNWU JIANXIU](#).

[jianyuan](#). (J. kannin; K. kamwōn 監院). In Chinese, lit. “overseer of the campus”; the “prior” in a Buddhist monastery. According to the Chan monastic code [CHANYUAN QINGGUI](#), the prior is in charge of supplies, finances, and interaction with both local government officials and lay donors. He purchases staples and supervises oil and flour production in the monastery. Other duties include the management of various ceremonies and festivals, such as the New Year’s and winter solstice festivities, and retreat-ending and retreat-commencing feasts (see [JIEZHI](#)). The prior had at least one principal assistant (see [DUSI](#)), and, during the Yuan dynasty, typically had in addition both a second assistant, called the comptroller ([JIANSI](#)), and a third, called the assistant comptroller ([FUSI](#)). Later, in certain contexts, the term for the prior’s assistant (dusi) came to refer instead to the prior.

Jianzhen. (C) (鑑真) (688–763). Chinese [VINAYA](#) master and reputed founder of the Japanese [RITSU](#) school (cf. [NANSHAN LÜ ZONG](#)) and the monastery of [TOSHODAJI](#) in Japan. See [GANJIN](#).

jiaoxiang panshi. (J. kyōsō hanjaku; K. kyosang p’ansök 教相判釋). In Chinese, lit., “classification and interpretation of the characteristics of the doctrine”; also known as jiaopan or [PANJIAO](#) (tenet classification). Tenet classification was a fundamental exegetical practice in East Asian Buddhism, in which scriptures or Buddhist teachings were ranked in order of their supposed relative profundity. The practice flourished in East Asia, especially during the fifth, sixth, and seventh centuries. As more translations of Buddhist texts became available in East Asia, indigenous exegetes struggled with the question of why this plethora of scriptural material, all of which purported to have been spoken by the Buddha himself, offered such differing presentations of Buddhist thought and practice. Drawing on the notion of [UPĀYA](#), or skill in means, exegetes began to reflect on the context and intent of the different Buddhist scriptures that were now available to them. The origin of scriptures and their teachings were analyzed and evaluated comparatively; after which the texts were organized in a hierarchical or, in some cases, chronological, order. Different exegetical traditions adopted different classification criteria. The [Tiantai Zong](#), for example, based its classification schema on the different (chronological) stages of the Buddha’s teaching career, the content of those teachings, and the varying methods he used in preaching to his audience (see [Wushi Bajiao](#)). The [Huayan Zong](#), following the lead of [Fazang](#) and [Chengguan](#), divided scriptures into five levels based on the profundity of their respective teachings: [Hīnayāna](#) (viz., the [Āgamas](#)), elementary [Mahāyāna](#) (viz., [Yogācāra](#) and [Madhyamaka](#)), advanced Mahāyāna ([Saddharmapundarikasūtra](#)), sudden teachings (typically [Chan](#)), and perfect teachings ([Avatamsakasūtra](#)). Most exegetes placed the central scripture of their schools at the apex of their classificatory hierarchy, thereby using the tenet-classification system as a polemical tool to demonstrate the superiority of their own traditions. See also [Siddhānta](#).

jiaowai biechuan. (J. kyōge betsuden; K. kyooe pyōlchōn 教外別傳). In Chinese, “a special transmission outside the teachings,” a line stating the [Chan](#) school’s own sense of its unique pedigree within Buddhism, and later attributed to the school’s traditional founder, [Bodhidharma](#). The phrase first appears in the [Zutang Ji](#) (K. [Chodang Chip](#)), compiled in 952. Later, in the [Zuting Shiyuan](#)

compiled in 1108, the phrase appeared together with three other phrases: [BULI WENZI](#) (“not establishing words and letters”), [ZHIZHI RENXIN](#) (“directly pointing to the human mind”), and [JIANXING CHENGFO](#) (“seeing one’s nature and achieving buddhahood”). These four phrases subsequently became a normative teaching within the school and the foundation on which the East Asian Chan traditions constructed their self-identity.

[Jie Daishi](#). (J) (慈惠大師). See [RYŌGEN](#).

[jiela](#). (J. kairō; K. kyerap 戒臘). In Chinese, “ordination age.” According to the [VINAYA](#), a monk’s or nun’s seniority is determined by the number of years he or she has been ordained as a monk or nun and not by the biological age or apparent spiritual accomplishments of the individual. Ordination seniority determines seating order within the congregation and walking order during alms-round. Seniority within the ranks of novice and fully ordained monks and nuns ([BHIKSU](#); [BHIKSUNI](#)) is counted separately, so that even a novice of many years standing will again be the youngest after receiving full ordination. Monastic “years” are in turn calculated by counting the number of completed summer “rains retreats” ([VARSA](#))—held once annually during that period that corresponds to the traditional summer monsoon season in South Asia—one has completed. The alternate terms *fala* (“dharma age”) and *xiala* (“summer-retreat age”) are also employed.

[jienei jiao](#). (J. kainai no kyō; K. kyenae kyo 界內教). In Chinese, “[mundane] teachings relating to [affairs found within] the three realms of existence.” In the Chinese [TIANTAI](#) system of doctrinal classification (see [JIAOXIANG PANSHI](#)), those Buddhist teachings that have the aim of facilitating worldly happiness and rebirth into more desirable realms of existence are described as *jienei jiao*. Cf. [JIAOWAI JIAO](#).

[ji er changzhao](#). (J. jakunijōshō; K. chōk i sangjo 寂而常照). In Chinese, “quiescent, yet constantly illumining”; a [CHAN](#) Buddhist expression that can be interpreted both ontologically and soteriologically. Ontologically, *ji er changzhao* describes the nature of the mind as imperturbable in its essence but as always dynamically responsive to external objects in its functioning. Soteriologically, *ji er changzhao* refers to the meditative technique wherein one trains the mind to be focused and tranquil with regard to all things that arise in the mind, while nevertheless remaining simultaneously vigilant and observant of

them. This expression typically appears in a parallel couplet along with “illuminating, yet always quiescent” (C. *zhao er changji*; J. *shōnijōjaku*; K. *cho i sangjōk*).

jieshe. (J. *kessha*; K. *kyōlsa* 結社). In Chinese, “retreat society”; a generic designation for various religious reform movements that were especially popular during Song-dynasty China and Koryō-dynasty Korea. These fraternal societies had their antecedents in the [AMITĀBHA](#) society of [LUSHAN HUIYUAN](#) (334–416) during the Eastern Jin dynasty and were widespread by the ninth century. By the Song dynasty, such communities were pervasive throughout China, especially in the south. These societies were typically involved in [TIANTAI](#), [HUAYAN](#), and [PURE LAND](#) practice, though some were dedicated to the worship of a specific [BODHISATTVA](#), such as [SAMANTABHADRA](#). These societies were typically founded outside the ecclesiastical establishment and, by encouraging both lay and ordained adepts to train together, they fostered some measure of religious egalitarianism within East Asian Buddhism. The *jieshe* movement was especially influential in Koryō-dynasty Korea, where some fourteen separate *kyōlsa* sites are mentioned in the *Koryōsa* (“History of Koryō”), from Kangwŏn province in the north to South Chōlla province in the south. The best known is the [CHŎNGHYE KYŎLSA](#) (Samādhi and Prajñā Society) initiated in 1180 by [POJO CHINUL](#) (1158–1210) and formally established in 1188, which was dedicated to [SŎN](#) (Chan) cultivation. In 1197, the community had grown so large that it was relocated to Kilsangsa on Mt. Songgwang, the site of the major present-day monastery of [SONGGWANGSA](#). The residents of the society are said to have gathered together to recite sūtras, train in meditation, and engage in group work activity. Chinul’s first composition, the *Kwŏn su Chŏnghye kyōlsa mun* (“Encouragement to Practice: The Compact of the Samādhi and Prajñā Society”), written in 1290, provided the rationale behind the establishment of the community and critiqued pure land adepts who claim that buddhahood cannot be achieved in the present lifetime. Chinul was joined at his community by the Ch’ōnt’ae ([TIANTAI](#)) adept [WŎNMYO YOSE](#) (1163–1240), who subsequently founded the Paengnyŏn *kyōlsa* (White Lotus Society) in 1211 at Mandōksan in the far southwest of the peninsula, which was engaged in Ch’ōnt’ae practice.

jiewai jiao. (J. *kaige no kyō*; K. *kyeoe kyo* 界外教). In Chinese, “[supramundane] teachings relating to [affairs beyond] the three realms of existence.” In the Chinese [TIANTAI](#) system of doctrinal classification (see [JIAOXIANG PANSHI](#)), those

Buddhist teachings that seek to do more than simply facilitate worldly happiness and rebirth into more desirable realms of existence—teachings that conduce to liberation from rebirth altogether—are described as *jiewai jiao*. Cf. [JIAONEI JIAO](#).

[jiewu](#). (J. *gego*; K. *haeo* 解悟). In Chinese, “understanding–awakening”; the most elementary of the two types of awakening (C. [WU](#); S. [BODHI](#)) discussed in some [CHAN](#) schools, equivalent to “seeing the nature” ([JIANXING](#)). This type of awakening is achieved through a sudden awakening ([DUNWU](#)) that marks the inception of the path ([MĀRGA](#)), variously described as being the equivalent of the beginning of either the ten faiths ([ŚRADDHĀ](#)) or the ten abidings ([VIHĀRA](#)) (see [BHŪMI](#)), and is functionally equivalent to the path of vision ([DARŚANAMĀRGA](#)) in [ABHIDHARMA](#) path systems. Through this initial comprehension one’s true nature, the Chan adept comes to know that he is not a deluded sentient being but is in fact a buddha. Simply knowing that one is a buddha through this sudden awakening of understanding, however, is not sufficient in itself to generate the complete, perfect enlightenment of buddhahood ([ANUTTARASAMYAKSAMBOBHI](#)) that ensures that one will always be able to act as a buddha. Only after continued gradual cultivation ([JIANXIU](#)) following this initial understanding–awakening will one remove the habituations ([VĀSANĀ](#)) that have been engrained in the mind for an essentially infinite amount of time, so that one will not only be a buddha, but will be able to act as one as well. That point where knowledge and action fully correspond marks the final “realization–awakening” ([ZHENGWU](#)). This two-tiered approach to awakening is the hallmark of the sudden awakening/gradual cultivation ([DUNWU JIANXIU](#)) path schema of certain Chan masters, such as [GUIFENG ZONGMI](#) (780–841) in the Chinese Heze school of Chan and [POJO CHINUL](#) (1158–1210) of the Korean [CHOGYE CHONG](#).

[jiezhi](#). (J. *kessei*; K. *kyŏlche* 結制). In Chinese, lit. “binding rule”; the initiation of an intensive period of meditative retreat during the summer season (*anju*; see [ANGO](#)), sometimes applied to the winter retreat season as well. The term is most commonly used within the [CHAN](#) ([ZEN](#) and [SŎN](#)) tradition with reference to its meditative retreats. The two terms *jiezhi* and *anju* are often used interchangeably or even in compound to generally refer to this three-month-long summer retreat. The term contrasts with the homophonous [JIEZHI](#), “relaxed rule,” the conclusion of a retreat.

[jiezhi](#). (J. *kaisei*; K. *haeje* 解制). In Chinese, lit. “relaxed rule”; the end of an intensive period of meditation during the summer season (*anju*; see [ANGO](#)),

sometimes applied to the end of the winter retreat season as well. The term is most commonly used within the [CHAN](#) ([ZEN](#) and [SŌN](#)) tradition with reference to its meditative retreats. The term contrasts with the homophonous [JIEZHI](#), “binding rule,” the initiation of a retreat.

[jifeng](#). (J. kihō; K. kibong 機鋒). In Chinese, the “sharpness of one’s responsiveness.” In [CHAN](#) Buddhism, especially after the middle of the Tang dynasty (c. eighth to ninth centuries), a practitioner’s level of spiritual comprehension or profundity of his or her enlightenment was often determined by jifeng. The tester or challenger would raise an illogical, perplexing puzzle, an anecdotal account of Chan patriarch’s conversations (see [GONG’AN](#)), or a mundane occurrence; the monk being tested was expected to offer a spontaneous, impromptu reply to the challenge. In Chan monasteries, abbots or other senior monks randomly cited events described in a gong’an and challenged the tested students or colleagues on their abilities to respond to or explain the apparently enigmatic phrases contained therein. On other occasions, they would have monks debate in groups about the meanings of these accounts; these occasions were called “dharma combat” or “dharma confrontations” (fazhan) and usually took place as a series of mutually and alternately directed questions and answers.

[Jigong](#). (J. Sai kō; K. Chegong 濟公) (1150–1209). In Chinese, “Sire Ji”; the name by which Huyin Daoji, a Chinese monk and thaumaturge who is associated with the [CHAN](#) school, is commonly known. See [HUYIN DAOJI](#).

[’Jig rten gsum mgon](#). [alt. ’Jig gsum mgon po] (Jikten Sumgön) (1143–1217). A disciple of [PHAG MO GRU PA RDO RJE RGYAL PO](#), himself a disciple of [SGAM PO PA](#) from whom the four major and eight minor Bka’ brgyud subsects ([BKA’ BRGYUD CHE BZHI CHUNG BRGYAD](#)) originate. [’JIG RTEN GSUM MGON](#) is the founder of the [’BRI GUNG BKA’ BRGYUD](#) sect, named after the hermitage he founded in 1179. His collected works are in fifty sections (chos tshan).

[’Jig rten mgon po](#). [alt. ’Jig gsum mgon po] (Jikten Gönpö). A Tibetan rendering of [Tri]lokanātha, “Lord of the Three Worlds”; an epithet of [AVALOKITEŚVARA](#).

[’Jigs med gling pa](#). (Jikme Lingpa) (1729–1798). A Tibetan exegete and visionary, renowned as one of the premier treasure revealers ([GTER STON](#)) in the

[RNYING MA](#) sect of Tibetan Buddhism. 'Jigs med gling pa was born in the central Tibetan region of 'Phyong rgyas (Chongye), and from an early age recalled many of his previous incarnations, including those of the Tibetan king [KHRI SRONG LDE BTSAN](#), the scholars [SGAM PO PA](#) and [KLONG CHEN PA](#) and, in his immediately preceding birth, Chos rje gling pa. After a period of monastic education, in his late twenties, he undertook an intense series of meditation retreats, first at Dpal ri monastery and then at the [CHIMS PHU](#) cave complex near [BSAM YAS](#). In one of the numerous visions he experienced during this period, he received the [KLONG CHEN SNYING THIG](#), or “Heart Sphere of the Great Expanse,” from a [DĀKINĪ](#) at the [BODHNĀTH STŪPA](#) in Kathmandu. The revelation of this text is considered a “mind treasure” (dgongs gter), composed by Padmasambhava and revealed to the mind of a later disciple. 'Jigs med gling pa kept this revelation secret for seven years before transcribing it. The klong chen snying thig corpus systematized by 'Jigs med gling pa, including numerous explanatory texts, tantric initiations, and ritual cycles, became a seminal component of the [RDZOGS CHEN](#) teachings in the Rnying ma sect. While based in central Tibet, 'Jigs med gling pa was also influential in Tibet's eastern regions, serving as spiritual teacher to the royal family of [SDE DGE](#) and supervising the printing of the collected Rnying ma tantras in twenty-eight volumes. His patrons and disciples included some of the most powerful and prestigious individuals from Khams in eastern Tibet, and his active participation in reviving Rnying ma traditions during a time of persecution earned him a place at the forefront of the burgeoning eclectic or nonsectarian ([RIS MED](#)) movement. Numerous subsequent visionaries involved in promulgating the movement identified themselves as 'Jigs med gling pa's reincarnation, including ['JAM DBYANG MKHYEN BRTSE DBANG PO](#), [MDO MKHYEN BRTSE YE SHES RDO RJE](#), [DPAL SPRUL RIN PO CHE](#), and [DIL MGO MKHYEN BRTSE](#). See also [GTER MA](#).

[Ji gujin fodao lunheng](#). (J. Shū kokonbutsudō ronkō; K. Chip kogŭm pulto nonhyŏng 集古今佛道論衡). In Chinese, “A Collection of Past and Present Treatises of the Buddhist and Daoists”; compiled in 661 by the Chinese [VINAYA](#) master [DAOXUAN](#). The *Ji gujin fodao lunheng* is a collection of works pertaining to the history of the Buddho–Daoist conflict in China from the Han to the Tang dynasties. Daoxuan records, for instance, that the famous pilgrim-translator [XUANZANG](#) was once ordered to translate the *Daode jing* into Sanskrit. Because Daoxuan makes frequent reference to works that are now lost, the *Ji gujin fodao lunheng* serves as an important source for studying the history of the interactions

between Buddhism and Daoism in China. Doaxuan's efforts were continued in Zhisheng's (d.u.) *Xu ji gujin fodao lunheng*.

jihvāvijñāna. (P. jivhāviññāṇa; T. lce'i rnam par shes pa; C. sheshi; J. zesshiki; K. sōlsik 舌識). In Sanskrit, “gustatory consciousness”; one of the five consciousnesses of physical objects (along with those of the eye, ear, nose, and body) and one of the six sensory consciousnesses (adding the mental consciousness, or [MANOVIJÑĀNA](#)). The gustatory consciousness perceives flavors ([RASA](#)). Like the other consciousness of physical objects, gustatory consciousness is produced through the contact ([SPARŚA](#)) between a gustatory sensory object ([ĀLAMBANA](#)) and the gustatory sense base or tongue sense organ ([JIHVENDRIYA](#)) and in dependence on three conditions ([PRATYAYA](#)): the object condition ([ĀLAMBANAPRATYAYA](#)), in this case, a flavor; a dominant condition ([ADHIPATIPRATYAYA](#)), here, the gustatory sense base (jihvendriya); and the immediately preceding condition ([SAMANANTARAPRATYAYA](#)), a prior moment of consciousness. The gustatory consciousness is counted as one of the six sensory consciousnesses ([VIJÑĀNA](#)), and eighteen elements ([DHĀTU](#)).

jihvāyatana. (P. jivhāyatana; T. lce'i skye mched; C. shechu; J. zesho; K. sōlch'ō 舌處). In Sanskrit, “gustatory base of cognition”; the gustatory sense organ ([JIHVENDRIYA](#)) as it occurs in the list of the twelve sense fields ([ĀYATANA](#)), which are called “bases of cognition” because each pair of sense base and sense object produces its respective sensory consciousness. In this case, the contact ([SPARŚA](#)) between a gustatory sensory object ([ĀLAMBANA](#)) and the gustatory sense base ([INDRIYA](#)) produces a gustatory consciousness ([JIHVĀVIJÑĀNA](#)).

jihvendriya. (P. jivhindriya; T. lce'i dbang po; C. shegen; J. zekkon; K. sōlgūn 舌根). In Sanskrit, “gustatory sense base” or “tongue sense organ”; the physical organ located in the tongue that makes it possible to perceive flavors ([RASA](#)). This sense base is not the tongue itself, but a form of subtle materiality located in the tongue and invisible to the naked eye. It is said to be shaped like many tiny half moons on the surface of the tongue. If this sense organ is absent or damaged, taste is not possible. The gustatory sense base serves as the dominant condition ([ADHIPATIPRATYAYA](#)) for the production of gustatory consciousness ([JIHVĀVIJÑĀNA](#)). The gustatory sense base is counted among the six sense bases or sense organs ([INDRIYA](#)), the twelve sources ([ĀYATANA](#)), and eighteen elements ([DHĀTU](#)).

Jikaku Daishi. (J) (慈覺大師). See [ENNIN](#).

jile. (J. Gokuraku; K. Kūngnak 極樂). In Chinese, “extreme happiness” or “ultimate bliss.” The term is most often used as a Chinese translation of [SUKHĀVATĪ](#) and frequently, but not necessarily, appears in this context in conjunction with the term [JINGTU](#) (“[PURE LAND](#)”). In the wider context of East Asian Buddhism, the term is also sometimes used to refer generally to a better afterlife or to heaven, and not specifically to the buddha-land of sukhāvātī.

jina. (T. rgyal ba; C. zuisheng; J. saishō; K. ch’oesŭng 最勝). In Sanskrit and Pāli, “conqueror,” or “victor,” one of the epithets of a buddha. In this sense, a buddha is said to be one who has either conquered [MĀRA](#) or vanquished the unwholesome ([AKUŚĀLA](#)) dharmas. The term is also used also to refer to founders, or even the current leaders, of other religious sects, including the Buddha’s contemporaries [ĀRĀDA KĀLĀMA](#) and [UDRAKA RĀMAPUTRA](#). Jina is also used as the title for the twenty-four teachers in the [JAINA](#) lineage.

Jinakālamālī. [alt. Jinakālamālīpakaraṇam]. In Pāli, “Garland of the Epochs of the Conqueror”; a Pāli historical chronicle written by Ratanapaññā Thera at Chiangmai during the first half of the sixteenth-century CE. The text recounts the history of the [THERAVĀDA](#) from its inception in India to its propagation in the Lānnā (La Na) kingdom of northern Thailand. The narrative begins with a synopsis of the former lives of the Buddha, and continues through his enlightenment and parinibbāna (S. [PARINIRVĀNA](#)) and the distribution of his relics. An account of the three Buddhist councils in India follows, as a prelude to a history of the religion in Sri Lanka. Attention is then given to the religious and political history of the kingdom of Haripuñjaya (Lamphun) in northern Thailand from the reign of Cāmadevī (see [CĀMADEVĪVAMSA](#)) in the seventh century to its annexation by the Lānnā king Mengrai in the thirteenth century. The text continues with a history of the Lānnā kingdom, including an account of the missionary activity of Medānkara Thera who, under the patronage of the Lānnā king Tiloka, established reformed Sinhalese Buddhism as the dominant religion throughout the realm. The text concludes with an account of the activities of Tiloka’s grandson, Phra Muang Keo. The Jinakālamālī has been edited for the Pāli Text Society and translated by N. A. Jayawickrama as *The Sheaf of Garlands of the Epochs of the Conqueror*.

jinaputra. (T. rgyal sras; C. zuishengzi; J. saishōshi; K. ch’oesŭngja 最勝子). In

Sanskrit, “progeny of the conqueror”; one of the epithets of [BODHISATTVAS](#), who are like the offspring of the [JINA](#), the Buddha.

[Jingang pi](#). (J. Kongōbei; K. Kūmgang pi 金剛鐮). In Chinese, “Adamantine Scalpel”; a treatise composed by the [TIANTAI](#) exegete [JINGXI ZHANRAN](#). The adamantine (S. [VAJRA](#)) scalpel was an ancient Indian tool used in cataract surgery; the title of the text thus alludes to its function as a tool for removing the ignorance that obscures the vision of sentient beings. The *Jingang pi* is a narrative conveyed in the form of a dream, which is structured around a dialogue with an unidentified stranger. The *Jingang pi* is largely concerned with the issue of buddha-nature ([FOXING](#)), and particularly with the controversy over whether insentient beings possess the buddha-nature. Zhanran seems to be the first Tiantai exegete to advance the argument that the buddha-nature was inherent in even insentient things, such as grass, trees, tiles, and rocks, thus corroborating a statement that appears in the [MAHĀPARINIRVĀNASŪTRA](#). This argument was later adopted by Tiantai scholars of the Song dynasty and by [TENDAI](#) and [ZEN](#) exegetes in Japan.

[Jingde chuandeng lu](#). (J. Keitoku dentōroku; K. Kyōngdōk chōndŭng nok 景德傳燈錄). In Chinese, “Record of the Transmission of the Lamplight [Compiled during the] Jingde [Era].” A comprehensive, thirty-roll genealogical collection of short hagiographical notes and anecdotes of the ancient “patriarchs” and teachers (see [ZUSHI](#)) of the [CHAN](#) school, compiled by Daoyuan (d.u.) in 1004. Beginning with the seven buddhas of the past ([SAPTATATHĀGATA](#)) and up to the dharma heirs (see [FASI](#)) of the Tang-dynasty Chan monk [FAYAN WENYI](#), the *Jingde chuandeng lu* provides a record of 1,701 Indian and Chinese successors in different main and collateral lineages of the Chan school. The first twenty-six rolls of the *Jingde chuandeng lu* is a series of hagiographies of Chan masters, focusing on their enlightenment experiences, and arranged genealogically; roll twenty-seven discusses eminent monks who do not belong to the Chan tradition; and the last three rolls contain [YULU](#), viz., discourse records (roll twenty-eight), poetry and verses (roll twenty-nine), and other miscellaneous materials, such as the [XINXIN MING](#) (roll thirty). As the earliest and most influential of the many lamplight histories (denglu) compiled during the Song dynasty, the *Jingde chuandeng lu* is an invaluable resource for understanding the origins and development of the Chan school in China.

[Jingdu sanmei jing](#). (J. Jōdo sanmaikyō; K. Chōngdo sammae kyōng 淨度三昧

經). In Chinese, “[SAMĀDHI-SŪTRA](#) on Liberation through Purification,” sometimes also known as the *Jingtu sanmei jing* (“Samādhi-Sūtra on the [PURE LAND](#)”) and other variations; allegedly translated by Tanyao during the Northern Wei period (386–557) but suspected of being an indigenous Chinese scripture (see [APOCRYPHA](#)), perhaps composed in order to assist in the revival of Buddhism following the persecution ([FANAN](#)) that occurred from 446 to 452. This sanmei jing offers a detailed account of the thirty separate levels of the hells and the incumbent punishments meted out there. In order to avoid the torments of the hells and to secure the protection of guardian deities, promote long life, and ensure rebirth in the heavens, the scripture describes the merits that accrue to laypeople who observe the five precepts ([PAÑCAŚĪLA](#)) and perform the “eight-restrictions feast” ([BAGUAN ZHAI](#)) on specific Chinese seasonal days, thus betraying its Chinese provenance. The scripture was discovered in both the [DUNHUANG](#) manuscript cache and in Japan manuscript collections.

Jingjue. (J. Jōkaku; K. Chōnggak 淨覺) (683–c. 760). Chinese author of the [LENGQIE SHIZI JI](#) (“Records of the Masters and Disciples of the [LAŅKĀVATĀRASŪTRA](#)”); an early lineage record of the [CHAN ZONG](#), presented from the standpoint of the so-called Northern school ([BEI ZONG](#)). See [LENGQIE SHIZI JI](#).

jinglu. (J. kyōroku; K. kyōngnok 經錄). In Chinese, “scriptural catalogues”; a genre of Buddhist literature unique to East Asian Buddhism. Because the Chinese state presumed the authority to authorize which texts (including Buddhist scriptures) were allowed to circulate, the Chinese Buddhist institution from early in its history began to compile catalogues of scriptures that were deemed authentic, and thus suitable for inclusion in the Buddhist canon ([DAZANGJING](#)), and texts that were deemed suspect and thus potentially to be excluded from the canon (see [APOCRYPHA](#)). Scriptural catalogues began to be compiled within a century of the beginnings of the translation of Buddhist texts into Chinese, or sometime around the middle of the third century, and some eighty catalogues were compiled over the next one thousand five hundred years, with the majority dating from the Tang dynasty (618–907) or before. As Buddhist canons came to be compiled in Korea and Japan as well, those countries also began to create their own catalogues. For the Chinese cataloguers, the main standard of scriptural authority was whether there was clear evidence that a scripture had been imported from outside China and then translated into

Chinese; any evidence that indigenous material had intruded into texts, whether that evidence involved vocabulary, thought, or practice, could lead to those texts being judged as apocrypha. Important catalogues include [DAO'AN's ZONGLI ZHONGJING MULU](#), the earliest catalogue, composed c. 374; Sengyou's [CHU SANZANG JIJI](#) from 515, which established the principal categories into which all subsequent cataloguers would classify texts; Fei Changfang's [LIDAI SANBAO JI](#) from 597, which fabricated many translator attributions to texts that had previously been listed as anonymous, so as to quash potential questions about the reliability of the Buddhist textual transmission; [DAOXUAN's DA TANG NEIDIAN LU](#) from 664; and Zhisheng's [KAIYUAN SHIJIAO LU](#) from 730, the catalogue par excellence, whose scriptural listings would provide the definitive content and organization of the East Asian Buddhist canon from that point onward.

[Jinglü yixiang](#). (J. Kyōritsu isō; K. Kyōngnyul isang 經律異相). In Chinese, lit., “Peculiarities of the Sūtras and Vinayas”; an encyclopedia of exotics found in both [SŪTRA](#) and [VINAYA](#) literature compiled in 516 CE by the monk Baochang, at the request of the martial emperor of the Liang dynasty (Liang Wudi). The encyclopedia is composed of fourteen chapters: heaven, earth, [BUDDHAS](#), [BODHISATTVAS](#), [ŚRĀVAKAS](#), kings, crown princes, elders, laymen ([UPĀSAKA](#)) and laywomen ([UPĀSIKĀ](#)), non-Buddhist sages, other laymen and commoners, ghosts, animals, and hells. The *Jinglü yixiang* serves as an important resource for studying the ways in which Buddhism as a foreign religion was understood and adopted by medieval Chinese Buddhists.

[Jingshan](#). (C) (徑山). See [WANSHOUSI](#).

[jingtū](#). (J. jōdo; K. chōngt'o 淨土). In Chinese, “pure land.” See [PURE LAND](#); [PARIŚUDDHABUDDHAKSETRA](#); [SUKHĀVATĪ](#).

[jingtū bian](#). (J. jōdohen; K. chōngt'o pyōn 淨土變). In Chinese, “transformation tableaux of the [PURE LAND](#)”; pictorial representations of scenes of the various pure lands. Found throughout East Asia, and discovered also at [DUNHUANG](#) and other Central Asian locations, these paintings are the counterparts of what are known as “transformation paintings” ([BIANXIANG](#)). Often used as diagrams ([MANDALA](#)) and dramatic visual aids for disseminating pure land ideas, these paintings are termed “transformations” (bian) possibly because they were meant to portray “animated” scenes to supplement storytelling and preaching. The

transformation pictures of [AMITĀBHA](#)'s pure land [SUKHĀVATĪ](#) were by far the most popular theme, although examples of the pure lands and abodes of [VAIROCANA](#), [BHAIJAGURU](#), [AVALOKITEŚVARA](#), and [MAITREYA](#) were also known. See also [AMITUO JINGTU BIAN](#) and [DIYU BIAN](#).

[Jingtu lun](#). (J. Jōdoron; K. Chōngt'ō non 淨土論). In Chinese, “Treatise on the [PURE LAND](#),” composed by the Chinese monk Jiakai (fl. c. 627). In the nine chapters of this treatise, Jiakai attempts to reorganize systematically the arguments of [DAOZHUO](#)'s [ANLE JI](#). Jiakai's own interests in the [MAHĀYĀNASAMGRAHA](#) and the teachings of [VIJÑAPTIMĀTRATĀ](#) and [TATHĀGATAGARBHA](#) are also reflected in his treatise. The treatise is largely concerned with the issues of the multiple buddha bodies ([BUDDHAKĀYA](#)), types of rebirth in the pure land, and the means of taking rebirth there. In the first chapter, Jiakai contends that there are three types of lands that correspond to the three buddha bodies: [DHARMAKĀYA](#), [SAMBHOGAKĀYA](#), and [NIRMĀNAKĀYA](#). The second chapter is concerned with the rebirth of ordinary beings ([PRTHAGJANA](#)). The third chapter discusses the different methods of attaining rebirth in the pure land: the general cause (e.g., arousing the [BODHICITTA](#)) vs. the special cause (e.g., [NIANFO](#)). The fourth chapter details the practice of mindfully invoking the buddha [AMITĀBHA](#)'s name ten times (shinian) before death and the practice of invoking his name for seven days. In chapter 5, Jiakai provides scriptural evidence that it is ordinary beings who are reborn in the pure land, not solely advanced bodhisattvas. Chapter 6 contains the biographies of twenty people who attained rebirth in the pure land; this chapter is the oldest extant collection of rebirth testimonials in East Asia (see [JINGTU RUIYING ZHUAN](#)). In chapter 7, Jiakai compares rebirth in a pure land with rebirth in [TUSITA](#) heaven. Chapter 8 discusses the benefits of repentance and chapter 9 underscores the importance of practicing the ten repetitions of Amitābha's name (shinian). Jiakai's text should be distinguished from the **Aparimitāyussūtropadeśa* (“Exegesis of the *Wuliangshou jing*”), commonly known to the pure land tradition as the *Jingtu lun* (J. Jōdoron) and attributed to [VASUBANDHU](#) (see [WULIANGSHOU JING YOUPOTISHE YUANSHENG JI](#)).

[Jingtu lun zhu](#). (C) (淨土論註). See [WULIANGSHOU JING YOUPOTISHE YUANSHENG JI](#).

[Jingtu qunyi lun](#). (J. Jōdo gungiron; K. Chōngt'ō kunūi non 淨土群疑論). In Chinese, “Treatise on Myriad Doubts concerning the [PURE LAND](#),” composed by

the monk Huaigan (fl. c. seventh century CE). In this treatise, written largely in dialogic format, Huaigan attempts to address systematically various questions concerning the notion of rebirth in [AMITĀBHA](#) Buddha's pure land. The seven-roll treatise is divided into twelve sections in a total of 116 chapters, which cover a wide range of subjects concerning pure land doctrine. These include, as but a few representative examples, the location of the pure land within the three realms of existence ([TRILOKA|DHĀTU](#)), the destiny ([GATI](#)) to which beings reborn there belong, where pure land rebirth belongs on [MĀRGA](#) schemata, and Huaigan's attempts to reconcile inconsistencies in different scriptures' accounts of the pure land. The *Jingtu qunyi lun* has therefore functioned almost as an encyclopedia for adherents of pure land teachings. The questions raised anticipate the criticisms of Huaigan's contemporaries, who specialized in the exegesis of the [MAHĀYĀNASAMGRAHA](#) and the new [YOGĀCĀRA](#) translations of [XUANZANG](#); Huaigan's answers also reflect his own training in Yogācāra doctrine and his extensive command of Buddhist scriptural and commentarial literature.

[Jingtu ruiying zhuan](#). (J. Jōdo zuiōden; K. Chōngt'ŏ sōng chōn 淨土瑞應傳). In Chinese, “Legends of Auspicious Resonance in the [PURE LAND](#)”; attributed to the monks Wenshen (fl. c. nine CE) and Shaokang (d. 805), although their authorship remains a matter of debate. The *Jingtu ruiying zhuan* is a collection of forty-eight testimonials of rebirth in the pure land of [SUKHĀVATĪ](#), offering proof that the prospect of rebirth there is a viable reason for faith in the salvific grace of [AMITĀBHA](#) Buddha. This text is one of the earliest examples of a genre of Buddhist literature called rebirth testimonials (*wangsheng zhuan*), which is unique to East Asia. The *Jingtu ruiying zhuan* also served as a prototype for later collections, such as the *Jingtu wangsheng zhuan*, attributed to Jiezu (985–1077).

[jingtu sanbu jing](#). (J. jōdo sanbukyō; K. chōngt'ŏ sambu kyōng 淨土三部經). In Chinese, “the three scriptures on the pure land,” a designation for three main sūtras that focus on [AMITĀBHA](#) Buddha and his [PURE LAND](#) of [SUKHĀVATĪ](#); these are generally considered to be the central canonical sūtras of the pure land schools, and especially of the Japanese [JŌDOSHŪ](#) and [JŌDO SHINSHŪ](#). The three scriptures are (1) [SUKHĀVATĪVYŪHASŪTRA](#), the “[Larger] Sūtra on the Buddha of Immeasurable Life” (*Wuliangshou jing*); (2) “Sūtra on the Contemplation of the Buddha of Immeasurable Life” ([GUAN WULIANGSHOU JING](#)); and (3)

[AMITĀBHASŪTRA](#), the “[Smaller] Sūtra on the Buddha Amitābha” (*Amituo jing*). The writings of the pure land school are to a large extent commentaries on or exegeses of these three scriptures.

[Jingtu sanmei jing](#). (淨土三昧經). In Chinese, “Samādhi-Sūtra on the Pure Land.” See [JINGDU SANMEI JING](#).

[jingtu sansheng](#). (J. jōdo no sanshō; K. chōngt’o samsōng 淨土三聖). In Chinese, “the pure land trinity,” or “the three saints of the pure land”; referring to the buddha [AMITĀBHA](#) (Amituo fo, usually depicted as standing in the middle), the [BODHISATTVA AVALOKITEŚVARA](#) (Guanshiyin pusa, usually depicted as flanking left), and bodhisattva [MAHĀSTHĀMAPRĀPTA](#) (Dashizhi pusa, usually depicted as flanking right). These are the three deities featured most prominently in sūtras on the [PURE LAND](#) of [SUKHĀVATĪ](#) and its pictorial representations (see [JINGTU BIAN](#)).

[Jingtu shiyi \[lun\]](#). (J. Jōdo jūgi[ron]; K. Chōngt’o sibūi [non] 淨土十疑[論]). In Chinese, “Ten Doubts regarding the [PURE LAND](#)”; a popular text on pure land beliefs and practices composed by [TIANAI ZHIYI](#). As the title suggests, the treatise is an apologia for the practice and verity of the pure land, even though it is exclusively directed at [AMITĀBHA](#)’s pure land of [SUKHĀVATĪ](#). The “doubts” that Zhiyi addresses in his treatise include: “Doesn’t it show a lack of compassion to seek rebirth in the pure land (and thus leave behind those who are suffering in this world)?” “Isn’t seeking rebirth in the pure land contradictory to the teaching of non-production (which nullifies the prospect of further rebirths)?” “Why focus on Amitābha and his pure land (as one’s sole choice of devotion)?” “How is it that unenlightened beings who are entangled in the fetters ([SAMYOJANA](#)) are capable of being reborn in the pure land (and thereby transcend the rounds of rebirth)?” “How could it be that the pure land of sukhāvātī (being entirely male) has no women and no one with [HĪNAYĀNA](#) inclinations?”

[jingtu wuzu](#). (J. jōdo no goso; K. chōngt’o ojo 淨土五祖). In Chinese, the “five patriarchs of pure land”; according to the most common retrospective lineage, these are [TANLUAN](#) (476–?), [DAOCHUO](#) (562–645), [SHANDAO](#) (613–681), Huaigan (d.u.), and Shaokang (?–805). Of the five, Daochuo, Shandao, and Huaigan might actually have had at least a tenuous master–disciple relation, although this would not be sufficient in itself to constitute an authentic “pure land school” in China. It is among the Japanese pure land schools (e.g., [JŌDOSHŪ](#) and [JŌDO SHINSHŪ](#)) that these retrospective Chinese lineages carry real authority, since

they authenticate the teachings and practices associated with those Japanese traditions.

Jingtu zhuan. (J. Jōdoden; K. Chōngt’o chōn 淨土傳). In Chinese, “biographies of [PURE LAND](#) [practitioners],” also called “biographies of those who have gone to rebirth in the pure land” (*wangsheng Jingtu zhuan*); several such compilations are extant. Most of these anthologies were made by selecting examples from the various biographies of eminent monks ([GAOSEN ZHUAN](#)) of persons who were reported, first, to have shown “auspicious signs” (*ruixiang*) at the time of their deaths and, second, were noted for their exceptional devotion to pure land practice. Visions of [AMITĀBHA](#) and his entourage, an inexplicable radiance filling the site, heavenly fragrances, and prescience and/or predictions of one’s imminent death and rebirth into the pure land were taken to be such “auspicious signs” and are common themes in the hagiographical accounts recorded in these anthologies. One of the earliest extant examples of the genre is the *Jingtu zhuan* compiled in the eleventh century by Jiezhu (985–1077), but many other anthologies were compiled in later centuries and were widely circulated. The stories they contain became popular testimonials to the efficacy and verity of pure land practice. These pure land anthologies are notable for their inclusive nature, and they collect biographies not only of eminent monks, but also of nuns, laypeople, and even persons of ill repute and low social status.

jingtu zong. (jōdoshū; K. chōngt’o chong 淨土宗). In Chinese “pure land school.” See [JINGTU WUZU](#); [JISHŪ](#); [JŌDOSHŪ](#); [JŌDO SHINSHŪ](#); [ŌJŌ YŌSHŪ](#); [YŪZŪ NENBUTSUSHŪ](#).

Jingxi Zhanran. (J. Keikei Tannen; K. Hyōnggye Tamyōn 荊溪湛然) (711–782). Chinese monk who is the putative ninth patriarch of the [Tiantai Zong](#); also known as Great Master Miaole (Sublime Bliss) and Dharma Master Jizhu (Lord of Exegesis). Zhanran was a native of Jingqi in present-day Jiangsu province. At age nineteen, Zhanran became a student of the monk Xuanlang (673–754), who had revitalized the community on Mt. Tiantai. After Xuanlang’s death, Zhanran continued his efforts to unify the disparate regional centers of Tiantai learning under the school’s banner; for his efforts, Zhanran is remembered as one of the great revitalizers of the Tiantai tradition. A gifted exegete who composed numerous commentaries on the treatises of [Tiantai Zhiyi](#), Zhanran established Zhiyi’s [Mohe Zhiguan](#), [Fahua Xuanyi](#), and [Fahua Wenju](#) as the three central texts of the Tiantai exegetical tradition. His commentary on the *Mohe zhiguan*,

the [MOHE ZHIGUAN FUXING ZHUANHONG JUE](#), is the first work to correlate ZHIGUAN (calmness and insight) practice as outlined by Zhiyi with the teachings of the [SADDHARMAPUNḌARĪKASŪTRA](#) (“Lotus Sūtra”), the central scripture of the Tiantai tradition. In his [JINGANG PI](#) (“Adamantine Scalpel”), Zhanran argued in favor of the controversial proposition that insentient beings also possess the buddha-nature ([FOXING](#)). Zhanran’s interpretation of Tiantai doctrine and the distinction he drew between his own tradition and the rival schools of the [HUAYAN ZONG](#) and [CHAN ZONG](#) set the stage for the internal Tiantai debates during the Song dynasty between its on-mountain (shanjia) and off-mountain (shanwai) branches (see [SHANJIA SHANWAI](#)). Zhanran lectured at various monasteries throughout the country and was later invited by emperors Xuanzong (r. 712–756), Suzong (r. 756–762), and Daizong (r. 762–779) to lecture at court, before retiring to the monastery Guoqingsi on Mt. Tiantai.

[Jingxuan](#). (C) (警玄). See [DAYANG JINGXUAN](#).

[Jingying Huiyuan](#). (J. Jōyō Eon; K. Chōngyōng Hyewōn 淨影慧遠) (523–592). Chinese monk and putative [DILUN](#) exegete during the Sui dynasty. Huiyuan was a native of [DUNHUANG](#). At an early age, he entered the monastery of Guxiangusi in Zezhou (present-day Shanxi province) where he was ordained by the monk Sengsi (d.u.). Huiyuan later studied various scriptures under the [VINAYA](#) master Lizhan (d.u.) in Ye, the capital of the Eastern Wei dynasty. In his nineteenth year, Huiyuan received the full monastic precepts from Fashang (495–580), ecclesiastical head of the [SAMGHA](#) at the time, and became his disciple. Huiyuan also began his training in the [DHARMAGUPTAKA](#) “Four-Part Vinaya” ([SIFEN LÜ](#)) under the vinaya master Dayin (d.u.). After he completed his studies, Huiyuan moved back to Zezhou and began his residence at the monastery Qinghuasi. In 577, Emperor Wu (r. 560–578) of Northern Zhou began a systematic persecution of Buddhism, and in response, Huiyuan is said to have engaged the emperor in debate; a transcript of the debate, in which Huiyuan defends Buddhism against criticisms of its foreign origins and its neglect of filial piety, is still extant. As the persecution continued, Huiyuan retreated to Mt. Xi in Jijun (present-day Henan province). Shortly after the rise of the Sui dynasty, Huiyuan was summoned by Emperor Wen (r. 581–604) to serve as overseer of the saṃgha (shamendu) in Luozhou (present-day Henan). He subsequently spent his time undoing the damage of the earlier persecution. Huiyuan was later asked by Emperor Wen to reside at the monastery of Daxingshansi in the capital. The

emperor also built Huiyuan a new monastery named Jingyingsi, which is often used as his toponym to distinguish him from [LUSHAN HUIYUAN](#). Jingying Huiyuan was a prolific writer who composed numerous commentaries on such texts as the [AVATAMSAKASŪTRA](#), [MAHĀPARINIRVĀNASŪTRA](#), [VIMALAKĪRTINIRDEŚĀ](#), [SUKHĀVATĪVYŪHASŪTRA](#), [ŚRĪMĀLĀDEVĪSIMHANĀDASŪTRA](#), [SHIDI JING LUN](#) ([VASUBANDHU](#)'s commentary on the [DAŚABHŪMIKASŪTRA](#)), [DASHENG QIXIN LUN](#), and others. Among his works, the [DASHENG YI ZHANG](#) (“Compendium of the Purport of Mahāyāna”), a comprehensive encyclopedia of Mahāyāna doctrine, is perhaps the most influential and is extensively cited by traditional exegetes throughout East Asia. Jingying Huiyuan also plays a crucial role in the development of early [PURE LAND](#) doctrine in East Asia. His commentary on the [GUAN WULIANGSHOU JING](#), the earliest extant treatise on this major pure land scripture, is critical in raising the profile of the *Guan jing* in East Asian Buddhism. His commentary to this text profoundly influenced Korean commentaries on the pure land scriptures during the Silla dynasty, which in turn were crucial in the the evolution of Japanese pure land thought during the Nara and Heian periods. Jingying Huiyuan’s concept of the “dependent origination of the [TATHĀGATAGARBHA](#)” (rulaizang yuanqi)—in which tathāgatagarbha is viewed as the “essence” ([TI](#)) of both [NIRVĀNA](#) and [SAMSĀRA](#), which are its “functioning” ([YONG](#))—is later adapted and popularized by the third [HUAYAN](#) patriarch, [FAZANG](#), and is an important precursor of later Huayan reconceptualizations of dependent origination ([PRATĪTYASAMUTPĀDA](#); see [FAJIE YUANQI](#)).

[Jingzhongsi](#). (C) (淨衆寺). See [WANFOSI](#).

[Jingzhong zong](#). (J. Jōshūshū; K. Chōngjung chong 淨衆宗). A branch of the early [CHAN ZONG](#) that flourished at the monastery Jingzhongsi in Chengdu (present-day Sichuan province). The history of the Jingzhong line is documented in the [LIDAI FABAO JI](#). According to this text, the Jingzhong line is derived from the Chan master Zhishen (609–702), a disciple of the fifth patriarch [HONGREN](#). Zhishen is also said to have received the purple robe of the Chan founder [BODHIDHARMA](#) from Empress Dowager [WU ZETIAN](#), which was ostensibly transmitted to Zhishen’s disciple Chuji (648–734/650–732/669–736) and then to [CHŌNGJUNG MUSANG](#) (C. Jingzhong Wuxiang) and [BAOTANG WUZHU](#). The *Lidai fabao ji*, authored by a disciple of Wuzhu, claims that the Jingzhong lineage is eventually absorbed into the [BAOTANG ZONG](#), though the two seem in fact to have been distinct lineages. The eminent Chan masters [MAZU DAOYI](#) and [GUIFENG](#)

[ZONGMI](#) are also known to have once studied under teachers of the Jingzhong line of Chan. The school is most closely associated with the so-called three propositions (sanju), a unique set of Chan precepts that were equated with the traditional roster of the three trainings ([TRISIKSĀ](#)): “no recollection” (wuyi), which was equated with morality ([ŚĪLA](#)); “no thought” ([WUNIAN](#)) with concentration ([SAMĀDHI](#)); and “no forgetting” (mowang) with wisdom ([PRAJÑĀ](#)). These three propositions are associated most closely with Musang, but other texts attribute them instead to Musang’s putative successor, Wuzhu. The portrayal in the literature of the teachings of the Jingzhong school divides along the fault line of these two great teachers, with Musang’s Chan adaptation of mainstream Buddhist teachings contrasting markedly with Wuzhu’s more radical, even antinomian approach, deriving from [HEZE SHENHUI](#). The Jingzhong masters are also said to have had some influence in Tibet (see [BSAM YAS DEBATE](#)), including on the development of [MAHĀYOGA](#) and [RDZOGS CHEN](#).

[Jinling Baozhi](#). (C) (金陵寶誌). See [BAOZHI](#).

[jiriki](#). (C. zili; K. charyōk 自力). In Japanese, “self power.” The term jiriki came to be used frequently in the pure land schools by the followers of [HŌNEN](#) and [SHINRAN](#) and their [JŌDOSHŪ](#) and [JŌDO SHINSHŪ](#) traditions. Jiriki, or “self power,” is often contrasted with the term [TARIKI](#), or “other power.” While tariki refers to the practitioner’s reliance on the power or grace of the buddha [AMITĀBHA](#), jiriki is often used pejoratively to refer to practices requiring personal effort, such as keeping the precepts ([ŚĪLA](#)) and cultivating the six perfections ([PĀRAMITĀ](#)). Reliance on jiriki was often condemned as a difficult path to enlightenment, especially as compared to practices based on tariki, such as reciting Amitābha’s name (J. nenbutsu; see C. [NIANFO](#)). Exegetes also attempted to underscore the futility of jiriki practices by suggesting that the world was currently in the mappō (C. [MOFA](#)), or dharma-ending age, when personal power alone was no longer sufficient to bring one to enlightenment, requiring instead the intervention of an external force. The jiriki–tariki dichotomy was often used polemically by Jōdoshū and Jōdo Shinshū exegetes to condemn the practices of rival Japanese traditions, such as the [TENDAISHŪ](#) and [ZENSHŪ](#), which they claimed were ineffective in the current degenerate age of the dharma.

[Jishu](#). [alt. Jishū] (時衆/時宗). In Japanese, “Time Assembly” or “Time school”; referring to followers of the Japanese itinerant holy man ([HIJIRI](#)) [IPPEN](#) (1239–1289). The name comes from this community’s practice of rotating leadership in

invoking the name of the buddha [AMITĀBHA](#) (J. nenbutsu; see [NIANFO](#)) at different time intervals. Ippen developed a practice known as ippen nenbutsu (single-time invocation of the name [see [NIANFO](#)] of the Amitābha), which largely consists of the uttering the phrase [NAMU AMIDABUTSU](#) as if that one time were the moment of one's death. Ippen widely propagated this teaching wherever he went, and to those who complied, he offered an amulet (fusan), which he claimed assured them rebirth in Amitābha's pure land of [SUKHĀVATĪ](#). In 1279, Ippen also began performing nenbutsu while dancing with drums and bells, a practice known as odori nenbutsu (dancing recitation) and first developed by the monk [KŪYA](#). During the course of his life as an itinerant preacher, Ippen acquired a large following that eventually became known as the Jishū. The number of Jishū followers grew greatly during the Kamakura period. The Jishū community was guided by a set of eighteen vows devised by Ippen and was distinguished from monks of other traditions by their unique robes. An intense rivalry seems to have existed between the leaders of the Jishū and the [JODO SHINSHŪ](#) tradition of Japanese pure land Buddhism. A large portion of the Jishū community was later absorbed into the Jōdo Shinshū community, largely through the efforts of [RENNYO](#). The current head temple of Jishū is Shōjōkōji in Fujisawa, Kanagawa Prefecture.

[Jitāri](#). [alt. Jetāri] (T. Dgra las rnam rgyal) (fl. c. 940–980). Sanskrit proper name of the author of the *Hetutattopadeśa* and a number of short works on [PRAMĀNA](#) in the tradition that follows [DHARMAKĪRTI](#); later Tibetan doxographers (see [SIDDHĀNTA](#)) characterize him as interpreting Dharmakīrti's works from a [MADHYAMAKA](#) perspective, leading them to include him in a [YOGĀCĀRA–SVĀTANTRIKA–MADHYAMAKA](#) school following the false aspect (alīkākara) position. A Jitāri also appears in the list of the eighty-four [MAHĀSIDDHAS](#) as a tantric adept; he is also listed as a teacher of [ATĪŚA DĪPAMKARAŚRĪJÑĀNA](#).

[Jiuhuashan](#). (九華山). In Chinese, “Nine Florate Mountain”; located in southeastern China, in Qingyang county, Anhui province. Jiuhuashan is one of the four Buddhist sacred mountains of China, along with [PUTUOSHAN](#) in Zhejiang, [EMEISHAN](#) in Sichuan, and [WUTAISHAN](#) in Shanxi. Each mountain is said to be the residence of a specific [BODHISATTVA](#), with Jiuhuashan considered the holy mountain of [KSITIGARBHA](#) (DIZANG PUSA), a revered bodhisattva in China, who is regarded as the redeemer of the denizens of the hells ([NĀRAKA](#)). Jiuhuashan, the major mountain center in southeastern China, covers more than

sixty square miles (one hundred square kilometers) and is famous for its spectacular peaks, perilous cliffs, huge boulders, ancient caves, and myriads of springs, streams, waterfalls, ancient pines, and bamboo forests. Jiuhuashan was originally known as Jiuzifeng (lit. Nine Children Mountain) because its nine major peaks had the shape of children; it was renamed Jiuhuashan after a description of the mountain in a poem by Li Bo (701–762 CE), the renowned Tang-dynasty poet. Jiuhuashan is said to have been the residence of a Korean monk named [CHIJANG](#) (C. Dizang; S. Kṣitigarbha), also known as [KIM KYOGAK](#) (628–726). Chijang was a scion of the royal family of the Silla dynasty, who ended up spending some seventy-five years meditating at Jiuhuashan. He is said to have survived by eating only rice that had been cooked together with white soil (perhaps lime or gypsum) dug from between the rocks. The laity were so moved by his asceticism that they built the monastery of Huachengsi for him. When Chijang passed away, his body did not decay and people came to believe that he was the manifestation of his namesake, Kṣitigarbha. A shrine hall named Dizang dian was built on the site where he died, which could only be reached by pulling oneself by rope up eighty-one precarious stone steps. Because of this connection to Chijang, by at least the Ming dynasty, Jiuhuashan was considered the sacred site of Kṣitigarbha. Jiuhuashan at one time housed more than three hundred monasteries and four thousand monks. The grand scale of its monastic architecture and the large numbers of pilgrims it attracted throughout the year led to its recognition as a Buddhist sacred mountain.

[Jiun Onkō](#). (慈雲飲光) (1718–1804). In Japanese, “Cloud of Compassion, Drinker of Light”; a monk of the Shingon Risshū school, which combined the esoteric teachings of the [SHINGONSHŪ](#) with disciplinary observance of the [VINAYA](#); also known as Jiun Sonja. Up to the age of twelve, he received a traditional Confucian education, but after his father’s death the following year, he was entrusted to Hōrakuji, a Shingon Risshū monastery in Kawachi (present-day Ōsaka prefecture), where he studied esoteric teachings and the [SIDDHAM](#) Sanskrit syllabary. During his early studies of Buddhism, Jiun came to realize the centrality of the [PRĀTIMOKSA](#) precepts to a monastic vocation, and in 1738 decided to take the full set of monk’s precepts (J. gusokukai) at the monastery of Yachūji. In the following year, Jiun was appointed abbot of his old monastery of Hōrakuji, but he resigned two years later to dedicate himself to [ZEN](#) practice in the [SOTŌSHŪ](#). In his late twenties, he founded a movement called the “vinaya of the true dharma” (shōbōritsu), which encouraged Buddhist clerics to commit

themselves to the prātimokṣa precepts, regardless of their sectarian affiliations. In 1758, Jiun wrote a massive textbook on Sanskrit, the thousand-roll *Bongaku shinryō* (“The Ford and Bridge to Sanskrit Studies”), the first such study aid published in Japan. In 1775, he compiled his *Juzen hōgo* (“Dharma Discourses on the Ten Wholesome Ways of Action”), a collection of lectures on the [KUŚALA-KARMAPATHA](#) that he had delivered the two previous years at Amidadera in Kyōto. Late in his life, he moved to [KATSURAGISAN](#), where he pioneered an eclectic religious movement that came to be called Uden SHINTŌ (“Shintō transmitted by Jiun”) or Katsuragi Shintō, which integrated Shingon, Zen, and Confucianism with Japanese indigenous religion.

jiupin. (J. kuhon; K. kup’um 九品). In Chinese, “nine grades.” According to the [PURE LAND](#) school, beings who succeed in being reborn into a pure land are divided into “nine grades,” e.g., “the uppermost in the top grade (shangshang),” “the intermediate in the top grade (shangzhong),” “the lowest in the top grade (shangxia),” “the uppermost in the intermediate grade (zhongshang),” ... “the lowest in the bottom grade (xiaxia).” One’s rebirth “grade” is determined by one’s previous practice, the amount of meritorious actions one has performed, and the greatness of one’s aspiration for enlightenment, among other factors. For example, according to the [GUAN WULIANGSHOU JING](#) (“Sūtra on the Visualization of the Buddha of Immeasurable Life”), the “uppermost in the top grade” is won by possessing the utmost sincerity (zhicheng xin), profound aspiration (shenxin), and a desire to direct one’s highest aspiration to the purpose of being reborn in the pure land (huixiang fayuan xin) during a lifetime of practice. By contrast, the “lowest in the bottom grade” is secured by a penitent reprobate who is able to chant the name of [AMITĀBHA](#) up to ten times (shinian) right before his or her death. One’s reborn “grade” will affect things such as the time one will take to reach buddhahood in the pure land (the higher the grade, the quicker one will the attainment). See also [AMITUO JIUPIN YIN](#).

jiushi. (J. kuse; K. kuse 九世). In Chinese, the “nine time periods,” or “nine temporal modes.” In each of the so-called three time periods (viz., past, present, future) there are three time periods posited, viz., a past, present, and future of the past, present, and future, giving a total of nine time periods.

jiuyi. (J. kugi; K. kuīi 九儀). In Chinese, “nine modes [of showing respect].” According to the Chinese pilgrim [XUANZANG](#)’s observations as recounted in his [DA TANG XIYU JI](#), Indian Buddhists expressed their veneration through these nine

modes: verbal greetings/asking about each other’s welfare, bowing, holding high their clasped hands, bowing with clasped hands, bending one knee so it touches the ground, kneeling, prostration with the forehead, two hands and two knees touching the ground, and whole-body prostration with the front of the body touching the ground.

Jīvaka. (T. ’Tsho byed; C. Qipo/Shubojia; J. Giba/Jubaka/Jubakuka; K. Kiba/Subakka 耆婆/戍博迦). A famous physician and lay disciple of the Buddha, declared foremost among laymen beloved by the people. The son of a courtesan, he was abandoned at birth on a dust heap. He was rescued by a prince who, when he was told the infant was still alive, gave him the name Jīvaka, meaning “Living” in Sanskrit and Pāli. As the adopted son of the prince, he was also known in Pāli as Jīvaka Komārabhacca, meaning Jīvaka who was “raised by the prince.” (Alternatively, Komārabhacca may mean “master of pediatrics,” as in the science of *kaumārabhṛtya*, the treatment of infants.) As a young man, Jīvaka studied medicine and soon became a renowned and wealthy doctor. It is said that his first patient gave him sixteen thousand coins, a pair of servants, and a coach with horses. King [BIMBISĀRA](#) of [MAGADHA](#) hired him as his royal physician and also assigned him to look after the health of the Buddha and his monks. Jīvaka continued to serve Bimbisāra’s son [AJĀTAŚATRU](#), who murdered his father to usurp the throne, and it was Jīvaka who escorted the patricide before the Buddha, so he could repent from his crime. Jīvaka attended the Buddha on many occasions. He bandaged the Buddha’s foot when it was injured by the rock hurled by [DEVADATTA](#) on [GRDHRAKŪTAPARVATA](#). Once, Jīvaka noted how the monks were pale and unhealthy in appearance and recommended that the Buddha require them to exercise regularly. He treated rich and poor alike and those who could not pay he treated without charge. So popular was Jīvaka that he could not treat all who came to him, yet he never neglected to serve the [SAMGHA](#). For this reason, the poor and indigent began to enter the order simply to receive medical attention. When Jīvaka became aware of this trend, he recommended to the Buddha that persons suffering from certain diseases not be allowed to ordain. Jīvaka became a stream-enterer ([SROTAĀPANNA](#)) and is included in a list of good men assured of realization of the deathless. ¶ Jīvaka is also traditionally listed as ninth of the sixteen [ARHAT](#) elders ([SODĀŚASTHAVIRA](#)), who were charged by the Buddha with protecting his dispensation until the advent of the next buddha, [MAITREYA](#). Jīvaka is said to reside in Gandhamādana with nine hundred disciples. The Chinese tradition says that this Jīvaka was

originally a prince in a central Indian kingdom, whose younger brother wanted to fight him for the throne. But Jīvaka told his brother that he thought only of the Buddha and had never wanted to be king. He then exposed his chest, and his younger brother saw a buddha image engraved over his heart. Realizing his brother's sincerity, he then dismissed his troops. Jīvaka thus earned the nickname "Heart-Exposing [ARHAT](#)" (Kaixin Luohan). In [CHANYUE GUANXIU](#)'s standard Chinese depiction, Jīvaka sits slightly leaning on a rock. He has an aquiline nose and deep-set eyes, a high forehead, and bright eyes staring forward. He holds a fan in his left hand, and his right fingers are bent.

Jīvakasutta. In Pāli, "Discourse to Jīvaka," fifty-fifth sutta in the [MAJJHIMANIKĀYA](#) (there is no equivalent recension in the Chinese translations of the [ĀGAMAS](#)). The Buddha addressed this discourse to his physician, [JĪVAKA](#) Komārabhacca, while he dwelled in the physician's mango grove in Rājagaha (S. [RĀJAGRHA](#)). Jīvaka inquires whether it is true that the Buddha eats meat prepared for him from animals killed for his sake, or whether this is a misrepresentation of his practice. The Buddha explains that there are three instances when a monk should not eat meat that has been offered to him: when it is heard, seen, or suspected that a living creature has been intentionally slaughtered to feed him. Apart from these three exceptions, a monk is permitted to accept and eat meat. He further explains that a monk should not show preference for one kind of food over another, nor be greedy in eating. Rather he should eat what he receives dispassionately, noting that food is eaten only to sustain the health of the body in order vigorously to pursue the path to liberation. Pleased by the discourse, Jīvaka Komārabhacca dedicates himself as a lay disciple of the buddha.

jīvita. (T. srog; C. shouming/minggen; J. jumyō/myōkon; K. sumyōng/myōnggūn 壽命/命根). In Sanskrit and Pāli, "vitality" or "life force." Jīvita appears in the Buddhist scriptures as a predominant factor ([INDRIYA](#)), the jīvitendriya, governing birth and prolonging the physical continuum up through the "intermediate state" ([ANTARĀBHAVA](#)), which leads to the next rebirth. Early [ABHIDHARMA](#) texts equate jīvita with "life" ([ĀYUS](#)) itself, viz., the life force that sustains and animates all sentient beings. In the [SARVĀSTIVĀDA](#) abhidharma, jīvita is listed as the seventh of fourteen conditioned forces dissociated from thought ([CITTAVIPRAYUKTASAMSKĀRA](#)), which is characterized by bodily warmth and serves as the basis for perceptual consciousness. In the Pāli abhidharma, life-

force appears twice as the support of both the physical body (as derived materiality, or upādārūpa) and the mind (as a morally indeterminate mental concomitant). When jīvita, which is the support of warmth and consciousness, is no longer associated with the physical body, death occurs.

Jizang. (J. Kichizō; K. Kilchang 吉藏) (549–623). In Chinese, “Storehouse of Auspiciousness”; Chinese Buddhist monk of originally Parthian descent and exegete within the [SAN LUN ZONG](#), the Chinese counterpart of the [MADHYAMAKA](#) school of Indian thought. At a young age, he is said to have met the Indian translator [PARAMĀRTHA](#), who gave him his dharma name. Jizang is also known to have frequented the lectures of the monk Falang (507–581) with his father, who was also ordained monk. Jizang eventually was ordained by Falang, under whom he studied the so-called Three Treatises ([SAN LUN](#)), the foundational texts of the Chinese counterpart of the Madhyamaka school: namely, the *Zhong lun* ([MŪLAMADHYAMAKĀRIKĀ](#)), [BAI LUN](#) (*[ŚATAŚĀSTRA](#)), and [SHI'ER MEN LUN](#) (**Dvādaśamukhaśāstra*). At the age of twenty-one, Jizang received the full monastic precepts. After Falang’s death in 581, Jizang moved to the monastery of Jiaxiangsi in Huiji (present-day Zhejiang province). There, he devoted himself to lecturing and writing and is said to have attracted more than a thousand students. In 598, Jizang wrote a letter to [TIAN TAI ZHI YI](#), inviting him to lecture on the [SADDHARMAPUNḌARĪKASŪTRA](#). In 606, Emperor Yang (r. 604–617) constructed four major centers of Buddhism around the country and assigned Jizang to one in Yangzhou (present-day Jiangsu province). During this period, Jizang composed his influential overview of the doctrines of the Three Treatises school, entitled the [SAN LUN XUANYI](#). Jizang’s efforts to promote the study of the three treatises earned him the name “reviver of the San lun tradition.” Jizang was a prolific writer who composed numerous commentaries on the three treatises, the *Saddharmapuṇḍarīkasūtra*, [MAHĀPARINIRVĀNASŪTRA](#), [VIMALAKĪRTINIRDEŚA](#), [SUKHĀVATĪVYŪHASŪTRA](#), etc., as well as an overview of Mahāyāna doctrine, entitled the *Dasheng xuan lun*.

jñāna. (P. ñāṇa; T. ye shes; C. zhi; J. chi; K. chi 智). In Sanskrit, “gnosis,” “knowledge,” “awareness,” or “understanding,” numerous specific types of which are described in Buddhist literature. Jñāna in the process of cognition implies specific understanding of the nature of an object and is necessarily preceded by [SAMJÑĀ](#) (“perception”). Jñāna is also related to [PRAJÑĀ](#) (“wisdom”); where prajñā implies perfected spiritual understanding, jñāna refers to more

general experiences common to a specific class of being, such as the knowledge of a [ŚRĀVAKA](#), [PRATYEKABUDDHA](#), or buddha. The [YOGĀCĀRA](#) school discusses four or five specific types of knowledge exclusive to the buddhas. The four knowledges are transformations of the eighth consciousnesses ([VIJÑĀNA](#)): (1) Mirror-like knowledge, or great perfect mirror wisdom ([ĀDARŚAJÑĀNA](#); mahādarśajñāna), a transformation of the eighth consciousness, the [ĀLAYAVIJÑĀNA](#), in which the perfect interfusion between all things is seen as if reflected in a great mirror. (2) The knowledge of equality, or impartial wisdom ([SAMATĀJÑĀNA](#)), a transformation of the seventh [KLISTAMANOVIJÑĀNA](#), which transcends all dichotomies to see everything impartially without coloring by the ego. (3) The knowledge of specific knowledge or sublime contemplation ([PRATYAVEKSANĀJÑĀNA](#)), a transformation of the sixth [MANOVIJÑĀNA](#), which recognizes the unique and common characteristics of all [DHARMAS](#), thus giving profound intellectual understanding. (4) The knowledge that one has accomplished what was to be done ([KRTYĀNUSTHĀNAJÑĀNA](#)), a transformation of the five sensory consciousnesses, wherein one perfects actions that benefit both oneself and others. The fifth of the five knowledges is the “knowledge of the nature of the [DHARMADHĀTU](#)” ([DHARMADHĀTUSVABHĀVAJÑĀNA](#)). Each of these knowledges is then personified by one of the [PAÑCATATHĀGATAS](#), sometimes given the names [VAIROCANA](#), [AKSOBHYA](#), [RATNASAMBHAVA](#), [AMITĀBHA](#), and [AMOGHASIDDHI](#).

[jñānadarśana](#). (P. ñānadassana; T. ye shes mthong ba; C. zhijian; J. chicken; K. chigyōn 知見). In Sanskrit, “knowledge and vision”; the direct insight into the reality of the three marks of existence ([TRILAKSANA](#))—impermanence ([ANITYA](#)), suffering ([DUHKHA](#)), and nonself/insubstantiality ([ANĀTMAN](#))—and one of the qualities perfected on the path leading to the stage of a worthy one ([ARHAT](#)). The term often appears in a stock description of the transition from the meditative absorption that is experienced during the four levels of [DHYĀNA](#) to the insight generated through wisdom ([PRAJÑĀ](#)): after suffusing one’s mind with concentration, purity, malleability, and imperturbability, the meditator directs his or her attention to “knowledge and vision.” In this vision of truth, the meditator then recognizes that the self ([ĀTMAN](#)) is but the conjunction of a physical body constructed from the four great elements ([MAHĀBHŪTA](#)) and a mentality ([VIJÑĀNA](#), [CITTA](#)) that is bound to and dependent upon that physical body (see [NĀMARŪPA](#)). Letting go of attachment to body and mind, the meditator finally gains the knowledge that he is no longer subject to rebirth and becomes an arhat.

The Pāli abhidhamma includes “knowledge and vision” within the last three types of purifications of practice (P. *visuddhi*; S. [VIŚUDDHI](#)): the fifth “purification of the knowledge and vision of what constitutes the path” (P. [MAGGĀMAGGAÑĀNADASSANAVISUDDHI](#)), the sixth “purification of the knowledge and vision of the method of salvation” (P. [PATIPADĀÑĀNADASSANAVISUDDHI](#)), and finally the seventh “purification of knowledge and vision” itself (P. [ÑĀNADASSANAVISUDDHI](#)), which constitutes the pure wisdom that derives from the experience of enlightenment. In the [MAHĀYĀNA](#), the perfection of knowledge and vision (*jñānadarśanapāramitā*) is also said to be an alternate name for the perfection of wisdom ([PRAJÑĀPĀRAMITĀ](#)), one of the six or ten perfections ([PĀRAMITĀ](#)) of the [BODHISATTVA](#) path.

[jñānadharmakāya](#). (T. *ye shes chos sku*). In Sanskrit, “knowledge truth body,” one of the two divisions (along with the [SVABHĀVAKĀYA](#)) of the [DHARMAKĀYA](#) of a buddha. With the development of [MAHĀYĀNA](#) thought, the dharmakāya became a kind of transcendent principle in which all buddhas partake, and it is in this sense that the term is translated as “truth body.” In the later Mahāyāna scholastic tradition, the dharmakāya was said to have two aspects. The first is the *svabhāvakāya* (alt. *svābhāvīkākāya*), or “nature body,” which is the ultimate nature of a buddha’s mind; the second is the *jñānakāya* or “knowledge body,” a buddha’s omniscient gnosis. The final chapter of the [ABHISAMAYĀLAMKĀRA](#) sets forth an elliptic presentation of the *svabhāvakāya* that led to a number of different later interpretations. According to Ārya [VIMUKTISENA](#)’s interpretation, the *svabhāvakāya* is not a separate buddha body, but rather the ultimate nature underpinning the other three bodies (the dharmakāya, [SAMBHOGAKĀYA](#), and [NIRMĀNAKĀYA](#)). [HARIBHADRA](#), influenced by [YOGĀCĀRA](#) scholastic positions, privileges the dharmakāya and says it has two parts: a knowledge body (*jñānadharmakāya*) and a *svabhāvakāya*, its ultimate nature. This controversy was widely debated in Tibet in the commentarial tradition. See also [TRIKĀYA](#).

[Jñānagarbha](#). (T. *Ye shes snying po*) (c. 700–760). Indian scholar of the syncretic Yogācāra–Madhyamaka school of philosophy, identified by the Tibetan tradition as a proponent of [YOGĀCĀRA–SVĀTANTRIKA–MADHYAMAKA](#). He is counted in Tibet, together with [ŚĀNTARAŚITA](#) and [KAMALAŚĪLA](#), as one of the “three Eastern Svāntarikas,” suggesting that he was from Bengal. He is said to have been the disciple of Śrīgupta and the teacher of Śāntarakṣita. His most famous work is the [SATYADVAYAVIBHANĠA](#) (“Analysis of the Two Truths”).

Jñānagupta. (C. Shenajueduo; J. Janakutta; K. Sanagulta 闍那崛多) (523–600). Indian monk from [GANDHĀRA](#), who arrived in China around 559 and became a prolific translator of Indian materials into Chinese; some thirty-five of his translations are still extant and preserved in the Chinese canon ([DAZANGJING](#)). He is perhaps best known for his retranslation of the [SADDHARMAPUNĀRIKASŪTRA](#) (“Lotus Sūtra”), which included portions of the scripture that did not appear in [KUMĀRAJĪVA](#)’s pioneering translation made two centuries before, especially the important “Chapter on Devadatta.” He also translated the *Adhyāśayasañcodana*, the [VĪMALAKĪRTINIRDEŚA](#), the *Abhiṣkramaṇasūtra* (a possible translation of the [MAHĀVASTU](#)), and several [DHĀRANĪ](#) sūtras.

jñānamudrā. (T. ye shes phyag rgya). In Sanskrit, “knowledge seal”; a term used to refer to an imagined or visualized female consort in the practice of sexual yoga in [ANUTTARAYOGATANTRA](#). In the context of sexual yoga, three types of female consorts or [VIDYĀ](#) (“knowledge women”) are sometimes enumerated. The first is the jñānamudrā or “knowledge seal,” who is an imagined or visualized partner, not an actual consort. The second and third types of consorts are both actual consorts. The [SAMAYAMUDRĀ](#), or “pledge seal,” is a consort who is fully qualified for the practice of sexual yoga, in the sense that she is of the appropriate age and caste, has practiced the common path, and maintains the tantric pledges ([SAMAYA](#)). The third and final type is the [KARMAMUDRĀ](#), “action seal,” who is also an actual consort but who may not possess the qualifications of a samayamudrā. In some expositions of tantric practice, these three types of “seals” are discussed with reference to [MAHĀMUDRĀ](#), or “great seal,” a multivalent term sometimes defined as the union of method ([UPĀYA](#)) and wisdom ([PRAJÑĀ](#)), which does not require a consort.

jñānamusti. (T. ye shes khu tshur; C. zhiquan yin; J. chicken’in; K. chigwŏn in 智拳印). In Sanskrit, “wisdom/knowledge fist [gesture]”; in esoteric Buddhist iconography, the distinctive gesture ([MUDRĀ](#)) associated with images of the buddha [VAIROCANA](#), the central figure of the esoteric traditions of Buddhism and the chief buddha of the tathāgata family (see [PAÑCAKULA](#)). The gesture is formed with the index finger of the left hand grasped by the fist of the right hand, and both hands raised in front of the image’s chest. The gesture is interpreted to indicate the unity in the [DHARMAKĀYA](#) of the divergent experience of ordinary beings and buddhas, [SAMSĀRA](#) and [NIRVĀNA](#), ignorance and wisdom, and delusion and enlightenment. See also [BODHYAṄGĪMUDRĀ](#).

Jñānaprasthāna. (T. Ye shes la 'jug pa; C. Fazhi lun; J. Hotchiron; K. Palchi non 發智論). In Sanskrit, “Foundations of Knowledge,” the central text, or “body” (śarīra), of the [ABHIDHARMAPITAKA](#) of the [SARVĀSTIVĀDA](#) school; attributed to [KĀTYĀYANĪPUTRA](#) and probably composed around the last half of the first-century BCE. The other six treatises of the Sarvāstivāda [ABHIDHARMA](#) are considered to be the ancillary texts, or “feet” (pādaśāstra), of the *Jñānaprasthāna*. The text is extant only in two Chinese translations, the earliest made in 383 by the Kashmiri monk Saṃghadeva and [ZHU FONIAN](#) (titled the *Bajiandu lun*, or *Aṣṭagrantha*, after the eight major sections into which the text is divided), the second, definitive translation by [XUANZANG](#) and his translation team between 657 and 660. Both recensions divide the treatise into eight sections, with forty-four chapters in total, but there are enough differences in the structure of the discussion to suggest that they may represent Gandhārin and Kashmiri recensions, respectively. The organization of material is as follows:

Section One: Miscellaneous Topics, including discussions of the highest worldly factors ([LAUKIKĀGRADHARMA](#)) and the [NIRVEDHABHĀGĪYA](#)
Section Two: Afflictions ([KLEŚA](#)) Section Three: Knowledge ([JÑĀNA](#)) Section
Four: Action ([KARMAN](#)) Section Five: Elements ([BHŪTA](#)) Section Six:
Dominant Factors ([INDRIYA](#)) Section Seven: Meditative Absorption ([DHYĀNA](#))
Section Eight: Vision ([DARŚANA](#))

A few centuries after the composition of the *Jñānaprasthāna*, or c. first half of the second-century CE, Sarvāstivāda exegetes compiled a massive commentary to the text, entitled the [ABHIDHARMAMAHĀVIBHĀSĀ](#), which followed the root text’s chapters and section divisions but exponentially expanded the coverage of the school’s teachings. Because of their adherence to the exegetical approaches outlined in that commentary, later masters of the Sarvāstivāda school in [KASHMIR–GANDHĀRA](#) termed themselves “[VAIBHĀSIKA](#).” ¶ The *Jñānaprasthāna* is probably the last of the canonical Sarvāstivāda abhidharma texts to have been composed and contains a systematic overview of the emblematic doctrines of the mature school. Distinctive Sarvāstivāda doctrines treated in the text include the full roster of the four conditions ([PRATYAYA](#)) and six causes ([HETU](#)); the Sarvāstivāda’s eponymous teaching that factors (dharma) exist in all three time periods ([TRIKĀLA](#)) of the past, present, and future; the definitive classification schema for the mental concomitants ([CAITTA](#)); and the listing of the four conditioned characteristics ([SAMSKRTALAKSANA](#)) of dharmas, viz., origination ([JĀTI](#)), continuance ([STHITI](#)), senescence ([JARĀ](#)), and desinence (anityatā, [ANITYA](#);

viz., death). The *Jñānaprasthāna*'s outline of Sarvāstivāda abhidharma is based on a soteriological schema, ultimately deriving from the [FOUR NOBLE TRUTHS](#). The opening chapter on miscellaneous factors begins with a discussion of the highest worldly factors (laukikāgradharma), perhaps the major conceptual innovation of the text, that is, dharmas at the moment of the transition from ordinary person ([PRTHAGJANA](#)) to noble one ([ĀRYA](#)), when they catalyze access to the path of vision ([DARŚANAMĀRGA](#)). The *Jñānaprasthāna* thus uses its treatment of the highest worldly dharmas as an interpretative tool to integrate its discussion of the major stages in the path, from the mundane path of practice ([LAUKIKA-BHĀVANĀMĀRGA](#)), to the path of vision, the supramundane path of cultivation ([LOKOTTARA-BHĀVANĀMĀRGA](#)), and the path of the realized adept ([ĀŚAIKSAMĀRGA](#); see also [PAÑCAMĀRGA](#)). This focus also highlights the major difference between Sarvāstivāda and Pāli abhidharma materials: whereas Pāli texts include substantial coverage of such preliminary practices as morality and choosing a meditation subject, the *Jñānaprasthāna* is principally concerned with the more advanced stages of the path. The second critical contribution of the *Jñānaprasthāna* is its systematization of the six causes ([HETU](#)). These six are not found in the [ĀGAMAS](#), and only four are listed in earlier Sarvāstivāda abhidharma texts, such as the [VIJÑĀNAKĀYA\[PĀDAŚĀSTRA\]](#). Kātyāyanīputra's systematization of this list seems to have been intended to demonstrate the causal connections that pertained between the stages of the path. Overall, the *Jñānaprasthāna* is best known not for its doctrinal innovations but instead for its grand systematization of Sarvāstivāda abhidharma.

[jñānasambhāra](#). (T. ye shes kyi tshogs; C. zhiju; J. chiju; K. chich'wi 智聚). In Sanskrit, the “collection,” or “equipment,” “of knowledge”; along with the “collection of merit” ([PUNYASAMBHĀRA](#)), one of the two types of qualities with which [BODHISATTVAS](#) must equip themselves in the course of achieving buddhahood. Between the two poles of method ([UPĀYA](#)) and wisdom ([PRAJÑĀ](#)), the collection of knowledge is associated with wisdom. Among the six perfections ([PĀRAMITĀ](#)), the last two, meditative absorption ([DHYĀNA](#)) and wisdom ([PRAJÑĀ](#)), are traditionally associated with the collection of knowledge (the perfection of effort, [VĪRYAPĀRAMITĀ](#), contributes to both collections). The [DHARMAKĀYA](#) is said to be the result of the buddhas having equipped themselves with knowledge, while the [RŪPAKĀYA](#) is said to be the result of the collection of merit.

Jñānasārasamuccaya. (T. Ye shes snying po kun las btus pa). A treatise of [MADHYAMAKA](#) scholasticism, traditionally attributed to [ĀRYADEVA](#), but probably composed by a Madhyamaka exegete following the development of Madhyamaka and [YOGĀCĀRA](#); the author sets forth Madhyamaka positions and denies the reality of consciousness ([VIJÑĀNA](#)). It describes the doctrines of the later Indian philosophical schools, both Hindu and Buddhist. Although the work does not contain overtly tantric elements, it may be the work of the so-called tantric Āryadeva or Āryadevapāda. There is a commentary on the text by Bodhibhadra (c. 1000), the *Jñānasārasamuccayanibandhana*.

jñānasattva. (T. ye shes sems dpa'). In Sanskrit, “knowledge being;” in later tantric visualization practice, one is first instructed to create a visualized image, called the “pledge being” ([SAMAYASATTVA](#)), of the deity ([DEVATĀ](#)) being propitiated. Once that image is perfectly visualized, the true form of the deity, called the “knowledge being,” is invited to come from his or her abode and fuse with the visualized form created by the meditator during the [SĀDHANA](#) ritual.

Jñānaśrīmitra. (T. Ye shes dpal bshes gnyen) Late Indian [YOGĀCĀRA](#) philosopher and logician of the school of [DHARMAKĪRTI](#) at [VIKRAMAŚĪLA](#) monastery, born between 975 and 1000. Within the Yogācāra, he held the so-called “aspectarian” ([SĀKĀRA](#)) position regarding the nature of cognition, taking a position opposed to that of [RATNĀKARAŚĀNTI](#). He is credited as the author of twelve treatises, including an important work on [APOHA](#), the *Apohaprakaraṇa*. In his works on logic, he upholds the interpretation of [DHARMAKĪRTI](#) by [PRAJÑĀKARAGUPTA](#) against the interpretation by [DHARMOTTARA](#).

jñapti. (P. ñatti; T. gsol ba; C. bai; J. byaku; K. paek 白). In Sanskrit, lit. “understanding”: in the context of the monastic code ([VINAYA](#)), a formal “motion” or “resolution” put before an assembly of the [SAMGHA](#) for the purpose of carrying out a [SAMGHAKARMAN](#), an ecclesiastical act. Depending upon the requirements of the particular ecclesiastical act, the jñapti may or may not be followed by a [KARMAVĀCANĀ](#), or “proceeding,” which is a formalized recitation of a prescribed ritual text. There are three kinds, based on the number of times the motion must be stated in order to give all the monks present the opportunity to raise objections prior to the motion being carried. Some saṃghakarman do not require the recitation of a karmavācanā. Others require that the jñapti and the karmavācanā be recited once ([JÑAPTIDVITĪYĀ KARMAVĀCANĀ](#)). Yet others require that the jñapti and the karmavācanā be recited three times. There is no

saṃghakarman that require the recitation of a karmavācanā two times.

[jñaptidvīyā karmavācanā](#). (P. ñattidutiyakammavācā; T. gsol ba dang gnyis kyī las brjod pa; C. boyi jiemo; J. byakuichikonma; K. paegil kalma 白一羯磨). In Sanskrit, “statement of a matter or ‘proceeding’ ([KARMAVĀCANĀ](#)) involving a ‘motion’ ([JŅAPTI](#)) accompanied by a single ‘repetition’ (dvīyā) of the formal question,” that is, a motion made before the congregation of monks that may be approved by silent assent, rather than being followed by a request for a voicing of approval. According to the [VINAYA](#), jñaptidvīyā karmavācanā is the procedure that is to be followed during certain specific formal occasions within the SAMGHA, such as the ordination ceremony, the adjudication of rules, the administration of punishments to transgressors of the precepts, and the settlement of disputes among the clergy. A motion or proposal is made formally one time to the attendees, and repeated once to solicit any additional responses. If the proposal is read in this manner with no audible objections from the group (silence indicating approval), it is passed and considered binding on the participants. For matters of greater importance or formality, there are also procedures involving three formal questions, which require an audible response before they are considered to be decided. See also [SAMGHAKARMAN](#); [KARMAN](#).

[jñeyāvarana](#). (T. shes bya’i sgrīb pa; C. suozhizhang; J. shochishō; K. sojjang 所知障). In Sanskrit, “cognitive obstructions,” or “noetic obscurations”; the second of the two categories of obstructions ([ĀVARANA](#)), together with the afflictive obstructions ([KLEŚĀVARANA](#)), that must be overcome in order to perfect the [BODHISATTVA](#) path and achieve buddhahood. In the [YOGĀCĀRA](#) and [MADHYAMAKA](#) systems, the cognitive obstructions are treated as subtler hindrances that serve as the origin of the afflictive obstructions, and result from fundamental misapprehensions about the nature of reality. According to Yogācāra, because of the attachment deriving ultimately from the reification of what are actually imaginary external phenomena, conceptualization and discrimination arise in the mind, which lead in turn to pride, ignorance, and wrong views. Based on these mistakes in cognition, then, the individual engages in defiled actions, such as anger, envy, etc., which constitute the afflictive obstructions. The afflictive obstructions may be removed by followers of the [ŚRĀVAKA](#), [PRATYEKABUDDHA](#), and beginning [BODHISATTVA](#) paths, by applying various antidotes or counteragents ([PRATIPAKSA](#)) to the afflictions ([KLEŚĀ](#)); overcoming these types of obstructions will lead to freedom from further rebirth.

The cognitive obstructions, however, are more deeply ingrained and can only be overcome by advanced bodhisattvas who seek instead to achieve buddhahood, by perfecting their understanding of emptiness ([ŚŪNYATĀ](#)). Buddhas, therefore, are the only class of beings who have overcome both types of obstructions and thus are able simultaneously to cognize all objects of knowledge in the universe; this is one of the sources for their unparalleled skills as teachers of sentient beings. The *jñeyāvaraṇa* are therefore sometimes translated as “obstructions to omniscience.”

[Jo bo mi bskyod rdo rje](#). (Jowo Mikyur Dorje). A statue of [ŚĀKYAMUNI](#) Buddha as an eight-year-old [BODHISATTVA](#), which was brought to Tibet by the Nepali Princess [BHRKUTĪ](#) during the reign of the Tibetan King SRONG BTSAN SGAM PO. Originally placed in the [JO KHANG](#) in [LHA SA](#), it was later moved to the Lha sa [RA MO CHE](#) Temple. The statue disappeared sometime during the Chinese Cultural Revolution (1966–1976) but was later recovered by the tenth [PAN CHEN LAMA](#) and returned to Ra mo che.

[Jo bo Shākyamuni](#). Chief image of the [JO KHANG](#) and of Tibet’s most sacred Buddhist images. Called the Jo bo (Jowo, “Lord”) or Jo bo rin po che (“Precious Lord”), this statue of [ŚĀKYAMUNI](#) as a young man is claimed to have been crafted in India during the Buddha’s lifetime and brought to Tibet by the Chinese princess [WENCHENG](#) during the reign of the Tibetan King SRONG BTSAN SGAM PO. It lends its name to the monastery where it is enshrined, the Jo khang.

[Jōdo](#). (J) (浄土). See [PURE LAND](#).

[Jōdo Shinshū](#). (浄土真宗). In Japanese, the “True Pure Land school”; referring to the followers of the Japanese [PURE LAND](#) monk [SHINRAN](#) (1173–1262) and often called simply the Shinshū (“True School”). The central scriptures of the Jōdo Shinshū are the so-called three pure land [SŪTRAS](#) (J. *jōdo sanbukyō*, see [JINGTU SANBUJING](#)): the longer [SUKHĀVATĪVYŪHASŪTRA](#), the shorter *Sukhāvātīvyūhasūtra* (also known as the [AMITĀBHASŪTRA](#)) and the [GUAN WULIANGSHOU JING](#), as well as the writings of Shinran, such as his magnum opus, [KYŌGYŌ SHINSHŌ](#). Following the example of Shinran’s own vocation, the school is distinguished from the earlier [JŌDOSHŪ](#) by its more liberal attitude toward the Buddhist [VINAYA](#) rules of conduct, permitting its clergy to marry, have families, and eat meat, and its faith-oriented approach to practice, which placed relatively less emphasis on the efficacy of nenbutsu (C. [NIANFO](#)), the invocation of the name of the buddha

[AMITĀBHA](#), and greater stress on the power and grace of Amitābha. Because Shinran believed that people in this degenerate age of the dharma (J. mappō; C. [MOFA](#)) had little hope of gaining salvation through their own power ([JIRIKI](#)), he taught instead the complete reliance on Amitābha's salvific power ([TARIKI](#)). And because there was no possibility of effecting salvation on one's own, Shinran advocated that just a single sincere recitation of his name ([ICHINENGI](#)) would be sufficient to earn Amitābha's grace, in distinction to other of Hōnen's successors, who advocated multiple or even continuous recitations of Amitābha's name ([TANENGI](#)). Shinran's teachings spread from the capital of Kyōto to the countryside, largely through the proselytizing efforts of his disciples. The followers of Shinran eventually formed regional centers known as dōjō (cultivation sites), which later came under control of the monastery [HONGANJI](#), thus developing a unified sectarian identity. This process largely began with the development of a memorial cult surrounding Shinran. [KAKUNYO](#) (1270–1351), Shinran's great-grandson, formalized the memorial services (hōonkō) for Shinran and transformed his mausoleum in Ōtani into a temple, which he later named Honganji. The regional centers also developed into contending factions (e.g., the Bukkōji, Senjuji, and Kinshokuji branches), but they were eventually unified under the strong leadership of [RENNYO](#) (1415–1499), the eighth abbot of Honganji. In 1465, warrior monks from [HIEIZAN](#) razed Honganji and turned the site into one of their own branch temples (matsuji). In 1478, having gained enough support to counter any threat from Mt. Hiei, Rennyo moved Honganji to the Yamashina area of Kyōto. The move was completed in 1483 with the completion of the Amida hall. Under Rennyo's leadership, Honganji became the central monastery of the Jōdo Shinshū tradition. Rennyo built a broad network of temples that was consolidated under the sole administration of Honganji. After a brief move to Ōsaka, Honganji was relocated to its current site in Kyōto on the order of Toyotomi Hideyoshi (1536–1598). A split occurred between two factions shortly thereafter, and ever since the early seventeenth century the Nishi (West) and Higashi (East) Honganji complexes have served as the religious centers of these two major branches of Jōdo Shinshū, the [NISHI HONGANJIHA](#) and the [HIGASHI HONGANJIHA](#) (also known as the [ŌTANIHA](#)). See also [JŌDOSHŪ](#).

[Jōdoshū](#). (浄土宗). In Japanese, the “[PURE LAND](#) school”; referring to the followers of [HŌNEN](#) (1133–1212), who formed the first indigenous school of Japanese Buddhism outside the aegis of the imperial court. The central scriptures

of the school are the so-called three pure land [SŪTRAS](#) (jōdo sanbukyō; see [JINGTU SANBUJING](#)): the longer [SUKHĀVĀTĪVYŪHASŪTRA](#), the shorter *Sukhāvātīvyūhasūtra* (also known as the [AMITĀBHASŪTRA](#)), and the [GUAN WULIANGSHOU JING](#); as well as the **Aparimitāyussūtropadeśa* (“Exegesis of the *Wuliangshou jing*”), commonly known as the *Jingtu lun* (J. *Jōdoron*) (“Treatise on the Pure Land”) and attributed by tradition to [VASUBANDHU](#) (see [WULIANGSHOU JING YOUNPOTISHE YUANSHENG JI](#)). Hōnen’s teachings focused on the “easy path” to [NIRVĀNA](#) and the prospect of achieving enlightenment exclusively through recitation of the nenbutsu (C. [NIANFO](#)), which would lead to rebirth in the buddha [AMITĀBHA](#)’s pure land. Hōnen’s teachings quickly spread throughout Japan largely through the efforts of his disciples [SHINRAN](#) (1173–1262), Ryūkan (1148–1228), Shōkōbō Benchō (1162–1238), Zen’ebō Shōkū (1177–1247), Jōkakubō Kōsai (1163–1247), and Kakumyōbō Chōsai (1184–1366). While his disciples all agreed on the efficacy of the recitation of the nenbutsu as advocated by Hōnen, they developed different interpretations of this practice. These divisions eventually led to the formation of disparate factions within the school. Those who followed Benchō came to be known as the Chinzei branch; their spirit of tolerance for other practices allowed the Chinzei branch to thrive. Shōkū’s followers, now known as the Seizan branch, held the position that rebirth in the pure land is possible only through continuous repetition of the nenbutsu ([TANENGI](#)); indeed, Shōkū himself was said to recite the nenbutsu as many as sixty thousand times a day. Kōsai, and to a lesser extent Shinran, held the more radical position that a single invocation of the name of Amitābha ([ICHINENGI](#)) would suffice. In 1207, in an effort to suppress the spread of Hōnen’s teaching of exclusive nenbutsu, Hōnen, Kōsai, and Shinran, were exiled to different regions of the country. In 1227, the Jōdo movement was further suppressed when Hōnen’s grave was desecrated by [HIEIZAN](#) monks and Kōsai was again sent into exile. In 1450, the Chinzei branch came to dominate the other branches when the Chinzei adherent Keijiku (1403–1459) assumed the position of abbot of the monastery [CHION’IN](#) (built at Hōnen’s grave site) in Kyōto. The Chinzei branch firmly established itself as the leading branch with the support of the Tokugawa bakufu. The teachings of Benchō’s disciple Ryōchū (1199–1287), who advocated the active use of the nenbutsu for purifying bad [KARMA](#) in order to attain rebirth in pure land, came to be the official position of the Chinzei branch and thus of the wider Jōdoshū tradition. See also [JŌDO SHINSHŪ](#).

[Jogye Order](#). (K) (曹溪宗). See [CHOGYE CHONG](#).

Jo khang. In Tibetan, “House of the Lord”; the earliest Tibetan temple and monastery, located in the capital of [LHA SA](#). The central image is a statue of [ŚĀKYAMUNI](#) Buddha as a youth, said to have been sculpted in India during the Buddha’s lifetime. This statue, the most sacred in Tibet, is known simply as the [JO BO](#) (“Lord”) [SHĀKYAMUNI](#) or Jo bo Rin po che (“Precious Lord”). The temple takes its name from this image housed within it. Indeed, the name Lha sa (“Place of the Gods”) may have referred originally to the Jo khang, only later becoming by extension to be the name of the city that surrounds it. The Jo khang stands at the heart of the old city, and is the central point for three circumambulation routes. The most famous of these is the [BAR BSKOR](#), or middle circuit, which passes around the outer walls and surrounding structures of the Jo khang. The Jo khang and bar bskor together have long been Lha sa’s primary religious space, with pilgrims circling it in a clockwise direction each day. The central market of Lha sa is also located along the bar bskor. Despite its well-known name, Tibetans tend to refer to the Jo khang simply as the Gtsug lag khang (Tsuklakang), the Tibetan term for [VIHĀRA](#), meaning “monastery”; the original structure was likely laid out by Newari artisans following the plan of an Indian Buddhist vihāra. Western sources have rather misleadingly dubbed the Jo khang the “Cathedral of Lhasa.” According to traditional Tibetan sources (most importantly, the [MANI BKA’ ’BUM](#)) the original structure was established by the Tibetan king [SRONG BTSAN SGAM PO](#) and his two queens (one Chinese and one Nepalese), around 640 CE. The statue of Śākyamuni, said to have been crafted during the Buddha’s lifetime, eventually made its way to China. It is said to have been brought to Tibet from China by the king’s Chinese bride, Princess [WENCHENG](#). The many difficulties she encountered en route from China convinced her that the landscape of Tibet was in fact a supine demoness (SRIN MO), who was inimical to the introduction of Buddhism. On her advice, the king (who had recently converted to Buddhism), the Chinese princess, and the king’s other wife, the Nepalese princess [BHRKUTĪ](#), built the Jo khang directly over the heart of the demoness; according to Tibetan legends, the king himself built much of the first-floor structure. Other temples were subsequently built across Tibet, corresponding to other parts of the demoness’s vast body, in order essentially to nail her to the earth and prevent her further obstruction of the dharma (see [MTHA’ ’DUL GTSUG LAG KHANG](#)). When the Jo khang was completed, a different statue than the more famous Jo bo Shākyamuni or Jo bo rin bo che, was the central image; it was a statue of the buddha called [JO BO MI BSKYOD RDO RJE](#) brought to Tibet by Bhr̥kutī. The statue brought by Wencheng (known as Jo bo

rin bo che) was housed in the nearby [RA MO CHE](#) temple, founded by Wencheng. After the king's death, the two statues were switched, moving the Jo bo Shākyamuni statue to the Jo khang and the Jo bo mi bskyod rdo rje statue to Ra mo che, where they would remain over the subsequent centuries. Modern scholarship has raised questions about many details of this tale, including the degree of Srong btsan sgam po's devotion to Buddhism and the existence of his Nepalese queen. However, the story of the Jo khang's founding, depicted on murals inside the temple itself, is widely known, and the Jo khang remains central to the sacred geography of the Tibetan Buddhist world. The Jo khang has been the site of many important moments of Tibetan history, including the establishment of the [SMON LAM CHEN MO](#) festival in 1409, when [TSONG KHA PA](#) offered a crown to the Jo bo statue, giving it the aspect of a [SAMBHOGAKĀYA](#). Over the course of its long history, the Jo khang has been enlarged and renovated many times (although elements of the original structure, such as juniper beams, are still visible) to become a complex of chapels, courtyards, residential quarters (including those for the [DALAI LAMA](#) and [PAN CHEN LAMA](#)), monastic dormitories, government offices, and storerooms. The temple suffered during the Chinese Cultural Revolution (1966–1976), when parts of the complex and much of its original statuary and murals were damaged or destroyed, including the central image. During this period, the complex was occupied by Red Guards and People's Liberation Army troops, and the temple was used as a pigsty. The temple has since been restored, beginning in 1972 and again during the early 1990s. In 2000, it was listed by UNESCO as a World Heritage Site.

[Jōmyō](#). (J) (紹明). See [NANPO JŌMYŌ](#).

[Jo nang](#). A sect of Tibetan Buddhism that flourished between the thirteenth and seventeenth centuries, seated primarily at the monastery of [JO NANG PHUN TSHOGS GLING](#), northwest of Shigatse. The lineage of masters affiliated with the Jo nang, traditionally said to begin with the eleventh-century yogin-scholar Yu mo Mi bskyod rdo rje (Yumo Mikyö Dorje), includes such highly acclaimed luminaries as [DOL PO PA SHES RAB RGYAL MTSAN](#) and [TĀRANĀTHA](#). Jo nang scholars are often noted for their interest in the [KĀLACAKRATANTRA](#) and the controversial doctrine of [GZHAN STONG](#), or “extrinsic emptiness,” developed and promulgated by Dol po pa. This theory, and its attendant interpretation of [TATHĀGATAGARBHA](#), was later adopted, reformulated, and actively transmitted by numerous other masters, especially those of the [BKA' BRGYUD](#) and [RNYING MA](#) sects. Others,

especially [SA SKYA](#) and later [DGE LUGS](#) adherents, presumed that these doctrines were incorrect and even heretical. In 1650, under the aegis of the fifth [DALAI LAMA](#), the monastery of Jo nang was forcibly converted to the Dge lugs sect, its books locked under state seal. The Jo nang tradition survived, however, secretly in small pockets throughout central and western Tibet, and at ['DZAM THANG](#) monastery in A mdo in eastern Tibet, where it has been practiced openly up to the present day. The name is also used to designate the principal central Tibetan monastery affiliated with the Jo nang tradition, Phun tshogs gling; see [JO NANG PHUN TSHOGS GLING](#).

[Jo nang phun tshogs gling](#). (Jonang Puntsokling). A monastery in west-central Tibet, northwest of Shigatse, which served as the principal seat of the [JO NANG](#) tradition of Tibetan Buddhism. Its foundation was laid by Kun spangs pa Thugs rje brtson 'grus (Kunpangpa Tukje Tsöndrü, 1243–1313), and was later expanded by the Jo nang luminary [DOL PO PA SHES RAB RGYAL MTSHAN](#), who became the monastery's principal teacher in 1326. Dol po pa also established his own hermitage in a valley above the monastery, the site where he later constructed his famed [STÜPA](#), based upon descriptions in the [KĀLACAKRATANTRA](#). The massive structure, standing nearly seventy feet tall, was consecrated in 1333. The monastic structure was again expanded by the sixteenth-century Jo nang scholar [TĀRANĀTHA](#), who gave it the name Phun tshogs gling. The full name of the monastery is Rtag brtan dam chos phun tshogs gling (or Rtag brtan dam chos gling); it is referred to as Jo nang phun tshogs gling because it was the seat of the Jo nang sect. The monastery is particularly famous for its extensive murals depicting the events in the life of [ŚĀKYAMUNI](#) Buddha, based on the biography of the Buddha by Tāranātha. The monastery was converted to a [DGE LUGS](#) establishment under the fifth [DALAI LAMA](#) and renamed [DGA' LDAN PHUN TSHOGS GLING](#).

[Josaphat](#). See [BARLAAM AND JOSAPHAT](#).

[juedai miao](#). (絕待妙). See [DAIJUE ERMIAO](#).

[Juefan Huihong](#). (J. Kakuhan Ekō; K. Kakpōm Hye hong 覺範慧洪) (1071–1128). Chinese [CHAN](#) monk in the [HUANGLONG PAI](#) collateral line of the [LINJI ZONG](#) during the Northern Song dynasty (960–1127) and major proponent of “lettered Chan” ([WENZI CHAN](#)), which valorized belle lettres, and especially poetry, in the practice of Chan. Huihong entered the monastery after he was orphaned at

fourteen, eventually passing the monastic examinations at age nineteen and receiving ordination at Tianwangsi in the eastern capital of Kaifeng. After studying the [CHENG WEISHI LUN](#) (**Vijñaptimātratāsiddhi*) for four years, he eventually began to study at [LUSHAN](#) with the Chan master Zhenjing Kewen (1025–1102), under whom he achieved enlightenment. Because of Huihong’s close ties to the famous literati officials of his day, and especially with the statesman and Buddhist patron [ZHANG SHANGYING](#) (1043–1122), his own career was subject to many of the same political repercussions as his associates; indeed, Huihong himself was imprisoned, defrocked, and exiled multiple times in his life when his literati colleagues were purged. Compounding his problems, Huihong also suffered along with many other monks during the severe Buddhist persecution (see [FANAN](#)) that occurred during the reign of Emperor Huizong (r. 1100–1125). Even amid these trying political times, however, Huihong managed to maintain both his monastic vocation and his productive literary career. Huihong is in fact emblematic of many Chan monks during the Song dynasty, when Chan enters the mainstream of Chinese intellectual life: his practice of Chan was framed and conceptualized in terms that drew from his wide learning and profound erudition, tendencies that helped make Chan writings particularly appealing to wider Chinese literati culture. Huihong decried the bibliophobic tendencies in Chan that were epitomized in the aphorism that Chan “does not establish words and letters” ([BULI WENZI](#)) and advocated that Chan insights were made manifest in both Buddhist sūtras as well as in the uniquely Chan genres of discourse records ([YULU](#)), genealogical histories (see [CHUANDENG LU](#)), and public-case anthologies ([GONG’AN](#)). Given his literary penchant, it is no surprise that Huihong was a prolific author. His works associated with Chan lineages include the [CHANLIN SENGBAO ZHUAN](#) (“Chronicles of the [SAMGHA](#) Jewel in the Chan Grove”), a collection of biographies of about a hundred eminent Chan masters important in the development of lettered Chan; and the *Linjian lu* (“Anecdotes from the Groves [of Chan]”), completed in 1107 and offering a record of Huihong’s own encounters with fellow monks and literati and his reflections on Buddhist practice. Huihong also wrote two studies of poetics and poetic criticism, the *Lengzhai yehua* (“Evening Discourses from Cold Studio”) and *Tianchu jinluan* (“Forbidden Cutlets from the Imperial Kitchen”), and numerous commentaries to Buddhist scriptures, including the [SADDHARMAPUNDARĪKASŪTRA](#) (“Lotus Sūtra”), [SHOULENGYAN JING](#), and [YUANJUE JING](#).

Jueguan lun. (J. Zetsukanron; K. Chōlgwan non 絕觀論). In Chinese, “Extinguishing Cognition Treatise,” (translated into English as *A Dialogue on the Contemplation-Extinguished*), attributed to the legendary Indian founder of the [CHAN](#) school, [BODHIDHARMA](#). The treatise largely consists of an imaginary dialogue between a certain learned man named Master Entrance-into-Principle (Ruli xiansheng) and his student Conditionality (Yuanmen), which unfolds as a series of questions and answers. In this dialogue, Entrance-into-Principle continuously negates the premises that underlie the questions his student Conditionality raises about the mind and its pacification, the nature of enlightenment, as well as other matters related to practice, meditation, and attainment. For example, in the opening dialogue, Conditionality asks, “What is the mind? How do we pacify it?” Master Entrance-into-Principle replies, “Neither positing ‘mind’ nor trying to ‘pacify’ it—this is pacifying it.” By rejecting the dualistic perspectives inherent in Conditionality’s questions, the Master finally opens his student to an experience of the pure wisdom that transcends all dualities. This style of negative argumentation, derived from [MADHYAMAKA](#) antecedents, is believed to be characteristic of the [NIUTOU ZONG](#) of the Chan school; the treatise is therefore often assumed to have been written by an adherent of that school, perhaps even by its seventh-century founder [NIUTOU FARONG](#) himself, or else during the zenith of the Niutou school in the third quarter of the eighth century. The treatise also makes use of Daoist terminology and thus serves as a valuable source for studying Chinese reinterpretations of sophisticated Buddhist doctrines. A controversial argument claiming that insentient beings also possess the buddha-nature ([FOXING](#)) also appears in the *Jueguan lun*. The treatise seems to have gone through several editions, some of which were preserved in the [DUNHUANG](#) caves in Chinese Xinjiang.

jushenguang. (J. koshinkō; K. kōsin’gwang 舉身光). In Chinese, lit. “whole-body light”; a “mandorla” surrounding the body of holy figures in Buddhist painting and sculpture. See [KĀYAPRABHĀ](#).

Jushi zhuan. (居士傳). In Chinese, “Record of [Eminent] Laymen,” by the Qing-dynasty author [PENG SHAOSHENG](#) (1740–1796), a Confucian literatus turned Buddhist layman; in fifty-six rolls. Written between 1770 and 1775, the record collects 312 biographies of Chinese Buddhist laymen (C. jushi; S. [UPĀSAKA](#)) from the inception of Buddhism in China through the reign of the Qing-dynasty

Kangxi emperor (r. 1662–1722). The compilation was intended to give appropriate recognition to the contributions laymen made to the development of the Buddhist tradition in China. Its entries are adapted from the occasional biographies of laymen that are widely scattered throughout such collections as the [HONGMING JI](#), *Fofa jintang*, *Faxi zhi*, [FOZU TONG JI](#), [JINGDE CHUANDENG LU](#), *Wudeng hui yuan*, *Donglin zhuan*, and [WANGSHENG JINGTU ZHUAN](#). Although there had been some biographical collections of laymen affiliated with the Chan school, such as the *Jushi fendeng lu*, *Xianjue zongsheng*, and *Jushi Chandeng lu*, the records of laymen involved with other schools were much more widely dispersed. To prepare a more comprehensive and accurate portrayal of Chinese laymen, Peng Shaosheng reexamined the aforementioned works and excerpted certain portions from them, discarding many spurious records and adding corroborating information taken from additional historical, biographical, and genealogical works. His biographies thus describe in detail the individual backgrounds and religious experiences of the laymen profiled, and provide much broader and rich coverage of lay activities throughout the full panoply of Chinese Buddhism. Although Peng Shaosheng himself was a [PURE LAND](#) adherent, his *Jushi zhuan* includes figures associated with Chan, pure land, and various Buddhist doctrinal schools. This book provides valuable information for understanding the motivations underlying lay Buddhist practice and the changes that practice took over time. Peng Shaosheng followed his record of male householders with a parallel collection of the biographies of Buddhist laywomen, the [SHANNÜREN ZHUAN](#).

Kaḥ thog. An important monastery affiliated with the [RNYING MA](#) sect of Tibetan Buddhism, founded in 1159 by Kaḥ thog Dam pa bde gshegs (Katok Dampa Deshek, 1122–1192) in the eastern Tibetan region of Khams, also called Kaḥ thog rdo rje gdan (Katok Dorjeden). It is situated on the ridge of a mountain said to be shaped like the Tibetan letter “ka,” from which the institution takes its name. One of the oldest surviving Rnying ma monasteries in Tibet, along with [BSAM YAS](#), Kaḥ thog has had a long and active history and maintained numerous rare instruction lineages that were lost in central Tibet. Widely famed for its philosophical studies, the monastery’s college traditionally drew students from all parts of eastern Tibet. Kaḥ thog’s monks were also renowned for their meditative training. The institution was home to the great scholar and historian Kaḥ thog rig ’dzin Tshe dbang nor bu (Katok Rikdzin Tsewang Norbu, 1698–1755). More contemporary figures associated with the monastery include the third [KAH THOG SI TU](#), Chos kyi rgya mtsho (Chökyi Gyatso, 1880–1925); the scholar Mkhan po Sngags ga (Khenpo Ngakga, 1879–1941); and the meditation master Bya bral Sangs rgyas rdo rje (Jadral Sangye Dorje, 1913–). It is one of the four major Rnying ma monasteries in eastern Tibet, the others being [ZHE CHEN](#), [RDZOGS CHEN](#), and [DPAL YUL](#).

Kaḥ thog Si tu. A line of Tibetan [SPRUL SKU](#) (incarnate lamas) at [KAH THOG](#) monastery, an important [RNYING MA](#) monastery in Khams, eastern Tibet; they are accepted to be the reincarnations of the erudite and accomplished eighth Si tu, [CHOS KYI ’BYUNG GNAS](#), the great scholar of [DPAL SPUNGS](#), himself the eighth [TAI SI TU](#) incarnation. The third Kaḥ thog Si tu was a nephew of [’JAM DBYANGS MKHYEN BRTSE DBANG PO](#), one of the leading figures in the so-called nonsectarian ([RIS MED](#)) movement of the nineteenth century and the main teacher of [’JAM DBYANGS MKHYEN BRTSE CHOS KYI BLO GROS](#), the teacher of many of the twentieth-century’s greatest Tibetan Buddhist masters.

Kaian kokugo. (槐安國語). In Japanese, “Words on the Peaceful Land of the Locust-Trees,” composed by the Japanese RINZAI [ZEN](#) master [HAKUIN EKAKU](#). The peaceful land of the locust-trees (*Sophora japonica*) is an allusion to the tale

of a retired official who dreams of a peaceful paradise, but upon waking realizes that it was nothing but a mound of ants living underneath a locust-tree in the yard. This tale is found in the *Nanke taishou zhuan* (“Biography of the Governor of Nanke”), written by Li Gongzuo (c. 778–848), and retold in the *Nanke ji* (“Record of the Southern Bough”) by the Ming-dynasty playwright Tang Xianzu (1550–1617). Hakuin composed this treatise in 1749 and published it the next year in 1750. The treatise, which was written at the request of his students, consists largely of Hakuin’s prose commentary and notes on the recorded sayings ([YULU](#)) of the Zen master Daitō (see [SŌHŌ MYŌCHŌ](#)). The entire treatise was written in literary Chinese.

[kaihōgyō](#). (回峰行). In Japanese, lit. “the practice of circumambulating the mountain,” a [SHUGENDŌ](#)-related ascetic practice of running a course around the mountain of [HIEIZAN](#), which is undertaken by Japanese [TENDAI](#) monks and nuns within the Sanmon branch of the school. The central deity of veneration for [kaihōgyō](#) is FUDŌ MYŌŌ (S. [ACALANĀTHA-VIDYĀRĀJA](#)). While engaged in running the course, one chants, meditates, and stops to pray at temples, shrines, and natural elements along the route. [Kaihōgyō](#) can be practiced for as little as one day or for a 100-day period as part of a monk or nun’s training. Best known, however, is its 1,000-day practice ([sennichi kaihōgyō](#)), which is carried out over a seven-year period. This route consists of twenty-five to fifty miles of running a day, depending on the stage of practice, which is broken up into 100-day terms. The first 700 days of practice benefits the practitioner ([gyōja](#)) himself ([JIRIKI](#)), while the last 300 days benefits others ([TARIKI](#)) and is thus known as the [BODHISATTVA](#) practice ([bosatsugyō](#)). Between these two stages, the [gyōja](#) undergoes a severe nine-day rite referred to as a [dōiri](#) (lit. “entering the hall”), during which he completely forgoes food, water, rest, or sleep. One who successfully completes the 1,000-day practice receives the title [Daigyōman Ajari](#) ([Ācārya](#) whose Great Practice is Fulfilled). [Kaihōgyō](#) dates back to at least the fourteenth century, and an earlier form of it may have been practiced as early as the ninth century. The origin of [kaihōgyō](#) is attributed to the Tendai monk [Sōō](#) (b. 831).

[Kailāsa](#). The Sanskrit name for one of the most important sacred mountains in Asia, generally referred to in English as Kailash or Mount Kailash. It is 21,778 ft. high and is located in southwestern Tibet, not far from the current borders of India and Nepal. Lake Manasarovar is located eighteen miles to the southeast;

these two sites have long been places of pilgrimage for Buddhists, Hindus, Jains, and followers of Tibetan [BON](#), some of whom have regarded the striking dome-shaped peak as Mount [SUMERU](#). The mountain is particularly important in Tibetan Buddhism, where it is called Gangs dkar Ti se (“White Snow Mountain Ti se”) or simply Gangs rin po che (“Precious Snow Mountain”). Pilgrims from across the Tibetan Buddhist world visit Mount Kailāsa, especially in the Year of the Horse, which occurs once every twelve years in the Tibetan calendrical cycle. Within that year, it is considered auspicious to visit the mountain at the time that marks the Buddha’s birth, enlightenment, and passage into [PARINIRVĀNA](#) (generally falling in May or June, depending on the lunar calendar). The primary form of practice is the thirty-two mile clockwise circumambulation of the mountain, often completed in a single day, with specific rituals and practices performed along the route. It is said that one circumambulation purifies the negative [KARMA](#) of one lifetime, ten circumambulations purify the negative [KARMA](#) accumulated over the course of a [KALPA](#), and one hundred circumambulations ensure enlightenment. The mountain came to take on numerous tantric associations beginning in the eleventh century. According to a popular story, the yogin [MI LA RAS PA](#) won control of the mountain for the Buddhists by defeating a rival Bon priest, Na ro bon chung, in a contest of miracles. The mountain later became an important meditation site for the followers of Mi la ras pa, principally members of the [’BRUG PA BKA’ BRGYUD](#) and [’BRI GUNG BKA’ BRGYUD](#) sects. Both [ŚĀKYAMUNI](#) Buddha and [PADMASAMBHAVA](#) are said to have visited Kailāsa. One of the most important associations of Mount Kailāsa is with the [CAKRASAMVARATANTRA](#), which names twenty-four sacred lands ([PĪTHA](#)) as potent locations for tantric practice. The Cakrasaṃvara literature recounts how long ago these twenty-four lands came under the control of Maheśvara (Śiva) in the form of Rudra Bhairava. The buddha [VAJRADHARA](#), in the wrathful form of a [HERUKA](#) deity, subdued [BHAIRAVA](#), transforming each of the twenty-four sites into a [MANDALA](#) of the deity Cakrasaṃvara and his retinue. In Tibetan literature, Mount Kailāsa came to be identified with one of the twenty-four sites, the one called Himavat or Himālaya (“The Snowy,” or “The Snow Mountain”); this was one of several important transpositions of sacred locations in India onto Tibetan sites. The [BKA’ BRGYUD](#) sect grouped the peak together with two other important mountain pilgrimage sites in southern Tibet, [LA PHYI](#) and [TSA RI](#), identified respectively as Cakrasaṃvara’s body, speech, and mind. These claims drew criticism from some Tibetan quarters, such as the renowned scholar [SA SKYA PANDITA](#), who argued

that the sites associated with Cakrasaṃvara were located not in Tibet but in India. Such criticism has not prevented Mount Kailāsa from remaining one of the most important pilgrimage places in the Tibetan cultural domain.

Kaimokushō. (開目鈔). In Japanese, “Opening the Eyes”; one of the major writings of [NICHIREN](#). Nichiren composed this treatise in 1273 while he was living in exile in a graveyard on Sado Island. Nichiren’s motivation for writing this treatise is said to have come from the doubts that he came to harbor about the efficacy of the teachings of the [SADDHARMAPUNḌARĪKASŪTRA](#) due to the government’s repeated persecution of him and his followers. The *Kaimokushō* details the reasons behind the persecutions: bad [KARMA](#) from the past, the abandonment of the country by the gods ([KAMI](#)), life in the impure realm of [SAHĀLOKA](#), and the trials and tribulations of the [BODHISATTVA](#) path. In the *Kaimokushō*, Nichiren professes to have overcome his doubts and welcomes the bodhisattva path of martyrdom. The treatise explains the path that leads to “opening the eyes” as a journey from the teachings of the heretics to those of the [HĪNAYĀNA](#), the [MAHĀYĀNA](#), and finally culminating in the teachings of the *Saddharmapuṇḍarīkasūtra* (see [JIAOXIANG PANSHI](#)). According to Nichiren tradition, because Nichiren claims at the conclusion of the text to be the “sovereign, teacher, and mother and father to all the people of Japan,” he has thus revealed himself to be the Buddha of the degenerate age of the dharma ([MAPPŌ](#)).

kaishan. (J. kaisan; K. kaesan 開山). In Chinese, lit. “opener of the mountain,” a term used in East Asian Buddhism to refer to the founder of a monastery or sectarian tradition.

kaiyan. (J. kaigen; K. kaeon 開眼). In Chinese, “opening the eyes,” also known as “dotting the eyes” ([DIANYAN](#)); the ritual of consecrating a newly carved or cast buddha image (see [BUDDHĀBHISEKA](#)). “Opening the eyes” refers to a ceremony, or series of ceremonies, that accompanies the installation of a buddha image or painting, which specifically involves either dotting the pupils of an image or ritually dropping eyedrops into its eyes, in order to animate it. After the image has been “enspirited” (*rushen*) by placing on the image embroidered five-colored thread, coins (to represent dragon’s eyes), and a mirror, the formal ritual begins by making offerings of incense, flowers, and lamps or candles before the newly installed image; at the conclusion of the ceremony, while reciting various [MANTRA](#), the pupils of the eyes of the image are dotted with ink, thus literally

“opening” them. (For this reason, in Korea, the ritual is most commonly known as “dotting the eyes,” or *chōman*; see [DIANYAN](#).) By thus opening the buddha-eye (*foyan*) through the performance of this ritual, the image is vested with numinous power, thus making it “come alive.” In Japan, the term *kaigen* is generally used for this buddha-consecration ceremony rather than *tengen*. *Kaigen* is then divided into the *kaigen* of phenomena (*ji*; see [SHI](#)) and the *kaigen* of principle (*ri*; see [LI](#)), which refer respectively to ceremonies consecrating a buddha image or the scriptures that might be enshrined inside the image and ceremonies that imbue the image with spiritual charisma. The ritual is also known as “opening the light [of the eyes]” (*kaiguang*; *kaiguangming*), and other variations. See also [NETRAPRATISTHĀPANA](#).

[Kaiyuan Shijiao lu](#). (J. *Kaigen Shakkyōroku*; K. *Kaewŏn Sōkkyo nok* 開元釋教錄). In Chinese, “Record of [ŚĀKYAMUNI](#)’s Teachings, Compiled during the Kaiyuan Era”; a comprehensive catalogue ([JINGLU](#)) of Buddhist texts compiled by the monk Zhisheng (658–740) in 730. The catalogue began as Zhisheng’s own private record of Buddhist scriptures but was adopted soon afterward by the Tang imperial court as an official catalogue of the Chinese Buddhist canon ([DAZANGJING](#)) and entered into the canon as well. Zhisheng divided his catalogue into two major sections, a chronological register (rolls one through ten) and a topical register (rolls eleven through twenty). The chronological register contains a list of translated scriptures, organized according to translator’s name and the period during which the text was translated. Because this register provides alternative titles of texts, numbers of volumes and rolls, names of translators, and a list of alternate translations, it is an invaluable tool for studying the production and circulation of Buddhist texts in medieval China. The topical register contains “lists of canonical texts” (*ruzang lu*), which subsequently became the standard rosters from which East Asian Buddhism constructed its canon. This roster also includes 406 titles of texts classified as [APOCRYPHA](#), that is, scriptures listed as either of “doubtful authenticity” ([YIJING](#)) or explicitly “spurious” (*weijing*), which Zhisheng determined were probably of indigenous Chinese origin and therefore not authentic translations of the Buddha’s words ([BUDDHAVACANA](#)). The renown of the catalogue is due to the great strides Zhisheng made toward eliminating discrepancies between the chronological and topical rosters, inconsistencies that had marred previous catalogues. The content and structure of all later catalogues is derived from Zhisheng’s work, making the *Kaiyuan Shijiao lu* the most important of all the Buddhist scriptural catalogues

compiled in East Asia.

[Kakacūpamasutta](#). (C. Moulipoqunna jing; J. Murihagunnakyō; K. Morip’agunna kyōng 牟犁破群那經). In Pāli, “Simile of the Saw Discourse”; the twenty-first sutta of the [MAJJHIMANIKĀYA](#) (a separate [SARVĀSTIVĀDA](#) recension appears as the 193rd [SŪTRA](#) in the Chinese translation of the [MADHYAMĀGAMA](#)). According to the Pāli recension, the Buddha preached this sutta at Sāvatti ([ŚRĀVASTĪ](#)), in conjunction with the admonishment of the monk Moliya Phagguna, who was overly friendly with nuns and angry at others’ criticism of his behavior. Moliya Phagguna remained recalcitrant even after being admonished; in response, the Buddha spoke to his disciples of the harmfulness of anger and of the need for patience even in the most heinous of circumstances, such as if someone were sawing off one’s limbs. Instead of giving in to hatred, such an event would offer an opportunity to develop loving-kindness by radiating loving thoughts even to one’s attackers.

[Kaksōng](#). (K) (覺性). See [PYŎGAM KAKSŎNG](#).

[Kakuban](#). (覺鑊) (1095–1143). Japanese monk and putative founder of the Shingi branch of the [SHINGONSHŪ](#), also known as Mitsugon Sonja (Venerable Secret Adornment). Kakuban was a native of Fujitsu no shō in Hizen (present-day Saga). In 1107, Kakuban became a monk at the monastery [NINNAJI](#) in Kyōto and studied the fundamentals of esoteric teachings ([MIKKYŌ](#)) under the eminent master Kanjo (1052–1125). Kakuban spent the next year in Nara, where he is said to have immersed himself in doctrinal studies at the monasteries of [KŌFUKUJI](#) and [TŌDAIJI](#). In 1110, he returned to Ninnaji and was tonsured by Kanjo. In 1112, Kakuban began studying the eighteen ritual procedures according to [KŪKAI](#)’s *Jūhachi geiin*, and the next year he received the [KONGŌKAI](#) and [TAIZŌKAI MANDALAS](#). In 1114, Kakuban received the full monastic precepts at Tōdaiji, and later that year he climbed [KŌYASAN](#) where he met the monk Shoren (d.u.). The next year, Kakuban studied a ritual known as the kumonjihō dedicated to [ĀKĀŚAGARBHA](#) under the monk Myōjaku (d.u.), and, during his stay on Mt. Kōya, Kakuban is said to have also received the consecration ([ABHISEKA](#)) of [DHARMA](#) transmission (J. denbō kanjō) eight times. In 1121, Kakuban received the three [SAMAYA](#) precepts and consecration of the two maṇḍalas from Kanjo at the sanctuary (dōjō) located in Ninnaji. In 1130, Kakuban established the temple Denbōin on Mt. Kōya with the support of retired Emperor Toba (1107–1123). There he attempted to reinstate a ritual of esoteric transmission known as the

denbōe. When the temple proved to be too small to hold a great assembly, Kakuban again established the larger temples Daidenbōin and Mitsugon'in on Kōyasan in 1132. Kakuban subsequently devoted himself to developing a new esoteric ritual tradition that could incorporate the disparate ritual traditions that had developed in Kyōto, Nara, [HIEIZAN](#), and other monastic centers. This new ritual tradition came to be known as the Denbōinryū. In 1134, Kakuban was appointed the head (zasu) of the monasteries of Daidenbōin and Kongōbuji on Mt. Kōya, but Kakuban's rise to power was soon contested by the conservative factions of Kongōbuji monks with ties to the monasteries of [TŌJI](#) and Daigoji. As a result, Kakuban retired to his monastery of Mitsugon'in. In 1140, the monks of Kongōbuji launched a violent attack on Daidenbōin and Mitsugon'in, which forced Kakuban to flee to Mt. Negoro in Wakayama. In 1288, the split between Kakuban's new ritual tradition (later known as Shingi or "new meaning") and the old traditions of Tōji and Kongōbuji was formalized by the monk Raiyu's (1226–1304) move of Daidenbōin and Mitsugon'in to Mt. Negoro. Kakuban is particularly well known for his efforts towards reestablishing the study of Kūkai's writings as the central organizing principle for the study of mikkyō ritual traditions. Kakuban is commonly regarded as having developed a new approach to nenbutsu (see [NIANFO](#)), or invocation of the name of the buddha [AMITĀBHA](#), known as the "esoteric recitation," or himitsu nenbutsu. However, by Kakuban's time nenbutsu practice in esoteric Buddhist contexts had already become a nearly ubiquitous feature of monastic and lay practice in Japan, and it would therefore be more accurate to regard Kakuban's writings on this topic as an attempt to propose a unified nenbutsu perspective for the diverse factions of monks and ascetics ([HIJIRI](#)) who had come to Mt. Kōya in search of rebirth in the pure lands and abodes of [MAITREYA](#), Amitābha, [MAÑJUŚRĪ](#), [AVALOKITEŚVARA](#), etc. Long after his death, Emperor Higashiyama (r. 1687–1709) in 1690 gave Kakuban the title Kōgyō Daishi.

[Kakuda Kātyāyana](#). (P. Pakudha Kaccāyana; T. Ka tya'i bu nog can; C. Jialuojiutuo jiazhanyan; J. Karakuda Kasen'en; K. Karagut'a Kajōnyōn 迦羅鳩駄迦旃延). One of the so-called six heretical teachers mentioned in the Buddhist scriptures as rivals or opponents of the Buddha; he is associated with [MASKARIN GOŚĀLĪPUTRA](#) (d. c. 488 BCE) and the [ĀJĪVAKA](#) group. Kakuda's doctrine is described as that of nonaction (P. akiriyavāda), viz., a type of antinomianism: because there are seven eternal and unchangeable elements—earth, water, fire, air, pleasure, pain, and the soul—there is therefore no [KARMA](#) and no such thing

as knowledge and ignorance, good and bad, *etc.* He also argued that there is no such thing as murder, because when a sword splits a head in half, the sword has simply passed between the spaces in the seven elements. As a teacher, Kakuda was apparently annoyed by questions. He considered it a sin to touch cold water, refusing to bathe when hot water was not available and constructing a mound of earth in expiation whenever it was necessary for him to ford a stream. In some sources, he is described as having a large and devoted following; in others, as not commanding the respect of his disciples.

[Kakukai](#). [alt. Kakkai] (覺海) (1142–1223). An early Kamakura-period Japanese scholar-monk from Keōin temple on Mt. Kōya (see [KŌYASAN](#)), and the thirty-seventh temple administrator (J. kengyō) of Kongōbuji; his sobriquet was Nanshōbō. Kakukai is especially known for his “immanentist” [SHINGON](#) pure land thought, emphasizing the position that this very world is itself the [PURE LAND](#), and that seeking rebirth in the pure land as a post-mortem destination should not be the main goal of Buddhist practice. His views on the pure land are similar to those of [KAKUBAN](#). However, Kakuban, like Kakukai’s student [DŌHAN](#), viewed the post-mortem attainment of rebirth in a pure land as a worthwhile goal. Many of Kakukai’s students, such as Dōhan, Hosshō, Shinben, and others, came to be regarded as paragons of the Shingon academic tradition on Mt. Kōya. Kakukai is also the author of an important medieval dharma lecture (J. hōgo) written in vernacular Japanese entitled *Kakukai hokkyō hōgo*.

[Kakunyo](#). (覺如) (1270–1351). A Japanese priest of the [JŌDO SHINSHŪ](#) tradition, also known by his posthumous name Shūshō. Kakunyo was the great-grandson of the Jōdo Shinshū patriarch [SHINRAN](#). As a young man, Kakunyo first studied on [HIEIZAN](#) and in Nara, and later studied Jōdo Shinshū teachings under Nyoshin (1239–1300), the second main priest of [HONGANJI](#). In 1310, Kakunyo became the third main priest of Honganji. Thereafter, he spent much of his time traveling to spread Shinran’s teachings, before passing away in 1351. He authored a number of texts, including the *Hōonkō shiki*, the *Shinran shōnin den e*, the *Shūi kotokuden*, the *Kudenshō*, the *Kaijashō*, the *Shūjishō*, the *Honganshō*, the *Ganganshō*, the *Shusse gan’i*, and the *Saiyōshō*.

[kāla](#). In Sanskrit, “time.” See [TRIKĀLA](#).

[Kālacakrat Tantra](#). (T. Dus kyi ’khor lo rgyud). A late [ANUTTARAYOGATANTRA](#) that was highly influential in Tibet. Although the title of the tantra is often

translated as “Wheel of Time,” this translation is not attested in the text itself. Kālacakra is the name of the central buddha of the tantra, and the tantra deals extensively with time (kāla) as well as various macrocosmic and microcosmic cycles or wheels ([CAKRA](#)). According to legend, King [SUCANDRA](#) came to India from his kingdom of [ŚAMBHALA](#) and asked that the Buddha set forth a teaching that would allow him to practice the dharma without renouncing the world. In response, the Buddha, while remaining at Vulture Peak ([GRDHRAKŪTAPARVATA](#)) in [RAJAGRHA](#) in the guise of a monk, set forth the *Kālacakratāntra* at Dhānyakāṭaka in southern India (near present-day Amarāvati) in the guise of the buddha Kālacakra. The king returned to śambhala, where he transcribed the tantra in twelve thousand verses. This text is referred to as the root tantra (mūlatantra) and is no longer extant. He also wrote a commentary in sixty thousand verses, also lost. He built a three-dimensional Kālacakra [MANDALA](#) at the center of the country, which was transformed into an ideal realm for Buddhist practice, with 960 million villages. The eighth king of śambhala, Mañjuśrīkīrti, condensed the original version of the tantra into the abridged version (the *Laghukālacakra*). A later king of śambhala, Puṇḍarīka, composed the [VIMALAPRABHĀ](#) commentary, considered crucial for understanding the tantra. These two texts were eventually transported from śambhala to India. Internal evidence in the text makes it possible to date the composition of the tantra rather precisely to between the dates 1025 and 1040 CE. This was the period of Muslim invasions of northern India under Mahmud of Ghazni, during which great destruction of Buddhist institutions occurred. The tantra, drawing on Hindu mythology, describes a coming apocalyptic war in which Buddhist armies will sweep out of śambhala, defeat the barbarians (mleccha), described as being followers of Madhumati (i.e., Muhammad), and restore the dharma in India. After its composition in northern India, the tantra was promulgated by such figures as Piṇḍo and his disciple [ATIŚA](#), as well as [NĀROPA](#). From India, it spread to Nepal and Tibet. The millennial quality of the tantra has manifested itself at particular moments in Tibetan history. Prior to World War II, the [PAN CHEN LAMA](#) bestowed the Kālacakra initiation in China in an effort to repel the Japanese invaders. The fourteenth [DALAI LAMA](#) has given the initiation many times around the world to promote world peace. ¶ The tantra is an anuttarayogatantra dedicated to the buddha Kālacakra and his consort Viśvamātā. However, it differs from other tantras of this class in several ways, including its emphasis on the attainment of a body of “empty form” (śūnyatābimba) and on its six-branched yoga (ṣaḍaṅgayoga). The tantra itself,

that is, the *Laghukālacakra* or “Abridged Kālacakra,” has five chapters, which in the Tibetan commentarial tradition is divided into three sections: outer, inner, and other or alternative. The outer, corresponding to the first chapter, deals with the cosmos and treats such topics as cosmology, astrology, chronology, and eschatology (the story of the apocalyptic war against the barbarians is told there). For example, this section describes the days of the year; each of the days is represented in the full Kālacakra maṇḍala as 360 golden (day/male) and dark (night/female) deities in union, with a single central Kālacakra and consort ([YAB YUM](#)) in the center. The universe is described as a four-tiered maṇḍala, whose various parts are homologous to the cosmic body of a buddha. This section was highly influential in Tibetan astrology and calendrics. The new calendar of the Tibetans, used to this day, starts in the year 1027 and is based on the Kālacakra system. The inner Kālacakra, corresponding to the second chapter, deals with human embryology, tantric physiology, medicine, yoga, and alchemy. The human body is described as a microcosm of the universe. The other or alternative Kālacakra, corresponding to the third, fourth, and fifth chapters, sets forth the practice of Kālacakra, including initiation ([ABHISEKA](#)), [SĀDHANA](#), and knowledge ([JÑĀNA](#)). Here, in the stage of generation ([UTPATTIKRAMA](#)), the initiate imagines oneself experiencing conception, gestation, and birth as the child of Kālacakra and Viśmamātā. In the stage of completion ([NISPANNAKRAMA](#)), one practices the six-branched yoga, which consists of retraction (pratyāhāra), concentration ([DHYĀNA](#)), breath control ([PRĀNĀYĀMA](#)), retention (dhāraṇā), recollection ([ANUSMRITI](#)), and [SAMĀDHI](#). In the last of these six branches, 21,600 moments of immutable bliss are created, which course through the system of channels and [CAKRAS](#) to eliminate the material aspects of the body, resulting in a body of “empty form” and the achievement of buddhahood as Kālacakra. The *Sekoddeśaṭīkā* of Naḍapāda (or Nāropa) sets forth this distinctive six-branched yoga, unique to the Kālacakra system. ¶ [BU STON](#), the principal redactor of the canon in Tibetan translation, was a strong proponent of the tantra and wrote extensively about it. [DOL PO PA SHES RAB RGYAL MTSHAN](#), a fourteenth-century [JO NANG PA](#) writer, championed the *Kālacakra* over all other Buddhist writings, assigning its composition to a golden age (kṛtayuga). Red mda’ ba gzhon nu blo gros, an important scholar associated with [SA SKYA](#) sect, regarded the tantra as spurious. [TSONG KHA PA](#), who was influenced by all of these writers, accepted the *Kālacakratantra* as an authentic [ANUTTARAYOGATANTRA](#) but put it in a category by itself.

Kālāmasutta. (C. Qielan jing; J. Garankyō; K. Karam kyōng 伽藍經). In Pāli, “Instruction to the Kālāmas”; popular Western designation for a Pāli sutta (**SŪTRA**) in the **ĀṄGUTTARANIKĀYA**; delivered to the Kālāma people of Kesaputta, which is more commonly titled in modern Southeast Asian editions of the Pāli canon as the *Kesamuttisutta* or *Kesaputtisutta*. (A separate **SARVĀSTIVĀDA** recension appears as the sixteenth **SŪTRA** in the Chinese translation of the **MADHYAMĀGAMA**; the Sinographs Qielan are a transcription of Kālāma, so this seems to have been the title used for the scripture in the northwest Indian tradition). The sermon is prominently cited in Western writings on Buddhism for its advocacy of free inquiry and a putatively rational approach to religion, which is exempt from intolerance and dogmatism. In classical commentarial materials, however, the text is not interpreted in this way and is rarely mentioned. According to the Pāli recension, the Kālāmas had been visited by many religious teachers and had received conflicting testimony from them on what constituted the religious life; they also were put off by these teachers’ tendency to praise only their own dogmas and to revile those of their rivals. Confused, the Kālāmas asked the Buddha to arbitrate. In his response, the Buddha rejects the validity of testimony simply because it is widely known, grounded in “tradition” (anussava; S. **ANUŚRAVA**), appearing in scripture, or taught by a respected teacher. All these standards are said to be unreliable for understanding truth and falsity. Instead, the Buddha encourages them to follow what they themselves learn through their own training to be blamable or praiseworthy, harmful or beneficial. The Buddha then helps the Kālāmas to understand for themselves that the three afflictions of greed or craving (**RĀGA**; **LOBHA**), hatred (**DVEṢA**; P. *dosa*), and delusion (**MOHA**) are harmful and should therefore be abandoned, while their absence is beneficial and should therefore be developed. The discourse concludes with the Buddha’s instruction on how to project in all directions the four divine abidings (**BRAHMAVIHĀRA**) of loving-kindness (**MAITRĪ**), compassion (**KARUNĀ**), empathetic joy (**MUDITĀ**), and impartiality (**UPEKṢĀ**) and a brief account of the solace that comes to those whose minds are free from hatred and defilement.

kalaśābhiseka. (T. bum dbang; C. baoping guanding; J. hōbyōkanjō; K. pobyōng kwanjōng 寶瓶灌頂). In Sanskrit, “vase empowerment,” “jar empowerment,” or “pot empowerment”; one of the four empowerments or initiations (**ABHISEKA**) of **ANUTTARAYOGATANTRA**, the other three being the secret empowerment (**GUHYĀBHISEKA**), the knowledge of the consort empowerment (**PRAJÑĀJÑĀNĀBHISEKA**), and the fourth empowerment (**CATURTHĀBHISEKA**). The

vase empowerment is the only one of the four that is used in the three other tantras of [KRIYĀTANTRA](#), [CARYĀTANTRA](#), and [YOGATANTRA](#). The term itself generally is meant to designate a series of empowerments or initiations, variously enumerated, but commonly counted as five: the water, crown, vajra, bell, and name empowerments, with a sixth, called the vajra master ([VAJRĀCĀRYA](#)) added in yogatantra and *anuttarayogatantra*. The vase empowerment may be publicly performed, often in large gatherings, and is considered a prerequisite for the three other empowerments.

[kālasūtra](#). (T. thig nag; C. heisheng diyu; J. kokujō jigoku; K. hūksūng chiok 黑繩地獄). In Sanskrit, “black string”; the second of the eight hot hells (see [NĀRAKA](#)) of the Buddhist cosmos. In this hell, the henchmen of [YAMA](#) tie the unfortunate denizens to the ground with hot iron chains; then, marking lines on their victims’ bodies with black string, they use those lines as guides to cut the body into pieces with burning saws. After the bodies of the denizens of this hell have been cut into pieces, they are made whole again and the process is repeated.

[kalaviṅka](#). (T. ka la ping ka; C. jialupinqie niao; J. karyōbinga chō; K. karyukpin’ga cho 迦陸頻伽鳥). In Sanskrit, “kalaviṅka (cuckoo) bird”; a mythical bird from the [HIMĀLAYA](#) mountains with a call said to be far more beautiful than that of all other birds and so compelling that it could be heard even before the bird had hatched. The bird and its call are used as a simile for the [BODHISATTVAS](#) and their aspiration for enlightenment ([BODHICITTA](#)), which are so compelling and persuasive that, even before they have achieved complete, perfect enlightenment ([ANUTTARASAMYAKSAMBOधि](#)), they are still far superior to all other spiritual adepts. As the [AVATAMSAKASŪTRA](#) says, “It is like the kalaviṅka bird, which, even before it has hatched, has such great dynamism that other birds cannot challenge it. [BODHISATTVA-MAHĀSATTVAS](#) are just the same: even before they have hatched from inside the egg of birth-and-death, the dynamism deriving from the merit associated with generating the aspiration for enlightenment is so compelling that [ŚRĀVAKAs](#) and [PRATYEKABUDDHAs](#) cannot challenge them.” The [DAZHIDU LUN](#) explains, “It is like the kalaviṅka bird, which even before it has hatched, has a call that is far more subtle and sublime than that of other birds. Bodhisattva-mahāsattvas are also just the same: although they may not have yet hatched from the egg of ignorance, the sound of their preaching and discoursing is far superior to that of the śrāvakas, pratyekabuddhas, and non-Buddhists.”

[Kālayāśas](#). (C. Jiangliangyeshe; J. Kyōryōyasha; K. Kangnyangyasa 薑良耶舍)

(383–442). A Central Asian monk who was one of the early translators of Buddhist texts into Chinese. Kālayaśas arrived at Jiankang, the capital of the Liu-Song dynasty, in 424, where he became an adviser to Emperor Wen. Two works of translation are attributed to him in the Buddhist catalogues. Perhaps the most influential work with which he is associated is the [GUAN WULIANGSHOU JING](#), the “meditation-sūtra” on [AMITĀBHA](#) Buddha, which is one of the three foundational texts of the East Asian [PURE LAND](#) traditions. Because no Sanskrit recension of this sūtra is attested, this scripture is now considered to be either a Central Asian or a Chinese indigenous scripture (see [APOCRYPHA](#)), and its ascription to Kālayaśas is problematic. The second text that he translated is the *Guan Yaowang Yaoshang er pusa jing* (“Sūtra on Visualizing the Two Bodhisattvas Bhaiṣajyarāja and Bhaiṣajyasamudgata”), an early sūtra on the Medicine Buddha/Bodhisattva cult associated with the bodhisattva [BHAISAJYARĀJA](#) and the buddha [BHAISAJYAGURU](#).

[Kālika](#). [alt. Karīka] (T. Dus ldan; C. Jialijia zunzhe; J. Karika sonja; K. Kariga chonja 迦里迦尊者). The Sanskrit name of one of the sixteen [ARHAT](#) elders ([SODĀŚASTHAVIRA](#)), who were charged by the Buddha with protecting his dispensation until the advent of the next Buddha, [MAITREYA](#). Kālika is said to reside in the Lion’s Island (Siṃhatā; viz., Sri Lanka) with one thousand disciples. According to Chinese tradition, Kālika used to be an elephant tamer. (Because elephants have both great strength and endurance, they are a common symbol of the [BUDDHADHARMA](#).) Because of this talent, he earned the nickname “Elephant-Riding Arhat” (Jixiang Luohan). In Tibetan iconography, he holds two earrings; East Asian images often portray him as an old man reading a scroll. In Chanyue Guanxiu’s standard Chinese depiction, Kālika is encircled by long eyebrows, sitting in easy comfort on a rock, with his right arm wrapped around his right knee, and his long eyebrows twisted around his fingers. His right hand is placed naturally on an adjacent rock.

[Kālī Kururagharikā](#). (C. Jialijia; J. Karika; K. Kariga 迦梨迦). Lay disciple of the Buddha, whom he declared to be foremost among laywomen who are able to generate faith even from hearsay; she was also well known as the mother of the arahant ([ARHAT](#)) [SONA-KOTIKANNA](#) (S. Śroṇa-Koṭikarṇa). According to the Pāli account, Kālī was born in Rājagaha ([RAJAGRHA](#)) but lived with her husband in the city of Kururaghara in the kingdom of [AVANTI](#). When she was pregnant with her son Soṇa, she returned to her parent’s house, and there one evening, while

relaxing on a balcony of the house, she overheard two disciples of the Buddha discuss the marvelous qualities of their teacher and his teachings. As she listened, faith (saddhā; S. [ŚRADDHĀ](#)) grew in her and she became a stream-enterer (sotāpanna; S. [SROTAĀPANNA](#)). That same night she gave birth to Soṇa. When Kālī returned to Kururaghara, she devoted herself to serving the arhat [MAHĀKĀTYĀYANA](#), who was a family friend and who frequently visited their town. Her son became a merchant, but on a caravan journey he encountered a series of frightful visions that inspired him to take ordination under Mahākātyāyana, who served as his preceptor (upajjhāya; S. [UPĀDHYĀYA](#)). When Soṇa later visited the Buddha, Kālī prepared a costly rug and asked that he spread it out in the Buddha's chamber. Soṇa had won praise from the Buddha for his eloquence ([PRATIBHĀNA](#)), and, on his return to Kururaghara, Kālī requested that he preach to her in the same manner as he had before the Buddha. Kālī Kururagharikā was considered the most senior of female disciples to have attained stream-entry. She was the devoted friend and companion of [KĀTIYĀNĪ](#), another eminent laywoman praised by the Buddha.

[Kaliṅga](#). (T. Ka ling ga; Jielingqie; J. Karyōga; K. Kallūngga 羯陵伽). An Indian kingdom on the eastern coast of the subcontinent; identified with the modern state of Orissa. In the eighth year of his reign, the Mauryan emperor [AŚOKA](#) (third century BCE) conquered Kaliṅga. In his inscriptions, Aśoka states that the resulting carnage caused him to turn away from violence and toward the dharma. Kaliṅga is mentioned in the Pāli canon as one of seven states that flourished at the time of the mythical king, Renu, but it is not included in the classical list of sixteen nations (janapada). During his previous life as [VESSANTARA](#), the [BODHISATTVA](#) gave the kingdom of Kaliṅga his white elephant, Pacaya, in order to alleviate that country's drought. A [TOOTH RELIC](#) of the Buddha is said to have been enshrined at the Kaliṅga capital, Dantapura, and, later during the reign of the Sinhalese king, Sirimeghavanna, it was carried to Sri Lanka, where it was installed as the palladium of the Sinhalese royal house. From ancient times, there were close relations between the kings of Kaliṅga and Sri Lanka. During the reign of Aggabodhi II, the king and queen of Kaliṅga came to the island, renounced their thrones, and entered the order. The royal houses of both kingdoms frequently exchanged brides, and many descendants of the Kaliṅga dynasty are mentioned as having been crowned king of Sri Lanka. Māgha, the twelfth-century invader and scourge of Buddhism on the island, is also said to have hailed from Kaliṅga. During the early centuries of the Common Era,

Kalinga was an important source for Buddhist and Brahmanical cultural influence among the Pyu and Mon peoples of Burma, contributing to the emergence of Buddhist civilization in Southeast Asia. Kalinga is also one of the twenty-four sacred sites associated with the [CAKRASAMVARATANTRA](#). See also [PĪTHA](#).

[Kālodāyin](#). (P. Kāḷudāyin; T. 'Char byed nag po; C. Jialiutuoyi; J. Karudai; K. Karyut'ai 迦留陀夷). An [ARHAT](#) elder, whom the Buddha declared to be foremost among his ordained disciples in gladdening clans. According to the Pāli tradition, he was the son of one of King [ŚUDDHODANA](#)'s ministers (purohita) at [KAPILAVASTU](#) and a playmate of the young [BODHISATTVA SIDDHĀRTHA](#). After his son renounced the world, Śuddhodana made Kālodāyin his most trusted councilor. When the king heard that his son had won enlightenment, he repeatedly sent delegations from his court to invite the Buddha to the palace; but on each occasion the delegates became arhats after hearing the Buddha preach and forgot their mission. Finally, the king sent Kālodāyin to invite the Buddha at a suitable time. Like his predecessors, Kālodāyin also was ordained and soon became an arhat, but he did not neglect his commitment to the king. Conveying the invitation when the countryside was in full bloom, he accompanied the Buddha on a sixty-day journey from [RAJAGRHA](#) to Kapilavastu, each day flying with his [RDDHI](#) powers to Śuddhodana's palace to keep the king and his people apprised of the Buddha's progress. By the time the Buddha reached his hometown, the entire city of Kapilavastu was anticipating the Buddha's arrival. It was for this accomplishment that Kālodāyin was honored by the Buddha as the foremost in gladdening clans or reconciling families. Different traditions describe Kālodāyin's ghastly end. According to the [SARVĀSTIVĀDA VINAYA](#), Kālodāyin was beheaded by the jealous husband of one of his lay supporters, and the severed head was buried in horse manure. Another account states that Kālodāyin by chance learned of a brāhmaṇa wife's affair; in order to keep the affair secret, she had her servant behead the monk.

[kalpa](#). (P. kappa; T. bskal pa; C. jie; J. kō; K. kōp 劫). In Sanskrit, "eon" or "age"; the unit of measurement for cosmological time. There are a number of types of kalpas. An "intermediate kalpa" (antarakalpa), often a synonym of the generic kalpa, is said to mark the aeon during which the lifetime gradually decreases from being essentially eternal down to ten years. A "great kalpa" (mahākalpa) is composed of eighty intermediate kalpas and is the longest of the

kalpas governing creation. (In the Pāli tradition, a mahākappa is instead said to be four “incalculable eons.”) In the cycle of creation and dissolution of the universe, a great kalpa is divided into four periods of twenty intermediate kalpas. These are (1) the “kalpa of creation” ([VIVARTAKALPA](#)), the period from the arising of the primordial wind that produces the receptacle world and the arising of the hell denizens; this is followed by (2) the “kalpa of abiding” ([VIVARTASTHĀYIKALPA](#)); (3) the “kalpa of dissolution” ([SAMVARTAKALPA](#)), the period between the time when the hell denizens vanish through the dissolution of the receptacle world ([BHĀJANALOKA](#)), viz., the physical environment; and finally (4) the “kalpa of nothingness” ([SAMVARTASTHĀYIKALPA](#)). The longest of all kalpas is called the “incalculable kalpa” ([ASAMKHYEYAKALPA](#)), which, despite its name, has been calculated as a mahākappa to the sixtieth power. The [BODHISATTVA](#) path leading to buddhahood is presumed to take not one, but three, “incalculable eons” to complete. A kalpa during which a buddha appears in the world is known as an “auspicious” or “fortunate” kalpa ([BHADRAKALPA](#)).

[kalpanā](#). [alt. kalpana] (T. rtog pa; C. fenbie; J. funbetsu; K. punbyōl 分別). In Sanskrit, “thought,” “imagination,” or “conceptual construction”; generally carrying the negative connotation of a delusive fantasy and misconception, in which the object of thought is either nonexistent or falsely imagined. (The Chinese translates instead the connotation of conceptual “discrimination.”) Kalpanā is often contrasted negatively with direct perception ([PRATYAKSA](#)), especially yogic direct perception ([YOGIPRATYAKSA](#)), in which reality is perceived directly without the medium of mental images. See also [VIKALPA](#); [WANGXIANG](#).

[kalpavṛkṣa](#). (T. dpag bsam shing; C. yuanshengshu; J. enshōju; K. wōnsaengsu 圓生樹). In Sanskrit, “wish-granting tree”; a magical tree whose fruit takes the form of whatever one wishes for. Numerous such trees appear in Buddhist legends. Perhaps the most famous of them is said to grow on the slopes of Mount [SUMERU](#), with its roots located in the realm of the demigods ([ASURA](#)) but its leaves, branches, and fruit located above in the realm of the divinities ([DEVA](#)). Because the demigods were thus unable to enjoy the fruit of the tree that grows in their land, they became jealous of the divinities and fought against them. There are several varieties of wish-granting trees, including the pārijāta.

[kalpikāraka](#). (P. kappiyakāraka; T. rung ba byed pa; C. jingren; J. jōnin; K. chōngin 淨人). In Sanskrit, lit. “one who makes it appropriate,” viz., “legalizer,”

referring to a lay “steward” or “surrogate”; one who receives donations on behalf of monks and converts them into appropriate requisites. Monks are forbidden to physically touch certain kinds of donated goods. The [VINAYA](#) rules entailing forfeiture and confession ([NAIHSARGIKAPĀYATTIKA](#); P. nissaggiyapācittiya), for example, prohibit monks from handling gold and silver, so a monk out on his daily alms round ([PINDAPĀTA](#)) would not be allowed to receive a monetary donation offered by a layperson. The kalpikāraka attending the monk would instead serve as his standin, receiving the money in the monk’s stead and keeping it until such time as the monk required some necessity or requisite. The kalpikāraka would then use the money to purchase the required item on the monk’s behalf. This is the only major ecclesiastical office that is held by a layman, not a monk. See also [VAIYĀPRTYA\(KARA\)](#).

[Kalu Rinpoche](#). (1905–1989). An important modern meditation master and teacher of Tibetan Buddhism. Recognized as an incarnation ([SPRUL SKU](#)) of the [KARMA BKA’ BRGYUD](#) master [’JAM MGON KONG SPRUL](#), Kalu Rinpoche was ordained at the age of thirteen by the eleventh SI TU RINPOCHE. Kalu Rinpoche began serious meditation study at an early age, undertaking his first three-year retreat at the age of sixteen. He also received the transmission of the teachings of the [SHANGS PA](#) sect of Bka’ brgyud. He later served as the meditation teacher at [DPAL SPUNGS](#) monastery. Following the Chinese invasion, Kalu Rinpoche left Tibet in 1962 and first stayed at a small monastery outside of Darjeeling, India. He later settled in Sonada, West Bengal, where he built a three-year retreat center, teaching there before traveling internationally for ten years (1971–1981). In 1971, he traveled to France and the United States, at the request of the [DALAI LAMA](#) and the [KARMA PA](#), in order to educate Westerners in Buddhism. During those ten years, Kalu Rinpoche founded many meditation and dharma centers in Canada, the United States, and Europe, with his main meditation school in Vancouver, Canada. Kalu Rinpoche led his first three-year retreat for Western students of Tibetan Buddhism in France in 1976. His full name is Kar ma rang ’byung kun khyab phrin las.

[kalyānamitra](#). (P. kalyānamitta; T. dge ba’i bshes gnyen; C. shanzhishi; J. zenchishiki; K. sŏnjisik 善知識). In Sanskrit, lit. “good friend”; viz., “spiritual guide,” or “religious mentor”; a spiritual companion or mentor (sometimes, though rarely, referring even to the Buddha himself) who encourages one in salutary directions and helps one to remain focused on matters of real religious

import. Association with a kalyāṇamitra is said to be one of the foundations of religious progress: it is one of the seven things conducive to the welfare and weal of monks and one of the indicators that a monk will perfect the seven constituents of awakening ([BODHYAṄGA](#)). In the absence of “good friends,” it was thought preferable for monks to lead the solitary life of the rhinoceros (see [KHADGAVISĀNA](#); [KHADGAVISĀNAKALPA](#)). Three kinds of kalyāṇamitra are described in the literature: an instructor, a fellow practitioner, and a lay supporter ([DĀNAPATI](#)). The Tibetan title “geshe” ([DGE BSHES](#)), referring to a monk who has successfully completed the scholastic curriculum of the [DGE LUGS](#) sect, is a contraction of the Tibetan translation of kalyāṇamitra.

[Kalyāṇī inscriptions](#). The Pāli term for a set of stele inscriptions erected at [PEGU](#), the capital of the Mon kingdom of Rāmañña, by King [DHAMMACETĪ](#) in 1479. The inscriptions are written in Pāli and Mon and celebrate the successful purification of the Mon [SAMGHA](#) through the introduction of the Sri Lankan [MAHĀVIHĀRA](#) ordination lineage. As a document, the Kalyāṇī inscriptions follow the conventions of a Sinhalese sāsana katikāvata: that is, they are composed of a list of monastic regulations imposed by the court on the entire saṃgha throughout the realm, prefaced by a long historical introduction. The purpose of the introduction, in part, is to legitimate the new regulations by appealing to historical precedent, such as the legend of Dhammāsoka ([AŚOKA](#)).

[Kalyāṇīsīmā](#). An ordination site established at the Mon capital of Pegu in 1476 by King [DHAMMACETĪ](#) (r. 1472–1492). The construction of the Kalyāṇīsīmā marked the beginning of the reformation of the Mon [SAMGHA](#) in accordance with orthodox Sinhalese standards. The reformation is recorded by Dhammacetī in the [KALYĀNĪ INSCRIPTIONS](#) that were erected at the site. Dhammacetī selected a delegation of twenty-two Mon monks to travel to Sri Lanka, where, at a site of the Kalyāṇīvihāra near modern Colombo, the monks were laicized and reordained into the [MAHĀVIHĀRA](#) tradition. Upon their return, the newly reordained monks consecrated the Kalyāṇīsīmā at Pegu. Under the leadership of an elder monk ordained in Sri Lanka some twenty-six years earlier, the king ordered all new monks in his realm to be ordained into the [MAHĀVIHĀRA](#) tradition at the Kalyāṇīsīmā. Simultaneously, the existing saṃgha was purged of malefactors, and monks found to be worthy of continuing in the order were encouraged to return to lay status and be reordained at the Kalyāṇīsīmā. In this way, the Mon saṃgha, which had been long divided into rival monastic lineages,

was reunited into a single fraternity descended from the Mahāvihāra tradition in Sri Lanka. The procedures employed by Dhammacetī to effect his reforms of the Mon saṃgha were taken as a blueprint for the later [THUDHAMMA](#) reformation of the Burmese saṃgha carried out by King [BODAWPAYA](#) beginning in 1782.

[kāma](#). (T. 'dod pa; C. yu; J. yoku; K. yok 欲). In Sanskrit and Pāli, “sensuality,” especially in the sense of sexual desire. Kāma often appears compounded with various intensifiers to emphasize its affective dimensions. [KĀMARĀGA](#) means “sensual craving” and is listed as the fourth of ten fetters ([SAMYOJANA](#)) that keep beings bound to the cycle of rebirth ([SAMSĀRA](#)). Kāmarāga is the desire for physical pleasure and sensuality; it belongs to the more general psychological category of craving (S. [TRSNĀ](#); P. taṇhā, lit. “thirst”), which ceaselessly seeks pleasure here and there and is the chief root of suffering. The five “strands of sensuality” (kāmaguṇa) refer to the sensual pleasures of the five physical senses (see [GUNA](#)). [KĀMACCHANDA](#) means “sensual pleasure” or “sensual gratification” and is also classified as one of five hindrances ([NĪVARANA](#)) that prevent the mind from achieving meditative absorption ([DHYĀNA](#)). Kāmacchanda is temporarily overcome with the attainment of the first meditative absorption and is eradicated in its grosser forms by attaining the stage of once-returned ([SAKRDĀGĀMIN](#)), the second degree of Buddhist sanctity or holiness ([ĀRYAPUDGALA](#)); it is completely eliminated upon attaining the stage of nonreturner ([ANĀGĀMIN](#)), the third and penultimate degree of Buddhist holiness. Finally, [KĀMADHĀTU](#), or the sensuous realm, is the lowest of the three realms of existence ([TRAIDHĀTUKA](#)) (excluding the realms of subtle materiality and immateriality) and receives this name because of the predominance of sensuous desire among the beings reborn there.

[kāmacchanda](#). (T. 'dod pa la 'dun pa; C. haoyu; J. kōyoku; K. hoyok 好欲). In Sanskrit and Pāli, “sensual pleasure” or “sensual gratification”; an intensification of mere “sensuality” ([KĀMA](#)), which is classified as one of five hindrances ([NĪVARANA](#)) that prevent the mind from achieving meditative absorption ([DHYĀNA](#)). Kāmacchanda is temporarily overcome with the attainment of the first meditative absorption and is eradicated in its grosser forms by attaining the stage of once-returned ([SAKRDĀGĀMIN](#)), the second degree of Buddhist sanctity ([ĀRYAPUDGALA](#)); it is completely eliminated upon attaining the stage of nonreturner ([ANĀGĀMIN](#)), the third and penultimate degree of Buddhist sanctity.

[kāmadhātu](#). (T. 'dod khams; C. yujie; J. yokukai; K. yokkye 欲界). In Sanskrit and Pāli, “sensuous realm” or “desire realm”; the lowest of the three realms of

existence, so named because the beings there are attached to pleasures derived from the five sense organs ([INDRIYA](#)). The dominant force among beings born into this realm is therefore sensuality ([KĀMA](#)), and especially the sex drive. The sensuous realm includes the following six rebirth destinies ([GATI](#)), in ascending order: denizens of hell ([NĀRAKA](#)), hungry ghosts ([PRETA](#)), animals ([TIRYAK](#)), humans ([MANUSYA](#)), demigods ([ASURA](#)), and six levels of sensuous-realm divinities ([DEVA](#)). Rebirth in the sensuous realm is the result of past performance of either predominantly unwholesome deeds (in the case of hell denizens, hungry ghosts, animals, and demigods), a mix of unwholesome and wholesome deeds (as with human beings), or predominantly wholesome deeds (the divinities). The beings in the sensuous realm all have a coarser physical constituent. Above the *kāmadhātu* are the realm of subtle materiality ([RŪPADHĀTU](#)) and the realm of immateriality ([ĀRŪPYADHĀTU](#)), where sensuality exerts only minimal sway over its beings. The *kāmadhātu* may also be designated as a world ([LOKA](#)), worldly realm ([LOKADHĀTU](#)), or “sphere”/“domain” ([AVACARA](#)).

[Kamakura daibutsu](#). (鎌倉大佛). In Japanese, “Great Buddha of Kamakura”; a colossal bronze buddha image located at [KŌTOKUIN](#), a [JŌDOSHŪ](#) temple in Kamakura City, Kanagawa Prefecture, Japan. The Kamakura daibutsu is a huge bronze statue of Amida (S. [AMITĀBHA](#)) and is one of Japan’s most renowned buddha images. It is forty-four feet high and weighs about ninety-three tons. The first Kamakura shōgun, Minamoto no Yoritomo (1147–1199), saw the colossal buddha image at [TŌDAIJI](#) (see [NARA DAIBUTSU](#)) that had been restored in 1185 and, inspired, proposed erecting a similar image in his capital of Kamakura. After his premature death, the building campaign was carried out by his court lady Ineda no Tsubone (d.u.) and the monk Jōkō (d.u.) and the image cast by Ōno Gorōemon and Tanji Hisatomo from eight separate bronze plates that were ingeniously pieced together. Casting and gilding of the bronze image began in 1252 and took some twelve years to complete; the new image replaced an earlier wooden statue from 1243 that had been badly damaged in a storm. It was originally located inside a huge wooden shrine hall; the building was destroyed by a tsunami that demolished the entire temple in 1495 but that was not strong enough to budge the massive statue. Without funds for repairs, the image was neglected for years until the Jōdo monk Yūten Ken’yo (1637–1718) arranged for needed restorations in 1712; just behind the image are four bronze plates in the shape of lotus petals, on which are engraved the names of the donors who contributed to the restoration project. The image’s head is covered with 656

stylized curls and is disproportionately large so that it will not look small to people viewing it from the ground; the hands are in the meditation gesture ([DHYĀNAMUDRĀ](#)) typical of Amitābha images, with both hands displaying encircled thumb and index fingers. The image was repaired in 1923 after the Great Kantō earthquake and once again in 1960–1961. The image is one of the most famous sites in Japan and draws well over a million visitors a year.

[Kamalaśīla](#). (T. Ka ma la shī la) (c. 740–795). One of the most important Madhyamaka authors of late Indian Buddhism, a major representative of the Yogācāra-Madhyamaka synthesis, and a participant in the famous [BSAM YAS DEBATE](#). According to Tibetan doxographies, he was a proponent of the [YOGĀCĀRA-SVĀTANTRIKA-MADHYAMAKA](#). Although little is known about his life, according to Tibetan sources he was a monk and teacher at [NĀLANDĀ](#). Tibetan sources also count him as one of three (together with [ŚĀNTARAKṢITA](#) and [JÑĀNAGARBHA](#)) “Eastern Svātantrikas” ([RANG RGYUD SHAR GSUM](#)), suggesting that he was from Bengal. He was clearly a direct disciple of Śāntarakṣita, composing important commentaries on his teacher’s two major works, the [MADHYAMAKĀLAMKĀRA](#) and the [TATTVASAMGRAHA](#). The latter commentary, which is extant in Sanskrit, is an important source for both Hindu and Buddhist philosophical positions in the eighth century. Śāntarakṣita had gone to Tibet at the invitation of the Tibetan king [KHRI SRONG LDE BTSAN](#), where, with the assistance of [PADMASAMBHAVA](#), he founded [BSAM YAS](#), the first Buddhist monastery in Tibet. According to tradition, at the time of his death Śāntarakṣita warned that a mistaken philosophical view would become established in Tibet and advised the king to invite Kamalaśīla to come to Tibet in order to dispel it. This mistaken view was apparently that of Heshang [MOHEYAN](#), a Northern [CHAN](#) ([BEI ZONG](#)) monk who had developed a following at the Tibetan court. Kamalaśīla was invited, and a debate was held between the Indian monk and his Chinese counterpart, with the king serving as judge. It is unclear whether a face-to-face debate took place or rather an exchange of documents. According to Tibetan sources, the king declared Kamalaśīla the winner, named [MADHYAMAKA](#) as the official philosophical school of his realm, and banished the Chinese contingent. (Chinese records describe a different outcome.) This event, variously known as the [BSAM YAS DEBATE](#), the Council of Bsam yas, and the Council of Lhasa, is regarded as one of the key moments in the history of Tibetan Buddhism. Three of Kamalaśīla’s most important works appear to have been composed in response to the issues raised in the debate, although whether all

three were composed in Tibet is not established with certainty. These texts, each entitled [BHĀVANĀKRAMA](#) or “Stages of Meditation,” set forth the process for the potential [BODHISATTVA](#) to cultivate [BODHICITTA](#) and then develop [ŚAMATHA](#) and [VIPĀŚYANĀ](#) and progress through the bodhisattva stages ([BHŪMI](#)) to buddhahood. The cultivation of vipāśyanā requires the use of both scripture ([ĀGAMA](#)) and reasoning ([YUKTI](#)) to understand emptiness ([ŚŪNYATĀ](#)); in the first *Bhāvanākrama*, he sets forth the three forms of wisdom ([PRAJÑĀ](#)): the wisdom derived from hearing or learning ([ŚRUTAMAYĪPRAJÑĀ](#)), the wisdom derived from thinking and reflection ([CINTĀMAYĪPRAJÑĀ](#)), and the wisdom derived from meditation ([BHĀVANĀMAYĪPRAJÑĀ](#)). This “gradual” approach, very different from what was advocated in the Chinese [CHAN ZONG](#), is set forth in all three of the *Bhāvanākrama*, which, according to Tibetan tradition, were composed in Tibet after the Bsam yas debate, at the request of the king. However, only the third, and the briefest, directly considers, and refutes, the view of “no mental activity” (*amanasikāra*), which is associated with Moheyan. It was also during his time in Tibet that Kamalaśīla composed his most important independent (i.e., noncommentarial) philosophical work, the [MADHYAMAKĀLOKA](#), or “Illumination of the Middle Way,” a wide-ranging exposition of the Yogācāra-Madhyamaka synthesis. It deals with a number of central epistemological and logical issues to articulate what is regarded as the defining tenet of the Yogācāra-Svātantrika-Madhyamaka school: that major [YOGĀCĀRA](#) doctrines, such as “mind-only” ([CITTAMĀTRA](#)), and the three natures ([TRISVABHĀVA](#)) are important in initially overcoming misconceptions, but they are in fact only provisional ([NEYĀRTHA](#)) teachings for those who have not yet understood the Madhyamaka view. The *Madhyamakāloka* is also important for its exploration of such central [MAHĀYĀNA](#) doctrines as the [TATHĀGATAGARBHA](#) and the question of the [EKAYĀNA](#). On this latter point, Kamalaśīla argues against the Yogācāra position that there are three final vehicles (for the [ŚRĀVAKA](#), [PRATYEKABUDDHA](#), and [BODHISATTVA](#), with some beings excluded from any path to liberation) in favor of the position that there is a single vehicle to buddhahood ([BUDDHAYĀNA](#)) for all beings. Kamalaśīla is said to have been murdered in Tibet by partisans of the Chinese position, who caused his death by squeezing his kidneys.

[kāmalo](#). (S). See [KĀMADHĀTU](#).

[kāmamithyācāra](#). (P. *kāmamicchācāra*; T. ’dod pas log par g.yem pa; C. xieyin; J. jain; K. saūm 邪淫). In Sanskrit, lit. “wrong conduct due to sensuality,” the

term is generally translated into English as “sexual misconduct”; synonymous with abrahmacarya, lit. “impure conduct.” Sexual misconduct constitutes the third of the ten unwholesome courses of action or nonvirtuous deeds ([AKUŚĀLAKARMAPATHA](#)) and figures prominently in the precepts of both Buddhist clergy and laity. In its most straightforward formulation, sensual misconduct is defined (from the male perspective) as sexual intercourse with an inappropriate partner, often defined as a woman who is under the protection of another male. This would include females who are still under the protection of their father or mother, brother, sister, or relatives; married women; female convicts; and betrothed women. It would also include women who are members of a religious community, such as Buddhist nuns. Such a formulation would seem to permit sexual intercourse between consenting adults, whether married or not. However, further forms of sexual misconduct are often mentioned, including having sexual intercourse at an improper place, such as near a temple, monastery, or [STŪPA](#), in the presence of a religious statue or painting, a relic, or one’s teacher; sexual intercourse at an improper time, such as a religious holiday, the night of the full moon or new moon retreats, during the daytime, or when a woman is menstruating or breast-feeding; and sexual intercourse in an improper orifice, defined as any orifice other than the vagina. From this perspective, many sexual practices may be classed as sexual misconduct. In the [VINAYA](#) literature, a wide range of what is considered deviant sexual behavior is proscribed, ranging from masturbation to necrophilia. Among the many forms of sexual misconduct, sexual acts that entail “defeat” ([PĀRĀJIKĀ](#)) for a [BHIKSU](#) are those that involve the penetration by the penis of any orifice “to the depth of a sesame seed.” For a [BHIKSUNI](#), acts that entail expulsion include sexual intercourse, lustfully allowing a man to touch her anywhere between the collarbone and the knees, or to lustfully stand with a man, converse with a man, or go to a rendezvous with a man.

[kāmarāga](#). (T. ’dod pa la ’dod chags; C. yutan; J. yokuton; K. yokt’am 欲貪). In Sanskrit and Pāli, “sensual craving,”; an intensification of mere “sensuality” ([KĀMA](#)), which is listed as the fourth of the ten fetters ([SAMYOJANA](#)) that keep beings bound to the cycle of rebirth ([SAMSĀRA](#)). Kāmarāga is the desire for physical pleasure and sensuality; it belongs to the more general psychological category of craving (S. [TRSNĀ](#); P. taṇhā, lit. “thirst”), which ceaselessly seeks pleasure here and there and is the chief root of suffering.

[Kāmarūpa](#). (S). One of the twenty-four sacred sites associated with the [CAKRASAMVARATANTRA](#). See [PĪTHA](#).

[kāmvacara](#). (S). See [KĀMADHĀTU](#).

[kami](#). (神). In Japanese, “spirits,” “gods,” or “deities” (the term is not gender-specific and can be used as either singular or plural). Kami worship preceded the arrival of Buddhism in Japan and much later came to be regarded as the putative indigenous religion of [SHINTŌ](#). Kami is a complicated concept in Japanese religion, because the term applies to several different entities. Kami were perhaps most commonly considered to be spirits associated with physical objects; in the natural world, this meant that kami inhabited everything from rocks and trees to rivers and mountains. Kami could also designate ancestors or ancient heroes. The early historical record *Kojiki* (712), for example, recorded the names of various gods (kami) who created Japan and the Japanese people. In this text, all recognized clans (J. uji) had ancestries that linked themselves back to these local spirits. The tutelary deity of the ruling family, for example, was an anthropomorphized solar spirit named Amateru/Amaterasu ōmikami (lit. “Great Honorable Spirit Heavenly Radiance”), who was claimed to reside at the Ise shrine. From the Heian (794–1185) through the Tokugawa (1600–1868) periods, in conjunction with the ongoing Buddhist appropriation of native cults, kami were largely regarded as the local physical manifestations of buddhas and [BODHISATTVA](#)s, a theory of correlation known as [HONJI SUJAKU](#). In addition, local kami were also presumed to have converted to Buddhism and become protectors of specific shrines (both portable and fixed) and monasteries. The nativist (J. kokugaku) movement during the Tokugawa period, which developed as a reaction against such so-called foreign elements in Japanese culture as Buddhism and Confucianism, began to explore ways of distinguishing Buddhism from indigenous cults and held up the kami as something uniquely Japanese. From the inception of the Meiji period (1868–1912) up until 1945, the notion of kami became heavily politicized due to the government-mandated separation of buddhas and kami (J. [SHINBUTSU BUNRI](#)) and the proposition that the emperor (J. tennō) was a kami whose lineage could be traced back to the gods of the *Kojiki*. During this period, Japanese soldiers who died for the empire were interred at the Yasukuni shrine where they were venerated as kami; with the Japanese defeat in World War II, the Japanese government was compelled publicly to renounce this position. See also [SHINBUTSU SHŪGŌ](#), [HAIBUTSU KISHAKU](#).

kammatthāna. In Pāli, lit. “working ground,” viz., “meditative topic”; a topic or object of meditation ([BHĀVANĀ](#)) used for training the mind and cultivating mental concentration ([SAMĀDHI](#)). The term originally referred to an occupation or vocation, such as farmer, merchant, or mendicant, but was adopted as a technical term to refer generically to various types of meditative exercises. The [VISUDDHIMAGGA](#) lists forty topics used for this purpose. First are ten “visualization devices” ([KASINA](#))—devices that are constructed from the elements earth, water, fire, and air; the colors blue, yellow, red, and white, and light and space—to develop concentration. Kasiṇa exercises can produce all four of the “meditative absorptions” ([JHĀNA](#); [DHYĀNA](#)) associated with the realm of subtle materiality. Next are ten “loathsome topics” (asubha; see [S. AŚUBHABHĀVANĀ](#)), such as the decaying of a corpse, which can lead only to the first meditative absorption (dhyāna). These are followed by ten “recollections” (P. anussati; S. [ANUSMRTI](#)): viz., of (1) the Buddha, (2) the dhamma ([DHARMA](#)), (3) the saṅgha ([SAMGHA](#)), (4) morality, (5) generosity, (6) the divinities, (7) death, (8) the body, (9) the inbreath and outbreath (P. ānāpānasati, S. [ĀNĀPĀNASMRTI](#)), and (10) peace. Of these, recollection or mindfulness (P. sati; S. [SMRTI](#)) of the inbreath and outbreath can produce all four meditative absorptions, while recollection of the body can produce the first absorption; the remaining recollections only lead to “access concentration” ([UPACĀRASAMĀDHI](#)), which immediately precedes but does not reach the level of the first absorption. Next are four “immaterial spheres” (arūpāyatana), viz., the “sphere of infinite space” (ākāśānañcāyatana, S. [ĀKĀŚĀNANTYĀYATANA](#)); of “infinite consciousness” (viññāṇañcāyatana, S. [VIJÑĀNĀNANTYĀYATANA](#)); of “nothingness” (ākiñcaññāyatana, S. [ĀKIÑCANYĀYATANA](#)); and of “neither perception nor nonperception” (nevasaññānāsaññāyatana, S. [NAIVASAMJÑĀNĀSAMJÑĀYATANA](#)). Meditation on these objects involves the increasing refinement of the fourth absorption and leads to the acquisition of the “immaterial attainments” ([ARŪPASAMĀPATTI](#)), also called “immaterial absorptions” (P. arūpāvacarajhāna; S. [ĀRŪPYĀVACARADHYĀNA](#), see [DHYĀNA](#), [SAMĀPATTI](#)). Four positive affective states or “divine abidings” ([BRAHMAVIHĀRA](#); [alt. P. appamañña]; S. [APRAMĀNA](#)), are loving-kindness (mettā; [MAITRĪ](#)), compassion ([KARUNĀ](#)), altruistic or empathetic joy ([MUDITĀ](#)), and equanimity or impartiality (upekkhā; [UPEKSA](#)). Of these, loving-kindness, compassion, and altruistic joy can produce only the first three meditative absorptions, but equanimity can produce all four. There is one perception of the loathsomeness of food (āhāre paṭikkūlasaññā) and one analysis of the four elements (catudhātu vavatthāna), both of which can produce access

concentration. Certain of these topics were said to be better suited to specific character types, such as the loathsome topics to persons with strong tendencies toward lust or the perception of the loathsomeness of food for gluttons; others, such as the meditation on the in-and outbreaths, were universally suitable to all character types. The Buddha was said to have had the ability to assess his disciples' character types and determine which topics of meditation would best suit them; as later generations lost this assessment ability, the number of kammatthānas in regular use dropped dramatically, with mindfulness of breathing being by far the most popular topic.

Kanaka Bharadvāja. (T. Bha ra dhwa dza bsod snyoms len; C. Jianuojiabaliduoshe; J. Kanyakabaridaja; K. Kanakkaballit'asa 迦諾迦跋釐墮闍). The Sanskrit name of the third of the sixteen **ARHAT** elders (**SODASASTHAVIRA**), who are charged by the Buddha with protecting his dispensation until the advent of the next buddha, **MAITREYA**. He holds a **PĀTRA** and lives in the eastern continent of **VIDEHA** with 3,600 disciples. Because he would lift his bowl up every time he received food on alms round, he was known in Chinese as the “Raising his Bowl Arhat” (Jubo Luohan). In **CHANYUE GUANXIU**'s standard Chinese depiction, Kanaka Bharadvāja is depicted as skinny and emaciated as a stick, his eyes staring in anger, his mouth closed, and his eyebrows sticking out horizontally like a sword. Holding a chowrie in his right hand and resting his left hand on his knee, he sits leaning against a rock.

Kanakavatsa. (T. Gser be'u; C. Jianuojiafacuo; J. Kanyakabassa; K. Kanakkabölch'a 迦諾迦伐蹉). The Sanskrit name of the second of the sixteen **ARHAT** elders (**SODASASTHAVIRA**), who are charged by the Buddha with protecting his dispensation until the advent of the next buddha, **MAITREYA**; he is said to reside in Kashmir with five hundred disciples. In the East Asian tradition, he is known as the “**ŚRĀVAKA** who knows all the wholesome and unwholesome dharmas.” Because he was renowned as a dynamic debater, one day a person approached him and asked, “What is happiness?” He answered, “It is the contentment that is gained through sensuality in hearing, viewing, smelling, tasting, and touching.” The person continued, “Then what is joy?” He replied, “It is the contentment that is gained not through sensuality, but instead through the sincerity and joy one feels in the Buddha's existence.” For this reason, Kanakavatsa is also known as the “Happiness and Joy Arhat.” In **CHANYUE GUANXIU**'s standard Chinese depiction, Kanakavatsa is portrayed in a gray robe,

sitting in meditation on a rock, with his hands forming a [MUDRĀ](#), and carrying a staff on his shoulder. His face is full of wrinkles, with eyebrows hanging downward and his gaze turned slightly upward.

kanbian. (J. kanben; K. kambyōn 勘辨). In Chinese, “critical examinations”; a technical term used within the [CHAN](#) school to refer to the encounters between Chan monks and masters in which each questions and challenges the understanding of the other. These examinations are often in the form of an extended exchange or dialogue, which will often involve successive series of verbal and gesticulative joustings between the parties. Paradigmatic examples of kanbian are found in the second section of the [LINJILU](#) (“The Record of Linji”), the discourse record ([YULU](#)) attributed to [LINJI YIXUAN](#) (d. 867).

Kāñci. (S). One of the twenty-four sacred sites associated with the [CAKRASAMVARATANTRA](#). See [PĪTHA](#).

Kandarakasutta. In Pāli, “Discourse to Kandaraka,” the fifty-first sutta of the [MAJJHIMANIKĀYA](#) (there is no equivalent recension in the Chinese translations of the [ĀGAMAS](#)), preached by the Buddha to a gathering of monks on the banks of Gaggara lake at Campā. Kandaraka, a wandering ascetic, visits the Buddha in the company of Pessa, the son of an elephant driver, and marvels at the silence maintained by the Buddha’s congregation of disciples. The Buddha tells him that his disciples are self-controlled through their practice of the four foundations of mindfulness (P. satipaṭṭhāna; S. [SMRTYUPASTHĀNA](#)). He then tells Pessa about four types of persons in the world: those who torment themselves, those who torment others, those who torment both themselves and others, and those who torment neither themselves nor others. After their departure, the Buddha addresses his disciples and elaborates on what he means by the four types of persons. Those who torment themselves are ascetics who undertake various mortification practices (see [TAPAS](#)). Those who torment others are butchers, hunters, fishermen, thieves, executioners, and prison wardens. Those who torment themselves and others are kings and their consorts who sponsor sacrifices wherein they undergo severe penances themselves and order the slaughter of sacrificial animals. Finally, those who torment neither themselves nor others are persons who have renounced the household life and gone forth as disciples of the Buddha. They abstain from extreme asceticism and harming others; they abstain from acquisitiveness and abide by the monastic rules; they practice meditation and quiet the mind; and they attain the four degrees of

meditative absorption ([JHĀNA](#); S. [DHYĀNA](#)) and the three knowledges (tevijjā; S. [TRIVIDYĀ](#)). The Buddha enumerates the three knowledges as (1) recollection of one's own previous lives (pubbenivāsānussati; S. [PŪRVANIVĀSĀNUSMRTI](#)); (2) the divine eye (dibbacakkhu; S. [DIVYACAKSUS](#)), or the ability to see the demise and rebirth of beings according to their good and evil deeds; and (3) knowledge of the extinction of the contaminants (āsavakkhāya; S. [ĀSRAVAKSAYA](#)), which encompasses knowledge of the [FOUR NOBLE TRUTHS](#) (ariyasacca; S. āryasatya) and is equivalent to arhatship.

[Kang](#). (J. Kō; K. Kang 康). A Sinograph used as an ethnicon for monks, missionaries, and translators who hailed from the kingdom of [SOGDIANA](#) in Central Asia (the Greek Transoxiana), as in the name of the translator [KANG SENGHUI](#). Chinese descendants of Sogdian ancestry, such as [FAZANG](#), also carried this ethnicon as their secular surname.

[Kang Senghui](#). (J. Kō Sōe; K. Kang Sūnghoe 康僧會) (d. 280). Sogdian monk and early translator of numerous mainstream Buddhist texts into Chinese. Kang Senghui emigrated in 247 to Jianye, the capital of the Wu dynasty (222–264). According to his hagiography, Kang Senghui was brought to the court of Wu as part of the court's investigation into Buddhism. As evidence of the truth of his religion, Kang Senghui miraculously manifested a relic ([ŚARĪRA](#)) of the Buddha, for which the marquis of Wu, Sun Quan, built a monastery near the capital named [JIANCHUSI](#). When Sun Quan's grandson, Sun Hao (r. 264–280), attempted to destroy all Buddhist structures in his kingdom, Kang Senghui is said to have successfully dissuaded him from doing so by making recourse to the notion of “sympathetic resonance” ([GANYING](#)). Kang Senghui translated several texts, including a collection of [AVADĀNAS](#) called the *Liudu ji jing*, and he wrote an important preface and commentary on the [ANBAN SHOUYI JING](#), a Chinese recension of the **Smṛtyupaṣṭhānasūtra* (P. [SATIPATTHĀNASUTTA](#)). As a learned scholar of Buddhism who was also well versed in the Confucian classics, astronomy, and divination, Kang Senghui played a crucial role in the development of a gentry Buddhist culture in the south, which was heavily influenced by indigenous Chinese philosophy.

[Kangzang guoshi](#). (C) (康藏國師). See [FAZANG](#).

[Kāṇha](#). (S). See [KRSNĀCĀRYA](#).

Kānheri. The most extensive Buddhist monastic cave site in India, located six miles southeast of Borivili, a suburb of present-day Mumbai (Bombay), in the modern Indian state of Maharashtra. The name derives from the Sanskrit *Kṛṣṇagiri*, or “Black Mountain,” probably because of the dark basalt from which many of the caves were excavated. Over 304 caves were excavated in the hills of the site between the first and tenth centuries CE. During the fifth and sixth centuries, older caves were modified and refurbished, while new caves were added, presumably initiated under the patronage of the Traikūṭakas (388–456 CE). While many of the new caves are architecturally rather plain, a number of important images were produced. The most extraordinary images are found in caves 90 and 41. The walls of cave 90 are abundantly, but haphazardly, carved with a myriad of images, suggesting that this hall was not intended for congregational purposes but rather as a place where believers could fund carvings as a way of making merit ([PUNYA](#)). On the left side wall of cave 90 is an especially complex iconographic arrangement. It shows [VAIROCANA](#) Buddha in the center, making the gesture of turning the wheel of the dharma ([DHARMAKRAMUDRĀ](#)) and seated in the so-called European pose ([PRALAMBAPĀDĀSANA](#)); accompanying Vairocana are four smaller images at the four corners of the composition. Together, these comprise the five buddhas ([PAÑCATATHĀGATA](#) or [PAÑCAJINA](#)). At each side of the composition is a vertical row of four buddhas, who together represent the eight buddhas of the past. By the sixth century, female images had emerged as a common part of Buddhist iconographic conceptions in South Asia, and Kānheri is no exception. Flanking the central Buddha in this same arrangement is a pair of [BODHISATTVAS](#), each accompanied by a female consort. Depicted next to the stalk upon which rests the central Buddha’s lotus pedestal are several subordinate figures: [INDRA](#) and [BRAHMĀ](#), with female consorts, as well as male and female [NĀGA](#). Kānheri was also a crucial site for both transoceanic and overland trade and pilgrimage networks, which probably accounts for the presence of images of [AVALOKITEŚVARA](#), a bodhisattva who could be called upon by seafarers and merchants who were in distress. Avalokiteśvara’s image in cave 90 shows him in the center, flanked by his attendants, and surrounded by scenes of the eight dangers, including shipwreck. In the bottom right-hand corner, seafarers are depicted praying to him. In cave 41, the unusual form of an Eleven-Headed Avalokiteśvara ([EKĀDAŚAMUKHĀVALOKITEŚVARA](#)), which is dated to the late fifth or early sixth century, indicates advanced and esoteric Buddhist practices at Kānheri. While frequently found in later Buddhist art in Tibet, Nepal, and East

Asia, this image is the only extant artistic evidence that this iconographic type is of Indian provenance. A sixteenth-century Portuguese traveler reported that the Kānheri caves were the palace built by Prince Josaphat's father to shield him from knowledge of the sufferings of the world. (cf. [BARLAAM AND JOSAPHAT](#)). See also [AJANTĀ](#).

[kanhua Chan](#). (J. kannazen/kanwazen; K. kanhwa Sŏn 看話禪). In Chinese, “Chan of investigating the topic of inquiry,” or, more freely, “questioning meditation.” The systematization of this meditative practice is commonly traced back to the writings of the Song-dynasty [CHAN](#) master [DAHUI ZONGGAO](#). The kanhua Chan technique grew out of the growing interest in the study of “public cases” ([GONG'AN](#)), viz., old stories and anecdotes of Chan masters, which flourished during the Song dynasty. Dahui's teacher [YUANWU KEQIN](#) is also known to have lectured on numerous public cases, and his anthology of gong'an, along with his analysis of them, was recorded in the famous collection the [BIYAN LU](#) (“Blue Cliff Records”). Dahui further elaborated upon Yuanwu's investigation of public cases and applied this process to the practice of Chan meditation. In his lectures and letters ([DAHUI PUJUE CHANSHI SHU](#)), Dahui urged his students (many of whom were educated literati) to use the gong'an as a “topic of meditative inquiry” ([HUATOU](#), K. hwadu), rather than interpret it from purely intellectual or conceptual perspectives. Perhaps the most famous huatou is the topic “no” ([WU](#)) attributed to the Chan master [ZHAOZHOU CONGSHEN](#): A monk asked Zhaozhou, “Does a dog have buddha-nature ([FOXING](#)), or not?” to which Zhaozhou replied “[WU](#)” (“no”; lit. “it does not have it”). (See [WU GONG'AN](#); [GOUZI WU FOXING](#).) (Because of the popularity of this one-word meditative topic, kanhua Chan is often interpreted to mean the investigation of the “critical phrase” or “keyword,” in which the “keyword” “wu” is presumed to have been extracted from the longer gong'an exchange.) The investigation of this huatou starts by “investigating the meaning” (C. canyi; K. ch'amŭi) of the huatou: what could Zhaozhou have meant by answering “no” to this question, when the right answer should be “yes”? The mainstream of East Asian Buddhist doctrine insists that all sentient beings, including dogs, are inherently enlightened and thus do in fact possess the buddha-nature, so this question promotes inquiry. Examining what Zhaozhou might have meant by saying “no” has what Dahui termed “taste” (C. wei, K. mi), meaning intellectual interest. As one's intellectual inquiry into this question continues, however, the student is ultimately left with “doubt” ([YIQING](#)), viz., the inability of the (unenlightened) mind to understand

Zhaozhou's motive in giving this response to the student's question. Doubt, Dahui says, renders the mind "puzzled, frustrated, and tasteless" (viz., lacking intellectual interest), just as if you were gnawing on an iron rod." Once doubt arises, there is no longer any conceptual support for the meditation, and the student moves on to "investigating the word" (C. canju; K. ch'amgu), viz., just sitting with the huatou wu and no longer trying to understand Zhaozhou's motive in offering this response. At this point, the huatou becomes a "live word" (C. huoju; K. hwalgu) that helps to free the mind from conceptualization and to lead the meditator forward toward liberation. As the sense of doubt becomes more and more intense, it finally "explodes" (C. po; K. p'a), bringing an end to the deluded processes of thought and removing the limiting point of view that is the self. Once the distinctions between self and other disintegrate, the meditator experiences the interconnection between himself or herself and all the phenomena in the universe ([SHISHI WU'AI](#)). Kanhua Chan, therefore, employs the inevitable doubt that a benighted person would have about the sayings of the enlightened Chan masters of old to create a powerful sense of inquiry that leads the meditator toward the experience of nonconceptualization and finally enlightenment. ¶ Dahui's system of kanhua Chan was first taught in Korea by [POJO CHINUL](#), where it is known as kanhwa Sŏn, and popularized by Chinul's successor, [CHIN'GAK HYESIM](#). Kanhwa Sŏn continues to be the most common contemplative technique practiced in Korean Sŏn halls. Korean Sŏn monks typically work on one hwadu—often Zhaozhou's "no"—for much of their career, continually deepening their experience of that topic. In China, after the Ming dynasty, kanhua Chan merged with the recitation of the buddha [AMITĀBHA](#)'s name ([NIANFO](#)), so that Chan meditators would turn the recitation into a huatou by reflecting on the topic "Who is reciting the Buddha's name?" In Japanese Zen, due in large part to the efforts of [HAKUIN EKAKU](#) and his disciples, kannazen became widespread within the RINZAI [ZEN](#) tradition, where it was incorporated into an elaborate system of kōan training, involving the systematic investigation of many different kōans.

[Kanhwa kyōrūi non](#). (看話決疑論). In Korean, "Resolving Doubts about Observing the Keyword"; attributed to the Korean [SŌN](#) master [POJO CHINUL](#). Shortly after Chinul's death in 1210, his disciple [CHIN'GAK HYESIM](#) is said to have discovered the *Kanhwa kyōrūi non* among Chinul's effects and arranged for the text to be published in 1215. The treatise displays the rapid crystallization of Chinul's thought around kanhwa Sŏn (see [KANHUA CHAN](#)), but its occasionally

polemical tone suggests Hyesim's editorial hand. In the *Kanhwa kyōrūi non*, Chinul carefully expounds on the practice of observing the hwadu ([HUATOU](#)), the “meditative topic” or “keyword” deriving from a Chan public case (kong'an; C. [GONG'AN](#)). He underscores the efficacy of the hwadu technique in counteracting the defects of conceptual understanding. In a series of questions and answers, Chinul also attempts to clarify the relation between the hwadu technique, the consummate interfusion of the [DHARMADHĀTU](#), and the so-called sudden teachings ([DUNJIAO](#)) of Buddhism, as defined in the [HUAYAN](#) tenet-classification system (see [JIAOXIANG PANSHI](#); [HUAYAN WUJIAO](#)). Chinul demonstrates that the goal of kanhwa Sōn is not simply to abandon words and thought, as in the “sudden teachings,” but to realize the unimpeded interpenetration of all phenomena ([SHISHI WU'AI](#)), the consummate description of enlightened experience according to the Huayan school. Unlike the prolix, scholastic explanations of Huayan, however, kanhwa Sōn relies much less on conceptual descriptions in its soteriology and thus provides a more direct “shortcut” (kyōngjōl) to enlightenment than is offered in Huayan. Kanhwa Sōn therefore offers the only truly perfect and sudden (wōndon; C. yuandun) approach to enlightenment.

[kanhwa Sōn](#). (看話禪). In Korean, the Sōn of investigating the topic of meditative inquiry (hwadu; C. [HUATOU](#)), or more freely, “questioning meditation.” See [KANHUA CHAN](#).

[Kaniṣka](#). (T. Ka ni ska; C. Jianisejia wang; J. Kanishika ō; K. Kanisaekka wang 迦膩色迦王) (c. 127–151 CE). Third king of the [KUSHAN](#) kingdom in the northwest of India and legendary patron of Buddhism, rivaled, according to the tradition, only by [AŚOKA](#), some four centuries later. The story of his conversion to Buddhism is widely found in the literature, but it seems to belong to the realm of legend, not history. Kaniṣka is said to have convened the fourth Buddhist council (see [COUNCIL, FOURTH](#)), which led to the compilation of the [ABHIDHARMAMAHĀVIBHĀSĀ](#) (“Great Exegesis of Abhidharma”). Thanks to Kaniṣka's putative support, the Kushan kingdom has traditionally been assumed to have been an important conduit for the introduction of Buddhist materials into China via the [SILK ROAD](#) of Central Asia. Recent evidence of the decline in western Central Asian trade during the Kushan period, however, may suggest instead that the Kushans were more of an obstacle than a help to this dissemination. Hence, it may not have been the Kushans who facilitated the

transmission of Buddhism but their Indo-Scythian predecessors in the region, the Saka (S. Śaka) tribe. The emerging scholarly consensus is that Kaniṣka's reign began in 127 CE; if accepted, this date will allow much more precise dating of the cultural products of the [KASHMIR–GANDHĀRA](#) region.

