[Paṭācārā](#). (C. Boluozhena; J. Harashana; K. Parach'ana 波羅遮那). In Sanskrit and Pāli, an eminent female [ARHAT](#) declared by the Buddha to be foremost among his nun disciples in mastery of the [VINAYA](#). According to the Pāli account, she was born the daughter of a wealthy banker in Sāvatti (S. [ŚRĀVASTĪ](#)), but when her parents tried to arrange a marriage with a suitable groom, she instead eloped with a servant with whom she had fallen in love. Even though she had disappointed her parents, she still wished to give birth at their home. But her husband protested, so while he was away collecting wood, she set off for her parents' house alone. Her husband followed, but on the way she gave birth to a son and they returned home together. She did the same when she was ready to give birth to her second child. Again, her husband followed and she gave birth on the road. This time a great storm broke out, and her husband went to gather branches and leaves to make a temporary shelter. She waited in the storm all night, huddled around her children, but her husband did not return; he had been bitten by a snake and had died. She discovered his body the next day and, filled with sorrow, set off across a swollen river to her parents' home. She could not carry both children at the same time, so she left her infant on a bed of leaves on the shore as she waded into the river with the older son. Midstream she looked back to see an eagle swoop down and snatch her infant, and in her excitement she dropped her son who was swept away by the current. Now, more miserable than before, she made her way to Sāvatti, only to discover that her parents' house had also collapsed in the storm, killing her parents and brother. With no family left, she went mad with grief, wandering about until her clothes fell off. People drove her away until one day she happened upon the [JETAVANA](#) grove, where the Buddha was staying. His attendants tried to prevent her approach, but the Buddha bade her to come and tell her story. Consoling her in a gentle voice, he preached to her of the inevitability of death, and, as she was listening to his words, she attained stream-entry (S. [SROTAĀPANNA](#)). She requested and was given ordination on the spot. Some time after, while washing her feet, Paṭācārā noticed how water droplets would each roll off in a different direction, and she noted, "So too do beings die, some in childhood, adulthood, or old age." With this realization she attained arhatship. Paṭācārā became a famous teacher of the

vinaya, with many female disciples, and was sought out by women who had suffered tragedies because of her wise and gentle advice. A similar story is told about [UTPALAVARNĀ](#).

Pāṭaliputra. (P. Pāṭaliputta; T. Pa ṭa la yi bu; C Huashi cheng; J. Keshijō; K. Hwassi sōng 華氏城). Capital of the kingdom of [MAGADHA](#) and later of the Mauryan empire, ruins of which are located near (and beneath) the modern city of Patna in Bihar. The place is described as having been a village named Pāṭaligāma at the time of the Buddha who, upon visiting the site, prophesied its future greatness. At that time Magadha's capital city was [RĀJAGRHA](#). It is not known when the capital was transferred to Pāṭaliputra, but it probably occurred sometime after the reign of the Buddha's junior contemporary, King [AJĀTAŚATRU](#). The city reached its greatest glory during the reign of the third Mauryan emperor, [AŚOKA](#), whose realm extended from Afghanistan in the west to Bengal in the east, and to the border of Tamil Nadu in the south. According to the Pāli chronicles [DĪPAVAMSA](#) and [MAHĀVAMSA](#), it was in the royal palace of Pāṭaliputra that Aśoka was converted to Buddhism by the seven-year-old novice Nigrodha. The same sources state that Pāṭaliputra was the site of the third Buddhist council ([SAMGĪTI](#); see COUNCIL, THIRD), whence Buddhist missions were dispatched to nine adjacent lands (paccantadesa). These reports are partially confirmed by Aśoka's own inscriptions. in which he describes his adoption and promotion of Buddhism and his dispatch of what appear to be diplomatic missions to several neighboring states. The city was known to the Greeks as Pālībothra and was described by Megasthenes, who dwelled there for a time. It continued to be the capital of Magadha after the fall of the Mauryans and served again as an imperial capital between the fourth and sixth centuries under the Gupta dynasty. By the time the Chinese pilgrim [XUANZANG](#) (600/602–664) visited India during the seventh century, Pāṭaliputra was mostly in ruins; what little remained was destroyed in the Muslim invasions of the twelfth century. See also [MOGGALIPUTTATISSA](#).

path. See [MĀRGA](#); [PATHA](#); [DAO](#).

patha. (T. lam; C. dao; J. dō; K. to 道). In Sanskrit and Pāli, “course” or “way”; a term closely synonymous with “path” ([MĀRGA](#)), as in the ten wholesome and unwholesome courses of action ([KARMAPATHA](#)). Patha often functions as a pleonastic suffix to create an abstract formation similar to the Sanskrit –tā, e.g., rāgapatha (sensuality). One of its most celebrated usages is in the compound

“ways of speech” (vacanapatha, vādapatha), the locus classicus for which appears in the [ATTHAKAVAGGA](#): “When all dharmas are abolished, all paths of speech are also abolished” (P. sabbesu dhammesu samūhatesu/samūhatā vādapathā pi sabbe ti).

[path of accumulation](#). See [SAMBHĀRAMĀRGA](#).

[path of cultivation](#). See [BHĀVANĀMĀRGA](#).

[path of no further training](#). See [AŚAIKSAMĀRGA](#).

[path of preparation](#). See [PRAYOGAMĀRGA](#).

[path of vision](#). See [DARŚANAMĀRGA](#).

[paṭibhāganimitta](#). In Pāli, lit., “counterpart image,” “representational image”; the third of the three major visualization signs experienced in tranquillity (P. samatha; S. [ŚAMATHA](#)) exercises, along with the [PARIKAMMANIMITTA](#) (preparatory image) and the [UGGAHANIMITTA](#) (eidetic image). These three images and the meditative exercises employed to experience them are