[kaṅkhāvitaraṇavisuddhi](#). In Pāli, “the purity of overcoming doubt”; the fourth of seven “purities” ([VISUDDHI](#)) to be developed along the path to liberation, according to the [VISUDDHIMAGGA](#). The purity of overcoming doubt refers to the understanding of the conditions that give rise to name and form ([NĀMARŪPA](#)), viz., mentality and materiality, with reference to the three time periods (S. [TRIKĀLA](#)) of past, present, and future. The practitioner notes that no instance of name and form arisen in the present came into being through the will of a creator, nor did it arise spontaneously by itself without a cause. Rather, the practitioner understands that everything that has arisen has occurred because of a specific cause or condition. Thus, the practitioner understands, for example, that, due to the contact of the eye sense base with a visible object, a moment of visual consciousness arises. In the same way, the practitioner understands that what has arisen in the present because of causes and conditions ([HETUPRATYAYA](#)) becomes the cause and condition for something arising in the future. This knowledge encompasses knowledge of the relationship between volitional action ([KARMAṆ](#)) and its result ([VIPĀKA](#)) and that future existence within the cycle of rebirth occurs as a result of volitional action. In addition, the practitioner clearly understands the distinction between volitional action and its result, that is, that there is neither volitional action in the result nor result in the volitional action. In this way, the practitioner overcomes doubt regarding causality underlying the appearance of name and form in relation to the three times.

[Kaṅkhāvitaraṇī](#). [alt. Mātikatṭhakathā]. A Pāli commentary written by [BUDDHAGHOSA](#) on the pāṭimokkha (S. [PRĀTIMOKSA](#)) of the [VINAYAPITAKA](#).

[Kāṅkṣā-Revata](#). (P. Kaṅkhā-Revata; T. Nam gru; C. Lipoduo; J. Ribata; K. Rip'ada 離婆多). An important [ARHAT](#) who was foremost among the Buddha's monk disciples in mastery of meditative absorption ([JHĀNA](#); [DHYĀNA](#)). He is typically known as Kāṅkṣā-Revata (Doubting Revata), to distinguish him from several other [REVATA](#)s who appear in the literature, because, prior to his enlightenment, Revata was troubled by doubt concerning what was permissible and what was not. According to Pāli sources, he was born into a wealthy family in the city of Sāvithi (S. [ŚRAVASTĪ](#)). One day, he heard the Buddha preach in

Kapilavatthu (S. [KAPILAVASTU](#)) and resolved to renounce the world and enter the order. He attained arahantship by relying on jhāna and his exceptional skill in these meditative states won him distinction. Revata had resolved to attain this distinction in a previous life as a brāhmaṇa, when, during the time of Padumuttara Buddha, he heard the Buddha describe one of his disciples as preeminent in his attainment of jhāna. In another famous story, the mother of Uttara had been reborn as a hungry ghost (P. *peta*; S. [PRETA](#)) and after fifty-five years of wandering encountered Revata and begged him for relief. He relieved her suffering by making various offerings to the [SAMGHA](#) in her name.

[Kaṇṭhaka](#). [alt. Kanthaka] (T. Bṣngags ldan; C. Jianzhi; J. Kenjoku; K. Kōnch'ōk 𨮑𨮑). In Sanskrit and Pāli, the name of the horse that [GAUTAMA](#) rode when he departed from his father's palace in [KAPILAVASTU](#) and renounced the world ([PRAVRAJITA](#)). Kaṇṭhaka was born on the same day as Gautama, as was his groom [CHANDAKA](#). Kaṇṭhaka was destined from birth to carry the future buddha from the household life into homelessness and was suitably magnificent in stature for that honor. Eighteen cubits in length, he was white, the color of a conch shell, and the sound of his neighing and gallop resounded throughout the kingdom of Kapilavastu. When he was saddled to carry his master into the wilderness, Kaṇṭhaka realized the significance of the event and neighed in exultation. Lest Gautama's father be forewarned and attempt to prevent his departure, the divinities muffled his neighing and the sound of his hoofs. The prince rode on Kaṇṭhaka's back, while Chandaka held onto his tail. Outside the city gates, Gautama turned to take a final look at his capital; a shrine ([CAITYA](#)) was later erected on the spot in commemoration. Between midnight and dawn, they traveled thirty leagues to the river Anomā. Kaṇṭhaka crossed the river in one jump and Gautama and Chandaka dismounted on the other side. There, the [BODHISATTVA](#) gave Chandaka his ornaments and directed him to take Kaṇṭhaka back to the palace; a shrine commemorating the event was later erected on the spot as well. Kaṇṭhaka continued to look at his master as he departed, and when he disappeared from view, Kaṇṭhaka died of a broken heart. He was immediately reborn in [TRAYASTRIMŚĀ](#) heaven as a deity named Kaṇṭhakadevaputra and dwelled in a magnificent palace made of gems, where the [ARHAT MAHĀMAUDGALYĀYANA](#) later visited him.

[Kanzan Egen](#). (關山慧玄) (1277–1360). Japanese [ZEN](#) master of the RINZAI [ZEN](#) tradition and founder of the influential monastery of [MYŌSHINJI](#) in Kyōto.

Kanzan was a native of Shinano in present-day Nagano prefecture and at a young age was ordained at the monastery [KENCHŌJI](#) in Kamakura. In 1307, he met the eminent Zen master [NANPO JŌMYŌ](#) when the latter was appointed the abbot of Kenchōji. In 1327, Kanzan visited Nanpo's leading disciple [SOHŌ MYŌCHŌ](#), also known as Daitō, to continue his studies with him at the monastery [DAITOKUJI](#) in Kyōto. In 1303, Kanzan is said to have attained awakening while struggling with the kōan (C. [GONG'AN](#)) of [YUNMEN WENYAN](#)'s "barrier" (case 8 of the [BIYAN LU](#)). Daitō himself had penetrated this kōan earlier at Kenchōji under Nanpo's guidance. In recognition of his disciple's achievement, Daitō gave him the name Kanzan (Barrier Mountain). In place of his teacher Daitō, Kanzan later became the personal instructor to Emperor Godaigo (r. 1318–1339) and Hanazono (r. 1308–1318). After Daitō's death in 1337, Emperor Hanazono converted his country villa into a monastery and invited Kanzan to serve as its founding abbot (kaisan, C. [KAISHAN](#)); this monastery was subsequently given the name Myōshinji.

[kapāla](#). (T. thod pa; C. dulou qi/jiebobei; J. dokuroki/kōhahai; K. ch'ongnu ki/kōpp'abae 髑髏器/劫波杯). In Sanskrit, "skull"; used in Buddhist [TANTRA](#) to refer to the skull cup that is often one of the accoutrements of [MAHĀSIDDHAS](#) and wrathful deities. The vessel, made from the cranium of a human skull, is often elaborately carved and inlaid with precious metals. The symbolism of the skull cup is variously explained; most generally, it is yet another antinomian aspect of Buddhist tantra, in which things that would be regarded as polluting in Indian culture (in this case the skull of a corpse) are put to use to overcome dualities. It is also said that the skull cup is a constant reminder of death. In tantric [SĀDHANAS](#), the skull cup is often said to contain the elixir of immortality ([AMRTA](#)). The skull cup figures prominently in tantric iconography (being held, for example, by [PADMASAMBHAVA](#)) and in tantric practice. For example, in [GCOD](#) practice, one visualizes the top of one's own head being cut off and transformed into a huge vessel, where one's own body is cooked and offered to [VAJRAYOGINĪ](#).

[Kapilavastu](#). (P. Kapilavatthu; T. Ser skya'i gzhi; C. Jiapiluowei; J. Kabirae; K. Kabirawi 迦毘羅衛). In Sanskrit, the capital city of the [ŚĀKYA](#) tribe and the hometown of the buddha [GAUTAMA](#). The city was located north of the larger region of [KOŚALA](#), in the foothills of modern-day Nepal. Kapilavastu is the town where [SIDDHĀRTHA](#) Gautama was raised and lived as a prince until he renounced worldly life. Later, after his enlightenment, he stayed often at Nigrodha's Park in

the precincts of the city, together with his growing band of disciples. In Kapilavastu, his cousins [ĀNANDA](#) and [DEVADATTA](#), his half-brother [NANDA](#), and his barber [UPĀLI](#) were converted and became monks ([BHIKSU](#)). When the Buddha ordained his then seven-year-old son [RĀHULA](#) as a novice ([ŚRĀMANERA](#)) without the knowledge of the boy's mother, [YAŚODHARĀ](#), the Buddha's father, [ŚUDDHODANA](#), protested, and a rule was created stating that ordinations would not take place without prior parental consent. After the death of his father, the Buddha's foster mother [MAHĀPRAJĀPATĪ](#) begged the Buddha to be allowed to join the [SAMGHA](#), thus initiating the order of nuns ([BHIKSUNĪ](#)).

[Kapimala](#). (C. Jiapimoluo; J. Kabimara; K. Kabimara 迦毘摩羅). Sanskrit name of an Indian monk who lived during the second century CE, who is listed as one of the successors in the Indian Buddhist lineage that traces itself back to the person of the Buddha himself. An Indian brāhmaṇa who was a native of [PĀTALIPUTRA](#) (modern Patna), the capital of the kingdom of [MAGADHA](#), he is said to have challenged the exegete [AŚVAGHOŚA](#) with his superpowers ([ABHIJÑĀ](#)) but was defeated by Aśvaghoṣa's profound learning and became his disciple, along with his three thousand adherents. He is typically listed as twelfth of twenty-three or thirteenth of twenty-four primary successors to [ŚĀKYAMUNI](#) Buddha.

[Kapleau, Philip](#). (1912–2004). Influential twentieth-century American teacher of Zen Buddhism. Kapleau worked as a court reporter at the war crimes trials following World War II, first in Nuremberg and then in Tokyo. He met [D. T. SUZUKI](#) in Japan in 1948 and later attended his lectures at Columbia University in 1950. He returned to Japan in 1953, where he spent the next thirteen years practicing Zen, the last ten under [YASUTANI HAKUUN](#) (1885–1973), a Zen priest who had severed his ties to the [SŌTŌ](#) sect in order to form his own organization, called Sanbōkyōdan, the “Three Treasures Association,” which taught Zen meditation to laypeople. Kapleau returned to the United States in 1965 and in the following year founded the Zen Center of Rochester, New York. While in Japan, Kapleau drew on his training as a court reporter to transcribe and translate Yasutani's instructions on Zen meditation, along with his formal interviews ([DOKUSAN](#)) with his students, and testimonials of their enlightenment experiences. These were compiled into *The Three Pillars in Zen*, first published in Japan in 1965, a work that influenced many Westerners to undertake Zen practice; it is widely recognized as a classic of the nascent American tradition of Zen Buddhism. As one of the first non-Japanese Zen teachers in America,

Kapleau set out in this book to adapt some of the forms of Zen practice that he thought would be better suited to an American audience. Kapleau's modifications included an English translation of the [PRAJÑĀPĀRAMITĀHRDAYASŪTRA](#) ("Heart Sūtra"). Yasutani was strongly opposed to the use of the translation, arguing that the sound of the words was more important than their meaning. Teacher and student broke over this question in 1967 and never spoke again. Kapleau, however, remained dedicated to Yasutani, and the Rochester Zen Center flourished under Kapleau's direction.

[kāraṇahetu](#). (T. byed pa'i rgyu; C. nengzuo yin; J. nōsain; K. nūngjak in 能作因). In Sanskrit, the "efficient," "generic," or "enabling" "cause," the first of the six causes ([HETU](#)) recognized in the [SARVĀSTIVĀDA-VAIBHĀSIKA ABHIDHARMA](#) system. This category of cause subsumes all five other causes within it, and it corresponds with the predominant effect ([ADHIPATAPHALA](#)) as its specific effect. Each conditioned [DHARMA](#) serves as the enabling cause for all other dharmas besides itself by the mere fact that it does not obstruct the others' arising. The [kāraṇahetu](#) provides the broad context necessary for the operation of causality, so that the process of production and cessation will continue unabated.

[Kāraṇavyūha](#). [alt. [Kāraṇavyūha](#); [Avalokiteśvaragūṇa-kāraṇavyūha](#)] (T. Za ma tog bkod pa'i mdo; C. Dasheng zhuangyan baowang jing; J. Daijō shōgon hōōgyō; K. Taesūng changōm powang kyōng 大乘莊嚴寶王經). In Sanskrit, "Description of the Casket [of [AVALOKITEŚVARA](#)'s Qualities]"; the earliest textual source for the [BODHISATTVA](#) [Avalokiteśvara](#)'s [MANTRA](#) "[OM MANI PADME HŪM](#)" (oṃ, O Jewel-Lotus); the extended version of the title is [Avalokiteśvaragūṇa-kāraṇavyūha](#). The earliest version of the [Kāraṇavyūha](#) is presumed to have been composed in Kashmir sometime around the end of the fourth or beginning of the fifth centuries CE. There are Tibetan and Chinese translations, including a late Chinese rendering made by the Kashmiri translator [TIAN XIZAI](#) (d. 1000) in 983. The [Kāraṇavyūha](#) displays characteristics of both sūtra and [TANTRA](#) literature in its emphasis on the doctrine of rebirth in [AMITĀBHA](#) Buddha's pure land ([SUKHĀVATĪ](#)), as well as such tantric elements as the mantra "oṃ maṇi padme hūṃ" and the use of [MANDALAS](#); it is thought to represent a transitional stage between the two categories of texts. The sūtra is composed as a dialogue between [ŚĀKYAMUNI](#) Buddha and the bodhisattva [SARVĀNĪVARANAVISKAMBHIN](#). While describing [Avalokiteśvara](#)'s supernal qualities and his vocation of saving sentient beings, Śākyamuni Buddha tells his

audience about the mantra “oṃ maṇi padme hūṃ” and the merits that it enables its reciters to accrue. Avalokiteśvara is said to be the embodiment of the [SAMBHOGAKĀYA](#) (enjoyment body), the body of the buddha that remains constantly present in the world for the edification of all beings, and the dharma that he makes manifest is expressed in this six-syllable mantra ([SADAKSAĪ](#)), the recitation of which invokes the power of that bodhisattva’s great compassion ([MAHĀKARUNĀ](#)). The sūtra claims that the benefit of copying this mantra but once is equivalent to that of copying all the 84,000 teachings of the [DHARMA](#); in addition, there are an infinite number of benefits that derive from a single recitation of it.

[Karika](#). (S). See [KĀLIKA](#).

[Kārli](#). [alt. Kārle]. Buddhist cave temple site in western India, situated halfway between Mumbai (Bombay) and Pune in Maharashtra. Based on inscriptional evidence, the excavation of the site began around 124 CE, toward the end of the reign of Nahapāna, who ruled over much of western India during the early second century. The veranda and doorways to the site are decorated with outstanding sculptural features: flanking the doorways are carvings of couples in sexual union ([MAITHUNA](#)); these images are stylistically similar to contemporary carvings in the city of [MATHURĀ](#). The end wall of the veranda features carvings of almost life-size elephants, which appear to support the architectural structure. The images of buddhas and [BODHISATTVA](#)s also found on the veranda were carved in the late fifth century, when the iconographic profile of the cave was modified. The interior of the cave’s [CAITYA](#) hall, which is South Asia’s largest, is characterized by an impressive, harmonious balance of architectural and sculptural elements. A [STŪPA](#) appears at the end of the long nave, with an ambulatory that allows its circumambulation ([PRADAKSINA](#)). A row of pillars carved directly out of the rock parallels the shape of the cave itself. These pillars are adorned with capitals that depict sculpted images of figures riding animals, which are stylistically close to those of the contemporary or slightly earlier images at the great stūpa at [SĀŅCI](#).

[Karma Bka’ brgyud](#). (Karma Kagyü). One of four major subsects of the [BKA’ BRGYUD](#) sect of Tibetan Buddhism. Also known as the Karma kaṃ tshang, it dates to the first [KARMA PA](#), [DUS GSUM MKHYEN PA](#). Headed by a lineage of incarnate lamas ([SPRUL SKU](#)), who each hold the title of Karma pa, the sect held great political power from the late fourteenth through the early seventeenth

century, until the ascendancy of the [DGE LUGS](#) at the time of the fifth [DALAI LAMA](#). It continues to be strong in exile. The Karma bka' brgyud is known for its equal emphasis on study and practice, and in the realm of practice, on [MAHĀMUDRĀ](#). Because of the black crown worn by the Karma pa, the sect is sometimes mistakenly referred to in the West as the “[BLACK HATS](#).” For a detailed history, see [KARMA PA](#).

[Karma chags med](#). (a.k.a. Rā ga a sya) (1613–1678). A [KARMA BKA' BRGYUD](#) teacher born near the [RI BO CHE](#) monastery in eastern Tibet, an unsuccessful candidate for the position of ninth [KARMA PA](#) and founder of the Gnas mdo branch of the Karma kaṃ tshang tradition, named after the monastery Gnas mdo that he established; at the same time, a founding figure in the lineage of the [RNYING MA](#) monastery [DPAL YUL](#), one of the four great Rnying ma monasteries of Khams. A prolific author, he is known for his devotion to [AMITĀBHA](#); his *Rnam dag bde chen zhing gi smon lam* (“Prayer to Be Reborn in [SUKHĀVATĪ](#)”) is recited in all sects. As redactor of the [GTER MA](#) (treasure texts) revealed by his student and teacher Mi 'gyur rdo rje, he originated a fusion of [BKA' BRGYUD](#) and [RNYING MA](#) teachings that spread widely in Khams.

[karmadāna](#). (S). See [WEINUO](#).

[Karma gling pa](#). (Karma Lingpa) (1326–1386). A treasure revealer ([GTER STON](#)) of the [RNYING MA](#) sect of Tibetan Buddhism. He is best known for unearthing the treasure cycle entitled the *Zhi khro dgongs pa rang grol* (“Peaceful and Wrathful Deities, the Natural Liberation of Intention”) from a mountain peak in his native region of Dwags po (Dakpo). Part of this doctrinal cycle, called the [BAR DO THOS GROL CHEN MO](#) (“Great Liberation through Hearing in the Intermediate State”), became widely known in the West as the so-called *Tibetan Book of the Dead*. See also [BAR DO](#); [ANTARĀBHAVA](#).

[Karma kaṃ tshang](#). See [KARMA PA](#); [KARMA BKA' BRGYUD](#).

[karmakula](#). (T. las kyī rigs; C. jiemo bu; J. katsumabu; K. kalma pu 羯磨部). In Sanskrit, “action family”; one of the “five lineages” or “five families” ([PAÑCAKULA](#)) of tantric Buddhism. The five are usually given as the [TATHĀGATAKULA](#), [VAJRAKULA](#), [PADMAKULA](#), [RATNAKULA](#), and [KARMAṆ](#) families (different tantras have different lists). Those in the karmakula become enlightened in the form of the buddha [AMOGHASIDDHI](#). Each of the five families

is associated with one of the five aggregates ([SKANDHA](#)), five wisdoms ([JÑĀNA](#)), five afflictions ([KLEŚA](#)), five elements ([MAHĀBHUTA](#)), and five colors. For the karman family, these are the conditioning factors ([SAMSKĀRA](#)) skandha, the wisdom of having accomplished what was to be done ([KṚTYĀNUSTHĀNAJÑĀNA](#)), the affliction of envy, the element air, and the color green. See also [PAÑCATATHĀGATA](#).

[karmamudrā](#). (T. las kyī phyag rgya). In Sanskrit, “action seal”; a term used to refer to the female consort in the practice of sexual yoga in [ANUTTARAYOGATANTRA](#). In the context of sexual yoga, three types of female consorts or [VIDYĀ](#) (“knowledge women”) are sometimes enumerated. The first is the [JÑĀNAMUDRĀ](#), or “wisdom seal,” who is an imagined or visualized partner and is not an actual consort. The second and third types of consorts are both actual consorts. The [SAMAYAMUDRĀ](#), or “pledge seal,” is a consort who is fully qualified for the practice of sexual yoga, in the sense that she is of the appropriate age and caste, has practiced the common path, and maintains the tantric pledges ([SAMAYA](#)). The third and final type is the karmamudrā, who is also an actual consort but who may not possess the qualifications of a samayamudrā. In some expositions of tantric practice, these three types of “seals” are discussed with reference to [MAHĀMUDRĀ](#), or “great seal,” a multivalent term sometimes defined as the union of method ([UPĀYA](#)) and wisdom ([PRAJÑĀ](#)), which does not require a consort.

[karman](#). (P. kamma; T. las; C. ye; J. gō; K. ōp 業). In Sanskrit, “action”; in its inflected form “karma,” it is now accepted as an English word; a term used to refer to the doctrine of action and its corresponding “ripening” or “fruition” ([VIPĀKA](#)), according to which virtuous deeds of body, speech, and mind produce happiness in the future (in this life or subsequent lives), while nonvirtuous deeds lead instead to suffering. In Vedic religion, karman referred especially to ritual actions. The term came to take on wider meanings among the [ŚRAMANA](#) movements of wandering ascetics, to which Buddhism belonged. The [JAINAS](#), for example, have a theory of karman as a physical substance created through unwholesome actions, which hinder the soul’s ability to achieve liberation; in order to free the soul from the bonds created through past actions, the body had to be rigorously cleansed of this karmic substance through moral discipline and asceticism. Although the Buddhists accepted the notion of moral causality, as did the Jainas, they redefined karman instead as mental intention ([CETANĀ](#)) or

intentional (cetayitvā) acts: the Buddha specifically says, “Action is volition, for after having intended something, one accomplishes action through body, speech, and mind.” These actions are of four types: (1) wholesome ([KUSĀLA](#)), which lead to wholesome results (vipāka); (2) unwholesome ([AKUSĀLA](#)), which lead to unwholesome results; (3) mixed, with mixed results that may be partially harmful and partially beneficial; and (4) indeterminate ([AVYĀKRTA](#)), which are actions done after enlightenment, which yield no result in the conditioned realm. The term karman describes both the potential and kinetic energy necessary to sustain a process; and, just as energy is not lost in a physical process, neither is it lost in the process of moral cause and effect. The Buddhists assert that there is a necessary relationship that exists between the action and its fruition, but this need not manifest itself in the present life; rather, when the complex of conditions and the appropriate time for their fruition come together, actions will bear their retributive fruit, even after an interval of hundreds of millions of eons ([KALPA](#)). The fruition of action is also received by the mental continuum ([CITTASAMTĀNA](#)) of the being who initially performed the action, not by another; thus, in mainstream Buddhism, one can neither receive the fruition of another’s karman nor redeem another’s actions. The physical universe ([BHĀJANALOKA](#)) and all experience within it are also said to be the products of karman, although in a passive, ethically neutral sense (viz., upapattibhava; see [BHAVA](#)). The goal of the Buddhist path is to be liberated from the effects of karman and the cycle of rebirth ([SAMSĀRA](#)) by destroying attachment to the sense of self ([ĀTMAN](#)). The doctrine of karman is meant to counter the errors of antinomianism (that morality is unnecessary to salvation), annihilationism, and materialism. Actions do, in fact, matter, even if there is ultimately no self that is the agent of action. Hence, karman as representing the continuity between action and result must be understood in conjunction with the teaching of discontinuity that is [ANĀTMAN](#): there is indeed a causal chain connecting the initiator of action and the recipient of its result, but it is not the case that the person who performs the action is the same as the person who experiences the result (the wrong view of eternality) or that the agent is different from the experiencer (the wrong view of annihilationism). This connection is likened to milk changing to its different forms of curds, butter, and ghee: the milk and the ghee are neither identical nor different, but they are causally connected. The process that connects karmic cause and effect, as well as the process by which that connection is severed, is detailed in the twelvefold chain of dependent origination ([PRATĪTYASAMUTPĀDA](#)). Enlightened beings, such as a buddha or an [ARHAT](#), have destroyed this chain and

thus have eradicated all attachment to their past karmic continuums; consequently, after their enlightenment, they can still perform actions, but those will not lead to results that would lead to additional lifetimes in saṃsāra. Although the Buddha acknowledges that the connections between karman and its effect may seem so complex as to appear unfathomable (why, for example, does the evil person who harms others live in wealth, while the good Samaritan who helps others lives in poverty?), he is adamant that those connections can be known, and known with perfect precision, through the experience of awakening ([BODHI](#)). Indeed, two of the three kinds of knowledge ([TRIVIDYĀ](#); P. tevijja) and one of the superknowledges ([ABHIJÑĀ](#)) that are by-products of enlightenment involve insight into the validity of the connection between karmic cause and effect for both oneself and for all beings: viz., the ability to remember one's own former lives ([PŪRVANIVĀSĀNUMSMṚTI](#); P. pubbenivāsānunssati) in all their detail; and the insight into the karmic destinies of all other beings as well ([CYUTYUPAPATTIÑĀNA](#); P. cutūpapātānuñāṇa). Distinguish [KARMAN](#), “ecclesiastical proceeding,” s.v.; see also [ANANTARYAKARMAN](#); [ANIÑJYAKARMAN](#); [ER BAO](#); [KARMĀVARANA](#).

karman. (P. kamma; T. las; C. jiemo; J. katsuma/konma; K. kalma 羯磨). In Sanskrit, “ecclesiastical proceeding”; from the literal meaning of karman as an “act.” (To distinguish karman as “action” from “ecclesiastical proceeding,” the Chinese uses a translation for the former and a transcription for the latter.) Such proceedings include admission into the order as novices (pravrajyā, see [PRAVRAJITA](#)), full ordination of monks and nuns ([UPASAMPADĀ](#)), the fortnightly confession ceremony ([UPOSADHA](#)) for recitation of the [PRĀTIMOKSA](#) precepts, the invitation ceremony ([PRAVĀRANĀ](#)) closing the rain's retreat ([VARSĀ](#)), giving cloth for robes ([KATHINA](#)), the adjudication of rules, the administration of punishments to transgressors of the precepts, and the settlement of disputes among the clergy. At such formal proceedings, a motion is made before the congregation of monks that may be approved by silent assent (see [JÑAPTIDVITĪYĀ KARMAVĀCANĀ](#) [P. ñattidutiyakammavācā]; [KARMAVĀCANĀ](#)). In responding to monks who have transgressed the precepts, for example, the [VINAYA](#) provides for seven different ecclesiastical proceedings, depending on the kind and severity of the infraction. They are reprimands; expulsion from the clergy; the appointment of an overseeing mentor (see [ĀCĀRYA](#); [ANTEVĀSIKA](#)); temporary proscription against contact with the laity; confronting with incriminating evidence a suspect who refuses to confess; confronting an unrepentant transgressor with incriminating

evidence; and correcting someone who intransigently holds on to the pernicious view that certain precepts are expendable. Distinguish [KARMA](#), “action,” s.v.; see also [SAMGHAKARMA](#).

Karma pa. In Tibetan, a title given to the incarnate lama ([SPRUL SKU](#)) identified at birth in each generation as the head of the [KARMA BKA' BRGYUD](#) subsect of the [BKA' RGYUD](#) sect of Tibetan Buddhism. The term is commonly etymologized as “man of [enlightened] action.” In the history of Tibetan Buddhism, the lineage of the Karma pas is considered to be the first to institutionalize its succession of incarnate lamas, a practice later adopted by the other sects. According to tradition, at the time of his death, each Karma pa composes a letter that specifies the date and location of his next incarnation. This letter is given to a close disciple, who then reveals its contents upon the death of the Karma pa, with the information in the letter used to locate the child who has been born as the next Karma pa. Among the most famous and sacred possessions of the Karma pa is a black crown, said to be made from the hair of one hundred thousand [DĀKINĪS](#). The actual crown is said to be invisible to persons lacking sufficient merit. However, during the Ming dynasty, the Yongle emperor (r. 1402–1424) presented the fifth Karma pa with a visible physical replica of the crown. The replica itself is said to have great power; the “black hat ceremony,” in which the Karma pa dons the crown, is among the most important in the sect. In the ceremony, the Karma pa holds the hat upon his head; otherwise, it is said, it will fly off into space. It is also said that those who see the crown will be liberated from rebirth. Due to the importance of the crown, the Karma pas are sometimes called the “black crowned” (zhwa nag). In the nineteenth century, a Western misunderstanding of this term led to the identification of a sect of Tibetan Buddhism called the “[BLACK HATS](#),” a mistake that persists in some accounts of Tibetan Buddhism. Like the [DALAI LAMAS](#), the Karma pas are considered to be emanations of the [BODHISATTVA AVALOKITEŚVARA](#). Also like the Dalai Lamas, the Karma pas have been among the most important and revered religious figures in the history of Tibet; they include many great scholars and yogins. Some have also had political power, at times leading to conflicts, sometimes polemical, and sometimes military, with the [DGE LUGS PA](#). Although the main seat of the Karma pas was [MTSHUR PHU](#) Monastery in central Tibet, the Karma pas tended to travel widely. Their importance and influence extended throughout the Tibetan cultural domain, including China. The lineage includes:

1. Karma pa [DUS GSUM MKHYEN PA](#) (1110–1193)
2. Karma pa [KARMA PAKSHI](#) (1203–1283)
3. Karma pa [RANG 'BYUNG RDO RJE](#) (1284–1339)
4. Karma pa Rol pa'i rdo rje (Rolpe Dorje, 1340–1383)
5. Karma pa Bde bzhin gshegs pa (Deshin Shekpa, 1384–1415)
6. Karma pa Mthong ba don ldan (Tongwa Dönden, 1416–1453)
7. Karma pa Chos grags rgya mtsho (Chödrak Gyatso, 1454–1506)
8. Karma pa [MI BSKYOD RDO RJE](#) (1507–1554)
9. Karma pa [DBANG PHYUG RDO RJE](#) (1556–1603)
10. Karma pa Chos dbying rdo rje (Chöying Dorje, 1604–1674)
11. Karma pa Ye shes rdo rje (Yeshe Dorje, 1676–1702)
12. Karma pa Byang chub rdo rje (Jangchub Dorje, 1703–1732)
13. Karma pa Bdud 'dul rdo rje (Dudül Dorje, 1733–1797)
14. Karma pa Theg mchog rdo rje (Tekchok Dorje, 1798–1868)
15. Karma pa Mkha' khyab rdo rje (Kakyap Dorje, 1871–1922)
16. Karma pa [RANG 'BYUNG RIG PA'IRDO RJE](#) (1924–1982)
17. Karma pa O rgyan 'phrin las rdo rje (Orgyan Trinle Dorje, b. 1985).

The line of Karma pas originated during the twelfth century with [DUS GSUM MKHYEN PA](#), a close disciple of [SGAM PO PA BSOD NAMS RIN CHEN](#), who had himself studied under the famous [YOGIN MI LA RAS PA](#). Dus gsum mkhyen pa established several important monasteries, including Mtshur phu, which served as the main seat of the Karma pas and the Karma bka' brgyud in central Tibet. Dus gsum mkhyen pa's successor, the second Karma pa [KARMA PAKSHI](#), is

remembered especially for his prowess in meditation and thaumaturgy. He was patronized by the Mongols, first by Möngke (1209–1259) and later by his brother, the Yuan emperor Qubilai Khan (r. 1260–1294) before losing the emperor's support. The third Karma pa [RANG 'BYUNG RDO RJE](#) continued this affiliation with the Mongol court, playing a role in emperor Toghun Temür's (r. 1333–1368) ascension to the throne. The fourth Karma pa Rol pa'i rdo rje and fifth Karma pa Bde bzhin gshegs pa maintained ties with the Chinese court—the former with Toghun Temür and the latter serving as the preceptor of the Yongle emperor (reigned 1402–1424) of the Ming dynasty, a position of great influence. The sixth Karma pa Mthong ba don ldan did not maintain the same political connections of his predecessors; he is remembered especially for his contributions to the religious life of the Karma bka' brgyud, producing meditation and ritual manuals. The seventh Karma pa Chos grags rgya mtsho is known primarily for his philosophical works on logic and epistemology ([PRAMĀNA](#)); his voluminous text on the topic is still used today as a principal textbook in many Bka' brgyud monasteries. The eighth Karma pa [MI BSKYOD RDO RJE](#) is among the most renowned scholars of his generation, a prolific author whose writings encompassed Sanskrit, poetry, and art, as well as [MADHYAMAKA](#) philosophy and tantra. The ninth Karma pa [DBANG PHYUG RDO RJE](#) is revered for his influential works on the theory and practice of [MAHĀMUDRĀ](#). It was during his lifetime that the [DGE LUGS](#) hierarchs ascended to power, with an attendant decline in the political fortunes of his sect in central Tibet. His successor, the tenth Karma pa Chos kyi dbang phyug, was thus forced into a life of virtual exile near the Sino-Tibetan border in the east as his patron, the king of Gtsang, was defeated by the Gushri Khan, patron of the Dge lugs. As the war came to an end, the tenth Karma pa returned to [LHA SA](#) where he established ties with the fifth Dalai Lama [NGAG DBANG BLO BZANG RGYA MTSHO](#). The eleventh Karma pa Ye shes rdo rje and twelfth Karma pa Byang chub rdo rje lived relatively short lives, although the latter made an important journey through Nepal together with his disciple, the brilliant scholar and Sanskritist Si tu [CHOS KYI 'BYUNG GNAS](#). The life of the thirteenth Karma pa Bdud 'dul rdo rje was, for the most part, lived outside the sphere of politics. He is remembered for his love of animals, to which he taught the dharma. Beginning during his lifetime and continuing into that of the fourteenth Karma pa Theg mchog rdo rje, there was a revival of Bka' brgyud doctrine in the eastern Tibetan province of Khams, as part of what has come to be called the [RIS MED](#) or nonsectarian movement. The fourteenth Karma pa's disciple, ['JAM MGON KONGS SPRUL BLO GROS MTHA' YAS](#), played a leading

role. The fifteenth Karma pa Mkha' khyab rdo rje, a principal disciple of 'Jam mgon kongs sprul, was a prolific scholar. The sixteenth Karma pa [RANG 'BYUNG RIG PA'I RDO RJE](#), like other lamas of his generation, saw the Communist Chinese occupation of Tibet, fleeing to India in 1959 and establishing an exile seat at Rumtek Monastery in Sikkim. He was the first Karma pa to visit the West. The seventeenth Karma pa O rgyan 'phrin las rdo rje was enthroned at Mtshur phu monastery on September 27, 1992. In late December 2000, he escaped into exile, establishing a residence in Dharamsala, India. Although his identification as the Karma pa has been disputed by a small number of followers of a rival candidate, O rgyan 'phrin las rdo rje is regarded as the seventeenth Karma pa by the majority of the Tibetan community, including the Dalai Lama.

[Karma Pakshi](#). (1203–1283). A Tibetan Buddhist master recognized as the second [KARMA PA](#), renowned for his virtuosity in meditation, thaumaturgy, and his activities at the Mongol court. The name “Pakshi” is derived from the Mongolian word for “teacher” or “master,” and the second Karma pa is also frequently known by the epithet grub chen, or [MAHĀSIDDHA](#). In his youth, Karma Pakshi was recognized as a child of great intellectual ability and skill in meditation. He conducted his early training under the [BKA' BRGYUD](#) teacher Spom brag pa Bsod rnam rdo rje (Pomdrakpa Sönam Dorje, 1170–1249) and spent a great period of his time in meditation retreat near the monastery of [MTSHUR PHU](#) in central Tibet. Traveling to eastern Tibet, he founded a monastery at Spungs ri (Pungri) and renovated the Bka' brgyud institution of KARMA DGON established by his predecessor [DUS GSUM MKHYEN PA](#). Karma Pakshi's fame spread throughout the Tibetan border regions to the north and east. In about 1251, the Mongol prince Qubilai (later Khan, r. 1260–1294) sent an invitation to Karma Pakshi, who was residing at Mtshur phu. He arrived at the Mongol court several years later. Karma Pakshi was one of numerous religious figures present at court, including the [SA SKYA](#) hierarch ['PHAGS PA BLO GROS RGYAL MTSHAN](#). Karma Pakshi quickly impressed Qubilai with a display of magical powers, and the Mongol prince requested him to remain permanently at court. The relationship soured, however, when Karma Pakshi refused the offer. On his return to Tibet, he formed a relationship with Qubilai's elder brother and political rival Möngke (1209–1259) and consented to visit Möngke's palace in Liangzhou. He taught the Mongol ruler and his court Buddhist doctrine, especially [TANTRA](#) based on the [CAKRASAMVARATANTRA](#). For ten years, Karma Pakshi traveled across China, Mongolia, and Tibet and is also said to have debated with numerous Daoist

practitioners. Qubilai assumed the role of high Khan after Möngke's death in 1259. Angered at Karma Pakshi's support of his rival brother, and still smarting from his refusal to remain at court, Qubilai ordered Karma Pakshi's capture and exile. Qubilai eventually relented and allowed the Karma pa to return to Tibet. Upon his return to Mtshur phu, he constructed a massive statue of [ŚĀKYAMUNI](#) called the "ornament of the world" ('dzam gling rgyan). The completed statue, however, was slightly tilted. In a famous account, Karma Pakshi is said to have straightened the statue by first assuming the same tilted posture and then righting himself, simultaneously moving the statue. Among his principal disciples was O rgyan pa Rin chen dpal (Orgyenpa Rinchenpal), who would become the guru of the third Karma pa, [RANG 'BYUNG RDO RJE](#).

[karmapatha](#). (P. kammapatha; T. las kyi lam; C. yedao; J. gōdō; K. ŏpto 業道). In Sanskrit, "course of action"; the name given to a standardized list of ten types of wholesome ([KUŚĀLA](#)) and unwholesome ([AKUŚĀLA](#)) actions ([KARMAN](#)), which lead respectively to salutary rebirths (viz., in the realms of humans and divinities) or unsalutary rebirths ([APĀYA](#); [DURGATI](#), viz., in the realms of hungry ghosts, animals, or hell denizens). The respective ten types are further subdivided into three subsets according to whether they pertain to physical actions, speech acts, or mental actions. The ten unwholesome courses of action (akuśalakarmapatha) include, under the category of the body: (1) killing (prāṇātipāta; P. pāṇātipāta), (2) stealing (adattādāna; P. adinnādāna), and (3) sexual misconduct ([KĀMAMITHYĀCĀRA](#); P. kāmamicchācāra); under the category of speech: (4) lying (mṛṣāvāda; P. musāvāda), (5) slander or malicious speech (paiśunyaavāda; P. piśuṇavācā), (6) offensive or harsh speech (pāraṣyavāda; P. pharusavācā), and (7) frivolous prattle (saṃbhinnapralāpa; P. samphappalāpa); and under the category of mind: (8) covetousness ([ABHIDHYĀ](#); P. abhijjhā), (9) ill will ([VYĀPĀDA](#)), and (10) wrong views ([MITHYĀDRSTI](#); P. micchādiṭṭhi). The root causes of the ten unwholesome courses of action are greed ([LOBHA](#)), hatred ([DVESA](#)), or delusion ([MOHA](#)): for example, killing, ill will, and offensive speech are generally motivated by hatred; sexual misconduct, covetousness, and stealing are generally motivated by desire and greed; wrong views are generally motivated by delusion; and lying, slander, and frivolous prattle are motivated by a combination of all three. For a thought to be classified as an unwholesome mental course of action, it must be particularly extreme—for example, the wish to misappropriate someone else's property, the malicious intention to harm someone, or the adherence to pernicious doctrines. The ten wholesome courses

of action (kuśalakarmapatha) are the opposite of those given in the preceding list: under the category of body, the avoidance of killing, the avoidance of stealing, and the avoidance of sexual misconduct; under the category of speech, the avoidance of lying, the avoidance of slander, the avoidance of offensive speech, and the avoidance of prattle; under the category of mind, unselfishness, good will, and right views ([SAMYAGDRSTI](#)). The list of ten wholesome and ten unwholesome courses of action is frequently found in all strata of Buddhist literature.

[Karmasiddhiprakaraṇa](#). (T. Las grub pa'i rab tu byed pa; C. Dasheng chengye lun; J. Daijō jōgōron; K. Taesŭng sōngōp non 大乘成業論). In Sanskrit, “Investigation Establishing [the Correct Understanding] of Karman”; an important treatise written c. 360 CE by the Indian scholiast [VASUBANDHU](#), which seeks to explain karmic continuity by resorting to the quintessential [YOGĀCĀRA](#) doctrine of the storehouse consciousness ([ĀLAYAVIJÑĀNA](#)). The Sanskrit recension has not survived, so the text is known only through its translations into Chinese (by Vimokṣaprajña and [XUANZANG](#)) and Tibetan. Vasubandhu critiques different theories propounded concerning the interconnections between [KARMAN](#) (action) and [VIPĀKA](#) (fruition) discussed in rival Buddhist schools, including the [VAIBHĀSIKA](#), [SAMMITĪYA](#), and [SAUTRĀNTIKA](#). Through this exhaustive analysis, Vasubandhu concludes that, while everything may be momentary ([KSANIKA](#)), karman and vipāka are connected through the requital of causal associations that are embedded in the storehouse consciousness. This storehouse consciousness is the repository of the seeds ([BĪJA](#)) of past actions and serves as a retributory or appropriating consciousness ([ĀDĀNAVIJÑĀNA](#)), which manifests karmic fruitions based on the wholesome and unwholesome influences arising in the other consciousnesses ([VIJÑĀNA](#)) to which it is related. The storehouse consciousness is thus the repository for the seeds of all past experiences, as well as the consciousness that “appropriates” a physical body at the moment of rebirth. Vasubandhu’s analysis reconciles momentariness ([KSANIKAVĀDA](#)), one of the most radical framings of nonself doctrine ([ANĀTMAN](#)), with the imperishability of karman.

[karmavācanā](#). (P. kammavācā; T. las su bsko ba; C. baijiemo; J. byakukonma; K. paekkalma 白羯磨). In Sanskrit, a “proceeding” or “stating of the matter”; carried out as part of the performance of an ecclesiastical act or saṅghakamma (S. [SAMGHAKARMAN](#); see also [KARMAN](#)) that involves the recitation of a

prescribed ritual text. In the Pāli tradition, not all ecclesiastical acts require the performance of a kammavācanā; those that do not are called P. ñattikamma. Ecclesiastical acts that do require a formal “statement of the matter” may be one of two types. The first is the P. ñattidutiyakammavācā (S. [JÑAPTIDVITĪYĀ KARMAVĀCANĀ](#)), an ecclesiastical act that requires the performance of a kammavācanā once. This is the dictated procedure that is to be followed during certain formal occasions within the [SAMGHA](#), such as the ordination ceremony, the adjudication of rules, the administration of punishments to transgressors of the precepts, and the settlement of disputes among the clergy. A motion or proposal is made formally one time to the attendees and repeated once to solicit additional comment. If the proposal is read in this manner with no audible objections from the group (silence thus indicates approval), it is passed and considered binding on the participants. The second is the P. ñatticatutthakammavācā (S. [jñapticaturtha karmavācanā](#)), an ecclesiastical act that requires the performance of a kammavācanā three times. This type involves matters of greater importance or formality and requires three formal questions and an audible response before they are considered decided. There are no saṅghakamma in the Pāli tradition that require the recitation of a kammavācā two times.

[karmāvaraṇa](#). (P. kammāvaraṇa; T. las kyi sgrib pa; C. yezhang; J. gōshō/gosshō; K. ōpchang 業障). In Sanskrit, “karmic obstruction,” or “hindered by [KARMA](#).” The term is used in the [VISUDDHIMAGGA](#) with reference to meditators who are incapable of making any progress in concentration ([SAMĀDHI](#)) exercises, specifically involving the [KASINA](#) visualization devices. The text notes that a practitioner who has engaged in any of the five types of unwholesome “acts that are of immediate effect” (P. ānantariyakamma; S. [ĀNANTARYAKARMA](#)), such as patricide or causing schism in the community of monks ([SAMGHBHEDA](#)), is “obstructed by his acts” and will therefore never be able to develop a viable meditation practice. ¶ The relation of karmāvaraṇa to meditation practice continues in Korean Buddhism, where the term ōpchang is colloquially used to refer to any kind of persistent physical, mental, or emotional obstacle to meditation practice, whether that be, for example, constant pain in one’s legs that makes it difficult to sit in meditation for long periods, an inability to concentrate, or emotional distress caused by being apart from one’s family. Anything that continually inhibits one’s ability to practice effectively may be termed an ōpchang (karmāvaraṇa). In the [ABHIDHARMAKOŚABHĀSYA](#), obstacles to

meditation practice are referred to as vimokṣāvaraṇa, obstruction to the production of the eight [VIMOKṢAS](#), that is, physical and mental inflexibility (akarmaṇyatā). The [ARHAT](#) who is free in both ways (ubhayatobhāgavimukta) is free from this as well as from the [KLEŚĀVARANA](#).

[karunā](#). (T. snying rje; C. bei; J. hi; K. pi 悲). In Sanskrit and Pāli, “compassion,” or “empathy”; the wish that others be free from suffering, as distinguished from loving-kindness ([MAITRĪ](#); P. mettā), the wish that others be happy. Compassion is listed as the second of the four divine abidings ([BRAHMAVIHĀRA](#)) along with loving-kindness, empathetic joy ([MUDITĀ](#)), and equanimity ([UPEKṢĀ](#)). As one of the forty topics of meditation (P. [KAMMATTHĀNA](#)), compassion is used only for the cultivation of tranquillity ([ŚAMATHA](#)), not insight ([VIPĀŚYANĀ](#)). Compassion is to be developed in the following manner: filling one’s mind with compassion, one pervades the world with it, first in one direction, then in a second direction, then a third, a fourth, then above, below, and all around. Of the four divine abidings, compassion, along with loving-kindness and empathetic joy, is capable of producing the first three of the four stages of meditative absorption ([DHYĀNA](#)). This mainstream Buddhist notion of compassion is to be distinguished from the “great compassion” ([MAHĀKARUNĀ](#)) of the [BODHISATTVA](#), whose compassion inspires them to develop [BODHICITTA](#), the aspiration to achieve buddhahood in order to liberate all beings from suffering. This great compassion is distinguished both by its scope (all sentient beings) and its agency (one personally seeks to remove the suffering of others). Great compassion thus becomes the primary motivating force that enables the [BODHISATTVA](#) to endure the three infinite eons ([ASAMKHYEYAKALPA](#)) necessary to consummate the path to buddhahood. In Mahāyāna literature, numerous techniques are set forth to develop compassion, including acknowledging the kindness one has received from other beings in past lifetimes.

[Karunāpundarīka](#). (T. Snying rje pad ma dkar po; C. Beihua jing; J. Hikekyō; K. Pihwa kyōng 悲華經). In Sanskrit, “Lotus of Compassion”; a MAHĀYĀNA SŪTRA important in the developing cult surrounding worship of the buddha [AMITĀBHA](#). The sūtra was translated into Chinese in ten rolls by [DHARMAKṢEMA](#) and seems to have been compiled from various shorter texts. The sūtra tells the story of how a king and his thousand sons aroused the aspiration for enlightenment ([BODHICITTOTPĀDA](#)) and received a prediction that they would

each be reborn in the [PURE LAND](#). The sūtra is important in the pure land schools for its listing of fifty-one vows of the buddha [AMITĀBHA](#), indicating that it was closely aligned with the teachings of the [SUKHĀVATĪVYŪHASŪTRA](#).

kaśāya. (P. kasāya; T. snyigs ma; C. zhuo; J. joku; K. t'ak 濁). In Sanskrit, lit. “turbidity,” “degeneration,” or “degradation,” etc., referring especially to a list of five degradations that are said to mark the period of degeneracy in the cosmic cycle, when the human life span has declined to between one hundred years and ten years. (Humans are thought to have longer, even much longer, life spans in more salutary periods of the eon.) The five are (1) degeneration of the life span (āyuhkaśāya), because the life span has diminished; (2) degeneration of views (dr̥ṣṭīkaśāya), because wrong views ([MITHYĀDRSTĪ](#)) are so prevalent; (3) degeneration of afflictions (kleśakaśāya), because the afflictions ([KLEŚA](#)) have become so much worse; (4) degeneration of sentient beings (sattvakaśāya), because living creatures are mentally and physically inferior; and (5) degeneration of the age (kalpakaśāya), because the world and the environment have worsened. A buddha does not appear in the world during a period marked by the five degenerations, but only during the salutary eon (see [BHADRAKALPA](#)).

kāśāya. (P. kāsāya; T. ngur smrig; C. jiasha; J. kesa; K. kasa 袈裟). In Sanskrit, “dyed” (lit. “turbid-colored”) robes ([CĪVARA](#)), referring to the robes of an ordained monk or nun, which were traditionally required to be sewn from pieces of soiled cloth and “dyed” to a reddish-or brownish-yellow saffron color or ochre tone; also spelled kaśāya. Although the color that eventually came to be used in different Buddhist traditions varied, the important feature was that it be a mixed or muddied hue—and thus impure—and not a pure primary color. This impurity would help monastics develop a sense of nonattachment even toward their own clothing. According to the [VINAYA](#), the kāśāya robe is also supposed to be sewn from sullied cloth that ordinary laypeople would be loath to use for clothing, such as rag cloth or funerary shrouds. Even new cloth offered to the [SAMGHA](#) will typically be ritually defiled so that it fulfills this requirement. The final requirement for the kāśāya robe is that it be sewn from pieces of cloth, not single sheets of new cloth, which were thought to be too luxurious. Robes were sewn from an odd-numbered series of vertical panels, typically five, seven, or nine in number, with each panel also in segments and the whole construction surrounded by a cloth edging. The Buddha is said to have received his inspiration for this patchwork design of the kāśāya while he was looking over a field of rice paddies with their surrounding embankments. Robes were one of the four major requisites (S. [NĪŚRAYA](#); P. nissaya) of the monks and nuns, along with such basics as a begging bowl ([PĀTRA](#)), and were the object of the [KATHINA](#)

ceremony, in which the monastics were offered cloth for making new sets of robes at the end of each rain's retreat ([VARSA](#)). Robes eventually became symbolic of sectarian affiliation and institutional status within the various Buddhist traditions and are made in an array of bright colors and luxurious fabrics; but even the fanciest of robes will still typically be sewn in the patchwork fashion of the original *kāṣāya*. See also [CĪVARA](#); [TRICĪVARA](#).

[Kashmir-Gandhāra](#). [alt. *Kāśmīra-Gandhāra*]. A district in northwest India corresponding to modern Kashmir. According to Pāli tradition, this area was the destination of one of the nine Buddhist missions dispatched from Pāṭaliputta (S. [PĀTALIPUTRA](#)) to adjacent lands (*paccantadesa*) by the elder [MOGGALIPUTTATIṢṢA](#); this mission is said to have occurred during the reign of the Mauryan king [AŚOKA](#), following the third Buddhist council (see [COUNCIL, THIRD](#)) in the third century BCE. The elder Majjhantika (S. [MADHYĀNTIKA](#)) was said to have been in charge of the mission to this region. The third council at Pāṭaliputta and the nine Buddhist missions are known only in Pāli sources and are first recorded in the fifth century CE [DĪPAVAMSA](#). Burmese chroniclers instead identify Kashmir-Gandhāra with the kingdom of Nanchao in what is the modern Chinese province of Yunnan. See also [GANDHĀRA](#).

[Kassapasihanādasutta](#). (S. *Kāśyapasimhanādasūtra*; C. Luoxing fanzhi jing; J. Ragyōbonjikyō; K. Nahyōng pōmji kyōng 俱形梵志經). In Pāli, “Discourse on the Lion’s Roar of Kassapa”; the eighth sutta of the [DĪGHANIKĀYA](#) (a separate [DHARMAGUPTAKA](#) recension appears as the twenty-fifth [SŪTRA](#) in the Chinese translation of the [DIRGHĀGAMA](#)), preached by the Buddha to the naked ascetic Acela Kassapa at Ujuñña in the Kaṇṇakattha deer park. Acela Kassapa approaches the Buddha and inquires whether it is true that he reviles all ascetic practices (see [TAPAS](#)) or whether this is a misrepresentation of his teachings. The Buddha states that he does not revile ascetic practices but that the proper course of action for mendicants is to follow the noble eightfold path (P. *ariyāṭṭhaṅgikamagga*; S. [ĀRYĀSTĀṆGAMĀRGA](#)). Acela Kassapa inquires about the efficacy of numerous ascetic practices engaged in by mendicants of the time. The Buddha responds that, even should one follow all of these practices scrupulously but still not be perfect in morality (*sīlasampadā*), in mentality (*cittasampadā*), and in wisdom (*paññāsampadā*), he will not be a true ascetic (*samaṇa*; [ŚRAMANA](#)) or a true *brāhmaṇa*; only when one has attained the destruction of the contaminants (*āsavakkhāya*; [ĀSRĀVAKSAYA](#)), or arahantship

(see [ARHAT](#)), will one be so recognized. The Buddha then explains in detail Buddhist practice and the attainments, beginning with taking refuge in the three jewels (S. [RATNATRAYA](#)) of the Buddha, the dhamma, and the saṅgha, observing the precepts, renouncing the world to become a Buddhist monk, and controlling the senses with mindfulness (sati; [SMRTI](#)), to cultivating the four meditative absorptions ([JHĀNA](#); S. [DHYĀNA](#)) and developing the six higher knowledges or superpowers (abhiññā; [ABHIJÑĀ](#)) that culminate in the destruction of the contaminants. The sutta concludes by noting that, upon hearing the discourse, Acela Kassapa entered the Buddhist order and in due course attained arahantship.

[kasina](#). (S. *kṛtsna/*kṛtsnāyatana; T. zad par gyi skye mched; C. bianchu; J. hensho; K. p'yōnch'ō 遍處). In Pāli, lit. “totality” or “universal” [alt. kasiṇāyatana], a “visualization device” that serves as the meditative foundation for the “totality” of the mind’s attention to an object of concentration. Ten kasiṇa are generally enumerated: visualization devices that are constructed from the physical elements ([MAHĀBHŪTA](#)) of earth, water, fire, and air; the colors blue, yellow, red, and white; and light and empty space. The earth device, for example, might be constructed from a circle of clay of even texture, the water device from a tub of water, and the red device from a piece of red cloth or a painted red disc. The meditation begins by looking at the physical object; the perception of the device is called the “beginning sign” or “preparatory sign” (P. [PARIKAMMANIMITTA](#)). Once the object is clearly perceived, the meditator then memorizes the object so that it is seen as clearly in his mind as with his eyes. This perfect mental image of the device is called the “eidetic sign,” or “learning sign” (P. [UGGAHANIMITTA](#)) and serves subsequently as the object of concentration. As the internal visualization of this eidetic sign deepens and the five hindrances ([NĪVARANA](#)) to mental absorption (P. [JHĀNA](#); S. [DHYĀNA](#)) are temporarily allayed, a “representational sign” or “counterpart sign” (P. [PATIBHĀGANIMITTA](#)) will emerge from out of the eidetic image, as if, the texts say, a sword is being drawn from its scabbard or the moon is emerging from behind clouds. The representational sign is a mental representation of the visualized image, which does not duplicate what was seen with the eyes but represents its abstracted, essentialized quality. The earth disc may now appear like the moon, the water device like a mirror suspended in the sky, or the red device like a bright jewel. Whereas the eidetic sign was an exact mental copy of the visualized beginning sign, the representational sign has no fixed form but

may be manipulated at will by the meditator. Continued attention to the representational sign will lead to all four of the meditative absorptions associated with the realm of subtle materiality. Perhaps because of the complexity of preparing the kasiṇa devices, this type of meditation was superseded by techniques such as mindfulness of breathing (P. ānāpānasati; S. [ANĀPĀNASMṚTI](#)) and is rarely practiced in the [THERAVĀDA](#) world today. But its notion of a purely mental object being somehow a purer “representation” of the external sense object viewed by the eyes has compelling connections to later [YOGĀCĀRA](#) notions of the world being a projection of mind.

[Kāśyapa](#). (P. Kassapa; T. 'Od srung; C. Jiashe; J. Kashō; K. Kasōp 迦葉). Sanskrit proper name of one of the seven buddhas of antiquity ([SAPTATATHĀGATA](#)) who preceded the current buddha [ŚĀKYAMUNI](#) and, by some accounts, the buddha who predicted Śākyamuni's own eventual enlightenment. He is also sometimes mentioned in a list of three past buddhas, along with Krakucchanda and Kanakamuni. ¶ Kāśyapa is also the name of one of the Buddha's ten main disciples, who is usually known to the tradition as “Kāśyapa the Great”; see [MAHĀKĀŚYAPA](#).

[Kāśyapa Mātāṅga](#). (C. Jiashe Moteng; J. Kashō Matō; K. Kasōp Madūng 迦葉摩騰) (d.u.). Indian monk whom Chinese tradition credits with first introducing Buddhism to East Asia. Emperor Ming (r. 57–75) of the Later Han dynasty is said to have had a dream about a golden man and sent out emissaries to find out who he was. His emissaries traveled to the Western Regions, where they invited Kāśyapa Mātāṅga and his colleague Zhu Falan (Dharmaratna) to China to teach about the golden man, the Buddha. The two monks arrived in the Chinese capital of Louyang in 67 CE with scriptures carried on white horses. Emperor Ming had a monastery built for them in Luoyang, which was accordingly named the White Horse Monastery ([BAIMASI](#)). The two missionaries were said to have translated the [SISHI'ER ZHANG JING](#) (“Sūtra in Forty-Two Sections”), the first translation of a Buddhist text into Chinese. The *Sishi'er zhang jing* is now known to be a Chinese indigenous composition (see [APOCRYPHA](#)), and its translators, Kāśyapa Mātāṅga and Zhu Falan, are considered to be legendary figures.

[Kāśyapaparivarta](#). (T. 'Od srung gi le'u; C. Yiri monibao jing; J. Yuinichi manihōkyō; K. Yuil manibo kyōng 遺日摩尼寶經). In Sanskrit, “The [KĀŚYAPA](#) Chapter”; a [SŪTRA](#) from one of the earliest strata of Indian [MAHĀYĀNA](#) Buddhism, probably dating from sometime in the first century CE. The sūtra

offers an overview of practices emblematic of [BODHISATTVAS](#), which are arranged in several groups of four practices apiece. The text cites a “bodhisattva canon” ([BODHISATTVAPITAKA](#)) as the source for the teaching on the six perfections ([PĀRAMITĀ](#)) and offers one of the earliest mentions of the “thought of enlightenment” ([BODHICITTA](#)) in its Mahāyāna interpretation as the aspiration to achieve buddhahood. A bodhisattva who generates this thought even for the first time is said to be superior to the solitary buddhas ([PRATYEKABUDDHA](#)) and disciples ([ŚRĀVAKA](#)). Disciples are also censured as not being true sons of the Buddha, an early expression of the later Mahāyāna school’s more explicit denunciations of the so-called [HĪNAYĀNA](#). The sūtra also refers to bodhisattva precepts (see [BODHISATTVAŚĪLA](#)), which will subsequently be elaborated upon in such texts as [MAITREYA/ASAṄGA](#)’s [BODHISATTVABHŪMI](#) and in such Chinese [APOCRYPHA](#) as the [FANWANG JING](#). The *Kāśyapaparivarta* was one of the first sūtras translated into Chinese, by the Indo-Scythian monk *[LOKAKSEMA](#) (c. 178–198 CE) in 179 CE; a later recension is also included in the massive [RATNAKŪTA](#) collection of sūtras. The *Kāśyapaparivarta* is one of a substantial number of scriptures in the *Ratnakūṭa* collection for which Sanskrit recensions have been rediscovered and edited. Its Sanskrit manuscript was first discovered in [KHOTAN](#) in the 1890s and was more than one thousand years old; other Sanskrit fragments have subsequently been recovered.

[Kāśyapīya](#). (P. Kassapīya/Kassapika; T. ’Od srung ba’i sde; C. Jiasheyibu/Yinguangbu; J. Kashōyuibu/Onkshō; K. Kasōbyubu/Ūmgwangbu 迦葉遺部/飲光部). In Sanskrit, “Followers of Kāśyapa”; one of the eighteen traditional schools of the mainstream Indian Buddhist tradition. There have been several accounts of the identity of the founder Kāśyapa. [PARAMĀRTHA](#) and [KUIJI](#) presume he was the Indian sage Kāśyapa ([MAHĀKĀŚYAPA](#)), while others opine that he was a Kāśyapa who was born some three centuries after the Buddha’s death. [DAOXUAN](#) (596–667) in his *Sifen lü kaizong ji* says that Jiashe (Kāśyapa) was the personal name of the founder of the Kāśyapīya school and Shansui ([SUVARŚAKA](#)) his surname. According to the tradition he is relating, Kāśyapa was one of the five disciples of [UPAGUPTA](#), the fifth successor in the Buddha’s lineage about one hundred years following his death. These five disciples established their own schools based on their differing views regarding doctrine and redacted the [VINAYA](#) into five distinct recensions (C. Wubu lü). The so-called **Prātimokṣavinaya* of the Kāśyapīya school is not extant, but it is known through the *Prātimokṣasūtra* (*Jietuojie jing*), a primer of the school’s monastic

discipline. There are several competing theories regarding the lineage of the Kāśyapīya school. The [SAMAYABHEDOPARACANACAKRA](#) posits that the Kāśyapīya split off from the [SARVĀSTIVĀDA](#) school about three hundred years after the Buddha's death and identifies it with the Suvarśaka school (C. Shansuibu). But other texts, such as the *Śāriputrapariṣcchāsūtra*, state that the Kāśyapīya and Suvarśaka schools are distinct, with the former having descended from the [STHAVIRANIKĀYA](#) and the latter from the Sarvāstivāda school. (The name of the Suvarśaka school is, however, not attested in Pāli sources.) The *Mañjuśrīpariṣcchā* instead claims that the school derived from the [DHARMAGUPTAKA](#) school, while the Tibetan tradition considers it as a collateral lineage of the [VIBHAJYAVĀDA](#) school. The most plausible scenario is that the Kāśyapīya, [MAHĪŚĀSAKA](#), and Dharmaguptaka were each subsections of the Vibhajyavāda, which was a loose umbrella term for all those schools (except the Sarvāstivāda) that split off from the Sthaviranikāya. Inscriptional evidence for all three schools survives in northwestern India. The doctrines of the Kāśyapīya tend to be closest to those ascribed to the Sarvāstivāda and Dharmaguptaka schools. The arrangement of its [TRIPITAKA](#) also seems to have paralleled that of the Dharmaguptaka school, and its [ABHIDHARMAPITAKA](#) in particular seems to have been similar in structure to the *Śāriputrābhidharmaśāstra* of the Dharmaguptakas. Some of the doctrines that are peculiar to the Kāśyapīyas are as follows: (1) Past [KARMA](#) that has not yet borne fruit exists (but the rest of the past does not), the present exists, and some of the future exists. By limiting the existence of past objects, the Kāśyapīyas reject the Sarvāstivāda position that dharmas perdure in all three time periods. (2) All compounded things ([SAMSKĀRA](#)) are instantly destroyed. (3) Whatever is compounded ([SAMSKRTA](#)) has its cause in the past, while the un-compounded ([ASAMSKRTA](#)) has its cause in the future. This view also contrasts with that of the Sarvāstivāda, which holds that future actions can serve as either the retributive cause ([VIPĀKAHETU](#)) or the efficient or generic cause ([KĀRANAHE TU](#)) of compounded objects, such that every conditioned dharma serves as the generic, indirect cause for the creation of all other compounded things, except itself. (4) The worthy ones ([ARHAT](#)) perfect both the knowledge of cessation ([KSAYAJÑĀNA](#)) and the knowledge of nonproduction ([ANUTPĀDAJÑĀNA](#)), the two types of knowledge that accompany liberation from rebirth ([SAMSĀRA](#)); thus, they are no longer subject to the afflictions ([KLEŚA](#)).

[Kathāvatthu](#). In Pāli, “Points of Controversy”; the fifth of the seven books of

the Pāli abhidhammapiṭaka (SEE [ABHIDHARMAPITAKA](#)). The Pāli tradition ascribes this text to [MOGGALIPUTTATISSA](#), who is credited with having composed the work at the conclusion of the third Buddhist council ([COUNCIL, THIRD](#)) held at Pāṭaliputta (S. [PĀTALIPUTRA](#)) in the third century BCE. In its twenty-three chapters, the treatise analyzes a wide range of doctrines held by contemporary Buddhist schools and demonstrates the orthodoxy of [STHAVIRANIKĀYA](#) positions. The work presumes the existence of the [DHAMMASAṄGANI](#), the [VIBHAṄGA](#), and the [PATTHANA](#) as definitive abhidhamma sources for resolving doctrinal controversies.

[kaṭhina](#). (T. sra brkyang; C. jiachinayi/jianguyi; J. kachinae/kengoe; K. kach'inaüi/kyōn'goüi 迦絺那衣/堅固衣). In Sanskrit and Pāli, “robe-cloth ceremony,” referring to the ceremony held in the fourth month of the rainy season, at which time the [SAMGHA](#) as a whole receives gifts of robes or plain cloth from the laity; the cloth or robes are then distributed to individual monastics who have properly observed the rains retreat ([VARSA](#); P. [VASSA](#)). If cloth is given, the recipient must stitch it into one of three types of proper robe ([TRICĪVARA](#); see also [KASĀYA](#)) on the same day. A monk selected to receive a kaṭhina robe or cloth is entitled to five privileges that remain in force for five months: (1) he may accept a meal invitation without telling anyone, (2) he may dwell without one of his three robes, (3) he may eat in a group with other monks, (4) he may keep any number of robes, and (5) he is entitled to a share of the robes donated to the saṃgha. A monk loses his right to receive kaṭhina robes or cloth if he is absent for more than a week from the monastery where he is observing the rains retreat.

[Kātiyānī](#). (T. Kā ti bu mo). Sanskrit and Pāli proper name of a lay disciple of the Buddha, who is declared in Pāli sources to be foremost among laywomen in unswerving trust. According to Pāli sources, she was a resident of the city of Kururaghara and a devoted friend of the laywoman [KĀLĪ KURURAGHARIKĀ](#). Kālī was a streamenterer ([SROTAĀPANNA](#)) whose son, [SONA-KOTIKANNA](#), was an arahant (S. [ARHAT](#)) renowned for his eloquence. One day, Kātiyānī accompanied Kālī to hear Soṇa preach to his mother. While the two women listened to the sermon, thieves broke into Kātiyānī's house, and when a servant girl, who had been sent back to fetch oil for lamps, returned and reported the theft, Kātiyānī refused to leave until the sermon was finished. At the end of the sermon, she became a streamenterer. She became renowned for her resoluteness in listening

to the dhamma ([DHARMA](#)), an honor she had resolved to attain in a previous life during the time of Padumuttara Buddha. The chief of the thieves witnessed all that had transpired and was so moved at Kāṭiyānī’s faith that he ordered that all of her property be returned. The thieves then begged Kāṭiyānī to forgive them for their wrongdoing. She forgave them and brought them to Soṇa-Koṭṭikaṇṇa who, seeing their underlying virtue, ordained them. All of the former thieves in turn became arahants as well.

[Katsuragisan](#). (J) (葛城山). Mountain practice site on the border between the present-day Japanese prefectures of Nara and Ōsaka, which was an important center of [SHUGENDŌ](#) practice. The semilegendary founder of Shugendō, [EN NO OZUNU](#) (b. 634), is said to have lived for some thirty years in a cave on this mountain. Since En no Ozunu was considered to be a manifestation of Hōki Bosatsu ([DHARMODGATA](#)) who, according to the [ĀVATAMSAKASŪTRA](#), lived in the Diamond Mountains, the Katsuragi range includes the appositely named [KONGŌSAN](#) (Mt. Kongō; see also [KŪMGANGSAN](#)). Like many sacred mountains around Japan, there are encased sūtras known to be interred in Katsuragisan region. Twenty-eight buried scrolls (J. kyōzuka) of the [SADDHARMAPUNĀRIKASŪTRA](#) (“Lotus Sūtra”)—corresponding to its twenty-eight chapters—were presumed to have been buried at Mt. Katsuragi, according to the late twelfth-century *Shozan engi* text. Also purportedly interred on the mountain are twenty-nine scrolls of the *Nyohōkyō* (C. **Rufa jing*) and eight hannya kyō ([PRAJÑAPĀRAMITĀ](#)) scrolls. During the Heian period, burying Buddhist scriptures at mountains in Japan served the dual role of physically sacralizing the mountain and also preserving the dharma in the face of the religion’s predicted demise (J. mappō; C. [MOFA](#)).

[katvāṅga](#). (S). See [KHATVĀṄGA](#).

[Kātyāyana](#). (P. Kaccāna; T. Ka tya’i bu; C. Jiazhanyan; J. Kasen’en; K. Kajōnyōn 迦旃延). One of the ten main disciples of the Buddha, who is usually known to the tradition as “Kātyāyana the Great.” See [MAHĀKĀTYĀYANA](#).

[Kātyāyanīputra](#). (T. Kā ta’i bu mo’i bu; C. Jiaduoyannizi; J. Kataennishi; K. Kadayōnnija 迦多衍尼子) (c. second to first century BCE). Important scholiast in the [SARVĀSTIVĀDA](#) school to whom the tradition attributes authorship of the [JÑĀNAPRASTHĀNA](#), the central text of the Sarvāstivāda [ABHIDHARMA](#).

Kaukkutika. [alt. Gokulika] (T. Bya gag 'tshong ba; C. Jiyin bu; J. Keiinbu; K. Kyeyunpu 鷄胤部). In Sanskrit, “those from [KUKKUTĀRĀMA](#)”; a major monastery in [PĀTALIPUTRA](#); one of the three main subgroups of the [MAHĀSĀMGHIKA](#) school of mainstream ([NIKĀYA](#)) Buddhism, along with the [LOKOTTARAVĀDA](#) [alt. Ekavyavahārika] and the [CAITYA](#). The school is said to have placed pride of place on the [ABHIDHARMAPITAKA](#), treating the [VINAYA](#) and [SŪTRA](#) as preparatory training, and emphasized the logical analysis of the abhidharma to the more expository and provisional expressions of truth found in the other two sections of the canon. This early collateral line of the Mahāsāṃghika school seems to have been most prominent around the end of the second century BCE, before it eventually split into the [BAHUŚRUTĪYA](#) and [PRAJÑAPTIVĀDA](#) subbranches.

kaukr̥tya. (P. kukkuc̥ca; T. 'gyod pa; C. hui; J. ke; K. hoe 悔). In Sanskrit, “worry,” “remorse,” or perhaps “crisis of conscience”; along with the related “restlessness” or “distraction” ([AUDDHATYA](#)), with which it is often seen in compound (as [auddhatya-kaukr̥tya](#)); it constitutes the fourth of the five hindrances ([NĪVARANA](#)) to the attainment of meditative absorption ([DHYĀNA](#)). [Auddhatya-kaukr̥tya](#) is the specific hindrance to joy ([SUKHA](#)), the fourth of the five factors of [dhyāna](#) ([DHYĀNĀṄGA](#)), and is fostered by unwise attention ([AYONISOMANASKĀRA](#)) to mental unrest and is overcome through learning and reflecting on the [SŪTRA](#) and [VINAYA](#), and associating with elders of calm demeanor. Restlessness and worry are countered by [SAMĀDHI](#), the fourth of the five spiritual faculties ([INDRIYA](#)) and the sixth of the factors of enlightenment ([BODHYAṄGA](#)), together with development of the tranquillity ([PRAŚRABDHI](#)), and equanimity ([UPEKṢĀ](#)) enlightenment factors.

Kaundinya. (S). See [ĀJÑĀTAKAUNDINYA](#).

Kaung-hmu-daw Pagoda. A massive [PAGODA](#) (Burmese, [JEDI](#)) located five miles north of [SAGAING](#) City in Upper Burma (Myanmar). The Kaung-hmu-daw pagoda was built by King Thalun of [AVA](#) (r. 1629–1648) between 1636 and 1648 and houses the Buddha’s alms bowl ([PĀTRA](#)) and an assortment of gems presented by the king of Sri Lanka. In recognition of its contents, the pagoda also receives the epithet Raza-mani-sula (“Lesser Royal Jewel”). The Kaung-hmu-daw was constructed on a massive scale (214 ft high and 243 ft in diameter) in order to protect the relics it enshrines from the ravages of earthquakes and pillagers. It is similar in shape to the [MAHĀTHŪPA](#) of Sri Lanka. Both pagodas are hemispherical and take as their prototype the reliquary [STŪPA](#) used in ancient

India and Sri Lanka.

kausīdya. (P. kusīta; T. le lo; C. jietai; J. kedai; K. haet'ae 懈怠). In Sanskrit, “indolence,” “laziness,” or “lassitude.” According to the [SARVĀSTIVĀDA](#) school of [ABHIDHARMA](#), indolence is one of the six “fundamental afflictions” or “defiled factors of wide extent” ([KLEŚA-MAHĀBHŪMIKA](#)) that are associated with all defiled thoughts, together with delusion ([MOHA](#)), heedlessness ([PRAMĀDA](#)), lack of faith ([ĀSRADDHYA](#)), sloth ([STYĀNA](#)), and restlessness ([AUDDHATYA](#)); the [YOGĀCĀRA](#) school also lists indolence among the twenty secondary afflictions ([UPAKLEŚA](#)). In addition to the general sense of laziness suggested by the English translations, the term also encompasses a sense of inferiority that discourages one from undertaking the practice of virtue. Indolence encourages attachment to unwholesome activities and the investment of energy in worldly deeds. In each of these senses, kausīdya serves as an obstacle to wholesome deeds, including the practice of meditation. Its antidote is effort ([VĪRYA](#)). Eight occasions of indolence are listed in the mainstream [NIKĀYAS](#) and [ĀGAMAS](#) (ranging from “I may get busy and become tired, so let me lie down now,” to “I’ve been very ill and am not fully recovered, so let me lie down now”), each of which prompts laziness and discourages the adept from arousing the energy necessary to attain, achieve, or realize what is not yet attained, and so forth.

Kauśika. (P. Kosiya; T. Ka’u shi ka; C. Jiaoshijia; J. Kyōshika; K. Kyosiga 橋戸迦). The name for the king of the heaven of the thirty-three ([TRĀYĀSTRIMŚA](#)), [ŚAKRO DEVĀNĀM INDRAH](#) (known more simply as [ŚAKRA](#) or [INDRA](#)), during a previous human lifetime as a brāhmaṇa priest. Śakra is often addressed more intimately as Kauśika in Buddhist texts.

Kauṣṭhila. (P. Koṭṭhita; T. Gsus po che; C. Juchiluo; J. Kuchira; K. Kuch’ira 拘絺羅). One of the principal arhat disciples of the Buddha deemed foremost among his monk disciples in analytical knowledge (S. [PRATISAMVID](#); P. paṭisambhidā), viz., of (1) true meaning, (2) the dharma, (3) language, and (4) ready wit. During the time of a previous buddha, Kauṣṭhila was said to have been a wealthy householder, who happened to overhear the Buddha praise one of his disciples as being foremost in analytical knowledge. It was then that he resolved to achieve the same preeminence during the dispensation of a future buddha. According to the Pāli account, Kauṣṭhila/Koṭṭhita was the son of a wealthy brāhmaṇa family from [ŚRĀVASTĪ](#), who was learned in the Vedas and who converted while listening to the Buddha preach to his father. He entered the [SAMGHA](#) and, taking up a topic

of meditation ([KAMMATTHĀNA](#)), soon attained arhatship. Kauṣṭhila is a frequent interlocutor in the [NIKĀYAS](#) and [ĀGAMAS](#) and often engages in doctrinal exchanges with [ŚĀRIPUTRA](#), such as regarding what exists after [NIRVĀNA](#) or the relative quality of various types of liberation ([VIMUKTI](#); P. vimutti). Other topics on which Kauṣṭhila discourses in the [SŪTRAS](#) include discussions on action ([KARMAN](#)); the arising of phenomena, ignorance, and knowledge; the nature of the senses and sense objects; the fate of [ARHATS](#) after their deaths; things not revealed by the Buddha; and so on. On one occasion, during a discussion among the elders, a dispute erupted between Kauṣṭhila and a monk named Citta. Citta continually interrupted the discussion by insisting on his views, to the point that Kauṣṭhila had to remind him to let others speak. Citta's supporters objected that their favorite's views were eminently sound; but Kauṣṭhila replied that not only were Citta's views mistaken but he would soon reject the Buddha's teachings and leave the order. Kauṣṭhila's reputation was burnished when events unfolded exactly as he had foretold. Śāriputra held Kauṣṭhila in such high regard that he praises him in three verses preserved in the Pāli [THERAGĀTHĀ](#). His fame was such that he is often known within the tradition as Kauṣṭhila the Great (Mahākauṣṭhila; P. Mahākoṭṭhita).

[kāya](#). (T. lus/sku/tshogs; C. shen; J. shin; K. sin 身). In Sanskrit and Pāli, “body”; a term used to refer to the ordinary human body as well as the exalted body, or bodies, of a buddha (for which see [TRIKĀYA](#), or “three bodies”). The body can serve as an object of meditation, as in “mindfulness of the body” ([KĀYĀNUPAŚYANĀ](#); P. kāyānupassanā; see [SMRTYUPASTHĀNA](#)), which involves practices associated with mindfulness of breathing (S. [ĀNĀPĀNASMṚTI](#); P. ānāpānasati), mindfulness of the physical postures ([ĪRYĀPATHA](#)), full awareness of bodily actions, contemplation of bodily impurities, contemplation of elements, and nine cemetery meditations ([AŚUBHABHĀVANĀ](#)). ¶ The term is also used to refer to a group, collection, or mass, typically as the final member of a compound, for example, a mass or crowd of people (janakāya), or the “collection of names,” viz., “letters” (nāmakāya; see [CITTAVIPRAYUKTASAMSKĀRA](#)). ¶ From this sense of kāya as a group evolves the notion of the [DHARMAKĀYA](#), originally meaning the “whole mass” (viz., “all”) of the dharmas, and more specifically the “corpus” of a buddha's auspicious qualities ([DHARMA](#)). From this latter sense it would come to mean the foundational “dharma-body” of the buddhas.

[kāyānupaśyanā](#). (P. kāyānupassanā; T. lus dran pa nye bar bzhag pa; C.

shenguan; J. shinkan; K. sin'gwan 身觀). In Sanskrit, “mindfulness of the body.” See [SMRTYUPASTHĀNA](#).

[kāyaprabhā](#). (T. lus kyi snang ba/lus 'od; C. guangbei; J. kōhai; K. kwangbae 光背). In Sanskrit, lit. “body light”; a “nimbus,” “mandorla,” or “aureole” of light that encircles either the head or the body of holy figures in Buddhist painting and sculpture. The radiance surrounding the body of a buddha, bodhisattva, or other sacred being helps to highlight the sacred character of the iconography. This use of light in Buddhist art may derive from depictions of the supernatural-fire motif in Zoroastrian iconography. The Chinese offers several related terms in addition to guangbei (lit. “lighted back”) that more precisely delineate what kind of light is being described. “Head light” (C. touguang; J. tōkō; K. tugwang) originally referred to light emanating from between the eyebrows (see [ŪRNĀKEŚA](#)), but it also is used to refer to a halo of light encircling the head, thus a “nimbus.” “Body light” (C. shenguang; J. sinkō; K. sin'gwang) or “light [surrounding] the whole body” (C. jushenguang; J. kyosinkō; K. kōsin'gwang) refers to a halo of light encircling the entire body, or what is usually referred to in the West as a “mandorla” (lit. the “almond” of light surrounding an image). The outdated art-historical term “aureole” may refer to the radiance enveloping either the head or the body in Buddhist iconography.

[kāyasākṣin](#). (P. kāyasakkhi; T. lus kyi mngon sum du byed pa; C. shenzheng; J. shinshō; K. sinjūng 身證). In Sanskrit, “bodily witness” or “one who has bodily testimony”; the fifth of the seven noble disciples ([ĀRYA](#)) listed in the [MAJJHIMANIKĀYA](#); a particular sort of nonreturner ([ANĀGĀMIN](#)), one of the twenty members of the [ĀRYASAMGHA](#) (see [VIMŚATIPRABHEDASAMGHA](#)). According to commentaries on the [ABHIDHARMAKOŚABHĀSYA](#), there are two types of kāyasākṣin. The kāyasākṣin who is a dr̥ṣṭadharmasāma (one for whom there is peace in this life) is a nonreturner who does not journey to the realms of subtle materiality or immateriality and is not reborn in the sensuous realm either, but enters into [NIRODHASAMĀPATTI](#) (equipoise of cessation) during a final life in the sensuous realm, and, without that cessation weakening, enters nirvāṇa. Other kāyasākṣins are nonreturners who are born as subtle materiality realm deities, enter into nirodhasamāpatti on that basis, and enter [NIRVĀNA](#) in that life, or nonreturners who are born as subtle materiality realm deities, enter into nirodhasamāpatti on that basis, die, and enter nirvāṇa as a divinity in the immaterial realm.

kāyaviññāna. (P. kāyaviññāna; T. lus kyi rnam par shes pa; C. shenshi; J. shinshiki; K. sinsik 身識). In Sanskrit, “tactile consciousness” or “body consciousness”; one of the five consciousnesses of physical objects (along with those of the eye, ear, nose, and tongue) and one of the six sensory consciousnesses (adding the mental consciousness, or [MANOVIJÑĀNA](#)). The tactile consciousness perceives tangible objects ([SPRASTAVYA](#)). Like the other consciousnesses of physical objects, tactile consciousness is produced through the contact ([SPARŚA](#)) between a tactile sensory object (sprastavya) and the tactile sense base or body sense organ ([KĀYENDRIYA](#)) and in dependence on three conditions ([PRATYAYA](#)): the object condition ([ĀLAMBANAPRATYAYA](#)), in this case, a tangible object; a dominant condition ([ADHIPATIPRATYAYA](#)), here, the tangible sense base or body sense organ ([KĀYENDRIYA](#)); and the immediately preceding condition ([SAMANANTARAPRATYAYA](#)), a prior moment of consciousness. The tactile consciousness is counted as one of the six sensory consciousnesses ([VIJÑĀNA](#)) and eighteen elements ([DHĀTU](#)).

kāyaviññāna. (P). See [KĀYAVIJÑĀNA](#).

kāyāyatana. (T. lus kyi skye mched; C. shenchu; J. shinsho; K. sinch’ō 身處). In Sanskrit and Pāli, “tactile sense base” or “base of tactile cognition”; the tactile or body sense organ ([KĀYENDRIYA](#)), as it occurs in the list of the twelve sense-fields ([ĀYATANA](#)), which are called “bases of cognition” because each pair of sense base and sense object produces its respective sensory consciousness. In this case, the contact ([SPARŚA](#)) between a tactile sensory object ([SPRASTAVYA](#)) and the tactile sense base (kāyendriya) produces a tactile consciousness ([KĀYAVIJÑĀNA](#)).

kāyendriya. (P. kāyindriya; T. lus kyi dbang po; C. shengen; J. shinkon; K. sin’gūn 身根). In Sanskrit and Pāli, “tactile sense base” or “body sense organ”; the physical organ located in the body that makes it possible to perceive tangible objects ([SPRASTAVYA](#)). This sense base is not the body itself, but a form of subtle materiality located on the body and invisible to the naked eye. It is said to be like a thin layer of skin covering the entire body. If this sense organ is absent or damaged, physical sensation is not possible. The tactile sense organ serves as the dominant condition ([ADHIPATIPRATYAYA](#)) for the production of tactile consciousness ([KĀYAVIJÑĀNA](#)). The tactile sense base is counted among the six sense bases or sense organs ([INDRIYA](#)), the twelve sources ([ĀYATANA](#)), and eighteen elements ([DHĀTU](#)).

[Kazi Dawa Samdup](#). (Ka dzi Zla ba bsam 'grub) (1868–1922). An early translator from Tibetan to English, best known for his work with [WALTER EVANS-WENTZ](#) as translator of *The Tibetan Book of the Dead*. He apparently had wished to pursue the religious life but, as the eldest son in his family, was unable to do so. He was a disciple of a Bhutanese lama, one Guru Norbu, who was affiliated with the '[BRUG PA BKA' BRGYUD](#) sect. Kazi Dawa Samdup served as a translator for such figures as [ALEXANDRA DAVID-NÉEL](#), Charles Bell, and John Woodroffe (Arthur Avalon) and also was a member of the political staff of the thirteenth [DALAI LAMA](#) during his sojourn in Sikkim and India. In 1919, he published a 20,000-word English–Tibetan dictionary. Also in 1919, he was serving as the English teacher at the Maharaja's Boys' School in Gangtok, when the local police chief introduced him to Evans-Wentz. He agreed to provide a translation of a Tibetan text that Evans-Wentz had acquired, the [BAR DO THOS GRO L CHEN MO](#). The translations that Kazi Dawa Samdup made for Evans-Wentz eventually appeared in three books: *The Tibetan Book of the Dead* (1927), *Tibetan Yoga and Secret Doctrines* (1935), and *The Tibetan Book of the Great Liberation* (1954). He was subsequently appointed to the post of lecturer in Tibetan at the University of Calcutta. In 1924, after his death, Evans-Wentz visited Kazi Dawa Samdup's family in Kalimpong, from whom he received a manuscript translation of the [MILA RAS PA' RNAM THAR](#), a famous biography of [MILA RAS PA](#), which Evans-Wentz subsequently edited and published as *Tibet's Great Yogi Milarepa* (1928). Although Evans-Wentz's notes and prefaces to these works contain many fanciful elements, Kazi Dawa Samdup's translations are generally well regarded.

[kechimyaku sōjō](#). (血脈相承). In Japanese, “transmission of the bloodline”; a term used to refer to the unbroken transmission of the dharma from master to disciple down through the generations, which is like the bloodline in a family being passed from parents to child. The term is especially used in the [ZEN \(CHAN\)](#) and esoteric Buddhist sects in Japan, but later is adopted by the [JŌDOSHŪ](#) and [NICHIRENSHŪ](#) as well. Cf. [XUEMO LUN](#).

[Keizan Jōkin](#). (瑩山紹瑾) (1268–1325). Japanese [ZEN](#) master and putative second patriarch of the [SŌTŌ](#) Zen tradition. Keizan was a native of Echizen in present-day Fukui prefecture. Little is known of his early years, but Keizan is said to have been influenced by his mother, who was a pious devotee of the [BODHISATTVA AVALOKITEŚVARA](#). Keizan went to the nearby monastery of [EIHEIJI](#)

and studied under the Zen master Gikai (1219–1309), a disciple of [DŌGEN KIGEN](#) (1200–1253). He was later ordained by the monk Ejō (1198–1280). After Ejō's death, Keizan went to the nearby monastery of Hōkyōji and continued his studies under another disciple of Dōgen, Jakuen (1207–1299). At age twenty-eight, Keizan was invited as the founding abbot (kaisan; C. [KAISHAN](#)) of the monastery of Jōmanji in Awa (present-day Tokushima prefecture). The next year, Keizan briefly visited Eiheiiji to train in the conferral of bodhisattva precepts (bosatsukai; [PUSA JIE](#); see also [BODHISATTVAŚĪLA](#)) under the guidance of the abbot Gien (d. 1313). Keizan returned to Jōmanji the very same year and began to confer precepts. Several years later, Keizan joined Gikai once more at the latter's new temple of Daijōji in Ishikawa and became his disciple. Three years later, Keizan succeeded Gikai as abbot of Daijōji. In 1300, Keizan began his lectures on what would eventually come to be known as the [DENKŌROKU](#). In 1311, while setting the regulations for Daijōji, Keizan composed the [ZAZEN YŌJINKI](#) and *Shinjinmei nentei*. He also entrusted Daijōji to his disciple Meihō Sotetsu (1277–1350) and established the monastery of Jōjūji in nearby Kaga. In 1317, Keizan established the monastery of Yōkōji on Mt. Tōkoku. Keizan also came into possession of a local temple known as Morookadera, which was renamed [SŌJJI](#). In 1322, Yōkōji and Sōjiji were sanctioned as official monasteries by Emperor Godaigo (r. 1318–1339). This sanction is traditionally considered to mark the official establishment of Sōtō as an independent Zen institution. Keizan later entrusted the monastery of Sōjiji to his disciple Gasan Jōseki (1276–1366) and retired to Yōkōji. In the years before his death, Keizan built a buddha hall, founder's hall, dharma hall, and monk's hall at Yōkōji.

[Kenchōji](#). (建長寺). A monastery in Kamakura, Japan, which is currently headquarters (honzan) of the Kenchōji branch of the RINZAI [ZEN](#) tradition. Kenchōji was established in 1249 by the powerful regent Hōjō Tokiyori (1227–1263). The founding abbot (kaisan; C. [KAISHAN](#)) of Kenchōji was the émigré Chan master [LANXI DAOLONG](#), whose lineage, known as the Daikakuha (along with [WUXUE ZUYUAN](#)'s Bukkōha), came to dominate the abbacy of Kenchōji. In 1293, the monastery was destroyed in a conflagration following an earthquake. In 1300, the reconstruction of Kenchōji took place. Kenchōji continued to serve as the private worship grounds for the Kamakura shōguns. In 1385, Ashikaga Yoshimitsu (1358–1408) placed Kenchōji as first rank of the [GOZAN](#) system. Kenchōji went through several reconstructions during the Edo period.

[Kenninji](#). (建仁寺). A monastery in Kyōto, Japan, which is currently headquarters (honzan) of the Kenninji branch of the RINZAI [ZEN](#) tradition. Kenninji was established in 1202 by the shōgun Minamoto Yoriie (1182–1204), who appointed [MYŌAN EISAI](#) (1141–1215) its abbot and founding patriarch (kaisan; C. [KAISHAN](#)). Kenninji was one of the first Zen monasteries to be established in Japan. Although Kenninji was devastated by fire in 1246, 1256, and 1258, the influential abbot [ENNI BEN'EN](#) (1202–1280) restored it back to glory. Throughout most of the fourteenth century, Kenninji remained a high-ranking monastery in the [GOZAN](#) system.

[Keqin](#). (C) (克勤). See [YUANWU KEQIN](#).

[Kern, Hendrik](#). (1833–1917). Important Dutch scholar of Sanskrit and Buddhism. Born Johan Hendrik Caspar Kern to Dutch parents in the Dutch East Indies, his family returned to the Netherlands when he was six years old. Beginning in 1851, he studied Sanskrit at Leiden and then in Berlin (with Albrecht Weber) before returning to the Netherlands as a lecturer in Greek. In 1863, he accepted an invitation to teach Sanskrit in Benares, returning in 1865 to become professor of Sanskrit at Leiden University, a position that he held until his retirement in 1903. He commanded a remarkable array of languages and published on a wide range of topics, mostly writing in his native Dutch. In 1884, he published the first English-language translation of the [SADDHARMAPUNDARĪKASŪTRA](#) (“Lotus Sūtra”) as part of [MAX MÜLLER](#)’s Sacred Books of the East series; a French translation of the sūtra by [EUGÈNE BURNOUF](#) had been published in 1852. Kern published an edition of the Nepalese manuscript in 1912. His chief contribution to Buddhist Studies was his two-volume *Geschiedenis van het Buddhisme in Indië* (*History of Buddhism in India*) published in 1882–1884, in which he put forward the view that the Buddha was a solar god, with the twelve [NIDĀNAS](#), representing the twelve months, *etc.* In this work, he also argued for the influence of the Yoga school on early Buddhism.

[Kerouac, Jack](#). (1922–1969). American novelist influenced by Buddhism. Kerouac was born in Lowell, Massachusetts, to a working-class Quebecois family. His first language was the Quebecois French dialect; he learned English from nuns at the local parish school. An outstanding student and athlete in high school, he accepted an athletic scholarship to Columbia University in 1940 and became a star football player, before a broken leg ended his career. Kerouac left the university and enlisted in the Navy but was discharged. He served as a

merchant seaman before returning to Columbia in 1944, where he met [ALLEN GINSBERG](#) and began to gather a group of companions that Kerouac would later dub the “Beat Generation.” His friend Neal Cassady’s enthusiasm for the psychic Edgar Cayce (1877–1945) prompted Kerouac to want to learn something about Asian religions. Finding [DWIGHT GODDARD](#)’s *A Buddhist Bible* in the public library in San Jose, California, he studied the book carefully and memorized sections of it. Although Kerouac considered himself to be a Roman Catholic throughout his life, his interest in Buddhism grew, in part due to the influence of the poet [GARY SNYDER](#), whom he met in San Francisco. At Snyder’s urging, Kerouac wrote a Buddhist scripture, *The Scripture of the Golden Eternity*, as well as a life of the Buddha. His best-known works, however, are *On the Road* (1957) and *The Dharma Bums* (1958). Kerouac died in his mother’s home in Florida at the age of forty-seven of complications resulting from alcoholism.

ketu. (T. rgyal mtshan; C. chuang; J. dō; K. tang 幢). In Sanskrit and Pāli, “banner”; symbolizing the victory of a buddha’s teachings and the vanquishing of Buddhism’s ideological opponents. See [FACHUANG](#).

Kevattasutta. (C. Jiangu jing; J. Kengokyō; K. Kyōn’go kyōng 堅固經). In Pāli, “Sermon to Kevatta” [alt. Kevaddhasuttanta]; eleventh sutta of the [DĪGHANIKĀYA](#) (a separate [DHARMAGUPTAKA](#) recension appears as the twenty-fourth sūtra in the Chinese translation of the [DĪRGHĀGAMA](#)), preached by the Buddha to the householder Kevatta [alt. Kevaddha] in the Pāvārika mango grove at [NĀLANDĀ](#). According to the Pāli account, Kevatta approached the Buddha and asked him to order a monk disciple to perform a miracle in order to inspire faith among the Buddha’s followers dwelling in Nālandā. The Buddha responded that there are three kinds of wonder, the wonder of supranormal powers (iddhipāṭihāriya), the wonder of manifestation (ādesanāpāṭihāriya), and the wonder of education (anusāsanīpāṭihāriya). The wonder of supranormal powers is composed of the ability to make multiple bodies of oneself, to become invisible, to pass through solid objects, to penetrate the earth, to walk on water, to fly through the sky, to touch the sun and moon, and to reach the highest heaven of [BRAHMĀ](#). The wonder of manifestation is the ability to read the thoughts and feelings of others. The Buddha declared all these wonders to be trivial and disparages their display as vulgar. Far superior to these, he says, is the wonder of education, which leads to awakening to the teaching and entering the Buddhist order, training in the

restraint of action and speech, observance of minor points of morality, guarding the senses, mindfulness, contentment with little, freedom from the five hindrances, joy and peace of mind, the four meditative absorptions, insight (*ñāṇadassana*; [JÑĀNADARŚANA](#)) into the conditioned nature and impermanence of body and mind, knowledge of the [FOUR NOBLE TRUTHS](#) (*catvāry āryasatyāni*), and the destruction of the contaminants (*āsavakkhaya*; S. [ĀSRAVAKSAYA](#)).

[Kewen](#). (C) (克文). See [ZHENJING KEWEN](#).

[Kha ba dkar po](#). (Kawagarbo). A famous mountain on the Tibetan plateau and the toponym of the deity embodied there; currently located in the Chinese province of Yunnan on the border with the Tibet Autonomous Region, close to Bde chen (Diqin). It is one of the eight famous mountains and mountain ranges, including Mount [KAILĀSA](#) in western Tibet and Dag pa shel ri (the Crystal Mountain) in the [TSA RI](#), on the borders of eastern Nepal on the pilgrimage circuit (see [GNAS SKOR BA](#)). The mountain (22,113 ft) is an important site for a two-week pilgrimage circuit.

[Kha char gtsug lag khang](#). (Kachar tsuklakang). A temple, known also as Kho char and Kho chags, built at the end of the tenth century near Spu rang (Purang), the eastern capital of the Tibetan [GU GE](#) kingdom. It was built by Kho re, a brother of [YE SHES 'OD](#), and housed a special silver statue. Two other images were later added, which together were called “the three silver brothers” (*dngrul sku mched gsum*). They were generally thought to be [AVALOKITEŚVARA](#), [MAÑJUŚRĪ](#), and [VAJRAPĀNI](#), although which was the original and central image is unknown. Kho re took over the kingdom after Ye shes 'od renounced the throne to take up the religious life in 988. The temple, the full name of which is Kha char Yid bzhin lhun gyi grub pa'i gtsug lag khang, was built during the same phase of temple building as [TA PHO GTSUG LAG KHANG](#).

[khadgavisāna](#). (P. *khaggavisāṇa*; T. *bse ru*; C. *linjiao*; J. *ringaku*; K. *in'gak* 麟角). In Sanskrit, “rhinoceros”; the solitary way of life pursued by the rhinoceros is a metaphor commonly found in the *sūtras* to refer to the life of solitude that monks should follow. The Buddha acknowledged the value of living together with a community of like-minded religious colleagues ([KALYĀNAMITRA](#)), but rather than keep the company of “bad friends,” it was instead preferable to live “like a rhinoceros” ([KHADGAVISĀNAKALPA](#)). As but one of many examples in the literature, the *Khaggavisāṇasutta* (“Discourse on the Rhinoceros”) in the

[SUTTANIPĀTA](#) (I.13) is a series of verses that all end with the repeated refrain that monks should “wander alone, like a rhinoceros.” Since the term *khadga* (P. *khagga*) by itself means a “rhinoceros,” the Pāli commentaries parsed the compound *khadgaviṣāṇa* (*khaggavisāṇa*) to mean “rhinoceros horn,” a rendering sometimes found in English translations, and the metaphor was then interpreted to mean “solitary” like the single horn of a rhinoceros. The standard Chinese translation for this term as “rhinoceros horn” (*linjiao*) also reflects this traditional understanding.

[khadgaviṣāṇakalpa](#). (P. *khaggavisāṇakappa*; T. *bse ru lta bu*; C. *linjiaoyu*; J. *ringakuyu*; K. *in’gagyu* 麟角喻). In Sanskrit, “like a rhinoceros”; a metaphor for the life of solitude that monks should follow (see [KHADGAVISĀNA](#)). The term is also used to refer to one of the two types of solitary buddhas ([PRATYEKABUDDHA](#)): the *khadgaviṣāṇakalpa* type, who live in solitude “like a rhinoceros,” and the “congregators” ([VARGACĀRIN](#)).

[khakkhara](#). (T. *’khar bsil*; C. *xizhang*; J. *shakujō*; K. *sōkchang* 錫杖). In Sanskrit, a “mendicant’s staff” that monks carried during their itinerant wandering; written variously as *khakharaka*, *khankharaka*, *etc.* The staff was one on a list of eighteen requisites ([NISRAYA](#)) of a monk, along with robes, alms bowl, *etc.* The mendicant carried the staff during his wanderings to scare away wild animals and to ward off any small animals in his path. It could also serve as a means of letting his presence be known to the laity when begging for alms ([PINDAPĀTA](#)). This is because the staff was topped by a round metal cap usually made of brass, while the staff itself was made of wood or iron. As the onomatopoeic Sanskrit word suggests, the metal cap has small rings dangling from it that made a jingling sound when shaken. This cap was often decorated with symbols of the teachings and virtues of the Buddha, such as a [CINTĀMANI](#), a dragon ([NĀGA](#)), a five-wheeled [STŪPA](#) (C. *wulun*; J. *gorinta*; K. *oryunt’ap* 五輪塔), or a buddha triad. Depending on the number of rings that hung symmetrically from each side of the metal cap, the staff could also be referred to as a four-, six-, or twelve-ring staff. [KSITIGARBHA](#) statues are often depicted holding such a staff; it is also one of the attributes of eleven-headed [AVALOKITEŚVARA](#) ([EKĀDAŚAMUKHĀVALOKITEŚVARA](#)).

[Khams sprul incarnations](#). (Kamtrül). A revered Tibetan lineage of incarnate masters ([SPRUL SKU](#)) belonging to the [’BRUG PA BKA’ BRGYUD](#) sect of Tibetan Buddhism. The fourth, Bstan ’dzin chos kyi nyi ma (Tenzin Chökyi Nyima,

1730–1780), composed an important description of the sacred sites of the Kathmandu Valley. The lineage includes

1. Karma bstan 'phel (Karma Tenpel, 1598–1638)
2. Kun dga' bstan 'phel (Kunga Tenpel, 1639–1679)
3. Kun dga' bstan 'dzin (Kunga Tendzin, 1680–1729)
4. Bstan 'dzin chos kyi nyi ma (Tendzin Chökyi Nyima, 1730–1780)
5. Grub brgyud nyi ma (Drupgyü Nyima, 1781–1847)
6. Bstan pa'i nyi ma (Tenpe Nyima, 1848–1907)
7. Sangs rgyas bstan 'dzin (Sangye Tendzin, 1908–1929)
8. Don brgyud nyi ma (Dongyü Nyima, b. 1930)

[Khandhaka](#). In Pāli “Collections”; the second major division of the Pāli basket of discipline ([VINAYAPITAKA](#)), which is subdivided between the [MAHĀVAGGA](#) (“Great Chapter”) and the [CŪLAVAGGA](#) (“Lesser Chapter”). This division covers the early history of the [SAMGHA](#) and the institution of formal rules and procedures governing monastic life. Whereas the [PRĀTIMOKSA](#) offers extensive sets of rules regarding the individual conduct of monks or nuns, the *Khandhaka* largely deals with their roles as members of the monastic community. See also [SKANDHAKA](#).

[khanikasamādhi](#). In Pāli, “momentary concentration”; a type of rudimentary concentration ancillary to [UPACĀRASAMĀDHI](#) and [APPANĀSAMĀDHI](#), which is used with reference to meditators who are developing insight (*vipassanā*; S. [VIPAŚYANĀ](#)) practice. Although a meditator specializing in insight techniques may not be developing advanced forms of meditative absorption ([JHĀNA](#); S. [DHYĀNA](#)), he still requires a modicum of concentration in order to maintain his intensive analysis of experience. Hence, the commentators posit that even insight practice requires “momentary concentration” in order to succeed.

[khapuspa](#). (T. nam mkha'i me tog; C. konghua/xukonghua; J. kūge/kokūge; K. konghwa/hōgonghwa 空華/虛空華). In Sanskrit, lit. “flower in the sky,” a common metaphor in Buddhist texts for something illusory. Just as a person with macular degeneration might believe that the “flowers” he perceives floating in the sky are real, when in fact they are actually a symptom of his disease, so too might an ignorant sentient being believe that he possesses a perduring soul ([ĀTMAN](#)) or self-nature ([SVABHĀVA](#)) that exists in reality, when in fact this notion is simply a misperception of the reality of nonself ([ANĀTMAN](#)); or that the afflictions ([KLEŚA](#)) affecting his mind are real, when in fact they are a product of attachment and are thus emptiness ([ŚŪNYATĀ](#)).

[Kharoṣṭhī](#). An ancient Indic script used in northwest India between the third century BCE and the third century CE to write Sanskrit and [GĀNDHĀRĪ](#). It was used in the [GĀNDHĀRA](#) region, as well as [KUSANA](#) and [SOGDIANA](#). Its alphabet follows the order of [ARAPACANA](#). Several of the edicts of [AŚOKA](#) from northwest India are in Kharoṣṭhī script; these were deciphered by James Prinsep. In the late twentieth century, numerous birch-bark Buddhist manuscripts written in Kharoṣṭhī were discovered in Afghanistan; dating from as early as the first century CE, they represent the oldest extant Buddhist manuscripts.

[khatvāṅga](#). (T. khri shing; C. chuangzu; J. shōsoku; K. sangjok 床足). In Sanskrit, lit. “the foot of a bedstead,” a staff topped by a skull that was thought to be the weapon of Śiva. This type of staff was one of the requisites commonly carried by Indian ascetics, [SIDDHAS](#), and tāntrikas.

[Khemā, Ayya](#). (1923–1997). Prominent [THERAVĀDA](#) Buddhist nun, meditation teacher, and advocate of women’s rights, born Ilse Ledermann to Jewish parents in Germany. In 1938, she fled from Nazi Germany to Scotland along with two hundred child refugees and two years later was reunited with her parents, who had escaped to Shanghai, China. The family was subsequently interned by the Japanese in World War II. She immigrated to the United States in 1949, where she married and had two children. In the early 1960s, she toured Asia with her husband and children, and it was at this time that she learned Buddhist meditation. She began teaching meditation in the 1970s and established Wat Buddha Dhamma, a Theravāda forest monastery near Sydney, Australia, in 1978. Soon thereafter, she was ordained a Buddhist nun by Nārada Mahāthera in Sri Lanka in 1979, receiving the name Khemā. In Colombo, she founded both the International Buddhist Women’s Center as a training center for Sri Lankan nuns and the Parappuduwa Nuns’ Island Hermitage at Dodanduwa. In 1987, Ayya Khemā organized the first international conference of Buddhist nuns held in [BODHGAYĀ](#), India, and helped found Sakyadhita, the first global Buddhist women’s organization. Also in 1987, she was the first Buddhist invited to address the United Nations. In 1989, she established Buddha Haus in Germany and served as its first director. A prolific writer, she authored over a dozen books on Buddhist meditation and teachings. She died in 1997 while in residence at Buddha Haus.

[Khóa Hư Lục](#). (課虛錄). In Vietnamese, “Instructions on Emptiness,” composed by Trần Thái Tông (1218–1277); the first prose work on Buddhism written in

Vietnamese. It is a collection of sermons and essays, most of them fragmentary, on the philosophy and practice of Buddhism from the perspective of the three trainings in morality ([ŚĪLA](#)), concentration ([SAMĀDHI](#)), and wisdom ([PRAJÑĀ](#)). It also marks one of the earliest efforts to assimilate the worldview of the Southern school ([NAN ZONG](#)) of [CHAN](#) into Vietnamese Buddhism. The *Khóa Hư Lu* (楞) consists of two books. The first (lit. “upper”) book includes twenty-one short essays, which can be classified as follows according to their literary styles: one “verse” on the [FOUR NOBLE TRUTHS](#); two “general discourses” on the contemplation of the body and the Buddhist path; six “essays” on generating the thought of enlightenment ([BODHICITTA](#)), not taking life, not stealing, not indulging in sensual pleasures, not telling lies, and not using intoxicants; five “treatises” on the topics of morality, concentration, wisdom, receiving precepts, buddha-contemplation ([NIANFO](#)), sitting in meditation, and the mirror of wisdom; four “prefaces” to longer complete works (three of which are no longer extant), viz., “A Guide to the Chan School,” “A Commentary on the [VAJRASAMĀDHISŪTRA](#),” “Liturgy of the Six-Period Repentance,” and “An Essay on the Equality Repentance Liturgy”; “recorded encounter dialogues with disciples” that record dialogues between Trān Thái Tông and his students; a “verse commentary” on the ancient public cases ([GONG’AN](#)) of Chan; and an “afterword.” The second (lit. “lower”) book includes a complete essay entitled “Liturgy of the Six-Period Repentance,” which offers a detailed instruction on the performance of the repentance liturgy.

[Khotan](#). (C. Yutian; J. Uten; K. Ujōn 于闐). Indo-European oasis kingdom at the southern edge of the Taklamakan Desert in Central Asia, along the northern slope of the Kunlun Mountains, which served as a major center of Buddhism in Central Asia and an important conduit for the transmission of Buddhism from India to China. Buddhist sources claim that Khotan was colonized first by Indians, when Kuṇāla, the eldest son of King [AŚOKA](#), is said to have left the northwest Indian city of [TAKSAŚILĀ](#) (Taxila) for Khotan in the third century BCE. From at least the third through the tenth centuries CE, Khotan was a major Buddhist and trade center along the southern [SILK ROAD](#) through Central Asia, where [MAHĀYANA](#) traditions associated with northwestern Indian Buddhism predominated. Indeed, through about the tenth century CE, Khotan was essentially a bastion of Indian urban culture in the Tarim Basin, which used [GĀNDHĀRĪ PRAKRIT](#) (in the [KHAROSTHĪ](#) script) in much of its written communications until the relatively late rise in the use of indigenous vernacular

Khotanese (probably sometime after the sixth century CE). The Khotanese language, which no longer survives, belonged to the Middle Iranian branch of the Indo-European language family, and fragments of Buddhist texts translated into Khotanese were discovered by [SIR MARC AUREL STEIN](#) (1862–1943) during his excavations in the region. Already by the third century CE, Chinese monks were traveling to Khotan to learn Buddhist doctrine and acquire Buddhist scriptures, and Khotanese scholars and monks were making their way to China to transmit and translate Buddhist texts (including such important Mahāyāna scriptures as the [AVATAMSAKASŪTRA](#), which was brought from Khotan early in the fifth century). The pilgrimage reports of [FAXIAN](#) and [XUANZANG](#) attest that Khotan was the home of at least four major monasteries and several smaller ones, with several tens of thousands of monks in residence. The Chinese occupied Khotan during both the first and seventh centuries CE, but throughout the first millennium they maintained close economic and cultural ties with the kingdom. By the eighth century, the continued incursions of Arabs, Turks, and Mongols inexorably led to the demise of Buddhism in the region and the people's conversion to Islam; Khotan was finally converted to Islam in 1004. Since the mid-eighteenth century, during the Qing dynasty (1644–1912), Khotan has been under the political control of China and currently is located in the Uighur Autonomous Region of Xinjiang province. See also [KUCHA](#).

[Khra 'brug](#). (Tradruk). The earliest of Tibet's great geomantic temples, after the [JO KHANG](#) in [LHA SA](#), said to have been founded by king [SRONG BTSAN SGAM PO](#) near the town of Tsetang (Rtse thang). According to traditional accounts, it was erected on the left shoulder of a great supine demoness whose body splayed across Tibet, hindering the spread of Buddhist teachings. It is therefore counted as one of the four “edge-taming temples” or “edge-pinning temples” ([MTHA' 'DUL GTSUG LAG KHANG](#)). The site was later venerated as a royal monastery by kings [KHRI SRONG LDE BTSAN](#) and Mu ne btsan po in the late eighth and early ninth centuries. After the persecution of king [GLANG DAR MA](#), Khra 'brug was renovated and expanded in 1351, and later by the fifth [DALAI LAMA](#), [NGAG DBANG BLO BZANG RGYA MTSHO](#), who added a golden roof. By the late eighteenth century, the site had become a complex of twenty-one temples. Although almost completely destroyed during the Chinese Cultural Revolution, reconstruction of the temple began in the 1980s.

[khregs chod](#). (trekchö). In Tibetan, lit. “breaking through the hard” or

“breakthrough”; one of the two main practices in the [SNYING THIG](#) tradition of [RDZOGS CHEN](#), the other being [THOD RGAL](#), “crossing the crest” or “leap over.” Khregs chod is paired with the essential purity (ka dag) of awareness; the practice of khregs chod leads to thod rgal; it cuts through the stream of obscurations and reveals awareness ([RIG PA](#)) devoid of object–subject bifurcation ([GRĀHYAGRĀHAKAVIKALPA](#)). Sustaining this awareness uninterruptedly while involved in ordinary sense perception is the essence of the practice. It cuts the stream of past and future thought and uses the gap of the unfindable present to contact the primordial pure awareness. It is oriented toward the emptiness ([ŚŪNYATĀ](#)) aspect free from conceptual proliferation ([NISPRAPAÑCA](#)). Both thod rgal and khregs chod are concerned with the natural light (’od gsal; [PRABHĀSVARA](#)) of pure awareness; but whereas the former leads to the total dissolution of the body into light in a vision of transcendental consciousness (ye shes; [JÑĀNA](#)), the practice of the former leaves the practitioner as a small particle of dust, as it were.

[Khri srong lde btsan](#). (Trisong Detsen) (r. 754–799). A Tibetan ruler considered the second of three great religious kings (chos rgyal) during the Imperial Period, the other two being [SRONG BTSAN SGAM PO](#) and [RAL PA CAN](#), and as a human incarnation of the [BODHISATTVA AVALOKITEŚVARA](#). Inheriting the throne in 754 as the thirty-eighth monarch of the Yar klungs dynasty, Khri srong lde btsan directed several events that are considered milestones in Tibetan history. During the early years of his reign, he extended the boundaries of the Tibetan empire forged under his predecessors. In 763, the king’s army occupied the imperial capital of Tang China at Chang’an (present-day Xi’an), an action commemorated on a stele that was erected in front of the [PO TA LA](#) Palace. However, Khri srong lde btsan is best remembered for his patronage of Buddhism and support in founding Tibet’s first Buddhist monastery of [BSAM YAS](#). Later chronicles record that he actively suppressed the native [BON](#) religion, as well as the aristocratic clans who were its benefactors, although he never entirely proscribed early Bon rituals. Khri srong lde btsan invited the renowned Indian Buddhist preceptor [ŚĀNTARAKSITA](#) to oversee the project of building Bsam yas and to establish the first monastic order in Tibet. According to traditional accounts, local spirits inimical to Buddhism created obstacles that hindered the project, which prompted the Indian abbot to request Khri srong lde btsan to invite the powerful tantric master [PADMASAMBHAVA](#) to Tibet in order to aid in their subjugation, after which the establishment of the monastery was able

to proceed. Khri srong lde btsan is said to have become a devotee of Padmasambhava, with one of his queens, [YE SHES MTSHO RGYAL](#), becoming the yogin's consort and serving as scribe for many of his [GTER MA](#) teachings. Padmasambhava also revived the king's eight-year-old daughter [PADMA GSAL](#) after her death in order to bestow a special teaching. According to tradition, at the time of his death, [ŚĀNTARAŚITA](#) warned in his final testament that a mistaken philosophical view would become established in Tibet and advised the king to invite [KAMALAŚĪLA](#) to come to Tibet in order to dispel it. The view was apparently that of the Northern Chan ([BEI ZONG](#)) monk Heshang Moheyan, who had developed a following at the Tibetan court. Kamalaśīla was invited and a debate was held between the Indian monk and the Chinese monk, with the king serving as judge. It is unclear whether a face-to-face debate took place or rather an exchange of documents. According to Tibetan sources, the king declared Kamalaśīla the winner, named [MADHYAMA](#) as the official philosophical school of his realm, and banished the Chinese party from his kingdom. (Chinese records describe a different outcome.) This event, variously known as the [BSAM YAS DEBATE](#), the Council of Bsam yas, and the Council of Lhasa, is regarded as one of the key moments in the history of Tibetan Buddhism.

[Khro phu bka' brgyud](#). (Trophu Kagyü). One of the four major and eight subsects of the Bka' brgyud sect of Tibetan Buddhism ([BKA' BRGYUD CHE BZHI CHUNG BRGYAD](#)), originating with Rgya tsha (Gyatsa, 1118–1195), Kun ldan ras pa (Kundenrepa, 1148–1217), and their nephew Khro phu lo tsā ba Byams pa dpal (Trophu lotsaba Jampapal, 1173–1228).

[Khruba Si Wichai](#). (1878–1938). One of the most famous and revered Lānnā (northern Thai) monks of the twentieth century, who supervised the renovation of more than one hundred northern Thai monasteries; many of these projects were later criticized by art historians for their excessive use of cement and lack of attention to preserving authentic stylistic features. He also organized the construction of the road up the famous landmark mountain Doi Suthep, leading to the monastery of [WAT PHRA THAT DOI SUTHEP](#). The road, which opened on April 10, 1935, is approximately 9.3 miles (fifteen kilometers) in length and took only slightly more than five months to complete through the labors of as many as five thousand volunteer workers. Khruba is an honorary title for a teaching monk in Thailand and usually implies that the monk is perceived to have strong charisma and sometimes supernatural powers. Statues of Khruba Si Wichai are

found at Wat Phra That Doi Suthep and Wat Phra Singh.

[Khuddakanikāya](#). (S. Kṣudrakapiṭaka; T. Phran tshegs sde; C. Xiaobu; J. Shōbu; K. Sobu 小部). In Pāli, “Miscellaneous Collection”; the fifth and last division of the [PĀLI SUTTAPITAKA](#). Such miscellanies, or “mixed baskets” (S. kṣudrakapiṭaka), were known to have existed in several of the mainstream Buddhist schools, including the [DHARMAGUPTAKA](#), [MAHĀSĀMGHIKA](#), and [MAHĪŚĀSAKA](#), but none of these recensions are extant (and there is no specific analogue in the Chinese [ĀGAMA](#) translations). The Pāli miscellany is composed of fifteen independent books, some of them representing the earliest strata of the Pāli canon, others relatively late compositions. The works are generally in verse, including the [KHUDDAKAPĀTHA](#), [DHAMMAPADA](#), [UDĀNA](#), [ITIVUTTAKA](#), [SUTTANIPĀTA](#), [VIMĀNAVATTHU](#), [PETAVATTHU](#), [THERAGĀTHĀ](#), [THERĪGĀTHĀ](#), [JĀTAKA](#), [APADĀNA](#), [BUDDHAVAMSA](#), and [CARIYĀPITAKA](#). The *Khuddakanikāya* contains in addition a commentary on portions of the *Suttanipāta*, called the [MAHĀNIDDESA](#) and [CŪLANIDDESA](#), and one treatise, the [PATISAMBHIDĀMAGGA](#), that conforms to the abhidhamma in style and content. The Burmese recension of the Pāli canon adds to the collection four other works: the [MILINDAPAÑHA](#), *Suttasaṅgaha*, [PETAKOPADESA](#), and [NETTIPPAKARANA](#), making nineteen books in all.

[Khuddakapātha](#). In Pāli, “Miscellaneous Readings”; first of the fifteen books contained in the [KHUDDAKANIKĀYA](#) of the Pāli [SUTTAPITAKA](#) and comprised of excerpts taken from earlier canonical texts. This late Pāli composition is mentioned as a canonical text only in the commentaries. The [KHUDDAKAPĀTHA](#) appears in the Pali Text Society’s English translation series as *The Minor Readings*.

[Khuông Việt](#). (匡越) (933–1011). Prominent Vietnamese monk and royal advisor, a native of Thửờng Lạc (nowadays Thanh Hóa Province, in northern Vietnam). His personal name was Ngô Chân Lưu. According to the [THIÊN UYỂN TẬP ANH](#), he was a descendent of Ngô Thuận Đê. As a young man, he studied Confucianism but later turned to Buddhism, receiving full ordination from [CHAN](#) Master Vân Phong. Khuông Việt was widely read in the Buddhist scriptures and diligently investigated the teachings of Chan. When he was in his forties, his fame reached the royal court, and King Đinh Tiên Hoàng (r. 968–979), the founder of the Đinh dynasty (968–980), summoned him to the capital city and honored him with the rank General Supervisor of Monks. The king also granted

him the sobriquet Khuông Việt Thái Sư (Great Master Who Brings Order to Việt). King Lê Đại Hành (r. 980–1005), the founder of the former Lê dynasty (980–1009), invited him to participate in all military, administrative, and diplomatic affairs, and he was often appointed to receive Chinese envoys. Khuông Việt was particularly famed for his exchange of couplets and poems with the Song-dynasty envoy Li Jue, who reported favorably on Vietnam to the Song-dynasty Emperor.

Khyung po rnal 'byor Tshul khrim s mgon po. (Kyungpo Naljor Tsultrim Gönpo) (c. tenth–eleventh centuries) A Tibetan scholar and adept considered the founder of the [SHANGS PA BKA' BRGYUD](#) sect of Tibetan Buddhism. Although his traditional biographies are somewhat ambiguous, it is known that he traveled to India and studied under several [MAHĀSIDDHA](#) including [MAITRĪPA](#) and two female masters, Sukha and [NIGUMA](#). From the latter, who was said to have been the wife or sister of the Indian scholar [NĀROPA](#), Khyung pa rnal 'byor received a collection of instructions known as the six doctrines of [NIGUMA](#) (Ni gu chos drug). These ranked with the better known doctrines of [NĀROPA](#) ([NA RO CHOS DRUG](#)) and became the seminal teachings of the Shangs pa bka' brgyud. Khyung po rnal 'byor returned to Tibet and, according to traditional accounts, founded 108 religious establishments in the region of Shangs, from which the Shangs pa bka' brgyud takes its name. Khyung po rnal 'byor established his main seat at Zhang zhong monastery (also called Zhang zhang and Zhong zhong) and attracted a great number of disciples from all parts of Tibet. Although the Shangs pa bka' brgyud never developed a strong centralized institution, the transmission of Khyung po rnal 'byor's distinctive teachings spread in many directions, eventually finding their way into nearly every sect of Tibetan Buddhism.

Kihwa. (己和) (1376–1433). Korean [SŎN](#) master of the Chosŏn dynasty, also known as Hamhŏ Tŭkt'ong and Mujun. Kihwa was a native of Ch'ungju in present-day North Ch'ungch'ŏng province. The son of a diplomat, Kihwa entered the Sŏnggyun'gwan academy and received a traditional Confucian education, although even there he already showed strong interests in Buddhism. In 1396, after the death of a close friend, Kihwa decided to become a monk, eventually becoming a disciple of the eminent Sŏn master [MUHAK CHACH'Ō](#) (1327–1405) at the monastery of Hoeamsa. After studying kanhwa Sŏn (see [KANHWA CHAN](#)) under Chach'ŏ, Kihwa is said to have attained his first awakening at a small hut near his teacher's monastery. Kihwa devoted the next

few years to teaching and lecturing at various monasteries around the Korean peninsula. In 1412, Kihwa began a three-year retreat at a small hermitage named Hamhōdang near the monastery of Yōnbongsa on Mt. Chamo in P’yōngsan. In 1420, he made a pilgrimage to Mt. Odae, and the following year he was invited to the royal monastery of Taejaōch’al. In 1424, King Sejong (r. 1419–1450) forcibly consolidated the different schools of Korean Buddhism into the two branches of Sōn ([CHAN](#); Meditation) and [KYO](#) (Doctrine), reduced the number of officially recognized monasteries, and limited the number of monks allowed to ordain. Perhaps in reaction to this increasing persecution of Buddhism, Kihwa left the royal monastery that same year. In response to the growing criticisms of Buddhism by the Confucian scholars at court, Kihwa composed his [HYŎNJŎNG NON](#). Kihwa also composed influential commentaries on the [VAJRACCHEDIKĀPRAJÑĀPĀRAMITĀSŪTRA](#) (“Diamond Sūtra”) and the [YUANJUE JING](#) (“Perfect Enlightenment Sūtra”). In 1431, he began restorations on a monastery known as Pongamsa on Mt. Hūiyang in Yongnam and died at the monastery two years later in 1433.

[Kim hwasang](#). (K) (金和尚). See [CHŎNGJUNG MUSANG](#).

[Kim Iryōp](#). (金一葉) (1896–1971). In Korean, Kim “single leaf,” influential Korean Buddhist nun during the mid-twentieth century and part of the first generation of Korean women intellectuals, or “new women” (sin yōsōng), thanks to her preordination career as a leading feminist writer, essayist, and poet. Her secular name was Wōnju, and her Buddhist names were Hayōp and Paengnyōn Toyōp; Iryōp is her pen name, which Yi Kwangsu (1892–1955?), a pioneer of modern Korean literature, gave her in memory of the influential Japanese feminist writer Higuchi Ichiyō (1872–1896) (J. Ichiyō = K. Iryōp). Kim’s early years were influenced by Christianity and her father even became a Protestant minister. Her mother died when Kim was very young and her father also passed away while she was still in her teens. Kim was educated at the Ihwa Haktang, a women’s academy (later Ewha University), and later studied abroad in Japan. She and other Ihwa graduates participated in the first female-published magazine in Korea, “New Women” (*Sinyōja*), which began and ended in 1920. Kim was a feminist intellectual who sought self-liberation and the elevation of women’s status through her writing. After her first marriage ended in divorce, she continued to pursue her search for her “self” and was involved in much-publicized relationships with men such as Oda Seijo and Im Nowōl, a writer of

“art-for-art’s sake.” But Kim’s ideal of female liberation based on individual self-identity appears to have undergone a profound transformation, thanks to her associations with Paek Sönguk (1897–1981), a Buddhist intellectual who worked to revitalize Korean Buddhism during the Japanese colonial period and eventually became a monk himself in 1929. Through her encounter with Buddhism, Iryöp’s pursuit of self-liberation seems to have shifted from an emphasis on a self-centered identity based on feminism to the release from the self ([ANĀTMAN](#)). After Paek Sönguk entered into the Diamond Mountains ([KŪMGANGSAN](#)) to become a monk, she again married, seemingly in an attempt both to keep her self-identity as a female and to realize the Buddhist release of self, by combining secular life with Buddhist practice. But a few years later, in 1933, she ultimately decided to become a nun under the tutelage of the Sön master [MAN’GONG WÖLMYÖN](#) (1871–1946) and became a long-time resident of [SUDÖKSA](#). There, she became an outspoken critic of secularized Japanese-style Buddhism and particularly of its sanction of married monks and eating meat. But most notable were her writings on the pursuit of self-liberation, which she expressed as “becoming one body” (ilch’ehwa) with all people and everything in the universe. Iryöp is credited for her contributions to popularizing Buddhism through her accessible writings in the Korean vernacular, as well as for elevating the position of nuns in Korean Buddhism.

[Kim Kyogak](#). (K) (金喬覺). See [CHIJANG](#).

[kimnara](#). (P. kinnara; T. mi ’am ci; C. jinnaluo; J. kinnara; K. kinnara 緊那羅). A class of wondrous celestial musicians in the court of [KUBERA](#), ranking below the [GANDHARVA](#). In Sanskrit, the name lit. means “How could this be human?” They are said to have human bodies but the heads of horses, but they also are sometimes depicted as little birds with human heads. Kimnara are common decorative figures in Buddhist cave and temple art. The kimnara is one of the eight kinds of nonhumans ([ASTASENĀ](#)) who protect the dharma, and they often appear in the audience of Buddhist [SŪTRAS](#). The other seven are the [DEVA](#), [ASURA](#), [GANDHARVA](#), [NĀGA](#), [YAKSA](#), [GARUDA](#), and [MAHORĀGA](#).

[Kinkakuji](#). (金閣寺). In Japanese, “Golden Pavilion monastery”; a Japanese temple located in northern Kyōto, the ancient capital city of Japan, formally known as Rokuonji (Deer Park temple, cf. [MRGADĀVA](#)). It was originally built as a retirement villa for Ashikaga Yoshimitsu (1358–1408), the third shōgun of the Muromachi (1337–1573) shogunate. However, following his father’s wishes, his

son converted it to a [ZEN](#) temple of the RINZAI school after the shōgun's death in 1408. The temple inspired the building of Ginkakuji (Silver Pavilion monastery), which was constructed about sixty years later on the other side of the city. The name Kinkaku derived from the pavilion's extravagant use of gold leaf, typical of Muromachi style, which covers the entire top two stories of the three-story pavilion. The pavilion uses three different architectural styles on each floor: the first emulates the residential style of Heian aristocracy; the second, warrior aristocracy; the third, Chinese [CHAN](#) style. The second floor enshrines the image of the [BODHISATTVA](#) Kannon ([ĀVALOKITEŚVARA](#)), surrounded by the statues of the four heavenly kings ([CĀTURMAHĀRĀJAN](#)), the guardian divinities ([DEVA](#)) of Buddhism. The pavilion burned down several times, including twice during the Ōnin war (1467–1477) and most recently by arson in 1950; the present structure was reconstructed in 1955. Kinkakuji is currently a branch temple of the RINZAI [ZEN](#) monastery of [SHŌKOKUJI](#).

[kirigami](#). (切紙). In Japanese, “secret initiation documents” (lit. “strips of paper”), ; secret instructions or formulas written on individual pieces of paper, which were used in the medieval Japanese traditions, including the [SŌTOSHŪ](#), to transmit esoteric knowledge and monastic routines. Kirigami were a central pedagogical feature in many fields involving apprenticeships in medieval Japan and were used to transmit knowledge about acting, poetic composition, martial arts, and religious practice. Sōtō Zen kirigami were also elaborations of the broader Chinese monastic codes (shingi; see [QINGGUI](#)) and focused on the secret rituals that a Zen abbot would perform in private, including consecration, funerals, and transmission of precepts or a dharma lineage. Many kirigami also provide short, targeted instruction on individual Zen cases (kōan; C. [GONG'AN](#)), such as the correct sequence of questions and answers, or the appropriate “capping phrase” ([JAKUGO](#)), that would prove mastery of a specific kōan. Because kirigami were also kept hidden away in Sōtō monasteries and were known only to the abbots, access to them was a potent symbol of the abbots' enhanced religious authority.

[kiriyaavāda](#). In Pāli, lit. “teaching on deeds,” the philosophical position that upholds the efficacy of deeds, specifically that a distinction should be drawn between merit (puñña, S. [PUNYA](#)) and demerit (apuñña, S. apuṇya). The term is usually seen in conjunction with the related kammavāda, viz., one who accepts the efficacy of action ([KARMAN](#)) and its fruition ([VIPĀKA](#)).

Kisā Gotamī. (S. *Kṛśā Gautamī). In Pāli, “Gotamī the emaciated”; an eminent arahant (S. [ARHAT](#)) therī, who was declared by the Buddha to be foremost among his nun disciples in the wearing of coarse robes (lūkhacīvara). The story of Kisā Gotamī is found in several places in the Pāli canon and commentaries and is one of the most beloved narratives in the [THERAVĀDA](#) world for its poignancy. Born to a poor family in the city of Sāvatti (S. [ŚRĀVASTĪ](#)), her personal name was Gotamī, and she received the epithet Kisā (“lean,” or “emaciated”) because she was so thin. She was fortunate to marry into a wealthy family, although she was not treated with respect until she bore a son. Her happiness was short lived, however, for her son died just as he became old enough to run around and play. Driven mad with grief, Kisā Gotamī wandered about carrying her son’s body at her hip, seeking everywhere for medicine to restore him to life. She was mocked and driven away by everyone she approached, until a kind man finally took pity on her and directed her to the Buddha. In response to her pleas to revive her son, the Buddha told her he would do so if she would bring him a mustard seed from a household in which no one had died. Searching frantically from house to house and ultimately finding none that had not experienced the death of loved ones, she came to realize the inevitability of death and so was able finally to lay her child’s body to rest in the charnel ground. Returning to the Buddha, she sought admission into the nun’s order and was ordained. She promptly became a streamenterer (sotāpanna; S. [SROTAĀPANNA](#)) and, soon afterward, an arahant (S. [ARHAT](#)). In a previous existence, she had witnessed Padumuttara Buddha declare one of his nuns foremost among those who wear coarse robes, and it was then that she vowed to one day earn that same title.

Kissa yōjōki. (喫茶養生禮). In Japanese, “Record of Drinking Tea for Health,” composed by the Japanese monk [MYŌAN EISAI](#) in 1211. After Eisai returned to Japan from his pilgrimage in China, he is said to have transplanted in Uji the tea seeds that he had brought back with him from the mainland. The *Kissa yōjōki* is a record of the method that he used to transplant and care for the tea plants. The names of different types of tea, the ideal time and techniques for harvesting the leaves, and the proper way of preparing tea are carefully explained. Eisai also discusses the health and spiritual benefits of drinking tea in the text. The *Kissa yōjōki* is a seminal text in the development of tea culture in Japan.

Kiyomizudera. (清水寺). In Japanese, “Pure Water Monastery”; an important monastery of the Japanese HŌSSŌ school of [YOGĀCĀRA](#) Buddhism, located in the

Higashiyama (Eastern Mountains) District of Kyōto. The monastery claims to have been founded in 778 by a monk named Enchin and the general Sakanoue no Tamuramaro, who stopped on the site for a drink from a waterfall fed by a natural spring, where he met the monk. Together, they contracted to create a magnificent image of an eleven-faced and forty-armed Kannon ([AVALOKITEŚVARA](#)), which was enshrined in 798 in a temporary hall that was given the name Kiyomizudera. The monastery became a state shrine in 810 and a focus of state-protection Buddhism (see [HUGUO FOJIAO](#)) in Japan. The current buildings date from the latest reconstruction of the monastery in 1633. The monastery is perhaps best known for its long veranda that juts over the hillside in front of the main shrine hall; there is a folk tradition dating back to the Edo period that anyone who survives a plunge off the veranda is granted whatever one wishes. The monastery was designated a UNESCO World Heritage Site in 1994.

[Kiyozawa Manshi](#). (清沢満之) (1863–1903). Meiji-era Japanese Buddhist leader in the [HIGASHI-HONGANJIHA](#) of [JŌDO SHINSHŪ](#). Kiyozawa was born into a poor warrior class family in a small town east of Nagoya and ordained in 1878 as a Higashi-Honganji priest. After studying Western philosophy at college and graduate school in Tokyo, he served his sect as an educator. In 1888, he was appointed principal of a Higashi-Honganji middle school in Kyōto and taught Western philosophy at a Higashi-Honganji seminary. In 1890, however, Kiyozawa left his position as principal to lead a rigorous ascetic life, wearing Buddhist robes, separating himself from his family, and living on simple food. Around this time, Kiyozawa launched a reform movement within Higashi-Honganji to return the school to the spirit of its founder, [SHINRAN](#) (1173–1262), and to make its ecclesiastical structure conform better to modern secular society, such as by having its deacons elected democratically. However, his movement failed and he was excommunicated in 1897. After being reinstated a year later, Kiyozawa again played an important role in the sect's education, serving in 1901 and 1902 as a dean of Higashi-Honganji's newly founded college (present-day Ōtani University). He died at the age of forty from the tuberculosis he had contracted during his practice of asceticism. Kiyozawa is credited with popularizing the [TANNISHŌ](#), a short collection of Shinran's sayings that previously were not widely known. Kiyozawa emphasized individual religious experience, in which the adherent's self-awareness of his or her incapacity for moral perfection would instead prompt the adept to realize the truth of salvation

through absolute reliance on the infinite. Kiyozawa argued that such individual spiritual realization could contribute to the welfare of society at large. Although Kiyozawa's thought was not widely accepted during his own age, it influenced a younger generation of Higashi-Honganji scholars, such as Akegarasu Haya (1877–1967), Sōga Ryōjin (1875–1971), and Kaneko Dai'ei (1881–1976), who later became leading intellectual figures in the sect.

Kizil. [alt. Qizil]. A complex of some 230 Buddhist caves from the ancient Central Asian kingdom of [KUCHA](#), located about seventy kilometers northwest of the present-day city of Kucha on the bank of the Muzat River in Baicheng County, in the Uighur Autonomous Region of China's Xinjiang province. The Kizil caves represent some of the highest cultural achievements of the ancient Indo-European petty kingdom of Kucha, an important oasis along the northern [SILK ROAD](#) connecting China to the bastions of Buddhist culture in the greater Indian cultural sphere. Construction at the site perhaps began as early as the third century CE and lasted for some five hundred years, until the region succumbed in the ninth century to Islamic control. Given the importance of the Kucha region in the development and transmission of Buddhism along the ancient Silk Road, scholars believe that the [DUNHUANG](#) murals were influenced by the art of Kizil. Although no statuary remains at the Kizil site, many wall paintings are preserved depicting events from the life of the Buddha; indeed, Kizil is second only to the Mogao caves of Dunhuang in the number of wall paintings it contains. The layout of many of the intact caves includes a central pillar, forming both a front chamber and a rear chamber, which often contains a [PARINIRVĀNA](#) scene. The first modern studies of the site were conducted in the early twentieth century by the German explorers Alfred Grünwedel and Alfred von Le Coq. The nearby site of Kumtura contains over a hundred caves, forty of which contain painted murals or inscriptions. Other cave sites near Kucha include Subashi, Kizilgaha, and Simsim.

kleśa. (P. kilesa; T. nyon mongs; C. fannaο; J. bonnō; K. pōnnoe 煩惱). In Sanskrit, “afflictions,” or “defilements”; mental factors that disturb the mind and incite unwholesome ([AKUŚALA](#)) deeds of body, speech, and/or mind. In order to be liberated from rebirth, the kleśa and the actions they incite must be controlled and finally eliminated. A typical standard list of kleśa includes the so-called three poisons ([TRIVISA](#)) of greed or sensuality ([RĀGA](#) or [LOBHA](#)), hatred or aversion ([DVESA](#)), and delusion ([MOHA](#)). According to the [SARVĀSTIVĀDA](#) school,

there are six “fundamental afflictions” or “defiled factors of wide extent” ([KLEŚAMAHĀBHŪMIKA](#)) that are associated with all defiled thoughts: delusion ([MOHA](#)), heedlessness ([PRAMĀDA](#)), lassitude ([KAUSĪDYA](#)), lack of faith ([ĀŚRADDHYA](#)), sloth ([STYĀNA](#)), and restlessness ([AUDDHATYA](#)). There are similarly ten “defiled factors of limited extent” (upakleśaparīttabhūmika), which may be associated with defiled thoughts: anger ([KRODHA](#)), hypocrisy ([MRAKSA](#)), selfishness ([MĀTSARYA](#)), envy ([ĪRSYĀ](#)), agitation or competition ([PRADĀSA](#)), harmfulness ([VIHIMSĀ](#)), enmity ([UPANĀHA](#)), trickery or guile ([ŚĀTHYA](#)), and arrogance ([MADA](#)). In the [YOGĀCĀRA](#) school, there are typically enumerated six fundamental kleśa—greed (rāga), aversion ([PRATIGHA](#)), stupidity (mūḍhi), pride ([MĀNA](#)), skeptical doubt ([VICIKITSĀ](#)), and the five wrong views ([DRSTI](#)), viz., (1) presuming that the five aggregates ([SKANDHA](#)) possess a self, (2) the two extreme views of eternalism and annihilationism, (3) rejection of the law of causality, (4) maintaining wrong views and presuming them superior to all other views, (5) misconceiving wrong types of conduct or morality to be conducive to enlightenment—and twenty derivative ones ([UPAKLEŚA](#)).

[kleśamahābhūmika](#). (T. nyon mongs chen po'i sa; C. da fannaodi fa; J. daibonnōjihō; K. tae pōnnoeji pōp 大煩惱地法). In Sanskrit, “defiled factors of wide extent”; the six principal factors ([DHARMA](#)) that ground all afflictions ([KLEŚA](#)) or defiled activities, according to the [SARVĀSTIVĀDA ABHIDHARMA](#): (1) confusion ([MOHA](#)), (2) heedlessness ([APRAMĀDA](#)), (3) lassitude ([KAUSĪDYA](#)), (4) lack of faith ([ĀŚRADDHYA](#)), (5) sloth ([STYĀNA](#)), and (6) restlessness ([AUDDHATYA](#)). See [KLEŚA](#).

[kleśāvarana](#). (T. nyon mongs kyi sgrib pa; C. fannaο zhang; J. bonnōshō; K. pōnnoe chang 煩惱障). In Sanskrit, “afflictive obstructions,” or, more literally, the obstructions that are the afflictions. This is the first of the two categories of obstructions ([ĀVARANA](#)), together with the cognitive or noetic obstructions ([JÑEYĀVARANA](#)), that the [MAHĀYĀNA](#) holds must be overcome in order to complete the [BODHISATTVA](#) path and achieve buddhahood. In the [YOGĀCĀRA](#) system, based on the mistakes in understanding generated by the cognitive obstructions, the individual engages in defiled actions, such as anger, envy, etc., which constitute the afflictive obstructions. The afflictive obstructions may be removed by followers of the [ŚRĀVAKA](#), [PRATYEKABUDDHA](#), and beginning [BODHISATTVA](#) paths, by applying various antidotes or counteragents to the afflictions ([KLEŚA](#)); overcoming these types of obstructions will lead to freedom

from further rebirth (and specifically the [PARICCHEDAJARĀMARANA](#), or “determinative birth-and-death”). The cognitive obstructions, however, can be overcome only by advanced bodhisattvas who aspire instead to achieve buddhahood.

[klistamanas](#). [alt. [kliṣṭamanovijñāna](#)] (T. [nyon yid](#); C. [ranmona/mona shi](#); J. [zenmana/manashiki](#); K. [yōmmalla/malla sik](#) 染未那/未那識). In Sanskrit, “afflicted mentality”; refers to the seventh of the eight categories of consciousnesses set forth in the [YOGĀCĀRA](#) school and enumerated by [ASAṄGA](#). The first six consciousnesses are the six sensory consciousnesses of eye, ear, nose, tongue, body, and mentality; the eighth is the foundational consciousness, the “storehouse consciousness” ([ALAYAVIJÑĀNA](#)), which serves as the repository of the seeds ([BĪJA](#)) of past actions. The seventh “afflicted mentality” observes the foundational consciousness and mistakenly conceives it to be the self. Upon the achievement of buddhahood, the afflicted mentality is transformed into the wisdom of equality ([SAMATĀJÑĀNA](#)).

[kliṣṭamanovijñāna](#). (S). See [KLISTAMANAS](#).

[klong chen snying thig](#). ([longchen nyingtik](#)). In Tibetan, the “Heart Essence of the Great Expanse,” one of the most important cycles of “treasure texts” ([GTER MA](#)) of the [RNYING MA](#) sect of Tibetan Buddhism. They are [RDZOGS CHEN](#) teachings revealed by [’JIGS MED GLING PA](#) in 1757. The teachings were a [dgongs gter](#), or “mind treasure,” discovered by him in his own mind. They are considered to embody the two major [snying thig](#) lineages, the [BI MA SNYING THIG](#) brought to Tibet by [VIMALAMITRA](#) and the [MKHA’ ’GRO SNYING THIG](#) brought to Tibet by [PADMASAMBHAVA](#). The revelation eventually encompassed three volumes, including dozens of individual treatises, [SĀDHANAS](#), and prayers.

[Klong chen rab ’byams](#). (Longchen Rabjam) (1308–1364). Also known as [Klong chen pa](#) (Longchenpa). An esteemed master and scholar of the [RNYING MA](#) sect of Tibetan Buddhism known especially for his promulgation of [RDZOGS CHEN](#). [Klong chen pa](#) is believed to be the direct reincarnation of [PADMA LAS ’BREL RTSAL](#), who revealed the *Rdzogs chen snying thig*, and also of [PADMA GSAL](#), who first received those teachings from the Indian master [PADMASAMBHAVA](#). Born in the central Tibetan region of [G.yo ru](#) (Yoru), he received ordination at the age of twelve. At nineteen, he entered [GSANG PHU NE’U THOG](#) monastery where he engaged in a wide range of studies, including philosophy, numerous

systems of [SŪTRA](#) and [TANTRA](#), and the traditional Buddhist sciences, including grammar and poetics. Having trained under masters as diverse as the abbots of Gsang phu ne'u thog and the third [KARMA PA](#), [RANG 'BYUNG RDO RJE](#), he achieved great scholarly mastery of numerous traditions, including the Rnying ma, [SA SKYA](#), and [BKA' BRGYUD](#) sects. However, Klong chen pa quickly became disillusioned at the arrogance and pretension of many scholars of his day, and in his mid-twenties gave up the monastery to pursue the life of a wandering ascetic. At twenty-nine, he met the great yogin Kumārarāja at [BSAM YAS](#) monastery, who accepted him as a disciple and transmitted the three classes of rdzogs chen (rdzogs chen sde gsum), a corpus of materials that would become a fundamental part of Klong chen pa's later writings and teaching career. Klong chen pa lived during a period of great political change in Tibet, as the center of political authority and power shifted from Sa skya to the Phag mo gru pa hierarchs. Having fallen out of favor with the new potentate, [TAI SI TU](#) Byang chub rgyal mtshan (Jangchub Gyaltzen, 1302–1364), he was forced to spend some ten years as a political exile in the Bum thang region of Bhutan, where he founded eight monasteries including Thar pa gling (Tarpa ling). Among the most important and well-known works in Klong chen pa's extensive literary corpus are his redaction of the meditation and ritual manuals of the heart essence ([SNYING THIG](#)), composed mainly in the hermitage of [GANGS RI THOD DKAR](#). Other important works include his exegesis on the theory and practice of rdzogs chen, such as the [MDZOD BDUN](#) (“seven treasures”) and the [NGAL GSO SKOR GSUM](#) (“Trilogy on Rest”). Klong chen pa's writings are renowned for their poetic style and refinement. They formed the basis for a revitalization of Rnying ma doctrine led by the eighteenth-century visionary and treasure revealer ([GTER STON](#)) ['JIGS MED GLING PA](#).

[klong sde](#). (long de). In Tibetan, the “expanse class,” one of the three classes of [ATIYOGA](#) in the [RNYING MA](#) sect of Tibetan Buddhism. The atiyoga or [RDZOGS CHEN](#) teachings are traditionally divided into three classes: the mind section ([SEMS SDE](#)), which emphasizes the luminosity of the mind ([RIG PA](#)) in its natural state; the expanse section, which emphasizes the expansive or spacious mind in its natural state; and the instruction section ([MAN NGAG SDE](#)), which emphasizes the indivisibility of luminosity and expansiveness. The root tantra of the klong sde is traditionally said to be the *Klong chen rab 'byams rgyal po'i rgyud*, a long text in which the term klong figures prominently. Some of the texts ascribed to this class may date from as early as the ninth century, but the genre seems to

have taken shape in the twelfth century; an important tantra for this class is the *Rdo rje sems dpanam mkha'i mtha' dang mnyam pa'i rgyud chen po*, where an important theme is the four signs (brda). According to tradition, klong sde is traced back to the late eighth-century Tibetan master [VAIROCANA](#).

klu. (lu). A class of Tibetan pre-Buddhist subterranean deities associated with water and infectious diseases such as leprosy. With the arrival of Buddhism, the klu were subsumed with the Indian [NĀGA](#). They have the head and torso of humans but the tails of snakes. The klu are possibly related to the Chinese long, or dragon: long fly in the air, klu remain submerged in subterranean lakes, but both are associated with water. The klu must be propitiated before the construction of monasteries and other buildings in Tibet, in rituals that involve both peaceful offerings and displays of violent power. The klu combine with other classes of Tibetan deities to create composite entities: klu bdud, klu sman, klu btsan, klu srin, and the like.

[Klu'i rgyal mtshan](#). (Lui Gyaltsen). (fl. late eighth–early ninth century) A translator ([LO TSĀ BA](#)) during the early spread of Buddhism in Tibet. Perhaps a native of Spiti, his clan name is Cog ro. He is known for his collaboration with Jinamitra in translating basic [VINAYA](#) texts into Tibetan and for his collaboration with [JÑĀNAGARBHA](#) on a translation of [BHĀVAVIVEKA](#)'s [PRAJÑĀPRADĪPA](#). See also [YE SHES SDE](#); [DPAL BRTSEGS](#).

[Klu khang](#). (Lukang). In Tibetan, the “[NĀGA](#) Temple”; a small temple located in the middle of an artificial lake behind the [PO TA LA](#) Palace in [LHA SA](#), Tibet, reached by a stone bridge. Its full name is Rdzong rgyab klu khang, the “Nāga Temple Behind the Fortress [i.e., the Po ta la].” According to legend, the regent of the fifth [DALAI LAMA](#), [SDE SRID SANGS RGYAS RGYA MTSHO](#), negotiated an agreement with the king of the nāgas at the time of construction of the Po ta la, receiving the king's permission to dig up the soil in return for building a temple in honor of the nāga king in the center of the lake that formed in the pit from groundwater. The temple was constructed around 1700 during the reign of the sixth Dalai Lama, who is said to have used the upper chamber for romantic assignations. The temple is a small three-storied pavilion in the shape of a [MANDALA](#), with doors in each of the cardinal directions. The temple was rebuilt by the eighth Dalai Lama in 1791 and restored by the thirteenth Dalai Lama, who used it as a retreat. The temple is renowned for a magnificent set of murals on the second and third floors. The murals depict the eighty-four [MAHĀSIDDHAS](#),

[PADMASAMBHAVA](#) and his chief disciples, illustrations of the human body drawn from Tibetan medicine, a wide array of [RDZOGS CHEN](#) practices, scenes from the life of the renowned treasure revealer ([GTER STON](#)) [PADMA GLING PA](#), and the peaceful and wrathful deities of the [BAR DO](#).

koan. Romanization of the Japanese term *kōan*, now entered into the English language to refer (not quite correctly) to an impenetrable or even nonsensical “question” or “paradox.” See [GONG’AN](#).

Kōben. (J) (高辨/弁). See [MYŌE KŌBEN](#).

Kōbō Daishi. (J) (弘法大師). See [KŪKAI](#).

[Ko brag pa Bsod nams rgyal mtshan.](#) (Godrakpa Sönam Gyaltzen) (1170–1249). A meditator of uncertain lineage, but best known for instruction manuals on the [SA SKYALAM ’BRAS](#) (path and result) practice; his instructions are representative of the *mo rgyud* (female transmission) of the Ma gcig Zhwa ma (1062–1149) line; he is also known for a lineage of the [KĀLACAKRATANTRA](#) six-branched yoga (*ṣaḍaṅgayoga*). One of his teachers, Chos kyi gzi brjid (1164–1224), was a student of [’JIG RTEN MGON PO](#), the founder of the [’BRI GUNG BKA’ BRGYUD](#) subsect. He is known for his *Gegs sel ha dmigs rgya mtsho* and a collection of songs.

[Kōfukuji.](#) (興福寺). In Japanese, “Flourishing Merit Monastery”; an ancient monastery in Nara, Japan, which is currently the headquarters (*honzan*) of the Hossō (see [YOGĀCĀRA](#)) tradition. Kōfukuji was first established in Yamashina (present-day Kyōto) in 669 as the merit cloister of the Fujiwara clan and was moved to the old capital of Fujiwarakyō in 672. When the new capital Heijōkyō was established, Kōfukuji was moved to its current location in Nara. After the death of Fujiwara no Fuhito (659–720), maternal grandfather of Emperor Shōmu (r. 724–749), Kōfukuji was formally designated an official state monastery. Under Fujiwara patronage, Kōfukuji came to dominate the early Buddhist community in Japan and has been traditionally considered one of the six great temples of Nara. Kōfukuji was destroyed during the war between the Taira and Minamoto clans in the twelfth century, and there were periodic attempts to rebuild the temple. Following the Meiji persecution of Buddhism ([HAIBUTSU KISHAKU](#)), major restorations on the monasteries were made. Kōfukuji is famous for its exquisite five-story pagoda and ancient icons, which testify to the

aesthetic glory of Nara Buddhism.

Kōhō Kennichi. (高峰顯日) (1241–1316). Japanese [ZEN](#) master of the RINZAI [ZEN](#) tradition, who is known to have been the son of Emperor Gosaga (r. 1242–1246). Kennichi was ordained by the Japanese monk [ENNI BEN'EN](#) at the monastery of Tōfukuji. In 1260, when the émigré [CHAN](#) master Wu'an Puning (1197–1276) was appointed abbot of the monastery of [KENCHŌJI](#) in Kamakura, Kennichi visited the master and became his student. Later, his patrons built the monastery of Unganji in Nasu and invited him to serve as abbot. In 1279, he also visited the émigré Chan master [WUXUE ZUYUAN](#) and continued to study under him at Kenchōji. Kennichi eventually received transmission ([YINKE](#)) from Wuxue and inherited his Rinzai ([LINJI ZONG](#)) lineage. With the support of the powerful regents Hōjō Sadatoki (1271–1311) and Takatoki (1303–1333), Kennichi also came to serve as abbot of the influential monasteries Jōmyōji, Manjuji, and Kenchōji. See also [MUGAI NYODAI](#).

kokubunji. (國分寺). In Japanese, lit. “nationally distributed monasteries”; a network of centrally controlled provincial monasteries established during the Nara and Heian periods in Japan. During the reign of Emperor Shōmu (r. 724–749), he ordered that monasteries be established in every province of Japan, which would each have seven-story pagodas enshrining copies of the [SADDHARMAPUNDIRĪKASŪTRA](#) (“Lotus Sūtra”). In 741, these provincial monasteries were organized into a national network as a means of bringing local power centers under the control of a centralized state government. The nunneries or convents that were also established as part of this same strategy were known as kokubunniji. The first headquarters of this kokubunji system was [DAIANJI](#), which was based on the capital of Nara; the headquarters later moved to the major Kegon ([HUAYAN](#)) monastery of [TŌDAJI](#), which was constructed at Shōmu’s behest. By the time of Shōmu’s death in 756, there were at least twenty of these provincial monasteries already established.

Kondāne. Early Buddhist monastic cave site located in western India, which dates from the early decades of the first century CE. The highly ornamented, four-story facade of its [CAITYA](#) hall has projecting balconies supported by curved brackets and deeply recessed windows with latticed screens. Although carved in stone, the architectural form is modeled after earlier wooden designs and accords well with the real woodwork of the main arch, fragments of which are still in situ. This style of architecture is related to the slightly earlier hall at [BHĀJĀ](#). In

the third row of balconies are panels depicting pairs of dancers, who display ease of movement and considerable rhythmic grace. In this cave, there is also an inscription in [BRAHMĪ](#) script that records the name of one Balaka, a student of Kanha (or Kṛṣṇa), who constructed the cave. The record is carved near the head of a statue that probably represents Balaka.

[kongji lingzhi](#). (J. kūjaku ryōchi; K. kongjŏk yŏngji 空寂靈知). In Chinese, “void and calm, numinous awareness.” See [LINGZHI](#).

[kong jia zhong sanguan](#). (C) (J. kū-ge-chū sangan; K. kong ka chung samgwan 空假中三觀). See [SANGUAN](#).

[Kongmu zhang](#). (J. Kumokushō; K. Kongmok chang 孔目章). In Chinese, “Items and Chapters”; the usual abbreviated title of the *Huayan jingnei zhangmendeng za kongmu zhang* composed by the [HUAYAN](#) master [ZHIYAN](#). The *Kongmu zhang* is essentially a four-roll commentary on [BUDDHABHADRA](#)’s sixty-roll translation of the [AVATAMSAKASŪTRA](#), which discusses over 140 items and chapters from the sūtra. Zhiyan’s unique tenet classification schema ([JIAOXIANG PANSHI](#)) and his teachings on the one vehicle (C. yisheng; S. [EKAYĀNA](#)) in the *Kongmu zhang* have influenced other Huayan exegetes such as [FAZANG](#).

[kongōkai](#). (S. vajradhātu; T. rdo rje dbyings; C. jingang jie; K. kūngang kye 金剛界). In Japanese, “diamond realm” or “diamond world”; one of the two principal diagrams ([MANDALA](#)) used in the esoteric traditions of Japan (see [MIKKYŌ](#)), along with the [TAIZŌKAI](#) (“womb realm”); the Sanskrit reconstruction for this diagram is *vajradhātumaṇḍala. The teachings of the kongōkai are said to derive in part from two seminal scriptures of the esoteric traditions, the [MAHĀVAIROCANĀBHISAMBODHISŪTRA](#) and [SARVATATHĀGATATATTVASAMGRAHA](#), but its construction as a maṇḍala relies on no known written instructions and more likely evolved pictorially. [KŪKAI](#) (774–835), the founder of the [SHINGONSHŪ](#), used the kongōkai maṇḍala in combination with the taizōkai maṇḍala in a variety of esoteric rituals designed to awaken the individual adept. However, Japanese [TENDAI](#) Buddhism as well as various [SHUGENDŌ](#) complexes also heavily incorporated their own rituals into the two maṇḍalas. ¶ The kongōkai consists of nine smaller, nearly square-shaped maṇḍalas, or “assemblies” (J. e), some of which are sometimes isolated for worship and visualized independently. It is said that, by visualizing the maṇḍala, the kongōkai ultimately demonstrates that the universe as a whole is coextensive with the

body of the [DHARMAKĀYA](#) or cosmic buddha, Mahāvairocana (SEE [VAIROCANA](#)). In the center of the maṇḍala, Mahāvairocana sits on a lotus flower, surrounded by four female figures, who symbolize the four perfections. Immediately outside are four discs, each encompassing a directional buddha: [AMITĀBHA](#) to the west, [AKSOBHYA](#) to the east, [AMOGHASIDDHI](#) to the north, and [RATNASAMBHAVA](#) to the south. Each is, in turn, surrounded by four [BODHISATTVAS](#). This ensemble of buddhas, bodhisattvas, and female figures is repeated in the first four maṇḍala of outward trajectory and its structure repeated in the lower six. Below the center maṇḍala is the maṇḍala of physical objects, each representing the buddhas and bodhisattvas. The next one in outward trajectory are figures residing inside a three-pointed vajra, representing the sounds of the world. The fourth maṇḍala displays all figures (excluding buddhas) in their female form, each exhibiting specific bodily movements. Arriving next at the upper-left maṇḍala, the group is reduced to Mahāvairocana and four surrounding bodhisattvas. In the top-center maṇḍala sits only a large Mahāvairocana. The last three maṇḍalas in the outward spiral shift toward worldly affairs. The top right reveals passions and desire. In the next to last are horrific demons and deities. The last maṇḍala represents consciousness. ¶ Looking at the depictions in the kongōkai individually, the nine smaller maṇḍalas are arrayed in a clockwise direction as follows. (1) The perfected-body assembly (jōjinne) is the central assembly of the entire maṇḍala. In the center of this assembly sits Mahāvairocana, displaying the gesture ([MUDRĀ](#)) of the wisdom fist ([BODHYAṄGIMUDRĀ](#); J. chicken-in), surrounded by the four directional buddhas (Akṣobhya, Ratnasambhava, Amitābha, and Amoghasiddhi), who embody four aspects of Mahāvairocana's wisdom. Each of these buddhas, including Mahāvairocana, is in turn attended by four bodhisattvas. (2) The [SAMAYA](#) assembly (J. sammayae; S. samayamaṇḍala) replaces the buddhas and bodhisattvas with physical objects, such as [VAJRAS](#) and lotuses. (3) The subtle assembly (J. misaime; S. sūkṣmamaṇḍala) signifies the adamant wisdom of Mahāvairocana. (4) In the offerings assembly (J. kuyō-e; S. pūjāmaṇḍala), bodhisattvas make offerings to the five buddhas. (5) The four-mudrās assembly (J. shiinne; S. caturmudrāmaṇḍala) depicts only Mahāvairocana and four bodhisattvas. (6) The single-mudrā assembly (J. ichiinne; S. ekamudrāmaṇḍala) represents Mahāvairocana sitting alone in the gesture of wisdom. (7) In the guiding-principle assembly (J. rishu-e; S. nayamaṇḍala), [VAJRASATTVA](#) sits at the center, surrounded by four female figures, representing craving, physical contact, sexual desire, and fulfillment. (8) In the assembly of the descent into the three realms of existence (J. gōzanze-e; S.

trailokyavijayamaṇḍala), Vajrasattva assumes the ferocious appearance of Gōsanze ([TRAILOKYAVIJAYA](#)). (9) The samaya of the descent into the three-realms assembly (J. gōzanzesammayae; S. trailokyavijayasamaya maṇḍala) has the same structure as the previous one. ¶ In one distinctively Shingon usage, the maṇḍala was placed in the east and the kongōkai stood in juxtaposition across from it. The initiate would then invite all buddhas, bodhisattvas, and divinities into the sacred space, invoking all of their power and ultimately unifying with them. In [SHUGENDŌ](#), the two maṇḍalas were often spatially superimposed over mountain geography or worn as robes on the practitioner while entering the mountain. See [TAIZŌKAI](#).

[Kongōsan](#). (J) (金剛山). In Japanese, “Diamond Mountain(s)”; the highest peak in the [KATSURAGISAN](#) region, on the border between the present-day Japanese prefectures of Nara and Ōsaka. The mountain was likely visited by [EN NO OZUNU](#), the putative founder of the [SHUGENDŌ](#) school of Japanese esoterism, who spent three decades practicing in the Katsuragi mountains. Its name may refer to the belief that En no Ozunu was a manifestation of Hōki Bosatsu ([DHARMODGATA](#)), who resided in the Diamond Mountains (see [KÜMGANGSAN](#)), according to the account in the [AVATAMSAKASŪTRA](#).

[Kong sprul mdzod lnga](#). (Kongtrül dzö nga). In Tibetan, lit. “five treasuries of Kong sprul”; the name for a collection of five encyclopedic works composed by the Tibetan author [’JAM MGON KONG SPRUL BLO GROS MTHA’ YAS](#). Kong sprul himself classified his writings in more than ninety volumes into a scheme of five “treasuries,” in order to preserve and systematize numerous teachings that were in danger of being forgotten or lost. These collections of works, which belonged primarily to the [BKA’ BRGYUD](#) and [RNYING MA](#) sects of Tibetan Buddhism, are now regarded as a primary source for the so-called nonsectarian ([RIS MED](#)) movement of the late nineteenth century and as outstanding literary achievements. The five treasuries are (1) [SHES BYA KUN KHYAB MDZOD](#) (“Treasury Embracing All Knowledge”); (2) [BKA’ BRGYUD SNGAGS MDZOD](#) (“Treasury of Bka’ brgyud Mantra”); (3) [RIN CHEN GTER MDZOD](#) (“Treasury of Precious Treasure Teachings”); (4) [GDAMS NGAG MDZOD](#) (“Treasury of Practical Instructions”); and (5) [THUN MONG MA YIN PA’I MDZOD](#) (“Uncommon Treasury”).

[Konjaku monogatarishū](#). (今昔物語集). In Japanese, “Tales of Times Now Past”; a collection of Buddhist tales compiled by the Japanese monk Minamoto no Takakuni (1004–1077). The *Konjaku monogatarishū* is claimed to have originally been composed in thirty-one rolls, but rolls eight, eighteen, and twenty-one are not extant. Rolls one through five are Buddhist tales from India, six through ten from China, and eleven through twenty from Japan. The *Konjaku monogatarishū* contains stories about the life of the Buddha and the events that occurred after his [PARINIRVĀNA](#), the transmission of Buddhism to China, the merits that accrue from worshipping the three jewels ([RATNATRAYA](#)), and moralistic tales of filial piety and karmic retribution. The tales of Japan provide a narrative of the transmission of Buddhism and the various Chinese schools to Japan, [SHŌTOKU TAISHI](#)’s support of Buddhism, the establishment of Buddhist monasteries, the merit of constructing Buddhist images and studying [SŪTRAS](#),

and the lives of eminent Japanese monks. Fascicles twenty-two to thirty-one deal with worldly tales about the Fujiwara clan, arts, battles, and ghosts.

[Koryŏguk sinjo taejang kyojŏng pyŏllok](#). (高麗國新雕大藏校正別錄). In Korean, “Supplementary Record of Collation Notes to the New Carving of the Great Canon of the Koryŏ Kingdom”; a thirty-roll compilation of editorial notes to the carving of the second edition of the Korean Buddhist canon (see [KORYŌ TAEJANGGYŎNG](#)), compiled in 1247 by the monk-editor Sugi (d.u.) and his editorial team. See [SUGI](#).

[Koryŏ taejanggyŏng](#). (高麗大藏經). In Korean, “The Koryŏ [Dynasty] Scriptures of the Great Repository”; popularly known in Korean as the [P’ALMAN TAEJANGGYŎNG](#) (“The Scriptures of the Great Repository in Eighty Thousand [Xylographs]”); referring specifically to the second of the two xylographic canons produced during the Koryŏ dynasty (937–1392) and widely regarded as one of the greatest cultural achievements of the Korean Buddhist tradition. The first Koryŏ edition of the canon was carved between 1011 and c. 1087 but was destroyed in 1234 during the Mongol invasion of the Korean peninsula. The second edition was carved between 1236 and 1251 and included some 1,514 texts in 6,815 rolls, all carved on 81,258 individual woodblocks, which are still housed today in the Scriptural Repository Hall at the monastery of [HAEINSA](#). This massive project was carried out at royal behest by its general editor [SUGI](#) (d.u.) and an army of thousands of scholars and craftsmen. The court supported this project because of the canon’s potential value in serving as an apotropaic talisman, which would prompt the various buddhas, as well as the divinities ([DEVA](#)) in the heaven of the thirty-three [divinities] ([TRĀYĀSTRIMŚĀ](#)), to ward off foreign invaders and bring peace to the kingdom. By protecting Buddhism through a state project to preserve its canonical teachings, therefore, Buddhism would in turn protect the state (viz., “state-protection Buddhism,” K. hoguk pulgyo, C. [HUGUO FOJIAO](#)). Sugi left thirty rolls (kwŏn) of detailed collation notes about the editorial procedures he and his team followed in compiling the new canon, the [KORYŌGUK SINJO TAÉJANG KYOJŎNG PYŎLLOK](#) (s.v.). Sugi’s notes make clear that the second Koryŏ edition followed the Song Kaibao and first Koryŏ xylographic canons in its style and format but drew its readings in large measure from the Khitan Buddhist canon compiled by the Liao dynasty in the north of China. The xylographs typically include twenty-three lines of fourteen characters apiece, with text carved on both sides of the block. The second Koryŏ canon is

arranged with pride of place given to texts from the [MAHĀYĀNA](#) tradition:

1. Major Mahāyāna scriptures (K 1–548), beginning with the [PRAJÑĀPĀRAMITĀ](#), followed by the [RATNAKŪTASŪTRA](#), and continuing through all the major Mahāyāna sūtras and sūtra collections, from the [AVATAMSAKA](#) to the [PARINIRVĀNA](#), [SAMDHINIRMOCAṆA](#), and [LAṆKĀVATĀRA](#)
2. Mahāyāna śāstras and scriptural commentaries, beginning with the [DAZHIDU LUN](#) (**Mahāprajñāpāramitāsāstra*) (K 549–646)
3. [ĀGAMA](#) collections and “hīnayāna” sūtras (K 647–888)
4. [VINAYA](#) materials (K 889–937)
5. [ABHIDHARMA](#) texts (K 938–977)
6. [AVADĀNA](#) and [JĀTAKA](#) tales and miscellaneous materials (K 978–1034)
7. Biographies of individual monks, starting with [AŚVAGHOSA](#), [NĀGĀRJUNA](#), *etc.* (K 1035–1049)
8. Rosters of numerical lists, scriptural catalogues (K 1050–1064)
9. Travelogues and Biographies of Eminent Monks anthologies (K 1065–1086)
10. Miscellaneous sūtras, [DHĀRAṆĪ](#) scriptures, and dhāraṇī anthologies (K 1087–1242)
11. Other miscellaneous sūtras (K 1243–1496)
12. References, Chan anthologies, and indigenous Korean works (K 1497–1514)

Because this second Koryŏ canon was renowned throughout East Asia for its scholarly accuracy, it was used as the basis of the modern Japanese [TAISHŌ SHINSHŪ DAIZŌKYŌ](#) (“New Edition of the Buddhist Canon Compiled during the Taishō Reign Era”), edited by [TAKAKUSU JUNJIRO](#) and Watanabe Kaikyoku, published using movable-type printing between 1924 and 1935, which has become the standard reference source for East Asian Buddhist materials. See also [DAZANGJING](#).

Kośala. (P. Kosala; T. Ko sa la; C. Jiaosaluo guo; J. Kyōsatsura koku; K. Kyosalla kuk 憍薩羅國). Name of an important Indian kingdom during the Buddha’s time, located to the northeast of the Indian subcontinent, in the foothills of modern-day Nepal; also spelled Kosala and Kauśala. Kośala was located to the south of the region of the [ŚĀKYA](#) tribe, the Buddha’s native clan, and exerted some political influence over its smaller neighbor. Along with [MAGADHA](#), Kośala was one of the two strongest kingdoms at the time of the Buddha and had its capital at [ŚRĀVASTĪ](#). The Buddha spent much of his time teaching in Śrāvastī, especially in the [JETAVANA](#) monastery, which was located on its outskirts. The Kośala kingdom was eventually conquered by King [AJĀTAŚATRU](#) of Magadha. Kośala is also one of the twenty-four sacred sites associated with the [CAKRASAMVARATANTRA](#). See [PĪTHA](#).

Kosambiyasutta. (C. Changshou; J. Chōju; K. Changsu 長壽). In Pāli, “Discourse to the Kosambians”; the forty-eighth sutta contained in the [MAJJHIMANIKĀYA](#) (scholars had presumed that an unidentified recension, perhaps [MAHĀSĀMGHIKA](#) or [DHARMAGUPTAKA](#), appears in the Chinese translation of the [EKOTTARĀGAMA](#), but this putative affiliation seems to be in error); delivered by the Buddha to a gathering of monks in Ghosita’s park at Kosambī (S. Kauśambī). The monks living in Kosambī had fallen into dispute over trivial matters, and the Buddha admonishes them to make loving-kindness (mettā; S. [MAITRĪ](#)) the basis of their mutual relations. He describes six principles of cordiality that contribute to the cohesion, harmony, and unity of the [SAMGHA](#); viz., (1) bodily acts of loving-kindness, (2) verbal acts of loving-kindness, (3) mental acts of loving-kindness, (4) sharing and cooperation, (5) public and private virtue conducive to meditative concentration, and (6) public and private virtue conducive to enlightenment and liberation. The Buddha then describes seven knowledges possessed by the stream-enterer (sotāpanna; S. [SROTAĀPANNA](#)). The stream-enterer knows that (1) his mind is well prepared for awakening to the truth, and (2) his mind is serene; (3) the Buddha’s teachings are not contained in the wrong views of other teachers, and (4) he confesses his misdeeds and makes amends for future restraint; and (5) he completes the work that is to be done for the holy life. Furthermore, he knows (6) the strength of one who adheres to right view and (7) that he possesses that strength.

Kotani Kimi. (小谷喜美) (1901–1971). Cofounder along with [KUBO KAKUTARŌ](#) (1892–1944) of the [REIYŪKAI](#) school of modern Japanese Buddhism, which

derives from the teachings of the [NICHIRENSHŪ](#) school of Buddhism. Kotani Kimi was the wife of Kotani Yasukichi, Kubo's elder brother. She and her husband became two of the earliest and most active proponents of Reiyūkai. After her husband died, she became the first official president of the group in 1930, and after Kubo's death in 1944, she ran the organization successfully on her own, although many splinter groups formed in reaction to her leadership. Kotani focused on the [SADDHARMAPUNDIRĪKASŪTRA](#) ("Lotus Sūtra"), but because ancestor worship was her primary religious practice, she used the sūtra rather idiosyncratically as a path to the spiritual realm. Kotani also focused the group's energies on social welfare programs, and especially youth education, for she felt that Japan's rapid modernization was neglecting the needs of the youth.

koṭi. (T. mtha'; C. juzhi; J. kutei; K. kuji 俱胝). In Sanskrit and Pāli, lit. the "end" of a scale and thus effectively referring to any large number; often translated by the Indian numerical term "crore," and variously numbering as one hundred thousand, ten million, one hundred million, or an infinity. Note this same sense of koṭi as "end" in various Sanskrit and Pāli compounds, such as [BHŪTAKOTI](#), lit. "end of reality," and thus "true end" or "ultimate state." The term can also have a negative connotation in the sense of "extreme," as in the case of practice or philosophical position far from the moderate. For its use in [MADHYAMAKA](#) philosophy, see [CATUSKOTI](#).

Kōtokuin. (高德院). In Japanese, "High Virtue Cloister"; located in Kamakura, Kanagawa prefecture, Japan. Kōtokuin is best known as the home of the colossal buddha image of Kamakura (see [KAMAKURA DAIBUTSU](#)), a huge bronze statue of [AMITĀBHA](#) Buddha; as a consequence, the temple is often called Daibutsuji. The temple is associated with the Jōdoshū, or Pure Land sect. After one crosses the threshold of the entrance gate into the temple compound, the site appears more like a park dedicated to the colossal buddha image than a temple; in fact, the real Kōtokuin temple buildings are now located to the east of the image and are off-limits to most tourists. Toward the back of the temple is now located the Kangetsudō, or Moon-Viewing Hall, which was brought from Korea in 1934; it enshrines an Edo-period (1603–1868) statue of Kannon ([AVALOKITEŚVARA](#)). To the right of the Moon-Viewing Hall is a stone stele on which is inscribed a famous tanka poem by Akiko Yosano (1878–1942) describing her impression on first seeing the Kamakura Daibutsu (although she mistakenly presumes she is viewing [ŚĀKYAMUNI](#), not Amitābha).

kōun ryūsui. (C. xingyun liushui; K. haengun yusu 行雲流水). In Japanese, “moving clouds and flowing water”; the phrase from which the term “clouds and water” (J. unsui; C. yunshui; K. unsu) derives, referring to an itinerant Zen monk in training. See [YUNSHUI](#).

Kounsa. (孤雲寺). In Korean, “Solitary Cloud Monastery”; the sixteenth district monastery ([PONSA](#)) of the contemporary [CHOGYE CHONG](#) of Korean Buddhism, located on Mount Tŭngun in North Kyōngsang province. The monastery was founded in 681 by great Hwaōm (C. [HUAYAN](#)) master [ŬISANG](#) (625–702), during the reign of the Silla king Sinmun (r. 681–692). The original Chinese characters for Kounsa meant “High Cloud Monastery,” but during the Unified Silla period, the monastery adopted the homophonous name “Solitary Cloud,” after the pen name of the famous literatus Ch’oe Ch’iwŏn (b. 857). During the reign of King Hŏn’gang (r. 875–886), a famous stone image of [BHAIJAGURU](#) was enshrined at the monastery. During the Koryŏ dynasty, the monk Ch’ŏnhae (fl. c. 1018) is said to have seen a Kwanŭm ([AVALOKITEŚVARA](#)) statue in a dream; later, he found an identical image on Mount Taehŭng in Songdo and enshrined it in the Kŭngnak chŏn at Kounsa. The monastery was rebuilt and repaired several times during the Chosŏn period. The large-scale rebuilding project that began in 1695 and continued through the eighteenth century helped raise the monastery’s overall status within the ecclesia. Kounsa suffered severe damage from fires that broke out in 1803 and 1835, but the monastery was soon reconstructed. During the Japanese colonial period (1910–1945), Kounsa became one of thirty-one head monasteries (ponsa) and managed fifty-four branch monasteries ([MALSA](#)).

koutou Chan. (J. kutōzen/kōtōzen; K. kudu Sŏn 口頭禪). In Chinese, lit. “mouth Chan”; the [CHAN](#) that is practiced only through words, referring to practitioners who are versed in Chan theory but have not comprehended that theory themselves through their meditation. This Chan Buddhist expression refers to those practitioners who have merely memorized the pithy sayings and [GONG’AN](#) dialogues of the patriarchs and masters ([ZUSHI](#)) of the Chan school without actually understanding them or putting them into practice. Cf. [YINGWU CHAN](#).

Kōyasan. (高野山). In Japanese, “Mt. Kōya”; a Japanese sacred mountain in Wakayama prefecture. Currently, the monastery Kongōbuji on Mt. Kōya serves as the headquarters (honzan) of the Kōyasan [SHINGONSHŪ](#) sect of the Shingon tradition. While traveling through the lands southwest of Yoshino, the Japanese monk [KŪKAI](#) is said to have stumbled upon a flat plateau named Kōya (High

Field) on a mountain. Kūkai determined that Kōya was an ideal site of self-cultivation, as it appeared to be an uninhabited area surrounded on four sides by high mountain peaks. It is said that the mountain was revealed to Kūkai by a hunter who was an incarnation of the god ([KAMI](#)) of the mountain, Kōya Myōjin. This deity is still worshipped on Mt. Kōya in his hunter form as Kariba Myōjin. In 816, Kūkai received permission from the emperor to establish a practice center dedicated to the study of [MIKKYŌ](#) ritual and doctrine at Kōya. Kūkai first sent his disciples Jitsue (786–847) and Enmyō (d. 851) to survey the entire area and went to the site himself in 818. Due to his activities at the official monastery, [TŌJI](#), and his business at the monasteries Jingōji and Murōji, Kūkai's involvement with Mt. Kōya was limited. In 835, he retired to Mt. Kōya due to his deteriorating health and finally died there, purportedly while in a deep meditative state. Kūkai's body is housed in the mausoleum complex Okunoin near Kongōbuji. According to legend, he remains there in a state of eternal [SAMĀDHI](#). As a result of the developing cult of Kūkai, who increasingly came to be worshipped as a bodhisattva, Mt. Kōya came to be viewed as a [PURE LAND](#) on earth. Later, as a result of political contestations, as well as several fires on the mountain in 994, Mt. Kōya entered a period of protracted decline and neglect. Through the efforts of Fujiwara and other aristocrats as well as the patronage of reigning and retired emperors, Mt. Kōya reemerged as a powerful monastic and economic center in the region, and became an influential center of pilgrimage and religious cultivation famous throughout Japan. In 1114, [KAKUBAN](#) took up residence on the mountain and assiduously practiced mikkyō for eight years. In 1132, he established the monasteries of Daidenbōin and Mitsugon'in on Mt. Kōya. Despite his efforts to refocus Mt. Kōya scholasticism around the doctrinal and ritual teachings of Kūkai, his rapid rise through the monastic ranks was met with great animosity from the conservative factions on the mountain. In 1288, the monk Raiyu (1226–1304) moved Daidenbōin and Mitsugon'in to nearby Mt. Negoro and established what came to be known as Shingi Shingon, which regarded Kakuban as its founder. In 1185, Myōhen, a disciple of [HŌNEN](#), moved to Mt. Kōya to pursue rebirth in the pure land, a common goal for many pilgrims to Mt. Kōya. It is said that, around 1192, [NICHIREN](#) and Hōnen made pilgrimages to the mountain. [MYŌAN EISAI](#)'s senior disciple Gyōyū established Kongōsanmai-in and taught Chinese RINZAI ([LINJI](#)) Zen on Mt. Kōya. Zen lineages developed between Mt. Kōya, Kyōto, and Kamakura around this time. In 1585, during the Warring States Period, the monk Mokujiki Ōgo was able to convince Toyotomi Hideyoshi not to burn down the mountain as Oda Nobunaga

had done at [HIEIZAN](#). As a result, Mt. Kōya preserves ancient manuscripts and images that would have otherwise been lost. Mt. Kōya’s monastic structures shrank to less than a third of their original size during the Meiji persecution of Buddhism ([HAIBUTSU KISHAKU](#)). At that same time, Mt. Kōya lost much of its former land holdings, which greatly reduced its economic base. In the twentieth century, Mt. Kōya went through several modernization steps: the ban against women was lifted in 1905, its roads were paved, and Mt. Kōya University was built on the mountain. At present, Mt. Kōya is a thriving tourist, pilgrimage, and monastic training center.

[Kōzen gokokuron](#). (興禪護國論). In Japanese, “Treatise on the Promulgation of Zen as Defense of the State”; written by [MYŌAN EISAI](#) in 1198 to legitimize the new [ZEN](#) teachings that he had imported from China. In ten sections, Eisai responds to the criticisms from the monks at [HIEIZAN](#) (see [ENRYAKUJI](#) and [TENDAISHŪ](#)) with extensive references to scriptures, Chan texts, and the writings of [SAICHŌ](#), [ENNIN](#), and [ENCHIN](#). Eisai argued that the new teachings would protect the state and allow for the “perfect teachings” (see [JIAOXIANG PANSHI](#)) of Tendai to flourish.

[kriyātantra](#). (T. bya rgyud). In Sanskrit, “action tantra”; the lowest of the traditional fourfold categorization of tantric texts, the others being (in ascending order) [CARYĀTANTRA](#), [YOGATANTRA](#), and [ANUTTARAYOGATANTRA](#). According to traditional commentaries, this class of tantras is so called because they emphasize the performance of external action or ritual over the practice of meditation. Tantras classified in this group include the [*SUSIDDHIKARASŪTRA](#) and the [SUBĀHUPARIPRCCHĀTANTRA](#).

[krodha](#). (P. kodha; T. khro ba; C. fen; J. fun; K. pun 忿). In Sanskrit, “anger,” or “wrath.” One of the forty-six mental factors (see [CAITTA](#)) according to the [ABHIDHARMAKOSĀBHĀSYA](#), and one of the fifty-one according to the [YOGĀCĀRA](#) school. Krodha is the infuriation one feels toward unpleasant objects and is one possible way in which aversion ([DVESA](#)) manifests itself. Krodha is distinguishable from “enmity” ([UPANĀHA](#)) in that “anger” is a more potent but more quickly dissipated kind of emotion, whereas “enmity” is a long-term simmering grudge.

[*Kṛśā Gautamī](#). (S). See [KISĀ GOTAMĪ](#).

Kṛṣṇācārya. [alt. Kṛṣṇā[cārya]-pāda/Kṛṣṇacārin/Kāṇha] (T. Nag po pa/Nag po spyod pa). Sanskrit proper name of one of the eighty-four [MAHĀSIDDHAS](#). A number of tantric works by an author or authors whose name is usually rendered in Tibetan as Nag po pa (the dark-skinned one) are extant in Tibetan translation.

krtsna/krtsnāyatana. (S). See [KASINA](#).

krtyānuṣṭhānajñāna. (T. bya ba sgrub pa'i ye shes; C. chengsuozuo zhi; J. jōshosachi; K. sōngsojak chi 成所作智). In Sanskrit, “the wisdom of having accomplished what was to be done”; one of the four [alt. five] wisdoms of a buddha described in the [YOGĀCĀRA](#) school, which is created through the transmutation of the five sensory consciousnesses ([VIJÑĀNA](#)). This type of wisdom brings about perfection in all one’s action, which benefits both oneself and others. This particular type of wisdom thus works on behalf of the welfare of all sentient beings and serves as the cause for the various emanations of a buddha.

ksana. (P. khaṇa; T. skad cig; C. chana; J. setsuna; K. ch’alla 刹那). In Sanskrit, “instant” or “moment”; the shortest possible span of time, variously measured as either the ninth part of a thought moment or the 4,500th part of a minute. The term figures prominently in mainstream Buddhist discussions of impermanence and epistemology (see [KSANIKAVĀDA](#)). Physical objects and mental events that persist over time are posited in fact to be merely a collection of these moments. As a result of ignorance, these are falsely perceived as lasting more than one moment. For example, sense experience is composed entirely of the perception of these moments of a given object, but this is not noticed by ordinary sense consciousness, and thought mistakenly projects continuity onto sense experience. The term therefore appears commonly in expositions of impermanence ([ANITYA](#)). According to the [VAIBHĀSIKA](#) school of abhidharma, ultimate truths ([PARAMĀRTHASATYA](#)) are only these indivisible instants of time and partless particles of matter ([PARAMĀNU](#)); one of the [MADHYAMAKA](#) arguments concerning emptiness ([ŚŪNYATĀ](#)) is that even the apparently smallest units of time and matter have parts. ¶ As the “right moment,” kṣaṇa also has the denotation of an “opportune birth” ([KSANASAMPAD](#)), referring specifically to birth at a time and place where a buddha or his teachings are present and with the faculties to be able to understand his teachings. This fortunate birth is contrasted with eight kinds of “inopportune births” ([AKSANA](#)), where one by contrast will be born in a place or state where one is either incapable of learning anything from a

buddha or, even if one could learn, no buddha is present in the world.

[kṣaṇasampad](#). (P. khaṇasampadā; T. dal 'byor; C. chana juzu; J. setsunagusoku; K. ch'alla kujok 刹那具足). In Sanskrit, lit. “fortunate moment,” or an “auspicious moment,” viz., “opportune birth” (see [KSANA](#)), referring specifically to rebirth as a human being and under circumstances that permit access to the practice of the dharma. The Tibetan literally means “freedom and endowment” or “leisure and opportunity,” referring to an auspicious human birth. Indian texts enumerate eight conditions of “nonleisure” (such as rebirth as an animal) and ten conditions of opportunity (such as rebirth in a land where the dharma is present). The absence of these eight conditions defines [AKSANA](#), “inopportune birth” (lit. “not a right moment”), referring specifically to a birth in which one will not be able to learn from a buddha. These are, when one is born (1) in one of the hells ([NĀRAKA](#)); (2) as an animal, (3) hungry ghost ([PRETA](#)), or (4) a long-lived divinity ([DEVA](#)); (5) in a border land or barbarian region; (6) with perverted views or heretical disposition; (7) stupid and unable to understand the teachings; or (8) at a time when no buddhas have appeared. An opportune birth (kṣaṇasampad, kṣaṇa), by contrast, means to be born at a time and place where a buddha or his teachings are present and where one has the faculties to understand his teachings.

[kṣanika](#). (T. skad cig ma; C. chana qing; J. setsunakei; K. ch'alla kyōng 刹那頃). In Sanskrit, “momentary”; originally used in the sūtras in its literal sense of a very small fraction of time, the term has also been used synonymously with “impermanence” ([ANITYA](#)) to indicate the “momentary” (kṣanika) nature of all phenomena. Kṣanika acquired technical significance when the doctrine of impermanence ([ANITYA](#)) came to be elaborated and interpreted in the various mainstream Indian schools in their attempt to ground the Buddhist understanding of the processes governing compounded existence on a logically defensible basis. These developments led the [SAUTRĀNTIKA](#) school to advocate a “doctrine of momentariness” ([KSANIKAVĀDA](#)), viz., that a dharma lasts only a single moment ([KSANA](#)), in which is comprised both its genesis and its destruction.

[kṣanikavāda](#). (T. skad cig ma smra ba; C. chanalun; J. setsunaron; K. ch'allaron 刹那論). In Sanskrit, “doctrine of momentariness”; a doctrinal position emblematic of the [SAUTRĀNTIKA](#) school of the mainstream Buddhist tradition. The doctrine of momentariness derives from attempts to elaborate the foundational Buddhist concept of impermanence ([ANITYA](#)): viz., how long

exactly do causally created events or objects exist before their destruction? Some of the early mainstream schools of Buddhism, such as the [SARVĀSTIVĀDA](#) and [STHAVIRANIKĀYA](#), presume that this process of existence, although extremely brief, could be differentiated into several specific moments. The Sarvāstivāda school, for example, assumed that events persisted through four moments ([KSANA](#)), viz., the four marks ([CATURLAKSANA](#)) of birth, subsistence, decay, and extinction; the Sarvāstivāda school posited that these marks were forces dissociated from thought ([CITTAVIPRAYUKTASAMSKĀRA](#)), which exerted real power over compounded objects, carrying an object along from one force to another, until the force “extinction” extinguishes it. According to the Sthaviranikāya, all mental events include three moments of origination (uppāda), subsistence (ṭhiti), and dissolution (bhaṅga), which together constitute the present. The [SAUTRĀNTIKA](#), by contrast, believed that the elements of existence ([DHARMA](#)) are momentary ([KSANIKA](#)) appearances in the phenomenal world, which are disconnected in space and not linked by any pervading substance. They are also disconnected in time or duration, since they last only a single moment (kṣaṇa), a moment that includes both its genesis and its destruction. Unlike the Sarvāstivāda school, then, the Sautrāntikas assert that, because all conditioned dharmas are inherently destined to be extinguished, annihilation occurs spontaneously and simultaneously with origination, without the exertion of a specific “force.”

[kṣānti](#). (P. khanti; T. bzod pa; C. renru; J. ninniku; K. inyok 忍辱). In Sanskrit, “patience,” “steadfastness,” or “endurance”; alt. “forbearance,” “acceptance,” or “receptivity.” Kṣānti is the third of the six (or ten) perfections ([PĀRAMITĀ](#)) mastered on the [BODHISATTVA](#) path; it also constitutes the third of the “aids to penetration” ([NIRVEDHABHĀGIYA](#)), which are developed during the “path of preparation” ([PRAYOGAMĀRGA](#)) and mark the transition from the mundane sphere of cultivation ([LAUKIKA-BHĀVANĀMĀRGA](#)) to the supramundane vision ([DARŚANA](#)) of the [FOUR NOBLE TRUTHS](#) (catvāry āryasatyāni). The term has several discrete denotations in Buddhist literature. The term often refers to various aspects of the patience and endurance displayed by the bodhisattva in the course of his career: for example, his ability to bear all manner of abuse from sentient beings; to bear all manner of hardship over the course of the path to buddhahood without ever losing his commitment to liberate all beings from [SAMŚĀRA](#); and not to be overwhelmed by the profound nature of reality but instead to be receptive or acquiescent to it. This last denotation of kṣānti is also found, for example, in the

“receptivity to the fact of suffering” (duḥkhe dharmajñānakṣānti; see [DHARMAKṢĀNTI](#)), the first of the sixteen moments of realization of the four noble truths, in which the adept realizes the reality of impermanence, suffering, emptiness, and nonself and thus overcomes all doubts about the truth of suffering; this acceptance marks the inception of the [DARŚANAMĀRGA](#) and the entrance into sanctity ([ĀRYA](#)). Kṣānti as the third of the aids to penetration (nirvedhabhagīya) is distinguished from the fourth, highest worldly dharmas ([LAUKIKĀGRADHARMA](#)), only by the degree to which the validity of the four noble truths is understood: this understanding is still somewhat cursory at the stage of kṣānti but is fully formed with laukikāgradharma.

[kṣāntipāramitā](#). (P. khantipāramī; T. bzod pa'i pha rol tu phyin pa; C. renru boluomi; J. ninnikuharamitsu; K. inyok paramil 忍辱波羅蜜). In Sanskrit, “perfection of patience.” See [KṢĀNTI](#).

[Kṣāntivādin](#). (P. Khantivādī; T. Bzod pa smra ba; C. Renru xianren/Chanti xianren; J. Ninniku sennin/Sandai sennin; K. Inyok sōnin/Sanje sōnin 忍辱仙人/羼提仙人). Lit. “Teacher of Patience”; one of the more famous previous lives of the Buddha as recounted in the Sanskrit and Pāli [JĀTAKA](#) collections. Over the course of millions of lifetimes, the [BODHISATTVA](#) is said to accrue vast stores of merit ([PUNYA](#)) through the practice of the six or ten perfections ([PĀRAMITĀ](#)). The story of Kṣāntivādin is the most famous story about the bodhisattva’s practice of patience ([KṢĀNTI](#)). In the story, the bodhisattva is a brāhmaṇa who renounces the world and lives in a forest near Benaras. One day, the king comes into the forest accompanied by his female attendants, who entertain him. Exhausted by his indulgence in pleasure and drink, the king falls asleep. The women wander off, eventually coming upon Kṣāntivādin seated beneath a tree. They gather around him and he preaches to them. The king awakes to find the women gone and becomes enraged. When he finally locates them, he presumes that Kṣāntivādin has stolen them away. When he asks the ascetic what he teaches, Kṣāntivādin replies “patience.” Seeking to test the ascetic’s ability to remain free from anger when injured and abused, he tortures him, cutting off his limbs, his nose, and his ears in turn, at each point asking the ascetic whether he still teaches patience; the various versions differ as to the order in which the limbs are severed and whether they are severed by the king himself or by his executioner. Leaving the ascetic to die of his wounds, the king walks away, only to be swallowed by the earth and transported to the [AVĪCI](#) hell. It is said that the king was [DEVADATTA](#) in

a former life and that his fate prefigured Devadatta's own demise.

ksapita. (P. jhāpita; T. zad byed; C. chapi/tupi; J. dabi; K. tabi/tobi 茶毘/茶毘). In Sanskrit, “destroy” or “burn up”; the Chinese characters are simply a transcription of the Sanskrit. This term refers to the cremation of the corpse and is performed especially as part of the funerary rites for a monk or nun. Elaborate manuals of cremation ceremonies are available in many Buddhist traditions to guide the celebrants in the steps of preparing the pyre and cremating the corpse. Living within the precincts of a cremation site or charnel ground ([ŚMAŚĀNA](#)) is also considered to be one of the most powerful ascetic practices ([DHUTAṄGA](#)), which helps to vanquish lust and establish the mindfulness of death (see [KAMMATTHĀNA](#)).

ksatriya. (P. khattiya; T. rgyal rigs; C. chali; J. setsuri; K. ch'alli 刹利). In Sanskrit, “warrior” or “royalty”; the second of the four castes of traditional Indian society, along with priests (brāhmaṇa), merchants (vaiśya), and servants (śūdra). As the son of the Śākya king, [ŚUDDHODANA](#), the soon-to-be buddha [GAUTAMA](#) belonged to the kṣatriya caste. Many of the leading figures in the [ŚRAMANA](#) movement, ascetic wanderers who stood in opposition to the brāhmaṇa priests of traditional Vedic religion, derived primarily from people of kṣatriya background. The Buddha's caste may also account for the frequent disparagement in the sūtras of the sacrificial activities of Vedic priests and the common topos in the sūtras of redefining the meaning of brahman (brāhmaṇa) in terms of meditative achievement and enlightenment (see [KASSAPASĪHANĀDASUTTA](#); [TEVIJASUTTA](#)), although it is also the case that brāhmaṇa priests were a chief rival of the early Buddhist community for patronage. The Buddhist and broader śramaṇa suspicions of the soteriological efficacy of the sacrifices performed by brāhmaṇas also appear in the dismissal of religious rites and rituals ([ŚĪLAVRATAPARĀMARŚA](#)) as one of the three coarser fetters ([SAMYOJANA](#)) or wrong views ([MITHYĀDRSTĪ](#)) that must be given up to attain stream-entry ([SROTAĀPANNA](#)). It is said that buddhas are only born into two castes, the brāhmaṇa and the kṣatriya, depending upon which is regarded most highly at the time of that buddha's birth.

ksayajñāna. (T. zad pa shes pa; C. jinzhi; J. jinchi; K. chinji 盡智). In Sanskrit, “knowledge of cessation”; one of the two types of knowledge that accompanies liberation from rebirth ([SAMSĀRA](#)). Kṣayajñāna is the understanding that one has eradicated the afflictions ([KLEŚA](#)), viz., greed, hatred, and delusion. Kṣayajñāna

occurs at the point that the adept becomes an [AŚAIKṢA](#) (one who has no more need of religious training) and brings an end to the clinging to existence, thus eradicating the desire for continued rebirth. This type of knowledge is typically paired with the “knowledge of nonproduction” ([ANUTPĀDAJÑĀNA](#)), the awareness that the kleśas, once eradicated, will never arise again.

[Kṣemā](#). (P. Khemā; T. Dge ma; C. Anwen; J. Annon; K. Anon 安穩). The chief of the Buddha’s nun ([BHIKSUNĪ](#)) disciples and foremost among them in wisdom ([PRAJÑĀ](#)). According to Pāli sources, Khemā was born to the royal family of Sāgala and became the chief queen of King [BIMBISĀRA](#). Known for her exceptional beauty, she was said to have a complexion the color of gold. When Khemā’s husband became a lay disciple of the Buddha, he encouraged her to accompany him to listen to the Buddha’s sermons, but she resisted, lest the great sage disparage her beauty to which she was greatly attached. Coaxed by court poets extolling the charms of the Veḷuvana (S. [VENUVANA](#)), or Bamboo Grove, where the Buddha was sojourning, Khemā finally agreed to visit him there. At her approach, the Buddha created an apparition of a celestial nymph that far exceeded in feminine beauty any human woman. He then caused the apparition to age and die in decrepitude before Khemā’s eyes, filling the queen with dismay and disgust. With her mind thus prepared, the Buddha preached to her a sermon on the frailty of physical beauty and the vanity of lust; as she listened to his words, she attained arahantship (S. [ARHAT](#)). As an arahant, Khemā could no longer live the householder’s life, and with the consent of her husband King Bimbisāra, she took ordination as a nun. During the lifetimes of the previous buddhas Kassapa (S. [KĀŚYAPA](#)), Kakusandha, and Konāgamana, she had great monasteries built for them and their disciples, and during the time of Vipassī (S. [VIPAŚYIN](#)) Buddha, she became a renowned preacher of dhamma. Once while staying at Toranavatthu, Khemā gave a discourse to King Pasenadi (S. [PRASENAJIT](#)) of Kosala (S. [KOŚALA](#)) on whether or not the Buddha exists after death, which allayed his doubts.

[kṣetraśuddhi](#). [alt. kṣetraviśuddhi] (T. dag zhing). In Sanskrit, “pure [buddha] field”; a type of buddha-field ([BUDDHAKSETRA](#)) created by a buddha as a result of his practice and which comes into existence at the time of that buddha’s enlightenment. The nature of the purity is variously defined but typically means that in this world the realms of animals, ghosts, and hell beings do not exist; although songbirds may exist, they have been created by the buddha for the

delight of the inhabitants of his buddha-field. The pure buddha-field is regarded as the outcome of the training ([PRAYOGA](#)) in purifying a buddha-field, one of the final practices of [BODHISATTVAS](#) set forth in the fourth chapter of the [ABHISAMAYĀLAMKĀRA](#)'s explanation of the [PRAJÑĀPĀRAMITĀ SŪTRAS](#). The purification is brought about by the six perfections ([PĀRAMITĀ](#)): for example, perfect giving ([DĀNAPĀRAMITĀ](#)) brings about an external pure field (parallel to the [BHĀJANALOKA](#)) supplied with all the enjoyments of the deities, and so on. See also [JINGTU](#).

[kṣīṇāsraṇa](#). (P. khīnāsava; T. zag pa zad pa; C. loujin; J. rojin; K. nujin 漏盡). In Sanskrit, “contaminants destroyed” or “free from impurities”; an epithet of the [ARHAT](#) who has destroyed all of the contaminants ([ĀSRAVA](#)) and will enter [NIRVĀNA](#) upon death. The term appears commonly in the opening passages of the MAHĀYĀNA SŪTRAS when describing the arhats who have gathered to hear the Buddha's teaching. In an example of the self-praise of the Mahāyāna sūtras at the expense of the arhat, the [ŚŪRAMGAMASAMĀDHISŪTRA](#) declares that a man who has committed the five deeds of immediate retribution ([ĀNANTARYAKARMAṆ](#)) yet has heard the sūtra is superior to an arhat who has destroyed the contaminants; this is because the former may achieve buddhahood while the arhat is destined only for nirvāṇa. See also [ĀSRAVAKSAYA](#).

[Kṣitigarbha](#). (T. Sa yi snying po; C. Dizang; J. Jizō; K. Chijang 地藏). In Sanskrit, lit. “Earth Store,” an important [BODHISATTVA](#) who has the power to rescue beings who have the misfortune to be reborn in the hells. Although Kṣitigarbha is known in all Mahāyāna countries through his inclusion in the widely known grouping of eight great bodhisattvas ([MAHOPAPUTRA](#); [ASTAMAHOPAPUTRA](#)), he was apparently not the object of individual cultic worship in India or Tibet. It was in East Asian Buddhism that Kṣitigarbha came into his own and became widely worshipped. In China, the cult of Kṣitigarbha (C. Dizang) gained popularity by at least the fifth century, with the translation of the *Dasheng daji Dizang shilun jing* (“Mahāyāna Mahāsannipāta Sūtra on Kṣitigarbha and the Ten Wheels”), first in the Northern Liang dynasty and subsequently again by [XUANZANG](#) in 651 CE. The eponymous [KṢITIGARBHASŪTRA](#), translated at the end of the seventh century, specifically relates the bodhisattva's vow to rescue all beings in the six realms of existence before he would attain buddhahood himself and tells the well-known prior-birth story of the bodhisattva as a young woman, whose filial piety after the death of

her heretical mother saved her mother from rebirth in the [AVICI](#) hell. It was his ability to rescue deceased family members from horrific rebirths that became Dizang's dominant characteristic in China, where he took on the role of the Lord of Hell, opposite the Jade Emperor of native Chinese cosmology. This role may possibly have resulted from Dizang's portrayal as the Lord of Hell in the apocryphal (see [APOCRYPHA](#)) *Foshuo Dizang pusa faxin yinlu shiwang jing* and reflects Buddhist accommodations to the medieval Chinese interest in the afterlife. This specialization in servicing the denizens of hell seems also to have evolved alongside the emergence of Dizang's portrayal as a monk, whom the Chinese presume to reside on the Buddhist sacred mountain of [JIUHUASHAN](#) in Anhui province. (See also [CHIJIANG](#); KIM KYUGAK.) Kṣitigarbha is easily recognizable in Chinese iconography because he is the only bodhisattva who wears the simple raiments of a monk and has a shaved head rather than an ornate headdress. In Japan, where Kṣitigarbha is known as Jizō, the bodhisattva has taken on a different significance. Introduced to Japan during the Heian period, Jizo became immensely popular as a protector of children, patron of travelers, and guardian of community thresholds. Jizō is typically depicted as a monk carrying a staff in his left hand and a chaplet or rosary in his right. The boundaries of a village beyond which children should not wander were often marked by a stone statue of Jizō. Japanese fishermen also looked to Jizō for protection; statues of the bodhisattva erected by early Japanese immigrants to Hawaii are still found today at many popular shoreline fishing and swimming sites in the Hawaiian Islands. In modern Japan, Jizō continues to be regarded as the special protector of children, including the stillborn and aborted. In memory of these children, and as a means of requesting Jizō's protection of them, statues of Jizō are often dressed in a bib (usually red in color), sometimes wearing a knit cap or bonnet, with toys placed nearby (see [MIZUKO KUYŌ](#)). Tibetan iconography typically has Kṣitigarbha seated on a lotus flower, holding a [CINTĀMANI](#) in his right hand and displaying the [VARADAMUDRĀ](#) with his left.

[Kṣitigarbhasūtra](#). (C. Dizang pusa benyuan jing; J. Jizō bosatsu hongangyō; K. Chijang posal ponwŏn kyŏng 地藏菩薩本願經). In Sanskrit, "The Scripture on Kṣitigarbha," now extant only in a Chinese translation (which may be rendered as "Scripture on the Original Vows of Kṣitigarbha Bodhisattva") made by the Khotanese monk [ŚIKSĀNANDA](#) between 695 and 700 CE. The Chinese recension is in a total of thirteen chapters, which are divided into three sections. The sūtra is presented as a dialogue between [ŚĀKYAMUNI](#) Buddha and [KṢITIGARBHA](#) before

a congregation of buddhas, [BODHISATTVAS](#), divinities, and ghosts. The sūtra describes Kṣitigarbha’s vow to save all beings from [SAMSĀRA](#) before becoming a buddha himself and offers various accounts of his prior births, during which he exhibited the uncanny ability to save beings from rebirth in the [AVĪCI](#) hell. For example, in one prior-birth story, the bodhisattva is portrayed as a young girl mourning the death of her non-Buddhist mother; through the girl’s filial devotion, her mother was rescued from avīci hell and reborn in one of the heavens. Another chapter outlines the far-reaching effects of Kṣitigarbha’s vows, by demonstrating that even beings suffering in different hells (the attributes of which are described in vivid detail in the sūtra) were rescued by various other transformations of Kṣitigarbha. Some chapters also detail proper religious behavior: for example, in one chapter, Śākyamuni Buddha outlines in detail the ways one should pray to Kṣitigarbha, while in another is delineated the appropriate actions for honoring and benefiting the dead and the dying.

[kṣuramārga](#). (T. spu gri’i lam; C. daoren lu/jianshu diyu; J. tōjinro/kenjujigoku; K. toin no/kōmsu chiok 刀刃路/劍樹地獄). In Sanskrit, “razor road”; the third of the four “neighboring hells” ([PRATYEKANARAKA](#)) located to the four sides of the eight hot hells (see [NĀRAKA](#)). This hell is a road made of sword blades, which the hell denizens must traverse before entering a razor forest ([ASIPATTRAVANA](#)) where blades fall from the trees and where they are forced to climb trees embedded with iron spikes ([AYAŚĀLMALĪVANA](#)).

[Kubera](#). (T. Lus ngan po; C. Jufeiluo; J. Kubeira; K. Kup’yera 俱吠囉). In Sanskrit, the ancient Indian god of wealth and king of the [YAKSAS](#), related to [VAIŚRAVANA](#) and [JAMBHALA](#). According to Hindu mythology, Kubera was the son of Viśrāva; hence, Vaiśravaṇa is his patronym. His abode is said to be in Sri Lanka, although prior to becoming the god of wealth he lived at Mount [KAILĀSA](#). Kubera is especially popular in the Himalayan regions, where he is usually depicted as a rich man with a large potbelly and holding a mongoose, which vomits jewels when he squeezes it.

[Kubjottarā](#). (P. Khujjuttarā; T. Rgur ’jog; C. Jiushouduoluo; J. Kujutara; K. Kusudara 久壽多羅). In Sanskrit, “Hunchbacked”; an eminent lay disciple best known from Pāli sources, whom the Buddha declared to be foremost among laywomen of wide learning (P. bahussuta; S. bahuśruta); she was the slave of Sāmāvātī (S. [ŚYĀMAVATĪ](#)), the wife of Udena and queen of Kosambī (S. Kauśambī). Kubjottarā was hunchbacked, which was said to have been

retribution for having once, in a previous existence, mocked a solitary buddha (paccekabuddha; S. [PRATYEKABUDDHA](#)) for having this same disfigurement. In another lifetime, she had made a nun do chores for her, which led to her rebirth as a slave. As the servant of Sāmāvati, Kubjottarā was sent to the market every day with eight coins to purchase flowers, where she would spend four coins and pocket the rest. One day, she witnessed the Buddha preach and at once became a stream-enterer (sotāpanna; S. [SROTAĀPANNA](#)). Returning to the palace, she confessed her previous wrongdoing to Sāmāvati, who immediately forgave her; the slave then related the contents of the Buddha's sermon. Fascinated, Sāmāvati requested Kubjottarā to listen to the Buddha's sermons every day and tell her and her harem attendants the Buddha's message upon returning to the palace. Through Kubjottarā's instructions, Sāmāvati and her attendants also became stream-enterers. Kubjottarā suggested that they pierce a hole in the walls of the harem so that they could watch as the Buddha passed in the street below and worship him. After her mistress's death, Kubjottarā spent her time in religious works, teaching and preaching the [DHARMA](#). She was said to be extremely intelligent and to have memorized the entire canon (tipiṭaka; S. [TRIPITAKA](#)).

[Kubo Kakutarō](#). (久保角太郎) (1892–1944). Cofounder along with [KOTANI KIMI](#) of the [REIYŪKAI](#) school of modern Japanese Buddhism, which derives from the teachings of the [NICHIRENSHŪ](#) school of Buddhism. Kubo Kakutarō was an orphan who by age thirteen was employed as a carpenter's apprentice in Tōkyō. He began to work for the Imperial Household Ministry, where he met Count Sengoku, a bureaucrat who sponsored Kubo's marriage to a woman from the aristocratic Kubo family; he then took the family's surname. His parents-in-law were followers of Nichiren. After learning of the possibility of self-ordination through the teachings of Toki Jonin, he founded Rei No Tomo Kai with Wakatsuki Chise; this group became known as Reiyūkai in 1924. Kubo also grew increasingly interested in ancestor veneration, a key component in the practice of the Reiyūkai school.

[Kucha](#). (S. *Kucīna; C. Qiuzi; J. Kiji; K. Kuja 龜茲). Indo-European oasis kingdom at the northern edge of the Taklamakhan Desert, which served as a major center of Buddhism in Central Asia and an important conduit for the transmission of Buddhism from India to China; the name probably corresponds to *Kucīna in Sanskrit. Indian Buddhism began to be transmitted into the Kuchean region by the beginning of the Common Era; and starting at least by the

fourth century CE, Kucha had emerged as a major Buddhist and trade center along the northern [SILK ROAD](#) through Central Asia. Both mainstream and [MAHĀYĀNA](#) traditions are said to have coexisted side by side in Kucha, although the Chinese pilgrim [XUANZANG](#), who visited Kucha in 630, says that [SARVĀSTIVĀDA](#) scholasticism predominated. Xuanzang also reports that there were over one hundred monasteries in Kucha, with some five thousand monks in residence. The indigenous Kuchean language, which no longer survives, belongs to Tocharian B, one of the two dialects of [TOCHARIAN](#), the easternmost branch of the western Indo-European language family. In the fourth and fifth centuries CE, many Kuchean monks and scholars began to make their way to China to transmit Buddhist texts, including the preeminent translator of Buddhist materials into Chinese, [KUMĀRAJĪVA](#). To the west of Kucha are the [KIZIL](#) caves, a complex of some 230 Buddhist caves that represent some of the highest cultural achievements of Central Asian Buddhism. Construction at the site perhaps began as early as the third century CE and lasted for some five hundred years, until Kucha came under Muslim control in the ninth century. Since the mid-eighteenth century, during the Manchu Qing dynasty (1644–1912), Kucha has been under the political control of China, and the present-day city of Kucha is located along the banks of the Muzat River in Baicheng County, in the Uighur Autonomous Region of China's Xinjiang province. In East Asia, monks from Kucha were given the ethnicon [BO](#), the Chinese transcription of the surname of the reigning family of Kucha. See also [KHOTAN](#).

[Kuiji](#). (J. Kiki; K. Kyugi 窺基) (632–682). Scholar–monk of the Tang dynasty, commonly regarded as the founder of the [FAXIANG ZONG](#) of Chinese [YOGĀCĀRA](#) Buddhism. Orphaned as a boy, Kuiji was ordained as a teenager and assigned to the imperial translation bureau in the Tang capital; there, he emerged as one of the principal disciples of [XUANZANG](#), under whom he studied Sanskrit and Indian Buddhist [ABHIDHARMA](#) and Yogācāra scholasticism. He participated in Xuanzang's numerous translation projects and is closely associated with the redaction of the [CHENG WEISHI LUN](#), which included extensive selections from ten Indian commentaries. Kuiji played a crucial role in selecting and evaluating the various doctrinal positions that were to be summarized in the text. Kuiji subsequently wrote a series of lengthy commentaries on [DHARMAPĀLA](#)'s doctrinally conservative lineage of [VIJÑĀPTIMĀTRATĀ](#)-Yogācāra philosophy. His elaborate and technical presentation of Yogācāra philosophy, which came to be designated pejoratively as Faxiang (Dharma Characteristics), contrasted

markedly with the earlier Chinese Yogācāra school established by [PARAMĀRTHA](#). Because he resided and eventually died at [DACPENSI](#), he is often known as Ci'en dashi (J. Jion daishi; K. Chaŭn taesa), the Great Master of Ci'en Monastery. Kuiji commentaries include the *Chengweishi lun shuji* and the [DASHENG FAYUAN YILIN ZHANG](#). See also [WÖNCH'ŪK](#).

[Kūkai](#). (空海) (774–835). In Japanese, “Sea of Emptiness”; monk who is considered the founder of the tradition, often referred to as the [SHINGONSHŪ](#), Tōmitsu, or simply [MIKKYŌ](#). He is often known by his posthumous title [KŌBŌ DAISHI](#), or “Great Master Who Spread the Dharma,” which was granted to him by Emperor Daigo in 921. A native of Sanuki province on the island of Shikoku, Kūkai came from a prominent local family. At the age of fifteen, he was sent to Nara, where he studied the Chinese classics and was preparing to become a government official. However, he seems to have grown disillusioned with this life. At the age of twenty, Kūkai was ordained, perhaps by the priest Gonsō, and the following year he took the full precepts at [TŌDAIJI](#). He is claimed to have experienced an awakening while performing the Kokūzō gumonjihō, a ritual dedicated to the mantra of the [BODHISATTVA ĀKĀŚAGARBHA](#). While studying Buddhist texts on his own, Kūkai is said to have encountered the [MAHĀVAIROCANĀBHISAMBODHISŪTRA](#) and, unable to find a master who could teach him to read its [MANTRAS](#), decided to travel to China to learn from masters there. In 804, he was selected as a member of a delegation to China that set sail in four ships; [SAICHŌ](#) was aboard another of the ships. Kukai eventually traveled to the Tang capital of Chang'an, where he studied tantric [MIJIAO](#) Buddhist rituals and theory under [HUIGUO](#) and Sanskrit under the Indian monk [PRAJŅA](#). Under the direction of his Chinese master, Kūkai was initiated into the two realm (ryōbu) [MANDALA](#) lineages of [YIXING](#), [ŚUBHAKARASIMHA](#), [VAJRABODHI](#), and [AMOGHAVAJRA](#). In 806, Kūkai returned to Japan; records of the texts and implements he brought with him are preserved in the *Shōrai mokuroku*. Little is known about his activities until 809, when he moved to Mt. Takao by imperial request. Kūkai described his new teachings as mikkyō, or “secret teachings,” [VAJRAYĀNA](#) (J. kongōjō), and [MANTRAYĀNA](#) (J. shingonjō). At the core of Kūkai's doctrinal and ritual program was the belief that all acts of body, speech, and mind are rooted in, and expressions of, the cosmic buddha [MAHĀVAIROCANA](#) (see [VAIROCANA](#)), as the [DHARMAKĀYA](#). Kūkai argued that the dharmakāya itself teaches through the artistic and ritual forms that he brought to Japan. Once his teachings gained some renown, Kūkai conducted several [ABHISEKA](#) ceremonies,

including one for the [TENDAI](#) patriarch [SAICHŌ](#) and his disciples. However, Kūkai and Saichō’s relationship soured when Kūkai refused to transmit the highest level of initiation to Saichō. In 816, Emperor Saga granted Kūkai rights to [KŌYASAN](#), to serve as a training center for his Shingon mikkyō tradition. In early 823, Kūkai was granted the temple of [TŌJI](#) in Kyōto, which became a second center for the Shingon tradition. In the summer of 825, Kūkai built a lecture hall at Tōji, and in 827 he was promoted to senior assistant high priest in the Bureau of Clergy. In 829, he built an abhiṣeka platform at Tōdaiji. In early 834, he received permission to establish a Shingon chapel within the imperial palace, where he constructed a maṇḍala altar. Kūkai passed into eternal [SAMĀDHI](#) (J. nyūjō) in 835 on Mt. Kōya, and it is said that he remains in his mausoleum in meditation waiting for the BODHISATTVA MAITREYA to appear. Kūkai authored a number of important texts, including the [BENKENMITSU NIKYŌRON](#), a treatise outlining the inherent differences of kengyō (revealed) and mikkyō (inner) teachings; *Sokushin jōbutsugi*, a treatise on the doctrine of attainment of buddhahood in “this very body” (J. [SOKUSHIN JŌBUTSU](#)); *Unjigi*, a text describing the contemplation of Sanskrit syllables (S. [BĪJA](#), J. shuji); *Shōjijissōgi*, a text outlining Kūkai’s theory of language in which all sounds and letters are themselves full embodiments of the dharmakāya’s teachings; and his magnum opus, the [HIMITSU MANDARA JŪJŪSHINRON](#), in which Kūkai makes his case for recognizing Shingon mikkyō as the pinnacle of Buddhist wisdom. Kūkai was an accomplished calligrapher, poet, engineer, and sculptor and is also said to have invented kana, the Japanese syllabary.

[Kukkuṭapāda, Mount](#). (T. Ri bo bya rkang; C. Jizushan; J. Keisokusen; K. Kyejoksan 鷄足山). In Sanskrit, “Cock’s Foot”; a mountain located in the ancient Indian state of [MAGADHA](#); also known as Gurupādaka (Honored Foot); the present Kurkihar, sixteen miles northeast of [BODHGAYĀ](#). The mountain is renowned as the site where the Buddha’s senior disciple, [MAHĀKĀŚYAPA](#), is said to be waiting in trance for the advent of the future buddha [MAITREYA](#). Once Maiteya appears, Mahākāśyapa will hand over to him the robe ([CĪVARA](#)) of [ŚĀKYAMUNI](#), symbolizing that Maitreya is his legitimate successor in the lineage of the buddhas. The Chinese monk–pilgrim [FAXIAN](#) visited the mountain on his sojourn in India in the fifth century CE, describing the mountain as home to many dangerous predators, including tigers and wolves.

[Kukkuṭārāma](#). (T. Bya gag kun ra; C. Jiyuansi; J. Keionji; K. Kyewōnsa 鷄園)

寺). Major Indian Buddhist monastery, located to the southeast of the Mauryan capital of [PĀTALIPUTRA](#) (P. Pāṭaliputta, present-day Patna); founded by King [AŚOKA](#) in the third century BCE, with [YAŚAS](#) serving as abbot. The Chinese pilgrim [XUANZANG](#) visited the site of the monastery in the seventh century, but only the foundations remained. Aśoka is said to have often visited the monastery to make offerings, but Puṣyamitra, who founded the Śuṅga dynasty in 183 BCE, destroyed the monastery when he invaded Pāṭaliputra and murdered many of its monks. Next to the monastery was a large reliquary named the Āmalaka [STŪPA](#), which is said to have been named after half an āmalaka fruit that Aśoka gave as his final offering to the [SAMGHA](#) before his death; thanks, however, to the merit that accrued from the profound sincerity with which the king made even such a meager offering, Aśoka recovered from his illness, and the seeds of the fruit were preserved in this stūpa in commemoration of the miracle. The [KAUKKUTIKA](#) school, one of the three main subgroups of the [MAHĀSĀMGHIKA](#) branch of the mainstream Buddhist tradition, is said to have derived its name from this monastery.

[kukūla](#). (T. me ma mur; C. tangwei zeng; J. tōezō; K. tangoejŭng 燬增). In Sanskrit, “heated by burning chaff”; the first of the four “neighboring hells” ([PRATYEKANARAKA](#)) located to the four sides of the eight hot hells (see [NĀRAKA](#)). This hell is a pit of hot ashes where the hell denizens are burned.

[kula](#). (T. rigs; C. jiazū; J. kazoku; K. kajok 家族). In Sanskrit, lit. “family”; used metaphorically to refer to a community of practice. The term is particularly associated with tantric Buddhism and is used to categorize the various buddhas, [BODHISATTVAS](#), other deities, and initiates into spiritual families, or groups. Early tantric texts utilize a threefold system of three buddha families, comprising the tathāgata family ([TATHĀGATAKULA](#)) associated with [ŚĀKYAMUNI](#) or [VAIROCANA](#), the vajra family ([VAJRAKULA](#)) associated with [VAJRAPĀNI](#) or [AKSOBHYA](#), and the lotus family ([PADMAKULA](#)) associated with [AVALOKITEŚVARA](#) or [AMITĀBHA](#). Later tantric traditions employ a fivefold system, wherein initiates are divided into five buddha families based on their predominant affliction and the ability of a particular buddha to lead them to enlightenment. The five buddha families ([PAÑCATATHĀGATA](#)) are correlated with the five wisdoms ([PAÑCAJÑĀNA](#)) or aspects of enlightenment ([BODHI](#)) and are composed of the tathāgata family (Vairocana), the vajra family (Akṣobhya), the ratna family ([RATNASAMMBHAVA](#)), the lotus family (Amitābha), and the action family ([AMOGHASIDDHI](#)).

kuladuhitr. (P. kuladhītā; T. rigs kyi bu mo; C. shannüren; J. zennyonin; K. sōnyōin 善女人). In Sanskrit, “daughter of good family,” or “respectable family”; an Indian term of address used by teacher toward a female student; hence, in the sūtras, the Buddha typically addresses his “pupils” as kuladuhitr and “sons of good family” ([KULAPUTRA](#)). In the Mahāyāna sūtras, the term is often interpreted to mean a woman who belongs to the [BODHISATTVA](#) lineage.

kuladūsaka. (P. kuladūsaka; T. khyim sun ’byin pa; C. wujia; J. wake; K. oga 汚家). In Sanskrit, “corruptor of good families.” “Corrupting” refers to a monk (or nun) imposing on the services of a lay family with acts that, it was feared, might destroy the laity’s religious faith in and respect for the institution of the [SAMGHA](#). Such acts include giving flowers, garlands, fruits, powder, toiletries, etc., as gifts to the laity—presumably for the purpose of courting favor—or acting as a physician, messenger, or marriage go-between. A monk or nun who does any of these things is guilty of a suspension offense (S. [SAMGHĀVAŚESA](#); P. saṅghādisesa).

kulamkula. (T. rigs nas rigs su skye ba; C. jiajia; J. keke; K. kaga 家家). In Sanskrit, “one who goes from family to family”; a specific type of stream-enterer ([SROTAĀPANNA](#)); one of the twenty members of the [ĀRYASAMGHA](#) (see [VIMŚATIPRABHEDASAMGHA](#)). According to the [ABHIDHARMAKOŚABHĀSYA](#), the kulamakula has eliminated one or two of the nine sets of afflictions ([KLEŚA](#)) that cause rebirth in the sensuous realm ([KĀMADHĀTU](#)); these are the impediments to the first [DHYĀNA](#) that the mundane ([LAUKIKA](#)) path of cultivation ([BHĀVANĀMĀRGA](#)) removes prior to reaching the path of vision ([DARŚANĀMĀRGA](#)). They will take two or even three rebirths among the humans or divinities of the sensuous realm before they reach the goal of [ARHAT](#). They are called “family to family” because the two rebirths are of a similar class, for example, in the sensuous realm.

kulaputra. (P. kulaputta; T. rigs kyi bu; C. shannanzi; J. zennanshi; K. sōnnamja 善男子). In Sanskrit, “son of good family,” or “son of respectable family”; an Indian term of address used by a teacher toward a male student; hence in the sūtras, the Buddha typically addresses his “pupils” as kulaputra and “daughters of good family” ([KULADUHITR](#)). In the [MAHĀYĀNA](#) sūtras, the term was often interpreted to mean a man who belongs to the [BODHISATTVA](#) lineage.

Kulatā. (S). One of the twenty-four sacred sites associated with the

[CAKRASAMVARATANTRA](#). See [PĪTHA](#).

Kumano. (熊野). In Japanese, lit. “Ursine Wilderness”; a mountainous region in Wakayama prefecture on the Kii Peninsula; Kumano is an important site in the history and development of [SHUGENDŌ](#), a syncretistic tradition of mountain asceticism in Japan. Artifacts from the seventh century provide the earliest traces of Kumano’s sacred roots, although worship there likely predated this time. Throughout the medieval period, the area developed ties with the powerful institutions of Japanese Tendai ([TĪANTAI](#)), [SHINGON](#), the Hossō monastery [KŌFUKUJI](#), and the imperial family, with additional influences from [PURE LAND](#) Buddhism. By the eleventh century, its three major religious sites, collectively known as Kumano Sanzan (the three mountains of Kumano), were well established as centers of practice: the Hongū Shrine, home to Amida ([AMITĀBHA](#)); the Shingū Shrine, home to Yakushi ([BHAIŚAJYAGURU](#)); and Nachi Falls and its shrine, the residence of the thousand-armed [BODHISATTVA](#) Kannon ([AVALOKITEŚVARA](#); see [SĀHASRABHUIJASĀHASRANETRĀVALOKITEŚVARA](#)). Following the principle of [HONJI SUJAKU](#) (buddhas or bodhisattvas appearing in the world as spirits), Buddhist deities were readily adopted into the local community of gods ([KAMI](#)). Hence, Amida took the form of the god Ketsumiko no kami, Yakushi manifested as Hayatama no kami, and Kannon appeared as Fusubi no kami. Kumano developed close ties with the aristocratic elite in Kyōto from the tenth through the twelfth centuries. After the ex-Emperor Uda’s pilgrimage to Kumano in 907, a long line of monarchs, often retired, made one or multiple journeys to the sacred destination. In the early twelfth century, ex-Emperor Shirakawa granted Shōgoin—a Japanese Tendai ([TĪANTAI](#)) monastery in Kyōto—to the monk Zōyō, whose appointment included responsibility for overseeing Kumano. Later in the Tokugawa Period (1600–1868), it was Shōgoin that regulated Tendai-affiliated Shugen centers around the country, consequently making a large impact on their doctrine and practice. The nearby Yoshino mountains of Kinbu and Ōmine, where Shugendō’s semilegendary founder [EN NO OZUNU](#) regularly practiced, share much history with Kumano. A text known as the *Shozan Engi* (1180?) describes Kumano as the garbhadhātu (J. [TAIZŌKAI](#), or “womb realm”) [MANDALA](#) and the northern Yoshino mountains as the vajradhātu (J. [KONGŌKAI](#), or “diamond realm”) maṇḍala. These two geographic maṇḍalas, now superimposed over the physical landscape, became the basis of the well-known Yoshino–Kumano pilgrimage route, which is still followed today. As the prestige and patronage of the court began to wane in the late

twelfth century, revenue from visitors to the area became an important source of income for the local economy. In the following centuries, increasing numbers of pilgrims, including aristocrats, warriors, and ordinary people, undertook the journey, accompanying Kumano Shugen guides (sendatsu).

kumārabhūta. (T. gzhon nur gyur pa; C. tongzhen; J. dōshin; K. tongjin 童眞). In Sanskrit, lit. “youthful,” and “in the form of a prince”; a name commonly used in Sanskrit sources as an epithet of the [BODHISATTVA MAÑJUŚRĪ](#), who is considered to remain perennially youthful in appearance. The term may also be used to refer to either a novice monk ([ŚRĀMANERA](#)), in particular one between the ages of four or eight and twenty; an unmarried man over the age of eight; or [BODHISATTVA](#)s in general. ¶ In Korea, Tongjin is identified with either [BRAHMA](#), the king of the [BRAHMALOKA](#), the first [DHYĀNA](#) heaven in the realm of subtle materiality ([RŪPADHĀTU](#)), or Skandha (K. Wit’a; C. Weituo), the guardian deity who is one of the eight generals subordinate to [VIRŪDHAKA](#), one of the four heavenly kings (caturmahārāja; see [LOKAPĀLA](#)), who is the king of the southern quarter of the world. In both cases, Tongjin is described as a dharma protector ([DHARMAPĀLA](#)). His name is interpreted to mean a “youth” (tong), whose character is “authentic” (–jin). Hanging paintings ([T’AENGHWA](#)) of Tongjin and the [SINJUNG](#) (“host of spirits”; lokapāla) are often displayed on the right wall of the main shrine halls ([TAEUNG CHŎN](#)) in Korean monasteries. In these paintings, Tongjin is typically portrayed wearing a grand, feathered headdress accompanied by over a dozen associates, who aid him in protecting the religion. Tongjin’s image also sometimes appears on the first and last pages of a Buddhist scripture, thus protecting its content.

Kumārajīva. (C. Jiumoluoshi; J. Kumarajū; K. Kumarajip 鳩摩羅什) (344–409/413). The most influential translator of Buddhist texts into Chinese. He is regarded by tradition as the founder of the Chinese [SAN LUN ZONG](#) or “Three Treatises” branch of the [MADHYAMAKA](#) school of [MAHĀYĀNA](#) philosophy. According to his hagiography, Kumārajīva was born in the Central Asian petty kingdom of [KUCHA](#), where he was related to the royal family on his mother’s side. In his youth, he studied [SARVĀSTIVĀDA](#) doctrine in Kashmir but was later converted to [MAHĀYĀNA](#) at the Central Asian oasis town of Kashgar by the monk [BUDDHAYAŚAS](#). When the Chinese general Lü Guang conquered Kucha in 383, he took Kumārajīva back with him to Liangzong near the Chinese outpost of [DUNHUANG](#) as a prize, only to lose the eminent scholar–monk to Yaoxing (r.

394–416) when the Latter Qin ruler reconquered the region in 401. During his eighteen years as a hostage, Kumārajīva apparently learned to speak and read Chinese and seems to have been one of the first foreign monks able to use the language fluently. A year later in 402, Yaoxing invited Kumārajīva to the capital of Chang’an, where he established a translation bureau under Kumārajīva’s direction that produced some of the most enduring translations of Buddhist texts made in Chinese. The sheer number and variety of the translations made by Kumārajīva and his team were virtually unmatched until [XUANZANG](#) (600/602–664 CE). Translations of some seventy-four texts, in 384 rolls, are typically attributed to Kumārajīva, including various sūtras, such as the [PAÑCAVIMŚATISĀHASRIKĀPRAJÑĀPĀRAMITĀSŪTRA](#), [ASTASĀHASRIKĀPRAJÑĀPĀRAMITĀ](#), [SADDHARMAPUNĀRĪKASŪTRA](#), [VIMALAKĪRTINIRDEŚA](#), [SUKHĀVATĪVYŪHASŪTRA](#), and [VAJRACCHEDIKĀPRAJÑĀPĀRAMITĀSŪTRA](#), and important śāstras such as the [MŪLAMADHYAMAKAKĀRIKĀ](#), [ŚATAŚĀSTRA](#), *Dvādaśamukhaśāstra*, and the [DAZHIDU LUN](#). Because Kumārajīva was one of the first foreign monks to have learned Chinese well, he produced translations that were readily comprehensible as Chinese, and his translations remain the most widely read in East Asia of any translator’s; indeed, where there are multiple translations of a scripture, it is almost inevitably Kumārajīva’s that remains part of the living tradition. The accuracy of his translations is said to be attested by the fact that his tongue remained unburned during his cremation. Along with his correspondences with the monk [LUSHAN HUIYUAN](#) found in the [DASHENG DAYIZHANG](#), these translations laid the foundation for Mahāyāna thought, and especially Madhyamaka philosophy, in China. His many famous disciples include [DAOSHENG](#), [SENGZHAO](#), Daorong, and Sengrui, who are known collectively as the “four sages.”

[Kumāra-Kāśyapa](#). (P. Kumāra-Kassapa; T. ’Od srung gzhon nu; C. Jiumoluo Jiashe; J. Kumara Kashō; K. Kumara Kasōp 鳩摩羅迦葉). An [ARHAT](#) declared by the Buddha as foremost among his monk disciples in eloquence ([PRATIBHĀNA](#)) or versatile discourse (P. chittakathika). According to Pāli sources, his mother was a banker’s daughter who had married after her father refused to give his consent for her to join the Buddhist order. But her new husband was sympathetic to her religious quest and granted her permission. Unbeknown to her, however, she was already pregnant when she was ordained and ended up giving birth to her son in the monastery. When her condition became known, Devadatta rebuked her as a [PĀRĀJIKĀ](#), but the Buddha handed the case to [UPĀLI](#) for adjudication, who

declared that there was no transgression. (In such cases, the [VINAYA](#) authorizes the nuns to care for the child until he is weaned, after which he should be given to a [BHIKSU](#) and ordained as a novice, or [ŚRĀMANERA](#), or else handed over to relatives to be raised. According to the [MŪLASARVĀSTIVĀDA VINAYA](#), however, his parents Udāyin and Guptā were an ordained monk and nun, who conceived him—supposedly not through sexual intercourse but through the nun impregnating herself with the monk’s semen—and then raised him in the monastery.) After his birth, the boy was raised by the king of [ŚRĀVASTĪ](#) and was ordained as a novice when he reached the minimum age of seven. He received the epithet kumāra (youth) because of his youth when he was ordained and his royal upbringing and because he was a favorite of the Buddha, who used to give him sweets. Kumāra-Kāśyapa attained arhatship by pondering fifteen questions put to him by a [BRAHMĀ](#) god, who was himself a nonreturner ([ANĀGĀMIN](#)) and had been the boy’s companion in a previous life. Kumāra-Kāśyapa, in turn, assisted his mother in attaining insight. His mother was very attached to him and had wept for twelve years because she never saw him. When one day she happened upon him, she was so overwhelmed with emotion that she stumbled and milk flowed from her breasts. Realizing that her love for him was an impediment to her liberation, he harshly rebuked her to lessen her affections; that evening, she attained arhatship. Kumāra-Kāśyapa received higher ordination ([UPASAMPADĀ](#)) as a monk prior to reaching the minimum age of twenty, as the [VINAYA](#) normally stipulates, when Buddha ruled that the ten months spent in the mother’s womb could be included in determining the ordinand’s age. During the time of a previous buddha, Kumāra-Kāśyapa was a brāhmaṇa who overheard a disciple of the Buddha being praised for his eloquence; it was then that he vowed to attain the same distinction under a future buddha.

[kumbhāṇḍa](#). [alt. kumbhaṇḍa] (P. kumbhaṇḍa; T. grul bum; C. jiupantu; J. kuhanda; K. kubando 鳩槃荼). In Sanskrit, a type of evil spirit, and typically listed along with especially [RĀKSASA](#), but also [PIŚĀCA](#), [YAKSA](#), and [BHŪTA](#) spirits. [VIRŪDHAKA](#) (P. Virūḥaka), one of the four world-guardians ([LOKAPĀLA](#)), who protects the southern cardinal direction, is usually said to be their overlord, although some texts give Rudra this role instead. The kumbhāṇḍa are also sometimes listed among the minions of [MĀRA](#), evil personified.

[Kūṃgang sammaegyōng non](#). (C. Jingang sanmei jing lun; J. Kongō sanmaikyōron 金剛三昧經論). In Korean, “Exposition of the [KŪMGANG SAMMAE](#)

[KYŎNG](#)” (**Vajrasamādhisūtra*); composed by the Korean monk [WŎNHYO](#) (617–686). The circumstances of the commentary’s composition are provided in Wŏnhyo’s biography in [ZANNING](#)’s [SONG GAOSENG ZHUAN](#). According to that account, an unidentified Silla king sent an envoy on a voyage to China in search of medicine that would cure his queen. On his way to China, however, the envoy was waylaid and taken to the dragon king’s palace in the sea, where he was told that the queen’s illness was merely a pretext in order to reintroduce the *Vajrasamādhi* into the world. The dragon king informed the envoy that the scripture was to be collated by an otherwise unknown monk named Taean (d.u.) and interpreted by Wŏnhyo, the most eminent contemporary scholar of the Korean Buddhist tradition. The commentary that Wŏnhyo wrote later made its way into China, where it was elevated to the status of a [ŚĀSTRA](#) (lun; K. non), hence the title *Kūmgang sammaegyŏng non*. Wŏnhyo’s commentary is largely concerned with the issue of how to cultivate “original enlightenment” ([BENJUE](#)), that is, how it is that the original enlightenment motivates ordinary sentient beings to aspire to become enlightened buddhas. Wŏnhyo discerns in the *Kūmgang sammae kyŏng* a map of six sequential types of meditative practice, which culminate in the “contemplation practice that has but a single taste” (ilmi kwanhaeng). In Wŏnhyo’s account of this process, the ordinary sensory consciousnesses are transformed into an “immaculate consciousness” ([AMALAVIJÑĀNA](#)), wherein both enlightenment and delusion are rendered ineluctable and all phenomena are perceived to have but the “single taste” of liberation. In Wŏnhyo’s treatment, original enlightenment is thus transformed from an abstract soteriological concept into a practical tool of meditative training.

[Kūmgang sammae kyŏng](#). (S. **Vajrasamādhisūtra*; C. Jingang sanmei jing; J. Kongō sanmaikyō 金剛三昧經). In Korean, “Adamantine Absorption Scripture,” usually known in English by its reconstructed Sanskrit title **Vajrasamādhisūtra*. East Asian Buddhists presumed that the scripture was an anonymous Chinese translation of an Indian sūtra, but the text is now known to be an apocryphal scripture (see [APOCRYPHA](#)), which was composed in Korea c. 685 CE, perhaps by an early adept of the nascent [SŎN](#) (C. [CHAN](#)) school, which would make it the second oldest text associated with the emerging Chan movement. The sūtra purports to offer a grand synthesis of the entirety of [MAHĀYĀNA](#) doctrine and [VINAYA](#), as the foundation for a comprehensive system of meditative practice. One of the main goals of the scripture seems to have been to reconcile the newly

imported Chan teachings with the predominantly Hwaŏm ([HUAYAN](#)) orientation of Korean Buddhist doctrine (see [KYO](#)). The text also includes quotations from [BODHIDHARMA](#)'s [ERRU SIXING LUN](#) and teachings associated with the East Mountain Teachings ([DONGSHAN FAMEN](#)) of the Chan monks [DAOXIN](#) and [HONGREN](#), arranged in such a way as to suggest that the author was trying to bring together these two distinct lineages of the early Chan tradition. Unaware of the text's provenance and dating, [WŎNHYO](#) (617–686), in the first commentary written on the sūtra, the [KŪMGANG SAMMAEGYŎNG NON](#), presumed that the sūtra was the scriptural source of the emblematic teaching of a treatise, the [DASHENG QIXIN LUN](#) ("Awakening of Faith According to the Mahāyāna"), that was written over a century earlier, viz., the one mind and its two aspects, true-thusness ([ZHENRU](#); viz., S. [TATHATĀ](#)) and production-and-cessation (shengmie), which correspond respectively to ultimate truth ([PARAMĀRTHASATYA](#)) and conventional truth ([SAMVRTISATYA](#)), or the unconditioned ([ASAMSKRTA](#)) and conditioned ([SAMSKRTA](#)) realms. (For the traditional account of the putative "rediscovery" of the sūtra and the writing of its commentary, see [KŪMGANG SAMMAEGYŎNG NON](#) s.v.).

[Kŭmgangsan](#). (C. Jingangshan; J. Kongōsan; 金剛山). In Korean, "Diamond (S. [VAJRA](#)) Mountains," Buddhist sacred mountains and important Korean pilgrimage site. The mountains are located in Kangwŏn Province, North Korea, on the east coast of the Korean peninsula in the middle of the Paektu Taegan, the mountain range that is regarded geographically and spiritually as the geomantic "spine" of the Korean peninsula. The mountains are known for their spectacular natural beauty, and its hundreds of individual peaks have been frequent subjects of both literati and folk painting. During the Silla dynasty, Kŭmgangsan began to be conceived as a Buddhist sacred site. "Diamond Mountains," also known by its indigenous name Hyŏllye, is listed in the *Samguk sagi* ("History of the Three Kingdoms") and [SAMGUK YUSA](#) ("Memorabilia of the Three Kingdoms") as one of the three mountains (samsan) and five peaks (o'ak) that were the objects of cultic worship during the Silla period; scholars, however, generally agree that this refers to another mountain closer to the Silla capital of [KYŎNGJU](#) rather than what are now known as the Diamond Mountains. The current Diamond Mountains have had several names over the course of history, including Pongnae, P'ungak, Kaegol, Yŏlban, Kidal, Chunghyangsŏng, and Sangak, with "Kŭmgang" (S. [VAJRA](#)) becoming its accepted name around the fourteenth century. The name "Diamond Mountains" appears in the [AVATAMSAKASŪTRA](#) as

the place in the middle of the sea where the [BODHISATTVA DHARMODGATA](#) (K. Pöpki posal) resides, preaching the dharma to his congregation of bodhisattvas. The Huayan exegete [CHENGGUAN](#) (738–839), in his massive [HUAYAN JING SHU](#), explicitly connects the *Avataṃsakasūtra*'s mention of the Diamond Mountains to Korea (which he calls Haedong, using its traditional name). The [ASTASĀHASRIKĀPRAJÑĀPĀRAMITĀ](#) also says that the Dharmodgata (K. Tammugal; J. Donmuketsu; C. Tanwujian) preaches the [PRAJÑĀPĀRAMITĀ](#) at [GANDHAVATĪ](#) (K. Chunghyangsöng; C. Zhongxiangcheng; J. Shukōjō, “City of Multitudinous Fragrances”), one of the alternate names of the Diamond Mountains and now the name of one of its individual peaks. According to the Koryŏ-period *Kūmgang Yujömsa sajök ki* by Minji (1248–1326), on a visit to the Diamond Mountains made by [ŬISANG](#) (625–702), the vaunt-courier of the Hwaö̃m (C. Huayan) school in Korea, Dharmodgata appeared to him and told him that Kūmgangsan was the place in Korea where even people who do not practice could become liberated, whereas only religious virtuosi would be able to get enlightened on the Korean Odaesan (cf. C. [WUTAISHAN](#)). For all these reasons, Pöpki Posal is considered to be the patron bodhisattva of Kūmgangsan. Starting in the late-Koryŏ dynasty, the Diamond Mountains became a popular pilgrimage site for Korean Buddhists. Before the devastation of the Korean War (1950–1953), it is said that there were some 108 monasteries located on Kūmgangsan, including four primary ones: [P'YOHUNSA](#), [CHANGANSA](#), [SIN'GYESA](#), and Mahayönsa. Mahayönsa, “Great Vehicle Monastery,” was built by Ŭisang in 676 beneath Dharmodgata Peak (Pöpki-bong) and was considered one of the ten great Hwaö̃m monasteries (Hwaö̃m siptae sach'al) of the Silla dynasty. Currently, the only active monasteries are P'yohunsa and its affiliated branch monasteries, a few remaining buildings of Mahayönsa, and Sin'gyesa, which was rebuilt starting in 2004 as a joint venture of the South Korean [CHOGYE CHONG](#) and the North Korean Buddhist Federation. In the late twentieth century, the Diamond Mountains were developed into a major tourist site, with funding provided by South Korean corporate investors, although access has been held hostage to the volatile politics of the Korean peninsula. ¶ In Japan, Diamond Mountains ([KONGÖSAN](#)) is an alternate name for [KATSURAGISAN](#) in Nara, the principal residence of [EN NO OZUNU](#) (b. 634), the putative founder of the [SHUGENDÖ](#) school of Japanese esoterism, because he was considered to be a manifestation of the bodhisattva Dharmodgata.

[Kūmsansa](#). (金山寺). In Korean, “Gold Mountain Monastery,” the seventeenth

district monastery ([PONSA](#)) of the contemporary [CHOGYE](#) order of Korean Buddhism; located on Moak Mountain near Kimje in North Chōlla province. The monastery was founded in 600 CE and grew quickly. The Silla monk [CHINP'YO](#) (fl. c. 800), one of the early figures associated with the transmission of the monastic regulations ([VINAYA](#)) to Korea, was responsible for a major expansion of the monastery that took place between 762 and 766. Chinp'yo dedicated the monastery to the [BODHISATTVA MAITREYA](#) and built a three-story main shrine hall, or [TAEUNG CHŎN](#), which is dominated by the golden 39-ft. high statue of Maitreya, standing in the gesture of fearlessness ([ABHAYAMUDRĀ](#)) between two attendants who are both 29-ft. high. The south wall of the hall is decorated with a [T'AENGHWA](#) painting of Maitreya conferring the monastic rules (vinaya) on Chinp'yo. The monastery was expanded again in 1079 by the Koryō [YOGĀCĀRA](#) monk Hyedōk Sohyōn (1038–1096), who added several additional hermitages and sanctuaries; a [STŪPA](#) reputed to enshrine his [ŚARĪRA](#) is located on the monastery grounds. In 1596, the Japanese burned the monastery, whose monks had organized a 1,500-man force to resist the Hideyoshi invasion force. The oldest buildings currently on the site date to 1635, when the monastery was reconstructed under the leadership of the monk Sumun (d.u.). The scriptural repository (Taejang chōn) at Kūmsansa was built in 1652 but moved to its current site in 1922; inside can be found images of [ŚĀKYAMUNI](#) and the two [ARHATS MAHĀKĀŚYAPA](#) and [ĀNANDA](#). The wooden building is quite ornate and is one of the best-preserved examples of its type from the Chosōn period. There are various other items of note on the monastery campus, including a hexagonal stone pagoda made from slate capped by granite, another five-story pagoda, and a stone bell resembling those at [T'ONGDOSA](#) and Silluksa. Carvings on the bell date it to the Koryō dynasty and depict buddhas, dharma protectors ([DHARMAPĀLA](#)), and lotus flowers ([PADMA](#)).

[kunapa](#). (T. ro myags 'dam; C. shifenzeng; J. shifunzō; K. sibunjŭng 屍糞增). In Sanskrit, “mud of corpses”; the second of the four “neighboring hells” ([PRATYEKANARAKA](#)) located to the four sides of the eight hot hells (see [NĀRAKA](#)). This hell is a swamp of rotting corpses.

[Kun byed gyal po](#). (Kun che gyalpo). In Tibetan, the “All-Creating King,” an important tantra for the [RNYING MA](#) sect of Tibetan Buddhism, known for its exposition of [RDZOGS CHEN](#). Within the tripartite division of [ATIYOGA](#), it is placed in the [SEMS SDE](#) class. Although presented as an Indian text (in which case, its

Sanskrit title would be *Kulayarāja*), the work is likely of Tibetan origin, dating from the late tenth century. A work in eighty-four chapters, it takes the form of a dialogue between the All-Creating King and Sattvavajra. Among its famous teachings are the “ten absences” (med pa bcu) that point to the special nature of primordial awareness, called [BODHICITTA](#) as well as the “all-creating king” in the text. The ten are as follows: no philosophical view on which to meditate, no vows to maintain, no method to seek, no [MANDALA](#) to create, no transmission to receive, no path to traverse, no [BHŪMI](#) to achieve, no conduct to abandon or adopt, an absence of obstacles in the primordial wisdom, and spontaneous perfection beyond all hope and fear.

[Kun bzang bla ma'i zhal lung](#). (Kunzang Lame Shelung). In Tibetan, “Words of My Perfect Teacher,” a popular Buddhist text, written by the celebrated nineteenth-century Tibetan luminary [DPAL SPRUL RIN PO CHE](#) during a period of prolonged retreat at his cave hermitage above [RDZOGS CHEN](#) monastery in eastern Tibet. It explains the preliminary practices ([SNGON 'GRO](#)) for the [KLONG CHEN SNYING THIG](#) (“Heart Essence of the Great Expanse”), a system of [RNYING MA](#) doctrine and meditation instruction stemming from the eighteenth-century treasure revealer ([GTER STON](#)) ['JIGS MED GLING PA](#). The work is much loved for its direct, nontechnical approach and for its heartfelt practical advice. Dpal sprul Rin po che’s language ranges from lyrical poetry to the vernacular, illustrating points of doctrine with numerous scriptural quotations, accounts from the lives of past Tibetan saints, and examples from everyday life—many of which refer to cultural practices specific to the author’s native land. While often considered a Rnying ma text, the *Kun bzang bla ma'i zhal lung* is read widely throughout the sects of Tibetan Buddhism, a readership presaged by the author’s participation in the [RIS MED](#) or so-called nonsectarian movement of eastern Tibet during the nineteenth century.

[Kuṇḍadhāna](#). (C. Juntubohan; J. Kuntohakan; K. Kundobarhan 君屠鉢漢). In Sanskrit and Pāli, name of an [ARHAT](#) who is listed as one of the four great [ŚRĀVAKAs](#) (C. sida shengwen). According to Pāli sources, the Buddha declared him to be foremost among monks in receiving food-tickets (salākā; S. śalākā), small slips of wood used to determine which monks would receive meals from the laity, a distinction he was given because he was always the first of the Buddha’s disciples to receive food-tickets when he accompanied the Buddha on invitations. Kuṇḍadhāna was a learned brāhmaṇa from Sāvattī (S. [ŚRĀVASTĪ](#))

who knew the Vedas by heart. When he was already an old man, he heard the Buddha preach and decided to renounce the world and join the Buddhist order. However, beginning on the day of his ordination, an apparition of a young woman would follow him wherever he went, although he himself could not see her. This caused great amusement among the public, and he became a frequent butt of jokes that he could not comprehend. On alms rounds ([PINDAPĀTA](#)), women would place two helpings of food in his bowl, remarking that the first was for him and the second for his lady friend. In the monastery, his fellow monks and even novices were relentless in their teasing, until one day he lost his temper and abused his tormentors. This outburst was duly reported to the Buddha, who admonished the old monk to be patient, as he was only suffering retribution from some past misdeed. King Pasenadi ([PRASENAJIT](#)) of Kosala (S. [KOŚĀLA](#)) heard of Kuṇḍadhāna's strange case and, after an inquiry that proved his innocence, supplied him with requisites so that he need no longer go into the city for alms. Free from the taunting, Kuṇḍadhāna was able to concentrate his mind and in due course became an arahant (S. [ARHAT](#)), whereupon the apparition disappeared. Kuṇḍadhāna's wrongdoing had occurred during the time of Kassapa (S. [KĀŚYAPA](#)) Buddha, when, as a sprite, he played a trick on two monks to test their friendship. Assuming the form of a maiden rearranging her clothes after a tryst, he caused one monk to accuse his companion of a violation. Because his mischief forever ended the friendship of the two monks, the sprite was reborn in hell for an eon and, in his last life, as the monk Kuṇḍadhāna, he was compelled to be followed around by this apparition of a maiden. He is also sometimes listed as one of the four great śrāvakas (C. sida shengwen); the lists vary widely but typically include either [MAHĀKĀŚYAPA](#), [PINDOLA-BHĀRADVĀJA](#), and [RĀHULA](#); or [MAHĀMAUDGALYĀYANA](#), Mahākāśyapa, and [ANIRUDDHA](#); or [ŚĀRIPUTRA](#), Mahāmaudgalyāyana, Mahākāśyapa, and [SUBHŪTI](#), *etc.*

[Kun dga' bzang po](#). (Kunga Sangpo) (1382–1456). A Tibetan Buddhist master, better known as Ngor chen, “the great man of Ngor”; renowned as the founder of the Ngor subsect of the [SA SKYA](#) sect after the seat he founded at [NGOR E WAM CHOS LDAN](#) monastery in 1429 (alt. 1434) near Shigatse (Gzhis ka rtse) in Gtsang (Tsang). His collected works in four volumes include works on the [LAM 'BRAS](#) (path and result), and rituals and guidance texts for a wide range of tantric practices including [HEVAJRA](#), [GUHYASAMĀJA](#), [VAJRABHAIRAVA](#), and [CAKRASAMVARA](#). Among his students are [SHĀKYA MCHOG LDAN](#) and [GO BO RAB 'BYAMS PA BSOD NAMS SENG GE](#).

Kun dga' dpal 'byor. (Kunga Paljor) (1426/8–1476). The second “throne holder” ('Brug chen) of the ['BRUG PA BKA' BRGYUD](#) sect of Tibetan Buddhism, after [GTSANG PA RGYA RAS YE SHES RDO RJE](#), the founder of the 'Brug pa bka' brgyud. Prior to Kun dga' dpal 'byor (called Chos rje “dharma lord”), the line of ['BRUG CHEN INCARNATIONS](#) passed down for twelve generations through Gtsang pa rgya ras's family; the line of incarnations is counted from Chos rje Kun dga' dpal 'byor, a great teacher and author. His collected works in two volumes include explanations of [MAHĀMUDRĀ](#), tantric songs (mgur), and special instructions.

kuṇḍikā. (T. ril ba spyi blugs/ril tshags; C. jingping/junchi; J. jōbyō/gunji; K. chōngbyōng/kunji 淨瓶/軍持). In Sanskrit and Pāli, “water pot” or “water sprinkler”; also seen spelled as kuṇḍika or kuṇḍaka (there are similarly many variations in the Chinese transcriptions and translations); the vessel originally used by monks and nuns for carrying water, which later became a common ritual implement used in a wide variety of Buddhist ceremonies for sprinkling water for purification. The kuṇḍikā was one of the eighteen requisites ([PARISKĀRA](#), [NĪŚRAYA](#)) that monks and nuns were allowed to keep and could be used either as a canteen for drinking water or as a pot for carrying water to use at the latrine. The kuṇḍikā has a distinctive shape: the oval main vessel, which can typically hold over three liters of water has a separate short spout, which was used to fill the pot with water, and its long neck is topped with a long slender tube through which water was poured (although these functions were sometimes interchanged). The two spouts were capped with metal, bamboo, or even fabric so that insects and dirt would not foul the water. The vessels were commonly made from earthenware, porcelain, or bronze. Scores of metal kuṇḍikā that were used in rituals are found in East Asia from the seventh and eighth centuries. During the Koryō dynasty in Korea, such kuṇḍikā were widely used by nobility and commoners, monks, and laypersons for storing water. A particularly exquisite twelfth-century bronze kuṇḍikā, inlaid with silver willows and aquatic birds, is a Korean national treasure. The [BODHISATTVA AVALOKITEŚVARA](#), especially his moon in the water form ([SHUIYUE GUANYIN](#)), is often depicted holding a kuṇḍikā capped by a willow twig and filled with the nectar of immortality ([AMRTA](#)), which he used to alleviate the suffering of sentient beings.

Kūngsǒn. (K) (巨瓊). See [PAEKP'A KŪNGSŌN](#).

Kuo'an Shiyuan. (J. Kakuan Shion; K. Kwagam Sawōn 廓庵師遠). (d.u.).

Chinese [CHAN](#) monk best known as author of one of the two classic depictions of the ten oxherding pictures (C. Shiniu tu) that eventually became normative within the Chan tradition. Shiyuan was a disciple of Dasui Yuanjing (d. 1135) in the [YANGQI PAI](#) of the [LINJI ZONG](#) but little else is known about his life or career. His set of ten oxherding pictures traces the development of the Chan student (the “herdsman”) who seeks to tame the “ox” of his unchecked thoughts, so that he may put his enlightened mind to use in the service of all sentient beings. His images of each stage, accompanied with his own explanatory verses, spread widely across East Asia and became a staple of Chan pedagogy. See [OXHERDING PICTURES, TEN](#).

[Kurukullā](#). (T. Dbang gi lha mo). Sanskrit proper name of a form of [TĀRĀ](#); Kurukullā appears in both peaceful and wrathful manner, generally red in color. Wrathful, she stands in [ARDHAPARYĀṆKA ĀSANA](#), one face with three eyes, wearing a crown of skulls and holding in her four hands a bow and arrow and snare (pāśa) and displaying the [ABHAYAMUDRĀ](#). When peaceful, she is portrayed in seated posture and has eight arms. Kurukullā is propitiated in a rite of [VAŚĪKARANA](#), by which men are bewitched. She is therefore considered the Tārā of love, propitiated by women seeking success in romance. Her mantra is om kurukulle hrī svāhā.

[kuśala](#). (P. kusala; T. dge ba; C. shan; J. zen; K. sŏn 善). In Sanskrit, “wholesome,” “virtuous,” “salutary,” or “meritorious.” Kuśala is the primary term used to identify salutary deeds of body, speech, and mind (often enumerated as ten) that result in favorable rebirths. A “wholesome” action generally refers to any volition ([CETANĀ](#)) or volitional action, along with the consciousness ([VIJÑĀNA](#)) and mental constructions ([SAMSKĀRA](#)) associated with it, that is not motivated by the afflictions ([KLEŚA](#)) of greed ([LOBHA](#)), hatred ([DVESA](#); P. dosa), or delusion ([MOHA](#)). Such volitional actions produce fortunate results for the actor and ultimately are the cause of the favorable rebirths in the destinies ([GATI](#)) of humans and divinities ([DEVA](#)). A list of ten wholesome courses of actions (kuśalakarmapatha; see [KARMAPATHA](#)), which are the opposite of the unwholesome ([AKUŚALA](#)) courses of action is typically given. These include, under the category of body, the avoidance of killing and instead sustaining life, the avoidance of stealing and instead giving, and the avoidance of sexual misconduct and instead maintaining sexual morality; under the category of speech, the avoidance of lying and instead speaking truthfully, the avoidance

of slander and instead speaking harmoniously, the avoidance of offensive speech and instead speaking kindly, and the avoidance of prattle and instead speaking sensibly; under the category of mind, unselfishness, good will, and right views ([SAMYAGDRSTI](#)).

[kuśalakarmapatha](#). In Sanskrit, the ten “wholesome courses of action.” See [KARMAPATHA](#).

[kuśalamahābhūmika](#). (T. dge ba’i sa mang; C. da shandi fa; J. daizenjihō; K. tae sŏnji pŏp 大善地法). In Sanskrit, “wholesome factors of wide extent”; the principal factors ([DHARMA](#)) that ground all wholesome activities. In the [SARVĀSTIVĀDA ABHIDHARMA](#) system, ten specific forces associated with mentality ([CITTASAMPRAKYUKTASAMSKĀRA](#)) are identified as accompanying all wholesome activities and therefore are described as “wholesome factors of wide extent.” These ten dharma are (1) “confidence” or “faith” ([ŚRADDHĀ](#)), (2) “heedfulness” or “vigilance” ([APRAMĀDA](#)), (3) “tranquillity” or “pliancy” ([PRAŚRABDHI](#)), (4) “equanimity” ([UPEKSĀ](#)), (5) “sense of shame” ([HRĪ](#)), (6) “fear of blame” ([APATRĀPYA](#)), (7) “absence of craving” ([ALOBHA](#)), (8) “absence of ill will” ([ADVEŚA](#)), (9) “absence of harmful intentions” ([AHIMSĀ](#)), (10) and “vigor” or “effort” ([VĪRYA](#)).

[kuśalamūla](#). (P. kusalamūla; T. dge ba’i rtsa ba; C. shangen; J. zengon; K. sŏn’gŭn 善根). In Sanskrit, the term “wholesome faculties,” or “roots of virtue,” refers to the cumulative meritorious deeds performed by an individual throughout his or her past lives. Different schools offer various lists of these wholesome faculties. The most common list is threefold: nongreed ([ALOBHA](#)), nonhatred ([ADVEŚA](#)), and nondelusion ([AMOHA](#))—all factors that encourage such wholesome actions ([KARMAN](#)) as giving ([DĀNA](#)), keeping precepts, and learning the dharma. These three factors thus will fructify as happiness in the future and will provide the foundation for liberation ([VIMUKTI](#)). These three wholesome roots are the converse of the three unwholesome faculties, or “roots of nonvirtue” ([AKUŚALAMŪLA](#)), viz., greed ([LOBHA](#)), hatred ([DVESĀ](#)), and delusion ([MOHA](#)), which lead instead to unhappiness or even perdition. In place of this simple threefold list, the [VAIBHĀSIKA](#) school of [ABHIDHARMA](#) offers three separate typologies of kuśalamūlas. The first class is the “wholesome roots associated with merit” (puṇyabhāgīya-kuśalamūla), which lead to rebirth in the salutary realms of humans or heavenly divinities ([DEVA](#)). These include such qualities as faith, energy, and decency and modesty, the foundations of moral

progress. Second are the “wholesome roots associated with liberation” ([MOKṢABHĀGĪYA-KUŚĀLAMŪLA](#)), which eventually lead to [PARINIRVĀNA](#). These are factors associated with the truth of the path ([MĀRGASATYA](#)) or various factors conducive to liberation. Third are the “wholesome roots associated with spiritual penetration” ([NIRVEDHABHĀGĪYA](#)-kuśalamūla), which are the four aspects of the direct path of preparation ([PRAYOGAMĀRGA](#)): heat ([ŪSMAN](#)), summit ([MŪRDHAN](#)), receptivity ([KSĀNTI](#)), and highest worldly dharmas ([LAUKIKĀGRADHARMA](#)). These nirvedhabhāgīyas open access to the path of vision ([DARŚANAMĀRGA](#)), where the first stage of sanctity, stream-entry ([SROTAĀPANNA](#)), is won. The nirvedhabhāgīya differ so markedly from the two previous categories of wholesome roots that they are often listed independently as the four wholesome faculties (catvāri kuśalamūlāni). The wholesome roots may be dedicated toward a specific aim, such as rebirth in a heavenly realm; toward the benefit of a specific person, such as a parent or relative; or toward the achievement of buddhahood for the sake of all sentient beings.

[Kuśāna](#). (S). See [KUSHANA](#).

[Kusan Sōnmun](#). (九山禪門). In Korean, “Nine Mountains School of Sōn,” the major strands of the Korean [SŌN](#) (C. [CHAN](#)) school during the Unified Silla and early Koryŏ dynasties. Due to severe opposition from the exegetical traditions supported by the court, especially Hwaŏm (C. [HUAYAN](#)), Korean adepts who returned from China with the new teachings of Chan (pronounced Sōn in Korean) established monasteries far away from the Silla capital of [KYŎNGJU](#) to propagate the new practice. At least nine such mountain monasteries appeared during the latter Unified Silla and early Koryŏ dynasty, which soon developed into independent lines of Sōn. Each line was named after the mountain (san) on which the monastery of its founder was built. Toŭi is regarded as the founder of the Kajisan line of Sōn, Hongch’ŏk of Silsangsan, Hyech’ŏl of Tongnisan, Muiŏm of Sŏngjusan, Pŏmil of Sagulsan, Toyun of Sajasan, Hyŏnuk of Pongnimsan, Iŏm of Sumisan, and Tohŏn of Hŭiyangsan. With the exception of Iŏm’s Sumisan line of Sōn, all these traditions traced themselves back to the HONGZHOU lineage of [MAZU DAOYI](#). The earliest biographies of many of these founders of the Kusan Sōnmun are found in the [CHODANG CHIP](#) (“Hall of the Patriarchs Record”), a tenth-century genealogical anthology and one of the earlier “lamplight histories” (denglu). Along with the other Buddhist traditions in Korea, the Nine Mountains Sōn traditions were largely united and reorganized

under the rubric of Sōn (Meditation) and Kyo (Doctrine) by King Sejong (r. 1419–1450) in 1424.

[Kusan Sōnp'a](#). (九山禪派). In Korean, “Nine Mountains Lineage of Sōn.” See [KUSAN SŌNMUN](#).

[Kushana](#). (S. Kuṣāṇa). A northwest Indian kingdom (late first to third centuries CE) located adjacent to the [GANDHĀRA](#) region of the Indian subcontinent. The story of the Kushan king [KANISKA](#)'s conversion to Buddhism is widely found in the literature, but it seems to belong to the realm of legend, not history. Thanks to Kaniṣka's putative support, the Kushan kingdom has traditionally been assumed to have been an important conduit for the introduction of Buddhist materials into China via the Silk Roads of Central Asia. Recent evidence of the decline in west Central Asian trade during the Kushan period, however, may suggest instead that the Kushans were more of an obstacle than a help. Hence, it may not have been the Kushans who facilitated the transmission of Buddhism but their Indo-Scythian predecessors in the region, the Saka (S. Śaka) tribe. The Chinese tradition identifies several important early translators of Buddhist materials as hailing from the Kushan kingdom, including *[LOKAKSEMA](#), who was active in the last quarter of the second century. Monks who hailed from this region were given the ethnicon [ZHI](#) by the Chinese.

[Kuśinagarī](#). [alt. Kuśinagara] (P. Kusinārā; T. Rtswa mchog grong; C. Jushinajieluo; J. Kushinagara; K. Kusinagera 拘尸那揭羅). The town in Uttar Pradesh where the Buddha entered into [PARINIRVĀNA](#) among a grove of [ŚĀLA](#) trees. While he was sojourning in [VAIŚĀLĪ](#), the Buddha had repeatedly hinted to his disciple [ĀNANDA](#) that it would be possible for him to live out the [KALPA](#), if only Ānanda would make such a request. (See [CĀPĀLACAITYA](#).) However, Ānanda did not understand what the Buddha was insinuating and neglected to make the request, so the Buddha renounced his will to live, saying that he would pass away three months hence. (Ānanda is said to have had to confess this mistake when the first Buddhist council was convened; see [COUNCIL, FIRST](#).) After they had traveled to Kuśinagarī for the parinirvāṇa, Ānanda had asked the Buddha not to attain parinirvāṇa in such a “little mud-walled town, a backwoods town, a branch township,” but the Buddha disabused him of this notion, telling him that Kuśinagarī had previously been the magnificent capital of an earlier [CAKRAVARTIN](#) king named Sudarśana (P. Sudassana). The Buddha passed away on a couch arranged between twin śāla trees. Following the Buddha's

cremation, the brāhmaṇa [DRONA](#) was called upon to decide the proper procedure for apportioning the Buddha's relics ([ŚARĪRA](#)). Droṇa divided the relics into eight parts that the disputing kings could carry back to their home kingdoms for veneration and built a reliquary [STŪPA](#) in Kuśinagarī to house the vessel that had temporarily held the relics. As the site of the Buddha's parinirvāṇa, Kuśinagarī became one of the four major Indian pilgrimage sites ([MAHĀSTHĀNA](#)) and is often depicted in Buddhist art.

[Kūṭadantasutta](#). (C. Jiuluotantou jing; J. Kuradantōkyō; K. Kuradandu kyōng 究羅檀頭經). In Pāli, “Discourse to Kūṭadanta”; the fifth scripture in the Pāli [DĪGHANIKĀYA](#) (a separate [DHARMAGUPTAKA](#) recension appears as the twenty-third [SŪTRA](#) in the Chinese translation of the [DIRGHĀGAMA](#)). According to the Pāli recension of the scripture, the Buddha engages in a discourse with an accomplished brāhmaṇa teacher and debater named Kūṭadanta, who was living in the prosperous brāhmaṇa village of Khānumata in the country of [MAGADHA](#). While Kūṭadanta was preparing to make a grand sacrifice of thousands of cattle, he consulted the Buddha on how properly to conduct the rite. The Buddha tells him a story of an earlier king, who conducted an exemplary sacrifice under the guidance of his wise court chaplain, in which all four castes took part. The king and his chaplain both were endowed with eight virtues suitable to their royal and priestly functions. Their sacrifice entailed the killing of no living creatures, and the labor for the sacrifice was not conscripted but offered voluntarily. The sacrifice was offered for the benefit of all and not just the king, and no regrets were felt during any stage of the rite. The Buddha then proceeds to describe even better kinds of sacrifice in increasing order of benefit, beginning with the serving and feeding of recluses; the building of monasteries ([VIHĀRA](#)) for the Buddhist order ([SAMGHA](#)); taking refuge in the three jewels ([RATNATRAYA](#)) of the Buddha, the dharma, and the saṃgha; observing the precepts; renouncing the world to become a Buddhist monk; controlling the senses with mindfulness (sati; S. [SMRTI](#)); cultivating the four meditative absorptions ([JHĀNA](#); S. [DHYĀNA](#)); and developing the six higher knowledges or supernormal powers (abhiññā; S. [ABHIJÑĀ](#)), which culminate in enlightenment and liberation from the cycle of rebirth. Upon hearing the discourse, Kūṭadanta becomes a stream-enterer (sotāpanna; S. [SROTAĀPANNA](#)) and declares himself a disciple of the Buddha. Through this parable, the Buddha expresses his disapproval of blood rituals, highlighting the unnecessary cruelty and waste involved in such sacrifices. Through this lengthy discourse, he persuades Kūṭadanta of the correctness of

these principles and converts him to Buddhism. The conversion of this respected brāhmaṇa is regarded as one of the great spiritual victories of the Buddha.

kuti. In Thai, “monk’s residence,” a small, simple, hut-like building, made of wood and/or bamboo, used as living quarters for a monk or at some monasteries for lay meditators in Thailand. A kuti is usually built on stilts in the traditional Southeast Asian style. The word can also be used to refer to a monk’s room in a larger building.

Kūya. (空也) (903–972). Japanese monk and itinerant holy man ([HIJIRI](#)) renowned for his efforts to spread the practice of nenbutsu (C. [NIANFO](#)) or invocation of the name of the buddha [AMITĀBHA](#) among the common people. Little is known of his early life, but legends of his building bridges and roads and producing images of buddhas and [BODHISATTVA](#)s abound. He is also famous for preaching at the marketplace, for which he came to be known as the “holy man (hijiri) of the marketplace.” Kūya is said to have received full ordination from the [TENDAISHŪ](#) monk Enshō (880–964) on [HIEIZAN](#) in 948. A famous statue of Kūya practicing nenbutsu is now housed at his temple Rokuharamitsuji. It shows the syllables of the nenbutsu emerging from this mouth in the form of buddhas.

kwaebul. (掛佛). In Korean, lit. “hanging buddha [image].” See [T’AENGHWA](#).

Kwallŭk. (J. Kanroku 觀勒) (d.u.). Early seventh-century Korean monk from the kingdom of Paekche, who arrived in Japan in 602 CE and was instrumental in transmitting Buddhism and Sinitic civilization to the Japanese isles. According to the account in the *Nihon shoki*, Kwallŭk was a specialist in the [MADHYAMAKA](#) school of [MAHĀYĀNA](#) philosophy, who arrived in Japan also bringing documents on calendrics, astronomy, geometry, divination, and numerology to the Japanese court, which placed many students under his tutelage. Kwallŭk’s interests were so diverse, in fact, that he was later chastised by the Japanese ruler for paying too much attention to astronomy and geography and confusing them with the “true vehicle” of Buddhism. Kwallŭk became arguably the most influential monk of his time and was eventually appointed in 624 by Queen Suiko (r. 593–628) to the new position of [SŌJŌ](#) (saṃgha primate), one of the earliest ecclesiastical positions created within the Japanese Buddhist church. His appointment to this position also indicates the prestige that monks from the Paekche kingdom enjoyed at the incipency of Buddhism in Japan.

Kwangmyōngsa. (廣明寺). In Korean, “Vast Radiance Monastery,” a major [SŎN \(CHAN\)](#) monastery during the Koryŏ dynasty; located on Songak Mountain in the Koryŏ capital of Kaesŏng. The monastery was established in 922, when the founder of the Koryŏ dynasty, Wang Kŏn (T’aejo, 877–943/r. 918–943), donated his residence to the Buddhist order. With King Kwangjong’s (r. 925–975) launching of an ecclesiastical examination system ([SŪNGKWA](#)), Kwangmyōngsa was designated as the site for the selection examination for monks in the Sŏn (Meditation) school, with [WANGNYUNSA](#) (Royal Wheel Monastery) chosen to administer the Doctrinal ([KYO](#)) school examinations. During the military rule of the Ch’oe family during the late twelfth and thirteenth centuries, the monastery was also one of the major sites in the capital for the discussing Sŏn dharma assembly (tamsŏn pŏphoe), along with Pojesa (Universal Salvation Monastery) and Sŏpot’ongsa (Western Universal Penetration Monastery). A well located to the northeast of the monastery was associated with the legend of Chakchegŏn, the ancestor of the Koryŏ ruling family, who is said to have visited the Dragon King’s palace. The monastery was the site of many Buddhist court ceremonies during the Koryŏ dynasty. King Ch’ungnyŏl (r. 1236–1308) visited the monastery in 1282 with his queen to meet the monk [IRYŎN](#) (1206–1289), writer of the [SAMGUK YUSA](#), and a ceremony to speed the king’s recovery from illness was held there in the following year. King Ch’ungnyŏl later held an *[ULLAMBANA](#) (K. Uranbunje) rite (1296) and a yonghwahoe (dragon flower assembly; 1301, 1302) at the monastery. In 1371, King Kongmin (1330–1374/r. 1351–1374) commanded [NAONG HYGŪN](#) (1320–1376) to administer there the monastic training examination (kongbusŏn, see [sŭngkwa](#)), an advanced test taken by the monks from the two meditative and five doctrinal schools. Kwangmyōngsa’s close relationship with the royal family continued into the early Chosŏn dynasty, when, for example, King T’aejong (1367–1422/r. 1400–1418), granted grain and slaves to the monastery in 1405. The monastery was reassigned to the Kyo (Doctrinal) school after 1424 and subsequently drops from Korean Buddhist sources.

Kwanŭmsa. (觀音寺). In Korean, “[AVALOKITEŚVARA](#) monastery,” the twenty-third parish monastery ([PONSA](#)) of the contemporary [CHOGYE ORDER](#) of Korean Buddhism, located on Halla Mountain on Cheju Island. Its foundation date is uncertain. The monastery was destroyed during the eighteenth century and rebuilt in 1912 by the laywoman Pong Yŏgwan (fl. c. 1907), who named it Pŏpchŏngam (Dharma Well Hermitage). While Pong was on a sea journey to

Piyang Island in 1901, she felt she would have been lost at sea were it not for the saving grace of Avalokiteśvara, the bodhisattva of compassion. Pong subsequently was ordained as a nun ([BHIKSUNĪ](#)) in 1907 and returned to Cheju island to rebuild the monastery. As the monastery's following increased, it became known as Kwanūmsa. The monastery's main buddha image and its hanging picture ([T'AENGHWA](#)) of the Buddha were brought from Kwangsansa and Yonghwasa. Kwanūmsa currently manages approximately thirty branch temples ([MALSA](#)).

[kwāpā dya](#). A Newari term for the image of the central, nontantric, deity located on the ground floor shrine in a Newar monastery ([BĀHĀ](#)), most often located directly across from the main entryway. The term is likely derived from the Sanskrit *koṣṭhapāla*, “guard,” “watchman,” and carries the meaning of “guardian of the [SAMGHA](#),” although the image does not generally function as a “guardian or protector deity.” The shrine of the *kwāpā dya* is generally open to the public, and, although visitors are not normally permitted inside, they may view the image from the gate and make offerings through the shrine's attendant.

[kyaung](#). (Burmese). See [VIHĀRA](#).

[Kyeyul chong](#). (戒律宗). In Korean, “[VINAYA](#) school.” See [KYO](#).

[Kyo](#). (C. *jiao*; J. *kyō* 教). In Korean, “doctrine” or “teaching,” generally referring to doctrinally oriented Buddhist schools and their tenets, as distinguished from meditation-oriented Buddhist schools and practices ([SŎN](#); C. [CHAN](#)). While the Chinese and Japanese Buddhist traditions appear to have used the term doctrine only to describe one of two generic approaches to Buddhism, in Korea Buddhist schools have often been categorized as belonging to either the Doctrine (Kyo) or the Meditation (Sŏn) schools; indeed, during the period of Buddhist suppression under the Chosŏn dynasty, Kyo and Sŏn became the specific designations for the two officially sanctioned schools of the tradition. During the stable political environment of the Unified Silla period (668–935), five major Kyo schools are traditionally presumed to have developed in Korean Buddhism: [NIRVĀNA](#) (Yŏlban chong), [VINAYA](#) (Kyeyul chong), Dharma-nature ([PŎPSŎNG CHONG](#)), Hwaŏm [alt. Wŏnyung chong], and [YOGĀCĀRA](#) (Pŏpsang chong). Toward the end of the Unified Silla period, however, the newly imported Sŏn (C. Chan, Meditation) lineages, which were associated with local gentry on the frontier of the kingdom, began to criticize the main doctrinal school, Hwaŏm, that was

supported by the old Silla aristocracy in the capital of [KYŎNGJU](#); these schools came to be called the “Nine Mountains School of Sŏn” ([KUSAN SŎNMUN](#)). These various doctrine and meditation schools were collectively referred to as the “Five Doctrinal [Schools] and Nine Mountains [Schools of Sŏn]” ([OGYO KUSAN](#)). The Ogyo Kusan designation continued to be used into the succeeding Koryŏ dynasty (937–1392), which saw the first attempts to bring together these two distinct strands of the Korean Buddhist tradition. Attempts to find common ground between the Kyo and Sŏn schools are seen, for example, in [ŬICH’ŎN](#)’s “cultivation together of scriptural study and contemplation” (kyogwan kyŏmsu) and [POJO CHINUL](#)’s “cultivation in tandem of concentration [viz., Sŏn] and wisdom [viz., scripture]” (chŏnghye ssangsu). The Ch’ŏnt’ae (C. [TIANTAI](#)) and [CHOGYE](#) schools that are associated respectively with these two monks were both classified as Sŏn schools during the mid-to late-Koryŏ dynasty; together with the five previous Kyo schools, these schools were collectively called the “Five Kyo and Two [Sŏn] Traditions” ([OGYO YANGJONG](#)). This designation continued to be used into the early Chosŏn dynasty (1392–1910). The Confucian orientation of the new Chosŏn dynasty led to an increasing suppression of these Buddhist traditions. In 1407, King T’aejong (r. 1400–1418) restructured the various schools then current in Korean Buddhism into three schools of Sŏn and four of Kyo; subsequently, in 1424, King Sejong (r. 1418–1450) reduced all these remaining schools down to, simply, the “Two Traditions, Sŏn and Kyo” ([SŎN KYO YANGJONG](#)), a designation that continued to be used through the remainder of the dynasty. The modern Chogye order of Korean Buddhism claims to be a synthetic tradition that combines both strands of Sŏn meditation practice and Kyo doctrinal study into a single denomination.

[Kyōgyō shinshō](#). (教行信証). In Japanese, “Teaching, Practice, Faith, and Realization,” composed by the Japanese [JŌDO SHINSHŪ](#) teacher [SHINRAN](#) (1173–1263), also known as the *Ken jōdo shinjitsu kyōgyōshō monrui*. The *Kyōgyō shinshō* is considered one of the most important texts of the Jōdo Shinshū tradition. The exact dates of its compilation are unknown, but it seems to have gradually developed into its current shape over the first half of the thirteenth century. Several other similar works were also composed during this period by disciples of [HŌNEN](#), largely in response to the monk [MYŌE KŌBEN](#)’s criticism of exclusive nenbutsu (C. [NIANFO](#)), the hallmark of the Jōdo traditions. The *Kyōgyō shinshō* largely consists of citations of scriptural passages on the practice of nenbutsu or invocation of the name of the buddha [AMITĀBHA](#). Perhaps the most

important section of the *Kyōgyō shinshō* is that on faith (shinjin; C. [XINXIN](#)), where Shinran attempted to demonstrate that faith is based on the practice of nenbutsu and comes not from the effort made by the practitioner but from Amitābha himself (see [TARIKI](#)). Citing the [SUKHĀVATĪVYŪHASŪTRA](#)'s teachings on the original vows (hongan) of the [BODHISATTVA DHARMĀKARA](#) (the future Amitābha), Shinran also emphasized the importance of the “single nenbutsu” ([ĪCHINENGI](#)) in attaining rebirth in the [PURE LAND](#). He also sought to legitimize the practice of nenbutsu through recourse to the notion of the “final age of the [DHARMA](#)” (J. mappō, C. [MOFA](#)) when other types of Buddhist practice were ineffective.

[Kyōjong sŏn](#). (教宗選). In Korean, the “Doctrinal ([KYO](#)) School examination.” See [SŪNGKWA](#).

[Kyōnghān](#). (K) (景閑). See [PAEGUN KYŌNGHAN](#).

[Kyōnghŏ Sŏngu](#). (鏡虛惺牛) (1849–1912). The preeminent Korean [SŌN](#) master of his generation, renowned for his efforts to revitalize Korean Buddhism at the end of the Chosŏn dynasty. Kyōnghŏ lost his father at an early age, and his mother entrusted him to the monastery of Ch'ōnggyesa in Kwangju, where he became a monk. He was tonsured by the monk Kyehŏ (d.u.) in 1857, but when Kyehŏ later renounced his vows, Kyōnghŏ left for Tonghaksa, where he continued his studies under the monk Manhwa Kwanjun (1850–1919). Later, Kyōnghŏ went to the hermitage Ch'ōnjangam in Hongju and became the disciple of the monk Yongam (d.u.). For the next twenty years, Kyōnghŏ taught at various places including Ch'ōnjangam, Kaesimsa, and [PUSŌKSA](#). In 1899, he settled down at the major monastery of [HAEINSA](#), where he presided over the publication of Buddhist scriptures and the reopening of [POJO CHINUL](#)'s [SUSŌNSA](#). Kyōnghŏ is presumed to be the author of the [SŌNMUN CH'WARYO](#) (“Selected Essentials from the Gate of Sŏn”), an anthology of the essential canon of the Korean Sŏn school. Kyōnghŏ subsequently led the life of an itinerant monk until his death in 1912. Kyōnghŏ was a strong advocate for the revitalization of [GONG'AN](#) meditation practice (kanhwa Sŏn; see [KANHUA CHAN](#)) and did much to reestablish what was then a moribund meditation tradition in Korean Buddhism. Among his disciples, [MAN'GONG WŎLMYŎN](#) (1871–1946) and [HANAM CHUNGWŎN](#) (1876–1951) are most famous. Largely through the influence of his disciples, many modern and contemporary Korean Sŏn monks came to trace their lineages back to Kyōnghŏ.

Kyōngju. (慶州). Ancient capital of the Korean Silla dynasty and location of hundreds of important Buddhist archeological sites—for example, South Mountain (**NAMSAN**) in central modern Kyōngju. Among the many monasteries in Kyōngju, **HWANGNYONGSA** (Yellow Dragon monastery) was one of the most renowned. It was built during the reign of King Chinhung (r. 540–576), and its campus had seven rectangular courtyards, each with three buildings and one pagoda, covering an area of around eighteen acres; in 645, a 262 ft. high nine-story pagoda was added. Hwangnyongsa was destroyed during the Mongol invasion in 1238 and was never rebuilt. **PULGUksA** (Buddha Land monastery) was built in 535 during the reign of the Silla King Pōphŭng (r. 514–540). The main courtyard is dedicated to the buddha **ŚĀKYAMUNI** and includes on either end the highly decorative Pagoda of Many Treasures (Tabot’ap), resembling the form of a reliquary (**ŚARĪRA**) shrine and symbolizing the buddha **PRABHŪTARATNA**, and the Pagoda of Śākyamuni (Sōkkat’ap). During a 1966 renovation of the Sōkka t’ap, the world’s oldest printed document was discovered sealed inside the stūpa: the **MUGUJŌNGGWANG TAEDARANI KYŌNG** (S. *Rāsmivimalaviśuddhaprabhādhāraṇī*; “Great **DHĀRANĪ** Scripture of Immaculate Radiance”). The terminus ad quem for the printing of the Dhāraṇī is 751 CE, when the text was sealed inside the Sōkkat’ap, but it may have been printed even earlier. Four kilometers up T’oham Mountain to the east of Pulguksa is its affiliated **SŌKKURAM** grotto temple, which was built in the late eighth century. In contrast to the cave temples of ancient India and China, the rotunda of Sōkkuram was assembled with granite. The central image is a stone buddha (probably of Śākyamuni) seated cross-legged on a lotus throne, surrounded by **BODHISATTVAS**, **ARHATS**, and Indian divinities carved in relief on the surrounding circular wall. A miniature marble pagoda, which is believed to have stood in front of the eleven-faced Avalokiteśvara, disappeared in the early years of the Japanese occupation of the Korean peninsula in the early twentieth century.

Kyōō gokokuji. (J) (教王護国寺). See **TŌJI**.

kyōsaku. (C. jingce; K. kyōngch’aek 警策). In Japanese, “admonition,” also pronounced keisaku by the RINZAI **ZEN** tradition. The term kyōsaku came to refer to the long wooden stick used by the **SŌTŌ** Zen tradition for waking, alerting, and instructing monks during meditation sessions.

Kyoto school. An influential school of modern and contemporary Japanese philosophy that is closely associated with philosophers from Kyōto University; it

combines East Asian and especially [MAHAYANA](#) Buddhist thought, such as [ZEN](#) and [JODO SHINSHU](#), with modern Western and especially German philosophy and Christian thought. [NISHIDA KITARO](#) (1870–1945), Tanabe Hajime (1885–1962), and [NISHITANI KEIJI](#) (1900–1991) are usually considered to be the school’s three leading figures. The name “Kyoto school” was coined in 1932 by Tosaka Jun (1900–1945), a student of Nishida and Tanabe, who used it pejoratively to denounce Nishida and Tanabe’s “Japanese bourgeois philosophy.” Starting in the late 1970s, Western scholars began to research the philosophical insights of the Kyoto school, and especially the cross-cultural influences with Western philosophy. During the 1990s, the political dimensions of the school have also begun to receive scholarly attention. ¶ Although the school’s philosophical perspectives have developed through mutual criticism between its leading figures, the foundational philosophical stance of the Kyoto school is considered to be based on a shared notion of “absolute nothingness.” “Absolute nothingness” was coined by Nishida Kitarō and derives from a putatively Zen and [PURE LAND](#) emphasis on the doctrine of emptiness ([SUNYATA](#)), which Kyoto school philosophers advocated was indicative of a distinctive Eastern approach to philosophical inquiry. This Eastern emphasis on nothingness stood in contrast to the fundamental focus in Western philosophy on the ontological notion of “being.” Nishida Kitarō posits absolute nothingness topologically as the “site” or “locale” (*basho*) of nonduality, which overcomes the polarities of subject and object, or noetic and noematic. Another major concept in Nishida’s philosophy is “self-awareness” (*jikaku*), a state of mind that transcends the subject–object bifurcation, which was initially adopted from William James’ (1842–1910) notion of “pure experience” (*J. junsui keiken*); this intuition reveals a limitless, absolute reality that has been described in the West as God or in the East as emptiness. Tanabe Hajime subsequently criticized Nishida’s “site of absolute nothingness” for two reasons: first, it was a suprarational religious intuition that transgresses against philosophical reasoning; and second, despite its claims to the contrary, it ultimately fell into a metaphysics of being. Despite his criticism of what he considered to be Nishida’s pseudoreligious speculations, however, Tanabe’s Shin Buddhist inclinations later led him to focus not on Nishida’s Zen Buddhist-oriented “intuition,” but instead on the religious aspect of “faith” as the operative force behind other-power ([TARIKI](#)). Inspired by both Nishida and such Western thinkers as Meister Eckhart (c. 1260–1327), Friedrich Nietzsche (1844–1900), and Martin Heidegger (1889–1976) (with whom he studied), Nishitani Keiji developed the existential and phenomenological aspects of Nishida’s

philosophy of absolute nothingness. Concerned with how to reach the place of absolute nothingness, given the dilemma of, on the one hand, the incessant reification and objectification by a subjective ego and, on the other hand, the nullification of reality, he argued for the necessity of overcoming “nihilism.” The Kyoto school thinkers also played a central role in the development of a Japanese political ideology around the time of the Pacific War, which elevated the Japanese race mentally and spiritually above other races and justified Japanese colonial expansion. Their writings helped lay the foundation for what came to be called *Nihonjinron*, a nationalist discourse that advocated the uniqueness and superiority of the Japanese race; at the same time, however, Nishida also resisted tendencies toward fascism and totalitarianism in Japanese politics. Since the 1990s, Kyoto school writings have come under critical scrutiny in light of their ties to Japanese exceptionalism and pre-war Japanese nationalism. These political dimensions of Kyoto school thought are now considered as important for scholarly examination as are its contributions to cross-cultural, comparative philosophy.

[Kyunyŏ](#). (均如) (923–973). Korean monk, exegete, poet, and thaumaturge during the Koryŏ dynasty, also known as Wŏnt’ong. According to legend, Kyunyŏ is said to have been so ugly that his parents briefly abandoned him at a young age. His parents died shortly thereafter, and Kyunyŏ sought refuge at the monastery of Puhŭngsa in 937. Kyunyŏ later continued his studies under the monk Ŭisun (d.u.) at the powerful monastery of Yŏngt’ongsa near the Koryŏ-dynasty capital of Kaesŏng. There, Kyunyŏ seems to have gained the support of King Kwangjong (r. 950–975), who summoned him to preach at the palace in 954. Kyunyŏ’s successful performance of miracles for the king won him the title of great worthy (taedŏk) and wealth for his clan. Kyunyŏ became famous as an exegete of the [AVATAMSAKASŪTRA](#). His approach to this scripture was purportedly catalyzed by the deep split between the exegetical traditions associated with the Korean exegete [WŎNHYO](#) (617–686) and the Chinese-Sogdian exegete [FAZANG](#) (643–712). Kyunyŏ sought to bridge these two traditions of Hwaŏm (C. [HUAYAN](#)) exegesis in his numerous writings, which came to serve as the orthodox doctrinal standpoint for the clerical examinations ([SŬNGKWA](#)) in the Koryŏ-period [KYO](#) school, held at the royal monastery of [WANGNYUNSA](#). In 963, Kyunyŏ was appointed the abbot of the new monastery of Kwibŏpsa, which the king established near the capital. Kyunyŏ’s life and some examples of his poetry are recorded in the *Kyunyŏ chŏn*; the collection includes

eleven “native songs,” or hyangga, one of the largest surviving corpora of Silla-period vernacular poems, which used Sinographs to transcribe Korean. His Buddhist writings include the *Sŏk Hwaŏm kyobun’gi wŏnt’ong ch’o*, *Sŏk Hwaŏm chigwijang*, *Sipkujang wŏnt’ong ki*, and others.

Lakkhanasutta. (C. Sanshi'er xiang jing; J. Sanjūnisōgyō; K. Samsibi sang kyōng 三十二相經). In Pāli, “Discourse on the Marks,” the thirtieth sutta of the [DĪGHANIKĀYA](#) (a separate [SARVĀSTIVĀDA](#) recension appears as the 115th [SŪTRA](#) in the Chinese translation of the [MADHYAMĀGAMA](#)). At [ANĀTHAPINDADA](#)’s (P. Anāthapiṇḍika) park in [ŚRĀVASTĪ](#) (P. Sāvatti), the Buddha explained to his disciples the thirty-two physical marks of a great man ([MAHĀPURUṢALAKṢANA](#)) and explained how one endowed with these marks has only two possible destinies: becoming a wheel-turning monarch ([CAKRAVARTIN](#)) or a buddha. The Buddha then recounts the deeds he performed in his previous lives that engendered each of his own thirty-two physical marks.

lakṣana. (P. lakkhaṇa; T. mtshan nyid; C. xiang; J. sō; K. sang 相). In Sanskrit, a polysemous term for a “mark,” “characteristic,” “attribute,” or “sign”; used in a variety of contexts to indicate either the principal characteristic or defining quality of something. As a primary characteristic, lakṣaṇa refers to the distinguishing features of a factor ([DHARMA](#)), i.e., the factor “earth” ([PṚTHIVĪ](#)) may be characterized by its mark of “hardness,” *etc.* ¶ The three defining characteristics ([TRILAKṢANA](#)) of all conditioned ([SAMSKṚTA](#)) things are their impermanence (anityatā), unsatisfactoriness ([DUHKHA](#)), and lack of a perduring self ([ANĀTMAN](#)). ¶ The four characteristics ([CATURLAKṢANA](#)) governing all conditioned objects ([SAMSKṚTALAKṢANA](#)), as described in the [SARVĀSTIVĀDA](#) school, are “origination,” or birth ([JĀTI](#)); “continuance,” or maturation ([STHITI](#)); “senescence,” or decay ([JARĀ](#)); and “desinence,” or death ([ANITYA](#)). The Sarvāstivāda school treated these four as “forces dissociated from thought” ([CITTAVIPRAYUKTASAMSKĀRA](#)), which exerted real power over compounded objects, escorting an object along from one force to another, until the force “desinence” extinguishes it; this rather tortured explanation was necessary in order to explain how factors that the school presumed existed in all three time periods (past, present, and future) nevertheless still appeared to undergo change. Some Sarvāstivāda [ABHIDHARMA](#) texts, however, accept only three characteristics, omitting continuance. ¶ The term lakṣaṇa is also used with reference to the thirty-two major marks ([DVĀTRIMŚADVĀRALAKṢANA](#)) of a great

man (see [MAHĀPURUSALAKSANA](#)), which appear on the physical body ([RŪPAKĀYA](#)) of either a buddha or on a wheel-turning monarch ([CAKRAVARTIN](#)); these are accompanied by eighty minor marks ([ANUVYAÑJANA](#)). ¶ The term lakṣaṇa is also used in the [YOGĀCĀRA](#) school to refer to the three intrinsic characteristics (trilakṣaṇa) of all phenomena, and in this context is equivalent to the three qualities or natures ([TRISVABHĀVA](#)), viz., imaginary ([PARIKALPITA](#)), dependent ([PARATANTRA](#)), and consummate ([PARINISPANNA](#)). ¶ In the [MADHYAMA](#) school, the term lakṣaṇa is used to refer to the “signs” of intrinsic existence ([SVABHĀVA](#)) that are falsely perceived by the senses as the result of ignorance. Ignorance mistakenly regards each phenomenon as having its own defining characteristic ([SVALAKSANA](#)). ¶ In Buddhist epistemology, the term lakṣaṇa is used for the specific or particular mark (svalakṣaṇa) and general or shared mark ([SĀMĀNYALAKSANA](#)) of an object; the former is known only by nonconceptual knowledge; the latter is the object that appears when one thinks about something. See also [NIMITTA](#).

[lakṣaṇaśāstra](#). (T. mtshan nyid bstan bcos). In Sanskrit, lit. “marks treatise”; in Mahāyāna works, a pejorative designation for the pre-Mahāyāna [ABHIDHARMA](#), which is portrayed as being obsessively concerned with generating exhaustive lists of factors ([DHARMA](#)) and their defining characteristics ([LAKSANA](#)).

[lakṣaṇayāna](#). (T. mtshan nyid theg pa). In Sanskrit, “vehicle of attributes,” a term used in [PRAJÑĀPĀRAMITĀ](#) and tantric literature to refer to the [SŪTRA](#) (i.e., exoteric) paths of [ŚRĀVAKAS](#), [PRATYEKABUDDHAS](#), and [BODHISATTVAS](#). In the [TANTRAS](#), lakṣaṇayāna refers to the practices of bodhisattvas as delineated in the sūtras and their commentaries. In this context, it is a synonym of [PĀRAMITĀYĀNA](#).

[Lakuṇṭaka Bhadrīka](#). (P. Lakuṇṭaka Bhaddiya; T. Snyan pa bzang ldan; C. Xianyan/Luoponabati; J. Ken'en/Rabanabadai; K. Hyōnyōm/Nabanabalche 賢鹽/羅婆那拔提). An [ARHAT](#) monk declared by the Buddha to be foremost among his monk disciples who were sweet in voice. According to Pāli sources, he was the son of a wealthy family from [ŚRĀVASTĪ](#), handsome but very small in stature, hence his sobriquet lakuṇṭaka (“dwarf”). After listening to one of the Buddha’s sermons, he was moved to enter the monastic order and eventually became a gifted preacher noted for his sweet voice. It was for this quality that he won preeminence and numerous stanzas in the [SUTTAPITAKA](#) are attributed to him. Despite his eventual eminence, his small size apparently made him the butt of many cruel jokes early in his vocation. It is said that novices used to tweak his

ears, and a group of thirty village monks once pushed him about until the Buddha intervened. One instance of disrespect, however, prompted his enlightenment. A woman riding in a chariot saw the diminutive Bhadrīka and laughed at him, showing her teeth. Bhadrīka took her teeth as an object of foulness meditation ([AŚUBHABHĀVANĀ](#)) and quickly reached the third stage of sanctity, that of a nonreturner ([ANĀGĀMIN](#)). [ŚĀRIPUTRA](#) subsequently instructed him in mindfulness of the body (see [KĀYĀNUPAŚYANĀ](#)) and Bhadrīka attained arhatship. The Buddha is reported to have been delighted to hear that Śāriputra's instructions proved so efficacious.

[lalanā](#). (T. brkyang ma). In tantric physiology, the channel ([NĀDĪ](#)) that runs in males from the right nostril to the base of the spine and in females from the left nostril to the base of the spine. It is one of the three main channels, together with the central channel ([AVADHŪTĪ](#)), and the right channel in females and the left channel in males ([RASANĀ](#)). According to some systems, 72,000 channels are found in the body, serving as the conduits for subtle energies or winds ([PRĀNA](#)). The most important of these channels are the central channel (avadhūtī), the lalanā, and the rasanā. The central channel runs from the place between the eyebrows to the crown of the head and down in front of the spinal column, ending at the genitals. The right and left channels run parallel to the central channel on either side. These two channels wrap around the central channel at various points, of which as many as seven are enumerated. These points, called wheels or [CAKRAS](#), are located between the eyes, at the crown of the head, at the throat, at the heart, at the solar plexus, at the base of the spine, and at the tip of sexual organ. In highest yoga tantra ([ANUTTARAYOGATANTRA](#)), especially in practices associated with the “stage of completion” ([NISPANNAKRAMA](#)), much emphasis is placed on loosening these knots in order to cause the winds to flow freely through the central channel.

[lalitāsana](#). (T. rol pa'i 'dug stangs). In Sanskrit, “posture of relaxation,” an iconographic posture ([ĀSANA](#)), in which the left leg is bent resting on the seat, and the right leg pendant, often with the knee slightly raised. Occasionally, the leg positions are reversed. This posture is common in [BODHISATTVA](#) images from the [AJANTĀ](#) caves in India, as well as in Chinese representations of [GUANYIN](#) ([AVALOKITEŚVARA](#)), Korean depictions of [MAITREYA](#), and Tibetan images of Green Tārā ([ŚYĀMATĀRĀ](#)). A common variant of this posture is the [RĀJALĪLĀSANA](#). See also [MAITREYĀSANA](#).

Lalitavajra. (S). See [LĪLAVAJRA](#).

Lalitavistara. (T. Rgya cher rol pa; C. Puyao jing/Fanguang da zhuangyan jing; J. Fuyōkyō/Hōkō daishōgongyō; K. Poyo kyōng/Panggwang taejangōm kyōng 普曜經/方廣大莊嚴經). In Sanskrit, lit. “Extensive Play,” a relatively late treatment of the Buddha’s life, in mixed prose and verse, probably dating from the third or fourth century CE. The work treats the current Buddha’s last lifetime, from his time waiting in the [TUSITA](#) heaven to take his final rebirth to the “first turning of the wheel of the dharma” ([DHARMACAKRAPRAVARTANA](#)) at [SĀRNĀTH](#), when the Buddhist dispensation ([ŚĀSANA](#)) begins. The frame of the Buddha’s life story is enhanced with exuberantly told tales of his thaumaturgic abilities and his numinous essence. For example, the infant Buddha, after emerging from his mother’s right side, takes seven steps and then gives an extended discourse to [ĀNANDA](#), predicting that there will be fools who will not believe the miracles surrounding his birth and will reject the *Lalitavistara*, and as a consequence, will be reborn in the [AVĪCI](#) hell. Some scholars have suggested the text’s supernal portrayal of the Buddha may have influenced the development of the [MAHĀYĀNA](#) conception of the multiple bodies of a buddha (see [TRIKĀYA](#)). The work is attributed to the [SARVĀSTIVĀDA](#) school, but it has been extensively reworked along Mahāyāna lines (including allusions to such emblematic Mahāyāna terms as [TATHĀGATAGARBHA](#)), suggesting that it went through continued, even radical, embellishment after its initial composition. There are two translations corresponding to this text in Chinese, the *Puyao jing*, translated by [DHARMARAKṢA](#) in 308, and the *Fanguang da zhuangyan jing*, translated by Divākara in 683. The Newari Buddhist tradition of Nepal includes the *Lalitavistara* among its nine principal books of the Mahāyāna ([NAVAGRANTHA](#); see [NAVADHARMA](#)).

Lamaism. An obsolete English term that has no correlate in Tibetan, sometimes used to refer to the Buddhism of Tibet. Probably derived from the Chinese term lama jiao, or “teachings of the lamas,” the term is considered pejorative by Tibetans, as it carries the negative connotation that the Tibetan tradition is something distinct from the mainstream of Buddhism. The use of this term should be abandoned in favor of, simply, “Tibetan Buddhism.”

lam ’bras. (lamdre). In Tibetan, lit. “path and result.” The central tantric system of the [SA SKYA](#) sect of Tibetan Buddhism, derived from the [HEVAJRATANTRA](#) and transmitted to Tibet by [’BROG MI SHĀKYA YE SHES](#). The system was first set

down in written form by the first of the five Sa skya hierarchs, [SA CHEN KUN DGA' SNYING PO](#) of the aristocratic 'Khon family. There are two exegetical traditions, first, the slob bshad (lopshe), or “explanation for disciples,” was originally reserved for members of the 'Khon family, and the second, the tshogs bshad (tsokshe), or “explanation in the assembly,” was for a wider audience. The preliminary practices of the lam 'bras are taught under the rubric of the snang ba gsum (nangwa sum) “three appearances” (impure, yogic, and pure) that systematize the topics found in the fundamental Sa skya teaching called “parting from the four attachments” (zhen pa bzhi bral) (see [SA CHEN KUN DGA' SNYING PO](#)). These topics are covered in other Tibetan sects under different such names as [BSTAN RIM](#), [LAM RIM](#) (“stages of the path”), and so on. The second, the tantric part of the system, requires consecration and includes the practice of esoteric yogas. The practices convey to the practitioner the insight that the nature of the basis (gzhi), path (lam), and result ('bras bu) is the same, and that liberation through the practice of coemergent knowledge (lhan cig skyes pa'i ye shes)—i.e., the enlightened body, speech, and mind—is indivisible from the basis.

[Lamotte, Étienne](#). (1903–1983). A Belgian Buddhologist and Roman Catholic monsignor, considered to be the principal successor of LOUIS DE LA VALLÉE POUSSIN in the Franco–Belgian school of European Buddhist Studies. After receiving his doctorate in 1930 (with a dissertation on the *Bhagavadgītā*), Lamotte taught for forty-five years (1932–1977) as a professor at the Université catholique de Louvain. In 1953, he was awarded the Francqui Prize, a prestigious Belgian prize awarded to scholars and scientists under the age of fifty. Making use of his knowledge of Sanskrit, Pāli, Tibetan, and Chinese, he made definitive French translations, all with extensive annotation, of a wide range of important Indian sūtra and treatises, including the [ŚŪRAMGAMASAMĀDHISŪTRA](#), [VIMALAKĪRTINIRDEŚA](#), [SAMDHINIRMOCANASŪTRA](#), [VASUBANDHU](#)'s [KARMASIDDHIPRAKARANA](#), and [ASAṄGA](#)'s [MAHĀYĀNASAMGRAHA](#). He was also the first to translate the lengthy prolegomenon to the **Mahāprajñāpāramitāsāstra*, a massive commentary on the “Great Perfection of Wisdom Sūtra” extant only in a Chinese recension known as the [DAZHIDU LUN](#), which is attributed by the East Asian tradition to [NĀGĀRJUNA](#). Lamotte's annotated translation of this text was published in five volumes between 1944 and 1980 but remained unfinished at the time of his death. Among his monographs, perhaps the most important is his comprehensive history of early Indian Buddhism published in 1958, *Histoire du Bouddhisme Indien: des*

origines à l'ère Śaka (translated into English in 1988 as *History of Indian Buddhism: From its Origins to the Śaka Era*), which remains the most extensive such history yet produced in a Western language.

Lampāka. (S). One of the twenty-four sacred sites associated with the [CAKRASAMVARATANTRA](#). See [PĪTHA](#).

Lamp for the Path to Enlightenment. See [BODHIPATHAPRADĪPA](#).

lam rim. In Tibetan, “stages of the path”; a common abbreviation for byang chub lam gyi rim pa (jangchup lamkyi rimpa), or “stages of the path to enlightenment,” a broad methodological framework for the study and practice of the complete Buddhist path to awakening, as well as the name for a major genre of Tibetan literature describing that path. It is closely allied to the genre known as [BSTAN RIM](#), or “stages of the doctrine.” The initial inspiration for the instructions of this system is usually attributed to the Bengali master [ATĪŚA DĪPAMKARAŚRĪJÑĀNA](#), whose [BODHIPATHAPRADĪPA](#) (“Lamp for the Path to Enlightenment”) became a model for numerous later stages of the path texts. The system presents a graduated and comprehensive approach to studying the central tenets of [MAHĀYĀNA](#) Buddhist thought and is often organized around a presentation of the three levels of spiritual predilection, personified as “three individuals” (skyes bu gsum): lesser, intermediate, and superior. The stages gradually lead the student from the lowest level of seeking merely to obtain a better rebirth, through the intermediate level of wishing for one’s own individual liberation, and finally to adopting the [MAHĀYĀNA](#) outlook of the “superior individual,” viz., aspiring to attain buddhahood in order to benefit all living beings. The approach is most often grounded in the teachings of the sūtra and usually concludes with a brief overview of [TANTRA](#). Although usually associated with the [DGE LUGS](#) sect, stages of the path literature is found within all the major sects of Tibetan Buddhism. One common Dge lugs tradition identifies eight major stages of the path treatises:

1. [LAM RIM CHEN MO](#) (“Great Treatise on the Stages of the Path”)
2. [LAM RIM CHUNG BA](#) (“Short Treatise on the Stages of the Path”)
3. [LAM RIM BSDUS DON](#) (“Concise Meaning of the Stages of the Path”); all by [TSONG KHA PA BLO BZANG GRAGS PA](#)

4. [LAM RIM GSER ZHUN MA](#) (“Stages of the Path [like] Refined Gold”) by the third [DALAI LAMA BSOD NAMS RGYA MTSHO](#)
5. [BDE LAM LAM RIM](#) (“The Easy Path Stages of the Path”) by the first [PAN CHEN BLA MA BLO BZANG CHOS KYI RGYAL MTSHAN](#)
6. [LAM RIM 'JAM DPAL ZHAL LUNG](#) (“Stages of the Path [which are] the Instructions of Mañjuśrī”) by the fifth Dalai Lama [NGAG DBANG BLO BZANG RGYA MTSHO](#)
7. [MYUR LAM LAM RIM](#) (“The Quick Path Stages of the Path”) by the second Pan chen Lama Blo bzang ye shes dpal bzang po (Losang Yeshe Palsangpo, 1663–1737)
8. [LAM RIM SNYING GU](#) (“Essential Stages of the Path”) by Dwags po Ngag dbang grags pa (Dakpo Ngawang Drakpa, born c. 1450).

[Lam rim bsdus don](#). (Lamrim Dūdön). In Tibetan, “Concise Meaning of the Stages of the Path”; also called *Lam rim chung ngu* or “Brief Stages of the Path.” The shortest of three major treatises on the stages of the path to awakening ([LAM RIM](#)) composed by the renowned Tibetan scholar [TSONG KHA PA BLO BZANG GRAGS PA](#). The text is written in verse form, based upon the author’s own meditative experiences. For that reason, it is often called the *Lam rim nyams mgur ma* or “Song of Experience of the Stages of the Path.”

[Lam rim chen mo](#). In Tibetan, “Great Treatise on the Stages of the Path”; the abbreviated title for one of the best-known works on Buddhist thought and practice in Tibet, composed by the Tibetan luminary [TSONG KHA PA BLO BZANG GRAGS PA](#) in 1402 at the central Tibetan monastery of [RWA SGRENG](#). A lengthy treatise belonging to the [LAM RIM](#), or stages of the path, genre of Tibetan Buddhist literature, the [LAM RIN CHEN MO](#) takes its inspiration from numerous earlier writings, most notably the [BODHIPATHAPRADĪPA](#) (“Lamp for the Path to Enlightenment”) by the eleventh-century Bengali master [ATIŚA DĪPAMKARĀŚRĪJÑĀNA](#). It is the most extensive treatment of three principal stages that Tsong kha pa composed. The others include (1) the [LAM RIM CHUNG BA](#) (“Short Treatise on the Stages of the Path”), also called the *Lam rim 'bring ba* (“Intermediate Treatise on the States of the Path”) and (2) the [LAM RIM BSDUS DON](#) (“Concise Meaning of the Stages of the Path”), occasionally also referred to as the *Lam rim chung ngu* (“Brief Stages of the Path”). The latter text, which

records Tsong kha pa's own realization of the path in verse form, is also referred to as the *Lam rim nyams mgur ma* ("Song of Experience of the Stages of the Path"). The [LAM RIM CHEN MO](#) is a highly detailed and often technical treatise presenting a comprehensive and synthetic overview of the path to buddhahood. It draws, often at length, upon a wide range of scriptural sources including the [SŪTRA](#) and [ŚĀSTRA](#) literature of both the [HĪNAYĀNA](#) and [MAHĀYĀNA](#); Tsong kha pa treats tantric practice in a separate work. The text is organized under the rubric of the three levels of spiritual predilection, personified as "the three individuals" (*skyes bu gsum*): the beings of small capacity, who engage in religious practice in order to gain a favorable rebirth in their next lifetime; the beings of intermediate capacity, who seek liberation from rebirth for themselves as an [ARHAT](#); and the beings of great capacity, who seek to liberate all beings in the universe from suffering and thus follow the bodhisattva path to buddhahood. Tsong kha pa's text does not lay out all the practices of these three types of persons but rather those practices essential to the bodhisattva path that are held in common by persons of small and intermediate capacity, such as the practice of refuge ([ŚARANA](#)) and contemplation of the uncertainty of the time of death. The text includes extended discussions of topics such as relying on a spiritual master, the development of [BODHICITTA](#), and the six perfections ([PĀRAMITĀ](#)). The last section of the text, sometimes regarded as a separate work, deals at length with the nature of serenity ([ŚAMATHA](#)) and insight ([VIPAŚYANĀ](#)); Tsong kha pa's discussion of insight here represents one of his most important expositions of emptiness ([ŚŪNYATĀ](#)). Primarily devoted to exoteric Mahāyāna doctrine, the text concludes with a brief reference to [VAJRAYĀNA](#) and the practice of tantra, a subject discussed at length by Tsong kha pa in a separate work, the [SNGAGS RIM CHEN MO](#) ("Stages of the Path of Mantra"). The *Lam rim chen mo*'s full title is *Skyes bu gsum gyi rnyams su blang ba'i rim pa thams cad tshang bar ston pa'i byang chub lam gyi rim pa*.

[Lam rim chung ba](#). (Lamrim Chungwa). In Tibetan, "Short Treatise on the Stages of the Path"; also called *Lam rim 'bring ba* ("Intermediate Treatise on the Stages of the Path"); the middle-length of three major treatises on [LAM RIM](#), or stages of the path, composed by the renowned Tibetan luminary [TSONG KHA PA BLO BZANG GRAGS PA](#). It is about half the size of the author's classic [LAM RIM CHEN MO](#) ("Great Treatise on the Stages of the Path"), and also less formal. He wrote this work in 1415, some thirteen years after *Lam rim chen mo*. Although the first sections of the text are largely a summary of what appears in *Lam rim*

chen mo, the section on insight ([VIPAŚYANĀ](#)) is substantially different from what appears in Tsong kha pa’s earlier and longer work, changing the order of the presentation and adding dozens of quotations from Indian works that he did not use in *Lam rim chen mo*. Perhaps the most important contribution of this later work is its discussion of the two truths ([SATYADVAYA](#)) found in the vipaśyanā section.

[Lam rim gser zhun ma](#). (Lamrim Sershunma). In Tibetan, “Stages of the Path [like] Refined Gold”; a famous [LAM RIM](#), or stages of the path, text composed by the third [DALAI LAMA BSOD NAMS RGYA MTSHO](#) constituting a “word commentary” (tshig ’grel) on [TSONG KHA PA BLO BZANG GRAGS PA](#)’s [LAM RIM BSDUS DON](#) (“Concise Meaning of the Stages of the Path”).

[Lam rim ’jam dpal zhal lung](#). (Lamrim Jampal Shelung). In Tibetan, “Stages of the Path [which are] the Instructions of Mañjuśrī”; an important [LAM RIM](#), or stages of the path, treatise composed by the fifth [DALAI LAMA NGAG DBANG BLO BZANG RGYA MTSHO](#).

[Lam rim snying gu](#). (Lamrim Nyingu). In Tibetan, “Essential Stages of the Path”; an important [LAM RIM](#), or stages of the path, treatise composed by Dwags po Ngag dbang grags pa (Dakpo Ngawang Drakpa, born c. 1450).

[Lam rim thar pa’i lag skyang](#). (Lamrim Tharpe Lakyang). In Tibetan, “Stages of the Path [which are like] Liberation in the Palm of One’s Hand”; a well-known [LAM RIM](#), or stages of the path, treatise written by the twentieth-century [DGE LUGS](#) scholar Pha bong ka Byams pa bstan ’dzin ’phrin las rgya mtsho (Pabongka Jampa Tendzin Trinle Gyatso, 1878–1941).

[Laṅkāvatārasūtra](#). (T. Lang kar gshegs pa’i mdo; C. Ru Lengqie jing; J. Nyū Ryōgakyō; K. Ip Nūngga kyōng 入楞伽經). In Sanskrit, “Scripture on the Descent into Laṅka”; a seminal [MAHĀYĀNA](#) sūtra that probably dates from around the fourth century CE. In addition to the Sanskrit recension, which was discovered in Nepal, there are also three extant translations in Chinese, by [GUNABHADRA](#) (translated in 443), [BODHIRUCI](#) (made in 513), and [ŚIKSĀNANDA](#) (made in 700), and two in Tibetan. The text is composed as a series of exchanges between the Buddha and the [BODHISATTVA](#) Mahāmati, who asks his questions on behalf of Rāvaṇa, the [YAKSA](#) king of Laṅka. Thanks to the wide-ranging nature of Mahāmati’s questions, the text covers many of the major themes that were the

focus of contemporary Indian Mahāyāna Buddhism, and especially the emerging [YOGĀCĀRA](#) school, including the theory of the storehouse consciousness ([ĀLAYAVIJÑĀNA](#)), the womb or embryo of the buddhas ([TATHĀGATAGARBHA](#)), and mind-only ([CITTAMĀTRA](#)); despite these apparent parallels, however, the sūtra is never quoted in the writings of the most famous figures of Indian Yogācāra, [ASAṄGA](#) (c. 320–390) and [VASUBANDHU](#) (c. fourth century CE). The sūtra also offers one of the earliest sustained condemnations in Buddhist literature of meat eating, a practice that was not proscribed within the mainstream Buddhist tradition (see [JAINA](#); [DHUTAṄGA](#)). The *Lankāvatāra* purports to offer a comprehensive synthesis of the Mahāyāna, and indeed, its many commentators have sought to discover in it a methodical exposition of scholastic doctrine. In fact, however, as in most Mahāyāna sūtras, there is little sustained argumentation through the scripture, and the scripture is a *mélange* composed with little *esprit de synthèse*. ¶ The emerging [CHAN](#) school of East Asia retrospectively identified the *Lankāvatāra* as a source of scriptural authority; indeed, some strands of the tradition even claimed that the sūtra was so influential in the school’s development that its first translator, Guṇabhadra, superseded [BODHIDHARMA](#) in the roster of the Chan patriarchal lineage, as in the [LENGQIE SHIZIJI](#) (“Records of the Masters and Disciples of the *Lankāvatāra*”). Rather than viewing the Chan school as a systematic reading of the *Lankāvatāra*, as the tradition claims, it is perhaps more appropriate to say that the tradition was inspired by similar religious concerns. The Newari Buddhist tradition of Nepal also includes the *Lankāvatāra* among its nine principal books of the Mahāyāna ([NAVAGRANTHA](#); see [NAVADHARMA](#)).

[Lanxi Daolong](#). (J. Rankei Dōryū; K. Nan’gye Toryung 蘭溪道隆) (1213–1278). Chinese [CHAN](#) monk in the Mi’an collateral branch of the [LINJI ZONG](#). Lanxi was a native of Fujiang in present-day Sichuan province. At a young age, he became a monk at the nearby monastery of Dacisi in Chengdu and later visited the Chan masters [WUZHUN SHIFAN](#) (1178–1249) and Chijue Daochong (1169–1250). Lanxi eventually became the disciple of Wuming Huixing (1162–1237), who in turn was a disciple of the eminent Chan master Songyuan Chongyue (1132–1202). In 1246, Lanxi departed for Japan, eventually arriving in Hakata (present-day Kyūshū) with his disciple Yiweng Shaoren (1217–1281). At the invitation of the powerful regent Hōjō Tokiyori (1227–1263), Lanxi served as abbot of the monastery Jōrakuji in Kamakura. In 1253, Tokiyori completed the construction of a large Zen monastery named [KENCHŌJI](#) in Kamakura and appointed Lanxi its

founding abbot (kaisan; C. [KAISHAN](#)). Lanxi soon had a large following at Kenchōji where he trained students in the new [SAMGHA](#) hall (C. [SENGTANG](#)) according to the Chan monastic regulations (C. [QINGGUI](#)) that he brought from China. In 1265, he received a decree to take up residence at the powerful monastery of [KENNINJI](#) in Kyōto, but after three years in Kyōto, he returned to Kenchōji. Lanxi also became the founding abbot of the temple of Zenkōji in Kamakura. Retired emperor Kameyama (r. 1259–1274) bestowed upon him the title Zen Master Daikaku (Great Enlightenment); Lanxi’s lineage in Japan thus came to be known as the Daikaku branch of the Japanese Rinzaï Zen tradition ([RINZAISHŪ](#)).

[Laozi huahu jing](#). (J. Rōshi kekokyō; K. Noja hwaho kyōng 老子化胡經). In Chinese, “Scripture on Laozi’s Conversion of the Barbarians,” an indigenous Chinese scripture (see [APOCRYPHA](#)), of which only the first and tenth rolls are extant. The fragments of the text were discovered at the Central Asian cave site of [DUNHUANG](#) by the French Sinologist [PAUL PELLIOT](#). A text known as the *Laozi huahu jing* is known to have been written by the Daoist priest Wang Fu (fl. c. third century CE) in the Western Jin dynasty, but the Dunhuang manuscript by the same title seems not to be Wang Fu’s text; this assumption derives from the fact that the Dunhuang manuscript makes reference to Manichean thought, which was not introduced to China until later during the Tang dynasty. The *Laozi huahu jing* was written in China to advance the theory that the Daoist progenitor Laozi traveled to the West, where he became the Buddha. This theory appears as early as the year 166 in a petition submitted to the Emperor Huan (R. 146–168) of the Latter Han Dynasty. By positing a Chinese origin for the presumably imported religion of Buddhism, the *Laozi huahu jing* may have been written either to argue for the primacy of Daoism over Buddhism or to suggest that there was common ground between the imported tradition of Buddhism and indigenous Chinese religion. The Daoist canon contains a related text that similarly posits Laozi’s identity as [ŚĀKYAMUNI](#) Buddha: the *Santian neijie jing* (“Inner Explanations of the Three Heavens”), which explains how Laozi left for [KASHMIR](#) in the ninth century BCE, where he converted both the king and his subjects to Daoism. After this success, he continued on to India, where he was subsequently reborn as Śākyamuni, thus demonstrating that Buddhism is nothing more than Daoism in foreign guise. Later, Daoist texts written during the thirteenth century provide descriptions of as many as eighty-one different incarnations of Laozi; several of these descriptions draw liberally from Buddhist

sources.

La phyi. (Lapchi). Also La phyi gangs (Lapchi Gang) and 'Brog la phyi gangs kyi ra ba (Drok Lapchi Gangkyi Rawa). A preeminent sacred region in southern Tibet on the Nepalese border, considered by some Tibetan sources, especially those of the [BKA' BRGYUD](#) sect, to be one of the three most important Buddhist pilgrimage sites in Tibet, together with Mt. [KAILĀSA](#) and [TSA RI](#). The central mountain of the region is considered the [MANDALA](#) of [CAKRASAMVARA](#) and [VAJRAYOGINĪ](#), and the region is specifically identified as [GODĀVARI](#), one of the twenty-four sacred sites (tīrtha; see [PĪTHA](#)) according to the [CAKRASAMVARATANTRA](#). According to Tibetan tradition, the region was first made suitable for spiritual practice, through the taming of its local demons, by the eleventh-century yogin [MI LA RAS PA](#), who established La phyi as one of his main centers for meditation practice. Central among the complex of retreat caves is Bdud 'dul phug (Dudulphuk), the Demon Vanquishing Cave.

Larger Perfection of Wisdom Sūtra. See [PAÑCAVIMŚATISĀHASRIKĀPRAJÑĀPĀRAMITĀSŪTRA](#).

latent tendencies. See [VĀSANĀ](#); [ANUŚAYA](#).

Laughing Buddha. See [BUDAI](#); [MAITREYA](#).

laukika. (P. lokiya; T. 'jig rten pa; C. shijian; J. seken; K. segan 世間). In Sanskrit, “mundane” or “worldly”; anything pertaining to the ordinary world or to the practices of unenlightened sentient beings ([PRTHAGJANA](#)) in distinction from the noble ones ([ĀRYA](#)), who have directly perceived reality. The “worldly” embraces all the contaminated ([SĀSRAVA](#)) or conditioned ([SAMSKRTA](#)) phenomena of the three realms of existence ([LOKADHĀTU](#)), since these are subject to impermanence (anityatā). In the context of the status of practitioners, laukika refers to ordinary sentient beings (prthagjana); more specifically, in the fifty-two-stage [BODHISATTVA](#) path, laukika usually indicates practitioners who are at the stage of the ten faiths (C. shixin), ten understandings (C. shijie), or ten practices (C. shixing), while “supramundane” ([LOKOTTARA](#)) refers to more enlightened practitioners, such as bodhisattvas who are on the ten stages ([DAŚABHŪMI](#)). But even seemingly transcendent dharmas can be considered mundane if they are changeable by nature, e.g., in the [MADHYAMAKA](#) (C. [SAN LUN ZONG](#)) exegete [JIZANG](#)'s (549–623) *Shengman baoku* (“Treasure Store of the

[ŚRĪMĀLĀDEVĪSIMHANĀDASŪTRA](#)"); mind-made bodies ([MANOMAYAKĀYA](#)) produced by bodhisattvas on the eighth through the tenth bodhisattva stages (see [BODHISATTVABHŪMI](#); [DAŚABHŪMI](#)) may still be designated “mundane” because they are subject to change. [FAZANG](#)’s [HUAYAN WUJIAO ZHANG](#) (“Essay on the Five Teachings According to Huayan”) parses these stages even more precisely: of the ten stages (daśabhūmi) of the path leading to buddhahood, stages one through three belong to the mundane (laukika); the fourth to the seventh stages are supramundane (lokottara) from the standpoint of the three vehicles ([TRĪYĀNA](#)) of [ŚRĀVAKA](#), [PRATYEKABUDDHA](#), and [BODHISATTVA](#); and the eighth to the tenth stages transcend even the supramundane and belong to the one vehicle ([EKAYĀNA](#)). In Indian [YOGĀCĀRA](#) and [MADHYAMAKA](#) works, and commonly in the Tibetan commentarial tradition, laukika and lokottara are used to differentiate paths in the mindstreams of noble ([ĀRYA](#)) beings in any vehicle ([YĀNA](#)), who have directly witnessed the true reality ([TATTVA](#)) of the [FOUR NOBLE TRUTHS](#). The last instants before the lokottara stage are given the name [LAUKIKĀGRADHARMA](#) (highest worldly factors); this is the last stage of the [PRAYOGAMĀRGA](#) in the five path ([PAÑCAMĀRGA](#)) system. The [ABHIDHARMASAMUCCAYA](#) says that the first lokottaradharma, the first instant of the sixteen-instant path of vision ([DARŚANAMĀRGA](#)), happens in a single meditative sitting. Even after the supramundane awakening, all subsequent attainments ([PRSTHALABDHA](#)) are mundane, with the exception of the knowledge in equipoise ([SAMĀHITAJÑĀNA](#)) when the initial vision is revisited in a process of habituation, leading to a union of subsequent states and equipoise in the final lokottara experience of full enlightenment.

[laukikabhāvanāmārga](#). (S). See [LAUKIKAMĀRGA](#).

[laukikāgradharma](#). (T. ’jig rten pa’i chos kyi mchog; C. shidiyifa; J. sedaiippō; K. sejeilbōp 世第一法). In Sanskrit, “highest worldly factors,” the fourth of the “aids to penetration” ([NIRVEDHABHĀGĪYA](#)), which are developed during the “path of preparation” ([PRAYOGAMĀRGA](#)) and mark the transition from the mundane sphere of cultivation ([LAUKIKAMĀRGA](#)) to the supramundane vision ([DARŚANA](#)) of the [FOUR NOBLE TRUTHS](#) (catvāry āryasatyāni). This aid to penetration receives its name because these factors ([DHARMA](#)) constitute the highest mundane stage prior to the attainment of the first noble ([ĀRYA](#)) path, the “path of vision” ([DARŚANAMĀRGA](#)). There were rival definitions within [MAINSTREAM BUDDHIST SCHOOLS](#) and among [VAIBHĀSIKA](#) teachers themselves about which factors

constituted the laukikāgradharma; the orthodox view of the dominant Kashmiri branch was that the laukikāgradharma were those factors involving mind ([CITTA](#)) and mental concomitants ([CAITTA](#)) that immediately catalyze the abandonment of mundane stages of existence and induce “access to the certainty that one will eventually win liberation” ([SAMYAKTVANIYĀMĀVAKRĀNTI](#)). Emerging from the stage of laukikāgradharmas, there is a single moment of “acquiescence to the fact of suffering” (duḥkhe dharmajñānaksānti) at the first (of the sixteen) moments of realization of the four noble truths, which then leads inexorably in the next instant to the path of vision (darśanamārga), which constitutes stream-entry ([SROTAĀPANNA](#)), the first of the four stages of sanctity. Thus, the laukikāgradharmas represent the final thought-moment of the ordinary person ([PRTHAGJANA](#)) before one attains the “supreme” fruit of recluseship ([ŚRĀMANYAPHALA](#)). ¶ In the Mahāyāna reformulation of [ABHIDHARMA](#) in the perfection of wisdom ([PRAJÑĀPĀRAMITĀ](#)) tradition based on the [ABHISAMAYĀLAMKĀRA](#), the laukikāgradharma is divided into three parts, a smaller, middling, and final part, within a larger presentation of a path of vision (darśanamārga) that knows “the lack of self of phenomena” ([DHARMANAI RĀTMYA](#)), i.e., that even the knowledge of the four noble truths is itself without any essential ultimate truth. According to this Mahāyāna abhidharma presentation, the path counteracts not just the mistaken apprehension of the four noble truths of suffering, origination, cessation, and path but also a series of thirty-eight object and subject conceptualizations ([GRĀHYAGRĀHAKAVIKALPA](#)). The three parts of the bodhisattva’s laukikāgradharma, each divided again into three, counteract the last set of nine “pure” subject conceptualizations of an essentialized liberated person who experiences a liberating vision.

laukikamārga. (T. ’jig rten pa’i lam; C. shijiandao; J. sekendō; K. segando 世間道). In Sanskrit, lit. “mundane path,” those practices that precede the moment of insight ([DARŚANAMĀRGA](#)) and thus result in a salutary rebirth in [SAMSĀRA](#) rather than liberation ([VIMUKTI](#)); also called laukika-[BHĀVANĀMĀRGA](#) (the mundane path of cultivation). In the five-stage soteriology of the [SARVĀSTIVĀDA](#) school, the mundane path corresponds to the first two stages, the path of accumulation ([SAMBHĀRAMĀRGA](#)) and the path of preparation ([PRAYOGAMĀRGA](#)), because they do not involve the direct perception of reality that transforms an ordinary person ([PRTHAGJANA](#)) into a noble one ([ĀRYA](#)). The mundane path is developed when a practitioner has begun to cultivate the three trainings ([TRISĪKSĀ](#)) of morality

([ŚĪLA](#)), concentration ([SAMĀDHI](#)), and wisdom ([PRAJÑĀ](#)) but has yet to eradicate any of the ten fetters ([SAMYOJANA](#)) or to achieve insight ([DARŚANA](#)). The eightfold path ([ĀRYĀSTĀṄGAMĀRGA](#)) is also formulated in terms of the spiritual ascension from mundane ([LAUKIKA](#)) to supramundane ([LOKOTTARA](#)). For example, mundane right view ([SAMYAGDRSTI](#)), the first stage of the eightfold path, refers to the belief in the efficacy of [KARMAN](#) and its effects and the reality of a next life after death, thus leading to better rebirths; wrong view ([MITHYĀDRSTI](#)), by contrast, denies such beliefs and leads to unsalutary rebirths. After continuing on to cultivate the moral trainings of right speech, action, and livelihood based on this right view, the practitioner next devotes himself to right concentration ([SAMYAKSAMĀDHI](#)). Concentration then leads in turn to supramundane right view, which results in direct insight into the [FOUR NOBLE TRUTHS](#) and the removal of the initial fetters. ¶ In the [MADHYĀNTAVIBHĀGA](#), a Mahāyāna work associated with the name of [MAITREYA](#), the eightfold path is reformulated as a “worldly” path that a bodhisattva treads after the path of vision (darśanamārga), on the model of the Buddha’s work for the world after his awakening beneath the [BODHI TREE](#) in [BODHGAYĀ](#). The bodhisattva’s supramundane vision, described by the seven factors of enlightenment ([BODHYAṄGA](#)), is an equipoise ([SAMĀHITA](#)) in which knowledge is beyond all proliferation ([PRAPAÑCA](#)) and conceptualization ([VIKALPA](#)); the states subsequent (prṣṭhalabdha) to that equipoise are characterized as the practice of skillful means ([UPĀYA](#)) to lead others to liberation, on the model of the Buddha’s compassionate activities for the sake of others. The practice serves to accumulate the bodhisattva’s merit collection ([PUNYASAMBHĀRA](#)); there is no further vision to be gained, only a return to the vision in the supramundane stages characterized as the fundamental (maula) stages of the ten bodhisattva stages ([BODHISATTVABHŪMI](#)) or a supramundane cultivation (lokottarabhāvanā). All other acts are laukika (“worldly”) skillful means.

[La Vallée Poussin, Louis de.](#) (1869–1938). Pioneering Belgian scholar of Buddhism, who is considered the founder of the Franco–Belgian school of European Buddhist Studies and one of the foremost European scholars of Buddhism during the twentieth century. La Vallée Poussin studied Sanskrit, Tibetan, and Chinese under [SYLVAIN LÉVI](#) at the Sorbonne in Paris and [HENDRIK KERN](#) at Leiden, before becoming a professor of comparative Greek and Latin grammar at the University of Ghent in 1895, where he taught for the next three decades. La Vallée Poussin became especially renowned for his multilingual

approach to Buddhist materials, in which all available recensions of a text in the major canonical languages of the Buddhist tradition were carefully studied and compared. Indicative of this approach is La Vallée Poussin's massive French translation of [VASUBANDHU](#)'s [ABHIDHARMAKOŚABHĀSYA](#) (later translated into English in four volumes), which uses the Chinese recension (in an annotated Japanese edition) as the *textus receptus* but draws heavily on Sanskrit, Chinese, and Tibetan materials in order to present a comprehensive, annotated translation of the text, placed squarely within the broader context of the [SARVĀSTIVĀDA ABHIDHARMA](#). La Vallée Poussin also published the first complete renderings in a Western language of [DHARMAPĀLA/XUANZANG](#)'s [CHENG WEISHI LUN](#) (**Vijñaptimātratāsiddhi*) and [ŚĀNTIDEVA](#)'s [BODHICARYĀVATĀRA](#). He also published editions, translations, and studies of central [YOGĀCĀRA](#), [MADHYAMAKA](#), and tantric texts, in addition to a number of significant topical studies, including one on the Buddhist councils ([SAMGĪTI](#)). In 1916, his Hibbert Lectures at Manchester College, Oxford, were published as *The Way to Nirvāṇa: Six Lectures on Ancient Buddhism as a Discipline of Salvation*. Of his many students, perhaps the most renowned was the Belgian [ÉTIENNE LAMOTTE](#).

[Ldan kar ma](#). (Denkarma). One of the earliest known catalogues of Tibetan Buddhist texts translated during the imperial period of the early dissemination ([SNGA DAR](#)) of Buddhism in Tibet; also spelled *Ldan dkar ma* or *Lhan kar ma*. The work, preserved in the [BSTAN 'GYUR](#) section of the Tibetan canon, was compiled in the early ninth century and catalogues more than seven hundred distinct texts. Its name is derived from the Ldan kar (Denkar) palace in which it was written. The work is an important aid for scholars in determining which Buddhist texts were known and available during this early period of Tibetan history. It also illustrates the development of early principles for categorizing Buddhist literature, prefiguring the formation of the modern canon with its [BKA' 'GYUR](#) and *bstan 'gyur* sections. [MAHĀYĀNA](#) sūtras are listed first, followed by [HĪNAYĀNA](#) sūtras, treatises ([ŚĀSTRA](#)), [TANTRAS](#), [DHĀRANĪS](#), praises (STOTRA), prayers ([PRANIDHĀNA](#)), auspicious verses (*maṅgalagāthā*), [VINAYA](#) texts, and works on logic (NYĀYA). The collection ends with a list of revisions and translations in progress. See also [JINGLU](#).

[Ledi, Sayadaw](#). (1846–1923). In Burmese, “Senior Monk from Ledi”; honorific title of the prominent Burmese (Myanmar) scholar-monk U Nyanadaza (P. Ñāṇadhaja), a well-known scholar of [ABHIDHAMMA](#) (S. [ABHIDHARMA](#)) and

proponent of [VIPASSANĀ](#) (S. [VIPAŚYANĀ](#)) insight meditation. Born in the village of Saingpyin in the Shwebo district of Upper Burma, he received a traditional education at his village monastery and was ordained a novice (P. *sāmaṇera*; S. [ŚRĀMANERA](#)) at the age of fifteen. He took for himself the name of his teacher, Nyanadaza, under whom he studied Pāli language and the Pāli primer on abhidhamma philosophy, the [ABHIDHAMMATTHASAṄGAHA](#). At the age of eighteen, he left the order but later returned to the monkhood, he said, to study the Brahmanical science of astrology with the renowned teacher Gandhama Sayadaw. In 1866, at the age of twenty, Nyanadaza took higher ordination ([UPASAMPADĀ](#)) as a monk (P. [BHIKKHU](#); S. [BHIKSU](#)) and the following year traveled to the Burmese royal capital of Mandalay to continue his Pāli education. He studied under several famous teachers and particularly excelled in abhidhamma studies. His responses in the Pāli examinations were regarded as so exceptional that they were later published under the title *Pāramīdīpanī*. In 1869, King [MINDON MIN](#) sponsored the recitation and revision of the Pāli tipitaka (S. [TRIPITAKA](#)) at Mandalay in what is regarded by the Burmese as the fifth Buddhist council (see [COUNCIL, FIFTH](#)). During the proceedings, Nyanadaza assisted in the editing of Pāli texts that were inscribed on stone slabs and erected at the Kuthodaw Pagoda at the base of Mandalay hill. Nyanadaza remained in the capital until 1882, when he moved to Monywa and established a forest monastery named Ledi Tawya, whence his toponym Ledi. It is said that it was in Monywa that he took up in earnest the practice of vipassanā meditation. He was an abhidhamma scholar of wide repute and an advocate of meditation for all Buddhists, ordained and lay alike. With the final conquest of Burma by the British and the fall of the monarchy in 1885, there was a strong sentiment among many Burmese monks that the period of the disappearance of the dharma (see [SADDHARMAVIPRALOPA](#)) was approaching. According to the *MANORATHAPURĀNĪ* by [BUDDHAGHOSA](#), when the dharma disappears, the first books to disappear would be the seven books of the abhidhamma. In order to forestall their disappearance, Ledi decided to teach both abhidhamma and vipassanā widely to the laity, something that had not been previously done on a large scale. He produced over seventy-five vernacular manuals on Buddhist metaphysics and insight meditation. He also wrote several treatises in Pāli, the best known of which was the *Pāramatthadīpanī*. He taught meditation to several disciples who went on to become some of the most influential teachers of vipassanā in Burma in the twentieth century. In recognition of his scholarship, the British government awarded Ledi Sayadaw the title *Aggamahāpaṇḍita* in 1911. Between

1913 and 1917, Ledi Sayadaw corresponded on points of doctrine with the British Pāli scholar [CAROLINE A. F. RHYS DAVIDS](#), and much of this correspondence was subsequently published in the *Journal of the Pali Text Society*.

[Legs bshad gser 'phreng](#). (Lekshe Sertreng). In Tibetan, “Golden Garland of Eloquence,” [TSONG KHA PA BLO BZANG GRAGS PA](#)’s explanation of the perfection of wisdom ([PRAJÑĀPĀRAMITĀ](#)) based on the commentaries of [BU STON RIN CHEN GRUB](#) and Nya dbon Kun dga’ dpal. The text is composed in the [GSANG PHU NE’U THOG](#) commentarial tradition founded by [RNGOG BLO LDAN SHES RAB](#), using the words of the [ABHISAMAYĀLAMKĀRA](#) and Haribhadra’s short commentary ([ABHISAMAYĀLAMKĀRAVIVRTI](#)) as a framework. *Legs bshad gser phreng* privileges the views of Indian [YOGĀCĀRA](#) and [MADHYAMAKA](#) writers, particularly Ārya [VIMUKTISENA](#), and accords great respect to the work of [RNGOG](#). It already reveals Tsong kha pa’s antipathy for the distinctive [GZHAN STONG](#) (“emptiness of other”) view of [DOL PO PA SHES RAB RGYAL MTSHAN](#), but it eschews the strong sectarian tendencies that begin to appear after the death of Tsong kha pa in the early fifteenth century. As an early work of Tsong kha pa, some of the views it espouses were rejected by later [DGE LUGS](#) scholars.

[Leg bshad snying po](#). (Lekshe Nyingpo). In Tibetan, “The Essence of Eloquence,” by [TSONG KHA PA BLO BZANG GRAGS PA](#); its full title in Tibetan is *Drang nges legs bshad snying po* (“Essence of Eloquence on the Provisional and Definitive”). It is the most famous of the five texts that Tsong kha pa wrote on the view of emptiness ([ŚŪNYATĀ](#)). In it, he explores the categories of the provisional ([NEYĀRTHA](#)) and the definitive ([NITĀRTHA](#)) as they are presented in the [YOGĀCĀRA](#) ([CITTAMĀTRA](#)), [*SVĀTANTRIKA](#), and [*PRĀSAṄGIKA](#) schools. In 1402, at the age of forty-five, he completed [LAM RIM CHEN MO](#), which concludes with a long and complex section on [VIPAŚYANĀ](#). Five years later, when he was fifty, he began writing a commentary on [NĀGĀRJUNA](#)’s [MŪLAMADHYAMAKAKĀRIKĀ](#), entitled *Rigs pa’i rgya mtsho* (“Ocean of Reasoning”), at a hermitage above what would become [SE RA](#) monastery on the northern outskirts of [LHA SA](#). While writing his commentary on the first chapter, he foresaw interruptions if he remained there and so moved to another hermitage nearby, called Rwa kha brag (“Goat-face Crag”). At this time, a representative of the Chinese emperor arrived in Lha sa bearing an invitation from the Ming emperor to come to teach the dharma at his court. Tsong kha pa left his

hermitage in order to meet with him. Citing his advancing age and the wish to remain in retreat, Tsong kha pa sent images of the Buddha in his stead. Returning to his hermitage, he set aside for the time being his commentary on Nāgārjuna and began writing *Legs bshad snying po*. After completing it in 1408, he returned to his commentary on Nāgārjuna's text. In 1415, he wrote his medium length [LAM RIM](#) text, known as *Lam rim 'bring*, which contains a substantial exposition of vipaśyanā. At the age of sixty-one, one year before his death, he composed a commentary on [CANDRAKĪRTI](#)'s [MADHYAMAKĀVATĀRA](#). Among his works on Madhyamaka, *Legs bshad snying po* is considered the most daunting, called his iron bow and iron arrow. Just as it is hard to pull an iron bow to its full extent, but if one can, the arrow will travel far, in the same way, the words—not to mention the meaning—of this text are difficult to understand but, when understood, are said to yield great insight. It has been viewed by generations of Tibetan scholars as a work of genius, known for its often cryptic brevity, but yielding profound insight if pursued with analytical fortitude. (The metaphor of the iron bow may also be a polite allusion to the fact that the book is so abstruse and sometimes apparently self-contradictory that it takes considerable effort to attempt to construct a consistent account of Tsong kha pa's position.) Within the [DGE LUGS](#) sect, *Legs bshad snying po* is regarded as the foremost philosophical tome in the eighteen volumes of Tsong kha pa's collected works, presenting a particular challenge, both as an avenue to approach reality and as an elaborate exercise in constructing his thought.

[Legs pa'i shes rab](#). (T). See [RNGOG LEGS PA'I SHES RAB](#).

[Lei-kyun Man-aung Zedi](#). A pagoda, or [CAITYA](#) (Burmese [JEDI](#)), located at the foot of the Sagaing Hills in Thotapan village in Upper Burma (Myanmar). Built in 1724 CE, the pagoda commemorates the spot where, according to local legend, the Buddha once vanquished ninety-nine ogres and converted them to Buddhism. The pagoda was built with eight faces to represent the Buddha's victory in all eight directions of the compass. It contains a shrine room with a twelve-foot buddha image, which is surrounded by figures of the ninety-nine ogres, all reverently listening to his preaching. There is an annual festival held here on the eighth day of the waxing moon in the Burmese lunar month of Tawthalin (September–October).

[lena](#). [alt. leṇa] (S. layana; T. gnas; C. gui/zhu; J. ki/jū; K. kwi/chu 歸/住). In [BUDDHIST HYBRID SANSKRIT](#) and Pāli, “refuge” or “abode”; the term was used by

extension to refer to a permanent dwelling place where a monk or group of monks remained in residence. In the early tradition, it appears that monks would rendezvous at specific places to spend the rains retreat ([VARSA](#)) without those places becoming the permanent dwelling places for a specific monk or group of monks. The term *lena* was used for these more private and permanent dwelling places that developed for the use of a single resident [SAMGHA](#), as opposed to a seasonal settlement; visiting monks were welcome but only for a limited period. The [CŪLAVAGGA](#) lists five kinds of *lena*, although the precise meaning of each is not entirely clear: (1) the [VIHĀRA](#), which originally seemed to be either communal shelters or individual huts; (2) the *addhayoga*, a more permanent structure with eaves; (3) a *pāsāda*, a structure with one or more upper stories; (4) a *hammiya*, a structure with an upper story and an attic; and (5) a *guha*, a structure built into the side of a hill or mountain. Eventually, only two of these terms survived, with *vihāra* referring to a free-standing monastery and *guha* referring to a man-made cave monastery.

[Lengqie shizi ji](#). (J. Ryōga shishiki; K. Nūngga saja ki 楞伽師資禮). In Chinese, “Records of the Masters and Disciples of the *Laṅkāvatāra*”; a genealogical anthology associated with the Northern school ([BEI ZONG](#)) of the early [CHAN](#) tradition, compiled by [JINGJUE](#) (683–c. 760). The *Lengqie shizi ji* contains the biographies and sayings of eight generations of masters (twenty-four in total), who received the “transmission of the lamp” (*chuandeng*) as patriarchs ([ZUSHI](#)) in the Chan school. The transmission narrative presented in this text differs markedly from that found in the [LIUZU TAN JING](#) (“Platform Sūtra”), which becomes normative in the mature Chan tradition. The recipients of the special transmission of the Chan teachings in the *Lenqie shizi ji* belong instead to the Northern school. Jingjue places [GUNABHADRA](#) before [BODHIDHARMA](#) in the Chan patriarchal lineage (probably because of his role in translating the [LAṅKĀVATĀRASŪTRA](#), an important scriptural influence in the early Chan school); in addition, [SHENXIU](#) is listed as the successor to the fifth Chinese patriarch, [HONGREN](#), in place of [HUINENG](#). The *Lenqie shizi ji* also contains a set of rhetorical questions and doctrinal admonitions known as *zhishi wenyi* (lit. “pointing at things and inquiring into their meaning”) in the biographies of Guṇabhadra, Bodhidharma, Hongren, and Shenxiu. Jingjue quotes from numerous sources, including his teacher Xuanze’s (d.u.) *Lengqie renfa zhi* (“Records of the Men and Teachings of the *Laṅkāvatāra*,” apparently extant only in these embedded quotations in the *Lenqie shizi ji*), the [DASHENG QIXIN](#)

[LUN](#), the [XIUXIN YAO LUN](#), Bodhidharma's [ERRU SIXING LUN](#), and the *Rudao anxin yao fangpian famen* attributed to [DAOXIN](#) (which also seems to exist only as quoted, apparently in its entirety, in the *Lenqie shizi ji*). As one of the earliest Chan texts to delineate the transmission-of-the-lamplight theory as espoused by the adherents of the Northern school of Chan, the *Lenqie shizi ji* is an invaluable tool for understanding the development of the lineage of Chan patriarchs and the early history of the Chan school. See also [CHUANDENG LU](#); [LIDAI FABAO JI](#).

[Leshan dafo](#). (樂山大佛). In Chinese, “Great Buddha of Leshan,” the world’s largest stone statue of the bodhisattva [MAITREYA](#). See [EMEISHAN](#).

[Lévi, Sylvain](#). (1863–1935). Influential nineteenth-century European scholar of the [YOGĀCĀRA](#) school of Buddhism. Born in Paris to Alsatian parents, Lévi had a conservative Jewish education and held his first teaching position at a conservative seminary in Paris. Educated in Sanskrit at the University of Paris, Lévi became a lecturer at the École des Hautes Études in Paris in 1886. There, he taught Sanskrit until he became professor of Sanskrit language and literature at the Collège de France in 1894, a position that he would hold until 1935. Lévi went to India and Japan to carry out his research and also traveled extensively in Korea, Nepal, Vietnam, and Russia. He eventually became the director of the École des Hautes Études. In addition to Sanskrit, Lévi also read classical Chinese, Tibetan, and Kuchean and was one of the first Western scholars to study Indian Buddhism through translations that were extant only in those secondary canonical languages. Perhaps his most significant translations were of seminal texts of the [YOGĀCĀRA](#) school, including renderings of [VASUBANDHU](#)’s twin synopses, the [VIMŚATIĀ](#) and [TRIMŚIKĀ](#) (1925), and [ASAṄGA](#)’s [MAHĀYĀNASŪTRĀLAMKĀRA](#), thus introducing the major writings of this important Mahāyāna scholastic school to the Western scholarly world. Lévi also published on classical Indian theater, the history of Nepal, and Sanskrit manuscripts from Bali. Together with [TAKAKUSU JUNJIRŌ](#), Lévi was the cofounder of the joint Japanese–French *Hōbōgin*, an encyclopedic dictionary of Buddhism, the compilation of which continues to this day.

[Lha btsun nam mkha’ ’jigs med](#). (Lhatsün Namka Jikme) (1597–1653). An adept of the [RNYING MA](#) sect of Tibetan Buddhism, renowned for his mastery of many Rnying ma doctrines and his great supernatural powers. Although ordained as a monk while a youth, he spent much of his life as a [YOGIN](#), practicing meditation in retreat centers across the Tibetan countryside. He is best

remembered for entering the region of Sikkim (T. 'Bras mo ljongs), in 1646, “opening” it as a place of pilgrimage and spiritual practice, and for founding the retreat center of Bkra shis lding (Tashiding).

Lha btsun Rin chen rnam rgyal. (Lhatsün Rinchen Namgyal) (1473–1557). A Tibetan Buddhist master famous for his literary compositions and publishing activities in southern Tibet. He was born into the ruling family of the Gung thang region of southwestern Tibet; the title lha btsun is generally applied to descendants of Tibet’s royal dynastic aristocracy. Although his teachers represent a wide range of religious affiliations and intellectual currents of his time, Rin chen rnam rgyal’s principal teacher is usually considered to be [GTSANG SMYON HERUKA](#), the so-called mad [YOGIN](#) of Tsang. Following the example of his master, who edited and published a well-known biography and verse anthology of [MI LA RAS PA](#), Rin chen rnam rgyal began a career of authoring, editing, and publishing a wide range of literary materials from his seat at the retreat complex of [BRAG DKAR RTA SO](#). These works include biographies and verse anthologies of numerous [BKA’ BRGYUD](#) masters. During the sixteenth century, Brag dkar rta so became one of Tibet’s leading publishing centers.

Lha lung. A monastery located in the southern Tibetan region of [LHO BRAG](#), founded in 1154 by the first [KARMA PA DUS GSUM MKHYEN PA](#). It remained allied with the [BKA’ BRGYUD](#) sect under the direction of the sixteenth-century scholar [DPA’ BO GTSUG LAG PHRENG BA](#) but changed affiliation to the [RNYING MA](#) under the Gsung sprul (Sungtrul) lama, the speech incarnation of [PADMA GLING PA](#). During the time of the fifth [DALAI LAMA, NGAG DBANG BLO BZANG RGYA MTSHO](#), it was converted to the [DGE LUGS](#) sect. Although mostly demolished during the Chinese Cultural Revolution, Lha lung is architecturally unique, and an important collection of murals survived destruction.

lha mo. In Tibetan, lit. “the goddess”; the name for the classical theater of Tibet. These plays are drawn from Tibetan literature, often with Buddhist themes, and can last a full day when performed in their entirety. They are performed with a rich assortment of masks and costumes; the members of the lha mo troupe employ sung dialogue, chanted narration, stylized movement, and dancing. Satire and comic improvisation are also included. The tradition of lha mo is said to have begun with the famous saint [THANG STONG RGYAL PO](#). See [’CHAM](#).

Lha mo bla mtsho. (Lhamo latso). An important oracular lake located in central

Tibet, southeast of [LHA SA](#). It is considered to be the receptacle for the life force (bla) of the [DALAI LAMAS](#) and considered sacred to the Buddhist protective deity [DPAL LDAN LHA MO](#) (Śrīdevī), protectress of the Dalai Lamas. Each Dalai Lama would try to visit the lake at least once during his life to receive visions on the water's surface regarding his future activities and death. The lake is also believed to display signs concerning the future rebirth of the Dalai and [PAN CHEN LAMAS](#). Most recently, in 1933, the regent Rwa sgreng Rin po che saw visions in the lake that indicated the birthplace and circumstances of the fourteenth Dalai Lama.

[Lha sa](#). In Tibetan, “place of the gods”; capital city of Tibet and location of some of the country's most important Buddhist institutions. According to traditional histories, the Tibetan king [SRONG BTSAN SGAM PO](#) moved his capital from the Yar klungs Valley to its current location when he founded the original edifice underlying the [PO TA LA](#) Palace in 637, a structure completed in its present form only during the seventeenth century under the direction of the fifth [DALAI LAMA](#), [NGA DBANG BLO BZANG RGYA MTSHO](#), and his regent. At about the same time, Srong bstan sgam po began work on the central [JO KHANG](#) temple. As goats were used as work animals during the construction, the area became known as Ra sa (lit. “place of the goats”). Following the temple's consecration in 647, it is said that the city's name was then changed to Lha sa (“place of the gods”). These two structures, together with the [RA MO CHE](#) temple, form the core of Lha sa's religious and sacred architecture. Over the centuries, many other institutions were added, including the medical college of Lcags po ri (Chakpori), the Dalai Lama's summer palace at the [NOR BU GLING KHA](#), and numerous small monasteries, temples, and shrines. Around the city's periphery, a number of important monasteries were established, including the three great [DGE LUGS](#) monasteries of [DGA' LDAN](#), ['BRAS SPUNGS](#), and [SE RA](#) (known collectively as the [GDAN SA GSUM](#), or “three seats”), as well as [GNAS CHUNG](#) monastery, the seat of Tibet's state oracle. A series of three ritual circumambulation routes around the city's sacred centers developed: (1) the nang bskor (nangkör, “inner circuit”), skirting the Jo khang temple's inner sanctum; (2) the [BAR BSKOR](#) (barkör, “middle circuit”), circling the outer walls of the Jo khang and its neighboring buildings; and (3) the gling bskor (lingkör, “sanctuary circuit”) circumnavigating the entire city, including the Po ta la Palace and Lcag po ri. Lha sa has long been considered the spiritual center of Tibet, and chief pilgrimage destination. Some devotees would travel the immense distance from their homeland to Lha sa while

performing full-length prostrations, literally covering the ground with their bodies the entire way. Although the far eastern and western provinces of Tibet traditionally maintained a large degree of regional independence, after the seventeenth century Tibet's central government, the [DGA' LDAN PHO BRANG](#), operated from Lha sa in the Po ta la Palace.

Lho brag. (Lhodrak). In Tibetan, lit. “the southern cliffs”; a region of alpine meadows and narrow gorges in southern Tibet on the border with Bhutan and location of numerous monasteries and retreat hermitages. The area was home to many translators and treasure revealers ([GTER STON](#)) of the [RNYING MA](#) and [BKA' BRGYUD](#) sects of Tibetan Buddhism during the early period of the later dissemination ([PHYI DAR](#)) of the [DHARMA](#). Perhaps the most famous among them is the translator [MAR PA CHOS KYI BLO GROS](#), who is often called Lho brag pa (Lhodrakpa), “The Man from Lhodrak,” who established his seat at [GRO BO LUNG](#). Other leading masters and their institutions include [NYANG RAL NYI MA 'OD ZER](#) who founded Smra bo rcog (Ma'ojok) monastery; Nam mkha'i snying po (Namke Nyingpo), Lo ras pa (Lorepa, 1187–1250), and [PADMA DKAR PO](#), who established [MKHAR CHU](#) monastery; [GURU CHOS KYI DBANG PHYUG](#), whose main seat was the Guru lha khang; and [DPA' BO GTSUG LAG PHRENG BA](#), abbot of the monasteries at [LHA LUNG](#) and [SRAS MKHAR DGU THOG](#).

lho gter. (lho ter). In Tibetan, “southern treasures,” a term used to refer to the treasure texts ([GTER MA](#)) discovered by great seventeenth-century Rnying ma lama [GTER BDAG GLING PA](#), which became the central texts studied at [SMIN GROL GLING](#) monastery.

li. (J. ri; K. i 理). In Chinese, “principle”; the fundamental “principle,” general “pattern,” or innate “quality” that governs reality. (The antiquated English rendering of li as “noumenon” is weighted down with Kantian connotations that are inappropriate in an East Asian philosophical context and is best avoided.) In ancient China, the term li was originally used as a noun to indicate the natural patterns that occurred on a piece of jade, although it could also be used as a verb referring to the carving that transforms a piece of raw jade into a refined cultural object. The term soon came to refer to the inner or outer patterns inherent in any kind of physical object. For example, in the section on “Jielao” (“Explaining Lao[zi]”) from the *Hanfeizi*, compiled during the late second century BCE, li refers to either an object's overt quality or its hidden disposition to manifest certain qualities at a given time. [XUANXUE](#) (Dark Learning) scholars from the

Wei-Jin period were among the first intellectuals to use the term in a philosophically meaningful way. In particular, Wang Bi (226–249) employed *li* as a synonym for his ontological concept of [WU](#) (nonbeing) to refer to a metaphysical principle that underlies all phenomena. Such usages of the term influenced early Buddhist thinkers in China. [DAOSHENG](#) (355–434), e.g., regarded *li* as an immutable, ultimate principle, often using it as a synonym for the buddha-nature ([FOXING](#)) or the true self (*zhenwo*). During the Tang dynasty, Huayan Buddhism ([HUAYAN ZONG](#)) employed the term in a philosophically sophisticated manner, although with varying meanings. For [DUSHUN](#), the putative founder of the Huayan school, *li* represents not a substance or thing but, instead, a proposition that expresses the true identity of the phenomenal world. For example, *li* could refer to the principle that all phenomena ([SHI](#)) are empty ([SŪNYATĀ](#)), a proposition that is only understandable through practice. His successors in the Huayan school, such as [FAZANG](#) and [CHENGGUAN](#), imbued the term with additional ontological connotations. Fazang identified *li* with the mind as suchness ([TATHATĀ](#); [BHŪTATATHATĀ](#)) described in the [DASHENG QIXIN LUN](#) (“Awakening of Faith According to the Mahāyāna”), which he considered to be synonymous with the [TATHĀGATAGARBHA](#). Developing on Fazang’s thought, Chengguan viewed *li* as the essential quality that pervades all four realms of reality ([DHARMADHĀTU](#); [SI FAJIE](#)). During the Song dynasty, Neo-Confucian philosophers reinterpreted the term to fit a Confucian philosophical context. They interpreted *li* as an inherent principle within things that makes them what they are; when applied to human beings, *li* thus refers to the four inner moral essences of humaneness, righteousness, propriety, and wisdom. Some aspects of these Neo-Confucian interpretations of the term *li* appear in the writings of such Song-dynasty Chan masters as [DAHUI ZONGGAO](#).

[Liang gaoseng zhuan](#). (梁高僧傳). In Chinese, “Biographies of Eminent Monks [Compiled during the] Liang [Dynasty].” See [GAOSEN ZHUAN](#).

[Liangjie](#). (C) (良价). See [DONGSHAN LIANGJIE](#).

[Lidai fabao ji](#). (J. *Rekidai hōbōki*; K. *Yōktae pōppo ki* 歷代法寶禮). In Chinese, “Record of the Dharma-Jewel throughout Successive Generations”; an influential genealogical history of the early [CHAN](#) tradition, composed by disciples of the Chan master [BAOTANG WUZHU](#) in the [JINGZHONG ZONG](#). The history of the Chan school as related in the *Lidai fabao ji* begins with the arrival of Buddhism in China during the Han dynasty, which is followed by a brief

discussion of the lineages of dharma transmission in the [FU FAZANG YINYUAN ZHUAN](#) and [LENGQIE SHIZI JI](#). The *Lidai fabao ji* then provides the biographies of the six patriarchs ([ZUSHI](#)) of Chan in China: Bodhidharmatrāta [alt. [BODHIDHARMA](#)], Huike, Sengcan, Daoxin, Hongren, and Huineng. Each biography ends with a brief reference to the transmission of the purple monastic robe of Bodhidharma as a symbol of authority. The manner in which this robe came into the hands of Zhishen (609–702), a disciple of the fifth patriarch Hongren, is told following the biography of the sixth, and last, patriarch Huineng. According to the *Lidai fabao ji*'s transmission story, Huineng entrusted the robe to Empress [WU ZETIAN](#), who in turn gave it to Zhishen during his visit to the imperial palace. Zhishen is then said to have transmitted this robe to Chuji [alt. 648–734, 650–732, 669–736], who later passed it on to his disciple [CHÖNGJUNG MUSANG](#) (C. Jingzhong Wuxiang). The robe finally came into the possession of Musang's disciple Baotang Wuzhu, whose teachings comprise the bulk of the *Lidai fabao ji*. After the *Lidai fabao ji* was translated into Tibetan, Wuzhu's teachings made their way to Tibetan plateau, where they seem to have exerted some influence over the early development of Tibetan Buddhism. The *Lidai fabao ji* was thought to have been lost until the modern discovery of several copies of the text in the manuscript cache at [DUNHUANG](#). Cf. [CHUANDENG LU](#); [LENGQIE SHIZI JI](#).

[Lidai sanbao ji](#). (J. Rekidai sanbōki; K. Yōktae sambo ki 歷代三寶紀). In Chinese, “Record of the Three Jewels throughout Successive Dynasties,” a private scriptural catalogue ([JINGLU](#)) composed by Fei Changfang (d.u.) in 597. The *Lidai sanbao ji* professes to be a history of the dissemination of the three jewels ([RATNATRAYA](#)) in China and provides lists of translated scriptures, indigenous works, or [APOCRYPHA](#), and discussion of the circumstances of their compilation. The catalogue is in fifteen rolls, covering 2,268 texts in a total of 6,417 rolls. The first three rolls of the catalogue provide a chronology of the major events in the history of Buddhism from the Zhou through the Han dynasties. Rolls four through twelve detail the different translations of Buddhist scriptures made in China during different dynastic periods and present them in chronological order. Rolls thirteen and fourteen present a roster of the complete [MAHĀYĀNA](#) and [HĪNAYĀNA TRIPITAKAs](#). Finally, the fifteenth roll provides an afterword, a table of contents of the *Lidai sanbao ji*, and a list of other scriptural catalogues that Fei consulted in the course of compiling his own catalogue. Fei's organizational principle is unique among the Chinese cataloguers and serves to legitimize

specific scriptural translations by associating them with the Chinese dynastic succession. Fei's record is particularly important for its attention to scriptures translated in northern China and its attempt to authenticate the translation and authorship of certain apocryphal texts. Fei was especially concerned in his catalogue to reduce the number of scriptures that previously had been listed as anonymous, in order to quash potential questions about the reliability of the Buddhist textual transmission (a concern that Daoists at the Chinese court were then exploiting in their competition for imperial patronage). Fei thus blatantly fabricated scores of attributions for translations that previously had been listed as anonymous. These attributions were later adopted by the state-authorized *Da Zhou lu*, compiled in 695, which ensured that these scriptures would subsequently enter the mainstream of the Buddhist textual transmission. Fei's translator fabrications resulted in substantial numbers of Chinese Buddhist scriptures that were apocryphal and yet accepted as canonical; this list includes many of the most influential scriptures and commentaries in East Asian Buddhism, including the [YUANJUE JING](#), [RENWANG JING](#), and [DASHENG QIXIN LUN](#).

[Liêu Quán](#). (了觀) (1667–1742). Vietnamese monk who is considered the second patriarch of a branch of the Linji school ([LINJI ZONG](#)) of [CHAN](#), which was brought to Vietnam by the Chinese Chan Master Nguyễn Thiêếu (Yuanshao). He was born in Phú Yên Province (Central Vietnam), and his personal name was Lê Thiệt Diệu. When he was six years old, his father sent him at his request to Hội Tôn Monastery to study under the Venerable Tê Viên, a Chinese monk. After his teacher passed away, he went to Bảo Quốc Monastery in Huế to study under another Chinese monk, the Venerable Giác Phong. In 1695, he went to Huế to receive novice ordination under the Chinese Chan Master Thạch Liêm and received full ordination in 1697 from another Chinese monk, the Venerable Từ Lâm. In 1702, he traveled to Đông Sơn Monastery to receive instructions on the practice of Chan from the Chinese monk Từ Dung, an eminent Buddhist teacher of the time, and received the “mind seal” of the Chan transmission from him in 1708. In 1735, Liêu Quán returned to Huế and until 1735 presided over numerous precept ceremonies. He was invited to the royal court several times, but he declined each invitation. Liêu Quán founded the Thiên Tôn (Chan School) Monastery in Huế and was traditionally considered to be the thirty-fifth generation successor in the Linji lineage. Liêu Quán was particularly credited with reforming some of the Chinese Linji Chan rituals and practices, making them more palatable to Vietnamese Buddhists.

li fajie. (J. rihokkai; K. i pŏpkye 理法界). In Chinese, “dharma-realm of principle,” the second of the four [DHARMADHĀTU](#) (realms of reality) according to the Huayan school ([HUAYAN ZONG](#)). The “dharmadhātu of principle” refers to the singular, all-pervasive truth of suchness ([ZHENRU](#); see [TATHATĀ](#)) that unifies all individual phenomena ([SHI](#)). This sense of unity exists within the “sphere of dharma” (see dharmadhātu) because all phenomena share the same empty nature and derive from the same one mind ([YIXIN](#)). A common Huayan simile compares “principle” to the oceanic body of water in which waves (viz., “phenomena,” shi) well up. Here, the “principle” is the creative, ontological source of all “phenomena.” The five Huayan classes of teachings ([HUAYAN WUJIAO](#)) classify the dharmadhātu of principle under the “initial [Mahāyāna] teaching” ([SHIJIAO](#)) and the “sudden [Mahāyāna] teaching” ([DUNJIAO](#)), and their respective modes of meditative contemplation.

Life of Milarepa. See [MILA RAS PA’I RNAM THAR](#).

Lihuo lun. (理惑論). In Chinese, “Treatise on the Resolution of Doubts.” See [MOUZI LIHUO LUN](#).

Lilavajra. [alt. Līlavajra, Lalitavajra] (T. Rol pa’i rdo rje). There is a disagreement in Tibetan lineage lists about whether this is the proper name of a single or multiple persons. In Sanskrit, both the words līlā and lalita denote joyful abandonment in a state of spontaneous play. According to Tibetan hagiographies, Līlavajra is one of the eighty-four [MAHĀSIDDHAS](#), Indian tantric adepts who manifested eccentric, even antinomian, behavior and from whom Tibetan translators received the transmission of secret tantric instructions. He is found in the lineage of the [CAKRASAMVARA](#) and [GUHYASAMĀJA](#) tantras but is associated in particular with the [VAJRABHAIRAVA](#) cycle (with the central figure given variously the name Kṛṣṇayamāri, Raktayamāri, [YAMĀNTAKA](#), and Vajrabhairava), a wrathful form of [MAÑJUŚRĪ](#), the embodiment of a buddha’s wisdom. Līlavajra is the central figure in the lineage lists of five of the six early Vajrabhairava traditions in Tibet; he is the source of the [RWA LO TSĀ BA RDO RJE GRAGS](#) tradition that [TSONG KHA PA BLO BZANG GRAGS PA](#) learned while still young. Through him, the [VAJRABHAIRAVATANTRA](#) became a central practice in the [DGE LUGS](#) sect.

li mi. (理密). In Chinese, “esoteric as to principle.” See [ER MI](#).

lineage. See [GOTRA](#); [KULA](#); [PARAMPARĀ](#); [CHUANDENG LU](#); [FASI](#); [ZUSHI](#).

liṅga. (T. mtshan/rtags; C. xiang/shengzhi; J. sō/shōshi; K. sang/saengji 相/生支). In Sanskrit and Pāli, “sign” or “mark,” a polysemous term with three major denotations in Buddhist materials: (1) the distinguishing characteristic of a given phenomena, (2) the reason in a syllogism ([PRAYOGA](#)), and (3) a denominator of gender and specifically the male sexual organ. In the [MAHĀYĀNA](#), in particular, the signs that a [BODHISATTVA](#) will not turn back (avaivartikaliṅga) on the path to full enlightenment are described in great detail; best known are the tears and horripilation that occur spontaneously in a true bodhisattva who hears a particular Mahāyāna [SŪTRA](#) for the first time, or when listening to an explanation of [BODHICITTA](#) and [SŪNYATĀ](#). In a syllogism, according to [DIGNĀGA](#), a true mark (liṅga) meets three prerequisites (trairūpya): it must be a property of the logical subject ([PAKSADHARMA](#)), and there must be positive (anvaya) and negative concomitance ([VYATIREKA](#)). For example, in a standard syllogistic formulation, “sound (the logical subject) is impermanent because it is a product (the mark),” being a product is a property of the logical subject: there is positive concomitance between a product and impermanence ([ANITYA](#)), i.e., perishing in the next moment, and there is negative concomitance between being permanent and not being a product. As a denominator of gender, liṅga also refers to the gender of letters and words (male, female, and neuter). In [TANTRA](#), liṅga refers to the gender of deities in [MANDALAS](#) and defines their hand implements and the specific practices associated with the deities; in some cases, particularly in the [RNYING MA](#) VAJRAKĪLAYA tantras, as in Śaivism, liṅga refers specifically to the male sexual organ.

lingyan. (靈驗). In Chinese, “numinous attestation.” See [GANYING](#).

lingying. (靈應). In Chinese, “numinous response.” See [GANYING](#).

Lingyinsi. (靈隱寺). In Chinese, “Numinous Seclusion Monastery”; located in Zhejiang province northwest of Hangzhou. In 326 CE, an Indian monk with the Chinese name Huili (d.u.) is supposed to have come to Hangzhou, where he was awestruck by the sight of Feilai Feng (lit. “Peak that Flew Hither”) and built a monastery there that he named Lingyin. The monastery is the largest of several that are located in the Wulin Mountains, which also features a large number of grottoes and religious rock carvings. The monastery was destroyed in 771 CE during the Tang dynasty and later rebuilt. In 1007 CE, during the Song dynasty, it

was renamed Lingyin Chan Monastery but was subsequently destroyed as the result of war and rebuilt again. In 1359, during the Ming dynasty, it was given its present name of Lingyinsi.

Lingyou. (C) (靈祐). See [GUISHAN LINGYOU](#).

Ling Zhao. (J. Rei Shō; K. Yōng Cho 靈照). Daughter of the famous Tang-dynasty Chinese layman [PANG YUN](#) and a well-known lay adept of the [CHAN](#) school in her own right. See [PANG YUN](#).

lingzhi. (J. ryōchi/reichi; K. yōngji 靈知). In Chinese, “numinous awareness”; the quality of “sentience” common to all sentient beings, which constitutes their capacity both to experience the sensory realms in all their diversity and to attain enlightenment. Numinous awareness is both the inherent faculty that inspires sentient beings to seek enlightenment and the quality of mind perfected through meditative development. As the foundation of sentience, numinous awareness is what enables all sentient beings to see, hear, know, and experience their world and thus constitutes the capacity of the mind to remain “aware” of all sensory stimuli; hence, this “numinous awareness is never dark” (C. lingzhi bumei). This property of awareness is said to be itself “void and calm” (C. kongji) and is consequently able to adapt without limitation to the various inclinations of sentient beings; hence, the term is often known as the “void and calm, numinous awareness” (C. kongji lingzhi). Regardless of whether that particular sentient being’s awareness inclines toward greed and hatred or toward wisdom and compassion, however, that sentience itself remains simply “aware.” This numinous awareness is therefore equated in the [CHAN](#) school with enlightenment ([BODHI](#)), [TATHĀGATAGARBHA](#), buddha-nature ([BUDDHADHĀTU](#); C. [FOXING](#)), or one’s “original face” ([BENLAI MIANMU](#)). The enlightenment inherent in the mind is naturally luminous, shining ever outward and allowing beings to experience their external world. This natural quality of luminosity is what is meant by “sentience,” and the very fact that “sentient” beings are conscious is ipso facto proof that they are inherently enlightened. If the meditator can turn this radiance emanating from one’s mind back to its source, one would rediscover that luminous core of the mind and be instantly enlightened. In [CHAN](#) meditation, the quality of introspection that allows the meditator to experience this numinous awareness directly is called “tracing back the radiance” ([FANZHAO](#)) or “seeing the nature” ([JIANXING](#)). The term receives particular attention in the works of the Chinese Chan/[HUAYAN](#) adept [GUIFENG ZONGMI](#) (780–841) and the Korean Sōn

master [POJO CHINUL](#) (1158–1210). See also [RIG PA](#).

[lingzhi bumei](#). (靈知不昧). In Chinese, “numinous awareness is never dark.” See [LINGZHI](#).

[Linh Mụ Tu](#). (靈姥寺). In Vietnamese, “Numinous Matron Monastery”; also known popularly as the Chùa Linh Mụ or Linh Mụ Pagoda. See [THIÊN MỤ TU](#).

[Linji lu](#). (J. Rinzairoku; K. Imje nok 臨濟錄). In Chinese, “The Record of Linji,” the discourse record ([YULU](#)) attributed to [LINJI YIXUAN](#) (d. 867), the putative founder of the eponymous [LINJI ZONG](#) of [CHAN](#) (J. Zen; K. Sŏn), and one of the most widely read and cited works within the Chan tradition; also known as the *Linji yulu* and the *Zhenzhou Linji Huizhao Chanshi yulu*. The *Linji lu* purports to provide a verbatim account of Linji’s sermons, teachings, and his exchanges with disciples and guests. As with most texts in the discourse-record genre, however, the *Linji lu* was not compiled until long after Linji’s death (the most popular recension was compiled in 1120, some 250 years after his death) and therefore provides a retrospective portrayal of how the mature Chan school assumed one of its quintessential masters would have taught and conducted himself. The record is in one roll and is divided into three sections: (1) formal discourses (e.g., [SHANGTANG](#)), many delivered at the request of local officials; (2) critical examinations ([KANBIAN](#)), viz., his encounters with monks, students, and lay visitors; and (3) a record of his activities (*xinglu*), which discusses his enlightenment under [HUANGBO XIYUN](#) (d. 850), his meetings with Chan masters early in his career, and concludes with an official biography taken from his stele inscription. The text is well known for its distinctive teachings, such as the “lump of raw flesh” ([CHIROUTUAN](#)), and his pedagogical technique called the Linji “shout” (he); see [BANGHE](#).

[Linji Yixuan](#). (J. Rinzai Gigen; K. Imje Ŭihyŏn 臨濟義玄) (d. 867). Chinese [CHAN](#) master of the Tang dynasty and putative founder of the eponymous [LINJI ZONG](#). Linji was a native of Nanhua in present-day Shandong province. He is said to have begun his career as a monk by training in Buddhist doctrine and [VINAYA](#), but he abandoned this scholastic path and headed south to study under the Chan master [HUANGBO XIYUN](#) (d. 850). Linji is also known to have visited Gao’an Dayu (d.u.) with whom he discussed the teachings of Huangbo. Having received certification of his attainment (see [YINKE](#)) from Huangbo, Linji returned north to Zhenzhou (in present-day Hebei province) and resided in a small

hermitage near the Hutuo River that he named Linji'an, whence derives his toponym. There, with the help of the monk Puhua (d. 861), Linji was able to attract a large following. Linji is most famous for his witty replies and iconoclastic style of teaching. Like the Chan master [DESHANM XUANJIAN](#)'s "blows" (bang), Linji was particularly famous for his "shouts" (he) in response to students' questions (see [BANGHE](#)). He was posthumously given the title Chan Master Huizhao (Illumination of Wisdom). The thriving descendents of Linji came to be known collectively as the Linji zong. Linji's teachings are recorded in his discourse record ([YULU](#)), the [LINJILU](#).

[Linji zong](#). (J. Rinzaishū; K. Imje chong 臨濟宗). In Chinese, the "Linji school"; one of the so-called Five Houses and Seven Schools ([WU JIA QI ZONG](#)) of the mature Chinese [CHAN](#) school. Chan genealogical records (see [CHUANDENG LU](#)) describe a lineage of monks that can be traced back to the eponymous Tang-dynasty Chan master [LINJI YIXUAN](#). Linji's lineage came to dominate the Chan tradition in the southern regions of China, largely through the pioneering efforts of his Song-dynasty spiritual descendants Fengxue Yanzhao (896–973), Fenyang Shanshao (947–1024), and Shishuang Chuyuan (986–1040). Shishuang's two major disciples, [HUANGLONG HUINAN](#) (1002–1069) and [YANGQI FANGHUI](#) (992–1049), produced the two most successful collateral lines within the Linji lineage: the [HUANGLONG PAI](#) and [YANGQI PAI](#). Few monks had as significant an impact on the Chan tradition as [DAHUI ZONGGAO](#), a successor in the Yangqi branch of the Linji lineage. Dahui continued the efforts of his teacher [YUANWU KEQIN](#), who is credited with compiling the influential [BIYAN LU](#) ("Blue Cliff Record") and developed the use of Chan cases or precedents ([GONG'AN](#)) as subjects of meditation (see [KANHUA CHAN](#)). Dahui and his spiritual descendants continued to serve as abbots of the most powerful monasteries in China, such as [WANSHOUSI](#) (see [GOZAN](#)). During Dahui's time, the Linji lineage came into brief conflict with the resurgent [CAODONG ZONG](#) lineage over the issue of the latter's distinctive form of meditative practice, which Dahui pejoratively labeled "silent-illumination meditation" ([MOZHAO CHAN](#)). Other famous masters in the Linji lineage include [WUZHUN SHIFAN](#), [GAOFENG YUANMIAO](#), and [ZHONGFENG MINGBEN](#). For the Korean and Japanese counterparts, see [IMJE CHONG](#); [RINZAISHŪ](#).

[lishi wu'ai fajie](#). (J. rijimugehokkai; K. isa muae pŏpkye 理事無礙法界). In Chinese, "dharma-realm of the unimpeded interpenetration between principle

and phenomena,” the third of the four realms of reality ([DHARMADHĀTU](#)) according to the Huayan school ([HUAYAN ZONG](#)). A mere realization of the “principle” ([LI](#)) of the dharmadhātu, as is offered in the second of the four dharmadhātus (see [LI FAJIE](#)) is not a decisive insight, the Huayan school claims, because it does not take into account the dynamic interpenetration or unimpededness (wu’ai) between the singular “principle” of true suchness ([ZHENRU](#); see [TATHATĀ](#)) and the myriad “phenomena” ([SHI](#)) of the external world. Since true suchness is an abstract entity without definable features or tangible substance of its own, it is only revealed and made accessible through “phenomena.” Conversely, “phenomena” lose their ontological ground and epistemological coherence if they are not uniformly rooted in the “principle.” Thus, the Buddhist practitioner must come to recognize that the vibrant functioning of the phenomenal aspects of reality is in fact the expression of the principle itself. Alternatively, some Huayan exegetes have equated “principle” with the imperturbable buddha-nature (S. [BUDDHADHĀTU](#), C. [FOXING](#)) and “phenomena” with the active [ĀLAYAVIJÑĀNA](#), the “storehouse consciousness.” In this interpretation, these two factors “interpenetrate” because ālayavijñāna is taken to be grounded in the buddha-nature and, in response to activating conditions, the buddha-nature is transmuted into the ālayavijñāna. A common simile used to describe the relationship between “principle” and “phenomena” is that between the deep ocean and the waves welling up on its surface, the essence of each of those waves is the same “principle” of water, but each wave is a unique, discrete “phenomenon” in its own right. Traditionally, Huayan classifies the unimpeded interpenetration between principle and phenomena under the “final [Mahāyāna] teaching (zhongjiao)” in the five Huayan classes of teachings schema ([HUAYAN WUJIAO](#)).

[Li Tongxuan](#). (J. Ri Tsūgen; K. Yi T’onghyōn 李通玄) (635–730; alt. 646–740). Tang-dynasty lay exegete of the [AVATAMSAKASŪTRA](#) (*Huayan jing*) and renowned thaumaturge. Li’s life is the stuff of legend. He is claimed to have been related to the Tang imperial house but is known only as an elusive and eccentric lay scholar of Buddhism, who hid away in hermits’ cells and mountain grottoes so as to devote himself entirely to his writing. Li’s hagiographer says that he was able to work late into the night just from the radiance that issued forth from his mouth; his scholarship and health were sustained by two mysterious maidens who brought him paper, brushes, and daily provisions. The magnum opus of this life of scholarship is a forty-roll commentary to

[ŚIKSĀNANDA](#)'s “new” 699 translation of the *Avatamsakasūtra*; his commentary is entitled the *Xin Huayan jing lun* and was published posthumously in 774. In the mid-ninth century, Li's commentary was published together with the sūtra as the [HUAYAN JING HELUN](#), and this compilation is the recension of Li's exegesis that is most widely used. Li also wrote a shorter one-roll treatise known usually by its abbreviated title of *Shiming lun* (“The Ten Illuminations”; the full title is *Shi Huayan jing shi'er yuansheng jiemi xianzhi chengbei shiming lun*), which discusses the *Huayan jing* from ten different perspectives on the doctrine of conditioned origination ([PRATĪTYASAMUTPĀDA](#)), and two other shorter works. Because Li Tongxuan was not associated with the mainstream of the Huayan lineage ([HUAYAN ZONG](#)), he was able to develop his own distinctive vision of the insights found in the *Avatamsakasūtra*, a vision that often offered an explicit challenge to the interpretations of [FAZANG](#) and the mainstream tradition. Li stands outside the orthodox patriarchal lineage of the Huayan school by being a layperson, not a monk, and by being someone interested not just in the profound philosophical implications of the scripture but also its concrete, practical dimensions. In his commentary, Li focuses not on the description of the dimensions of the realm of reality (dharmadhātu; see [SI FAJIE](#)) as had Fazang, but instead on [SUDHANA](#)'s personal quest for enlightenment in the final, and massive, [GANDAVYŪHA](#) chapter of the sūtra. Li moved forward the crucial point of soteriological progress from the activation of the thought of enlightenment ([BODHICITTOTPĀDA](#)), which he places at the first stage of the ten abidings (shizhu), up to the first level of the ten faiths (shixin), what had previously been considered a preliminary stage of the Huayan path ([MĀRGA](#)). Since faith alone was sufficient to generate the understanding that one's own body and mind are identical to the dharmadhātu and are fundamentally equivalent to buddhahood, buddhahood could therefore be experienced in this very life, rather than after three infinite eons ([ASAMKHYEYAKALPA](#)) of training. ¶ Although Li's writings seem to have been forgotten soon after his death, there was an efflorescence of interest in Li Tongxuan during the Song dynasty, when specialists in the Linji school of Chinese [CHAN](#) Buddhism ([LINJI ZONG](#)), such as [JUEFAN HUIHONG](#) (1071–1128) and [DAHUI ZONGGAO](#) (1089–1163), and their acquaintance, the scholar-official [ZHANG SHANGYING](#) (1043–1121), began to draw on Li's practical orientation toward the *Huayan jing* in order to clarify aspects of Chan practice. In particular, Li's advocacy of “nature origination” ([XINGQI](#)) in the *Huayan jing* (rather than conditioned origination of the dharmadhātu [[FAJIE YUANQI](#)]) seemed to offer an intriguing sūtra parallel to Chan's emphasis on “seeing the nature” in

order to “achieve buddhahood” ([JIANXING CHENGFO](#)). In Korea, [POJO CHINUL](#) (1158–1210) was strongly influenced by Li Tongxuan’s portrayal of Huayan thought, using it to demonstrate his claim that the words of the Buddha in the scriptural teachings of [KYO](#) and the mind of the Buddha transmitted by [SŌN](#) (C. Chan) were identical. Through Li, Chinul was able to justify his claim of an intrinsic harmony between Sōn and Kyo. Chinul also wrote two treatises on Li’s Huayan thought, including a three-roll abridgement of Li’s *Xin Huayan jing lun*, entitled the *Hwaōm non chōryo*. In Japan, [MYŌE KŌBEN](#) (1173–1232) drew on Li’s accounts of the radiance emanating from the Buddha himself, in conjunction with his readings of esoteric Buddhism ([MIKKYŌ](#)) and his own prophetic dreams and visionary experiences, to create a distinctive meditative technique called the [SAMĀDHI](#) of the Buddha’s radiance (Bukkō zanmai). Thus, despite being outside the mainstream of the Huayan tradition, in many ways, Li Tongxuan proved to be its longest lasting, and most influential, exponent. [PENG SHAOSHENG](#) (1740–1796), in his [JUSHI ZHUAN](#) (“Biographies of [Eminent Laymen]”), lists Li Tongxuan as one of the three great lay masters ([SANGONG](#)) of Chinese Buddhism, along with [PANG YUN](#) (740–803) and [LIU CHENGZHI](#) (354–410), praising Li for his mastery of scholastic doctrine (jiao).

[Liu Chengzhi](#). (劉程之) (354–410). Chinese lay Buddhist known for his specialization in [PURE LAND](#) practice; his cognomen was Liu Yimin. Liu lived in the period between the Eastern Jin and Liu-Song dynasties. He lost his father at a very young age and is said to have waited on his mother with utmost filial piety. An accomplished scholar and civil servant, he eventually resigned his government post to live in solitude in the valleys and forests. Learning about the practice of reciting the Buddha’s name ([NIANFO](#)) that was then occurring in the community of [LUSHAN HUIYUAN](#) (334–416) at [DONGLINSI](#) on [LUSHAN](#), Liu Chengzhi moved there, eventually staying for eleven years, concentrating on the practice of reciting the Buddha’s name. Eventually, he was able to achieve the samādhi of recitation ([NIANFO](#) sanmei), which provoked many spiritual responses. One day, for example, [AMITĀBHA](#) appeared before Liu, suffusing Liu with radiant light from his golden body. He subsequently dreamed about the water named Eight Kinds of Merit in the pond of the seven jewels in Amitābha’s pure land. Hearing a voice telling him, “You may drink the water,” he ingested only a small amount, after which he felt the cool refreshment spread throughout his chest and smelled unusual fragrance emanating from his entire body. The next day, he told Huiyuan that the time had come for him to be reborn in the

western pure land and, soon afterwards, he passed away in serenity. [PENG SHAOSHENG](#) (1740–1796), in his [JUSHI ZHUAN](#) (“Biographies of [Eminent] Laymen”), lists Liu Chengzhi as one of the three great lay masters ([SANGONG](#)) of Chinese Buddhism, along with [LI TONGXUAN](#) (635–730) and [PANG YUN](#) (740–803), praising Liu for his mastery of pure land ([JINGTU](#)) practice.

[liuru](#). (C) (六如). See [LIUYU](#).

[liuxiang](#). (J. rokusō; K. yuksang 六相). In Chinese, “six aspects,” “characteristics,” or “signs” ([LAKSANA](#)) inherent in all [DHARMAS](#), according to the Huayan school ([HUAYAN ZONG](#)). Based on their reading of the [AVATAMSAKASŪTRA](#), Huayan thinkers delineated six “aspects” to all things (with two alternate analogies given for each aspect): (1) The general or generic aspect ([zongxiang](#)), e.g., the aggregates ([SKANDHA](#)) together make up an individual person, which is the general sum of its parts; alt., being a sentient being is the generic aspect of a person. (2) The constituent or particular aspect ([biexiang](#)), e.g., the individual is constituted from the aggregates, which are the constituent parts that make up the sum of the person; alt., the fact that people may be differentiated as wise or fools is their particular characteristic. (3) The identity aspect ([tongxiang](#)), e.g., though distinct from one another, the aggregates are all part of this same person; alt., that each person possesses the identical wisdom of the buddhas is their characteristic of identity. (4) The differentiated aspect ([yixiang](#)), e.g., though they are of the same person, the aggregates are still distinct from one another; alt., that people have their unique attachments and vices is their characteristic of difference. (5) The collective, or integrated, aspect ([chengxiang](#)), e.g., the aggregates function collectively in interdependence one with another, thereby forming an integrated whole, which is the person; alt., that all beings are reborn in congruity with the actions they perform is their characteristic of integration. (6) The instantiated, or destructive, aspect ([huaixiang](#)), e.g., though forming a unitary whole in their function, each aggregate functions within its own laws and operational parameters; alt., that the mind ultimately does not abide anywhere is the characteristic of destruction. According to Huayan analysis, the first dyad pertains to the “essence” ([TI](#)) of things, the second to their “characteristics” ([xiang](#)), and the third to their “function” ([YONG](#)). Huayan exegetes argued that, in the enlightened vision of reality, these six aspects of things were seen simultaneously and not as contradictory facets. This vision of the “consummate interfusion” ([YUANRONG](#)) of

the six aspects is said to occur on the first [BHŪMI](#) of the [BODHISATTVA](#) path (see [BODHISATTVABHŪMI](#)). See also [SHISHI WU'AI FAJIE](#); [FAJIE YUANQI](#).

[liuyu](#). (J. rokuyu; K. yugyu 六喻). In Chinese, “six similes,” referring to six analogies employed to illustrate the unreality and illusory nature of all [DHARMAS](#), the locus classicus of which appears in the [VAJRACCHEDIKĀPRAJÑĀPĀRAMITĀSŪTRA](#) (“Diamond Sūtra”). The existence of all mundane and supramundane dharmas (including [NIRVĀNA](#) and buddhahood) is said to be as evanescent as a “dream,” a “phantasm,” a “bubble,” a “shadow,” “morning dew,” and “lightning.” These similes appear frequently throughout [MAHĀYĀNA](#) Buddhist literature. See [ASTAMĀYOPĀMA](#).

[liuyu](#). (C) (六欲). See [QIQING LIUYU](#).

[Liuzu tan jing](#). (J. Rokuso dangyō; K. Yukcho tan kyōng 六祖壇經). In Chinese, “Platform Sūtra of the Sixth Patriarch,” the written transcription of the sermons of the sixth patriarch ([LIUZU](#)) [HUINENG](#) (638–713); the composition is attributed to the monk [FAHAI](#); also known as the *Nan zong dunjiao zuishang dasheng mohe bore boluomi jing*, *Liuzu dashi fabao tan jing*, *Fabao tan jing*, or simply *Tan jing* (“Platform Sūtra”). The *Liuzu tan jing* is one of the most influential texts of the [CHAN](#) tradition. The text is ostensibly a record of the lectures delivered by the reputed sixth patriarch Huineng at the monastery of Dafansi in Shaozhou (present-day Guangdong province). The lectures contain the famous story of Huineng’s verse competition with his rival [SHENXIU](#), which wins Huineng the Chan patriarchy (see [ZUSHI](#)), in which Huineng distinguished his own “sudden teachings” ([DUNJIAO](#)) of a so-called Southern school ([NAN ZONG](#)) of Chan from the “gradual teachings” (jianjiao) of Shenxiu’s Northern school ([BEI ZONG](#)). As Huineng defines the term later in this sermon, the “sudden teaching” involves an approach to Buddhist training that is free from all dualistic forms of practice (see [ADVAYA](#)) and that correspondingly rejects any and all expedient means ([UPĀYA](#)) of realizing truth. This sudden teaching comes to be considered emblematic of the so-called Southern school (Nan zong) of Chan, which retrospectively comes to be considered the mainstream of the Chan tradition. The teachings of the text also focus on the unity of concentration ([SAMĀDHI](#)) and wisdom ([PRAJÑĀ](#)), in which concentration is conceived to be the essence ([TI](#)) of wisdom and wisdom the functioning ([YONG](#)) of concentration; “no-thought” ([WUNIAN](#)), which the text defines as “not to think even when involved in thought”; seeing one’s own nature ([JIANXING](#)); and the conferral of the formless precepts ([WUXIANG JIE](#)).

Indeed, the “platform” in the title refers to the ordination platform (jietan; cf. [SĪMĀ](#)) where Huineng conferred these formless precepts. Although the *Liuzu tan jing* has been traditionally heralded as the central scripture of the Nan zong, and certainly is beholden to the teachings of the Southern-school champion [HEZE SHENHUI](#), the text seems to have been influenced as well by the teachings of both the Northern and Oxhead schools ([NIUTOU ZONG](#)). Within the Chan tradition, a Yuan-dynasty edition of the *Liuzu tan jing*, which included an important preface by [FORI QISONG](#), was most widely disseminated. [SIR MARC AUREL STEIN](#)’s rediscovery in the [DUNHUANG](#) manuscript cache of a previously unknown, and quite different, recension of the text, dating to the mid-ninth century, did much to launch the modern scholarly reappraisal of the received history of the Chan school. See also [DUNWU](#).

lobha. (T. chags pa; C. tan; J. ton; K. t’am 貪). In Sanskrit and Pāli, “craving,” or “greed,” a synonym of [RĀGA](#) (“sensuality” or “desire”) and the opposite of “absence of craving” or “absence of greed” ([ALOBHA](#)). Lobha is one of the most ubiquitous of the defilements ([KLEŚA](#)) and is listed among six fundamental afflictions ([KLEŚAMAHĀBHŪMIKA](#)), ten fetters ([SAMYOJANA](#)), ten proclivities ([ANUŚAYA](#)), five hindrances ([ĀVARANA](#)), three poisons ([TRIVISA](#)), and three unwholesome faculties ([AKUŚĀLAMŪLA](#)). Lobha is also one of the forty-six mental factors (see [CAITTA](#)) according to the [VAIBHĀSIKA](#) school of [SARVĀSTIVĀDA](#) abhidharma, one of the fifty-one according to the [YOGACĀRA](#) school, and one of the fifty-two in the Pāli abhidhamma. When sensory contact with objects is made “without proper comprehension” or “without introspection” ([ASAMPRAJANYA](#)), craving (lobha), aversion ([DVEṢA](#)), and delusion ([MOHA](#)) arise. In the case of craving—which is a psychological reaction associated with the pursuing, possessing, or yearning for a pleasing stimulus and discontent with unpleasant stimuli—this greed could target a host of possible objects. Scriptural accounts list these objects of craving as sensual pleasures, material belongings, loved ones, fame, the five aggregates ([SKANDHA](#)), speculative views ([DRSTI](#)), the meditative absorptions ([DHYĀNA](#)) of the “subtle-materiality” and “immaterial” realms (see [TRILOKADHĀTU](#)), the future “becoming” ([BHAVA](#)) of the “self” (S. bhavarāga), and the future “annihilation” of the “self” (S. abhavarāga), among other things. According to the [ĀGAMAŚ](#) and the [ABHIDHARMAKOŚABHĀSYA](#), craving is the self-imposed “yoking together” of the subject and its object, whereby the mind is “mired,” “bonded,” and “burdened” by desire. As one of the three unwholesome faculties ([AKUŚĀLAMŪLA](#)), craving is said to be the common

ground or source of a variety of unwholesome mental states, such as possessiveness ([MĀTSARYA](#)) and pride ([MADA](#)).

[Lo chen Dharma Shri](#). (1654–1717). Eminent scholar of the [RNYING MA](#) sect of Tibetan Buddhism. He was the younger brother of the founder of [SMIN GROL GLING](#) monastery, [GTER BDAG GLING PA](#). More scholarly than his older brother, his collected works cover the entire range of traditional subjects, including astrology, [VINAYA](#), and [TANTRA](#), filling twenty volumes. Particularly important is his detailed explanation of Mnga' ris paṇ chen Padma dbang rgyal's (Ngari Panchen Pema Wangyel) [SDOM GSUM RNAM NGES](#), his *Sdom pa gsum rnam par nges pa'i 'grel ba legs bshad ngo mtshar dpag bsam gyi snye ma*, the study of which forms the central part of the curriculum of many Rnying ma [BSHAD GRWA](#) (monastic schools).

[Lo chen sprul sku](#). (Lochen tulku). A Tibetan title for the lineage of incarnations of the famed eleventh-century translator [RIN CHEN BZANG PO](#), the main line of incarnate lamas at [BKRA SHIS LHUN PO](#) monastery after that of the [PAṆ CHEN LAMA](#). The appellation is short for lo tsā ba chen po, “great translator” (see [LO TSĀ BA](#)).

[logic](#). A term used to render Sanskrit [YUKTI](#) or NYĀYA, referring in general to the system of reasoning developed by [DIGNĀGA](#) and [DHARMAKĪRTI](#) that sets forth the constituents of correct reasoning and how such reasoning results in inference ([ANUMĀNA](#)). See also [HETUVIDYĀ](#), [LAKSANA](#), [LIṄGA](#).

[Lohapāsāda](#). The ordination (P. uposatha; S. [UPOSADHA](#)) hall of the [MAHĀVIHĀRA](#) monastery in [ANURĀDHAPURA](#), Sri Lanka. Originally a small structure built by the Sri Lankan king [DEVĀNAMPIYATISSA](#) in the third century BCE, King [DUTTHAGĀMANĪ](#) rebuilt it in the first century BCE, this time as a celebrated nine-story edifice with one hundred rooms on each floor, the four upper floors of which were reserved for [ARHATS](#). The Lohapāsāda was restored and renovated numerous times. In the fourth century CE, King [MAHĀSENA](#), under the advice of the heretical monk, Saṅghamitta, had the Lohapāsāda torn down and its materials reused for construction within the rival [ABHAYAGIRI](#) monastery. Mahāsenā's son, Sirimeghavaṇṇa, in an effort to make amends for his father's misdeed, ordered the Lohapāsāda to be reconstructed on its original spot within the Mahāvihāra compound. [BUDDHAGHOSA](#), the fifth-century commentator, describes the Lohapāsāda and its prominence as place of religious preaching and

instruction. It was restored a final time in the twelfth century by King [PARĀKRAMABĀHU I](#), after it had been sacked by Cōḷa invaders. Thereafter, the Lohapāsāda fell into ruin and has remained in that state until today. The site is marked by twelve hundred stone pillars which are believed to have supported the first terrace of the structure.

Lohiccasutta. (C. Luzhe jing; J. Roshakyō; K. Noch'a kyōng 露遮經). In Pāli, “Discourse to Lohicca,” the twelfth sutta of the Pāli [DIGHANIKĀYA](#) (a separate [DHARMAGUPTAKA](#) recension appears as the twenty-ninth [SŪTRA](#) in the Chinese translation of the [DIRGHĀGAMA](#)); preached by the Buddha to the brāhmaṇa Lohicca at the village of Sālavatikā in [KOŚALA](#). According to the Pāli account, Lohicca holds the view that a sage who reaches certain wholesome states of mind should tell no one of it, for to do so would be to manifest craving and entangle him in new bonds. He puts this opinion to the Buddha who responds that, to the contrary, it would be selfish for such a person to remain silent if he had something of benefit to teach to others. The Buddha then describes three types of teachers who are worthy of blame. The first is one who, even though he himself has not attained true renunciation, teaches [DHARMA](#) and [VINAYA](#) to others but is rejected along with his teachings by his pupils. The second is one who, even though he himself has not attained true renunciation, is embraced along with his teachings by his pupils. The third is one who, even though he himself has attained true renunciation, is nevertheless rejected along with his teachings by his pupils. The Buddha then describes the teacher who is unworthy of blame as someone who awakens to the dharma and enters the Buddhist order, trains in the restraint of conduct and speech and observes minor points of morality, guards the senses, practices mindfulness, is content with little, becomes freed from the five hindrances ([NĪVARANA](#)), attains joy and peace of mind, cultivates the four meditative absorptions ([DHYĀNA](#)), develops insight (P. *ñāṇadassana*; [JÑĀNADARŚANA](#)) into the conditioned nature and the impermanence of body and mind, and gains knowledge of the [FOUR NOBLE TRUTHS](#) ([CATVĀRY ĀRYASATYĀNI](#)) and the destruction of the contaminants ([ĀSRAVA](#)). Lohicca is pleased by the sermon and becomes a lay disciple of the Buddha.

loka. (T. 'jig rten; C. shijie/shijian; J. sekai/seken; K. segye/segan 世界/世間). In Sanskrit and Pāli, “world,” or “realm”; a polysemous term with a wide range of literal and figurative senses. Literally, loka is used to refer to a specific realm of various types of beings as well as more broadly to an entire world system (see

[LOKADHĀTU](#), [TRAIDHĀTUKA](#)), with Mount [SUMERU](#) at the center; the term can also refer collectively to the inhabitants of such a world. In a figurative sense, loka carries many of the connotations of “world” in English (“worldly,” “mundane”) to refer to [SAMSĀRA](#) and its qualities, which, although attractive to the unenlightened, are subject to impermanence ([ANITYA](#)). Such a world is contrasted with what is, lit. “beyond the world” or [LOKOTTARA](#), a term used to describe the “supramundane” aspirations and achievements of those seeking liberation.

[lokadharmā](#). (P. lokadhamma; T. 'jig rten gyi chos; C. shifa; J. sehō; K. sebōp 世法). In Sanskrit, “worldly factors,” a polysemous term that in its most general sense indicates mundane factors ([DHARMA](#)) that arise and cease according to causes and conditions ([HETUPRATYAYA](#)). The term also refers to worldly ways and principles, which can be summed up as the process of birth, decay, and death. However, in its most common usage, the term lokadharmā is understood as referring to eight worldly conditions or states ([ASTALOKADHARMA](#)) that govern all of mundane life in this world: gain (lābha) and loss (alābha), fame (yaśas) and disgrace (ayaśas), praise (praśamsā) and blame (nindā), and happiness ([SUKHA](#)) and suffering ([DUHKHA](#)). Each of these states will inevitably befall any sentient being trapped in the cycle of continued existence ([SAMSĀRA](#)). In this schema, the lokadharmā are understood as four complimentary pairs: gain (lābha) is the inevitable precursor of loss (alābha) and loss the inevitable outcome of gain; and so forth for the other three pairs. Learning to react with equanimity to each of these worldly conditions will lead to nonattachment and ultimately enlightenment.

[lokadhātu](#). (T. 'jig rten pa'i khams; C. shijie; J. sekai; K. segye 世界). In Sanskrit and Pāli, “worldly realm” or “world system”; a cosmos within [SAMSĀRA](#) that consists of the four continents, a central Mount [SUMERU](#), etc. See [AVACARA](#); [TRAIDHĀTUKA](#).

***Lokakṣema**. (C. Zhi Loujiachan; J. Shi Rukasen; K. Chi Rugach'am 支婁迦讖) (c. 178–198 CE). A pioneering translator of Indic Buddhist materials into Chinese. Lokakṣema was an Indo–Scythian monk from the [KUSHAN](#) kingdom in the [GANDHĀRA](#) region of northwest India, who was active in China sometime in the last quarter of the second century CE, soon after the Parthian translator [AN SHIGAO](#). His Sanskrit name is a tentative reconstruction of the Chinese transcription Loujiachan, and he is often known in the literature by the abbreviated form Zhi Chan (using the ethnicon [ZHI](#)). Lokakṣema is said to have

arrived in the Chinese capital of Luoyang in 167 CE, where he began to render Indic Buddhist sūtras into Chinese. Some fourteen works in twenty-seven rolls are typically ascribed to him (although the numbers given in the literature vary widely), of which twelve are generally presumed to be authentic. The translations thought to be genuine include the first Chinese renderings of sūtras from some of the earliest strata of Indic [MAHĀYĀNA](#) literature, including the [ASTASĀHASRIKĀPRAJÑĀPĀRAMITĀ](#) (*Xiaopin bore jing*), the [KĀŚYĀPĀPARIVĀRTA](#) (*Yi rimonibao jing*), the [PRĀTYUTPANNABUDDHASAMMUKHĀVĀSTHITASAMĀDHISŪTRA](#) (*Banzhou sanmei jing*), and the [ĀKSOBHYATATHĀGATASYAVYŪHA](#) (*Achu foguo jing*). Given the time of his arrival in China, the Indic texts on which his translations were based must already have been in circulation in Kushan territory by at least 150 CE, giving a terminus ad quem for their composition. Rendered into a kind of pidgin Chinese, these “translations” may actually have targeted not Chinese readers but instead an émigré community of Kushan immigrants who had lost their ability to read Indic languages.

lokapāla. (T. 'jig rten skyong ba; C. si tianwang; J. shitennō; K. sa ch'ōnwang 四天王). In Sanskrit, “world guardians” or “protectors of the world”; an alternate name for the four “great kings” (mahārāja) of heaven, who were converted by the Buddha and entrusted with protecting the inhabitants of the world. The world guardians reside in the first and lowest of the six heavens of the sensuous realm of existence ([KĀMADHĀTU](#)), the heaven of the four great kings ([CĀTURMAHĀRAJAKĀYIKA](#)). They are vassals of [ŚAKRA](#), the lord or king ([INDRA](#)) of the gods ([DEVA](#)) ([ŚAKRO DEVĀNĀM INDRAH](#)), who is lord of the heaven of the thirty-three devas ([TRĀYĀSTRIMŚĀ](#)), the second of the six sensuous realm heavens, which is located at the summit of the world's central axis of Mount [SUMERU](#). The world guardians' names are (1) [DHṚTARĀSTRA](#), who guards the gate to the east at the midslope of Mount Sumeru, which leads to the continent of [VIDEHA](#); (2) [VIRŪDHAKA](#) in the south, who guards the gate that leads to [JAMBUDVĪPA](#); (3) [VIRŪPĀKṢA](#) in the west, who guards the gate that leads to [GODĀNĪYA](#); and (4) [VAIŚRAVANA](#) in the north, who guards the gate that leads to [UTTARAKURU](#). Of the eight classes of demigods, who are subservient to the world guardians, Dhṛtarāṣṭra rules over the [GANDHARVA](#) and pūtana; Virūdhaka over the [KUMBHĀNDA](#) and [PRETA](#); Virūpākṣa over the [NĀGA](#) and [PIŚĀCA](#); and Vaiśravaṇa over the [YAKṢA](#) and [RĀKṢASA](#). The four world guardians began as indigenous Indian or Central Asian deities, who were eventually incorporated into Buddhism; they seem to have been originally associated with royal

([KSATRIYA](#)) lineages, and their connections with royal warfare are evidenced in the suits of armor they come to wear as their cult is transmitted from Central Asia to China, Korea, and Japan.

[Lokātīstava](#). (T. 'Jig rten las 'das par bstod pa). In Sanskrit, “In Praise of the Supramundane One”; an Indian philosophical work written in the form of a praise of the Buddha by the [MADHYAMAKA](#) master [NĀGĀRJUNA](#). In the Tibetan tradition, there are a large number of such praises (called bstod tshogs or [STAVAKĀYA](#)), in contrast to the set of philosophical texts (called rigs tshogs or [YUKTIKĀYA](#)) attributed to Nāgārjuna, among which the [ACINTYASTAVA](#), *Lokātīstava*, [NIRAUPAMYASTAVA](#), and [PARAMĀRTHASTAVA](#) are extant in Sanskrit and generally accepted to be his work; these four works together are known as the [CATUHSTAVA](#). It is less certain that he is the author of the [DHARMADHĀTUSTAVA](#) (“Hymn to the Dharmadhātu”) of which only fragments are available in the original. The *Lokātīstava* is a work in twenty-eight verses. The first part of the text refutes the independent existence of the aggregates ([SKANDHA](#)) that constitute the person; the second part of the text refutes the ultimate existence of the world; and the third part states that the knowledge of emptiness ([ŚŪNYATĀ](#)) leads to liberation. The content of the work accords with that of the [MŪLAMADHYAMAKAKĀRIKĀ](#), although here, the Buddha is addressed directly and quoted in many of the stanzas.

[Lokāyata](#). (T. 'Jig rten rgyang phan pa; C. Shunshi waidao; J. Junse gedō; K. Sunse oedo 順世外道). In Sanskrit and Pāli, “Naturalist” or “Worldly” school; one of the major early schools of the Indian movement of wandering religious ([ŚRAMANA](#)), which is mentioned occasionally in Buddhist scriptures. Its founding is attributed to the legendary figure Brhaspati, but during the Buddha’s lifetime, its most prominent exponent was [AJITA](#) Keśakambala. The Lokāyata school is claimed to have taken a rigidly materialist perspective toward the world, in which everything in the universe, including consciousness, was composed only of the four elements ([MAHĀBHŪTA](#)) of earth, water, heat, and air. Since everything occurs spontaneously through the interaction of its inherent material properties, the Lokāyatas advocated a “natural,” even laissez-faire, attitude toward conduct (yadṛcchāvāda), in which the summum bonum of existence was thought to be sensual pleasure ([KĀMA](#)). As a materialist school, the Lokāyatas also denied the efficacy of moral cause and effect because of its rejection of any prospect of transmigration or rebirth.

lokeśvara. (T. 'jig rten dbang phyug; C. shizizai; J. sejizai; K. sejajae 世自在). In Sanskrit, “lord of the world”; a polysemous term in a Buddhist context. Lokeśvara is one of the many titles of respect given to a buddha. The term also denotes several different divinities ([DEVA](#)) who are worshipped or called upon for favor; many of these gods were assimilated from the ancient Indian pantheon. Thus, the term can refer to any number of deities that are invoked by Buddhist practitioners. Lokeśvara is also one of the common variant names of the [BODHISATTVA AVALOKITEŚVARA](#). Finally, [LOKEŚVARARĀJA](#) is the name of one of the fifty-three buddhas of the past mentioned in the [SUKHĀVATĪVYŪHASŪTRA](#) and the one who gave the prediction of future buddhahood to [DHARMĀKARA](#), the eventual buddha [AMITĀBHA](#).

Lokeśvararāja. (T. 'Jig rten dbang phyug rgyal po; C. Guanzizai wang rulai/Shizizai wang fo; J. Kanjizaiō nyorai/Sejizaiō butsu; K. Kwanjajae wang yōrae/Sejajae wang pul 觀自在王如來/世自在王佛). Sanskrit proper name of one of the fifty-three buddhas of the past listed in the [SUKHĀVATĪVYŪHASŪTRA](#) (*Wuliangshou jing*); Lokeśvararāja is the one who displayed millions of buddha fields ([BUDDHAKSETRA](#)) to [DHARMĀKARA](#) and who gave the monk the prediction of his future buddhahood ([VYĀKARANA](#)). Dharmakāra then selected the best qualities of each of these buddha lands and combined them into his conception of a single buddha field, which he described to Lokeśvararāja in terms of forty-eight vows. Dharmakāra subsequently completed the path of the bodhisattva to become the buddha [AMITĀBHA](#), and his buddha field, or [PURE LAND](#), became [SUKHĀVATĪ](#).

lokiyasamādhi. (S. laukikasamādhi; T. 'jig rten pa'i ting nge 'dzin; C. shunshi sanmei; J. junse sanmai; K. sunse sammae 順世三昧). In Pāli, “mundane concentration,” or “worldly concentration”; any type of mental concentration that is disassociated from the four paths (P. magga; S. [MĀRGA](#)) and four fruits ([PHALA](#)) of liberation. The term denotes all moments of concentration that are involved in ordinary mundane consciousness, whether virtuous or nonvirtuous, and states of meditative absorption (P. [JHĀNA](#); S. [DHYĀNA](#)) cultivated through tranquillity meditation (P. samathabhāvanā; S. [SAMATHA](#)), which do not as yet involve insight or wisdom (P. paññā; S. [PRAJÑĀ](#)). See also [LOKUTTARASAMĀDHI](#).

lokottara. (P. lokuttara; T. 'jig rten las 'das pa; C. chushijian; J. shusseken; K. ch'ulsegan 出世間). In Sanskrit, lit. “beyond the world”; “supramundane,” “transcendent”; viz., something that is related to attaining liberation ([VIMOKSA](#))

from [SAMSĀRA](#) or that leads to such liberation. The term also can indicate a certain level of spiritual maturity, such as when the practitioner is no longer subject to the contaminants ([ĀSRAVA](#)). In the context of the status of practitioners, mundane ([LAUKIKA](#)) refers to ordinary beings; more specifically, in the fifty-two stage bodhisattva path, laukika usually indicates practitioners who are at the stage of the ten faiths (C. shixin), ten understandings (C. shijie), or ten practices (C. shixing), while “supramundane” (lokottara) refers to more enlightened practitioners, such as [BODHISATTVA](#)s who are on the ten stages ([DAŚABHŪMI](#)). [FAZANG](#)’s [HUAYAN WUJIAO ZHANG](#) (“Essay on the Five Teachings according to Huayan”) parses these stages even more precisely: of the ten stages (daśabhūmi) of the path leading to buddhahood, stages one through three belong to the mundane (laukika); the fourth to the seventh stages are supramundane from the standpoint of the three vehicles ([TRİYĀNA](#)) of [ŚRĀVAKA](#), [PRATYĒKABUDDHA](#), and [BODHISATTVA](#); and the eighth to the tenth stages transcend even the supramundane and belong to the one vehicle ([EKAYĀNA](#)). The [LOKOTTARAVĀDA](#) (Teaching of Transcendence), a subschool of the [MAHĀSĀMGHIKA](#) school of mainstream Buddhism, took its name from its advocacy of the supramundane qualities of the Buddha and the univocality of the [BUDDHAVACANA](#). The school’s emblematic text, the [MAHĀVASTU](#), claims that all the seemingly mundane acts of the Buddha are in fact supramundane; hence, although the Buddha may appear to eat and sleep, walk and talk like ordinary people, he in fact remains constantly in a state of meditation because he is free from all needs.

[Lokottaravāda](#). (P. Lokuttaravāda; T. ’Jig rten ’das par smra ba; C. Shuochushibu; J. Setsushusebu; K. Sōlch’ulsebu 說出世部). In Sanskrit, lit. “Teaching of Transcendence,” meaning “Those Who Teach [that the Buddha and the [BUDDHAVACANA](#)] are Transcendent,” the name of one of the three main branches of the [MAHĀSĀMGHIKA](#) school of mainstream Buddhism; also known as the [EKAVYAVAHĀRIKA](#) (“Those Who Make a Single Utterance”). (Note that the Chinese translation suggests that the school should properly be called the Lokottaranikāya.) The name for the school comes from its distinguishing doctrine: that the Buddha articulates all of his teachings in a single utterance that is altogether transcendent or supramundane ([LOKOTTARA](#)). Later interpretations of the school also suggest that its name may derive from the fact that all the things of this world can be described in a single utterance because those phenomena are nothing more than mental constructions or have merely

provisional reality. The Lokottaravāda position is in distinction to two rival schools that derive from the [KAUKKUTIKA](#) branch of the Mahāsāṃghika: the [BAHUŚRUTĪYA](#), who asserted that the buddhavacana includes both transcendent and provisional teachings; and the [PRAJÑAPTIVĀDA](#), who asserted that the Buddha taught not only transcendent truths but also employed provisional designations ([PRAJÑAPTI](#)) and concepts to frame his teachings for his audience. The Lokottaravāda is now primarily known as the school that composed the [MAHĀVASTU](#), a biography of the Buddha that is the earliest extant text of [BUDDHIST HYBRID SANSKRIT](#). The *Mahāvastu* claims that all the seemingly mundane acts of the Buddha are in fact transcendent; hence, although the Buddha may appear to function like ordinary people, he in fact remains constantly in a state of meditation.

lokuttaramagga. (S. lokottaramārga; T. 'jig rten las 'das pa'i lam; C. chushi dao; J. shussedō; K. ch'ulse to 出世道). In Pāli, “supramundane path”; four stages of “attainment” along the noble path (S. [ĀRYAMĀRGA](#)) of enlightened persons (S. [ĀRYAPUDGALA](#)); viz., the path of stream-enterer (S. srotaāpattimārga), the path of once-returner (S. sakṛdāgāminimārga), the path of nonreturner (S. anāgāminimārga), and the path of the worthy (S. arhanmārga). The four supramundane paths are combined with four supramundane fruitions ([LOKUTTARAPHALA](#)) to make eight stages of holiness altogether.

lokuttaraphala. (S. lokottaraphala; T. 'jig rten las 'das pa'i 'bras bu; C. chushi guo; J. shusseka; K. ch'ulse kwa 出世果). In Pāli, “supramundane fruition”; four stages of “enjoyment” along the noble path (S. [ĀRYAMĀRGA](#)) of noble persons (S. [ĀRYAPUDGALA](#)); viz., the fruition of stream-enterer (S. srotaāpattiphala), fruition of once-returner (S. sakṛdāgāminiphala), fruition of nonreturner (anāgāminiphala), and fruition of the worthy one (S. arhatphala). The four supramundane fruitions are combined with four supramundane paths ([LOKUTTARAMAGGA](#)) to make a total of eight stages of sanctity. See [ĀRYAMĀRGAPHALA](#); [ĀRYAPUDGALA](#).

lokuttarasamādhi. (S. lokuttarasamādhi; T. 'jig rten las 'das pa'i ting nge 'dzin; C. chushi sanmei; J. shusse sanmai; K. ch'ulse sammae 出世三昧). In Pāli, “supramundane concentration”; concentration associated with the attainment of any of the four paths (magga, S. [MĀRGA](#)) and/or four fruitions ([PHALA](#)) of enlightenment, which constitute collectively eight moments along the path to complete liberation from [SAMSĀRA](#). The eight moments in order of their occurrence are the (1) path and (2) fruition of a stream-enterer (S.

[SROTAĀPANNA](#)), the (3) path and (4) fruition of a once-returner (S. [SAKRDĀGĀMIN](#)), the (5) path and (6) fruition of a nonreturner (S. [ANĀGĀMIN](#)), and the (7) path and (8) fruition of a worthy one (S. [ARHAT](#)). All other forms of concentration not associated with the paths and fruits of enlightenment are deemed of this world or “mundane concentrations” ([LOKIYASAMĀDHI](#)). Supramundane concentration is also characterized by its singular object, [NIRVĀNA](#).

[Longchisi](#). (龍池寺). In Chinese, “Monastery of the Dragon Pool”; located on [ZHONGNANSHAN](#) near the former Chinese capital of Chang’an (present-day Xi’an). According to [DAOXUAN](#) (596–667 CE), in 601 CE a Buddhist monk named Daopan (532–615 CE) assembled some disciples around a pond by Mt. Zhongnan, where they built this monastery. The name refers to the legend of a dragon king (see [NĀGA](#)), who flooded an entire kingdom so that he could use it as a pool in which to reside. He was later converted to Buddhism by [MADHYĀNTIKA](#), one of [ĀNANDA](#)’s two main disciples. In another account, it is said that the monastery already existed when Emperor Wen (r. 581–604 CE) of the Sui dynasty ordered its renovation in 587 CE, whereupon it was given the name Longchi Monastery. In this account, Daopan was already in residence at the monastery, which enjoyed the patronage of several influential court officials. Many eminent monks in addition to Daopan are buried here. They include Kongzang (569–642 CE), Huiman (589–642 CE), Jingxuan (569–611 CE), Huizan (536–607 CE), and Pukuang (548–620). It is also said that the [HUAYAN](#) master [FAZANG](#) (643–712 CE) was active at the monastery, where, at the behest of the Tang Emperor Ruizong (r. 684–690 CE and 710–712 CE), he famously performed a ritual to pray for snow in order to stave off a severe drought the region was experiencing. (There are conflicting accounts, however, as to whether this event occurred at Longchisi or [WUZHENSI](#).) **[Longmen](#)**. (龍門). In Chinese, lit. “Dragon Gate,” an important Buddhist cave site located 7.5 miles south of the ancient Chinese capital of Luoyang in China’s Henan province. Spanning over half a mile along a cliff above the Yi River, the Longmen grottoes contain some of the most spectacular examples of stone sculpture in China, together with the [MOGAO KU](#) near [DUNHUANG](#), the [YUNGANG](#) grottoes at Datong, and the Dazu caves ([DAZU SHIKE](#)) outside the city of Chongqing. The first grotto at Longmen was excavated in 495 CE when the Northern Wei capital was moved from Datong to Luoyang. Construction at the site continued until the site was abandoned in 755 because of civil strife and reflects a period of intense Buddhist activity in China that lasted

through the Tang and Northern Song dynasties. A total of 2,345 grottoes were excavated and carved, which include more than one hundred thousand Buddhist images, some three thousand inscribed tablets, and over forty pagodas. Although largely an imperial site, some of the individual caves and niches were commissioned by the local Buddhist laity. Fengxiansi, the largest of the Longmen grottoes, dates to the Tang dynasty. When that chapel was first constructed, a roof is thought to have enclosed the entire cliff face. Today, the roof no longer remains and the sculptures stand unprotected in the open air. In 2000, the Longmen grottoes were placed on the list of UNESCO World Heritage sites. See also [BINGLINGSI](#).

[lo tsā ba](#). (lotsawa). In Tibetan, “translator,” used especially as an epithet for the Tibetan translators of the earlier dissemination ([SNGA DAR](#)) and later dissemination ([PHYI DAR](#)) of dharma in Tibet, who translated Buddhist texts from Sanskrit into Tibetan. The term may be a Tibetan phonetic rendering of the Sanskrit *lokaścakṣus*, “eye of the world.” The title is often abbreviated simply as lo and appended at the beginning of the names of many of the early translators.

[lotus flower](#). See [PADMA](#).

[lotus posture](#). See [VAJRAPARYAṆKA](#); [PADMĀSANA](#).

[Lotus Sūtra](#). See [SADDHARMAPUNĀRĪKASŪTRA](#).

[Ita ba nyon mongs can](#). (S. *dr̥ṣṭisamkleśa*). In Tibetan, “defiled view” (see [DRSTI](#)), a term for the fifth of the six [ANUŚAYA](#) (“proclivities”) set forth as the basic afflictions or defilements ([KLEŚA](#)) in the [ABHIDHARMAKOŚABHĀSYA](#). It differentiates *dr̥ṣṭi* in the negative sense of “speculative opinions” from *dr̥ṣṭi* in the positive sense of “right view” (see [SAMYAGDRSTI](#)). These defiled views are subdivided into five types of wrong views (*pañcadr̥ṣṭi*): [SATKĀYADRSTI](#) (view that there is a perduring self), [ANTAGRĀHADRSTI](#) (extreme views of permanence or annihilation), [MITHYĀDRSTI](#) (fallacious views denying the efficacy of [KARMA](#), rebirth, and causality), [DRSTIPARĀMARŚA](#) (clinging to one’s own wrong views as being superior), and [ŚĪLAVRATAPARĀMARŚA](#) (belief in the efficacy of rites and rituals). All are eliminated by the path of vision ([DARŚANAMĀRGA](#)).

[Luang Prabang](#). Ancient royal capital of the kingdom of Laos and one of the major historical centers of Laotian Buddhism. Originally named Muang Sua, the

region was a frequent locus of political contestation and was periodically under the suzerainty of the Nanzhao kingdom in southern China, the Chams from Vietnam, the Khmer kingdom in Cambodia, and the Thais. In 1353, the city became the initial capital of the Lao Lan Xang kingdom (1353–1707) and after the demise of that state became the center of an independent Luang Prabang kingdom. After the French annexed Laos, Luang Prabang continued to be maintained as the royal residence. The city is a collection of districts, each of which is built around a central monastery. The city includes thirty-three major Buddhist monasteries (wat), which are built in a distinctive style, with tiered roofs, pillared porticos, and embellished from top to bottom with exceedingly elaborate ornamentation. One of the most important of the monasteries is Wat Xieng Thong, which was constructed in 1560 on the northern peninsula of the city and includes a rare image of a reclining buddha that is said to date from the monastery's founding. Luang Prabang was designated a UNESCO World Heritage Site in 1995 and has emerged as a major center of Buddhist tourism in Southeast Asia.

Lumbinī. (T. Lum bi'i tshal/Lum bi ni; C. Lanpini yuan; J. Ranbinion; K. Nambini wōn 藍毘尼園). In Sanskrit and Pāli, the name of the Buddha's birthplace, now Rummidei in the Terai Region of modern Nepal. The Buddha's mother **MĀYĀ** was traveling from her home in **KAPILAVASTU** to her parents' home to give birth when she went into labor at Lumbinī. According to traditional accounts, she gave birth while standing between twin **ŚĀLA** trees. It is said that the Buddha stepped out of her right side and was born. (His conception had been similarly miraculous: the Buddha entered his mother's womb in the form of a white elephant.) The moment after the Buddha's birth, both mother and child were washed with water by divinities, the legendary origin of "bathing the infant Buddha" ceremonies that occur during the festival celebrating the Buddha's birth in numerous Buddhist cultures. As soon as he was born, he is claimed to have taken seven steps and declared that he was unrivalled on heaven and earth (see **SIMHANĀDA**). As with all mothers of prospective buddhas, Māyā died seven days after the birth of her son. Queen Māyā's sister **MAHĀPRAJĀPATĪ**, another wife of his father King **ŚUDDHODANA**, would serve as the Buddha's wet nurse and foster mother and eventually become the founder of the order of nuns (**BHIKSUNĪ**). The mainstream **MAHĀPARINIRVĀNASŪTRA** (P. **MAHĀPARINIBBĀNASUTTA**) recognizes Lumbinī as the first of the four principal pilgrimage sites (**MAHĀSTHĀNA**) Buddhists should frequent to recollect the achievements of the Buddha and to

“arouse emotion in the faithful” along with [BODHGAYĀ](#), where the Buddha attained enlightenment; the Deer Park ([MRGADĀVA](#)) at [RSIPATANA](#) ([SĀRNĀTH](#)), where he first “turned the wheel of the dharma” ([DHARMAKAKRAPRAVARTANA](#)); and [KUSINAGARĪ](#), where he passed away into [PARINIRVĀNA](#). Lumbinī is still frequented today by Buddhist pilgrims from all over the world.

luohan. (J. rakan; K. nahan 羅漢). In Chinese, [ARHAT](#), referring to groups of venerated disciples of the Buddha who in their popular forms served as objects of cultic worship in East Asia. Countless paintings and statues of arhats were created, and legends and miracle stories concerning them circulated throughout the East Asian region. The arhats were commonly worshipped in groups of sixteen, eighteen, and five hundred, the last two of which developed without a canonical basis. Especially important was the cult of sixteen (later sometimes expanded to eighteen) arhat disciples (see [SODĀŚASTHAVIRA](#)), whom the Buddha ordered to forgo [PARINIRVĀNA](#) and to continue to dwell in this world in order to preserve the Buddhist teachings until the coming of the future buddha, [MAITREYA](#). Each of these arhats was assigned a residence and a retinue of disciples. Once Maitreya had advented on earth, the arhats would be charged with gathering the remaining relics of the current buddha [ŚĀKYAMUNI](#) and erecting one last [STŪPA](#) to hold them, after which they would finally pass into [PARINIRVĀNA](#). In China, arhat cults were popular particularly during the medieval period. Statues and paintings of arhats were enshrined throughout the land and Buddhists made offerings before those images. The Wuyue court even sponsored an annual summoning ritual of the five hundred arhats from the tenth century onward. The Song-dynasty court continued to sponsor the same ritual to pray for the welfare of the court and to ward off the evils. In Korea, the Koryŏ (918–1392) court performed a ritual for the five hundred arhats more than twenty-five times between 1053 and the end of the dynasty. The ritual was principally intended to pray for precipitation and protection from foreign invasion. This ritual even continued into the early Chosŏn (1392–1910) period. Still today, most of the larger Korean monasteries will have on their campus an arhat hall (nahan chŏn), which enshrines paintings and/or images, typically of the group of sixteen. In Japan, the arhat cults were especially connected with the [ZEN](#) school. In particular, many monasteries associated with the [SŌTOSHŪ](#) have a hall dedicated to the arhats, which usually enshrines images of the sixteen, and the tradition engages in monthly and semiannual rituals dedicated to the arhats. In the Sōtō tradition, arhats are believed to play both salvific and apotropaic roles.

[Luoyang qielan ji](#). (J. Rakuyō garanki; K. Nagyang karam ki 洛陽伽藍記). In Chinese, “Record of the Monasteries of Luoyang,” written in 547 by Yang Xuanzhi (d.u.) of the Eastern Wei dynasty. (Qielan in the title is an abbreviated Chinese transcription of the Sanskrit term *saṃghārāma* or monastery; see [ARĀMA](#).) This five-roll compilation is a record of forty-five great monasteries that flourished in or around the Chinese capital of Luoyang during the previous Northern Wei dynasty. The number of monasteries in the vicinity of Luoyang grew from forty-two during the Yongjia reign (307–313) of the Jin dynasty to 1,367 during the Northern Wei period; after the Wei moved its capital from Luoyang to Ye in 534, however, the number rapidly declined to 421. After witnessing the decline of Buddhism in the city during his visit in 547, Yang Xuanzhi decided to record in as much detail as he could the splendor of the monasteries that had once flourished in Luoyang. Yang provides a meticulous description of the founder, scenery, layout, and landscape of each of the great monasteries, as well as the icons and tablets housed inside the different basilicas and shrines on each monastic campus. Whenever possible, he also includes a brief account of ceremonies and services observed at the monasteries. The *Luoyang qielan ji* is an invaluable source of information on Northern Wei Buddhist institutions.

[Lushan](#). (J. Rozan; K. Yōsan 廬山). A Chinese sacred mountain located near Poyang Lake in present-day Jiangxi province. Lushan, or Cottage Mountain, is a scenic place that was long frequented by Daoist practitioners and known as the abode of Daoist perfected. [AN SHIGAO](#), the early Parthian translator of Chinese Buddhist texts, is also said to have resided on the mountain during the Eastern Han dynasty. At the end of the fourth century CE, the Chinese monk [DAO'AN](#) is known to have established the monastery Xilinsi (Western Grove Monastery) on the mountain. A decade or so later, his famed disciple [LUSHAN HUIYUAN](#) also came to the mountain and established the influential monastery [DONGLINSI](#) (Eastern Grove Monastery). On a peak named the “[PRAJÑĀ](#) Terrace,” Huiyuan enshrined an image of the buddha [AMITĀBHA](#) for worship and contemplation. Together with 123 colleagues, Huiyuan established the White Lotus Society ([BAILIAN SHE](#)), which was dedicated to Amitābha worship. Due especially to Huiyuan’s influence, Lushan emerged as an important site for the cult of Amitābha and his [PURE LAND](#) (see [SUKHĀVATĪ](#)). During the Song dynasty, Lushan became the home of the [CHAN](#) master [HUANGLONG HUINAN](#) (1002–1069) and his disciples in the [HUANGLONG PAI](#) of the [LINJI ZONG](#). In 1147, Donglin Changcong

(1025–1091), one of Huanglong’s chief disciples and recipient of the imperial purple robe, was appointed by the court to assume the abbotship of Donglinsi, which had been officially recognized as a public Chan cloister (chanyuan) in 1079. During his visit to Lushan, the renowned poet Su Shi (1037–1101) is said to have attained awakening under Changcong’s guidance. In 1616, the Chan master [HANSHAN DEQING](#) established the monastery Fayunsi on Lushan’s Wuru peak. Lushan continues to serve today as an important pilgrimage site for Chinese Buddhists.

[Lushan Huiyuan](#). (J. Rozan Eon; K. Yōsan Hyewōn 廬山慧遠) (334–416). Chinese monk during the Six Dynasties period, who was an important early advocate of [PURE LAND](#) cultic practices. Huiyuan was a native of Yanmen in present-day Shanxi province. In 345, he is said to have visited the prosperous cities of Xuchang and Luoyang, where he immersed himself in the study of traditional Confucian and Daoist scriptures. In 354, Huiyuan met the translator and exegete [DAO’AN](#) on Mt. Heng (present-day Hebei province), where he was ordained, and became his student. Huiyuan seems to have primarily studied [PRAJÑĀPĀRAMITĀ](#) thought under Dao’an. In 381, Huiyuan headed south for [LUSHAN](#), a mountain widely known as the abode of Daoist perfected and an ideal site for self-cultivation. There, he established the monastery [DONGLINSI](#) (Eastern Grove Monastery), which soon became the center of Buddhist activity in the south. Huiyuan is also known to have attracted a large lay following, consisting largely of educated members of the local gentry. He also began corresponding with the eminent monk [KUMĀRAJĪVA](#) to clarify certain issues (e.g., the nature of the [DHARMAKĀYA](#)) in [MAHĀYĀNA](#) doctrine. These correspondences were later edited together as the [DASHENG DAYI ZHANG](#). In 402, together with 123 other monks and laymen, Huiyuan is said to have contemplated on an image of the buddha [AMITĀBHA](#) in order to seek rebirth in his pure land of [SUKHĀVATĪ](#). This gathering is known as the beginning of the White Lotus Society ([BAILIAN SHE](#)). He should be distinguished from the commentator [JINGYING HUIYUAN](#).

[lus med mkha’ ’gro snyan brgyud chos skor dgu](#). (lüme kadro nyengyu chökorgu). In Tibetan, “the nine teachings from the aural lineage of the formless [DĀKINĪ](#)”; a series of brief one-line instructions that the Indian [SIDDHA TILOPA](#) received from the formless display of reality. Tilopa passed these instructions to his disciple [NĀROPA](#), who in turn passed them in part to his disciple [MAR PA CHOS KYI BLO GROS](#) and later, in full, to the Indian master [TIPHU PA](#) (said to be the

miraculous reincarnation of his son). Mar pa transmitted four of the nine to his disciple [MILA RAS PA](#) who then famously sent his disciple [RAS CHUNG PA RDO RJE GRAGS](#) to India in order to receive the remaining five from Ti phu pa. These instructions are understood to summarize the entire path of tantric practice and are foundational for many teachings of the [BKA' BRGYUD](#) sect of Tibetan Buddhism. The nine are:

1. maturation and liberation: sever the mind's tangled knots (smin grol sems kyi rgya mdud bshig)
2. commitments: look into your own mind, a mirror (dam tshig rang sems me long ltos)
3. channels and their energies: animate the networks and centers (rtsa rlung drwa mig 'khor lo bskor)
4. great bliss: keep the precious gem of speech (bde chen gsung gi rin chen zung)
5. pristine cognition: look with the lamp of primordial awareness (rig pa ye shes sgron me ltos)
6. self-liberation: attend to the great seal (rang grol phyag rgya chen po ltos)
7. sacramental substance: bask in realization's sun (dam rdzas rtogs pa'i nyi ma lde)
8. action: strike the water with a sword (spyod pa chu la ral gri rgyob)
9. equal-taste: gaze into the mirror of externals (ro snyoms phyi'i me long ltos).

Lü zong. (J. [RISSHŪ](#); K. Yul chong 律宗). See [NANSHAN LÜ ZONG](#); [DONGTA LÜ ZONG](#); XIANGBU LÜ ZONG.

mada. (T. rgyags pa; C. jiao; J. kyō; K. kyo 橋). In Sanskrit and Pāli, “conceit,” “arrogance”; one of the forty-six mental factors ([CAITTA](#)) according to the [VAIBHĀSIKA](#) school of [SARVĀSTIVĀDA ABHIDHARMA](#) and one of the fifty-one according to the [YOGĀCĀRA](#) school; it is listed among the twenty secondary afflictions ([UPAKLEŚA](#)). Conceit is considered to be a derivative of “passion” ([RĀGA](#)), since it entails an arrogant, self-absorbed state of mind that produces an air of superiority, invulnerability, and self-adoration. Some of the conditions that lead to conceit include: (1) one’s youth or virility; (2) one’s family lineage or social status; (3) one’s wealth; (4) one’s seemingly autonomous freedom in action; (5) one’s apparent longevity and invulnerability to disease; (6) one’s intelligence or knowledge; (7) one’s virtue or charitable activities; (8) one’s physical appearance or personal adornments.

Madhupindikasutta. (C. Miwanyu jing; J. Mitsugan’yukyō; K. Mirhwanyu kyōng 蜜丸喻經). In Pāli, “Discourse on the Honey Ball,” the eighteenth sutta in the [MAJJHIMANIKĀYA](#) (a separate [SARVĀSTIVĀDA](#) recension appears as the 115th [SŪTRA](#) in the Chinese translation of the [MADHYAMĀGAMA](#), along with an untitled recension of unidentified affiliation in the [EKOTTARĀGAMA](#)). The Buddha addresses a prince named Daṇḍapāni, describing his teachings as avoiding discord with beings in this world, as indifference to perceptions, as abandoning doubts, and as not craving for existence. The disciple Mahākaccāna (S. [MAHĀKĀTYĀYANA](#)) then further explicates the sermon’s meaning and the Buddha praises his erudition. The [ATTHASĀLINI](#) cites the *Madhupiṇḍikasutta* as an example of a scripture that, although preached by a disciple, still qualifies as the word of the Buddha ([BUDDHAVACANA](#)) because Mahākaccāna’s exegesis is based on a synopsis given first by the Buddha. The *Madhupiṇḍikasutta* is best known for its discussion of how the process of sensory perception culminates in conceptual proliferation (P. papañca; S. [PRAPAÑCA](#)). Any sentient being will be subject to an impersonal causal process of perception in which consciousness (P. viññāṇa; S. [VIJÑĀNA](#)) occurs conditioned by a sense base and a sense object; the contact between these three brings about sensory impingement (P. phassa; S. [SPARŚA](#)), which in turn leads to sensation ([VEDANĀ](#)). At that point, however, the sense of ego intrudes and this process then becomes an intentional one, whereby what one feels, one perceives (P. saññā; S. [SAMJÑĀ](#)); what one perceives, one

thinks about (P. vitakka; S. [VITARKA](#)); and what one thinks about, one conceptualizes (papañca). However, by allowing oneself to experience sensory objects not as things-in-themselves but as concepts invariably tied to one's own point of view, the perceiving subject now becomes the hapless object of an inexorable process of conceptual subjugation: viz., what one conceptualizes becomes proliferated conceptually (P. papañcasaññāsāṅkhā; a term apparently unattested in Sanskrit) throughout all of one's sensory experience in the past, present, and future. The consciousness thus ties together everything that can be experienced in this world into a labyrinthine network of concepts, all tied to oneself and projected into the external world as craving ([TRSNĀ](#)), conceit ([MĀNA](#)), and wrong views ([DRSTI](#)), thus creating bondage to [SAMSĀRA](#). The goal of training is a state of mind in which this tendency toward conceptual proliferation is brought to an end (P. nippapañca; S. [NISPRAPAÑCA](#)).

[madhyamadeśa](#). (P. majjhimadesa; T. yul dbus; C. zhongguo; J. chūgoku; K. chungguk 中國). In Sanskrit, “central land”; a term used to refer to the region of the Buddha's activities in what is today northeastern India, said to encompass an area some nine hundred leagues ([YOJANA](#)) in circumference. The term is also used more figuratively to refer to a civilized region, especially a region in which Buddhism has been established. Thus, it is considered to be fortunate not simply to be reborn as a human but to be reborn as a human in such a central region, where one will have ready access to the teachings of Buddhism. See [KŚANASAMPAD](#).

[Madhyamāgama](#). (P. Majjhimanikāya; T. Dbu ma'i lung; C. Zhong ahan jing; J. Chūagongyō; K. Chung aham kyōng 中阿含觀). In Sanskrit, the “Medium [Length] Scriptures”; the division of the Sanskrit [SŪTRAPITAKA](#) corresponding closely to, but also substantially larger, than the [MAJJHIMANIKĀYA](#) of the Pāli canon. The *Madhyamāgama* collection is no longer extant in an Indic language but is preserved in its entirety in a Chinese translation made by Gautama Saṃghadeva between 397 and 398; a few fragments of a Sanskrit recension have been discovered (such as at [TURFAN](#)), and there are Tibetan translations of some individual sūtras from the collection. The extant Sanskrit fragments are ascribed to the [SARVĀSTIVĀDA](#) school; since these fragments correspond closely to the Chinese renderings, it is generally accepted that the Chinese translation of the *Madhyamāgama* represents the Sarvāstivāda school's recension of this collection. The *Madhyamāgama* contains 222 sūtras, eighty of which correspond

to suttas in the Pāli [AṄGUTTARANIKĀYA](#), eleven to suttas in the [SAMUYUTTANIKĀYA](#), and twelve to suttas in the [DĪGHANIKĀYA](#). Of the Pāli *Majjhimanikāya*'s 152 suttas, ninety-eight have corresponding recensions in the *Madhyamāgama*. See also [AGAMA](#).

Madhyamaka. (T. Dbu ma pa; C. San lun zong/Zhongguan; J. Sanronshū/Chūgan; K. Sam non chong/Chunggwon 三論宗/中觀). In Sanskrit, “Middle Way (school)”; a proponent or follower of the middle way” ([MADHYAMAPRATIPAD](#)); Buddhism is renowned as the middle way between extremes, a term that appears in the Buddha’s first sermon (see P. [DHAMMACAKKAPPAVATTANASUTTA](#)) in which he prescribed a middle path between the extremes of self-indulgence and self-mortification. Thus, all proponents of Buddhism are in a sense proponents of the middle way, for each school of Buddhist philosophy identifies different versions of the two extremes and charts a middle way between them. The term Madhyamaka has however come to refer more specifically to the school of Buddhist philosophy that sets forth a middle way between the extreme of eternalism ([ŚĀŚVATADRSTI](#)) and the extreme of annihilationism ([UCCHEDADRSTI](#)). The Madhyamaka school derives from the works of [NĀGĀRJUNA](#), the c. second century CE philosopher who is traditionally regarded as its founder. His major philosophical works, especially his [MŪLAMADHYAMAKAKĀRIKĀ](#) (a.k.a. [MADHYAMAKAŚĀSTRA](#)), as well as the writings of his disciple [ĀRYADEVA](#), provide the locus classicus for the school (which only seems to have been designated the Madhyamaka school after Āryadeva’s time). Commentaries on their works (by such figures as [BUDDHAPĀLITA](#), [BHĀVAVIVEKA](#), and [CANDRAKĪRTI](#)) provide the primary medium for philosophical expression in the school. Madhyamaka was highly influential in Tibet, where it was traditionally considered the highest of the four schools of Indian Buddhist philosophy (Madhyamaka, [YOGĀCĀRA](#), [SAUTRĀNTIKA](#), and [VAIBHĀSIKA](#)). Tibetan exegetes discerned two branches in the Madhyamaka, the [PRĀSAṄGIKA](#) (associated with Buddhapālita and Candrakīrti) and the [SVĀTANTRIKA](#) (associated with Bhāvaviveka and [ŚĀNTARAKSITA](#)). The works of Nāgārjuna and Āryadeva were also widely studied in East Asia, forming the basis of the “Three Treatises” school (C. [SAN LUN ZONG](#); K. Sam non chong; J. Sanronshū), where the three treatises are the ZHONG LUN (the “Middle Treatise,” or *Madhyamakaśāstra*), the [SHĪ’ERMEN LUN](#) (“Twelve Gate Treatise,” or **Dvādaśamukhaśāstra*), and the [BAI LUN](#) (“Hundred Verses Treatise,” *[ŚATAŚĀSTRA](#)), the latter two attributed to Āryadeva. The Madhyamaka school is

most renowned for its exposition of the nature of reality, especially its deployment of the doctrines of emptiness ([ŚŪNYATĀ](#)) and the two truths ([SATYADVAYA](#)). Because of its central claim that all phenomena are devoid or empty (*śūnya*) of intrinsic existence ([SVABHĀVA](#)), its proponents are also referred to as [ŚŪNYAVĀDA](#) and Niḥsvabhāvavāda. The doctrine of emptiness has also led to the charge, going back to the time of Nāgārjuna and continuing into the contemporary era, that the Madhyamaka is a form of nihilism, a charge that Nāgārjuna himself deftly refuted. Central to Madhyamaka philosophy is the relation between emptiness and dependent origination ([PRATĪTYASAMUTPĀDA](#)). Dependent origination in its Madhyamaka interpretation refers not only to the twelfefold chain but more broadly to the fact that all phenomena arise in dependence on other factors. Hence, everything is dependent, and thus is empty of independent and intrinsic existence ([NIḤSVABHĀVA](#)). As Nāgārjuna states, “Because there are no phenomena that are not dependently arisen, there are no phenomena that are not empty.” This analysis becomes key to the Madhyamaka articulation of the middle way: because everything is dependently arisen, the extreme of annihilation ([UCCHEDĀNTA](#)) is avoided; because everything is empty, the extreme of permanence ([ŚĀSVATĀNTA](#)) is avoided. Although most of the major schools of Buddhist philosophy speaks of the two truths—the ultimate truth ([PARAMĀRTHASATYA](#)) and the conventional truth ([SAMVRTISATYA](#))—this category is especially important for Madhyamaka, which must simultaneously proclaim the emptiness of all phenomena (the ultimate truth) while describing the operations of the world of cause and effect and the processes governing the path to enlightenment (all of which are deemed conventional truths). Although the true character of conventional truth is misperceived as a result of ignorance ([AVIDYĀ](#)), conventional truths themselves are not rejected; as Nāgārjuna states, “Without relying on the conventional, the ultimate cannot be taught; without understanding the ultimate, [NIRVĀNA](#) is not attained.” The precise nature of the two truths and their relation is explored in detail in the Madhyamaka treatises, most famously in the sixth chapter of Candrakīrti’s [MADHYAMAKĀVATĀRA](#). Although most renowned for its doctrine of emptiness, Madhyamaka is a [MAHĀYĀNA](#) school and, as such, also offers detailed expositions of the path ([MĀRGA](#)) to the enlightenment. These works that focus on soteriological issues include the [SUHRLLEKHA](#) and [RATNĀVALĪ](#) of Nāgārjuna, the [CATUḤŚATAKA](#) of Āryadeva, the [MADHYAMAKĀVATĀRA](#) of Candrakīrti, the [BODHICARYĀVATĀRA](#) of Śāntideva, the [BHĀVANĀKRAMA](#) of [KAMALAŚĪLA](#), and the [BODHIPATHAPRADĪPA](#) of [ATĪŚA DĪPAMKARAŚRĪJÑĀNA](#).

[Madhyamakahrdaya](#). (T. Dbu ma'i snying po). In Sanskrit, “Essence of the Middle Way”; the major work of the sixth-century Indian [MADHYAMAKA](#) (and, from the Tibetan perspective, [SVĀTANTRIKA](#)) master [BHĀVAVIVEKA](#) (also referred to as Bhavya and Bhāviveka). The text is written in verse, accompanied by the author’s extensive prose commentary, entitled the [TARKAJVĀLĀ](#). The *Madhyamakahrdaya* is preserved in both Sanskrit and Tibetan, the [TARKAJVĀLĀ](#) only in Tibetan. The work is in eleven chapters, the first three and the last two of which set forth the main points in Bhāvaviveka’s view of the nature of reality and the Buddhist path, dealing with such topics as [BODHICITTA](#), the knowledge of reality (*tattvajñāna*), and omniscience ([SARVAJÑĀTĀ](#)). The intervening chapters set forth the positions (and Bhāvaviveka’s refutations) of various Buddhist and non-Buddhist schools, including the [ŚRĀVAKA](#), [YOGĀCĀRA](#), Sāṃkhya, Vaiśeṣika, Vedānta, and Mīmāṃsā. These chapters (along with [ŚĀNTARAṢĪTA](#)’s [TATTVASAMGRAHA](#)) are a valuable source of insight into the relations between Madhyamaka and the other Indian philosophical schools of the day. The chapter on the śrāvakas, for example, provides a detailed account of the reasons put forth by the mainstream Buddhist schools as to why the Mahāyāna [SŪTRAS](#) are not the word of the Buddha. Bhāvaviveka’s response to these charges, as well as his refutation of Yogācāra in the subsequent chapter, are particularly spirited.

[Madhyamakālaṃkāra](#). (T. Dbu ma rgyan). In Sanskrit, “Ornament of the Middle Way”; a verse work in ninety-seven stanzas by the eighth-century Indian master [ŚĀNTARAṢĪTA](#); it is accompanied by a prose commentary (*vṛtti*) by the author. Both the root text and commentary are lost in the original Sanskrit (although verses cited elsewhere remain) but preserved in Tibetan translation. Whereas Śāntaraṣīta’s other major work, the [TATTVASAMGRAHA](#), is valued largely for its detailed discussion of competing Buddhist and non-Buddhist schools of Indian philosophy, the *Madhyamakālaṃkāra*, which was composed later, is regarded as the foundational text of the [YOGĀCĀRA–MADHYAMAKA](#) synthesis that occurred in late Indian Buddhism, what Tibetan doxographers would dub [YOGĀCĀRA–SVĀTANTRIKA–MADHYAMAKA](#). Śāntaraṣīta argues that the proper method for gaining realization of reality is to first come to the Yogācāra understanding that external objects do not exist and then move to the Madhyamaka view that mind also is empty of self. The *Madhyamakālaṃkāra* famously states (at stanzas 92–93), “Through relying on mind-only, the nonexistence of external objects should be known. Relying on this [Madhyamaka] mode, it should be known that this [mind] also is completely

selfless. Those who, having mounted the chariot of the two modes, grasp the reins of reasoning thereby attain the state of a Mahāyānist exactly as it is.” Śāntarakṣita argues that anything that has intrinsic nature ([SVABHĀVA](#)) must be intrinsically either one or many. Whatever is neither intrinsically one nor many must lack intrinsic nature. He then goes on to subject a wide range of important philosophical categories to this reasoning in an effort to demonstrate that nothing is endowed with intrinsic nature. These categories include the conditioned (such as the elements of earth, water, fire, and wind), the unconditioned ([NIRVĀNA](#)), the person ([PUDGALA](#)) asserted by the [VĀTSĪPUTRĪYAS](#), and space ([ĀKĀŚA](#)). He continues on to apply this same reasoning to the major categories of consciousness of various Buddhist and non-Buddhist schools, focusing upon [VAIBHĀSIKA](#), [SAUTRĀNTIKA](#), and the various subschools of [VIJÑĀNAVĀDA](#). In the course of this section, he considers such important topics in Buddhist epistemology as whether or not the object casts an image or “aspect” ([ĀKĀRA](#)), toward the perceiving consciousness, and whether reflexivity ([SVASAMVEDANA](#)) exists. He concludes that consciousness lacks intrinsic nature ([NIHJVABHĀVA](#)). Roughly the last third of the text is devoted to an exposition of the two truths ([SATYADVAYA](#)). He concludes by stating that the follower of the Buddha has compassion for those who hold mistaken philosophical views.

[Madhyamakāloka](#). (T. Dbu ma snang ba). In Sanskrit, “Illumination of the Middle Way”; the major independent (as opposed to commentarial) work of the late eighth-century Indian master [KAMALAŚĪLA](#). The work is preserved only in Tibetan translation. While the [MADHYAMAKĀLAMKĀRA](#) of Kamalaśīla’s teacher, [ŚĀNTARAKṢITA](#), is considered the foundational philosophical text of the [YOGĀCĀRA–MADHYAMAKA](#) synthesis, the *Madhyamakāloka* is its most important and detailed exposition. As such, it deals with a number of central epistemological and logical issues to articulate what is regarded as the defining tenet of the [YOGĀCĀRA–SVĀTANTRIKA–MADHYAMAKA](#) school: that major [YOGĀCĀRA](#) doctrines, such as “mind-only” ([CITTAMĀTRA](#)) and the three natures ([TRISVABHĀVA](#)), are important in initially overcoming misconceptions, but they are in fact only provisional ([NEYĀRTHA](#)) teachings for those who have not yet understood the Madhyamaka view. The *Madhyamakāloka* is also important for its exploration of such central [MAHĀYĀNA](#) doctrines as the [TATHĀGATAGARBHA](#) and the question of the [EKAYĀNA](#). On this latter point, Kamalaśīla argues against the Yogācāra position that there are three final vehicles ([ŚRĀVAKA](#), [PRATYĒKABUDDHA](#), and [BODHISATTVA](#) vehicles, with some beings excluded from

any path to liberation; see [SAMUCCHINNAKUŚĀLAMŪLA](#); [ICCHANTIKA](#)) in favor of the position that there is a single vehicle to buddhahood for all beings.

[Madhyamakaratnapradīpa](#). (T. Dbu ma rin po che'i sgron ma). In Sanskrit, “Jeweled Lamp for the Middle Way”; a work of [MADHYAMAKA](#) philosophy attributed to Bhavya or [BHĀVAVIVEKA](#). However, because the work contains references to [CANDRAKĪRTI](#) and [DHARMAKĪRTI](#), who lived after Bhāvaviveka, some scholars do not consider it to be the work of the author of the [PRAJÑĀPRADĪPA](#), but by a later scholar by that name, sometimes referred to as Bhavya II. The work begins with a discussion of the two truths ([SATYADVAYA](#)) and then goes on to offer criticisms of the positions of both non-Buddhist and Buddhist philosophical schools, with the latter including [VAIBHĀSIKA](#) and [SAUTRĀNTIKA](#), as well as [YOGĀCĀRA](#). The text continues with a presentation and defense of the Madhyamaka interpretation of the two truths, followed by a presentation of the practices of the [BODHISATTVA](#) and of the three bodies ([TRIKĀYA](#)) of the Buddha. The text concludes with a paean to [NĀGĀRJUNA](#) and the benefits of following his teachings.

[Madhyamakārthasaṃgraha](#). (T. Dbu ma'i don bsdus pa). In Sanskrit, “Summary of the Meaning of the Middle Way”; a brief text in verse attributed to [BHĀVAVIVEKA](#). As the title suggests, it provides a brief outline of the basic topics of [MADHYAMAKA](#) philosophy, such as the middle way between the extremes of existence and nonexistence, Madhyamaka reasoning, and the two truths.

[Madhyamakaśāstra](#). (T. Dbu ma'i bstan bcos; C. Zhong lun; J. Chūron; K. Chung non 中論). In Sanskrit, “Treatise on the Middle Way”; an alternative title of the magnum opus of the second-century Indian exegete [NĀGĀRJUNA](#). See [MŪLAMADHYAMAKAKĀRIKĀ](#).

[Madhyamakāvatāra](#). (T. Dbu ma la 'jug pa). In Sanskrit, “Entrance to the Middle Way” (translated also as “Supplement to the Middle Way”); the major independent (as opposed to commentarial) work of the seventh-century Indian master [CANDRAKĪRTI](#), who states that it is intended as an avatāra (variously rendered as “primer,” “entrance,” and “supplement”) to [NĀGĀRJUNA](#)'s [MŪLAMADHYAMAKAKĀRIKĀ](#). The work is written in verse, to which the author provides an extensive prose commentary (bhāṣya). The work is organized around ten “productions of the aspiration to enlightenment” ([BODHICITTOTPĀDA](#)), which correspond to the ten stages ([BHŪMI](#)) of the bodhisattva path (drawn

largely from the [DAŚABHŪMIKASŪTRA](#)) and their respective perfections ([PĀRAMITĀ](#)), describing the salient practices and attainments of each. These are followed by chapters on the qualities of the bodhisattva, on the stage of buddhahood, and a conclusion. The lengthiest (comprising approximately half of the work) and most important chapter of the text is the sixth, dealing with the perfection of wisdom ([PRAJÑĀPĀRAMITĀ](#)). This is one of the most extensive and influential expositions in Indian literature of Madhyamaka philosophical positions. In it, Candrakīrti provides a detailed discussion of the two truths—ultimate truth ([PARAMĀRTHASATYA](#)) and conventional truth ([SAMVRTISATYA](#))—arguing that all things that have these two natures and that conventional truths (which he glosses as “concealing truths”) are not in fact true because they appear falsely to the ignorant consciousness. He also discusses the crucial question of valid knowledge ([PRAMĀNA](#)) among the unenlightened, relating it to worldly consensus (lokaprasiddha). The sixth chapter also contains one of the most detailed refutations of [YOGĀCĀRA](#) in [MADHYAMAKA](#) literature, treating such topics as the three natures ([TRISVABHĀVA](#)), the foundational consciousness ([ĀLAYAVIJÑĀNA](#)), and the statements in the sūtras that the three realms of existence are “mind-only” ([CITTAMĀTRA](#)). This chapter also contains Candrakīrti’s most famous contribution to Madhyamaka reasoning, the sevenfold reasoning designed to demonstrate the absence of a personal self ([PUDGALANĀIRĀTMYA](#)). Adding to and elaborating upon a fivefold reasoning found in Nāgārjuna’s *Mūlamadhyamakakārikā*, Candrakīrti argues that the person does not intrinsically exist because of it: (1) not being the aggregates ([SKANDHA](#)), (2) not being other than the aggregates, (3) not being the basis of the aggregates, (4) not depending on the aggregates, (5) not possessing the aggregates, (6) not being the shape of the aggregates, and (7) not being the composite of the aggregates. He illustrates this reasoning by applying it to the example of a chariot, which, he argues, is not to be found among its constituent parts. The sixth chapter concludes with a discussion of the sixteen and the twenty forms of emptiness ([ŚŪNYATĀ](#)), which include the emptiness of emptiness ([ŚŪNYATĀŚŪNYATĀ](#)). The work was the most widely studied and commented upon Madhyamaka text in Tibet among all sects, serving, for example, as one of the “five texts” ([ZHUNG LNKA](#)) that formed the [DGE LUGS](#) scholastic curriculum. The work is preserved only in Tibetan, although a Sanskrit manuscript of verses has been discovered in Tibet.

[Madhyamakāvatārabhāṣya](#). (S). See [MADHYAMAKĀVATĀRA](#).

madhyamapratipad. (P. majjhimapaṭipadā; T. dbu ma'i lam; C. zhongdao; J. chūdō; K. chungdo 中道). In Sanskrit, “middle way”; a well-known description of the Buddhist path (**MĀRGA**), with two important denotations. As set forth by the Buddha in his first sermon, the “Setting in Motion the Wheel of the Dharma” (P. **DHAMMACAKKAPPAVATTANASUTTA**; S. **DHARMACAKRAPRAVARTANASŪTRA**), the middle way refers to a religious path between the two extremes of self-indulgence and self-mortification or extreme asceticism, extremes that the Buddha himself experienced prior to his enlightenment, the former during his youth as a prince, and the latter during his practice of self-mortification. In this first sermon, the Buddha identifies the middle way between these two extremes as the eightfold path (S. **ĀRYĀSTĀNGAMĀRGA**). As expounded by **NĀGĀRJUNA** and his followers, the middle way is a philosophical position between the extremes of permanence (**ŚĀŚVATĀNTA**) and annihilation (**UCCHEDĀNTA**) (sometimes also called the extremes of existence and nonexistence; see **ANTAGRĀHADRSTI**). Although the precise meaning of this interpretation of the middle way is widely discussed and debated, one interpretation identifies the extreme of permanence as the position that everything exists ultimately and the extreme of annihilation as the position that nothing exists even conventionally, with the middle way being the position that nothing exists ultimately but everything exists conventionally.

Madhyāntavibhāga. (T. Dbus mtha' rnam 'byed; C. Bianzhongbian lun; J. Benchūbenron; K. Pyōnjungbyōn non 辯中邊論). In Sanskrit, “Differentiation of the Middle Way and the Extremes”; one of the five works (together with the **ABHISAMAYĀLAMKĀRA**, the **MAHĀYĀNASŪTRĀLAMKĀRA**, the **RATNAGOTRAVIBHĀGA**, and the **DHARMADHARMATĀVIBHĀGA**) said to have been presented to **ASAṄGA** by the bodhisattva **MAITREYA** in the **TUSITA** heaven. (More precisely, the title *Madhyāntavibhāga* refers to the *Madhyāntavibhāgakārikā* attributed to Maitreya; **VASUBANDHU** wrote a commentary to the text, entitled *Madhyāntavibhāgabhāṣya*, and **STHIRAMATI** wrote a commentary entitled *Madhyāntavibhāgaṭīkā*). Written in verse, it is one of the most important **YOGĀCĀRA** delineations of the three natures (**TRISVABHĀVA**), especially as they figure in the path to enlightenment, where the obstacles created by the imaginary (**PARIKALPITA**) are overcome ultimately by the antidote of the consummate (**PARINIŠPANNA**). The “middle way” exposed here is that of the Yogācāra, and is different from that of **NĀGĀRJUNA**, although the names of the two extremes to be avoided—the extreme of permanence (**ŚĀŚVATĀNTA**) and the extreme of

annihilation ([UCCHEDĀNTA](#))—are the same. Here the extreme of permanence is the existence of external objects, the imaginary nature ([PARIKALPITASVABHĀVA](#)). The extreme of annihilation would seem to include Nāgārjuna’s emptiness of intrinsic nature ([SVABHĀVA](#)). The middle way entails upholding the existence of consciousness ([VIJÑĀNA](#)) as the dependent nature ([PARATANTRASVABHĀVA](#)) and the existence of the consummate nature ([PARINISPANNASVABHĀVA](#)). The work is divided into five chapters, which consider the three natures, the various forms of obstruction to be abandoned on the path, the ultimate truth according to [YOGĀCĀRA](#), the means of cultivating the antidotes to the defilements, and the activity of the [MAHĀYĀNA](#) path. See also [MAITREYANĀTHA](#).

Madhyāntika. (P. Majjhantika; T. Nyi ma gung pa; C. Motiandi; J. Matsudenchi/Madenchi; K. Malchōnji 末田地). The third of the five teachers (dharmācārya) mentioned in Indian Sanskrit texts as the initial successors of the Buddha: viz., [MAHĀKĀŚYAPA](#), [ĀNANDA](#), Madhyāntika, [ŚĀNAKAVĀSIN](#), and [UPAGUPTA](#). The [AŚOKĀVADĀNA](#) records that he lived a hundred years after the Buddha’s death and, after becoming an [ARHAT](#), was sent by his teacher Ānanda to disseminate Buddhism in Kashmir (see [KASHMIR-GANDHĀRA](#)). According to [BUDDHAGHOSA](#)’s fifth-century CE [VINAYA](#) commentary, the [SAMANTAPĀSĀDIKĀ](#), Madhyāntika was the preceptor of [MAHINDA](#) (S. Mahendra), the son of King Asoka (S. [AŚOKA](#)), who converted the Sinhalese king [DEVĀNAMPIYATIṢṢA](#) to Buddhism in the third century BCE, thus inaugurating Buddhism in Sri Lanka. According to that same text, after the third Buddhist council (see [COUNCIL, THIRD](#)), Madhyāntika traveled to Kashmir, where he led countless Kashmiris to enlightenment and ordained a thousand as novice monks ([ŚRĀMANERA](#)). He is also said to have tamed a malevolent [NĀGA](#) living in a lake there. The [DA TANG XIYU JI](#) by the Chinese pilgrim [XUANZANG](#) (600/602–664) records that the Buddha predicted before his [PARINIRVĀNA](#) that Madhyāntika would travel to Udyāna in Kashmir to disseminate the dharma. Fifty years after the Buddha’s death, Madhyāntika heard this prediction from his teacher Ānanda and set out on a successful mission to that region. Xuanzang reports that, in Udyāna, Madhyāntika supervised the carving of a hundred-foot-high wooden image of [MAITREYA](#) Buddha; Madhyāntika used his spiritual powers to send a sculptor directly to the [TUSITA](#) heaven (on three separate occasions, according to the account) so he would be able to accurately model the image after the person of Maitreya himself. Sanskrit [VINAYA](#) materials, including those from the [MAHĀSĀMGIKA](#) and [MŪLASARVĀSTIVĀDA](#) schools, typically list Madhyāntika as

the third successor of the Buddha. He is also subsequently listed as the third Indian patriarch ([ZUSHI](#)) in early Chinese records of dharma transmission ([CHUANFA](#)), such as the [FU FAZANG YINYUAN ZHUAN](#) and the [CHU SANZANG JIJI](#), as well as in early Chan genealogical records, such as the [CHUAN FABAO JI](#) and the [LIDAI FABAO JI](#). Later Chan lineage texts compiled after about the early ninth century, such as the [BAOLIN ZHUAN](#) and the [JINGDE CHUANDENG LU](#), eliminate him from the roster and move Śāṅkavāsin up to the position of third patriarch.

[madhyendriya](#). (T. dbang po 'bring; C. zhonggen; J. chūkon; K. chunggŭn 中根). In Sanskrit, “average faculties”; a term used to describe those disciples of the Buddha whose intellectual capacity is between that of the least intelligent ([MRDVINDRIYA](#)) and the most intelligent ([TIKSNENDRIYA](#)), and thus average. The term appears particularly in discussions of [UPĀYA](#), the Buddha’s ability to adapt his teachings to the intellects, interests, and aspirations of his disciples. Thus, in consideration of the abilities of his audience, the Buddha would teach different things to different people, sometimes extolling a particular practice to those of middling and lesser faculties, knowing that they were temporarily unable to practice the highest teaching. Precisely what constitutes the Buddha’s highest teaching is a point of considerable disagreement over the course of Buddhist thought, with the advocates of one faction consigning the teaching held to be highest by another faction to the category of teachings intended for those of middling or lesser faculties.

[mae chi](#). In Thai, “nun” (although not a novice [ŚRĀMANERIKĀ](#) or fully ordained [BHIKSUNI](#)) or the “order of nuns” in Thailand; those who are ordained as mae chi observe the eight precepts ([SIKSĀPADA](#); cf. [ASTĀNGASAMANVĀGATAM UPAVĀSAM, UPOSADHA](#)), dress in white robes similar in style to the saffron robes of the monks, shave their heads every fortnight, and spend much of their time in religious observances. However, because mae chi have not received a monastic ordination and are thus technically still laywomen ([UPĀSIKĀ](#)), they are not afforded the special legal status of fully ordained monks, and typically receive far less financial support from both the government and the laity. During the last two decades of the twentieth century, the number of mae chi increased substantially, particularly among college-educated women. Moreover, there was also an increased emphasis on practicing and teaching [VIPASSANĀ](#) (S. [VIPĀŚYANĀ](#)) meditation, as well as on providing young women with opportunities for religious education, particularly those who were economically disadvantaged.

The majority of women who ordain as nuns, however, continue to be middle aged and older, in sharp contrast to monks, most of whom ordain as either novices or as young men, and who often enter the monkhood for only a single rains retreat (Thai. pansa, P. vassa; S. [VARSA](#)). In the late 1990s, there were around ten thousand nuns in Thailand, compared with almost two hundred thousand monks.

[Mae Thorani](#). (Thai). See [THORANI](#).

[Magadha](#). (T. Yul ma ga dha; C. Mojietuo [guo]; J. Makatsuda[koku]; K. Magalta [kuk] 摩揭佉[國]). The largest of the sixteen states ([MAHĀJANAPADA](#)) that flourished in northern India between the sixth and third centuries BCE. As described in Pāli sources, its capital was Rājagaha (S. [RĀJAGRHA](#)) and, during the lifetime of the Buddha was ruled by King [BIMBISĀRA](#) and his usurper son Ajātasattu (S. [AJĀTAŚATRU](#)), both of whom became patrons of Buddhism. The Ganges River ([GAṄGANADĪ](#)) was the border between Magadha and the powerful Licchavi federation. Beginning with Bimbisāra, the relative strength of Magadha vis-à-vis its neighbors rose steadily for several centuries. Ajātasattu annexed the kingdom of Kosala (S. [KOŚALA](#)) with the aid of the Licchavis after which he reduced the latter to vassals. The capital of Magadha was moved from Rājagaha to Pāṭaliputta (S. [PĀTALIPUTRA](#)) sometime after Ajātasattu and subsequently became the seat of government for the Mauryan Empire. The height of Magadha's influence was reached in the third century BCE during the reign of the emperor Asoka (S. [AŚOKA](#)), when the authority of Pāṭaliputta extended across the north of the Indian subcontinent from Bengal in the east, to Afghanistan in the west and south to the borders of Tamil Nadu. Magadha has been described as the birthplace of Buddhism, and its language, the language of the Buddha. Buddhism in the region received its greatest impetus during the reign of Asoka, whose inscriptions indicate that he promoted the religion throughout his empire. Later depictions of Asoka that appear in Pāli sources portray him as exclusive in his patronage of Buddhism, although his own epigraphs indicate that he lent royal support to brāhmaṇas and non-Buddhist [ŚRAMANA](#) sects as well.

[Ma gcig lab sgron](#). (Machik Labdrön) (c. 1055–1149). Female Tibetan Buddhist master who codified the important meditation tradition called “severance” ([GCOD](#)), classified as one of the so-called eight great conveyances that are lineages of achievement ([SGRUB BRGYUD SHING RTA CHEN PO BRGYAD](#)). Born in the southern Tibetan region of [LA PHYI](#), Ma gcig lab sgron was recognized at a

young age to be a prodigy. According to her traditional biographies, she had a natural propensity for the [PRAJÑĀPĀRAMITĀ](#) literature, spending much of her youth reading and studying its root texts and commentaries. She continued her religious education under the monk known as Grwa pa mngon shes (Drapa Ngönshe) and Skyo ston Bsod nams bla ma (Kyotön Sönam Lama) in a monastic setting where she was eventually employed to use her skills in ritual recitation and exegesis. She then took up the lifestyle of a tantric [YOGINĪ](#), living as the consort of the Indian adept Thod pa Bhadra and giving birth to perhaps five children. Reviled in one source as “a nun who had repudiated her religious vows,” Ma gcig lab sgron left her family and eventually met the figure who would become her root guru, the famed Indian yogin [PHA DAM PA SANGS RGYAS](#) who transmitted to her the instructions of “pacification” ([ZHI BYED](#)) and [MAHĀMUDRĀ](#). She combined these with her training in prajñāpāramitā and other indigenous practices, passing them on as the practice of severance, principally to the Nepalese yogin Pham thing pa and her own son Thod smyon bsam grub (Tönyön Samdrup). Ma gcig lab sgron is revered as a [DĀKINĪ](#), an emanation of the Great Mother (Yum chen mo, as the goddess [PRAJÑĀPĀRAMITĀ](#) is known in Tibetan), and the female bodhisattva [TARĀ](#). Her reincarnations have also been recognized in contemporary individuals, including the former abbess of the important [SHUG GSEB](#) nunnery, Rje btsun Rig ’dzin chos nyid zang mo (Jetsun Rikdzin Chönyi Sangmo). Ma gcig lab sgron remains a source of visionary inspiration for new ritual cycles, as well as a primary Tibetan example of the ideal female practitioner. Her tradition of severance continues to be widely practiced by Tibetan Buddhists of all sectarian affiliations.

[maggacitta](#). In Pāli, “path consciousness”; a term synonymous with “path knowledge” (*maggañāṇa*); the moment of consciousness that occurs upon accessing any one of the four supramundane or noble paths (P. *ariyamagga*; S. [ĀRYAMĀRGA](#)), viz., that of the stream-enterer (P. *sotāpanna*; S. [SROTAĀPANNA](#)), once-returner (P. *sakadāgāmi*; S. [SAKRDĀGĀMIN](#)), nonreturner (P. *anāgāmi*; [ANĀGĀMIN](#)), and worthy one (P. *arahant*; S. [ARHAT](#)). It marks the attainment of what is called “purity of knowledge and vision” ([ÑĀNADASSANAVISUDDHI](#)), which is the seventh and final purity (*visuddhi*; cf. S. [VĪSUDDHI](#)) that is developed along the path to liberation. Path consciousness is immediately preceded by [GOTRABHŪÑĀNA](#) or “change-of-lineage knowledge,” that point at which consciousness first takes the [NIRVĀNA](#) element (P. *nibbānadhātu*) as its object, thereby freeing the practitioner from belonging to the lineage of ordinary

worldlings (P. puthujjana; cf. S. [PRTHAGJANA](#)). Path consciousness is immediately followed by two or three moments of “fruition consciousness” ([PHALACITTA](#)), after which the mind subsides into the subconscious continuum ([BHAVANGASOTA](#)). The difference between path consciousness and fruition consciousness may be described in the following way with reference to the stream-enterer: through the path of stream-entry, one “becomes” free of the first three fetters ([SAMYOJANA](#)), whereas through fruition of stream-entry one “is” free of the first three fetters. Because path consciousness represents the first moment of entering of the path, it occurs only once to any given practitioner on each of the four paths. Fruition consciousness, on the other hand, is not so limited and thus may repeat itself innumerable times during a lifetime.

[maggāmaggañānadassanavisuddhi](#). (S. *margāmargajñānadarśanaviśuddhi; C. dao feidao zhijian qingjing; J. dōhidōchikenshōjō; K. to pido chigyōn ch’ōngjōng 道非道智見清淨). In Pāli, “purity of knowledge and vision of what is and is not the path.” According to the [VISUDDHIMAGGA](#), the fifth of seven “purities” (visuddhi; cf. S. [VISUDDHI](#)) to be developed along the path to liberation. This purity consists of the understanding that distinguishes between what is the right path and what is the wrong path. It requires as a prerequisite the cultivation of methodological insight (nayavipassanā) through contemplating the nature of the five aggregates (P. khandha; S. [SKANDHA](#)). Through an understanding of the [FOUR NOBLE TRUTHS](#) and dependent origination (P. paṭiccasamuppāda; S. [PRATĪTYASAMUTPĀDA](#)), the practitioner realizes that the aggregates come into being and pass away from moment to moment, and that as a consequence they are insubstantial, unreliable, and empty, like a mirage. During this stage of purification, ten experiences arise, which, if the practitioner becomes attached to them, function as defilements of insight (vipassanūpakkilesa). These include: (1) radiant light (obhāsa), (2) knowledge (ñāṇa), (3) rapture (pīti), (4) tranquility (passaddhi), (5) pleasure (sukha), (6) determination (adhimokkha), (7) energy (paggaha), (8) awareness (upaṭṭhāna), (9) equanimity (upekkhā), and (10) delight (nikanti). These ten defilements may cause the practitioner to believe that he has attained liberation, when in fact he has not. They are overcome with continued practice, whereby the mind comes to regard them with indifference as mere concomitants of insight.

[Magoksa](#). (麻谷寺). In Korean, “Hemp Valley Monastery”; the sixth district monastery ([PONSA](#)) of the contemporary [CHOGYE CHONG](#) of Korean Buddhism,

located on T'aehwasan (Exalted Splendor Mountain) outside the city of Kongju in South Ch'ungch'ōng province. The origins of the monastery and its name are obscure. One record claims that Magoksa was established by the Silla [VINAYA](#) master [CHAJANG](#) (fl. c. 590–658) in 643; because so many people attended Chajang's dharma lecture at the monastery's founding, the audience was said to have been "as dense as hemp stalks," so the Sinograph for "hemp" (ma) was given to the name of the monastery. This claim is, however, suspect since the monastery is located in what was then the territory of Silla's rival Paekche. A second theory is that the monastery was founded in 845 by Muju Muyōm (799–888), founder of the Sōngjusan school of the Nine Mountains school of Sōn ([KUSAN SŌNMUN](#)). When Muyōm returned to Silla in 845 from his training in China, he is said to have named the monastery after his Chinese [CHAN](#) teacher Magu Baoche (K. Magok Poch'ōl; b. 720?). Finally, it is also said that the monastery's name simply derives from the fact that hemp was grown in the valley before the monastery's establishment. In 1172, during the Koryō dynasty, Magoksa was significantly expanded in scope by [POJO CHINUL](#) (1158–1210) and his disciple Suu (d.u.), who turned it into a major monastery in the region. Following the Japanese Hideyoshi invasions of 1592–1598, the monastery sat destroyed for some sixty years until several of its shrine halls were reconstructed by Kakch'ōng (d.u.) in 1651 and the monastery returned to prominence. The Taegwang pojōn (Basilica of Great Brightness) is Magoksa's central sanctuary and enshrines an image of the buddha [VAIROCANA](#); the building was reconstructed in 1172 by Pojo Chinul and again in 1651. In front of the basilica is a juniper tree planted by the independence fighter Kim Ku (1876–1949), who later lived at the monastery as a monk. Magoksa's main buddha hall (taeung pojōn; see [TAEUNG CHŎN](#)) enshrines a [ŚĀKYAMUNI](#) Buddha statue that is flanked by [AMITĀBHA](#) and [BHAIṢAJYAGURU](#), and the calligraphy hanging outside this hall is reported to be that of Kim Saeng (711–790/791), one of Silla's most famous calligraphers. One of Magoksa's unique structures is its five-story, Koryō-era stone pagoda, which is built upon a two-story-high stone base; its bronze cap suggests Tibetan influences that may have entered Korea via the Mongol Yuan dynasty. It is one of only three [STŪPA](#)s of similar style known to exist worldwide. The Yōngsan chōn (Vulture Peak Hall) is decorated with paintings of the eight stereotypical episodes in the life of the Buddha (p'alsang; see C. [BAXIANG](#)); it is also called the Ch'ōnbul chōn, or Thousand Buddhas Hall, for the many buddha statues enshrined around the inside perimeter of the hall. The building, which was reconstructed by Kakch'ōng in 1651, is today's Magoksa's oldest extant

building, with a plaque that may display the calligraphy of King Sejo (r. 1455–1468).

[mahābhaya](#). (T. 'jigs pa chen po; C. dakewei; J. daikai; K. taegaoe 大可畏). In Sanskrit, the “great fears”; things that are frightening and from which one may need the protection of either a [BODHISATTVA](#) or a specific text or practice. The great fears are often listed as eight, with various constituents. One common list is earth, water, fire, wind, snakes, elephants, thieves, and kings; another is lions, elephants, fire, snakes, thieves, violent waters (including floods and storms at sea), imprisonment, and demons.

[Mahābherihārakaparivarta](#). (T. Rnga bo che chen po'i le'u; C. Dafagu jing; J. Daihokkukyō; K. Taebōpko kyōng 大法鼓經). A Sanskrit [MAHĀYĀNA](#) sūtra translated into Chinese by [GUNABHADRA](#) in the fifth century as the “Great Drum Sūtra”; it is considered one of the major sūtras for the exposition of the notion of the “embryo of the buddhas” ([TATHĀGATAGARBHA](#)). It is one of two texts (the other being the Mahāyāna [ĀṄGULIMĀLIYASŪTRA](#)) that make specific reference to the [TATHĀGATAGARBHASŪTRA](#), stating that only [BODHISATTVA-MAHĀSATTVAS](#) understand the nature of the tathāgatagarbha and thus preserve the *Tathāgatagarbhasūtra*. This sūtra also sets forth the doctrine of a single vehicle ([EKAYĀNA](#)), similar to that found in the [SADDHARMAPUNḌARĪKASŪTRA](#).

[mahābhūmika](#). (T. sa chen po pa; C. dadi fa; J. daijihō; K. taeji pōp 大地法). In Sanskrit, lit. “factors of wide extent”; “omnipresent mental factors” ([DHARMA](#)) that ground all conscious activity; also known as [CITTAMAHA BHŪMIKA](#). In the [SARVĀSTIVĀDA ABHIDHARMA](#) system, ten specific factors are said universally to accompany all consciousness activity and are therefore known as “omnipresent mental factors.” The ten are: (1) “sensation” or “feeling” ([VEDANĀ](#)), (2) “volition” or “intention” ([CETANĀ](#)), (3) “perception” ([SAMJÑĀ](#)), (4) “zest” or “desire to act” ([CHANDA](#)), (5) “sensory contact” ([SPARŚA](#)), (6) “discernment” ([MATI](#)), (7) “mindfulness” ([SMṚTI](#)), (8) “attention” ([MANASIKĀRA](#)), (9) “determination” ([ADHIMOKSA](#)), (10) “concentration” ([SAMĀDHI](#)). To give but one example of how these factors are viewed as ubiquitous, even such mental states as distraction are still characterized by a relative “lack” of concentration, not a complete absence thereof; hence, “concentration” remains an omnipresent mental factor even amid distraction. There is also a list of six “fundamental afflictions” or “defiled factors of wide extent” ([KLEŚA](#)-mahābhūmika) that are associated with all defiled thoughts: delusion ([MOHA](#)), heedlessness (pramāda;

see [APRAMĀDA](#)), lassitude ([KAUSĪDYA](#)), lack of faith ([ĀSRADDHYA](#)), sloth ([STYĀNA](#)), and restlessness ([AUDDHATYA](#)). Finally, there are also two “unwholesome factors of wide extent” ([AKUŚALA](#)-mahābhūmika): lack of shame (ahrī; cf. [HRĪ](#)) and lack of dread (anapatrāpya; cf. [APATRĀPYA](#)).

[mahābhūta](#). (T. ’byung ba chen po; C. dazhong/sida; J.daishu/shidai; K. taejong/sadae 大種/四大). In Sanskrit and Pāli, the “great elements”; or “major elementary qualities” of which the physical world of materiality or form ([RŪPA](#)) is composed. According to [ABHIDHARMA](#) analysis, these elements involve not only the common manifestations of earth ([PṚTHIVĪ](#); P. paṭhavī), water ([ĀPAS](#); P. āpo), fire ([TEJAS](#); P. tejo), and wind ([VĀYU](#); P. vāyu/vāyo), but also the fundamental qualities of the physical world that these elements represent. Thus, the quality of solidity is provided by earth, the quality of cohesion by water, the quality of heat or warmth by fire, and the quality of mobility by wind. All physical objects are said to possess of all four of the great elements, in greater or lesser proportion.

[mahābodhi](#). (T. byang chub chen po; C. da puti/wushang puti; J. daibodai/mujōbodai; K. tae pori/musang pori 大菩提/無上菩提). In Sanskrit, “great enlightenment”; the enlightenment of a buddha and the enlightenment to which the [BODHISATTVA](#) aspires. In this sense, it is distinguished from the term [BODHI](#), which can be used more broadly to describe both the enlightenment of a buddha as well as the enlightenment of an [ARHAT](#). The term mahābodhi is thus synonymous with [SAMBODHI](#) and [ANUTTARASAMYAKSAMBODHI](#), which are only used with reference to buddhas. Mahābodhi is also used to refer to both the [BODHI TREE](#) and to the monastery constructed at [BODHGAYĀ](#), since those are the sites where [ŚĀKYAMUNI](#) achieved “great enlightenment.” See also [MAHĀBODHI TEMPLE](#).

[mahābodhinirmānakāya](#). (T. byang chub chen po’i sprul sku). In Sanskrit, “emanation body of great enlightenment”; the familiar form assumed by a buddha in order to subdue the afflictions of sentient beings, which performed such deeds as going forth from the world, achieving enlightenment under the [BODHI TREE](#), turning the wheel of the dharma ([DHARMAKĀKRAPRAVARTANA](#)), and passing into [PARINIRVĀNA](#). Among the three bodies of a buddha—the [DHARMAKĀYA](#), the [SAMBHOGAKĀYA](#), and the [NIRMĀNAKĀYA](#)—this body is a subtype of the last. It is also called a “supreme emanation body” ([UTTAMANIRMĀNAKĀYA](#)) to distinguish it from other forms in which a buddha

may appear in the world.

[mahābodhisattva](#). (T. byang chub sems dpa' chen po; C. da pusa; J. daibosatsu; K. tae posal 大菩薩). In Sanskrit, “great bodhisattva”; a term that sometimes has the specific sense of a bodhisattva who has achieved the path of vision ([DARŚANAMĀRGA](#)). Such a bodhisattva is also called an āryabodhisattva.

[Mahābodhi Society](#). An organization founded in 1891 by a group that included the Sinhalese nationalist and Buddhist leader, Anagārika Dharmapāla (1864–1933; see [DHARMAPĀLA, ANAGĀRIKA](#)). Dharmapāla had been shocked to read [EDWIN ARNOLD](#)'s 1886 newspaper account of the sad condition of [BODHGAYĀ](#), the site of the Buddha's enlightenment. Arnold described a dilapidated temple surrounded by hundreds of broken statues scattered in the jungle. The [MAHĀBODHI TEMPLE](#) itself had stood in ruins prior to renovations undertaken by the British in 1880. Also of great concern was the fact that the site had been under Śaiva control since the eighteenth century, with reports of animal sacrifice taking place in the environs of the temple. The society was established with the aim of restoring Bodhgayā as place of Buddhist worship and pilgrimage and it undertook a series of unsuccessful lawsuits to that end; a joint Hindu–Buddhist committee was eventually established in 1949 to oversee the site. The society also sought to return other neglected sites, such as [KUŚINAGARĪ](#), the place of the Buddha's [PARINIRVĀNA](#), to places of Buddhist pilgrimage. Although the restoration of Indian Buddhist sites was the impetus for the founding of the Mahābodhi Society, this was not its only activity. It was the first organization of the modern period to seek to promote pan-Buddhist solidarity; Dharmapāla himself traveled widely on behalf of the society to North America, Japan, China, and Southeast Asia. The journal of the society, called *The Mahā Bodhi*, founded in 1892, has published articles and translations for more than a century.

[Mahābodhi Temple](#). (T. Byang chub chen po; C. Daputisi; J. Daibodaiji; K. Taeborisa 大菩提寺). The “Temple of the Great Awakening”; proper name used to refer to the great [STŪPA](#) at [BODHGAYĀ](#), marking the place of the Buddha's enlightenment, and hence the most important place of pilgrimage (see [MAHĀSTHĀNA](#)) in the Buddhist world. The Emperor [AŚOKA](#) erected a pillar and shrine at the site in the third century BCE. A more elaborate structure, called the [VAJRĀSANA GANDHAKUTĪ](#) (“perfumed chamber of the diamond seat”), is depicted in a relief at Bodhgayā, dating from c. 100 BCE. It shows a two-storied structure supported by pillars, enclosing the [BODHI TREE](#) and the vajrāsana, the “diamond

seat,” where the Buddha sat on the night of his enlightenment. The forerunner of the present structure is described by the Chinese pilgrim [XUANZANG](#). This has led scholars to speculate that the temple was built between the third and sixth centuries CE, with subsequent renovations. Despite various persecutions by Hindu kings, the site continued to receive patronage, especially during the Pāla period, from which many of the surrounding monuments date. The monastery fell into neglect after the Muslim invasions that began in the thirteenth century. British photographs from the nineteenth century show the monastery in ruins. Restoration of the site was ordered by the British governor-general of Bengal in 1880, with a small eleventh-century replica of the monastery serving as a model. There is a tall central tower some 165 feet (fifty meters) in height, with a high arch over the entrance with smaller towers at the four corners. The central tower houses a small shrine with an image of the Buddha. The structure is surrounded by stone railings, some dating from 150 BCE, others from the Gupta period (300–600 CE), which preserve important carvings. The area came under the control of a Śaiva mahant in the eighteenth century. In the late nineteenth century, the Sinhalese Buddhist activist Anagārika Dharmapāla (see [DHARMAPĀLA, ANAGĀRIKA](#)), was part of a group that founded the [MAHĀBODHI SOCIETY](#) and began an unsuccessful legal campaign to have control of the site returned to Buddhists. In 1949, after Indian independence, the Bodhgayā Temple Act was passed, which is established a joint committee of four Buddhists and four Hindus to oversee the monastery and its grounds.

[Mahābodhivamsa](#). In Pāli, the “History of the Great Bodhi [Tree]”; a prose chronicle recounting the history of the [BODHI TREE](#). It was composed in Sri Lanka by the monk Upatissa in the tenth or eleventh century CE. The work begins with an account of the buddha Dīpaṅkara (S. [DĪPAMKARA](#)), the lives of the bodhisatta ([BODHISATTVA](#)) under previous buddhas, the life of Gotama (S. [GAUTAMA](#)) Buddha, his enlightenment under the Bodhi tree, his parinibbāna ([PARINIRVĀNA](#)) and the distribution of his relics, and the three Buddhist councils in India. It then tells of [MAHINDA](#)’s mission to Sri Lanka, the conversion of the island to Buddhism, the arrival of [SAṄGHAMITTĀ](#) with a branch of the Bodhi tree, and the commencement of pūjā in honor of the tree.

[mahābrahmā](#). (T. Tshang pa chen po; C. Dafan tian; J. Daibonten; K. Taebŏm ch’ŏn 大梵天). In Sanskrit and Pāli, the “great [BRAHMA](#)”; the highest of the three heavens that constitute the first absorption ([DHYĀNA](#)) of the realm of subtle

materiality ([RŪPADHĀTU](#)) in the Buddhist cosmological system. The term often appears in plural, as mahābrahmāṇaḥ (P. mahābrahmāno), suggesting that this heaven is not the domain of a single brahmā, of whom the divinities of the two lower heavens are his subjects and ministers, but rather that a number of mahābrahmā gods inhabit this heaven. However, it is typically a single Brahmā, often called Brahmā [SAHĀMPATI](#), who appears in the sūtras. In the [BRAHMAJĀLASUTTA](#), the false belief in a creator god derives from the fact that the first mahābrahmā divinity to be reborn in this heaven at the beginning of world cycle falsely imagined himself to be the creator of the beings who were reborn after him in the brahmā heavens, with those beings in turn believing his claim and professing it on earth after they were reborn as humans. As with all the heavens of the realm of subtle materiality, one is reborn as a divinity there through achieving the same level of concentration (dhyāna) as the gods of that heaven during one's practice of meditation in a previous lifetime. See also [BRAHMALOKA](#).

[Mahācakravāda](#). (S). See [CAKRAVĀDA](#).

[mahādarśajñāna](#). (S). See [ADARŚAJÑĀNA](#).

[Mahādeva](#). (T. Lha chen; C. Mohetipo; J. Makadaiba; K. Mahajeba 摩訶提婆). An Indian monk of questionable historicity, credited with the infamous “five theses” (pañcavastūni). Mahādeva appears in numerous accounts of the early centuries of the Buddhist order, but the various reports of dates, his affiliation, and his character are contradictory. Although extolled in some accounts, the [ABHIDHARMAMAHĀVIBHĀSĀ](#) recounts that he had sexual relations with his mother; that he murdered his father, his mother, and several [ARHATS](#); and that his cremation fire was fueled by dog excrement. Some accounts make him a participant at the second Buddhist council (see [COUNCIL, SECOND](#)), said to have occurred a century after the Buddha's death, which resulted in the schism of the [SAMGHA](#) into the conservative [STHAVIRANIKĀYA](#) and the more liberal [MAHĀSĀMGHIKA](#). However, the chief point of controversy there seems to have been ten relatively minor rules of discipline, the most serious of which was the prohibition against monks and nuns handling gold or silver. If Mahādeva was a historical figure, it is more likely that he was involved in a later schism that occurred within the Mahāsāṃghika, as a result of which the followers of Mahādeva formed the [CAITYA](#) subsect. The theses attributed to Mahādeva challenge the authority of the arhat. Although there is a lack of consistency in

the various renditions of the five theses, according to one widely repeated version, the five are (1) arhats are subject to erotic dreams and nocturnal emissions; (2) arhats retain a subtle form of ignorance, called the “unafflicted ignorance” ([AKLISTĀJÑĀNA](#)), which prevents them from knowing the names of people, trees, grasses, and which road to take without being told; (3) arhats are therefore subject to doubt; (4) arhats thus must rely on others for corroboration, including on the question of whether they have achieved enlightenment; (5) entry into the path can be achieved simply by attaining the first [DHYĀNA](#), becoming a stream-enterer ([SROTAĀPANNA](#)), and exclaiming “Oh suffering” (rather than by the more protracted method of the noble eightfold path). These theses, which are widely reported, reflect the Mahāsāṃghika attack on the arhat ideal, and presumably the Sthaviranikāya conception thereof. When these charges were leveled, and by whom, is unclear. In some accounts, Mahādeva was himself subject to each of these faults (reflecting on his transgression, he cried out “Oh suffering” in the night and later sought to deceive those who heard him by explaining that he had been contemplating the first of the [FOUR NOBLE TRUTHS](#)) and stated the five theses to protect his own claim to being an arhat.

[Mahādhammasamādānasutta](#). (C. Shoufa jing; J. Juhōkyō; K. Subōp kyōng 受法經). In Pāli, the “Larger Discourse on Undertaking the [DHARMA](#)”; the forty-sixth sutta in the [MAJJHIMANIKĀYA](#) (a separate [SARVĀSTIVĀDA](#) recension appears as the 175th sūtra in the Chinese translation of the [MADHYAMĀGAMA](#)); preached by the Buddha to a gathering of monks in the [JETAVANA](#) grove at Sāvasthī (S. [ŚRĀVASTĪ](#)). The Buddha explains the different consequences that befall those who act with ignorance and those who act with wisdom. He then describes four ways of undertaking things in this life and the good and bad consequences that accrue to one who follows these ways. The first way is to live a painful life now, followed by a painful future existence; the second way is to live a pleasant life now, followed by a painful existence; the third way is to live a painful life now, followed by a pleasant existence; the fourth way is to live a pleasant life now, followed by a pleasant existence. The Buddha illustrates his points using the similes of a bitter gourd of poison, a bronze cup of a flavorful poisoned beverage, a medicine made from cow’s urine, and a flavorful medicinal drink.

[Mahādukkhakkhandhasutta](#). (C. Kuyin jing; J. Kuongyō; K. Koūm kyōng 苦陰經). In Pāli, the “Greater Discourse on the Mass of Suffering”; the thirteenth sutta in the [MAJJHIMANIKĀYA](#) (a separate [SARVĀSTIVĀDA](#) recension appears as the

ninety-ninth [SŪTRA](#) in the Chinese translation of the [MADHYAMĀGAMA](#)); preached by the Buddha to his disciples at Sāvasthi (S. [ŚRĀVASTĪ](#)) to refute the claims of naked [JAINA](#) ascetics that their teachings were identical to the teachings of the Buddha. The Buddha explains the full implications of sensual pleasures, the advantages of renouncing them, and the path needed to escape from their influence. Finally he asserts that outside his teachings these truths are unknown, and that only a buddha and his disciples can teach of them.

[Mahāgopālakasutta](#). (C. Fangniu pin; J. Hōgobon; K. Pangu p’um 放牛品). In Pāli, the “Greater Discourse on the Cowherd”; the thirty-third sutta in the [MAJJHIMANIKĀYA](#) (separate recensions appear in the Chinese translations of the [SAMUKTĀGAMA](#) and the [EKOTTARĀGAMA](#)); preached by the Buddha to an assembly of monks at the [JETAVANA](#) grove in the city of Sāvasthi (S. [ŚRĀVASTĪ](#)). The Buddha describes the conditions under which the teachings can prosper, using the example of the cowherd. Just as when a cowherd is equipped with the requisite skills in tending his cattle his herd can be expected to grow and prosper, so, too, when a monk is equipped with the requisite skills in leading the holy life, the teachings can be expected to grow and prosper.

[Mahāgosiṅgasutta](#). (C. Niujaosuoluolin jing; J. Gokakusararingyō; K. Ugaksararim kyōng 牛角娑羅林經). In Pāli, the “Greater Discourse in Gosiṅga Park”; the thirty-second sutta in the [MAJJHIMANIKĀYA](#) (a separate [SARVĀSTIVĀDA](#) recension appears as the 184th sūtra in the Chinese translation of the [MADHYAMĀGAMA](#)). On a beautiful moonlit night, while dwelling in the Gosiṅga woodland park, [ŚĀRIPUTRA](#) asks the eminent monks [ĀNANDA](#), [REVATA](#), [ANIRUDDHA](#), [MAHĀKĀŚYAPA](#), and [MAHĀMAUDGALYĀYANA](#) what kind of mendicant might adorn the park with their virtues. Each expresses his view, to which Śāriputra adds his own. The Buddha confirms their opinions, noting that each ideal in its own way would be an adornment to the Gosiṅga park.

[Mahāgovindasutta](#). (C. Diansun jing; J. Tensongyō; K. Chōnjon kyōng 典尊經). In Pāli, the “Great Discourse on Mahāgovinda”; the nineteenth sutta in the [DĪGHANIKĀYA](#) (a separate [DHARMAGUPTAKA](#) recension appears as the third sūtra in the Chinese translation of the [DĪRGHĀGAMA](#)). A celestial musician (gandhabba; [GANDHARVA](#)) named Pañcasikha recounts to the Buddha how the [BRAHMĀ](#) divinity Sanānkumāra once taught his fellow divinities a noble teaching acquired from a brāhmaṇa named Mahāgovinda. The Buddha reveals that he himself was that Mahāgovinda in a previous existence and that the teaching he

set forth then as a bodhisatta (S. [BODHISATTVA](#)) could only lead to rebirth in the brahmā heavens. But now as a buddha, his teaching leads to the higher goals of the stream-enterer (P. sotāpanna; S. [SROTAĀPANNA](#)), once-returner (P. sakadagāmi; S. [SAKRDĀGĀMIN](#)), nonreturner (P. anāgāmi; S. [ANĀGĀMIN](#)), and the highest goal of the arahant ([ARHAT](#)).

[Mahāhatthipadopamasutta](#). (C. Xiangjiyu jing; J. Zōshakuyugyō; K. Sangjōgyu kyōng 象跡喻經). In Pāli, the “Greater Discourse on the Simile of the Elephant’s Footprint”; the twenty-eighth sutta contained in the [MAJJHIMANIKĀYA](#) (a separate [SARVĀSTIVĀDA](#) recension appears as the thirtieth sūtra in the Chinese translation of the [MADHYAMĀGAMA](#)), preached by Sāriputta (S. [ŚĀRIPUTRA](#)) to an assembly of monks at the [JETAVANA](#) grove in the town of Sāvatti (S. [ŚRĀVASTĪ](#)). Using the simile of the elephant’s footprint, Sāriputta explains how just as the footprints of all animals can be contained in the footprint of an elephant, so all wholesome phenomena were contained in the [FOUR NOBLE TRUTHS](#). He expounds on the four truths in terms of the four elements ([MAHĀBHŪTA](#)) of earth, water, fire, and air, and the dependent origination (P. paṭiccasamuppāda; S. [PRATĪTYASAMUTPĀDA](#)) of the five aggregates (P. khandha; S. [SKANDHA](#)).

[mahājanapada](#). (T. grong khyer chen po; C. dacheng; J. daijō; K. taesōng 大城). In Pāli, literally “great country.” Sixteen mahājanapadas or states are mentioned in Pāli texts as flourishing in northern India at the time of the Buddha. They were Kāsi, Kosala ([KOŚALA](#)), Aṅga, [MAGADHA](#), Vajji, [MALLA](#), Cetiya, Vamśa, Kuru, Pañcāla, Maccha, Sūrasena, Assaka, [AVANTI](#), [GANDHĀRA](#), and Kamboja. Of these, the first fourteen are included in Majjhimadesa (the middle country), while the last two are in Uttarāpatha (the northern region).

[Mahākāla](#). (T. Nag po chen po; C. Daheitian; J. Daikokuten; K. Taehŭkch’ōn 大黑天). In Sanskrit, the “Great Black One”; one of the most important wrathful deities of tantric Buddhism. He is a [DHARMAPĀLA](#) or “protector of the dharma,” of the [LOKOTTARA](#) or “supramundane” variety; that is, one regarded as the manifestation of a buddha or bodhisattva. He is said to be the wrathful manifestation of [AVALOKITEŚVARA](#), the bodhisattva of compassion. In the form of Avalokiteśvara with a thousand arms and eleven heads (see [SĀHASRABHUJASĀHASRANETRĀVALOKITEŚVARA](#)), the top head is that of Mahākāla. He has many aspects, including two-, four-, and six-armed forms, and appears in several colors, the most famous being black and white. He wears a crown of five skulls, symbolizing the transmutation of the five afflictions ([KLEŚA](#)) into the five

wisdoms ([PAÑCAJÑĀNA](#)) of a buddha. One of his most popular forms in Tibet is as Pañjaranātha or “Protector of the Pavilion.” In this form, which derives from the *Vajrapañjaratantra*, he is the protector of the [HEVAJRATANTRA](#) cycle. Here is depicted as a dwarf-like figure, holding a wooden staff across his arms. In Japan, where he is known as Daikokuten, Mahākāla is a less frightening figure and is one of the “seven gods of good fortune” ([SHICHIFUKUJIN](#)), extolled as a god of wealth and a god of the household.

[Mahākālika](#). (S). See [KĀLIKA](#).

[mahākālpa](#). (P. mahākappa; T. bskal chen; C. dajie; J. daikō; K. taegŏp 大劫). In Sanskrit, “great eon”; one of the vast units of time in Buddhist cosmology, said to be equal in length to eighty [KALPAS](#). A kalpa is traditionally said to be the length of time it would take to remove all the mustard seeds stored in a cube that was one [YOJANA](#) in height, length, and breadth, if one seed were removed each century. It is also said to be the length of time it would take to wear away a stone of similar size by wiping that stone with a piece of silk once every century. When it is said that a great kalpa is equal in length to eighty kalpas, a kalpa is sometimes referred to as an “intermediate eon” ([ANTARAKALPA](#)). When used to describe the duration of a particular world system, a great eon is divided into four periods: a period of nothingness, a period of creation, and period of subsistence, and a period of destruction, each twenty kalpas in length (see [KALPA](#)).

[Mahākapphina](#). (P. Mahākappina; T. Ka pi na chen po; C. Mohejiebinna; J. Makakōhinna; K. Mahagŏppinna 摩訶劫賓那). Sanskrit proper name of an eminent [ARHAT](#) deemed by the Buddha foremost among those who taught monks. According to Pāli accounts (where he is referred to as Mahākappina), he was older than the Buddha and had been the king of a frontier kingdom whose capital was Kukkutavatī. His wife was a princess from the city of Sāgala named Anojā. Mahākappina was endowed with a great intellect and every day he sent messengers from his city to inquire if scholars were traveling through his realm. One day, merchants from Sāvatti (S. [ŚRĀVASTĪ](#)) visited Kukkutavatī and told the king about the Buddha and his teachings. On hearing the news, the king was overjoyed and, presenting the travelers with a gift of thousands of coins, resolved to meet the Buddha himself. Setting out for Sāvatti with his retinue, Mahākappina found his path blocked by three rivers. These he crossed by means of an “asseveration of truth” (see [SATYAVACANA](#)), in which he declared, “If this

teacher indeed be a perfect buddha, let not even the hooves of my horses get wet.” When the royal delegation approached the Buddha, he preached to them, whereupon all of them attained arhatship and entered the order. When Anojā and the other royal wives heard the news, they resolved to follow their husbands and enter the order as nuns. When the Buddha preached to the women they all attained stream-entry (P. sotāpanna; S. [SROTAĀPANNA](#)) and took ordination. Mahākappina used to spend his time in the bliss of meditative absorption (P. [JHĀNA](#); S. [DHYĀNA](#)) and was wont to exclaim, “Oh joy, Oh joy.” While dwelling at the Maddakucchi Deer Park, he wondered whether he needed to attend the fortnightly confessional (P. [UPOSATHA](#); S. [UPOSADHA](#)). The Buddha, knowing his thoughts, appeared before him and instructed him to attend. Thinking Mahākappina too inactive, he instructed him to teach the dharma to others. Mahākappina complied, and by means of a single sermon a thousand recluses attained arhatship. In the Mahāyāna sūtras, where he is known by his Sanskrit name, Mahākappiṇa, he is listed among the monks in audience for the preaching of the [SUKHĀVATĪVYŪHASŪTRA](#).

[mahākaruṇā](#). (T. snying rje chen mo; C. dabeij; J. daihi K. taebi 大悲). In Sanskrit, “great compassion”; the compassion specific to [BODHISATTVAS](#), viz., the wish to free all sentient beings from suffering. In expositions of the bodhisattva path, great compassion is distinguished from compassion ([KARUNĀ](#)), often defined as the wish that others be free from suffering. “Great compassion” is distinguished both by its scope (all beings) and its agency (one oneself wishes to remove the suffering of others). Thus, it is said that compassion is possessed by both [ŚRĀVAKAS](#) and [PRATYEKABUDDHAS](#) who seek the state of the [ARHAT](#), whereas great compassion is limited to bodhisattvas, who decide to seek buddhahood in order to fulfill the wish to liberate all beings from suffering. In this sense, great compassion is regarded as the precursor to [BODHICITTA](#). Thirty-two specific types of a tathāgata’s great compassion are listed in the [MAHĀVYŪTPATTI](#). Mahākaruṇā is also an epithet of [AVALOKITEŚVARA](#), the bodhisattva of compassion (see [MAHĀKARUNĪKA](#)), and specifically to his manifestation as the “thousand-armed and thousand-handed [AVALOKITEŚVARA](#)” (S. [SĀHASRABHUJASĀHASRANETRĀVALOKITEŚVARA](#)).

[Mahākaruṇika](#). (T. Thugs rje chen po; C. Dabeizhe; J. Daihisha; K. Taebija 大悲者). In Sanskrit, “Great Compassionate One”; an epithet of [AVALOKITEŚVARA](#), the bodhisattva of compassion. The name Mahākaruṇika is also used specifically to

refer to one of the more famous iconographic forms of the bodhisattva, his manifestation as the “thousand-armed and thousand-handed Avalokiteśvara” (S. [SĀHASRABHUJASĀHASRANETRĀVALOKITEŚVARA](#)). In some versions of this image, each of the hands has an eye in the palm, indicating its ability compassionately to see and offer assistance to suffering sentient beings. In China, the esoteric code associated with Mahākaruṇika, the [DABEI ZHOU](#) (great compassion [DHĀRANĪ](#)), is often chanted at regular offices, especially in Chan monasteries, and is a common part of funeral ceremonies for monks and nuns. ¶ In the [UPĀYAKAUŚALYASŪTRA](#), Mahākaruṇika is the name of the Buddha in his previous life as a ship captain. Learning that a bandit plans to murder a group of five hundred merchants also traveling on the ship, the ship captain kills the bandit in order to save the lives of the merchants and to prevent the bandit from committing himself the misdeed of murder. It is said that the ship captain did not suffer any negative results from this deed. This story is often cited as an example of justifiable homicide in Buddhism.

[Mahākāśyapa](#). (P. Mahākassapa; T. 'Od srung chen po; C. Mohejiashe; J. Makakashō; K. Mahagasōp 摩訶迦葉). Sanskrit name of one of the Buddha's leading disciples, regarded as foremost in the observance of ascetic practices (P. [DHUTANGA](#); S. dhūtagaṇa). According to the Pāli accounts (where he is called Mahākassapa) his personal name was Pippali and he was born to a brāhmaṇa family in [MAGADHA](#). Even as a child he was inclined toward renunciation and as a youth refused to marry. Finally, to placate his parents, he agreed to marry a woman matching in beauty a statue he had fashioned. His parents found a match in Bhaddā Kapilānī (S. [BHADRA-KAPILĀNĪ](#)), a beautiful maiden from Sāgala. But she likewise was inclined toward renunciation. Both sets of parents foiled their attempts to break off the engagement, so in the end they were wed but resolved not to consummate their marriage. Pippali owned a vast estate with fertile soil, but one day he witnessed worms eaten by birds turned up by his plowman. Filled with pity for the creatures and fearful that he was ultimately to blame, he resolved then and there to renounce the world. At the same time, Bhaddā witnessed insects eaten by crows as they scurried among sesame seeds put out to dry. Feeling pity and fear at the sight, she also resolved to renounce the world. Realizing they were of like mind, Pippali and Bhaddā put on the yellow robes of mendicants and abandoned their property. Although they left together, they parted ways lest they prove a hindrance to one another. Realizing what had transpired, the Buddha sat along Pippali's path and showed himself resplendent

with yogic power. Upon seeing the Buddha, Pippali, whose name thenceforth became Kassapa, immediately recognized him as his teacher and was ordained. Traveling to Rājagaha (S. [RĀJAGRHA](#)) with the Buddha, Mahākassapa requested to exchange his fine robe for the rag robe of the Buddha. The Buddha consented, and his conferral of his own rag robe on Mahākassapa was taken as a sign that, after the Buddha's demise, Mahākassapa would preside over the convention of the first Buddhist council (see [COUNCIL, FIRST](#)). Upon receiving the Buddha's robe, he took up the observance of thirteen ascetic practices (dhutaṅga) and in eight days became an arahant (S. [ARHAT](#)). Mahākassapa possessed great supranormal powers (P. iddhi; S. [RDDHI](#)) and was second only to the Buddha in his mastery of meditative absorption (P. [JHĀNA](#); S. [DHYĀNA](#)). His body was said to be adorned with seven of the thirty-two marks of a superman ([MAHĀPURUṢĀLAKSANA](#)). So revered by the gods was he, that at the Buddha's funeral, the divinities would not allow the funeral pyre to be lit until Mahākassapa arrived and had one last chance to worship the Buddha's body. Mahākassapa seems to have been the most powerful monk after the death of the Buddha and is considered by some schools to have been the Buddha's successor as the first in a line of teachers (dharmācārya). He is said to have called and presided over the first Buddhist council, which he convened after the Buddha's death to counter the heresy of the wicked monk [SUBHADRA](#) (P. Subhadda). Before the council began, he demanded that [ĀNANDA](#) become an arhat in order to participate, which Ānanda finally did early in the morning just before the event. At the council, he questioned Ānanda and [UPĀLI](#) about what should be included in the [SŪTRA](#) and [VINAYA](#) collections ([PITAKA](#)), respectively. He also chastised Ānanda for several deeds of commission and omission, including his entreaty of the Buddha to allow women to enter the order (see [MAHĀPRAJĀPATĪ](#)), his allowing the tears of women to fall on the Buddha's corpse, his stepping on the robe of the Buddha while mending it, his failure to recall which minor monastic rules the Buddha said could be ignored after his death, and his failure to ask the Buddha to live for an eon or until the end of the eon (see [CĀPĀLACAITYA](#)). Pāli sources make no mention of Mahākassapa after the events of the first council, although the Sanskrit [AŚOKĀVADĀNA](#) notes that he passed away beneath three hills where his body will remain uncorrupted until the advent of the next buddha, [MAITREYA](#). At that time, his body will reanimate itself and hand over to Maitreya the rag robe of [ŚĀKYAMUNI](#), thus passing on the dispensation of the buddhas. It is said that the robe will be very small, barely fitting over the finger of the much larger Maitreya. ¶ Like many of the great arhats, Mahākāśyapa appears

frequently in the [MAHĀYĀNA](#) sūtras, sometimes merely listed as a member of the audience, sometimes playing a more significant role. In the [VIMALAKĪRTINIRDEŚA](#), he is one of the [ŚRĀVAKA](#) disciples who is reluctant to visit Vimalakīrti. In the [SADDHARMAPUNĀRIKASŪTRA](#), he is one of four arhats who understands the parable of the burning house and rejoices in the teaching of a single vehicle ([EKAYĀNA](#)); later in the sūtra, the Buddha prophesies his eventual attainment of buddhahood. Mahākāśyapa is a central figure in the [CHAN](#) schools of East Asia. In the famous Chan story in which the Buddha conveys his enlightenment by simply holding up a flower before the congregation and smiling subtly (see [NIANHUA WEIXIAO](#)), it is only Mahākāśyapa who understands the Buddha's intent, making him the first recipient of the Buddha's "mind-to-mind" transmission ([YIXIN CHUANXIN](#)). He is thus considered the first patriarch ([ZUSHI](#)) of the Chan school.

[Mahākātyāyana](#). (P. Mahākaccāna; T. Ka tyā'i bu chen po; C. Mohejiazhanyan; J. Makakasen'en; K. Mahagajōnyōn 摩訶迦旃延). Also known as Kātyāyana (P. Kaccāna, Kaccāyana); Sanskrit name of one of the Buddha's chief disciples and an eminent [ARHAT](#) deemed foremost among the Buddha's disciples in his ability to elaborate on the Buddha's brief discourses. According to the Pāli accounts, where he is known as Mahākaccāna, he was the son of a brāhmaṇa priest who served King Caṇḍappajjota of [AVANTI](#). He was learned in the Vedas and assumed his father's position upon his death. He was called Kaccāna because of the golden hue of his body and because it was the name of his clan. Once, he and seven companions were sent by the king to invite the Buddha to Avanti, the capital city of Ujjenī (S. Ujjayinī). The Buddha preached a sermon to them, whereupon they all attained arhatship and entered the order. Mahākaccāna took up residence in a royal park in Ujjenī, where he was treated with great honor by the king. He was such an able preacher and explicator of doctrine that many persons joined the order, until, it is said, the entire kingdom of Avanti sparkled with yellow robes. He became most renowned for his discourses in the [MADHUPINDIKASUTTA](#), *Kaccāyanasutta*, and *Parāyanasutta*. In a previous life, Mahākaccāna was a thaumaturge (vijjādhara; S. [VIDHYĀDHARA](#)) during the time of the buddha Padumuttara. It was then that he first made the vow to win the eminence he eventually did under Gotama (S. Gautama) Buddha. Although living far away in Avanti, Mahākaccāna often went to hear the Buddha preach, and the assembled elders always left a place for him. He is said to have requested the Buddha to allow for special dispensation to ordain new monks in

outlying regions without the requisite number of monastic witnesses. Mahākaccāna was noted for his ability to provide detailed exegeses of the Buddha's sometimes laconic instructions and brief verses, and several suttas in the Pāli canon are ascribed to him. According to tradition, he is the author of the [NETTIPPAKARANA](#) and the [PETAKOPADESA](#), which seek to provide the foundational principles that unify the sometimes variant teachings found in the suttas; these texts are some of the earliest antecedents of commentarial exegesis in the Pāli tradition and are the only commentaries included in the suttapitaka proper. He is also said to be the author of the Pāli grammar, the *Kaccāyanavyākaraṇa*. According to the Sanskrit tradition, Mahākātyāyana was the initiator of the [STHAVIRANIKĀYA](#) branch of the mainstream Buddhist schools and traditional compiler of the [ABHIDHARMA](#). The [JÑĀNAPRASTHĀNA](#) of the [SARVĀSTIVĀDA ABHIDHARMAPITAKA](#) is attributed to him, but it was certainly composed several hundred years later by an author of the same name. He is often depicted holding an alm's bowl ([PĀTRA](#)) or with his fingers interlaced at his chest. Like many of the great arhats, Mahākātyāyana appears frequently in the [MAHĀYĀNA](#) sūtras, sometimes merely as a member of the audience, sometimes playing a more significant role. In the [VIMALAKĪRTINIRDEŚA](#), he is one of the [ŚRĀVAKA](#) disciples who is reluctant to visit the lay [BODHISATTVA VIMALAKĪRTI](#). In the [SADDHARMAPUNBARĪKASŪTRA](#), he is one of four arhats who understand the parable of the burning house and who rejoices in the teaching of the one vehicle ([EKAYĀNA](#)); later in the sūtra, the Buddha prophesies his eventual attainment of buddhahood.

[Mahākausthila](#). (S). See [KAUSTHILA](#).

[Mahālisutta](#). In Pāli, the “Discourse to Mahāli”; the sixth sutta of the [DĪGHANIKĀYA](#) (there is no equivalent recension in the Chinese translations of the [ĀGAMAS](#)); preached by the Buddha to the Licchavi chief Mahāli at the Kūṭāgārasālā in Vesālī (S. [VAISĀLĪ](#)). Mahāli tells the Buddha that the ascetic Sunakkhatta claimed to be able to see heavenly forms but was not able to hear heavenly sounds. Mahāli asks whether such attainments are possible, whereupon the Buddha explains how through meditative absorption (P. [JHĀNA](#); S. [DHYĀNA](#)) they indeed can be developed. He further explains to Mahāli that these supernatural powers are not the reason why people join the Buddhist order, but rather to attain the four degrees of sanctity, namely, those stream-enterer (P. [sotāpanna](#); S. [SROTAĀPANNA](#)), once-returner (P. [sakadagāmi](#); S. [SAKRDĀGĀMIN](#)),

nonreturner (P. *anāgāmi*; S. [ANĀGĀMIN](#)), and arahant (S. [ARHAT](#)). These are to be attained by following the noble eightfold path (P. *ariyāṭṭhaṅgikamagga*; see S. [ASTĀṄGIKAMĀRGA](#)). The question is then raised as to whether the soul and body are the same or different. This leads to another discussion of Buddhist practice and attainments, beginning with taking refuge in the three jewels, observing the precepts, renouncing the world to become a Buddhist monk, and controlling the senses with mindfulness (P. *sati*; S. [SMRTI](#)), to cultivating the four meditative absorptions (P. *jhāna*; S. *dhyāna*), and developing the six superknowledges (P. *abhiññā*; S. [ABHIJÑĀ](#)), which culminate in enlightenment and liberation from the cycle of rebirth.

[Mahāmaudgalyāyana](#). (P. *Mahāmoggallāna*; T. *Mo’u ’gal gyi bu chen po*; C. *Mohemujianglian/Mulian*; J. *Makamokkenren/Mokuren*; K. *Mahamokkōllyōn/Mongnyōn* 摩訶目犍連/目連). An eminent [ARHAT](#) and one of the two chief disciples of the Buddha, often depicted together with his friend [ŚĀRIPUTRA](#) flanking the Buddha. *Mahāmaudgalyāyana* was considered supreme among the Buddha’s disciples in supranormal powers ([RDDHI](#)). According to Pāli accounts, where he is called *Moggallāna*, he was older than the Buddha and born on the same day as *Śāriputra* (P. *Sāriputta*). Both he and *Śāriputra* were sons of wealthy families and were friends from childhood. Once, when witnessing a play, the two friends were overcome with a sense of the impermanence and the vanity of all things and decided to renounce the world as mendicants. They first became disciples of the agnostic *Saṅjaya Belaṭṭhiputta* ([SAÑJAYA VAIRĀTĪPUTRA](#)), although later they took their leave and wandered the length and breadth of India in search of a teacher. Finding no one who satisfied them, they parted company, promising one another that if one should succeed he would inform the other. Later *Śāriputra* met the Buddha’s disciple, *Assaji* (S. [AŚVAJIT](#)), who recited for him a précis of the Buddha’s teachings, the so-called [YE DHARMĀ](#) verse, which immediately prompted *Śāriputra* to attain the path of a stream-enterer ([SROTAĀPANNA](#)). He repeated the stanza to *Mahāmaudgalyāyana*, who likewise immediately became a stream-enterer. The two friends thereupon resolved to take ordination as disciples of the Buddha and, together with five hundred disciples of their former teacher *Saṅjaya*, proceeded to the *Veḷuvana* (S. [VENUVANA VIHĀRA](#)) grove where the Buddha was residing. The Buddha ordained the entire group with the formula *ehi bhikkhu pabbajjā* (“Come forth, monks”; see [EHIBHIKSUKĀ](#)), whereupon all five hundred became arhats, except for *Śāriputra* and *Mahāmaudgalyāyana*. *Mahāmaudgalyāyana* attained arhatship

seven days after his ordination, while Śāriputra reached the goal one week later. The Buddha declared Śāriputra and Mahāmaudgalyāyana his chief disciples the day they were ordained, noting that they had both strenuously exerted themselves in countless previous lives for this distinction; they appear often as the bodhisattva's companions in the [JĀTAKAs](#). Śāriputra was chief among the Buddha's disciples in wisdom, while Mahāmaudgalyāyana was chief in mastery of supranormal powers. He could create doppelgängers of himself and transform himself into any shape he desired. He could perform intercelestial travel as easily as a person bends his arm, and the tradition is replete with the tales of his travels, such as flying to the Himālayas to find a medicinal plant to cure the ailing Śāriputra. Mahāmaudgalyāyana said of himself that he could crush Mount [SUMERU](#) like a bean and roll up the world like a mat and twirl it like a potter's wheel. He is described as shaking the heavens of [ŚAKRA](#) and [BRAHMĀ](#) to dissuade them from their pride, and he often preached to the divinities in their abodes. Mahāmaudgalyāyana could see ghosts ([PRETA](#)) and other spirits without having to enter into meditative trance as did other meditation masters, and because of his exceptional powers the Buddha instructed him alone to subdue the dangerous [NĀGA](#), Nandopananda, whose huge hood had darkened the world. Mahāmaudgalyāyana's powers were so immense that during a terrible famine, he offered to turn the earth's crust over to uncover the ambrosia beneath it; the Buddha wisely discouraged him, saying that such an act would confound creatures. Even so, Mahāmaudgalyāyana's supranormal powers, unsurpassed in the world, were insufficient to overcome the law of cause and effect and the power of his own former deeds, as the famous tale of his death demonstrates. A group of naked [JAINA](#) ascetics resented the fact that the people of the kingdom of [MAGADHA](#) had shifted their allegiance and patronage from them to the Buddha and his followers, and they blamed Mahāmaudgalyāyana, who had reported that, during his celestial and infernal travels, he had observed deceased followers of the Buddha in the heavens and the followers of other teachers in the hells. They hired a group of bandits to assassinate the monk. When he discerned that they were approaching, the eighty-four-year-old monk made his body very tiny and escaped through the keyhole. He eluded them in different ways for six days, hoping to spare them from committing a deed of immediate retribution ([ĀNANTARYAKARMAN](#)) by killing an arhat. On the seventh day, Mahāmaudgalyāyana temporarily lost his supranormal powers, the residual karmic effect of having beaten his blind parents to death in a distant previous lifetime, a crime for which he had previously been reborn in hell. The bandits

ultimately beat him mercilessly, until his bones had been smashed to the size of grains of rice. Left for dead, Mahāmaudgalyāyana regained his powers and soared into the air and into the presence of the Buddha, where he paid his final respects and passed into [NIRVĀNA](#) at the Buddha's feet. ¶ Like many of the great arhats, Mahāmaudgalyāyana appears frequently in the [MAHĀYĀNA](#) sūtras, sometimes merely listed as a member of the audience, sometimes playing a more significant role. In the [VĪMALAKĪRTINIRDEŚA](#), he is one of the [ŚRĀVAKA](#) disciples who is reluctant to visit [VĪMALAKĪRTI](#). In the [SADDHARMAPUNDIRĪKASŪTRA](#), he is one of four arhats who understands the parable of the burning house and who rejoices in the teaching of the one vehicle ([EKAYĀNA](#)); later in the sūtra, the Buddha prophesies his eventual attainment of buddhahood. Mahāmaudgalyāyana is additionally famous in East Asian Buddhism for his role in the apocryphal [YULANBEN JING](#). The text describes his efforts to save his mother from the tortures of her rebirth as a ghost (preta). Mahāmaudgalyāyana (C. Mulian) is able to use his supranormal powers to visit his mother in the realm of ghosts, but the food that he offers her immediately bursts into flames. The Buddha explains that it is impossible for the living to make offerings directly to the dead; instead, one should make offerings to the [SAMGHA](#) in a bowl, and the power of their meditative practices will be able to save one's ancestors and loved ones from rebirths in the unfortunate realms ([DURGATI](#)).

[Mahāmāyā](#). (S). See [MĀYĀ](#).

[Mahāmāyātāntra](#). (T. Sgyu 'phrul chen mo'i rgyud). In Sanskrit, the “Great Illusion Tantra”; an important [ANUTTARAYOGATANTRA](#) of the “mother tantra” class, famous for its instructions on “dream yoga,” one of the [SIX YOGAS OF NĀROPA](#). It was translated into Tibetan during the earlier dissemination of the dharma ([SNGA DAR](#)) by [VAIROCANA](#) and [GNUBS CHEN SANGS RGYAS YE SHES](#). It would later be counted as one of the five principal tantras of the [SHANGS PA BKA' BRGYUD](#) sect of Tibetan Buddhism.

[Mahāmāyūrī](#). (T. Rma bya chen mo; C. Kongque mingwang; J. Kujaku myōō; K. Kongjak myōngwang 孔雀明王). In Sanskrit, “Great Peacock”; one of the five female protectors ([RAKSĀ](#)) of [VAJRAYĀNA](#) Buddhism, who frequently appear in [MANDALAS](#) and remain important in the Newar Buddhism of Nepal. She is green in color and is sometimes depicted holding a peacock feather, à propos her name. She is considered the female emanation of the buddha [AMOGHASIDDHI](#). Mahāmāyūrī has long been associated with curing snakebites. For example, in

the *Mahāmāyūrīvidyārājñīdhāraṇī* (T. Rma bya chen mo'i gzungs), an early Buddhist [TANTRA](#), later classified as a [KRIYĀTANTRA](#), a newly ordained monk named Svāti is bitten by a poisonous snake. [ĀNANDA](#) informs the Buddha, who imparts the [DHĀRANĪ](#) of Mahāmāyūrī which, when recited, cures snakebites.

[Mahāmeghasūtra](#). (T. Sprin chen po'i mdo; C. Dafangdeng wuxiang jing/Dayun jing; J. Daihōdō musōkyō/Daiungyō; K. Taebangdŭng musang kyōng/Taeun kyōng 大方等無想經/大雲經). In Sanskrit, the “Great Cloud Sūtra”; it is also known in China as the *Dafangdeng wuxiang jing*. The *Mahāmeghasūtra* contains the teachings given by the Buddha to the bodhisattva “Great Cloud Secret Storehouse” (C. Dayunmizang) on the inconceivable means of attaining liberation, [SAMĀDHI](#), and the power of [DHĀRANĪS](#). The Buddha also declares that [TATHĀGATAS](#) remain forever present in the dharma and the [SAMGHA](#) despite having entered [PARINIRVĀNA](#) and that they are always endowed with the four qualities of [NIRVĀNA](#) mentioned in the [MAHĀPARINIRVĀNASŪTRA](#), namely, permanence, bliss, purity, and selfhood (see [GUNAPĀRAMITĀ](#)). The *Mahāparinirvāṇasūtra*'s influence on the *Mahāmeghasūtra* can also be witnessed in the story of the goddess “Pure Light” (C. Jingguang). Having heard the *Mahāparinirvāṇasūtra* in her past life, the goddess is told by the Buddha that she will be reborn as a universal monarch ([CAKRAVARTIN](#)). The sūtra is often cited for its prophecy of the advent of [NĀGĀRJUNA](#), as well as for its injunctions against meat-eating. It was also recited in order to induce rain. In China, commentators on the *Mahāmeghasūtra* identified the newly enthroned Empress [WU ZETIAN](#) as the reincarnation of the goddess, seeking thereby to legitimize her rule. As Emperor Gaozong (r. 649–683) of the Tang dynasty suffered from increasingly ill health, his ambitious and pious wife Empress Wu took over the imperial administration. After her husband's death she exiled the legitimate heir Zhongzong (r. 683–684, 705–710) and usurped the throne. One of the many measures she took to gain the support of the people was the publication and circulation of the *Mahāmeghasūtra*. Two translations by [ZHU FONIAN](#) and [DHARMAKSEMA](#) were available at the time. Wu Zetian also ordered the establishment of monasteries called DAYUNSI (“Great Cloud Monastery”) in every prefecture of the empire.

[Mahāmeghavana](#). In Pāli, “Great Cloud Grove”; a park in Sri Lanka donated to [MAHINDA](#) for use by the saṅgha (S. [SAMGHA](#)) by King [DEVĀNAMPIYATIṢṢA](#). The park was located on the southern outskirts of the Sinhalese capital,

[ANURĀDHAPURA](#), and received its name because a cloud appeared and rained upon the spot when the park was first laid out. The Mahāmeghavana was considered especially auspicious because it was said to have been visited by four of the five buddhas of the current auspicious eon (S. [BHADRAKALPA](#); P. bhaddakappa), a fact Mahinda pointed out to the king after the park was donated to the saṅgha. The Mahameghavana came to be the site of many of the major monuments, shrines, and institutions of Sinhalese Buddhist history. These included the [MAHĀVIHĀRA](#) monastery, built for Mahinda, which became headquarters of the [THERAVĀDA](#) fraternity; the [THŪPĀRĀMA](#) monastery, which housed the first [STŪPA](#) or reliquary mound erected on the island; the southern branch of the [BODHI TREE](#), brought to the island from India by Mahinda's sister, the elder nun [SAṄGHAMITTĀ](#); and the [MAHĀTHŪPA](#) and [LOHAPĀSĀDA](#) built by King [DUTTHAGĀMANI](#). Subsequently at the Mahāmeghavana were also built the [ABHAYAGIRI](#) monastery by King [VATTAGĀMANI ABHAYA](#) and the [JETAVANA](#) monastery by King [MAHĀSENA](#). These two monasteries became headquarters of rival fraternities that seceded from the Mahāvihāra.

[Mahāmoggallāna](#). (P). See [MAHĀMAUDGALYĀYANA](#).

[Mahāmucilinda](#). (S). See [MUCILINDA](#).

[mahāmudrā](#). (T. phyag rgya chen po; C. dayin/dashouyin; J. daiin/daishuin; K. taein/taesuin 大印/大手印). In Sanskrit, “great seal”; an important term in tantric Buddhism, especially in the traditions that flourished in Tibet. In Tibet, although it is extolled by all sects, mahāmudrā is particularly associated with the [BKA' BRGYUD](#) sect and the lineage coming from [TILOPA](#) and [NĀROPA](#) to [MAR PA](#) and [MI LA RAS PA](#). There, it is regarded as the crowning experience of Buddhist practice. It is a state of enlightened awareness in which phenomenal appearance and emptiness ([ŚŪNYATĀ](#)) are unified. It is also used to refer to the fundamental reality that places its imprint or “seal” on all phenomena of [SAMŚĀRA](#) and [NIRVĀNA](#). Mahāmūdrā literature exalts the ordinary state of mind as being both the natural and ultimate state, characterized by lucidity and simplicity. In mahāmudrā, the worldly mind is valued for its ultimate identity with the ordinary mind; every deluded thought contains within it the lucidity and simplicity of the ordinary mind. This identity merely needs to be recognized to bring about the dawning of wisdom, the realization that a natural purity pervades all existence, including the deluded mind. It is usually set forth in a threefold rubric of the basis (gzhi), path (lam), and fruition ('bras bu), with the first

referring to the pure nature of the ordinary mind, the second referring to becoming aware of that mind through the practice of meditation, and the third referring to the full realization of the innate clarity and purity of the mind. There is some debate in Tibet whether mahāmudrā is exclusively a tantric practice or whether there is also a [SŪTRA](#) version, connected with [TATHĀGATAGARBHA](#) teachings. ¶ In tantric practice, mahāmudrā is also highest of the four seals, the others being the action seal ([KARMAMUDRĀ](#)), the pledge seal ([SAMAYAMUDRĀ](#)), and the wisdom seal ([JÑĀNAMUDRĀ](#)).

[Mahāmudropadeśa](#). (T. Phyag rgya chen po'i man ngag). In Sanskrit, “Instructions on the Great Seal”; a text known primarily through its Tibetan translations. It records seminal instructions on the view and practice of [MAHĀMUDRĀ](#), taught by [TILOPA](#) to his disciple [NĀROPA](#) on the banks of the Ganges River. Due to this setting, the work is commonly known in Tibet as the *Phyag chen gang gā ma* (“Ganges Mahāmudrā”) or simply the *Gang gā ma*. Several versions are preserved in the Tibetan Buddhist canon and the writings of various Tibetan Buddhist masters.

[Mahāmuni](#). (T. Thub pa chen po; C. Dasheng; J. Daishō; K. Taesōng 大聖). In Sanskrit and Pāli, “Great Sage”; one of the common epithets of the Buddha, which figures in the Buddha’s name [MANTRA](#): oṃ muni muni Mahāmuni Śākyamuni svāhā. Mahāmuni is also the name of the most famous and venerated image of the Buddha in Burma; see [ARAKAN BUDDHA](#).

[Mahānāman](#). (P. Mahānāma; T. Ming chen; C. Mohenan; J. Makaan; K. Mahanam 摩訶男). The Sanskrit proper name of two significant disciples of the Buddha. ¶ Mahānāman was one of the five ascetics (S. [PAÑCAVARGIKA](#); P. pañcavaggiyā; alt. S. bhadravargīya) who was a companion of Prince [SIDDHĀRTHA](#) during his practice of austerities and hence one of the first disciples converted by the Buddha at the Deer Park ([MRGADĀVA](#)) in [RSIPATANA](#) following his enlightenment. Together with his companions, Mahānāman heard the Buddha’s first sermon, the “Setting in Motion the Wheel of Dharma” (S. [DHARMAKAPRAVARTANASŪTRA](#); P. [DHAMMACAKKAPPAVATTANASUTTA](#)), and he attained the state of a stream-enterer ([SROTAĀPANNA](#)) three days later. He and the others became [ARHATS](#) while listening to the Buddha preach the [ANATTALAKKHANASUTTA](#). Mahānāman later traveled to the town of Macchikāsaṇḍa, and, while he was out on alms rounds, the householder [CITTA](#) saw him. Citta was greatly impressed by Mahānāman’s dignified deportment,

and invited him to his house for an meal offering. Having served Mahānāman the morning meal and listened to his sermon, Citta was inspired to offer his pleasure garden Ambāṭakavana to Mahānāman as a gift to the [SAMGHA](#), and built a monastery there. ¶ Another Mahānāman was also an eminent lay disciple, whom the Buddha declared to be foremost among laymen who offer choice alms food. According to the Pāli account, Mahānāman was Anuruddha's (S. [ANIRUDDHA](#)) elder brother and the Buddha's cousin. It was with Mahānāman's permission that Anuruddha joined the order with other Sākiyan (S. [ŚĀKYA](#)) kinsmen of the Buddha. Mahānāman was very generous in his support of the order. During a period of scarcity when the Buddha was dwelling at Verañja, he supplied the monks with medicines for three periods of four months each. Mahānāman was keenly interested in the Buddha's doctrine and there are several accounts in the scriptures of his conversations with the Buddha. Once while the Buddha lay ill in the Nigrodhārāma, [ĀNANDA](#) took Mahānāman aside to answer his questions on whether concentration ([SAMĀDHI](#)) preceded or followed upon knowledge. Mahānāman attained the state of a once-returner (sakadāgāmi; S. [SAKRDĀGĀMIN](#)), but his deception toward Pasenadi (S. [PRASENAJIT](#)), the king of Kosala (S. [KOŚALA](#)), precipitated the eventual destruction of the Sākiya (S. [ŚĀKYA](#)) clan. Pasenadi had asked Mahānāman for the hand of a true Sākiyan daughter in marriage, but the latter, out of pride, instead sent Vāsabhakkhattiyā, a daughter born to him by a slave girl. To conceal the treachery, Mahānāman feigned to eat from the same dish as his daughter, thus convincing Pasenadi of her pure lineage. The ruse was not discovered until years later when Viḍuḍabha, the son of Pasenadi and Vāsabhakkhattiyā, was insulted by his Sākiyan kinsmen who refused to treat him with dignity because of his mother's status as the offspring of a slave. Viḍuḍabha vowed revenge and later marched against Kapilavatthu (S. [KAPILAVASTU](#)) and slaughtered all who claimed Sākiyan descent. ¶ Another Mahānāma was the c. fifth century author of the Pāli [MAHĀVAMSA](#).

[Mahānidānasutta](#). (C. Dayuan fangbian jing; J. Daien hōbengyō; K. Taeyōn pangp'yōn kyōng 大緣方便經). In Pāli, the “Great Discourse on Causality”; the fifteenth sutta of the [DĪGHANIKĀYA](#) (a separate [DHARMAGUPTAKA](#) recension appears as the thirteenth sūtra in the Chinese translation of the [DĪRGHĀGAMA](#)); preached by the Buddha to [ĀNANDA](#) in the market town of Kammāsadhamma to dispel his wrong view that the doctrine of dependent origination (P. paṭiccasamuppāda; S. [PRATĪTYASAMUTPĀDA](#)) only appears to be profound. He

then gives an exposition of dependent origination as a tenfold causal chain (rather than the typical twelvefold chain, dropping the first two links), explaining that those who do not fathom this truth, even if they be masters of meditative absorption (P. [JHĀNA](#); S. [DHYĀNA](#)), will still be addicted to the notion of a self (P. *atta*; S. [ĀTMAN](#)) and hence bound to the cycle of rebirth.

[Mahāniddeśa](#). In Pāli, “Longer Exposition,” first part of the *Niddeśa* (“Exposition”), an early commentarial work on the [SUTTANIPĀTA](#) included in the Pāli [SUTTAPITAKA](#) as the eleventh book of the [KHUDDAKANIKĀYA](#). The *Niddeśa* is attributed by tradition to the Buddha’s chief disciple, Sāriputta (S. [ŚĀRIPUTRA](#)), and is divided into two sections: the *Mahāniddeśa* and the [CŪLANIDDEŚA](#) (“Shorter Exposition”). The *Mahāniddeśa* comments on the sixteen suttas (S. [SŪTRA](#)) of the [AṬṬHAKAVAGGA](#) chapter of the *Suttanipāta*; the *Cūlaniddeśa* comments on the sixteen suttas of the Parāyaṇavagga chapter and on the *Khaggavisānasutta* (see [KHADGAVISĀNA](#)). The *Mahāniddeśa* and *Cūlaniddeśa* do not comment on any of the remaining contents of the *Suttanipāta*, a feature that has suggested to historians that at the time of their composition the *Aṭṭhakavagga* and *Parāyaṇavagga* were autonomous anthologies not yet incorporated into the *Suttanipāta*, and that the *Khaggavisānasutta* likewise circulated independently. The exegesis of the *Suttanipāta* by the *Mahā-* and *Cūlaniddeśa* displays the influence of the Pāli [ABHIDHAMMA](#) (S. [ABHIDHARMA](#)) and passages from it are frequently quoted in the [VISUDDHIMAGGA](#). Both parts of the *Niddeśa* are formulaic in structure, a feature that appears to have been designed as a pedagogical aid to facilitate memorization. In Western scholarship, there has long been a debate regarding their dates of composition, with some scholars dating them as early as the third century BCE, others to as late as the second century CE. The *Mahā-* and *Cūlaniddeśa* are the only commentarial texts besides the [SUTTAVIBHANGA](#) of the [VINAYAPITAKA](#) to be included in the Sri Lankan and Thai recensions of the Pāli canon. In contrast, the Burmese canon includes two additional early commentaries, the [NETTIPAKARANA](#) and [PETAKOPADESA](#), as books sixteen and seventeen in its recension of the *Khuddakanikāya*.

[Mahanikai](#). (P. *Mahānikāya*). In Thai, “Great Congregation”; the predominant monastic fraternity of Thai Buddhism, to which the vast majority of Thai monasteries belong; sometimes also seen transcribed as *Mahanikay*, or by its Pāli equivalent, *Mahānikāya*. The current *Mahanikai* order traces its lineage back

to the fifteenth century, when a group of Siamese monks were sent to Sri Lanka for reordination in order to revitalize and help preserve the Thai monastic tradition. The designation “Mahanikai,” however, represents a synthesis of many Thai traditions that were all placed under this rubric in the nineteenth century by the Thai king Mongkut ([RĀMA IV](#)), who was a monk from 1824 to 1851. Mongkut was concerned with lax observance of the vinaya precepts within much of the Thai monastic community and used the term Mahanikai to refer to those monks who did not conform to his new “reform” order, the [THAMMAYUT](#). Thus, any monks who did not reordain into the Thammayut order became by default Mahanikai monks. A similar situation occurred in Cambodia, when the Thammayut fraternity was introduced there later in the nineteenth century. In Mongkut’s time, the two sects came to differ on many points of monastic practice, including the way robes were worn, how often monks could eat, and whether they could handle money. Thammayut monks were also encouraged to preach sermons in Thai vernacular language, while Mahanikai preached sermons grounded in Pāli. Many of these differences, and the tensions that surround them, still exist today. The largest and most important monastery of the Mahanikai order is [WAT MAHATHAT](#), “Temple of the Great Relic,” in Bangkok.

[Mahāpadānasuttanta](#). (C. Daben jing; J. Daihongyō; K. Taebon kyōng 大本經). In Pāli, the “Discourse on the Great Legend”; the fourteenth sutta of the Pāli [DĪGHANIKĀYA](#) (a separate [DHARMAGUPTAKA](#) recension is the first [SŪTRA](#) in the Chinese translation of the [DĪRGHĀGAMA](#)). The scripture was preached by the Buddha to a group of monks dwelling at the city of Sāvatti ([ŚRĀVASTĪ](#)), wherein the Buddha recounts his encounters in his previous lives with the seven buddhas of antiquity (see [SAPTABUDDHA](#)). He describes the life of the buddha Vipassī (S. [VIPAŚYIN](#)), whose enlightenment story closely resembles his own. Vipassī is described as having attained liberation through insight (P. [VIPASSANĀ](#); S. [VIPAŚYANĀ](#)) into dependent origination (P. [paṭiccasamuppāda](#); S. [PRATĪTYASAMUTPĀDA](#)). Dependent origination is presented here as a tenfold causal chain rather than the standard twelvefold chain, suggesting that this sutta retains a version of the doctrine that predates its classical formulation. See also [MAHĀVADĀNASŪTRA](#).

[mahāpadeśa](#). (P. mahāpadesa; T. chen po bstan pa; C. dashuo; J. daisetsu; K. taesöl 大說). In Sanskrit, “great authorities”; one of the categories employed in Buddhist hermeneutics to determine textual authority, that is, to judge after the

Buddha’s death, when he was no longer available as the final arbiter, whether a specific teaching was the authentic word of the Buddha ([BUDDHAVACANA](#)). According to this system of evaluation, someone might claim that a specific teaching is the word of the Buddha because of it having been heard from one of four possible authorities: (1) from the Buddha, (2) from a community ([SAMGHA](#)) of senior monks, (3) from a smaller group of learned elder monks, and (4) from a single learned monk. When someone claims to have heard a teaching directly from one of these four sources, the saṃgha may determine whether it is the word of the Buddha by ascertaining whether it corresponds to the teachings of the [SŪTRAS](#) and is in agreement with the [VINAYA](#). If it does, it is to be accepted as the word of the Buddha; if it does not, it is to be rejected. In the Pāli tradition, the four are set forth in the *Mahāpadesasutta*, which is found in the canon both as an independent text and as incorporated into the [MAHĀPARINIBBĀNASUTTA](#). The Sanskrit versions of the topic, in both mainstream and [MAHĀYĀNA](#) materials, add a third criterion to this conformity with the sūtras and with the vinaya: that the words not go against “the way things are” ([DHARMATA](#)).

[Mahāpanthaka](#). (S). See [PANTHAKA](#); [CŪDAPANTHAKA](#).

[Mahāparākramabāhu-Katikāvata](#). In Pāli, “The Great Law Code of Parākramabāhu”; a set of monastic regulations promulgated by the Sinhalese king [PARĀKRAMABĀHU I](#) (r. 1153–1186) as part of a monastic purification program (sāsanavisodhana) he inaugurated. This policy led to the abolition of the [ABHAYAGIRI](#) and [JETAVANA](#) fraternities and the ascendancy of the [MAHĀVIHĀRA](#) as the only recognized Buddhist fraternity on the island of Sri Lanka. His law code is classified as a sāsana-katikāvata; that is, a set of regulations binding on the entire saṃgha (S. [SAMGHA](#)) of the kingdom, as opposed to a vihāra-katikāvata, or set of regulations binding only on the residents of a single monastery. As a document, the *Mahāparākramabāhu-Katikāvata* is laid out as a set of specific rules governing the life of the saṃgha, preceded by an historical introduction recounting purifications conducted in the past by notable kings such as Asoka (S. [AŚOKA](#)). The text was influential in Southeast Asia as both a blueprint for monastic revitalization movements and saṃgha organization, and as a model for the writing of Buddhist chronicles.

[Mahāparinibbānasuttanta](#). (S. [MAHĀPARINIRVĀNASŪTRA](#); C. Youxing jing/Da banniepan jing; J. Yūgyōkyō/Daihatsunehangyō; K. Yuhaeng kyōng/Tae panyōlban kyōng 遊行經/大般涅槃經). In Pāli, the “Discourse on the Great

Decease” or the “Great Discourse on the Final Nirvāṇa”; the sixteenth sutta of the Pāli [DĪGHANIKĀYA](#) and longest discourse in the Pāli canon. (There were also either Sanskrit or Middle Indic recensions of this mainstream Buddhist version of the scripture, which should be distinguished from the longer [MAHĀYĀNA](#) recension of the scripture that bears the same title; see [MAHĀPARINIRVĀNASŪTRA](#).) There are six different Chinese translations of this mainstream version of the text, including a [DHARMAGUPTAKA](#) recension in the Chinese translation of the [DĪRGHĀGAMA](#) and an independent translation in three rolls by [FAXIAN](#). This scripture recounts in six chapters the last year of Buddha’s life, his passage into [PARINIRVĀNA](#), and his cremation. In the text, the Buddha and [ĀNANDA](#) travel from Rājagaha (S. [RĀJAGRHA](#)) to Kusināra (S. [KUŚINAGARĪ](#)) in fourteen stages, meeting with different audiences to whom the Buddha gives a variety of teachings. The narrative contains numerous sermons on such subjects as statecraft, the unity of the [SAMGHA](#), morality, the [FOUR NOBLE TRUTHS](#), and the four great authorities ([MAHĀPADEŚA](#)) for determining the authenticity of Buddhist doctrines following the Buddha’s demise. The Buddha crosses a river using his magical powers and describes to the distraught where their deceased loved ones have been reborn. Becoming progressively more ill, the Buddha decides to spend his final rains retreat (P. vassa; S. [VARSA](#)) with Ānanda meditating in the forest near [VENUGRĀMAKA](#), using his powers of deep concentration to hold his disease in check. He is eighty years old and describes his body as being like an old cart held together by straps. When the Buddha expresses his wish to address the saṃgha, Ānanda assumes that there is a teaching that the Buddha has not yet taught. The Buddha replies that he was not one who taught with a “teacher’s fist” (P. ācariyamutṭhi) or “closed fist,” holding back some secret teaching, but that he has in fact already revealed everything. The Buddha also says that he is not the head of the saṃgha and that after his death each monk should “be an island unto himself” with the [DHARMA](#) as his island (P. dīpa; S. dvīpa) and his refuge. ¶ While meditating at the [CĀPĀLACAITYA](#), the Buddha mentions to Ānanda three times that a [TATHĀGATA](#) has the power to live for an eon or until the end of an eon. (The Pāli commentaries take “eon” here to mean “his full allotted lifespan,” not a cosmological period.) Ānanda, however, misses the hint and does not ask him to do so. [MĀRA](#) then appears to remind the Buddha of what he told him at the time of his enlightenment: that he would not enter nibbāna ([NIRVĀNA](#)) until he had trained monks and disciples who were able to teach the dhamma (S. [DHARMA](#)). Māra tells the Buddha that that task has now been accomplished, and the Buddha eventually agrees, “consciously and deliberately”

renouncing his remaining lifespan and informing Māra that he will pass away in three months' time. The earth then quakes, causing the Buddha to explain to Ānanda the eight reasons for an earthquake, one of which is that a tathāgata has renounced his life force. It is only at that point that Ānanda implores the Buddha to remain until the end of the eon, but the Buddha tells him that the appropriate time for his request has passed, and recalls fifteen occasions on which he had told Ānanda of this remarkable power and how each time Ānanda had failed to ask him to exercise it. The Buddha then explains to a group of monks the four great authorities ([MAHĀPADEŚĀ](#)), the means of determining the authenticity of a particular doctrine after the Buddha has died and is no longer available to arbitrate. He then receives his last meal from the smith [CUNDA](#). The dish that the Buddha requests is called [SŪKARAMADDAVA](#), lit., "pig's delight." There has been a great deal of scholarly discussion on the meaning of this term, centering upon whether it is a pork dish, such as mincemeat, or something eaten by pigs, such as truffles or mushrooms. At the meal, the Buddha announces that he alone should be served the dish and what was left over should be buried, for none but a buddha could survive eating it. Shortly after finishing the dish, the Buddha is afflicted with the dysentery from which he would eventually die. The Buddha then converts a layman named Pukkusa, who offers him gold robes. Ānanda notices that the color of the robes pales next to the Buddha's skin, and the Buddha informs him that the skin of the Buddha is particularly bright on two occasions, the night when he achieves enlightenment and the night that he passes away. Proceeding to the outskirts of the town of Kuśinagarī, the Buddha lies down on his right side between twin sāla (S. [ŚĀLA](#)) trees, which immediately bloom out of season. Shortly before dying, the Buddha instructs Ānanda to visit Cunda and reassure him that no blame has accrued to him; rather, he should rejoice at the great merit he has earned for having given the Buddha his last meal. Monks and divinities assemble to pay their last respects to the Buddha. When Ānanda asks how monks can pay respect to the Buddha after he has passed away, the Buddha explains that monks, nuns, and laypeople should visit four major places ([MAHĀSTHĀNA](#)) of pilgrimage: the site of his birth at [LUMBINĪ](#), his enlightenment at [BODHGAYĀ](#), his first teaching at [RSIPATANA \(SĀRNĀTH\)](#), and his [PARINIRVĀNA](#) at Kuśinagarī. Anyone who dies while on pilgrimage to one of these four places, the Buddha says, will be reborn in the heavens. Scholars have taken these instructions as a sign of the relatively late date of this sutta (or at least this portion of it), arguing that this admonition by the Buddha is added to promote pilgrimage to four already well-established shrines. The Buddha

instructs the monks to cremate his body in the fashion of a [CAKRAVARTIN](#). He says that his remains ([ŚARĪRA](#)) should be enshrined in a [STŪPA](#) to which the faithful should offer flowers and perfumes in order to gain happiness in the future. The Buddha then comforts Ānanda, telling him that all things must pass away and praising him for his devotion, predicting that he will soon become an [ARHAT](#). When Ānanda laments the fact that the Buddha will pass away at such a “little mud-walled town, a backwoods town, a branch township,” rather than a great city, the Buddha disabuses him of this notion, telling him that Kuśinagarī had previously been the magnificent capital of an earlier cakravartin king named Sudarśana (P. Sudassana). The wanderer [SUBHADRA](#) (P. Subhadda) then becomes the last person to be ordained by the Buddha. When Ānanda laments that the monks will soon have no teacher, the Buddha explains that henceforth the dharma and the [VINAYA](#) will be their teacher. As his last disciplinary act before he dies, the Buddha orders that the penalty of brahmadaṇḍa (lit. the “holy rod”) be passed on [CHANDAKA](#) (P. Channa), his former charioteer, which requires that he be completely shunned by his fellow monks. Then, asking three times whether any of the five hundred monks present has a final question, and hearing none, the Buddha speaks his last words, “All conditioned things are subject to decay. Strive with diligence.” The Buddha’s mind then passed into the first stage of meditative absorption (P. [JHĀNA](#); S. [DHYĀNA](#)) and then in succession through the other three levels of the subtle-materiality realm ([RŪPADHĀTU](#)) and then through the four levels of the immaterial realm ([ĀRŪPYADHĀTU](#)). He then passed back down through the same eight levels to the first absorption, then back up to the fourth absorption, and then passed away, at which point the earth quaked. Seven days later, his body was prepared for cremation. However, the funeral pyre could not be ignited until the arrival of [MAHĀKĀŚYAPA](#) (P. Mahākassapa), who had been away at the time of the Buddha’s death. After he arrived and paid his respects, the funeral pyre ignited spontaneously. The relics ([ŚARĪRA](#)) of the Buddha remaining after the cremation were taken by the Mallas of Kuśinagarī, but seven other groups of the Buddha’s former patrons also came to claim the relics. The brāhmaṇa [DRONA](#) (P. Doṇa) was called upon to decide the proper procedure for apportioning the relics. Droṇa divided the relics into eight parts that the disputing kings could carry back to their home kingdoms for veneration. Droṇa kept for himself the urn he used to apportion the relics; a ninth person was given the ashes from the funeral pyre. These ten (the eight portions of relics, the urn, and the ashes) were each then enshrined in stūpas. At this point the scripture’s narrative ends. A similar account, although with significant

variations, appears in Sanskrit recensions of the *Mahāparinirvāṇasūtra*.

[Mahāparinirvāṇasūtra](#). (T. *Yongs su mya ngan las 'das pa chen po'i mdo*; C. *Da banniepan jing*; J. *Daihatsunehangyō*; K. *Tae panyōlban kyōng* 大般涅槃經). In Sanskrit, “Discourse on the Great Decease” or the “Great Discourse on the Final Nirvāṇa”; also known in all languages simply as the *Nirvāṇa Sūtra*. As its title suggests, the [SŪTRA](#) describes the events and the Buddha’s final instructions prior to his passage into [PARINIRVĀNA](#) and is thus the Sanskrit retelling of the mainstream version of the text (see [MAHĀPARINIBBĀNASUTTA](#)). However, although some of the same events are narrated in both versions, the Sanskrit text is very different in content, providing one of the most influential sources for [MAHĀYĀNA](#) views of the true nature of the Buddha and his [NIRVĀNA](#), and of the buddha-nature (referred to in the sūtra as both [BUDDHADHĀTU](#), or “buddha-element,” and [TATHĀGATAGARBHA](#)). There appear to have been a number of Sanskrit versions of the sūtra, the earliest of which was likely compiled in Kashmir (see [KASHMIR-GANDHĀRA](#)) in the third century CE. One piece of internal evidence for the date of composition is the presence of prophecies that the dharma would fall into decline seven hundred years after the Buddha’s passage into nirvāṇa. None of the Sanskrit versions is extant (apart from fragments), but several are preserved in Chinese and Tibetan translations. The earliest and shortest of these translations is in six rolls, translated into Chinese by [FAXIAN](#) (who brought the Sanskrit text to China from India) and [BUDDHABHADRA](#), and completed in 418 CE. A second version was translated from Sanskrit into Tibetan at the end of the eighth century. The longest version, in forty rolls, was translated into Chinese by [DHARMAKṢEMA](#) and completed in 423. It is known as the “Northern Text.” This version was later translated into Tibetan from the Chinese as the *Yongs su mya ngan las das pa chen po'i mdo*. Besides the Tibetan translation of the long Chinese version by Dharmakṣema, there is another version of the sūtra in Tibetan translation, a *Mahāparinirvāṇasūtra* in 3,900 ślokas, translated by Jinamitra, Dhyānagarbha, and Ban de btsan dra, as well as a few folios of a translation of the sūtra by Kamalagupta and [RIN CHEN BZANG PO](#). The Faxian and Dharmakṣema Chinese versions were subsequently edited into a single work, in thirty-six rolls. Chinese scriptural catalogues ([JINGLU](#)) also refer to two other translations of the sūtra, made prior to that of Faxian, but these are no longer extant. There were significant differences between the versions of Faxian and Dharmakṣema (and hence apparently in the Sanskrit recensions that they translated), so much so that scholars speculate that the shorter version was

composed in a non-Mahāyāna community, with Mahāyāna elements being added to what evolved into the longer version. The most famous of the differences between the versions occurs on the question of whether all beings, including “incorrigibles” ([ICCHANTIKA](#)), possess the buddha-nature; the shorter version says that they do not and they are therefore condemned to eternal damnation; the longer version says that they do and thus even they retain the capacity to achieve enlightenment. The shorter version of the sūtra describes the [SAMGHA](#) as consisting of monks and nuns and preaches about the need to provide donations ([DĀNA](#)) to them; the longer version includes the laity among the saṃgha and preaches the need for charity to all persons. The longer version also recommends various forms of punishment, including execution, for those who denigrate the Mahāyāna. The sūtra also makes reference to other famous sūtras, such as the [SADDHARMAPUNĀRIKASŪTRA](#), and is mentioned in other sūtras, such as the [MAHĀMEGHASŪTRA](#). The *Mahāparinirvāṇasūtra*, like other important sūtras extolling tathāgatagarbha thought, such as the [ŚRĪMĀLĀDEVĪSIMHANĀDASŪTRA](#), plays on the classical doctrine of the four “inverted views” ([VIPARYĀSA](#)), according to which sentient beings mistakenly view that which is suffering as being pleasurable, that which is impermanent as permanent, that which is impure as pure, and that which is without self as having self. In this sūtra, by contrast, the four right views of suffering, impermanence, impurity, and no-self are proclaimed to be erroneous when describing the Buddha, his nirvāṇa, and the buddhadhātu; these are instead each said to be in fact blissful, permanent, pure, and endowed with self (see [GUNAPĀRAMITĀ](#)). Thus, the Buddha did not pass into nirvāṇa, for his lifespan is incalculable. The Buddha’s nirvāṇa—which is referred to in the sūtra as “great nirvāṇa” (mahānirvāṇa) or “great final nirvāṇa” (MAHĀPARINIRVĀṆA)—differs from that of the [ARHAT](#). The nirvāṇa of the arhat is said to be merely the state of the absence of the afflictions ([KLEŚA](#)) but with no awareness of the buddhadhātu. The nirvāṇa of the buddha is instead eternal, pure, blissful, and endowed with self, a primordially existent reality that is only temporarily obscured by the kleśa; when that nirvāṇa and buddhadhātu are finally “recognized,” buddhahood is then achieved. The Buddha reveals the existence of this nirvāṇa to bodhisattvas. Because the buddhadhātu is present within all sentient beings, these four qualities are therefore found not simply in the Buddha but in all beings. This implies, therefore, that the Buddha and all beings are endowed with self, in direct contradiction to the normative Buddhist doctrine of no-self ([ANĀTMAN](#)). Here, in this sūtra, the teaching of no-self is described as a conventional truth ([SAMVRTISATYA](#)): when the Buddha said that

there was no self, what he actually meant was that there is no mundane, conditioned self among the aggregates ([SKANDHA](#)). The Buddha's true teaching, as revealed at the time of his nirvāṇa, is that there is a "great self" or a "true self" (S. mahātman; C. dawo), which is the buddhadhātu, in all beings. To assert that there is no self is to misunderstand the true dharma. The doctrine of emptiness ([ŚŪNYATĀ](#)) thus comes to mean the absence of that which is compounded, suffering, and impermanent. These teachings would become influential in Tibet, especially among the proponents of the doctrine of "other emptiness" ([GZHAN STONG](#)). See also [GUNAPĀRAMITĀ](#).

[Mahāprajāpatī](#). (P. Mahāpajāpatī; T. Skye dgu'i bdag mo chen mo; C. Mohebosheboti; J. Makahajahadai; K. Mahabasabaje 摩訶波闍波提). An eminent [ARHAT](#), the Buddha's stepmother and aunt, and the first woman to be ordained a Buddhist nun (S. [BHIKSUNĪ](#); P. bhikkhunī). Mahāprajāpatī and the Buddha's mother, [MĀYĀ](#), were sisters and both married to the bodhisattva's father, [ŚUDDHODANA](#). When the bodhisattva's mother died seven days after his birth, Mahāprajāpatī raised him as her own son. According to the Pāli accounts, she became a lay disciple of the Buddha when he returned to the palace of his father and preached the *Mahādhammapāla-Jātaka*, becoming at that time a stream-enterer ([SROTAĀPANNA](#)). Upon the death of her husband, she resolved to renounce the world and follow the Buddha as a nun, but because there was no nuns' order, she had to request the Buddha to institute it. When, at the city of [KAPILAVASTU](#), five hundred men of the [ŚĀKYA](#) clan entered the monastic order, Mahāprajāpatī together with the five hundred former wives of these men approached the Buddha and requested that they also be allowed to ordain and follow the religious life. The Buddha refused, warning that the presence of women in the order would speed the inevitable decline and demise of the dispensation. Despite his refusal, she and the five hundred Śākyan women shaved their heads and donned the yellow robes of Buddhist mendicants and followed the Buddha to the city of [VAISĀLĪ](#). Again Mahāprajāpatī requested the Buddha to permit them to enter the order and again he refused. Finally, [ĀNANDA](#), the Buddha's cousin and chief attendant, interceded on her behalf, asking the Buddha if women were capable of achieving enlightenment. He conceded that they were. Finally, the Buddha, acknowledging the debt he owed to his stepmother, granted ordination to her on the condition that she accept eight "heavy rules" (S. [GURUDHARMA](#); P. garudhamma) that would guarantee the nuns' order's dependence on the monks' order and place it in an inferior rank. Her acceptance of these eight special rules

served as her ordination. Mahāprajāpatī soon attained arhatship, as did her five hundred companions when they heard the *Nandakovādasutta* that the monk [NANDAKA](#) preached to them at the Buddha’s request. (On the first hearing, the nuns attained stream-entry; when the Buddha had Nandaka repeat the same sermon the next day, they all achieved arahantship. Other sources say, however, that Mahāprajāpatī and her followers attained arahantship only moments before her death.) As the first bhikṣunī, Mahāprajāpatī is regarded as the mother of the nuns’ order, and she was declared by the Buddha to be foremost among nuns in experience. She lived to be 120 years old, and when she died, her five hundred disciples passed into [PARINIRVĀNA](#) with her. The miracles attending Mahāprajāpatī’s cremation, including the duplication of the physical body ([MAHĀPRĀTIHĀRYA](#)) that the Buddha himself had performed, were said to have been second only to those of the Buddha himself.

[*Māhaprajñāpāramitāsāstra](#). [alt. *Mahāprajñāpāramitopadeśa]. See [DAZHIDU LUN](#).

[*Mahāprajñāpāramitāsūtra](#). (T. Shes rab kyi pha rol tu phyin pa chen po’i mdo; C. Dabore boluomiduo jing; J. Daihannya haramittakyō; K. Taebanya paramilta kyōng 大般若波羅蜜多經). In Sanskrit, the “Sūtra on the Great Perfection of Wisdom”; a massive compilation of [PRAJÑĀPĀRAMITĀ](#) scriptural literature said to have been preached by the Buddha in four different places to sixteen discrete assemblies. These sixteen assemblies correspond to sixteen separate perfection of wisdom sūtras, including such seminal works as the [ŚATASĀHASRIKĀPRAJÑĀPĀRAMITĀSŪTRA](#) (“Prajñāpāramitā in One Hundred Thousand Lines”) and the [VAJRACCHEDIKĀPRAJÑĀPĀRAMITĀSŪTRA](#) (“Diamond Sūtra”), which are integrated in this text into a single narrative. This recension of the scripture is only extant in a Chinese translation made in six hundred rolls by [XUANZANG](#) and his translation team between the years 660 and 663. Xuanzang’s recension is by far the largest of all the prajñāpāramitā scriptures in the Chinese Buddhist canon ([DAZANGJING](#)), constituting about a third of the entire prajñāpāramitā section. The *Mahāprajñāpāramitāsūtra* also often holds pride of place as the first sūtra found in many traditional East Asian Buddhist scriptural canons, such as the [KORYŌ TAEJANGGYŌNG](#). (In Tibet, the [ŚATASĀHASRIKĀPRAJÑĀPĀRAMITĀ](#) in sixteen volumes comes at the start of the prajñāpāramitā section.) There has been speculation that the Chinese version of the well-known [PRAJÑĀPĀRAMITĀHRDAYASŪTRA](#) (“Heart Sūtra”), which was also

translated by Xuanzang, may be a redaction of sections of this Chinese recension of the *Mahāprajñāpāramitāsūtra*, made as a mnemonic encoding ([DHĀRANĪ](#)) of the massive perfection of wisdom literature.

[mahāprātihārya](#). (P. mahāpāṭihāriya; T. cho 'phrul chen po; C. shenbianxiang; J. jinpensō; K. sinbyōnsang 神變相). In Sanskrit, “great miracle.” This and the “dual miracle” ([YAMAKAPRĀTIHĀRYA](#)) are two popular miracles that the Buddha performed during his career, frequently narrated in both canonical and commentarial literature and also widely depicted in Buddhist art. Both the mahāprātihārya and the yamakaprātihārya are generally understood to have taken place in the city of [ŚRĀVASTĪ](#). In the mahāprātihārya, the Buddha creates duplicates of himself, his doppelgängers then appearing in various terrestrial and heavenly abodes. In one instance, the Buddha produces a doppelgänger that remains on earth while he then goes to the [TUSITA](#) heaven to preach the dharma to his mother [MĀYĀ](#). In another instance, the Buddha creates several duplicates of himself so that everyone present in his audience can interact with him privately.

[Mahāpratisarā](#). (C. Dasuiqiu; J. Daizuigu; K. Taesugu 大隨求). One of the five female protectors ([RAKSĀ](#)) of [VAJRAYĀNA](#) Buddhism, who remains important in the Newar Buddhism of Nepal. In the *Pañcarakṣāsūtra*, her [DHĀRANĪ](#) is said to provide protection from a variety of dangers and to bestow rebirth in heaven. In some accounts of the life of the Buddha, his son [RĀHULA](#) was conceived on the night that the prince left the palace, but was not born until six years later when his father became the Buddha; during her protracted pregnancy, the Buddha’s wife, [YAŚODHARĀ](#), is said to have been protected by Mahāpratisarā.

[Mahāpūrṇa](#). (S). See [PŪRNA](#).

[mahāpuruṣa](#). (P. mahāpurisa; T. skyes bu chen po; C. daren; J. dainin; K. taemin 大人). In Sanskrit, lit., “great person,” sometimes translated as “superman”; a being whose body is adorned with the “marks of a great person” ([MAHĀPURUSALAKSANA](#)), which include the thirty-two “major marks” ([LAKSANA](#)) and the eighty secondary marks ([ANUVYĀÑJANA](#)). A being with such physical marks is destined to become either a buddha or a [CAKRAVARTIN](#). ¶ The term mahāpuruṣa is also used to indicate the highest rank in a threefold division of humans that occur in certain [MAHĀYĀNA](#) texts, notably [ATIŚA](#)’s [BODHIPATHAPRADĪPA](#): (a) beings of great capacity, who seek to free all beings

from suffering; (b) beings of intermediate capacity, who seek to free themselves from suffering; and (c) beings of lesser capacity, who seek happiness within the cycle of rebirth. The Tibetan translation of this term, *skyes bu chen po*, is used widely in the [LAM RIM](#) literature as a designation for those practicing the Mahāyāna.

[mahāpuruṣalakṣaṇa](#). (P. mahāpurisalakkhaṇa; T. *skyes bu chen po'i mtshan*; C. *darenxiang*; J. *daininsō*; K. *taeinsang* 大人相). In Sanskrit, “the marks of a great man,” sometimes referred to in English as the “major marks”; a list of thirty-two marks (*dvātriṃśadvaralakṣaṇa*) possessed by both buddhas and “wheel-turning emperors” ([CAKRAVARTIN](#)); such beings possess in addition eighty minor marks ([ANUVYAÑJANA](#)). These marks are understood to be the karmic result of countless eons of effort on the path to either worldly or spiritual perfection (viz., [ANUTTARASAMYAKSAMBODHI](#)). These are said to be fully present on the body of a buddha, especially in the [SAMBHOGAKĀYA](#), with similitudes of the marks found on the body of cakravartin. Each of the marks is said to result from the practice of a specific virtue in past lives, and elaborate commentary is provided on some of the marks, especially the [USNĪSA](#) and the [ŪRNĀ](#). Although the lists vary considerably, they typically include (1) *supraṭiṣṭhitapāda*—his feet stand firmly on the ground; (2) *adhastāt pādatalayoś cakre jāte*—he has thousand-spoked wheels on the palms of his hands and the soles of his feet; (3) *āyatapādapārṣṇi*—the heels of his feet are broad; (4) *dīrghāṅguli*—he has long fingers; (5) *mṛdutaruṇahastapāda*—his hands and feet are smooth; (6) *jālahastapāda*—his hands and feet are webbed; (7) *ucchaṅkhapāda*—his legs are long; (8) *aiṇeyajaṅgha*—he has thighs like an antelope; (9) *sthitānavanata-pralambabāhu*—his arms extend below the knees; (10) *kośopagata-vastiguhyā*—his penis is retracted; (11) *suvarṇavarṇa*—his complexion is golden; (12) *sūkṣmachavi*—his skin is smooth (so that no dust clings to his body); (13) *ekaikaroma*—he has one hair in each pore of his body; (14) *ūrdhvāgraroma*—the hairs of his body point upward; (15) *brhadṛju-gātra*—his body is tall and straight; (16) *saptotsada*—the seven parts of his body are well-proportioned; (17) *siṃhapūrvārdhakāya*—the upper part of his body is like a lion’s; (18) *citāntarāṃsa*—he has broad shoulders; (19) *nyagrodhaparimaṇḍala*—his body and limbs are perfectly proportionate and thus shaped like a fig tree; (20) *susamvṛttaskandha*—he has full, round shoulders; (21) *rasarasāgra*—he has an excellent sense of taste; (22) *siṃhahanu*—he has a jaw like a lion’s; (23) *catvāriṃśaddanta*—he has forty teeth; (24) *samadanta*—his teeth are even; (25) *aviraladanta*—his teeth are

evenly spaced; (26) *suśukladamaṣṭra*—his teeth are white; (27) *prabhūtajihva*—his tongue is long and broad; (28) *brahmasvara*—his voice is like that of [BRAHMĀ](#); (29) *abhinīlanetra*—his eyes are deep blue; (30) *gopakṣma*—his eyelashes are like those of a bull; (31) *ūrṇā* or [ŪRNĀKEŚĀ](#)—he has a white tuft of hair between his eyebrows; and (32) *uṣṇīṣaśīrṣa*—he has a protrusion on the crown of the head. See also [RĀSTRAPĀLAPARIRCCHĀ](#).

[mahārājan, four](#). ([CATURMAHĀRĀJA](#)) (S). See [LOKAPĀLA](#).

[Mahāratnakūtasūtra](#). (S). See [RATNAKŪTASŪTRA](#).

[Mahāratta](#). (S. *Mahārāṣṭra*; T. *Yul 'khor chen po*; C. *Mohelatuo guo*; J. *Makarata koku*; K. *Maharat'a kuk* 摩訶刺佉國). One of nine adjacent lands (*paccantadesa*) converted to Buddhism by missionaries dispatched by the elder [MOGGALIPUTTATIṢṢA](#) at the end of the third Buddhist council (see [COUNCIL, THIRD](#)) held in Pāṭaliputta (S. [PĀTALIPUTRA](#)) during the reign of Asoka (S. [AŚOKA](#)) in the third century BCE. *Mahāratta* is identified with modern Maharashtra and was converted by Mahādhammarakkhita, who preached the *Mahānārada-kassapa-Jātaka*. The third Buddhist council at Pāṭaliputta and the nine Buddhist missions are known only in Pāli sources and are first recorded in the fourth-century [DĪPAVAMSA](#).

[mahāraurava](#). (P. *mahāroruva*; T. *ngu 'bod chen po*; C. *dajiaohuan [diyu]*; J. *daikyōkan[jigoku]*; K. *taegyuhwan [chiok]* 大叫喚[地獄]). In Sanskrit, “great screaming”; one of the eight hot hells in traditional Buddhist cosmology, the fifth in ascending order of suffering, so-called because the beings scream terribly there due to the torments they endure, torments greater than the hell above, which is merely called “screaming.” This hell is said to be the destination of those who steal the property of others, especially that of divinities ([DEVĀ](#)), *brāhmaṇas*, and their teachers.

[Mahārītṭha](#). The Pāli proper name of the nephew of the Sinhalese king [DEVĀNAMPIYATIṢṢA](#). Sent as an emissary to the court of King [ASOKA](#), Mahārītṭha invited the arahant nun [SAṄGHAMITTĀ](#) to Sri Lanka in order to establish the [BHIKKHUNĪ SAMGHA](#) on the island. Upon his return to the capital Anurādhapura, Mahārītṭha along with five hundred companions entered the [BHIKKHU SAMGHA](#), whereupon all of them attained arahantship. So that the religion would be firmly established on the island, Mahinda convened a [SAMGĪTI](#) or rehearsal of scripture

at the Thūpārāma in which he requested Mahāriṭṭha to recite the [VINAYA](#). In the fourteenth-century chronicle, [SADDHAMMASAṄGAHA](#), this recitation of vinaya by Mahāriṭṭha is deemed the fourth Buddhist council (see [COUNCIL, FOURTH](#)).

[Mahāsaccakasutta](#). In Pāli, the “Great Discourse to Saccaka”; the thirty-sixth sutta contained in the [MAJJHIMANIKĀYA](#) (fragments are extant in Sanskrit, and portions corresponding to a untitled recension of uncertain affiliation are included in the Chinese translation of the [EKOTTARĀGAMA](#)); preached by the Buddha to the [JAINA](#) adherent Saccaka (S. [MAHĀSATYANIRGRANTHA](#)) in the Mahāvana forest in Vesālī ([VAIŚĀLĪ](#)). Saccaka asks about the proper method of cultivating the mind and the body in order to attain liberation. The Buddha explains the various methods of training mind and body he had tried during his own quest for liberation. Beginning with his renunciation of the householder’s life, he tells of his training under two meditation masters, his rejection of meditation in favor of severe austerities, and his rejection of austerities for his own path midway between self-indulgence and extreme asceticism, which finally led to his enlightenment.

[Mahāsamayāsuttanta](#). (C. Dahui jing; J. Daikyō; K. Taehoe kyōng 大會經). In Pāli, the “Great Discourse to an Assembly [of Divinities]”; the twentieth sutta contained in the [DĪGHANIKĀYA](#) (a separate [DHARMAGUPTAKA](#) recension appears as the nineteenth [SŪTRA](#) in the Chinese translation of the [DĪRGHĀGAMA](#)). Once while the Buddha was dwelling in the Mahāvana grove with five hundred arahants, an assembly of [DEVA](#) and [BRAHMĀ](#) gods from ten thousand world systems (P. cakkavāḷa; S. [CAKRAVĀDA](#)) gathered in order to hear verses recited by the Buddha. The Buddha proceeds to recount in verse the names of numerous divinities and concludes with an admonition that [MĀRA](#), the evil one, will shrink back from those who are free from lust and fear.

[Mahāsāṃghika](#). (T. Dge ’dun phal chen pa’i sde; C. Dazhongbu; J. Daishubu; K. Taejungbu 大眾部). In Sanskrit, “Great Congregation”; one of the major “mainstream” (i.e., non-[MAHĀYĀNA](#)) schools of Indian Buddhism. The Mahāsāṃghika came into existence in a dispute over monastic practice with the [STHAVIRANIKĀYA](#), which occurred about a century after the Buddha’s death, at the so-called second Buddhist council ([SAMGĪTI](#)) held at [VAIŚĀLĪ](#) (see [COUNCIL, SECOND](#)). The Sthaviranikāya resolved that ten specific rules of the [VINAYA](#) must be observed, while another faction, which came to call itself the “Great Congregation” (Mahāsāṃghika), held that these rules could be ignored. The ten

violations of monastic practice that the Sthaviranikāya sought to proscribe were (1) carrying salt in an animal horn, (2) eating when the shadow of the sundial is two fingerbreadths past noon, (3) after eating, traveling to another village on the same day to eat another meal, (4) holding several monastic assemblies within the same boundary ([SĪMĀ](#)) during the same fortnight, (5) making a monastic decision with an incomplete assembly and subsequently receiving the approval of the absent monks, (6) citing precedent as a justification to violate monastic procedures, (7) drinking whey after mealtime, (8) drinking unfermented wine, (9) using mats with fringe, and (10) accepting gold and silver. A rival group held that these did not constitute violations of the vinaya and, since those who held this view were apparently the larger faction, they then called themselves the “great congregation.” Other sources state that a Mahāsāṃghika monk named [MAHĀDEVA](#) claimed that the Sthaviranikāya [ARHATS](#) were not free from certain failings, such as nocturnal emissions, although these charges may have been leveled at a subsequent point. Because of a paucity of sources, little is known of the doctrinal positions held by the school, although they seem to have emphasized the career of the bodhisattva and the supramundane nature of the Buddha, with his career as [ŚĀKYAMUNI](#) being only a display. They also taught that there was a root consciousness ([MŪLAVIJÑĀNA](#)) that serves as the support for the six sensory consciousnesses, just as the root of a tree is the basis of the leaves; this concept may have been the antecedent of the [YOGĀCĀRA](#) school’s storehouse consciousness ([ĀLAYAVIJÑĀNA](#)). The famous biography of the Buddha, the [MAHĀVASTU](#), is a product of the [LOKOTTARAVĀDA](#), one of the three major branches of the Mahāsāṃghika; other major branches included the [KUKKUTĀRĀMA](#) and the [CAITYA](#). The school was found throughout India and present-day Afghanistan, but eventually died out as an ordination lineage.

[Mahāsammata](#). (T. Mang pos bkur pa; C. Dapingdeng wang; J. Daibyōdō ō; K. Taep’yōngdŭng wang 大平等王). In Sanskrit and Pāli, “Greatly Revered” or “Great Consensus”; proper name of the first king of the current world system. After humans began to be reborn following the formation of this current world, wickedness arose, and it became necessary to select a king in order to bring order to society. One person was chosen to rule and he was called Mahāsammata. In return for serving as king, he was allotted a portion of the harvest. He ruled compassionately without needing to resort to torture, fines, or exile. He is regarded as the progenitor of the [KSĀTRIYA](#) caste, an ancient ancestor of the [ŚĀKYA](#) clan, and as a previous incarnation of the Buddha.

[Mahāsamnipātasūtra](#). (T. 'Dus pa chen po'i mdo; C. Dafangdeng daji jing; J. Daihōdō daijukkyō; K. Taebangdŭng taejip kyōng 大方等大集經). In Sanskrit, the “Great Compilation”; an anthology of texts that, along with the [RATNAKŪTASŪTRA](#), is one of the two major compendiums of [MAHĀYĀNA](#) sūtras. The collection consists of seventeen Mahāyāna sūtras, and was probably first compiled in the third century CE but did not reach its final form until the fifth century or later; the anthology was translated into Chinese by [DHARMAKSEMA](#) c. 414 CE. The entire collection is only extant in Chinese, although individual sūtras in the collection are extant in Sanskrit and Tibetan. It includes such sūtras as the *Ākāśagarbhasūtra* and the [CANDRAGARBHAPARIPRCCHĀ](#), an important text on the decline of the dharma.

[Mahāsāropamasutta](#). In Pāli, “Great Discourse on the Simile of the Heartwood”; the twenty-ninth sutta contained in the [MAJJHIMANIKĀYA](#) (a separate recension appears, but without title, in the Chinese translation of the [EKOTTARĀGAMA](#)); preached by the Buddha to an assembly of monks at Vulture Peak ([GRDHRAKŪTAPARVATA](#)) outside the town of Rājagaha ([RĀJAGRHA](#)) to address [DEVADATTA](#)'s secession from the Buddha's dispensation. Devadatta left because he was infatuated with the personal fame and profit he earned through his mastery of supernormal powers. The Buddha explained that the teachings were not spoken for the purpose of acquiring gain or profit, which were like the twigs and leaves of a tree, nor were they for mere morality ([ŚĪLA](#)), meditative concentration ([SAMĀDHI](#)), or supranormal powers ([ABHIJÑĀ](#)), which are like the inner and outer bark of a tree. Rather, the teachings were elucidated for the attainment of becoming a worthy one ([ARHAT](#)), which is like the heartwood of a tree.

[Mahāsatiṭṭhānasuttanta](#). (P). See [SATIPATTHĀNASUTTA](#).

[mahāsattva](#). (T. sems dpa' chen po; C. dashi/mohesa; J. daiji/makasatsu; K. taesa/mahasal 大士/摩訶薩). In Sanskrit, “great being”; an epithet of a [BODHISATTVA](#). Some commentators define mahāsattva as a bodhisattva who has attained the path of vision ([DARŚANAMĀRGA](#)), in which case the term would be synonymous with [ĀRYABODHISATTVA](#). In the [MAHĀYĀNA](#) sūtras, however, the term does not seem always to carry this technical meaning and instead occurs as a standard epithet of an advanced bodhisattva, as in the [PRAJÑĀPĀRAMITĀHRDAYASŪTRA](#), where [AVALOKITEŚVARA](#) is referred to as “bodhisattva-mahāsattva.”

[Mahāsatyanirgrantha](#). (P. Saccaka; C. Dasazhenijianzi; J. Daisatsushanikenshi; K. Taesalch’anigōnja 大薩遮尼犍子). A [JAINA](#) adherent and skilled debater, who was defeated in debate by the Buddha and became his disciple. See [MAHĀSACCAKASUTTA](#).

[Mahāsena](#). (C. Mohesina; J. Makashina; K. Mahasana 摩訶斯那) (r. 334–361 CE). A king of Sri Lanka, who, in the earlier part of his reign, looted the [MAHĀVIHĀRA](#) monastery and turned the spoils over to the [ABHAYAGIRI](#) monastery. On the advice of his advisor, the wicked monk Saṅghamitta, he forbade donations to the Mahāvihāra. He built the [JETAVANA](#) monastery within the boundaries of the Mahāvihāra. Later, he recanted and restored the confiscated property belonging to the Mahāvihāra. His is the last reign recorded in the [DĪPAVAMSA](#) and [MAHĀVAMSA](#).

[mahāsiddha](#). (T. grub thob chen po; C. dasheng; J. daishō; K. taesōng 大聖). In Sanskrit, “great adept”; an epithet of a tantric [YOGIN](#), used especially to refer to any one of a group of Indian tantric masters (in some renditions, numbering eighty or eighty-four; see “List of Lists”). These yogins, many of whom were historical figures (dating from between the seventh and twelfth centuries CE), were famous in India and Tibet and appear frequently in both hagiography and iconography. The most famous collection of hagiographies is the *[CATURAŚĪTISIDDHAPRAVṚTTI](#) by Abhayadatta. Just as the [ARHAT](#) is the ideal of mainstream Buddhism and the [BODHISATTVA](#) the ideal of the [MAHĀYĀNA](#), the [MAHĀSIDDHA](#) is the ideal of Buddhist [TANTRA](#) in India. Although many of the hagiographies of the mahāsiddhas tell stories of princes who, like the Buddha, renounced the world, others tell of enlightened masters who are neither virtuous monks nor gentle bodhisattvas but are instead drawn from the most ignoble levels of Indian society: butchers, hunters, fishermen, blacksmiths, leathersmiths, pimps; i.e., those involved in professions that were considered to be sources of pollution. If this were not enough, they also engage in activities that break taboos: they eat meat, they meditate sitting on top of corpses, they copulate with low-caste girls. If the power of the monk derives from the purity he acquires through abstaining from the things that laymen do, the power of the tantric yogin derives from his transgression of purity, engaging in acts that both violate monastic vows as well as the prescriptions regarding purity and pollution of traditional Indian society. The mahāsiddhas also perform prodigious magical feats, such as flying through the air, turning base metals into gold, diving into

the earth, and restoring amputated limbs. They are regarded as enlightened beings, using what is prohibited on the path, and transforming acts that would send others to hell into the deeds of a buddha. It is unclear how many of the mahāsiddhas were historical figures, and the accounts of their deeds are obviously rich in mythological detail. Their stories are replete with what we might regard as miracles, the performance of which the Buddha was said to have discouraged. On a philosophical level, such miracles demonstrate that those who have insight into the true nature of reality are not bound by rules, their transgression of the conventions of society signifying their transcendence of the laws of nature. Those who understand the true nature of the world can manipulate it, unbound by the laws of either gravity or [KARMAN](#). The stories of the mahāsiddhas also demonstrate the persistence of the worldly in the history of Buddhism. Tantric practice is said to produce two types of powers, called [SIDDHIS](#). There are mundane ([LAUKIKA](#)) siddhis, such as the ability to turn base metals into gold, to find buried treasure, to gain the love of a woman, to curse an enemy, to paralyze an invading army, or to stop the sun from moving across the sky. These contrast with the supramundane ([LOKOTTARA](#)) siddhis of buddhahood. Much of the tantric literature that survives is designed to provide mundane siddhis, generally divided into four categories of deeds ([CATURKARMAN](#)): pacifying, increasing, controlling, and wrathful.

[Mahāsīhanādasutta](#). (C. Shenmao xishu jing; J. Shinmōkijukyō; K. Sinmo hūisu kyōng 身毛喜豎經). In Pāli, the “Great Discourse on the Lion’s Roar”; the twelfth sutta in the [MAJJHIMANIKĀYA](#) (Sanskrit fragments of small portions of the scripture are extant; no version is included in the Chinese translations of the [ĀGAMAS](#), but there is an independent translation attributed to Weijing titled the *Shenmao xishu jing*, or “Horripilation Sūtra”); preached by the Buddha to Sāriputta ([ŚĀRIPUTRA](#)) in response to criticisms made by Sunakkhatta, a former disciple who charged that the Buddha was not endowed with supranormal powers. The Buddha states that because of his limited capacities, Sunakkhatta was unable to perceive the Buddha’s ten powers, four kinds of self-confidence, and the nondecline of his omniscience. He then describes the meritorious deeds that give rise to these powers and the wrong views of the naked [JAINA](#) ascetics with whom Sunakkhatta had taken up residence. The Buddha declares that those who claim that the Buddha’s insights are simply his own ideas and that he lacks supranormal powers will be reborn in the hells. ¶ A different *Mahāsīhanādasutta* also appears as the eighth sutta in the Pāli [DIGHANIKĀYA](#), where it is an alternate

title for the [KASSAPASĪHANĀDASUTTANTA](#) (“Lion’s Roar of Kassapa/Kaśyapa”); see [KASSAPASĪHANĀDASUTTANTA](#).

[Mahasi, Sayadaw](#). (1904–1982). In Burmese, “Senior Monk from Mahasi,” also known as Sobhana Mahāthera; honorific title of U Thobana (P. Sobhana), a prominent Burmese (Myanmar) scholar-monk and influential promoter of insight meditation ([VIPASSANĀ](#)). He was born in Seikkhun village near Shwebo in Upper Burma to a prosperous peasant family. At the age of twelve, he was ordained as a novice (P. *sāmaṇera*; S. [ŚRĀMANERA](#)) at Pyinmana monastery in Saikkhun and in 1923 he took higher ordination ([UPASAMPADĀ](#)) as a monk (P. [BHIKKHU](#); S. [BHIKSU](#)). Trained in Pāli and Buddhist scriptures at both Saikkhun and a number of monastic colleges in Mandalay, U Thobana alternated his own studies with teaching duties in Moulmien, Lower Burma, where he also encountered and trained under the meditation master Mingun Jetavan Sayadaw in the neighboring town of Thaton. U Thobana received his Dhammācāriya degree in 1941, just prior to the outbreak of World War II and the Japanese occupation of Burma. During the war, he returned to his native village in Upper Burma and settled in a monastery named Mahasi, whence his toponym. There he devoted himself to the practice and teaching of vipassanā meditation and wrote the *Manual of Vipassanā Meditation*, the first of his many treatises on the subject. In 1949, the Prime Minister of Burma, U Nu, invited Mahasi Sayadaw to head the newly founded Thathana Yeiktha (meditation hermitage) in Rangoon (Yangon). Since that time, affiliate branches of the Thathana Yeiktha headed by teachers trained in the Mahasi method of vipassanā have been established throughout the country and internationally, particularly in Thailand and Sri Lanka. Mahasi Sayadaw was an erudite scholar and the author of sixty-seven works on Buddhism in Burmese and Pāli. The Burmese government awarded him the title Aggamahāpaṇḍita for his scholarship in 1952. In 1954, he was appointed to the dual position of pucchaka (questioner) and osana (editor) in the sixth Buddhist Council (See [COUNCIL, SIXTH](#)) convened in Rangoon in 1954–56. Among other duties during the council, he oversaw the preparation of a new Burmese edition of the Pāli tipitaka (S. [TRIPITAKA](#)), its commentaries, and sub-commentaries for publication. Mahasi Sayadaw headed numerous Buddhist missions to countries in Asia, Europe, and America, and included among his disciples are many contemporary meditation teachers in Myanmar and internationally.

[mahāśmaśāna](#). (S). See [ŚMAŚĀNA](#).

Mahāssapurasutta. (C. Mayi jing; J. Meyūkyō; K. Maṅ kyōng 馬邑經). In Pāli, the “Greater Discourse at Assapura”; the thirty-ninth sutta in the [MAJJHIMANIKĀYA](#) (a separate [SARVĀSTIVĀDA](#) recension appears as the 182nd sūtra in the Chinese translation of the [MADHYAMĀGAMA](#), and another recension of unidentified affiliation in the [EKOTTARĀGAMA](#)); preached by the Buddha to a group of monks dwelling in the market town of Assapura in the Aṅga country. The people of Assapura were greatly devoted to the Buddha and were generous in their support of the monks. In recognition of their generosity, the Buddha admonished his disciples to strive ardently in their practice of the path to liberation by delivering a discourse on what makes one a true recluse. He describes the path in stages, beginning with the avoidance of evil deeds through the restraint of bodily and verbal actions, followed by the avoidance of evil thoughts through the mental restraint of meditation. This provides the foundation for the cultivation of four stages of meditative absorption (P. [JHĀNA](#); S. [DHYĀNA](#)), which, in turn, facilitates the eradication of contaminants (P. āsava; S. [ĀSRAVA](#)) through the practice of insight (P. vipassanā; S. [VIPAŚYANĀ](#)) and the attainment of final liberation in [NIRVĀNA](#).

Mahāsthāmaprāpta. (T. Mthu chen thob; C. Dashizhi; J. Daiseishi; K. Taeseji 大勢至). In Sanskrit, “He who has Attained Great Power”; a [BODHISATTVA](#) best known as one of the two attendants (along with the far more popular [AVALOKITEŚVARA](#)) of the buddha [AMITĀBHA](#) in his buddha-field ([BUDDHAKSETRA](#)) of [SUKHĀVATĪ](#). Mahāsthāmaprāpta is said to represent Amitābha’s wisdom, while Avalokiteśvara represents his compassion. According to the [GUAN WULIANGSHOU JING](#), the light of wisdom emanating from Mahāsthāmaprāpta illuminates all sentient beings, enabling them to leave behind the three unfortunate destinies ([APĀYA](#); [DURGATI](#)) and attain unexcelled power; thus, Mahāsthāmaprāpta is considered the bodhisattva of power or strength. There is also a method of contemplation of the bodhisattva, which is the eleventh of the sixteen contemplations described in the *Guan jing*. An adept who contemplates Mahāsthāmaprāpta comes to reside in the lands of all the buddhas, being relieved from innumerable eons of continued birth-and-death. In the [ŚŪRAMGAMASŪTRA](#), the bodhisattva advocates the practice of [BUDDHĀNUMSMRTI](#). Mahāsthāmaprāpta also appears in the [SADDHARMAPUNĀRIKASŪTRA](#) (“Lotus Sūtra”) as one of the bodhisattvas who assembled on Vulture Peak ([GRDHRAKŪTAPARVATA](#)) to hear the teachings of the buddha [ŚĀKYAMUNI](#). Iconographically, the bodhisattva is rarely depicted alone; he almost always appears in a triad together with Amitābha and Avalokiteśvara. Mahāsthāmaprāpta can often be recognized by a small jar on his jeweled crown, which is believed to contain pure water to cleanse sentient beings’ afflictions ([KLEŚA](#)). He is also often described as holding a lotus flower in his hand or joining his palms together in [AÑJALI](#). Mahāsthāmaprāpta is one of the twenty-five bodhisattvas who protects those who recite Amitābha’s name and welcomes them on their deathbed to the Buddha’s [PURE LAND](#). Serving as one of the thirteen bodhisattvas of the Japanese [SHINGONSHŪ](#) of esoteric Buddhism, Mahāsthāmaprāpta is believed to preside over the special ceremony marking the first year anniversary of one’s death. He is also depicted in the Cloister of the Lotus Division (Rengebu-in) in the [TAIZŌKAI MANDALA](#).

mahāsthāna. (T. gnas chen; C. lingdi; J. reichu; K. yŏngji 靈地). In Sanskrit, lit. “great site”; a list of four or eight sites of Buddhist pilgrimage in India that were the scenes of famous events in the life of the Buddha. The four sites, as mentioned in the [MAHĀPARINIBBĀNASUTTA](#), are the sites of (1) the miracle of his birth at [LUMBINĪ](#), (2) the defeat of [MĀRA](#) and the achievement of buddhahood at

[BODHGAYĀ](#), (3) the first turning of the wheel of the dharma ([DHARMAKAPRAVARTANA](#)) at [RSIPATANA](#) ([SĀRNĀTH](#)), (4) his passage into [PARINIRVĀNA](#) at [KUŚINAGARĪ](#). In the list of eight, between the third and fourth events are added the following sites of (5) the “twin miracles” ([YAMAKAPRĀTIHĀRYA](#)) performed at [ŚRĀVASTĪ](#), (6) the descent from the [TRĀYASTRIMŚA](#) heaven at [SĀMKĀŚYA](#), (7) the taming of the elephant [NĀLĀGIRI](#) at [RĀJAGRHA](#), (8) the receipt of the monkey’s gift of honey at [VAIŚĀLĪ](#). These sites became important places of pilgrimage in India and were ubiquitous stops during the sojourns of [XUANZANG](#) and other Chinese and Korean pilgrims on the subcontinent. These eight sites are found depicted in Indian sculpture dating from the Pāla period.

[mahāsthāna](#). (T. gnas chen; C. lingdi; J. reichi; K. yǒngji 靈地). In Sanskrit, lit. “great site”; a list of four or eight sites of Buddhist pilgrimage in India that were the scenes of famous events in the life of the Buddha. The four sites, as mentioned in the [MAHĀPARINIBBĀNASUTTA](#), are the sites of (1) the miracle of his birth at [LUMBINĪ](#), (2) the defeat of [MĀRA](#) and the achievement of buddhahood at [BODHGAYĀ](#), (3) the first turning of the wheel of the dharma ([DHARMAKAPRAVARTANA](#)) at [RSIPATANA](#) ([SĀRNĀTH](#)), (4) his passage into [PARINIRVĀNA](#) at [KUŚINAGARĪ](#). In the list of eight, between the third and fourth events are added the following sites of (5) the “twin miracles” ([YAMAKAPRĀTIHĀRYA](#)) performed at [ŚRĀVASTĪ](#), (6) the descent from the [TRĀYASTRIMŚA](#) heaven at [SĀMKĀŚYA](#), (7) the taming of the elephant [NĀLĀGIRI](#) at [RĀJAGRHA](#), (8) the receipt of the monkey’s gift of honey at [VAIŚĀLĪ](#). These sites became important places of pilgrimage in India and were ubiquitous stops during the sojourns of [XUANZANG](#) and other Chinese and Korean pilgrims on the subcontinent. These eight sites are found depicted in Indian sculpture dating from the Pāla period.

[Mahāsuddassanasuttanta](#). (C. Dashanjian wang jing; J. Daizenkennōkyō; K. Taesŏn’gyŏn wang kyŏng 大善見王經). In Pāli, the “Great Discourse on King Suddassana”; the seventeenth sutta of the [DĪGHANIKĀYA](#) (a separate [SARVĀSTIVĀDA](#) recension appears as the fifty-eighth sūtra in the Chinese translation of the [MADHYAMĀGAMA](#)); preached by the Buddha to [ĀNANDA](#) in the town of Kusināra (S. [KUŚINAGARĪ](#)) while he lay dying beneath twin sāla (S. [ŚĀLA](#)) trees in the grove of the Mallas. Ānanda begs the Buddha not to pass away in such an insignificant town, whereupon the Buddha recounts to him the former

splendor of the place eons ago, when the city was governed by the [CAKRAVARTIN](#) Suddassana (S. Sudarśana). After recounting the king’s virtues, the Buddha reveals that he himself had been Suddassana in a previous life while he was a [BODHISATTVA](#). Thus, the Buddha concludes, Kusināra is indeed a suitable place for the final demise (parinibbāna; S. [PARINIRVĀNA](#)) of a buddha.

[mahāsukha](#). (T. bde ba chen po; C. dale; J. dairaku/tairaku; K. taerak 大樂). In Sanskrit, “great bliss”; an important term in Buddhist [TANTRA](#), with a range of denotations, from orgasm to enlightenment. In a more technical usage, it refers to a special bliss consciousness generated during the practice of [ANUTTARAYOGATANTRA](#) by causing the winds ([PRĀNA](#)) to enter the central channel ([AVADHŪTĪ](#)). This bliss consciousness is then to be used to perceive emptiness ([ŚŪNYATĀ](#)) directly, resulting in what is called the union of bliss and emptiness.

[Mahātanhāsankhayasutta](#). (C. Tudi jing; J. Dateikyō; K. Toje kyōng 帝經). In Pāli, the “Great Discourse on the Destruction of Craving”; the thirty-eighth sutta in the [MAJJHIMANIKĀYA](#) (a separate [SARVĀSTIVĀDA](#) recension appears as the 201st sūtra in the Chinese translations of the [MADHYAMĀGAMA](#)); preached by the Buddha at the [JETAVANA](#) grove in the town of Sāvatti (S. [ŚRĀVASTĪ](#)) to the monk Sāti, who held the mistaken view that the Buddha taught that consciousness (P. viññāṇa; S. [VIJÑĀNA](#)) transmigrates from life to life. The Buddha reprimands Sāti, telling him he never taught such a view, but that consciousness arises only due to causes and conditions and never otherwise. He continues with a lengthy discourse on dependent origination (P. paṭiccasamuppāda; S. [PRATĪTYASAMUTPĀDA](#)) in which he describes how all worldly phenomena come into being and pass away according to the law of cause and effect.

[Mahāthūpa](#). In Pāli, “great [STŪPA](#)”; the great reliquary mound built by the Sinhalese king [DUTTHAGĀMANĪ](#) in the first century BCE, erected after he had vanquished the Daṃḷas and reunited the island kingdom under his rule. The Mahāthūpa was erected in the [MAHĀMEGHAVANA](#) grove near [ANURĀDHAPURA](#) at a spot visited by all four of the buddhas who had been born thus far in the present auspicious eon (P. bhaddakappa; S. [BHADRAKALPA](#)). The monument, which was 120 cubits high and designed in the shape of a water drop, was crowned with a richly adorned relic chamber that housed physical relics (S. [ŚARĪRA](#)) of the Buddha acquired from the [NĀGA MAHĀKĀLA](#). The arahant [MAHINDA](#) is said to have once indicated to King [DEVĀNAMPIYATISSA](#) the site where the Mahāthūpa

was to be built. Devānaṃpiyatissa wished to construct the shrine himself, but Mahinda informed him that that honor was to go the future king, Duṭṭhagāmaṇī. To commemorate that prophecy, Devānaṃpiyatissa had it inscribed on a pillar at the site. It was the discovery of that pillar that prompted Duṭṭhagāmaṇī to take up the task. Thousands of saints from various parts of the island and [JAMBUDVĪPA](#) (meaning India in this case) gathered at the Mahāmeghavana to celebrate the construction of the Mahāthūpa. Duṭṭhagāmaṇī fell ill and died just before the monument was completed. The royal umbrella was raised above the Mahāthūpa by his brother and successor, Saddhatissa.

[mahā-upaputra](#). [alt. mahōpaputra] (T. nye ba’i sras chen brgyad; C. ba dapusa; J. hachidai bosatsu; K. p’al taebosal 八大菩薩). In Sanskrit, the “eight close sons”; a group of “eight great [BODHISATTVAS](#)” (which is the Chinese translation of the term). They are [KṢITIGARBHA](#), [ĀKĀŚAGARBHA](#), [AVALOKITEŚVARA](#), [VAJRAPĀNI](#), [MAITREYA](#), [SARVANĪVARANAṆISKAMBHIN](#), [SAMANTABHADRA](#), and [MAÑJUŚRĪ](#). These eight are often depicted flanking the buddhas [ŚĀKYAMUNI](#) or [AMITĀBHA](#). This grouping is known throughout Asia, from northern India, where they appear in [ELLORĀ](#), [RATNAGIRI](#), and [NĀLANDĀ](#), to Japan, as well as Indonesia—indeed, wherever [MAHĀYĀNA](#) and tantric Buddhism flourished. They figure as a group in [TANTRAS](#) of various classes, where the number of their arms corresponds to the main deity of the [MANDALA](#) and their colors correspond to the direction in which they are placed. Textual evidence for the grouping is known from as early as the third century CE, with the Chinese translation of the *Ba jixiang shen jing* (“Eight Auspicious Spirits Scripture”). Their roles are laid out in the *Aṣṭamaṇḍalakasūtra*, where the aims of their worship are essentially mundane—absolution from evil, fulfillment of desires, and protection from ills. See also [ASTAMAHOPOPAPUTRA](#).

[Mahāvadānasūtra](#). (T. Rtogs par brjod pa chen po’i mdo; C. Daben jing; J. Daihongyō; K. Taebon kyōng 大本經). In Sanskrit, the “Sūtra of the Great Legend”; a sūtra that exists in Pāli (where it is called the [MAHĀPADĀNASUTTANTA](#)) and is also extant in a [DHARMAGUPTAKA](#) recension that is the first [SŪTRA](#) in the Chinese translation of the [DIRGHĀGAMA](#). The scripture provides the biography of [VIPĀŚYIN](#) (P. Vipassī), one of the buddhas of the past, from the time of his birth to the time of his enlightenment. The narrative closely mirrors that of the life of [GAUTAMA SIDDHĀRTHA](#), but with the significant sites and persons having different names. The text notes that the life stories of all

buddhas are the same. See also [MAHĀPADĀNASUTTANTA](#).

Mahāvagga. In Pāli, “Great Chapter”; an important book in the Pāli [VINAYAPITAKA](#), which provides the first systematic narrative of the early history of the [SAMGHA](#). The [KHANDHAKA](#) (“Collections”), the second major division of the Pāli vinaya, is subdivided between the *Mahāvagga* and the [CŪLAVAGGA](#) (“Lesser Chapter”). The *Mahāvagga* includes ten khandhakas. The long, opening khandhaka narrate the events that immediately follow the Buddha’s experience of enlightenment ([BODHI](#)) beneath the [BODHI TREE](#), including the conversion of the first lay disciples, Tapussa (S. [TRAPUSA](#)) and [BHALLIKA](#) (cf. [TIWEI \[BOLI\] JING](#)); his earliest teachings to the group of five (P. pañcavaggiyā; S. [PAÑCAVARGIKA](#)); the foundation of the order of monks; and the institution of an ordination procedure through taking the three refuges (P. tisarāṇa; S. [TRIŚARANA](#)) and the formula ehi bhikkhu pabbajjā (“Come, monks”; see S. [EHIBHIKSUKĀ](#)). Much detail is provided also on the enlightenment experiences and conversion of his first major disciples, including Aññātakoṇḍañña (S. [ĀJÑĀTAKAUNDINYA](#)), Assaji (S. [AŚVAJIT](#)), and Uruvela-Kassapa (S. [URUVILVĀ-KĀŚYAPA](#)), as well as the two men who would become his two greatest disciples, Sāriputta (S. [ŚĀRIPUTRA](#)) and Moggallāna (see S. [MAHĀMAUDGALYĀYANA](#)). Subsequent khandhakas discuss the recitation of the rules of discipline (P. pāṭimokkha; S. [PRĀTIMOKSA](#)) on the fortnightly retreat day (P. uposatha; S. [UPOSADHA](#)), the institution of the rains retreat (P. vassa; S. [VARŚĀ](#)), medicines, the design of the monastic robes ([CĪVARA](#)), and the robe-cloth ceremony ([KATHINA](#)), and of the criteria for evaluating whether an action conforms to the spirit of the vinaya. The *Mahāvagga*’s historical narrative is continued in the *Cūlavagga*, which relates the history of the saṃgha following the buddha’s [PARINIRVĀNA](#).

Mahāvairocana. See [VAIROCANA](#).

Mahāvairocanābhisambodhisūtra. (T. Rnam par snang mdzad chen po mngon par rdzogs par byang chub pa rnam par sprul ba byin gyis rlob pa shin tu rgyas pa mdo; C. Da piluzhena chengfo shenbian jiachi jing/Dari jing; J. Daibirushana jōbutsu jinben kajikyō/Dainichikyō; K. Tae Pirojana sōngbul sinbyōn kaji kyōng /Taeil kyōng 大毘盧遮那成佛神 變加持經/大日經). In Sanskrit, “The Discourse on the Enlightenment of Mahāvairocanā”; a scripture also known as the *Mahāvairocanasūtra* and the *Vairocanābhisambodhitāntra*; the full title of the work is *Mahāvairocanābhisambodhivikurvitādhiṣṭhānavāipulyasūtra* (“Extensive Sūtra on the Enlightenment, Transformations, and Empowerment of

[MAHĀVAIROCANĀ](#)”). This scripture is an early Buddhist [TANTRA](#), which was probably composed sometime between the mid-sixth and seventh centuries, around the time that the [MANTRAYĀNA](#) was emerging as distinct strand of [MAHĀYĀNA](#) Buddhism; the text is later classified as both a [YOGATANTRA](#) and a [CARYĀTANTRA](#). It was first translated into Chinese by [ŚUBHAKARASIMHA](#) and [YIXING](#) in 724–725, and would become one of the two most important tantras for East Asian esoteric Buddhism (the other being the [SARVATATHĀGATATATTVASAMGRAHA](#)). The text was translated into Tibetan in the early ninth century; the Tibetan version contains an additional seven chapters, called the “continuation” (uttaratantra), that do not appear in the Chinese version. Among the commentaries to the text, the most important is that of [BUDDHAGUYHA](#) and that of the Chinese translators, Śubhakarasiṃha and Yixing. The tantra is set forth as a dialogue between [VAJRAPĀNI](#) and the buddha Mahāvairocanā. The central topics of the text are [BODHICITTA](#), [KARUNĀ](#), and [UPĀYA](#), which the buddha [VAIROCANĀ](#) explains are respectively the cause, root, and culmination of his own omniscience. Much of the text deals with the traditional tantric topics of initiation ([ABHISEKA](#)), [MANTRA](#) recitation, [MUDRĀ](#), visualization, and the description of the [MANDALA](#).

[Mahāvamsa](#). In Pāli, the “Great Chronicle”; the most famous Pāli chronicle of Sri Lanka. Written in verse and attributed to Mahānāma Thera, it follows the outline of the earlier [DĪPAVAMSA](#) in tracing the history of the Buddhist religion from its inception through the three Buddhist councils in India, to its introduction into Sri Lanka by [MAHINDHA](#) during the reign of [DEVĀNAMPIYATISSA](#), up to the reign of Mahāsenā in the fourth century CE. Written most probably in the fifth century CE, the *Mahāvamsa* presents a more elaborate and coherent description of events than is found in the *Dīpavamsa*, although some material treated in the latter, such as the lineage of nuns, is omitted.

[Mahāvastu](#). In Sanskrit, the “Great Chapter.” Also known as the *Mahāvastu AVADĀNA*, this lengthy work is regarded as the earliest Sanskrit biography of the Buddha. The work describes itself as a book “of the [VINAYAPITAKA](#) according to the [LOKOTTARAVĀDA](#), which is affiliated with the [MAHĀSĀMĠHIKA](#).” The work thus provides important insights into how the Buddha was understood by the Lokottaravāda, or “Proponents of the Supramundane,” a branch of the Mahāsaṃghika, or “Great Community,” which some scholars regard as a

possible antecedent of the Mahāyāna. The placement of the work in the vinaya-piṭaka suggests that the genre of biographies of the Buddha began as introductions to the monastic code, before becoming independent works. Indeed, it corresponds roughly to the [MAHĀVAGGA](#) portion of the [KHANDHAKA](#) in the Pāli vinaya-piṭaka. The *Mahāvastu* is divided into three parts. The first part deals with the previous lives of the being who would become the buddha [ŚĀKYAMUNI](#), recounting the virtuous deeds he performed and the [BODHISATTVA](#) vow he made to the buddha [DIPAMKARA](#) and other buddhas of the past. The second part begins in [TUSITA](#), when the bodhisattva decides where to take his final birth. It goes on to recount his birth, childhood and youth; departure from the palace; and search for enlightenment. It concludes with his defeat of [MĀRA](#). The third section describes the first conversions and the foundation of the [SAMGHA](#). Like other early “biographies” of the Buddha, the narrative ends long before the Buddha’s passage into [PARINIRVĀNA](#). Also like these other works, the *Mahāvastu* does not provide a simple chronology, but is interrupted with numerous teachings, avadānas, and [JĀTAKA](#)s, some of which do not have analogues in the Pāli. There are also interpolations: for example, there are two versions of the [BODHISATTVA](#)’s departure, the first rather simple and the second more elaborate, containing the famous story of the chariot rides during which the prince encounters aging, sickness, and death for the first time (cf. [CATURNIMITTA](#)). The so-called proto-Mahāyāna elements of the *Mahāvastu* have been the subject of much debate. For example, the text includes a lengthy description of the ten bodhisattva [BHŪMI](#)s, often regarded as a standard Mahāyāna tenet, but their description differs in significant ways from that found in the Mahāyāna sūtras. Although clearly a work with many interpolations, linguistic elements suggest that portions of the text may date to as early as the second century BCE.

[Mahāvedallasutta](#). (C. Dajuchiluo jing; J. Daikuchirakyō; K. Taeguch’ira kyōng 大拘絺羅經). In Pāli, “Greater Discourse on Points of Doctrine”; the forty-third sutta in the [MAJJHIMANIKĀYA](#) (a separate [SARVĀSTIVĀDA](#) recension appears in the Chinese translation of the [MADHYAMĀGAMA](#)); expounded by Sāriputra (S. [ŚĀRIPUTRA](#)) to the monk Mahākotṭhita (S. [KAUSTHILA](#)) at Sāvatti (S. [ŚRĀVASTĪ](#)) in the [JETAVANA](#) grove. Mahākotṭhita approached Śāriputra and questioned him concerning a number of points of doctrine preached by the Buddha. These included, what is wisdom ([PRAJÑĀ](#)); what is consciousness ([VIJÑĀNA](#)) and its relation to wisdom; what is sensation ([VEDANĀ](#)); what is perception ([SAMJÑĀ](#)) and what is the relation between sensation, perception, and consciousness; what is

knowable by the mind alone; what is existence and how many kinds of existence are there; what is the first meditative absorption ([DHYĀNA](#)); what are the five sense faculties ([INDRIYA](#)); and what are the various kinds of deliverance attained through meditation ([VIMUKTI](#)). Śāriputra answered all of questions put to him to Mahākoṭṭhiya's satisfaction.

[mahāvibhaṅga](#). (S). See [SŪTRAVIBHAṄGA](#).

[Mahāvibhāṣā](#). (S). See [ABHIDHARMAMAHĀVIBHĀSĀ](#).

[Mahāvihāra](#). (C. Mohepiheluo; J. Mahabihara/Makabikara; K. Mahabihara 摩訶毘訶羅). In Pāli, the “Great Monastery”; built in the third century BCE for the elder [MAHINDA](#) at [ANURĀDHAPURA](#) by the Sinhala king [DEVĀNAMPIYATISSA](#), following the king's conversion to Buddhism. The Mahāvihāra became the headquarters of the orthodox [THERAVĀDA](#) fraternity on the island, with many important shrines, such as the [MAHĀTHŪPA](#), located on its grounds. Its authority was challenged by the [ABHAYAGIRI](#) and [JETAVANA](#) secessionist fraternities in the first century BCE and fourth century CE, respectively. Five hundred monks from Mahāvihāra were said to have participated in the first commitment to writing of a Buddhist canon, which occurred during the reign of [VATTAGĀMANI ABHAYA](#) (the patron of Abhayagiri) in the last decades BCE. During the reign of Mahāsena, in the late third century CE, a royal decree forbade giving alms to the monks of the monastery, causing the monastery to be vacated for nine years; during this time, some of the buildings were destroyed, but they were eventually rebuilt. [BUDDHAGHOSA](#) composed his sutta commentaries while residing at the monastery. After the capital was moved from Anurādhapura to Pulatthipura, near the beginning of the ninth century, the monastery lost much of its influence and eventually fell into decay.

[Mahāvihāravāsin](#). In Pāli, “Dweller in the Great Monastery”; the name of the monastic order and ordination lineage associated with the [MAHĀVIHĀRA](#) in Sri Lanka. Although originating in Sri Lanka, it established a presence in India, as indicated by inscriptions at [NĀGĀRJUNAKONDĀ](#). When [FAXIAN](#) traveled to Sri Lanka in 410 CE, he reported that there were three thousand monks belonging to the Mahāvihāravāsin. The commentarial tradition beginning with [BUDDHAGHOSA](#), who compiled his sutta commentaries at the monastery, represents the Mahāvihāra positions on doctrine and practice. After a long period of decline, the Mahāvihāra fraternity was again made the sole monastic order on

the island with the abolition of its rivals in the twelfth century CE during a purification program carried out by [PARAKRĀMABĀHU I](#). It has been the dominant order in Sri Lanka during the modern period.

[Mahāvīra](#). (T. Dpa' bo chen po; C. Daxiong; J. Daiyū/Daiō; K. Taeung 大雄). In Sanskrit and Pāli, “Great Victor”; the title of [NIRGRANTHA JÑĀTĪPUTRA](#) (P. Nigaṇṭha Nātaputta), also known as Vardhamāna (d. c. 488 BCE), leader of the [JAINA](#) tradition, a [ŚRAMANA](#) sect in northern India that the Buddhists listed among the [TĪRTHIKA](#) groups, the adherents of non-Buddhist religions, sometimes mistranslated as “heretics.” Mahāvīra was considered to be the last in a long line of [JINA](#) (“victors” over ignorance) or tīrthaṅkaras going back through twenty-four generations to Pārśva. Mahāvīra seems to have been an elder contemporary of the Buddha and figures prominently in Buddhist materials; indeed, he is one of the so-called six sectarian teachers criticized by the Buddha for their wrong views in such texts as the [SĀMAÑÑAPHALASUTTA](#) of the [DĪGHANIKĀYA](#). See [JAINA](#).

[Mahāvyutpatti](#). (T. Bye brag tu rtogs par byed pa chen po; C. Fanyi mingyi daji; J. Hon'yaku myōgi taishū; K. Pōnyōk myōngūi taejip 翻譯名義大集). In Sanskrit, the “Great Detailed Explanation”; an important Sanskrit–Tibetan lexicon dating from the ninth century. In order to provide consistency in the translation of Indian [SŪTRAS](#) and [ŚĀSTRAS](#), the Tibetan king [RAL PA CAN](#) convened a meeting of scholars in 821 and charged them with providing standard Tibetan equivalents for a wide range of terms encountered in Sanskrit Buddhist texts. The result was a lexicon known as the *Mahāvyutpatti*, which contains (in one version) 9,565 terms. The king is said to have instructed its compilers not to include tantric vocabulary. The work is organized into 283 categories, the purpose of some of which (the eighteen kinds of [ŚŪNYATĀ](#), the ten virtuous actions, the thirty-two marks of a [MAHĀPURUSA](#)) are more self-evident than others (“names of strange things,” “various terms”). During the seventeenth century, Chinese, Mongolian, and Manchurian equivalencies were added to the lexicon so that the terms would be available in the four major languages used in the Qing empire (Manchu, Chinese, Tibetan, and Mongolian). The first English translation was made by ALEXANDER CSOMA DE KŐRŐS, but it was not published until long after his death. The *Mahāvyutpatti* continues to be consulted in editions produced by Japanese scholars that include additional Chinese equivalencies and various indexes.

[Mahāyāna](#). (T. theg pa chen po; C. dasheng; J. daijō; K. taesūng 大乘). In

Sanskrit, “great vehicle”; a term, originally of self-appellation, which is used historically to refer to a movement that began some four centuries after the Buddha’s death, marked by the composition of texts that purported to be his words ([BUDDHAVACANA](#)). Although ranging widely in content, these texts generally set forth the bodhisattva path to buddhahood as the ideal to which all should aspire and described [BODHISATTVA](#)s and buddhas as objects of devotion. The key doctrines of the Mahāyāna include the perfection of wisdom ([PRAJÑĀPĀRAMITĀ](#)), the skillful methods ([UPĀYAKAUŚALYA](#)) of a buddha, the three bodies ([TRIKĀYA](#)) of a buddha, the inherency of buddha-nature ([BUDDHADHĀTU](#); [TATHĀGATAGARBHA](#)), and [PURE LAND](#)s or buddha-fields ([BUDDHAKSETRA](#)). The term Mahāyāna is also appended to two of the leading schools of Indian Buddhism, the [YOGĀCĀRA](#) and the [MADHYAMA](#), because they accepted the Mahāyāna sūtras as the word of the Buddha. However, the tenets of these schools were not restricted to expositions of the philosophy and practice of the bodhisattva but sought to set forth the nature of wisdom and the constituents of the path for the [ARHAT](#) as well. The term Mahāyāna often appears in contrast to [HĪNAYĀNA](#), the “lesser vehicle,” a pejorative term used to refer to those who do not accept the Mahāyāna sūtras as the word of the Buddha. Mahāyāna became the dominant form of Buddhism in China, Korea, Japan, Tibet, and Mongolia, and therefore is sometimes referred to as “Northern Buddhism,” especially in nineteenth-century sources. Because of the predominance of the Mahāyāna in East Asia and Tibet, it is sometimes assumed that the Mahāyāna displaced earlier forms of Buddhism (sometimes referred to by scholars as “Nikāya Buddhism” or “[MAINSTREAM BUDDHIST SCHOOLS](#)”) in India, but the testimony of Chinese pilgrims, such as [XUANZANG](#) and [YIJING](#), suggests that the Mahāyāna remained a minority movement in India. These pilgrims report that Mahāyāna and “hīnayāna” monks lived together in the same monasteries and followed the same [VINAYA](#). The supremacy of the Mahāyāna is also sometimes assumed because of the large corpus of Mahāyāna literature in India. However, scholars have begun to speculate that the size of this corpus may not be a sign of the Mahāyāna’s dominance but rather of its secondary status, with more and more works composed but few gaining adherents. Scholars find it significant that the first mention of the term “Mahāyāna” in a stone inscription does not appear in India until some five centuries after the first Mahāyāna sūtras were presumably composed, perhaps reflecting its minority, or even marginal, status on the Indian subcontinent. The origins of the Mahāyāna remain the subject of scholarly debate. Earlier theories that saw the Mahāyāna as largely a lay movement

against entrenched conservative monastics have given way to views of the Mahāyāna as beginning as disconnected cults (of monastic and sometimes lay members) centered around an individual sūtra, in some instances proclaimed by charismatic teachers called [DHARMABHĀNAKA](#). The teachings contained in these sūtras varied widely, with some extolling a particular buddha or bodhisattva above all others, some saying that the text itself functioned as a [STŪPA](#). Each of these sūtras sought to represent itself as the authentic word of [ŚĀKYAMUNI](#) Buddha, which was more or less independent from other sūtras; hence, the trope in so many Mahāyāna sūtras in which the Buddha proclaims the supremacy of that particular text and describes the benefits that will accrue to those who recite, copy, and worship it. The late appearance of these texts had to be accounted for, and various arguments were set forth, most making some appeal to [UPĀYA](#), the Buddha's skillful methods whereby he teaches what is most appropriate for a given person or audience. Thus, in the [SADDHARMAPUNḌARĪKASŪTRA](#) ("Lotus Sūtra"), the Buddha famously proclaims that the three vehicles ([TRĪYĀNA](#)) that he had previously set forth were in fact expedient stratagems to reach different audiences and that there is in fact only one vehicle ([EKAYĀNA](#)), revealed in the *Saddharmapuṇḍarīkasūtra*, the [BUDDHAYĀNA](#), which had been taught many times in the past by previous buddhas. These early Mahāyāna sūtras seem to have been deemed complete unto themselves, each representing its own world. This relatively disconnected assemblage of various cults of the book would eventually become a self-conscious scholastic entity that thought of itself as the Mahāyāna; this exegetical endeavor devoted a good deal of energy to surveying what was by then a large corpus of such books and then attempting to craft the myriad doctrines contained therein into coherent philosophical and religious systems, such as Yogācāra and Madhyamaka. The authority of the Mahāyāna sūtras as the word of the Buddha seems to have remained a sensitive issue throughout the history of the Mahāyāna in India, since many of the most important authors, from the second to the twelfth century, often offered a defense of these sūtras' authenticity. Another influential strand of early Mahāyāna was that associated with the [RĀSTRAPĀLAPARIPRCCHĀ](#), [KĀŚYAPAPARIVARTA](#), and [UGRAPARIPRCCHĀ](#), which viewed the large urban monasteries as being ill-suited to serious spiritual cultivation and instead advocated forest dwelling (see [ARAÑÑAVĀSI](#)) away from the cities, following a rigorous asceticism (S. dhutaṅga; P. [DHUTAṅGA](#)) that was thought to characterize the early [SAMGHA](#). This conscious estrangement from the monks of the city, where the great majority of monks would have resided, again suggests the Mahāyāna's minority status in India. Although one often reads in

Western sources of the three vehicles of Buddhism—the hīnayāna, Mahāyāna, and [VAJRAYĀNA](#)—the distinction of the Mahāyāna from the vajrayāna is less clear, at least polemically speaking, than the distinction between the Mahāyāna and the hīnayāna, with followers of the vajrayāna considering themselves as following the path to buddhahood set forth in the Mahāyāna sūtras, although via a shorter route. Thus, in some expositions, the Mahāyāna is said to subsume two vehicles, the [PĀRAMITĀYĀNA](#), that is, the path to buddhahood by following the six perfections ([PĀRAMITĀ](#)) as set forth in the Mahāyāna sūtras, and the [MANTRAYĀNA](#) or vajrayāna, that is, the path to buddhahood set forth in the tantras.

[Mahāyānasamgraha](#). (T. Theg pa chen po bsdus pa; C. She dasheng lun; J. Shōdaijōron; K. Sōp taesūng non 攝大乘論). In Sanskrit, the “Summary of the Great Vehicle”; an important treatise of the [YOGĀCĀRA](#) school, composed by the fourth-century master [ASAṄGA](#). The text is lost in the original Sanskrit but is preserved in Tibetan and four Chinese translations, including those by such famous figures as [PARAMĀRTHA](#) and [XUANZANG](#). The work is the most complete presentation of Yogācāra theory and practice, setting forth in detail the doctrines of the three natures ([TRISVABHĀVA](#)), as well as the foundational consciousness ([ĀLAYAVIJÑĀNA](#)), and the seeds ([BĪJA](#)) that reside there. It also sets forth practices for cultivating the wisdom derived from hearing ([ŚRUTAMAYĪPRAJÑĀ](#)), the wisdom derived from reflection ([CINTĀMAYĪPRAJÑĀ](#)), and the wisdom derived from meditation ([BHĀVANĀMAYĪPRAJÑĀ](#)), whereby the ālayavijñāna is destroyed and enlightenment attained. The lineage ([GOTRA](#)) of enlightenment and the nature of the [DHARMAKĀYA](#) are also elucidated. Both [VASUBANDHU](#) and [ASVABHĀVA](#) composed commentaries on the text, which were also translated into Chinese. The *Mahāyānasamgraha* served as the basis of the [SHE LUN ZONG](#) in China.

[Mahāyānasūtrālamkāra](#). [alt. Sūtrālamkāra] (T. Theg pa chen po'i mdo sde'i rgyan; C. Dasheng zhuangyan jing lun; J. Daijō shōgongyōron; K. Taesūng changōmgyōng non 大乘莊嚴經論). In Sanskrit, the “Ornament for the Mahāyāna Sūtras”; one of the five works (together with the [ABHISAMAYĀLAMKĀRA](#), the [RATNAGOTRAVIBHĀGA](#), the [MADHYĀNTAVIBHĀGA](#), and the [DHARMADHARMATĀVIBHĀGA](#)) said to have been presented to [ASAṄGA](#) by the bodhisattva [MAITREYA](#) in the [TUSITA](#) heaven (see also [MAITREYANĀTHA](#)). Written in verse, the text offers a systematic presentation of the practices of the bodhisattva from the standpoint of the [YOGĀCĀRA](#) school and is one of the most important of the Indian Mahāyāna [ŚĀSTRAS](#). Its twenty-one chapters deal with (1)

the proof that the [MAHĀYĀNA](#) sūtras are the word of the Buddha; (2) taking refuge in the three jewels ([RATNATRAYA](#)); (3) the lineage ([GOTRA](#)) of enlightenment necessary to undertake the bodhisattva path; (4) the generation of the aspiration to enlightenment ([BODHICITTOTPĀDA](#)); (5) the practice of the [BODHISATTVA](#); (6) the nature of reality, described from the Yogācāra perspective; (7) the attainment of power by the bodhisattva; (8) the methods of bringing oneself and others to maturation; (9) enlightenment and the three bodies of a buddha ([TRIKĀYA](#)); (10) faith in the Mahāyāna; (11) seeking complete knowledge of the dharma; (12) teaching the dharma; (13) practicing in accordance with the dharma; (14) the precepts and instructions received by the bodhisattva; (15) the skillful methods of the bodhisattva; (16) the six perfections ([PĀRAMITĀ](#)) and the four means of conversion ([SAMGRAHAVASTU](#)), through which bodhisattvas attract and retain disciples; (17) the worship of the Buddha; (18) the constituents of enlightenment ([BODHIPĀKSIKADHARMA](#)); (19) the qualities of the bodhisattva; and (20–21) the consummation of the bodhisattva path and the attainment of buddhahood. There is a commentary ([BHĀSYA](#)) by [VASUBANDHU](#) and a subcommentary by [STHIRAMATI](#).

[Mahāyānottaratantraśāstra](#). (S). See [RATNAGOTRAVIBHĀGA](#).

[Mahāyānottaratantraśāstravyākhyā](#). (S). See [RATNAGOTRAVIBHĀGA](#).

[Mahayazawin-gyi](#). In Burmese, “The Great Chronicle”; a voluminous Burmese [YAZAWIN](#) or royal chronicle written c. 1730 by U Kala. Historically, other Burmese (Myanmar) royal chronicles of the eighteenth and nineteenth centuries are based directly or indirectly on this text. Following the outlines of the [DĪPAVAMSA](#) and [MAHĀVAMSA](#), the first part of U Kala’s work traces the history of kings from the time of [MAHĀSAMMATA](#) at the beginning of the present world-eon, through the Mauryan dynasty in India, to the history of kings in Sri Lanka. As in the Pāli chronicles upon which it is patterned, the *Mahayazawin-gyi* portrays the histories of the Buddhist religion and of Buddhist kingdoms as intertwined. The history of Burma, which occupies the majority of the text, is organized into periods according to the capital cities. It begins with the founding of Tagaung, the first Burmese capital, before the lifetime of the Buddha. The Tagaung period is followed in turn by the Sirīkhetarā, [PAGAN](#), [AVA](#), [PEGU](#), and the second Ava periods. The most famous episode of the chronicle is the long account of the conversion of Pagan’s king [ANAWRAHTA](#) (P. Anuruddha; S. Aniruddha; r. c. 1044–1077 CE) to Theravāda Buddhism through the efforts of the Mon saint,

[SHIN ARAHAN](#). This event allegedly precipitated Anawrahta's conquest of the neighboring Mon kingdom of Thaton in search of texts and relics, and in turn the founding of the first Burmese empire. U Kala's chronicle concludes with an account of the meritorious deeds of Tanin gan wei (r. 1714–1733), the king of Ava at the time the text was composed.

[mahāyoga](#). (T. rnal 'byor chen po/ma hā yo ga). In Sanskrit “great yoga”; the seventh of the nine vehicles according to the [RNYING MA](#) sect of Tibetan Buddhism. Here, the system of practice described elsewhere as [ANUTTARAYOGATANTRA](#) is divided into three: mahāyoga, [ANUYOGA](#), and [ATIYOGA](#), with mahāyoga corresponding roughly to practices of the “stage of generation” ([UTPATTIKRAMA](#)), in which one visualizes oneself as a deity and one's environment as a [MANDALA](#). Its root text is the [GUHYAGARBHATANTRA](#).

[Mahinda](#). (S. Mahendra; T. Dbang chen; C. Moshentuo; J. Mashinda; K. Masinda 摩晒陀). Pāli proper name of the son of Asoka (S. [AŚOKA](#)), who converted the Sinhalese king, [DEVĀNAMPIYATIṢṢA](#), to Buddhism in the third century BCE, thus inaugurating the Buddhist religion in Sri Lanka. The story of Mahinda is first recorded in the [DĪPAVAMSA](#) (c. fourth century CE) and is elaborated in the [MAHĀVAMSA](#) (c. fifth century CE) and [BUDDHAGHOSA](#)'s [VINAYA](#) commentary, [SAMANTAPĀSĀDIKĀ](#). In each of these works, Mahinda's story is preceded by a narrative that begins with the legend of Asoka's conversion to Buddhism, through the convention of the third Buddhist council (see [COUNCIL, THIRD](#)) under the direction of [MOGGALIPUTTATIṢṢA](#), to the dispatch of Buddhist missions to nine adjacent lands (paccantadesa). Mahinda was chosen to lead the mission sent to Sri Lanka. Mahinda, together with his sister [SAṄGHAMITTĀ](#), was ordained at the age of twenty at the request of his father, Asoka. He attained arahantship immediately upon his ordination. Mahinda was swift in learning the doctrine, and was placed in charge of Moggaliputtatissa's one thousand disciples when the latter retired to Ahogaṅga due to a dispute within the [SAMGHA](#). Mahinda had been a monk for twelve years when the third Buddhist council was convened to celebrate the resolution of the dispute. Shortly thereafter, he was sent along with four other monks, a novice, and a layman to Sri Lanka for the purpose of converting its king. Mahinda preached the [CŪLAHATTHIPADOPAMASUTTA](#) to Devānaṃpiyatissa, whereupon the king requested to be accepted as a lay disciple. The next day, he preached to the king's sister-in-law, Anulā, and five hundred women of the court, all of whom became stream-enterers. Preaching to

them a second time, they became once-returners. When they asked be ordained, he said that monks could not ordain women, and suggested that his sister, the nun Saṅghamittā, be invited, which was done. She came to Sri Lanka, bringing with her a branch of the [BODHI TREE](#). The king offered to Mahinda the [MAHĀMEGHAVANA](#), a royal pleasure garden that was to be the future site of the [MAHĀTHŪPA](#). In the garden, which was on the outskirts of the Sinhalese capital, [ANURĀDHAPURA](#), Mahinda established the [SĪMĀ](#) boundary for the [MAHĀVIHĀRA](#) monastery, which thenceforth became the headquarters of the Theravāda fraternity on the island. At Mahinda's prompting, relics of the Buddha were received from Asoka and Sakka (S. [ŚAKRA](#)), king of the gods, which were interred in the Cetiyaḡiri and Thūpārāma. Under Mahinda's direction, a council was held where [MAHĀRIṬṬHA](#), a native son of Sri Lanka, recited the vinaya. According to the *Samantapāsādikā*, this recital marked the firm establishment of the religion on the island. The *Saddhammasaṅgaha* reckons the recitation of the vinaya by Mahāriṭṭha as the fourth Buddhist council (see [COUNCIL, FOURTH](#)). Mahinda died at the age of sixty and was cremated and his ashes interred in a shrine near the Mahāthūpa.

[Mahisamandala](#). (C. Moxisuomantuoluo [guo]; J. Makesamandara [koku]; K. Mahyesamandara [kuk] 摩醯娑慢陀羅 [國]). One of nine adjacent lands (paccantadesa) converted to Buddhism by missionaries dispatched by the elder [MOGGALIPUTTATIṢṢA](#) at the end of the third Buddhist council ([SAMGĪTI](#); see [COUNCIL, THIRD](#)) held in Pāṭaliputta (S. [PĀTALIPUTRA](#)) during the reign of Asoka in the third century BCE. Mahisamaṇḡala has been identified with modern Mysore and was converted by the elder [MAHĀDEVA](#), who preached the *Devadūtasutta*. The third Buddhist Council at Pāṭaliputta and the nine Buddhist missions are known only in Pāli sources and are first recorded in the c. fourth-century text, the [DĪPAVAMSA](#).

[Mahīsāsaka](#). [alt. Mahiṃśāsaka] (P. Mahiṃsāsaka; T. Sa ston pa; C. Huadi bu; J. Kejibu; K. Hwaji pu 化地部). One of the eighteen traditional “mainstream” (i.e., non-[MAHĀYĀNA](#)) [NIKĀYAS](#) or schools of Indian Buddhism. The school may be named eponymously after its founder, whose name seems to mean “Governing the Land,” a brāhmaṇa who had been a district governor before becoming an [ARHAT](#). The school probably emerged some three centuries after the demise of the Buddha. Within the traditional division of schools into two groups, the [MAHĀSĀMḡHIKA](#) and the [STHAVIRANIKĀYA](#), the Mahīsāsaka is placed among the

latter. The school was an offshoot of the [SARVĀSTIVĀDA](#) and it may have spawned in turn the later [DHARMAGUPTAKA](#) school. Epigraphic evidence of the school has been found as far north as the Punjab and as far south as [NĀGĀRJUNAKONDĀ](#). The Chinese pilgrim [FAXIAN](#) came across its recension of the [VINAYA](#) in Sri Lanka. Like the other schools of the day, the Mahīśāsaka distinguished itself from its contemporaries through its position on a number of contested issues, including the question of which works should be included in the [TRIPITAKA](#). In accordance with the Sarvāstivāda, it upheld that notion that dharmas function during all three time periods of past, present, and future. On the question of the whether or not there was an intermediate state ([ANTARĀBHAVA](#)) between death and rebirth, the Mahīśāsaka asserted that there was not, but that a subtle form of the aggregates ([SKANDHA](#)) was carried forward into the next lifetime. The Mahīśāsaka also asserted that the fourth noble truth of the path ([MĀRGASATYA](#)) was an unconditioned factor ([ASAMSKRTADHARMA](#)) like the third noble truth of cessation ([NIRODHASATYA](#)). The school also held that the Buddha is a member of the [SAMGHA](#), a question with important implications for the division of alms and monastic properties. The [YOGĀCĀRA](#)-exegete [ASAṄGA](#) is said to have been ordained in this school.

[mahopaputra](#). (S). See [ASTAMAHOPAPUTRA](#); [MAHĀ-UPAPUTRA](#).

[mahorāga](#). (T. Ito 'pnye chen po; C. mohouluojia; J. magoraga; K. mahuraga 摩睺羅迦). A type of demigod in the Buddhist pantheon, the mahorāga are huge subterranean serpents who lie on their sides and rotate in the earth, their rotations causing earthquakes and tremors. They are often propitiated prior to the construction of a shrine, [STŪPA](#), or monastery. Iconographically, they are pictured like nāgas, with the head, arms, and torso of a human, and the lower body and tail of a serpent. The mahorāga are one of the eight kinds of nonhumans ([ASTASENĀ](#)) who protect the dharma, who often appear in the audience of Buddhist [SŪTRAS](#); the other seven are the [DEVA](#), [ASURA](#), [GANDHARVA](#), [NĀGA](#), [YAKṢA](#), [GARUDA](#), and [KIMNARA](#).

[Maijishan](#). (J. Bakusekizan; K. Maekchöksan 麥積山). In Chinese, “Haystack Mountain”; a cave monastery site located southeast of Tianshui in the northwest Chinese province of Gansu, located on a hill some 466 feet (142 meters) high. Situated on the edge of the Qinling Mountains, Maijishan was once an important stop along the ancient [SILK ROAD](#). Based on an inscription dated to 407 CE in cave no. 76, construction of the Maijishan cave sites is presumed to have been

initiated by the Yao Xin family (396–416) during the Later Qin dynasty and to have continued for centuries. Close to two hundred caves have been preserved, which include more than seven thousand terracotta sculptures and countless painted murals. Many of the caves and wooden structures at the site have been damaged or destroyed due to natural disasters. While the paintings at the site are heavily damaged, the sculptures are well preserved and feature smooth modeling and flat planes devoid of naturalism. The dignified facial expressions with foreign features (e.g., round, open eyes and pronounced noses) are similar to those of the [BINGLINGSI](#) images. The arrangement of cave no. 78 consists of three large seated buddhas, which probably represent the buddhas of the past, present, and future. Two small niches at the rear wall feature the pensive bodhisattva [MAITREYA](#) and [SIDDHĀRTHA](#) in the pensive pose (see [MAITREYĀSANA](#)). The two standing bodhisattvas in cave no. 74 are characterized by their smooth bodies and scarves that elegantly frame their bodies; these features, along with the three-disk crown, derive from the Silk Road cave site of [KIZIL](#). The cave temple sites of Binglingsi and Maijishan reflect the artistic synthesis of different Central Asian styles, which heavily influenced the development of the later Northern Wei artistic styles at [LONGMEN](#) and [YUNGANG](#). Both sites also display a range of iconographies derived from sūtras that were newly translated during the Liang and Qin dynasties, whose rulers used Buddhism to enhance their political prestige.

[Maināmati–Lalmāi Range](#). A low series of hills situated between the towns of Maināmati and Lalmāi in the Comilla district of modern-day Bangladesh, where the ruins of a significant number of Buddhist monasteries have been discovered. The earliest ruins date from the sixth century CE, the latest, the thirteenth century CE. Among the more important sites are the Salban Vihāra with 115 monastic cells, the Kotila Mura, which has three [STŪPAS](#), and the Charpatra Mura.

[mainstream Buddhist schools](#). A neologism coined by modern scholars to refer to the non-[MAHĀYĀNA](#) traditions of Indian Buddhism, including [DHARMAGUPTA](#), [MAHĀSĀMGIKA](#), [MAHĪŚĀSAKA](#), [SARVĀSTIVĀDA](#), [SAUTRĀNTIKA](#), [STHAVIRANIKĀYA](#), etc., which traditionally number eighteen (although over thirty different schools are named in the literature). These are also sometimes referred to as the [NIKĀYA](#) or [ŚRĀVAKAYĀNA](#) schools. The locution “mainstream Buddhist school” is to be preferred to the pejorative [HĪNAYĀNA](#), or “lesser vehicle,” a polemical term that the [MAHĀYĀNA](#) coined to refer to these schools, which (from their perspective)

taught narrow and discredited perspectives on Buddhist practice. See List of Lists, “eighteen mainstream Buddhist schools,” and individual entries for these schools.

[maithuna](#). (T. 'khrig pa; C. jiaojie; J. kōsetsu; K. kyōjōp 交接). In Sanskrit, “coupling,” “sexual intercourse”; a term that appears both in proscriptions in the monastic code as well as in prescriptions for certain forms of tantric practice. In the monastic codes ([PRĀTIMOKSA](#)), there are discussions as to what constitutes the violation of the vow of celibacy ([BRAHMACARYA](#)), explaining that the misdeed has been committed if sexual penetration of an orifice to the depth of a mustard seed occurs. In tantric texts, especially of the [ANUTTARAYOGA](#) class, sexual union with a consort is prescribed as a technique for creating the great bliss ([MAHĀSUKHA](#)) necessary for the achievement of enlightenment.

[Maitreya](#). (P. Metteya; T. Byams pa; C. Mile; J. Miroku; K. Mirūk 彌勒). In Sanskrit, “The Benevolent One”; the name of the next buddha, who now abides in [TUSITA](#) heaven as a [BODHISATTVA](#), awaiting the proper time for him to take his final rebirth. Buddhists believed that their religion, like all conditioned things, was inevitably impermanent and would eventually vanish from the earth (cf. [SADDHARMAVIPRALOPA](#); [MOFA](#)). According to one such calculation, the teachings of the current buddha [ŚĀKYAMUNI](#) would flourish for five hundred years after his death, after which would follow a one-thousand-year period of decline and a three-thousand-year period in which the dharma would be completely forgotten. At the conclusion of this long disappearance, Maitreya would then take his final birth in India ([JAMBUDVĪPA](#)) in order to reestablish the Buddhist dispensation anew. According to later calculations, Maitreya will not take rebirth for some time, far longer than the 4,500 years mentioned earlier. He will do so only after the human life span has decreased to ten years and then increased to eighty thousand years. (Stalwart scholiasts have calculated that his rebirth will occur 5.67 billion years after the death of Śākyamuni.) Initially a minor figure in early Indian Buddhism, Maitreya (whose name derives from the Indic [MAITRĪ](#), meaning “loving-kindness” or “benevolence”) evolved during the early centuries of the Common Era into one of the most popular figures in Buddhism across Asia in both the mainstream and [MAHĀYĀNA](#) traditions. He is also known as [AJITA](#), although there are indications that, at some point in history, the two were understood to be different deities. As the first bodhisattva to become a figure of worship, his imagery and cult set standards for the development of later

bodhisattvas who became objects of cultic worship, such as [AVALOKITEŚVARA](#) and [MAÑJUŚRĪ](#). Worship of Maitreya began early in Indian Buddhism and became especially popular in Central and East Asia during the fifth and sixth centuries. Such worship takes several forms, with disciples praying to either meet him when he is reborn on earth or in tuṣita heaven so that they may then take rebirth with him when he becomes a buddha, a destiny promised in the [SADDHARMAPUNĀRIKASŪTRA](#) (“Lotus Sūtra”) to those who recite his name. Maitreya is also said to appear on earth, such as in a scene in the Chinese pilgrim [XUANZANG](#)’s account of his seventh-century travels to India: attacked by pirates as he sailed on the Ganges River, Xuanzang prayed to and was rescued by the bodhisattva. Maitreya also famously appeared to the great Indian commentator [ASAṄGA](#) in the form of a wounded dog as a means of teaching him the importance of compassion. Devotees across the Buddhist world also attempt to extend their life span in order to be alive when Maitreya comes, or to be reborn at the time of his presence in the world, a worldly paradise that will be known as ketumati. His earliest iconography depicts him standing or sitting, holding a vase ([KUNDIKĀ](#)), symbolizing his imminent birth into the brāhmaṇa caste, and displaying the [ABHAYAMUDRĀ](#), both features that remain common attributes of his images. In addition, he frequently has a small [STŪPA](#) in his headdress, believed to represent a prophecy regarding his descent to earth to receive the robes of his predecessor from [MAHĀKĀŚYAPA](#). Maitreya is also commonly depicted as a buddha, often shown sitting in “European pose” ([BHADRĀSANA](#); see also [MAITREYĀSANA](#)), displaying the [DHARMAKĀRAMUDRĀ](#). He is said to sit in a chair in “pensive” posture in order to be able to quickly stand and descend to earth at the appropriate time. Once he is reborn, Maitreya will replicate the deeds of Śākyamuni, with certain variations. For example, he will live the life of a householder for eight thousand years, but having seen the four sights ([CATURNIMITTA](#)) and renounced the world, he will practice asceticism for only one week before achieving buddhahood. As the Buddha, he will first travel to Mount [KUKKUTAPĀDA](#) near [BODHGAYĀ](#) where the great [ARHAT](#) Mahākāśyapa has been entombed in a state of deep [SAMĀDHI](#), awaiting the advent of Maitreya. Mahākāśyapa has kept the robes of Śākyamuni, which the previous buddha had entrusted to him to pass on to his successor. Upon his arrival, the mountain will break open, and Mahākāśyapa will come forth from a stūpa and give Maitreya his robes. When Maitreya accepts the robes, it will only cover two fingers of his hands, causing people to comment at how diminutive the past buddha must have been. ¶ The cult of Maitreya entered East Asia with the initial propagation of

Buddhism and reached widespread popularity starting in the fourth century CE, a result of the popularity of the *Saddharmapuṇḍarīkasūtra* and several other early translations of Maitreya scriptures made in the fourth and fifth centuries. The *Saddharmapuṇḍarīkasūtra* describes Maitreya's present abode in the tuṣita heaven, while other sūtras discuss his future rebirth on earth and his present residence in heaven. Three important texts belonging to the latter category were translated into Chinese, starting in the fifth century, with two differing emphases: (1) the *Guan Mile pusa shangsheng doushuo tian jing* promised sentient beings the prospect of rebirth in tuṣita heaven together with Maitreya; and (2) the *Guan Mile pusa xiasheng jing* and (3) the *Foshuo Mile da chengfo jing* emphasized the rebirth of Maitreya in this world, where he will attain buddhahood under the Dragon Flower Tree (Nāgapuṣpa) and save numerous sentient beings. These three texts constituted the three principal scriptures of the Maitreya cult in East Asia. In China, Maitreya worship became popular from at least the fourth century: [DAO'AN](#) (312–385) and his followers were among the first to propagate the cult of Maitreya and the prospect of rebirth in tuṣita heaven. With the growing popularity of Maitreya, millenarian movements associated with his cult periodically developed in East Asia, which had both devotional and political dimensions. For example, when the Empress [WU ZETIAN](#) usurped the Tang-dynasty throne in 690, her followers attempted to justify the coup by referring to her as Maitreya being reborn on earth. In Korea, Maitreya worship was already popular by the sixth century. The Paekche king Mu (r. 600–641) identified his realm as the world in which Maitreya would be reborn. In Silla, the hwarang, an elite group of male youths, was often identified with Maitreya and such eminent Silla monks as [WŎNHYO](#) (617–686), [WŎNCH'ŬK](#) (613–696), and Kyŏnghŭng (fl. seventh century) composed commentaries on the Maitreya scriptures. Paekche monks transmitted Maitreya worship to Japan in the sixth century, where it became especially popular in the late eighth century. The worship of Maitreya in Japan regained popularity around the eleventh century, but gradually was replaced by devotions to [AMITĀBHA](#) and [KSITIGARBHA](#). The worship of Maitreya has continued to exist to the present day in both Korea and Japan. The Maitreya cult was influential in the twentieth century, for example, in the establishment of the Korean new religions of Chŭngsan kyo and Yonghwa kyo. Maitreya also merged in China and Japan with a popular indigenous figure, [BUDAI](#) (d. 916)—a monk known for his fat belly—whence he acquired his now popular East Asian form of the “laughing Buddha.” This Chinese holy man is said to have been an incarnation of the bodhisattva

Maitreya (J. Miroku Bosatsu) and is included among the Japanese indigenous pantheon known as the “seven gods of good fortune”(SHICHIFUKUJIN). Hotei represents contentment and happiness and is often depicted holding a large cloth bag (Hotei literally means “hemp sack”). From this bag, which never empties, he feeds the poor and needy. In some places, he has also become the patron saint of restaurants and bars, since those who drink and eat well are said to be influenced by Hotei. Today, nearly all Chinese Buddhist monasteries (and many restaurants as well) will have an image of this Maitreya at the front entrance; folk belief has it that by rubbing his belly one can establish the potential for wealth.

Maitreyanātha. (T. Byams mgon; C. Cizun; J. Jison; K. Chajon 慈尊). In Sanskrit, the “Protector Maitreya”; an epithet of MAITREYA, the future buddha. The Sanskrit compound can also be read as “Protected by Maitreya,” and scholars have presumed that this is the name of an Indian scholar and contemporary of ASANGA (fourth century CE), whom they credit with the authorship of some or all of the “five books of Maitreya,” the ABHISAMAYĀLAMKĀRA, the MAHĀYĀNASŪTRĀLAMKĀRA, the RATNAGOTRAVIBHĀGA, the MADHYĀNTAVIBHĀGA, and the DHARMADHARMATĀVIBHĀGA; all of which, according to tradition, were presented to Asaṅga in the TUSITA heaven by the BODHISATTVA Maitreya.

Maitreyāsana. (T. byams pa'i 'dug stangs; C. banjia siwei; J. hankashiyui; K. pan'ga sayu 半跏思惟). In Sanskrit, the “posture of MAITREYA”; a posture (ĀSANA) in which the figure sits on a raised seat, with either both legs hanging pendant to the ground or with one leg pendant to the ground, the other leg crossed over the opposite knee. This pose is common in early images of Maitreya in China, Korea, and Japan, where the posture is translated as the “pensive pose” or “contemplative pose” (C. siwei xiang), because in this form the right hand rests lightly on the right cheek, depicting Maitreya’s musing over when he should take his final rebirth and reestablish the Buddhist dispensation. This posture was also adopted in Japan in representations of Nyoirin Kannon. This posture is also closely related to, and often synonymous with, the “auspicious pose” (BHADRĀSANA) and the “pendant leg posture” (PRALAMBAPĀDĀSANA).

maitrī. (P. mettā; T. byams pa; C. ci/cibei; J. ji/jihi; K. cha/chabi 慈/慈悲). In Sanskrit, “loving-kindness,” “kindness”; often seen in Western literature in its Pāli form mettā. Loving-kindness is one of the four divine abidings (BRAHMAVIHĀRA) and the four immeasurables (APRAMĀNA), and is defined as the

wish for happiness; the other three divine abidings and immeasurables are [KARUNĀ](#), or compassion; [MUDITĀ](#), or sympathetic joy; and [UPEKṢĀ](#), or equanimity. Of the four divine abidings, loving-kindness, along with sympathetic joy and compassion, is capable of producing the first three of the four states of meditative absorption ([DHYĀNA](#)). Equanimity alone is capable of producing the fourth dhyāna. In the [VISUDDHIMAGGA](#), loving-kindness is listed as one among forty meditative topics ([KAMMATTHĀNA](#)). The text indicates that divine abidings, including loving-kindness, are only to be used for the cultivation of tranquility (P. samatha; S. [ŚAMATHA](#)), not insight (P. [VIPASSANĀ](#); [VIPASĪYANĀ](#)). In the *Visuddhimagga*, [BUDDHAGHOSA](#) recommends that the practice of mettā (maitrī) begin with wishing for happiness for oneself, and then extending that wish to others. In other contexts, maitrī, as the wish for the happiness of others, is considered one of the factors that motivates the [BODHISATTVA](#) to seek to save all beings from suffering. See also [METTĀSUTTA](#).

[Maitrīpa/Maitrīpāda](#). (c. 1007–1085). A tantric adept and scholar from north India, especially associated with the transmission of instructions and songs of realization on the doctrine of [MAHĀMUDRĀ](#). He is known by several names: the Tibetan form Maitrīpa or its Sanskrit original Maitrīpāda; as a Buddhist monk, Matrīgupta; as a tantric adept, Advayavajra and Avadhūtipāda. Born in Bengal, Maitrīpa began his training as a Brahmanical scholar but later converted to Buddhism after debating with the scholar [NĀROPA](#). He then received ordination and studied at the Buddhist universities of [NĀLANDĀ](#) and [VĪKRAMAŚĪLA](#) under such eminent masters as [RATNĀKARAŚĀNTI](#). Maitrīpa is said to have become a great academician, but he was also practicing [TANTRA](#) in secret. According to some traditions, Maitrīpa was expelled when liquor and a female consort were found in his room, perhaps by [ATIŚA DĪPAMKARAŚRĪJÑĀNA](#), who was resident abbot of Vikramaśīla at the time. He then sought out the adept Śavarīpa in south India and, after a series of trials, was accepted as his disciple, receiving various tantric instructions. Maitrīpa later returned to the north, marrying the king of Malabar's daughter and composing numerous treatises on tantric theory and practice, especially that of amanasikāra (“no mental activity”), which are preserved in the [BSTAN 'GYUR](#) portion of the Tibetan Buddhist canon. He was an important teacher of [MAR PA](#).

[Majjhimanikāya](#). (S. [MADHYAMĀGAMA](#)). In Pāli, “Collection of Middle [Length] Discourses”; the second of the five divisions of the Pāli [SUTTAPITAKA](#),

the others being the [DĪGHANIKĀYA](#), [SAMYUTTANIKĀYA](#), [AṄGUTTARANIKĀYA](#), and [KHUDDAKANIKĀYA](#). The *Majjhimanikāya* contains 152 suttas (S. [SŪTRA](#)) divided into three major parts, with fifty suttas in each of the first two parts and fifty-two in the third. Each one of these parts is further subdivided into five sections (*vagga*). The suttas are not arranged in any particular order, although suttas with broadly related themes (e.g., the six sense faculties, or [INDRIYA](#)), similar styles (e.g., suttas that contain a shorter, and often verse, summary of doctrine followed by longer expositions) or target audiences (e.g., discourses to householders, monks, religious wanderers, or *brāhmaṇas*) are sometimes grouped together in the same section. The enlightenment cycle of Gotama (S. [GAUTAMA](#)) Buddha finds some of its earliest expressions in several suttas in this *nikāya*. For example, the [ARIYAPARIYESANĀSUTTA](#) does not include the famous story of the prince's chariot rides but says instead, "Later, while still young, a black-haired young man endowed with the blessing of youth, in the prime of life, though my mother and father wished otherwise and wept with tearful faces, I shaved off my hair and beard, put on the yellow robe, and went forth from the home life into homelessness." There is sometimes overlap between *nikāyas*; for example, the [SATIPATHHĀNASUTTA](#) of the *Majjhimanikāya* appears as the first section of the *Mahāsatipathhānasutta* of the *Dīghanikāya*. Not all of the suttas are spoken by the Buddha; for example, [ĀNANDA](#) delivers the *Gopakamoggallānasutta* after the Buddha's passage into [PARINIRVĀNA](#). The Sanskrit counterpart of the *Majjhimanikāya* is the [MADHYAMĀGAMA](#), which is the [SARVĀSTIVĀDA](#) school's recension of this collection. In the Chinese translation, ninety-eight of the *Madhyamāgama*'s 222 sūtras correspond to suttas found in the *Majjhimanikāya*, eighty appear in the *Aṅguttaranikāya*, twelve to the *Dīghanikāya*, and eleven to the *Samyuttanikāya*.

[major and minor marks](#). See [MAHĀPURUSALAKSANA](#).

[makara](#). (T. *chu srin*; C. *mojieyu*; J. *makatsugyo*; K. *magarō* 摩竭魚). In Indian mythology, a kind of sea monster, depicted variously as either a crocodile, or a hybrid being with the body of a fish and the head of an elephant. In the twelve signs of the zodiac recognized in Indian astrology, *makara* corresponds to the constellation of Capricorn.

[Makiguchi Tsunesaburō](#). (牧口常三郎) (1871–1944). Founder of [SŌKA GAKKAI](#), a modern Japanese lay movement. Makiguchi was born in a small village in Niigata prefecture. Until 1928, he pursued a career as an educator and writer,

serving as a teacher or a principal in several schools, and publishing articles on his educational philosophy, which focused on developing the creativity and personal experience of his students. Perhaps because of such personal misfortunes as the loss of four of his five children, Makiguchi converted in 1928 to [NICHIREN SHŌSHŪ](#), an offshoot of Nichiren Buddhism, after finding that its teachings resonated with his own ideas about engendering social and religious values. Together with his disciple Toda Jōsei (1900–1958), Makiguchi founded in 1930 the Sōka Kyōiku Gakkai (Creating Educational Values), a lay organization under the umbrella of the Nichiren Shōshū, which focused on publicizing his pedagogical ideas, and led its first general meeting. The society subsequently began to take on a decidedly religious character, focusing on missionary work for Nichiren Shōshū. As the Pacific War expanded, Makiguchi and his followers refused to cooperate with state-enforced [SHINTŌ](#) practices, leading to a rift between them and [TAISEKIJI](#), the head monastery of Nichiren Shōshū. As a result, Makiguchi was arrested in 1943 on charges of lèse-majesté and violations of the Public Order Act, and died in prison one year later. After Makiguchi’s disciple Toda Jōsei was released from prison in July 1945, he took charge of the Sōka Kyōiku Gakkai organization and renamed it Sōka Gakkai in 1946, developing it into one of the largest lay Buddhist organizations in Japan.

[makuragyō](#). (枕經). In Japanese, lit., “pillow scripture”; the deathbed recitation of Buddhist scriptures. In Japan, a monk is invited to offer prayers and recite scriptures for the recently deceased. Before the corpse is interred in the coffin, the makuragyō service is performed at the deceased’s bedside or pillow, hence the service’s name. Traditionally, the deathbed service was performed by a monk called the kasō, who chanted passages from the scriptures through the night.

[mala](#). (T. dri ma; C. gou; J. ku; K. ku 垢). In Sanskrit, “taint,” “stain,” “maculation”; often used as a synonym for afflictions ([KLEŚA](#)). Much of the discourse on the Buddhist path ([MĀRGA](#)) is expressed in terms of purity and pollution, with the path to liberation sometimes described as the gradual purification of the mind, in which various stains or taints are removed. What remains at the end of the process of purification is the subject of considerable discussion among the various Buddhist schools. For example, [DHARMAKĪRTI](#) declared in his [PRAMĀNAVĀRTTIKA](#), “The nature of the mind is clear light; its stains are adventitious.” See also [AMALAVIJÑĀNA](#).

mālā. (T. 'phreng ba; C. man; J. man; K. man 鬘). In Sanskrit and Pāli, lit. “garland” a “rosary,” viz., a string of beads usually held in the right hand and used for counting the recitations of prayers or [MANTRAS](#); also called a [JAPAMĀLĀ](#). The number of beads on the rosary varies by tradition, with some rosaries in pure land traditions having twenty-seven beads, and rosaries in Tibetan Buddhism commonly having 108 or 111 beads. The rationale for 111 beads is as follows: it is assumed that in each set of ten repetitions, one repetition will be faulty and need to be redone. Thus ten beads are added for the first hundred beads and one bead is added for the additional ten beads. The significance of the more common number of 108 is less clear. One common interpretation is that this number refers to a list of 108 afflictions ([KLEŚA](#)); fingering all 108 beads in the course of a recitation would then be either a reminder to remain mindful of these afflictions or would constitute their symbolic purification. Alternatively, this 108 can refer to all of phenomenal existence, i.e., the eighteen elements ([DHĀTU](#)), viz., the six sense bases, six sense objects, and six sensory consciousnesses, in all of the six realms of existence ([GATI](#)) ($18 \times 6 = 108$). See also [JAPAMĀLĀ](#).

[Malalasekera, Gunapala Piyasena](#). (1899–1973). One of the most influential Sinhalese scholars of the twentieth century. Born in Malamulla Panadura, Ceylon (Sri Lanka), Malalasekera entered the Ceylon Medical College in 1917. He attended the School of Oriental Studies at the University of London from 1923 to 1926, where he was a student of [CAROLINE A. F. RHYS DAVIDS](#). He later taught Pāli and Buddhist civilization, Pāli language, Sanskrit, and Sinhalese at the University of Ceylon. Aside from an immense influence on at least two generations of Indologists and Buddhologists in Sri Lanka, Malalasekera was also a distinguished diplomat, serving as the Ceylonese ambassador to the then-Soviet Union, Poland, Czechoslovakia, and Romania. He served as the permanent representative for Ceylon at the United Nations from 1961 to 1963, and as the high commissioner in Great Britain for four years after that. He was the president of the All Ceylon Buddhist Congress from 1939 to 1957 and then again in 1967. He led the first conference of the [WORLD FELLOWSHIP OF BUDDHISTS](#) in 1950 and became editor-in-chief of the *Encyclopaedia of Buddhism* in 1956. Malalasekera published many books and articles, including *The Pāli Literature of Ceylon* and *A Dictionary of Pāli Proper Names*.

***[Mālānanda](#)**. (C. Moluonantuo; J. Marananda; K. Maranant'a 摩羅難陀).

Reconstructed proper name of the Serindian monk who in 384 brought Buddhist scriptures and images to the Korean kingdom of Paekche (traditional dates 18 BCE–668 CE) from the Eastern Jin dynasty (265–420 CE) in China; his name is also reconstructed as *Kumāranandin. Mālānanda arrived in the Paekche capital via sea to an elaborate reception by the Paekche court and King Ch'imnyu (r. 384–385), suggesting that he came as part of an official mission from the Eastern Jin. In 385, under the auspices of the royal court, Mālānanda established a Buddhist monastery in the Paekche capital and ordained ten young men as monks, the first recorded instance of Buddhist ordination on the Korean peninsula.

Malang fu. (J. Merōfu; K. Marang pu 馬郎婦). In Chinese, “Mr. Ma’s Wife”; also known as [YULAN GUANYIN](#) (Fish Basket Guanyin); a famous manifestation of the [BODHISATTVA GUANYIN](#) ([AVALOKITEŚVARA](#)). The story of Mrs. Ma is found in various Chinese miracle-tale collections. The basic outline of the story begins with a beautiful young woman who comes to a small town to sell fish. Many young men propose to her, but she insists that she will only marry a man who can memorize the “Universal Gateway” chapter of the [SADDHARMAPUNḌARĪKASŪTRA](#) (“Lotus Sūtra”) in one night. Twenty men succeed, so she then asks them to memorize the [VAJRACCHEDIKĀPRAJÑĀPĀRAMITĀSŪTRA](#) in one night. The ten men who succeed at that task are then asked to memorize the entire *Saddharmapuṇḍarīkasūtra*. One young man whose surname was Ma succeeds and he marries the beautiful fish seller. Unfortunately, she became ill on their wedding day and died the very same day. Later, a foreign monk visits the town to pay respects and informed Ma and the townsmen that this young fish seller was none other than the bodhisattva Guanyin in disguise.

Mālava. (S). One of the twenty-four sacred sites associated with the [CAKRASAMVARATANTRA](#). See [PĪTHA](#).

Mallā. (T. Gyad kyi yul; C. Moluo [guo]; J. Mara [koku]; K. Mara [kuk] 摩羅 [國]). In the plural, the Sanskrit and Pāli name of the people in one of the sixteen countries ([MAHĀJANAPADA](#)) that flourished in northern India during the Buddha’s lifetime. According to Pāli sources, the Mallā people were divided into two kingdoms, each with its own capital, Pāvā and Kusināra (S. [KUŚINAGARĪ](#)). The inhabitants of the former city were named Pāveyyakā Mallā, while those of the latter were named Kosinārakā. The Buddha is described as having inaugurated a new assembly hall in Pāvā by offering a sermon there for the populace. This hall

was located in the Ambavana grove, which belonged to [CUNDA](#), the blacksmith. Later, in the final year of his life, the Buddha would accept his last meal of [SŪKARAMADDAVA](#) (pork or possibly mushrooms) from Cunda, on account of which he would fall deathly ill with dysentery. From Cunda's residence in Pāvā, the Buddha made his way to Kusināra where, lying down between twin sāla (S. [ŚĀLA](#)) trees, he passed into parinibbāna (S. [PARINIRVĀNA](#)). When Ānanda laments the fact that the Buddha will pass away at such a “little mud-walled town, a backwoods town, a branch township,” rather than a great city, the Buddha disabused him of this notion, telling him that Kuśinagarī had previously been the magnificent capital named Kusāvātī of an earlier [CAKRAVARTIN](#) king named Sudarśana (P. Sudassana). The Buddha's body was cremated at the Makutabandhana shrine in Kuśinagarī, after which the relics were removed to the assembly hall. There, the brāhmaṇa Doṇa (S. [DRONA](#)) distributed them among the many claimants from different kingdoms and clans that were demanding their share. The Buddha claimed many disciples from the Mallā country as did his rival, the [JAINA](#) leader, Nigaṇṭha Nātaputta (S. [NIRGRANTHA-JŪNĀTĪPUTRA](#)). The Mallā belonged to the warrior caste (P. khattiya; S. [KSATRIYA](#)), although they are depicted in Buddhist texts as living amicably with their neighbors. In Greek accounts, they are called Malloi, a people who for a time successfully resisted attack by Alexander's forces. If this identification is correct, it would place their country in the area of modern Punjab.

[Mallikā](#). [alt. Mālikā] (P. Mallikā; T. Ma li ka; C. Moli; J. Matsuri/Mari; K. Malli 未利). In Sanskrit and Pāli, “Jasmine”; a prominent disciple of the Buddha and the wife of King [PRASENAJIT](#) of [KOŚALA](#). She was the daughter of a lower-caste garland maker who one day offered the Buddha a basket of fermented rice, without knowing his identity. The Buddha predicted that day that she would become queen of Kośala, which indeed came true. Her faith in the Buddha led to her royal husband becoming a disciple of the Buddha, which occurred when she suggested that the king visit the Buddha to have him interpret some disturbing dreams he had had. Despite her lack of education, she gained extensive knowledge of the dharma from [ĀNANDA](#), who visited the palace to teach. As queen, Mallikā was a generous supporter of the [SAMGHA](#), sponsoring the construction of a hall, lined with ebony, that was used for sermons. In the *Mallikāsutta*, she asks the Buddha why some women are beautiful and some ugly, some rich and some poor, some powerful and some powerless. The Buddha explains that beauty is the result of gentleness and calmness, wealth is

the result of generosity, and power is the result of a lack of envy. The commentary to the [DHAMMAPADA](#) ([DHAMMAPADATTHAKATHĀ](#)) relates a story in which Mallikā was mounted by her dog while drying herself after a bath. She allowed the dog to continue, not knowing that she was being observed by the king. When he accused her of bestiality, she lied, saying that the window in the bathhouse prevented one from seeing clearly. To prove her point, she told the king to go into the bathhouse. When he returned, she falsely accused him of having intercourse with a goat. As a result of these two misdeeds—the bestiality and the lie—after her death, she was reborn in the [AVICI](#) hell for seven days, a fact that the Buddha hid from her bereaved husband Prasenajit. After seven days, she was reborn in [TUSITA](#), at which point the Buddha informed the king that his wife had been reborn in a divine realm. In the [ŚRĪMĀLĀDEVĪSIMHANĀDASŪTRA](#), Queen Śrīmālā is the daughter of Mallikā and Prasenajit.

[malsa](#). (未寺). In Korean, “branch monastery”; an affiliate monastery of one of the twenty-four “district monasteries” ([PONSA](#)) in the contemporary Korean [CHOGYE CHONG](#). See [PONSA](#).

[mamakāra](#). (P. mamaṅkāra; T. bdag gir ’dzin pa; C. wosuo; J. gasho; K. aso 我所). In Sanskrit, lit. “mine-making”; the mistaken conception of “mine,” or “possession.” Mamakāra is a form of ignorance deriving from the conception of self or “I” ([AHAMKĀRA](#)) in which objects (primarily the [SKANDHAS](#)) are mistakenly conceived to be the possessions of an autonomous person. Based on this false presumption, all manner of negative afflictions ([KLEŚA](#)) arise, including greed, jealousy, and hatred. Wisdom is often described as the abandonment of the conceptions of “I” and “mine.” When it is understood that the person ([PUDGALA](#)) is merely a collection of impermanent and ever-changing physical and mental processes ([SAMTĀNA](#)), one understands that there is no permanent, independent self among the constituents of materiality and mentality. If there is no autonomous self, then there can be no autonomous owner of the objects of experience. Thus, upon the abandonment of the conception of “I,” the conception of “mine” is also abandoned.

[ma mo](#). A class of indigenous Tibetan female spirits. They are generally hostile, known to carry disease sacks (nad rkyal). With the advent of Buddhism in Tibet, they came to be identified with the Indian deity Mātarī [alt. Mātṛkā]. [DPAL LDAN LHA MO](#) is considered their leader. [PADMASAMBHAVA](#) subdued all ma mo on a mountain named Chu bo ri. There are numerous groupings of ma mo who appear

in various deities' retinues, such as Dpal ldan lha mo and [YAMA](#), and who are invoked in rituals, called on both to cease their illness-causing activities and to inflict illnesses on enemies. They also figure in weather-making rituals, since they are able to withhold or send rain. They are depicted as ugly emaciated women with matted hair and withered breasts.

[māmsacaksus](#). (P. maṃsacakkhu; T. sha'i spyān; C. rouyan; J. nikugen; K. yugan 肉眼). In Sanskrit, “fleshly eye”; one of the five eyes or five sorts of vision ([PAÑCACAKSUS](#)), a list that overlaps with the five (or six) “clairvoyances” or superknowledges ([ABHIJÑĀ](#)). In Pāli texts, the “fleshly eye” is one of the five types of vision of a buddha. In Mahāyāna texts, the māṃsacakṣus refers to what would ordinarily be considered eyesight. It is said to be a [VIPĀKAPHALA](#) (maturation result) restricted in its range to the sight of the particular animal or deity that possesses it. In the case of vultures, for example, the fleshly eye may be able to see up to several miles, and in the case of certain divinities ([DEVA](#)) it may be the entire cosmos.

[māna](#). (T. nga rgyal; C. man; J. man; K. man 慢). In Sanskrit and Pāli, “pride,” “conceit”; also known as asmimāna, the “‘I am’ conceit.” The eighth of ten “fetters” ([SAMYOJANA](#)) that keep beings bound to the cycle of rebirth ([SAMSĀRA](#)), pride arises from comparing oneself to others and manifests itself in three ways: viz., as the feeling that one is equal to, inferior to, or superior to others. Pride is a deep-seated and habitual affective response to other persons and continues to exist in subtle form in the minds of stream-enterers ([SROTAĀPANNA](#)), once-returners ([SAKRDĀGĀMIN](#)), and nonreturners ([ANĀGĀMIN](#)) even though they have eliminated the “cognitive” fetter of personality belief ([SATKĀYADRSTI](#)). Māna is permanently eliminated upon attaining the stage of worthiness ([ARHAT](#)), the fourth and highest degree of Buddhist sanctity ([ĀRYAPUDGALA](#)). According to the [SARVĀSTIVĀDA ABHIDHARMA](#), there are seven kinds of conceit. The first kind is simply called “māna,” which refers to a sense of superiority toward those who are inferior and a sense of pride in the idea of being equal to those who are equal. “Atimāna” is haughtiness, the insistence on one’s superiority when in fact one is a mere equal to another person or the insistence on being equal to those who are in fact superior to oneself. “Mānātimāna” is “pride and conceit,” the insistence on one’s superiority when in fact the person to whom one is comparing oneself is superior. “Asmimāna” is the conceit “I am,” the deriving of a sense of an enduring self from grasping onto external objects and the internal

five aggregates ([SKANDHA](#)). “[ADHIMĀNA](#)” is the overestimation of or bragging about one’s spiritual accomplishments. “[ABHIMĀNA](#)” has been variously interpreted as arrogance or “false humility,” admitting of another’s slight superiority when in fact he or she is vastly superior. “Mithyāmāna” is hypocrisy: posturing as a virtuous person when in fact one lacks virtue.

[manahsamcetanāhāra](#). (T. yid la sems pa’i zas; C. sishi; J. shijiki; K. sasik 思食). In Sanskrit, “the sustenance ([AHĀRA](#)) that is mental volition ([CETANĀ](#))”; a term used in [YOGĀCĀRA](#) materials to connote the support provided to the person by what might loosely be termed motivation. The term is said to refer to the mind ([MANAS](#)) in the sense of the sixth of six types of consciousness. See [MANAS](#).

[Manam Chonghŏn](#). (曼庵宗憲) (1876–1957). Korean monk and educator during the Japanese occupation and postwar periods; also known as Mogyang. After losing his parents at an early age, Manam became a monk and studied under [HANYŎNG CHŎNGHO](#) (1870–1948). In 1900, he devoted himself to the study of [SŎN](#) meditation at the monastery of Unmun Sŏnwŏn ([UNMUNSA](#)). In 1910, after Korea’s annexation by Japan, Manam traveled throughout the southern regions of the peninsula and delivered lectures on Buddhism to the public until he settled down at the monastery of [PAEGYANGSA](#) in 1920 to serve as abbot. At a time when the Buddhist community was split over the issue of clerical marriage, Manam, for the first time, divided his monk-students between the celibate chŏngpŏp chung (proper-dharma congregation) and the married hobŏp chung (protecting-dharma congregation). Manam’s actions were considered to be a formal recognition of clerical marriage and were heavily criticized by the rest of the Buddhist community led by [YONGSŎNG CHINJONG](#) (1864–1940) and Namjŏn Kwangŏn (1868–1936). In 1945, the Koburhoe organization that Manam established clashed with the General Administrative Committee of the Chosŏn Buddhist order over the issue of the laxity of Buddhist practice in Korea, with Manam arguing for a return to the strict and disciplined lifestyle of the past as a means of preventing the corruption of Buddhism. After the end of the Japanese occupation, Manam organized the Kobul Ch’ongnim gathering and initiated what later came to be called the “purification movement” (chŏnghwa undong) in Korean Buddhism. In 1952, he succeeded his teacher Hanyŏng and became head (kyojŏng) of the Chosŏn Buddhist order. As head, he gave the order a new name, the “Chogye Order of Korean Buddhism” (Taehan Pulgyo Chogye Chong; see [CHONGYE CHONG](#)), and created a new entry in its constitution, formally

delineating the distinction between married monks (kyohwasŭng) and celibate monks (suhangsŭng). He attempted to initiate a new plan for the organization of monasteries that would give priority to the celibate monks, but his plan was never put into practice. When President Syngman Rhee showed his support for the purification movement in May 1954, the monks of the Chogye order held a national convention and appointed Manam, Tongsan Hyeil (1890–1965), and Ch’ŏngdam Sunho (1902–1971) as the new leaders of the order and initiated a nationwide Buddhist reformation movement. Manam, however, was ultimately unable to mediate the different opinions of the representatives of the Buddhist community concerning the specific details and goals of the purification movement.

mānāpya. (S). See [MĀNATVA](#).

manas. (T. yid; C. yi; J. i; K. ŭi 意). In Sanskrit and Pāli, “mind,” or “mentation”; generally a synonym of such related terms as [CITTA](#) and [VIJÑĀNA](#). In lists of the six internal sensory organs ([INDRIYA](#)), manas is the sixth, in which context it is also referred to as the mental faculty ([MANENDRIYA](#)). As such, it differs from the other five faculties (the eye, ear, nose, tongue, and bodily sense organs), all of which are associated with physical organs. The sixth consciousness, the mental consciousness ([MANOVIJÑĀNA](#)), however, can know any object, whether physical or nonphysical; hence its objects are phenomena ([DHARMA](#)). The mental consciousness does not rely directly on a physical sense organ, as in the case of the preceding five types of consciousness; hence its sense faculty ([INDRIYA](#)) is mental, and is identified as a previous moment of consciousness, which allows for either the next moment of mental cognition of a previous object or the first moment of cognition of a new object. In [YOGĀCĀRA](#), manas is sometimes used as an abbreviation for [KLISTAMANAS](#).

mānasapratyakṣa. (S). See [MANONUBHAVAPRATYAKSA](#).

manaskāra. [alt. manasikāra] (P. manasikāra; T. yid la byed pa; C. zuoyi; J. sai; K. chagŭi 作意). In Sanskrit, “mental engagement,” or “attention”; a general term for mental activity, concentration, or attention, with at least two technical senses: as one of the five omnipresent ([SARVATRAGA](#)) or seven universal (P. sabbacittasādhāraṇa) mental concomitants ([CAITTA](#)), it is the factor that directs the mind to a specific object; in the process of developing calmness or serenity ([ŚAMATHA](#)), there are four levels of increasingly powerful and continuous mental

engagement with the object of concentration. See also [AYONIŚOMANASKĀRA](#).

[manaskarman](#). (P. manokamma; T. yid kyi las; C. yiye; J. igō; K. ūiōp 意業). In Sanskrit, “mental action”; thoughts that produce [KARMAN](#). Virtuous and nonvirtuous actions are of three types: physical actions (those performed by the body), verbal actions (those expressed in words), and mental actions (thoughts). Physical actions of the nonvirtuous type would include killing, stealing, and sexual misconduct. Verbal actions of the nonvirtuous type would include lying, divisive speech, harsh speech, and senseless speech. Mental actions of the nonvirtuous type would include covetousness, harmful intent, and wrong view. (See also [KARMAPATHA](#)).

[Manasvin](#). (T. Gzi can; C. Monasi; J. Manashi; K. Manasa 摩那斯). One of the eight great [NĀGA](#) kings who assembled to hear the Buddha preach the [SADDHARMAPUNDARĪKASŪTRA](#).

[mānatva](#). [alt. mānāpya] (P. mānatta; T. mgu bar bya ba; C. monatuo; J. manata; K. manat’a 摩那埵). In Sanskrit, a temporary period of “penance” imposed on a monk for a minor offense. According to the Pāli [VINAYA](#), the mānatta penance is imposed on a monk who commits an offense requiring probation (P. saṅghādisesa; S. [SAMGHAVAŚESA](#)) when that monk immediately confesses the infraction to another monk. The penance imposed in this circumstance is called “penance for unconcealed offenses” (apaṭicchannamānatta), which entails the loss of the usual privileges of monkhood for a set period of six nights. If a monk conceals a saṅghādisesa offense for a period of time before confessing it, he must undergo a “probationary penance” called either “probation” ([PARIVĀSA](#)) or “penance for concealed offenses” (paṭicchannamānatta). This probationary penance likewise entails the loss of privileges, but in this case that probation must last for as long as the offense was concealed. After the parivāsa penance is completed, the monk must then undergo mānatta penance for six nights. A monk undergoing mānatta punishment may not: (1) dwell under the same roof as another monk, (2) live where there is no other monk, (3) accept respect or praise from other monks or novices, (4) confer ordination ([UPASAMPADĀ](#)) or provide “dependence” or guidance (P. nissaya; S. [NIŚRAYA](#)) to younger monks, (5) accept the services of a novice, (6) preach to nuns, (7) commit similar acts of wrongdoing, (8) criticize the act carried out against him, and (9) criticize the persons responsible for carrying out the act. After the six-night period of mānatta penance is finished, the monk is eligible to be readmitted into the [SAMGHA](#).

manāyatana. (T. yid kyi skye mched; C. yichu; J. isho; K. ūich'ō 意處). In Sanskrit and Pāli, lit., “mental source” or “mental base of cognition”; another term for **MANAS**, when it appears on the list of the twelve **AYATANA**, the sources of consciousness or bases of cognition. The twelve sources of consciousness are the six external sensory objects (form, sound, taste, odors, objects of touch, and phenomena) and the six internal sense faculties (eye, ear, nose, tongue, body, and mind). The five sense objects and the five sense faculties are necessarily physical, serving respectively as the causes of the first five types of sensory consciousnesses: visual, auditory, olfactory, gustatory, and tactile consciousnesses. The sixth consciousness, the mental consciousness (**MANOVIJÑĀNA**), however, can know any object, whether physical or nonphysical; hence its objects are phenomena (**DHARMA**). The mental consciousness does not rely directly on a physical sense organ; hence, its organ (**INDRIYA**) is mental, and is identified as a previous moment of consciousness.

manda. (T. snying po; C. tihu; J. daigo; K. cheho 醍醐). In Sanskrit and Pāli, “cream”; used figuratively to refer to something’s “quintessence” or “supreme point.” This usage is implicit, for example, in the compound term **BODHIMANDA** (lit. “the supreme point of awakening,” viz., “the seat of enlightenment”), the place where the buddha achieved complete, perfect enlightenment. Maṇḍa as representing the quintessence of the teachings of Buddhism is also found in the temporal taxonomy of the teachings (**JIAOXIANG PANSHI**) advocated by the Chinese **Tiantai Zong**, in which the “taste of ghee” (tihu wei) symbolizes the consummate teachings of Buddhism found in the **SADDHARMAPUNDARĪKASŪTRA** and **MAHĀPARINIRVĀNASŪTRA**.

maṇḍala. (T. dkyil 'khor; C. mantuluo; J. mandara; K. mandara 曼荼羅). In Sanskrit, lit. “circle”; a polysemous term, best known for its usage in tantric Buddhism as a type of “circular diagram.” Employed widely throughout South, East, and Central Asia, maṇḍala are highly flexible in form, function, and meaning. The core concept of maṇḍala originates from the Sanskrit meaning “circle,” where a boundary is demarcated and increasing significance is accorded to areas closer to the center; the Tibetan translation (dkyil 'khor) “center periphery” emphasizes this general scheme. In certain contexts, maṇḍalas can have the broad sense of referring to circular objects (“maṇḍala of the moon”) or a complete collection of constituent parts (“maṇḍala of the universe”). This latter denotation is found in Tibetan Buddhism, where a symbolic representation of the

universe is offered to buddhas and bodhisattvas as a means of accumulating merit, especially as a preliminary practice ([SNGON 'GRO](#)). Maṇḍalas may have begun as a simple circle drawn on the ground as part of a ritual ceremony, especially for consecration, initiation, or protection. In its developed forms, a maṇḍala is viewed as the residential palace for a primary deity—located at the center—surrounded by an assembly of attendant deities. This portrayal may be considered either a symbolic representation or the actual residence; it may be mentally imagined or physically constructed. The latter constitutes a significant and highly developed contribution to the sacred arts of many Asian cultures. Maṇḍalas are often depicted two dimensionally by a pattern of basic geometric shapes and are most commonly depicted in paint or colored powders. These are thought of almost as architectural floor plans, schematic representations viewed from above of elaborate three-dimensional structures, mapping an ideal cosmos where every element has a symbolic meaning dependent upon the ritual context. Maṇḍalas are occasionally fashioned in three dimensions from bronze or wood, with statues of deities situated in the appropriate locations. When used in a private setting, such as in the Buddhist visualization meditation of deity yoga ([DEVATĀYOGA](#)), the practitioner imagines the entire universe as purified and transformed into the transcendent maṇḍala—often identifying himself or herself with the form of the main deity at the center. In other practices, the maṇḍala is visualized within the body, populated by deities at specific locations. In public rituals, including tantric initiations and consecration ceremonies, a central maṇḍala can be used as a common basis for the participation of many individuals, who are said to enter the maṇḍala. The maṇḍala is also understood as a special locus of divine power, worthy of ritual worship and which may confer “blessings” upon devotees. Religious monuments ([BOROBUDUR](#) in Java), institutions ([BSAM YAS](#) monastery in Tibet), and even geographical locations ([WUTAISHAN](#) in China) are often understood as maṇḍalas. Maṇḍalas have also entered the popular vocabulary of the West. Swiss psychologist Carl Jung developed theories of cognition incorporating maṇḍalas as an analytical model. The fourteenth [DALAI LAMA](#) has used the [KĀLACAKRA](#) maṇḍala as a means of spreading a message of peace throughout the world. See also [KONGŌKAI](#); [TAIZŌKAI](#).

[Mandalay](#). The last royal capital of the Burmese Konbaung kingdom, prior to the British conquest of Burma (Myanmar). The city is situated on the eastern bank of the Irrawaddy River, twelve miles north of [AVA](#) (Inwa) and five miles

north of [AMARAPURA](#), both previous capitals of the Konbaung dynasty (1752–1885). Built in 1857 by [MINDON MIN](#) (r. 1853–1878) at the base of the eponymous Mandalay Hill, its construction was carried out at the place where the Buddha is said to have made a prophecy that a great Buddhist capital would arise on that spot in the 2,400th year after the parinibbāna. Very similar in plan to Amarapura, Mandalay is laid out in a grid pattern, at the center of which is a royal precinct in the shape of a perfect square surrounded by a wide moat and a brickwork defensive wall. The wall is pierced by twelve gates, three on each side, crowned with multistoried tiered pavilions (B. pyatthat), symbols of royal authority. Broad avenues run perpendicularly from the gates to the center of the royal compound where the palace and ancillary buildings are located. Destroyed during Allied bombing in World War II, these structures have recently been restored. The city's most famous shrine is the [MAHĀMUNI](#) pagoda, which houses the colossal bronze Mahāmuni image of Gotama Buddha (see [ARAKAN BUDDHA](#)). Originally housed in the palladium of Arakan, the Mahāmuni was seized by King Bodawpaya (r. 1782–1819) when he conquered that kingdom in 1785. As had been the case with the founding of earlier capitals, the construction of Mandalay was regarded as inaugurating a golden age wherein the religion, culture, and political fortunes of the Burmese kingdom would flourish. In connection with the prophecy, in 1868, Mindon Min summoned 2,400 learned monks to the capital from throughout the kingdom to revise the Pāli TĪPĪTAKA in what came to be regarded by the Burmese as the fifth Buddhist council (see [COUNCIL, FIFTH](#)). In 1871, the revised Burmese canon was inscribed on 729 stone slabs that were erected, each in its own shrine, in concentric rings around the massive Kuthodaw pagoda (Pagoda of Great Merit). The entire complex occupies fourteen acres and is situated to the northeast of the fortified city at the base of Mandalay Hill. Nearby is the Sandamuni pagoda, constructed along a similar plan, which houses 1,171 slabs on which are inscribed the Pāli commentaries. Another monument constructed for the synod is the Kyauktawgyi pagoda modeled after the [ANANDA TEMPLE](#) at [PAGAN](#), which contains a colossal seated statue of the Buddha. Commemorating Mandalay's foundation legend is the Shweyattaw temple, also built by Mindon Min and located halfway up a stairway leading to the top of Mandalay Hill. The structure houses a colossal standing image of the Buddha covered in gold leaf, whose outstretched arm points to the city center, marking the spot where the Buddha delivered his prophecy. In addition to its pagodas and temples, the city boasted numerous monasteries and colleges making it one of the major scholastic centers of the

kingdom. Mandalay ceased to be the Burmese capital in 1885 when it fell to British troops at the conclusion of the Third Anglo–Burmese War.

Mandāravā. (T. Man da ra ba) (c. eighth century). A revered female Indian Buddhist master, renowned as a close disciple and consort of the tantric adept [PADMASAMBHAVA](#). She was born the daughter of the king of Sahor, modern Rewalsar in Mandi District, Himachel Pradesh. According to traditional sources, Mandāravā rejected the marriage arrangements made by her father, wishing instead to renounce the world and practice religion. Padmasambhava accepted her as his disciple and the couple remained in a hilltop retreat. The king learned of their arrangement and, in a fit of anger, had Padmasambhava (or, according to some accounts, the couple) burned alive. As a dense cloud of smoke cleared, the adept appeared seated atop a lotus in the center of a large lake, miraculously unscathed. The king and his court were thus converted to Buddhism and became Padmasambhava’s disciples. The lake became known in Tibetan as Mtsho Padma (Lotus Lake) and has become a major site for pilgrimage and religious practice. Mandāravā accompanied Padmasambhava to [MĀRATIKA](#) cave in Nepal where they undertook the practice of longevity. Although Mandāravā remained most of her life in India, she was revered as a [DĀKINĪ](#) in Tibet, where she is believed to have appeared numerous times as a female teacher and [YOGINĪ](#).

mandorla. See [KĀYAPRABHĀ](#).

manendriya. (P. manindriya; T. yid kyi dbang po; C. yigen; J. ikon; K. ūigŭn 意根). In Sanskrit, “mental faculty” or “mental dominant”; another term for [MANAS](#) as it appears in the list of the six [INDRIYA](#) or sensory faculties that provide the foundation for the six forms of consciousness. Each of the six consciousnesses—eye, ear, nose, tongue, body, mental—requires a sense faculty or indriya in order to function. For the five sense consciousnesses, this organ is the physical sense organ associated with the eye, ear, nose, tongue, or body. The mind or mental consciousness ([MANOVIJÑĀNA](#)) does not have a physical support in this sense. Thus, the mental faculty is identified as a previous moment of consciousness.

maṅgala. (T. bkra shis; C. jixiang; J. kichijō; K. kilsang 吉祥). In Sanskrit and Pāli, “auspiciousness,” but having a wide range of connotations, including luck, good fortune, happiness, prosperity, welfare, good omen, and blessing. The term is also used to describe any number of social virtues, considered auspicious because they produce benefits in both this and future lifetimes. According to the

Pāli [MĀṄGALASUTTA](#), for example, these virtues include not associating with fools, but associating instead with the wise; caring for parents, supporting wife and children, and following a salutary occupation; generosity, morality, helping relatives, and performing actions that are blameless; refraining from evil; abstaining from intoxicants; respect, humility, contentment, gratitude, learning the teachings (P. dhamma; S. [DHARMA](#)); obedience, ascetic practice, and so forth.

[Maṅgalasutta](#). In Pāli, “Discourse on the Auspicious”; one of the best-loved and most frequently recited texts in the Southeast Asian Buddhist world. The *Maṅgalasutta* appears in an early scriptural anthology, the [SUTTANIPĀTA](#); a later collection, the [KHUDDAKAPĀTHA](#); and in a postcanonical anthology of “protection texts,” the [PARITTA](#). The text itself is a mere twelve verses in length and is accompanied by a brief preface inquiring about what is true auspiciousness. The Buddha’s response provides a straightforward recital of auspicious things, beginning with various social virtues and ending with the achievement of *nibbāna* (S. [NIRVĀNA](#)). The *Maṅgalasutta*’s great renown derives from its inclusion in the *Paritta*, a late anthology of texts that are chanted as part of the protective rituals performed by Buddhist monks to ward off misfortunes; indeed, it is this apotropaic quality of the scripture that accounts for its enduring popularity. *Paritta* suttas refer to specific discourses delivered by the Buddha that are believed to offer protection to those who either recite the sutta or listen to its recitation. Other such auspicious apotropaic suttas are the [RATANASUTTA](#) (“Discourse on the Precious”) and the [METTĀSUTTA](#) (“Discourse on Loving-Kindness”). These *paritta* texts are commonly believed in Southeast Asia to bring happiness and good fortune when chanted by the [SAMGHA](#). The *Maṅgalasutta* has been the subject of many Pāli commentaries, one of the largest of which, the *Maṅgalatthadīpanī*, composed in northern Thailand in the sixteenth century, is over five hundred pages in length and continues to serve as the core of the monastic curriculum in contemporary Thailand. The *Maṅgalasutta*’s twelve verses are: “Many divinities and humans, desiring well-being, have thought about auspiciousness; tell us what is the highest auspiciousness./ Not to associate with fools, to associate with the wise, to worship those worthy of worship—that is the highest auspiciousness./ To live in a suitable place and to have done good deeds before, having a proper goal for oneself—that is the highest auspiciousness./ Learning, craftsmanship, and being well-trained in discipline, being well-spoken—that is the highest auspiciousness./ Care for mother and father, supporting wife and children, and

types of work that bring no conflict—that is the highest auspiciousness./ Generosity, morality, helping relatives and performing actions that are blameless—that is the highest auspiciousness./ Ceasing and refraining from evil, abstaining from intoxicants, diligence in morality—that is the highest auspiciousness./ Respect, humility, contentment, gratitude, listening to the dhamma at the proper time—that is the highest auspiciousness./ Patience, obedience, seeing ascetics and timely discussions of the dhamma—that is the highest auspiciousness./ Ascetic practice, the religious life, seeing the four noble truths, and the realization of nibbāna—that is the highest auspiciousness./ If someone’s mind is sorrowless, stainless, secure, and does not shake when touched by the things of the world—that is the highest auspiciousness./ Having acted in this wise, unconquered everywhere they go to well-being everywhere—for them, this is the highest auspiciousness.”

[Man’gong Wŏlmyŏn](#). (滿空月面) (1871–1946). In Korean, “Replete in Emptiness, Moon-Face”; the cognomen and ordination name of an important [SŎN](#) (C. Chan) monk of the late Chosŏn and Japanese colonial periods. Man’gong was born in T’aein county, North Chŏlla province, and became a novice monk in 1884. After enlightenment experiences in 1895 and 1901, he became in 1904 a dharma heir of [KYŎNGHŎ SŎNGU](#) (1849–1912), the preeminent Sŏn master of his generation who was renowned for his efforts to revitalize Korean Sŏn practice. Like Kyŏnghŏ, Man’gong was also a well-known iconoclast, who practiced an “unconstrained practice” (K. muae haeng; C. [WU’AI XING](#)) that was not bound by the customary restrictions of monastic discipline. After 1905, Man’gong often resided at [SUDŎKSA](#) on Mt. Tŏksung in South Ch’ungch’ŏng province, and he and his lineage are closely associated with that monastery. Man’gong also collaborated with such contemporary Buddhist leaders as [HAN YONGUN](#) (1879–1944) and Sŏktu Pot’aek (1882–1954) in attempting to rejuvenate Korean Buddhist practice. Man’gong established the Sŏnhagwŏn (Cloister for Sŏn Learning) in 1921 in order to promote Korean Sŏn meditation training. Man’gong emphasized training in “questioning meditation” (K. kanhwa Sŏn; C. [KANHUA CHAN](#)), using the meditative topic (K. hwadu; C. [HUATOU](#)) “no” (K. mu; C. [WU](#); see [WU GONG’AN](#); [GOUZI WU FOXING](#)). Man’gong was also publicly critical of the Japanese colonial government. There is a well-known anecdote that, at a conference of abbots from the thirty-one Korean head monasteries ([PONSA](#)) in 1937, he chided the Japanese governor-general by telling him that only Korean Buddhists would be able to save him once he had fallen

into hell for destroying their tradition. In his later years, Man’gong retreated to the hermitage of Chönwōlsa, near Sudōksa on Mt. Tōksung. Man’gong had several renowned disciples who constitute the Tōksung transmission lineage, including the monks Kobong (1890–1961), Ch’unsōng (1891–1977), and Pyōkch’o (1899–1986), and the nuns [KIM IRYÖP](#) (1896–1971) and Pōphūi (1887–1975); Sungsan Haengwōn (1927–2004), a major propagator of the Korean Sōn tradition in the West, was Man’gong’s dharma successor through Kobong.

[Manhae](#). (K) (萬海). See [HAN YONGUN](#).

[mani](#). (T. nor bu; C. moni/zhu; J. mani/shu; K. mani/chu 摩尼/珠). In Sanskrit and Pāli, “jewel”; one of the generic terms for a precious gem in Buddhist texts, appearing in such compounds as “wish-fulfilling jewel” ([CINTĀMANI](#)) and the famous [MANTRA](#), [OM MANI PADME HŪM](#). In this mantra and elsewhere, the term is particularly associated with the bodhisattva [AVALOKITEŚVARA](#). The term occurs commonly in most strata of Buddhist texts, both literally in descriptions of the heavens and pure lands and figuratively as a metaphor for something beautiful, precious, and rare.

[Ma ni bka’ ’bum](#). In Tibetan, “One Hundred Thousand Pronouncements [Regarding] Maṇi”; a heterogeneous compilation of texts traditionally attributed to the Tibetan king [SRONG BTSAN SGAM PO](#). This large collection of works, usually published in two massive volumes, is generally understood as a treasure text ([GTER MA](#)), said to have been revealed by three individuals during the twelfth and thirteenth centuries: the [SIDDHA](#) Gngos grub (Ngödrup), the famed treasure revealer ([GTER STON](#)) [NYANG RAL NYI MA ’OD ZER](#), and Shākya ’Od—a disciple in the Nyang ral lineage sometimes known as Shākya bzang po (Shākya Sangpo). The texts are organized into three parts or cycles (skor): (1) “The cycle of [SŪTRAS](#)” (mdo skor), containing many legendary accounts of the [BODHISATTVA AVALOKITEŚVARA](#) and Srong btsan sgam po; (2) “the cycle of sādhanas” (sgrub skor), containing various meditation manuals ([SĀDHANA](#)) based on different aspects of Avalokiteśvara; and (3) “the cycle of precepts” (zhal gdams kyi skor), a miscellany of texts, many of which relate to the bodhisattva of great compassion. The remaining texts are sometimes referred to as “the cycle of the disclosure of the hidden” (gab pa mngon phyung gi skor). The title of the collection refers to the famed six-syllable [MANTRA](#) of Avalokiteśvara, [OM MANI PADME HŪM](#). The texts are an important early source for many of Tibet’s key

legends: the activities of Srong btsan sgam po, including the founding of the [JO KHANG](#) temple, and the status of Avalokiteśvara as the special protector of Tibet and the Tibetan people, incarnated in the person of Srong btsan sgam po himself. The *Ma ni bka' 'bum* also includes an account of a set of four statues (three or five according to some sources) in a form of [AVALOKITEŚVARA](#) (called the “Four Brother Statues of Avalokiteśvara”) said to have spontaneously arisen by miraculous means from the trunk of single sandalwood tree. According to the Tibetan text, the Tibetan king Srong bstan sgam po dispatched a monk named Akaraśīla to southern Nepal, where he discovered the four images in the midst of a large sandalwood grove. Akaraśīla then “invited” the statues to reside in various locations in order to dispel misery and strife and serve as the basis for religious practice. These statues are considered some of the most sacred Buddhist images in Nepal and Tibet. In their most common reckoning, the four brothers are: (1) the white [MATSYENDRANĀTH](#) in Jana Bāhāl, Kathmandu, Nepal; (2) the red Matsyendranāth in nearby Patan; (3) the Ārya Lokeśvara in the [PO TA LA](#) Palace, [LHA SA](#); (4) and the 'PHAGS PA WA TI in [SKYID GRONG](#), southern Tibet (a part of which is now in possession of the Dalai Lama in exile). Sometimes a fifth image is included: the Minanāth in Patan.

[ma ni 'khor lo](#). In Tibetan, lit. “[MANI](#) wheel,” commonly rendered into English as a “prayer wheel”; a device for the repetition of a [MANTRA](#), so-called because of its frequent use in conjunction with repetitions of the mantra [OM MANI PADME HŪM](#). The device, commonly used in Tibetan Buddhism, is a hollow cylinder ranging in length from a few inches to a few feet, filled with a long scroll of paper on which a mantra has been printed thousands of times. The scroll is wrapped tightly around the central axis of the device and enclosed in the cylinder. Each turn of the wheel is considered the equivalent of one recitation of the mantra, multiplied by the number of times the mantra is printed on the scroll. Smaller prayer wheels are carried and spun in the left hand while a rosary ([JAPAMĀLĀ](#)) is counted in the right hand as the mantra is recited. Larger versions are often mounted in a series along walls; very large wheels may even fill a small temple, where they are turned by pushing handles at their base. There are also wheels that are turned by the wind, water, or convection.

[Mañjughosa](#). (T. 'Jam pa'i dbyangs; C. Miaoyin pusa; J. Myōon bosatsu; K. Myoŭm posal 妙音菩薩). See [MAÑJUŚRĪ](#).

[Mañjuśrī](#). (T. 'Jam dpal; C. Wenshushili; J. Monjushiri; K. Munsusari 文殊師利).

In Sanskrit, “Gentle Glory,” also known as [MAÑJUGHOSA](#), “Gentle Voice”; one of the two most important [BODHISATTVAS](#) in [MAHĀYĀNA](#) Buddhism (along with [AVALOKITEŚVARA](#)). Mañjuśrī seems to derive from a celestial musician ([GANDHARVA](#)) named Pañcaśikha (Five Peaks), who dwelled on a five-peaked mountain (see [WUTAISHAN](#)), whence his toponym. Mañjuśrī is the bodhisattva of wisdom and sometimes is said to be the embodiment of all the wisdom of all the buddhas. Mañjuśrī, Avalokiteśvara, and [VAJRAPĀNI](#) are together known as the “protectors of the three families” ([TRIKULANĀTHA](#)), representing wisdom, compassion, and power, respectively. Among his many epithets, the most common is [KUMĀRABHŪTA](#), “Ever Youthful.” Among Mañjuśrī’s many forms, the most famous shows him seated in the lotus posture ([PADMĀSANA](#)), dressed in the raiments of a prince, his right hand holding a flaming sword above his head, his left hand holding the stem of a lotus that blossoms over his left shoulder, a volume of the [PRAJÑĀPĀRAMITĀ](#) atop the lotus. Mañjuśrī plays a major role in many of the most renowned Mahāyāna sūtras. Mañjuśrī first comes to prominence in the [VIMALAKĪRTINIRDEŚA](#), which probably dates no later than the first century CE, where only Mañjuśrī has the courage to visit and debate with the wise layman [VIMALAKĪRTI](#) and eventually becomes the interlocutor for Vimalakīrti’s exposition of the dharma. In the [SADDHARMAPUNĀRĪKASŪTRA](#), only Mañjuśrī understands that the Buddha is about to preach the “Lotus Sūtra.” In the [AVATAMSAKASŪTRA](#), it is Mañjuśrī who sends [SUDHANA](#) out on his pilgrimage. In the *Ajātaśatrukaukṛtyavinodana*, it is revealed that Mañjuśrī inspired [ŚĀKYAMUNI](#) to set out on the bodhisattva path many eons ago, and that he had played this same role for all the buddhas of the past; indeed, the text tells us that Mañjuśrī, in his guise as an ever-youthful prince, is the father of all the buddhas. He is equally important in tantric texts, including those in which his name figures in the title, such as the [MAÑJUŚRĪMŪLAKALPA](#) and the [MAÑJUŚRĪNĀMASAMGĪTI](#). The bull-headed deity [YAMĀNTAKA](#) is said to be the wrathful form of Mañjuśrī. Buddhahadra’s early fifth-century translation of the *Avataṃsakasūtra* is the first text that seemed to connect Mañjuśrī with Wutaishan (Five-Terrace Mountain) in China’s Shaanxi province. Wutaishan became an important place of pilgrimage in East Asia beginning at least by the Northern Wei dynasty (424–532), and eventually drew monks in search of a vision of Mañjuśrī from across the Asian continent, including Korea, Japan, India, and Tibet. The *Svayambhūpurāṇa* of Nepal recounts that Mañjuśrī came from China to worship the [STŪPA](#) located in the middle of a great lake. So that humans would be able worship the stūpa, he took his sword and cut a great gorge

at the southern edge of the lake, draining the water and creating the Kathmandu Valley. As the bodhisattva of wisdom, Mañjuśrī is propiated by those who wish to increase their knowledge and learning. It is considered efficacious to recite his mantra “oṃ arapacana dhīḥ” (see [ARAPACANA](#)); Arapacana is an alternate name for Mañjuśrī.

[Mañjuśrīkīrti](#). (T. 'Jam dpal grags pa). Eighth king of the mythical kingdom of [ŚAMBHALA](#), and the first of the twenty-five so-called “kulika kings” of śambhala. The first seven kings of śambhala are known as dharmarājas, starting with Sucandra, who received the [KĀLACAKRATANTRA](#) from the Buddha and then propagated it in his kingdom. Mañjuśrīkīrti is said to have ascended to the throne of the kingdom 674 years after the Buddha entered [PARINIRVĀNA](#). He is credited with first preventing some three hundred thousand brāhmaṇas from leaving the kingdom and then converting them to Buddhism, turning all the inhabitants of śambhala into a single class, the [VAJRAKULA](#), or “vajra family.” This is one of the etymologies of the term “kulika king.” His greatest achievement, however, was the composition of a summary of the *Kālacakratantra* received by Sucandra. This work is known as the *Mūlakālacakratantra*, or root *Kālacakratantra*, and alt., as the *Laghutāntra*, or “short tantra.” It is said that over the course of time, the original tantra was lost, so that the recension of the *Kālacakratantra* that exists today is the version composed by Mañjuśrīkīrti.

[Mañjuśrīmitra](#). (T. 'Jam dpal bshes gnyen). An important, and possibly mythical, figure in the [RDZOGS CHEN](#) tradition of Tibetan Buddhism. According to some accounts, he was a king of Singhala (Sri Lanka). The rdzogs chen teachings are said to have originated from the primordial buddha [SAMANTABHADRA](#), who transmitted them to his emanation ([SAMBHOGAKĀYA](#)), the buddha [VAJRASATTVA](#), who in turn transmitted them to his [NIRMĀNAKĀYA](#) emanation, known by the Tibetan name [DGA' RAB RDO RJE](#) (perhaps Pramodavajra in Sanskrit), who finally transmitted them to Mañjuśrīmitra. He is said to have received these teachings in the form of 6,400,000 verses and organized them into the three categories of [SEMS SDE](#), [KLONG SDE](#), and [MAN NGAG SDE](#). He in turn transmitted these teachings to Śrīsiṃha. Mañjuśrīmitra is the author of *Rdo la ser zhun*.

[Mañjuśrīmūlakalpa](#). (T. 'Jam dpal gyi rtsa ba'i rgyud; C. Dafanguang pusazang wenshushili genben yigui jing; J. Daihōkō bosatsuzō Monjushiri konpongikikyō; K. Taebanggwang posalchang Munsusari kūnbon üigwe kyōng

大方廣菩薩藏文殊師利根本儀軌經). In Sanskrit “The Fundamental Ordinance of [MAÑJUŚRĪ](#)”; known in Tibetan as the “Fundamental Tantra of Mañjuśrī.” The work is an early and important Buddhist [TANTRA](#) (marking a transition between the [SŪTRA](#) and tantra genres), dating probably from around the late sixth or early seventh centuries, which was later classed as a [KRIYĀTANTRA](#). The text, which is in a compilation of fifty-five chapters, provides detailed instructions by the Buddha on the performance of rituals and consecrations, including the important jar or vase consecrations ([KALĀŚĀBHISEKA](#)). The work is also among the first to introduce the notion of families ([KULA](#)) of divinities, in this case three families: the [TATHĀGATAKULA](#), the [PADMAKULA](#), and the [VAJRAKULA](#). Like other tantric texts, it provides instruction on a wide range of topics, including the recitation of [MANTRAS](#), the drawing of images and [MANDALAS](#), and the nature of the [VIDYĀDHARA](#), as well as on astrology, medicine. Among the many prophecies in the text is the oft-cited prophecy concerning [NĀGĀRJUNA](#), in which the Buddha states that four hundred years after his passage into [PARINIRVĀNA](#), a monk named Nāga will appear, who will live for six hundred years.

[Mañjuśrīnāmasaṃgīti](#). (T. 'Jam dpal gyi mtshan yang dag par brjod pa; C. Sheng miaojixiang zhenshi ming jing; J. Shōmyōkichijō shinjitsumyōkyō; K. Sōng myogilsang chinsil myōng kyōng 聖妙吉祥真實名經). In Sanskrit, “Litany of the Names of [MAÑJUŚRĪ](#)”; one of the most popular liturgical works of late Indian Buddhism. The text dates from the late seventh or early eighth century CE and in its present form includes 167 verses and a lengthy prose section. It begins with a request to the Buddha from a disciple, in this case, the tantric deity [VAJRADHARA](#), to set forth the names of Mañjuśrī. The Buddha offers extensive praise to Mañjuśrī in the form of multiple epithets and identifications, equating him with all that is auspicious, although special attention is paid to his identity with the myriad categories of Buddhist wisdom. In other verses, the Buddha provides syllables to be recited in order to visualize a variety of deities, all of whom are considered forms of Mañjuśrī. Mañjuśrī himself is identified with the letter A, the first letter of the Sanskrit alphabet, and hence the source of all other names and the deities they represent. The Buddha also describes the [MANDALA](#) of Mañjuśrī. The prose section, like so many Mahāyāna sūtras, extols the virtues of its own recitation. Here, the Buddha declares that those who recite the *Mañjuśrīnāmasaṃgīti* three times daily will gain all manner of attainment and will also be protected by the Hindu gods, such as Viṣṇu ([NĀRĀYANA](#)) and Śiva (Maheśvara).

man ngag sde. (me ngak de). In Tibetan, “instruction class”; comprising the third of three main divisions of [RDZOGS CHEN](#) doctrine according to the [RNYING MA](#) sect of Tibetan Buddhism. The other two are [SEMS SDE](#) (mental class) and [KLONG SDE](#) (spatial class). The man ngag sde teachings, regarded as the highest of the three, have constituted the core of Rnying ma practice since the eleventh century. It is said that sems sde teaches the clarity/awareness side of enlightenment, klong sde teaches the spatial side of enlightenment, and man ngag sde combines the two. A wide range of practices are included in the man ngag sde, concerned above all with the presentation by the teacher of a “pure awareness” ([RIG PA](#)) that is free from dualistic conceptions, and the recognition and maintenance of that state by the student; the instructions on the [BAR DO](#) emerged from these texts. The most famous practices of man ngag sde are “cutting through” ([KHREGS CHOD](#)) and “leaping over” ([THOD RGAL](#)). The man ngag sde has a number of subcategories, the most famous of which is the [SNYING THIG](#). The root tantras of the man ngag sde are said to be the seventeen tantras.

manojalpa. (T. yid la brjod pa; C. yiyan; J. igon; K. ũiön 意言). In Sanskrit, lit., “mental talk” or “mental chatter”; a general term for thought ([VIKALPA](#)), often in the negative sense of a constant subconscious murmur of conceptions regarding sensory objects. In the [YOGĀCĀRA](#) school, the object of manojalpa is the imaginary ([PARIKALPITA](#)), defined as the falsely imagined nature of objects as separate from the consciousness that perceives them and naturally serving as the bases of their conceptual designations.

manomayakāya. (T. yid kyi rang bzhin gyi lus; C. yishengshen; J. ishōshin; K. ũisaengsin 意生身). In Sanskrit and Pāli, “mind-made body”; a subtle body acquired during meditative practice, which can exercise psychical and magical powers ([RDDHI](#)), such as passing through solid objects, appearing in many places at once, or flying. This body is described as living on joy, not solid nutriment; lacking such characteristics of a physical body as solidity, cohesion, heat, and motion; and being invisible to normal sight. The [SĀMAÑÑAPHALASUTTA](#) refers to the manomayakāya as something achieved by the meditator who has mastered the fourth of the four meditative absorptions (P. [JHĀNA](#); S. [DHYĀNA](#)) associated with the subtle-materiality realm ([RŪPADHĀTU](#)); this meditative body is created from one’s current physical body, the sutta says, as if drawing a sword from its scabbard or a reed from its sheath. The [LANĀVATĀRASŪTRA](#) lists three types of manomayakāya achieved by a [BODHISATTVA](#): (1) a body obtained through the

enjoyment of [SAMĀDHI](#) on the third, fourth, and fifth stages ([BHŪMI](#)) of the bodhisattva path; (2) a body obtained by recognizing the self-nature of the dharma itself, which is achieved on the eighth bhūmi; and (3) a body the bodhisattva assumes in accordance with the class of being he is seeking to edify. The manomayakāya is also analogous to the “transitional being” ([GANDHARVA](#)) that abides in the [ANTARĀBHAVA](#), the intermediate state between death and rebirth. Existence in any of the four meditative (dhyāna) heavens of either the subtle-materiality realm (rūpadhātu) or the immaterial realm ([ARŪPYADHĀTU](#)) may also sometimes be designated as a heavenly mind-made body (divyo manomayaḥ kāyaḥ). Finally, the mind-made body is manifested by great bodhisattvas (vaśitāprāptabodhisattva) and other sanctified beings during their transfigurational births-and-deaths ([PARINĀMIKAJARĀMARANA](#))—viz., the births-and-deaths that may occur even after enlightenment—one of the two categories of [SAMSĀRA](#), along with the determinative birth-and-death ([PARICCHEDAJARĀMARANA](#)) experienced by ordinary sentient beings within the three realms of existence ([TRILOKADHĀTU](#)). Mind-made bodies may be perceived only by the [DIVYACAKSUS](#), literally the “divine eye,” one of the five (or six) superknowledges ([ABHIJÑĀ](#)) and three “knowledges” ([TRIVIDYĀ](#)). The term also figures in the development of the theories of the two, three, or four bodies of the Buddha ([BUDDHAKĀYA](#)). Early scholasts speak of the Buddha having both a physical body and a manomayakāya, or “emanation body” ([NIRMĀNAKĀYA](#)), a second body that he used to perform miraculous feats such as visiting his mother in the [TRĀYASTRIMŚA](#) heaven atop Mount [SUMERU](#) after her death.

[manonubhavapratyakṣa](#). [alt. mānasapratyakṣa] (T. yid kyis myong ba'i mngon sum/yid kyī mngon sum; C. yishouxianliang; J. ijugenryō; K. ūisuhyōllyang 意受現量). In Sanskrit, “mental direct perception”; a form of perception ([PRATYAKSA](#)). According to the [ABHIDHARMA](#) analysis, the mind ([MANAS](#)) is capable of directly perceiving an object without the intrusion of a process of thought, just as the five sense consciousnesses are capable of directly perceiving a sensory object. An experience of sensory direct perception is said to be followed by a single moment of mental direct perception. That moment, however, is so short that for ordinary beings it passes without being noticed. Other forms of mental direct perception include the various superknowledges, or [ABHIJÑĀ](#), such as the ability to know the thoughts of others, the ability to remember one's own former lives, and the ability to hear and see things at a great distance. One element of the Buddhist path is the process of developing

mental direct perception to the point that one can directly perceive with the mind (and without thought and imagination) the truths of impermanence, suffering, and nonself. When these truths are directly perceived at the level of a [SAMĀDHI](#) that unifies serenity ([ŚAMATHA](#)) and insight ([VIPAŚYANĀ](#)), the mental direct perception then becomes what is called yogic direct perception ([YOGIPRATYAKSA](#)).

[Manorathapūraṇī](#). In Pāli, the “Fulfiller of Wishes”; a Pāli commentary on the [AṄGUTTARANIKĀYA](#) written by [BUDDHAGHOSA](#). Cf. [SADDHARMAVIPRALOPA](#).

[manovijñāna](#). (P. manoviññāṇa; T. yid kyi rnam par shes pa; C. yishi; J. ishiki; K. ūisik 意識). In Sanskrit, “mental consciousness”; the sixth of the six consciousnesses (after the five sensory consciousnesses). Unlike the sense consciousnesses, all of which entail forms of direct perception ([PRATYAKSA](#)), the mental consciousness is capable of both direct perception (pratyakṣa) and thought ([KALPANĀ](#)). Also, unlike the sensory consciousnesses, the mental consciousness is not limited by object: whereas the eye can only see visual objects, the ear can only hear auditory objects, etc., the objects of the mental consciousness are said to be all phenomena ([DHARMA](#)) because it is capable of thinking about anything that exists. The mental consciousness also differs from the five sense consciousnesses in terms of its precondition ([PRATYAYA](#)). For the five sense consciousnesses, the respective sense organ serves as the precondition; thus, each of these sense organs has a physical dimension ([RŪPA](#)). However, for the mental consciousness, the precondition is a previous moment of consciousness, which allows for either the next moment of mental cognition of a previous object or the first moment of cognition of a new object.

[Manpukuji](#). (萬福寺). In Japanese, “Myriad Blessings Monastery”; located in Uji, outside Kyōto, Japan. Currently, Manpukuji is the headquarters (honzan) of the [ŌBAKUSHŪ](#) of the [ZEN](#) tradition. The monastery was founded by the émigré [CHAN](#) (Zen) master [YINYUAN LONGXI](#) with the support of the shōgun Tokugawa Ietsuna (1639–1680). Construction began in 1661 and the dharma hall was completed the next year with the help of the grand counselor Sakai Tadakatsu (1587–1662). In 1664, Yinyuan left his head disciple [MU’AN XINGTAO](#) in charge and retired to his hermitage at Manpukuji. Mu’an thus became the second abbot of Manpukuji and oversaw the construction of the buddha hall, the bell tower, the patriarchs’ hall, and so forth. For several generations, émigré Chinese monks dominated the abbacy of Manpukuji. The construction of Manpukuji was

modeled after Yinyuan's old monastery of Wanfusi (which is pronounced Manpukuji in Japanese) in Fuzhou (present-day Fujian province). The major icons were also prepared by émigré Chinese artists and, along with the famous portrait of Yinyuan, are now considered important cultural artifacts. Mu'an's disciple Tetsugen Dōkō (1630–1682) led a project to carve a complete set of xylographs of the Ming dynasty edition of the Buddhist canon, which is now housed at Manpukuji; this edition, commonly called the Ōbaku canon, is one of the few complete xylographic canons still extant in East Asia (cf. the second carving of the Korean Buddhist canon, [KORYŎ TAEJANGGYŎNG](#)).

mantra. (T. sngags; C. zhenyan; J. shingon; K. chinŏn 眞言). In Sanskrit, “spell,” “charm,” or “magic formula”; a syllable or series of syllables that may or may not have semantic meaning, most often in a form of Sanskrit, the contemplation or recitation of which is thought to be efficacious. Indian exegetes creatively etymologized the term with the paronomastic gloss “mind protector,” because a mantra serves to protect the mind from ordinary appearances. There are many famous mantras, ranging in length from one syllable to a hundred syllables or more. They are often recited to propitiate a deity, and their letters are commonly visualized in tantric meditations, sometimes within the body of the meditator. Although mantras are typically associated with tantric texts, they also appear in the [SŪTRAS](#), most famously in the [PRAJÑĀPĀRAMITĀHRDAYASŪTRA](#) (“Heart Sūtra”). Numerous tantric [SĀDHANAS](#) require the recitation of a particular mantra a specific number of times, with the recitations counted on a rosary ([JAPAMĀLĀ](#)). In Tibetan Buddhism, mantras are also repeated mechanically by turning “prayer wheels” ([MA NI 'KHOR LO](#)). Perhaps the most famous of all such spells is the six-syllable mantra of the bodhisattva [AVALOKITEŚVARA](#), [OM MANI PADME HŪM](#), which is recited throughout the Tibetan Buddhist world. The Japanese [SHINGONSHŪ](#) takes its name from the Sinitic translation of mantra as “true word” (C. zhenyan; J. shingon).

mantrayāna. (T. sngags kyi theg pa; C. zhenyan sheng; J. shingonjō; K. chinŏn sŭng 眞言乘). In Sanskrit, “mantra vehicle”; often used as a synonym of [VAJRAYĀNA](#), suggesting the central place of mantras in tantric practice. According to one popular paronomastic gloss, the term [MANTRA](#) means “mind protector,” especially in the sense of protecting the mind from the ordinary appearances of the world. In this sense, the mantrayāna would refer not simply to the recitation of mantra but to the entire range of practices designed to

transform the ordinary practitioner into a deity and his ordinary world into a [MANDALA](#). In Tibetan Buddhism, the Tibetan forms of the terms mantrayāna and guhyamantrayāna (“secret mantra vehicle”) are used as commonly as vajrayāna and more commonly than [TANTRAYĀNA](#).

[manusya](#). (P. manussa; T. mi; C. ren; J. nin; K. in 人). In Sanskrit, “human”; one of the six realms of rebirth ([GATI](#)) in [SAMSĀRA](#), together with the realms of divinities, demigods, animals, ghosts, and hell denizens. Human rebirth (along with that of divinities and sometimes demigods) is considered a fortunate rebirth, unlike rebirth as an animal, ghost, or hell being, which are considered unfortunate ([DURGATI](#); [APĀYA](#)). To achieve liberation from rebirth, human birth is considered the ideal state, because a human being is not so beset by suffering that one is unable to practice the path (as are the animals, ghosts, or hell denizens) or so intoxicated by pleasures (as are the divinities) that one is disinclined to do so. According to the theory of [KARMA](#), rebirth as a human is the result of having performed a virtuous deed, such as a keeping a vow, in a previous life. Among humans, some are more fortunate than others in terms of their access to the dharma and their opportunities for practice, described in a list of opportune births ([KSANA](#); [KSANASAMPAD](#)), such as birth at a time and place where a buddha exists and where one has the capability to understand his teachings. Rebirth as a human endowed with such prospects is said to be exceedingly rare and unlikely to occur again in the near future; therefore, every effort should be made either to achieve liberation in this lifetime or to accumulate the necessary merit ([PUNYA](#)) to ensure rebirth as a human. In Buddhist cosmology, humans occupy the four island continents that surround Mount [SUMERU](#) in the cardinal directions. However, humans as they are commonly encountered are found only on the southern continent of [JAMBUDVĪPA](#); the human inhabitants of the other three continents exceed them in both height and in life span.

[Manzan Dōhaku](#). (卍山道白) (1636–1715). In Japanese, “Myriad Mountains, Purity of the Path”; [ZEN](#) master and scholar of the [SŌTŌSHŪ](#). Manzan is said to have become a monk at the age of nine and to have experienced a deep awakening at sixteen. After his awakening, he left the following verse: “The night is deep and the clouds have cleared from the sky as if it had been washed; throughout the world, nowhere is the radiance of my eyes defiled or obstructed.” In 1678, he met the Sōtō Zen master Gesshū Sōko (1618–1696) and inherited his

dharma (shihō). Two years later Manzan took over the abbacy of the temple Daijōji from Gesshū and remained there for ten years. In 1700, Manzan went to the city of Edo (Tōkyō) in hopes of reforming the custom of [IN'IN EKISHI](#), or “changing teachers according to temple.” Instead, he called for a direct, face-to-face transmission (menju shihō) from one master to his disciple (isshi inshō). After several failed attempts he finally succeeded in persuading the bakufu government to ban the in'in ekishi and [GARANBŌ](#) (“temple dharma lineage”) practice in 1703. Manzan was also a consummate scholar who is renowned for his efforts to edit Zen master [DŌGEN KIGEN](#)'s magnum opus, [SHŌBŌGENZŌ](#). He based his arguments for the abandonment of garanbō and in'in ekishi on his readings of the *Shōbōgenzō*. Manzan left many works. His *Zenkaiketsu* and *Taikaku kanna* offered a Zen perspective on the meaning of precepts. He also wrote the *Tōmon enyoshū*, which explains various matters related to Zen, including face-to-face transmission (menju shihō). His teachings can also be found in the *Manzan oshō gōroku*. His most eminent disciple was the Tokugawa reformer [MENZAN ZUIHŌ](#) (1683–1769).

[Māra](#). (T. Bdud; C. Mo; J. Ma; K. Ma 魔). In Sanskrit and Pāli, lit., “Maker of Death”; the personification of evil in Buddhism and often referred to as the Buddhist “devil” or “demon”; he is in fact a powerful divinity of the sensuous realm ([KĀMADHĀTU](#)), devoted to preventing beings from achieving liberation from rebirth and thus conquering death. In the biographies of the Buddha, Māra figures as the Buddha's antagonist. According to the most elaborate accounts of the Buddha's enlightenment experience, when the [BODHISATTVA SIDDHĀRTHA](#) sat under the [BODHI TREE](#), vowing not to rise until he attained liberation from [SAMSĀRA](#), he was approached by Māra, who sought to dissuade him from his quest. When he refused, Māra sent his minions to destroy him, but their weapons were transformed into flower blossoms. When he sent his daughters—Ratī (Delight), Aratī (Discontent), and Tṛṣṇā (Craving)—to seduce him, the bodhisattva remained unmoved, in some versions transforming them into hags and then restoring their beauty once they repented. When Māra questioned the bodhisattva's right to occupy his seat beneath the Bodhi tree, the bodhisattva declared that he had earned that right by accumulating merit over countless eons. When asked who could vouch for these deeds, the bodhisattva extended his right hand and touched the earth, thereby calling the goddess of the earth, [STHĀVARĀ](#), to bear witness to his virtue; this gesture, called the [BHŪMISPARŚAMUDRĀ](#) (“earth-touching gesture”), is one of the most common iconographic depictions of the

Buddha. The goddess bore witness to the bodhisattva's virtue by causing the earth to quake. In a Southeast Asian version, the goddess is called [THORANI](#), and she wrung out from her hair all the water that the bodhisattva had offered in oblations over many lives. This created a great torrent, which washed Māra away. In all accounts, Māra is finally vanquished and withdraws, with the entire episode being referred to as the “defeat of Māra” (Māravijaya). Māra reappears shortly after the Buddha's enlightenment, urging him to immediately pass into [PARINIRVĀNA](#) and not bother teaching others. His request is rejected, but he nevertheless extracts from the Buddha a promise to enter nirvāṇa when he has completed his teaching; near the end of the Buddha's life, Māra reappears at the [CĀPĀLACAITYA](#) to remind him of his promise. Māra also distracts the Buddha's attendant, [ĀNANDA](#), preventing him from requesting that the Buddha live until the end of the eon, a power that the Buddha possesses but must be asked to exercise. Ānanda is chided by the Buddha and later rebuked by the [SAMGHA](#) for his oversight. Māra commonly appears in Buddhist literature when monks and nuns are about to achieve enlightenment, attempting to distract them. Māra would eventually figure in sectarian polemics as well. In the [MAHĀYĀNA](#) sūtras, those who claim that the Mahāyāna sūtras are not the authentic word of the Buddha are condemned as being possessed by Māra. In scholastic literature, Māra is expanded metaphorically into four forms. [SKANDHAMĀRA](#), the māra of the aggregates ([SKANDHA](#)), is the mind and body of unenlightened beings, which serve as the site of death. Kleśamāra, the māra of the afflictions ([KLEŚA](#)), refers to such afflictions as greed, hatred, and delusion, which catalyze death and rebirth and which prevent liberation. [MRTYUMĀRA](#), the māra of death, is death itself, and DEVAPUTRAMĀRA, the deity Māra, is the divinity ([DEVA](#)) who attacked the Buddha and who seeks to prevent the defeat of the other three forms of Māra.

[marana](#). (T. 'chi ba; C. si; J. shi; K. sa 死). In Sanskrit and Pāli, “death.” In ordinary parlance, death refers to the cessation of a living being's vital signs, marking the end of a single lifetime. This fact was apparently unknown to Prince [SIDDHĀRTHA](#), such that his observation of a dead body during an excursion outside his palace served as one of the four signs or sights ([CATURNIMITTA](#)) that led him to renounce the world and seek a state beyond death. Death is common theme throughout Buddhist literature. Birth, aging, sickness, and death are often listed as four faults of [SAMŚĀRA](#). The gods [MĀRA](#) and [YAMA](#) are closely associated with death. Throughout the Buddhist world, all manner of rituals are performed to forestall death, and there are numerous instructions on how to face

death. Because death is certain to come, but its precise time is unknown, there are constant reminders to be prepared for death at any moment. Because the friends and possessions accumulated in this life cannot be taken to the next life, it is said that nothing is of benefit at the time of death except the dharma. The signs portending death in various levels of existence and the physical and psychological process of dying are described in detail in Buddhist literature. After death has occurred, rituals are typically performed to guide the consciousness of the deceased to rebirth in an auspicious realm. Together with “old age” or “senescence” ([JARĀ](#)), death constitutes the twelfth and final link in the cycle of dependent origination ([PRATĪTYASAMUTPĀDA](#)). From a philosophical perspective, death is also viewed as occurring constantly with the passage of each momentary combination of mind and matter ([NĀMARŪPA](#)) or the five aggregates ([SKANDHA](#)). Viewed from this perspective, an individual dies (and is reborn) moment after moment (see [KṢANIKAVĀDA](#)), physical death being merely the final specific instance thereof. The passing away of an enlightened person is described as a special kind of death, insofar as the conditions for future existence have been eliminated in that individual and as a consequence there will be no more rebirth for that person.

[maranānussmṛti](#). (P. maraṇānussati; T. 'chi ba rjes su dran pa; C. niansi; J. nenshi; K. yōmsa 念死). In Sanskrit, “recollection of death”; one of the most widely described forms of Buddhist meditation. This practice occurs as one of the forty objects of meditation ([KAMMATTHĀNA](#)) for the development of concentration. One of the most detailed descriptions of the practice is found in the [VISUDDHIMAGGA](#) of [BUDDHAGHOSA](#). Among six generic personality types (greedy, hateful, ignorant, faithful, intelligent, and speculative), Buddhaghosa states that mindfulness of death is a suitable object for persons of intelligent temperament. Elsewhere, however, Buddhaghosa says that among the two types of objects of concentration, the generically useful objects and specific objects, only two among the forty are generically useful: the cultivation of loving-kindness (P. mettā; S. [MAITRĪ](#)) and the recollection of death. In describing the actual practice, Buddhaghosa explains that the meditator who wishes to take death as his object of concentration should go to a remote place and repeatedly think, “Death will take place” or “Death, death.” Should that not result in the development of concentration, Buddhaghosa provides eight ways of contemplating death. The first of the eight is contemplation of death as a murderer, where one imagines that death will appear to deprive one of life.

Death is certain from the moment of birth; beings move progressively toward their demise without ever turning back, just as the sun never reverses its course through the sky. The second contemplation is to think of death as the ruin of all the accomplishments and fortune acquired in life. The third contemplation is to compare oneself to others who have suffered death, yet who are greater than oneself in fame, merit, strength, supranormal powers (P. *iddhi*; S. [RDDHI](#)), or wisdom. Death will come to oneself just as it has come to these beings. The fourth contemplation is that the body is shared with many other creatures. Here one contemplates that the body is inhabited by the eighty families of worms, who may easily cause one's death, as may a variety of accidents. The fifth contemplation is of the tenuous nature of life, that life requires both inhalation and exhalation of breath, requires a balanced alternation of the four postures ([ĪRYĀPATHA](#)) of standing, sitting, walking, and lying down. It requires moderation of hot and cold, a balance of the four physical constituents, and nourishment at the proper time. The sixth contemplation is that there is no certainty about death; that is, there is no certainty as to the length of one's life, the type of illness of which one will die, when one will die, nor where, and there is no certainty as to where one will then be reborn. The seventh contemplation is that life is limited in length. In general, human life is short; beyond that, there is no certainty that one will live as long as it takes "to chew and swallow four or five mouthfuls." The final contemplation is of the shortness of the moment, that is, that life is in fact just a series of moments of consciousness. Buddhaghosa also describes the benefits of cultivating mindfulness of death. A monk devoted to the mindfulness of death is diligent and disenchanted with the things of the world. He is neither acquisitive nor avaricious and is increasingly aware of impermanence (S. [ANITYA](#)), the first of the three marks of mundane existence. From this develops an awareness of the other two marks, suffering and nonself. He dies without confusion or fear. If he does not attain the deathless state of [NIRVĀNA](#) in this lifetime, he will at least be reborn in an auspicious realm. Similar instructions are found in the literatures of many other Buddhist traditions.

[Māratajjanīyasutta](#). (C. Xiangmo jing; J. Gōmakyō; K. Hangma kyōng 降魔經). In Pāli, "Discourse on the Rebuke to Māra"; the fiftieth sutta in the [MAJJHIMANIKĀYA](#) (a separate [SARVĀSTIVĀDA](#) recension is the 131st sūtra in the Chinese translation of the [MADHYAMĀGAMA](#); there are also two other independent translations); the scripture is an account of an encounter between

[MAHĀMAUDGALYĀYANA](#) (P. Mahāmoggallāna) and the divinity [MĀRA](#), the personification of evil. According to the Pāli recension, Mahāmoggallāna was in the Bhesakaḷā grove at Suṃsumāragiri in the Bhagga country when Māra entered his belly. Mahāmoggallāna coaxed Māra to stop vexing him by relating how in a previous life, during the time of Kakusandha Buddha, he had been Māra’s uncle. He warns Māra of the dangers that befall those who create trouble for the Buddha and his disciples.

[Māratika](#). (T. ’Chi ba mthar byed). A cave in eastern Nepal near the town of Rumjitar, called Haileshi in Nepali, believed by Tibetan Buddhists to be the site where [PADMASAMBHAVA](#) and his consort [MANDĀRAVĀ](#) undertook the practice of longevity for three months. According to traditional accounts, in a vision the couple received initiation and blessings directly from the buddha [AMITĀYUS](#), and Padmasambhava attained the state of a [VIDYĀDHARA](#) with the power to control the duration of his life.

[māravijaya](#). In Sanskrit, the “defeat of Māra.” See [MĀRA](#).

[mārga](#). (P. magga; T. lam; C. dao; J. dō; K. to 道). In Sanskrit, “path”; a polysemous term in Sanskrit, whose root denotation is a road, track, way, or course. As one of the most important terms in Buddhism, it refers to the metaphorical route from one state to another, typically from suffering to liberation, from [SAMSĀRA](#) to [NIRVĀNA](#). The term derives in part from the view that the means of achieving liberation from suffering have been identified by the Buddha, and he himself has successfully followed the route to that goal, leaving behind tracks or footprints that others can follow. Indeed, it is the Buddhist view that each of the buddhas of the past has followed the same path to enlightenment. However, in the interval between buddhas, that path becomes forgotten, and the purpose of the next buddha’s advent in the world is to rediscover and reopen that same path. The term mārga occurs in the Buddha’s first sermon (S. [DHARMAKAKRAPRAVARTANASŪTRA](#); P. [DHAMMACAKKAPPAVATTANASUTTA](#)) as the fourth constituent of the [FOUR NOBLE TRUTHS](#) ([CATVĀRY ĀRYASATYĀNI](#)), where it is identified as the eightfold path ([ĀRYĀSTĀNGAMĀRGA](#)) between the two extremes of self-indulgence and self-mortification. Elsewhere, the path is associated with the threefold training ([TRISĪKSĀ](#)) in morality ([ŚĪLA](#)), concentration ([SAMĀDHI](#)), and wisdom ([PRAJÑĀ](#)). However, there are numerous delineations of the path to enlightenment. For example, both the mainstream Buddhist schools and the [MAHĀYĀNA](#) describe

three paths: (1) the path of the [ŚRĀVAKA](#), culminating in attainment of [NIRVĀNA](#) as an [ARHAT](#); (2) the path of the [PRATYEKABUDDHA](#), also culminating in the nirvāṇa of an arhat; and (3) the path of the [BODHISATTVA](#), culminating in the attainment of buddhahood. Each of these paths has its own stages, with a common system describing five ([PAÑCAMĀRGA](#)): (1) the path of accumulation ([SAMBHĀRAMĀRGA](#)), (2) the path of preparation ([PRAYOGAMĀRGA](#)), (3) the path of vision ([DARŚANAMĀRGA](#)), (4) the path of cultivation ([BHĀVANĀMĀRGA](#)), and (5) the adept path, “where there is nothing more to learn” ([AŚAIKSAMĀRGA](#)). In more technical descriptions, the path to enlightenment is described as a series of moments of consciousness in a process of purification, in which increasingly subtle states of contaminants ([ĀSRAVA](#)) and afflictions ([KLEŚA](#)) are permanently cleansed from the mind. The term “path” figures in the title of a number of highly important Buddhist works, such as the [VISUDDHIMAGGA](#) (“Path of Purification”) by the Pāli commentator [BUDDHAGHOSA](#). The Tibetan exegete [TSONG KHA PA](#) wrote of the “three principal aspects of the path” (lam rtso nam gsum): renunciation, [BODHICITTA](#), and correct view. See also [DAO](#).

[mārgajñatā](#). (T. lam shes; C. dao zhi; J. dōchi; K. toji 道智). In Sanskrit, “knowledge of the paths”; one of the three knowledges (along with [SARVĀKĀRAJÑATĀ](#) and [SARVAJÑATĀ](#), or [VASTUJÑĀNA](#)) set forth in the [ABHISAMAYĀLAMKĀRA](#). When explained from the perspective of the path that bodhisattvas have to complete in order to reach their goal of full enlightenment, the knowledge of paths is indicated by nine dharmas; these include its special causes ([MAHĀKARUNĀ](#), Mahāyāna [GOTRA](#), and so on), the bodhisattva’s paths of accumulation and preparation (called [MOKSABHĀGĪYA](#) and [NIRVEDHABHĀGĪYA](#)), a special path of vision ([DARŚANAMĀRGA](#)), and a path of cultivation ([BHĀVANĀMĀRGA](#)) understood from the standpoints of [UPĀYA](#) (method) and [PRAJÑĀ](#) (wisdom). “Method” consists of zealous resolution ([ADHIMOKSA](#)) regarding the merit ([PUNYA](#)) that derives from the perfection of wisdom ([PRAJÑĀPĀRAMITĀ](#)) and its results; rejoicing ([ANUMODANA](#)) in that merit; and dedicating it to the goal of full enlightenment ([PARINĀMANĀ](#)). Wisdom consists in innate purity, and the purity that derives from the elimination of obscurations ([ĀVARANA](#)). When described from the perspective of the bodhisattva’s actual practice, “knowledge of the paths” refers to the Mahāyāna path of bodhisattvas, including all the aspects ([ĀKĀRA](#)) of knowledge that are as yet uninformed by the full knowledge of a buddha (the sarvākārajñatā).

mārgaphala. (P. maggaphala; T. lam 'bras; C. daoguo; J. dōka; K. to kwa 道果). In Sanskrit, lit. “path and its fruition”; the eight stages of realization belonging to an [ĀRYA](#), or “noble one.” consisting of four supramundane paths ([MĀRGA](#)) and four supramundane fruits ([PHALA](#)). These are as follows: (1) realization of the path of stream-enterer ([SROTAĀPANNA](#)), and (2) the realization of the fruition of stream-enterer; (3) realization of the path of once-returner ([SAKRDĀGĀMIN](#)), and (4) realization of the fruition of once-returner; (5) realization of the path of nonreturner ([ANĀGĀMIN](#)), and (6) realization of the fruition of nonreturner; and (7) realization of the path of the worthy ones ([ARHAT](#)); and (8) the realization of the fruition of worthy one. In Tibetan, the literal translation of mārgaphala as [LAM 'BRAS](#) refers to a central doctrine of the [SA SKYA](#) sect.

mārgasatya. (P. maggasacca; T. lam gyi bden pa; C. daodi; J. dōtai; K. toje 道諦). In Sanskrit, “the truth of the path”; the fourth of the so-called [FOUR NOBLE TRUTHS](#) (catvāry āryasatyāni) set forth by the Buddha in his first sermon (S. [DHARMAKAKRAPRAVARTANASŪTRA](#); P. [DHAMMACAKKAPPAVATTANASUTTA](#)) in the Deer Park ([MRGADĀVA](#)) at [SĀRNĀTH](#). In that sermon, the Buddha identified the truth of the path to the cessation of suffering to be the eightfold path ([ĀRYĀSTĀNGAMĀRGA](#)). In later literature, the truth of the path is also described in terms of the three trainings ([TRISĪKSĀ](#)) in morality ([SĪLA](#)), concentration ([SAMĀDHI](#)), and wisdom ([PRAJÑĀ](#)). Like the three other truths, the truth of the path has four aspects. They are: (1) path (mārga), because the path leads to liberation from suffering and rebirth; stated more technically, it leads from the state of the ordinary person ([PRTHAGJANA](#)) to the state of the noble one ([ĀRYA](#)); (2) suitability (nyāya), because the path contains the antidotes suitable to destroy suffering and the origin of suffering; (3) achievement ([PRATIPATTI](#)) because the path brings about liberation; and (4) deliverance (nairyāṇika), because wisdom destroys the afflictions ([KLEŚA](#)) and delivers one to a state of liberation.

Marīcī. (T. 'Od zer can ma; C. Molizhi; J. Marishi; K. Mariji 摩利支). In Sanskrit and Pāli, lit. “Shining,” or “Mirage”; proper name of the Indian goddess of the morning sun, who was adopted into the Buddhist pantheon. Marīcī rides a chariot drawn by seven pigs; her charioteer is Rāhu. She is depicted with three faces and eight hands, either in her chariot or simply standing on the back of a sow. In tantric Buddhism, Marīcī is the consort of [VAIROCANA](#), although she is rarely shown in sexual union with him. Due to her porcine steeds, in Nepal and Tibet she is sometimes confused with [VAJRAVĀRĀHĪ](#). Under the name

Aśokakāntā, she is also an attendant of [TĀRĀ](#).

[Mar pa bka' brgyud](#). (Marpa Kagyü). In Tibetan term, “Oral Lineage of Mar pa”; one of the so-called eight great conveyances that are lineages of achievement ([SGRUB BRGYUD SHING RTA CHEN PO BRGYAD](#)). The term refers generally to the teachings transmitted from such Indian masters as [TILOPA](#), [NĀROPA](#), and [MAITRĪPA](#) to the Tibetan teacher [MAR PA CHOS KYI BLO GROS](#) and subsequently to [MI LA RAS PA](#), [RAS CHUNG PA RDO RJE GRAGS](#), [SGAM PO PA BSOD RNAM RIN CHEN](#), and the various [BKA' BRGYUD](#) subsects. It is generally synonymous with the term [DWAGS PO BKA' BRGYUD](#). See also [BKA' BRGYUD CHE BZHI CHUNG BRGYAD](#).

[Mar pa Chos kyī blo gros](#). (Marpa Chökyi Lodrö) (1012?–1097). A renowned Tibetan translator and lay Buddhist master who played an important role in the later transmission ([PHYI DAR](#)) of Buddhism from India to Tibet. He is regarded as the Tibetan founder of the [BKA' BRGYUD](#) sect of Tibetan Buddhism, which traces its lineage to India and the [MAHĀSIDDHAS](#) [TILOPA](#) and [NĀROPA](#). In his traditional biographies, Mar pa is generally regarded as a reincarnation of the Indian mahāsiddha [DOMBĪ HERUKA](#). Mar pa was born to wealthy landowners in the southern Tibetan region of [LHO BRAG](#) and quickly proved to be a gifted child. As an adult, Mar pa was characterized as having a volatile temper, although ultimately compassionate. His parents sent their son to study Sanskrit and Indian vernacular languages with the translator ['BROG MI SHĀKYA YE SHES](#) in western Tibet. Because resources for studying Buddhism in Tibet were limited as the so-called dark period between the earlier dissemination ([SNGA DAR](#)) and later dissemination (phyi dar) came to an end, Mar pa decided to make the harrowing journey to India to seek instruction from Buddhist masters. He would make three journeys there over the course of his life. He first spent three years in Nepal, acclimating to the new environment and continuing his study of local languages. There he met two Nepalese teachers, Chitherpa and Painḍapa, who offered many religious instructions but also encouraged Mar pa to seek out the master who would become his chief guru, the great [SIDDHA NĀROPA](#). According to tradition, Mar pa studied under Nāropa at the forest retreat of Pullahari, receiving initiations and teachings of several important tantric lineages, especially those of the [BKA' 'BABS BZHI](#) (four transmissions) that Nāropa had received from his principal teacher [TILOPA](#). Despite the fame of this encounter, contemporary Tibetan sources indicate that Mar pa himself never claimed to have studied

directly with Nāropa, who had already passed away prior to Mar pa’s trip to India. Mar pa’s other great master was the Indian siddha [MAITRĪPA](#), from whom he received instruction in [MAHĀMUDRĀ](#) and the tradition of [DOHĀ](#), or spiritual song. Mar pa received other tantric transmissions from Indian masters such as Jñānagarbha and Kukkurīpā. Upon his return to Tibet, Mar pa married several women, the most well known being [BDAG ME MA](#), who figures prominently in the life story of [MI LA RAS PA](#). He began his career as teacher and translator, while also occupying himself as landowner and farmer. He had intended to pass his dharma lineage to his son [DARMA MDO SDE](#), for whom Mi la ras pa’s famous tower was built, but the child was killed in an equestrian accident. Mar pa’s accumulated instructions were later passed to four principal disciples: Ngog Chos sku rdo rje (Ngok Chöku Dorje), Mes tshon po (Me Tsönpo), ’Tshur dbang nge (Tsur Wangnge), and the renowned [YOGIN](#) and poet Mi la ras pa. At least sixteen works translated from Sanskrit by Mar pa are preserved in the Tibetan Buddhist canon. He is also known as Mar pa [LO TSA BA](#) (Marpa the Translator) and Lho brag pa (Man from Lhodrak). Among the biographies of Mar pa, one of the most famous is that by [GTSANG SMYON HERUKA](#).

[Maru](#). (S). One of the twenty-four sacred sites associated with the [CAKRASAMVARTANTRA](#). See [PĪTHA](#).

[ma sanjin](#). (J. masangin; K. ma samgün 麻三斤). In Chinese, “three catties of flax”; a [CHAN](#) expression that becomes a famous meditative topic ([HUATOU](#)) and is used in Chan “questioning meditation” (see [KANHUA CHAN](#)). The phrase appears in a case or precedent ([GONG’AN](#)) attributed to [DONGSHAN SHOUCU](#) (910–990) in the [YUNMEN ZONG](#): Once when Dongshan was asked, “What is the Buddha?,” he replied, “Three catties of flax.” This gong’an appears as case no. 18 in the [WUMEN GUAN](#) (“Gateless Checkpoint”) and case no. 12 in the [BIYAN LU](#) (“Blue Cliff Record”).

[Maskarin Gośālīputra](#). (P. Makkhali Gosāla; T. Kun tu rgyu gnag lhas kyi bu; C. Moqieli Jushelizi; J. Magari Kusharishi; K. Malgari Kusarija 末伽梨拘睺梨子) (d. c. 488 BCE). In Sanskrit, “Maskarin, Who Was Born in a Cow Shed”; the name of an [ĀJĪVAKA](#) teacher (and the sect’s founder, according to some sources) who was a contemporary of the Buddha. Because no Ājīvaka texts have survived, information about the school’s doctrines must be derived from Buddhist and [JAINA](#) sources. According to Jaina accounts, Maskarin Gośālīputra was a disciple of [MAHĀVĪRA](#) but eventually left the Jaina fold. Maskarin

Gośālīputra subsequently founded his own school of wandering religious ([ŚRAMANA](#)) called the Ājīvakas and was notorious for denying the doctrine of moral cause and effect ([KARMAN](#)). As his rivals describe his teachings, he asserted that there is no immediate or ultimate cause for the purity or depravity of beings; instead, beings are directed along their course by destiny or fate (niyati). Thus attainments or accomplishments of any kind are not a result of an individual's own action or the acts of others; rather, those beings experience ease or pain according to their positions within the various stations of existence. Maskarin Gośālīputra is portrayed as advocating a theory of automatic purification through an essentially infinite number of transmigrations (saṃsāraśuddhi), during which all beings would ultimately attain perfection. The Buddha is said to have regarded Makkhali Gośālīputra's views as the most dangerous of heresies, because they were capable of leading even the divinities ([DEVA](#)) to loss, discomfort, and suffering. He is one of the so-called six heterodox teachers ([TĪRTHIKA](#)) often mentioned in Buddhist sūtras and criticized by the Buddha. The other five are [PŪRANA-KAŚYAPA](#), [AJITA KEŚAKAMBHALA](#), [KAKUDA KĀTYĀYANA](#), [SAÑJAYA VAIRATĪPUTRA](#), and [NIRGRANTHA-JÑĀTĪPUTRA](#).

Mathurā. [alt. Madhurā] (T. Bcom rlag; C. Motouluo; J. Machūra; K. Mat'ura 摩偷羅). North central Indian city on the Yamunā River, located approximately thirty miles (fifty kms.) north of Agra, and renowned as the birthplace of Kṛṣṇa. During the time of the Buddha, it was the capital of Śurasena and was ruled by King Avantiputra. The Buddha seems to have visited the city but did not preach there. Indeed, he seems to have disliked it; in the *Madhurasutta*, he enumerates its five disadvantages: uneven ground, excessive dust, fierce dogs, bestial spirits ([YAKSA](#)), and difficulty in obtaining alms. Buddhism gained favor there in later years, and Mathurā became one of the major scholastic centers of the [SARVĀSTIVĀDA](#) and/or [MŪLASARVĀSTIVĀDA](#) school; both [FAXIAN](#) and [XUANZANG](#) describe it as a flourishing Buddhist city.

mati. (P. mati; T. blo gros; C. hui; J. e; K. hye 慧). In Sanskrit and Pāli, “discernment” or “intelligence.” This term is often used in [ABHIDHARMA](#) texts to mean “the proper discernment of [DHARMAS](#),” and, in this sense, mati is closely synonymous with [PRAJNĀ](#), or “wisdom.” Mati in its denotation of “discernment” or “mentality” is used in the [SARVĀSTIVĀDA ABHIDHARMA](#) system to indicate one of the ten “omnipresent mental factors” ([MAHĀBHŪMIKA](#)) that are said to accompany all consciousness activity. In the “eight consciousnesses” model of

the the [YOGĀCĀRA](#) school, mati refers to the seventh consciousness ([KLIṢṬAMANAS](#)). ¶ Mati is also used as a proper noun and serves as the name of a handful of figures in Buddhist literature, including a previous incarnation of [ŚĀKYAMUNI](#) Buddha.

Mātrceta. (T. Ma khol; C. Moxilizhizha; J. Machiriseita; K. Majillijet’a 摩唎里制吒) (c. third century CE). An Indian monk regarded as one of the great Sanskrit poets of the Buddhist tradition. It is said that at the time of the Buddha he was an oriole who, upon seeing the Buddha, sang a beautiful song. Hearing the song, the Buddha predicted that the bird would be reborn as a great poet in the future. Mātrceta was a Hindu poet and a devotee of Śiva. He was a skilled orator, defeating many Buddhists in debate. The monks of [NALANDĀ](#) monastery appealed to [NĀGĀRJUNA](#) for assistance and [ĀRYADEVA](#) volunteered to represent his teacher. Mātrceta and Āryadeva engaged in a famous debate, with Āryadeva eventually defeating Mātrceta and converting him to Buddhism. His most famous work is the *Śatapañcāśatakastotra* (“Praise in One Hundred Fifty Stanzas”), a work that praises the qualities and deeds of the Buddha in thirteen sections. A second work in praise of the Buddha is his *Catuḥśataka* (“Four Hundred Verses,” also known as the *Varṇārhavarṇastotra*, not to be confused with the [CATUḤŚATAKA](#) by Āryadeva). [YIJING](#), who visited India in the seventh century, reported that the two hymns were taught to all monks, whether [HĪNAYĀNA](#) or [MAHĀYĀNA](#), immediately after ordination, and were regularly chanted at assemblies. Yijing translated the former work into Chinese. Mātrceta is also known for his hymns in praise of [TARĀ](#). In addition, he was the author of the *Mahārājakanīṣkalekha* (“Letter to King Kaniṣka”); he was invited to court by the king but, pleading old age, sent a letter of advice instead. If the reign of [KANĪṢKA](#) is placed in the second century, it is possible that the letter is addressed to Kaniṣka II. In some Tibetan sources, Mātrceta is identified with Āryaśura.

mātrkā. (P. mātikā; T. phyi mo; C. modalijia; J. matarika; K. madalliga 摩怛理迦). In Sanskrit, lit. “matrix” and related etymologically to that English word; systematized “matrices” or “lists” of terms and topics appearing in the [SŪTRAS](#), which served as the nucleus of the [ABHIDHARMA](#) literature. Important early disciples of the Buddha, including [ŚĀRIPUTRA](#), [MAHĀMAUDGALYĀYANA](#), and [MAHĀKĀTYĀYANA](#), are said to have compiled such lists in order to systematize the disparate teachings found in the Buddha’s discourses, using these rosters as mnemonic devices for teaching the [DHARMA](#) to their students. The earliest matrices may have been such common dharma lists as the five aggregates ([SKANDHA](#)), twelve sense spheres ([ĀYATANA](#)), and eighteen elements ([DHĀTU](#)). These relatively simple lists were gradually elaborated into complex matrices that were intended to provide a systematic overview of the full range of Buddhist

spiritual development, such as an exhaustive matrix of twenty-two triads (such as wholesome, unwholesome, and indeterminate) and one hundred dyads that provides the exegetical framework for the [DHAMMASAṄGANI](#), the first book in the Pāli [ABHIDHAMMA](#). None of the early matrices of the [SARVĀSTIVĀDA](#) or [YOGĀCĀRA](#) schools are extant, but they can be reconstructed from culling the lists treated in their abhidharma literatures; these rosters closely follow those appearing in the Pāli abhidhamma. By tying together, expanding upon, and systematizing these various matrices, the different schools of abhidharma constructed scholastically meticulous and coherent exegeses of Buddhist doctrine and soteriology. The mātṛkā thus served as the forerunner of the abhidharma, and the abhidharma thus represents an elaboration and analysis of these lists. In some early accounts, in fact, a matrix was essentially synonymous with the abhidharma, and both terms are used in differing accounts of the initial recitation of the Buddhist canon following the Buddha’s demise; indeed, the [ABHIDHARMAPITAKA](#) is sometimes even referred to as the mātṛkāpiṭaka.

[mātr-tantra](#). (T. ma rgyud). In Sanskrit, lit., “mother tantra”; a term used in a twofold division of [ANUTTARAYOGA](#) tantric texts as mother tantras and father tantras ([PITRATANTRA](#)). The former, also known as [DĀKINĪ](#) tantras, are traditionally said to emphasize wisdom ([PRAJÑĀ](#)) over method ([UPĀYA](#)), especially wisdom in the form of the mind of clear light ([PRABHĀSVARACITTA](#)). This designation may also derive from the fact that in these tantras, the majority (and in some cases, all) of the deities of the [MANDALA](#) are female.

[mātsarya](#). (P. macchariya; T. ser sna; C. qian/ji; J. ken/shitsu; K. kan/chil 慳/嫉). In Sanskrit, “selfishness,” “miserliness”; one of the forty-six mental concomitants (see [CAITTA](#)) according to the [SARVĀSTIVĀDA-VAIBHĀSIKA](#) school, one of the fifty-one according to the [YOGĀCĀRA](#) school, and one of the fifty-two according to the Pāli abhidhamma; it is listed among the secondary afflictions ([UPAKLEŚA](#)). Mātsarya is described as the inability to bear the good fortune of others because of one’s attachment to objects. It is related to hatred ([DVEṢA](#)) and results in mental discomfort and unhappiness.

[Matsuo Bashō](#). (松尾芭蕉) (1644–1694). A renowned Japanese Buddhist author of the Edo period. Although famous in the West especially for his haiku poetry, Bashō is also known for his renga, or linked verse, prose works, literary criticism, diaries, and travelogues, which also contain many famous poems. His most celebrated work is his travel diary, a work in mixed prose and verse

entitled *Oku no Hosomichi* (“Narrow Road to the Deep North”), published posthumously in 1702. He was born in Iga Province (present-day Mie prefecture) to a family of the samurai class, but abandoned that life in favor of living as a Buddhist monk, much like the Heian period (794–1185) [SHINGONSHŪ](#) monk [SAIGYŌ](#) (1118–1190), with whom he is often compared. Bashō received instruction from the [RINZAISHŪ](#) master Butchō (1643–1715), and his work is commonly regarded as conveying a [ZEN](#) aesthetic, as in the famous haiku poem he wrote at his moment of awakening: “A timeless pond, the frog jumps, a splash of water” (J. furuike ya, kawazu tobikomou, mizu no oto).

[Matsyendranāth](#). The Newar name given to several highly revered statues of [AVALOKITEŚVARA](#), located in the Kathmandu Valley. See [MA NIBKA’ ’BUM](#).

[Maudgalyāyana](#). (S). See [MAHĀMAUDGALYĀYANA](#).

[māyā](#). (T. sgyu ma; C. kuang; J. ō; K. kwang 誑). In Sanskrit, “deceit,” “deception,” “trickery,” “fraudulence”; one of the forty-six mental concomitants (see [CAITTA](#)) according to the [SARVĀSTIVĀDA–VAIBHĀSIKA](#) school of [ABHIDHARMA](#) and one of the fifty-one according to the [YOGĀCĀRA](#) school; it is classified among the secondary afflictions ([UPAKLEŚA](#)). Deceit includes such acts as feigning virtue and accomplishment, resorting to deceptive speech or underhanded subterfuge, and engaging in any of the inappropriate livelihoods (cf. [SAMYAGĀJĪVA](#); [ĀRYĀSTĀṄGAMĀRGA](#)), such as divination or fortune-telling, when done with the intent to impress, trick, exploit, or manipulate others.

[Māyā](#). [alt. Māyādevī; Mahāmāyā] (T. Sgyu ’phrul ma; C. Moye; J. Maya; K. Maya 摩耶). In Sanskrit and Pāli, “Illusion”; the mother of [GAUTAMA](#) Buddha. Her father was Añjana, king of Devadaha, and her mother was Yaśodharā. Māyā and her sister [MAHĀPRAJĀPATĪ](#) were both married to the Buddha’s father [ŚUDDHODANA](#), the king of [KAPILAVASTU](#). Māyā was between forty and fifty when the future buddha was conceived. At that time, the future buddha was a [BODHISATTVA](#) residing in [TUSITA](#) heaven, where he surveyed the world and selected his future parents. On the night of his conception, Māyā dreamed that four great gods transported her to the Himalayas, where goddesses bathed her in the waters of the Anotatta Lake and clad her in divine raiment. As she lay on a couch prepared for her, the future buddha, in the form of a white elephant holding a white lotus in its trunk, entered into her right side. After ten lunar months, during which time she remained chaste, Māyā set out to visit her parents

in Devadaha. Along the way she stopped at the [LUMBINĪ](#) grove, where she gave birth to the prince and future buddha while holding onto a branch of a [ŚĀLA](#) tree; according to some accounts, he emerged from her right side. Seven days later, Māyā died. Varying reasons are provided for her demise, including that she died from joy at having given birth to the future buddha and that she died after seven days because she would have died from a broken heart when Prince [SIDDHĀRTHA](#) subsequently renounced the world at the age of twenty-nine. It is also said that the mothers of all buddhas die shortly after their birth because it is not suitable that any other child be conceived in the womb that had been occupied by a future buddha. Māyā was reborn as a male divinity named Māyādevaputra in the [TUŚITA](#) heaven. After her death, Māyā's sister Mahāprājāpatī raised the future buddha as her own child. Because his mother's death had prevented her from benefiting from his teachings, the Buddha once spent a rainy season in [TRĀYASTRIMŚA](#) heaven atop Mount [SUMERU](#), during which time he preached the [ABHIDHARMA](#) to his mother, who had come from tuṣita heaven to listen, along with the other assembled divinities. These teachings, which the Buddha later recounted to [ŚĀRIPUTRA](#), would become the [ABHIDHARMAPITAKA](#). The Buddha's descent from the heaven at [SĀMKĀŚYA](#) at the conclusion of his teachings is one of the most commonly depicted scenes in Buddhist art. The entry of the future Buddha into his mother's womb, and by extension into the human realm of existence, is a momentous event in Buddhist history, and elaborate descriptions of that descent and of that womb appear in a number of texts. One of the most famous is found in the forty-fourth chapter of the [GANDAVYŪHA](#), a [MAHĀYĀNA SŪTRA](#) dating from perhaps the second century of the Common Era. In the sūtra, [SUDHANA](#) goes in search of enlightenment. During his journey, he encounters all manner of exalted beings, each of whom provides him with instruction. One of the teachers he meets is Māyā. She describes in elaborate detail how her son entered her womb, revealing that it was able to accommodate much more than a white elephant, without for a moment distorting her form. She reveals that it was not only the bodhisattva [SIDDHĀRTHA](#) who descended from the tuṣita and entered her womb; in fact, countless other bodhisattvas accompanied him to become buddhas simultaneously in millions of similar universes. She reveals as well that she is the mother not only of all the buddhas of the present, but of all the buddhas of the past and that she will also be the mother of the next buddha, [MAITREYA](#).

[māyādeha](#). (T. sgyu lus; C. huanshen; J. genshin; K. hwansin 幻身). In Sanskrit,

“illusory body”; a polysemous term that, in its most general sense, refers to the fact that the body is insubstantial and thus like an illusion. The term is also the name of one of the so-called [SIX YOGAS OF NĀROPA](#), where it encompasses a range of practices, including the contemplation of one’s own reflection in a mirror and expressing praise and blame to the reflection as a means of overcoming attachment to one’s body. In a more technical sense, the term refers to a body achieved through the practice of [ANUTTARAYOGATANTRA](#), in which as a result of insight into the nature of reality and the control of the subtle energies that course through the [CAKRAS](#), the yogin creates a subtle body created from the subtle wind ([PRĀNA](#)) that serves as the conduit of the mind of clear light ([PRABHĀSVARACITTA](#)); this body appears in the form of the buddha that one will become.

Māyājāla. (T. Sgyu ’phrul dra ba). In Sanskrit, “Magical Net”; a class of [TANTRAS](#). Certain Buddhist tantras from the eighth century onward described themselves as extractions from a massive, and probably mythological, urtext. In Tibet, and particularly within the [RNYING MA](#) sect, the Māyājāla (“Magical Net”) became associated with the tantras of the [MAHĀYOGA](#) class. It is often said that there are eighteen Māyājāla tantras, although sources differ on which tantras should be included in the list. For the Rnying ma, the [GUHYAGARBHATANTRA](#) has been the most influential of the Māyājāla tantras, and its [MANDALA](#) of one hundred deities (forty-two peaceful and fifty-eight wrathful deities) appears throughout the later Rnying ma ritual traditions. Some scholars have suggested that the similar group of [VAJRAŚEKHARA](#) tantras, also eighteen in number, represented a precursor to the Māyājāla group. The Vajraśekhara group played a larger role in East Asian tantric Buddhism. While the Vajraśekhara and Māyājāla groups share several titles in common, the Vajraśekhara tantras are generally associated with the [YOGATANTRA](#) class, of which the [SARVATATHĀGATATATTVASAMGRAHA](#) is a particularly important member. See also [GUHYAGARBHATANTRA](#).

māyākāra. (T. sgyu ma mkhan; C. huanshi; J. genshi; K. hwansa 幻師). In Sanskrit and Pāli, lit., “illusion-maker”; a term often translated as “magician,” in the sense of someone who is able to conjure things that appear to be real but are in fact illusions. Given the consistent Buddhist claim of the fictive nature of ordinary sense experience, the magician figures prominently in illustrations of the false appearances of the world. In one example, a magician casts a spell on

his audience, causing them to see what is in fact a small pebble as a beautiful woman. The magician also sees the woman but knows that she is not real. A person arriving late for the performance is unaffected by the spell and sees only the pebble. In this metaphor, the audience is likened to ordinary sentient beings, who both perceive false appearances and believe them to be true. The magician is likened to an [ARHAT](#) who perceives false appearances but is unaffected by them, knowing them to be false. The latecomer is like the Buddha who sees things as they truly are.

[māyopamasamādhī](#). (T. sgyu ma lta bu'i ting nge 'dzin; C. ruhuan sanmei; J. nyogezanmai; K. yōhwan sammae 如幻三昧). In Sanskrit, lit. “illusion-like [SAMĀDHI](#)”; a meditative state that occurs after rising from the direct perception of emptiness ([ŚŪNYATA](#)). In this state, after having perceived the pure vacuity of emptiness, the objects of experience again appear to be real, but the meditator knows that they are like illusions, appearing to have intrinsic existence but in fact being empty thereof.

[Mazu Daoyi](#). (J. Baso Dōitsu; K. Majo Toil 馬祖道一) (709–788). Chinese [CHAN](#) master of the Tang dynasty and retrospective patriarch of the [HONGZHOU ZONG](#) of the broader Chan tradition. Mazu was a native of Hanzhou in present-day Sichuan province. At an early age, he became a student of the Chan master Chuji (alt. 648–734, 650–732, 669–736) of Zizhou (also in present-day Sichuan province) and received the full monastic precepts later from the [VINAYA](#) master Yuan (d.u.) at nearby Yuzhou. Mazu is said to have later visited the sixth patriarch [HUINENG](#)'s disciple [NANYUE HUIAIRANG](#) (677–744), under whom he attained awakening. According to the famous story, which is frequently recited in Chan literature, Mazu was awakened when his teacher Nanyue likened Mazu's sitting in meditation to the act of polishing of a roof tile: just as a roof tile cannot be polished to make a mirror, sitting meditation, says Nanyue, cannot lead to buddhahood. In his thirties, Mazu began teaching at various monasteries in the southern regions of Fujian and Jiangxi province. In 769, he began his residence at the monastery of Kaiyuansi (also known as Youqingsi) in Zhongling (in present-day Jiangsu province) and attracted many students. Emperor Xianzong (r. 805–820) later gave him the posthumous title Chan Master Daji (Great Serenity). His teachings are recorded in the *Mazu Daoyi chanshi guanglu*. Mazu developed the idea of “original enlightenment” ([BENJUE](#)) from the [DASHENG QIXIN LUN](#) (“Awakening of Faith According to the Mahāyāna”) in a

radical direction. He asserted that “everyday mind is the way” (pingchangxin shi dao) and that “mind itself is the Buddha” (zixin shi fo), arguing that sentient beings have never in fact been deluded but have always been awakened buddhas. Although Mazu did not intend to advocate maintaining a deluded state of mind but wanted instead to recognize the value of the ordinary life as the ground of enlightenment, his emphasis on the inseparable relationship of enlightenment and ignorance drew severe criticisms, especially from [GUIFENG ZONGMI](#) (780–841), who believed that Mazu’s teachings fostered antinomianism for suggesting that practice was not necessary in order to awaken.

[mchod rten](#). (chöten). In Tibetan, lit., “basis for worship”; the Tibetan translation of the Sanskrit terms [STŪPA](#) and [CAITYA](#). As in India, the Tibetan stūpa serves as a reliquary, and may contain the remains (ashes, hair, bones) of a prominent lama ([BLA MA](#)) or objects associated with an exalted being, such as the begging bowl or robe of a famous monk. In the case of a highly exalted personage, such as one of the [DALAI LAMAS](#), the body is not cremated but is instead embalmed and then entombed inside a stūpa. They range greatly in size, from several inches high to hundreds of feet tall. In a standard ritual that precedes a teaching, the lama is offered a statue of the Buddha, a text, and a small stūpa, representing the body, speech, and mind of the Buddha, respectively. One of the most common forms of Buddhist practice in Tibet is to circumambulate a stūpa in a clockwise direction. There is a large literature in Tibetan devoted to the construction, consecration, and symbolism of the stūpa. Many different types of stūpas are described, one of the most famous rubrics being the eight types of stūpas, each with a different shape, which commemorate eight events in the life of the Buddha. These are: (1) the “heap of lotuses stūpa” (pad spungs mchod rten) commemorating the Buddha’s birth, (2) the “enlightenment stūpa” (byang chub mchod rten) commemorating the Buddha’s achievement of enlightenment beneath the [BODHI TREE](#), (3) the “many auspicious doors stūpa” (bkra shis sgo mang mchod rten) commemorating the Buddha’s turning of the wheel of the dharma, (4) the “display of miracles stūpa” (cho ’phrul mchod rten) commemorating the Buddha’s display of miracles at [ŚRĀVASTĪ](#), (5) the “divine descent stūpa” (lha babs mchod rten) commemorating the Buddha’s descent from the [TRĀYASTRIMŚA](#) heaven on the summit of Mount [SUMERU](#) to [SĀMKAŚYA](#), (6) the “settling of disputes stūpa” (dbyen bsdums mchod rten) commemorating the Buddha’s healing of a schism within the monastic community caused by his cousin [DEVADATTA](#), (7) the “victory stūpa” (rnam

rgyal mchod rten) commemorating the Buddha’s extension of his life by three months, and (8) the “nirvāṇa stūpa” (myang ’das mchod rten) commemorating the Buddha’s passage into [PARINIRVĀNA](#). See also [BAXIANG](#).

[mchod yon](#). (T). See [YON MCHOD](#).

[Mchog gyur gling pa](#). (Chokgyur Lingpa) (1829–1870). A Tibetan Buddhist visionary renowned for his activities as a treasure revealer ([GTER STON](#)) in Khams, eastern Tibet. His full name is often given as Mchog ’gyur bde chen zhig po gling pa (Chokgyur Dechen Shikpo Lingpa). At the age of thirteen, he had his first vision of [PADMASAMBHAVA](#), who predicted that he would discover treasure texts ([GTER MA](#)). His early claims to be a gter ston were rejected and he was expelled from his monastery for having a consort. He eventually won the trust of [’JAM MGON KONG SPRUL](#) and [’JAM DBYANGS MKHYEN BRTSE DBANG PO](#), and came to be regarded as an authentic revealer of treasure, discovering texts that he himself translated and for which he composed liturgies. He also discovered relics and images. With ’Jam mgon kong sprul and ’Jam dbyangs mkhyen brtse dbang po, he is considered an important figure in the [RIS MED](#) or nonsectarian movement in eastern Tibet during the nineteenth century.

[mchog zung](#). (choksung). In Tibetan, “the two supreme attendants.” In Tibetan Buddhist art, [ŚĀKYAMUNI](#) is typically depicted flanked by two ancillary companions, [ŚĀRIPUTRA](#) who is supreme in wisdom, and [MAHĀMAUDGALYĀYANA](#) who is supreme in [RDDHI](#) (magical attainment). See [ER XIESHI](#).

[Mdo Mkhyen brtse Ye shes rdo rje](#). (Do Kyentse Yeshe Dorje) (1800–1866). A Tibetan Buddhist master from the Mgo log (Golok) region of eastern Tibet, venerated as the body incarnation of the famous eighteenth-century treasure revealer ([GTER STON](#)) [’JIGS MED GLING PA](#) and an important lineage holder of the “heart essence” ([SNYING THIG](#)) tradition of [RDZOGS CHEN](#). He was the disciple of the first [RDO GRUB CHEN](#), who instructed him to live the life of a lay tantric practitioner. He was known for his magical powers ([SIDDHI](#)), such as the ability to fly and to subjugate demons. Often known by the epithet ’Ja’ lus pa chen po, “Great Rainbow-Body Man,” his disciples included the second Rdo grub chen and [DPAL SPRUL RIN PO CHE](#).

[Mdzod bdun](#). (Dzö Dün). In Tibetan, lit. “seven great treasuries”; an important collection of texts compiled by the Tibetan master of the [RNYING MA](#) sect [KLONG](#)

[CHEN RAB 'BYAMS](#). The central theme of these works is the Rnying ma doctrine of [RDZOGS CHEN](#). The seven texts are:

1. *Gnas lugs mdzod* (“Treasury of the Abiding Nature of Reality”) 2. *Man ngag mdzod* (“Treasury of Instructions”) 3. *Chos dbyings mdzod* (“Treasury of the [DHARMADHĀTU](#)”) 4. *Grub mtha' mdzod* (“Treasury of Philosophical Systems”) 5. *Theg mchog mdzod* (“Treasury of the Supreme Vehicle”) 6. *Tshig don mdzod* (“Treasury of Word and Meaning”) 7. *Yid bzhin mdzod* (“Wish-fulfilling Treasury”)

[Me 'bar mtsho](#). (Mebar Tso). In Tibetan, lit. “Lake of Blazing Fire”; an important Buddhist sacred site in the Bum thang region of central Bhutan, associated with the great Bhutanese treasure revealer ([GTER STON](#)) [PADMA GLING PA](#). It is not an actual lake, but a wide pool amid a rock gorge, said to be the location from which Padma gling pa unearthed his first treasure ([GTER MA](#)). It takes its name from the well-known account of how Padma gling pa emerged from the river’s depths with a butter lamp in his hand that remained burning.

[Medhaṅkara and Mahādhammagambhīra](#). The names of two members of a delegation of twenty-five monks from the Thai kingdom of Lānnā (Chiangmai) who, in 1424 CE, together with a group of eight monks from Kamboja and six from Rāmañña (the Mon homeland in Lower Burma), were reordained in Sri Lanka at the Kalyāṇī river near Colombo. The delegation returned to Thailand in 1425, settling first in the kingdom of [AYUTHAYA](#) before proceeding to Chiangmai in 1430. The next king of Chiangmai, Tilokarājā (r. 1442–1487 CE), strongly promoted the reformist Sinhalese sect led by Mahāmedhaṅkara and Mahādhammagambhīra, making it the dominant Buddhist order throughout northern Thailand. This reformation occurred at the same time that the king consolidated and expanded the territories under his rule. Tilokarājā’s patronage of the new Sinhalese order is celebrated in the sixteenth-century text [JINAKĀLAMĀLĪ](#). In the [PADAENG CHRONICLE](#), the leader of this reformist movement is given the name Ñāṇagambhīra.

[Medicine Buddha](#). See [BHAIṢAJYAGURU](#).

[meditation](#). There is no single term in Buddhism that corresponds precisely to what in English is called “meditation.” Some of its connotations are conveyed in such Buddhist terms as [BHĀVANĀ](#); [CHAN](#); [DHYĀNA](#); [JHĀNA](#); [PATIPATTI](#); [SAMĀDHI](#);

[ZUOCHAN](#).

[meditative absorption](#). See [DHYĀNA](#); [JHĀNA](#); [SAMĀPATTI](#).

[Menander](#). See [MILINDAPAÑHA](#).

[Menzan Zuihō](#). (面山瑞方) (1683–1769). Japanese reformer of the [SŌTŌSHŪ](#) of [ZEN](#) during the Tokugawa period (1600–1867), who is largely responsible for establishing [DŌGEN KIGEN](#) (1200–1253) as the font of orthodoxy for the Sōtō school and, during the modern and contemporary periods, as an innovative religious thinker. Born in Higo province in the Kumamoto region, Menzan studied with [MANZAN DŌHAKU](#) (1636–1715) and later Sonnō Sōeki (1649–1705). At a thousand-day retreat Menzan led following Sonnō’s death, Menzan read texts by Dōgen that had been neglected for centuries and subsequently used them as the scriptural authority from which he forged an entirely new vision of the Sōtōshū; he then deployed this revisioning of Dōgen to justify a reformation of long-held practices within the school. Menzan was a prolific author, with over a hundred works attributed to him, sixty-five of which have been published in modern Sōtō school collections; these works include everything from detailed philological commentaries to extended discussions of monastic rules and regulations. He remains best known for his *Shōbōgenzō shōtenroku*, an eleven-roll encyclopedic commentary to Dōgen’s magnum opus, the [SHŌBŌGENZŌ](#).

[merit](#). See [PUNYA](#).

[merit cloister](#). See [GONGDE YUAN](#).

[Meru](#). See [SUMERU, MOUNT](#).

[method](#). See [UPĀYA](#).

[Mettāsutta](#). (C. Ci jing; J. Jikyō; K. Cha kyōng 慈經). In Pāli, the “Discourse on Loving-Kindness”; one of the best-loved and most frequently recited texts in the [THERAVĀDA](#) Buddhist world. According to the *Mettāsutta*’s framing narrative, a group of monks went into the forest during the rainy season to meditate. The tree deities of the forest were disturbed by the presence of the monks and sought to drive them away by frightening them during the night. The monks went to the Buddha and requested his assistance in quelling the disturbance. The *Mettāsutta*

was the discourse that the Buddha then delivered in response, instructing the monks to meditate on loving-kindness (P. *mettā*; S. [MAITRĪ](#)), thinking, “May all beings be happy and safe. May they have happy minds. Whatever living beings there may be—feeble or strong, long, stout, or of medium size, short, small, large, those seen or those unseen, those dwelling far or near, those who are born as well as those yet to be born—may all beings have happy minds.” Having radiated these thoughts throughout the forest, the monks were no longer troubled by the spirits. The *Mettāsutta* appears in an early scriptural anthology, the [SUTTANIPĀTA](#), a later collection, the [KHUDDAKAPĀTHA](#), and in a postcanonical anthology of “protection texts,” ([PARITTA](#)). (Separate recensions appear in the Chinese translations of the [EKOTTARĀGAMA](#) and the [SAMYUKTĀGAMA](#), the latter affiliated with the [SARVĀSTIVĀDA](#) school.) The *Mettāsutta*’s great renown derives from its inclusion among the paritta texts, which are chanted as part of the protective rituals performed by Buddhist monks to ward off misfortunes; indeed, it is this apotropaic quality of the scripture that accounts for its enduring popularity. Paritta suttas refer to specific discourses delivered by the buddha that are believed to offer protection to those who either recite the sutta or listen to its recitation. Other such auspicious apotropaic suttas are the [MĀṄGALASUTTA](#) (“Discourse on the Auspicious”) and the [RATANASUTTA](#) (“Discourse on the Precious”). These paritta texts are commonly believed to bring happiness and good fortune when chanted by the [SAMGHA](#). See also [BRAHMAVIHĀRA](#).

[mianbi](#). (C) (J. *menpeki*; K. *myŏnbyŏk* 面壁). See [BIGUAN](#).

[Miaoshan](#). (J. *Myōzen*; K. *Myosŏn* 妙善). In Chinese, “Sublime Wholesomeness”; a legendary Chinese princess who is said to have been an incarnation of the [BODHISATTVA GUANYIN](#) (S. [AVALOKITEŚVARA](#)). According to legend, Princess Miaoshan was the youngest of three daughters born to King Zhuangyan. As in the legend of Prince [SIDDHĀRTHA](#), Miaoshan refused to fulfill the social expectations of her father and instead endured great privations in order to pursue her Buddhist practice. In frustration, Miaoshan’s father banished her to a convent, where the nuns were ordered to break the princess’s religious resolve. The nuns were ultimately unsuccessful, however, and in anger, the king ordered the convent set ablaze. Miaoshan escaped to the mountain of Xiangshan, where she pursued a reclusive life. After several years, her father contracted jaundice, which, according to his doctors’ diagnosis, was caused by his disrespect toward the three jewels ([RATNATRAYA](#)). The only thing that could cure him would be a

tonic made from the eyes and ears of a person who was completely free from anger. As fate would have it, the only person who fulfilled this requirement turned out to be his own daughter. When Miaoshan heard of her father's dilemma, she willingly donated her eyes and ears for the tonic; and upon learning of their daughter's selfless generosity and filiality, Miaoshan's father and mother both repented and became devoted lay Buddhists. Miaoshan then apotheosized into the goddess Guanyin, specifically her manifestation as the "thousand-armed and thousand-eyed Guanyin" ([SĀHASRABHUJASĀHASRANETRĀVALOKITEŚVARA](#)). Later redactions of the legend include Miaoshan's visit to hell, where she was said to have relieved the suffering of the hell denizens. The earliest reference to the Miaoshan legend appears in stele fragments that date from the early eleventh century, discovered at a site near Hangzhou. Other written sources include the *Xiangshan baojuan* ("Precious Scroll of Xiangshan Mountain"), which was revealed to a monk and then transmitted and disseminated by a minor civil servant. With the advent of the Princess Miaoshan legend, the Upper Tianzhu monastery, already recognized as early as the tenth century as a Guanyin worship site, became a major pilgrimage center. The earliest complete rendition of the Miaoshan legend dates from the early Song dynasty (c. twelve century). Thereafter, several renditions of the legend were produced up through the Qing dynasty.

[Mi bskyod rdo rje](#). (Mikyö Dorje) (1507–1554). Tibetan Buddhist master recognized as the eighth [KARMA PA](#), revered as one of the most dynamic teachers in his lineage. He was born in eastern Tibet and as a newborn child is said to have declared, "I am the Karma pa." Although a rival candidate was simultaneously promoted in A mdo, prominent [BKA' BRGYUD](#) lamas identified Mi bskyod rdo rje as the reincarnation of the seventh Karma pa. His enthronement took place on 1513 at [RI BO CHE](#) monastery. He received an invitation from the Chinese emperor Wuzong Zhengde (r. 1506–1522) who dispatched a military troop as an escort. The Karma pa declined the invitation, divining that the emperor would soon die. When the military escort returned to court, they found the emperor had indeed passed away. Mi bskyod rdo rje was famed as both a meditation master and scholar. He wrote dozens of works, including philosophical treatises on [MADHYAMAKA](#) and [ABHIDHARMA](#), tantric commentaries, poetry, works on linguistics, [SĀDHANAs](#), liturgies, and other ritual texts; his collected works comprise over thirty volumes. His artwork contributed to the establishment of a new painting style in eastern Tibet, known as the karma

sgar bris, or “karmapa encampment” style.

middha. (T. gnyid; C. shuimian; J. suimen; K. sumyŏn 睡眠). In Sanskrit and Pāli, “torpor,” or sometimes simply “sleep.” In the [SARVĀSTIVĀDA](#) and [YOGĀCĀRA](#) dharma lists, middha is one of the four or eight “indeterminate” ([ANĪYATA](#)) factors among the fifty-one mental constituents ([CAITTA](#); P. cetasika) that, depending on the intention of the agent, may be virtuous, nonvirtuous, or neutral. Middha is defined as the unintended withdrawal of the senses’ engagement with their objects. The term is often seen in compound with “sloth” or “laziness” ([STYĀNA](#)), which together constitute one of the five hindrances ([NĪVARANA](#)) to meditative absorption ([DHYĀNA](#)), specifically hindering the meditative factor ([DHYĀNĀṄGA](#)) of applied thought ([VITARKA](#)). This hindrance is countered by the spiritual faculty ([INDRIYA](#)) of effort ([VĪRYA](#)). Ways of countering sloth and torpor include memorizing the doctrine, developing the perception of light, or simply walking around in the open air. In the Pāli abhidhamma, middha is classified as an unvirtuous (akusala) state. In Sarvāstivāda and Yogācāra it is indeterminate because sleep may be virtuous, unvirtuous, or neutral based on one’s state of mind when falling asleep.

middle way. See [MADHYAMAPRATIPAD](#).

Mihintale. The Sinhala name of a mountain in Sri Lanka, located eight miles east of [ANURĀDHAPURA](#); it is called Missakapabbata in Pāli. Mihintale is said to be the place where the monk [MAHINDA](#), son of the emperor [AŚOKA](#) and recently arrived from India, first met the king of Sri Lanka, [DEVĀNAMPIYATIṢṢA](#), teaching the king the dharma and thus introducing Buddhism to the island. The king was hunting in the area and, following a stag into the forest, encountered Mahinda and his companions. A [STŪPA](#) marks the site of their meeting. The mountain became an important place of pilgrimage, with numerous [VIHĀRAS](#) and shrines constructed over the centuries.

Miidera. (三井寺). A famous monastery in Ōtsu, Japan, which is currently the headquarters (honzan) of the Jimon branch of the [TENDAISHŪ](#). In 858, the monk [ENCHIN](#) restored the dilapidated monastery of Onjōji, which was originally constructed by retired Emperor Kōbun’s (r. 671–672) children as their clan temple in 686. Onjōji, which was renamed Miidera, thus became a subtemple of the powerful monastery of [ENRYAKUJI](#) on the nearby [HIEIZAN](#). In 993, after a long period of conflict between the disciples of [ENNIN](#) and Enchin over the issue of

succession, Enchin's followers moved to Miidera and eventually formed a separate branch of Tendai. For the next six hundred years, the monks of Miidera continued to contend for authority with the monks at Enryakuji, which came to be known as the Sanmon branch of the Tendaishū. Miidera suffered from a series of great fires from the eleventh to the fourteenth century, and further destruction was done to the monastery by the forces of Toyotomi Hideyoshi (1536–1598) in 1561. The golden hall (kondō) was rebuilt several decades later in 1598, and restoration efforts continued for several decades. Miidera is famous for its numerous treasures now designated important cultural properties.

mijiao. (J. mikkyō; K. milgyo 密教). In Chinese, “esoteric teachings”; a term used to describe a large body of literature and practices that included both [MAHĀYĀNA](#) rituals introduced from India and Central Asia into China beginning in the third and fourth centuries CE, as well as more specifically “tantric” teachings translated into Chinese in the eighth century. Rather than representing a specific independent school, mijiao refers more generically to a range of esoteric practices (including the recitation of [MANTRAS](#) and the creation of [MANDALAS](#)), which came to be adopted by many of the Buddhist traditions of China. A more systematic form of mijiao appeared in the zhenyan zong (see [SHINGONSHŪ](#)), which flourished during the Tang dynasty, declining in influence after the Huichang persecution (see [HUICHANG FANAN](#)) of 842–845. Its adherents included the foreign masters [ŚUBHAKARASIMHA](#), [VAJRABODHI](#), and [AMOGHAVAJRA](#), each of whom held influential positions at court during the Tang, where the image of the divine king, as well as rituals to protect the state ([HUGUO FOJIAO](#)), found favor. Among the most important texts for mijiao were the [MAHĀVAIROCANĀBHISAMBODHISŪTRA](#) and the [SARVATATHĀGATATATTVASAMGRAHA](#). See also [MIKKYŌ](#).

mikkyō. (密教). In Japanese, lit. “esoteric teachings”; often translated as “esoteric Buddhism.” The term mikkyō is used collectively today to refer to a large body of texts, liturgies, implements, and rituals that were imported from China to Japan during the Heian period (794–1185) by influential Japanese monk-pilgrims in the Japanese [TENDAISHŪ](#) and [SHINGONSHŪ](#) traditions. These new teachings and objects in turn were largely, but not exclusively, based on the teachings of late medieval Indian Buddhism (see [TANTRA](#) and [VAJRĀYĀNA](#)) that had reached Central Asia and China. [SAICHŌ](#) (762–822) and [KŪKAI](#) (774–835) played the most notable roles in introducing esoteric Buddhism to the Japanese

isles. Their trips to Tangdynasty China (618–907) coincided with the height of esoteric practice on the continent. While Saichō’s brief voyage to China in 804 focused on [TIANTAI](#) practice, he also learned a limited number of [MANTRA](#) practices toward the end of his stay, which he introduced to Japan. In 806, [KŪKAI](#) returned from a three-year stay in the Tang capital of Chang’an, bringing back with him the extensive training he had received in esoteric Buddhism from the prominent tantric master [HUIGUO](#) (746–805), as well as a large collection of esoteric texts and [MANDALAS](#). In the following years, Saichō and Kūkai’s esoteric rituals quickly gained favor with the Japanese court, gradually becoming dominant among the political elite over the course of the Heian period. Alongside Kūkai’s Shingon school of mikkyō (known as [TŌMITSU](#)), Tendai Buddhism increasingly developed its own set of tantric practices (known as [TAIMITSU](#)) under such successors of Saichō as [ENNIN](#) (794–864), [ENCHIN](#) (814–891), and [ANNEN](#) (b. 841). These practices were further adopted by the Nara Buddhist institutions and heavily influenced the growth and development of [SHUGENDŌ](#). Many local cultic practices, now collectively referred to as [SHINTŌ](#), also incorporated esoteric rituals. The primary deity of worship in mikkyō is the universal buddha [MAHĀVAIROCANA](#). Concrete goals of esoteric practice included maintaining power, attaining good fortune, warding off evil, and becoming a buddha in one’s very body ([SOKUSHIN JŌBUTSU](#)). Common ritual implements included maṇḍalas (see [KONGŌKAI](#) and [TAIZŌKAI](#)); icons, sometimes hidden, that were presented in the ritual hall (see [HIBUTSU](#)); and various ritual objects such as wands, bells, and the [VAJRA](#).

[Mi la’i mgur ’bum](#). (Mile Gurbum). In Tibetan, “The Hundred Thousand Songs of Milarepa”, containing the collected spiritual songs and versified instructions of the eleventh-century Tibetan yogin [MI LA RAS PA](#). Together with their brief narrative framing tales, the songs in this collection document the later period of Mi la ras pa’s career, his life as a wandering hermit, his solitary meditation, subjugation of demons, and training of disciples. The work catalogues his songs of realization: expressions of his experiences as an awakened master, his reflections on the nature of the mind and reality, and his instructions for practicing the Buddhist path. The songs are composed in a vernacular idiom, abandoning the highly ornamental formal structure of classical poetry in favor of a simple and direct style. They are much loved in Tibet for their clarity, playfulness, and poetic beauty, and continue to be taught, memorized, and recited within most sects of Tibetan Buddhism. Episodes from the *Mi la’i mgur*

'bum have become standard themes for traditional Tibetan Buddhist plastic arts and have been adapted into theatrical dance performances ([CHAMS](#)). The number 100,000 is not literal, but rather a metaphor for the work's comprehensiveness; it is likely that many of the songs were first recorded by Mi la ras pa's own close disciples, perhaps while the [YOGIN](#) was still alive. The most famous version of this collection was edited and arranged by [GTSANG SMYON HERUKA](#) during the final decades of the fifteenth century, together with an equally famous edition of the [MI LA RAS PA'IRNAM THAR](#) ("The Life of Milarepa").

[Mi la ras pa](#). (Milarepa) (1028/40–1111/23). The most famous and beloved of Tibetan [YOGINS](#). Although he is associated most closely with the [BKA' BRGYUD](#) sect of Tibetan Buddhism, he is revered throughout the Tibetan cultural domain for his perseverance through hardship, his ultimate attainment of buddhahood in one lifetime, and for his beautiful songs. The most famous account of his life (the [MI LA RAS PA'IRNAM THAR](#), or "The Life of Milarepa") and collection of spiritual songs ([MI LA'I MGUR 'BUM](#), or "The Hundred Thousand Songs of Milarepa") are extremely popular throughout the Tibetan world. The themes associated with his life story—purification of past misdeeds, faith and devotion to the [GURU](#), ardor in meditation and yogic practice, and the possibility of attaining buddhahood despite the sins of his youth—have inspired developments in Buddhist teaching and practice in Tibet. Mi la was his clan name; ras pa is derived from the single cotton robe (ras) worn by Tibetan anchorites, an attire Milarepa retained for most of his life. The name is therefore an appellation, "The Cotton-clad Mi la." Although his dates are the subject of debate, biographies agree that Mi la ras pa was born to a wealthy family in the Gung thang region of southwestern Tibet. He was given the name Thos pa dga', literally "Delightful to Hear." At an early age, after the death of his father, the family estate and inheritance were taken away by Mi la ras pa's paternal aunt and uncle, leaving Mi la ras pa, his mother, and his sister to suffer poverty and disgrace. At the urging of his mother, Mi las ras pa studied sorcery and black magic in order to seek revenge. He was successful in his studies, causing a roof to collapse during a wedding party hosted by his relatives, with many killed. Eventually feeling remorse and recognizing the karmic consequences of his deeds, he sought salvation through the practice of Buddhism. After brief studies with several masters, he met [MAR PA CHOS KYI BLO GROS](#), who would become his root guru. Mar pa was esteemed for having traveled to India, where he received valuable tantric instructions. However, Mar pa initially refused to teach Mi la ras pa,

subjecting him to all forms of verbal and physical abuse. He made him undergo various ordeals, including constructing single-handedly several immense stone towers (including the final tower built for Mar pa's son called [SRAS MKHAR DGU THOG](#), or the “nine-storied son's tower”). When Mi la ras pa was at the point of despair and about to abandon all hope of receiving the teachings, Mar pa then revealed that the trials were a means of purifying the negative [KARMAN](#) of his black magic that would have prevented him from successfully practicing the instructions. Mar pa bestowed numerous tantric initiations and instructions, especially those of [MAHĀMUDRĀ](#) and the practice of GTUM MO, or “inner heat,” together with the command to persevere against all hardship while meditating in solitary caves and mountain retreats. He was given the initiation name Bzhad pa rdo rje (Shepa Dorje). Mi la ras pa spent the rest of his life practicing meditation in seclusion and teaching small groups of yogin disciples through poetry and songs of realization. He had little interest in philosophical discourse and no tolerance for intellectual pretension; indeed, several of his songs are rather sarcastically directed against the conceits of monastic scholars and logicians. He was active across southern Tibet, and dozens of locations associated with the saint have become important pilgrimage sites and retreat centers; their number increased in the centuries following his death. Foremost among these are the hermitages at [LA PHYI](#), [BRAG DKAR RTA SO](#), [CHU DBAR](#), [BRIN](#), and [KAILĀSA](#). Bhutanese tradition asserts that he traveled as far as the [STAG TSHANG](#) sanctuary in western Bhutan. Foremost among Milarepa's disciples were [SGAM PO PA BSOD NAMS RIN CHEN](#) and [RAS CHUNG PA RDO RJE GRAGS](#). According to his biography, Mi la ras pa was poisoned by a jealous monk. Although he had already achieved buddhahood and was unharmed by the poison, he allowed himself to die. His life story ends with his final instructions to his disciples, the account of his miraculous cremation, and of how he left no relics despite the pleas of his followers.

[Mi la ras pa'i rnam thar](#). (Milarepe Namtar). In Tibetan, “Life of Milarepa”; an account of the celebrated eleventh-century Tibetan yogin [MI LA RAS PA](#). While numerous early Tibetan versions of the life story exist, including several that may date from his lifetime, the best-known account was composed in 1488 by [GTSANG SMYON HERUKA](#), the so-called mad [YOGIN](#) of Tsang, based upon numerous earlier works. Its narrative focuses on Mi la ras pa's early wrongdoings, his subsequent training and meditation, and eventual death. It is a companion to the [MI LA'I MGUR 'BUM](#) (“The Hundred Thousand Songs of

Milarepa”), also arranged and printed by Gtsang smyon Heruka, which records Milarepa’s later teaching career through a compilation of his religious instruction and songs of realization. Gtsang smyon Heruka’s version of the *Mi la ras pa’i rnam thar* is known and read throughout the Tibetan Buddhist cultural world and is widely accepted as a great literary achievement by Tibetans and Western scholars alike. The account of Milarepa’s life profoundly affected the development of sacred biography in Tibet, a prominent genre in Tibetan Buddhist culture, and has influenced the way in which Tibet’s Buddhism and culture have been understood in the West.

Milarepa. (T). See [MILARAS PA](#).

Milinda. See [MILINDAPAÑHA](#).

Milindapañha. (C. Naxian biqiu jing; J. Nasenbikukyō; K. Nasōn pigu kyōng 那先比丘經). In Pāli, the “Questions of Milinda”; a famous dialogical text that records the conversations of the [ARHAT NĀGASENA](#) and the Bactrian-Greek King Milinda (Menander) on various knotty points of Buddhist doctrine and ethics. The text was presumably composed in northern India in Sanskrit or Prakrit and later translated into Pāli, with the original composition or compilation probably occurring around the beginning of the Common Era. (There is an early Chinese translation made around the late fourth century, probably from a Central Asian recension in [GĀNDHĀRĪ](#) titled the **Nāgasenabhikṣusūtra*, which is named after the [BHIKSU](#) Nāgasena rather than King Milinda.) It is uncertain whether such a dialogue ever in fact took place. There was indeed a famous king of [BACTRIA](#) named Menander (alt. Menandros; Milinda in Indian sources) who ruled over a large region that encompassed parts of modern India, Pakistan, and Afghanistan during the middle of the second century BCE. There is no evidence of Nāgasena’s existence, however. Whatever the historical reality, the “Questions of Milinda” is one of the best-known texts of Pāli Buddhism. The text is structured as a series of questions by the king and answers by the monk on a wide range of topics, with each of the interlocutors displaying an impressive knowledge of Buddhist doctrine and literature. Nāgasena always provides a satisfying answer to each of the king’s queries. His presentation of the dharma is so successful in fact that at the end of the dialogue King Milinda places his son upon the throne, enters the religious life, and becomes an arahant (S. arhat). The text was translated into Sinhalese in the eighteenth century by the elder Sumaṅgala. The *Milindapañha* is included in the Burmese recension of the Pāli [TIPITAKA](#) in the

[KHUDDAKANIKĀYA](#). Since its translation into English, it has become one of the more commonly anthologized of Pāli texts.

[mindfulness](#). See [SMRTI](#); [SMRTYUPASTHĀNA](#).

[mindfulness of breathing](#). See [ĀNĀPĀNASMRTI](#).

[mindfulness of the body](#). See [KĀYĀNUPAŚYANĀ](#); [SMRTYUPASTHĀNA](#).

[mind of clear light](#). See [PRABHĀSVARACITTA](#); [PRABHĀSVARA](#).

[Mindon Min](#). (r. 1853–1878). Tenth king of the Konbaung dynasty and penultimate Burmese king to rule Burma (Myanmar) before the imposition of complete British rule. His reign is known for its reforms and cultural renaissance. He usurped the throne from his brother Pagan Min (r. 1846–1853), during whose reign Great Britain declared war on Burma for a second time in 1852. Upon becoming king, Mindon Min sued for peace and was compelled to surrender Burma’s remaining coastal provinces to Britain in exchange for a cessation of hostilities. In 1857 he built a new capital, [MANDALAY](#), and sought to make it into a center for Buddhist learning. In 1871, he summoned scholar-monks from throughout the country to convene a Buddhist council for the purpose of revising the Pāli [TIPITAKA](#) and its commentaries. By Burmese reckoning, this conclave was the fifth Buddhist council (see [COUNCIL, FIFTH](#)). The revised texts were inscribed on stone tablets and erected in the Kuthodaw Pagoda compound at the base of Mandalay Hill, where they can still be seen today. In the secular sphere, Mindon promoted a number of reforms. He assessed a land tax and fixed the salaries for government officials. He standardized the country’s weights and measures, built roads and a telegraph system, and was the first Burmese king to issue coinage. In 1872, he sent his chief minister, Kinwun Mingyi U Gaung, to London, Paris, and Rome to secure recognition of his kingdom as an independent country. Despite his efforts to revitalize his country culturally and politically, contemporary records indicate that many within the Burmese saṅgha (S. [SAMGHA](#)) regarded British conquest of the Burmese kingdom as inevitable and imminent. Fundamentalist reform factions arose within the Burmese order that resisted the directives of the king’s monastic council and organized themselves into independent self-governing congregations (see [GAING](#)). After the British destruction of the Burmese monarchy in 1885, these reformed congregations were to play an important role in shaping Burmese

monastic culture in the twentieth century.

[mind-to-mind transmission](#). See [YIXIN CHUANXIN](#).

Mingdi. (J. Meitei; K. Myōngje 明帝) (r. 58–76 CE). In Chinese, “Bright Emperor”; emperor during the Later Han dynasty, who is traditionally associated with the introduction of Buddhism into China. According to a famous legend found in the preface to the [SISHI’ER ZHANG JING](#) (“Sūtra in Forty-Two Sections”), in 67 CE, Emperor Ming had a dream of a radiant golden figure flying through the air. After he awoke and asked his vassals to interpret his dream, they told him he had seen the Buddha. Emperor Ming subsequently sent envoys to the western regions (Xiyu, viz., Central Asia), where this divine being was known to reside. The envoys were said to have returned three years later with two foreign missionaries, [KĀŚYAPA MĀTAṄGA](#) and Zhu Falan (Dharmaratna), and many Buddhist scriptures, including a copy of the *Sishi’er zhang jing*. The emperor also ordered a monastery built on their behalves in the capital of Luoyang, which he called [BAIMASI](#) (White Horse Monastery), because the two Indian monks are said to have arrived in China with scriptures carried on white horses. Baimasi is, according to tradition, the first Buddhist monastery established on Chinese soil. Much of this legend is suspect. Buddhism probably had already begun to infiltrate into China at least fifty years prior to Mingdi’s dream, since the emperor’s vassals already knew who this golden figure was supposed to be. In addition, the *Sishi’er zhang jing*, the scripture thought to have been the first text translated by these two early missionaries, is now generally presumed to be an indigenous Chinese composition (see [APOCRYPHA](#)), not the translation of an originally Indian scripture.

Mi pham ’Jam dbyangs rnam rgyal rgya mtsho. (Mipam Jamyang Namgyal Gyatso) (1846–1912). A prominent Tibetan Buddhist scholar of the [RNYING MA](#) sect and a leading figure in the [RIS MED](#) or so-called nonsectarian movement of eastern Tibet. He is often known as Mi pham rgya mtsho or ’Ju Mi pham in reference to his clan name. As a young child he excelled at study—it is said that he composed his first text at age seven—and quickly mastered a broad range of traditional Buddhist learning, from [MAHĀYĀNA](#) sūtras to tantric rituals, as well as subjects such as logic, astrology, grammar, medicine, and the arts. His ease in learning a vast body of scriptures was ascribed to his devotion to the [BODHISATTVA](#) of wisdom [MAÑJUŚRĪ](#). He is said to have read the entire [BKA’ ’GYUR](#) seven times. He studied with and received transmission from many of the

leading scholars of the day, including [DPAL SPRUL RIN PO CHE](#) and 'JAM MGON KONG SPRUL. His principal guru was the luminary '[JAM DBYANGS MKHYEN BRTSE DBANG PO](#). Unlike many other prominent Rnying ma lamas of his time, he was not actively involved in the discovery and revelation of treasure ([GTER MA](#)). He is especially renowned for his strikingly original, and often controversial, commentaries on important Indian treatises—scriptural exegesis of Indian works being relatively rare among his contemporary Rnying ma scholars. These works include his commentary on the ninth chapter of [ŚĀNTIDEVA](#)'s [BODHICARYĀVATĀRA](#) and his commentary on [ŚĀNTARAKSITA](#)'s [MADHYAMAKĀLAMKĀRA](#). In other works, he sought to reveal the philosophical profundity of the [RDZOGS CHEN](#) teachings.

[Miram Ch'ungji](#). (宓庵冲止) (1226–1292). Korean monk from the late Koryŏ dynasty and sixth-generation successor to the [SUSŎNSA](#) religious society (K. kyŏlsa; C. [JIESHE](#)) established by [POJO CHINUL](#); also known as Pŏphwan. In 1244, Miram passed the highest-level civil examination at the age of nineteen. He was subsequently appointed to the Hallim academy, the king's secretariat, and was later sent to Japan as an emissary. When he heard that state preceptor (K. kuksa; C. [GUOSHI](#)) [CH'UNGGYŎNG CH'ŎNYŎNG](#) was residing at the nearby monastery of Sŏnwŏnsa in Kaegyŏng, he decided to become the master's disciple. In 1286, after Ch'unggyŏng passed away, Ch'ungji succeeded him as head of the Susŏnsa society. He later went to Yanjing (present-day Beijing) at the request of the Yuan emperor Shizong (r. 1260–1294). He passed away in 1292 at the age of sixty-seven, and was given the posthumous title and name State Preceptor Wŏn'gam. He was a talented poet and his poetry can be found in the *Tongmunsŏn*. His extant writings also include the *Chogyŏ Wŏn'gam kuksa ōrok*, *Haedong Chogyŏ cheyukse Wŏn'gam kuksa kasong*, and *Haedong Chogyŏ Miram hwasang chapchŏ*. A compendium of his writings, the *Wŏn'gam kuksa chip*, is no longer extant.

[Missakapabbata](#). (P). See [MIHINTALE](#).

[Misshaku Kongō](#). (J) (密迹金剛). See [Niō](#).

[mithyādr̥ṣṭi](#). (P. micchādiṭṭhi; T. log par lta ba; C. ejian/xiejian; J. akuken/jaken; K. akkyŏn/sagyŏn 惡見/邪見). In Sanskrit, “wrong view,” “mistaken view,” or “perverse view”; a general term for misconceptions or a specific referent to erroneous philosophical positions, such as the belief in eternalism

([ŚĀŚVATADRṢṬI](#); [ŚĀŚVATĀNTA](#)) or annihilationism ([UCCHEDADRṢṬI](#); [UCCHEDĀNTA](#)) or the belief in a creator deity. The term is used more specifically as the last of the ten unwholesome actions (see [KARMAPATHA](#))—viz., killing, stealing, sexual misconduct, lying, divisive speech, harsh speech, senseless speech, covetousness, harmful intent, and wrong views—in the context of which it refers to the mistaken belief that actions do not have effects and that former and future rebirths therefore do not occur. This particular wrong view is considered to be especially pernicious because one who holds such views would be inclined to engage in unwholesome deeds, falsely believing that they would be no consequences. (It is noteworthy in this context that in East Asia, one of the terms used to translate *mithyādrṣṭi* is the same as that used for *akuśaladrṣṭi* or “nonvirtuous view.”) The term also appears as the fifth of five types of views ([DRṢṬI](#)), which is a root affliction ([MŪLAKLEŚA](#)). The five are the view of the body as being real ([SATKĀYADRṢṬI](#)); the view of holding to an extreme ([ANTAGRĀHADRṢṬI](#)), that is eternalism or annihilationism; the holding of wrong views as being superior ([DRṢṬIPARĀMARŚA](#)); the clinging to rites and rituals as being soteriologically efficacious ([ŚĪLAVRATAPARĀMARŚA](#)); and *mithyādrṣṭi*. In this case as well, *mithyādrṣṭi* includes the denial of cause and effect, the denial of the prospect of rebirth, or the denial of the possibility of liberation from rebirth.

[mithyājñāna](#). (T. log pa’i shes pa; C. xiezhi; J. jachi; K. saji 邪智). In Sanskrit, “erroneous conceptions”; a consciousness that is mistaken with regard to its object of comprehension. Such knowledge may be nonconceptual, such as the perception of two moons by a person suffering from double vision, or conceptual, such as the belief that rebirth does not exist. This type of knowledge contrasts with the authentic knowledge of things as they are (*yathārthajñāna*), or the “knowledge and vision that accords with reality” ([YATHĀBHŪTAJÑĀNADARŚANA](#)). A common example of *mithyājñāna* offered by a variety of Indian traditions is mistaking a rope for a snake when the light is low: the presumed perception of a snake is completely erroneous, and the emotional reaction elicited by such a perception is entirely unwarranted. The most fundamental and deep-rooted of these misconceptions is the perception of the self ([ĀTMAN](#)) as an indivisible, unchanging, indestructible entity.

[mithyāsamvṛti](#). (T. log pa’i kun rdzob). In Sanskrit, “false conventionality”; a term that occurs in [MADHYAMAKA](#) philosophy, where two types of

conventionalities are enumerated: real conventionalities ([TATHYASAMVRTI](#)) and false conventionalities. A real conventionality is a conventional truth ([SAMVRTISATYA](#)) in the sense that it is not the object of an ultimate consciousness and is falsely imagined to possess [SVABHĀVA](#), or intrinsic existence. Even though it may be falsely conceived, it is not however utterly nonexistent (like a false conventionality) because a real conventionality is capable of performing a function ([ARTHAKRIYĀ](#)) in accordance with its appearance. For example, the water in a lake would be a true conventionality because it can perform the function of water, whereas as the water in a mirage would be a false conventionality because it could not perform the function of a water. Only a real conventionality is a conventional truth; it is true in the sense that it can perform a function; a false conventionality is not a conventional truth because it does not exist even conventionally.

[Miyun Yuanwu](#). (J. Mitsuun Engo; K. Mirun Wōno 密雲圓悟) (1566–1642). Chinese [CHAN](#) master of the [LINJI ZONG](#); also known as Tiantong. Miyun was a native of Changzhou prefecture in present-day Jiangsu province. He is said to have decided to become a monk after reading the [LIUZU TAN JING](#) and was formally ordained by Huanyou Zhengzhuan (1549–1614) at the age of twenty-eight. In 1602, Miyun followed Huanyou to the monastery of Longchiyuan in Changzhou and served as its prior ([JIANYUAN](#)). In 1611, Miyun received Huanyou’s robes and bowls as a mark of transmission. Three years later, Miyun succeeded Huanyou’s seat at Longchiyuan. In 1623, Miyun moved to the monastery Tongxuansi on Tiantaishan and again to Guanghuisi in Fuzhou prefecture (Zhejiang province) a year later. In 1630, Miyun restored the monastery Wanfusi on Mt. Huangbo. He subsequently served as abbots of the monasteries Guanglisi on Mt. Yuwang, Jingdesi on Mt. Tiantong, and Dabao’ensi in Jinleng. His teachings are recorded in the *Miyun chanshi yulu*.

[mizuko kuyō](#). (水子供養). In Japanese, lit., “offering to a child of the waters,” viz., “ceremony for an aborted fetus”; a memorial ceremony performed by women and their families on behalf of the spirits of aborted, miscarried, and stillborn fetuses. Abortion is legal and widely practiced in contemporary Japan and this ceremony has become increasingly common since the 1970s as a way both to placate the potentially malevolent spirit of an aborted fetus and to comfort the woman who chose to undertake the procedure. Images of the [BODHISATTVA](#) Jizō ([KSITIGARBHA](#)) in the form of a child are enshrined at temples,

roadside shrines, or even family altars, and dedicated to the spirit of the fetus. In temples where this ceremony is common, small images of the bodhisattva are made available, which will then be typically garbed in either red bibs and caps or baby clothes so as to represent the fetus, with chanting performed and offerings made before the image. The mizuko kuyō ceremony was originally performed as an offering service to Jizō, the patron bodhisattva of children, but evolved during the Edo period in Japan into a ceremony for aborted fetuses or victims of infanticide, along the lines of other rituals performed for the ancestors of a family lineage. (Given the widespread famines of the time, some parents may have thought it better to offer children the prospect of a better rebirth than the suffering of continued starvation or unremitting sickness.) Because of this connection to Jizō, a hymn commonly sung at contemporary ceremonies is an indigenous Japanese Buddhist composition that calls on Jizō to protect the spirit of a deceased child and lead him or her to buddhahood. The mizuko kuyō may be performed at any time of the year but is especially prevalent on days dedicated to rituals for deceased ancestors, such as the Bon Festival in August.

Mkha' 'gro snying thig. (Kandro Nyintik). In Tibetan, “Heart Essence of the ḌĀKINĪS”; an important set of treasure texts (GTER MA) of the RNYING MA sect of Tibetan Buddhism. These RDZOGS CHEN teachings are said to have been transmitted by PADMASAMBHAVA to Princess PADMA GSAL and to YE SHES MTSHO RGYAL. The treasure texts were discovered by PADMA LAS 'BREL RTSAL and were later included in the SNYING THIG YA BZHI, the fourfold collection of snying thig teachings by KLONG CHEN PA. He composed a commentary on the *Mkha' 'gro snying thig*, entitled *Mkha' 'gro yang thig*. The text and commentary together are known as the *Mkha' 'gro snying thig ma bu*, the “Mother and Son Heart Essence of the Ḍākinīs.”

Mkhar chu. (Karchu). An important monastic center associated with both the RNYING MA and BKA' BRGYUD sects of Tibetan Buddhism, located in the LHO BRAG region of southern Tibet. The original site was established by the 'Brug pa bka' brgyud master Lo ras pa (1187–1250), but was later renovated and enlarged by famed 'Brug pa scholar and historian PADMA DKAR PO. The monastery and surrounding environs were a wealthy and active center for Buddhist practice, visited by numerous important masters. His disciple Nam mkha'i snying po stayed in a meditation retreat nearby, where he is said to have attained realization of MAHĀMUDRĀ. Mkhar chu later became a seat for Nam mkha'i

snying po's successive reincarnations. Other Rnying ma and Bka' brgud masters associated with Mkhaz chu include [NYANG RAL NYI MA 'OD ZER](#), [RGOD TSHANG PA MGON PO RDO RJE](#), [GURU CHOS KYI DBANG PHYUG](#), and Me long rdo rje (1234–1303).

[Mkhas grub Dge legs dpal bzang](#). (Kedrup Gelek Palsang) (1385–1438). Also known as Mkhas grub rje, an early leader of the [DGE LUGS](#) sect of Tibetan Buddhism, who trained first under the influential scholar Red mda' ba Gzhon nu blo gros (Rendawa Shonu Lodro, 1349–1412). At the age of twenty-three he met [TSONG KHA PA](#), who became his principal [GURU](#). Mkhas grub rje excelled in his study of Buddhist logic and philosophy and his collected works contain numerous influential treatises on [PRAMĀNA](#), [MADHYAMAKA](#), and [TANTRA](#) (especially the [KĀLACAKRA](#)); among his most famous works is the *Stong thun skal bzang mig 'byed*. At the age of forty-seven, he ascended the golden throne of [DGA' LDAN](#) monastery as the institution's abbot, replacing Tsong kha pa's other illustrious student [RGYAL TSHAB DAR MA RIN CHEN](#) (see [DGA' LDAN KHRI PA](#)). Mkhas grub rje was recognized posthumously as being first in the line of [PAN CHEN LAMA](#) incarnations. Mkhas grub rje is commonly depicted in paintings and statues called rje yab sras gsum, “the triumvirate of the foremost father and his [two] sons,” showing Tsong kha pa flanked by Rgyal tshab and Mkhas grub. Here Mkhas grub can often be distinguished from Rgyal tshab by his younger visage and darker hair, and by his wild eyes, said to have been a result of his tantric practice.

[Mkhas pa'i dga' ston](#). See [CHOS'BYUNG MKHAS PA'I DGA' STON](#).

[mkha' spyod](#). (kachö). Literally, “sky-enjoyer”; a Tibetan translation of [DĀKINĪ](#).

[Mkho mthing](#). (Koting). In Tibet, one of the four “extra taming temples” or “extra pinning temples” ([YANG 'DUL GTSUG LAG KHANG](#)) said to have been constructed during the time of the Tibetan king [SRONG BTSAN SGAM PO](#) to pin down the limbs of the demoness (T. srin mo) in order to introduce Buddhism into Tibet. It is located in [LHO BRAG](#) and pins down her left elbow.

[mofa](#). (J. mappō; K. malpōp 末法). In Chinese, “final dharma” period. The dispensation of Buddhism, like all compounded things, is presumed to be impermanent and subject to decay and eventually dissolution. This process of eschatological decline was believed to occur in stages, often calculated at either

five hundred or one thousand years at each stage (although there were many variations), and began with the passage of the Buddha into [PARINIRVĀNA](#). In East Asia, the notion of decline was formalized into an influential doctrinal system, consisting of three stages or periods named “true dharma” (zhengfa; see [SADDHARMA](#)), “semblance dharma” ([XIANGFA](#)), and “final dharma” (mofa). This tripartite system was not inherited from Indian Buddhism. The term mofa is not the translation of the Sanskrit [SADDHARMAVIPRALOPA](#) (“destruction of the dharma”), but is instead a neologism derived from moshi, the Chinese translation of term [PAŚCIMAKĀLA](#) (“latter time”). The notion of the period of the final dharma spawned a large and influential exegetical tradition in East Asia. The date of the onset of the final period was variously calculated (and was generally assumed to have already begun soon after Buddhism’s introduction into East Asia). This assumption was widely employed as doctrinal justification for certain practices, such as the invocation of the name of the buddha [AMITĀBHA](#) ([NIANFO](#)) or the cult of the future buddha [MAITREYA](#). In such contexts, it was claimed that during the period of the final dharma, beings lacked the capacity to successfully follow the standard path to liberation set forth by the Buddha and instead should rely on the efficacious powers of Amitābha or the prospect of an easier practice regimen after the advent of [ŚĀKYAMUNI](#) Buddha’s successor, Maitreya. The notion of the age of the final dharma was espoused in many indigenous scriptures (see [APOCRYPHA](#)) written in East Asia. It also played an important role in the formation of such traditions as [PURE LAND](#), [JŌDOSHŪ](#), [JŌDO SHINSHŪ](#), [NICHIRENSHŪ](#), [NICHIREN SHOSHŪ](#), and others. See also [SADDHARMAVIPRALOPA](#).

[Mogao ku](#). (莫高窟). In Chinese, “Peerless Caves.” See [DUNHUANG](#).

[Moggaliputtatissa](#). (C. Mujianlianxidixu; J. Mokukenrenshiteishu; K. Mokkaŷlyŷnjajesu 目犍連子帝須). According to Pāli sources, the monk who served as head of the third Buddhist council ([SAMGĪTI](#); see [COUNCIL, THIRD](#)) convened at Pāṭaliputta (S. [PĀTALIPUTRA](#)) in the third century BCE. In a previous life, Moggaliputtatissa had been a divinity who, at the behest of a delegation of arahants (S. [ARHAT](#)), took human rebirth so that he could assist in the future purification of the Buddhist teaching. Fully trained in the [TIPIṬAKA](#) and its commentaries ([ATTHAKATHĀ](#)) as a novice, he became an arahant shortly after being ordained as a monk. King [AŚOKA](#)’s lavish support of the Buddhist [SAMGHA](#) prompted many non-Buddhist mendicants and brāhmaṇas to don the robes of

Buddhist monks merely as a livelihood. With the orthodox saṃgha unable to forcibly remove the bogus monks from their midst, the ordination ceremony (P. uposatha; S. [UPOSADHA](#)) was suspended. When this situation had persisted for seven years, Moggaliputtatissa, at Aśoka's request, taught the [DHARMAVINAYA](#) to the king so that he might intervene on behalf of the legitimate party. Aśoka interrogated the saṃgha and, drawing on the authority of the state (āṇācakka), defrocked those monks found to be improperly ordained. With the saṃgha thus purified of its corrupting influences, Moggaliputtatissa convened the third Buddhist council to rehearse the Buddha's teachings as preserved in the Pāli tipīṭaka and its commentaries. At that time Moggaliputtatissa composed the [KATHAVATTHU](#), the seventh and last book of the [ABHIDHAMMAPITAKA](#), to refute heretical views. At the conclusion of the council, Moggaliputtatissa dispatched missionaries to nine adjacent lands (paccantajanapada) to propagate the newly purified teaching.

[Moggallāna](#). (P). See [MAHĀMAUDGALYĀYANA](#).

[Mogharāja](#). (C. Mianwang [biqu]; J. Men'ō [biku]; K. Myōnwang [pigu] 面王 [比丘]). The Sanskrit and Pāli proper name of an eminent [ARHAT](#) declared by the Buddha to be foremost among monks who wore coarse robes. According to Pāli sources, he was a brāhmaṇa ascetic who studied under Bāvarī, and one of sixteen students sent to defeat the Buddha in debate. When the Buddha answered the question posed by Mogharāja, he attained arahantship immediately. He became known for stitching his robes from coarse cloth discarded by tailors and dyers. Mogharāja suffered from various skin ailments and, believing his residence to be infested with insects, he slept on a straw bed laid out in the open, even during the winter. When the Buddha inquired how he fared, Mogharāja responded that he was happy even in the cold. The boils and sores that covered his body were a consequence of a misdeed performed in a previous life. During the time of Padumuttara Buddha he had blackened the floor of the Buddha's cloister with soot from a fire; for this transgression, he was compelled to suffer in hell for a thousand years and after that to endure skin disease for another five hundred lifetimes. It was during the lifetime of Padumuttara that Mogharāja heard him praise a disciple as foremost among those who wore coarse clothing, and he resolved to attain that preeminence during the dispensation of a future buddha.

[moha](#). (T. gti mug; C. chi; J. chi; K. ch'i 癡). In Sanskrit and Pāli, "delusion," "confusion," "benightedness," "foolishness"; as a synonym of "ignorance"

([AVIDYĀ](#)), moha denotes a fundamental confusion concerning the true character of the conception of a person ([PUDGALA](#)) and the phenomenal world and is thus an affliction ([KLEŚA](#)) and cause of future suffering. Moha appears frequently in the sūtra literature as one of the “three poisons” ([TRIVISA](#)) or three unwholesome faculties ([AKUŚĀLAMŪLA](#)): viz., the kleśas of greed or sensuality ([RĀGA](#) or [LOBHA](#)), hatred or aversion ([DVESA](#)), and delusion (moha). Moha is also one of the forty-six mental concomitants ([CAITTA](#)) according to the [SARVĀSTIVĀDA-VAIBHĀSIKA](#) school of [ABHIDHARMA](#) and is listed as the first of six “fundamental afflictions” or “defiled factors of wide extent” (kleśa-[MAHĀBHŪMIKA](#)) that are associated with all defiled thoughts, together with heedlessness ([PRAMĀDA](#)), lassitude ([KAUSĪDYA](#)), lack of faith ([ĀSRADDHYA](#)), sloth ([STYĀNA](#)), and restlessness ([AUDDHATYA](#)). It also is listed as one of the fourteen unwholesome (akusala) mental states ([CETASIKA](#)) in the Pāli abhidhamma. Delusion is the opposite of nondelusion ([AMOHA](#)), one of the eleven wholesome factors (KUŚĀLADHARMA) in the [YOGĀCĀRA](#) list of one hundred dharmas ([BAIFA](#)).

[Moheyan](#). See [BSAMYAS DEBATE](#).

[Mohe zhiguan](#). (J. Makashikan; K. Maha chigwan 摩訶止觀). In Chinese, “The Great Calming and Contemplation”; a comprehensive treatise on soteriological theory and meditation according to the [Tiantai Zong](#); attributed to [Tiantai Zhiyi](#) (538–597). The *Mohe zhiguan* is based on a series of lectures Zhiyi delivered in 594, which were transcribed and edited by his disciple [Guanding](#). Zhi (lit. “stopping”) is the Chinese translation for [Śamatha](#) (calmness, serenity) and guan (lit. “observation”) is the Chinese for [Vipāśyanā](#) (insight); the work as a whole seeks to establish a proper balance between meditative practice and philosophical insight. Zhi and guan practice are treated in three different ways in this treatise. Zhi in its denotation of “stopping” means calming the mind so that it is not buffeted by distracting thoughts; fixing the mind so that it stays focused on the present; and recognizing that distraction and concentration are both manifestations of a unitary, nondual reality. Guan in its denotation of “observation” means to illuminate the illusory nature of thought so that distractions are brought to an end; to have insight into the suchness ([Tathatā](#)) that is the ultimate nature of all phenomena in the universe; and to recognize that in suchness both insight and noninsight ultimately are identical. The original text of the *Mohe zhiguan* consists of ten chapters, but only the titles of the last three chapters survive. The last extant chapter, Chapter 7 on “Proper Contemplation,”

comprises approximately half of the entire treatise and, as the title suggests, provides a detailed description of the ten modes of contemplation and the ten spheres of contemplation. The first of the ten spheres of contemplation is called “the realm of the inconceivable” (S. [ACINTYA](#)). In his discussion of this realm in the first part of the fifth roll, Zhiyi covers one of the most famous of Tiantai doctrines: “the [TRICHILIOCOSM](#) in a single instant of thought” ([YINIAN SANQIAN](#)), which Zhiyi frames here as the “the trichiliocosm contained in the mind during an instant of thought” (sanqian zai yinian xin), viz., that any given thought-moment perfectly encompasses all reality, both temporally and spatially. By emphatically noting the “inconceivable” ability of the mind to contain the trichiliocosm, Zhiyi sought to emphasize the importance and mystery of the mind during the practice of meditation. This chapter, however, remains incomplete. The work also offers an influential presentation of the “four [SAMĀDHIS](#),” that is, the samādhis of constant sitting, constant walking, both sitting and walking, and neither sitting nor walking. Along with Zhiyi’s [FAHUA XUANYI](#) and [FAHUA WENJU](#), the *Mohe zhiguan* is considered to be one of the three most important treatises in the Tiantai tradition and is regarded as Zhiyi’s magnum opus. The Tiantai monk [ZHANRAN](#)’s [MOHE ZHIGUAN FUXING ZHUANHONG JUE](#) is considered to be the most authoritative commentary on the *Mohe zhiguan*.

[Mohe zhiguan fuxing zhuanhong jue](#). (J. Makashikan bugyōdenguketsu; K. Maha chigwan pohaeng chōnhong kyōl 摩訶止觀輔行傳弘決). Often referred to in Chinese by its abbreviated title of *Zhuanhongjue*; a comprehensive commentary on [ZHIYI’S MOHE ZHIGUAN](#) composed by [JINGXI ZHANRAN](#)(711–782). In the past, the *Mohe Zhiguan* and the *Zhuanhongjue* were frequently printed together; hence, the traditional interpretation of the *Mohe Zhiguan* has been heavily dependent upon Zhanran’s commentary. It was largely through the exegetical efforts of Zhanran, in fact, that the *Mohe Zhiguan* was established as the foundation of Tiantai theory and practice. The commentary also provides Zhanran’s own views regarding the teachings of other rival schools, such as the [HUAYAN ZONG](#), [CHAN ZONG](#), and [FAXIANG ZONG](#). Zhanran also advocated the view that human nature was inherently evil (xing’e lun), and his views on human nature are elaborated in his commentary.

[moksa](#). (P. mokkha; T. thar pa; C. jietuo; J. gedatsu; K. haet’al 解脫). In Sanskrit, “liberation,” “freedom” or “release”; the state of liberation from suffering and rebirth, achieved via the path of the [ŚRĀVAKA](#), [PRATYEKABUDDHA](#), or

[BODHISATTVA](#) and virtually interchangeable with the synonymous [VIMOKṢA](#). The term is often used as a synonym for [NIRVĀNA](#). Buddhahood is the ultimate form of mokṣa, but it is possible to achieve liberation (as an [ARHAT](#)) without achieving buddhahood. Whether all beings will eventually achieve some form of mokṣa and whether all beings will eventually achieve buddhahood are points of controversy among Buddhist schools. The term is often paired with [SVARGA](#) (“heaven”) as the two destinations that may result from practicing the Buddha’s teachings. That is, by leading a virtuous life, one is reborn as a divinity ([DEVA](#)) in one of several heavenly realms. By understanding the nature of reality, one attains mokṣa, final liberation from all forms of rebirth. In this pairing, svarga is the lesser goal for those incapable of seeking the ultimate goal of mokṣa in the present lifetime.

[mokṣabhāgīya](#). (T. thar pa cha mthun; C. shunjietuofen; J. jungedatsubun; K. sunhaet’albn 順解脫分). In Sanskrit, “aids to liberation”; abbreviation for the mokṣabhāgīya-kuśalamūla (wholesome faculties associated with liberation), the second of the three types of wholesome faculties (literally, “virtuous root”) ([KUŚĀLAMŪLA](#)) recognized in the [VAIBHĀSIKA](#) school of [SARVĀSTIVĀDA ABHIDHARMA](#), along with the puṇyabhāgīya (aids to creating merit) and [NIRVEDHABHĀGĪYA](#) (aids to penetration). This type of wholesome faculty involves the intent to listen to (śruta) and reflect upon (cintā) the Buddhist teachings and then make the resolution ([PRANIDHĀNA](#)) to follow the [DHARMAVINAYA](#) to such an extent that all one’s physical and verbal actions ([KARMA](#)) will come into conformity with the prospect of liberation. The mokṣabhāgīyas are constituents of the path of preparation ([PRAYOGAMĀRGA](#)), the second segment of the five-path schema outlined in the Vaibhāsiika [ABHIDHARMA](#) system, which mark the transition from the mundane sphere of cultivation ([LAUKIKA-BHĀVANĀMĀRGA](#)) to the supramundane vision (viz., [DARŚANAMĀRGA](#)) of the [FOUR NOBLE TRUTHS](#) (catvāry āryasatyāni). In distinction to the nirvedhabhāgīyas, however, which are the proximate path of preparation, the mokṣabhāgīyas constitute instead the remote path of preparation and are associated only with the types of wisdom developed from learning ([ŚRUTAMAYĪPRAJÑĀ](#)) and reflection ([CINTĀMAYĪPRAJÑĀ](#)), not meditative practice ([BHĀVANĀMAYĪPRAJÑĀ](#)). The mokṣabhāgīyas are generally concerned with the temporary allayment of the influence of the three major afflictions ([KLEŚA](#))—viz., greed ([LOBHA](#)), hatred ([DVEṢA](#)), and ignorance ([MOHA](#))—by cultivating the three kuśalamūlas of nongreed ([ALOBHA](#)), nonhatred ([ADVĒSA](#)), and nondelusion ([AMOHA](#)). These factors are “conducive to liberation”

by encouraging such salutary actions as giving ([DĀNA](#)), keeping precepts ([ŚĪLA](#)), and learning the dharma. The mokṣabhāgīya are associated with the development of the first twelve of the [BODHIPĀKṢIKADHARMAS](#), or “thirty-seven factors pertaining to awakening.” Among them, the first set of four develop [SMRTI](#) (mindfulness) as described in the four [SMRTYUPASTHĀNA](#) (applications of mindfulness), the second set of four develop [VĪRYA](#) (effort) as described in the four [PRAHĀNA](#) (efforts or abandonments), and the third set of four develop [SAMĀDHI](#) (concentration) as described in the four [RDDHIPĀDA](#) (bases of psychic powers). According to a different enumeration, there are five mokṣabhāgīya: (1) faith ([ŚRADDHĀ](#)), (2) effort ([VĪRYA](#)), (3) mindfulness ([SMRTI](#)), (4) concentration ([SAMĀDHI](#)), and (5) wisdom ([PRAJÑĀ](#)).

mokṣamārga. (T. thar lam; C. jietuodao; J. gedatsudō; K. haet’alto 解脫道). In Sanskrit, “path to liberation”; a path that leads to liberation from [SAMSĀRA](#), as opposed to a favorable rebirth within saṃsāra, such as in the heavens ([SVARGA](#)). In this case, the term would refer specifically to the five paths ([PAÑCAMĀRGA](#)): the path of accumulation ([SAMBHĀRAMĀRGA](#)), the path of preparation ([PRAYOGAMĀRGA](#)), the path of vision ([DARŚANAMĀRGA](#)), the path of cultivation ([BHĀVANĀMĀRGA](#)), and the adept path where there is nothing more to learn ([AŚAIKSAMĀRGA](#)). However, any virtuous practice that is motivated by the wish to achieve liberation from rebirth would also be qualified as a “path to liberation.”

mokt’ak. (C. muduo; J. bokutaku 木鐸). In Korean, “wooden clacker”; a wooden percussion instrument that is used in Korean Buddhist monasteries to call monks and nuns to assembly and to keep time during religious services or meditation periods. The mokt’ak is abstractly carved in a shape that resembles a fish, and is thus the functional equivalent in Korea to the Chinese “wooden fish” ([MUYU](#); see also [DRUM](#)). The instrument is constructed by carving wood (typically apricot, jujube, or birch) in the shape of a round bell with a handle grip. The bell shape of the wood is cut across the middle and the center hollowed out, producing a sound box. The sound resonates when it is struck by a small wooden mallet. The long, narrow cut in the mokt’ak represents the mouth of a fish, while the two small holes on each side of the “mouth” represent the eyes of a fish. Because a fish’s eyes are always open day and night, the stylized mokt’ak version of the wooden fish is a subtle admonition to monks and nuns to remain ever vigilant about their practice. The term mokt’ak itself originates from ancient Chinese

custom in which a government official would use a wooden or iron bell to summon people to the announcement of a new government ordinance. However, a Chinese wooden clacker is an iron bell with a wooden clapper inside, an instrument that is called a yoryōng in Korean.

monastery. See [VIHĀRA](#); [CHÖL](#); [TERA](#); [DGON PA](#); entries on specific monasteries.

Mongkut. (Thai). See [RĀMA IV](#).

monk. See [BHIKSU](#); [ŚRAMANA](#); [ŚRĀMANERA](#).

monsan. (門參). In Japanese, lit. “lineage instructions,” probably an abbreviation of monto hissan (the secret instructions of this lineage); secret kōan ([GONG’AN](#)) manuals used in medieval Japanese [SŌTOSHŪ](#) monasteries of the [ZEN](#) tradition, which provide detailed descriptions of the kōan curriculum taught in the various Sōtō lineages. As a record of the secret instructions transmitted in a particular lineage, the possession of these manuals often served as proof of the inheritance of that particular dharma lineage. The manuals contain names of kōans and a series of standardized questions and answers ([WENDA](#)) for each kōan. The monsans provide the required responses to the master’s questions, which are in the form of Chinese verses and phrases known as [AGYO](#) and [JAKUGO](#). The earliest extant monsans date from the sixteenth century, but they seem to represent long-established traditions within Zen lineages.

moshi. (J. masse; K. malse 末世). In Chinese, the “latter time”; a translation of the Sanskrit term [PAŚCIMAKĀLA](#). The term commonly appears in the [MAHĀYĀNA](#) sūtras to refer to the time following the Buddha’s passage into [PARINIRVĀNA](#). In China, this term seems to have served as the basis for the Chinese neologism [MOFA](#), the more common term in East Asia to refer to the final period of the dharma.

mother tantra. See [MĀTRĀNĀTRA](#).

Mount Hiei. See [HIEIZAN](#).

Mount Sumeru. See [SUMERU](#), [MOUNT](#).

Mouzi. (J. Bōshi; K. Moja 牟子) (fl. c. third century CE?). A Chinese Buddhist layman who is the composer of the [MOUZI LIHUO LUN](#), a text that is often known

eponymously as simply the *Mouzi*. The author's family name was Mou and he is traditionally identified as Mou Rong of the Latter Han dynasty (25–220 CE), although this identification is no longer accepted by scholars. According to the preface to his treatise, Mouzi was a scholar-official from Cangwu in Jiaozhou, in the far southern reaches of the Chinese empire, where there seems to have been a flourishing Buddhist community that may date to the Latter Han dynasty. Mouzi's references to Buddhist monks wearing saffron robes, eating one meal a day, and living a celibate life suggest that he may have had contact with foreign monks who accompanied Indian traders arriving at southern Chinese seaports. Mouzi is said to have given up his administrative career after his mother's death so that he could devote himself to Buddhist scholarship and meditation for the rest of his life. Other than the attribution that he was the writer of this earliest extant Buddhist treatise written by a Chinese layman, however, nothing more is known about him.

[Mouzi lihuo lun](#). (J. Bōshi riwakuron; K. Moja ihok non 牟子理惑論). In Chinese, “Treatise on the Resolution of Doubts,” or “Treatise on the Disposition of Error”; the earliest extant Buddhist treatise written by a Chinese convert; often known by its abbreviated eponymous title, the *Mouzi*. The text is attributed to a Chinese Buddhist layman, [MOUZI](#), who is claimed to have hailed from the south of China. The text is a polemical Buddhist defense of the faith, which responds to criticisms of Buddhism by rival religions in China. The text consists of a eulogistic preface, thirty-eight short dialogues between Mouzi and unnamed critic(s) of Buddhism, and a brief conclusion, in which the antagonist finally acquiesces to the rectitude of Buddhist positions. Stylistically, the work is written in Confucian commentarial form, thus making more palatable its putatively subversive idea, viz., that adherence to Buddhism is completely compatible with being a righteous and filial Chinese. Typically, criticisms deriving from Confucian beliefs are refuted using references from the *Laozi* and *Zhuangzi*, while Daoist criticisms are refuted with astute readings of both Daoist and Confucian texts. The *Mouzi* was thus successful not simply because it refuted the critiques of rival religions; in addition, by demonstrating the inherent inaccuracy and speciousness of their positions, the treatise was also able to prove the veracity, if not the superiority, of Buddhism itself. In one of the dialogues that argues that filiality is found not only in Confucianism but in Buddhism as well, the *Mouzi* compares the Buddhist monk to a son who saves his father from drowning by grabbing him and lifting him upside down back into the boat.

Although the inelegant manner in which the son grabbed his father may initially seem disrespectful, since it saves his parent from drowning, the act would be acceptable even according to Confucius himself, who insisted that exigent circumstances justified adaptable demonstrations of filial piety. Similarly, the behavior of a Buddhist monk who leaves the home life may in fact be filial, even though initially it may not appear to be so. In another section, the *Mouzi* substantiates the filiality of Buddhism by pointing out that, since the Buddha protected his parents [ŚUDDHODANA](#) and [MAYA](#) by showing them the path to their salvation, practicing Buddhism was indeed filial. In another dialogue concerning criticisms of the Buddhist teaching of rebirth, the *Mouzi* compares the spirit that is reborn to the seeds of a plant, which can grow into new plants even after the leaves and roots (viz., the physical body) have died. The composition date of the *Mouzi* has proven to be an intractable problem. Its preface claims that the text was written in the second century CE, although current scholarly estimates of its date range from the second quarter of the third century through the fourth or even early fifth century. More likely, the text developed over time, with many accretions. The text was included in the (nonextant) *Fa lun* (“Collection on the Dharma”), compiled by Lu Cheng (425–494) around 465, which would be the terminus ad quem for its composition. The text that is extant today is the recension appearing in [SENGYOU](#)’s (445–518) [HONGMING JI](#) (“Collection on the Propagation and Clarification [of Buddhism]”), the important anthology of Buddhist apologetics, compiled c. 515–518. Although some earlier scholars have questioned the authenticity of the text, it is now generally accepted to be in fact one of the earliest extant sources from the incipency of indigenous Chinese Buddhism.

[mozhao Chan](#). (J. mokushōzen; K. mukcho Sōn 默照禪) In Chinese, “silent illumination meditation”; a form of Chan meditation attributed to the [CAODONG ZONG](#) (J. [SŌTOSHŪ](#)), and specifically the masters [HONGZHI ZHENGJUE](#) (1091–1157) and his teacher Danxia Zichun (1064–1117). This practice builds upon the normative East Asian notion of the inherency of buddhahood (see [TATHĀGATAGARBHA](#)) to suggest that, since enlightenment is the natural state of the mind, there is nothing that needs to be done in order to attain enlightenment other than letting go of all striving for that state. Authentic Chan practice therefore entails only maintaining this original purity of the mind by simply sitting silently in meditation. Hongzhi’s clarion call to this new Caodong-style of practice is found in his *Mozhao ming* (“Inscription on Silent Illumination”),

which may have been written in response to increasingly vehement criticisms of the practice by the rival [LINJI ZONG](#), although its dating remains uncertain. In Hongzhi’s description of the practice of silent illumination, silence (mo) seems to correlate roughly with calmness (Ch. zhi, S. [ŚAMATHA](#)) and illumination (zhao) with insight (C. guan, S. [VIPAŚYANĀ](#)); and when both silence and illumination are operating fully, the perfect interfusion of all things is made manifest. Silent-illumination meditation thus seems to have largely involved prolonged sessions of quiet sitting (see [ZUOCHAN](#)) and the cessation of distracted thought, a state likened to dead wood and cold ashes or a censer in an old shrine. The Linji Chan adept [DAHUI ZONGGAO](#) deploys the term to denigrate the teachings of his Caodong contemporaries and to champion his preferred approach of practice, investigating meditative topics (see [KANHUA CHAN](#)) through Chan cases (C. [GONG’AN](#)), which demands a breakthrough to enlightenment, not simply what he claims is the passive sitting of the Caodong zong. After Dahui’s obstreperous critique of mozhao, the term seems to have acquired such a pejorative connotation that it stopped being used even within the Caodong tradition. See also [SHIKAN TAZA](#).

[mrakṣa](#). (P. makkha; T. ’chab pa; C. fu; J. fuku; K. pok 覆). In Sanskrit “disparagement” or “hypocrisy.” The term is typically interpreted to mean either concealing the achievements or wholesome qualities of others, or concealing one’s own faults. Mrakṣa is one of the forty-six mental concomitants (see [CAITTA](#)) according to the [SARVĀSTIVĀDA–VAIBHĀSIKA](#) school of [ABHIDHARMA](#) and the [ABHIDHARMAKOŚABHĀSYA](#) and one of the fifty-one according to the [YOGĀCĀRA](#) school; it is classified among the secondary afflictions ([UPAKLEŚA](#)).

[mṛdvindriya](#). (T. dbang po rtul ba; C. dungen; J. donkon; K. tun’gŭn 鈍根). In Sanskrit, “dull faculties”; the lowest of the “three capacities” ([TRĪNDRIYA](#)) used to describe those disciples of the Buddha whose intellectual and spiritual abilities are lesser than those with “average faculties” ([MADYENDRIYA](#)) and “sharp faculties” ([TĪKSNENDRIYA](#)). The “follower of faith” ([ŚRADDHĀNUSĀRIN](#)) who enters into practice more quickly than the “follower of dharma” ([DHARMĀNUSĀRIN](#)), without first investigating whether the practice will deliver the result, is the archetypal mṛdvindriya person. The term appears in discussions of [UPĀYA](#), the Buddha’s skill at adapting his teachings to the intellects, interests, and aspirations of his disciples. The Buddha offers the simplest teachings, such as that the practice of charity ([DĀNA](#)) and morality ([ŚĪLA](#)), which result in a

favorable rebirth as a divinity or human, to those of lesser faculties, understanding that such disciples are initially incapable of understanding more sophisticated teachings. The term is also put to polemical use, describing the adherents of competing schools who mistakenly think that their understanding of the doctrine is the Buddha's highest teaching. In the [MAHĀYĀNA](#), those with "dull faculties" do not gain the irreversible ([AVAIVARTIKA](#)) stage until a later stage of the path.

[Mṛgadāva](#). [alt. Mṛgadāya] (P. Migadāya; T. Ri dwags kyi gnas; C. Luyeyuan; J. Rokuyaon; K. Nogyawōn 鹿野苑). In Sanskrit, the "Deer Park" in the modern town of [SĀRNĀTH](#), some four miles (six kms.) north of Vārāṇasī, where the Buddha preached his first sermon, the "Turning the Wheel of the Dharma" (S. [DHARMAKAPRAVARTANASŪTRA](#); P. [DHAMMACAKKAPPAVATTANASUTTA](#)), following his enlightenment; the site was also known as [RSIPATANA](#). It was there that the Buddha encountered the "group of five" (S. [PAÑCAVARGIKA](#); P. pañcavaggiyā), the five ascetics who had previously repudiated him for abandoning the practice of austerities, and it was to this group that the Buddha taught the [FOUR NOBLE TRUTHS](#) (catvāry āryasatyāni) and the eightfold path ([ĀRYĀSTĀNGAMĀRGA](#)). A number of other important discourses were also delivered there. The Deer Park later became the site of a large monastery. According to the Chinese pilgrim [XUANZANG](#), the place derived its name from the *Nigrodhamṛgajātaka*, which tells the story of when the bodhisattva was reborn as Nigrodha, king of the deer. When he offered himself in sacrifice, the king of Vārāṇasī was so moved that he established a sanctuary where deer could live unmolested by hunters.

[Mṛgāramātrprāsāda](#). (P. Migāramātupāsāda; T. Ri dwags 'dzin gyi ma'i khang bzang; C. Luzimu tang; J. Rokushimodō; K. Nokchamo tang 鹿子母堂). In Sanskrit, "Hall of Mṛgāra's Mother"; the name of the monastery inside the Pūrvārāma (P. Pubbārāma), a park located outside the eastern city gate of [ŚRĀVASTĪ](#), which was constructed for the Buddha by his foremost female lay disciple [VIŚĀKHĀ](#), who was also known as "Mṛgāra's Mother." The monastic residence is said to have been two stories high, with five hundred rooms on each floor, and each room lavishly appointed. A golden water tower that could hold sixty pots of water rose from the roof. The Buddha is said to have spent the last twenty years of his life in Śrāvastī, dividing his time between this monastery built for him by Viśākhā and the [JETAVANA](#) monastery in [ANĀTHAPINDADA](#)'s park

(S. Anāthapiṇḍadārāma) built for him by his foremost male lay disciple Anāthapiṇḍada, typically moving between both sites every day.

mrtyumāra. (T. 'Chi bdag gi bdud; C. Simo; J. Shima; K. Sama 死魔). In Sanskrit, “māra of death”; one of the four metaphorical forms of **MĀRA**, the personification of evil, along with the māra of the afflictions (kleśamāra), the māra of the aggregates (**SKANDHAMĀRA**), and the deity Māra (**DEVAPUTRAMĀRA**). In this form, death itself is an aspect of Māra, since death brings an end to everything that one holds precious in this current life.

mtha' 'dul gtsug lag khang. (tadül tsuklakang). In Tibetan, the four “edge-taming temples” or “edge-pinning temples” of **KHRA 'BRUG**, **'GRAM**, **BKA' TSHAL**, and **GRUM PA RGYANG**, said to have been constructed during the time of the Tibetan king **SRONG BTSAN SGAM PO** to pin down the limbs of the demoness (T. srin mo) in order to pacify Tibet to prepare it for the introduction of Buddhism. The **LHA SA** gtsug lag khang, also known as the **JO KHANG**, pins down her heart and the four edge taming temples her right and left shoulders and hips.

Mtshur phu. (Tsurpu). A Tibetan monastery that served as the seat of the **KARMA PA**, established in 1187 by the first **KARMA PA DUS GSUM MKHYEN PA** in the Stod lung (Tölung) valley, northwest of **LHA SA**. The monastery was actually a large complex of assembly halls, residences (including that of the **MTSHUR PHU RGYAL TSHAB incarnations**), retreat centers, and meditation caves that greatly expanded as the fame of the Karma pas grew. At its height, it housed over one thousand monks. The monastery was completely demolished during the Chinese Cultural Revolution but has been partially restored since the 1980s.

Mtshur phu rgyal tshab incarnations. (Tsurpu Gyaltsap). A line of incarnate lamas (**SPRUL SKU**) of the **KARMA BKA' BRGYUD** sect of Tibetan Buddhism, entrusted as the regents of **MTSHUR PHU** monastery and traditionally close to the **KARMA PAs**. The lineage includes:

1. Go shrī Dpal 'byor don grub (Goshri Paljor Döndrup, c. 1427–1489)
2. Bkra shis rnam rgyal (Tashi Namgyal, c. 1490–1518)
3. Grags pa dpal 'byor (Drakpa Paljor, c. 1519–1549)
4. Grags pa don grub (Drakpa Döndrup, c. 1550–1617)
5. Grags pa mchog dbyangs (Drakpa Chokyang, c. 1618–1658)
6. Nor bu bzang po (Norbu Sangpo, c. 1659–1698)
7. Dkon mchog 'od zer (Könchok Öser, c. 1699–1765)
8. Chos dpal bzang po (Chöpal Sangpo, c. 1766–1820)
9. Grags pa ye shes (Drakpa Yeshe, c. 1821–1876)
10. Bstan pa'i

nyi ma (Tenpe Nyima, c. 1877–1901) 11. Gags pa rgya mtsho (Drakpa Gyatso, c. 1902–1959) 12. Karma Gags pa bstan pa yar ’phel, a.k.a. Bstan ’dzin phrin las chos kyi nyi ma (Tenzin Trinle Chökyi Nyima, b. 1960)

[mu kōan](#). (無公案) (J). See [GOUZI WU FOXING](#).

[Mu’an Xingtao](#). (J. Mokuan Shōtō; K. Mogam Sōngdo 木菴性瑫) (1611–1684). Chinese [CHAN](#) master, calligrapher, and pioneer of the [ŌBAKUSHŪ](#) in Japan. He was a native of Quanzhou in present-day Fujian province. After his novice ordination at the age of eighteen, Mu’an received the full monastic precepts from the monk Yongjue Yuanxian (1578–1657) on Mt. Gu (present-day Fujian province). Mu’an visited the eminent Chan master [MIYUN YUANWU](#) before he returned to Yongjue, under whom he is said to have attained awakening. Later, Mu’an continued his studies under [FEIYIN TONGRONG](#) and his disciple [YINYUAN LONGQI](#) at the monastery of Wanfusi on Mt. Huangbo (present-day Fujian province). Mu’an eventually became Yinyuan’s disciple and inherited his lineage. In 1655, Mu’an arrived in Nagasaki, Japan, and began his residence at the monastery of Fukusaiji. In 1661, Mu’an followed Yinyuan to his new monastery of [MANPUKUJI](#) in Uji. Three years later, Mu’an succeeded Yinyuan as the abbot of the monastery, and the next year he oversaw the ordination of monks at the triple-precept platform ceremony (sandān kaie). In 1670, he received the purple robe, and later with the support of the shōgun Tokugawa Ietsuna (1639–1680), he established the monastery of Zuishōji in Edo. In 1675, he turned over the administration of Zuishōji to his disciple Tetsugyū Dōki (1628–1700) and that of Manpukuji to Huilin Xingji (1609–1681).

[muccitukamyatāñāna](#). [alt. muñcitukamyatāñāna]. In Pāli, “knowledge arising from the desire for deliverance”; according to the [VISUDDHIMAGGA](#), the sixth of nine total types of knowledge cultivated as part of “purity of knowledge and vision of progress along the path” ([PATIPADĀÑĀNADASSANAVISUDDHI](#)). This latter category, in turn, constitutes the sixth and penultimate purity (P. visuddhi; S. [VISUDDHI](#)) to be developed along the path to liberation. Having cultivated aversion toward all conditioned formations (P. saṅkhāra; S. [SAMSKĀRA](#)) and the mental and physical phenomena ([NĀMARŪPA](#)) comprising the individual and the universe, because of their frightful nature and fundamental unsatisfactoriness, the practitioner generates the desire to be free from them. The *Visuddhimagga* explains that, like a frog caught in a snake’s mouth, a bird caught in a cage, or a

deer caught in a hunter's snare, the practitioner, being fearful of, dissatisfied with, and taking no delight in any kind of becoming in any realm or abode of existence, wishes only for deliverance from the cycle of rebirth.

Muchū mondō. (夢中間答). In Japanese, “Questions and Answers in Dreams,” a primer on [ZEN](#) (C. [CHAN](#)) training attributed to the [RINZAISHŪ](#) master [MUSŌ SOSEKI](#) (1275–1351). The *Muchū mondō* is a record of the answers given by Musō to the questions regarding Zen asked by Ashikaga Tadayoshi (1306–1352), the brother of the shōgun Ashikaga Takauji (1305–1358). In total, Tadayoshi and Musō exchanged ninety-three sets of questions and answers that covered a wide range of subjects, including everything from praying for merit to the study of kōans (C. [GONG'AN](#)) and the practice of seated meditation (J. zazen; C. [ZUOCHAN](#)). Due to its simple and clear discussion of topics relevant to a lay audience, the *Muchū mondō* has been widely read within the tradition and republished often.

Mucilinda. [alt. Mahāmucilinda] (P. Mucalinda; T. Btang bzung; C. Muzhenlintuo; J. Mokushinrinda; K. Mokchillinda 目眞隣陀). In Sanskrit, the name of a snake divinity ([NĀGA](#)) who is said to have sheltered [GAUTAMA](#) Buddha while he was meditating following his enlightenment. According to the Pāli account, Mucalinda (S. Mucilinda) was the eponymous name of the nāga king of the Mucalinda tree, which was located in [URUVILVĀ](#), along the bank of the [NERAÑJARĀ](#) river near the [BODHI TREE](#) in [BODHGAYĀ](#), the site of the Buddha's enlightenment. In the third week following his enlightenment, the Buddha was meditating there, experiencing the bliss of enlightenment, when a severe thunderstorm broke out. Seeing that the Buddha was in danger, the nāga king of the tree (whom the commentaries say lived in a pond next to the tree), coiled himself around the Buddha seven times and then spread his hood over him like an umbrella to protect him from the storm. In other accounts, the nāga king resides in the Mucilinda lake, which is located just south of the present-day site of the [MAHĀBODHI TEMPLE](#) at Bodhgayā, and the event occurs in the sixth week following the enlightenment. In some versions of the story, once the storm had passed, the nāga transformed himself into a youth who then paid his respects before the buddha. The scene is a frequent subject of Buddhist art, where Mucilinda is often depicted in multiheaded form (often with seven heads). The story of Mucilinda is also exuberantly told in the [LALITAVISTARA](#) as well as in various [MAHĀYĀNA](#) sources.

muditā. (T. dga' ba; C. xi; J. ki; K. hŭi 喜). In Sanskrit and Pāli, “joy” or “sympathetic joy”; the third of the four divine abidings ([BRAHMAVIHĀRA](#)) and four immeasurables ([APRAMĀNA](#)). Sympathetic joy is the attitude of taking delight in the happiness and good fortune of others and is the opposite of jealousy and envy. The other three divine abidings and immeasurables are [MAITRĪ](#) (loving-kindness), [KARUNĀ](#) (compassion), and [UPEKSĀ](#) (equanimity). The divine abidings are used for the cultivation of tranquillity or serenity meditation ([ŚAMATHA](#)). Of the four divine abidings, sympathetic joy, along with loving-kindness and compassion, is capable of producing the first three of four states of meditative absorption ([DHYĀNA](#)). Equanimity alone is capable of producing the fourth dhyāna. In the [VISUDDHIMAGGA](#), sympathetic joy is listed as one among forty possible meditative topics ([KAMMATTHĀNA](#)). The text indicates that, along with the other three divine abidings, sympathetic joy is used only for the cultivation of tranquillity, not to cultivate insight (P. [VIPASSANĀ](#); S. [VIPAŚYANĀ](#)).

mudrā. (P. muddā; T. phyag rgya; C. yin; J. in; K. in 印). In Sanskrit, lit., “seal,” “mark,” or “sign”; but in Buddhist contexts it often refers to hand and arm “gestures” made during the course of ritual practice or depicted in images of buddhas, bodhisattvas, tantric deities, and other Buddhist images. Mudrās commonly associated with figures of the Buddha, such as the “gesture of fearlessness” ([ABHAYAMUDRĀ](#)), the “earth-touching gesture” ([BHŪMISPARŚAMUDRĀ](#)), the “wheel of the dharma gesture” ([DHARMACAKRAMUDRĀ](#)), and the “gesture of meditation” ([DHYĀNAMUDRĀ](#)), are found in the earliest Indian representations of [ŚĀKYAMUNI](#). With the development of [MAHĀYĀNA](#) and [VAJRAYĀNA](#) iconography, the number of mudrās depicted in Buddhist art proliferated, until they numbered in the hundreds. They are a prominent feature in the vajrayāna artwork of the Himalayan region (northern India, Nepal, Tibet, and Bhutan) as well as early tantric images from Southeast Asia and the esoteric traditions of East Asia. Mudrās are also dynamic hand movements performed during the course of tantric ritual practice, where they may symbolize material offerings, enact forms of worship, or signify relationships with visualized deities. ¶ In a more specifically tantric denotation, the term mudrā is used to refer to a sexual consort, of which there are two types: the [JÑĀNAMUDRĀ](#) (a visualized consort) and the [KARMAMUDRĀ](#) (an actual consort). The highest state of realization in certain tantric systems is called [MAHĀMUDRĀ](#), the great seal. See also [ABHAYAMUDRĀ](#); [AÑJALIMUDRĀ](#); [BHŪTADĀMARAMUDRĀ](#); [BODHYAṄĪMUDRĀ](#); [DAINICHI KEN-IN](#); [HŪMKĀRAMUDRĀ](#);

HŌSHU-IN; [ONGYŌ-IN](#); [TARJANĪMUDRĀ](#); [VARADAMUDRĀ](#); [VITARKAMUDRĀ](#).

[Mugai Nyodai](#). (無外如大) (1223–1298). Influential nun, who became Japan’s first female [ZEN](#) master. A daughter of the powerful Adachi clan, Mugai entered the cloister and became a student of émigré teacher [WUXUE ZUYUAN](#) (J. Mugaku Sogen, 1226–1286). Wuxue was a Chinese [CHAN](#) master in the [LINJI ZONG](#) (J. [RINZAISHŪ](#)), who reluctantly came to Japan in 1279 at the invitation of Hōjō Tokimune (1251–1284), the eighth regent of the Kamakura shogunate, to escape the depredations of the Mongol troops then invading China. Nyodai eventually became a dharma heir (J. hassu; C. [FASI](#)) in [WUXUE](#)’s Rinzai lineage, together with the imperial scion and monk [KŌHŌ KENNICHI](#) (1241–1316). Nyodai later founded Keiaiji, a Rinzai Zen convent in the Japanese capital of Kyōto, which eventually became the leading cloister of the five mountain convent system (amadera gozan), the nun’s counterpart of the five mountain ([GOZAN](#)) monastery system of the Kamakura.

[Mugujōnggwang taedarani kyōng](#). (S. Raśmivimalaviśuddhaprabhādhāraṇī; T. ’Od zer dri ma med pa mnam par dag pa’i ’od gzungs; C. Wugoujingguang datuoluoni jing; J. Mukujōkō daidaranikyō 無垢淨光大陀羅尼經). In Korean, “Great [DHĀRANĪ](#) Scripture of Immaculate Radiance”; the world’s oldest extant printed text, printed c. 751 CE in Silla dynasty Korea. The woodblock printing of the text was rediscovered in 1966 during reconstruction of the Sōkka t’ap ([ŚĀKYAMUNI STŪPA](#)) at the royal monastery of [PULGUksA](#) in the ancient Silla capital of [KYŌNGJU](#). The terminus ad quem for its printing is 751 CE, when the text was sealed inside the Sōkka t’ap, but since the colophon to the *Dhāraṇī* states that it was translated into Chinese in 704 by *Mitraśānta, the printing may well have occurred decades earlier. The dhāraṇī was printed using xylographic (woodblock) technology, in which the Sinographs are carved on specially cured wood in mirror image, then an impression taken off the blocks with ink.

[Muhak Chach’o](#). (無學自超) (1327–1405). A Korean [SŌN](#) monk and pilgrim during the transition from the Koryō to the Chosŏn dynasty; Muhak was a native of Samgi (present-day South Kyōngsang province). After his ordination in 1344, Muhak traveled to different monasteries to study. In 1353, he went to China, where he met the Indian [ĀCĀRYA ZHIKONG CHANXIAN](#) (d. 1363; K. Chigong Sōnhyōn; S. *Śūnyadiśya-Dhyānabhadra) and studied under his Korean student [NAONG HYEĞŪN](#) at the Yuan-dynasty capital of Yanjing. Muhak returned to Korea in 1356. When Naong returned two years later, Muhak continued his

studies under him at the hermitage of Wŏnhyoam on Mt. Ch'ŏnsŏng. In 1392, shortly after the establishment of the Chosŏn dynasty, Muhak was invited to the palace as the king's personal instructor (wangsa) and given the title Venerable Myoŏm (Subtle Adornment). He was also asked to reside at the royal monastery of Hoeamsa. In 1393, Muhak assisted the Chosŏn-dynasty founder, King T'aejo (r. 1392–1398), in deciding on the location for the new capital in Hanyang (present-day Seoul). Among his writings, Muhak's history of the Korean Sŏn tradition, *Pulcho chongp'a chido*, is still extant.

Mujaku Dōchū. (無着道忠) (1653–1744). Japanese [ZEN](#) master and historian of the [RINZAISHŪ](#). Mujaku was a native of Tajima in present-day Hyōgo prefecture. He entered the monastery at a young age and was ordained by the monk Jikuin Somon (d.u.) at the monastery of Ryūgein. At the age of twenty-two, Mujaku followed his teacher Jikuin to Daijōji, where the latter was invited as its founding abbot (kaisan; C. [KAISHAN](#)). Later that same year, Jikuin was invited to [MYŌSHINJI](#) as its abbot and again Mujaku followed. In 1707, Mujaku himself became the abbot of Myōshinji and served again as abbot in 1714. He retired to Ryūgein in 1722 and devoted much of his time to his writing. Mujaku was a prolific writer who is said to have composed more than 370 works. His works include commentaries on various scriptures and discourse records ([YULU](#)) of [CHAN](#) and Zen masters, monastic regulations for the Zen community (see [QINGGUI](#)), histories of temples and monasteries, and dictionaries of Zen terms and vernacular phrases. His work thus serves as an invaluable tool for studying the history, doctrine, ritual, daily behavior, and language of the Zen tradition.

Mujū Ichien. (無住一圓) (1227–1312). A Japanese monk during the Kamakura period; also known as Mujū Dōgyō. He was born into a warrior family and became a monk at the age of eighteen. Mujū studied the doctrines of various sects, including the Hossōshū, [SHINGONSHŪ](#), [TENDAISHŪ](#), and [JŌDOSHŪ](#), and received [ZEN](#) training from the [RINZAISHŪ](#) monk [ENNI BEN'EN](#) (1202–1280). In 1262, Mujū built Chōboji (Matriarchal Longevity Monastery) in Owari (present-day Nagoya, a port city in the center of the main Japanese island of Honshū), where he spent the rest of his life. Although affiliated with the Rinzaishū, Mujū took an ecumenical approach to Buddhism, arguing that all the different teachings of Buddhism were skillful means of conveying the religion's ultimate goal; he even denounced [NICHIREN](#) (1222–1382) for his contemporary's exclusivist attitude toward his own eponymous sect. Mujū was also famous for

his collections of Japanese folklore, such as the [SHASEKISHŪ](#) (“Sand and Pebbles Collection”), written between 1279 and 1283; his *Tsuma kagami* (“Mirror for Wives”) of 1300; and his 1305 *Zōdanshū* (“Collection of Random Conversations”). In particular, in the *Shasekishū*, Mujū introduced the idea of the “unity of spirits and buddhas” ([SHINBUTSU SHŪGŌ](#)), describing the Japanese indigenous gods, or [KAMI](#), as various manifestations of the Buddha.

[Mujun](#). (K) (無準). See [KIHWA](#).

[Mukai nanshin](#). [alt. Bukai nanshin] (霧海南針). In Japanese, “A Compass on the Misty Sea”; a Japanese vernacular sermon (kana hōgo) written in 1666 for a lay woman by the Japanese [ŌBAKUSHŪ](#) monk CHŌON DŌKAI and published in 1672. The *Mukai nanshin* provides an explanation of [ZEN](#) practice with reference to the four great vows ([SI HONGSHIYUAN](#)) and the six perfections ([PĀRAMITĀ](#)) of the [BODHISATTVA](#). The *Mukai nanshin* also contains criticisms of other contemporary teachings, especially that of Zen kōan (C. [GONG’AN](#)) training as then practiced in Japanese Zen. Both the [RINZAISHŪ](#) and [SŌTŌSHŪ](#) of the Zen school during the Tokugawa period relied heavily upon the rote memorization of kōans and capping phrases ([JAKUGO](#)) and tended to ignore the study of the literary content of the kōans due to their lack of formal training in classical Chinese. Ōbaku monks like Chōon, under the influence of their Chinese émigré teachers, began to criticize this tendency within the Zen community in Japan.

[Mukan Fumon](#). (無關普門) (1212–1291). Japanese proper name of [RINZAISHŪ](#) monk and first abbot of [NANZENJI](#); also known as Gengo. Mukan was born in Hoshina in Shinano province (present-day Nagano prefecture) and received the [BODHISATTVA](#) precepts around 1230 at a monastery affiliated with [MYŌAN EISAI](#)’s (1141–1215) lineage. He became versed at Japanese exoteric and esoteric Buddhist teachings, and traveled around the eastern part of Japan, especially the Kantō and Tōhoku regions, to lecture. Between 1243 and 1249, Mukan studied under [ENNI BEN’EN](#) (1202–1280). Mukan traveled to China in 1251, where he received transmission from Duanqiao Miaolun (1201–1261), the tenth-generation master in the [YANGQI PAI](#) collateral lineage of the [LINJI ZONG](#), before returning to Japan in 1263. Mukan became the third abbot of Tōhukuji in 1281 and was later appointed in 1291 by the cloistered Emperor Kameyama (r. 1260–1274) to be the founding abbot (J. kaisan; C. [KAISHAN](#)) of Nanzenji. There is a well-known story about his appointment as the Nazenji abbot. The monastery was originally built as a royal palace, but soon after the emperor moved there,

ghosts began to haunt it. After several other monks failed to exorcise the ghosts, the emperor finally invited Mukan to try. Mukan succeeded in removing the ghosts by conducting Zen meditation with his disciples. In gratitude, the emperor turned the palace into a Rinzai monastery and appointed Mukan its abbot.

mūla. (T. rtsa; C. gen; J. kon; K. kŭn 根). In Sanskrit and Pāli, “root” or “faculty”; referring specifically to three unwholesome or nonvirtuous ([AKUŚALA](#)) and three wholesome or virtuous ([KUŚALA](#)) roots or faculties that determine the moral quality of volition and volitional action ([CETANĀ](#)), the latter being essentially equivalent to the catalyst of action ([KARMA](#)). The three unwholesome roots are greed ([LOBHA](#)), hatred ([DVEṢA](#)) and delusion ([MOHA](#)). The three wholesome roots are nongreed ([ALOBHA](#)), nonhatred ([ADVĒṢA](#)), and nondelusion ([AMOHA](#)). Greed encompasses everything from the mildest desire for something to the grossest form of lust and arises through unsystematic attention ([AYONIŚOMANASKĀRA](#)) to alluring objects. Hatred encompasses everything from the mildest dislike of something to the most intense feelings of rage and arises through unsystematic attention to unattractive objects. The expression “wholesome faculties” or “virtuous roots” ([KUŚALAMŪLA](#)) refers not only to the absence of such unwholesome states but also to the presence of virtuous states. Thus, for example, nongreed refers to liberality and generosity, nonhatred to kindness, and nondelusion to wisdom, *etc.* As an antidote to greed, the perception of impurity ([AŚUBHA](#)) in objects is to be cultivated. As an antidote to hatred, loving-kindness ([MAITRĪ](#)) is to be cultivated. As an antidote to delusion, wisdom ([PRAJÑĀ](#)) is to be cultivated. The term mūla is used sometimes to refer to these attitudes that produce wholesome or unwholesome actions, and sometimes to refer to the positive and negative actions themselves, including those performed in previous lives. See also [KUŚALAMŪLA](#); [MOKṢABHĀGĪYA](#); [NIRVEDHABHĀGĪYA](#); SAMMUCCHINNAKUŚALAMŪLA.

mūlakleśa. (T. rtsa ba’i nyon mongs; C. genben fannao; J. konpon bonnō; K. kŭnbon pŏnnoe 根本煩惱). In Sanskrit, “root afflictions,” “basic afflictions”; a subcategory of the forty-six mental concomitants ([CAITTA](#)) according to the [SARVĀSTIVĀDA](#) school of [ABHIDHARMA](#) and fifty-one according to the [YOGĀCĀRA](#) school. It comprises the fundamental negative mental states, enumerated as six: sensuality ([RĀGA](#)), anger ([PRATIGHA](#)), pride ([MĀNA](#)), ignorance ([AVIDYĀ](#)), doubt ([VICIKITSĀ](#)), and views ([DRṢṬI](#)). They are called root afflictions because they are the sources of all other afflictions, and are distinguished from the “secondary

afflictions” ([UPAKLEŚA](#)), which are narrower in applicability. The list is also closely related to the three poisons ([TRIVIṢA](#)) of sensuality or greed (*rāga* or [LOBHA](#)), hatred or aversion ([DVESA](#)), and delusion ([MOHA](#)).

[Mūlamadhyamakakārikā](#). (T. *Dbu ma rtsa ba'i tshig le'u byas pa*; C. *Zhong lun*; J. *Chūron*; K. *Chung non* 中論). In Sanskrit, “Root Verses on the Middle Way”; the magnum opus of the second-century Indian master [NĀGĀRJUNA](#); also known as the *Prajñānāmamūlamadhyamakakārikā* and the *Madhyamakaśāstra*. (The Chinese analogue of this text is the *Zhong lun*, which renders the title as [MADHYAMAKAŚĀSTRA](#). This Chinese version was edited and translated by [KUMĀRAJĪVA](#). Kumārajīva’s edition, however, includes not only Nāgārjuna’s verses but also Piṅgala’s commentary to the verses.) The most widely cited and commented upon of Nāgārjuna’s works in India, the *Mūlamadhyamakakārikā*, was the subject of detailed commentaries by such figures as [BUDDHAPĀLITA](#), [BHĀVAVIVEKA](#), and [CANDRAKĪRTI](#) (with Candrakīrti’s critique of Bhāvaviveka’s criticism of a passage in Buddhapālita’s commentary providing the locus classicus for the later Tibetan division of [MADHYAMAKA](#) into *[SVĀTANTRIKA](#) and *[PRĀSANGIKA](#)). In East Asia, it was one of the three basic texts of the “Three Treatises” school (C. [SAN LUN ZONG](#)), and was central to [TIANTAI](#) philosophy. Although lost in the original Sanskrit as an independent work, the entire work is preserved within the Sanskrit text of Candrakīrti’s commentary, the [PRASANNAPADĀ](#) (serving as one reason for the influence of Candrakīrti’s commentary in the European reception of the *Mūlamadhyamakakārikā*). The work is composed of 448 verses in twenty-seven chapters. The topics of the chapters (as provided by Candrakīrti) are the analysis of: (1) conditions ([PRATYAYA](#)), (2) motion, (3) the eye and the other sense faculties ([INDRIYA](#)), (4) aggregates ([SKANDHA](#)), (5) elements ([DHĀTU](#)), (6) passion and the passionate, (7) the conditioned (in the sense of production, abiding, disintegration), (8) action and agent, (9) prior existence, (10) fire and fuel, (11) the past and future limits of [SAMSĀRA](#), (12) suffering, (13) the conditioned ([SAMSKĀRA](#)), (14) contact (*saṃsarga*), (15) intrinsic nature ([SVABHĀVA](#)), (16) bondage and liberation, (17) action and effect, (18) self, (19) time, (20) assemblage (*sāmagrī*), (21) arising and dissolving, (22) the [TATHĀGATA](#), (23) error, (24) the [FOUR NOBLE TRUTHS](#), (25) [NIRVĀNA](#), (26), the twelve links of dependent origination ([PRATĪTYASAMUTPĀDA](#)), and (27) views. The tone of the work is set in its famous homage to the Buddha, which opens the work, “I bow down to the perfect Buddha, the best of teachers, who taught that what is dependently arisen is

without cessation, without production, without annihilation, without permanence, without coming, without going, without difference, without sameness, pacified of elaboration, at peace.” The *Mūlamadhyamakakārikā* offers a relentless examination of many of the most important categories of Buddhist thought, subjecting them to an analysis that reveals the absurd consequences that follow from imagining any of them to be real in the sense of possessing an independent and intrinsic nature ([SVABHĀVA](#)). Nāgārjuna demonstrates repeatedly that these various categories only exist relationally and only function heuristically in a worldly and transactional sense; they do not exist ultimately. Thus, in the first chapter, Nāgārjuna examines production via causes and conditions, one of the hallmarks of Buddhist thought, and declares that a thing is not produced from itself, from something other than itself, from something that is both itself and other, or from something that is neither itself nor the other. He examines the four kinds of conditions, declaring each to lack an intrinsic nature, such that they do not exist because they do not produce anything. In the second chapter, Nāgārjuna examines motion, seeking to determine precisely where motion occurs: on the path already traversed, the path being traversed, or on the path not yet traversed. He concludes that motion is not to be found on any of these three. In the twenty-fifth chapter, he subjects nirvāṇa to a similar analysis, finding it to be neither existent, nonexistent, both existent and nonexistent, nor neither existent nor nonexistent. (These are the famous [CATUSKOTI](#), the “four alternatives,” or tetralemma.) Therefore, nirvāṇa, like saṃsāra and all worldly phenomena, is empty of intrinsic nature, leading Nāgārjuna to declare (at XXV.19), in one of his most famous and widely misinterpreted statements, that there is not the slightest difference between saṃsāra and nirvāṇa. The thoroughgoing negative critique or apophasis in which Nāgārjuna engages leads to charges of nihilism, charges that he faces directly in the text, especially in the twenty-fourth chapter on the four noble truths where he introduces the topic of the two truths ([SATYADVAYA](#))—ultimate truth ([PARAMĀRTHASATYA](#)) and conventional truth ([SAMVRTISATYA](#))—declaring the importance of both in understanding correctly the doctrine of the Buddha. Also in this chapter, he discusses the danger of misunderstanding emptiness ([ŚŪNYATĀ](#)), and the relation between emptiness and dependent origination (“That which is dependent origination we explain as emptiness. This is a dependent designation; just this is the middle path”). To those who would object that emptiness renders causation and change impossible, he counters that if things existed independently and intrinsically, there could be no transformation; “for whom emptiness is possible,

everything is possible.” There has been considerable scholarly discussion of Nāgārjuna’s target audience for this work, with the consensus being that it is intended for Buddhist monks well versed in [ABHIDHARMA](#) literature, especially that associated with the [SARVĀSTIVĀDA](#) school; many of the categories to which Nāgārjuna subjects his critique are derived from this school. In the Sarvāstivāda abhidharma, these categories and factors ([DHARMA](#)) are posited to be endowed with a certain reality, a reality that Nāgārjuna sees as implying permanence, independence, and autonomy. He seeks to reveal the absurd consequences and hence the impossibility of the substantial existence of these categories and factors. Through his critique, he seeks a new understanding of these fundamental tenets of Buddhist philosophy in light of the doctrine of emptiness as set forth in the [PRAJÑĀPĀRAMITĀ SŪTRAS](#). He does not cite these sūtras directly, however, nor does he mention the [MAHĀYĀNA](#), which he extols regularly in other of his works. Instead, he seeks to demonstrate how the central Buddhist doctrine of causation, expressed as dependent origination (pratīyasamutpāda), necessarily entails emptiness (śūnyatā). The understanding of emptiness is essential in order to abandon false views ([MITHYĀDRSTI](#)). Nāgārjuna therefore sees his purpose not to reject the standard categories of Buddhist thought but to reinterpret them in such a way that they become conduits for, rather than impediments to, liberation from suffering, in keeping with the Buddha’s intent.

[Mūlamahāsāṃghika](#). (T. Gzhi dge ’dun phal chen pa; C. Genben Dazhong bu; J. Konpon Daishubu; K. Kūnbon Taejung pu 根本大衆部). In Sanskrit, the “Root” or “Fundamental Great Congregation”; one of the nine subdivisions of the [MAHĀSĀMGHIKA](#) school of mainstream Buddhism. The other eight are [EKAVYAVAHĀRIKA](#), [LOKOTTARAVĀDA](#), [KAUKKUTIKA](#), [BAHUŚRUTIYA](#), [PRAJÑĀPTIVĀDA](#), [CAITYA](#), Avaraśaila, and Uttaraśaila.

[Mūlapariyāyasutta](#). (C. Xiang jing; J. Sōkyō; K. Sang kyōng 想經). In Pāli, “Discourse on the Root Instruction” or the “Roots of Phenomena”; the first sutta in the [MAJJHIMANIKĀYA](#) (an untitled recension of uncertain affiliation appears in the Chinese translation of the [EKOTTARĀGAMA](#); there is also a related [SARVĀSTIVĀDA](#) recension that appears as the 102nd [SŪTRA](#) in the Chinese translation of the [MADHYAMĀGAMA](#)). Preached to a gathering of monks in Ukkatṭhā, the Buddha explains the basis of all phenomena under twenty-four categories (e.g., the four material elements, the heavens, sensory cognition, etc.), noting that the nature of these phenomena is truly knowable only by a

[TATHĀGATA](#). The Buddha describes the different cognitive capacities of four types of persons: ordinary worldlings ([PṚTHAGJANA](#)), disciples engaged in higher training, worthy ones ([ARHAT](#)), and perfect buddhas ([SAMYAKSAMBUDDHA](#)).

[Mūlasarvāstivāda](#). (T. Gzhi thams cad yod par smra ba; C. Genben Shuoyiqieyou bu; J. Konpon Setsuissaiubu; K. Kūnbon Sōrilch'eyu pu 根本說一切有部). In Sanskrit, lit., “Root [SARVĀSTIVĀDA](#)”; a subsect of the [SARVĀSTIVĀDA](#) (lit. “Everything Exists”), one of the “mainstream” (i.e., non-Mahāyāna) schools ([NIKĀYA](#)) of Indian Buddhism. The differences between the Mūlasarvāstivāda and the Sarvāstivāda are not entirely clear, but they are differentiated less by doctrinal disagreements than by disputes over [VINAYA](#). There is virtually no evidence in Indian inscriptions of the term “Mūlasarvāstivāda,” suggesting that it did not have an independent sectarian identity; to the contrary, however, some Chinese pilgrims to India mention only the former term. The scholarly consensus is that the designation Mūlasarvāstivāda seems to have originated in a dispute over vinaya recensions between the Sarvāstivāda school of [MATHURĀ](#) in north-central India and the northwestern Sarvāstivāda school in the [KASHMIR-GANDHĀRA](#) region. By calling their vinaya recension the [MŪLASARVĀSTIVĀDA VINAYA](#)—the “root” or “source” of the Sarvāstivāda vinaya in one interpretation—the Mathurā sect was claiming its primacy over other strands of the Sarvāstivāda school, especially this northwest branch, and essentially asserting that the Kashmiri Sarvāstivāda school was an offshoot of the Mathurā community. After the northwestern school fell into decline, the Mathurā school may also have adopted this name to demonstrate its preeminence as the “original,” “root,” or “foundational” Sarvāstivāda school. Their Mūlasarvāstivāda vinaya proved to be extremely important in the history of Buddhism by providing the foundation for monastic practice in the mature Tibetan traditions of Buddhism.

[Mūlasarvāstivāda vinaya](#). (T. Gzhi thams cad yod par smra ba'i 'dul ba; C. Genben Shuoyiqieyou bu pinaiye; J. Konpon Setsuissaiubu binaya; K. Kūnbon Sōrilch'eyubu pinaeya 根本說一切有部毘奈耶). In Sanskrit, the “Monastic Code of the [MŪLASARVĀSTIVĀDA](#),” or “Original Monastic Code of the [SARVĀSTIVĀDA](#) School”; one of the six extant recensions of the [VINAYA](#). Divergences between their respective monastic codes were one of the principal differentiating characteristics of the various mainstream schools of Indian Buddhism. The attempt to differentiate the Mūlasarvāstivāda vinaya from the Sarvāstivāda

vinaya (both of which are extant in Chinese translation) may well derive from a polemical claim by the [MATHURĀ](#) branch of the Sarvāstivāda school in north-central India that their tradition comprised the “root” or “foundational” monastic code of the school. Whatever the precise denotation of the term, the Mūlasarvāstivāda vinaya, is by far the longest of the extant vinayas—by some calculations some four times longer than any of its counterparts. The Mūlasarvāstivāda vinaya contains some material that suggests it may belong to one of the earliest strata of the vinaya literature. The text was composed in Sanskrit in the first or second centuries CE, but only a few Sanskrit fragments have been discovered at [GILGIT](#). The code is preserved in full only in Tibetan translation, although there is also a partial (but still massive) Chinese translation made by [YIJING](#) (635–713) in the late seventh and early eighth centuries. The code details 253 rules and regulations for fully ordained monks ([BHIKSU](#)) and 364 rules for fully ordained nuns ([BHIKSUNĪ](#)) as well as precepts for male and female lay practitioners ([UPĀSAKA](#) and [UPĀSIKĀ](#)), male and female novices ([ŚRĀMANERA](#) and [ŚRĀMANERIKĀ](#)), and female probationers ([ŚIKSAMĀNĀ](#)). Because each rule requires an explanation of how it came to be established, the text is a vast source of stories (many of which do not appear in other codes) that provide essential insights into Buddhist monastic life at the time of its composition. The collection also includes discussions of areas of monastic life that receive short shrift in other recensions, such as how to escort images on procession through town or lend the [SAMGHA](#)’s money with interest to laypeople. The Mūlasarvāstivāda vinaya also includes many narratives ([AVADĀNA](#)) and stories, including one of the earliest Sanskrit accounts of the life of the Buddha, as well as [SŪTRAS](#) that in other mainstream traditions appear in the scripture section of the canon ([SŪTRAPITAKA](#)). Because of its eclectic content, the Mūlasarvāstivāda vinaya functions almost as proto-canon ([TRIPITAKA](#)). The Mūlasarvāstivāda vinaya is the monastic code still followed today in the Tibetan traditions of Buddhism, where it is studied primarily via the summary composed by [GUNAPRABHA](#), entitled the [VINAYASŪTRA](#).

[Mūlasāsana](#). In Pāli, the “Origin of the Religion”; a Pāli chronicle composed in northern Thailand during the early fifteenth century, prior to the [CĀMADEVĪVAMSA](#) and [JINAKĀLAMĀLĪ](#), both of which use it as a source. The work is written in the Tai-Yuan language, a dialect prevalent in the Lānnā Thai kingdom. The chronicle recounts how a reformed monastic tradition from Sri Lanka was introduced to Martaban (Muttama) in Lower Burma in the fourteenth

century, and how this tradition was then spread to [SUKHOTHAI](#) and Chiangmai.

[mūlatantra](#). (T. rtsa rgyud). In Sanskrit, “root tantra”; a term used to distinguish the foundational text in a given tantric cycle from the various addenda, commentaries, ritual texts, and [SĀDHANAS](#) connected with the [TANTRA](#). Thus, one would speak, for example, of the root tantra of the [GUHYASAMĀJA](#).

[mūlavijñāna](#). (T. rtsa ba'i nram shes; C. benshi; J. honjiki; K. ponsik 本識). In Sanskrit, lit. “root consciousness,” “foundational consciousness”; a generic form of consciousness described within the [MAHĀSĀMGHIKA](#) branch of the mainstream Buddhist schools, which was said to serve as the support for the six sensory consciousnesses, just as the root of a tree is the basis of the leaves. This concept of a root consciousness may have been the antecedent of the storehouse consciousness ([ĀLAYAVIJÑĀNA](#)) in the [YOGĀCĀRA](#) school; the term is sometimes used as an alternate name for that form of consciousness in Yogācāra materials.

[Müller, Friedrich Max](#). (1823–1900). Arguably the most famous Indologist of the nineteenth century, born in Dessau, the capital of the duchy of Anhalt-Dessau, son of the famous Romantic poet Wilhelm Müller. He studied Sanskrit in Leipzig, receiving a doctorate in philology in 1843 at the age of twenty. In Berlin, he attended the lectures of Franz Bopp and Schelling. He went to Paris in 1846 where he studied with [EUGÈNE BURNOUF](#), who suggested the project that would become his life’s work, a critical edition of the *Ṛgveda*. In order to study the available manuscripts, he traveled to London and then settled in Oxford, where he would spend the rest of his life, eventually being appointed to a newly established professorship in comparative philology. Although best known for his work in philology, Indology, and comparative religion, Müller wrote essays and reviews on Buddhism throughout his career. Perhaps his greatest contribution to Buddhist studies came through his role as editor-in-chief of the Sacred Books of the East series, published between 1879 and 1910. Ten of the forty-nine volumes of the series were devoted to Buddhist works. Reflecting the opinion of the day that Pāli texts of the [THERAVĀDA](#) tradition represented the most accurate record of what the Buddha taught, seven of these volumes were devoted to Pāli works, with translations by [THOMAS W. RHYS DAVIDS](#) and [HERMANN OLDENBERG](#), as well as a translation of the [DHAMMAPADA](#) by Müller himself. Among other Indian works, [ĀSVAGHOSA](#)’s famous life of the Buddha appeared twice, translated in one volume from Sanskrit by E. B. Cowell and in another from Chinese by [SAMUEL BEAL](#). [HENDRIK KERN](#)’s translation of the

[SADDHARMAPUNDIRĪKASŪTRA](#) (“Lotus Sūtra”) was included in another volume. The final volume of the series, entitled *Buddhist Mahāyāna Texts* (1894), included such famous works as the [VAJRACCHEDIKĀPRAJÑĀPĀRAMITĀSŪTRA](#) (“Diamond Sūtra”), the [PRAJÑĀPĀRAMITĀHRDAYASŪTRA](#) (“Heart Sūtra”), and the three major [PURE LAND](#) sūtras, all Indian works (or at least so regarded at the time) but selected because of their importance for Japanese Buddhism. Müller’s choice of these texts was influenced by two Japanese students: [TAKAKUSU JUNJIRO](#) and [NANJO BUN’YU](#), both [JODO SHINSHU](#) adherents who had gone to Oxford in order to study Indology with Müller. Upon their return, they introduced to Japanese academe the philological study of Buddhism from Sanskrit and Pāli sources. The works in *Buddhist Mahāyāna Texts* were translated by Müller, with the exception of the [GUAN WULIANGSHOU JING](#) (**Amitāyurdhyānasūtra*), which was translated by Takakusu. In his final years, with financial support of the King of Siam, Müller began editing the Sacred Books of the Buddhists series, which was taken over by T. W. Rhys Davids upon Müller’s death in 1900.

[Mun, Ajahn](#). See [AJAHN MUN BHURIDATTA](#).

[muni](#). (T. thub pa; C. mouni/shengzhe; J. muni/shōja; K. moni/sōngja 牟尼/聖者). In Sanskrit and Pāli, “sage”; used in India to refer various seers, saints, ascetics, monks, and hermits, especially those who have taken vows of silence. In Buddhism, the term is used in reference to both the Buddha and [PRATYEKABUDDHAS](#), more rarely to [ARHATS](#). It figures in two of the most common epithets of the Buddha: [ŚĀKYAMUNI](#), or “Sage of the Śākya Clan,” and [MAHĀMUNI](#), or “Great Sage.” The term also figures in the name [MANTRA](#) of the Buddha, “oṃ muni muni mahāmuni Śākyamuni svāhā.”

[mūrdhagata](#). (S). See [MURDHAN](#).

[mūrdhan](#). (T. rtse mo; C. ding; J. chō; K. chōng 頂). In Sanskrit, “summit,” or “peak,” or “climax”; the second of the “aids to penetration” ([NIRVEDHABHĀGIYA](#)); these aids are developed during the [PRAYOGAMĀRGA](#) (path of preparation) and mark the transition from the mundane path of cultivation ([LAUKIKA-BHĀVANĀMĀRGA](#)) to supramundane vision (viz., [DARŚANAMĀRGA](#)) on both the [HĪNAYĀNA](#) and [MAHĀYĀNA](#) paths. Mūrdhan is defined specifically in terms of faith in the validity of the [FOUR NOBLE TRUTHS](#) (catvāry āryasatāni), a faith that begins to develop at the level of [ŪSMAN](#) (heat), the first of the aids to penetration,

and reaches its “summit” or “climax” at the level of mūrdhan. This stage is called “summit,” the [ABHIDHARMAMAHĀVIBHĀSĀ](#) explains, because it is like the summit of a mountain, where one cannot tarry long: either you continue on to ascend another peak or you retreat back down the mountain. Therefore, if one has no difficulties, one will progress on to [KSĀNTI](#) (forbearance); but if one meets with problems, one will retrogress back to ūṣman. Thus, mūrdhan and ūṣman, the first two of the nirvedhabhāgīyas, are still subject to retrogression and thus belong to the mundane path of cultivation (laukikabhāvanāmārga). Mūrdhan marks the end of the possibility of the wholesome faculties ([KUŚALAMŪLA](#)) created by past salutary deeds being destroyed by unwholesome mental states, such as anger. The kuśalamūla are no longer susceptible to destruction from this point on the path forward to the achievement of the state of the [ARHAT](#) or buddha.

[Musang](#). (K) (無相). See [CHŎNGJUNG MUSANG](#).

[muṣitasmṛti](#). (P. muṭṭhassati; T. brjed nges; C. shinian; J. shitsunen; K. sillyŏm 失念). In Sanskrit, “inattentiveness,” “negligence,” or “forgetfulness”; one of the forty-six mental concomitants ([CAITTA](#)) according to the [SARVĀSTIVĀDA](#) school of [ABHIDHARMA](#) (where the term is also called smṛtināśa) and one of the fifty-one according to the [YOGĀCĀRA](#) school. Within this group, it falls into the category of the “secondary afflictions” ([UPAKLEŚA](#)). “Inattentiveness” refers to the lack of clarity caused by the failure to attend properly to and be mindful of either the present moment or an intended object of attention, or the failure to recollect what had transpired in the immediately preceding moments. It involves the inattentiveness to virtuous objects, thus leading to attention to nonvirtuous objects. The term is taken to be one of the possible derivative mental states of “ignorance” ([AVIDYĀ](#)), because it causes the mind to become distracted to the objects of the afflictions. It is the opposite of “attentiveness,” “proper recollection,” and “presence of mind” ([SMṚTI](#)).

[Musō Soseki](#). (夢窓疎石) (1275–1351). Japanese [ZEN](#) master in the [RINZAISHŪ](#). A native of Ise, he became a monk at a young age and studied the teachings of the [TENDAISHŪ](#). Musō’s interests later shifted toward Zen and he became the student of the Zen master [KŌHŌ KENNICHI](#). After receiving dharma transmission from Kōhō, Musō led an itinerant life, moving from one monastery to the next. In 1325, he received a decree from Emperor Godaigo (r. 1318–1339) to assume the abbotship of the powerful monastery of [NANZENJI](#) in Kyōto. The following year,

he went to Kamakura, where he served as abbot of the influential monasteries of Jōchiji, Zuisenji, and [ENGAKUJI](#). Later, he returned to Nanzenji at the request of the emperor. In 1333, Emperor Godaigo triumphantly returned to Kyōto and gave Musō the monastery Rinsenji and the title of state preceptor (kokushi; C. [GUOSHI](#)). After the emperor's death in 1339, Musō established the new monastery of TENRYŪJI with the help of the shōgun Ashikakga Takauji (1305–1358) and became its founding abbot (J. kaisan; C. [KAISHAN](#)). In this manner, Musō came to serve as abbot of many of the top-ranking monasteries of the [GOZAN](#) system. His disciples came to dominate the medieval Zen community and played important roles in the rise of gozan culture. His teachings are recorded in the *Musōroku*, *Musō hōgo*, and [MUCHŪ MONDŌ](#).

[Muyong Suyŏn](#). (無用秀演) (1651–1719). Korean scholastic ([KYO](#)) monk of the Chosŏn dynasty. Muyong lost both parents at the age of thirteen and lived with his elder brother, until he decided in 1669 to become a monk at the monastery of [SONGGWANGSA](#). Three years later, he went to the monastery of [SŌNAMSA](#) to continue his studies under Ch'imgoeng Hyŏnbyŏn (1616–1684). At Ch'imgoeng's recommendation, Muyong became a disciple of the eminent [SŌN](#) master [PAEGAM SŌNGCH'ONG](#) (1631–1700) at Songgwangsa. In 1680, Muyong held a public lecture at Sinsŏnam in the vicinity of Chinggwangsa. In order to accommodate the large number of people coming to his lectures, Muyong is said to have moved back to the larger monasteries of Sŏnamsa and Songgwangsa. Muyong at one point went into retreat to meditate, but he was forced to return to teaching at the request of all those people who wished to attend his lectures. He also assisted in Paegam's publication of Buddhist scriptures. After Paegam's death, he taught at the hermitage of Ch'ilburam. In 1719, when his disciple Yakt'an (1668–1754) organized a great assembly to study Hwaŏm (C. [HUAYAN](#)) doctrine and verse commentaries to the public cases (K. kongan; C. [GONG'AN](#)) of the Chan masters of old, Muyong was asked to preside. His essays, letters, and poems are collected in the *Muyongdang chip*.

[muyu](#). (J. mokugyo; K. mogŏ 木魚). In Chinese, literally “wooden fish”; referring to a wooden percussion instrument carved in the shape of a fish, which is commonly used in Chinese Buddhist monasteries to summon monks and nuns to daily events and to mark time during rituals. It is one of the four percussion instruments (see [DRUM](#)), together with the Brahmā bell, dharma drum, and cloud-shaped gong. Various explanations are given for its fish-like shape. According to

the [BAIZHANG QINGGUI](#) (“Baizhang’s Rules of Purity”), since a fish’s eyes are never closed, the wooden fish is a subtle admonition to monks and nuns to remain ever vigilant about their practice. The [TIANTAI](#) monastic code, *Jiaoyuan Qinggui* (“Rules of Purity for the Garden of the Teachings”), includes a story said to come from the [ABHIDHARMAMAHĀVIBHĀSĀ](#), about a monk who had been reborn as a fish with a tree growing out of his back, which was retribution for betraying his teacher and slandering the dharma in a prior lifetime. Whenever the tree swayed, the fish bled and felt great pain. One day, the monk’s former teacher was crossing the sea in a boat and, seeing the fish, recognized it to be his former student. He performed the “rite of water and land” (C. [SHUILU HUI](#)), freeing the fish from its torment, and the fish repented for its past behavior. When his former student was again reborn, the tree was donated to a monastery, which carved it into the shape of a fish as a symbol of admonition. In a third story from a different source, the Chinese pilgrim [XUANZANG](#) was returning home from India and saved a wealthy man’s three-year-old son from the stomach of a big fish. The man wanted to repay him for his deed, so Xuanzang instructed him to have a piece of wood carved in the shape of a fish and hung in the monastery for the benefit of the fish. Over time, the body depicted on the wooden fish began to take on more the look of a dragon, autochthonous water divinities in traditional China, with a dragon-like head with a talismanic pearl ([MANI](#)) in its mouth. In Korea, the *muyu* takes on the more abstract fish shape of the [MOKT’AK](#) (wooden clacker).

[Myōan Eisai](#). (明庵榮西) (1141–1215). Japanese monk associated with the [TENDAISHŪ](#) (C. [TIANTAI ZONG](#)) and [ZENSHŪ](#) (C. [CHAN ZONG](#)) traditions; a successor in the [HUANGLONG PAI](#) collateral lineage of the Chinese [LINJI ZONG](#), he was also the first monk to introduce the Chan school to Japan. Eisai became a monk at a young age and received the full monastic precepts on [HIEIZAN](#), studying the Tendai teachings at the monastery of [MIIDERA](#). In 1168, he left for China and made a pilgrimage to Mt. Tiantai and Mt. Ayuwang in present-day Zhejiang province. He returned to Japan that same year with numerous Tiantai texts of and made an effort to revitalize the Tendai tradition in Japan. In 1187, Eisai set out on another trip to China. This second time, he stayed for five years and studied under the Chan master Xu’an Huaichang (d.u.) on Mt. Tiantai. Eisai followed Xu’an to the monastery of Jingdesi on Mt. Tiantong when the latter was appointed its abbot in 1189. After receiving dharma transmission from Xu’an, Eisai returned to Japan in 1191. Eisai’s efforts to spread the teachings of

Zen was suppressed by his fellow Tendai monks of [ENRYAKUJI](#) despite his claim that the denial of Chan meant the denial of the teachings of [SAICHŌ](#), the spiritual progenitor of Tendai. In 1198, Eisai composed his [KŌZEN GOKOKURON](#), wherein he defended Zen and argued for its usefulness in governing the nation and protecting Japan from foreign invasion. In 1199, he traveled to Kamakura where he won the support of the new shogunate and became the founding abbot (J. kaisan; C. [KAISHAN](#)) of the monastery of Jufukuji. Three years later, the shōgun Minamoto Yoriie (1182–1204) established [KENNINJI](#) and appointed Eisai as its founding abbot. In 1214, he composed his treatise on tea, the [KISSA YŌJŌKI](#), for Minamoto Sanetomo (1192–1219) who suffered from ill health. At Kenninji, Eisai taught a form of Zen that reflected his training in the esoteric ([MIKKYŌ](#)) teachings of Tendai.

[Myoch'ōng](#). (妙清) (d. 1135). Korean monk during the Koryŏ dynasty who used his geomantic prowess to exert political power and who eventually led a rebellion against the kingdom; also known as Chŏngsim. Myoch'ōng was a native of Sŏgyŏng (lit. “Western Capital”; present-day P'yŏngyang). His teachings on geomancy and divination, known as [TOCH'AM](#), were derived from the earlier geomantic theories of [TOSŌN](#) (827–898) and became widely influential in Korea, eventually leading to Myoch'ōng becoming an advisor to the Koryŏ king in 1127. In an attempt to emphasize the independence of the Koryŏ kingdom from the Chinese Song dynasty, Myoch'ōng also proposed that the king adopt the title emperor and advocated that Koryŏ invade the adjacent kingdom of Jin. Taking advantage of the political turmoil of his times, Myoch'ōng also attempted (unsuccessfully) to persuade the king to move the Koryŏ capital from Kaesŏng to Sŏgyŏng, his own ancestral home, which he claimed was a more geomantically auspicious site. His suggestions were criticized by such conservative officials as Kim Pusik (1075–1151), the famous general and compiler of the Korean history *Samguk sagi*. His proposals to move the capital rebuffed, Myoch'ōng and other sympathetic court officials rebelled against the state in 1135, establishing a new kingdom, Taewi, and declaring Sŏgyŏng its capital. Myoch'ōng's troops were defeated by the royal army led by Kim Pusik, and Myoch'ōng himself was eventually betrayed and killed by one of his own officers.

[Myōe Kōben](#). (明慧高弁) (1173–1232). A Japanese [SHINGONSHŪ](#) monk who sought to revitalize the Kegonshū (C. [HUAYAN ZONG](#)) in Japan; commonly

known as Myōe Shōnin. Kōben promoted traditional Buddhist values over the newer approaches of so-called Kamakura Buddhism. Against the prevailing tide of belief that the world was in terminal decline (J. mappō; C. [MOFA](#)), he took a positive stance on Buddhist practice by arguing that salvation could still be attained through traditional means. Kōben was born in Kii province (present-day Wakayama Prefecture) and orphaned at the age of eight when both parents died in separate incidents. He went to live under the care of his maternal uncle Jōgaku Gyōji, a Shingon monk at Jingoji on Mt. Takao, northwest of Kyōto. In 1188, at the age of sixteen, he was ordained by Jōgaku at [TŌDAIJI](#). He took the ordination name Jōben and later adopted the name Kōben. After ordination, he studied Shingon, Kegon, and esoteric Buddhism ([MIKKYŌ](#)) at one of Tōdaiji's subtemples, Sonshōin. Kōben tried twice to travel on pilgrimage to India, first in the winter of 1202–1203 and second in the spring of 1205, but was unsuccessful. On his first trip, Kasuga, a spirit ([KAMI](#)) associated with the Fujiwara family shrine in Nara, is said to have possessed the wife of Kōben's uncle, Yuasa Munemitsu, and insisted that Kōben not leave Japan. In the second attempt, he fell ill before he set out on his trip. In both instances, Kōben believed that the Kasuga deity was warning him not to go, and he consequently abandoned his plans. These portents were supported by Fujiwara opposition to his voyage. In 1206, the retired emperor Gotoba gave Kōben a plot of land in Toganoō. Gotoba designated the temple there as Kegon, renamed it Kōzanji, and requested that Kōben revive the study of Kegon doctrine. A year later, Gotoba appointed him headmaster of Sonshōin with the hope of further expanding Kōben's promotion of the Kegon school. Despite this generous attention, Kōben focused little of his efforts on this mission. He initially built a hermitage for himself at Toganoō, and it was not until 1219 that he constructed the Golden Hall at Kōzanji. Kōben dismissed the newer schools of Buddhism in his day, particularly [HŌNEN](#)'s (1122–1212) reinterpretation of pure land practice in the [JŌDOSHŪ](#). In 1212, he denounced Hōnen's nenbutsu (C. [NIANFO](#)) practice in *Zaijarin* ("Refuting the False Vehicle"), a response to Hōnen's earlier work, *Senchaku hongan nenbutsu shū* ("Anthology of Selections on the Nenbutsu and the Original Vow"; see [SENCHAKUSHŪ](#)). In contrast to the Jōdoshū's exclusive advocacy of the single practice of reciting the Buddha's name, Kōben defended the traditional argument that there were many valid methods for reaching salvation. Kōben spent the last several decades of his life experimenting with ways to make Kegon doctrine accessible to a wider audience. In the end, however, his efforts were largely unsuccessful. He was unable to garner popular support, and his disciples never

founded institutionally independent schools, as did the disciples of the other teachers of Kamakura Buddhism. Kōben was fascinated by his dreams and recorded many of them in a well-known text known as the *Yume no ki*, or “Dream Diary.” Like most Japanese of his day, Kōben regarded many of these dreams to be portents coming directly from the buddhas, bodhisattvas, and gods.

myōkōnin. (妙好人). In Japanese, “sublimely excellent people”; a term used especially in the [JŌDO SHINSHŪ](#) tradition of Japanese [PURE LAND](#) Buddhism to refer to a devout practitioner of nenbutsu (C. [NIANFO](#); recitation of the Buddha’s name). The Chinese exegete [SHANDAO](#) (613–681) was the first to use the term myōkōnin (C. miaohaoren) in his commentary on the [GUAN WULIANGSHOU JING](#) (“Book of the Contemplation of the Buddha of Limitless Life”), where he explains that the [SŪTRA](#) uses the term lotus flower ([PUNDARĪKA](#)) to refer to a “sublimely excellent” nianfo practitioner; [HŌNEN](#) similarly used the term to refer to nenbutsu practitioners in general. But it was [SHINRAN](#) (1173–1263), the founder of Jōdo Shinshū, who adopted the term in such writings as his *Mattōshō* (“Lamp for the Latter Age”), to refer to Jōdo Shinshū adherents whose virtuous conduct, prompted by their sincere faith in the buddha [AMITĀBHA](#), could serve as a model for their colleagues. The term was popularized during the mid-nineteenth century with the publication of the [MYŌKŌNINDEN](#), edited by the [NISHI HONGANJIHA](#) priest Sōjun (1791–1872). This collection of tales about various myōkōnin demonstrates how the acceptance of Amitābha’s grace leads to virtuous deeds that are worthy of emulation. The myōkōnin could be farmers, fishermen, merchants, warriors, doctors, or priests, but many of them were illiterate peasants. The Jōdo Shinshū tradition is somewhat ambivalent toward the myōkōnin: despite the myōkōnin’s sincere faith in Amitābha, they did not necessarily accept the authority of the school’s head or some of its doctrines. Hence, despite being pure expressions of pure land faith, the myōkōnin are not necessarily a proper model for Jōdo Shinshū followers and may even be heretical. Because many of myōkōnin were uneducated common people, few left any writings, with the prominent exception of the modern myōkōnin Asahara Saichi (1850–1932).

Myōkōninden. (妙好人傳). In Japanese, “Record of Sublimely Excellent People”; a [JŌDO SHINSHŪ](#) collection of the biographies of the [MYŌKŌNIN](#), viz., devoted practitioners of the practice of nenbutsu (C. [NIANFO](#); recitation of the Buddha’s name). The anthology was first compiled by a [NISHI HONGANJIHA](#) priest Gōsei

(1721–1794) and edited by Gōsei’s disciple Rizen (1753–1819). The Nishi Honganji priest Sōjun (1791–1872) made additional editorial changes to this earlier edition and first published the *Myōkōninden* in 1842. Sōjun’s original edition collected the biographies of twenty-two myōkōnin, in two rolls. Sōjun added more biographies between 1843 and 1858, and eventually published four additional chapters, adding biographies of thirty-seven myōkōnin in 1843, nineteen in 1847, thirty-seven in 1856, and twenty-one in 1858. In 1852, Zō’ō (fl. nineteenth century) also published the *Zoku Myōkōninden* (“Supplement to the *Myōkōninden*”) with additional biographies of twenty-three myōkōnin. The present version of the text was first published in 1898, combining in a single volume all six chapters (viz., Gōsei’s original first chapter, Sōjun’s four additional chapters, and Zō’ō’s supplement). The myōkōnin featured in the collection comes from various social classes, although most of them are common people, such as peasants and merchants. The accounts of their lives emphasize such traditional social virtues as filial piety, loyalty, and generosity, as well as the rewards of exclusive nenbutsu practice and the dangers of [KAMI](#) (spirit) worship.

[myōngbu chōn](#). (冥府殿). In Korean, “hall of the dark prefecture”; a basilica in Korean monasteries that is dedicated to the [BODHISATTVA KSITIGARBHA](#), the patron bodhisattva of the denizens of the hells ([NĀRAKA](#)), and the ten kings of hell (shiwang), the judges of the dead. This hall is where monks typically perform the forty-ninth day ceremony (K. sasipku [il] chae; C. [SISHIJU \[RI\] ZHAI](#)), which sends the deceased being to the intermediate transitional state ([ANTARĀBHAVA](#)) and then on to the next rebirth. See also [YAMA](#).

[Myōngnang](#). (明郎) (d.u.). Korean monk of the Silla dynasty and reputed founder of the sinin (divine seal), or esoteric Buddhist, tradition; also known as Kugyuk. His father was a high-ranking court official and his cousin was the [VINAYA](#) master [CHAJANG](#). Myōngnang traveled to China in 632 and returned four years later to propagate the new teachings of esoteric Buddhism. He established the monasteries of Kūmgwangsa and Wōnwōnsa and made them centers of esoteric Buddhist activity in Korea. He also was one of the teachers of the influential Korean scholiast [WŌNHYO](#) (617–686). The monastery Sach’ōnwangsa is known to have been built at the site where Myōngnang prepared a [MANDALA](#) and recited [MANTRAS](#) that spawned the typhoon that defeated the Tang Chinese invasion force. His teachings continued to flourish until the Koryō dynasty, when he came

to be viewed retrospectively as the founder of the sinin tradition.

Myōshinji. (妙心寺). In Japanese, “Sublime Mind Monastery”; an influential [ZEN](#) monastery in Kyōto that is currently the headquarters (HONZAN) of the Myōshinji branch of the [RINZAISHŪ](#). After the eminent Zen master Daitō’s (see [SŌHŌ MYŌCHŌ](#)) death in 1337, Emperor Hanazono (r. 1308–1318) converted his country villa into a monastery, which he named Myōshinji, and installed Daitō’s disciple [KANZAN EGEN](#) as its founding abbot (J. kaisan; C. [KAISHAN](#)). During the Muromachi period, Myōshinji was excluded from the powerful [GOZAN](#) ranking system and became the subject of harsh persecution during Ashikaga’s rule. In the early half of the fifteenth century, the monk Nippō Sōshun (1358–1448) oversaw the restoration of Myōshinji, but the monastery was consumed in a conflagration during the Ōnin war (1467–1469). In 1477, with the support of Emperor Gotsuchimikado (r. 1464–1500) the monastery was restored once more under the supervision of its abbot Sekkō Sōshin (1408–1486). At the decree of Emperor Gokashiwabara (r. 1500–1526), Myōshinji was included in the gozan system and enjoyed the financial support of a high-ranking official monastery. Largely through its tight fiscal management and active proselytizing efforts, Myōshinji expanded quickly to control over fifty branch temples and became one of the most influential monasteries of the Rinzai Zen tradition. During the Edo period, a renowned Zen master of the Myōshinji lineage named [HAKUIN EKAKU](#) played an important role in the revitalization of the kōan (C. [GONG’AN](#)) training system.

Myur lam lam rim. (Nyurlam Lamrim). In Tibetan, “The Quick Path Stages of the Path”; an important [LAM RIM](#), or “stages of the path,” treatise composed by the second [PAN CHEN LAMA](#) Blo bzang ye shes dpal bzang po (Losang Yeshe Palsangpo, 1663–1737). The work’s complete title is *Byang chub lam gyi rim pa’i dmar khrid thams cad mkhyen par bgrod pa’i myur lam*.

N

nabich’um. (나비춤). In Korean, “butterfly dance,” a [CHAKPÖP](#) ritual dance usually performed by Buddhist nuns during Korean Buddhist rituals, such as the [YÖNGSANJAE](#). This dance is typically performed outdoors in the central campus of a monastery and is often accompanied by ritual chanting ([PÖMP’AE](#); C. [FANBAI](#)) and traditional musical instruments. The pömp’ae chant requests the three jewels ([RATNATRAYA](#)) and protecting dragons ([NĀGA](#)) to attend the ceremony. Generally, the nabich’um is performed by two or four nuns in long, white robes with floor-length sleeves and yellow conical hats, thus resembling butterflies. The dance expresses a desire to transform oneself so as to lead all sentient beings to enlightenment. Nabich’um is quite slow, with subdued movements, and is performed without the feet of the dancer moving more than a step away from where the dance began. Nabich’um may also be performed as part of an offering of incense and flowers carried out by the dancers. Nabich’um is also sometimes performed without musical accompaniment.

nādi. (T. rtsa). In Sanskrit, “tube” or “pipe,” in tantric physiognomy, the “channels” that run throughout the body serving as conduits for the winds ([PRĀNA](#)) that serve as the “mounts” of consciousness. According to some systems, there are 72,000 channels in the body. These channels branch out from networks located along the central channel ([AVADHŪTI](#)) that runs from the base of the spine to the crown of the head. The central channel is paralleled and entwined by two vertical channels on the right and left, called the [RASANĀ](#) (right) and [LALANĀ](#) (left). At the points where the right and left channels wrap around the central channel, there are networks (called [CAKRA](#), or “wheels”) of smaller channels that radiate throughout the body. The number of these networks differs among various systems, but they are commonly said to be located along the central channel at the crown of the head, the point between the eyes, the throat, the heart, the navel, the base of the spine, and the tip of the sexual organ. Much tantric practice is devoted to techniques for loosening knots in the channels in order that the winds will flow smoothly through them, with advanced practices designed to cause the winds to enter the central channel. The system of channels also provides the basis for medical theories in both India and Tibet.

Nadī-Kāśyapa. (P. Nadī-Kassapa; T. Chu klung ’od srungs; C. Nati Jiashe; J.

Nadai Kashō; K. Naje Kasōp 那提迦葉). One of the three “Kāśyapa brothers” (together with [URUVILVĀ-KĀŚYAPA](#) and [GAYĀ-KĀŚYAPA](#)), also known in Pāli as the Tebhātika Jaṭilas. Prior to their encounter with the Buddha, the three brothers were matted-hair ascetics engaged in fire worship, living with their followers on the banks of the [NAIRAÑJANĀ](#) River. Nadī-Kāśyapa himself had three hundred followers. After his first teachings in the Deer Park ([MRGADĀVA](#)) at [SĀRNĀTH](#) and in Vārāṇasī, the Buddha returned to [URUVILVĀ](#), where he had practiced asceticism prior to this enlightenment. There, he encountered Uruvilvā-Kāśyapa, a famous ascetic (said to be 120 years old) who claimed to be enlightened. The Buddha spent the rains retreat ([VARŚĀ](#)) with him and his followers, performing some 3,500 miracles. When the Buddha eventually convinced Uruvilva-Kāśyapa that he was not enlightened and that the fire worship that he taught did not lead to enlightenment, Uruvilva-Kāśyapa requested ordination. Uruvilvā-Kāśyapa and his five hundred followers all cut off their long locks and threw them in the river, where the other two brothers and their followers saw them floating by. They came to investigate and also sought ordination. The Buddha taught them the so-called “Fire Sermon” ([ĀDITTAPARIYĀYA](#)), at which point they all became [ARHAT](#)s. They all then traveled to [RĀJAGRHA](#), where, in the presence of King [BIMBISĀRA](#), the new monks proclaimed their allegiance to the Buddha. The three brothers are often listed among the audience of [MAHĀYĀNA](#) sūtras.

[nadī vaiṭaranī](#). (T. chu bo rab med; C. liehe zeng; J. retsugazō; K. yōrhajūng 烈河增). In Sanskrit, “river difficult to ford,” the fourth of the four types of “neighboring hells” ([PRATYEKANARAKA](#)) located at the four sides of the eight hot hells (cf. [NĀRAKA](#)). This hell is a river of boiling water, which the hell denizens are forced to swim across. The river is an example of the common Buddhist practice of appropriating elements of Hindu cosmology. In Hinduism, this river is important in funerary rites, when a gift of a cow is to be given to a brāhmaṇa in order for the deceased to be ferried across the river to the realm of [YAMA](#). The boatman asks the deceased if the gift of a cow has been given. If so, they are allowed to board; if not, they must swim across the horrific waters. In the *Mahābhārata*, the Pāṇḍavas must cross the river en route to heaven. In Buddhist cosmology, it becomes just one of the “neighboring hells,” which all denizens of hell must swim across as they exit the hot hells.

[nāga](#). (T. klu; C. long; J. ryū; K. yong 龍). In Sanskrit and Pāli, “serpent” or “dragon” (as in the Chinese), autochthonous beings said to inhabit bodies of

water and the roots of great trees, often guarding treasures hidden there. They are depicted iconographically with human heads and torsos but with the tail and hood of a cobra. They inhabit an underwater kingdom filled with magnificent palaces, and they possess a range of magical powers, including the ability to masquerade as humans. Nāgas appear frequently in Buddhist literature in both benevolent and malevolent forms. They are said to be under the command of [VIRŪPĀKSA](#), the god of the west, and are guards of the [TRĀYASTRIMŚA](#) heaven. They sometimes appear in the audience of Buddha, most famously in the twelfth chapter of the [SADDHARMAPUNBARĪKASŪTRA](#) (“Lotus Sūtra”), where an eight-year-old nāga princess offers a gem to the Buddha. She instantaneously transforms into a male, traverses the ten bodhisattva stages ([BHŪMI](#)), and achieves buddhahood. This scene is sometimes cited as evidence that women have the capacity to achieve buddhahood. In the story of the Buddha’s enlightenment, the Buddha is protected during a rainstorm by the nāga [MUCILINDA](#). The Buddha is said to have entrusted the [ŚATASĀHASRIKĀPRAJÑĀPĀRAMITĀ](#) (“Perfection of Wisdom in One Hundred Lines”) to the safekeeping of the nāgas at the bottom of the sea, from whom [NĀGĀRJUNA](#) recovered it. Digging the earth is said to displease nāgas, who must therefore be propitiated prior to the construction of a building.

[Nāgabodhi](#). (T. Klu’i byang chub; C. Longzhi; J. Ryūchi; K. Yongji 龍智) (d.u.). A south Indian [MAHĀSIDDHA](#), possibly of the eighth century, counted among the traditional list of eighty-four mahāsiddhas. He is renowned in Tibet as a master of [ATIYOGA](#). He is said to have been a thief who tried to steal from [NĀGĀRJUNA](#) and ended up becoming his disciple, receiving tantric instructions from Nāgārjuna, which he then passed on to two disciples, [ŚUBHAKARASIMHA](#) at [NĀLANDĀ](#) and [VAJRABODHI](#) in Sri Lanka, each of whom transmitted these teachings in China. In East Asian Buddhism, Nāgabodhi is considered the fourth of the eight patriarchs of the Zhenyan and [SHINGON](#) schools.

[Nāgadīpa](#). In Pāli, “Serpent Island,” the ancient name for the Jaffna Peninsula at the northern tip of the island of Sri Lanka. According to the [MAHĀVAMSA](#), the Buddha came here during his second visit to the island in order to settle a dispute between two [NĀGAS](#). A number of important monasteries and pilgrimage sites are located there. According to one prophecy, at the time when the teachings of the Buddha are about to disappear from this world, his relics ([ŚARĪRA](#)) will reassemble from the various reliquaries ([STŪPA](#)) and travel to the

Rājāyatanacetiya in Nāgadīpa before returning to [BODHGAYĀ](#), where they will burst into flame.

[Naganuma Myōkō](#). (長沼妙校) (1889–1957). Cofounder, with [NIWANO NIKKYŌ](#) (1906–1999), of Risshō Kōseikai, a Japanese “new religion” associated with the [REIYŪKAI](#) and [NICHIREN](#) schools. See [RISSHŌ KŌSEIKAI](#).

[Nagara](#). (S). One of the twenty-four sacred sites associated with the [CAKRASAMVARATANTRA](#). See [PĪTHA](#).

[Nāgārjuna](#). (T. Klu sgrub; C. Longshu; J. Ryūju; K. Yongsu 龍樹). Indian Buddhist philosopher traditionally regarded as the founder of the [MADHYAMAKA](#) [alt. Mādhyamika] school of [MAHĀYĀNA](#) Buddhist philosophy. Very little can be said concerning his life; scholars generally place him in South India during the second century CE. Traditional accounts state that he lived four hundred years after the Buddha’s [PARINIRVĀNA](#). Some traditional biographies also state that he lived for six hundred years, apparently attempting to identify him with a later Nāgārjuna known for his tantric writings. Two of the works attributed to Nāgārjuna, the [RATNĀVALĪ](#) and the [SUHRLEKHA](#), are verses of advice to a king, suggesting that he may have achieved some fame during his lifetime. His birth is “prophesied” in a number of works, including the [LAṆKĀVATĀRASŪTRA](#). Other sources indicate that he also served as abbot of a monastery. He appears to have been the teacher of [ĀRYADEVA](#), and his works served as the subject of numerous commentaries in India, East Asia, and Tibet. Although Nāgārjuna is best known in the West for his writings on emptiness ([ŚŪNYATĀ](#)), especially as set forth in his most famous work, the “Verses on the Middle Way” ([MŪLAMADHYAMAKAKĀRIKĀ](#), also known as the [MADHYAMAKAŚĀSTRA](#)), Nāgārjuna was the author of a number of works (even when questions of attribution are taken into account) on a range of topics, and it is through a broad assessment of these works that an understanding of his thought is best gained. He wrote as a Buddhist monk and as a proponent of the Mahāyāna; in several of his works he defends the Mahāyāna sūtras as being [BUDDHAVACANA](#). He compiled an anthology of passages from sixty-eight sūtras entitled the “Compendium of Sūtras” ([SŪTRASAMUCCAYA](#)), the majority of which are Mahāyāna sūtras; this work provides a useful index for scholars in determining which sūtras were extant during his lifetime. Among the Mahāyāna sūtras, Nāgārjuna is particularly associated with the “perfection of wisdom” ([PRAJÑĀPĀRAMITĀ](#)) corpus. According to legend, Nāgārjuna retrieved from the

Dragon King’s palace at the bottom of the sea the “Perfection of Wisdom in One Hundred Thousand Lines” ([ŚATASĀHASRIKĀPRAJÑĀPĀRAMITĀSŪTRA](#)), which the Buddha had entrusted to the undersea king of the [NĀGAS](#) for safekeeping. He also composed hymns of praise to the Buddha, such as the [CATUHSTAVA](#), and expositions of Buddhist ethical practice, such as the *Ratnāvalī*. (Later exegetes classify his works into a [YUKTIKĀYA](#), or “logical corpus,” and a [STAVAKĀYA](#), or “devotional corpus.”) Nāgārjuna’s works are addressed to a variety of audiences. His philosophical texts are sometimes directed against logicians of non-Buddhist schools, but most often offer a critique of the doctrines and assumptions of Buddhist [ABHIDHARMA](#) schools, especially the [SARVĀSTIVĀDA](#). Other works are more general expositions of Buddhist practice, directed sometimes to monastic audiences, sometimes to lay audiences. An overriding theme in his works is the bodhisattva’s path to buddhahood, and the merit ([PUNYA](#)) and wisdom ([PRAJÑĀ](#)) that the bodhisattva must accumulate over the course of that path in order to achieve enlightenment. By wisdom here, he means the perfection of wisdom (prajñāpāramitā), declared in the sūtras to be the knowledge of emptiness ([ŚŪNYATĀ](#)). Nāgārjuna is credited with rendering the poetic and sometimes paradoxical declarations concerning emptiness that appear in these and other Mahāyāna sūtras into a coherent philosophical system. In his first sermon, the [DHARMAKĀPRĀVARTANASŪTRA](#), the Buddha had prescribed a “middle way” between the extremes of self-indulgence and self-mortification. Nāgārjuna, citing an early sūtra, spoke of a middle way between the extremes of existence and nonexistence, sometimes also referred to as the middle way between the extremes of permanence ([ŚĀŚVATĀNTA](#)) and annihilation ([UCCHEDĀNTA](#)). For Nāgārjuna, the ignorance ([AVIDYĀ](#)) that is the source of all suffering is the belief in [SVABHĀVA](#), a term that literally means “own being” and has been variously rendered as “intrinsic existence” and “self-nature.” This belief is the mistaken view that things exist autonomously, independently, and permanently; to hold this belief is to fall into the extreme of permanence. It is equally mistaken, however, to hold that nothing exists; this is the extreme of annihilation. Emptiness, which for Nāgārjuna is the true nature of reality, is not the absence of existence, but the absence of self-existence, viz., the absence of svabhāva. Nāgārjuna devotes his *Mūlamadhyamakakārikā* to a thoroughgoing analysis of a wide range of topics (in twenty-seven chapters and 448 verses), including the Buddha, the [FOUR NOBLE TRUTHS](#), and [NIRVĀNA](#), to demonstrate that each lacks the autonomy and independence that are mistakenly ascribed to it. His approach generally is to consider the various ways in which a given entity could exist, and

then demonstrate that none of these is tenable because of the absurdities that would be entailed thereby, a form of reasoning often described in Western writings as *reductio ad absurdum*. In the case of something that is regarded to be the effect of a cause, he shows that the effect cannot be produced from itself (because an effect is the product of a cause), from something other than itself (because there must be a link between cause and effect), from something that is both the same as and different from itself (because the former two options are not possible), or from something that is neither the same as nor different from itself (because no such thing exists). This, in his view, is what is meant in the perfection of wisdom sūtras when they state that all phenomena are “unproduced” ([ANUTPĀDA](#)). The purpose of such an analysis is to destroy misconceptions ([VIKALPA](#)) and encourage the abandonment of all views ([DRSTI](#)). Nāgārjuna defined emptiness in terms of the doctrine of [PRATĪTYASAMUTPĀDA](#), or “dependent origination,” understood in its more generic sense as the fact that things are not self-arisen, but are produced in dependence on causes and conditions. This definition allows Nāgārjuna to avoid the claim of nihilism, which he addresses directly in his writings and which his followers would confront over the centuries. Nāgārjuna employs the doctrine of the two truths ([SATYADVAYA](#)) of ultimate truth ([PARAMĀRTHASATYA](#)) and conventional truth ([SAMVRTISATYA](#)), explaining that everything that exists is ultimately empty of any intrinsic nature but does exist conventionally. The conventional is the necessary means for understanding the ultimate, and the ultimate makes the conventional possible. As Nāgārjuna wrote, “For whom emptiness is possible, everything is possible.”

[Nāgārjunakoṇḍā](#). “Nāgārjuna’s hill” (koṇḍā means “hill” in Telugu), an important archaeological site in southern India, in the modern state of Andhra Pradesh; it is the present name for Vijayapurī, the capital of the Ikṣvāku dynasty (c. 227–309) founded by Vāsiṣṭīputra Caṃtamūla after the decline of [AMARĀVATĪ](#), the southern capital of the later Sātavāhana [alt. Śātavāhana] dynasty. In 1926, ruins were discovered of what was the most important monastic center in the Deccan. There is no archaeological evidence to support its traditional association with the philosopher [NĀGĀRJUNA](#), although there are remains of Buddhist monasteries and reliquaries of at least four Buddhist schools. Each monastic unit consisted of a [STŪPA](#), two [CAITYA](#) halls (one containing a stūpa, the other an image of the buddha), and a [VIHĀRA](#) (residential quarters). The stūpas at the site are designed in the shape of a wheel. Limestone

panels and friezes have also been discovered at the site. Nāgārjunakoṇḍā and [AMARĀVATĪ](#) are particularly important for showing how Buddhist and Brahmanical structures were constructed at the same time, alongside each other, supported by different members of the same ruling families.

[Nāgasena](#). (T. Klu sde; C. Naxian biqiu/Naqiexina; J. Nasen biku/Nagasaina; K. Nasōn pigu/Nagasōna 那先比丘/那伽犀那). The Sanskrit and Pāli name for an eminent [ARHAT](#) celebrated in the Pāli [MILINDAPAÑHA](#) and the Sanskrit *Nāgasenabhikṣusūtra* (which may derive from a Bactrian [SARVĀSTIVĀDA](#) textual lineage) for his discussions on Buddhist doctrine with the Bactrian Greek king Menander (P. Milinda). Although Nāgasena was not born into a Buddhist family, he was destined to come to the aid of the Buddha's religion in fulfillment of a promise he had made in his previous existence as a divinity in the [TRĀYASTRIMŚA](#) heaven. Thus, according to the Pāli account, he was born into a brāhmaṇa family in the Himalayas and became well versed in the Vedas at an early age. King Milinda was harassing the Buddhist order by skillfully disputing points of doctrine and defeating Buddhist representatives in debate. To counter this threat, the elder Assagutta summoned the monk Rohana, and charged him with the task of converting Nāgasena, convincing him to join the order and training him so that he might vanquish King Milinda and convert him to Buddhism. Rohana visited Nāgasena's house for seven years and ten months before receiving so much as a greeting from his proud brāhmaṇa father. Finally, impressed by the monk's demeanor, Nāgasena's father became his patron and invited him daily for his morning meal. After Nāgasena was sufficiently educated in Vedic lore, Rohana engaged him in discussions and convinced him of the veracity of the Buddha's teachings. Nāgasena entered the order under Rohana who, as his preceptor, taught him [ABHIDHAMMA](#) (S. [ABHIDHARMA](#)). One day, Nāgasena, having inherited his father's pride, questioned the intelligence of his teacher. Rohana, an arhat endowed with the power to read others' minds, rebuked Nāgasena for his arrogance. Nāgasena begged forgiveness, but Rohana would grant it only if Nāgasena defeated King Milinda in debate. Thereafter, Nāgasena was sent to the Vattaniya hermitage to train under Assagutta and while there achieved stream-entry ([SROTAĀPANNA](#)). He was then sent to [PĀTALIPUTRA](#) to study under the elder Dhammarakkhita, where he attained arhatship. At the appropriate time, Nāgasena, who was then widely renowned for his erudition, was invited to Milinda's kingdom. There, in the Saṅkheyya hermitage, Nāgasena engaged King Milinda in discussion on various points of doctrine, at the end of

which the king took refuge in the three jewels ([RATNATRAYA](#)) and became a lay disciple in the Buddha's religion. Scholars are uncertain whether such a dialogue ever took place. There was indeed a famous king named Menander (Milinda in Indian sources) who ruled over a large region that encompassed parts of modern India, Pakistan, and Afghanistan during the middle of the second century BCE. There is, however, no historical evidence of Nāgasena. The text itself was probably composed or compiled around the beginning of the Common Era and marks some of the earliest abhidharma-style exchanges found in the literature. ¶ A different Nāgasena (corresponding to the second of the two Chinese transcriptions in the entry heading) is also traditionally listed as twelfth of the sixteen [ARHAT](#) elders ([SODAŚASTHAVIRA](#)), charged by the Buddha with protecting his dispensation until the advent of the next buddha, [MAITREYA](#). East Asian sources claim that he resides on Bandubo Mountain with twelve hundred disciples. He is often depicted in paintings as cleaning his ears, earning him the nickname “Ear-Picking Arhat” (Wa'er Luohan). In [CHANYUE GUANXIU](#)'s standard Chinese depiction, Nāgasena sits leaning on a rock, with large nose and deep-set eyes, staring ahead in anger. He has a high forehead and a hump on his back. His mouth is open with his tongue exposed. He supports his chin with his fists.

[naihsargikapāyattika](#). (P. nissaggiyapācittiya; T. spang ba'i ltung byed; C. sheduo; J. shada; K. sat'a 捨墮). In Sanskrit, “forfeiture offense,” a category of monastic infraction in the [PRĀTIMOKṢA](#) that includes offenses committed by a monk or a nun pertaining to the improper acquisition or characteristics of the alms bowl ([PĀTRA](#)), robes ([TRICĪVARA](#)), and other kinds of requisites. Such an offense always entails the forfeiture of property (although in some cases it is later returned). The offense is rectified when the guilty party forfeits the objects in question and confesses the misdeed to a [SAMGHA](#) composed of four or more monks, to a gaṇa composed of two or three monks, or to an individual monk. In the Pāli [VINAYA](#), there are thirty rules in this category, falling under three categories: robes, silk (although the rules pertain to other materials as well), and bowls. As an example of the first category, if a monk is given robe cloth by a layperson who is unrelated to him, he may accept only enough cloth to make an upper robe ([UTTARĀSAMGA](#)) and an under robe ([NIVĀSANA](#)). Any additional cloth must be forfeited, and it is a violation to hoard it. As an example of the second category, if a monk receives gold or silver, it must be forfeited; it is a violation of the rule to keep it. As an example of the third category, it is a violation for a

monk to be in possession of an additional undamaged and properly made alms bowl for more than ten days; after ten days, the extra bowl must be forfeited and the transgression confessed.

Nairañjanā. (P. Nerañjarā; T. Ne ran dza na; C. Nilianchanhe; J. Nirenzenga; K. Niryōnsōnha 尼連禪河). Ancient name of the present-day Lilaja River, a tributary of the Ganges, located in the modern Indian state of Bihar; site of the Buddha's austerities and enlightenment. During a six-year period, from the time of his departure from the palace to his achievement of buddhahood, the **BODHISATTVA** Prince **SIDDHĀRTHA** practiced austerities at **URUVILVĀ** along the banks of this river. It was while bathing in this river during a period of intense self-mortification that the bodhisattva swooned from hunger, after which he concluded that extreme asceticism was not a viable path to liberation from suffering and continued rebirth. Sitting under a tree on the bank of the river, he accepted a bowl of milk porridge from a young woman named **SUJĀTĀ**, who mistook his gaunt visage for a **YAKSA** to whom the local village made offerings. He ate the meal and then cast the dish into the river, saying, "If I am to become a buddha today, may the dish float upstream." The plate floated upstream for some distance before disappearing into a whirlpool, descending down to the palace of a serpent king (**NĀGA**), where it landed on top of the bowls used by the previous buddhas, making a clicking sound. The bodhisattva spent the afternoon prior to the night of his enlightenment in a grove on the banks of the river. After his enlightenment, it was on the banks of this river that **BRAHMĀ** persuaded him to teach the dharma. The Buddha later converted the ascetic **URUVILVĀ-KĀŚYAPA**, whose hermitage was located along this Nairañjanā River.

nairātmya. (T. bdag med; C. wuwo; J. muga; K. mua 無我). In Sanskrit, "selflessness," referring to the absence of a perduring self. It is a later scholastic term synonymous with the canonical term **ANĀTMAN**, lit., "nonself"; here, the same notion is turned into an abstract noun, **nairātmya**, hence "selflessness." This translation should not be understood in its common English meaning as a personality trait that is the opposite of selfishness. **Nairātmya** instead is used philosophically to refer to the quality of an absence of self. The major Buddhist philosophical schools of India differ on the precise meaning of this selflessness, based on how they define "self" (**ĀTMAN**). They would all agree, however, that an understanding of **nairātmya** is the central insight of the Buddhist path (**MĀRGA**) leading to liberation from the cycle of rebirth. Two types of **nairātmya**

are distinguished, based on what it is that lacks self. The first is called the selflessness of persons ([PUDGALANAIRĀTMYA](#)), which refers to the absence of a permanent and autonomous entity among the aggregates of mind and body ([NĀMARŪPA](#)) that transmigrates from lifetime to lifetime. The second type of *nairātmya* is called the selflessness of phenomena (i.e., phenomena other than persons), or [DHARMANAIRĀTMYA](#), which refers to the absence of any kind of enduring element in the factors that make up the universe. *Nairātmya* is used in both [HĪNAYĀNA](#) and [MAHĀYĀNA](#) philosophical schools but receives particular emphasis in the Mahāyāna. In the [MADHYAMAKA](#) school, e.g., the selflessness of phenomena is defined as the absence of intrinsic nature, or [SVABHĀVA](#); see [NIHJVABHĀVA](#). ¶ *Nairātmyā* (T. Bdag med ma; C. Wuwomu), or “Selfless,” is also the name of the consort of [HEVAJRA](#). In the [HEVAJRATANTRA](#), she represents the overcoming of wrath.

[naiskramya](#). (P. nekkhamma; T. nges ’byung; C. chuyaozhi/chuli; J. shutsuyōshi/shutsuri; K. ch’uryoji/ch’ulli 出要志/出離). In Sanskrit, “renunciation” (see also [NIHSARANA](#); [NIRVEDA](#)) especially in the sense of leaving mundane life and embarking on a religious vocation. The Buddha repeatedly exhorts monks to develop renunciation as a means of eliminating attachment to the pleasures of the senses. As such, in the cultivation of the path ([MĀRGA](#)), renunciation is associated with right intention ([SAMYAKSAMKALPA](#)) and is essential for all three trainings ([TRĪŚIKSĀ](#)) in morality ([ŚĪLA](#)), concentration ([SAMĀDHI](#)), and wisdom ([PRAJÑĀ](#)). In the Pāli tradition, renunciation constitutes the third perfection (P. pāramī; S. [PĀRAMITĀ](#)) mastered by the bodhisatta (S. [BODHISATTVA](#)) on the path leading to buddhahood. In the [MAHĀYĀNA](#) traditions, renunciation is lauded as a prerequisite to developing the aspiration for enlightenment ([BODHICITTA](#)), since it is impossible to develop a wish to liberate all beings from [SAMSĀRA](#) unless one is dissatisfied with saṃsāra oneself. In order to develop renunciation, the adept is advised to contemplate the rarity of human birth ([KSNASAMPAD](#)), the suffering inherent in the realms of saṃsāra, the cause and effect of actions ([KARMAN](#)), and the inevitability and unpredictability of death. See also [ĀDĪNAVA](#); [ANUPUBBIKATHĀ](#).

[naivasamjñānāsamjñāyatana](#). (P. nevasaññānāsaññāyatana; T. ’du shes med ’du shes med min skye mched; C. feixiang feifeixiang chu; J. hisōhishōjo; K. pisang pibisang ch’ō 非想非非想處). In Sanskrit, “sphere of neither perception nor nonperception,” the fourth and highest of the four levels of the immaterial realm

([ĀRŪPYADHĀTU](#)) and the fourth of the four immaterial absorptions ([ĀRŪPYĀVACARADHYĀNA](#)). It surpasses the first three levels of the immaterial realm, viz., infinite space ([AKĀŚĀNANTYĀYATANA](#)), infinite consciousness ([VIJÑĀNĀNANTYĀYATANA](#)), and nothingness ([ĀKIÑCANYĀYATANA](#)), respectively. It is a realm of rebirth and a meditative state that is entirely immaterial (viz., there is no physical or material [[RŪPA](#)] component to existence) in which perception of all mundane things vanishes entirely, but perception itself does not. Beings reborn in this realm are thought to live as long as eighty thousand eons ([KALPA](#)). However, as a state of being that is still subject to rebirth, even the sphere of neither perception nor nonperception remains part of [SAMSĀRA](#). Like the other levels of both the subtle-materiality realm ([RŪPADHĀTU](#)) and the immaterial realm, one is reborn in this state by achieving the specific level of meditative absorption associated with that state in the previous lifetime. One of the most famous and influential expositions on the subject of these immaterial states comes from the [VISUDDHIMAGGA](#) of [BUDDHAGHOSA](#), written in the fifth century. Although there are numerous accounts of Buddhist meditators achieving immaterial states of [SAMĀDHI](#), they are also used polemically in Buddhist literature to describe the attainments of non-Buddhist [YOGINS](#), who mistakenly identify these exalted, but still impermanent, states of existence as the permanent liberation from rebirth. See also [DHYĀNASAMĀPATTI](#); [DHYĀNOPAPATTI](#).

[Nakagawa Sōen](#). (中川宋淵) (1907–1984). Japanese [ZEN](#) monk in the [RINZAISHŪ](#) who was influential in the early transmission of that Zen tradition to North America. Born in Taiwan to a Japanese military family, he graduated from Tōkyō Imperial University in 1931 and was ordained as a monk at Kogakuji in 1933. After hearing the [MYŌSHINJI](#) Zen master Yamamoto Genpo (1866–1961) speak at Ryūtakuji, he became his disciple and trained under him at the latter monastery, eventually becoming abbot there. In 1935, Nakagawa began corresponding with Nyogen Senzaki (1876–1958), a Rinzai missionary in California, and eventually traveled to San Francisco to visit Senzaki in 1949; he made ten more such visits over the next three decades. Nakagawa helped to establish the Zen Studies Society in New York in 1965 and the Daibosatsu Zendo in the Catskills in 1971.

[Nakchin](#). (樂眞) (1045–1114). In Korean, “Enjoying Truth”; Korean scholar-monk during the mid-Koryŏ dynasty, also known as royal master (wangsa) Ogong T’onghye (Awakening to Emptiness, Penetrating Wisdom). Initially a

student of the state preceptor (kuksa; see [GUOSHI](#)) Kyōngdōk Nanwōn (999–1066), Nakchin passed the monk’s examination ([SŪNGKWA](#)) and received the title “greatly virtuous” (taedōk). After Nanwōn’s death, Nakchin became a close colleague of the state preceptor Taegak [ŬICH’ŎN](#) (1055–1101), the fifth son of the Koryō king Munjong (r. 1046–1083). After Ŭich’ōn surreptitiously departed for China against his royal father’s wishes, the king sent Nakchin after him, and they eventually studied together under the [HUAYAN](#) teacher Jinshui Jingyuan (1011–1088), at Huiyinsi in Hangzhou. After the two monks returned to Korea, Nakchin stayed with Ŭich’ōn at Hūngwangsa in the capital, where he assisted Ŭich’ōn in establishing the large monastic library known as the Kyojang Togam and in publishing the massive *Koryō sokchanggyōng* (“Koryō Supplement to the Canon”), which was especially important for its inclusion of a broad cross section of the indigenous writings of East Asian Buddhist teachers. Nakchin also served as an editor of Ŭich’ōn’s *Wōnjong mullyu*. Nakchin eventually rose to the preeminent position of “[SAMGHA](#) overseer” (K. sūngt’ong; C. [SENGTONG](#)) under King Sukchong (r. 1096–1105) and, in 1114, received the title royal master (wangsa).

[Nakula](#). (S). See [BAKKULA](#).

[Nakulapitr and Nakulamātṛ](#). (P. Nakulapitā and Nakulamātā; T. Ne’u le’i pha, Ne’u le’i ma; C. Nayouluo fu, Nuoguluo zhangzhe mu; J. Naura fu, Nakora chōja mo; K. Naura pu, Nakkora changja mo 那憂羅父, 諾酷羅長者母). In Sanskrit, “Nakula’s Father” and “Nakula’s Mother”; lay followers of the Buddha, declared by him to be foremost among laypersons who are intimate companions. According to the Pāli account, they were a married couple who lived in the village of Suṃsumāragiri in Bhagga country. Once on a visit to their village, the Buddha was staying at a grove called Bhesakalāvana. The couple went to pay their respects and, upon seeing the Buddha, immediately fell at his feet, calling him their son and asking why he had been away so long. This spontaneous reaction was a consequence of their past existences: for five hundred lifetimes they had been the Buddha’s parents, and for many more lives they were his close relatives. The Buddha preached to them, and they immediately became stream-enterers (sotāpanna; S. [SROTAĀPANNA](#)). Once when Nakulapitā was gravely ill, he began to fret about the fate of his wife and family, should he die. Nakulamātā, noticing his condition, consoled him in such a way that his anxiety was removed and he recovered his health. Later, he recounted what had transpired to the

Buddha, who congratulated him on his wife's good qualities. Nakulapitā's conversations with the Buddha are recorded in the Pāli [SAMYUTTANIKĀYA](#). The Buddha again visited their village many years later when the couple was old. They invited him to their home for his morning meal. There, they related to him their devotion to one another and asked for a teaching that would keep them together through their future lives. It was on the basis of this discussion that the Buddha declared Nakulapitā and Nakulamātā foremost among those who live intimately. In a former life, Nakulapitā had resolved to attain this type of preeminence: during the time of the buddha Padumuttara, as a householder in the city of Hamsavatī, he overheard the Buddha praise a lay couple for their intimacy.

[Nālāgiri](#). (T. Nor skyong; C. Hucal/Shoucai; J. Gozai/Shuzai; K. Hojae/Sujae 護財/守財). The Sanskrit and Pāli name of a ferocious elephant whom the Buddha tames, in a scene often depicted in Buddhist art. The elephant was so dangerous that the citizens of [RĀJAGRHA](#) asked King [AJĀTAŚATRU](#) to have a bell put around his neck to warn people of his approach. In an attempt to assassinate the Buddha and take control of the [SAMGHA](#), the Buddha's cousin [DEVADATTA](#) bribed the king's elephant keeper to let loose the fierce elephant against the Buddha. After being given a large quantity of palm wine, the elephant was unleashed and rampaged through the city. Hearing the bell, the monks implored the Buddha not to collect alms in the city that day, but he ignored their pleas. A woman who was fleeing from the elephant dropped her child at the Buddha's feet. When the elephant charged, the Buddha spoke to him and suffused him with loving-kindness ([MAITRĪ](#)), causing the elephant to stop before him. When he stroked the elephant's head, it knelt at his feet and received teachings from the Buddha. The townspeople were so impressed by the miracle that they showered the elephant's body with jewelry; for this reason, the elephant was henceforth known as DHANAPĀLA, "Wealth Protector." In some sources, he is called Vasupāla.

[Nālandā](#). (T. Na len dra; C. Nalantuosi; J. Narandaji; K. Narandasa 那爛陀寺). A great monastic university, located a few miles north of [RĀJAGRHA](#), in what is today the Indian state of Bihar. It was the most famous of the Buddhist monastic universities of India. During the Buddha's time, Nālandā was a flourishing town that he often visited on his peregrinations. It was also frequented by [MAHĀVĪRA](#), the leader of the [JAINA](#) mendicants. According to [XUANZANG](#) (whose account is confirmed by a seal discovered at the site), the monastery at Nālandā was

founded by King Śākrāditya of [MAGADHA](#), who is sometimes identified as the fifth-century ruler Kumāragupta I (r. 415–455). It flourished between the sixth and twelfth centuries CE under Gupta and Pāla patronage. According to Tibetan histories, many of the greatest [MAHĀYĀNA](#) scholars, including [ASAṄGA](#), [VASUBANDHU](#), [DHARMAKĪRTI](#), [DHARMAPĀLA](#), [ŚĪLABHADRA](#), and [ŚĀNTIDEVA](#), lived and taught at Nālandā. Several [MADHYAMAKA](#) scholars, including [CANDRAKĪRTI](#), are also said to have taught there. At its height, Nālandā was a large and impressive complex of monasteries that had as many as ten thousand students and fifteen hundred teachers in residence. During the reign of Harṣa, it was supported by a hundred neighboring villages, each with two hundred households providing rice, butter, and milk to sustain the community of monastic scholars and students. The library, which included a nine-story structure, is said to have contained hundreds of thousands of manuscripts. The university had an extensive curriculum, with instruction offered in the [VAIBHĀSIKA](#) school of [SARVĀSTIVĀDA ABHIDHARMA](#), [SAUTRĀNTIKA](#), [YOGĀCARA](#), and [MADHYAMAKA](#), the Vedas and Hindu philosophical schools, as well as mathematics, grammar, logic, and medicine. Nālandā attracted students from across Asia, including the Chinese pilgrims [YIJING](#) and Xuanzang, who provided detailed reports of their visits. Both monks were impressed by the strict monastic discipline that was observed at Nālandā, with Xuanzang reporting that no monk had been expelled for a violation of the [VINAYA](#) in seven hundred years. In the eleventh century, [NĀROPA](#) held a senior teaching position at Nālandā, until he left in search of his teacher [TILOPA](#). In 1192, Nālandā was sacked by Turkic troops under the command of Bakhtiyar Khilji, who may have mistaken it for a fortress; the library was burned, with the thousands of manuscripts smoldering for months. The monastery had been largely abandoned by the time of a Tibetan pilgrim's visit in 1235 CE, although it seems to have survived in some form until around 1400. Archaeological excavations began at Nālandā in the early twentieth century and have continued since, unearthing monasteries and monastic cells, as well as significant works of art in stone, bronze, and stucco.

[Na lan dra](#). [alt. Na len dra]. A Tibetan monastery named after the famed Indian Buddhist university of [NĀLANDĀ](#). Na lan dra was founded in 1435 by the renowned scholar [RONG STON SMRA BA' I SENG GE](#). Located in the region of 'Phan yul (Penyul) north of [LHA SA](#), the institution is often known as 'Phan po Na len dra (Penpo Nalendra). The monastery declined after its founder's death and was absorbed by the [SA SKYA](#) sect at the end of the fifteenth century.

[nāmarūpa](#). (T. ming gzugs; C. mingse; J. myōshiki; K. myōngsaek 名色). In Sanskrit and Pāli, lit. “name-and-form,” “mind-and-matter,” “mentality-and-materiality”; a term for the mental and physical constituents of the person, with “name” (nāma) subsuming the four mental aggregates ([SKANDHA](#)) of sensations ([VEDANĀ](#)), perception ([SAMJÑĀ](#)), conditioning factors ([SAMSKĀRA](#)), and consciousness ([VIJÑĀNA](#)), and “form” ([RŪPA](#)) referring to the materiality aggregate, viz., the physical body. The term occurs most commonly as the fourth of the twelve links in the chain of dependent origination ([PRATĪTYASAMUTPĀDA](#)), where, in some interpretations, it refers to the five aggregates of a new lifetime at the moment of conception, when the consciousness (vijñāna) from the previous lifetime enters the womb; in this interpretation, “name” would be the consciousness that has arrived in the womb from the previous lifetime, and “form” would be the embryo that it inhabits. Name and form are said to rely upon each other, like a lame man (name) traveling on the shoulders of a blind man (form). Because of this reciprocal relationship, if consciousness (name) is not present, the form of the embryo will not develop and miscarriage will result. But consciousness (name) also cannot exist without the support that form provides, for it is only when there are physical sense bases ([INDRIYA](#)) that can come into contact with the external world that consciousness can be produced. Name and form are thus also compared to two bundles of reeds leaning against one another, neither of which can stand without the other. In addition to this sense of the term as the physical and psychical components of the person, the term is also used in a wider sense to refer to the entire world, since it is composed of mind (nāma) and matter (rūpa).

[nam Myōhōrengekyō](#). (J) (南無妙法蓮華經). Alternate transcription of [NAMU MYŌHŌRENGEKYŌ](#).

[Namo Buddha](#). (T. Stag mo lus sbyin). Together with [SVAYAMBHŪ](#) and [BODHNĀTH](#), one of the three major [STŪPAS](#) of the Kathmandu Valley in Nepal. Located twenty-five miles (forty kilometers) southeast of Kathmandu, it is built at the putative site where a prince named Mahāsattva, a bodhisattva who was a previous rebirth of [ŚĀKYAMUNI](#) Buddha, sacrificed his life to feed a starving tigress. In some versions of the story, the prince came across a starving tigress and her hungry cubs and, in order to save their lives, jumped off a cliff, committing suicide so they could eat his flesh. In another version, commemorated on a rock carving near the stūpa, the prince cut off pieces of his

flesh and fed them to the tigress until he finally died. The stūpa is said to be built over his bones, and the tigress's cave is nearby. The Tibetan name of the stūpa means, "Offering the Body to the Tigress." The Nepali name is said to derive from the fact that there were once many tigers in the area; the residents would therefore repeat "namo Buddha" ("homage to the Buddha") for protection.

Namsan. (南山). In Korean, "South Mountain," important Buddhist site located to the south of the ancient Silla-dynasty capital of [KYŎNGJU](#). Namsan had been worshipped as a Korean sacred mountain since prehistoric times and was strongly embedded in local shamanic cults. With the advent of Buddhism, Namsan became the center of Buddhist worship in Korea as the representation of Mt. [SUMERU](#), the axis mundi of the world in Buddhist cosmology. As a result, the whole area of Namsan is dotted with rock-cut reliefs, engravings, and stone images, all fine examples of Korean Buddhist art from the seventh through the fourteenth centuries, depicting among many others the buddhas [ŚĀKYAMUNI](#), [BHAIŠAJYAGURU](#), and [AMITĀBHA](#). Most of these images date from the seventh and eighth centuries, when the political power of the Silla dynasty was at its height. Most noteworthy is the massive boulder in T'apkok (Pagoda Valley), which is carved with a rich tapestry of Buddhist images that depict the popular view of the Buddhist world during the Silla period. In the center of the boulder's northern face is a seated buddha image, which is flanked by two images of wooden pagodas. A mythical lion below the pagodas acts as a guardian to this scene. The eastern face expresses the belief in the [PURE LAND](#). It depicts a narrative scene of Amitābha, flanked by two [BODHISATTVAS](#), presumably [AVALOKITEŚVARA](#) and [MAHĀSTHĀMAPRĀPTA](#), with accompanying images of flying beings (S. [APSARAS](#)) and monks who came to venerate this central figure. On the boulder's southern face, a buddha triad and an individual image of a bodhisattva are carved. Finally, on its western face is depicted an image of Śākyamuni at the moment of his awakening beneath two [BODHI TREES](#). Other noteworthy Buddhist images at Namsan include the rock-cut reliefs of seven buddhas at Ch'ilburam (Seven Buddhas Rock), which is uniquely composed of two boulders, one with a buddha triad, the other one with four bodhisattvas; the seated stone statue of Śākyamuni at Mirŭkkok (Maitreya Valley), which is one of the best-preserved Buddhist stone statues from the eighth century; the seated image of a bodhisattva carved on the high cliff of Sinsŏnam (Fairy Rock); and the seated figure of Śākyamuni in Samnŭnggok (Samnŭng Valley), which was carved on a colossal rock twenty-three feet high and sixteen feet in width.

[namu Amidabutsu](#). (C. namo Amituo fo; K. namu Amit'a pul 南無阿彌陀佛). In Japanese, “I take refuge in the buddha [AMITĀBHA](#).” Chanting of the name of the buddha Amitābha as a form of “buddha-recollection” (J. nenbutsu; see C. [NIANFO](#)) is often associated with the [PURE LAND](#) traditions. In Japan, nenbutsu practice was spread throughout the country largely through the efforts of itinerant holy men ([HIJIRI](#)), such as [KŪYA](#) and [IPPEN](#). With the publication of [GENSHIN](#)'s [ŌJŌ YŌSHŪ](#), the practice of nenbutsu and the prospect of rebirth in Amitābha's pure land came to play an integral role as well in the [TENDAI](#) tradition. [HŌNEN](#), a learned monk of the Tendai sect, inspired in part by reading the writings of the Chinese exegete [SHANDAO](#), became convinced that the nenbutsu was the most appropriate form of Buddhist practice for people in the degenerate age of the dharma (J. mappō; C. [MOFA](#)). Hōnen set forth his views in a work called *Senchaku hongan nenbutsushū* (“On the Nenbutsu Selected in the Primal Vow,” see [SENCHAKUSHŪ](#)). The title refers to the vow made eons ago by the bodhisattva [DHARMĀKARA](#) that he would become the buddha Amitābha, create the pure land of bliss ([SUKHĀVATĪ](#)), and deliver to that realm anyone who called his name. To illustrate the power of the practice of nenbutsu, Hōnen contrasted “right practice” and the “practice of sundry good acts.” “Right practice” refers to all forms of worship of Amitābha, the most important of which is the recitation of his name. “Practice of sundry good acts” refers to ordinary virtuous deeds performed by Buddhists, which are meritorious but lack the power of “right practice” that derives from the grace of Amitābha. Indeed, the power of Amitābha's vow is so great that those who sincerely recite his name, Hōnen suggests, do not necessarily need to dedicate their merit toward rebirth in the land of bliss because recitation will naturally result in rebirth there. Hōnen goes on to explain that each bodhisattva makes specific vows about the particular practice that will result in rebirth in their buddha-fields ([BUDDHAKSETRA](#)). Some buddha-fields are for those who practice charity ([DĀNA](#)), others for those who construct [STŪPAS](#), and others for those who honor their teachers. While Amitābha was still the bodhisattva Dharmākara, he compassionately selected a very simple practice that would lead to rebirth in his pure land of bliss: the mere recitation of his name. Hōnen recognized how controversial these teachings would be if they were widely espoused, so he instructed that the *Senchakushū* not be published until after his death and allowed only his closest disciples to read and copy it. His teachings gained popularity in a number of influential circles but were considered anathema by the existing sects of Buddhism in Japan because of his promotion of the sole

practice of reciting the name. His critics charged him with denigrating [ŚĀKYAMUNI](#) Buddha, with neglecting virtuous deeds other than the recitation of the name, and with abandoning the meditation and visualization practices that should accompany the chanting of the name. Some years after Hōnen's death, the printing xylographs of the *Senchakushū* were confiscated and burned as works harmful to the dharma. However, by that time, the teachings of Hōnen had gained a wide following among both aristocrats and the common people. Hōnen's disciple [SHINRAN](#) came to hold even more radical views. Like Hōnen, he believed that any attempt to rely on one's own powers ([JIRIKI](#)) to achieve freedom from [SAMSĀRA](#) was futile; the only viable course of action was to rely on the power of Amitābha. But for Shinran, this power was pervasive. Even to make the effort to repeat silently "namu Amidabutsu" was a futile act of hubris. The very presence of the sounds of Amitābha's name in one's heart was due to Amitābha's compassionate grace. It was therefore redundant to repeat the name more than once in one's life. Instead, a single utterance ([ICHINENGI](#)) would assure rebirth in the pure land; all subsequent recitation should be regarded as a form of thanksgiving. This utterance need be neither audible nor even voluntary; instead, it is heard in the heart as a consequence of the "single thought-moment" of faith (shinjin, see [XINXIN](#)), received through Amitābha's grace. Shinran not only rejected the value of multiple recitations of the phrase namu Amidabutsu; he also regarded the deathbed practices advocated by Genshin to bring about rebirth in the pure land as inferior self-power (jiriki). Despite harsh persecution by rival Buddhist traditions and the government, the followers of Hōnen and Shinran came to form the largest Buddhist community in Japan, known as the [JŌDOSHŪ](#) and [JŌDO SHINSHŪ](#).

[Namuci](#). (T. Grol med; C. Mowang [Boxun]; J. Maō [Hajun]; K. Mawang [Pasun] 魔王 [波旬]). In Sanskrit and Pāli, "Non-releaser," a cognomen of [MĀRA](#), the anthropomorphized evil one, also sometimes known as [PĀPIYAMS](#). Namuci is the name of a devil killed by the king of the divinities, [INDRA](#), and absorbed into the Buddhist pantheon as one of the evil ones (māra). Namuci is sometimes identified with the third of the four types of māras most commonly found in Buddhist literature: (1) kleśamāra (P. kilesamāra), the māra of afflictions; (2) [SKANDHAMĀRA](#) (P. khandhamāra), the māra of the aggregates; (3) [MRTYUMĀRA](#) (P. maccumāra), the māra of death; and (4) DEVAPUTRAMĀRA (P. devaputtamāra), the divinity Māra. As the "personification of death" itself, Māra cum Namuci thus releases no one from his grasp.

[namu Myōhōrengekyō](#). (C. *namo Miaofa lianhua jing*; K. *namu Myōbōp yōnhwa kyōng* 南無妙法蓮華經). In Japanese, lit. “Homage to the Lotus Flower of the Sublime Dharma Scripture,” the phrase chanted as the primary practice of the various subtraditions of the [NICHIRENSHŪ](#), including [NICHIREN SHOSHŪ](#) and [SOKKA GAKKAI](#). The first syllable of the phrase, “namu,” is a transcription of the Sanskrit term “*namas*,” meaning “homage”; “Myōhōrengekyō” is the Japanese pronunciation of the title of [KUMĀRAJĪVA](#)’s (344–413) Chinese translation of the influential [SADDHARMAPUNḌARĪKASŪTRA](#) (“Lotus Sūtra”). The phrase is also known in the Nichiren tradition as the [DAIMOKU](#) (lit. “title”). Chanting or meditating on the title of the *Saddharmapuṇḍarīkasūtra* seems to have had a long history in the [TENDAISHŪ](#) ([TĪANTAI ZONG](#)) in Japan. The practice was further developed and popularized by the Tendai monk NICHIREN, who placed this practice above all others. Relying on the [FAHUA XUANYI](#), an important commentary on the *Saddharmapuṇḍarīkasūtra* by the Chinese monk [TĪANTAI ZHIYI](#) (538–597), Nichiren claimed that the essence of the scripture is distilled in its title, or daimoku, and that chanting the title can therefore lead to the attainment of buddhahood in this very body ([SOKUSHIN JŌBUTSU](#)). He also drew on the notion that the dharma was then in decline (J. *mappō*; see C. [MOFA](#)) to promote the chanting of *namu Myōhōrengekyō* as the optimal approach to enlightenment in this degenerate age. The [ONGI DUDEN](#) (“Record of the Orally Transmitted Teachings”), the transcription of Nichiren’s lectures on the sūtra compiled by his disciple Nichikō (1246–1332), gives a detailed exegesis of the meaning of the phrase. In the Nichiren interpretation, *namu* represents the dedication of one’s whole life to the essential truth of Buddhism, which is the daimoku *Myōhōrengekyō*. *Myōhō* refers to the “sublime dharma” of the nonduality of enlightenment and ignorance. *Renge* is the “lotus flower” ([PUNḌARĪKA](#)), which, because it is able to bear seeds and yet bloom at the same time, symbolizes the simultaneity of cause and effect. Finally, *kyō* represents the voices and sounds of all sentient beings, which affirm the universal presence of the buddha-nature (C. [FOXING](#)). The chanting of the phrase is therefore considered to be the ultimate means to attain buddhahood, regardless of whether or not one knows its meaning. In addition to its soteriological dimension, the chanting of the phrase is believed by some to convey such practical benefits as good health and financial well-being.

[ñāṇadassanavisuddhi](#). In Pāli, “purity of knowledge and vision”; according to the [VISUDDHIMAGGA](#), the seventh and final of seven “purities” (P. *visuddhi*; cf. S.

[VIŚUDDHI](#)) to be developed along the path to liberation. This purity consists of knowledge associated with the attainment of any of the four supramundane or noble (P. ariya; S. [ĀRYA](#)) paths, viz., that of the stream-enterer (P. sotāpanna; S. [SROTAĀPANNA](#)), once-returner (P. sakadāgāmi; S. [SAKRDĀGĀMIN](#)), nonreturner (P. anāgāmi; S. [ANĀGĀMIN](#)), or worthy one (P. arahant; S. [ARHAT](#)). Entry into the path is preceded by what is called “change-of-lineage knowledge” ([GOTRABHŪÑĀNA](#)), which arises immediately following the attainment of the conformity knowledge ([ANULOMAÑĀNA](#)) that occurred as the culmination of the preceding (sixth) purity called [PATIPADĀÑĀNADASSANAVISUDDHI](#), or “purity of knowledge and vision of progress along the path.” Change-of-lineage knowledge takes as its object the unconditioned [NIRVĀNA](#) element (P. nibbānadhātu; S. [NIRVĀNADHĀTU](#)) by virtue of which the practitioner ceases kinship with ordinary worldlings (P. puthujjana; S. [PRTHAGJANA](#)) and becomes a noble one (ariya; ārya). Immediately thereafter, he or she enters the path by attaining what is called [MAGGACITTA](#), or “path consciousness.” It is this attainment of path consciousness that, technically speaking, constitutes the purity of knowledge and vision. If, at this time, the practitioner attains the path of a stream-enterer, which is the first and lowest of the four paths of sanctity, he or she permanently uproots the first three of ten fetters ([SAMYOJANA](#)) that bind one to the cycle of existence, viz., (1) belief in the existence of a self in relation to the body (P. sakkāyadiṭṭhi; S. [SATKĀYADRSTI](#)); (2) belief in the efficacy of rites and rituals (P. sīlabbataparāmāsa; S. [ŚĪLAVRATAPARĀMARŚA](#)); and (3) skeptical doubt about the efficacy of the path (P. vicikicchā; S. [VICIKITSĀ](#)). The sotāpanna will never again suffer a lower rebirth and is destined to attain full enlightenment ([BODHI](#)) and nibbāna in at most seven more lifetimes.

[nānādhātuḥjñānabala](#). (T. khams sna tshogs mkhyen pa’i stobs; C. zhongzhongjie zhili; J. shujukai chiriki; K. chongjonggye chiryök 種種界智力). In Sanskrit, “power of knowing diverse elements,” one of the ten special powers ([BALA](#)) of a buddha (S. tathāgatabala). One of the keys to the Buddha’s extraordinary pedagogical skill was his telepathic ability to understand the level of spiritual development or capacity of each member of his audience, whereby he was able to teach what was most appropriate for a given person at a given time (see [TRĪNDRIYA](#)). Thus, it is said that the Buddha taught the goal of rebirth as a divinity in heaven ([SVARGA](#)) to those who lacked the capacity to seek liberation from rebirth, and the doctrine of the absence of a perduring self ([ANĀTMAN](#)) to those who lacked the capacity to understand the more profound

doctrine of emptiness ([ŚŪNYATĀ](#)). Whereas the [NĀNĀDHIMUKTIJÑĀNABALA](#) reflects a buddha’s ability to discern the predilections or personality of a disciple in a particular lifetime, the [nānādhātujñānabala](#) reflects a buddha’s ability to discern the level of intelligence of a disciple in a particular lifetime. According to some conceptions of the Buddha, through his skillful methods ([UPĀYAKAUŚALYA](#)), the Buddha was able to give a single discourse (sometimes said to consist only of the letter “[A](#)”), and each member of the audience would hear a different teaching appropriate for him or her.

[nānādhimuktijñānabala](#). (P. *nānādhimuttikañāṇa*; T. *mos pa sna tshogs mkhyen pa’i stobs*; C. *zhongzhong shengjie zhili*; J. *shujushōge chiriki*; K. *chongjong sūnghae chiryōk* 種種勝解智力). In Sanskrit, “power of knowing diverse aspirations,” one of the ten special powers ([BALA](#)) of a buddha (S. *tathāgatabala*). One of the keys to the Buddha’s extraordinary pedagogical skill was said to be his telepathic ability to understand the predilections or interests of each member of his audience, so that he could tailor his message to the aspirations of each individual. Thus, it is said that when the Buddha taught the practice of [SAMĀDHI](#), he set forth forty different objects of concentration, each appropriate for a different personality. For those who were lustful, he taught meditation on the foulness of the human body; for those who were hateful, he taught meditation on loving-kindness; for those who were proud, he taught meditation on the twelve links of dependent origination; for those who were distracted, he taught meditation on the breath. Whereas the [NĀNĀDHĀTUJÑĀNABALA](#) reflects a buddha’s ability to discern the level of intelligence of a disciple in a particular lifetime, the [nānādhimuktijñānabala](#) reflects a buddha’s ability to discern the interests or personality of a disciple in a particular lifetime.

[Ñānagambhīra](#). The name given to the great fifteenth-century reformer of Thai Buddhism in the [PADAENG CHRONICLE](#). He is known as [MEDHĀṆKARA](#) in the [JINAKĀLAMĀLĪ](#).

[Ñānamoli, Bhikkhu](#). (1905–1960). A distinguished British [THERAVĀDA](#) monk and translator from Pāli. Born Osbert Moore, he was educated at Exeter College, Oxford. During World War II, he served as a staff officer in Italy, where he became interested in Buddhism after reading Julius Evola’s *The Doctrine of Awakening*. He joined the BBC after the war. In 1949, he traveled to Sri Lanka with his friend Harold Musson. Together, they received lower ordination (P. *pabbajjā*; cf. S. [PRAVRAJITA](#)) as novices (P. *sāmaṇera*; S. [ŚRĀMANERA](#)) at the

Island Hermitage in Dodunduwā. They took higher ordination ([UPASAMPADĀ](#)) as monks (P. bhikkhu; S. [BHIKSU](#)) at Vajirarama Temple (Colombo) in 1950. Taking the ordination name Ñāṇamoli, Moore spent the remainder of his life living as a monk at the Island Hermitage, translating Pāli texts into English. His magnum opus was his renowned translation of [BUDDHAGHOSA](#)'s [VISUDDHIMAGGA](#), rendered as *The Path of Purification*, in 1956. Other translations include the [NETTIPPAKARANA](#) (published as *The Guide*) and the [PATISAMBHIDĀMAGGA](#) (published as *The Path of Discrimination*), as well as most of the suttas of the [MAJJHIMANIKĀYA](#) and several from the [SAMVUTTANIKĀYA](#). Other of his books include *The Life of the Buddha* and *A Thinker's Note Book*. He died suddenly of heart failure while on pilgrimage at Majo and was cremated at Vajirarama monastery.

[Ñāṇaponika Mahāthera](#). (1901–1994). A distinguished German [THERAVĀDA](#) monk and scholar. Born Siegmund Feniger to a Jewish family in Hanau am Main, Germany, he first developed an interest in Buddhism through readings in his youth. His family moved to Berlin in 1922, where he met like-minded students of Buddhism and later formed a Buddhist study circle in the city of Königsberg. He traveled to Sri Lanka in 1936 for further study and to escape Nazi persecution. That same year, he received lower ordination (P. pabbajjā; cf. S. [PRAVRAJITA](#)) as a novice (P. sāmaṇera; S. [ŚRĀMANERA](#)) under the German scholar-monk [ÑĀNATILOKA](#) at his Island Hermitage in Dodunduwā. He took higher ordination ([UPASAMPADĀ](#)) as a monk (P. bhikkhu; S. [BHIKSU](#)) in 1937. During World War II, he was interned by the British at Dehra Dun along with other German nationals, including Heinrich Harrer (who would escape to spend seven years in Tibet) and [LAMA ANAGARIKA GOVINDA](#). After the war, he traveled to Burma with Ñāṇatiloka to participate in the sixth Buddhist council (see [COUNCIL, SIXTH](#)) that was held in Rangoon (Yangon). Ñāṇaponika was a delegate to several [WORLD FELLOWSHIP OF BUDDHISTS](#) conferences convened at Rangoon, Bangkok, and Phnom Penh, and served as vice-president of the organization in 1952. He resided at the Forest Hermitage in Kandy from 1958 to 1984. Ñāṇaponika was the founding editor of the Buddhist Publication Society and served as its president till 1988. An energetic teacher and prolific writer, his books include the influential *The Heart of Buddhist Meditation* and *Abhidhamma Studies*. For his many contributions and accomplishments, Ñāṇaponika was honored as one of four “Great Mentors, Ornaments of the Teaching” (mahāmahopadhyāyasāsanasobhana) in the [AMARAPURA NIKĀYA](#), the monastic

fraternity to which he belonged. He was for several decades the most senior Western Theravāda monk in the world, having completed his fifty-seventh rains retreat as a monk by the time of his death in 1994.

[Ñānatiloka Mahāthera](#). (1878–1957). A distinguished German [THERAVĀDA](#) monk and scholar. Born Anton Walter Florus Gueth in Wiesbaden, Germany, in 1878, Ñānatiloka studied music at conservatories in Frankfurt and Paris and became a violinist. As a child, he became interested in religion, and, after attending a lecture on Theosophy in Berlin in 1899, he decided to travel to Asia. Traveling as a violinist, he toured Turkey, Egypt, and India. From India, he went to Sri Lanka and then to Burma. In 1903 he took ordination as a Buddhist novice (P. *sāmaṇera*; S. [ŚRĀMANERA](#)) in Rangoon (Yangon) from bhikkhu Ānanda Metteyya, apparently the first German ever to be ordained. In the following year he took higher ordination ([UPASAMPADĀ](#)) as a monk (P. *bhikkhu*; S. [BHIKSU](#)). After his ordination, Ñānatiloka moved to Sri Lanka in 1905. He traveled to Europe in 1910–1911, the first of many international tours, staying mostly in Switzerland, where he conducted the first Buddhist novice ordination (P. *pabbajjā*; cf. S. [PRAVRAJITA](#)) on European soil. In 1911, he returned to Sri Lanka and made his hermitage on an island infested with poisonous snakes in the middle of Ratgama Lake in southwestern Sri Lanka. When he arrived at the hermitage site, he was the only human on the island. People in the nearby town of Dodanduwa brought him offerings by boat every day. Soon, many Europeans came to be ordained by Ñānatiloka at what became known as Island Hermitage. He was interned by the British during World War I as an enemy alien. In 1916, he was given a passport to return to Germany via the United States. He traveled to Honolulu and then on to China but was arrested in Chungking (Chongqing) and imprisoned in Hankow (Hankou) until 1919, when he was exchanged by the International Red Cross and sent back to Germany. He was unable to return to Sri Lanka in 1920 and so went on to Japan, where he served as a professor at Komazawa University. In 1926, Ñānatiloka was finally able to return to Sri Lanka. Ñānatiloka was interned again with other German nationals (including his student [ÑĀNAPONIKA](#)) during the Second World War and returned again to Sri Lanka in 1946. He was later naturalized as a Sri Lankan citizen. He founded the International Buddhist Union with [LAMA ANAGARIKA GOVINDA](#), another student, to whom he gave his Buddhist name. Ñānatiloka was viewed by the Sinhalese as a great religious practitioner; upon Ñānatiloka's death in 1957, he received a cremation ceremony of the highest honor in Independence Square, with both the

prime minister of Sri Lanka and the German ambassador attending. He published his most famous work, *The Word of the Buddha*, in 1906, as well as articles and books in both English and German, including *Buddhist Dictionary*, *Guide through the Abhidhamma-Piṭaka*, and *Path to Deliverance*.

Nanatsudera. (七寺). Japanese vernacular name of the monastery of Tōenzan Chōfukuji in downtown Nagoya; famous as the repository of a massive twelfth-century manuscript canon of East Asian Buddhist works that was designated an Important Cultural Property after World War II. The monastery, which is affiliated with the [SHINGONSHŪ](#), was founded by [GYŌGI](#) in 735 and was originally named Shōgakuin. The monastery was destroyed in an air raid in March 1945, but its canon survived, stored in lacquered chests called karabitsu. In 1990, scholarly investigation of the 4,954 juan (3,398 in rolls, 1,556 in folded books) of Nantsudera’s canon identified scores of juan of scriptures that were long believed to have been lost. Especially important were several previously unknown Chinese Buddhist [APOCRYPHA](#), including seminal works of the proscribed [SANJIE JIAO](#) school. The Nanatsudera collection is considered by many scholars of East Asian Buddhism to be the most important discovery of Buddhist textual materials since the unearthing of the [DUNHUANG](#) cache in the early twentieth century.

Nanda. (T. Dga’ bo; C. Nantuo; J. Nanda; K. Nanda 難陀). In Sanskrit and Pāli, “Joyful”; an [ARHAT](#) declared by the Buddha to be foremost among his monk disciples in self-control. Nanda was the son of [ŚUDDHODANA](#) and [MAHĀPRAJĀPATĪ](#) and half brother of the Buddha. He was a few days younger than the Buddha, and Mahāprajāpatī handed him over to a wet nurse so that she could raise the bodhisattva as her own son when the latter’s mother, [MAHĀMĀYĀ](#), died. Nanda was extremely handsome (he is also known as Sundara Nanda, or “Handsome Nanda”) and was said to have been vain about his looks. During the Buddha’s sojourn at the [ŚĀKYA](#) capital of [KAPILAVASTU](#) after his enlightenment, he visited Nanda on the day his half-brother was to be married to a beautiful maiden named [JANAPADAKALYĀNĪ NANDĀ](#) (also called Sundarī Nandā). Having wished his half brother well, the Buddha handed him his alms bowl ([PĀTRA](#)) to carry back to the monastery; the scene of Nanda holding the bowl, standing between the departing Buddha and his beckoning bride-to-be, is often depicted in Buddhist art. Once Nanda arrived at the monastery with the alms bowl, the Buddha asked Nanda to join the order, and only reluctantly, and out of deference

to the Buddha, did he agree. But he longed for his fiancée and soon fell ill from his loneliness and depression, drawing pictures of her on rocks. Knowing Nanda's mind, the Buddha then flew with him to the [TRĀYASTRIMŚĀ](#) heaven. Enroute, he pointed out an injured female monkey and asked Nanda whether Janapadakalyāṇī Nandā was more beautiful than the monkey; Nanda replied that she was. When they arrived in the heaven, the Buddha showed Nanda the celestial maidens attending the gods. Nanda was entranced with their loveliness, which far exceeded the beauty of Janapadakalyāṇī, saying that, compared to the celestial maidens, the beauty of his bride-to-be was like that of the monkey. The Buddha promised him one of these maidens as his consort in his next lifetime if he would only practice the religious life earnestly. Nanda enthusiastically agreed. Upon returning to the human world at [JETAVANA](#) grove, Nanda was criticized by [ĀNANDA](#) for his base motivation for remaining a monk. Feeling great shame at his lust, he resolved to overcome this weakness, practiced assiduously, and in due course became an [ARHAT](#). In another version of the story, Nanda only overcomes his lust after a second journey: after going to heaven, the Buddha takes Nanda on a journey to hell, where he shows him the empty cauldron that awaits him after his lifetime in heaven. After his enlightenment, Nanda came to the Buddha to inform him of his achievement and to release the Buddha from his promise of celestial maidens. It was because of his great will to control his passions that Nanda was deemed foremost in self-control. Due to his previous attachment to women, however, it is said that even after he became an arhat, Nanda would stare at the beautiful women who attended the Buddha's discourses. The story of Nanda appears in a number of versions, including the poem [SAUNDARANANDA](#) by [AŚVAGHOSA](#).

[Nandaka](#). (T. Dga' byed; C. Nantuojia; J. Nandaka; K. Nandaga 難陀迦). In Sanskrit and Pāli, "Pleasing"; an [ARHAT](#) declared by the Buddha to be foremost among monk disciples who preach to nuns. According to the Pāli account, Nandaka was born into a rich family of merchants dwelling in Sāvatti (S. [ŚRĀVASTĪ](#)). He entered the order on the same day that Anāthapiṇḍika (S. [ANĀTHAPIṆḌIKA](#)) donated the [JETAVANA](#) grove to the Buddha after hearing him preach. Nandaka practiced meditation and soon attained insight and became an [ARHAT](#). Once, the Buddha requested that he preach to a large gathering of nuns, who had entered the order with Mahāpajāpatī (S. [MAHĀPRAJĀPATĪ](#)). He was hesitant when he recognized that they had been his wives in a previous life, when he had been a king. Fearing criticism from his fellows, he sent another

monk as his substitute. The Buddha insisted that he preach, however, for he knew that only a sermon by Nandaka could lead the nuns to liberation. On the first day of his discourse, all in attendance became stream-enterers (P. *sotāpanna*; S. [SROTAĀPANNA](#)), and on the second day, five hundred became arhats. It was because of his great skill on this occasion that Nandaka earned a reputation for being preeminent in preaching. In one sermon attributed to him, Nandaka addressed a group of monks gathered in a waiting hall at Jetavana monastery. His voice attracted the Buddha, who listened the entire night from outside, because the door was locked. When he entered the hall the next morning, Nandaka begged forgiveness for having made him wait, but the Buddha only praised Nandaka for the quality of his sermon, stating that it was the duty of all good monks to give such exhortations.

[Nandimitra](#). (T. Dga' ba'i bshes gnyen; C. Qingyou; J. Keiyū; K. Kyōngu 慶友) (c. second century CE). An Indian [ARHAT](#), presumed to have been born in Sri Lanka, who is traditionally regarded as the author the *Nandimitrāvadāna* (*Da aluohan Nantimiduoluo suoshuo fazhu ji*, abbr. *Fazhu ji*; “Record of the Duration of the Dharma Spoken by the Great Arhat Nandimitra”), the primary source for the cult of the sixteen (alt. eighteen) [ARHAT](#), or [LUOHAN](#). In this text, which was translated by [XUANZANG](#) in 654 CE, Nandimitra explains that, when the Buddha was on his deathbed, he entrusted his religion to sixteen great arhats (see [SODĀŚASTHAVIRA](#)), who were charged with watching over and caring for the welfare of the laity and protecting the religious interests of Buddhism. These arhats were to remain in the world until the [BODHISATTVA MAITREYA](#) appears as the next buddha. They will then collect all the relics ([ŚARĪRA](#)) of [ŚĀKYAMUNI](#) and build a magnificent [STŪPA](#) to contain them. After paying homage to the stūpa, they will then vanish into [PARINIRVĀNA](#). Nandimitra gives the names of these sixteen arhats and identifies their domains and the size of their retinues.

[Nang Thorani](#). (Laotian). See [THORANI](#).

[Nanhai jigui neifa zhuan](#). (J. Nankai kiki naihōden; K. Namhae kigwi naebŏp chŏn 南海寄歸內法傳). In Chinese, lit., “Tales of Returning from the South Seas with the Dharma,” translated into English as *A Record of the Buddhist Kingdoms of the Southern Archipelago*; an important Buddhist travelogue by the Chinese monk [YIJING](#) (635–713) and a major source of information on monastic practice in the various places that he visited during his trip. Yijing dreamed of following in the footsteps of the renowned pilgrims [FAXIAN](#) and [XUANZANG](#) and, in 671, at

the age of thirty-six, set out for India via the southern maritime route. After arriving in 673, he visited the major pilgrimage sites (see [MAHĀSTHĀNA](#)) on the subcontinent, before traveling to the monastic university at [NĀLANDĀ](#), where he remained for the next ten years, studying Sanskrit texts especially associated with the [VINAYA](#) tradition. After departing from India in 685, Yijing stayed over in [ŚRĪVIJAYA](#) (Palembang in present-day Sumatra) and continued his studies for another four years. It is there that he composed this record of his travels and began his translation of the massive [MŪLASARVĀSTIVĀDA VINAYA](#). After returning once to Guangdong (Canton) to retrieve more paper and ink, he returned to China for good in 695 CE. Yijing's four-roll long pilgrimage record is divided into forty sections, which provide a detailed description of the customs, rules, and regulations of the different Buddhist kingdoms and regions he visited. Unlike Xuanzang, Yijing is less concerned with describing the areas he visited and more with detailing the practice of Buddhism in the homeland of the religion. Yijing's interest in establishing an orthodox interpretation of vinaya that could be emulated by the Chinese can be readily observed in his detailed account of monastic rules and best practices governing ordination procedures, monastic residence during the rains retreat ([VARSĀ](#)), worshipping a buddha image, cleaning, washing, caring for the sick, and performing funerals, to name but a few. Many of the texts that Yijing cites in corroboration of these practices are now lost; Yijing's record also serves as a valuable source for the study of the Buddhist literature of the period.

[Nanhuasi](#). (南華寺). In Chinese, “Southern Florate Monastery”; located in present-day Guangdong province close to Nanhua Mountain and facing the Caoqi River. The monastery was built by an Indian monk in 502 CE during the Liang dynasty and was originally named Baolinsi (Bejeweled Forest Monastery). It went through several name changes until it was renamed Nanhuasi in 968 CE during the Song dynasty, and it has carried that name ever since. In 677 CE, during the Tang dynasty, [HUINENG](#), the so-called sixth patriarch ([LIUZU](#)) of the [CHAN](#) school, is said to have come to Nanhuasi, where he founded the so-called “Southern school” ([NAN ZONG](#)) of Chan. From that point on, the monastery became an important center of the Chan school, and Huineng's remains are enshrined there, as are those of the Ming-dynasty Chan monk [HANSHAN DEQING](#) (1546–1623 CE). The monastery contains a stone slab that supposedly displays indentations left by Huineng's constant prostrations during his devotional services. The monastery is also famous for housing a bell named the Nanhua

Bell, which weighs six tons and can be heard up to ten miles away.

Nanjō Bun'yū. (南条文雄) (1849–1927). Japanese Buddhist scholar who helped to introduce the modern Western discipline of Buddhist Studies to Japan; he is usually known in the West by his own preferred transcription of Nanjio Bunyiu. Nanjō was the third son of the abbot of a temple in the [HIGASHI HONGANJIHA](#) (see [ŌTANIHA](#); [HONGANJI](#)) of [JŌDO SHINSHŪ](#), and was eventually ordained as a priest in that sect. In 1876, the Higashi Honganjiha sent Nanjō to England, where he studied Sanskrit and other Buddhist canonical languages with [FRIEDRICH MAX MÜLLER](#) (1823–1900). After eight years overseas, he returned to Japan in 1884, teaching Sanskrit and Buddhism at Tōkyō Imperial University, where he was an important Japanese pioneer in Sanskrit pedagogy and the study of Indian Buddhist literature. He also held a succession of posts as professor and president of several Buddhist universities in Tōkyō, Kyōto, and Nagoya. Nanjō played a critical role in reviving the study of Buddhist literature in China. While he was in Oxford, Nanjō met [YANG WENHUI](#) (1837–1911; cognomen Yang Renshan) and later arranged to send Yang copies of some three hundred Chinese Buddhist texts that had been lost in China during the depredations of the Taiping Rebellion (1851–1865). Yang was able to reprint and distribute these scriptures from his personal publication house, the Jinling Sūtra Publishing Center, in Nanjing. Nanjō is best known in the West for publishing in 1883 the first comprehensive catalogue of the East Asian Buddhist canon, *A Catalogue of the Chinese Translation of the Buddhist Tripiṭaka, the Sacred Canon of the Buddhists in China and Japan, compiled by order of the Secretary of State for India*. This catalogue is especially important for making one of the first attempts to correlate the Chinese translations of Buddhist texts with their Sanskrit and Tibetan recensions. Nanjō also edited the Sanskrit recensions of such texts as the [LAṆKĀVATĀRASŪTRA](#) and the larger and smaller [SUKHĀVATĪVYŪHASŪTRA](#) (which he translated in collaboration with F. Max Müller) and assisted HENDRIK KERN in preparing his Sanskrit edition of the [SADDHARMAPUNDIRĪKASŪTRA](#).

Nanpo Jōmyō. [alt. Shōmyō] (南浦紹明) (1235–1308). Japanese [ZEN](#) master in the [RINZAISHŪ](#); a native of Suruga in present-day Shizuoka Prefecture. He studied under the émigré Chinese Chan master [LANXI DAOLONG](#) (1213–1278) at the monastery of [KENCHŌJI](#) in Kamakura. In 1259, Nanpo left for China, where he studied with the [LINJI ZONG](#) Chan master [XUTANG ZHIYU](#) (1185–1269). Before returning to Japan, Nanpo is said to have received Xutang's seal of approval (see

[YINKE](#)) and thus inherited Xutang's Linji lineage. In 1267, Nanpo returned to Japan and served his teacher Lanxi. Nanpo later moved to the monastery of Sūfukuji in Hakata (present-day Kyūshū), where he continued to reside for the next thirty-three years. In 1305, he was invited to the influential monastery of Manjuji in Kyōto and was installed as its abbot. Later, he served as abbot of his home monastery of Kenchōji. In 1309, he received the posthumous title State Preceptor Entsū Daiō (Perfect Penetration, Great Resonance). Among his disciples [SOHŌ MYŌCHŌ](#) (1282–1337), also known as Daitō, is most famous. Currently, virtually all monks in the Rinzai Zen tradition trace their lineages back to Nanpo via [HAKUIN EKAKU](#) (1685–1769). The lineages that originated from Nanpo came to be known collectively as the Ōtōkan, which is a combination of Sinographs taken from the names of Dai-ō, Dai-tō, and Kan-zan (see [KANZAN EGEN](#)).

[Nanquan Puyuan](#). (J. Nansen Fugan; K. Namch'ōn Powōn 南泉普願) (748–834). Chinese [CHAN](#) master in the [HONGZHOU ZONG](#); a native of Xinzheng in present-day Henan province. In 777, Nanquan received the full monastic precepts from a certain [VINAYA](#) master Hao (d.u.) at the nearby monastery of Huishansi in Songyue. Along with studying such important [MAHĀYĀNA](#) scriptures as the [LAŅKĀVATĀRASŪTRA](#) and [AVATAMSAKASŪTRA](#), Nanquan also explored the major texts of the [SAN LUN ZONG](#), the Chinese counterpart of the [MADHYAMAKA](#) school of Buddhist philosophy. He later became the disciple of the eminent Chan master [MAZU DAOYI](#) (709–788) and eventually one of his dharma successors. In 795, he began his long-time residence on Mt. Nanquan in Chiyang (present-day Anhui province), whence he acquired his toponym. He remained on the mountain for thirty years, where he devoted himself to teaching his students. Among his immediate disciples, [ZHAOZHOU CONGSHEN](#) (778–897) is most famous. Nanquan is renowned for his enigmatic sayings and antinomian behavior. Many of his noteworthy conversations with other masters are quoted in public case collections, such as the [BIYAN LU](#) and [CONGRONG LU](#). Nanquan's teaching style is perhaps best captured in the (in)famous public case ([GONG'AN](#)) “Nanquan cuts the cat in two” (case no. 63 of the *Biyān lu*, case no. 14 in the [WUMENGUAN](#)). Monks from the eastern and western wings of the monastery were arguing over possession of a cat. Nanquan grabbed the cat and told the monks, “If anyone can say something to the point, you will save this cat's life; if not, I will kill it.” No one replied, so Nanquan cut the cat in two. In the following gong'an in the *Biyān lu* (case no. 64), his disciple Zhaozhou Congshen

returned to the monastery and heard the story. He immediately took off his straw sandals, placed them on his head, and walked away. Nanquan remarked, “If you had been here a moment ago, you could have saved that cat’s life.”

[Nanshan lü zong](#). (J. Nanzan risshū; K. Namsan yulchong 南山律宗). In Chinese, the “South Mountain School of Discipline,” the name for a loose affiliation of Chinese exegetes who traced their lineage back to the Chinese [VINAYA](#) master [DAOXUAN](#) (596–667). (The name Nanshan, or South Mountain, refers to Daoxuan’s residence at [ZHONGNANSHAN](#) in present-day Shanxi province.) This tradition is largely concerned with the exegesis of the [SIFEN LÜ](#) (“Four-Part Vinaya”) of the [DHARMAGUPTAKA](#) school. This [VINAYA](#) text, which came to be adopted widely throughout East Asia, was translated into Chinese in 405 by the Kashmiri monk [BUDDHAYAŚAS](#) (c. early fifth century CE) and is still followed today in the East Asian Buddhist traditions. It taught a code of discipline that involved 250 principal monastic precepts for monks, 348 for nuns. The central scripture of the Nanshan lü zong is Daoxuan’s influential commentary on the *Sifen lü*, the *Sifen lü shanfan buque xingshi chao*, which was composed in 626. Although the Nanshan lü zong remained the dominant tradition of vinaya exegesis in China, other groups such as the [DONGTA LÜ ZONG](#) (East Pagoda) and Xiangbu (Xiang Region) vinaya schools also flourished. The interpretations of the Nanshan lü zong were introduced into Japan by the Chinese monk [GANJIN](#) (C. Jianzhen; 687–763), who helped established the School of Discipline (J. [RISSHŪ](#)), one of the six schools of the Nara tradition of early Japanese Buddhism (see [NARA BUDDHISM, SIX SCHOOLS OF](#)).

[Nanto shichidaiji](#). (南都七大寺). In Japanese, “seven great monasteries of Nara,” seven of the major Buddhist monasteries founded in the ancient Japanese capital of Nara. See individual entries for [DAIANJI](#), [GANGŌJI](#), [HŌRYŪJI](#), [KŌFUKUJI](#), [SAIDAJI](#), [TŌDAJI](#), and [YAKUSHIJI](#).

[Nanyang Huizhong](#). (J. Nan’yō Echū; K. Namyang Hyech’ung 南陽慧忠) (675?–775). Chinese [CHAN](#) master of the Tang dynasty; a native of Yuezhou in present-day Zhejiang province. He is said to have studied under the sixth patriarch ([LIUZU](#)) [HUINENG](#) (638–713) as a youth and to have eventually become one of his dharma successors. After Huineng’s death, Nanyang led an itinerant life, traveling from one monastery to the next until he settled down on Mt. Baiya in Nanyang (present-day Henan province), whence he acquired his toponym. He is said to have remained in seclusion on the mountain for some forty years. In 761,

he was invited to the palace by Emperor Suzong (r. 756–762), who honored Nanyang as his teacher. He took up residence at the monastery of Qianfusi, but later moved to Guangzhaisi at the request of Emperor Daizong (r. 762–779). Nanyang later established the monasteries of Yanchangsi and Changshousi and installed a copy of the Buddhist canon ([DAZANGJING](#)) at each site. Juizong lived during a period of great efflorescence in the Chan school, but he was not closely identified with any one school. He is, however, said to have been critical of the teachings of the Chan master [MAZU DAOYI](#) (709–788) and other [HONGZHOU ZONG](#) teachers in Sichuan in the south of China, who rejected the authority of the traditional Buddhist scriptures; he is also said to have criticized the Hongzhou interpretation of “mind is buddha” as being akin to the [ŚRENĪKA HERESY](#), in which the body is simply an impermanent vessel for an eternal mind or soul. The notion that “inanimate objects can preach the dharma” (wujing shuofa) is also attributed to Nanyang.

[Nanyue Huairang](#). (J. Nangaku Ejō; K. Namak Hoeyang 南嶽懷讓) (677–744). Chinese [CHAN](#) monk of the Tang dynasty, Huairang was a native of Jinzhou in present-day Shandong province. At an early age, Huairang is said to have gone to the monastery of Yuquansi in Jingzhou (present-day Hubei province) where he studied [VINAYA](#) under the vinaya master Hongjing (d.u.). Later, he visited [SONGSHAN](#) and continued his studies under Hui’an (also known as Lao’an or “Old An”; 582–709), a reputed disciple of the fifth patriarch [HONGREN](#) (601–674). Hui’an purportedly introduced Huairang to the sixth patriarch ([LIUZU](#)) [HUINENG](#) (638–713), from whom Huairang eventually received dharma transmission. In 713, Huairang began teaching at the monastery of Boresi on Mt. Nanyue (present-day Hunan province), whence his toponym. There, Huairang acquired his most famous disciple, [MAZU DAOYI](#) (709–788). As most of what is known of Huairang comes from the work of Mazu and Mazu’s students, some scholars contend that the obscure figure of Huairang was used as a convenient means of linking Mazu’s successful [HONGZHOU ZONG](#) line with the legendary sixth patriarch Huineng. The Chan lamplight records ([CHUANDENG LU](#)) trace the [GUIYANG ZONG](#) and [LINJI ZONG](#), two of the traditional “five houses” (see [WU JIA QI ZONG](#)) of the mature Chan tradition, back to Nanyue Huairang.

[Nanyue Huisi](#). (J. Nangaku Eshi; K. Namak Hyesa 南嶽慧思) (515–577). Chinese monk in the [Tiantai](#) school and teacher of [Tiantai Zhiyi](#) (538–597); also known as Great Master Nanyue and Great Master Si. Huisi was a native of Yuzhou in

present-day Anhui province. According to his biography in the Liang-era [GAOSEN ZHUAN](#), Huisi was obsessed with the prospect of death in his youth and assiduously pursued a means of attaining immortality. Studying with his teacher Huiwen (d.u.), about whom next to nothing is known, Huisi is said to have learned a meditative technique based on [NĀGĀRJUNA](#)'s premise of the identity of emptiness, provisionality, and their mean (see [SANDI](#)), which he later taught to his own students. Monks who disagreed with his teachings tried to poison him, so Huisi left northern China for the south, but his popularity there prompted jealous monks to brand him a spy. This charge was rejected by the Chen-dynasty emperor, and Huisi continued to teach in the south, where he attracted many students, including the renowned Tiantai Zhiyi. Huisi's meditative teachings on the *suiziyi sanmei* ("cultivating [SAMĀDHI](#) wherever mind is directed," or "the *samādhi* of freely flowing thoughts") were recorded in Zhiyi's [MOHE ZHIGUAN](#). In this type of meditation, the adept is taught to use any and all experiences, whether mental or physical, whether wholesome or unwholesome, as grist for the mill of cultivating *samādhi*. Huisi is credited with the compilation of several treatises, such as the *Dasheng zhiguan*, *Cidi chanyao*, *Fahua jing anle xingyi*, and others.

[Nanzenji](#). (南禪寺). In Japanese, "Southern [ZEN](#) Monastery," major monastery in Kyōto, Japan, that is currently the headquarters (*honzan*) of the Nanzenji branch of the [RINZAISHŪ](#). In 1264, Emperor Kameyama (r. 1259–1274) built a country villa, which he later converted to a Zen monastery named Nanzenji. He invited the monk Mukan Fumon (1212–1291), a disciple of [ENNI BEN'EN](#) (1202–1280), to serve as the monastery's founding abbot (J. *kaisan*; C. [KAISHAN](#)). After Fumon's departure, the monk Soen (1261–1313) succeeded Mukan and oversaw additional construction at the monastery. As the first Zen monastery constructed by an emperor, many eminent Zen masters were appointed to its abbacy. In 1325, Emperor Godaigo (r. 1318–1339) invited [MUSŌ SŌSEKI](#) (1275–1351) to serve as abbot of Nanzenji. After his triumphant return to Kyōto in 1334, Godaigo elevated Nanzenji to the first rank in the influential [GOZAN](#) system. Nanzenji maintained this rank, even after political power was handed over to the Ashikaga shogunate. During the Muromachi period, the abbacy of Nanzenji came to be restricted only to those who had already served as abbot of another *gozan* monastery. For this reason, Nanzenji became the center of *gozan* culture and Zen practice. The monastery suffered from a series of conflagrations in 1393, 1447, and 1467. Although the monastery never fully recovered from these

fires, some restoration efforts were made by Toyotomi Hideyoshi (1536–1598).

Nan zong. (J. Nanshū; K. Nam chong 南宗). In Chinese, “Southern School,” an appellation used widely throughout the Tang dynasty, largely due to the efforts of [HEZE SHENHUI](#) (684–758) and his lineage, to describe what they claimed to be the orthodox lineage of the [CHAN ZONG](#); in distinction to the collateral lineage of the “Northern School” ([BEI ZONG](#)) of [SHENXIU](#) (606–706) and his successors. Heze Shenhui toured various provinces and constructed ordination platforms, where he began to preach that [HUINENG](#) (638–713), whom he claimed as his teacher, was the true sixth patriarch ([LIUZU](#)) of the Chan school. In 732, during an “unrestricted assembly” (WUZHE DAHUI) held at the monastery of Dayunsi in Huatai, Shenhui engaged a monk by the name of Chongyuan (d.u.) and publicly criticized what he called the “Northern School” of Shenxiu’s disciples [PUJI](#) (651–739), [YIFU](#) (661–736), and [XIANGMO ZANG](#) (d.u.) as being merely a collateral branch of [BODHIDHARMA](#)’s lineage, which advocated an inferior gradualistic teaching. Shenhui argued that his teacher Huineng had received the orthodox transmission of Bodhidharma’s lineage and the “sudden teaching” ([DUNJIAO](#)), which was the unique soteriological doctrine of Bodhidharma and his Chan school. Shenhui launched a vociferous attack on the Northern School, whose influence and esteem in both religious and political circles were unrivaled at the time. He condemned Shenxiu’s so-called “Northern School” for having wrongly usurped the mantle of the Chan patriarchy from Huineng’s “Southern School.” Shenhui also (mis)characterized the teaching of the “Northern School” as promoting a “gradual” approach to enlightenment ([JIANWU](#)), which ostensibly stood in stark contrast to Huineng’s and thus Shenhui’s own “sudden awakening” ([DUNWU](#)) teachings. As a result of Shenhui’s polemical attacks on Shenxiu and his disciples, subsequent Chan historians, such as [GUIFENG ZONGMI](#) (780–841), came to refer reflexively to a gradualist “Northern School” that was to be rigidly distinguished from a subitist “Southern School.” Modern scholarship has demonstrated that, in large measure, the centrality of the “Southern School” to early Chan history is a retrospective creation. The Chan patriarchal lineage going back to Chan’s putative founder, Bodhidharma, was still inchoate in the eighth century; indeed, contemporary genealogical histories, such as the [LIDAI FABAO JI](#), [CHUAN FABAO JI](#), [LENGQIE SHIZI JI](#), and [BAOLIN ZHUAN](#), demonstrate how fluid and fragile the notion of the Chan lineage remained at this early period. Because the lineages that eventually came to be recognized within the later tradition were not yet cast in stone, it was therefore possible for

Shenhui to advocate that a semilegendary, and relatively unknown figure, Huineng, rather than the leading Chan figures of his time, was the orthodox successor of the fifth patriarch [HONGREN](#) and the real sixth patriarch (liuzu). While this characterization is now known to be misleading, subsequent histories of the Chan tradition more or less adopted Shenhui's vision of early Chan history. The influential [LIUZU TAN JING](#) played an important role in this process of distinguishing a supposedly inferior, gradualist Northern School from a superior, subitist Southern School. By the eleventh century, with the composition of the mature Chan genealogical histories, such as the [CHODANG CHIP](#) (C. [ZUTANG JI](#)) and [JINGDE CHUANDENG LU](#), this orthodox lineage was solidified within the tradition and became mainstream. In these later "transmission of the lamplight" records ([CHUANDENG LU](#)), the "Southern School" was now unquestioned as the orthodox successor in Bodhidharma's lineage, a position it retained throughout the subsequent history of the Chan tradition. Despite Shenhui's virulent attacks against the "Northern School," we now know that Shenxiu and his disciples were much more central to the early Chan school, and played much more important roles in Chan's early growth and development, than the mature tradition realized.

[Naong Hyegŭn](#). (懶翁慧勤) (1320–1376). In Korean, "Old Lazybones, Earnest in Wisdom," an eminent Korean [SŎN](#) master and pilgrim of the Koryŏ dynasty. Naong was a native of Yŏnghae in present-day North Kyŏngsang province and is said to have decided to become a monk after the traumatic death of a close friend in 1339. After his ordination by the monk Yoyŏn (d.u.) of the hermitage of Myojŏgam on Mt. Kongdŏk, Naong traveled from one monastery to the next until he settled down at the monastery of Hoeamsa in 1344. Four years later at Hoeamsa, Naong is said to have attained his first awakening. In 1347, he left for China where he met the Indian master [ZHUKONG CHANXIAN](#) (1289–1363; K. Chigong Sŏnhyŏn; S. *Śūnyadiśya-Dhyānabhadra) at the monastery of Fayuansi in the Yuan-dynasty capital of Yanjing; later, Naong would receive dharma transmission from Zhikong. After studying under Zhikong, Naong visited the Chan master Pingshan Chulin (1279–1361) at Jingcisi in Hangzhou (present-day Zhejiang province). Naong is said to have later received Pingshan's chowrie ([FUZI](#); [VĀLAVYAJANA](#)) as a sign of his spiritual attainment. Before his return to the Yuan capital of Yanjing in 1355, Naong made a pilgrimage to [MT. PUTUOSHAN](#), where he made offerings to the bodhisattva [AVALOKITEŚVARA](#) ([GUANYIN](#)). Upon his arrival back in Yanjing, he was appointed abbot of the monastery of

Guangjisi by Emperor Xundi (r. 1333–1368). In 1358, Naong returned to Korea and three years later was invited to the royal palace, where he taught the king and queen. In 1370, Naong was appointed the royal preceptor (wangsa) and abbot of the influential monastery of [SONGGWANGSA](#). Naong was viewed as a living buddha and eventually became the object of cultic worship: in the apocryphal *Ch'isǒng kwangmyǒng kyǒng* (“Book of Blazing Light”), which was widely disseminated in Korea in the sixteenth century, Naong is said to have been an emanation of [ŚĀKYAMUNI](#) Buddha himself. He spent the next few years revitalizing the community at his old monastery of Hoeamsa. Among his many disciples, [MUHAK CHACH'Ō](#) (1327–1405) is most famous.

[Nara Buddhism, Six Schools of](#). A traditional grouping of six major scholastic schools of Japanese Buddhism active during the Nara period (710–794 CE): (1) Sanronshū (see [SAN LUN ZONG](#)), an East Asian counterpart of the [MADHYAMAKA](#) school; (2) Kegonshū (see [HUAYAN ZONG](#)), an East Asian exegetical tradition focused on the [AVATAMSAKASŪTRA](#); (3) [RISSHŪ](#), or [VINAYA](#) exegesis; (4) Jōjitsushū (see [CHENGSHI LUN](#)) the [TATTVASIDDHI](#) exegetical tradition; (5) Hossōshū (see [FAXIANG ZONG](#)), an East Asian strand of [YOGĀCĀRA](#); and (6) Kushashū, focused on [ABHIDHARMA](#) exegesis using the [ABHIDHARMAKOŚABHĀSYA](#). These six schools are presumed to have been founded during the initial phase of Buddhism’s introduction into Japan, between c. 552 and the end of the Nara period in 794. These learned schools were eventually supplanted by the practice and meditative schools of [TENDAISHŪ](#) and [SHINGONSHŪ](#), which were introduced during the succeeding Heian period (794–1185), and the later schools of the [ZENSHŪ](#), the pure land schools of [JŌDOSHŪ](#) and [JŌDO SHINSHŪ](#), and [NICHIRENSHŪ](#) of the Kamakura period (1185–1333).

[Nara daibutsu](#). [alt. Birushana Nyorai] (奈良大佛/毘盧遮那如來). In Japanese, lit. “The Great Buddha of Nara”; a colossal image of the buddha [VAIROCANA](#) located at [TŌDAIJI](#) in the ancient Japanese capital of Nara. At about forty-eight feet (14.98 meters) high, this image is the largest extant gilt-bronze image in the world, and the Daibutsuden (Great Buddha Hall) where the image is enshrined is the world’s largest surviving wooden building. Despite its massive size, however, the current Daibutsuden, which was reconstructed during the middle of the Edo period (1603–1867) to a height of 156 feet (forty-eight meters), is only two-thirds the size of the original structure. The Indian monk [BODHISENA](#) (J. Bodaisenchi) (704–760), who traveled to Japan in 736 at the invitation of

Emperor Shōmu (r. 724–749), performed the “opening the eyes” ([KAIYAN](#); [NETRAPRATIṢṬHĀPANA](#)) ceremony for the 752 dedication of the great buddha image. The bronze body of the image was restored in 1185, and the massive head (seventeen feet, or 5.3 meters, in size) was repaired in 1692. See also [KAMAKURA DAIBUTSU](#).

[Nārada Mahāthera](#). (1898–1983). A prominent modern Sri Lankan [THERAVĀDA](#) scholar and missionary monk (dhammaduta bhikkhu). Born in a Colombo suburb, he studied at the Roman Catholic St. Benedict’s College (where the medium of instruction was English) and at the Buddhist Paramananda Vihāra Sunday school. He was ordained as a novice (P. *sāmaṇera*; S. [ŚRĀMANERA](#)) at the age of eighteen under the guidance of Pelene Vajirañāna Mahānāyaka Thera. He received a traditional monastic education in Pāli but also studied Western philosophy, logic, and ethics. He began missionary work with the Servants of the Buddha Society and took his first journey outside of Sri Lanka in 1929, to India. He later traveled widely in Southeast Asia and developed close ties with Buddhists in Indonesia and Vietnam. In the late 1940s, he was involved in the resumption of Theravāda missionary activity among the Newars of Kathmandu Valley in Nepal after the ban on religious propagation was lifted by the Rana regime. He also devoted himself to promoting Theravāda Buddhism in Australia and Western Europe and was elected president of the Buddhist Vihāra Society in London in 1948. Nārada Mahāthera was a prolific writer, and his publications ranged from Buddhist ethics and meditation to [ABHIDHAMMA](#) studies. His more popular books include *Buddhism in a Nutshell*, *The Buddha and His Teachings*, *The Buddhist Conception of Mind or Consciousness*, *The Buddhist Doctrine of Karma and Rebirth*, *The Way to Nibbana*, *The Life of the Buddha*, and *An Elementary Pali Course*. His English translations include *The Dhammapada* and *Abhidhammathasaṅgaha: A Manual of Abhidhamma*.

[Naraen Kongō](#). (J) (那羅延金剛). See [NIŌ](#).

[nāraka](#). (P. *nerayika*; T. *dmyal ba*; C. *diyu* [youqing/zhongsheng]; J. *jigoku* [ujō/shujō]; K. *chiok* [yujōng/chungsaeng] 地獄[有情/衆生]). In Sanskrit, “hell denizen,” the lowest of the six rebirth destinies ([GATI](#)) in the realm of [SAMŚĀRA](#), followed by ghosts, animals, demigods, humans, and divinities. In Buddhist cosmography, there is an elaborate system of hells (*naraka* or *niraya* in Sanskrit and Pāli), and Buddhist texts describe in excruciating detail the torment hell

denizens are forced to endure as expiation for the heinous acts that led to such baleful rebirths (cf. [ĀNANTARYAKARMA](#)). According to one well-known system, the hells consist of eight hot hells, eight cold hells, and four neighboring hells ([PRATYEKANARAKA](#)), all located beneath the surface of the continent of [JAMBUDVĪPA](#). The ground in the hot hells is made of burning iron. The ground in the cold hells is made of snow and ice; there is no sun or any source of light or heat. The eight hot hells, in descending order in depth and ascending order in suffering, are named reviving ([SAMJĪVA](#)), black line ([KĀLASŪTRA](#)), crushed together ([SAMGHĀTA](#)), crying ([RAURAVA](#)), great crying ([MAHĀRAURAVA](#)), hot ([TĀPANA](#)), very hot ([PRATĀPANA](#)), and interminable ([AVĪCI](#)). The eight cold hells, in descending order in depth and ascending order in suffering, are named blisters (arbuda), bursting blisters (nirarbuda), chattering teeth (aṭaṭa), moaning (hahava; translated into Tibetan as a chu zer ba, “saying ‘achoo’”), moaning (huhuva), [skin split like a] blue lotus (utpala), [skin split like a] lotus (padma), and [skin split like a] great lotus (mahāpadma). The neighboring hells include (1) the pit of embers ([KUKŪLA](#)), (2) the swamp of corpses ([KUNAPA](#)), (3) the road of razors ([KSURAMĀRGA](#)), grove of swords ([ASIPATRAVANA](#)), and forest of spikes ([AYAŚĀLMALĪVANA](#)), and (4) the river difficult to ford ([NADĪ VAITARANĪ](#)). Buddhist hells are places of rebirth rather than permanent postmortem abodes; there is no concept in Buddhism of eternal damnation. The life spans in the various hells may be incredibly long but they are finite; once the hell denizen’s life span is over, one will be reborn elsewhere. In a diorama of the hells on display at the Chinese cave sites at [DAZU SHIKE](#), for example, after systematic depictions of the anguish of the various hells, the last scene shows the transgressor being served a cup of tea, as a respite from his protracted torments, before being sent on to his next rebirth.

[Nara, seven great monasteries of](#). See [NANTO SHICHIDAJI](#).

[Nārāyaṇa](#). (T. Sred med kyi bu; C. Naluoyan tian; J. Naraenten; K. Narayōn ch’ōn 那羅延天). In ancient India, Nārāyaṇa was the son of the primordial person (puruṣa) and was later regarded as an avatar of the Hindu god Viṣṇu. He was adopted into Buddhism as one of the guardian deities ([DHARMAPĀLA](#)). His image is often seen standing at the entrance to a monastery, protecting its hallowed precincts from baleful influences. Because the divinity [BRAHMĀ](#) (alt. Mahābrahmā) was born from a lotus that blossomed from the navel of Nārāyaṇa, Nārāyaṇa is also sometimes identified as being the mother of Brahmā, the

presiding divinity in the third and highest of the three levels of the first [DHYĀNA](#) heaven in the subtle-materiality realm ([RŪPADHĀTU](#)). (Like Nārāyaṇa, Brahmā is also adopted into Buddhism as a dharmapāla.) Since Brahmā is regarded as the “father of creatures,” Nārāyaṇa is in turn called the “Origin of Human Life” (C. Renshengben). Nārāyaṇa is said to dwell in the Diamond Grotto on [WUTAISHAN](#) in China, which leads directly to the pure land and was thought to be the site where [MAÑJUŚRĪ](#) and [VIMALAKĪRTI](#) discussed the [MAHĀYĀNA](#) teachings in the [VIMALAKĪRTINIRDEŚĀ](#).

[Narendrayaśas](#). (C. Naliantiliyeshe; J. Narendairiyasha; K. Naryōnjeriyasa 那連提黎耶舍) (517–589). Sanskrit proper name of an Indian translator of primarily Mahāyāna Buddhist texts into Chinese. Born in [ODDIYĀNA](#) in northeastern India into the [KSĀTRIYA](#) caste, Narendrayaśas was ordained at the age of seventeen and left on pilgrimage to the Buddhist sacred sites on the Indian subcontinent, his travels taking him as far as the Himalayas in the north and the island of Sri Lanka in the south. After residing at the [VENUVANAVIHĀRA](#) monastery in India for a decade, he eventually traveled north of the Himalayas to propagate Buddhism, before getting caught in the Turkic invasions that made it impossible for him to return home. Turning east through Central Asia, he ended up traveling along the [SILK ROAD](#) to China, arriving in the Northern Qi kingdom in 556. Residing at Tianpingsi at the request of Emperor Wenxuan (r. 550–559) and later at Daxingshansi in Chang’an, he translated some fourteen texts into Chinese, including the [KARUNĀPUNĀRĪKA](#), [SAMĀDHIRĀJA](#), and the [MAHĀMEGHASŪTRA](#).

[Nā ro chos drug](#). (Naro chödruk). The Tibetan name for a series of tantric practices, often translated into English as “the six yogas (or dharmas) of Nāropa,” which are attributed to the eleventh-century Indian adept [NĀROPA](#). These practices spread widely throughout Tibet, where they were transmitted among various Tibetan Buddhist traditions, including those of the [SA SKYA](#) and [DGE LUGS](#). However, the Nā ro chos drug became a fundamental component in the meditation training of [BKA’ BRGYUD](#) practitioners and continue to be practiced especially in the context of the traditional three-year retreat. Nāropa received several streams of tantric instruction from his [GURU](#), the Indian [SIDDHA TILOPA](#), including the [BKA’ BABS BZHI](#) (four transmissions). According to tradition, he later codified these instructions and transmitted them to his Tibetan disciple [MAR PA CHOS KYI BLO GROS](#), although Nāropa had died before Mar pa’s

first journey to India. However, Mar pa received these teachings from Nāropa's disciples and taught them in Tibet as the Nā ro chos drug. There are several slight variations in their presentation, but the most common enumeration of the Nā ro chos drug are (1) [GTUM MO](#) (tummo), literally “fierce woman,” referring to the inner heat produced as an effect of manipulating the body's subtle energies; (2) [sgyu lus](#) (gyulu), “illusory body” (see [MĀYĀDEHA](#)), in which the meditator realizes the illusory nature of ordinary experiences; (3) [rmi lam](#) (milam), “dreams,” referring to the practice of developing conscious awareness during dream states; (4) ['od gsal](#) (ösel), “clear light” (see [PRABHĀSVARA](#)), referring to the luminous aspect of mind and its recognition; (5) [BAR DO](#), “intermediate state,” referring to the practice of mental control during the disorienting period between death in one lifetime and rebirth into another; (6) ['PHO BA](#) (powa), “transference,” which is the practice of ejecting the consciousness out of the body at the moment of death to take rebirth in a pure realm. The first four are generally believed to facilitate liberation in the present life, the last two at the time of death.

[Nāropa](#). (1016–1100?). An Indian scholar and tantric master who holds an important place in the lineages of tantric Buddhism in Tibet. According to his traditional biography, Nāropa was a brāhmaṇa born in Bengal, who traveled to [KASHMIR](#) as a child. He was forced to marry at the age of seventeen, but the marriage ended by mutual consent after eight years. According to some sources, Nāropa's wife (or sister according to other sources) was [NIGUMA](#), who became a famous tantric [YOGINĪ](#). Nāropa was ordained as a Buddhist monk, entering [NĀLANDĀ](#) monastery in 1049. His talents as a scholar eventually led him to be selected to serve as abbot and as a senior instructor known by the name Abhayakīrti. In 1057, while at the monastery, he encountered an old hag (in reality a [DĀKINĪ](#)), who told him that he had understood the words of the texts he had studied but not their inner meaning. She urged him to go in search of her brother [TILOPA](#). As a result of this encounter, Nāropa left the monastery to find Tilopa and become his disciple. Over the course of his journey, he encountered Tilopa in various forms but was unable to recognize him. Tilopa eventually revealed himself to Nāropa, subjecting him to a famous series of twelve greater and twelve lesser trials, involving serious physical injury and mental anguish. Tilopa eventually transferred his realization to Nāropa by striking him on the head with his shoe. Nāropa later compiled Tilopa's instructions and transmitted them to his own disciples. According to tradition, these students included the Tibetan translator [MAR PA CHOS KYI BLO GROS](#), but in fact Nāropa had died before

Mar pa made his first journey to India. Regardless, various instructions of Nāropa were transmitted to Tibet, the most famous of which are the [NĀ RO CHOS DRUG](#), or “six doctrines (or yogas) of Nāropa.” These practices became important for numerous Buddhist lineages but are especially associated with the [BKA’ BRGYUD](#) sect, where Nāropa holds a central place in the lineage from [VAJRADHARA](#) to Tilopa to Nāropa to Mar pa to MI LA RES PA. Several works attributed to Nāropa are preserved in the Tibetan canon.

[nāśanīya](#). (P. nāsana; T. bsnyil ba; C. binchu; J. hinzui; K. pinch’ul 擯出). In Sanskrit, lit. “removal”; an ecclesiastical procedure ([KARMA](#)) that the [SAMGHA](#) carries out against a novice ([ŚRĀMANERA](#)) or a nun ([BHIKSŪNĪ](#)), whereby certain privileges are withdrawn because of misconduct. According to the Pāli [VINAYA](#), there are three kinds of nāśanīya (P. nāsana): (1) liṅganāsana, or “removal of the sign,” here meaning removing the robe or defrocking the guilty party; (2) saṃvāsanāsana, or removing the guilty party from association with other monastics; and (3) daṇḍakammanāsana, or the expulsion of a novice for an offense. There are ten occasions that may entail the application of nāsana to the novice, viz., (1) killing living creatures, (2) theft, (3) unchastity, (4) lying about spiritual attainments, (5) using intoxicants, (6–8) criticizing either the Buddha, the dharma, or the saṃgha, (9) heresy, and (10) seducing nuns.

[Nāsik](#). A group of twenty-four Buddhist caves dating from the early second century CE, northeast of Mumbai (Bombay) in the Indian state of Maharashtra. All the caves except cave 18 are [VIHĀRA](#) caves. The interiors of the caves are quite plain, in contrast to their highly ornamented exteriors, which include lithic carvings made to resemble wooden structures. The [CAITYA](#) cave has a pillared interior with a [STŪPA](#) in its apse, which is a characteristic feature of early Indian Buddhist cave temples. Figures and ornaments in its facade bear resemblance to similar motifs at [SĀŅCI](#), suggesting artistic influence from that site.

[nāstika](#). (P. natthika; T. med pa pa; C. zhiwu; J. shūmu; K. chimmu 執無). In Sanskrit, literally, “one who says ‘is not’,” that is, “nihilist,” typically used in Buddhist materials to refer to specific [ŚRAMANA](#) religious groups, like the [ĀJĪVAKA](#) and some of the Cārvāka materialists, who either do not accept the validity of moral cause and effect ([KARMA](#)) and hence [REBIRTH](#), or reject the reality of sensory phenomena. In Hindu literature, the term is used to refer to those who reject the authority of the Vedas; in this latter sense, Buddhists (as well as the [JAINA](#)) are classed as nāstika.

nat. In Burmese, a generic term for a “spirit” or “god.” Burmese (Myanmar) lore posits the existence of numerous species of nats, of both indigenous and Indian origin. Nats can range in temperament from benign to malevolent, including those who are potentially helpful but dangerous if offended. The most generally benevolent species of nats are the divinities ([DEVA](#)) of the Indian pantheon. This group includes such gods as Thakya Min ([ŚAKRA](#)) and Byama ([BRAHMĀ](#)). Nats of Indian origin are typically looked upon as servants of the Buddhist religion, which is how they are depicted in Burmese Pāli literature. Indigenous nats in the form of nature spirits are thought to occupy trees, hills, streams, and other natural sites, and may cause harm if disturbed. The guardian spirits of villages and of the home are also classified as nats. Certain nats guard medicinal herbs and certain minerals, and, when properly handled, aid alchemists in their search for elixirs and potions. One species of nat, the oktazaung, are ghosts who have been forced to act as guardians of pagoda treasures. These unhappy spirits are thought to be extremely dangerous and to bring calamity upon those who attempt to rob pagodas or encroach upon pagoda lands. The best-known group of nats is the “thirty-seven nats” of the Burmese national pantheon. For centuries, they have been the focus of a royal cult of spirit propitiation; the worship of national nats is attested as early as the eleventh century CE at [PAGAN](#) (Bagan). At the head of the pantheon is Thakya Min, but the remaining are all spirits of deceased humans who died untimely or violent deaths, mostly at the hands of Burmese monarchs. The number thirty-seven has remained fixed over the centuries, although many of the members of the pantheon have been periodically replaced. One of the nats who has maintained his position is Mahagiri Min, lord of the nat pantheon, occupying a position just beneath Thakya Min. Mahagiri dwells atop Mount Poppa and is also worshipped as the household nat in most Burmese homes. An annual nat festival of national importance is held in August at the village of Taungbyon near Mandalay. The festival is held in honor of Shwepyingyi and Shwepyingge, two Muslim brothers who became nats as a consequence of being executed by King Kyanzittha of Pagan (r. 1084–1112) who feared their supernormal strength.

navadharmā. In Sanskrit, the “nine dharmas,” also known as the [NAVAGRANTHA](#) (“nine books”); nine MAHĀYĀNA SŪTRAS that are the object of particular devotion in the Newar Buddhist tradition of Nepal. The notion of a collection of nine books seems to have originated in the Newar community, although the nine

sūtras are all of Indian origin. The nine are the [AṢṬASĀHASRIKĀPRAJÑĀPĀRAMITĀ](#), [SADDHARMAPUNĀRĪKASŪTRA](#), [LALITAVISTARA](#), [LĀNKĀVATĀRASŪTRA](#), [SUVARNAPRABHĀSOTTAMASŪTRA](#), [GANDAVYŪHA](#), Tathāgataguhyasūtra, [SAMĀDHIRĀJASŪTRA](#), and [DAŚABHŪMIKASŪTRA](#). Of these nine, the *Aṣṭasāhasrikāprajñāpāramitā* is granted the highest esteem, having its own cult and its own deity, the goddess [PRAJÑĀPĀRAMITĀ](#). These texts serve an important ritual function in Newar Buddhism, where they are said to represent the entire Mahāyāna corpus of [SŪTRA](#), [ŚĀSTRA](#), and [TANTRA](#). These texts are often recited during the religious services of monasteries, and a recitation of all nine texts is considered to be particularly auspicious. Some Newar Buddhist rituals (vrata) include offerings to the three jewels ([RATNATRAYA](#)), in which a priest will make a [MANDALA](#) for the [GURU](#), the Buddha, the [DHARMA](#), and the [SAMGHA](#). These sūtras of the nine dharmas are used in the creation of the dharmamaṇḍala, a powerful ritual symbol in Newar Buddhism. In this [MANDALA](#), the center space is occupied by the *Aṣṭasāhasrikāprajñāpāramitā*. The fact that there are nine of these texts may derive from the need to have nine elements in the maṇḍala. Different renditions of the dharmamaṇḍala indicate that the texts included in the navadharmas may have changed over time; this particular set of nine sūtras seems to date from the fifteenth century. Although these texts are held in particularly high regard, they are not the only authoritative texts in Newar Buddhism.

[navagrantha](#). (S). The “nine books.” See [NAVADHARMA](#).

[navaṅga\[pāvacaṇa\]](#). (S. navāṅga; T. gsung rab yan lag dgu; C. jiubu jing; J. kubu kyō; K. kubu kyōng 九部經). In Pāli, the “nine sections” or categories of the Buddha’s teachings based on content, structure, or literary style. In the Pāli tradition and some [BUDDHIST HYBRID SANSKRIT](#) sources, the nine sections that are typically listed are discourses (P. sutta; S. [SŪTRA](#)), aphorisms in mixed prose and verse (P. geyya; S. [GEYA](#)), prophetic teachings or expositions (P. veyyākaraṇa; S. [VYĀKARANA](#)), verses ([GĀTHĀ](#)), utterance or meaningful expressions ([UDĀNA](#)), fables (P. [ITIVUTTAKA](#); S. ITIURTTAKA), tales of previous lives ([JĀTAKA](#)), marvelous events (P. abbhutadhamma; S. [ADBHUTADHARMA](#)), and catechisms or works of great extent (P. vedalla; S. [VAIPULYA](#)). See also [DVĀDAŚĀṅGA\[PRAVACANA\]](#).

[navasamjñā](#). (P. navasaññā; T. ’du shes dgu; C. jiuxiang guan; J. kusōkan; K. kusangwan 九想觀). In Sanskrit, lit. “the nine perceptions,” one of the so-called meditations on the impurity/foulness [of the body] ([AŚUBHABHĀVANA](#)), the

objective of which is to facilitate understanding of impermanence ([ANITYA](#)), to develop disenchantment toward one's own and others' bodies, and/or to subdue lustful thoughts. In this meditation, the adept either mentally visualizes or physically observes the progressive decay of a corpse through nine specific stages: mottled discoloration of the corpse ([vinīlakasaṃjñā](#)), discharges of pus ([vipūyakasaṃjñā](#)), the decay of rotten flesh ([vipadumakasaṃjñā](#)), bloating and tumefaction ([vyādhmātakasaṃjñā](#)), the exuding of blood and the overflow of body fluids ([vilohitakasaṃjñā](#)), infestation of worms and maggots ([vikhāditakasaṃjñā](#)), the dissolution of flesh and exposure of bones and sinews ([vikṣiptakasaṃjñā](#)), the cremated remains ([vidagdhakasaṃjñā](#)), and the dispersed skeletal parts ([asthisamjñā](#)). These contemplations help to wean the meditator from the affliction of lust ([RĀGA](#); [LOBHA](#)), but lead only to the first of the four levels of meditative absorption ([DHYĀNA](#)).

[Neichi Toin](#). (1557–1629). Important Mongolian teacher who helped to spread Buddhism in Inner Mongolia; his traditional biography appears in a work entitled *Cindamani-yin erike*. Neichi Toin was the son of a Torghud noble. In order to comply with his father's wishes, he married and fathered a child, but left the family home in his late twenties and traveled to Tibet. He spent several years at [BKRA SHIS LHUN PO](#) monastery, where he studied with the first [PAN CHEN LAMA](#), [BLO BZANG CHOS KYI RGYAL MTSHAN](#), receiving tantric initiation from him. He excelled particularly in practices associated with [YAMĀNTAKA](#). In the 1590s, he returned to Mongolia, first to the Khalka region and then to Hohhot, where he spent the next thirty years living as a yogin with a group of disciples. His biography, which seems to take the story of [MILLA RAS PA](#) as its model, describes his habitation in mountain caves, his practice of [GTUM MO](#), his unconventional behavior, and his performance of various miracles. He is said to have worn blue and green robes and to have taken money intended for monasteries and given it to the poor. Around 1629, he went to Eastern Mongolia, where he sought to spread Buddhism, bringing him into conflict with local shamans. He secured the support of powerful nobles, leading to the founding of four monasteries in the region. Although a devotee of the [DGE LUGS PA](#), he ran afoul of the fifth [DALAI LAMA](#) ([NGAG DBANG BLO BZANG RGYA MTSHO](#)), who criticized him for giving the [YAMĀNTAKA](#) initiation to those without the proper qualification and for claiming to be the incarnation of [TSONG KHA PA](#). On a more political level, it appears that the Dalai Lama was concerned that a Mongol was developing a strong following outside the bounds of the Dge lugs hierarchy controlled from [LHA SA](#). When a

formal complaint was brought against Neichi Toin, the Manchu emperor deferred to the Dalai Lama, who declared that Neichi Toin did not have the necessary qualifications to be a high lama. He was therefore purged and his followers disbanded.

nenbutsu. [alt. nembutsu] (念佛). In Japanese, “recollection of the Buddha’s name.” See [NIANFO](#); [NAMU AMIDABUTSU](#); [ICHINENGI](#); [TANENGI](#).

netrapratisthāpana. (P. akkhipūjā; T. spyān dbye). In Sanskrit, “fixing the eyes,” viz., “opening the eyes”; a consecration ceremony for a buddha image ([BUDDHĀBHISEKA](#)), which serves to vivify the inert statue or painting, rendering it a hypostatization of the buddha. There are many versions of the ritual. In Southeast Asia, after making offerings to such Brahmanical protective divinities as [INDRA](#), [AGNI](#), or [YAMA](#) and conducting a purification ritual, the eyes of the image are painted in as the final act of preparing for its installation in a shrine. The ritual concludes with the recitation of a series of protective chants ([PARITTA](#)). The entire ritual often runs through the entire night, with the eyes “opened” around sunrise as the climax of the ritual. The Pāli form akkhipūjā, lit. “ritual of [opening] the eyes,” is attested by the late-fifth or early-sixth century, in the [MAHĀVAMSA](#) and [BUDDHAGHOSA](#)’s [SAMANTAPĀSĀDIKĀ](#). In Mahāyāna texts, such image consecration by painting in the eyes appears in the [RATNAGUNASAMCAYAGĀTHĀ](#), which dates prior to the fifth century CE. See also [PRATISTHĀ](#). For East Asian equivalents, see [DIANYAN](#); [KAIYAN](#).

Nettipakarana. In Pāli, “The Guide,” a paracanonical Pāli text dedicated to the exegesis of scripture, which is included in the longer Burmese (Myanmar) edition of the [KHUDDAKANIKĀYA](#). The *Netti* (as it is often called) is traditionally ascribed to the Buddha’s disciple Kaccāna (see [KĀTYĀYANA](#); [MAHĀKĀTYĀYANA](#)), but was likely composed in India sometime around the beginning of the Common Era. Some scholars presume that the work is a revision of the closely related [PETAKOPADESA](#), which it ultimately superseded. Both the *Netti* and the *Petākopadesa* develop an elaborate hermeneutical theory based on the broad rubrics of “interpretation” or “guidance” (*netti*; cf. Skt. *netri*) as to “sense” (*byañjana*; Skt. *vyañjana*) and interpretation as to “meaning” (*attha*; Skt. [ARTHA](#)). The *Netti* is divided into two major sections: an outline of the contents, and a longer systematic set of rubrics that describe specific techniques of interpretation, in three subsections. See also [VYĀKHYĀYUKTI](#); [SANFEN KEJING](#).

neyārtha. (P. neyyattha; T. drang don; C. buliaoyi; J. furyōgi; K. puryoŭi 不了義). In Sanskrit, “provisional,” “conventional”; one of the two categories (along with **NĪTĀRTHA**, “definitive,” “absolute”) into which the teachings of the **SŪTRAS** may be classified. The terms neyārtha and nītārtha are among several sets of categories employed in the interpretation of scriptures, providing a means of accounting for statements that appear to contradict what is regarded as the Buddha’s final position on a topic. The Indian schools differ on what constitutes a provisional statement, with some holding that any statement by the Buddha that cannot be accepted literally is provisional, with others holding instead that any statement that does not describe the final nature of reality is provisional. See also **SATYADVAYA**; **ABHISAMDHI**; **ABHIPRĀYA**.

Ngag dbang blo bzang rgya mtsho. (Ngawang Losang Gyatso) (1617–1682). The fifth **DALAI LAMA** of Tibet, widely held to be one of the most dynamic and influential members of his lineage. He was the first Dalai Lama to formally wield both religious and secular power over the Tibetan state and is renowned for his diverse range of religious and political activities. Commonly referred to as “the great fifth” (Inga pa chen po), Ngag dbang blo bzang rgya mtsho established himself as a gifted teacher, accomplished tantric practitioner, prolific author, and skillful statesman. The fifth Dalai Lama was born to an aristocratic family in the region of ’Phyong rgyas (Chongye) near the burial grounds of the early Tibetan dynastic rulers. His family had close ties with the **RNYING MA** sect, although the Dalai Lama claimed in one of his autobiographies that his mother had been the tantric consort of the **JO NANG** master **TĀRANĀTHA** and that Tāranātha was his biological father. He was recognized as the fifth Dalai Lama in 1622 by **BLO BZANG CHOS KYI RGYAL MTSHAN**, although there was a rival candidate, Grags pa rgyal mtshan. The fifth Dalai Lama mastered the **DGE LUGS** curriculum but also had a strong interest in Rnying ma, **SA SKYA**, and **BKA’ BRGYUD**. During this period, the Dge lugs was being persecuted by the kings of Gtsang, who were patrons of the **KARMA BKA’ BRGYUD**. The fifth Dalai Lama cultivated a relationship with the Qoshot Mongols. This deepened a connection with the Mongols begun by the third Dalai Lama, **BSOD NAMS RGYA MTSHO**, and enhanced by the fourth Dalai Lama, **YON TAN RGYA MTSHO**. With the aid of the Qoshot Mongol ruler Gushri Khan (1582–1655), the fifth Dalai Lama and his Dge lugs sect prevailed after a period of bitter political rivalry against the Bka’ brgyud and their supporters in the Gtsang court. In 1642, the Dalai Lama and his regent Bsod nams chos ’phel became the rulers of Tibet, although it took nearly

a decade before their power was consolidated throughout the provinces of central Tibet and extended to parts of eastern and western Tibet. The relationship thus forged between the Dalai Lama and the Mongol ruler was based on the so-called priest-patron ([YON MCHOD](#)) model previously established between the Sa skya heirarch ' [PHAGS PA BLO GROS RGYAL MTSHAN](#) and Qubilai Khan. The Dalai Lama promoted the view that he and the previous Dalai Lamas were incarnations ([SPRUL SKU](#)) of the [BODHISATTVA AVALOKITEŚVARA](#) and that he himself was linked to the three great religious kings (chos rgyal) [SRONG BTSAN SGAM PO](#), [KHRI SRONG LDE BTSAN](#), and [RAL PA CAN](#). In 1645, the fifth Dalai Lama began construction of the [PO TA LA](#) Palace on the site of Srong btsan sgam po's palace on Dmar po ri (Red Hill) in [LHA SA](#). He named it after [POTALAKA](#), the abode of Avalokiteśvara. The palace included his residence quarters and space for the Tibetan government, the [DGA' LDAN PHO BRANG](#), both relocated from ' [BRAS SPUNGS](#) monastery. In 1652, at the invitation of the Qing emperor, the fifth Dalai Lama traveled to the Manchu imperial court in Beijing, where he was greeted with great ceremony, although he resented attempts by the Chinese to present him as a vassal of the Qing emperor rather than as an equal head of state. The Dalai Lama forced the conversion to Dge lugs of those monasteries he considered doctrinally heterodox or politically dangerous. These included numerous Bka' brgyud institutions and, famously, the monastery of Dga' ldan (formerly Rtag brtan) phun tshogs gling (see [JO NANG PHUN TSHOGS GLING](#)), whose Jo nang texts were ordered to be locked under state seal. The fifth Dalai Lama did, however, support the founding of new Rnying ma institutions, such as [RDZOGS CHEN](#) monastery and [SMIN GROL GLING](#), and the renovation of [RDO RJE BRAG](#). He himself was a "treasure revealer" ([GTER STON](#)), discovering several texts that are included in his collected works. His religious training was broad and eclectic; among teachers of the Dge lugs sect, he was particularly close to the first [PAN CHEN LAMA](#), [BLO BZANG CHOS KYI RGYAL MTSHAN](#), who had also been the teacher of the fourth Dalai Lama, and from whom the fifth Dalai Lama received both his novice vows in 1625 and his monastic vows in 1638. After the Paṅ chen Lama's death, the Dalai Lama identified his next incarnation, continuing the alternating relation of teacher and student between the two foremost lamas of the Dge lugs. He died in 1682, but his death was kept secret by his regent, [SDE SRID SANGS RGYAS RGYA MTSHO](#), until 1697. He is entombed in a massive [STŪPA](#) in the Po ta la. The fifth Dalai Lama was a prolific and talented author, with his collected works comprising twenty-five volumes on a wide range of topics. Of particular note are his extensive autobiographies. Among his

more strictly “religious” works, his [LAM RIM](#) teachings entitled [LAM RIM 'JAM DPAL ZHAL LUNG](#) is well known.

[Ngal gso skor gsum](#). (Ngalso khorsum). In Tibetan, “Trilogy on Rest”; one of the major works by the Tibetan master [KLONG CHEN RAB 'BYAMS](#). It is composed of three cycles of teachings, each of which contains a root text, summary, autocommentary, and essential instruction (don khrid), as well as additional texts, for a total of fifteen works. The three cycles of teachings are (1) Sems nyid ngal gso (“Resting in Mind Itself”); (2) Sgyu ma ngal gso (“Resting in Illusion”); and (3) Bsam gtan ngal so (“Resting in Concentration [[DHYĀNA](#)]”).

[Ngor e wam chos ldan](#). [alt. Ngor e wam chos ldan] (Ngor Evam Chöden). A Tibetan monastery founded by Ngor chen (“the great man of Ngor”) [KUN DGA' BZANG PO](#) in 1429 near Gzhis ka rtse (Shigatse) in Gtsang (Tsang); the seat of the head of the [NGOR](#) subsect of the [SA SKYA](#) sect. After the monastery of Sa skya, it is regarded as the second most important monastery of the Sa skya sect, especially famous as a center for the [LAM 'BRAS](#) (path and result) teachings. It had four branches (bla brangs): Klu sding, Thar rtse, Phan bde khang gsar, and Khang sar; the abbacy (three years in duration) alternated among them. Its extensive library contained a number of Sanskrit manuscripts. The [TSHAR PA](#) order is considered an offshoot of the Ngor subsect. Prominent among a network of monasteries associated with Ngor e wam chos ldan is the Lhun grub steng monastery in [SDE DGE](#), the monastery most closely associated with the royal family and the location of the famous Sde dge printery.

[Nguyễn Thiệu](#). (C. Yuanshao 元韶) (c. 1610–c. 1691). Chinese monk who is considered the founding patriarch of a Vietnamese branch of the Chinese [LINJI ZONG](#) of [CHAN](#). Born in Guangdong (China), he became a monk at the age of nineteen. He arrived in Vietnam in 1665 accompanying Chinese merchants and settled in Bình Định province (central Vietnam). He eventually built the Tháp Tháp Di Đà monastery and began to teach Chan. He also founded the Hà Trung monastery in Thuận Hóa and Quốc Ân monastery in Huế. After that, at the request of Lord Nguyễn Phúc Tần, he returned to China to bring back Buddhist materials and utensils and to invite other eminent monks to Vietnam. Among these monks was the Chan master Thạch Liêm. Nguyễn Thiệu was the first monk to teach Linji Chan in central Vietnam. The modern Vietnamese Buddhist claim of an affinity with Linji Chan derives from this transmission via Nguyễn Thiệu.

[Nhất Hạnh](#). (V) (一行). See [THICH NHÁT HANH](#).

nianfo. (J. nenbutsu; K. yŏmbul 念佛). In Chinese, “recollection, invocation, or chanting of [the name of] the Buddha.” The term nianfo has a long history of usage across the Buddhist tradition and has been used to refer to a variety of practices. The Chinese term nianfo is a translation of the Sanskrit term [BUDDHĀNUMŚRTI](#) (recollection of [the qualities of] the Buddha), one of the common practices designed to help develop meditative absorption ([DHYĀNA](#)) in the mainstream traditions. Buddhānumśṛti is listed as the first of six fundamental contemplative practices, along with recollection of the [DHARMA](#), [SAMGHA](#), giving ([DĀNA](#)), morality ([ŚĪLA](#)), and the divinities ([DEVĀ](#)). Buddhānumśṛti (P. buddhānussati) is also the first in the Pāli list of ten “recollections” (P. anussati; S. [ANUSMRTI](#)), which are included among the forty meditative exercises (see [KAMMATTHĀNA](#)) discussed in the [VISUDDHIMAGGA](#). The meditator is instructed to reflect on the good qualities of the Buddha, often through contemplating a series of his epithets, contemplation that is said to lead specifically to “access concentration” ([UPACĀRASAMĀDHI](#)). In early Mahāyāna texts, the term seems to refer to the meditative practice of recollecting, invoking, or visualizing an image of a buddha or advanced [BODHISATTVA](#), such as [ŚĀKYAMUNI](#), [MAITREYA](#), or [AMITĀBHA](#). In East Asia, the term nianfo came to be used primarily in the sense of reciting the name of the Buddha, referring especially to recitation of the Chinese phrase namo Amituo fo (K. namu Amit’abul; J. [NAMU AMIDABUTSU](#); Homage to the buddha Amitābha). This recitation was often performed in a ritual setting and accompanied by the performance of prostrations, the burning of incense, and the intonation of scriptures, all directed toward gaining a vision of Amitābha’s [PURE LAND](#) of [SUKHĀVATĪ](#), a vision that was considered proof that one would be reborn there in the next lifetime. New forms of chanting Amitābha’s name developed in China, such as [WUHUI NIANFO](#) (five-tempo intonation of [the name of] the Buddha), which used leisurely and increasingly rapid tempos, and [YINSHENG NIANFO](#) (intoning [the name of] the Buddha by drawing out the sound). Nianfo practice was often portrayed as a relatively easy means of guaranteeing rebirth in Amitābha’s pure land. Many exegetes referred to the vows of the bodhisattva [DHARMĀKARA](#) (the bodhisattva who became Amitābha) as set forth in the [SUKHĀVATĪVYŪHASŪTRA](#), as evidence of the efficacy of nianfo practice in the degenerate age of the dharma ([MOFA](#)). In China, these various forms of nianfo were advocated by such famous monks as [TANLUAN](#), [DAOCHUO](#), and

[SHANDAO](#); these monks later came to be retroactively regarded as patriarchs of a so-called pure land school ([JINGTU ZONG](#)). In fact, however, nianfo was widely practiced across schools and social strata in both China and Korea and was not exclusively associated with a putative pure land tradition. In Japan, nenbutsu, or repetition of the phrase “namu Amidabutsu” (homage to Amitābha Buddha) became a central practice of the Japanese [PURE LAND](#) schools of Buddhism, such as [JŌDOSHŪ](#), [JŌDO SHINSHŪ](#), and [JISHŪ](#). The practice spread rapidly among common people largely through the efforts of such itinerant holy men ([HIJIRI](#)) as [KŪYA](#) and [IPPEN](#). Influential pure land teachers, such as [HŌNEN](#) and his disciple [SHINRAN](#), also promoted the exclusive practice of chanting the phrase [NAMU AMIDABUTSU](#) and debated whether multiple recitations of the Buddha’s name ([TANENGI](#)) were expected of pure land adherents or whether a single recitation ([ICHINENGI](#)) would be enough to ensure rebirth. Despite periodic suppressions of this movement, Hōnen and Shinran’s schools, known as the Jōdoshū and Jōdo Shinshū, became the largest Buddhist communities in Japan.

[niangu](#). (J. nenko; K. yŏmgo 拈古). In Chinese, “raising [and analyzing] ancient [cases]”; a “lettered Chan” ([WENZI CHAN](#)) literary style, which uses verse to comment on [CHAN](#) public cases ([GONG’AN](#)). See [HUANGLONG PAI](#).

[nianhua weixiao](#). (J. nenge mishō; K. yŏmhwa miso 拈花微笑) In Chinese, lit. “holding up a flower and smiling subtly”; a famous [CHAN](#) transmission story in which [ŚĀKYAMUNI](#) Buddha instructs the congregation nonverbally by simply holding up a flower. Only [MAHĀKĀŚYAPA](#) understands the Buddha’s intent and he smiles back in recognition, making him the first recipient of the Buddha’s “mind-to-mind transmission” ([YIXIN CHUANXIN](#)). Mahākāśyapa is thus considered the first patriarch ([ZUSHI](#)) of the Chan school. This story, also called the “World-Honored One holding up a flower” (Shizun nianhua), first appears in the 1036 imperially ratified Chan genealogical record, *Tiansheng Guangdeng lu*. There, the story also portrays the Buddha giving his disciple his robe as a token of transmission, but this event does not appear in the later versions of the story, such as in the 1093 *Zongmen tongyao ji* and the 1183 *Liandeng huiyao*. The same story is recorded also in the apocryphal Chinese sūtra *Da fantianwang wenfo jueyi jing* (“Mahābrahmā Questions the Buddha and Resolves His Doubts”), compiled sometime between the mid-twelfth and the late fourteenth centuries, probably in order to defend the historicity of the story, the authenticity of which was questioned even in Chan circles. The story became famous among

not only Buddhist clerics but also literati. The tale eventually became a meditative topic within the Chan school and is recorded as the sixth case ([GONG'AN](#)) in the 1228 [WUMEN GUAN](#) (“Gateless Checkpoint”); there, it concludes by giving the Buddha’s verbal confirmation that the transmission is complete: “I have this repository of the true dharma eye ([ZHENGFAZHANG](#)), the sublime mind of [NIRVĀNA](#), the authentic quality (C. shixiang; S. [TATTVA](#)) that is free from all qualities, the subtle and sublime dharma gate that does not rely on words or letters ([BULI WENZI](#)) but is a special transmission outside of the scriptures ([JIAOWAI BIECHUAN](#)). This I entrust to Mahākāśyapa.” In Western literature, this story has been dubbed the “Flower Sermon,” but this designation is never used in Chan literature.

[niannian wuchang](#). (C) (念念無常). See [ER WUCHANG](#).

[nibbidānupassanāñāna](#). In Pāli, “knowledge arising from the contemplation of disgust.” According to the [VISUDDHIMAGGA](#), the fifth of nine knowledges (ñāṇa; S. [JÑĀNA](#)) cultivated as part of “purity of knowledge and vision of progress along the path” (paṭipadāñāṇadassanavisuddhi). This latter category, in turn, constitutes the sixth and penultimate purity (visuddhi) to be developed along the path to liberation. The knowledge arising from the contemplation of disgust (P. nibbidā; S. [NIRVEDA](#)) refers to the sense of disillusionment that the adept feels toward the aggregates (khandha; S. [SKANDHA](#)) or the mental and material phenomena ([NĀMARŪPA](#)) comprising the individual and the universe; this response is prompted by the realization that all phenomena are frightening and dangerous because they are characterized by impermanence (P. anicca; S. [ANITYA](#)), suffering (P. dukkha; S. [DUHKHA](#)), and nonself (P. anatta; S. [ANĀTMAN](#)). The practitioner thus becomes dissatisfied with the things of this world and takes no delight in the thought of any further becoming ([BHAVA](#)) in any realm of rebirth ([GATI](#)). The *Visuddhimagga* states that this fifth knowledge, arising from the contemplation of disgust, is in essence not different from the preceding two knowledges: “knowledge arising from the contemplation of terror” ([BHAYATUPATTHĀNAÑĀNA](#)) and “knowledge arising from the contemplation of danger” ([ĀDĪNAVĀNUPASSANĀÑĀNA](#); see also [ĀDĪNAVA](#)). The differences among the three are said to be only nominal.

[Nichiren](#). (日蓮) (1222–1282). Japanese founder of the [NICHIRENSHŪ](#), one of the so-called new schools of Kamakura Buddhism. Nichiren is said to have been born into a commoner family in present-day Chiba prefecture. At the age of

twelve he entered the priesthood and was ordained at the age of sixteen. In 1239, he left his rural temple and went first to Kamakura and then to the capital of Kyōto to study at the great monasteries there. Although he draws heavily on [TENDAI](#) and [TAIMITSU](#) teachings in his own writings, Nichiren seems to have been acquainted with other traditions of Buddhism as well. During this period, Nichiren began to question what he perceived as inconsistencies in the doctrines of the various schools he was studying. In particular, Nichiren disagreed with the [JODOSHŪ](#) pure land tradition of [HONEN](#) (1133–1212), and the practice of reciting the buddha’s name ([NENBUTSU](#); C. [NIANFO](#)). Nichiren eventually concluded that the [SADDHARMAPUNḌARĪKASŪTRA](#) (“Lotus Sūtra”) contained the Buddha’s ultimate teaching, relegating all other teachings to a provisional status. Armed with this new insight, Nichiren proclaimed in 1253 that people should place their faith in the *Saddharmapuṇḍarīkasūtra* by reciting its “title” (J. [DAIMOKU](#)), viz., [NAMU MYŌHŌRENKĒKYŌ](#) (Homage to the *Saddharmapuṇḍarīkasūtra*), an act that he claimed was sufficient for gaining liberation in the time of the decline of the dharma, or mappō (C. [MOFA](#)). It was at this point that he adopted the name “Nichiren” (“Lotus of the Sun,”: i.e., Japan) Although Nichiren was a controversial figure, he attracted a large number of followers in Kamakura. In 1260, he wrote the *Risshō Ankokuron* (“Treatise on Establishing the Right [Teaching] for Securing the Peace of Our Country”), a tract that encouraged the Kamakura military government (bakufu) to rely on the teachings of the *Saddharmapuṇḍarīkasūtra* in order to avert political disaster and social upheaval and, in turn, to patronize Nichiren’s school over other Buddhist sects. As a result of his lobbying, and his challenge to the pure land tradition, Nichiren was arrested and exiled to Shizuoka prefecture in 1261 but was pardoned two years later. In 1271, a failed assassination plot against Nichiren hardened his resolve. He was arrested again in 1272 and banished to the island of Sado, where he wrote many of his most important treatises, including *Kaimokushō* (“Opening the Eyes”) and *Kanjin no honzonshō* (“The Object of Devotion for Observing the Mind”). In 1274, he was once again pardoned and subsequently returned to Kamakura. Failing for a third time to convince the Kamakura bakufu to turn to the *Saddharmapuṇḍarīkasūtra* for protection and salvation, he retired to Mt. Minobu in Yamanashi prefecture. There, he devoted his time to educating his disciples and writing essays, including *Senjishō* (“On the Selection of the Time”) and *Hō’onshō* (“Repaying Indebtedness”). Nichiren died at the age of sixty in the year 1282, leaving behind hundreds of works and divisive infighting for control of his legacy.

[Nichiren Shōshū](#). (日蓮正宗). In Japanese, “Orthodox School of Nichiren”; one of the principal Japanese Buddhist schools based on the teachings of [NICHIREN](#) (1222–1282). Nichiren Shōshū is descended from Nichiren through Nichikō (1246–1332), the alleged sole heir of Nichiren among his six chief disciples. Nichikō was a loyal student and archivist of Nichiren’s writings, who established in 1290 what was then called the Fuji school at [TAISEKIJU](#), a monastery on Mt. Fuji in Shizuoka prefecture. Nichikō’s school later divided into eight subbranches, known collectively as the Fuji Monryū (Fuji schools) or Nichikō Monryū (Nichikō schools). The monk Nichikan (1665–1726), a noted commentator and teacher, was instrumental in resurrecting the observance of Nichiren’s teachings at Taisekiji. He was also the person who systematized and established many of the innovative features of the school, particularly the school’s unique view that Nichiren was the Buddha (see below). The eight associated temples that remained in the Fuji school reunited in 1876 as the Komon sect, later adopting a new name, the Honmon. However, in 1899, Taisekiji split from the other temples and established an independent sect, renaming itself Nichiren Shōshū in 1912. In 1930, [MAKIGUCHI TSUNESABURO](#) and Toda Josei established the [SŌKA GAKKAI](#) (then called Sōka Kyōiku Gakkai), a lay organization for the promotion of Nichiren Shōshū thought, but quickly ran afoul of the Japanese government’s promotion of the cult of state Shintōism. Makiguchi refused to comply with government promulgation of Shintō worship and was imprisoned for violating the Peace Preservation Law; he died in prison in 1944. Toda was eventually released, and he devoted himself after World War II to promoting Sōka Gakkai and Nichiren Shōshū, which at that time were closely connected. The two groups acrimoniously separated in 1991, Nichiren Shōshū accusing Sōka Gakkai of forming a personality cult around their leader [IKEDA DAISAKU](#) (b. 1928) and of improper modifications of Nichiren practice; Sōka Gakkai accusing the Nichiren Shōshū leader Abe Nikken of trying to dominate both organizations. The two groups now operate independently. Nichiren Shōshū has grown to over seven hundreds temples in Japan, as well as a few temples in foreign countries. Nichiren Shōshū distinguishes itself from the other Nichiren schools by its unique view of the person of Nichiren: it regards the founder as the true buddha in this current degenerate age of the dharma (J. mappo; C. [MOFA](#)), a buddha whom [ŚĀKYAMUNI](#) promised his followers would appear two thousand years in the future; therefore, they refer to Nichiren as daishōnin, or great sage. Other Nichiren schools instead regard the founder as the reincarnation of Jōgyō Bosatsu (the [BODHISATTVA VIŚISTACĀRITRA](#)). Nichiren

Shōshū's claim to orthodoxy is based on two documents, not recognized by other Nichiren schools, in which Nichiren claims to transfer his dharma to Nichikō, viz., the *Minobu sōjōsho* ("Minobu Transfer Document") and the *Ikegami sōjōsho* ("Ikegami Transfer Document"), which are believed to have been written in 1282 by Nichiren, the first at Minobu and the second on the day of his death at Ikegami. Nichiren Shōshū practice is focused on the dai-gohonzon maṇḍala, the ultimate object of devotion in the school, which Nichiren created. The [DAI-GOHONZON](#) (great object of devotion), a [MANDALA](#) (here, a cosmological chart) inscribed by Nichiren in 1279, includes the [DAIMOKU](#) (lit., "title"), viz., the phrase "[NAMU MYŌHŌRENGEKYŌ](#)" (Homage to the [SADDHARMAPUNĀRĪKASŪTRA](#)), which is considered to be the embodiment of Nichiren's enlightenment and the ultimate reason for his advent in this world. The gohonzon is placed in a shrine or on a simple altar in the homes of devotees of the sect. This veneration of the gohonzon to the exclusion of all other deities and images of the Buddha distinguishes Nichiren Shōshū from other Nichiren schools. The school interprets the three jewels ([RATNATRAYA](#)) of the Buddha, [DHARMA](#), and [SAMGHA](#) to refer, respectively, to Nichiren (the buddha); to namu Myōhōrengekyō and the gohonzon (the dharma); and to his successor Nichikō (the saṃgha). By contrast, other Nichiren schools generally consider Śākyamuni to be the Buddha and Nichiren the saṃgha, and do not include the gohonzon in the dharma, since they question its authenticity. All schools of Nichiren thought accept Nichiren's acknowledgment of the buddhahood that is latent in all creatures and the ability of all human beings of any class to achieve buddhahood in this lifetime.

[Nichirensū](#). (日蓮宗). In Japanese, "schools [associated with] Nichiren." There was and is no single "Nichiren School," but the term is used to designate all of the different schools that trace their origins back to the life and teachings of [NICHIREN](#) (1222–1282). At the time of his death, Nichiren left no formal institution in place or instructions for the formation of any such institution. Thus, a number of groups emerged, led by various of his disciples. These groups, which can collectively be referred to as Nichirensū, disagreed on a number of important points of doctrine and theories of propagation. However, they all shared the fundamental convictions that the [SADDHARMAPUNĀRĪKASŪTRA](#) ("Lotus Sūtra") was the highest of the Buddha's teachings; that during the degenerate age (J. mappo; C. [MOFA](#)) liberation could be achieved by chanting the title ([DAIMOKU](#)) of that scripture; that Nichiren was the true teacher of this

practice and Japan its appropriate site; and that all other forms of Buddhist practice were ineffective in this degenerate age and thus should be repudiated. However, Nichiren’s disciples and his followers disagreed on such questions as whether they should have any connections with other Buddhist groups; how aggressively they should proselytize Nichiren’s teachings; and whether the two sections of the *Saddharmapuṇḍarīkasūtra*—the “[SHAKUMON](#)” (Chapters 1–14), or trace teaching, and the “[HONMON](#)” (Chapters 15–28), or essential teaching—are of equal importance or whether the “Honmon” is superior. During the Meiji period, specific schools of Nichiren’s teachings were recognized, with six different schools institutionalized in 1874. One of these, which called itself the Nichirensū, declared the two parts of the sūtra to be of equal importance; the other five declared the superiority of the “Honmon.” One of these five eventually became the [NICHIREN SHŌSHŪ](#).

[nidāna](#). (T. gzhi/gleng gzhi; C. yinyuan/nituona; J. innen/nidana; K. inyŏn/nidana 因緣/尼陀那). A polysemous term in Sanskrit and Pāli, meaning variously “cause,” “motivation,” “occasion,” or “episode.” The term has at least three important denotations: (1) a general term for cause, used especially in the context of the twelfefold chain of dependent origination ([PRATĪTYASAMUTPĀDA](#)), often referred to as the “twelve nidāna,” or twelve “links” in this chain; (2) one of the traditional categories of Buddhist literature, devoted to narratives that describe the occasion for the Buddha’s exposition of a particular point of doctrine or a specific monastic rule; and (3) the portion of a sūtra that describes the setting of the discourse, such as where the Buddha was residing, the audience members, *etc.* In the second of these meanings, it is one of the nine ([NAVAṄGA](#)) (Pāli) or twelve ([DVĀDAŚĀṄGA](#)) (Sanskrit) categories ([AṄGA](#)) of Buddhist scripture, distinguished according to their narrative structure or literary style.

[Nidānakathā](#). In Pāli, “Account of Origins,” the introduction to the [JĀTAKA](#), the collection of stories of the Buddha’s past lives, which form the fifth and final part of the [SUTTAPITAKA](#), the [KHUDDAKANIKĀYA](#); it is traditionally attributed to the great fifth-century Pāli scholar [BUDDHAGHOSA](#). The text gives an account of the Buddha’s previous lives as a bodhisatta (S. [BODHISATTVA](#)), continuing through his last birth, his enlightenment, and his early ministry. The work is divided into three sections: (1) The “Dūre Nidāna,” or “Distant Epoch,” begins with the bodhisatta’s encounter, as the mendicant [SUMEDHA](#), with the buddha [DIPAMKARA](#). Sumedha could become Dipamkara’s disciple and achieve liberation

as an arahant (S. [ARHAT](#)) in that life, but instead vows to become a buddha in the far distant future. Dipaṅkara predicts that he will indeed become a buddha (see P. veyyākaraṇa; S. [VYĀKARANA](#)). The ten perfections (P. pāramī; S. [PĀRAMITĀ](#)) that he must practice in order to achieve buddhahood are then described. This is followed by an account of subsequent buddhas who also prophesied his eventual attainment of buddhahood, and the identity of the bodhisatta on each of those occasions. Next comes a list of perfections and the jātaka story that best exemplifies it. The first section ends with his penultimate birth as a divinity in [TUSITA](#) heaven. (2) The “Avidūre Nidāna,” or “Not Remote Epoch,” recounts his descent from tuṣita heaven, through his birth as the son of King Suddhodana (S. [ŚUDDHODANA](#)) and Queen [MĀYĀ](#), his princely life and marriage, and his renunciation and penances, concluding with his achievement of enlightenment. (3) The “Santike Nidāna” or “Present Epoch,” recounts the period from his decision to teach the dhamma, through the conversion of his early disciples, and ends with the dedication of the [JETAVANA](#) grove as a monastery by the wealthy merchant Anāthapiṇḍika (S. [ANĀTHAPINDADA](#)). The *Nidānakathā* represents the earliest continuous narrative of the Buddha’s life contained in Pāli sources, and it served as the basis of later expanded narratives, such as that found in the near-contemporary *Manorathavilāsinī*. It is important to note that these episodes do not provide a complete biography of the Buddha, beginning with his birth and ending with his death. Instead, they begin in the distant past with his vow to become a buddha, skip over his many births as a bodhisatta (which are contained in the jātaka stories to which the *Nidānakathā* serves as an introduction), and end with the donation of Jetavana, in the first years after his enlightenment. These Pāli accounts are all relatively late. Earlier biographies of the Buddha are found in Sanskrit works of other schools, such as the second-century CE [BUDDHACARITA](#) by [AŚVAGHOṢA](#), the third-century [MAHĀVASTU](#) contained in the [LOKOTTARAVĀDA VINAYA](#), and the third-century [LALITAVISTARA](#).

Niddesa. In Pāli, “Exposition”; the eleventh book of the [KHUDDAKANIKĀYA](#) of the Pāli [SUTTAPIṬAKA](#). It is a commentarial work on portions of the [SUTTANIPĀTA](#) and is divided into two parts, the [CŪLANIDDESA](#) (“Lesser Exposition”) and the [MAHĀNIDDESA](#) (“Longer Exposition”). The former comments on the *Khaggavisānasutta* (cf. S. [KHADGAVISĀNA](#)) and *Parāyaṇavagga*, while the latter comments on the [ATTHAKAVAGGA](#). The book is among the earliest examples of the commentarial genre of Buddhist literature—so early, in fact, that it was included within the suttapiṭaka itself. See [CŪLANIDDESA](#); [MAHĀNIDDESA](#).

nidhāna. (T. gter; C. fuzang; J. fukuzō/bukuzō; K. pokchang 伏藏/腹藏). In Sanskrit, “depository” or “hidden container”; ritual container placed in the interior of a Buddhist sculpture or hung above a painting in order to ritually vivify the image or painting. Following the methods described in the “Instructions on Image Making and Iconometry” (S. Sambaddhabhāṣitapratimālakṣaṇavivaraṇī; T. Rdzogs pa’i sangs rgyas kyis gzungs pa’i sku gzugs kyi mtshan nyid kyi nam ’grel; C. Zaoxiang liangdu jing; J. Zōzō ryōdo kyō; K. Chosang nyangdo kyōng), the insertion of the container was, along with the eye-opening ceremony ([KAIYAN](#); [NETRAPRATISTHĀPANA](#)), an important part of the ritual of image consecration, which served as an agency for transforming the inert statue or painting into an object of worship. The contents of these intestinal depositories were often similar to those found in [ŚARĪRA](#) containers: viz., relic fragments, copies of [DHĀRANĪ](#) and [SŪTRAS](#), and consecration certificates. But they also could be objects that would serve as a symbolic vivifying and spiritual force, e.g., viscera and entrails made from cloth, as well as five types of grain and five-colored threads. Although it is unknown when the tradition of sewing intestines to deposit in images began, the earliest extant East Asian example is a container found in the [UDĀYANA](#) image of [ŚĀKYAMUNI](#) Buddha at Seiryōji in Kyōto, which is dated to 988 CE.

niepan ba wei. (C) (涅槃八味). See [BA WEI](#).

Niepan xi. (J. Nehan wa yū; K. Yōlban sōk 涅槃夕). In Chinese, “dusk [when] the [MAHĀPARINIRVĀNASŪTRA](#) [was preached]”; the second part of an expression that describes the two major stages in the teaching career of the Buddha. According to Chinese legend, the Buddha preached this scripture just before his ultimate demise ([PARINIRVĀNA](#))—a period that was likened to the sun setting at dusk. This statement is typically preceded by [HUAYAN ZHAO](#), “the morning [when] [HUAYAN](#) [was preached],” since, according to the [HUAYAN ZONG](#), in the days immediately following his enlightenment, the Buddha initially preached the [AVATAMSAKASŪTRA](#), or *Huayan jing*. “Morning” refers to the earliest stage of the Buddha’s preaching career, which was likened to the sun rising at dawn.

Niepan zong. (J. Nehanshū; K. Yōlban chong 涅槃宗). In Chinese, “Nirvāṇa tradition,” an eclectic Chinese lineage of scholiasts who dedicated themselves to exegesis and dissemination of the [MAHĀYĀNA](#) recension of the [MAHĀPARINIRVĀNASŪTRA](#) (“Nirvāṇa Sūtra”). The Niepan zong did not exist in any formal sense; the term is instead used to designate a group of exegetes with

analogous intellectual interests. Foremost among these exegetes is [DAOSHENG](#) (355–434), a member of [KUMĀRAJĪVA](#)'s (343–413) translation team in Chang'an, whose views are emblematic of teachers in this lineage. Daosheng was strongly critical of statements appearing in the first Chinese translation of the *Mahāparnirvāṇasūtra*, made in 418 by [FAXIAN](#) and [BUDDHABHADRA](#), which asserted that all sentient beings except the incorrigibles ([ICCHANTIKA](#)) are endowed with the buddha-nature ([FOXING](#)). Daosheng opposed this view, which at the time had the authority of received scripture; instead, he made the radical claim that even icchantikas must also retain the capacity eventually to attain enlightenment, thus calling into question the accuracy of these two eminent monks' scriptural edition. [DHARMAKSEMA](#)'s new translation of the text four years later did not include the controversial statement and thus vindicated Daosheng's position. Daosheng also explored the soteriological implications of the buddha-nature doctrine in the *Mahāparnirvāṇasūtra*. If the buddha-nature were inherent in all sentient beings, as the scripture claimed, then enlightenment was not something that would unfold through the mastery of a gradual series of steps, but would instead be experienced in a sudden moment of insight—a “recognition” of the enlightenment that has always been present. Hence, Daosheng claimed, buddhahood is in fact attained instantaneously (see [DUNWU](#)), not progressively. This position initiated an extended examination within East Asian Buddhism of sudden versus gradual theories of enlightenment that played out in many of the mature traditions, including the [TIANTAI ZONG](#), [HUAYAN ZONG](#), and [CHAN ZONG](#). The teachings of the Niepan zong were also influential in promoting Chinese Buddhism's turn away from “apophatic” forms of discourse emblematic of [MADHYAMAKA](#) styles of argumentation, to the more “kataphatic” or positive forms of discourse that are typical of the later indigenous schools, including Tiantai, Huayan, and Chan. Following Daosheng, his disciple Daolang (d.u.) in his *Niepan jing yishu* (“Commentary to the ‘Nirvāṇa Sūtra’”) postulated congruencies between the buddha-nature and emptiness ([ŚŪNYATĀ](#)), which suggested how the seemingly “apophatic” notion of emptiness found in Indian materials could actually serve as a dynamic force revealing the truth that underlies all conventional existence in the world. Still other Niepan zong exegetes devoted themselves to the text of the *Mahāparnirvāṇasūtra* itself, producing a new edition of the scripture known as the Southern Edition (Nanben), which collated the two earlier renderings and restructured the chapter headings. By the beginning of the Tang dynasty, the tradition of *Mahāparnirvāṇasūtra* exegesis had become moribund, and its intellectual

concerns were subsumed into the Tiantai zong, which derived much of its teachings from the “Nirvāṇa Sūtra” and the [SADDHARMAPUNḌARĪKASŪTRA](#) (“Lotus Sūtra”).

[Nigrodha](#). (C. Nijutuo; J. Nikuda; K. Niguda 尼瞿陀). According to Pāli accounts, the name of the Buddhist novice who converted the Mauryan king Asoka ([AŚOKA](#)) to Buddhism. When Asoka ascended the throne, he is said to have continued his father’s practice of each day feeding sixty thousand mendicants and brāhmaṇas at the palace, but was unsettled by their indecorous deportment. One day he saw the young novice Nigrodha, an [ARHAT](#), and was pleased by the boy’s dignity and calm demeanor. Nigrodha is said to have become an arhat upon his ordination at age seven. Nigrodha converted Asoka to Buddhism by preaching the *Appamādasutta*, whereupon the king ceased his benefactions to the sixty thousand mendicants and brāhmaṇas and gave undivided support instead to the Buddhist [SAMGHA](#). Although Pāli sources claim that Asoka became a staunch and exclusive supporter of the [STHAVIRANIKĀYA](#), Asoka’s own inscriptions indicate that his allegiance to Buddhism was less rigid and that he continued to respect and support brāhmaṇas and non-Buddhist mendicants throughout his reign.

[Niguma](#). (T. Ni gu ma). An Indian tantric [YOGINĪ](#) of the eleventh century, said to be either the wife or the sister of [NĀROPA](#). Her teachings are renowned as the “six doctrines (or yogas) of Niguma” (Ni gu chos drug). They are inner heat (GTUM MO), illusory body (sgyu lus; [MĀYĀDEHA](#)), dream yoga (rmi lam), clear light (’od gsal; [PRABHĀSVARA](#)), transference of consciousness (’PHO BA), and intermediate state ([BAR DO](#)), nominally the same as the more famous [NĀ RO CHOS DRUG](#) (“six yogas of Nāropa”), but with different emphases. She is said to have transmitted these teachings to her Tibetan disciple [KHYUNG PO RNAL ’BYOR](#), who returned to Tibet to found the Shangs pa branch of the [BKA’ BRGYUD](#).

[nihprapañca](#). (S). See [NISPRAPAÑCA](#).

[nihsarana](#). (P. nissaraṇa; T. nges ’byung; C. li; J. ri; K. i 離). In Sanskrit, “escape” or “emergence,” often a synonym for liberation from [REBIRTH](#). The term can also refer to the sense of dissatisfaction with [SAMSĀRA](#) and the wish to escape from it, as in the compounds bhavaniḥsaraṇa, “escape for mundane existence,” jarāniḥsaraṇa, “escape from old age,” and kleśaniḥsaraṇa, “escape from the afflictions.” The wish to escape from rebirth is cultivated by

contemplating such things as the relative rarity of rebirth as a human with access to the [DHARMA](#), the uncertainty of the time of death, the cause and effects of actions, and the various sufferings inherent in the six realms of saṃsāra. See also [NIRVEDA](#); [NIRYĀNA](#).

[niḥsargika-pātayantika](#). (S). See [PĀYATTIKA](#).

[niḥśreyasa](#). (T. nges legs; C. zhishan; J. shizen; K. chisŏn 至善). In Sanskrit, “ultimate goodness,” a term often used in Buddhist texts to refer to liberation from [REBIRTH](#). The term commonly occurs in conjunction with [ABHYUDAYA](#) (lit., “elevation”), which refers to the worldly prosperity and temporal happiness that is achieved through rebirth as a prosperous human or divinity. Thus, abhyudaya and niḥśreyasa constitute the two benefits that accrue from practicing the dharma: those who maintain the precepts and offer charity to the [SAMGHA](#) attain the “elevation” (abhyudaya) of a happy rebirth within [SAMSĀRA](#); those who follow the path to its conclusion achieve the ultimate goodness (niḥśreyasa) of liberation from rebirth.

[niḥsvabhāva](#). (T. rang bzhin med pa; C. wuzixing/wuxing; J. mujishō/mushō; K. mujasŏng/musŏng 無自性/無性). In Sanskrit, lit., “lack of self-nature,” “absence of intrinsic existence.” According to the [MADHYAMAKA](#) school, the fundamental ignorance that is the root of all suffering is the misconception that persons and phenomena possess an independent, autonomous, and intrinsic identity, called [SVABHĀVA](#), lit., “self-nature” or “own-nature.” Wisdom is the insight that not only persons, but in fact all phenomena, lack such a nature. This absence of self-nature, or niḥsvabhāva, is the ultimate nature of reality and of all persons and phenomena in the universe. It is a synonym for emptiness ([ŚŪNYATA](#)). The Madhyamaka school is sometimes referred to as the niḥsvabhāvavāda, “proponents of the lack of intrinsic existence.” The term also figures prominently in the [YOGĀCĀRA](#) school and its doctrine of the “three natures” ([TRISVABHĀVA](#)) as set forth in the [SAMDHINIRMOCANASŪTRA](#), where each of the three natures is described as having a different type of absence of self-nature (triniḥsvabhāva). Thus, the imaginary ([PARIKALPITA](#)) is said to lack intrinsic nature, because it lacks defining characteristics (lakṣaṇaniḥsvabhāvatā). The dependent ([PARATANTRA](#)) is said to lack production (utpattiniḥsvabhāvatā), because it is not independently produced. The consummate ([PARINIŠPANNA](#)) is said to be the ultimate lack of nature (paramārthaniḥsvabhāvatā) in the sense that it is the absence of all differences between subject and object. See also

[NAIRĀTMYA](#); [ANĀTMAN](#).

nikāya. (T. sde; C. bu; J. bu; K. pu 部). In Sanskrit and Pāli, lit. “group” or “collection,” a term with two important denotations: (1) Any of the various collections of [SŪTRAS](#), such as in the Pāli canon, e.g., the “Long Collection” ([DĪGHANIKĀYA](#)), “Middle-Length Collection” ([MAJJHIMANIKĀYA](#)), *etc.* The Sanskrit collections of sūtras tend to be called instead [ĀGAMA](#). Nikāya is also used as a general term for the collection or “canon.” (2) Any of the various groups (in the sense of schools or sects) of “mainstream” (i.e., non-Mahāyāna) Indian Buddhism. Traditional lists enumerate eighteen such groups, although there were in fact more; the names of thirty-four schools have been identified in texts and inscriptions. These groups, divided largely according to which [VINAYA](#) they followed, are sometimes referred to collectively as Nikāya Buddhism, a term that more specifically refers to monastic Buddhism after the split that occurred between the [MAHĀSĀMĠHIKA](#) and [STHAVIRA](#) schools. Nikāya Buddhism is also sometimes used as a substitute for the pejorative term [HĪNAYĀNA](#), although it appears that in India the term hīnayāna was sometimes used to refer collectively to all Nikāya schools and sometimes to refer to a specific school, such as the [VAIBHĀSIKA](#) school of [SARVĀSTIVĀDA ABHIDHARMA](#). See also [MAINSTREAM BUDDHIST SCHOOLS](#).

Nikyōron. (J) (二教論). See [BENKENMITSU NIKYŌRON](#).

Nīlakanthakasūtra. (S). See [QIANSHOU JING](#).

nimitta. (T. mtshan ma; C. xiang/ruixiang; J. sō/zuisō; K. sang/sōsang 相/瑞相). In Sanskrit and Pāli, “mark” or “sign,” in the sense of a distinguishing characteristic, or a meditative “image.” Among its several denotations, three especially deserve attention. (1) In Buddhist epistemology, nimitta refers to the generic appearance of an object, in distinction to its secondary characteristics, or [ANUVYĀÑJANA](#). Adherence toward the generic sign and secondary characteristics of an object produces a recognition or perception ([SAMJÑĀ](#)) of that object, which may in turn lead to clinging or rejection and ultimately suffering. Thus nimitta often carries the negative sense of false or deceptive marks that are imagined to inhere in an object, resulting in the misperception of that object as real, intrinsically existent, or endowed with self. Thus, the apprehension of signs (nimittagrāha) is considered a form of ignorance ([AVIDYĀ](#)), and the perception of phenomena as signless ([ĀNIMITTA](#)) is a form of wisdom that constitutes one of

three “gates to deliverance” ([VIMOKSAMUKHA](#)), along with emptiness ([ŚŪNYATĀ](#)) and wishlessness ([APRANIHITA](#)). (2) In the context of [THERAVĀDA](#) meditation practice ([BHĀVANĀ](#)), as set forth in such works as the [VISUDDHIMAGGA](#), *nimitta* refers to an image that appears to the mind after developing a certain degree of mental concentration ([SAMĀDHI](#)). At the beginning of a meditation exercise that relies, e.g., on an external visual support ([KASINA](#)), such as a blue circle, the initial mental image one recalls is termed the “preparatory image” ([PARIKAMMANIMITTA](#)). With the deepening of concentration, the image becomes more refined but is still unsteady; at that stage, it is called the “acquired image” or “eidetic image” ([UGGAHANIMITTA](#)). When one reaches access or neighborhood concentration ([UPACĀRASAMĀDHI](#)), a clear, luminous image appears to the mind, which is called the “counterpart image” or “representational image” ([PATIBHĀGANIMITTA](#)). It is through further concentration on this stable “representational image” that the mind finally attains “full concentration” ([APPANĀSAMĀDHI](#)), i.e, meditative absorption (P. [JHĀNA](#); S. [DHYĀNA](#)). (3) The term also appears in [CATURNIMITTA](#), the “four signs,” “sights,” or “portents,” which were the catalysts that led the future buddha [SIDDHĀRTHA GAUTAMA](#) to renounce the world (see [PRAVRAJITA](#)) and pursue liberation from the cycle of birth and death ([SAMŚĀRA](#)): specifically, the sight of an old man, a sick man, a dead man, and a religious mendicant ([ŚRAMANA](#)).

[Nine Mountain Schools of Sōn](#). See [KUSAN SŌNMUN](#).

[Ninnaji](#). (仁和寺). In Japanese, “Monastery of Humane Peace,” located in the ancient Japanese capital of Kyōto and affiliated with the [SHINGONSHŪ](#). The construction of the monastery began in 886 under the patronage of Emperor Kōkō (r. 884–887) and continued through the reign of Emperor Uda (r. 887–897). The main hall was completed in 888 by Emperor Uda and today contains an important Amida (S. [AMITĀBHA](#)) triad that has been designated a national treasure. In 904, Emperor Uda established a residence for himself at Ninnaji and assumed control of the monastery. Monks of royal blood began serving thereafter as abbots of Ninnaji.

[niō](#). (仁王/二王). In Japanese, “humane kings,” a pair of muscular wrathful guardian deities, often depicted as massive wooden statues flanking a separate entrance gate, called the Niōmon in Japanese Buddhist monasteries. (In Korea, this gate is known as the Kūmgangmun, or Vajra Gate.) They are also sometimes known as the “two kings” (niō), the Kongōjin, or the Kongōrikishi. They are

considered to be manifestations of [VAJRAPĀNI](#). The first figure is known as either Naraen Kongō (see [NĀRĀYANA](#)) or Agyō; he is usually depicted with his mouth open and holding a [VAJRA](#) in his right hand. The second figure is called either Misshaku Kongō or Ungyō; he usually has his mouth closed and is either wielding a sword or has nothing in his hands.

[Niōzen](#). [alt. Ninōzen] (J) (仁王禪/二王禪). See [SUZUKI SHŌZAN](#).

[nirākāra](#). (T. nram pa med pa; C. wuxiang; J. musō; K. musang 無相). In Sanskrit, “without aspect,” an epistemological term used to describe the process of sensory perception by those who assert that perception is direct cognition of the object itself, rather than of an image or “aspect” ([AKĀRA](#)) of the object. A point of contention among the Indian Buddhist schools (and Indian philosophical schools more generally) is whether sense perception is mediated or immediate. The proponents of the former position hold that even in “direct perception” ([PRATYAKSA](#)), sensory objects are not perceived directly by the sense consciousnesses, but rather through the medium of an image or aspect, compared to a reflection cast by an object onto a mirror. Consciousness is thus affected by the object, which leaves its impression on the perceiving consciousness. Proponents of this theory of epistemology include the [SAUTRĀNTIKA](#) and [YOGĀCĀRA](#), who are called “proponents of having an aspect” or “aspectarians” (sākāravāda). The contrary position is that the six sensory consciousnesses do in fact perceive their objects directly, without recourse to an image or aspect, hence the term nirākāra, or “without aspect.” In this case, consciousness is not changed by the object it perceives; consciousness is instead like a light that reveals an object previously hidden in darkness. Proponents of this position include the [VAIBHĀSIKA](#), who are called “proponents of no aspect,” or “nonaspectarians” ([NIRĀKĀRAVĀDA](#)).

[nirākāravāda](#). (T. nram pa med par smra ba). In Sanskrit, “proponents of no aspect,” or “nonaspectarians.” See [NIRĀKĀRA](#).

[Niraupamyastava](#). (T. Dpe med par bstod pa). In Sanskrit, “Hymn to the Peerless One”; one of the four hymns ([CATUHSTAVA](#)) of [NĀGĀRJUNA](#). The other three hymns are the [LOKĀTĪTASTAVA](#), the [ACINTYASTAVA](#), and the [PARAMĀRTHASTAVA](#). All four hymns are preserved in Sanskrit and are cited by a wide range of Indian commentators, leaving little doubt about their authorship. The *Niraupamyastava* consists of twenty-four stanzas (plus a dedication of

merit) in praise of the “Peerless One,” i.e., the Buddha. The praise falls roughly into three categories: the first section is devoted to the qualities of the Buddha’s mind, the second section is devoted to the qualities of the Buddha’s body, and the concluding section explains the relationship between the Buddha’s true body and the practice of the three vehicles ([TRİYĀNA](#)). Nāgārjuna explains that the Buddha has two bodies. The first is the [DHARMAKĀYA](#), which is the Buddha’s true body and which is not visible to the world. The second is his physical body ([RŪPAKĀYA](#)), which is perfect, without orifices, flesh, blood, or bones and free from hunger, thirst, and any form of impurity. However, in order to conform to the ways of the world, the Buddha displays these physical aspects and engages in worldly activities with this body. With regard to the three vehicles, Nāgārjuna explains that because the [DHARMADHĀTU](#) is undifferentiated, there are not different vehicles; however, the Buddha teaches three vehicles in order to prompt beings to enter the path.

[nirgrantha](#). (P. nigaṇṭha; T. gcer bu pa; C. lixi/nijianzi; J. rike/nikenshi; K. igye/nigōnja 離繫/尼撻子). In Sanskrit, “free from all ties,” the term generally used in Buddhist texts to refer to the followers of [NIRGRANTHA-JÑĀTĪPUTRA](#) (P. Nigaṇṭha-Nātaputta), the Buddhist name for the leader of the [JAINA](#) religion, [MAHĀVĪRA](#). As described in Pāli sources, this group followed the four restraints prescribed by their teacher: restraint regarding the use of water, restraint regarding evil deeds, cleansing themselves of evil, and realizing when evil is held at bay. They wore a single garment rather than going naked, and used it to prevent dirt and dust (which they regarded as living things) from entering their alms bowls. The Nigaṇṭhas were renowned for their extreme asceticism. They taught that the consequences of past deeds could only be eliminated through severe penance and that future consequences could only be eliminated through the complete suspension of action. The cessation of action, they believed, led to the cessation of suffering and sensation, by which means the individual would be freed from the cycle of [REBIRTH](#). According to Pāli sources, the Nigaṇṭhas were influential during the Buddha’s time and already well established by the time he began his ministry. Their main strongholds were at Vesāli (S. [VAIŚĀLĪ](#)) and [NĀLANDĀ](#). Among the many renowned members of the Nigaṇṭha order were several nuns, some of whom, such as Bhaddā-Kundalakesā (S. [BHADRA-KUNDALAKEŚĀ](#)), later converted to Buddhism. The Nigaṇṭhas are frequently singled out for ridicule in early Buddhist literature. The Buddha describes them as unworthy in ten ways, viz., that they are without faith, unrighteous, without

fear or shame, associate with evil friends, are puffed up and disparaging of others, greedy, stubborn, faithless, evil in thought, and are supporters of wrong views.

[Nirgrantha-Jñātīputra](#). (P. Nigaṇṭha-Nātaputta; T. Gcer bu pa gnyen gyi bu; C. Nijiantuo Ruotizi; J. Nikenda'nyakudaishi; K. Nigōnda Yajeja 尼撻陀若提子) (599–527 BCE). The name commonly used in Buddhist texts to refer to the leader of the [JAINA](#) group of non-Buddhists ([TĪRTHIKA](#)), also known by his title [MAHĀVĪRA](#) (Great Victor). In Pāli sources, Nātaputta (as he is usually called) is portrayed as the Buddha's senior contemporary. He teaches a practice called the fourfold restraint, enjoining his followers to be restrained regarding water, to be restrained regarding evil, to wash away evil, and to live in the realization that evil was held at bay; a person who could perfect the fourfold restraint was called free from bonds (P. nigaṇṭha; S. [NIRGRANTHA](#)). Like the Buddha and the leaders of many other renunciant (P. sāmana, S. [ŚRAMANA](#)) sects, Nātaputta claimed omniscience. According to Buddhist accounts, he taught that the consequences of past deeds could be eradicated only through severe penance. He also taught that the accrual of future consequences could be prevented only through the suspension of action. The cessation of action would lead to the cessation of suffering and feeling, and with this the individual would be freed from the cycle of rebirth. In Pāli materials, Nātaputta is portrayed in a most unfavorable light and his teachings are severely ridiculed, suggesting that in the early years of the Buddhist community the Jainas were formidable opponents and competitors of the Buddhists. Nātaputta is described as often declaring the postmortem fate of his deceased disciples, although he did not in fact know it. He is said to have been irritable and resentful, and unable to answer difficult questions. His disciple [CITTA](#) abandoned him for this reason and became a follower of the Buddha. In fact, Nātaputta is described as losing many followers to the Buddha, the most famous of whom was the householder [UPĀLI](#). Nātaputta was convinced that Upāli could resist the Buddha's charisma and defeat him in argument. When he discovered that Upāli, too, had lost the debate and accepted the Buddha as his teacher, he vomited blood in rage and died soon thereafter. Buddhist sources claim that, on his deathbed, Nātaputta realized the futility of his own teachings and hoped that his followers would accept the Buddha as their teacher. In order to sow the discord that would result in their conversion, Nātaputta taught contradictory doctrines at the end of his life, teaching one disciple that his view was a form of annihilationism and another that his view was a form of

eternalism. As a result, the Nigaṅṭha sect fell into discord and fragmented soon after his death. (This account, predictably, does not appear in Jaina sources.) News of Nātaputta's death prompted Sāriputta (S. [ŚĀRIPUTRA](#)) to recite a synopsis of the Buddha's teachings to the assembled [SAMGHA](#) in a discourse titled [SANGĪTISUTTA](#). Nātaputta is often listed in Buddhist texts as one of six non-Buddhist (tīrthika) teachers. See [NIRGRANTHA](#); [JAINA](#).

[nirmānakāya](#). (T. sprul pa'i sku; C. huashen; J. keshin; K. hwasin 化身). In Sanskrit, "emanation body," or "transformation body"; according to the [MAHĀYĀNA](#) descriptions, one of the three bodies ([TRIKĀYA](#)) of a buddha, together with the [DHARMAKĀYA](#) and the [SAMBHOGAKĀYA](#). In accounts where a buddha is said to have two bodies, the dharmakāya constitutes one body and the [RŪPAKĀYA](#) constitutes the other, with the rūpakāya subsuming both the sambhogakāya and the nirmānakāya. The term nirmānakāya may have been employed originally to describe the doubles of himself that the Buddha is sometimes said to display in order to teach multiple audiences simultaneously. (Cf. [MAHĀPRĀTIHĀRYA](#).) In the Mahāyāna, however, the emanation body became the only body of a buddha to appear to ordinary beings, implying that the "historical Buddha" was in fact a display intended to inspire the world; in the debates about whether the Buddha felt hunger or suffered physical pain, the Mahāyāna schools as well as several of the [MAINSTREAM BUDDHIST SCHOOLS](#) asserted that he did not, but rather appeared to do so in order to conform to worldly conventions. The nirmānakāya of a buddha is said to be able to appear in any form, including divinities, humans, animals, and inanimate objects; some texts even suggest that a buddha may appear as a bridge or a cooling breeze. The form of the nirmānakāya that appeared in India as Śākyamuni is called a "supreme emanation body" ([UTTAMANIRMĀNAKĀYA](#)). All such nirmānakāyas are said to perform twelve deeds, from waiting in [TUSITA](#) heaven for their last rebirth to entering [PARINIRVĀNA](#). Another type of nirmānakāya is the [JANMANIRMĀNAKĀYA](#), the "birth" or "created" emanation body, which is the form of a buddha when he appears as a divinity, human, or animal to benefit sentient beings, or as a beneficial inanimate object, such as a bridge. A third type is the [ŚILPANIRMĀNAKĀYA](#), an "artisan emanation body," in which a buddha appears in the world as an artisan or as a work of art. The Sanskrit term nirmānakāya is translated into Tibetan as [SPRUL SKU](#), spelled in English as tulku.

nirmānarati. (P. nimmānarati; T. 'phrul dga'; C. huale tian; J. kerakuten; K. hwarak ch'ōn 化樂天). In Sanskrit, “enjoying creations” or “enjoying emanations,” the fifth (in ascending order) of the six heavens ([SVARGA](#)) of the sensuous realm (S. [KĀMADHĀTU](#)), located above Mount [SUMERU](#) and thirty-two thousand leagues ([YOJANA](#)) above the immediately preceding heaven, [TUSITA](#). The heaven receives its name because the divinities reborn there create their own magical emanations that they control. In this heaven, males and females experience sexual pleasure without engaging in physical contact but merely by smiling at each other. The children produced from their union have the appearance of nine-year-old children at birth. The life span in this heaven is said to be eight thousand years, in which each day is as long as eight hundred human years.

nirmita. (P. nimmita; T. sprul pa; C. hua; J. ke; K. hwa 化). In Sanskrit, “conjured,” referring to something perceived by the sensory organs to be real but that is in fact illusory, like the moon on the surface of a lake or the water in a mirage. The term is often associated in Buddhist literature with the various doubles the Buddha conjures of himself in order to bring varying types of sentient beings to liberation (see [NIRMĀNAKĀYA](#)).

nirodha. (T. 'gog pa; C. mie; J. metsu; K. myōl 滅). In Sanskrit and Pāli, “cessation,” “extinction,” or “suppression,” referring especially to the extinction of a specific affliction ([KLEŚA](#)) or group of afflictions. Because [NIRVĀNA](#) is the cessation of all action ([KARMAN](#)) and affliction, it is thus a form of nirodha. The “truth of cessation,” or [NIRODHASATYA](#), is the third of the [FOUR NOBLE TRUTHS](#) articulated by the Buddha in his first sermon, “Setting in Motion the Wheel of Dharma” (P. [DHAMMACAKKAPPAVATTANASUTTA](#); S. [DHARMACAKRAPRAVARTANASŪTRA](#)). Because nirodha is an absence and hence does not change from moment to moment, it is sometimes classified as a permanent factor ([NITYADHARMA](#)). Two types of nirodha are described in [ABHIDHARMA](#) literature. [PRATISAMKHYĀNIRODHA](#), or “analytical cessation,” refers to a cessation that occurs as a result of meditative analysis of the real nature of phenomena; it is one of the un compounded factors ([ASAMSKRTADHARMA](#)) recognized in both the [SARVĀSTIVĀDA-VAIBHĀSIKA](#) and [YOGĀCĀRA](#) schools. [APRATISAMKHYĀNIRODHA](#), or “nonanalytical cessation,” refers to a mere absence, such as the temporary absence of hunger after a meal, or to an un compounded factor (asamskṛtadharma) that suppresses the production of all other dharmas,

ensuring that they are restrained from ever again arising in the present. See also [NIRODHASAMĀPATTI](#).

[nirodhasamāpatti](#). (T. 'gog pa'i snyoms 'jug; C. miejin ding; J. metsujinjō; K. myōlchin chōng 滅盡定). In Sanskrit and Pāli, “equipoise of cessation,” also known as “the cessation of perception and sensation” ([SAMJÑĀVEDAYITANIRODHA](#)). Nirodhasamāpatti constitutes the ninth and highest level of meditative attainment in the mainstream Buddhist schools, achieved after the fourth meditative absorption of the immaterial realm ([ĀRŪPYADHĀTU](#)) and thus transcending the four subtle-materiality absorptions ([RŪPĀVACARADHYĀNA](#)) and four immaterial absorptions ([ĀRŪPYĀVACARADHYĀNA](#)). Nirodhasamāpatti engenders a state of suspended animation: the meditator remains alive, but all physical and mental activities cease for a fixed, but temporary, period of time. There is a great deal of discussion of this state in the [ABHIDHARMA](#) literatures, especially concerning the process by which the meditator returns to consciousness at the conclusion of the equipoise of cessation. Many stories are also told in the literature of monks in the state of nirodhasamāpatti who remain impervious to the dangers of raging conflagrations or passing tigers. Because even mentality ([CITTA](#)) is temporarily absent in this state, nirodhasamāpatti is classified as a “conditioned force dissociated from thought” ([CITTAVIPRAYUKTASAMSKĀRA](#)) in both the [VAIBHĀSIKA](#) school of [SARVĀSTIVĀDA ABHIDHARMA](#), and in the hundred-dharmas ([BAIFA](#)) classification of the [YOGĀCĀRA](#) school. In Yogācāra schools that accept the storehouse consciousness ([ĀLAYAVIJÑĀNA](#)), all consciousness, including the [KLISTAMANAS](#), stops in nirodhasamāpatti; it is only the presence of the ālayavijñāna that keeps the meditator alive.

[nirodhasatya](#). (P. nirodhasacca; T. 'gog pa'i bden pa; C. miedi; J. mettai; K. myōlche 滅諦). In Sanskrit, “truth of cessation,” the third of the so-called [FOUR NOBLE TRUTHS](#) (catvāry āryasatyāni) set forth by the Buddha in his first sermon, the “Setting in Motion the Wheel of the Dharma” (P. [DHAMMACAKKAPPAVATTANASUTTA](#); S. [DHARMACAKRAPRAVARTANASŪTRA](#)). In a general sense, [NIRODHA](#) as “cessation” refers to [NIRVĀNA](#), which constitutes the cessation of all action ([KARMA](#)) and afflictions ([KLEŚA](#)) and the suffering they induce (although the term nirvāṇa does not appear in the first sermon). In the [ABHIDHARMA](#), the term is applied to the specific destruction of each of the kleśa associated with the three realms of existence ([TRILOKA\[DHĀTU\]](#)), the sensuous

realm ([KĀMADHĀTU](#)), the subtle-materiality realm ([RŪPADHĀTU](#)), and the immaterial realm ([ĀRŪPYADHĀTU](#)) and the nine levels (the sensuous realm, the four meditative absorptions of the subtle-materiality realm, and the four absorptions of the immaterial realm). Such cessations are “true” ([SATYA](#)) in the sense that they are permanent; the particular kleśa is destroyed such that it will not occur again. The eradication of all the kleśas and contaminants ([ĀSRAVAKSAYA](#)) results in the achievement of liberation from rebirth as an [ARHAT](#). The four truths are not presented in the order of cause and effect, but rather effect and cause, with the first truth of suffering ([DUHKHASATYA](#)) being the effect of the second truth of origin ([SAMUDAYASATYA](#)). In the same way, the third truth of cessation (nirodhasatya) is said to be the effect of the fourth truth of the path ([MĀRGASATYA](#)). However, nirodha is not an effect in the ordinary sense of the term because it is a permanent state; it is classified instead as a [VISAMYOGAPHALA](#), an effect that is a separation, i.e., the practice of the path results in the attainment of nirodha but does not produce nirodha as its effect. Nirodhasatya has four aspects ([ĀKĀRA](#)): suffering has stopped (nirodha); nirodha is a state of peace (śānta); it is sublime (praṇīta) because there is no state superior to it; and it is a definite escape ([NIRYĀNA](#)).

[Nirrti](#). (T. Bden bral; C. Nielidi; J. Neritei; K. Yöllijö 涅槃底). Sanskrit name of the lord of ogres and the divinity of death and destruction, who presides over the southwesterly direction. Nirṛti is often described as wearing armor, riding a lion, brandishing a sword in his right hand, and showing the sword [MUDRĀ](#) (C. daoyin) with his left, symbolizing the power of wisdom ([PRAJÑĀ](#)) and the destruction of the afflictions ([KLEŚA](#)). See [RĀKSASA](#).

[nirukti](#). (P. nirutti; T. nges pa'i tshig; C. yanjiao; J. gonkyō; K. ōn'gyo 言教). In Sanskrit, “clarification,” often referring specifically to the ability to understand the etymology and linguistic usage of a word, phrase, or text. Nirukti is the third of four “analytical” or “unlimited knowledges” ([PRATISAMVID](#)), four types of knowledge with which a [BODHISATTVA](#) on the ninth of the ten bodhisattva stages ([DAŚABHŪMI](#); daśabodhisattvavihāra) is endowed. Nirukti and the other three knowledges are treated at length in the [MAHĀYĀNASŪTRĀLĀNKĀRA](#) and the [BODHISATTVABHŪMI](#), where nirukti is described as the ability to understand any and all languages, including those of divinities ([DEVA](#)) and demigods ([YAKSA](#), [GANDHARVA](#), [ASURA](#), [GARUDA](#), [KIMNARA](#), and [MAHORĀGA](#)). Thanks to this linguistic power, bodhisattvas are able to parse the full range of etymological or

linguistic expressions attached to all phenomena and make use of this ability to preach the dharma to all potential audiences, with the highest degree of efficacy. This power of nirukti also makes their voices pleasant and understandable to anyone in the world.

[nirupadhiśesanirvāna](#). (cf. P. anupādisesanibbāna; T. lhag ma med pa'i mya ngan las 'das pa; C. wuyu niepan; J. muyonehan; K. muyō yōlban 無餘涅槃). In Sanskrit, “[NIRVĀNA](#) without remainder” or “nirvāṇa without residue,” the nirvāṇa achieved upon the death of an [ARHAT](#) or a buddha, in which there is no “remainder” of the aggregates of mind and body. It is synonymous with [ANUPADHIŚESANIRVĀNA](#) (s.v.).

[nirvāna](#). (P. nibbāna; T. mya ngan las 'das pa; C. niepan; J. nehan; K. yōlban 涅槃). In Sanskrit, “extinction”; the earliest and most common term describing the soteriological goal of the Buddhist path ([MĀRGA](#)). Its etymology and meaning have been widely discussed by both traditional exegetes and modern scholars. Nirvāṇa is commonly interpreted as meaning “blowing out” (from the Sanskrit root √vā, “to blow,” plus the prefix nir-, “out”), as “when a flame is blown out by the wind,” to use the famous metaphor from the [ATTHAKAVAGGA](#), and is thus sometimes glossed as the extinction of the flame of desire ([RĀGA](#)) or, more broadly, to the extinction of the “three poisons” ([TRIVISA](#)) or primary afflictions ([KLEŚA](#)) of greed/sensuality ([RĀGA](#) or [LOBHA](#)), hatred/aversion ([DVEṢA](#)), and delusion/ignorance ([MOHA](#)). In a more technical sense, nirvāṇa is interpreted as the cessation of the afflictions (kleśa), of the actions ([KARMA](#)) produced by these afflictions, and eventually of the mind and body ([NĀMARŪPA](#); [SKANDHA](#)) produced by karman, such that rebirth ([SAMSĀRA](#)) ceases for the person who has completed the path. In the first sermon after his enlightenment, “Setting in Motion the Wheel of the Dharma” (P. [DHAMMACAKKAPPAVATTANASUTTA](#); S. [DHARMACAKRAPRAVARTANASŪTRA](#)), the Buddha outlines the [FOUR NOBLE TRUTHS](#) (catvāry āryasatyāni), the third of which was the “truth of cessation” ([NIRODHASATYA](#)). This state of the cessation of suffering ([DUḤKHA](#)) and its causes ([SAMUDAYA](#)) is glossed as nirvāṇa. In one famous description of nirvāṇa, the Buddha explained, “There is that plane ([ĀYATANA](#)) where there is neither earth, water, fire, nor air [viz., the four [MAHĀBHŪTA](#)], neither the sphere of infinite space [[ĀKĀŚĀNANTYĀYATANA](#)] ... nor the sphere of neither perception nor nonperception [[NAIVASAMJÑĀNĀSAMJÑĀYATANA](#)], neither this world nor another nor both together, neither the sun nor the moon. Here, O monks, I say that there

is no coming or going, no staying, no passing away or arising. It is not something fixed, it moves not on, it is not based on anything. This is indeed the end of suffering.” Even though this is a thoroughly negative description of nirvāṇa, it is important to note that the passage opens with the certitude that “there is that plane...” Whether this state of cessation represents a form of “annihilation” is a question that preoccupied early scholarship on Buddhism. The Buddha described human existence as qualified by various forms of suffering, sought a state that would transcend such suffering, and determined that, in order to put an end to suffering, one must destroy its causes: unwholesome ([AKUŚĀLA](#)) actions (karman) and the negative afflictions (kleśa) that motivate them. If these causes could be destroyed, they would no longer have any effect, resulting in the cessation of suffering and thus nirvāṇa. Nirvāṇa, therefore, was not regarded as a place or state of existence, since by definition that would mean it was part of saṃsāra and thus subject to impermanence and suffering. Nirvāṇa is instead an absence, and it is often described in rigidly apophatic terms, as in the passage above, as if by describing what nirvāṇa was not, at least some sense of what it is could be conveyed. When the tradition attempts more positive descriptions, nirvāṇa is sometimes described as deathless ([AMRTA](#)), imperishable (acyuta), uncreated (abhūta), peace (upaśama), bliss ([SUKHA](#)), etc. The concept of nirvāṇa may be somewhat more accessible if it is approached soteriologically, as the culmination of the Buddhist path of practice (mārga). At the upper reaches of the path, the adept must pass through three “gates to liberation” ([VIMOKSAMUKHA](#)), which mark the transition from the compounded ([SAMSKRĀTA](#)) realm of saṃsāra to the un compounded ([ASAMSKRĀTA](#)) realm of nirvāṇa. In approaching nirvāṇa, the adept first passes through the gate of emptiness ([ŚŪNYATĀ](#)), which reveals that nirvāṇa is empty of anything associated with a sense of self. Next comes the gate of signlessness ([ANIMITTA](#)), which reveals that nirvāṇa has nothing by which it may be perceived. Finally comes the gate of wishlessness ([APRANIHITA](#)), meaning that nirvāṇa can be achieved only when one no longer has any desire for, or attachment to, nirvāṇa. Exactly what persisted in the state of nirvāṇa was the subject of considerable discussion over the history of the tradition. The Buddha is said to have realized nirvāṇa when he achieved enlightenment at the age of thirty-five, thus eradicating the causes of future rebirth. After this experience, however, he continued to live for another forty-five years, and, upon his death, he entered nirvāṇa, never to be reborn again. Because of this gap between his initial experience of nirvāṇa and his final [PARINIRVĀNA](#), the scholastic tradition

therefore distinguished between two types of nirvāṇa. The first type is the “nirvāṇa with remainder” ([SOPADHIŚESANIRVĀNA](#)), sometimes interpreted as the “nirvāṇa associated with the kleśas.” This is the state of nirvāṇa achieved prior to death, where the “remainder” refers to the mind and body of this final existence. This is the nirvāṇa achieved by the Buddha under the [BODHI TREE](#). However, the inertia of the karman that had led to this present life was still operating and would continue to do so until his death. Thus, his mind and body during the remainder of his final lifetime were what was left over after he realized nirvāṇa. The second type is referred to as the “nirvāṇa without remainder” ([ANUPADHIŚESANIRVĀNA](#) or [NIRUPADHIŚESANIRVĀNA](#)), sometimes interpreted as the “nirvāṇa of the skandhas.” This is the nirvāṇa achieved at death, in which the causes of all future existence have been extinguished, bringing the chain of causation of both the physical form and consciousness to an end and leaving nothing remaining to be reborn. This is also called “final nirvāṇa” (parinirvāṇa), and it is what the Buddha achieved at the time of his demise at [KUŚINAGARĪ](#). These states were accessible to all adepts who followed the Buddhist path to its conclusion. In the case of the Buddha, some traditions also refer to the third type of nirvāṇa, the “final nirvāṇa of the relics” (śarīraparinirvāṇa), viz., the dissolution of the relics ([ŚARĪRA](#)) of the Buddha at a point in the distant future. According to Buddhist eschatology, there will come a time in the far distant future when the teachings of [ŚĀKYAMUNI](#) Buddha will disappear from the world, and his relics will no longer be honored. At that point, the relics that have been enshrined in reliquaries ([STŪPA](#)) around the world will be released from their shrines and be magically transported to [BODHGAYA](#), where they will reassemble into the resplendent body of the Buddha, who will be seated in the lotus posture under the Bodhi tree, emitting rays of light that illuminate ten thousand world systems. The relics will be worshipped by the divinities ([DEVA](#)) one last time and then will burst into flames and disappear into the sky. Until that time, the relics of the Buddha are to be regarded as his living presence, infused with all of his marvelous qualities. With the rise of [MAHĀYĀNA](#), the “nirvāṇa without remainder” came to be disparaged in some texts as excessively quietistic, and the Buddha’s passage into parinirvāṇa was described as simply a display; the Buddha is instead said to be eternal, inhabiting a place that is neither in saṃsāra nor nirvāṇa and that is referred to as the “unlocated nirvāṇa” ([APRATISTHITANIRVĀNA](#)). The [MADHYAMAKA](#) philosopher [NĀGARJUNA](#) declared that there was not the slightest difference between saṃsāra and nirvāṇa, a statement taken to mean that both are equally empty of any intrinsic nature

([NIHŠVABHĀVA](#)). Madhyamaka texts also refer to a nirvāṇa that is “intrinsically extinguished” ([PRAKṚTIPARINIRVRṬA](#)); this quiescence that is inherent in all phenomena is a synonym of emptiness ([ŚŪNYATĀ](#)).

nirvāṇadhātu. (P. nibbānadhātu; T. mya ngan las 'das pa'i dbyings; C. niepanjie; J. nehankai; K. yōlban'gye 涅槃界). In Sanskrit, “the nirvāṇa element,” a term that is essentially synonymous with [NIRVĀNA](#) and refers to the plane or state experienced through the liberation ([VIMOKSA](#)) that derives from the extinction of suffering ([DUHKHA](#)). In the [VAIBHĀSIKA](#) school of [SARVĀSTIVĀDA ABHIDHARMA](#), two types of nirvāṇadhātu are discussed. First is the nirvāṇadhātu with remainder (sopadhiśeṣanirvāṇadhātu, see [SOPADHIŚEṢANIRVĀNA](#)), where the remainder is the residue of the aggregates ([SKANDHA](#)); this form is the nirvāṇa that is experienced while the body remains alive. Second is the nirvāṇadhātu without remainder (nirupadhiśeṣanirvāṇadhātu; see [NIRUPADHIŚEṢANIRVĀNA](#), [ANUPADHIŚEṢANIRVĀNA](#)), the nirvāṇa achieved upon the death of an [ARHAT](#) or a buddha, in which there is no “remainder” of materiality and mentality ([NĀMARŪPA](#)); this type is synonymous with [PARINIRVĀNA](#).

Nirvāṇa school. See [NIEPAN ZONG](#).

Nirvāṇa Sūtra. See [MAHĀPARINIRVĀNASŪTRA](#).

nirveda. (P. nibbidā; T. skyo ba; C. yan; J. en; K. yōm 厭). In Sanskrit, “disgust,” “disillusionment,” “loathing”; a term used in Buddhist meditation theory to indicate the preliminary and conditional turning away from the things of this world and turning toward [NIRVĀNA](#), which serves as the crucial mental factor ([DHARMA](#)) in catalyzing the transition from an ordinary person ([PRTHAGJANA](#)) to a noble one ([ĀRYA](#)). There has been considerable discussion in the literature on the precise meaning of nirveda, with connotations suggested that range from disgust to disappointment to indifference. As the meditator comes to recognize that all worldly objects that may be perceived through the senses are impermanent ([ANITYA](#)), he realizes that association with, let alone attachment to, them will inexorably lead to suffering ([DUHKHA](#)). The recognition of the ubiquity of suffering leads the adept inevitably toward a sense of nirveda, the volition to distance oneself from these worldly objects and to seek the alternative that is nirvāṇa. As a by-product of the experience of [YATHĀBHŪTAJÑĀNADARŚANA](#) (“seeing things as they really are”), nirveda thus produces the mental factor [VAIRĀGYA](#) (“dispassion”), which ultimately leads to [VIMOKSA](#) (“liberation”).

nirvedha. (T. nges par 'byed pa; C. jueze; J. ketchaku; K. kyölt'aek 決擇). In Sanskrit, “penetration,” referring specifically to the direct penetration into the nature of reality that occurs on the path of vision ([DARŚANAMĀRGA](#)). See [NIRVEDHABHĀGĪYA](#).

nirvedhabhāgīya. (T. nges par 'byed pa'i cha dang mthun pa; C. shunjuezen; J. junketchakubun; K. sun'gyölt'aekpum 順決擇分). In Sanskrit, “aids to penetration,” the constituent stages developed during the path of preparation ([PRAYOGAMĀRGA](#)), the second segment of the five-path schema outlined in the [VAIBHĀSIKA ABHIDHARMA](#) system, which mark the transition from the mundane sphere of cultivation ([LAUKIKABHĀVANĀMĀRGA](#)) to the supramundane vision ([DARŚANA](#)) of the [FOUR NOBLE TRUTHS](#) (catvāry āryasatyāni); also called the “virtuous faculties associated with penetration” (nirvedhabhāgīya-[KUŚALAMŪLA](#)) or the “four virtuous faculties” ([CATUSKUŚALAMŪLA](#)). The nirvedhabhāgīya are the third of the three types of virtuous faculties ([KUŚALAMŪLA](#)) recognized in the [VAIBHĀSIKA](#) school, along with the puṇyabhāgīya and [MOKSABHĀGĪYA](#) kuśalamūlas. In distinction to the mokṣabhāgīyas, however, which are the remote path of preparation, the nirvedhabhāgīyas constitute instead the proximate path of preparation and are associated specifically with the type of wisdom that is generated through one's own meditative experience ([BHĀVANĀMĀYĪPRAJÑĀ](#)). The four aids to penetration are (1) heat ([ŪSMAN](#) [alt. ūṣmagata]), (2) summit ([MŪRDHAN](#)), (3) acquiescence or receptivity ([KSĀNTI](#)), (4) and highest worldly dharmas ([LAUKIKĀGRADHARMA](#)). After accumulating the preliminary skills necessary for religious cultivation on the preceding path of accumulation ([SAMBHĀRAMĀRGA](#)), the practitioner continues on to develop the mindfulness of mental constituents (dharma-[SMRTYUPASTHĀNA](#)) on the path of preparation. This path involves the four aids to penetration, which mark successive stages in understanding the sixteen aspects of the four noble truths and are each subdivided into various categories, such as weak, medium, and strong experiences. While the first two of these [NIRVEDHABHĀGĪYAS](#) are subject to retrogression and thus belong to the worldly path of cultivation (laukikabhāvanāmārga), the latter two are nonretrogressive ([AVAIVARTIKA](#)) and lead inevitably to insight ([DARŚANA](#)). Mastery of the four aids to penetration culminates in the “unimpeded concentration” ([ĀNANTARYASAMĀDHI](#)), in which the meditator acquires fully all the highest worldly dharmas; this distinctive concentration provides access to the third stage of the path, the path of vision ([DARŚANAMĀRGA](#)), which marks the entrance into sanctity ([ĀRYA](#)) as a stream-

enterer ([SROTAĀPANNA](#)). Thus the nirvedhabhāgīyas are the pivotal point in the progression of an ordinary person ([PRTHAGJANA](#)) to the status of a noble one ([ĀRYA](#)). According to the [ABHIDHARMAMAHĀVIBHĀSĀ](#), disciples ([ŚRĀVAKA](#)) and solitary buddhas ([PRATYEKABUDDHA](#)) may develop the nirvedhabhāgīyas either before or during any of the four stages of the meditative absorptions ([DHYĀNA](#)), while bodhisattvas develop all four in one sitting during their final lifetimes.

[nirvikalpa](#). (P. nibbikappa; T. rnam par rtog pa med pa; C. wu fenbie; J. mufunbetsu; K. mubunbyōl 無分別). In Sanskrit, “nonconceptual,” an adjective used to describe states of direct perception, either by the sensory consciousnesses or the mental consciousness. The sense consciousnesses are necessarily nonconceptual, but a state of nonconceptual mental consciousness is required for direct realization of the truth, and hence liberation. The nonconceptual state is therefore praised for its ability to perceive directly without the intercession of the distorting medium of thought. See also [NIRVIKALPAJÑĀNA](#).

[nirvikalpajñāna](#). (T. rnam par mi rtog pa'i ye shes; C. wu fenbie zhi; J. mufunbetsuchi; K. mu punbyōl chi 無分別智). In Sanskrit, “nondiscriminative wisdom,” “nonconceptual awareness”; the insight that is marked by freedom from the misconception that there is an inherent bifurcation between a perceiving subject (grāhaka) and its perceived objects (grāhya). In the [YOGĀCĀRA](#) school, this misconception is called the discrimination of object and subject (GRĀHYAGRĀHAKAVIKALPA). Overcoming this bifurcation leads to the nondiscriminative wisdom (nirvikalpajñāna), which, in the five-stage path ([PAÑCAMĀRGA](#)) system of the Yogācāra school, marks the inception of the path of vision ([DARŚANAMĀRGA](#)), where the adept sees reality directly, without the intercession of concepts, and realizes the inherent unity of objects and cognition (jñeya-jñāna). The [MAHĀYĀNASAMGRAHA](#) explains that nirvikalpajñāna has as its nature the following five types of absences: (1) the absence of inattention (amanasikāra), such as occurs during sleep, (2) the absence of discursive thought ([VITARKA](#)) and sustained consideration ([VICĀRA](#)), (3) the quiescence of the cessation of perception and feeling ([SAMJÑĀVEDAYITANIRODHA](#)), (4) the absence of materiality ([RŪPA](#)), and (5) the absence of analytical investigation regarding truthfulness. These attributes mean that nirvikalpajñāna (1) is not merely a lack of attention; (2) it is not just the second stage of [DHYĀNA](#) or higher, where discursive thought (vitarka) and investigation (vicāra) no longer pertain; (3) it is

not the “equipoise of cessation” ([NIRODHASAMĀPATTI](#)), which no longer includes mind ([CITTA](#)) and mental concomitants ([CAITTA](#)), because wisdom ([JÑĀNA](#)) is not possible without mind and its concomitants; (4) it is free from any kind of discrimination; and (5) it cannot be an object of analytical investigation, since it transcends the relationship between the objects in any discursive analysis. This type of wisdom is therefore associated with knowledge (jñāna) that is supramundane ([LOKOTTARA](#)) and uncontaminated ([ANĀSRAVA](#)). The term nirvikalpajñāna also appears in [MADHYAMAKA](#) descriptions of the path ([MĀRGA](#)), despite the fact that Madhyamaka does not reject the conventional existence of external objects. Here, the term refers to the nonconceptual realization of emptiness ([ŚŪNYATĀ](#)) that occurs on the path of vision ([DARŚANAMĀRGA](#)) and above, where reality is directly perceived in an experience in which emptiness and the consciousness that realizes emptiness are said to be like “pure water poured into pure water.” See also [VIKALPA](#); [TRIVIKALPA](#).

niryāna. (T. nges ’byung; C. chuli; J. shutsuri; K. ch’ulli 出離). In Sanskrit, lit. “departure” or “going out.” In the context of the [FOUR NOBLE TRUTHS](#) (catvāry āryasatyāni), it is an aspect of the third “truth of cessation” ([NIRODHASATYA](#)), where niryāna means the definite “escape” from suffering when its cause has been eliminated. In the context of the [MAHĀYĀNA](#) path, niryāna involves the final stages of a bodhisattva’s progress ([PRATIPATTI](#)) leading to full enlightenment; the [ABHISAMAYĀLAMKĀRA](#) gives a list of eight niryānas based on aspects of the final destination. In some contexts, the term, like [NIRVEDA](#) and NIḤSARAṆA, can mean “renunciation,” in the sense of the conviction to be liberated or to emerge from rebirth in [SAMSĀRA](#), whether one is following the path of the [ŚRĀVAKA](#) or [PRATYEKABUDDHA](#) in order to become an [ARHAT](#), or is following the [BODHISATTVA](#) path in order to become a buddha. It is in this sense that the Tibetan translation of the term as “emergence” (nges ’byung) is deployed by [TSONG KHA PA](#) in his delineation of the “three principal aspects of the path” ([LAM GTSO RNAM GSUM](#)), where emergence is the first of the three aspects, followed by [BODHICITTA](#) and wisdom ([PRAJÑĀ](#)).

Nishida Kitarō. (西田幾太郎) (1870–1945). Influential Japanese philosopher of the modern era and founder of what came to be known as the [KYOTO SCHOOL](#), a contemporary school of Japanese philosophy that sought to synthesize [ZEN](#) Buddhist thought with modern Western, and especially Germanic, philosophy. Nishida was instrumental in establishing in Japan the discipline of philosophy as

practiced in Europe and North America, as well as in exploring possible intersections between European philosophy and such Buddhist ontological notions as the idea of nonduality ([ADVAYA](#)). Nishida was born in 1870, just north of Ishikawa prefecture's capital city of Kanazawa. In 1894, he graduated from Tōkyō Imperial University with a degree in philosophy and eventually took an appointment at Kyōto University, where he taught from 1910 until his retirement in 1927. At Kyōto University, Nishida attracted a group of students who would later become known collectively as the "Kyoto School." These philosophers addressed an array of philosophical concerns, including metaphysics, ontology, phenomenology, and epistemology, using Western critical methods but in conjunction with Eastern religious concepts. Nishida's influential 1911 publication *Zen no kenkyū* ("A Study of Goodness") synthesized Zen Buddhist and German phenomenology to explore the unity between the ordinary and the transcendent. He argued that, through "pure experience" (J. *junsui keiken*), an individual human being is able to come in contact with a limitless, absolute reality that can be described either as God or emptiness ([ŚUNYATA](#)). In Nishida's treatment, philosophy is subsumed under the broader soteriological quest for individual awakening, and its significance derives from its effectiveness in bringing about this goal of awakening. Other important works by Nishida include *Jikaku ni okeru chokkan to hansei* ("Intuition and Reflection in Self-Consciousness," 1917), *Geijutsu to dōtoku* ("Art and Morality," 1923), *Tetsugaku no konpon mondai* ("Fundamental Problems of Philosophy," 1933), and *Bashoteki ronri to shūkyōteki sekaikan* ("The Logic of the Place of Nothingness and the Religious Worldview," 1945). Nishida's *Zen no kenkyū* also helped lay the foundation for what later became regarded as Nihonjinron, a nationalist discourse that advocated the uniqueness and superiority of the Japanese race. Prominent in Nishida's philosophy is the idea that the Japanese—as exemplified in their exceptional cultivation of Zen, which here can stand for both Zen Buddhism and the homophonous word for "goodness"—are uniquely in tune with this concept of "pure experience." This familiarity, in part influenced by his longtime friend DAISETZ TEITARO SUZUKI, elevates the Japanese race mentally and spiritually above all other races in the world. This view grew in popularity during the era of Japanese colonial expansion and remained strong in some quarters even after the end of World War II. Since at least the 1970s, Nishida's work has been translated and widely read among English-speaking audiences. Beginning in the 1990s, however, his writings have come under critical scrutiny in light of their ties with Nihonjinron and Japanese

nationalism.

[Nishi Honganjiha](#). [alt. Honganjiha] (西本願寺派). In Japanese, “Western Honganji school”; the largest subsect of [JODO SHINSHŪ](#). After the death of [SHINRAN](#) in 1263, the [HONGANJI](#) institution emerged as the dominant subsect of Jōdo Shinshū, administered by the descendants of Shinran’s patriarchal line. In the Tokugawa Period (1600–1868), the shōgun Tokugawa Ieyasu (1543–1616) grew suspicious of Honganji, which during the fifteenth and sixteenth centuries had grown not only to be the largest sect of Japanese Buddhism but also one of the largest landholding institutions in Japan. By involving himself in a succession dispute, the shōgun was successfully able to cause a split within the Honganji into East (higashi; see [HIGASHI HONGANJIHA](#); [ŌTANIHA](#)) and West (nishi) factions, with Kyōnyo (1558–1614) heading the Higashi faction, and Junnyo (1577–1631) leading the Nishi faction. In 1639, Nishi Honganji established its own seminary college in Kyoto that was renamed Ryūkoku University in 1922. Important modern Nishi Honganji Buddhists include [ŌTANI KŌZUI](#) (1868–1948), the famed explorer and collector.

[Nishitani Keiji](#). (西谷啓治) (1900–1990). Japanese philosopher and member of what came to be known as the [KYOTO SCHOOL](#), a contemporary school of Japanese philosophy that sought to synthesize [ZEN](#) Buddhist thought with modern Western, and especially Germanic, philosophy. Nishitani was schooled in Ishikawa prefecture and Tōkyō and graduated from Kyōto University in 1924 with a degree in philosophy. A student of [NISHIDA KITARŌ](#) (1870–1945), the founder of the Kyoto School, Nishitani became a professor in the Department of Religion at Kyōto University in 1935 and from 1937 to 1939 studied with Martin Heidegger in Freiburg, Germany. He later chaired the Department of Modern Philosophy at Kyōto Prefectural University from 1955 to 1963. In such works as his 1949 *Nihirizumu* (translated in 1990 as *The Self-Overcoming of Nihilism*) and *Shūkyō to wa nani ka* (“What Is Religion?,” 1961, translated in 1982 as *Religion and Nothingness*), Nishitani sought to synthesize German existentialism, Christian mysticism, and what he considered to be Zen experience. Where German philosophy, which is governed by logic and cognitive thinking, addressed ontological questions regarding the self, he argued that such means as Christian mysticism and Zen meditation could complement German philosophy in constructing a path to a complete realization of the self. Nishitani took issue with Nietzsche’s nihilism by borrowing from the Buddhist concept of emptiness

([ŚŪNYATĀ](#)) to argue that recognition of the self as empty brings one to an understanding of things as they are (viz., the Buddhist concept of suchness, or [TATHATĀ](#)), and hence a true understanding and affirmation of oneself. Nishitani’s philosophical justification of Japan’s wartime activities, notably his contributions to the well-known journal *Chūōkōron* (“Central Review”) in the early 1940s, has become a controversial aspect of his work.

[niṣīdana](#). [alt. niṣadana] (P. niṣīdana; T. gding ba; C. zuoju; J. zagu; K. chwagu 坐具). In Sanskrit, lit. “the act of sitting,” any cloth, rug, or mat that is spread out over the ground and used for sitting or sleeping, thus a “sitting mat.” In the Buddhist tradition, a niṣīdana is a sitting cloth used during seated meditation or during prostrations. A niṣīdana is one of the few basic requisites ([NIŚRAYA](#); [PARISKĀRA](#)) that a monk or nun is allowed to possess. For this reason, the [VINAYA](#) literature includes extensive discussions on the appropriate characteristics of the niṣīdana—i.e., how large it can be, its color, proper use, and so on. Many of these rules appear in the [NAIHSARGIKAPĀYATTIKA](#) (forfeiture offense) section of the [PRĀTIMOKSA](#). The term also comes to refer by extension to a stool.

[niṣpannakrama](#). (T. rdzogs rim; C. yuanman cidi; J. enmanshidai; K. wŏnman ch’aje 圓滿次第). In Sanskrit, “stage of completion” (also called saṃpannakrama and utpannakrama); one of the two major phases of [ANUTTARAYOGATANTRA](#) practice, the other being the [UTPATTIKRAMA](#), variously translated as the “stage of generation,” “creation stage,” or “development stage.” The stage of generation is considered the preparation for the stage of completion. After having received initiation ([ABHISEKA](#)), during the stage of generation the practitioner engages in the practice of detailed visualization of himself or herself as a deity and the environment as a [MANDALA](#). Meditation on emptiness ([ŚŪNYATĀ](#)) is also involved. The central point of the practice is to vividly imagine oneself as the buddha one is going to become and thus simulate the process whereby this achievement will occur. The stage of completion is the period in which the actual achievement of buddhahood by the path of anuttarayogatantra occurs. Here, the meditator engages in practices that cause the winds ([PRĀNA](#)) to enter the central channel ([AVADHŪTĪ](#)) and gather at the heart [CAKRA](#), causing the mind of clear light ([PRABHĀSVARA](#)) to become manifest, at which point the three states of death, intermediate state ([ANTARĀBHAVA](#)), and rebirth are transformed respectively into the [DHARMAKĀYA](#), [SAMBHOGAKĀYA](#), and [NIRMĀNAKĀYA](#) of a buddha.

[Niṣpannayogāvalī](#). (T. Rdzogs pa’i mal ’byor gyi ’phreng ba). In Sanskrit,

“Garland of Perfect Yoga,” a compendium of tantric [SĀDHANAS](#) (with descriptions of [MANDALAS](#) and deities) by the eleventh-century Indian master [ABHAYĀKARAGUPTA](#).

[niṣprapañca](#). [alt. niḥprapañca] (P. nippapañca; T. spros pa dang bral ba; C. buxilun; J. fukeron; K. purhūiron 不戲論). In Sanskrit, “conceptual nonproliferation” or “absence of superimposition,” the transcendent ([LOKOTTARA](#)) state of mind that is characteristic of the enlightened noble person ([ĀRYA](#)). Niṣprapañca refers to the absence of that which is fanciful, imagined, or superfluous, especially in the sense of the absence of a quality that is mistakenly projected onto an object. This false quality is called [PRAPAÑCA](#), which has the sense of “diffusion” or “expansion,” viz., “conceptual proliferation.” Such “proliferation” typically takes the form of a chaotic onslaught of thoughts and associations at the conclusion of the apprehension of an object by one of the five sensory consciousnesses. Those thoughts and associations are then objectified, projecting a false reality onto the sense object. Such projections are thus described as operations of ignorance. Reality is free from such elaborations, and wisdom is the state of mind that perceives this reality. The goal of meditation practice is therefore sometimes described as the achievement of a state free from such conceptual proliferation, i.e., niṣprapañca. By systematic attention ([YONIŚOMANASKĀRA](#)) to the impersonal, conditioned character of sensory experience and through sensory restraint ([INDRIYASAMVARA](#)), the tendency to project the notion of a perduring self ([ĀTMAN](#)) into the perceptual process is brought to an end. This state of “nonproliferation” frees perception from its subjugation to conceptualization, allowing it to see the things of this world as impersonal causal products that are inevitably impermanent ([ANITYA](#)), suffering ([DUHKHA](#)), and nonself ([ANĀTMAN](#)), freeing the mind in turn from the attachment to [SAMSĀRA](#). The precise nature of conceptual nonproliferation is defined differently in the various Indian schools. In the Pāli [MILINDAPAÑHA](#), [NĀGASENA](#) explains to the king that the four fruits of stream-enterer ([SROTAĀPANNA](#)), once-returner ([SAKRDĀGĀMIN](#)), nonreturner ([ANĀGĀMIN](#)), and [ARHAT](#) are in fact nippapañca. In the [YOGĀCĀRA](#) school of Mahāyāna Buddhism, niṣprapañca refers to the absence of the misapprehension of sensory objects as separate from the perceiving consciousness, and in the [MADHYAMAKA](#) school it refers to the absence of perceiving objects as endowed with [SVABHĀVA](#).

[niśraya](#). (P. nissaya; T. brten; C. suoyi; J. shoe; K. soūi 所依). In Sanskrit,

“requisite,” “reliance,” “support,” in the sense of a basic possession required of any monk or nun. Four basic requisites are allowed for use by all monks and nuns: (1) food acquired through alms gathering (see [PINDAPĀTA](#); P. piṇḍiyālopabhojana); (2) a robe ([CĪVARA](#)) made from collected rags (pāṃsukūlacīvara; P. paṃsukūlacīvara); (3) dwelling at the foot of a tree (vṛkṣamūlasenāsana; P. rukkhamūlasenāsana); and (4) using fermented urine as medicine (pūtimuktabhaiṣajya; P. pūtimuttabhesajja). During the ordination procedure, when new ordinands “go forth” ([PRAVRAJITA](#)) as novice monks ([ŚRĀMANERA](#)) or nuns ([ŚRĀMANERIKĀ](#)), they will be apprised of these four requisites and encouraged to be content with them for the rest of their lives. In addition to these four basic reliances, the [VINAYA](#) does allow the use of other related things, such as constructed residences, meals offered by laypeople by invitation, robes made of cloth other than rags, and a mixture of honey, molasses oil, and butter as a medicine. See also [PARISKĀRA](#). ¶ The term niśraya is also used in the sense of “guidance.” A newly ordained monk or nun is required to live under the “guidance” of his or her preceptor (S. [UPĀDHYĀYA](#); P. upajjhāya) for a minimum of five years. During this period, the preceptor is to instruct the new monk in the teachings ([DHARMA](#)) and train him in the monastic regulations ([VINAYA](#)). Only a monk who has at least ten years of seniority in the [SAMGHA](#) and who is otherwise qualified may provide “guidance” to another monk. If the new monk has lost his preceptor, he must seek niśraya from a teacher.

niṣṭhā. (P. niṭṭhā; T. mthar phyin pa; C. jiujing; J. kukyō; K. kugyōng 究竟). In Sanskrit, “the end,” “completion.” In mainstream Buddhist materials, the Buddha often described the consummation of religious training and the achievement of the state of either stream-enterer ([SROTAĀPANNA](#)) or [ARHAT](#) as “the end”; the term is synonymous with the “deathless” ([AMRTA](#)) and thus “liberation” ([VIMOKSA](#)). The term appears in a variety of contexts in both mainstream and [MAHĀYĀNA](#) traditions to mean “coming to the end” of practice, viz., to achieve spiritual perfection, as in the soteriological term “path of completion” ([NISTHĀMĀRGA](#)).

niṣṭhāmārga. (T. mthar phyin pa’i lam; C. jiujingdao/wei; J. kukyōdō/i; K. kugyōngdo/wi 究竟道/位). In Sanskrit, “path of completion,” the fifth of the “five-path” ([PAÑCAMĀRGA](#)) schema described in both [SARVĀSTIVĀDA ABHIDHARMA](#) and the [YOGĀCĀRA](#) school of [MAHĀYĀNA](#). With the consummation of the path of cultivation ([BHĀVANĀMĀRGA](#)), the adept achieves the “adamantine-like

concentration” ([VAJROPAMASAMĀDHI](#)), which leads to the permanent destruction of even the subtlest and most persistent of the ten fetters ([SAMYOJANA](#)), resulting in the “knowledge of cessation” ([KSAYAJÑĀNA](#)) and in some presentations an accompanying “knowledge of nonproduction” ([ANUTPĀDAJÑĀNA](#)), viz., the knowledges that the fetters are destroyed and can never again recur. Because the adept now has full knowledge of the eightfold path ([ĀRYĀSTĀṄGAMĀRGA](#)) and has achieved liberation ([VIMOKSA](#)), he no longer needs any further instruction; for this reason, this path is also described as the “path where there is nothing more to learn” ([AŚAIKSAMĀRGA](#)). With the attainment of this path, the practitioner is freed from the possibility of any further rebirth due to the causal force of [KARMAN](#).

[niṣyandaphala](#). (T. rgyu mthun gyi ’bras bu; C. dengliu guo; J. tōruka; K. tūngnyu kwa 等流果). In Sanskrit, lit. “flowing-forth-from effect,” “correlative effect,” or “uniform-emanation effect”; this is one of the five types of effects or fruitions ([PHALA](#)) enumerated in the [SARVĀSTIVĀDA ABHIDHARMA](#) and the [YOGĀCĀRA](#) system. The niṣyandaphala is described as an effect that “flows out from” or arises in similarity with, its corresponding cause ([HETU](#))—in this case, specifically the “homogeneous cause” ([SABHĀGAHETU](#)) and “all-pervasive cause” ([SARVATRAGAHETU](#))—and is generally described in one of two ways. In the first sense, the effect may correlate with the cause of the previous action. For example, as a result of giving a gift in a past life, a person might enjoy the act of charity in a future life; or, as a result of committing murder in a past life, a person might enjoy killing in a future life. In the second sense, the effect may accord with the experience resulting from the previous action. For example, as a result of being charitable in a past life, one may receive charity in a future life; or as a result of committing murder in a past life, one may be murdered in a future life.

[nītārtha](#). (P. nītattha; T. nges don; C. liaoyi; J. ryōgi; K. yoŭi 了義). In Sanskrit, “definitive,” one of the two categories into which statements in the sūtras may be classified, along with [NEYĀRTHA](#), or “provisional.” Nītārtha and neyārtha are among a number of categories employed in the interpretation of scripture, and provide a means of accounting for statements by the Buddha that appear to contradict the Buddha’s presumed final position on a topic. The Indian schools differ on what constitutes a definitive statement. Some hold that any statement that can be accepted literally is definitive. Thus, for those [MAHĀYĀNA](#) schools

that hold that all beings will eventually achieve buddhahood, the statement in the [SADDHARMAPUNÐARĪKASŪTRA](#) (“Lotus Sūtra”) that there is only one vehicle ([EKAYĀNA](#)) would be regarded as a definitive teaching. Based on a statement in the [AKSAYAMATINIRDEŚASŪTRA](#), others hold that only those statements that describe the ultimate nature of reality are definitive, playing on the literal sense of *nītārtha* as “definite object” or “definite meaning.” Thus, a statement that wealth is the result of charity ([DĀNA](#)), while literally true, would be deemed provisional because it does not make reference to the final nature or emptiness ([ŚŪNYATĀ](#)) of wealth or the act of giving.

[Nittō guhō junrei gyōki](#). (入唐求法巡禮行記). In Japanese, “Record of a Pilgrimage to China in Search of the Dharma”; a renowned travel diary, in four rolls, by the Japanese [TENDAISHŪ](#) monk [ENNIN](#) (794–864) of his nine years sojourning in Tang China. In 838, Ennin sailed to China with his companions Engyō (799–852) and Jōkyō (d. 866), arriving in Yangzhou (present-day Jiangsu province) at the mouth of the Yangzi River. The next year, he found himself at the monastery of Kaiyuansi, where he received the teachings and rituals of the various [KONGŌKAI](#) (vajradhātu) deities from the monk Quanya (d.u.). When adverse winds kept him from returning to Japan, he remained behind at the monastery of Fahuayuan on Mt. Chi in Dengzhou (present-day Shandong province). From there, Ennin made a pilgrimage to [WUTAISHAN](#), where he studied [TIANTAI ZONG](#) doctrine and practice. In 840, Ennin arrived in the capital Chang’an, where he studied under the master ([ACĀRYA](#)) Yuanzheng (d.u.) of the monastery of Daxingshansi. The next year, Ennin also studied the teachings of the [TAIZŌKAI](#) (garbhadhātu) and the [SUSIDDHIKARASŪTRA](#) under the ācārya Yizhen (d.u.) of the monastery of Qinglongsi. In 842, Ennin furthered his studies of the taizōkai under the ācārya Faquan (d.u.) at the monastery Xuanfasi, [SIDDHAM](#) under Yuanjian (d.u.) of Da’anguosi, and siddham pronunciation under the Indian ācārya Baoyue (d.u.). In 845, Ennin fled the Huichang persecution of Buddhism ([HUICHANG FANAN](#)) that was then raging in Chang’an, and arrived back in Japan in 847. Ennin’s record includes not only detailed information on the routes he took between Japan and China, but also the procedures and expenses required in order to obtain travel permits. In addition, his diary contains detailed descriptions of the daily rituals followed at a Korean monastery in Shandong province where he (and other foreign travelers) stayed for some time. The *Nittō guhō junrei gyōki* is therefore an important source for studying the daily lives of travelers, merchants, officials, and monks in medieval China.

nitya. (P. nicca; T. rtag pa; C. chang; J. jō; K. sang 常). In Sanskrit, “permanent”; technically defined in some schools as the quality of being capable of lasting more than a single instant ([KSANA](#)). According to the [SARVĀSTIVĀDA](#) school of [ABHIDHARMA](#) exegesis, all conditioned factors ([SAMSKṚTADHARMA](#)) are impermanent ([ANITYA](#)); there are only three unconditioned factors ([ASAMSKṚTADHARMA](#)) that may be viewed as permanent, because they are not subject to the forces of impermanence that govern the conditioned realm of existence. These are the analytical cessation ([PRATISAMKHYĀNIRODHA](#), which would include [NIRVĀNA](#)); nonanalytical cessation ([APRATISAMKHYĀNIRODHA](#)); and space ([ĀKĀŚA](#)). To perceive as permanent conditioned factors that are actually impermanent is a fundamental misconception and a primary cause of suffering ([DUHKHA](#)). This mistaken view of permanence thus figures among the four “inverted views” ([VIPARYĀSA](#)): to see the painful as pleasurable, the impermanent as permanent, the impure as pure, and that which is without self as having a self.

nityadharmā. (P. niccadhamma; T. rtag pa'i chos; C. changfa; J. jōhō; K. sangpōp 常法). In Sanskrit, “permanent factors,” one of two basic categories of phenomena in certain strands of [ABHIDHARMA](#) exegesis. Despite the centrality of the doctrine of impermanence in Buddhism, it is not the case that all phenomena are impermanent: conditioned factors ([SAMSKṚTADHARMA](#)) are impermanent, but unconditioned factors ([ASAMSKṚTADHARMA](#)) may instead be viewed as permanent. Permanent factors are typically enumerated as three: analytical cessation ([PRATISAMKHYĀNIRODHA](#), which would include [NIRVĀNA](#)); nonanalytical cessation ([APRATISAMKHYĀNIRODHA](#)); and space ([ĀKĀŚA](#)). Since each of these types of factors is uncompounded, and thus not subject to the forces of impermanence that govern the conditioned realm of existence, they may be viewed as “permanent factors.”

nityānta. (S). See [ŚĀŚVATĀNTA](#).

Niutou Farong. (J. Gozu Hōyū; K. Udu Pōbyung 牛頭法融) (594–657). In Chinese, “Oxhead, Dharma Interfusion”; proper name of the founder of an early [CHAN](#) school often known in English as the “Oxhead school” ([NIUTOU ZONG](#)), after his toponym Niutou (Oxhead). Farong was a native of Yanling in present-day Jiangsu province. Little is known of his early years. He is said to have studied the teachings of [MADHYAMAKA](#) and to have spent twenty years in the mountains after his ordination by a certain dharma master Ling (d.u.). In 643, Farong entered the monastery of Youqisi on Mt. Niutou (in present-day Jiangsu

province), whence he acquired his toponym. In 647, he gave a public lecture on the [SADDHARMAPUNÐARĪKASŪTRA](#), and six years later he lectured on the [PAÑCAVIMŚATISĀHASRIKĀPRAJÑĀPĀRAMITĀSŪTRA](#) at the monastery of Jianchusi (see [BAO'ENSI](#)). The influential treatise [JUEGUAN LUN](#) (“Extinguishing Cognition Treatise”) is attributed by tradition to [BODHIDHARMA](#), the legendary founder of the Chan school, but it is now generally believed to have been composed by Farong or one of his students. Although Farong’s official biography in the [XU GAOSENZHUAN](#) does not mention this event, later stele inscriptions and Chan genealogical histories (see [CHUANDENG LU](#)) report that [DAOXIN](#), the putative fourth patriarch of the Chan school, instructed Farong in the sudden teaching ([DUNJIAO](#)); Farong’s connections with Daoxin are, however, historically dubious. Some of the more unusual positions Farong took include the notion that even inanimate objects, such as rocks, rivers, and flowers, possess the buddha-nature ([FOXING](#)). Farong was also one of the earliest teachers in the Chan school to advocate the nonreliance on conceptual descriptions of Buddhism (see [BULI WENZI](#)).

Niutou zong. (J. Gozushū; K. Udu chong 牛頭宗). In Chinese, “Oxhead School”; a lineage of early Chan that traces itself to the Chan master [NIUTOU FARONG](#) (594–657), a reputed disciple of the fourth patriarch [DAOXIN](#) (580–651), although the connections between the two monks are tenuous. The monk Zhiwei (646–722) is often credited with the actual formation of the Niutou zong as a lineage that could claim independence from both the Northern school ([BEI ZONG](#)) and Southern school ([NAN ZONG](#)) of Chan. The school was active in the seventh through eighth centuries, but reached its zenith in the third quarter of the eighth century. The school’s name is derived from Mt. Niutou (in present-day Jiangsu province), where Farong and his students are said to have taught a form of Chan distinct from that of the other lineages then current in China. The Chan historian [GUIFENG ZONGMI](#) characterizes the Niutou school as the “tradition (that believes) all things are to be cut off without support” (minjue wuji zong). The teachings of the Niutou tradition show a strong predilection toward the notion of emptiness ([ŚŪNYATĀ](#)) and [PRAJÑĀPĀRAMITĀ](#), as exemplified in its influential treatise [JUEGUAN LUN](#) (“Extinguishing Cognition Treatise”), which uses a series of negative argumentations, derived from [MADHYAMAKA](#) antecedents, to open students to an experience of the pure wisdom that transcends all dualities. Oxhead writings also frequently employ a threefold rhetorical structure of an initial question by the teacher, followed by the student’s hesitation in how to

respond, culminating in understanding; this structure seems to have its antecedents in [Tiantai Zhiyi](#)'s teachings of the “three truths” ([SANDI](#)) of absolute, conventional, and mean. One of the enduring influences of the Niutou school is on the 780 CE composition of the [LiuZu Tan Jing](#) (“Platform Sūtra of the Sixth Patriarch”), which deploys a similar threefold rhetoric in developing its understanding of Chan.

[Nivāpasutta](#). (C. Lieshi jing; J. Ryōshikyō; K. Yōpsa kyōng 獵師經). In Pāli, “Discourse on the Snare,” the twenty-fifth sutta in the [MAJJHIMANIKĀYA](#) (a separate [SARVĀSTIVĀDA](#) recension appears as the 178th [SŪTRA](#) in the Chinese translation of the [MADHYAMĀGAMA](#)); preached by the Buddha to an assembly of monks at the [JETAVANA](#) grove in the town of [ŚRĀVASTĪ](#) (P. Sāvatti). The Buddha speaks of the obstacles that can hinder monks along the path to liberation using a simile of a hunter, his entourage, a green pasture, and four herds of deer being hunted as prey. The hunter represents [MĀRA](#), the personification of evil and death, who seeks to entrap beings in the cycle of rebirth ([SAMŚĀRA](#)). The hunter’s entourage is Māra’s hordes. The pastures are the bait of sensual pleasures that Māra uses to ensnare beings, and the four herds of deer are four types of brāhmaṇas and recluses whom Māra tempts. Progressively deeper levels of soteriological attainment, from the meditative absorptions (P. [JHĀNA](#); S. [DHYĀNA](#)) to the extinction of the contaminants (P. [ĀSAVAKHAYA](#); S. [ĀSRAVAKSAYA](#)), render one free from Māra’s grasp.

[nīvaraṇa](#). [alt. nivarāṇa] (T. sgrib pa; C. gai; J. gai; K. kae 蓋). In Sanskrit and Pāli, “hindrance” or “obstruction,” referring specifically to five hindrances to the attainment of the first meditative absorption of the subtle-materiality realm ([RŪPĀVACARADHYĀNA](#)). Each of these five hindrances specifically obstructs one of the five constituents of absorption ([DHYĀNĀṄGA](#)) and must therefore be at least temporarily allayed in order for absorption ([DHYĀNA](#)) to occur. The five are: (1) “sensual desire” ([KĀMACCHANDA](#)), which hinders one-pointedness of mind ([EKĀGRATĀ](#)); (2) “malice” or “ill will” ([VYĀPĀDA](#)), hindering physical rapture ([PRĪTI](#)); (3) “sloth and torpor” ([STYĀNA-MIDDHA](#)), hindering the initial application of thought ([VITARKA](#)); (4) “restlessness and worry” ([AUDDHATYA-KAUKRITYA](#)), hindering mental ease ([SUKHA](#)); and (5) “skeptical doubt” ([VICIKITSĀ](#)), hindering sustained consideration ([VICĀRA](#)). Buddhist sūtras and meditation manuals, such as the [VISUDDHIMAGGA](#), provide extensive discussion of various antidotes or counteragents ([PRATIPAKSA](#), see also [KAMMATTHĀNA](#)) to these hindrances, such as

the contemplation on the decomposition of a corpse ([AŚUBHABHĀVANĀ](#)) to counter sensual desire; the meditation on loving-kindness ([MAITRĪ](#)) to counter malice; the recollection of death to counter sloth and torpor; quietude of mind to counter restlessness and worry; and studying the scriptures to counter skeptical doubt. In addition, the five faculties or dominants ([INDRIYA](#)) are also specifically designed to allay the five hindrances: faith ([ŚRADDHĀ](#)) counters malice; effort ([VĪRYA](#)) counters sloth and torpor; mindfulness ([SMṚTI](#)) counters sensual desire; concentration ([SAMĀDHI](#)) counters restlessness and worry; and wisdom ([PRAJÑĀ](#)) counters skeptical doubt. A similar correlation is made between the seven factors of enlightenment ([BODHYANGA](#)) and the hindrances. These five hindrances are permanently eliminated at various stages of the noble path ([ĀRYAMĀRGA](#)): worry (kaukr̥tya) and skeptical doubt are permanently overcome at the point of becoming a stream-enterer ([SROTAĀPANNA](#)); sensual desire and malice on becoming a nonreturner ([ANĀGĀMIN](#)); and sloth and torpor and restlessness (auddhatya) on becoming a worthy one ([ARHAT](#)).

[nivāsana](#). (T. sham thabs; C. niepanseng/qun; J. nehanzō/kun; K. yōlbansūng/gun 涅槃僧/裙). In Sanskrit and Pāli, “undergarment,” the lower robe or skirt worn by Buddhist monks and nuns. The nivāsana is a large piece of cloth that is wrapped around the torso and tied at the waist, in some traditions extending to the ankles; it is also called the antaravāsaka, or inner garment. According to the [VINAYA](#), it is to be made of three panels of cloth. This skirt, together with the [UTTARĀSAMGA](#) or upper robe and the [SAMGHĀTĪ](#) or outer robe, constitute the [TRICĪVARA](#), or triple robe of the monk. See also [KĀSĀYA](#).

[Niwano Nikkyō](#). (庭野日敬) (1906–1999). Cofounder of [RISSHŌ KŌSEIKAI](#), a Japanese lay Buddhist organization that was an offshoot of [REIYŪKAI](#) and was strongly influenced by [NICHIRENSHŪ](#) doctrine. Niwano was born into a poor family in a small town in Nigata prefecture in northern Japan. After going to work in Tokyo in 1923, Niwano led a typical working-class life, running such small businesses as rice, charcoal, and Japanese-pickle shops, while also showing an intense interest in astrology, numerology, and divination. Niwano became an ardent adherent of Reiyūkai in 1934, when his nine-month-old daughter recovered from a serious illness after he followed the organization’s practice of ancestor worship. Niwano soon became a leading evangelist for Reiyūkai, recruiting many new followers, one of whom was [NAGANUMA MYŌKŌ](#) (1899–1957). In 1938, Niwano and Naganuma left Reiyūkai and cofounded

Risshō Kōseikai, together with about thirty other followers. According to Niwano, the group seceded because of Reiyūkai's overemphasis on the miraculous benefit, rather than the teachings, of the [SADDHARMAPUNḌARĪKASŪTRA](#) ("Lotus Sūtra"), although others say that the split occurred because the leader of Reiyūkai publicly criticized Niwano's interest in divination. After establishing the organization, Naganuma served as a spirit medium, while Niwano focused on teaching and administration. After Naganuma's death in 1957, Niwano became the president of the million-member organization and declared the end of the organization's first era of "skillful means" (J. hōben; S. [UPĀYAKAUŚALYA](#)), which had been characterized by spirit mediumship and divine instructions, and the dawn of a new era of "manifesting the truth" (shinjitsu kengen). Niwano affirmed that henceforth the central objects of the organization's faith would be the *Saddharmapuṇḍarīkasūtra* and [ŚĀKYAMUNI](#) Buddha, which were eternal and universal. Based on his understanding of the sūtra, Niwano emphasized the spiritual development of individuals along the [BODHISATVA](#) path, whose salvific efforts should be dedicated not just to one's own family and ancestors, but also to Japanese society and the world at large. Niwano also dedicated himself to promoting world peace through interreligious cooperation, one example of which was the establishment of the Niwano Peace Foundation in 1978. Niwano resigned from the presidency of Risshō Kōseikai in 1991 and was succeeded by his eldest son Niwano Nichiko (b. 1938).

[niyāma](#). [alt. niyama] (T. nges par 'gyur ba; C. jue ding; J. ketsujō; K. kyōlchōng 決定). In Sanskrit and Pāli, "constraint," "certainty," referring to the certainty of what is to come or the fixedness of things. Laws governing the universe are referred to as the five certainties (pañcaniyāma). According to the Pāli commentaries, these five certainties are (1) the certainty of the seasons (utuniyāma), which includes such aspects of the natural environment as the regular progression of the seasons, the rise and fall in temperature, etc.; (2) the certainty of seeds (bījanīyāma), which refers to botany, viz., that specific seeds produce specific plants, that certain fruits have certain flavors, and so on; (3) the certainty of action (kammanīyāma), which refers to the fact that virtuous actions lead to happiness in the future and nonvirtuous actions lead to suffering; (4) the certainty of mind (cittanīyāma), which includes the processes and constituents of consciousness; and (5) the certainty of the dharma (dhammanīyāma), which refers, among other things, to certain events that occur in the lives of all

buddhas. ¶ In the [MAHĀYĀNA](#), *nyāma*, a [BUDDHIST HYBRID SANSKRIT](#) word that is probably an alternate form of *niyāma*, has a different meaning, referring to the development of compassion that overcomes the faults of the [HĪNAYĀNA](#) and is unique to the bodhisattva path. It has been translated into English as “the fixed condition” of a bodhisattva or a bodhisattva’s “distinctive way of salvation.”

[niyatagotra](#). (T. *nges pa’i rigs*; C. *jueding zhongxing*; J. *ketsujō shushō*; K. *kyōlchōng chongsōng* 決定種性). In Sanskrit, “definite” or “fixed” “lineage,” a term that appears in [YOGĀCĀRA](#) soteriological theories. According to some Yogācāra texts, sentient beings are endowed with a disposition that determines whether they will follow the path of a [ŚRĀVAKA](#), [PRATYEKABUDDHA](#), or [BODHISATTVA](#) and eventually achieve liberation from rebirth as an [ARHAT](#) or a buddha. This disposition, or lineage ([GOTRA](#)), according to some Yogācāra schools, is determined from time immemorial and cannot be altered. It is on the basis of this doctrine that the Yogācāra is said to assert the existence of three separate soteriological vehicles ([TRİYĀNA](#)). These Yogācāra schools do not therefore accept the famous declaration in [SADDHARMAPUNĀRĪKASŪTRA](#) (“Lotus Sūtra”) that all beings will eventually enter the [MAHĀYĀNA](#) and achieve buddhahood. In order to account for the possibility of beings who, prior to their entry into [NIRVĀNA](#), move from a [HĪNAYĀNA](#) path to the Mahāyāna path (or vice versa), the Yogācāra asserts that some beings are endowed with an “indefinite lineage” ([ANIYATAGOTRA](#)), allowing them to change vehicles based on various circumstances, usually before reaching the aids to penetration ([NIRVEDHABHĀGĪYA](#)) that precede the path of vision ([DARŚANAMĀRGA](#)). They also hold that some beings, called [ICCHANTIKA](#) (incorrigibles), belong to no spiritual lineage at all and thus are doomed never to achieve liberation. This doctrine of the presence and absence of particular lineages is associated with the Yogācāra exegete [ASAṄGA](#) and is identified in East Asian Buddhism with the [FAXIANG ZONG](#). The majority of Yogācāra texts, however, say that those fixed in a [ŚRĀVAKA](#) and [PRATYEKABUDDHA](#) lineage are only fixed in that lineage until they reach their goal; later, roused to enter the Mahāyāna by reflecting on the compassion of the Buddha, they then enter the bodhisattva lineage at the level of the [MOKSABHĀGĪYA-KUŚĀLAMŪLA](#) (“virtuous faculties that are aids to liberation”) and achieve full awakening.

[niyatamicchāditti](#). (C. *jueding xiejian*; J. *ketsujō jaken*; K. *kyōlchōng sagyōn* 決定邪見). In Pāli, lit. “fixed deluded views”; the three wrong views that lead to a

fixed destiny in the next rebirth; viz., the view that existence is uncaused (ahetukadiṭṭhi) and controlled by fate; the view that neither virtuous nor nonvirtuous actions produce results (akiriyadiṭṭhi); and the nihilistic view that death is annihilation, after which nothing happens that is the result of a previous action (natthikadiṭṭhi).

niyatapuggala. In Pāli, “person with a fixed destiny,” in the sense of having a definite place of rebirth, either salutary or unsalutary, in the immediately following lifetime. Such persons are of three types: one who has committed one of five heinous deeds that results in immediate retribution in the next life (P. ānantariyakamma, S. [ĀNANTARYAKARMA](#)) of being reborn in the interminable hell ([AVICI](#)); one who follows one of the wrong views that leads to a specific unfortunate rebirth in the next lifetime (niyatamicchādiṭṭhi); and one who has attained one of the four stages of noble persons (P. ariyapuggala, S. [ĀRYAPUDGALA](#)) and thus will be reborn as either a human or a divinity ([DEVA](#)) in the next life, or who, in the case of an arahant (S. [ARHAT](#)), will not be reborn at all.

noble persons. See [ĀRYAPUDGALA](#).

nonattachment. Despite its ubiquity in Western Buddhist literature, there is no precise equivalency in Indian Buddhist terminology for this English word. For some of the connotations of nonattachment, see [ALOBHA](#); [ANUPALABDHI](#); [NIRVEDA](#); [UPEKSĀ](#); [VIMOKSA](#); [VAIRĀGYA](#).

nonduality. See [ADVAYA](#).

Nōnin. (J) (能忍). See [DAINICHI\(BŌ\) NŌNIN](#).

nonreturner. See [ANĀGĀMIN](#).

nonsel. See [ANĀTMAN](#); [NAIRĀTMYA](#).

Nor bu gling kha. (Norbulingka). The summer residence of the [DALAI LAMAS](#) and the Tibetan government, located in the city of [LHA SA](#), south of the [PO TALA](#) Palace. The original foundations for the palace were laid by the seventh Dalai Lama, Skal bzang rgya mtsho, in 1755 at a medicinal spring, with the building completed in 1783 during the reign of the eighth Dalai Lama. Subsequent

incarnations greatly expanded the grounds, adding numerous residential and administrative buildings as well an arboretum, gardens, and pools. Every Dalai Lama beginning with the eighth, together with his administration, would transfer to the Nor bu gling kha on the eighteenth day of the third lunar month, usually sometime in April. The palace grounds were also the site of the yearly grand Tibetan drama festival known as Zho ston (Shotön). On March 10, 1959, Tibetans numbering in the thousands held a mass demonstration against Chinese occupation outside the walls of the Nor bu gling kha, behind which the fourteenth Dalai Lama and his family were sequestered. On March 17, the Dalai Lama secretly escaped from the residence to go into exile in India.

Northern school (of Chan). See [BEI ZONG](#).

novice. See [ŚRĀMANERA](#); [ŚRĀMANERIKĀ](#).

nṛtyāsana. (T. gar byed pa/gar stabs/gar gyi tshul gyis gnas pa). In Sanskrit, lit., “dancing posture,” a physical position in which the figure stands on a slightly bent left leg with the right leg bent and right foot resting on the opposite thigh or groin. The position of the feet may also be reversed. This position is commonly found among female [DĀKINĪ](#) images, such as [VAJRAVĀRĀHĪ](#). See also [ĀSANA](#).

nun. See [BHIKSUNĪ](#); [MAE CHI](#); [ŚRĀMANERIKĀ](#).

Nu, U. (1907–1995). Burmese (Myanmar) political leader and patron of Buddhism. (U is a Burmese honorific.) As a young man, U Nu became active in anti-British agitation and in 1936 was expelled by British authorities from the University of Rangoon law school for his political activities. Thereafter, he became a leader of the Burmese nationalist movement, adopting the nationalist title “Thakin” (master), along with his comrades Aung San, Ne Win, and others. On the eve of the Japanese invasion of Burma in 1942, he was imprisoned by the British as a potential agent. He was released by the Japanese occupation forces and served as the foreign minister of their puppet regime. With growing disenchantment at Japanese mistreatment of Burmese citizens, U Nu helped to organize a clandestine guerilla resistance force that assisted the British when they retook Burma. At the conclusion of World War II, he participated in negotiations with the British for Burmese independence. He became Burma’s first prime minister and served three terms in office (1948–1956, 1957–1958, 1960–1962). A devout Buddhist, he organized under government auspices

national monastic curricula, promoted the practice of insight meditation ([VIPASSANĀ](#)), and, in 1956, sponsored the convention of the sixth Buddhist council (according to Burmese reckoning; see [COUNCIL, SIXTH](#)) in celebration of the 2,500th anniversary of the Buddha's parinibbāna (S. [PARINIRVĀNA](#)). The council prepared a new Burmese edition of the Pāli canon (P. *tipiṭaka*; S. [TRIPITAKA](#)), together with its commentaries and sub-commentaries, which is currently used in Burmese monastic education. U Nu also attempted, unsuccessfully, to unite the several noncommensal fraternities (Burmese [GAING](#)) of the Burmese [SAMGHA](#) into a single body. While achieving much in the religious sphere, U Nu proved unable to cope with the political crises confronting his government, and Burma descended into civil war. He resigned as prime minister in 1956, returned to office in 1957, abdicated civilian government to General Ne Win in 1958, returned to office in 1960, and finally was deposed and arrested by Ne Win in a coup d'état in 1962. U Nu was released in 1968, and a year later he organized a resistance army from exile in Thailand. A rapprochement between U Nu and Ne Win was reached in 1980, and he was allowed to return to Burma, where he devoted himself to religious affairs, in particular as director of a Buddhist translation bureau located at Kaba Aye in Rangoon (Yangon). He again entered politics during the democracy uprising of 1988, setting up a symbolic provisional government when the then-ruling Burmese Socialist government collapsed. He was placed under house arrest in 1989 by the State Law and Order Restoration Council (SLORC), a group composed of generals who succeeded Ne Win. He was released in 1992. A prolific writer on politics and Buddhism, his works include *Buddhism: Theory and Practice*, *Burma under the Japanese*, *Unite and March*, *Towards Peace and Democracy*, and his autobiography, *Saturday's Son*.

[Nyagrodhārāma](#). (P. *Nigrodhārāma*; T. *Nya gro dha'i kun dga' ra ba*; C. *Nijülü lin*; J. *Nikuritsurin*; K. *Niguyullim* 尼拘律林). In Sanskrit, "Nyagrodha's Grove," a grove near [KAPILAVASTU](#) where the Buddha resided during his first visit to the city after his enlightenment. It was donated to the order by Nyagrodha, a member of the [ŚĀKYA](#) clan. It was in this grove that the Buddha performed the famous "dual miracle" ([YAMAKAPRĀTIHĀRYA](#)) for his kinsmen and related the [VESSANTARA-JĀTAKA](#) (S. *Viśvaṃtarajātaka*). The Buddha is said to have resided there on other occasions, and several rules of the [VINAYA](#) were promulgated in Nyagrodha's Grove.

[nyāma](#). (BHS). See [NIYĀMA](#).

[Nyanaponika Thera](#). See [ÑĀNAPONIKA MAHĀTHERA](#).

[Nyanatiloka Thera](#). See [ÑĀNATILOKA MAHĀTHERA](#).

[Nyang ral nyi ma 'od zer](#). (Nyangral Nyima Öser) (1124–1196). A Tibetan Buddhist master considered the first of the “five kingly treasure revealers” ([GTER STON RGYAL PO LŅGA](#)) and as a reincarnation of the Tibetan king [KHRI SRONG LDE BTSAN](#). He is also sometimes counted as the first of the “three supreme emanations” (mchog gi sprul sku gsum); the others are [GURU CHOS KYI DBANG PHYUG](#) and [RGOD LDEM CAN](#). Born in the southern Tibetan region of [LHO BRAG](#), he received numerous visions of [PADMASAMBHAVA](#), before commencing his illustrious career as a treasure revealer ([GTER STON](#)). His *Chos 'byung me tog snying po sbrang rtsi'i bcud* (“Nectar of the Honey in the Heart of the Flower: A History of the Dharma”) is an important early history of the dharma, with special emphasis on the [RNYING MA](#) sect. Among his other well-known works are the *Bka' brgyad bde gshegs 'dus pa'i rgyud* (“Tantra of the Gathering of the Sugatas of the Eight Transmitted Precepts”) and a biography of Padmasambhava entitled [BKA' THANG ZANGS GLING MA](#) (“Copper Island Chronicle”).

[Nyar ma gtsug lag khang](#). (Nyarma Tsuklakang). Also spelled Myar ma. A religious institution established in the late tenth century by the king of the western Tibetan [GU GE](#) region [YE SHES 'OD](#) and the translator [RIN CHEN BZANG PO](#). It is located in Mar yul, currently Ladakh, in northwest India.

[Nyāyabindu](#). (T. Rigs pa'i thigs pa). In Sanskrit, “Drop of Reasoning,” one of the seven treatises of the great seventh-century logician [DHARMAKĪRTI](#). This text summarizes Dharmakīrti's positions on topics set forth at greater length in his most important work, the [PRAMĀNAVĀRTTIKA](#), focusing upon the two forms of valid knowledge ([PRAMĀNA](#)): direct perception ([PRATYAKᅒA](#)) and inference ([ANUMĀNA](#)). The work is divided into three chapters, with the first chapter dealing with direct perception (pratyakᅒa), that is, valid knowledge gained through the sense consciousnesses (and the mental consciousness) without mediation by thought. The second chapter deals with “inference for one's own purposes” ([SVĀRTHĀNUMĀNA](#)), the process by which thought arrives at a valid judgment. The third chapter deals with “inference for the purpose of others” ([PARĀRTHĀNUMĀNA](#)), the statement of syllogisms to an opponent in a debate.

Among the several commentaries to the text, the most important is that by [DHARMOTTARA](#).

[*Nyāyānusāra](#). (C. Shun zhengli lun; J. Junshōriron; K. Sun chōngni non 順正理論). In Sanskrit, “Conformity with Correct Principle”; influential [VAIBHĀSIKA ABHIDHARMA](#) treatise by [SAMGHABHADRA](#) (c. fifth century CE). It is intended as a refutation of [VASUBANDHU](#)’s popular [ABHIDHARMAKOŚABHĀSYA](#) and its presentation of what it purports to be the orthodox positions of the [SARVĀSTIVĀDA](#) school. The **Nyāyānusāra* is both an exposition of the abhidharma philosophy of the Kashmiri Sarvāstivāda Vaibhāṣikas and a critical commentary on Vasubandhu’s *Abhidharmakośabhāṣya*, which advocated many positions that critiqued the Kashmiri Vaibhāṣika school. The **Nyāyānusāra* is roughly three times its rival text’s length and sought to defend the Vaibhāṣikas against Vasubandhu’s portrayal of their doctrines. For this reason, [XUANZANG](#) (who translated the text into Chinese) says that the original title of the text was the **Kośakaraka* (C. Jushi bao lun) or “Hailstones upon the *Kośa*.” As but one example of its criticisms, Saṃghabhadra’s opening critique of Vasubandhu centers on the latter’s assumption that abhidharma does not represent the teaching of the Buddha himself. To refute Vasubandhu’s misinterpretations, Saṃghabhadra cites scriptural passages that prove the Vaibhāṣika position, drawn from scripture ([SŪTRA](#)) but also from the massive [ABHIDHARMAMAHĀVIBHĀṢĀ](#) compendium of abhidharma. In addition to scriptural citation, Saṃghabhadra also resorts to logical argumentation ([YUKTI](#)) to refute Vasubandhu’s positions, both by exposing the contradictions explicit in Vasubandhu’s own presentations of doctrine and by demonstrating how Vasubandhu’s positions would undermine fundamental principles of Buddhist doctrine. In addition to his challenge of Vasubandhu, Saṃghabhadra also criticizes the positions of other Vaibhāṣika detractors, including the Dārṣṭāntika teacher Śrīlāta, and the [SAUTRĀNTIKA](#) master Sthavira; Saṃghabhadra’s goal is thus clearly to defend Vaibhāṣika abhidharma against any and all comers. The **Nyāyānusāra* is only extant in Xuanzang’s eighty-roll Chinese translation (the Sanskrit title is a reconstruction); portions of the original Sanskrit text have, however, been preserved in citations from other Indian texts, such as commentaries to the *Abhidharmakośabhāṣya* by [STHIRAMATI](#), Pūrṇavardhana, and [YAŚOMITRA](#).

[Nyāyapraveśa](#). (T. Tshad ma rigs par ’jug pa’i sgo; C. Yinming ru zhengli lun;

J. Inmyō nisshōiron; K. Inmyōng ip chōngni non 因明入正理論). In Sanskrit, “Primer on Logic,” by the sixth century CE Indian philosopher and logician [ŚAMKARASVĀMIN](#), a student of [DIGNĀGA](#). Some scholars have argued, based on the Tibetan tradition, that the *Nyāyapraveśa* was actually written by Dignāga, and that the version translated into Chinese and attributed to Śamkarasvāmin is actually Śamkarasvāmin’s later edition of Dignāga’s text. The *Nyāyapraveśa* provides an introduction to the logical system of Dignāga, covering such subjects as valid and invalid methods of proof, methods of refutation, perception, erroneous perception, inference, and erroneous inference. Although Śamkarasvāmin’s work was not as extensive, detailed, or original as Dignāga’s, it proved to be popular within the tradition, as attested by the many commentaries on it, including exegeses by non-Buddhists. Large parts of the work survive in the original Sanskrit.

Ōbakushū. (黄檗宗). In Japanese, “Ōbaku school”; one of the three main [ZEN](#) traditions in Japan, along with the [RINZAISHŪ](#) and [SŌTŌSHŪ](#). The émigré Chinese [CHAN](#) master [YINYUAN LONGQI](#) (1594–1673) is credited with its foundation. In 1654, Yinyuan fled the wars that accompanied the fall of the Ming dynasty and the establishment of the Manchu Qing dynasty, and arrived in Nagasaki, Japan, where he first served as abbot of the monastery of Kōfukuji. With the support of the shōgun Tokugawa Ietsuna (1639–1680) and Emperor Gomizunoo (r. 1611–1629), in 1661, Yinyuan traveled to a mountain he named Ōbaku (after Mt. Huangbo in China), where he began construction of a new monastery that he named [MANPUKUJI](#) (C. Wanfusi), after his old monastery in Fujian, China. The monastery and the broader Ōbaku tradition retained many of the exotic Chinese customs that Yinyuan and his Chinese disciples [MU’AN XINGTAO](#), Jifei Ruyi (1616–1617), and Huilin Xingji (1609–1681) had brought with them from the mainland, including the latest monastic architecture and institutional systems, the use of vernacular Chinese as the official ritual language in the monastery, and training in Chinese artistic and literary styles. In addition, for thirteen generations after Yinyuan, Manpukuji’s abbots continued to be Chinese, and only later began to alternate between Chinese and Japanese successors. These Chinese monastic customs that Yinyuan introduced were met with great ambivalence by such Japanese Rinzai leaders as Gudō Tōshoku (1577–1661) and later [HAKUIN EKAKU](#). Although Yinyuan himself was affiliated with the [YANGQI PAI](#) in the Chinese [LINJI ZONG](#), Chinese Chan traditions during this period had also assimilated the widespread practice of reciting of the Buddha’s name (C. [NIANFO](#); J. nenbutsu) by transforming it into a form of “questioning meditation” (C. [KANHUA CHAN](#); J. kannazen): e.g., “Who is it who is reciting the Buddha’s name?” Raising this question while engaging in nenbutsu was a technique that initially helped to concentrate the mind, but would also subsequently help raise the sense of doubt (C. [YIQING](#); J. gijō) that was central to Linji school accounts of authentic Chan meditation. However, since buddha-recitation was at this time closely associated in Japan with pure land traditions, such as [JŌDOSHŪ](#) and [JŌDO SHINSHŪ](#), this approach to Chan practice was extremely controversial among contemporary Japanese Zen adepts. The Chinese style of Zen that Yinyuan and his followers promulgated in Japan prompted their

contemporaries in the Rinzai and Sōtō Zen traditions to reevaluate their own practices and to initiate a series of important reform movements within their respective traditions (cf. [IN'IN EKISHI](#)). During the Meiji period, Ōbaku, Rinzai, and Sōtō were formally recognized as separate Zen traditions ([ZENSHŪ](#)) by the imperial government. Currently, the monastery Manpukuji in Uji serves as the headquarters (honzan) of the Ōbaku school.

[Obermiller, Eugène](#). (1901–1935). Noted Russian scholar of Indian and Tibetan Buddhism, born in St. Petersburg to a family devoted to music and the arts. He studied English, French, and German as a youth and was planning to become a musician. However, when he was eighteen years of age, he was stricken by syringomyelia, a disease of the spinal cord, which deprived him of the full use of his hands and fingers. After the Russian Revolution, he attended [FYODOR IPPOLITOVICH STCHERBATSKY](#)'s lectures on Sanskrit at the University of Petrograd (later Leningrad and St. Petersburg) and studied Sanskrit, Tibetan, and Mongolian. He became Stcherbatsky's student, preparing Sanskrit-Tibetan and Tibetan-Sanskrit indexes to the [NYĀYABINDU](#) and assisting him in editing the Tibetan text of the [ABHIDHARMAKOŚABHĀSYA](#). Obermiller spent a great deal of time in Buryatia in the Transbaikal, studying at Mongolian monasteries of the [DGE LUGS PA](#) tradition, where he learned to speak Tibetan. In working closely with learned Buddhist monks, Obermiller anticipated what would become a common model of scholarship after the Tibetan diaspora that began in 1959. In 1928, Stcherbatsky formed the Institute of Buddhist Culture (later to become part of the Institute of Oriental Studies), and Obermiller was appointed as a research scholar. In 1929, the two colleagues published an edition of the [ABHISAMAYĀLAMKĀRA](#). Obermiller continued to suffer from syringomyelia throughout this period. By the age of thirty, he had become incapacitated to the point that he was not able to write and died four years later. Despite his debilitating illness, during his last years, he remained committed to his scholarship and published a number of pioneering translations, including BU STON's "History of Buddhism" ([BU STON CHOS 'BYUNG](#)) and the [RATNAGOTRAVIBHĀGA](#) (*Uttaratantra*) in 1932. In his articles (several of which have been republished), he focused especially on the [PRAJÑĀPĀRAMITĀ](#) exegetical literature, relying largely on Dge lugs expositions.

[Odantapurī](#). (T. O tan ta pū ri). Sometimes called Uḍḍandapura, Odantapurī is thought to be the second oldest of India's large monastic universities. It was

located some six miles from [NALANDĀ](#), in modern Bihar State. It was founded during the seventh century CE by King Gopāla (660–705), who also served as its main patron. Gopāla was the first king of the Pāla dynasty, which would continue to support Buddhism in this region for centuries. Odantapurī reached its peak around the eighth century CE and, according to some Tibetan sources, had approximately twelve thousand students at its height. The monastery was highly influential in the larger Buddhist world; the architectural layout of [BSAM YAS](#) monastery in Tibet is believed to have been modeled on Odantapurī. Odantapurī flourished until the turn of the thirteenth century, when it and [VIKRAMAŚĪLA](#) were destroyed in the 1199 and 1200 CE invasion of the Ghurid Muslims, who were said to have mistaken the monasteries for fortresses. The Ghurid military governors erected their administrative headquarters for the region at the site where Odantapurī had stood.

[Oḍḍiyāna](#). (T. O rgyan/U rgyan). Also spelled Oḍiyāna and Uḍḍiyāna; a region northeast of India known for its early tantric Buddhist activity, often identified by modern scholars with the Swat Valley of Pakistan. It is fabled as the birthplace of [PADMASAMBHAVA](#) and is the place of origin of numerous tantric texts and lineages, including the [GUHYASAMĀJATANTRA](#). Several Tibetan masters wrote accounts of their travels through Oḍḍiyāna, including [O RGYAN PA RIN CHEN DPAL](#), whose name literally means “the man of Oḍḍiyāna,” as well as Stag tshang ras pa (Taktsangrepa), and Buddhagupta. Because the Tibetan name O rgyan is almost synonymous with Padmasambhava (who is often referred to in Tibetan as O rgyan rin po che, O rgyan chen po, O rgyan pa, O rgyan pad ma, etc.), O rgyan is found in the names of many Tibetan temples and monasteries.

[Odra](#). (S). One of the twenty-four sacred sites associated with the [CAKRASAMVARATANTRA](#). See [PĪTHA](#).

[ogha](#). (T. chu bo; C. baoliu; J. boru; K. p’ongnyu 洪流). In Sanskrit and Pāli, “floods,” “currents”; forces whose pull is so strong that, like a flood or strong current, they overwhelm the hapless ordinary person ([PRTHAGJANA](#)). A list of three is typically found in the literature: greed for sensual experience ([KĀMARĀGA](#)), greed for continuing existence (BHAVARĀGA), and ignorance ([AVIDYĀ](#)), with a fourth, views ([DRSTĪ](#)), sometimes added.

[Ogyo Kusan](#). (五教九山). In Korean, “Five Doctrinal [schools] and Nine Mountains [school of Sōn]”; a designation for the five major doctrinal schools

([KYO](#))—viz., Nirvāṇa ([Yōlban chong](#); see [NIEPAN ZONG](#)), Vinaya ([Kyeyul chong](#); cf. [NANSHAN LŪ ZONG](#)), Dharma-Nature ([Pōpsōng chong](#)), Hwaōm (alt. [Wōnyung chong](#); see [HUAYAN ZONG](#)), and Yogācāra ([Pōpsang chong](#); see [FAXIANG ZONG](#))—and the Nine Mountains school of [SŌN](#) ([KUSAN SŌNMUN](#)); this designation is presumed to have been used from the late Silla through the mid-Koryō dynasties to refer to the major sectarian strands within the Korean Buddhist tradition. This is a retrospective designation; there is little evidence that all five of these doctrinal schools ever existed as independent traditions in Korea, or that they identified themselves as belonging to an independent and separate doctrinal strand of Korean Buddhism. See [KUSAN SŌNMUN](#); [KYO](#); [OGYO YANGJONG](#); [SŌN](#); [SŌN KYO YANGJONG](#).

[Ogyo Yangjong](#). (五教兩宗). In Korean, “Five Doctrinal [schools] and Two [Meditative] Traditions”; a designation used from the mid-Koryō through early Chosōn dynasties to refer to the major strands of [KYO](#) and [SŌN](#) within the Korean Buddhist tradition. See [KUSAN SŌNMUN](#); [KYO](#); [OGYO KUSAN](#); [SŌN](#); [SŌN KYO YANGJONG](#).

[Ōjō yōshū](#). (C. Wangsheng yao ji 往生要集). In Japanese, “Collection of Essentials on Going to Rebirth” [in the pure land]; one of the most influential Japanese treatises on the practice of nenbutsu (C. [NIANFO](#)) and the soteriological goal of rebirth in the [PURE LAND](#), composed by the Japanese [TENDAISHŪ](#) monk [GENSHIN](#) at the Shuryōgon’in at [YOKAWA](#) on [HIEIZAN](#) in 985. The *Ōjō yōshū* offers a systematic overview of pure land thought and practice, using extensive passages culled from various scriptures and treatises, especially the writings of the Chinese pure land monks [DAOCHUO](#) and [SHANDAO](#). Genshin’s collection is divided into ten sections: departing from the defiled realm, seeking (rebirth) in the pure land; evidence for (the existence of) [SUKHĀVATĪ](#); the proper practice of nenbutsu methods for assisting mindfulness; special nenbutsu (betsuji nenbutsu); the benefits of nenbutsu; evidence for the results forthcoming from nenbutsu; the fruits of rebirth in the pure land; and a series of miscellaneous questions and answers. Genshin contends that the practice of nenbutsu is relatively easy for everyone and is appropriate for people during the degenerate age of the final dharma (J. mappō; see [MOFA](#)), especially as a deathbed practice. Genshin also recommended the chanting of the name of the buddha [AMITĀBHA](#) to those of lower spiritual capacity (a total of nine spiritual capacities are posited by Genshin; cf. [JIUPIN](#)), and he regarded this practice as inferior to the contemplative

practices described in the [GUAN WULIANGSHOU JING](#). Genshin's work was also famous for its description of [SAMSĀRA](#), especially its vivid depiction of the hells (cf. [NĀRAKA](#)); his description inspired lurid paintings of the hells on Japanese screens. The *Ōjō yōshū* became popular among the Heian aristocracy; the text's view of the degenerate age (J. mappō; cf. C. [MOFA](#)) may have provided an explanation for the social upheaval at the end of the Heian period. The text also exerted substantial influence over the subsequent development of the pure land movements in the Tendai tradition on Mt. Hiei. The *Ōjō yōshū* also played an important role in laying the groundwork for an independent pure land tradition in Japan a century later. Several important commentaries on the *Ōjō yōshū* were prepared by the Japanese [JŌDOSHŪ](#) monk [HŌNEN](#). In addition, the *Ōjō yōshū* was one of the few texts written in Japan that made its way to China, where it influenced the development of pure land Buddhism on the mainland.

[Olcott, Henry Steel](#). (1832–1907). Cofounder of the Theosophical Society and a key figure in the modern history of Buddhism in Sri Lanka. Born in Orange, New Jersey, to a Presbyterian family, Olcott developed an interest in spiritualism during his twenties. He served in the Union Army during the American Civil War and subsequently was appointed to the commission that investigated the assassination of Abraham Lincoln. Working as a journalist in New York City, he traveled to the Eddy Farm in Chittenden, Vermont, in 1874 to investigate paranormal events occurring in a farmhouse. While there, he met [HELENA PETROVNA BLAVATSKY](#). Together, they founded the Theosophical Society in New York in 1875, an organization that was responsible for bringing the teachings of the Buddha, at least as interpreted by the Society, to a large audience in Europe and America. With the aim of establishing links with Asian teachers, they traveled to India, arriving in Bombay in 1879 and proceeding to Ceylon (Sri Lanka) the next year. Enthusiastically embracing his new Buddhist faith and shocked at what he perceived to be the ignorance of the Sinhalese about their own religion, Olcott took it upon himself to restore true Buddhism to Ceylon and to counter the efforts of Christian missionaries on the island. In order to accomplish this aim, he adopted some of the techniques of Protestant missionaries, founding lay and monastic branches of the Buddhist Theosophical Society to disseminate Buddhist knowledge (and later assisted in the founding of the Young Men's Buddhist Association), designing a Buddhist flag, and publishing in 1881 *A Buddhist Catechism*. The book was printed in some forty editions in twenty languages and was long used in schools in Sri Lanka.

Buddhist leaders (including his former protégé, [ANAGĀRIKA DHARMAPĀLA](#)) eventually grew alarmed at his rejection of traditional devotional practices and feared that he was misappropriating Buddhism into a universalist Theosophy. In 1885, Olcott set out for Burma and Japan on a mission to heal the schism he perceived between “the northern and southern Churches,” that is, between the Buddhists of Ceylon and Burma (southern) and those of China and Japan (northern). In subsequent years, Olcott was involved in often acrimonious debates within the Theosophical Society, failing to prevent a schism in 1895 into an American section and the international headquarters in Adyar, India.

[Oldenberg, Hermann](#). (1854–1920). An important scholar in the early history of Buddhist Studies in the West. Oldenberg was born in Hamburg, Germany, the son of a Protestant minister. He studied Sanskrit and Indology in Berlin, receiving his doctorate in 1875. During his career, he held positions at Berlin, Kiel, and Göttingen University, teaching comparative philology and Sanskrit. He traveled to India for the first time in 1912 and also worked in the India Office in London. Oldenberg was arguably the most influential German scholar of Buddhism of the nineteenth century. He published an edition of the Pāli [VINAYAPITAKA](#) in five volumes between 1879 and 1883. He also published an edition of the [DĪPAVAMSA](#) and collaborated with [THOMAS W. RHYS DAVIDS](#) in translating the pāṭimokkha (S. [PRĀTIMOKSA](#)), [MAHĀVAGGA](#), and [CŪLAVAGGA](#) for [FRIEDRICH MAX MÜLLER](#)'s “Sacred Books of the East” series. He also contributed translations of Vedic works to the same series. His most influential work, however, was his 1881 *Buddha: sein Leben, seine Lehre, seine Gemeinde*, published in English as *Buddha: His Life, His Doctrine, His Order*. In Oldenberg's view, the majority of the texts included in the Pāli canon had been compiled prior to the second Buddhist council ([SAMGĪTI](#)) in Vesālī (S. [VAIŚALĪ](#)), said to have taken place c. 380 BCE (see [COUNCIL, SECOND](#)). He also believed that these texts had been accurately preserved in Sri Lanka. Oldenberg is therefore (together with [THOMAS RHYS DAVIDS](#) and [CAROLINE RHYS DAVIDS](#)) largely responsible for the view that the Pāli canon is the most accurate record of the Buddha and his teachings, and that it contains reliable historical information about the events in the Buddha's life. Paralleling the search for the historical Jesus, Oldenberg attempted to strip away the legends of that life, in order to offer a demythologized, historical portrayal of the Buddha. In this effort, his work is often contrasted with that of the French scholar [ÉMILE SENART](#), who, working largely from Sanskrit texts, took a more mythological approach to the accounts

of the Buddha's life. For Oldenberg, the Buddha of the later Sanskrit texts was a superhuman figure; the Buddha of the Pāli was historical and human. Oldenberg also disagreed with Senart on the nature of Buddhism, seeing its true religious significance only in the aspiration to achieve [NIRVĀNA](#); Senart saw Buddhism as largely a popular movement that emphasized achieving happiness in the world and rebirth in the heavens. Oldenberg was the first scholar seriously to compare Pāli and Sanskrit versions of texts, a project that [EUGÉNE BURNOUF](#) had planned but was unable to undertake due to his untimely death. Based on these studies, Oldenberg sought to identify the older (and thus, in his view, the more reliable) stratum of textual materials. Oldenberg's views on both the centrality of the Pāli canon and the nature of Buddhism have remained influential in modern presentations of the religion.

[Oldenburg, Sergey](#). (1863–1934). Russian scholar of Buddhism, known especially as the founder of the Bibliotheca Buddhica, based in St. Petersburg. The series, published in thirty volumes between 1897 and 1936, was composed primarily of critical editions (and in some cases translations) by the leading European and Japanese scholars of some of the most important texts of Sanskrit Buddhism, including the [ŚIKSĀSAMUCCAYA](#), [MŪLAMADHYAMAKAKĀRIKĀ](#), [AVADĀNAŚATAKA](#), and [ABHISAMAYĀLAMKĀRA](#). The series also included indexes as well as independent works, such as FYODOR IPPOLITOVICH STCHERBATSKY's *Buddhist Logic*. In the 1890s, Oldenburg published Sanskrit fragments discovered in Kashgar, and he led Russian expeditions to Central Asia in 1909–1910 and 1914–1915 in search of Buddhist manuscripts and artifacts. His research interests were wide-ranging; he published articles on Buddhist art, on [JĀTAKA](#) literature, and on the *Mahābhārata* in Buddhist literature.

[om mani padme hūm](#). (T. om maṇi padme hūṃ; C. an mani bami hong; J. on mani padomei un; K. om mani panme hum 唵嘛呢叭彌吽). In Sanskrit, “homage to the Jewel-Lotus One”; the most famous of all Buddhist [MANTRAS](#) and important especially in Tibetan Buddhism, where it is the mantra most commonly recited and most often placed in prayer wheels; indeed, the Tibetan term rendered in English as “prayer wheel” is [MA NI 'KHOR LO](#), or “[MANI](#) wheel.” This phrase is the renowned mantra of the bodhisattva of compassion, [AVALOKITEŚVARA](#). The mantra seems to appear first in the [KĀRANDAVYŪHA](#), a MAHĀYĀNA SŪTRA presumed to have been composed in [KASHMIR](#) sometime around the end of the fourth or the beginning of the fifth century CE. The sūtra exalts Avalokiteśvara

and praises the mantra at length, referring to it as the “six-syllable spell” ([SADAKSARĪVIDYĀ](#)). Contrary to the widespread view, the mantra does not refer to “the jewel in the lotus.” Instead, it is a call (in the vocative case in Sanskrit) to Avalokiteśvara, using one of his epithets, Maṇipadma, “Jewel-Lotus One.” The mantra receives extensive commentary in Tibetan Buddhism. For example, according to the [MANI BKA’ ’BUM](#), the six syllables correspond to the six rebirth destinies ([SADGATI](#)) of divinities, demigods, humans, animals, ghosts, and hell denizens, so that by reciting the mantra, one is closing the door for all sentient beings to any possibility of further rebirth. [O rgyan gling pa](#). (Orgyen Lingpa) (1323–1360). A Tibetan treasure revealer ([GTER STON](#)) and master of the [RNYING MA](#) sect of Tibetan Buddhism. At the age of twenty-three he is said to have discovered treasure texts ([GTER MA](#)) at [BSAM YAS](#) monastery. He is credited with discovering numerous treasure cycles, including the “Five Chronicles” ([BKA’ THANG SDE LNGA](#)). He is also responsible for revealing a well-known biography of [PADMASAMBHAVA](#), the [PADMA BKA’ THANG YIG](#), also referred to as the “Crystal Cave Chronicle” (*Bka’ thang shel brag ma*) due to its extraction from Padmasambhava’s meditation site at “Crystal

Cave” (Shel brag) in the Yar klungs valley of central Tibet.

O rgyan pa Rin chen dpal. (Orgyenpa Rinchenpal) (1229/30–1309). A Tibetan Buddhist master venerated as a lineage holder in the early **BKA’ BRGYUD** tradition. Also known as Seng ge dpal, he was a disciple of the renowned “upper” (stod) **’BRUG PA BKA’ BRGYUD** teacher **RGOD TSHANG PA MGON PO RDO RJES** and became famous as a highly accomplished meditator; for this reason, Tibetan literature frequently refers to him as a **MAHĀSIDDHA**, or great adept. He is said to have made a journey to the fabled land of **ODDIYĀNA** (O rgyan), believed by some modern scholars to lie in the Swat region of modern-day Pakistan. He thus became known as O rgyan pa, “the man of Oḍḍiyāna,” and he later authored a pilgrimage guide to the location, the *O rgyan lam yig*. Some Tibetan historians have identified a separate transmission lineage stemming from O rgyan pa: the Service and Attainment of the Three Vajras (Rdo rje’i gsum gyi bsnyen sgrub), frequently known as the O rgyan bsnyen sgrub. Rin chen dpal is also known for his transmission of practices relating to the six-branch yoga of the **KĀLACAKRATANTRA**, a system of instructions he is said to have received from the **DĀKINĪ VAJRAYOGINĪ** during his travels in Oḍḍiyāna. These traditions appear to have largely disappeared in Tibet several centuries after his death. O rgyan pa officially recognized the young **RANG ’BYUNG RDO RJE** as the third **KARMA PA** and then served as the hierarch’s principal teacher.

original enlightenment. See **BENJUE**; **HONGAKU**.

original face. See **BENLAI MIANMU**.

oshō. (和尚). One of the common Japanese pronunciations of the Chinese term **HESHANG**, which in turn is derived from the Sanskrit term **UPĀDHYĀYA**, meaning “preceptor.” The term is now used generally in the Japanese Buddhist tradition to refer to an abbot, teacher, or senior monk. The pronunciation of the term varies according to tradition. In the **ZENSHŪ**, the term is pronounced “oshō,” in the **TENDAISHŪ** “kashō,” in **RISSHŪ**, **SHINGONSHŪ**, and **JŌDO SHINSHŪ** “wajō.” In the Zen context, oshō refers to those monks who have been in training for ten years or more. In the **SŌTŌSHŪ** of the Zen school, monks who have received formal dharma transmission are referred to as oshō.

Ōtaniha. (大谷派). Also known as Ōtanishū and Higashi Honganjiha, the second largest subsect of **JŌDO SHINSHŪ** in the Japanese **PURE LAND** tradition. After

[SHINRAN](#)'s founding of Jōdo Shinshū, the [HONGANJI](#) emerged as the dominant subsect and was administered by the descendants of Shinran's patriarchal line. During the Tokugawa period (1600–1868), the shōgun Tokugawa Ieyasu (1543–1616) grew suspicious of Honganji, which during the fifteen and sixteenth centuries had not only grown to be the largest sect of Japanese Buddhism but also one of the largest landholding institutions in Japan. By involving himself in a succession dispute, the shōgun was successfully able to blunt its power by causing a schism within the Honganji into east (higashi) and west (nishi) factions, with Kyōnyo (1558–1614) heading the Higashi faction and Junnyo (1577–1631) leading the Nishi faction. Because the eastern faction maintained control of Shinran's mausoleum in the Ōtani area of Kyoto, [HIGASHI HONGANJI](#) has also come to be called the Ōtaniha. Ōtani University developed from the Higashi Honganji seminary, which was founded in 1665. Several of the most important Buddhist thinkers of the Meiji period were affiliated with the Ōtaniha, including [NANJŌ BUN'YŪ](#) (1849–1927), Inoue Enryō (1858–1919), and [KIYOZAWA MANSHI](#) (1863–1903). [DAISETZ TEITARO SUZUKI](#) (1870–1966) founded the journal *The Eastern Buddhist* at Ōtani University, and the author Kanamatsu Kenryō (1915–1986) was also affiliated with the Ōtaniha. See also [NISHI HONGANJIHA](#).

[Ōtani Kōzui](#). (大谷光瑞) (1876–1948). Modern Japanese explorer to Buddhist archeological sites in Central Asia, and especially [DUNHUANG](#); the twenty-second abbot of the [NISHI HONGANJIHA](#), one of the two main sub-branches of the [JŌDO SHINSHŪ](#) of the Japanese pure land tradition. Ōtani was sent to London at the age of fourteen by his father, the twenty-first abbot of Nishi Honganji in Kyōto, to study Western theology. Inspired by the contemporary expeditions to Central Asia then being conducted by European explorers such as [SIR MARC AUREL STEIN](#) (1862–1943) and Sven Hedin (1865–1952), Ōtani decided to take an overland route on his return to Japan so that he could survey Buddhist sites along the [SILK ROAD](#). Ōtani embarked on his first expedition to the region in 1902, accompanied by several other Japanese priests from Nishi Honganji. While en route, Ōtani received the news of his father's death and returned to Japan to succeed to the abbacy; the expedition continued and returned to Japan in 1904. Even though his duties subsequently kept him in Japan, Ōtani dispatched expeditions to Chinese Turkestan in 1908–1909 and between 1910 and 1914. The artifacts recovered during these three expeditions include manuscripts, murals, sculpture, textiles, etc., and are known collectively as the “Ōtani

collection.” These materials are now dispersed in Japan, Korea, and China, but they are still regarded as important sources for the study of Central Asian Buddhist archeology.

[Ouyi Zhixu](#). (J. Gōyaku/Gūyaku Chigyoku; K. Uik Chiuk 滿益智旭) (1599–1655). One of the four eminent monks (si da gaoseng) of the late-Ming dynasty, along with [YUNQI ZHUHONG](#) (1535–1615), [HANSHAN DEQING](#) (1546–1623), and [DAGUAN ZHENKE](#) (1543–1604); renowned for his mastery of a wide swath of Confucian and Buddhist teachings, particularly those associated with the [Tiantai](#), [Pure Land](#), and [Chan](#) traditions. In his youth, he studied Confucianism and despised Buddhism, even writing anti-Buddhist tracts. He had a change of heart at the age of seventeen, after reading some of Zhuhong’s writings, and burned his previous screeds. According to his autobiography, Zhixu had his first “great awakening” at the age of nineteen while reading the line in the *Lunyu* (“Confucian Analects”) that “the whole world will submit to benevolence” if one restrains oneself and returns to ritual. After his father’s death that same year, he fully committed himself to Buddhism, reading sūtras and performing recollection of the Buddha’s name ([Nianfo](#)) until he finally was ordained under the guidance of Xueling (d.u.), a disciple of Hanshan Deqing, at the age of twenty-four. At that time, he began to read extensively in [Yogācāra](#) materials and had another great awakening through Chan meditation, in which he experienced body, mind, and the outer world suddenly disappearing. He next turned his attention to the bodhisattva precepts and the study of vinaya. Following his mother’s death when he was twenty-seven, Zhixu rededicated himself to Chan meditation, but after a serious illness he turned to pure land teachings. In his early thirties, he devoted himself to the study of Tiantai materials, through which he attempted to integrate his previous research in Buddhism and began to write commentaries and treatises on Buddhist scriptures and on such Confucian classics as the *Zhouyi* (“Book of Changes”). In the late-sixteenth century, Jesuit missionaries such as Michele Ruggieri (1543–1607) and Matteo Ricci (1552–1610) had reintroduced Christianity to China and sought “to complement Confucianism and to replace Buddhism.” This emerging religious challenge led Zhixu to publish his *Bixie ji* (“Collected Essays Refuting Heterodoxy”) as a critique of the teachings of Christianity, raising specifically the issue of theodicy (i.e., why a benevolent and omnipotent god would allow evil to appear in the world); Zhixu advocates instead that good and evil come from human beings and are developed and overcome respectively through

personal cultivation. After another illness at the age of fifty-six, his later years were focused mostly on pure land teachings and practice. In distinction to Japanese pure land teachers, such as [HÖNEN](#) (1133–1212) and [SHINRAN](#) (1173–1262), who emphasized exclusively Amitābha’s “other-power” (C. tali; J. [TARIKI](#)), Zhixu, like most other Chinese pure land teachers, advocated the symbiosis between the other-power of Amitābha and the “self-power” (C. jiri; J. [JIRIKI](#)) of the practitioner. This perspective is evident in his equal emphasis on the three trainings in meditation (Chan), doctrine (jiao), and precepts (lü) (cf. [TRÍSIKSĀ](#)). Ouyi’s oeuvre numbers some sixty-two works in 230 rolls, including treatises and commentaries on works ranging from Tiantai, to Chan, to Yogācāra, to pure land. His pure land writings have been especially influential, and his *Amituojing yaojie* (“Essential Explanations” on the [AMITĀBHASŪTRA](#)) and *Jingtu shiyao* (“Ten Essentials on the Pure Land”) are regarded as integral to the modern Chinese Pure Land tradition.

[ovādapātimokkha](#). (S. *avavādaprātimokṣa). In Pāli, “admonitory discipline”; the designation in Pāli materials for a foundational disciplinary code ([PRĀTIMOKSA](#)) handed down by the past buddha Vipassī (S. [VIPAŚYIN](#)), which is believed to summarize the teachings fundamental to all the buddhas: “Not doing anything evil, *Undertaking what is wholesome*, Purifying one’s mind, / This is the teaching of the buddhas” (P. sabbapāpassa akaraṇaṃ/kusalassūpasampadā/sacittapariyodapanam/etaṃ buddhāna sāsanaṃ) ([MAHĀPADĀNASUTTANTA](#) [[DĪGHANIKĀYA](#) no. 14]; [DHAMMAPADA](#), v. 183). This verse has been widely incorporated into [THERAVĀDA](#) Buddhist rituals and ceremonies. See also [AVAVĀDA](#).

[Oxhead School](#). See [NIUTOU ZONG](#).

[Oxherding Pictures, Ten](#). (C. Shiniu tu; J. Jūgyūzu; K. Sibū to 十牛圖). A varied series of illustrations used within the [CHAN](#) (J. [ZEN](#); K. [SŎN](#), V. [THIÊN](#)) schools to depict the process of religious training, a process that leads ultimately to awakening and the perfect freedom of enlightenment. The series show a young herdsman who goes out into the wild in search of a wild ox that he can tame. The “herdsman” represents the religious adept who seeks to tame the “ox” of his unchecked thoughts, so that he may put his mind to use in the service of all sentient beings. There are several different versions of the oxherding pictures found in the literature, but two are best known. The first is by the Song-dynasty adept Puming (d.u.): (1) not yet found, (2) training begun, (3) disciplining, (4)

turning its head, (5) tamed, (6) unimpeded, (7) wandering freely, (8) each forgotten, (9) moon shining alone, and (10) both disappear. A second set of ten pictures, which became normative within the Chan tradition, was made later by the Song-dynasty [YANGQI PAI](#) teacher [KUO'AN SHIYUAN](#) (d.u.): (1) searching for the ox; (2) seeing its footprints; (3) finding the ox; (4) catching the ox; (5) taming the ox; (6) riding the ox home; (7) ox forgotten, but not the person; (8) person and ox both forgotten; (9) returning to the origin and going back to the fount; and (10) entering the marketplace to bestow gifts. This second set of pictures is often found painted sequentially around the outside walls of the main shrine hall ([TAEUNG CHŎN](#)) in Korean monasteries.

paccavekkhanañāna. In Pāli, “reviewing knowledge”; the recollection of any meditative absorption (P. [JHĀNA](#), S. [DHYĀNA](#)) or object of concentration, the attainment of any of the four noble paths (P. *magga*, S. [MĀRGA](#)), or the fruition ([PHALA](#)) of a noble path. In the case of a noble attainment, reviewing knowledge arises in the following manner. According to the Pāli [ABHIDHAMMA](#) analysis, first, path consciousness ([MAGGACITTA](#)) gives rise to two or three moments of fruition consciousness ([PHALACITTA](#)), after which the mind subsides into the subconscious mental continuum or life stream ([BHAVAṄGASOTA](#)). The subconscious life stream continues until the mind adverts to the previous path moment for the purpose of reviewing it. This is followed by seven moments of mental excitation, called impulsion or advertence (*javana*), that take as their object the past path moment. Thereafter the mind again subsides into the subconscious life stream. The mind then adverts to previous moments of fruition for the purpose of reviewing them. This is followed by seven moments of mental excitation that take as their object the past fruition moments. In the same way that the practitioner reviews the path and fruition, he also reviews the afflictions (P. *kilesa*; S. [KLEŚA](#)) eradicated from his mind, those remaining to be eradicated, *nibbāna* (S. [NIRVĀNA](#)) as an object, *etc.* He knows thereby what he has attained, what remains to be attained, and what he has experienced.

Padaeng Chronicle. “Chronicle of the Red Forest Monastery,” a chronicle of uncertain date written in the Khun language of Kengtung valley of the Shan states of Burma (Myanmar). It records the history of the [THERAVĀDA](#) tradition from its inception to the founding of Wat Padaeng at Kengtung and the vicissitudes of the religion in the Shan states thereafter. It begins with a record of the life of the Buddha, through the three Buddhist councils ([SAMGĪTI](#)) in India, to Buddhism’s spread to Sri Lanka and the Mon kingdom of [SUVANNABHŪMI](#) in Lower Burma. From that point, it describes the introduction of two reformed Sinhalese monastic sects at Martaban (Muttama) in Lower Burma, and the spread of reformed Sinhalese Buddhism from there to the Thai kingdoms of [AYUTHAYA](#), [SUKHOTHAI](#), and Chiangmai, following the narrative outline of the [MŪLASĀSANA](#).

Paddamya Taung. A pagoda or [JEDI](#) (P. cetī/cetiya; S. [CAITYA](#)) located at the northernmost range of the Sagaing Hills along the Irrawaddy (Ayeyarvaddi) River in Upper Burma (Myanmar). Situated on a hill named Mani-kinzana Paddamya, the monument is claimed by local tradition to have been built by the Indian Mauryan emperor [AŚOKA](#) in 308 BCE, and to contain gems and buddha relics (P. saṅgī; S. [ŚARĪRA](#)) that he donated. The pagoda derives its name from the surrounding area, which at one time was rich in rubies (Burmese, paddamya) and medicinal plants. It was restored in 1300 CE, while Sagaing was the capital of the Burmese kingdom, by the monk Thingayaza from Padu Village near the city. An annual festival is held there on the full moon day of the Burmese month of Tawthalin (September-October).

padma. (P. paduma; T. padma; C. lianhua/hong lianhua; J. renge/gurenge; K. yŏnhwa/hong yŏnhwa 蓮華/紅蓮華). In Sanskrit, “lotus,” an aquatic plant that blossoms above the surface of the water and is the most commonly occurring flower in Buddhist art and literature. Because the lotus flower blooms above the muddy waters of stagnant ponds, the lotus is used as a symbol for the purity of mind that develops out of the pollution that is [SAMSĀRA](#) but remains unsullied by it. In addition, the lotus is said to be the only plant that produces its flower and fruit simultaneously, indicating in some interpretations that the cause (the Buddha’s teaching) and its effect (enlightenment) are not separate. Lotuses occur in a variety of colors, some of which have their own names, such as the [PUNDARĪKA](#), or white lotus, which occurs in the title [SADDHARMAPUNDARĪKASŪTRA](#) (“Lotus Sūtra”). Lotuses are often depicted at the feet of the Buddha; buddhas and bodhisattvas are commonly seated in the middle of large lotus blossoms; deities often hold lotus blossoms in their hands. When the Buddha was born, he is said to have taken seven steps, with a lotus blossoming under his foot with each step. Lotuses play important symbolic roles in a number of texts. For example, in the [SUKHĀVATĪVYŪHASŪTRA](#), those who in their previous lives accumulate merit but continue to have doubts about being reborn in the [PURE LAND](#) are born there within the calyx of a lotus, where they reside for five hundred years, until the flower opens and they are able to begin their training. In the [TATHĀGATAGARBHASŪTRA](#), countless lotuses appear in the sky; their petals unfold to reveal a buddha seated within, and then the petals fade. This symbolizes the presence of the [TATHĀGATAGARBHA](#) within all beings, hidden within the afflictions ([KLEŚA](#)), which are then destroyed upon the attainment of buddhahood. In tantric Buddhism, the term padma is sometimes used to refer to

the female genitals.

Padma bka' thang yig. (Pema gatangyik). In Tibetan, “Chronicle of the Lotus”; a treasure text ([GTER MA](#)) containing a well-known biography of [PADMASAMBHAVA](#), discovered by the treasure revealer ([GTER STON](#)) [O RGYAN GLING PA](#). Its complete title is: *O rgyan gu ru padma 'byung gnas kyi skyes rabs rnam par thar pa rgyas par bkod pa padma bka'i thang yig*. Because it was excavated from Shel brag (Sheldrak), or Crystal Cave, it is also known as the *Shel brag ma* (“Crystal Cave Version”).

Padma bkod. (Pema kö). One of Tibet’s foremost [SBAS YUL](#), or “hidden lands,” located in southern Tibet and partially in Arunachal Pradesh in India. It is the location of the so-called Gtsang po (Tsangpo) gorges, where the Gtsang po River of Tibet makes a 180-degree bend from east to west through steep cliffs and waterfalls before changing its name to the Brahmaputra River in India. The region is primarily associated with [PADMASAMBHAVA](#) and his twenty-five main disciples, who are said to have meditated in caves throughout the area. After spending time there in retreat, the Indian master prophesied that the locale would become a powerful center for religious practice. The treasure revealer ([GTER STON](#)) Bdud 'dul rdo rje (Dudul Dorje, 1615–1672) discovered a pilgrimage guide (gnas yig) to the site and identified its geographical features with the body of the goddess [VAJRAVĀRĀHĪ](#). Padma bkod was formally “opened” as a pilgrimage site and place of practice by Sgam po O rgyan 'gro 'dul gling pa (Gampo Orgyan Drodul Lingpa, b. 1757), Rig 'dzin Rdo rje rtog med (Rikdzin Dorje Tokme, 1746–1797), and Chos gling Gar dbang 'chi med rdo rje (Chöling Garwang Chime Dorje, b. 1763). The remote region is famous for its forests and dense jungle wilderness, and the numerous ethnic tribal groups living there. It has served as a safe haven for those fleeing conflict as well as a site for tantric practice. According to a seventeenth-century account, it is associated especially with [VAJRAYOGINĪ](#), with the river representing her central channel ([AVADHŪTĪ](#)).

Padma dkar po. (Pema Karpo) (1527–1592). A Tibetan Buddhist master and lineage holder of the ['BRUG PA BKA' BRGYUD](#) tradition, renowned for his extensive and wide-ranging scholarship. Born in the Kong po region of southern Tibet, as a child he was already recognized as the fourth member in the line of ['BRUG CHEN INCARNATIONS](#). He became a fully ordained monk and studied widely in the Tibetan traditions of logic and [TANTRA](#). Although famed for his experience in yogic practice and meditation, he also served as a skillful politician and

religious administrator. He is perhaps most widely celebrated for his scholarly writings, which include extensive commentaries on traditional doctrinal topics as well as comprehensive historical works on the spread of Buddhism in Tibet, particularly his own 'Brug pa bka' brgyud sect. His followers referred to him by the title kun mkhyen, "the omniscient," a testament to his great learning. Padma dkar po was active at the monasteries of previous 'Brug chen incarnations, including the famed twelfth-century institution at [RWA LUNG](#) in Gtsang, but he also founded his own monastery Gsang sngags chos gling in 1574 at Rta dbang near the border with Bhutan. Following Padma dkar po's death, two candidates were pitted against one another as the master's authentic rebirth and the legitimate successor to the 'Brug chen throne. The outcome of the rivalry was eventually decided by the ruler of central Tibet, the Gtsang pa sde srid; the losing candidate, who had already been installed as the throne holder of Rwa lung Monastery, fled to Bhutan in 1616, where he established himself as the important Bhutanese religious figure [ZHABS DRUNG NGAG DBANG RNAM RGYAL](#).

[Padma gling pa](#). (Pema Lingpa) (1450–1521). An esteemed Bhutanese treasure revealer ([GTER STON](#)), famous for unearthing treasure in public and responsible for promulgating numerous important religious traditions, including forms of ritual monastic dance (['CHAM](#)). He is counted as the fourth of the so-called five kingly treasure revealers ([GTER STON RGYAL PO LNGA](#)) and the last of the five pure incarnations of the royal princess [PADMA GSAL](#). He is also regarded as the mind incarnation of the translator [VAIROCANA](#) and an incarnation of [KLONG CHEN RAB 'BYAMS](#). Padma gling pa was born into a humble family of blacksmiths in the Bum thang region of Bhutan and studied the craft from the age of nine. Many examples of Padma gling pa's craftsmanship, in the form of swords and chain mail, still exist. Padma gling pa's life is somewhat unusual in that he did not undertake a traditional course of study with a spiritual master; it is recorded that he once declared, "I have no master and I am not a disciple." Rather, his religious training was achieved almost entirely through visionary revelation. At the age of twenty-six, he had a vision of [PADMASAMBHAVA](#), who bestowed on him a roster of 108 treasure texts that he would unearth in the future. The next year, amid a large public gathering, he made his first treasure discovery at [ME 'BAR MTSHO](#), a wide pool of water in a nearby river. Surrounded by a multitude of people gathered along the riverside, Padma gling pa dove in the waters holding a burning butter lamp in his hand. When he reemerged, he held a great treasure chest under his arm, and, to the crowd's amazement, the lamp in his hand was

unextinguished; from that point on the pool was called “Burning Flame Lake.” This feat marked the beginning of Padma gling pa’s prolific career as treasure revealer and teacher. Between the years 1501 and 1505, he founded his seat at [GTAM ZHING](#) monastery in Bum thang. Padma gling pa composed a lengthy autobiography recording many of his activities in great detail. He was a controversial figure in his time (some of the treasure texts he discovered contain condemnations of those who doubted their authenticity), and the historicity of his deeds has been the subject of scholarly critique. However, Padma gling pa remains an important figure in the religious and cultural life of Bhutan, where he is considered both a saint and a national hero. He never received monastic ordination and fathered several sons who continued to transmit Padma gling pa’s spiritual lineage, especially at [SGANG STENG](#) monastery in central Bhutan. Several incarnation lineages of Padma gling pa were also recognized, such as the gsung sprul (“speech incarnation”) based at [LHA LUNG](#) Monastery in southern Tibet. Both the sixth [DALAI LAMA TSHANGS DBYANGS RGYA MTSHO](#) and the Bhutanese royal family are said to be descendants of Padma gling pa’s familial lineage.

[Padma gsal](#). (Pemasel) (fl. c. eighth century). The daughter of the Tibetan King [KHRI SRONG LDE BTSAN](#), to whom [PADMASAMBHAVA](#) entrusted a lineage of [RDZOGS CHEN](#) instructions known as [MKHA’ ’GRO SNYING THIG](#). She died at the age of eight. When the Tibetan king brought her body before the Indian master at the Brag dmar ke’u tshang (Drakmar Ke’utsang) cave at [CHIMS PHU](#), he asked why someone with the great merit to be both a princess and a disciple of Padmasambhava had to die while still a child. The Indian master revealed she had been a bee who stung one of the four brothers involved in the completion of the great [BODHNĀTH STŪPA](#). Thereafter Padmasambhava miraculously revived her, transmitted the instructions of the Mkha ’gro snying thig, and prophesied that she would reveal the teachings as a treasure ([GTER MA](#)) in a future rebirth as [PADMA LAS ’BREL RTSAL](#). Some traditions describe a lineage of five pure incarnations of the royal princess Padma gsal (lha lcam padma gsal gyi dag pa’i skye ba lnga), including several important lamas of the [RNYING MA](#) sect of Tibetan Buddhism:

1. Padma gsal
2. [PADMA LAS ’BREL RTSAL](#)
3. Spang sgang pa Rin chen rdo rje (Pang gangpa Rinchen Dorje)
4. [KLONG CHEN RAB ’BYAMS](#)
5. [PADMA GLING PA](#)

According to some Tibetan sources, however, Padma las 'brel rtsal was the secret name of Spang sgang pa Rin chen rdo rje.

Padmakāra. (S). See [PADMASAMBHAVA](#).

padmakula. (T. padma'i rigs; C. lianhua bu; J. renebu; K. yōnhwa pu 蓮華部). In Sanskrit, “lotus family” or “lotus lineage”; one of the three, four, or five buddha families (see [PAÑCATATHĀGATA](#)) that occur in the Buddhist [TANTRAS](#). In the lotus family, the chief buddha is [AMITĀBHA](#) and the chief bodhisattva is [AVALOKITEŚVARA](#). In the three-family system, associated especially with [KRIYĀTANTRA](#) and [CARYĀTANTRA](#), the other two families are the [TATHĀGATAKULA](#) and the [VAJRAKULA](#). In the four-family system, associated with [YOGATANTRA](#), the [RATNAKULA](#) is added; in the five-family system, associated with [ANUTTARAYOGATANTRA](#), the [KARMAKULA](#) family is added. Each of the five families is associated with one of the five [SKANDHAS](#), five wisdoms ([JÑĀNA](#)), five afflictions ([KLEŚA](#)), five elements, and five colors. For the padma family, these are the perception ([SAMJÑĀ](#)) skandha, the wisdom of specific knowledge ([PRATYAVEKṢANĀJÑĀNA](#)), the affliction of desire, the element fire, and the color red.

Padma las 'brel rtsal. (Pema Ledreltsal) (1231/1248–1259/1315). The reincarnation of Princess [PADMA GSAL](#), daughter of the Tibetan king [KHRI SRONG LDE BTSAN](#), and the treasure revealer ([GTER STON](#)) who discovered the [MKHA' 'GRO SNYING THIG](#). According to some Tibetan sources, Padma las 'brel rtsal was the secret name of Spang sgang pa Rin chen rdo rje. Other sources hold the latter to be Padma las 'brel rtsal's incarnation, followed by [KLONG CHEN RABS 'BYAMS](#) and [PADMA GLING PA](#).

Padmapāṇi. (T. Phyag na pad mo; C. Lianhuashou; J. Rengeshu; K. Yōnhwasu 蓮華手). In Sanskrit, “He Who Holds a Lotus in His Hand,” one of the common forms of [AVALOKITEŚVARA](#), the bodhisattva of compassion. He is a two-armed form of the bodhisattva, holding a lotus blossom ([PADMA](#)) or the stem of a lotus flower in one hand, and is often depicted standing. One of the most famous images of Padmapāṇi is found at [AJANTĀ](#).

Padmasambhava. (T. Padma 'byung gnas) (fl. eighth century). Indian Buddhist master and tantric adept widely revered in Tibet under the appellation Guru rin po che, “Precious Guru”; considered to be the “second buddha” by members of

the [RNYING MA](#) sect of Tibetan Buddhism, who view him as a founder of their tradition. In Tibetan, he is also known as Padma 'byung gnas (Pemajungne), “the Lotus Born,” which translates his Sanskrit name. It is difficult to assess the many legends surrounding his life and deeds, although the scholarly consensus is that he was a historical figure and did visit Tibet. The earliest reference to him is in the [SBA BZHED](#) (a work that purports to be from the eighth century, but is likely later), where he is mentioned as a water diviner and magician, suggesting that he may have been an expert in irrigation, which would have required the ability to subdue local spirits. Two texts in the Tibetan canon are attributed to him. The first is the *Man ngag lta ba'i phreng ba*, which is a commentary on the thirteenth chapter of the [GUHYAGARBHATANTRA](#). The second is a commentary on the *Upāyapāśapadmamālā*, a [MAHĀYOGA TANTRA](#). Regardless of his historical status and the duration of his stay in Tibet, the figure of Padmasambhava has played a key role in the narrative of Buddhism's arrival in Tibet, its establishment in Tibet, and its subsequent transmission to later generations. He is also venerated throughout the Himalayan regions of India, Bhutan, and Nepal and by the Newar Buddhists of the Kathmandu Valley. According to many of his traditional biographies, Padmasambhava was miraculously born in the center of a lotus blossom ([PADMA](#)) on Lake Danakośa in the land of [ODDIYĀNA](#), a region some scholars associate with the Swat Valley of modern Pakistan. Discovered and raised by King Indrabodhi, he abandoned his royal life to pursue various forms of Buddhist study and practice, culminating in his training as a tantric adept. He journeyed throughout the Himalayan regions of India and Nepal, meeting his first consort [MANDĀRAVĀ](#) at Mtsho padma in Himachal Pradesh, and later remaining in prolonged retreat in various locations around the Kathmandu Valley including [MĀRATIKA](#), [YANG LE SHOD](#) and the [ASURA CAVE](#). His reputation as an exorcist led to his invitation, at the behest of the Indian scholar [ŚĀNTARAKṢITA](#), to travel to Tibet in order to assist with the construction of [BSAM YAS](#) monastery. According to traditional accounts, Padmasambhava subdued and converted the indigenous deities inimical to the spread of Buddhism and, together with Śāntarakṣita and the Tibetan king [KHRI SRONG LDE BTSAN](#), established the first Buddhist lineage and monastic center of Tibet. He remained in Tibet as a court priest, and, together with his Tibetan consort [YE SHES MTSHO RGYAL](#), recorded and then concealed numerous teachings as hidden treasure texts ([GTER MA](#)), to be revealed by a later succession of masters spiritually linked to Padmasambhava. The Rnying ma sect preserves the corpus of instructions stemming from the master in two classes of materials: those revealed after his

passing as treasure texts and those belonging to an unbroken oral tradition ([BKA' MA](#)). It is believed that Padmasambhava departed Tibet for his paradise known as the Glorious Copper-Colored Mountain ([ZANGS MDOG DPAL RI](#)), where he continues to reside. From the time of the later dissemination of the doctrine ([PHYI DAR](#)) in the eleventh century onwards, numerous biographies of the Indian master have been revealed as treasure texts, including the [PADMA BKA' THANG YIG](#), [BKA' THANG GSER 'PHRENG](#), and the [BKA' THANG ZANGS GLING MA](#). Padmasambhava is the focus of many kinds of ritual activities, including the widely recited “Seven Line Prayer to Padmasambhava” (Tshig 'dun gsol 'debs). The tenth day of each lunar month is dedicated to Padmasambhava, a time when many monasteries, especially those in Bhutan, perform religious dances reverencing the Indian master in his eight manifestations. In iconography, Padmasambhava is depicted in eight forms, known as the guru mtshan brgyad, who represent his eight great deeds. They are Padma rgyal po, Nyi ma 'od zer, Blo ldan mchog sred, Padmasambhava, Shākya seng ge, Padmakara (also known as Sororuhavajra, T. Mtsho skyes rdo rje), Seng ge sgra sgrogs, and [RDO RJE GRO LOD](#).

[padmāsana](#). (T. padma'i gdan; C. lianhua zuo; J. renga; K. yŏnhwa chwa 蓮華坐). In Sanskrit, “lotus posture,” a term for the seated posture in which the right foot rests on the left thigh and the left foot rests on top on the right thigh. It is a position predominantly used in Hindu forms of yoga, and in a Buddhist context is often confused with the [VAJRAPARYAṅKA](#) (vajra cross-legged posture), where the position of the feet is reversed. See also [ĀSANA](#). ¶ The term padmāsana, in the denotation of “lotus seat,” is also used to designate the lotus-flower base upon which many Buddhist deities stand or sit.

[Paegam Sŏngch'ong](#). (栢庵性聰) (1631–1700). Korean scholar-monk and poet from the mid-Chosŏn dynasty. Born in 1631, he entered the [SAMGHA](#) in 1645, at the age of sixteen, and received the precepts from the monk Ch'wiam (d.u.). He went to Mt. Pangjang (present-day [CHIRISAN](#)) and became a disciple of the eminent Sŏn master Ch'wimi Such'o (1590–1668). In 1660, Sŏngch'ong became a lecturer and subsequently traveled from one monastery to the next, including [SONGGWANGSA](#), Chinggwangsa, and [SSANGGYESA](#). He was also a renowned poet and is known to have befriended many famous poets of his time. In 1681, a boat containing more than 190 Buddhist texts, including the *Daming Fashu*, *Huixuan ji*, *Sidashisuo lu*, and *Jingtubao shu*, was found adrift near Imja Island.

Sōngch’ong was able to acquire these texts, and for the next fifteen years he made over five thousand copies of them. He passed away in 1700, while residing at the hermitage of Sinhūngam in Ssanggyesa. Sōngch’ong was also a prolific writer and left many works, including his *Ch’imun chip chu* (“Commentary on the [ZIMEN JINGXUN](#)”), *Chōngt’obosō*, *Paegam chip*, and *Chihōm ki*.

Paegun Kyōnghān. (白雲景閑) (1299–1374). Korean [SŌN](#) master in the Imje (C. [LINJI ZONG](#)) lineage, who is known as one of the three great Sōn masters of the late-Koryō dynasty, along with [T’AEGO POU](#) (1301–1376) and [NAONG HYGŪN](#) (1320–1376). After entering the monastery at a young age, Kyōnghān eventually traveled to Yuan-dynasty China in 1351, where he studied under the Chan master Shiwu Qinggong (1272–1352), a Linji-Chan teacher from whom he received dharma transmission, and under the Indian monk [ZHUKONG CHANXIAN](#), who later came to live and teach in Korea. After awakening in 1353, Kyōnghān returned to Korea, residing at An’guksa and Sin’gwangsa, both in Hwanghae province, and later at Ch’wiamsa in Yōju, where he passed away in 1374. Kyōnghān’s record of dharma talks, *Paegun hwasang ōrok* (“Discourse Records of the Master Paegun”), in two rolls, was compiled posthumously by his disciple Sōkch’an. Kyōnghān is also the author of the [PULCHO CHIKCHI SIMCH’E YOJŎL](#), an anthology of the biographies and teachings of the Buddhist patriarchs and Sōn masters.

Paegyangsa. (白羊寺). In Korean, “White Ram Monastery”; the eighteenth district monastery ([PONSA](#)) of the contemporary [CHOGYE CHONG](#) of Korean Buddhism, located on Paegam (White Cliff) Mountain in South Chōlla province. The monastery was founded in 632 by the Paekche monk Yōhwan (d.u.) and was originally called Paegamsa; it was renamed Chōngt’osa after a reconstruction project during the Koryō dynasty in 1034. Its current name of Paegyangsa comes from a Koryō-era legend. Sometime during the reign of King Sōnjo of the Chosōn dynasty (r. 1567–1607), a teacher now known as Hwanyang (d.u., lit. “Goat Caller”) was said to have been leading a recitation assembly on the [SADDHARMAPUNḌARĪKASŪTRA](#) (“Lotus Sūtra”), when a white ram came down out of the mountains to listen to the monks recite the [SŪTRA](#). Once the event was over, the ram appeared to Hwanyang in a dream and explained that he had been reborn as a ram for transgressions he had committed in heaven; after hearing the master’s sermon, however, he was redeemed and was able to take rebirth once again as a divinity ([DEVA](#)). The next day the body of the ram was found on the

monastery grounds, and Paegyangsa received the name by which it has been known ever since. Paegyangsa is guarded by the Gate of the Four Heavenly Kings (Sach'ŏnwang mun). The main shrine hall ([TAEUNG CHŎN](#)) is unusually located to the right of the gate, rather than centered in the compound, and an eight-story stone [STŪPA](#) is located behind the main hall, rather than in front of it. The oldest extant building on the campus is the Kŭngnak pojŏn, or [SUKHĀVATĪ](#) hall, the construction of which was sponsored by the queen-consort of the Chosŏn king Chungjong (r. 1506–1544). The main shrine hall, reconstructed in 1917 by the prominent Buddhist reformer [MANAM CHONGHŎN](#) (1876–1957), is dedicated to [ŚĀKYAMUNI](#) Buddha, and enshrines an image of Śākyamuni flanked by the bodhisattvas [MAÑJUŚRĪ](#) and [SAMANTABHADRA](#). Much of the monastery burned in 1950 during the Korean War, and reconstruction extended into the 1990s. In 1996, Paegyangsa was elevated to the status of an ecumenical monastery ([CH'ONGNIM](#)), and is one of the five such centers in the contemporary Chogye order, which are expected to provide training in the full range of practices that exemplify the major strands of the Korean Buddhist tradition; the monastery is thus also known as the Kobul Ch'ongnim.

[Paekkok Ch'ŏnŭng](#). (白谷處能) (1617–1680). Korean monk of the Chosŏn dynasty, also known as Sinsu. Ch'ŏnŭng received a traditional Confucian education from Ŭihyŏn (d.u.) and subsequently became a monk in 1631. He returned to Seoul a few years later and continued to study the Confucian classics from a Confucian scholar by the name of Sin Iksŏng. He later went to the monastery of [SSANGGYESA](#) in [CHIRISAN](#) and became the disciple of the Sŏn master [PYŎGAM KAKSŎNG](#), under whom he studied for the next twenty-three years. In 1680, while lecturing at [KŪMSANSA](#), he passed away at the age of sixty-four. Ch'ŏnŭng was particularly renowned for his writing and poetry, and maintained a close relationship with the leading Confucian scholars at the time. As a response to King Hyŏnjong's (r. 1660–1674) suppression of Buddhism, Ch'ŏnŭng submitted to the court the *Kanp'ye Sŏkkyo so* (“Remonstrations against the Ruination of Śākyamuni's Teachings”), a critical response to the Confucian criticisms of Buddhism that were prevalent during that period. His writings can also be found in the *Paekkok chip* and *Imsŏngdang taesa haengjang*. The *Paekkok chip* is a collection of his poems and the biographies, stele inscriptions, and records of other monks. The *Kanp'ye Sŏkkyo so* can also be found in the *Paekkok chip*. He also authored the *Imsŏngdang taesa haengjang*, a record of the life of the Sŏn master Imsŏng Ch'ungŏn (1567–1638).

Paekp'a Kūngsŏn. (白坡巨璣) (1767–1852). Korean [SŎN](#) master of the Chosŏn dynasty, also known as Kusan. Paekp'a was a native of Mujang in present-day North Chŏlla province. In 1778, he was ordained by a certain Sihŏn (d.u.) at the nearby monastery of Sŏnŭnsa. In 1790, he moved from his original residence at the hermitage of Yongmunam on Mt. Ch'o to the Yŏngwŏnam on Mt. Pangchang, where he studied under the renowned Hwaŏm chong (C. [HUAYAN ZONG](#)) master, Sŏlp'a Sangŏn (1707–1791). A year before Sangŏn passed away, Kūngsŏn received the full monastic precepts from him. Paekp'a established himself at the famous hermitage of Unmunam and attracted many students. He studied the teachings of the renowned [CHAN](#) master [XUEFENG YICUN](#) at Mt. Yŏnggu and acquired the name Paekp'a. In order to practice Sŏn meditation, he returned to Yongmunam and revived [POJO CHINUL](#)'s Samādhi and Prajñā Society ([CHŎNGHYE KYŎLSA](#)). He subsequently returned to Unmunam to compile his influential treatise *Sŏnmun sugyŏng* (“Hand Mirror of the Sŏn School”), which was later the subject of a famous critique by the Sŏn master [CH'ŎUL ŬISUN](#) (1786–1866) in his *Sŏnmun sabyŏn manŏ* (“Prolix Words on Four Distinctive Types in the Sŏn School”). Paekp'a was a staunch promoter of Sŏn, who sought to resolve what he perceived to be a fundamental internal tension within the Sŏn tradition: the radical subitism of the Imje chong ([LINJI ZONG](#)), which advocated the simultaneity of sudden awakening ([DUNWU](#)) and cultivation (K. tonŏ tonsu; C. dunwu dunxiu), and the more moderate subitism of the Heze zong and [POJO CHINUL](#) (1158–1210), which advocated sudden awakening followed by gradual cultivation (K. tonŏ chŏmsu; C. [DUNWU JIANXIU](#)). Paekp'a's goal was to demonstrate how the subitist “questioning meditation” (K. kanhwa Sŏn; C. [KANHUA CHAN](#)) that became emblematic of both the Linji zong and the Korean Sŏn tradition after Chinul could be reconciled with Korean Buddhism's preferred soteriological schema of moderate subitism. By contrast, Ch'ŏul was more concerned with exploring deeper levels of accommodation between Sŏn practice and Buddhist doctrinal teachings ([KYO](#)), by demonstrating the fundamental unity of these two major strands of the religion. Their respective positions set the stage for subsequent debates during the late Chosŏn dynasty over whether Korean Buddhism was an exclusively Sŏn, or a broader ecumenical, tradition, an identity debate that continues into the present day. Kūngsŏn's many writings also include the *Susŏn kyŏlsamun*, *T'aegoamga kwasŏk*, *Sikchisŏl*, *Ojong kangyo sagi*, *Sŏnyo ki*, and *Chakpŏp kwigam*.

Paek Yongsŏng. (K) (白龍城). See [YONGSŎNG CHINJONG](#).

Pagan. (Bagan). Capital of the first Burmese (Myanmar) empire (1044–c. 1287), located near the confluence of the Irrawaddy (Ayeyarwady) and Chindwin rivers in the middle of Burma’s dry zone. The center of a classic hydraulic civilization, Pagan supported a large population of peasant farmers, specialized laborers, and religious and political elites through maintenance of elaborate irrigation works in nearby Kyaukse. Also known as Arimaddanapura, or “Crusher of Enemies,” Pagan began as a cluster of nineteen villages that coalesced into a fortified city-state by the ninth century. Pagan rose in importance in the vacuum left by the collapse of the Pyu kingdom of Śrīkṣetra, which succumbed to military pressure from Nanchao in 832 CE. Invigorated by the cultural and technological advancements brought by Pyu refugees, Pagan emerged as an empire in the eleventh century under the military leadership of King **ANAWRAHTA** (r. 1044–1077), who united Burma for the first time. His domain extended from the borders of Nanchao in the north to the maritime regions of Bassein, Thaton, and the Tenasserim peninsula in the south. Later chronicles credit Anawrahta with adopting **THERAVĀDA** Buddhism as the official religion of his empire, a religion he acquired as war booty from his conquest of the Mon kingdom of Thaton. While details of the account are doubtful, Pagan became a stronghold of the Pāli Buddhist tradition, whence it spread to other parts of Southeast Asia. Anawrahta began an extensive program of temple building that lasted till the Mongol invasion of 1287. Pagan’s royalty and aristocracy built thousands of pagodas, temples, monasteries, and libraries within the environs of the city, of which 2,217 monuments survive, scattered across an area of approximately forty square miles. Like the Pyu kingdom before it, Pagan received cultural influences from South India, Bengal, and Sri Lanka, all of which are reflected in varying degrees in the city’s architecture and plastic arts. Beginning in the twelfth century, Pagan extended patronage to the reformed Sinhalese Theravāda Buddhism imported from Sri Lanka, which flourished alongside the native “unreformed” Burmese Theravāda tradition until the end of the empire. Under later dynasties, reformed Theravāda Buddhism became the dominant religion of Burma, Thailand, Laos, and Cambodia. Theravāda scholarship flourished at Pagan. Major works of the period include the Pāli grammars *Saddanīti*, *Suttaniddesa* and *Nyāsa*, and treatises on **ABHIDHAMMA** such as *San̄khepavaṇṇanā*, *Nāmācārādīpanī*, *Mātikatthadīpanī*, *Visuddhimaggagaṇṭhi* and *Abhidhammatthasaṅgahaṭṭikā*.

pagoda. Portuguese term adapted into English, probably derived from the Sanskrit **BHAGAVAT** (“blessed,” “fortunate”) or the Persian but kadah (“idol

house”); the term was first used by Portuguese explorers to describe Indian temples in general. The term was subsequently adopted by the British and eventually came to take on the specific meaning of the multistoried tower found in Buddhist monastic complexes, especially those in East Asia. In fact, the “pagoda” is a [STŪPA](#), or reliquary, housing a relic ([DHĀTU](#); [ŚARĪRA](#)) of the Buddha or a Buddhist saint. In East Asia, the finial or decorative ornament atop the hemispherical Indian stūpa evolved into a more prominent and elongated form, until the stūpa itself became a tower several stories tall, in some cases each story having its own projecting roof. See also [CAITYA](#).

[paired miracle](#). See [YAMAKAPRĀTIHĀRYA](#).

[paiśunya](#). (P. piṣuṇa; T. phra ma; C. lijianyu; J. rikengo; K. iganŏ 離間語). In Sanskrit, “slander,” or “malicious speech” (and sometimes rendered as “backbiting”); one of the ten unwholesome courses of action (daśākuśalakarmapatha; see [KARMAPATHA](#)) that lead to suffering in the future; also written as paiśunyavāda (P. piṣuṇavācā). These ten unwholesome actions are classified into three negative physical deeds, four negative verbal deeds, and three negative verbal deeds. Slander falls into the second category, together with lying (mr̥ṣāvāda), offensive or harsh speech ([PĀRUSYA](#)), and frivolous prattle ([SAMBHINNAPRALĀPA](#)). Slander is speech intended to cause dissension and divisiveness between two parties. It has the effect of creating dissension between friends or greater dissension between enemies. It may be motivated by greed, hatred, or ignorance.

[Pak Chungbin](#). (朴重彬) (1891–1943). Founder of the Korean new religion of [WŎNBULGYO](#); also known by his cognomen [SOT’AESAN](#). He is said to have begun his quest to discover the fundamental principle of the universe and human life at the age of seven and continued ascetic training for about twenty years. Finally, in 1916 at the age of twenty-six, Sot’aesan is said to have attained a personal enlightenment, which is considered the founding year of his religion. Since Sot’aesan recognized compelling parallels between his own experience and the description of enlightenment in Buddhism, he first called his religious organization the Pulpŏp Yŏn’guhoe (Society for the Study of the [BUDDHADHARMA](#)); later, the religion adopted the formal name of Wŏnbulgyo (lit. Consummate Buddhism). He presented his enlightenment, which he symbolized with the “one circle image” (IRWŎNSANG), as the criterion of religious belief and practice by proclaiming the “cardinal tenet of one circle” (irwŏn chongji). Along

with organizing his religion's fundamental tenets and building its institutional base, he and his followers also worked to improve the ordinary life of his followers, by establishing thrift and savings institutions and engaging in farming and land reclamation projects. The three foundational religious activities of edification (kyohwa), education (kyoyuk), and public service (chasŏn) continue to be emblematic of Wŏnbulgyo practice. Sot'aesan published in 1943 the *Wŏnbulgyo chŏngjŏn* ("Principal Book of Wŏn Buddhism"), a primer of the basic tenets of Wŏnbulgyo, which is one of the two representative scriptures of the religion, along with the *Taejonggyŏng* ("Discourses of the Founding Master"), the dialogues and teachings of Sot'aesan, published in 1962 by his successor Chŏngsan Song Kyu (1900–1962). Sot'aesan died in 1943 at the age of fifty-three, after delivering his last lecture, entitled "The Truth of Birth and Death" (Saengsa ũi chilli).

pakṣa. (T. phyogs). In Sanskrit, "side" or "class"; a technical term in Buddhist logic ([HETUVIDYĀ](#)) used to designate the "logical subject." Pakṣa is related to two other terms, [SAPAKṢA](#) (similar instance), and [VIPAKṢA](#) (dissimilar instance): for example, in the syllogism ([PRAYOGA](#)) "sound is impermanent because it is produced," sound is the pakṣa, or logical subject; a pot is sapakṣa (a similar instance or in the similar class), and space is vipakṣa (a dissimilar instance or in the dissimilar class). The word is also found in a number of compounds in its basic denotation of side or class, e.g. [PRATIPAKṢA](#), [PAKṢADHARMA](#), bodhipakṣa (see [BODHIPĀKṢIKADHARMA](#)). See also [PRAYOGA](#).

pakṣadharmā. (T. phyogs chos; C. zongfa; J. shūhō/shūbō; K. chongpŏp 宗法). In Sanskrit, lit. "property of the position," a term in Buddhist logic that designates one of the qualities of a correct syllogism ([PRAYOGA](#)). A syllogism is composed of three parts, the subject (dharmin), the property being proved ([SĀDHYADHARMA](#)), and the reason ([HETU](#) or [LIṄGA](#)). In the syllogism "Sound is impermanent because of being produced," the subject is sound, the property being proved is impermanence, and the reason is "being produced." In order for the syllogism to be correct, three relations must exist among the three components of the syllogism: (1) the reason must be a property ([DHARMA](#)) of the subject, also called the "position" ([PAKṢA](#)); (2) there must be a relationship of pervasion ([VYĀPTI](#)) between the reason and the property being proved, such that whatever is the reason is necessarily the property being proved; and (3) there must be a relationship of reverse pervasion between the property and the reason

such that whatever is not the property is necessarily not the reason. In the example, the syllogism “Sound is impermanent because of being produced” is correct because the reason (being produced) is a quality of the subject (sound), there is pervasion in the sense that whatever is produced is necessarily impermanent, and there is reverse pervasion because whatever is permanent is necessarily not produced. In Tibetan oral debate, the defender of a position is traditionally allowed only three answers to a position stated by the opponent; the position is typically stated in the form of a consequence ([PRASAṄGA](#)) rather than a syllogism (prayoga), but the mechanics of the statement are the same. The defender may say, “I accept” (’dod), meaning that he agrees that the property being proved is a property of the subject. The defender may say, “There is no pervasion” (ma khyab), meaning that whatever is the reason is not necessarily the property being proved. Or he may say, “The reason is not established” (rtags ma sgrub), meaning that the reason is not in fact a property of the position.

[P’algwanhoe](#). (八關會). In Korean, “Eight-Restrictions Festival,” a Korean variant of the pan-Buddhistic [BAGUAN ZHAI](#) (eight-restrictions feast). The Korean form is a large winter festival of thanksgiving held over two days during full-moon day of the eleventh month, and has little to do with the baguan zhai’s origins in the Buddhist [UPOSADHA](#) observance. The Korean version of this festival was sponsored by the royal court and would begin with the king and his ministers exchanging formal greetings, followed by a series of plays that depicted legends of the Silla dynasty. The festival also propitiated some of the important heavenly deities and autochthonous spirits of the mountains and rivers. Spirits of deceased heroes of the state were also commemorated, a practice that seems to stem from the origins of this festival in an earlier Silla ritual to appease the spirits of fallen warriors. This festival therefore combined various aspects of indigenous Korean cultural practice with an imported Buddhist ritual targeting the laity.

[Pāli](#). [alt. Pāḷi]. The term used to designate a dialect of Middle Indo-Aryan, which serves as the canonical language of the [THERAVĀDA](#) school of mainstream Buddhism. The term pāli does not, however, appear with this denotation in the Theravāda canon, where instead it refers to a canonical text or passage, in distinction to a commentary ([ATTHAKATHĀ](#)) on such a passage. By extension, then, in modern usage in both Southeast Asian nations and the West, Pāli has come to designate the language in which those passages and their commentaries

are written. According to the tradition, the Buddha spoke Māgadhī, the dialect of the Indian state of [MAGADHA](#). Although no specimens of Māgadhī survive from the period before [AŚOKA](#), linguists have determined that it differed from Pāli. It appears that the Buddha did not teach in Sanskrit but instead spoke in the local dialects of the regions of northern India in which he preached, one dialect of which may have been Māgadhī. It is assumed that, after his death, his various teachings were gathered and then regularized into an ecclesiastical language that could be comprehended and recited by monastic groups across a wide region. It appears that, after the reign of King Aśoka, some Buddhist schools translated the Buddha's teachings into Sanskrit while others used Pāli, but later scholastic Pāli was also influenced by Sanskrit. According to Theravāda tradition, the Buddha's teachings were first recorded in writing in Pāli, in Sri Lanka rather than India, at the end of the first century BCE. Although these texts do not survive, scholars speculate that the Pāli used in those recensions was generally equivalent to what is used in the canon as it is preserved today. Later Pāli incorporates variant vocabulary that derives in part from the local language—thus, for example, Pāli texts composed in Thailand often show the influence of Thai vernacular. There is no single script for Pāli, with the local script, including, for example, Old Mon, Khmer, Sinhalese, Burmese, Thai, and now Romanization, being employed to write the language.

[Pali Text Society](#). An organization founded in 1881 by the British [PALI](#) specialist [THOMAS WILLIAM RHYS DAVIDS](#) (1843–1922), which, according to Rhys Davids' mission statement, sought “to foster and promote the study of Pali texts.” The Pali Text Society (PTS) was one response to Buddhism's growing popularity in the West in the mid-to late-nineteenth century, and the society played an essential role in sponsoring both the production of critical editions of Pāli texts and their translation into English. With the help of scholars around the world, the PTS published critical, Romanized editions of most of the Pāli Canon over the first three decades of its existence; this massive project was followed with editions of important commentarial literature and an English translation series. The PTS also started the *Journal of the Pali Text Society*, which continues to publish articles on both Pāli Buddhism and broader topics in Buddhist Studies. The group also published primers for learning the Pāli language and such important reference works as the Society's *Pali-English Dictionary*, begun by Rhys Davids and finished by his student William Stede, which is now available in a searchable electronic format online. By the time of Rhys Davids'

death in 1922, the PTS had published almost thirty thousand pages of Romanized and translated Pāli materials, as well as a host of articles and essays written by Western scholars. Over the years, presidents of the PTS have included such distinguished Pāli scholars as [CAROLINE A. F. RHYS DAVIDS](#) (1858–1942), [ISALINE BLEW HORNER](#), and K. R. Norman. In 1994, the PTS began the Fragile Palm Leaves project to collect, identify, catalogue, preserve, and copy a number of rare Pāli manuscripts that survive in the Southeast Asian Buddhist traditions.

[Pallava dynasty](#). A line of hereditary rulers who governed the southeastern coast of India from their capital Kāñcī (or Kāñcīpuram) from the fourth through the ninth centuries CE. The Pallavas maintained important maritime trade links with Sri Lanka and Southeast Asia and were strong patrons of the [JAINA](#) religion through the sixth century, after which they shifted their allegiance to Śaivism. The Pallava kings were patrons of the arts, and their kingdom is renowned for its literature, music, painting, sculpture, and architecture. The most notable building of the Pallava period is the sculptured stone Shore Temple at Mahabalipuram dedicated to Śiva. While the capital of an increasingly Hindu-oriented kingdom, Kāñcī remained throughout the Pallava period an important Buddhist center. Its monasteries supported various schools of Buddhism, including [STHAVIRANIKĀYA](#) and [VĀTSĪPUTRIYA](#), and exerted a particularly strong influence on the Buddhism of Śrīkṣetra, the contemporary Pyu kingdom of Burma. Excavations at Pyu sites uncovered numerous Pāli and Sanskrit inscriptions written in Pallava script. The [YOGĀCĀRA](#) masters [DIGNĀGA](#) and [DHARMAPĀLA](#) were from Kāñcī and its environs, and the Chinese pilgrim [XUANZANG](#) visited the city in 642 and described a large walled monastery to the south of the city, which contained an Aśokan [STŪPA](#) one hundred feet tall, marking the spot where the Buddha had defeated a non-Buddhist ([TĪRTHIKA](#)). A formidable military power, the Pallavas were regularly at war with the Chalukyas of Badami. In 897, they fell to the Cōḷas, whose rising empire was to dominate South India for the next several centuries.

[P'alman taejanggyōng](#). (K) (八萬大藏經). In Korean, “The Scriptures of the Great Repository in Eighty Thousand [Xylographs],” the popular name of the second Koryō edition of the Buddhist canon (K. taejanggyōng; C. [DAZANGJING](#)), now housed at the monastery of [HAEINSA](#). See [KORYŎ TAEJANGGYŎNG](#).

[Palsim suhaeng chang](#). (發心修行章). In Korean, “Arouse Your Mind and Practice,” an edifying tract by the Buddhist exegete and propagator [WŎNHYO](#)

(617–686), which remains one of the most widely read of all Korean Buddhist works. The *Palsim suhaeng chang* is a clarion call to Buddhist practice, which warns about the dangers of desire and the value of studying the dharma. Even those who cannot enter the mountains and cultivate the mind in solitude should still apply themselves to cultivating virtuous courses of action ([KUŚĀLAKARMAPATHA](#)). The verses end with a lament about the inevitability of death and the need to practice now before age robs people of their vitality. This text exemplifies Wŏnhyo’s personal commitment to disseminating Buddhism among the people of Silla Korea and was probably written sometime during his most active period of propagation, perhaps between 677 and 684. During the middle of the Chosŏn dynasty (1392–1910), the *Palsim suhaeng chang* was included in the [CH’OBALSIM CHAGYŎNG MUN](#) (“Personal Admonitions to Neophytes Who Have First Aroused Their Minds”), a primer of three short texts used to train Korean postulants (K. haengja; C. [XINGZHE](#)) and novices in the basics of Buddhist morality and daily practice.

[pañcabala](#). (T. stobs lnga; C. wuli; J. goriki; K. oryŏk 五力). In Sanskrit and Pāli, “five powers,” (1) faith ([ŚRADDHĀ](#)), (2) effort ([VĪRYA](#)), (3) mindfulness ([SMṚTI](#)), (4) concentration ([SAMĀDHI](#)), and (5) wisdom ([PRAJÑĀ](#)). These five are essential to progress on the path, serving as antidotes to unwholesome states of mind, and specifically to the five hindrances ([NĪVARANA](#)) that obstruct the five factors of meditative absorption ([DHYĀNĀṄGA](#)): faith serves as an antidote to ill will ([VYĀPĀDA](#)); effort serves as an antidote to sloth and torpor ([STYĀNĀ-MIDDHA](#)); mindfulness serves as an antidote to either heedlessness ([APRAMĀDA](#)) or sensual desire ([KĀMACCHANDA](#)); samādhi serves as an antidote to distraction or restlessness and worry ([AUDDHATYA-KAUKṚTYA](#)); and wisdom serves as an antidote to skeptical doubt ([VICIKITSĀ](#)). In the [SAMYUTTANIKĀYA](#), the Buddha explains that faith is faith in the Buddha’s enlightenment; effort is effort at the four exertions (to prevent the arising of unwholesome states that have not yet arisen, to abandon unwholesome states that have already arisen, to create wholesome states that have not yet arisen, and to maintain wholesome states that have already arisen); mindfulness is the practice of the four foundations of mindfulness (P. [SATIPATTHĀNA](#), Skt. [SMṚTYUPASTĀNA](#)); concentration is achievement of the four dhyānas; and wisdom is discerning the [FOUR NOBLE TRUTHS](#) (catvāry āryasatyāni). The five powers constitute five of the thirty-seven aspects of enlightenment ([BODHIPĀKSIKADHARMA](#)). In the [PRAJÑĀPĀRAMITĀ](#) literature, they are described as five states achieved on the forbearance ([KSĀNTI](#))

and highest worldly dharmas ([LAUKIKĀGRADHARMA](#)) levels of the path of preparation ([PRAYOGAMĀRGA](#); see [NIRVEDHABHĀGĪYA](#)). They are preceded on the heat ([ŪSMAN](#)) and peak ([MŪRDHAN](#)) levels by the five same factors at a lesser stage of development; there they are called the “five faculties,” or “dominants” ([PAÑCENDRIYA](#)).

pañcacakṣus. (P. pañcacakkhu; T. spyan lnga; C. wuyan; J. gogen; K. oan 五眼). In Sanskrit, “five eyes,” referring to five specific sorts of vision. In Pāli texts they are all associated with the vision of a buddha; in [MAHĀYĀNA](#) texts, the five eyes open at higher and higher stages of practice; they overlap with the five (or six) superknowledges ([ABHIJÑĀ](#)). The [MĀMSACAḶSUS](#) (fleshly eye) is a [VIPĀKAPHALA](#) (maturation result) restricted in its range to the sight of the particular human, animal, or deity that possesses it. (In the case of vultures, for example, it is up to a hundred miles or so; in the case of deities it may be the entire cosmos.) The [DIVYACAḶSUS](#) (heavenly eye) sees the death and rebirth of all beings; the [PRAJÑĀCAḶSUS](#) (wisdom eye) knows all conditioned ([SAMSKRṬA](#)) and unconditioned ([ASAMSKRṬA](#)) dharmas and is free from all projections; the [DHARMACAḶSUS](#) (dharma eye) knows the attainments of all noble persons, from stream-enterer ([SROTAĀPANNA](#)) up to buddha; and the [BUDDHACAḶSUS](#) (buddha eye) sees all dharmas in the full awakening of final enlightenment. In place of dharmacakṣus, Pāli lists have the samantacakkhu (all-seeing eye).

pañcagati. (T. ’gro ba lnga; C. wudao/wuqu; J. godō/goshu; K. odo/och’wi 五道/五趣). In Sanskrit, the “five destinies” or places of rebirth in [SAMŚĀRA](#); in descending order: divinities ([DEVA](#)), humans ([MANUSYA](#)), animals ([TIRYAK](#)), ghosts ([PRETA](#)), and hell denizens ([NĀRAKA](#)). In other expositions of the places of rebirth, a sixth is often added, that of the [ASURA](#), or demigods. See [GATI](#).

pañcājina. (T. rgyal ba lnga; C. wuzhi rulai; J. gochi nyorai; K. oji yōrae 五智如來). In Sanskrit, “five conquerors,” a synonym for the [PAÑCATATHĀGATA](#), viz. [VAIROCANA](#), [AKSOBHYA](#), [RATNASAMBHAVA](#), [AMITĀBHA](#), and [AMOGHASIDDHI](#).

pañcājñāna. (T. ye shes lnga; C. wuzhi; J. gochi; K. oji 五智). In Sanskrit, “five wisdoms,” “five knowledges”; five aspects of the perfect enlightenment ([BODHI](#)) of the buddhas, according to the [MAHĀYĀNA](#) tradition. They are (1) the wisdom of the [DHARMADHĀTU](#) ([DHARMADHĀTUJÑĀNA](#)), (2) the mirrorlike wisdom ([ĀDARŚAJÑĀNA](#)), (3) the wisdom of equality or impartiality ([SAMATAJÑĀNA](#)), (4) the wisdom of specific knowledge ([PRATYAVEKŚANAJÑĀNA](#)), and (5) the wisdom

of accomplishing what was to be done ([KRTYĀNUṢṬHĀNAJÑĀNA](#)). They are important especially in [YOGĀCĀRA](#), where it is said, for example, that the foundational storehouse consciousness ([ĀLAYAVIJÑĀNA](#)) is transformed into the mirrorlike wisdom, and the afflicted mind ([KLISTAMANAS](#)) is transformed into the wisdom of equality. In tantric Buddhism, the five wisdoms are associated with the five buddhas ([PAÑCATATHĀGATA](#)): [VAIROCANA](#), [AKSOBHYA](#), [RATNASAMBHAVA](#), [AMITĀBHA](#), and [AMOGHASIDDHI](#), respectively. It is also said that, through the practice of the tantric path, the five [KLEŚA](#)s of delusion or obscuration ([MOHA](#)), hatred ([DVESA](#)), pride ([MĀNA](#)), desire ([RĀGA](#)), and jealousy ([ĪRSYĀ](#)) are transformed into the five wisdoms in the order listed above.

[pañcakāmaguṇa](#). (T. 'dod yon sna lnga; C. wumiaoyu; J. gomyōyoku; K. omyoyok 五妙欲). In Sanskrit and Pāli, the “five strands of desire,” the five qualities of the sensuous realm ([KĀMADHĀTU](#)): viz., pleasing visual objects, sounds, fragrances, tastes, and tangible objects. It is through attachment to these five that beings are reborn in the sensuous realm and it is in turn by giving up these attachments that beings are able to develop meditative absorption ([DHYĀNA](#)) and be reborn in the subtle-materiality realm ([RŪPADHĀTU](#)) and the immaterial realm ([ĀRŪPYADHĀTU](#)).

[pañcakaśāya](#). (T. snyigs ma lnga; C. wuzhuo; J. gojoku; K. ot'ak 五濁). In Sanskrit, lit. “five turbidities,” the “five degenerations” that are said to be signs of the degenerate age of the dharma ([SADDHARMAVIPRALOPA](#)). These five are said to mark the period in the cosmic cycle when the human life span is less than one hundred years and more than ten years. The five are (1) degeneration of life span ([āyukṣāya](#)) because the life span is short during this period; (2) degeneration of views ([drṣṭikṣāya](#)) because wrong views ([DRSTI](#)) are prevalent; (3) degeneration of afflictions ([kleśakṣāya](#)) because the afflictions ([KLEŚA](#)) become worse; (4) degeneration of sentient beings ([sattvakṣāya](#)) because those beings are mentally and physically inferior; and (5) degeneration of the eon ([kalpakṣāya](#)) because the world and environment worsen. A buddha does not appear in the world during a period marked by the five degenerations.

[pañcakrama](#). (T. rim lnga; C. wucidi; J. goshidai; K. och'aje 五次第). In Sanskrit, “five stages,” the five stages of the completion stage ([NISPANNAKRAMA](#)) of the [ANUTTARAYOGATANTRA](#) path according to the [GUHYASAMĀJATANTRA](#). The five stages are (1) vajra repetition ([vajrājāpa](#)), (2) purification of consciousness ([cittaviśuddhi](#)), (3) self-empowerment ([svādhiṣṭhāna](#)), (4) enlightenment

(abhisambodhi), and (5) union (yuganaddha). ¶ *Pañcakrama* is also the title of a text attributed to [NĀGĀRJUNA](#) on the five stages according to the *Guhyasamājatantra*. Scholars attribute this to the “tantric Nāgārjuna,” and not to the [MADHYAMA](#) master, although, according to the Tibetan tradition, Nāgārjuna lived for six hundred years and thus composed works on tantra. Together with [ĀRYADEVĀ](#)’s commentary, the *Caryāmelāpakapradīpa*, the pañcakrama provides one of the most influential interpretive systems for an anuttarayogatantra cycle.

pañcakula. (T. rigs lnga; C. wubu; J. gobu; K. obu 五部). In Sanskrit, “five lineages” or “five families”; referring to the five buddha families of tantric Buddhism. The five are the [TATHĀGATA](#), [VAJRA](#), [PADMA](#), [RATNA](#), and [KARMA](#) families. The concept of buddha families began to be formulated with the onset of the [MAHĀYĀNA](#), likely rooted in earlier Buddhist tendencies to divide practitioners, scripture, deities, and the like into different “families” ([GOTRA](#) or [KULA](#)). One of the earliest expressions of this was the TRIKULA system, in which [VAJRASATTVA](#) is the buddha of [VAJRAKULA](#), [VAIROCANA](#) belongs to the [TATHĀGATAKULA](#), and [AVALOKITEŚVARA](#) belongs to the [PADMAKULA](#). In the fivefold system, [VAIROCANA](#), [AKSOBHYA](#), [AMITĀBHA](#), [RATNASAMBHAVA](#), and [AMOGHASIDDHI](#) are the buddhas of the tathāgata, vajra, padma, ratna and karman families, respectively. The five buddhas were seen as [DHARMAKĀYA](#) buddhas, with the number five providing a number of homologies, including with the five aggregates, the five poisons, the five wisdoms, the five colors, and the five elements. The number five was also important for the [MANDALA](#), with one buddha holding the central position, and the other four in the cardinal directions.

pañcamārga. (T. lam lnga; C. wuwei; J. goi; K. owi 五位). In Sanskrit, “five paths,” the most common description of the path to enlightenment in Sanskrit Buddhism: (1) the path of accumulation ([SAMBHĀRAMĀRGA](#)), (2) the path of preparation ([PRAYOGAMĀRGA](#)), (3) the path of vision ([DARŚANAMĀRGA](#)), (4) the path of cultivation ([BHĀVANĀMĀRGA](#)), and (5) the adept path, lit., “the path where there is nothing more to learn” ([AŚAIKSAMĀRGA](#)). These five paths are progressive, moving the practitioner sequentially from ordinary existence towards enlightenment and complete liberation from suffering. This system is elaborated especially in [SARVĀSTIVĀDA ABHIDHARMA](#) materials, as well as in the [YOGĀCĀRA](#) school of the [MAHĀYĀNA](#). Depending on the source in which it is discussed, the pañcamārga can therefore be deployed to describe the spiritual

development culminating in the rank of [ARHAT](#) or culminating in the rank of buddha. The general features of each of the five stages are as follows. ¶ The first is the “path of accumulation” or “equipment” ([saṃbhāramārga](#)), wherein the practitioner develops a small degree of three prerequisite qualities for spiritual advancement: morality ([ŚĪLA](#)) by way of the basic precepts, merit ([PUNYA](#)) by way of veneration, and concentration ([SAMĀDHI](#)). The path of accumulation marks the beginning of the religious life. ¶ In the second “path of preparation” ([prayogamārga](#)), the practitioner continues to cultivate those qualities developed in the first path, but also undertakes a more stringent cultivation of concentration ([samādhi](#)) through the practice of calmness ([ŚAMATHA](#)); he also begins the cultivation of wisdom ([PRAJÑĀ](#)) through the practice of insight ([VIPAŚYANĀ](#)). ¶ With the third path, the “path of vision” ([darśanamārga](#)), the practitioner comes to a direct perception of the true nature of reality as it is. This reality may be described in terms of the [FOUR NOBLE TRUTHS](#) ([catvāry āryasatyāni](#)) and/or emptiness ([ŚŪNYATĀ](#)). In the Yogācāra school, this path is understood as the realization that subject and object derive from the same source and a subsequent perception of phenomenal objects without the intervention of conventional labels. The [darśanamārga](#) is of particular importance because it typically marks the end of the mundane path of training and the beginning of the supramundane path of sanctity; thus, it is upon entering the path of vision that one becomes a noble person ([ĀRYA](#)). In abhidharma models, the path of vision corresponds to the stage of stream-entry ([SROTAĀPANNA](#)); in later Mahāyāna models, attainment of this path marks the first stage ([BHŪMI](#)) of the bodhisattva path. ¶ The fourth path, the “path of cultivation” or “development” ([bhāvanāmārga](#)), involves the reinforcement and deepening of the insights developed in the path of vision. This cultivation is accomplished by advanced stages of meditation, through which one eliminates the most subtle and deep-rooted afflictions ([KLEŚA](#)). The various schools delineate the meditative practices involved in this path in a variety of ways. The [ABHIDHARMASAMUCCAYA](#), for example, schematizes this path both in terms of the nature or object of the meditation and in terms of the type of affliction that is abandoned during practice. ¶ Finally, the fifth stage, the adept path, lit., the “path where there is nothing more to learn” or the “path where no further training is necessary” ([aśaikṣamārga](#)), is synonymous with the soteriological goal, whether that is the state of an arhat or a buddha. With the consummation of the path of cultivation, the adept achieves the “adamantine-like concentration” ([VAJROPAMASAMĀDHI](#)), which leads to the permanent destruction of even the subtlest and most persistent of the ten fetters ([SAMYOJANA](#)), resulting

in the “knowledge of cessation” ([KSAYAJÑĀNA](#)) and in some presentations an accompanying “knowledge of nonproduction” ([ANUTPĀDAJÑĀNA](#)), viz., the knowledges that the fetters were destroyed and could never again recur. With the attainment of this path, the practitioner has nothing more he needs to learn and is freed from the possibility of any further rebirth due to the causal force of [KARMA](#). This final path is also sometimes referred to as the [NISTHĀMĀRGA](#), or “path of completion.” All those proceeding to a state of liberation ([VIMOKSA](#)), whether as an arhat or as a buddha, are said to traverse these five paths. See also [ĀNANTARYAMĀRGA](#); [VIMOKSAMĀRGA](#).

[pañcāmṛta](#). (T. bdud rtsi lnga). In Sanskrit, the “five ambrosias,” one of the more graphic examples of the inversion of purity and pollution in the Buddhist [TANTRAS](#). The five ambrosias are feces, urine, semen, menstrual blood, and marrow. In the [ANUTTARAYOGATANTRAS](#), it is said that an advanced [YOGIN](#) is able to transform these five polluting substances into five types of ambrosia, which represent the five buddhas ([PAÑCATATHĀGATA](#)): [VAIROCANA](#), [AKSOBHYA](#), [AMITĀBHA](#), [RATNASAMBHAVA](#), and [AMOGHASIDDHI](#). Once purified, the five ambrosias can then be ingested as a form of worshipping the five buddhas and as a means of speeding the attainment of the five wisdoms ([PAÑCAJÑĀNA](#)): (1) the wisdom of the [DHARMADHĀTU](#) ([DHARMADHĀTUJÑĀNA](#)), (2) the mirrorlike wisdom ([ĀDARĀJÑĀNA](#)), (3) the wisdom of equality ([SAMATAJÑĀNA](#)), (4) the wisdom of specific knowledge ([PRATYAVEKSANĀJÑĀNA](#)), and (5) the wisdom of accomplishing activities ([KṚTYĀNUṢṬHĀNAJÑĀNA](#)).

[pañcānantarya](#). (P. pañcānantariya; T. mtsham med lnga; C. wu wujian ye; J. gomukengō; K. o muganōp 五無間業). In Buddhist Hybrid Sanskrit, “five acts of immediate consequence” ([ĀNANTARYAKARMA](#)) or “five great misdeeds,” the worst moral offenses that one can commit. The lists vary slightly from source to source, but typically include: (1) patricide, (2) matricide, (3) killing an [ARHAT](#), (4) spilling the blood of a buddha, and (5) causing schism in the monastic community ([SAMGHABHEDA](#)). Despite whatever wholesome actions one may perform afterwards, after death, these deeds result in the “immediate retribution” of rebirth in the [AVĪCI](#) hell. In the [SĀMAÑÑAPHALASUTTA](#) of the Pāli canon, King Ajātasattu ([AJĀTAŚĀTRU](#)) admits to killing his father, the former king [BIMBISĀRA](#). The Buddha remarks that this action is what keeps King Ajātasattu from fully realizing the fruits of hearing the [DHARMA](#). However, the most notorious of those who have committed these actions is [DEVADATTA](#), the Buddha’s own cousin,

who is infamous for attempting to kill the Buddha (and in one case wounding him), murdering the arhat [UṬPALAVARNĀ](#), and then causing a schism in the saṃgha. As a result of these deeds, the earth opened up and Devadatta fell into [AVĪCI](#) hell, where he is said to remain for one hundred thousand eons.

[pañcaniyata](#). (T. nges pa lnga; C. wu jue ding; J. goketsujō; K. o kyōlchōng 五決定). In Sanskrit, the “five certainties,” five qualities describing a buddha’s enjoyment body ([SAMBHOGAKĀYA](#)), the body that appears in an ideal realm and is visible to [BODHISATTVA](#)s. The order and detail of these characteristics vary slightly from source to source. Generally, the enjoyment body will appear (1) as a definite body, adorned with the thirty-two major marks and the eighty minor marks of a great man ([MAHĀPURUSALAKSANA](#)); (2) in a definite place, such as the heavenly [AKANISTHA](#) realm; (3) with a definite retinue, viz. bodhisattvas who have achieved the first stage ([BHŪMI](#)) or above or, according to some sources, the tenth stage; (4) expounding a definite teaching, the doctrines of the [MAHĀYĀNA](#); and (5) in a definite time, until the end of the [SAMSĀRA](#).

[pañcāntaradhānāni](#). (P). See [ANTARADHĀNA](#).

[Pañcappakaranatthakathā](#). In Pāli, “Commentary on the Five Books,” a voluminous Pāli commentary attributed to [BUDDHAGHOSA](#) on the last five books of the [ABHIDHAMMAPITAKA](#): the [DHĀTUKATHĀ](#), [PUGGALAPAÑÑATTI](#), [KATHĀVATTHU](#), [YAMAKA](#), and [PATTHĀNA](#). Thus Buddhaghosa produced a commentary for each of the seven books of the Pāli abhidhammapitaka—the [ATTHASĀLINĪ](#), a commentary on the [DHAMMASAṄGANĪ](#), the [SAMMOHAVINODANĪ](#), a commentary on the [VIBHAṄGA](#), and this [PAÑCAPPAKARANATTHAKATHĀ](#). The section of the *Pañcappakaraṇatthakathā* that comments on the *Dhātukathā*—called the *Dhātukathāṭṭhakathā*—contains fourteen divisions and offers a detailed analysis of such doctrinal categories as [ĀYATANA](#), [SKANDHA](#), and [DHĀTU](#). The commentary that deals with the *Kathāvatthu* is of particular interest, because it identifies the specific mainstream Buddhist schools that hold the various wrong types of wrong views that are refuted in the *Kathāvatthu*. The commentary begins with an account of the eighteen [MAINSTREAM BUDDHIST SCHOOLS](#) that arose prior to the third Buddhist council (see [COUNCIL, THIRD](#)), as well six additional schools. The section on the *Paṭṭhāna*—called the *Paṭṭhānapakaraṇatthakathā*—may have been written by a monk named Cullabuddhaghosa at the request of Buddhaghosa. Like other Pāli commentaries, this commentary also calls itself an “Exposition on the Highest Matter” (P.

Paramatthadīpanī); however, this title is very rarely used for the work, since there is a commentary by [DHAMMAPĀLA](#) on the [CARIYĀPITAKA](#) written around the same time that is also called the *Paramatthadīpanī*.

[pañcasarvatraga](#). (S). See [SARVATRAGA](#).

[pañcaśīla](#). (P. pañcasīla; T. bslab pa lnga; C. wujie; J. gokai; K. ogye 五戒). In Sanskrit, the “five precepts,” five rules of conduct or “steps in training” ([ŚIKSĀPADA](#)) that form the foundation for Buddhist morality ([ŚĪLA](#)) for both lay and monastic followers. The five are (1) to abstain from killing living creatures (usually interpreted to mean not killing human beings); (2) to abstain from taking what is not given; (3) to abstain from engaging in sexual misconduct; (4) to abstain from lying (commonly defined as not to lie about the possession of high states of attainment or superhuman powers); and (5) to abstain from consuming intoxicants that cause heedlessness ([PRAMĀDA](#)). These rules are commonly administered as part of the ceremony of going for refuge ([ŚARANA](#)), which is the formal acknowledgment of becoming an adherent of Buddhism. Each of these precepts is administered in the formula, “I undertake the training rule (śikṣāpada) to abstain from killing living creatures,” etc. The precepts are regarded as steps in training that are useful in prompting virtuous actions ([KUŚĀLAKARMAN](#)), in restraining unvirtuous deeds of body and speech, and in correcting the intention ([CETANĀ](#)) that prompts action. It is generally understood that the practitioner must become adept in maintaining the precepts before he can effectively engage in the cultivation of concentration ([SAMĀDHI](#)) and wisdom ([PRAJÑĀ](#)), the next two stages in the threefold training ([TRISIKSĀ](#)). Taking the precepts is considered karmically efficacious, since an act will be more virtuous if one first takes a vow to desist from an unvirtuous activity and then does so, rather than desisting from the activity without having first taken such a vow. ¶ These five precepts also figure in other important moral formulas. Monks and nuns take the five precepts (with the third precept defined as celibacy), with violation of the first four bringing “defeat” ([PĀRĀJIKĀ](#)) and, in some traditions, expulsion from the [SAMGHA](#). These five precepts (with celibacy as the third) are augmented by three additional precepts to form a short-term code observed by lay disciples fortnightly on the new moon and full moon days ([UPOŚADHA](#); P. uposatha); this code is known as the eight “retreat precepts” (S. uposaḍhaśīla; P. uposathasīla), a sort of temporary renunciation (see [ASTĀṄGASAMANVĀGATAM UPAVĀSAM](#); [BAGUAN ZHAI](#)) that essentially turns the layperson into a monk for that

day. The three additional precepts are (6) not to eat at an inappropriate time (generally interpreted to mean between noon and the following dawn); (7) not to dance, sing, play music, attend performances, or adorn one’s body with garlands, perfumes, or cosmetics; and (8) not to sleep on high or luxurious beds. The same five precepts (with the third again defined as celibacy) are augmented by five additional rules that are kept by novice monks ([ŚRĀMANERA](#)) and nuns ([ŚRĀMANERIKĀ](#)) to constitute the “ten precepts” ([DAŚAŚĪLA](#)). The additional five are (6) not to eat at an inappropriate time; (7) not to dance, sing, play music, or attend performances; (8) not to adorn one’s body with garlands, perfumes, and cosmetics; (9) not to sleep on high or luxurious beds; (10) not to handle gold and silver, viz. money. Fully ordained monks ([BHIKSU](#)) and nuns ([BHIKSUNĪ](#)) observe in turn hundreds of specific training rules, all putatively promulgated by the Buddha himself, which are set out in great detail in the [PRĀTIMOKSA](#) of various [VINAYA](#) traditions. See also [ŚĪLA](#).

[pañcaskandha](#). (P. pañcakhandha; T. phung po lnga; C. wuyun; J. goun; K. oon 五蘊). The “five aggregates” that are the objects of clinging. See [SKANDHA](#).

[Pañcaskandhaprakaraṇa](#). (T. Phung po lnga’i rab tu byed pa; C. Dasheng wuyun lun; J. Daijō gounron; K. Taesŭng oon non 大乘五蘊論). In Sanskrit, “Explanation of the Five Aggregates,” the title of two different works. The earliest *Pañcaskandhaprakaraṇa* is a short work, now lost in the original Sanskrit, by the fourth or fifth century CE Indian master [VASUBANDHU](#). According to tradition, Vasubandhu had both a “[HĪNAYĀNA](#)” and a [MAHĀYĀNA](#) period, beginning as an adherent of the [SAUTRĀNTIKA](#) school of the mainstream Buddhist tradition, before being converted to the Mahāyāna by his half brother [ASAṄGA](#). Although his presentation of the five aggregates bears many similarities to that in his [ABHIDHARMAKOŚABHĀSYA](#) (the chief work of his so-called hīnayāna period), this work derives from his Mahāyāna period; it begins with a homage to the bodhisattva [MAÑJUŚRĪ](#) and mentions the [ĀLAYAVIJÑĀNA](#). In this work, Vasubandhu seems to be reworking the presentation of the five aggregates found in Asaṅga’s [ABHIDHARMASAMUCCAYA](#); he also sets forth and criticizes the positions of the [MAHĪŚĀKA](#), the school in which Asaṅga was originally trained. ¶ There is also a *Pañcaskandhaprakaraṇa* by the seventh-century Indian [MADHYAMA](#) master [CANDRAKĪRTI](#), discussing the factors ([DHARMA](#)) categorized under the headings of the five [SKANDHA](#), the twelve [ĀYATANA](#), and the eighteen [DHĀTU](#).

pañcatathāgata. (T. de bzhin gshegs pa lnga; C. wuzhi rulai/wu fo; J. gochi nyorai/gobutsu; K. ojiyōrae/obul 五智如來/五佛). In Sanskrit, “five tathāgatas,” a grouping of five buddhas important in tantric Buddhism. They are also known as the “five conquerors” ([PAÑCAJINA](#)) and sometimes in English as the “five [DHYĀNI BUDDHAS](#)” (although the term dhyāni buddha is a Western neologism that does not appear in Buddhist texts). The members of the group vary across tantric texts and traditions, but the most common grouping is that derived from the [SARVATATHĀGATATATTVASAMGRAHA](#). They are [VAIROCANA](#), [AKSOBHYA](#), [AMITĀBHA](#), [RATNASAMBHAVA](#), and [AMOGHASIDDHI](#), the buddhas of the [TATHĀGATAKULA](#), [VAJRAKULA](#), [PADMAKULA](#), [RATNAKULA](#), and [KARMAKULA](#) families, respectively. The concept of buddha families began to be formulated with the rise of the [MAHĀYĀNA](#), rooted in earlier Buddhist tendencies to divide practitioners, scripture, deities, and the like into different “families” ([GOTRA](#) or [KULA](#)). One of the earliest expressions of such a grouping was the trikula system, in which [VAJRASATTVA](#) is the buddha of the vajrakula, Vairocana belongs to the tathāgatakula, and [AVALOKITEŚVARA](#) belongs to the padmakula. The five buddhas were seen as [DHARMAKĀYA](#) buddhas, with the number five providing a number of possible homologies, including the five aggregates, the five poisons, the five wisdoms, the five colors, and the five elements. The number five was also important for the [MANDALA](#), with one buddha holding the central position, the other four in the cardinal directions. The five tathāgatas were also integrated into the separate and later concept of the [ĀDIBUDDHA](#), or “primordial buddha,” which would become especially important in Newari Buddhism.

pañcavargika. (P. pañcavaggiyā; T. lnga sde; C. wuqun [biqiu]; J. gogun [biku]; K. ogun [pigū] 五群[比丘]). In Sanskrit, the “group of five”; the five ascetics who practiced austerities with the [BODHISATTVA](#) prior to his enlightenment and to whom the Buddha preached his first sermon after his enlightenment, thus becoming the Buddha’s first disciples. They are [ĀJÑĀTAKAUNDIYA](#) (or Kaundinya), [AŚVAJIT](#), [VĀSPA](#), [MAHĀNĀMAN](#), and [BHADRIKA](#). According to the Pāli account (where they are called Aññātakoṇḍañña or Koṇḍañña, Assaji, Vappa, Mahānāma, and Bhaddiya), Koṇḍañña had been present as one of the eight brāhmaṇas who attended the infant’s naming ceremony, during which the prophesy was made that the prince would one day become either a wheel-turning monarch (P. cakkavatti, S. [CAKRAVARTIN](#)) or a buddha. The other four ascetics were sons of four of the other brāhmaṇas in attendance at the naming ceremony. When the prince gave up his practice of austerities and accepted a meal, the five

ascetics abandoned him in disgust. After his enlightenment, the Buddha surveyed the world with his divine eye (S. [DIVYACAKSUS](#)) and surmised that, of all people then alive, these five ascetics were most likely to understand the profundity of his message. When he first approached them, they refused to recognize him, but the power of his charisma was such that they felt compelled to show him the honor due a teacher. He preached to them two important discourses, the [DHAMMACAKKAPPAVATTANASUTTA](#), in which he explained the [FOUR NOBLE TRUTHS](#) (S. catvāry āryasatyāni), and the [ANATTALAKKHANASUTTA](#) (S. **Anātmalakṣaṇasūtra*), in which he explained the doctrine of nonself (P. anatta, S. [ANĀTMAN](#)). Upon hearing and comprehending the first sermon, the five ascetics attained the dhammacakku (S. [DHARMACAKSUS](#)) or the “dhamma eye,” an attainment equated in the Pāli canon with that of the stream-enterer (P. sotāpanna, S. [SROTAĀPANNA](#)). The five then requested to be accepted as the Buddha’s disciples and were ordained as the first Buddhist monks (P. bhikkhu, S. [BHIKSU](#)), using the informal [EHIBHIKSUKĀ](#) (P. ehi bhikkhu), or “come, monk,” formula. Upon hearing the second sermon, the five were completely freed of the contaminants (P. āsava, S. [ĀRAVA](#)), becoming thereby arahants ([ARHAT](#)) freed from the prospect of any further rebirth. With this experience, there were then six arahants in the world, including the Buddha. The Pāli story of the conversion of the group of five is recounted in the [MAHĀVAGGA](#) section of the Pāli [VINAYAPITAKA](#). The group of five appears often in [JĀTAKA](#) stories of the previous lives of the Buddha, indicating their long karmic connections to him, which result in their remarkable fortune at being the first to hear the Buddha preach the dharma. In Sanskrit materials, this group of five is usually known as the bhadravargīya, or “auspicious group.”

[pañcavidyā](#). (T. rig gnas che ba lnga; C. wuming; J. gomyō; K. omyōng 五明). In Sanskrit, the “five sciences”; the five traditional sciences of ancient India, which a bodhisattva is said to have mastery of; also known as the pañcavidyāsthāna. These are śabda, which includes grammar and composition; hetu or logic; cikitsā or medicine; śilpakarma, which includes the manual arts; and adhyātmavidyā, the “inner knowledge,” which in the case of Buddhism was said to be knowledge of the [TRIPITAKA](#) and the twelve categories ([ANGA](#)) of the word of the Buddha ([BUDDHAVACANA](#)).

[Pañcaviṃśatisāhasrikāprajñāpāramitāsūtra](#). (T. Shes rab kyi pha rol tu phyin pa stong phrag nyi shu lnga pa; C. Mohe bore boluomi jing; J. Maka hannya

haramitsukyō; K. Maha panya paramil kyōng 摩訶般若波羅蜜經). In Sanskrit, “Perfection of Wisdom in Twenty-five Thousand Lines,” one of the three most important of the “large” [PRAJÑĀPĀRAMITĀ](#) sūtras, together with the [ŚĀTASĀHASRIKĀPRAJÑĀPĀRAMITĀSŪTRA](#) (“Perfection of Wisdom in One-Hundred Thousand Lines”) and the [ASTASĀHASRIKĀPRAJÑĀPĀRAMITĀSŪTRA](#) (“Perfection of Wisdom in Eight Thousand Lines”). The early prajñāpāramitā sūtras were named based upon their length. The scholarly consensus is that the earliest of the sūtras of this genre was the version in eight thousand lines. Although it is not strictly the case that the two larger sūtras are simply prolix expansions of the shorter sūtra, there is considerable repetition among the texts, with the larger sūtras increasing the number of categories to which various qualifications, including negations, were made. The prajñāpāramitā sūtras are said to have an explicit meaning and a hidden meaning: the former is the doctrine of emptiness ([ŚŪNYATĀ](#)), the latter is the structure of the bodhisattva’s path ([MĀRGA](#)) to this enlightenment. This structure is set forth in the [ABHISAMAYĀLAMKĀRA](#) attributed to [MAITREYANĀTHA](#), one of the most widely commented upon of all Mahāyāna [ŚĀSTRAS](#) in India. Although the text does not explicitly say so, the *Abhisamayālamkāra* is said to derive its categories from the *Pañcaviṃśatisāhasrikā*. Ārya [VIMUKTISENA](#), Bhadanta Vimuktisena, and [HARIBHADRA](#) each wrote commentaries on the *Abhisamayālamkāra*, in which they explicitly connect it with the *Pañcaviṃśatisāhasrikā*. The [DAZHIDU LUN](#) is also considered a commentary on this sūtra.

[pañcaviṣaya](#). (T. yul lnga; C. wujing; J. gokyō; K. ogyōng 五境). In Sanskrit, “five objects,” the five external physical sensory objects of forms, sounds, odors, tastes, and tangible objects. See [VISAYA](#).

[pañcendriya](#). (P. pañcendriya; T. dbang po lnga; C. wugen; J. gokon; K. ogŭn 五根). In Sanskrit, the “five [sense] faculties,” or “dominants”; the five internal visual, auditory, olfactory, gustatory, and tactile faculties associated with the physical sense organs. In the [ABHIDHARMA](#) literature, these faculties are said not to refer to the physical eye, ear, etc., but to subtle matter located in the eye, ear, nose, tongue, and body that provide the physical basis for sense experience. ¶ The pañcendriya are also a soteriological term, referring to five spiritual “dominants” or “faculties” that are crucial to development along the path: faith ([ŚRADDHĀ](#)), effort ([VĪRYA](#)), mindfulness ([SMṚTI](#)), concentration ([SAMĀDHI](#)), and wisdom ([PRAJÑĀ](#)). These are called the “five powers” ([PAÑCABALA](#)) at a higher

stage of development. See [INDRIYA](#).

[Paṅ chen Lama](#). A Tibetan title given to members of an important line of incarnate lamas ([SPRUL SKU](#)), commonly identified as second in stature in Tibet after the [DALAI LAMAS](#). Their seat is [BKRA SHIS LHUN PO](#) monastery in Gtsang in western Tibet. Paṅ chen is a common abbreviation for the mixed Sanskrit and Tibetan appellation “paṅḍita chen po” (literally “great scholar”), and is an honorific title granted to scholars of great achievement. It was also used as an epithet for the abbot of Bkra shis lhun po monastery, beginning with its founder and first abbot [DGE 'DUN GRUB](#). The fifth Dalai Lama gave the abbacy of Bkra shis lhun po to his tutor, [BLO BZANG CHOS KYI RGYAL MTSHAN](#). As abbot of the monastery, he was called Paṅ chen, but he came to receive the distinctive title “Paṅ chen Lama” when the fifth Dalai Lama announced that, upon his teacher’s death, his teacher would reappear as an identifiable child-successor. Blo bzang chos kyi rgyal mtshan thus had conferred on him the title “Paṅ chen Lama.” The Paṅ chen Lama is considered the human incarnation of the buddha [AMITĀBHA](#), while the Dalai Lama is considered the human incarnation of the [BODHISATTVA AVALOKITEŚVARA](#). Blo bzang chos kyi rgyal mtshan is traditionally viewed as the fourth member of the lineage, with his previous incarnations recognized posthumously, beginning with [TSONG KHA PA](#)’s disciple [MKHAS GRUB DGE LEGS DPAL BZANG PO](#). For this reason, there is some confusion in the numbering of the lamas of the lineage; Blo bzang chos kyi rgyal mtshan is sometimes referred to as the fourth Paṅ chen Lama, but more commonly in Tibetan sources as the first. Blo bzang dpal ldan ye shes is sometimes referred to as the sixth Paṅ chen Lama, but more commonly in Tibetan sources as the third. (In the discussion below, the higher numerical designation will be employed, since it is used in the contemporary controversy over the identity of the Paṅ chen Lama.) The fifth Dalai Lama apparently hoped that the Dalai Lama and Paṅ chen Lama could alternate as teacher and student in lifetime after lifetime. This plan required, however, that each live a long life, which was not to be the case. Subsequent incarnations were recognized and installed at Bkra shis lhun po and eventually grew to wield considerable religious and political power, at times rivaling that of the Dalai Lama himself. This was particularly true in the nineteenth century, when few Dalai Lamas reached their majority. The sixth Paṅ chen Lama, Blo bzang dpal ldan ye shes (Losang Palden Yeshe, 1738–1780), was a skilled politician who secured Tibet’s first relationship with a European power when he befriended George Bogle, British emissary to the East India Company under

Warren Hastings. The ninth Paṅ chen Lama (1883–1937) did not enjoy close relations with the thirteenth Dalai Lama; the Dalai Lama felt that the Paṅ chen Lama was too close to both the British and the Chinese. They also disagreed over what taxes the Paṅ chen Lama owed the [LHA SA](#) government. The Paṅ chen Lama went to China in 1925, and his supporters became aligned with the nationalist Guomindang party. While in China, he gave teachings and performed rituals, including some intended to repulse the Japanese invaders then on the Chinese mainland. After the death of the thirteenth Dalai Lama, he served in an advisory capacity in the search for the fourteenth Dalai Lama and died shortly thereafter, while en route back to Tibet. His successor, the tenth Paṅ chen Lama 'Phrin las lhun grub chos kyi rgyal mtshan (Trinle Lhündrup Chökyi Gyaltzen, 1938–1989) was selected by the Chinese, with the Lha sa government providing only tacit support. He was drawn into the official Chinese administration as a representative of the Communist party and remained in China when the Dalai Lama fled into exile in 1959. In 1964, he was arrested and imprisoned for his outspoken opposition to the Communist party's harsh policies in Tibet, and was subjected to public humiliation and physical abuse. After fourteen years in prison, he was released in 1978, and played a key role in fostering the cultural reconstruction that helped to reestablish religious life in Tibet. Despite his role in the Communist administration, many Tibetans continue to view his life as a heroic struggle for the cause of liberalization in Tibet. His death led to the recognition of two child incarnations: one, Dge 'dun chos kyi nyi ma (Gendün Chökyi Nyima, b. 1989), chosen by the fourteenth Dalai Lama in exile and favored by the majority of Tibetan people, and another, Rgyal mtshan nor bu (b. 1990), installed by the Chinese government. The disappearance of the Dalai Lama's candidate in China has led to a significant increase in tension between the two factions. The lineage of Paṅ chen Lamas includes:

1. Mkhas grub Dge legs dpal bzang (1385–1438)
2. Bsod nams phyogs kyi glang po (Sönam Chokyi Langpo, 1439–1505)
3. Dben sa pa Blo bzang don grub (Wensapa Losang Döndrup, 1505–1566)

The three above were recognized posthumously.

4. Blo bzang chos kyi rgyal mtshan (1567–1662)

5. Blo bzang ye shes dpal bzang po (Losang Yeshe Palsangpo, 1663–1737)
6. Blo bzang dpal ldan ye shes (Losang Palden Yeshe, 1738–1780)
7. Blo bzang bstan pa'i nyi ma (Losang Tenpe Nyima, 1781–1854)
8. Blo bzang bstan pa'i dbang phyug dpal ldan chos kyi grags pa (Losang Tenpe Wangchuk Palden Chökyi Drakpa), 1855–1882)
9. Blo bzang thub bstan chos kyi nyi ma dge legs mam rgyal (Losang Tupden Chökyi Nyima Gelek Namgyal, 1883–1937)
10. 'Phrin las lhun grub chos kyi rgyal mtshan (Trinle Lhundrup Chökyi Gyaltzen, 1938–1989)
11. Dge 'dun chos kyi nyi ma (Gendün Chökyi Nyima, b. 1989)

Pang Hanam. (K) (方漢岩). See [HANAM CHUNGWÖN](#).

Pang jushi. (J. Hō koji; K. Pang kōsa 龐居士). See [PANG YUN](#).

Pang jushi yulu. (J. Hō koji goroku; K. Pang kōsa ōrok 龐居士語錄). In Chinese, “The Recorded Sayings of Layman Pang”; the discourse record of the lay Chan adept [PANG YUN](#). See [PANG YUN](#).

Pang Yun. (J. Hō On; K. Pang On 龐蘊) (740–808). One of the most famous lay adepts of the [CHAN ZONG](#), commonly known within the tradition as “Layman Pang” ([PANG JUSHI](#)); also referred to as “[VIMALAKĪRTI](#) of the East” (Dongtu Weimo). [PENG SHAOSHENG](#) (1740–1796), in his [JUSHI ZHUAN](#) (“Biographies of Lay Buddhists”), lists Pang Yun as one of the three great lay masters (sangong) of Chinese Buddhism, along with [LI TONGXUAN](#) (635–730) and [LIU CHENGZHI](#) (354–410), praising Pang for his mastery of Chan practice. One of the famous anecdotes regarding Pang is that, in his middle age, he gave his house away to be used for a monastery and discarded all his personal possessions by loading them onto a boat and sinking them in a river. Subsequently, he is said to have earned his livelihood by making and selling bamboo utensils. He is presumed to have carried on religious practices at a hermitage separate from his residence. Pang was father to both a son and a daughter. The daughter, [LING ZHAO](#), who also attained a deep understanding of Chan, seems to have had an especially close

spiritual relationship with her father. Pang is presumed to have visited the Chan master [SHITOU XIQIAN](#) (710–790) about 785, whom he asked, “What man is it who does not accompany the ten thousand dharmas?” Shitou covered the layman’s mouth with his hand and Pang Yun was instantly enlightened. The layman stayed with Shitou until 786, when he traveled to visit [MAZU DAOYI](#) (707–786), one of the most influential Chan masters of his time. When the layman asked Mazu the same question he had asked Shitou, Mazu is said to have replied: “Wait till you’ve swallowed in one swig all the water of the West River, then I’ll tell you,” whereupon he attained great enlightenment. After staying with Mazu for two years, Pang Yun is believed to have started pilgrimages around central China, probably writing many verses that are extant now in materials such as the [PANG JUSHI YULU](#) (“Recorded Sayings of Layman Pang”), the posthumous records of Pang’s later years compiled by his friend the prefect Yu Di. Perhaps the most famous saying attributed to Pang Yun is: “Supernatural powers and marvelous activities are drawing water and carrying firewood.” Pang is said to have had a premonition of the time of his death. When he was about to die, he sat up cross-legged in his bed and told his daughter to report to him when it was noon, at which point he would pass away; she looked out and said, “The sun has just reached the zenith, but there is an eclipse.” While the layman went out to look at the eclipse, his daughter sat down cross-legged on his bed and passed away herself. Seeing this, the layman said, “My daughter has anticipated me.” He then postponed his death for seven days and died in the presence of his friend Yu Di, uttering these final words: “Please just regard as empty everything in existence, but beware of presuming that all nonexistence is real. Live comfortably in the world, where all is like shadows and echoes.” Records pertaining to Layman Pang are also found in such major Chan texts as [BIYAN LU](#), [CHODANG CHIP](#), [ZONGJING LU](#), and [JINGDE CHUANDENG LU](#).

[panjiao](#). (判教). In Chinese, “tenet classifications,” “doctrinal taxonomies.” See [JIAOXIANG PANSHI](#).

[Paññāsajātaka](#). In Pāli, “Fifty Birth Stories,” and sometimes referred to in Western scholarship as the “Apocryphal Jātakas”; a collection of fifty [JĀTAKA](#) stories that are not included in the canonical jātaka collection of the Pāli [TRIPITAKA](#). There are Thai, Cambodian, and Burmese recensions of these stories, the first two of which are quite similar in structure, the last of which differs in the selection and order of the stories. This Burmese (Myanmar) recension of this

collection, called the [ZIMMÈ PAÑÑĀSA](#), literally means the “Chiangmai Fifty,” suggesting that the provenance for many of these stories may be in the northwest of Thailand near the city of Chiangmai. The dating and authorship are unknown, but the terminus ad quem for the collection is around the fifteenth century. Some of the fifty stories show clear connections to the Pāli jātika collection; others are more similar to Sanskrit texts. Still other stories seem to have no connection to the available Pāli and Sanskrit literature and may derive from folk traditions; indeed, the grammar and syntax of the stories also seems to suggest local influences.

[Panthaka](#). [alt. Mahāpanthaka] (P. Mahāpanthaka; T. Lam chen bstan; C. Bantuojia; J. Hantaka; K. Pant’akka 半託迦). An [ARHAT](#) known for his mastery of the four immaterial absorptions (ĀRŪPYADHYĀNA); according to Pāli sources, the Buddha declared him foremost in the ability to manipulate perception (saññāvivaṭṭakusalānam). Panthaka was the elder of two brothers born to a merchant’s daughter from [RĀJAGRHA](#) who had eloped with a slave. After she became pregnant, she decided to return home to give birth, but the infant was born along the way. This happened again when she gave birth to her second child. Because both he and his younger brother, [CŪDAPANTHAKA](#), were born along the side of a road, they were given the names, “Greater” and “Lesser” Roadside. The boys were eventually taken to Rājagṛha and raised by their grandparents, who were devoted to the Buddha. Panthaka often accompanied his grandfather to listen to the Buddha’s sermons and was inspired to ordain. He proved to be an able monk, skilled in doctrine, and eventually attained arhatship. He later ordained his younger brother Cūḍapanthaka but was gravely disappointed in his brother’s inability to memorize even a single verse of the dharma. He treated Cūḍapanthaka with such contempt that the Buddha intervened on his behalf, giving the younger brother a simple technique by which he too attained arhatship. ¶ Panthaka is also traditionally listed as tenth of the sixteen [ARHAT](#) elders ([SODĀŚASTHAVIRA](#)), who were charged by the Buddha with protecting his dispensation until the advent of the next buddha, [MAITREYA](#); his younger brother Cūḍapanthaka is the sixteenth on that list. Panthaka resides in the [TRĀYĀSTRIMŚĀ](#) heaven (the heaven of the thirty-three devas) with 1,300 disciples. Panthaka was good at arithmetic and an expert in chanting and music. When sitting in meditation, Panthaka often sat in half-lotus posture; and after his finished his sitting, he would raise both his hands and take a deep breath. For this reason, he was given the nickname “the Arhat who Reaches Out His Hands”

(Tanshou Luohan). In [CHANYUE GUANXIU](#)'s standard Chinese depiction, Panthaka has placed his sitting-cloth on a rock, where he sits in meditation, with a sash across his shoulders. Holding a scroll in both hands, he appears to be reading a [SŪTRA](#).

pāpa. (T. sdig pa; C. e/zui; J. aku/zai; K. ak/choe 惡/罪). In Sanskrit and Pāli, “transgression”; an unsalutary, unwholesome, or nonvirtuous ([AKUŚĀLA](#)) deed that produces a correspondingly negative effect; thus, any knowingly wrongful, wicked, or immoral act of body, speech, or mind. Equivalent in meaning to [AKUŚĀLAKARMAN](#), or “unsalutary action,” pāpa leads to unfortunate and painful consequences in the form of physical or mental suffering for the agent of the deed, either in this or future lives; it may lead to rebirth as an animal ([TIRYAK](#)), ghost ([PRETA](#)), or hell denizen ([NĀRAKA](#)). Pāpa is the opposite of [PUNYA](#), meritorious deeds that lead to happiness in this or future lifetimes. The common translation of pāpa as “sin” is misleading because there is no divine being in Buddhism whose commandments can be broken. Rather, painful consequences of unsalutary actions befall the agent, according to the impersonal law of [KARMAN](#) and its retribution. According to classical karman theory, a person is literally defiled by the performance of unwholesome deeds and carries that stain until those deeds are either expiated through painful experience, or until the person attains liberation, whereupon the seeds of all former nonvirtuous deeds are destroyed. In practice, however, the Buddhist traditions are replete with practices designed to remove or minimize the effects of past nonvirtuous actions.

pāpadeśanā. [alt. pāpaśodhana] (P. pāpadesanā; T. sdig pa bshags pa; C. chanhui; J. sange; K. ch’amhoe 懺悔). In Sanskrit, “confession of transgressions,” “atonement”; the confession of unvirtuous deeds, either privately in the presence of a real or visualized representation of a buddha, or communally as part of a confession ceremony, such as the fortnightly monastic confession (S. [UPOSADHA](#); P. uposatha). Such confession also figures as a standard component in many [MAHĀYĀNA](#) and tantric liturgies. The Mahāyāna also deployed a confessional ritual designed for people burdened with heavy karmic obstructions who wished swiftly to attain complete, perfect enlightenment ([ANUTTARASAMYAKSAMBOधि](#)); this ritual involved chanting the names of thirty-five buddhas of the ten directions (daśadigbuddha, see [DAŚADĪŚ](#)) and making offerings before images of them. Regardless of the setting, the tenor of confession practice is to make public something that has been hidden; there is no tradition in Buddhism of a

priest offering absolution of sins. According to standard theory of [KARMA](#), the seeds of an unsalutary deed can be removed only through suffering the effects of that deed or through destroying the seed through wisdom ([PRAJÑĀ](#)). However, there is a general view in the Buddhist ethical systems that the strength of an unwholesome deed, especially one of a less heinous nature, can be diminished through its declaration and revelation.

[Papañcasūdanī](#). In Pāli, “Destruction of Obstacles [to Progress],” a commentary on the [MAJJHIMANIKĀYA](#) by the fifth-century exegete [BUDDHAGHOSA](#). According to the colophon to the commentary, Buddhaghosa wrote the commentary in response to a request of Buddhāmitta, a monk from Mayūrapaṭṭana. The [Papañcasūdanī](#) is quoted in Buddhaghosa’s commentary to the [VINAYAPITAKA](#), the [SAMANTAPĀSĀDIKĀ](#), suggesting that it antedates that work.

[pāpaśodhana](#). (S). See [PĀPADEŚANĀ](#).

[Pāpiyāms](#). (P. Pāpimant; BHS. Pāpīmant; T. Sdig can; C. Mowang [Boxun]; J. Maō [Hajun]; K. Mawang [Pasun] 魔王 [波旬]). An epithet of [MĀRA](#). See [NAMUCI](#).

[pāra](#). (T. pha rol; C. bi’an; J. higan; K. p’ian 彼岸). In Sanskrit and Pāli, “distant,” “opposite”; often freely rendered into Buddhist languages as “the other shore,” a common metaphor for the state of liberation, or [NIRVĀNA](#). The Buddhist path is often described metaphorically in Buddhist texts as a crossing from the near shore of [SAMSĀRA](#) to the far shore of nirvāṇa, with the [DHARMA](#) serving as one’s raft or ship. In other imagery, saṃsāra itself is the perilous ocean, and nirvāṇa the safe harbor.

[parach’um](#). (悤囉舍). In Korean, “cymbal dance,” a [CHAKPŎP](#) ritual dance performed by Buddhist monks during such Korean Buddhist rites as the [YŎNGSANJAE](#), using a cymbal (para). This dance is supposedly performed in veneration of, and as an offering to, the Buddha. One of the types of parach’um is known as “thousand-handed cymbal dance” (ch’ōnsu para) and is performed while other monks chant in honor of the thousand-armed form of the [BODHISATTVA](#) [AVALOKITEŚVARA](#) (see [SĀHASRABHUJASĀHASRANETRĀVALOKITEŚVARA](#)). This dance is considered to be extremely masculine, owing to its confident and strong motions, and thus is almost always performed by monks. In this dance, an even number of dancers (generally between two and ten), dressed in ceremonial robes with long sleeves,

grasp with both hands the two cymbals, which are larger than dinner plates. The dancers raise and lower the cymbals, bringing them clashing together in front of their bodies and over their heads. This sound is intended to lead sentient beings towards the path to buddhahood. The tempo is quicker than that of the butterfly dance ([NABICH'UM](#)), and, as the dancers turn, they also manipulate the shiny cymbals so that they flash beautifully.

[paracittajñāna](#). [alt. cetoparyāyābhijñāna] (P. cetopariyañāṇa; T. gzhan gyi sems shes pa; C. taxintong; J. tashintsū; K. t'asimt'ong 他心通). In Sanskrit, “knowledge of others’ minds”; one of the five mundane ([LAUKIKA](#)) “superknowledges” or “supranormal powers” ([ABHIJÑĀ](#)) that are gained through refinement of the fourth stage of meditative absorption ([DHYĀNA](#)). The sixth “superknowledge,” the knowledge of the extinction of the contaminants ([ĀSRAVAKSAYA](#); P. āsavakhaya) is supramundane ([LOKOTTARA](#)). One who has developed paracittajñāna knows when another’s mind is greedy or free from greed, hateful or free from hate, deluded or undeluded, constrained or distracted, developed or undeveloped, surpassable or unsurpassable, concentrated or unconcentrated, and freed or unfreed.

[pārājika](#). (T. phas pham pa; C. boluoyi; J. harai; K. parai 波羅夷). In Sanskrit and Pāli, “defeat,” according to the monastic codes, those misdeeds that entail automatic (and, according to the Pāli recension of the [VINAYA](#), permanent) expulsion from the [SAMGHA](#) and reversion to the laity. There are four pārājika offenses for monks ([BHIKSU](#)): (1) sexual intercourse through any of the orifices, (2) theft, (3) murder or abetting the murder of a human being, and (4) falsely claiming to have attained any degree of enlightenment, or to possess suprahuman powers (uttaramanuṣyadharmā). Nuns ([BHIKSUNĪ](#)) have a list of eight pārājika offenses, which include the above four, plus (5) enjoying physical contact with a male between the collarbone and the knee, (6) concealing the pārājika offense of another nun, (7) becoming the follower of a monk (who is suspended), and (8) possessing eight dispositions tinged with sexuality (which include cases of a lascivious nun rejoicing at the arrival of a lecherous man, asking him to sit down, or stretching her body toward him). In the Pāli [VINAYA](#), a monk or nun who commits a pārājika offense is compared to a person with his or her head cut off, to a withered leaf dropped from a branch, and to a stone split in two, etc., in that they may never return to their former monastic state, and may never again rejoin the saṃgha. Other vinaya traditions, such as the [MŪLASARVĀSTIVĀDA](#),

retain some possibility of redemption from this state of “defeat” by continuing to live in the monastery as a “pārājika penitent,” or [ŚIKSĀDATTAKA](#).

[Parākramabāhu I](#). [alt. Parakkamabāhu I] (r. 1153–1186). Also known as Sirisaṅghabodhi Parakkamabāhu, a Sinhalese king who abolished the [ABHAYAGIRI](#) and [JETAVANA](#) fraternities and unified the Sinhalese [SAMGHA](#) under the banner of the [MAHĀVIHĀRA](#) fraternity. Emulating the example of King [AŚOKA](#), the king first acquainted himself with the rules and regulations of the order so that he could discriminate between compliance and noncompliance with the monastic code. Monks were summoned to be examined by him and a council of elders. Unworthy monks were expelled and were assigned lucrative positions so that they would not reenter the order. Of the three fraternities, only the Mahāvihāra was judged to be in possession of a valid ordination ritual ([UPASAMPADĀ](#)), so monks of the Abhayagiri and Jetavana fraternities were forced to be reordained into the Mahāvihāra fraternity. The [CŪLAVAMSA](#) states that those monks from the Abhayagiri and Jetavana not unfrocked for misconduct were received as novices (P. *samaṇera*; S. [ŚRĀMANERA](#)). At the end of the purification movement, in 1165 CE, the king had a committee of elders draw up a new monastic code on the basis of [DHAMMAVINAYA](#), which was called the *Mahā-Parakkamabāhu-Katikāvata*. This law code was promulgated by the king and, citing Aśoka as a precedent, was made binding on the entire Sinhalese saṅgha. The reforms of Parākramabāhu I are recognized as having influenced (directly or indirectly) the Sinhalese fraternities established at [PAGAN](#) by Chapada Thera and his associates beginning in 1181 CE, as well as [SUKHOTAI](#) Buddhism (fourteenth–fifteenth century), Mon Buddhism (fourteenth–fifteenth century) and the [THUDHAMMA](#) reformation of Burmese Buddhism (late eighteenth century). Later Buddhist historical writings borrowed directly from the *Mahā-Parakkamabāhu-Katikāvata*, including, e.g., *Saddhammasaṅgaha* (fourteenth century) and the [KALYĀNĪ INSCRIPTIONS](#) (fifteenth century).

[Parākramabāhu VI](#). [alt. Parakkamabāhu VI] (r. 1410–1468). A Sinhalese king, who, according to the [CŪLAVAMSA](#), arranged for repeated performances of the [UPASAMPADĀ](#) ordination ceremony. He promulgated a monastic code (katikāvata), which is only partially preserved. In 1423, during his reign, a delegation of thirty-nine Thai and Mon monks headed by either Medhaṅkara (according to [JINAKĀLAMĀLĪ](#)) or Ñāṇagambhīra (according to the [PADAENG CHRONICLE](#)) reached Sri Lanka, where they were trained. In 1424 they were

laicized and reordained into the [MAHĀVIHĀRA](#) order at Kalyāṇī near Colombo. The “Padaeng Chronicle” has the delegation of monks headed by Ñāṇagambhīra arriving in Sri Lanka and receiving ordination in 1419, whence they were trained for five years before returning to the Thai kingdom of [AYUTHAYA](#). In either case, this delegation is credited with inaugurating a second wave of Sinhalese-inspired monastic reforms in the Thai kingdoms. The “Padaeng Chronicle” (but not the *Jinakālamālī*) states explicitly that Ñāṇagambhīra sought training and reordination in Sri Lanka because of numerous deficiencies and heresies in the Thai Buddhist order that had been introduced by the earlier reformer, Sumana. The contested points concern ownership of property, use of money, the ordination procedure, and the setting up of proper [SĪMĀ](#) boundaries for monastic rituals and procedures.

paramāṇu. (T. rdul phra rab; C. jiwei; J. gokumi; K. kŭngmi 極微). In Sanskrit and Pāli, “particle” or “atom”; the smallest unit of matter. Buddhist schools take a variety of positions on the ontological status of such atoms, especially as to whether or not they were divisible or indivisible. Both the [SAUTRĀNTIKA](#) and the [SARVĀSTIVĀDA](#) schools of mainstream Buddhism, for example, held that each paramāṇu was an indivisible unit of matter, but differed on the exact nature of the objects formed through the coalescence of these particles. By contrast, the [MADHYAMAKA](#) school of [MAHĀYĀNA](#) philosophy rejected any such notion of particles, since it did not accept that there was anything in the universe that possessed independent existence ([NIHŠVABHĀVA](#)), and thus the notion of such atoms was simply a convenient fiction. Numerous Mahāyāna [SŪTRAS](#), notably the [AVATAMSAKASŪTRA](#), extol the ability of a buddha to place entire world systems within a single particle without changing either’s size. These Buddhist debates have parallels within both the [JAINA](#) and Hindu traditions. Modern Buddhists have also sought to suggest that apparent parallels between the notion of paramāṇu and modern atomic theory are evidence that Buddhism is consistent with science.

Paramārtha. (C. Zhendi; J. Shindai; K. Chinje 眞諦) (499–569). Indian Buddhist monk, translator, and exegete. Paramārtha is said to have been a native of Ujjayinī in western India. Little is known of his early career, but he became renowned in China after arriving at the capital of Jiangang (near present-day Nanjing) and the court of the Liang-dynasty Emperor Wu (r. 502–549) in 546 CE. Under the patronage of Emperor Wu, Paramārtha began translating the many

scriptures that he is said to have brought with him from India. After a rebellion took the life of the emperor, Paramārtha headed south, where he continued his translation activities with the support of local rulers. His translations include the [SUARNAPRABHĀSOTTAMASŪTRA](#) (552), *Suixiang lun zhong shiliu di shu* (555–556), *Anuttarāśrayasūtra* (557), [MADHYĀNTAVIBHĀGA](#) (558?), and [VIMŚATIKA](#) (563), among others; the apocryphal [DASHENG QIXIN LUN](#) is also said by tradition to have been translated (in 553) by Paramārtha. Another influential anthology attributed to Paramārtha is the *Wuxiang lun* (consisting of the treatises *Zhuanshi lun*, *San wuxing lun*, and *Xianshi lun*), which posits the existence of an immaculate ninth consciousness known as the [AMALAVIJÑĀNA](#) and contends that the eighth consciousness, or [ĀLAYAVIJÑĀNA](#), is impure. These claims were further developed by his followers in the [SHE LUN ZONG](#) exegetical tradition, who based their claims on Paramārtha’s influential translation of the [MAHĀYĀNASAMGRAHA](#). Paramārtha died in 569 while translating the [ABHIDHARMAKOŚABHĀSYA](#). Among his disciples, Huikai (518–568) and Fatai (d. 601) are most famous.

[paramārthabodhicitta](#). (T. don dam byang chub kyi sems). In Sanskrit, the “ultimate aspiration to enlightenment.” In Indian [MAHĀYĀNA](#) scholastic literature, this term is contrasted with the “conventional aspiration to enlightenment” ([SAMVRTIBODHICITTA](#)). This latter term is used to refer to bodhicitta in its more common usage, as the aspiration to achieve buddhahood for the sake of all sentient beings. It is the creation of this aspiration for enlightenment ([BODHICITTOTPĀDA](#)) that marks the beginning of the bodhisattva path and the Mahāyāna path of accumulation ([SAMBHĀRAMĀRGA](#)). The ultimate aspiration or mind of enlightenment refers to the bodhisattva’s direct realization of the ultimate truth. In the case of [MADHYAMA](#), this would be the direct realization of emptiness ([ŚUNYATĀ](#)). Such realization, and hence the ultimate aspiration to enlightenment, occurs beginning on the Mahāyāna path of vision ([DARŚANAMĀRGA](#)) and is repeated on the path of cultivation ([BHĀVANĀMĀRGA](#)).

[paramārthasatya](#). (P. paramatthasacca T. don dam bden pa; C. zhendi/diyiyi di; J.shintai/daiichigitai; K. chinje/cheirüi che 眞諦/第一義諦). In Sanskrit, “ultimate truth,” “absolute truth”; one of the two truths ([SATYADVAYA](#)), along with “conventional truth” ([SAMVRTISATYA](#)). A number of etymologies of the term are provided in the commentarial literature, based on the literal meaning of paramārthasatya as “highest-object truth.” Thus, an ultimate truth is the highest-object truth because it is the object of wisdom ([PRAJÑĀ](#)), the highest form of

consciousness. It is also the highest-object truth because it is the supreme of all factors (dharma). The term paramārtha is variously defined in the Buddhist philosophical schools but refers in general to phenomena that do not appear falsely when directly perceived and that are the objects of wisdom, that is, those dharmas the understanding of which leads to liberation. Thus, Buddhist philosophical schools do not speak simply of a single “ultimate truth” but of ultimate truths. For example, according to [VAIBHĀSIKA](#) school of [SARVĀSTIVĀDA ABHIDHARMA](#), an ultimate truth is anything that cannot be broken into parts, such as particles or atoms ([PARAMĀNU](#)), and persists only for the shortest unit of time, an instant ([KSANA](#)). The term paramārtha is especially associated with the [MADHYAMAKA](#) school, where the ultimate truth is emptiness ([ŚŪNYATĀ](#)); the object qualified by emptiness is a conventional truth ([SAMVRTISATYA](#)).

[Paramārthastava](#). (T. Don dam par bstod pa). In Sanskrit, “Praise of the Ultimate One”; one of the four hymns ([CATUHSTAVA](#)) of [NĀGĀRJUNA](#), along with the [LOKĀTĪTASTAVA](#), [ACINTYASTAVA](#), and [NIRAUPAMYASTAVA](#). All four hymns are preserved in Sanskrit and are cited by Indian commentators, leaving little doubt about their authorship. There is somewhat greater doubt in the case of this text, however, since the Indian commentators, such as [ATIŚA DĪPAMKARAŚRĪJĀNA](#), are from a later period. However, it is very similar in style and content to the *Niraupamyastava*, which is cited by [BHĀVAVIVEKA](#) and other early commentators. The *Paramārthastava* is a brief work in eleven stanzas. It is a hymn of praise to the Buddha from the perspective of the ultimate, acknowledging the dilemma of using worldly conventions to praise the Buddha, who transcends linguistic expression and comparison; the Buddha is described as being without intrinsic nature ([NIHŠVABHĀVA](#)), duality, color, measure, or location. Thus, Nāgārjuna writes, “Thus praised, and praised again, what, indeed, has been praised? All dharmas are empty; who has been praised, and by whom has he been praised?”

[paramārthaviniścayadharmacakra](#). (T. don dam mam par nges pa’i chos ’khor). In Sanskrit, “the dharma wheel for ascertaining the ultimate,” the third of three turnings of the wheel of the dharma ([DHARMAKAKRAPRAVARTANA](#)). The [SAMDHINIRMOCANASŪTRA](#) describes three turnings of the wheel of the dharma by the Buddha: in the first, he taught the [FOUR NOBLE TRUTHS](#) (catvāry āryasatyāni); in the second, he taught emptiness ([ŚŪNYATĀ](#)); and in the third, he taught what was “well differentiated” (suvibhakta). The third of the three turnings of the

wheel of the dharma was delivered in [Vaiśālī](#). The sūtra identifies it as a teaching for [Bodhisattvas](#) and classifies it as definitive ([Nītārtha](#)); this third turning of the wheel is the teaching of the *Samdhinirmocanasūtra* itself. According to the commentators, this third wheel accounts for the Buddha's provisional ([Neyārtha](#)) statements in the first wheel of the dharma (see [Catuḥsatyadharmacakra](#)), namely, that the four noble truths exist; and his apparently contradictory statement in his second wheel of the dharma in the [Prajñāpāramitā Sūtras](#) (perfection of wisdom sūtras) (see [Alaṅkāradharmacakra](#)) that all dharmas are “unproduced, unceased, primordially peaceful, and naturally passed beyond sorrow.” Here, in this third and definitive teaching, also called “the dharma wheel that makes a fine delineation” ([*Suvibhaktadharmacakra](#)), he says that dharmas have three natures ([Trisvabhāva](#)), and each of those in its own way lacks an intrinsic nature ([Svabhāva](#)). The three natures are the [Parikalpita](#) or imaginary nature of dharmas, the [Paratantra](#) or dependently arisen nature of dharmas, and the [Pariniṣpanna](#) or consummate nature of dharmas. In Tibet, there was a debate that extended over centuries as to whether the paramārthaviniścayadharmacakra, this third turning of the wheel, according to the *Samdhinirmocanasūtra*, was provisional or definitive. See [Rang Stong Gzhan Stong](#).

[Paramatthadīpanī](#). In Pāli, “Lamp on the Ultimate Truth” (S. [Paramārtha](#)), a commentary on the [Udāna](#), [Itivuttaka](#), [Vimānavatthu](#), [Petavatthu](#), [Theragāthā](#) and [Therīgāthā](#) of the [Khuddakanikāya](#) by the post-fifth-century CE exegete [Dhammapāla](#); this exegesis is also called the Vimalavilāsinī. ¶ The *Paramatthadīpanī* is also the name of a modern critique of the *Porāṇaṭṭikā* written in Pāli by [Ledi Sayadaw](#).

[Paramatthajōtikā](#). In Pāli, “Illumination of the Ultimate Truth” (S. [Paramārtha](#)), a commentary on the [Khuddakapāṭha](#), [Dhammapada](#), [Suttanipāṭa](#), and [Jātaka](#) of the [Khuddakanikāya](#), attributed to the great fifth-century exegete [Buddhaghosa](#).

[Paramatthamañjūsā](#). In Pāli, “Container of the Ultimate Truth” (S. [Paramārtha](#)), a commentary on [Buddhaghosa](#)'s [Visuddhimagga](#) by the post-fifth-century scholar [Dhammapāla](#). This commentary is also often referred to in the literature as the “Great Subcommentary” (*Mahāṭṭikā*).

[paramatthasaṅgha](#). (S. paramārthasaṅgha; T. don dam pa'i dge 'dun; C.

shengyi seng; J. shōgisō; K. sŭngŭisŭng 勝義僧). In Pāli, “ultimate community”; a technical term used in the Pāli commentaries to answer the question of what precisely constitutes the [SAMGHA](#) jewel among the three jewels ([RATNATRAYA](#)), as in the refuge ([ŚARANA](#)) formula, “I go for refuge to the saṃgha.” That is, does the saṃgha constitute the larger community of the Buddhist faithful, only those who have been ordained as monks or nuns, or only those who achieved some level of enlightenment? According to the Pāli tradition, the paramatthasaṃgha consists of the seven and/or eight dakkhiṇeyyapuggala (S. dakṣiṇīyapudgala), or “person(s) worthy to receive gifts,” described in the [DĪGHANIKĀYA](#). In keeping with the canonical definition of noble persons (P. ariyapuggala; S. [ĀRYAPUDGALA](#)), the term paramatthasaṃgha thus refers specifically to ordained monks and nuns who have reached any of the four [ĀRYA](#) paths: that of (1) sotāpanna (S. [SROTAĀPANNA](#)), or stream-enterer, (2) sakkadāgāmi (S. [SAKRDĀGĀMIN](#)), or once-returner, (3) anāgāmi (S. [ANĀGĀMIN](#)), or nonreturner, and (4) arahant (S. [ARHAT](#)), or worthy one. Technically speaking, then, this advanced paramatthasaṃgha group constitutes the saṃgha jewel. The paramatthasaṃgha is contrasted in the Pāli commentaries with the [SAMMUTISANĠHA](#) (S. saṃvṛtisaṃgha) or “conventional saṃgha,” which is comprised of monks and nuns who are still puthujjanas (S. [PRTHAGJANA](#)), or ordinary unenlightened persons. Since the paramatthasaṃgha refers only to those who are both enlightened and ordained, the term necessarily excludes all laymen, enlightened or otherwise, as well as any nonhuman beings (such as divinities, etc.) even if they are enlightened, for nonhuman beings are ineligible for ordination as monks or nuns. Also excluded are all [BODHISATTVA](#)s, since by definition in the Pāli tradition bodhisattvas remain unenlightened persons until the night that they attain buddhahood. Buddhas are also excluded from the paramatthasaṃgha because they comprise the buddha jewel among the three jewels. While novices technically are outside the saṃgha by virtue of not having yet received higher ordination ([UPASAMPADĀ](#)), enlightened novices are nevertheless included in the paramatthasaṃgha as objects of refuge.

[pāramitā](#). (P. pāramī; T. pha rol tu phyin pa; C. boluomi; J. haramitsu; K. paramil 波羅蜜). In Sanskrit, “perfection,” a virtue or quality developed and practiced by a [BODHISATTVA](#) on the path to becoming a buddha. The term is paranomastically glossed by some traditional commentators as “gone beyond” or “gone to the other side” (see [PARA](#)), although it seems in fact to derive from Skt. parama, meaning “highest” or “supreme.” The best-known enumeration of the

perfections is a group of six: giving ([DĀNA](#)), morality ([ŚĪLA](#)), patience or forbearance ([KSĀNTI](#)), effort ([VĪRYA](#)), concentration ([DHYĀNA](#)), and wisdom ([PRAJÑĀ](#)). There are also lists of ten perfections. In the [MAHĀYĀNA](#) (specifically in the [DAŚABHŪMIKASŪTRA](#)), the list of ten includes the preceding six, to which are added method ([UPĀYA](#)), vow ([PRANIDHĀNA](#)), power ([BALA](#)), and knowledge ([JÑĀNA](#)), with the explanation that the bodhisattva practices the perfections in this order on each of the ten bodhisattva stages or grounds ([BHŪMI](#)). Thus, giving is perfected on the first bhūmi, morality on the second, and so on. In Pāli sources, where the perfections are called pāramī, the ten perfections are giving (dāna), morality (sīla), renunciation (nekkhamma; S. [NAISKRAMYA](#)), wisdom (paññā), effort (viriya), patience (khanti), truthfulness (sacca; S. [SATYA](#)), determination (adhiṭṭhāna; S. [ADHISTHĀNA](#)), loving-kindness (mettā; S. [MAITRĪ](#)), and equanimity (upekkhā; S. [UPEKṢĀ](#)). The practice of these perfections over the course of the many lifetimes of the bodhisattva's path eventually fructifies in the achievement of buddhahood. The precise meaning of the perfections is discussed at length, as is the question of how the six (or ten) are to be divided between the categories of merit ([PUNYA](#)) and wisdom ([JÑĀNA](#)). For example, according to one interpretation of the six perfections, giving, morality, and patience contribute to the collection of merit ([PUNYASAMBHĀRA](#)); concentration and wisdom contribute to the collection of wisdom ([JÑĀNASAMBHĀRA](#)), and effort contributes to both. Commentators also consider what distinguishes the practice of these six from other instances of the practice of giving, etc. Some [MADHYAMAKA](#) exegetes, for example, argue that these virtues only become perfections when the bodhisattva engages in them with an understanding of emptiness ([ŚŪNYATĀ](#)); for example, giving a gift without clinging to any conception of giver, gift, or recipient.

[pāramitāyāna](#). (T. phar phyin theg pa). In Sanskrit, “perfection vehicle.” In scholastic tantric literature, the [MAHĀYĀNA](#) is sometimes divided into the pāramitāyāna and the [VAJRAYĀNA](#), with the former referring to the path of the [BODHISATTVA](#), set forth in Mahāyāna sūtras and focused on the practice of the six perfections ([PĀRAMITĀ](#)). The vajrayāna is represented as a faster and more effective route, set forth in the tantras, to the same goal of buddhahood. In this way, the Mahāyāna is represented as having both exoteric and esoteric forms. The pāramitāyāna is also called the pāramitānaya, or “perfection mode.”

[paramparā](#). (T. rgyud pa; C. xiangcheng; J. sōjō; K. sangsŭng 相承). In Sanskrit and Pāli, “succession,” “lineage”; a lineage of teachers and disciples

(*ācāryaparamparā*), through which the specific teachings and practices of a teacher are transmitted down through successive generations of students. The term, also important in both Hindu and [JAINA](#) traditions, has the sense of instructions passed down orally from master to disciple over the generations. In Buddhism, *paramparā* refers most often to a transmission of teachings that can be traced from the present time and place back to India and to the Buddha. Although such transmission is particularly important in Buddhist [TANTRA](#) and in the [CHAN](#) traditions of East Asia, it is a dominant element throughout the Buddhist world, including the ordination lineages of monks and nuns. See also [CHUANDENGLU](#); [FASI](#); [YINKE](#).

[paranirmitavaśavartin](#). (P. *paranimmitavasavatti*; T. *gzhan 'phrul dbang byed*; C. *tahuazizai tian*; J. *takejizaiten*; K. *t'ahwajajaech'ŏn* 他化自在天). In Sanskrit, “controlling the emanations of others,” the sixth and highest of the six heavens of the sensuous realm ([KĀMADHĀTU](#)). This heaven is so named because the divinities there not only control their own emanations or creations (as do the divinities of the heaven of the enjoyment of creation, or [NIRMĀNARATI](#)), but also have the ability to control the emanations of other beings. They are the tallest and longest-lived of all divinities in the sensuous realm.

[paraprasiddhānumāna](#). (T. *gzhan la grags pa'i rjes dpag*). In Sanskrit, lit. “inference familiar to another,” a term in Buddhist logic, important especially in the [MADHYAMAKA](#) school of Indian Buddhist philosophy. Similar to the case of [PARĀRTHĀNUMĀNA](#) (“inference for others”), *paraprasiddhānumāna* refers not to the mental conclusion or an inference drawn from evidence but rather to a logical argument made to an opponent. In this case, “inference familiar to another” refers to an argument consisting of elements that (1) the person stating the argument does not accept and (2) that the opponent accepts (or does not reject). The argument is stated with the intention of causing the opponent to draw the correct conclusion, that is, a conclusion contrary to his own tenets. It is generally the case in Indian logic that all elements of the syllogism must be accepted by both parties in a debate; such a syllogism is referred to as an “autonomous syllogism” ([SVATANTRĀNUMĀNA](#); [SVATANTRAPRAYOGA](#)). This is not the case with the inference familiar to another, in which the elements of the syllogism are accepted only by the opponent. In the Madhyamaka school, there was a controversy over whether such syllogisms were acceptable when a Madhyamaka adherent debated with a proponent of another school. The locus

classicus of the controversy is the debate between [BHĀVAVIVEKA](#) and [CANDRAKĪRTI](#) concerning [BUDDHAPĀLITA](#)'s commentary on the first chapter of [NĀGĀRJUNA](#)'s [MŪLAMADHYAMAKAKĀRIKĀ](#). It was Candrakīrti's position that the Madhyamaka should use only consequences ([PRASAṄGA](#)) or an inference familiar to others; to use an autonomous syllogism implied acceptance of intrinsically established relations among the elements of the syllogism. Bhāvaviveka had argued that it was necessary for the Madhyamaka to state an autonomous syllogism at the conclusion of a debate. Based on this controversy, the terms [*SVĀTANTRIKA](#) and [*PRĀSAṄGIKA](#) were coined retrospectively in Tibet to describe later developments within the Indian Madhyamaka school.

parārtha. (T. gzhan don; C. lita; J. rita; K. it'a 利他). In Sanskrit, “welfare of others,” “benefiting others.” As part of his training, a [BODHISATTVA](#), out of his concern for the welfare of others, willingly relinquishes motivations and deeds that would lead to his own personal benefit. For example, in the [JĀTAKA](#) stories, the bodhisattva repeatedly sacrifices his own welfare, and often his own life, for the benefit of others. This compassionate motivation is contrasted with the more selfish motivation of “benefiting oneself” ([SVĀRTHA](#)). However, it is said that through the practice of the bodhisattva path, one achieves buddhahood in which both of these two aims ([ARTHA](#)) are fulfilled. The welfare of others is fulfilled because the bodhisattva becomes a buddha who teaches the dharma to sentient beings. The welfare of oneself (that is, the bodhisattva himself) is fulfilled because, by achieving buddhahood, the bodhisattva achieves omniscience and liberation from rebirth.

parārthānumāna. (T. gzhan don rjes dpag; C. tabiliang; J. tahiryō; K. t'apiryang 他比量). In Sanskrit, “inference for others,” a key term in Buddhist logic. Two types of inference ([ANUMĀNA](#)) are set forth: inference for oneself ([SVĀRTHĀNUMĀNA](#)) and inference for others. The former generally refers to the mental process of inference whereby a conclusion is arrived upon based on evidence. In contrast, inference for others is not an inference in a technical sense but only metaphorically. It refers to the statement that would be made to another person, such as an opponent in a debate, in order for that person to arrive at the correct conclusion. Precisely what constitutes such a statement—especially how much and how little is to be said—is a major topic of Buddhist logic. For example, there is discussion of whether the actual conclusion that one wishes the other person to draw must be formally stated, or not. In a standard example of an

inference for others, the conclusion would not be stated. Thus, to someone who thought that sound is permanent, one might say: “Whatever is produced is impermanent, such as a clay pot. Sound is produced.” The fourth chapter of [DHARMAKĪRTI](#)’s [PRAMĀNAVĀRTTIKA](#) is devoted to the topic of inference for others. See [PARAPRASIDDHĀNUMĀNA](#).

[parasambhogakāya](#). (C. ta shouyong shen; J. tajuyūshin; K. t’a suyong sin 他受用身). In Sanskrit, “body intended for others’ enjoyment”; one of the four types of buddha bodies ([BUDDHAKĀYA](#)) discussed in the [BUDDHABHŪMIŚĀSTRA](#) (C. *Fodijing lun*), the [MAHĀYĀNASAMGRAHA](#) (C. *She dasheng lun*), and the [CHENG WEISHI LUN](#) (S. **Vijñaptimātratāsiddhi*), along with the “self-nature body” ([SVABHĀVAKĀYA](#)), “body intended for personal enjoyment” ([SVASAMBHOGAKĀYA](#)), and “transformation body” ([NIRMĀNAKĀYA](#)). This fourfold schema of buddha bodies derives from the better-known three bodies of a buddha ([TRIKĀYA](#))—viz., dharma body ([DHARMAKĀYA](#)), reward body ([SAMBHOGAKĀYA](#)), and transformation body (nirmānakāya)—but distinguishes between two different types of enjoyment bodies. The first, the svasambhogakāya, derives from the countless virtues that originate from the accumulation of immeasurable merit and wisdom over a buddha’s infinitely long career; this body is a perfect, pure, eternal, and omnipresent material body that enjoys the bliss of dharma ([DHARMAPRĪTI](#)) for oneself until the end of time. By contrast, the parasambhogakāya is a subtle virtuous body deriving from the wisdom of equality ([SAMATĀJÑĀNA](#)), which resides in a [PURE LAND](#) and displays supernatural powers in order to enhance the enjoyment of the dharma by bodhisattvas at all ten stages of the bodhisattva’s career ([BODHISATTVABHŪMI](#)).

[paratantra](#). (T. gzhan dbang; C. yitaqi xing; J. etakishō; K. ūit’agi sōng 依他起性). In Sanskrit, lit., “other-powered,” viz., “dependent”; the second of the three natures ([TRISVABHĀVA](#)), a central tenet of the [YOGĀCĀRA](#) school in which all phenomena are classified as having three natures: an imaginary ([PARIKALPITA](#)), dependent (paratantra), and consummate ([PARINIŠPANNA](#)) nature. In the Yogācāra system, external objects do not exist as materially distinct entities that are separate from the consciousness that perceives them. According to this school, the perception of forms, sounds, smells, and so on is produced not by an external sensory stimulus, but from the ripening of karmic seeds ([BĪJA](#)); i.e., from residual impressions (literally “perfumings”; see [VĀSANĀ](#)) left by earlier perceptions of a similar type. The paratantra is the category of dependently originated,

impermanent phenomena that arise from seeds stored in the foundational consciousness ([ĀLAYAVIJÑĀNA](#)), seeds that fructify as states of consciousness. Sentient beings do not comprehend the paratantra nature because sense experience is distorted by subject-object bifurcation (see [GRĀHYAGRĀHAKAVIKALPA](#)), called the imaginary (parikalpita) nature. The paratantra category encompasses all impermanent phenomena, which are produced in dependence on causes and conditions. The [SAMDHINIRMOCANASŪTRA](#) describes the paratantra as lacking any intrinsic nature of production (utpattiniḥsvabhāvata); that is, no impermanent phenomenon can produce itself. They provide for the functioning of [SAMSĀRA](#) and the path to [NIRVĀNA](#) and enlightenment ([BODHI](#)). However, they also serve as the basis of misconceptions (parikalpita) due to ignorance, which falsely imagines objects to be separate entities from the consciousness that perceives them. The absence of this falsely imagined separation with regard to dependent phenomena is called the consummate (pariniṣpanna).

[parātmaparivartana](#). (T. bdag gzhan brje ba). In Sanskrit, “exchange of self and other,” a method for developing [BODHICITTA](#), or the aspiration to achieve buddhahood in order to liberate all beings from suffering. As described by [ŚĀNTIDEVA](#) in the eighth chapter of his [BODHICARYĀVATĀRA](#), the [BODHISATTVA](#) should take one’s natural sense of self-cherishing and transfer that to others, while taking one’s natural disregard for others and transfer that to oneself. In this way, one can then seek the welfare of others as one once sought one’s own welfare, and abandon one’s own welfare as one once abandoned the welfare of others. The goal is for the bodhisattva to develop the aspiration to give all of one’s happiness to others and to take all of the sufferings of others upon oneself.

[parātmamasamatā](#). (T. bdag gzhan mnyam pa; C. zita pingdeng; J. jita byōdō; K. chat’a p’yōngdŭng 自他平等). In Sanskrit, “equalizing self and other,” a method for developing [BODHICITTA](#), or the aspiration to achieve buddhahood in order to liberate all beings from suffering. In the eighth chapter of his [BODHICARYĀVATĀRA](#), [ŚĀNTIDEVA](#), drawing apparently on the *Tathāgataguhyasūtra*, explains that there is no reason to cherish oneself over others, because both oneself and others equally wish for happiness and equally wish to avoid suffering. If suffering is to be dispelled, it should be done without distinguishing whether that suffering is experienced by oneself or by another sentient being. This equalizing of self and other is considered a prerequisite for

the “exchange of self and other” ([PARĀTMAPARIVARTANA](#)).

[paricchedarāmarāṇa](#). (C. fenduan shengsi; J. bundan shōji; K. pundan saengsa 分段生死). In Sanskrit, “determinative birth-and-death,” one of the two categories of [SAMSĀRA](#) as delineated in the [CHENG WEISHI LUN](#) (**Vijñaptimātratāsiddhi*), along with transfigurational birth-and-death ([PARINĀMIKAJARĀMARĀṆA](#)); this is saṃsāra as experienced by ordinary sentient beings taking rebirth within the three realms of existence ([TRAIDHĀTUKA](#)). (In this compound, jarāmarāṇa does not mean only “old age and death,” but is used as an abbreviation for the whole panoply of human experience, viz. “birth, old age, sickness, and death.”) While the mind-made bodies ([MANOMAYAKĀYA](#)) of [ARHATS](#) or great [BODHISATTVAS](#) may undergo transfigurational birth-and-death (*pariṇāmikajarāmarāṇa*) and are thus able to change their appearance and life span at will, the physical bodies of ordinary sentient beings are restricted in their longevity, appearance, and size and are thus subject to determinative birth-and-death. The main causes and conditions that lead to determinative birth-and-death are contaminated action ([SĀSRAVA-KARMAN](#)) and the afflictive obstructions ([KLEŚĀVARANA](#)); transfigurational birth-and-death is instead conceived to result from uncontaminated action ([ANĀSRAVA-KARMAN](#)) and the cognitive obstructions ([JÑEYĀVARANA](#)) that still remain even after overcoming the afflictive obstructions.

[parihāni](#). (P. parihāni; T. yongs su nyams pa; C. tui; J. tai; K. t’oe 退). In Sanskrit, lit., “diminution,” “retrogression,” or “backsliding” from virtuous states that had previously been cultivated or mastered. Parihāni refers specifically to the diminution of mental states that had been directed toward liberation ([VIMUKTI](#)), which allows mental disturbances to reappear and thus causes regression to previous habitual tendencies involving unwholesome or mundane thoughts and activities. The term often appears in debates concerning the issue of whether the noble persons ([ĀRYAPUDGALA](#)) are subject to backsliding. Such [MAINSTREAM BUDDHIST SCHOOLS](#) as the [MAHĀSĀMGIKA](#), [SARVĀSTIVĀDA](#), and [SAMMITĪYA](#) argued, for example, that [ARHATS](#) were subject to backsliding because they were still prone to vestigial negative proclivities of mind ([ANUŚAYA](#)), even if those only manifested themselves while the monks were sleeping, e.g., nocturnal emissions. The [STHAVIRANIKĀYA](#) argued that arhats were not subject to backsliding since they had perfected all the necessary stages of training and were free from such proclivities. Related to this issue are

discussions concerning the status of once-returners ([SAKRDĀGĀMIN](#)) and nonreturners ([ANĀGĀMIN](#)): the majority of schools posited that once-returners and nonreturners could regress to the status of the stream-enterer ([SROTAĀPANNA](#)), the first level of sanctity, but that the status of the stream-enterer was not subject to retrogression and was thus inviolate. In the [PURE LAND](#) tradition, backsliding is a core rationale justifying the pure land teachings, since, in the world of [SAMSĀRA](#), backsliding is inevitable for all except the most resolute practitioners. According to the [AMITĀBHASŪTRA](#), for example, sentient beings have accumulated karmic burdens since time immemorial and are invariably subject to backsliding; thus, they will never be able to escape from the endless cycle of birth-and-death on their own. For this reason, the buddha [AMITĀBHA](#) encourages them to seek rebirth in the pure land, instead, where they will have no hindrances to their eventual attainment of liberation. In the [MAHĀYĀNA](#) tradition, reaching the stage where there no longer is any prospect of regression is a crucial threshold on the path to liberation. Different scriptures place this point of nonbacksliding at different stages along the path. One of the most common explanations about which stage is “irreversible” ([AVAIVARTIKA](#)) appears in the [DAŚABHŪMIKASŪTRA](#), which locates it on the eighth stage ([BHŪMI](#)), the “immovable” ([ACALĀ](#)), where further progress is assured and where there is no possible of retrogressing to a preceding stage. However, [HARIBHADRA](#) in his commentary on the [ABHISAMAYĀLAMKĀRA](#) identifies two earlier points at which the bodhisattva becomes irreversible, one on the path of preparation ([PRAYOGAMĀRGA](#)) and one on the path of vision ([DARŚANAMĀRGA](#)).

[parikalpita](#). (T. kun btags; C. bianji suozhi xing; J. henge shoshūshō; K. pyōn'gye sojip sōng 遍計所執性). In Sanskrit, “imputed,” “imaginary,” or “artificial,” the first of the three natures ([TRISVABHĀVA](#)), a central tenet of the [YOGĀCĀRA](#) school, in which all phenomena are classified as having three natures: an imaginary (parikalpita), dependent ([PARATANTRA](#)), and consummate ([PARINISPANNA](#)) nature. The Yogācāra “mind only” ([CITTAMĀTRA](#)) system expounded in the [YOGĀCĀRABHŪMI](#), [MADHYĀNTAVIBHĀGA](#), [MAHĀYĀNASŪTRĀLAMKĀRA](#), and the commentaries of [ASAṄGA](#) and [VASUBANDHU](#) asserts that external objects do not exist as materially different entities, separate from the consciousness that perceives them; all ordinary appearances are distorted by subject-object bifurcation (see [GRĀHYAGRĀHAKAVIKALPA](#)). Forms, sounds, and so on are only seen by ordinary persons in their imaginary (parikalpita) nature. In this system, which denies the existence of external

objects, the imaginary refers to the falsely perceived nature of objects as entities that exist separate from the consciousness that perceives them. Karmic seeds ([BĪJA](#)), classified as dependent (paratantra), fructify to produce both the perceiving consciousness and the perceived object. However, due to ignorance ([AVIDYĀ](#)), subject and object are imagined to be distant from each other, with objects constituting an external world independent of the consciousness that perceives it. The constituents of such an external world are deemed imaginary (parikalpita). The term parikalpita is also used by [DHARMAKĪRTI](#) and his Yogācāra followers, who assert that the grāhyagrāhakavikalpa distortion makes objects appear to be naturally the bases of the terms used to designate them although they in fact do not. The [SAMDHINIRMOCANASŪTRA](#) describes the parikalpita as lacking the nature of characteristics (lakṣaṇaniḥsvabhāvatā).

[parikalpitakleśāvaraṇa](#). (T. nyon sgrub kun btags; C. fenbie huo; J. funbetsuwaku; K. punbyöl hok 分別惑). In Sanskrit, “imaginary” or “artificial” “afflictive obstructions,” those obstructions ([ĀVARANA](#)) to liberation that derive from mistaken conceptions of self ([ĀTMAN](#)) generated through the study of flawed philosophical systems in the present lifetime. This type is in distinction to [SAHAJAKLEŚĀVARANA](#), “innate afflictive obstructions,” which derive from the mistaken conceptions of self generated and reinforced over the course of many lifetimes. In progressing along the path to liberation, the parikalpitakleśāvaraṇa are said to be easier to abandon than the sahajakleśāvaraṇa.

[parikalpitasvabhāva](#). (T. kun brtags kyī mtshan nyid). See [PARIKALPITA](#).

[parikalpitātmagraha](#). (T. bdag ’dzin kun btags; C. fenbie wozhi; J. funbetsugashū; K. punbyöl ajip 分別我執). In Sanskrit, “artificial conception of self,” a term used to refer to the conception of self acquired during a human lifetime through the study of false systems of tenets, such as those that assert the existence of a permanent self or soul ([ĀTMAN](#)). It is contrasted with the “innate conception of self” ([SAHAJĀTMAGRAHA](#)), the deep-seated conception of self that is carried by all sentient beings from lifetime to lifetime. Those on the path to enlightenment abandon the artificial conception of self more easily than the innate conception of self.

[parikalpitāvidyā](#). (T. kun btags ma rig pa; C. fenbie wuming; J. funbetsumumyō; K. punbyöl mumyōng 分別無明). In Sanskrit, “imaginary” or “artificial ignorance”; the form of ignorance that derives from the study and

adoption of mistaken philosophical views during the present lifetime of a human being. It is thus more superficial and more easily overcome than the “innate ignorance” ([SAHAJĀVIDYA](#)) that is accumulated over the course of many lifetimes. Because of its more superficial nature, imaginary ignorance is not cited as the cause of cyclical existence; rebirth is instead said to be caused by innate ignorance. Imaginary ignorance is, however, understood to be the cause of the multitude of wrong views ([MITHYĀDRSTI](#)) regarding the nature of the self.

[parikammanimitta](#). In Pāli, “preparatory image” or “preliminary sign;” the first of the three major visualization signs experienced in tranquillity (P. *samatha*; S. [ŚAMATHA](#)) exercises, along with the [UGGAHANIMITTA](#) (eidetic image) and the [PATIBHĀGANIMITTA](#) (representational or counterpart image). Any object of attention, such as a visualization device ([KASINA](#)) that is used in the initial development of concentration, is termed a parikammanimitta. Generally, these devices involve visual objects such as fire, a circle of earth, or a particular color, though the breath may also be considered a parikammanimitta. These three signs and the meditative exercises employed to experience them are discussed in detail in [BUDDHAGHOSA](#)’s [VISUDDHIMAGGA](#), where they are listed sequentially according to the degree of concentration necessary for them to appear. In these exercises, the meditator attempts to convert a visual object of meditation, such as earth, fire, or a color, into a mental projection or conceptualization that is as clear as the visual image itself. The image the practitioner views with his eyes is called the parikammanimitta or “preparatory image,” and the effort the practitioner makes is called parikkammabhāvanā. When that parikammanimitta is equally clear when visualized in the mind, the practitioner is then said to have obtained the uggahanimitta (eidetic image). Even that image, however, still represents a relatively weak degree of concentration, and it must be enhanced until the paṭibhāganimitta, or “counterpart image,” emerges, which marks the access to meditative absorption (P. [JHĀNA](#), S. [DHYĀNA](#)).

[parikkamasamādhi](#). In Pāli, “preparatory concentration”; a preliminary degree of concentration established at the beginning of a meditative development; parikkamasamādhi takes as its object an initial mental image called the [PARIKAMMANIMITTA](#) (preparatory image). The parikkamanimitta can be developed on the basis of any number of mental or physical objects used as supports. One such object could be, for example, a blue circle used as an external visualization device ([KASINA](#)). The preparatory image so generated is

crude, weak, and unstable. With the deepening of concentration, however, the image becomes refined, at which point it is called an “eidetic image” ([UGGAHANIMITTA](#)). Through increased concentration, the [uggahanimitta](#) eventually is displaced by a clear luminous image called the “representational” or “counterpart” “image” ([PATIBHĀGANIMITTA](#)), at which point the mind enters the next stage of concentration, called [UPACĀRASAMĀDHI](#) or “access concentration,” which may eventually develop into thoroughgoing “meditative absorption” (P. [JHĀNA](#); S. [DHYĀNA](#)).

[pariṇāmanā](#). (T. yongs su bsngo ba; C. huixiang; J. ekō; K. hoehyang 廻向). In Sanskrit, “dedication,” the practice of mentally or ritually directing the merit ([PUNYA](#)) produced from a virtuous ([KUŚALA](#)) deed or deeds ([KARMA](#)) to a particular aim. Merit may be dedicated to the benefit of all sentient beings or to the benefit of a specific person or persons (such as a family member), but the term is used especially to refer to the dedication of the merit accumulated by a [BODHISATTVA](#) to the greater goal of achieving buddhahood so that one may be able to liberate all beings from suffering. Merit may also be dedicated toward the goal of a rebirth in a specific realm (such as a [PURE LAND](#) or the heavens) in the next lifetime. The dedication of merit is a standard element of Mahāyāna ritual ([PŪJĀ](#)) and meditative practices and is often praised as a means of protecting virtuous faculties ([KUŚALAMŪLA](#)) from being destroyed by unwholesome states of mind. See also [PATTIDĀNA](#).

[pariṇāmikajarāmarāṇa](#). [alt. pariṇāmikijarāmarāṇa] (C. bianyi shengsi; J. henyaku shoji; K. pyōnyōk saengsa 變易生死). In Sanskrit, “transfigurational birth-and-death,” one of the two categories of [SAMSĀRA](#) as delineated in the [CHENG WEISHI LUN](#) (**Vijñaptimātratāsiddhi*), along with determinative birth-and-death ([PARICCHEDAJARĀMARĀNA](#)); this is [saṃsāra](#) as experienced by an [ARHAT](#) or great [BODHISATTVA](#) ([vaśitāprāptabodhisattva](#)). (In this compound, [jarāmarāṇa](#) does not mean only “old age and death,” but is used as an abbreviation for the whole panoply of human existence, *viz.* “birth, old age, sickness, and death.”) Since these noble ([ĀRYA](#)) beings have already achieved some measure of enlightenment, when they undergo rebirth and death in the three realms of existence ([TRAIDHĀTUKA](#)), these occur as a “transfigurational birth-and-death” of the “mind-made body” ([MANOMAYAKĀYA](#)), not a “determinative birth-and-death” of the physical body. Although these beings have overcome the afflictive obstructions ([KLEŚĀVARANA](#)) that tie one to the cycle of [saṃsāra](#) (and specifically

to paricchadajarāmarāṇa), they may still be subject to the cognitive obstructions ([JÑEYĀVARANA](#)) that block full understanding ([JÑĀNA](#)); thus, while they may still engage in actions, these are non-karma-producing actions (viz., “uncontaminated actions,” or [ANĀSRAVAKARMAN](#)) that do not lead to a determinative rebirth. While such beings may then appear to be reborn, these rebirths are actually transfigurations of their mind-made bodies (manomayakāya), which may be manipulated at will to change their appearances or to extend their life spans indefinitely.

parinirvāṇa. (P. parinibbāna; T. yongs su mya ngan las 'das pa; C. banniepan; J. hatsunehan; K. panyōlban 般涅槃). In Sanskrit, “final nirvāṇa” or “complete nirvāṇa,” the final passage into [NIRVĀNA](#) upon the death of a buddha or an [ARHAT](#). The term is most widely associated with the passing away of the buddha [ŚĀKYAMUNI](#). Delineations of the Buddhist path set forth the experience of nirvāṇa in two phases. The first occurs when all of the causes for future rebirth have been destroyed, at which point one becomes an arhat or a buddha. However, the karmic seed that had fructified as the final lifetime has not yet run its full course, and thus the enlightened person does not instantly die and pass into nirvāṇa, but instead lives out the remainder of his or her lifetime. This type of nirvāṇa is sometimes called the “nirvāṇa with remainder” ([SOPADHIŚESANIRVĀNA](#)). When the term of the last lifetime comes to an end, there is a total extinction of all conventional physical and mental existence because the adept has previously brought an absolute end to any propensity toward defilement ([KLEŚA](#)) and eradicated all the causes that would lead to any prospect of future rebirth. The nirvāṇa that is experienced at death is thus “without remainder” ([ANUPADHIŚESANIRVĀNA](#)), because there are no physical or mental constituents remaining that were the products of previous [KARMAN](#); the “nirvāṇa without remainder” is therefore synonymous with parinirvāṇa. The parinirvāṇa of the Buddha is one of the most important scenes in all of Buddhist art and literature. It is described at length in both the eponymous Pāli [MAHĀPARINIBBĀNASUTTA](#) and Sanskrit [MAHĀPARINIRVĀNASŪTRA](#). Images of the “reclining buddha” depict the buddha at the time of his parinirvāṇa.

pariniṣpanna. (T. yongs su grub pa; C. yuanchengshi xing; J. enjōjisshō; K. wōnsōngsil sōng 圓成實性). In Sanskrit, “perfected” or “consummate,” the third of the three natures ([TRISVABHĀVA](#)), a central tenet of the [YOGĀCĀRA](#) school, in which all phenomena are classified as having three natures: an imaginary

([PARIKALPITA](#)), dependent ([PARATANTRA](#)), and consummate (pariniṣpanna) nature. Pariniṣpanna is the emptiness or lack of an imaginary external world (bāhyārtha) materially different from the consciousness that perceives it. The paratantra category encompasses the conventional truth ([SAMVRTISATYA](#)) of dependently originated impermanent phenomena that arise from seeds stored in the foundational consciousness ([ĀLAYAVIJÑĀNA](#)). The pariniṣpanna category is their ultimate truth ([PARAMĀRTHASATYA](#)). Thus pariniṣpannasvabhāva, the consummate nature, is an absence of an object that is different in nature from the consciousness that perceives it. The consummate (pariniṣpanna) is sometimes defined as the absence of the imaginary (parikalpita) in the dependent (paratantra). The consummate nature is the highest reality according to Yogācāra; the [SAMDHINIRMOCANASŪTRA](#) describes it as paramārthaniḥsvabhāva, the “lack of intrinsic nature, which is the ultimate.”

[pariniṣpannasvabhāva](#). (S). See [PARINIŠPANNA](#).

[parisad](#). (P. parisā; T. 'khor; C. zhonghui; J. shue; K. chunghoe 衆會). In Sanskrit, “following,” “assembly,” or “congregation”; the followers of the buddha, said to consist of four groups: monks ([BHIKSU](#)), nuns ([BHIKSUNĪ](#)), male lay disciples ([UPĀSAKA](#)), and female lay disciples ([UPĀSIKĀ](#)). The term is often used to designate the followers of the Buddha collectively, whereas the term [SAMGHA](#) is generally used in a more limited sense to designate the ordained followers, or the enlightened ordained. See [ĀRYASAMGHA](#); [PARAMĀRTHASAMGHA](#).

[pariskāra](#). (P. parikkhāra; T. yo byad; C. ziju/daoju; J. shigu/dōgu; K. chagu/togu 資具/道具). In Sanskrit, “requisites,” “personal belongings,” “equipment”; the minimal possessions of food, shelter, and clothing that Buddhist monks and nuns were permitted to possess as “requisites” for their physical survival. A list of four such requisites is commonly found in the [VINAYA](#) literature: robes ([CĪVARA](#); [TRICĪVARA](#)); alms bowl ([PĀTRA](#)); seat and bed (śayanāsana); and medicine to cure illness (glānapratyayabhaiṣajya). In the Pāli recension of the vinaya, there are eight requisites: (1) the three robes, consisting of the inner robe ([ANTARAVĀSAKA](#)), the upper robe ([UTTARĀSAṄGA](#)), and a cloak or shawl ([SAMGHĀTĪ](#)); (2) a waist band or belt (kāyabandhana); (3) an alms bowl (P. patta; S. pātra); (4) a sitting mat (nisīdana); (5) a piece of cloth for filtering water to prevent the accidental death of insects (P. parissāvana; S. [PARISRĀVANA](#)); (6) a jug for collecting water (dhammakaraka); (7) sewing needles kept in a small box (sūcighara); and (8) a razor for shaving (vāsi). There

is also a list of thirteen, one version of which includes the three robes, a mat, two undergarments, two garments for absorbing perspiration, a face towel, a towel for the body, a bandage, a cloth for catching hair when shaving, and a cloth bag for medicines. There are also lists of eighteen requisites. Perhaps reflecting the increasing needs of a large and mainly sedentary monastic community, longer lists also appear. The [MAHĀVYUTPATTI](#) lists one hundred requisites of a [ŚRAMANA](#), including various dining utensils and containers, shoes, mattresses, cushions, stools, brooms, a mosquito net, a hatchet, a hook for hanging things on the wall, and an iron chain. When not involving a specific list, pariṣkāra may also refer generically to anything that may appropriately be offered to a monk or nun. The term is also occasionally used in the sense of “spiritual requisites” or “equipment,” as in a list of seven pariṣkāra, which refer to the first seven steps in the eightfold path ([ĀRYĀSTĀNGAMĀRGA](#)) that culminate in right [SAMĀDHI](#). The rationale behind the pariṣkāra is that they demonstrate that a monk shuns luxury and lives only on the bare essentials that are absolutely necessary for survival. Inevitably, however, the list more often represents an ideal rather than the actual state of monastic affairs. See also [NISĀRAYA](#).

[pariṣkāravaśitā](#). (T. yo byad la dbang ba; C. caizizai; J. zaijizai; K. chaejjajae 財自在). In Sanskrit, lit. “power of requisites” or “equipment”; one of the ten powers of an advanced [BODHISATTVA](#), which are discussed in the [BODHISATTVABHŪMI](#). Pariṣkāravaśitā indicates the power of a bodhisattva miraculously to produce the requisites, or “equipment” of life (such as food, shelter, and clothing). The *Bodhisattvabhūmi* explains that, as with the other nine powers, pariṣkāravaśitā is acquired through merit accumulated through the practice of a variety of selfless acts.

[parisrāvana](#). (P. parissāvana; T. chu tshags; C. lushui nang; J. rokusuinō; K. noksu nang 灑水囊). In Sanskrit, “strainer” or “filter”; one of the requisites ([PARISKĀRA](#)) of a Buddhist mendicant, which was to be placed over a vessel as water is poured into it in order to avoid the accidental drowning of insects. Although according to Buddhist karmic theory, only the intentional killing of insects had negative karmic effects, Buddhist monks and nuns, like their [JAINA](#) counterparts, sought in this way to avoid harming insects while also providing some measure of purification for their drinking water.

[parisuddha](#). (T. yongs su dag pa; C. qingjing; J. shōjō; K. ch’ōngjōng 清淨). In Sanskrit, “purified” or “cleansed”; a state that is free from afflictions or

defilements ([KLEŚA](#)). In the Buddhist tradition, the term can be applied in a number of ways. The body, speech, and mind of a buddha are described as *pariśuddha*, as are many of the [SŪTRAS](#) that contain his teaching. The buddha-fields ([BUDDHAKṢETRA](#)) or [PURE LANDS](#) of [AMITĀBHA](#) and [AKSOBHYA](#) are also described as *pariśuddha*. In doctrinal developments such as those associated with the [TATHĀGATAGARBHA](#) tradition, *pariśuddha* is used to characterize the inherent, inviolable nature that underlies the reality of all beings. This term is also used to describe the conduct of those who adhere to the teachings, as in the formulation *pariśuddhakāyasamācāra*, or “purity in bodily conduct.” *Parīśuddha* is often coupled with the related term *pariyavadāta*, also meaning “clean” or “pure”; in compound, they are often translated as “bright (or white) and pure.”

[parīśuddhabuddhakṣetra](#). (T. *sangs rgyas kyi shing yongs su dag pa*; C. *qingjing foguotu*; J. *shōjō bukkokudo*; K. *ch’ōngjōng pulgukt’o* 清淨佛國土). In Sanskrit, “purified buddha-field.” In the [MAHĀYĀNA](#), when a buddha attains enlightenment, he not only achieves the three bodies ([TRIKĀYA](#)) of a buddha, but also creates a land in which he will preach the dharma. That land can be either pure, impure, or mixed. A pure buddha field may be one in which the inhabitants engage in only virtuous deeds and experience no suffering. The term is also used to describe a buddha-field that does not include the unfortunate realms ([APĀYA](#); [DURGATI](#)) of animals, ghosts, and hell denizens. The buddha-field of Amitābha, [SUKHĀVATĪ](#), is a pure field in these two senses (although the term *parīśuddhabuddhakṣetra* does not appear in the [SUKHĀVATĪVYŪHASŪTRA](#)). The term may also be used with regard to whether the inhabitants of the buddha-field are all [BODHISATTVAS](#), or all [ĀRYABODHISATTVAS](#), that is, those who have achieved at least the first [BHŪMI](#). It is possible that the Chinese term [JINGTU](#) (the source of the English term “[PURE LAND](#)”), which does not appear to be a direct translation from Sanskrit, derives from *parīśuddhabuddhakṣetra*, perhaps as an abbreviation of it. In the [ABHISAMAYĀLAMKĀRA](#)’s explanation of the [PAÑCAVIMŚATISĀHASRIKĀPRAJÑĀPĀRAMITĀSŪTRA](#), the *parīśuddhabuddhakṣetra* is twofold, corresponding to the [BHĀJANALOKA](#) (“container world,” referring to the wider environment or the physical or inanimate world) and the [SATTVALOKA](#), the “world of sentient beings,” who are the inhabitants of that “container.” A degraded environment with treeless deserts, thornbushes, and so on is impure; when beings are sick and hungry, etc., the *sattvaloka* is impure. The perfect purity of a buddha-field comes about when a bodhisattva achieves the purity of those two worlds by counteracting their imperfections through the creation of an

entirely pleasant environment, and through the supply of food, clothing, shelter, etc.

paritta. [alt. parittā] (BHS. parīṭṭa, T. yongs su skyob pa; C. minghu/minghu jing; J. myōgo/myōgokyō; K. myōngho/myōngho kyōng 明護/明護經). In Pāli, “protection” (classical S. paritrāṇa); referring to both the practice of reciting a short passage from a [SŪTRA](#) in order to draw on the text’s apotropaic powers, as well as to the passages themselves. The use of paritta are said to have been sanctioned by the Buddha: after a monk had died of a snake bite, the Buddha recited a text (the *Khandhaparitta*, or “Protection of the Aggregates”) for the monks to repeat as protection, which states that loving-kindness (P. mettā; S. [MAITRĪ](#)) and the infinite power of the Buddha, [DHARMA](#), and [SAMGHA](#) would guard the monks from the finite power of snakes, scorpions, and other dangerous creatures. There were many specific instances that subsequently led the Buddha to deliver different paritta verses, including protection from evil spirits, the assurance of good fortune, exorcism, curing serious illness, and even safe childbirth. The power of these verses often is thought to derive from an asseveration of truth (S. [SATYAVACANA](#); P. saccavacana, saccakiriya), as in the famous paritta associated with [Aṅgulimāla](#), who offered this statement to help ease a woman’s labor pains: “Since I was born of āryan birth, O sister, I am not aware of having intentionally deprived any living being of its life. By this asseveration of truth, may you be well and may your unborn child be well.” (There is intentional irony in this statement, since Aṅgulimāla was well known to have been a murderous highwayman before he became a monk; his “āryan birth” here refers to his ordination into the [SAMGHA](#).) ¶ Collections of paritta are particularly common in Southeast Asian Buddhism, and the texts included in these collections are among the most widely known of Buddhist scriptures among the laity. One of the most popular such Pāli anthologies is the *Catubhanavara* (“The Text of the Four Recitals”), which contains twenty-nine (or in some recensions twenty-four) Pāli suttas whose protective powers are thought to be particularly efficacious. (This text is widely used in Sri Lanka, where it is known as the *Pirit Potha*.) Scriptures commonly presumed to have apotropaic powers in Pāli Buddhism include the [METTĀSUTTA](#) (“Discourse on Loving-Kindness”), the [MAṅGALASUTTA](#) (“Discourse on the Auspicious”), the [RATANASUTTA](#) (“Discourse on the Precious”), and the [ĀTĀNĀTIYASUTTA](#) (“Discourse on the Ātānātiya Protective Spell”). The recitation of these texts accompanies all sorts of Buddhist ceremonies, from weddings to funerals to

house blessings. In Southeast Asia, the monks performing a parittarecitation ritual are sometimes connected to the congregation with a ritual string, through which blessings and protection are transferred to the participants. See also [RAKSĀ](#).

parīttābha. (P. parittābhā; T. 'od chung; C. shaoguang tian; J. shōkōten; K. sogwang ch'ōn 少光天). In Sanskrit, “lesser radiance,” the lowest of the three heavens of the second meditative absorption ([DHYĀNA](#)) associated with the subtle-materiality realm ([RŪPADHĀTU](#)). The divinities of this heaven are so named because their bodies emanate less light than those of the divinities of the upper realms of the second dhyāna. As with all the heavens of the subtle-materiality realm, one is reborn as a divinity there through achieving the same level of absorption (dhyāna) as the gods of that heaven during one's practice of meditation in a previous lifetime.

parīttasubha. (P. parittasubhā; T. dge chung; C. shaojing tian; J. shōjōten; K. sojōng ch'ōn 少淨天). In Sanskrit, “lesser purity,” the lowest of the three heavens of the third meditative absorption ([DHYĀNA](#)) of the subtle-materiality realm ([RŪPADHĀTU](#)). The divinities of this heaven are so named because the purity of their bliss is less than that of the gods of the other two levels of the third dhyāna. As with all the heavens of the subtle-materiality realm, one is reborn as a divinity there through achieving the same level of concentration (dhyāna) as the gods of that heaven during one’s practice of meditation in a previous lifetime.

Parivāra. In Pāli, lit., “The Accessory”; an appendix to the three major divisions of the Pāli recension of the monastic disciplinary code ([VINAYAPITAKA](#))—viz. the [SUTTAVIBHAṄGA](#), [KHANDHAKA](#), and [CŪLAVAGGA](#)—the *Parivāra* provides a summary and classification of the rules of monastic conduct, as well as additional instructions regarding administrative procedures to be followed within the monastic community (P. saṅgha; S. [SAMGHA](#)). The *Parivāra* consists of nineteen chapters summarizing the earlier sections of the vinaya, the content and structure of which vary slightly. For example, the first chapter is a series of catechisms regarding the monks’ rules ([PRĀTIMOKSA](#)), which are classified according to subject. The second offers the same treatment on the rules for nuns. Other chapters are composed of verses or numerical lists. The *Parivāra* also offers detailed procedures regarding the settlement of disagreements or disputes within the community. The text dictates that disputes must be heard and settled by a court of vinaya experts (vinayadhara). Because it contains references to Ceylonese monks, the work is likely of a later origin than the rest of the Pāli vinaya.

parivāsa. (T. spo ba; C. biezhu; J. betsujū; K. pyōlchu 別住). In Sanskrit and Pāli, “probation,” a disciplinary term used in the context of the [VINAYA](#). In the monastic disciplinary rules ([PRĀTIMOKSA](#)), parivāsa refers to the temporary period of probation imposed on a monk for concealing a [SAMGHĀVAŚESA](#) (P. saṅghadisesa) offense. When a monk commits a saṅghāvaśeṣa offense, he is required to confess it immediately to another monk. If he does so, he is then required to observe six nights of [MĀNATVA](#) (P. mānatta), or penance, only. If instead he conceals his offense, he is required to observe the parivāsa probation for as many days as he concealed his offense, after which he must observe six nights of mānatva punishment. Like mānatva, parivāsa entails the temporary loss of privileges normally accorded a monk. The guilty party is required to observe

ninety-four restrictions, of which three are most important: (1) he may not dwell under the same roof with another monk, (2) he must announce to monks visiting his monastery that he is observing parivāsa, and (3) when visiting other monasteries, he must inform the monks living there that he is observing parivāsa. In addition, he is not allowed to accept the respect customarily due to a monk, and he may not be served by a novice. The monk observing parivāsa may not serve as an [UPĀDHYĀYA](#) or [ĀCĀRYA](#) and may not preach to nuns. He must occupy the lowest seat in the monastery and dwell in the worst accommodations. He must give up his seat when approached by another monk and take the lower seat. He may not walk on the same paths as other monks. He may not ask others to bring him his meals to hide his punishment. He may not live alone in the forest or observe ascetic practices ([DHUTAṄGA](#)) as a means to hide his offense from others. If at any point in the observance of parivāsa, the guilty monk commits another saṃghāvaśeṣa offense, he must restart the observance from the beginning. After completing his parivāsa penance and his six nights of mānatva, the monk approaches the saṃgha, which in this case means a quorum of monks consisting of at least twenty members, and requests to be “called back into communion” (abbhāna). If the saṃgha agrees, the monk is declared free of the saṃghāvaśeṣa offense and is restored to his former status. ¶ The term parivāsa is also used for a four-month probationary period imposed on mendicants belonging to other religions who wish to join the Buddhist saṃgha. To undertake this parivāsa, the mendicant must first shave his head and beard and don the saffron robes of a monk and approach the [SAMGHA](#) with his request. Having taken the three refuges ([TRIŚARANA](#)) three times, he declares that formerly he was the member of another sect but now wishes to receive higher ordination as a Buddhist monk. To prepare for ordination, the supplicant requests the saṃgha to grant him parivāsa. The Buddha exempted [JAINA](#) ascetics from this requirement, as well as members of his own [ŚĀKYA](#) clan.

parivrājaka. (P. paribbājaka; T. kun tu rgyu; C. youxingzhe; J. yugyōja; K. yuhaengja 遊行者). In Sanskrit, “wanderer” or “recluse,” a wandering ascetic in ancient India. The term is sometimes used to refer to Buddhist monks and nuns, but is more commonly used to refer to non-Buddhist “mendicants,” both male and female (S. parivrājikā, P. paribbājikā) of various affiliations, particularly those associated with the various [ŚRAMANA](#) groups. A catalogue of their views and practices, as well as their condemnation by the Buddha, appears in the [BRAHMAJĀLASUTTA](#). Several of the Buddha’s most prominent disciples, including

[ŚĀRIPUTRA](#) and [MAHĀMAUDGALYĀYANA](#), were originally parivrājakas before leaving their teachers to join the Buddhist [SAMGHA](#). According to the Pāli [VINAYA](#), Buddhist monks and nuns are not allowed to offer services, food, or clothing to mendicants of other sects; to do so is a pācittiya (S. [PĀYATTIKA](#)) offense.

[pāriyātraka](#). (T. yongs 'du sa brtol; C. yuanshengshu/bolizhiduoshu; J. enshōju/harishittaju; K. wōnsaengsu/parijiltasu 圓生樹/波利質多樹). Also known as pārijāta, in Sanskrit, “wish-granting tree,” a magical tree whose fruit takes the form of whatever one wishes for. Numerous such trees appear in Buddhist legends. Perhaps the most famous of them is said to grow on the slopes of Mount [SUMERU](#): its trunk is rooted in the realm of the demigods ([ASURA](#)), but its leaves, branches, and fruit are located high above in the realm of the divinities ([DEVA](#)). Because the demigods are thus unable to enjoy the fruit of the tree that grows in their land, they became jealous of the divinities and fought against them. See also [KALPAVRKSA](#).

[pariyatti](#). (S. paryavāpti; C. tong; J. tsū; K. t'ong 通). In Pāli, lit. “mastery” or “comprehension” (of a body of scriptural literature), or (in later Pāli commentarial usage) the “scriptures” themselves as transmitted through an oral tradition; one of the two principal monastic vocations noted in the Pāli commentarial literature, along with [PATIPATTI](#) (meditative practice). The pariyatti monk serves an important role within the Buddhist tradition by continuing the transmission of a corpus of scriptural literature down to the next generation. Pariyatti monks thus performed the function of a bhāṇaka (reciter) or [DHARMABHĀNAKA](#) (reciter of the dharma), who were typically assigned to memorize one specific subcategory of the canon, i.e., Mahājñimabhāṇaka (“reciters of the [MAJJHIMANIKĀYA](#)”), Jātakabhāṇaka (“reciters of the [JĀTAKA](#)”), *etc.* Monks in the contemporary Southeast Asian traditions who study Pāli literature are now also referred to as pariyatti monks; thus the term has come to mean a “study monk.” ¶ Pariyatti is also the first of three progressive kinds of religious mastery. In this context, pariyatti is understood as a thorough comprehension of the theories, terms, and texts that ground Buddhist doctrine and that are enumerated in the literature of the [TRIPITAKA](#) (the canon). The second is paṭipatti, or “practice” of the prescriptions encountered in one’s study of pariyatti. The final stage is paṭivedha (S. [PRATIVEDHA](#)), direct “penetration” to truth. See also [GANTHADHURA](#).

parokṣa. (T. lkog gyur; C. zhiwai; J. chige; K. chioe 智外). In Sanskrit, “hidden,” a term used in the twofold classification of phenomena into the manifest ([ABHIMUKHĪ](#)), those things that are evident to sense perception, and the hidden (parokṣa), those things whose existence must be inferred through reasoning. The latter category includes such important matters as subtle impermanence, the existence of rebirth, and the existence of liberation. A third category of the “very hidden” (atyantaparokṣa) is sometimes added, comprising those things that are known only by a buddha, such as the specific deeds in a past life that produced specific consequences in the present. Because those things that are “very hidden” are not accessible to direct perception or inference, they are known through statements by the Buddha in the scriptures ([ĀGAMA](#)).

Pārśva. (T. Rtsibs logs; C. Xie; J. Kyō; K. Hyōp 脇). A North Indian [ĀBHIDHARMIKA](#) associated with the [SARVĀSTIVĀDA](#) school, who may have lived during the second century CE. Some four hundred years after the death of the Buddha, the king [KANISKA](#) (r. 132–152) is said to have convened an assembly of five hundred [ARHAT](#)s to redact the canon; according to [XUANZANG](#), Pārśva presided over this assembly, which came to be known as the fourth Buddhist council ([SAMGĪTI](#); see COUNCIL, FOURTH). It was at that council that the [ABHIDHARMAPITAKA](#) of the Sarvāstivāda school was compiled, including its massive encyclopedic coverage of abhidharma scholastic debates, the [ABHIDHARMAMAHĀVIBHĀṢĀ](#). Pārśva is also claimed to have been a great expert in debate, which led him to convert Aśvaghōṣa, who became his disciple after Pārśva defeated him in a public debate. In Chinese texts, Pārśva is also called Nansheng (“Hard to Be Born,” probably a translation of Durjāta), since according to legend he stayed in his mother’s womb until the age of six (or sixty) because of misdeeds he performed in his previous life. Some of the Chinese transmission of the lamplight ([CHUANDENG LU](#)) literature states that Pārśva was a native of central India who lived during the fifth century BCE and lists Pārśva as the ninth (as in, for example, the [FOZU TONGJI](#)) or tenth Indian patriarch (C. [ZUSHI](#); as in the *Zhiyuelu*). ¶ Pārśva is also the name of the predecessor of [MAHĀVĪRA](#) (a.k.a. [NIRGRANTHA-JŅĀTĪPUTRA](#)), the Buddha’s contemporary in the rival [JAINA](#) school of the Indian [ŚRAMANA](#) movement. This Pārśva seems to have been a historical figure, who appears on a list of twenty-four [JINA](#) in the Jaina spiritual lineage.

Parthia. (C. Anxi guo; J. Ansoku koku; K. Ansik kuk 安息國). A region in

Central Asia, southeast of the Caspian Sea, which the Roman geographers knew as Parthia; the Chinese is a transcription of the Parthian proper name Aršak or Arsakes (see [ANXI GUO](#)), referring to the Arsacid kingdom (c. 250 BCE–224 CE). Aršak was the name adopted by all Parthian rulers, and the Chinese employed it to refer to the lands that those rulers controlled. In the Marv oasis, where the old Parthian city of Margiana was located, Soviet archeologists discovered the vestiges of a Buddhist monastic complex that has been dated to the third quarter of the fourth century CE, as well as birch-bark manuscripts written in the [BRAHMĪ](#) script that are associated with the [SARVĀSTIVĀDA](#) school of the mainstream Buddhist tradition. There is therefore archeological evidence of at least a semblance of Buddhist presence in the area during the fourth through sixth centuries. Parthian Buddhists who were active in China enable us to push this dating back at least two more centuries, for two of the important early figures in the transmission of Buddhist texts into China also hailed from Parthia: [AN SHIGAO](#) (fl. c. 148–180 CE), a prolific translator of mainstream Buddhist works, and An Xuan (fl. c. 168–189), who translated the [UGRAPARIPRCCHĀ](#) with the assistance of the Chinese Yan Fotiao. (The [AN](#) in their names is an ethnicon referring to Parthia.) There is, however, no extant Buddhist literature written in the Parthian language and indeed little evidence that written Parthian was ever used for purposes other than government documents and financial records until the third century CE, when Manichaean texts written in Parthian begin to appear.

[pāruṣya](#). (P. pharusavācā; T. tshig rtsub; C. ekou; J. akuku; K. akku 惡口). In Sanskrit, “harsh speech,” one of the ten unsalutary ways of action ([AKUŚALA-KARMAPATHA](#)) that lead to suffering in the future. The ten are classified into three negative physical deeds, four negative verbal deeds, and three negative verbal deeds. Harsh speech falls into the second category, together with lying (mṛṣāvāda), slander ([PAIŚUNYA](#)) and senseless speech ([SAMBHINNAPRALĀPA](#)). Harsh speech would include insults, abusive speech, and sarcasm intended to hurt another person. It may be directed against a living being or a physical object. Harsh speech is typically motivated by hatred, but it can also be motivated by jealousy or ignorance.

[paryudāsapratiśedha](#). (T. ma yin dgag). In Sanskrit, “affirming negative,” or “implied negation,” a term used in Buddhist logic ([HETUVIDYĀ](#)) to refer to a negative declaration or designation ([PRATISEDHA](#)) that is expressed in such a way that it implies something positive. For example, the term “non-cat” implies the

existence of something other than a cat. The standard example provided in works on Buddhist logic is: “The corpulent Devadatta does not eat during the day,” where the absence of his eating during the day implies that he eats at night. In [MADHYAMA](#) philosophy, emptiness ([ŚŪNYATĀ](#)), the nature of reality, is not a paryudāsapratīṣedha, that is, it does not imply something positive in place of the absence of intrinsic existence ([SVABHĀVA](#)). See also [PRASAJYAPRATISEDHA](#).

[Pāsādikasutta](#). (C. Qingjing jing; J. Shōjōkyō; K. Ch’ōngjōng kyōng 清淨經). In Pāli, the “Delightful Discourse,” the twenty-ninth sutta of the [DĪGHANIKĀYA](#) (a separate [DHARMAGUPTAKA](#) recension appears as the seventeenth [SŪTRA](#) in the Chinese translation of the [DĪRGHĀGAMA](#)); preached to [ĀNANDA](#) and [CUNDA](#) in the Vedhañña grove in the Sākiya (S. [ŚĀKYA](#)) country. Ānanda and Cunda relate to the Buddha the news of the death of Nigaṇṭha Nātaputta (S. [NIRGRANTHA-JŪNĀTĪPUTRA](#)), the leader of the [JAINA](#) sect of wandering mendicants, and the strife that subsequently arose among his followers. The Buddha declares that such disputes naturally arise when the dharma is not well taught. He then elaborates on various wrong views (P. micchādiṭṭhi; S. [MITHYĀDRSTI](#)) and prescribes four foundations of mindfulness (P. [SATIPATTHĀNA](#); S. [SMRTYUPASTHĀNA](#)) as a means by which wrong views can be allayed.

[paścimakāla](#). (T. phyi ma’i dus; C. moshi; J. masse; K. malse 末世). In Sanskrit, lit. “latter time,” a term that occurs especially in the MAHĀYĀNA SŪTRAS to describe the time after the Buddha’s passage into [PARINIRVĀNA](#). This term does not necessarily connote a final period of the disappearance of the Buddha’s dharma, as does the term [SADDHARMAVIPRALOPA](#), but more specifically the period after the Buddha’s passing. Since the Mahāyāna sūtras were composed long after the Buddha passed away, the author of the sūtra will sometimes have the Buddha recommend it in “the latter time” is to suggest the Buddha’s approval of the text. In China, the translation of this term, moshi, seems to have served as the basis for the Chinese neologism [MOFA](#), a more common term that in East Asia came to evoke the final period of the dharma.

[past lives](#). See [JĀTISMARA](#); [PŪRVANIVĀSĀNUMRTI](#).

[Paśupatināth](#). A large temple complex in Kathmandu, Nepal, along the Bhagmati River, dedicated to the form of Śiva known as Paśupati, “Lord of the Beasts.” Newar and Tibetan Buddhist traditions, however, understand Paśupatināth as having Buddhist connections as well. Newar Buddhists venerate

the central image of the Guhyeśwarī shrine (understood by Hindus to be Kālī) as the deity [NAIRĀTMYĀ](#), consort of [HEVAJRA](#). Some Tibetans consider several caves along the river to have been occupied by the Indian Buddhist adepts [TILOPA](#) and [NĀROPA](#), a tradition that other Tibetan scholars have refuted.
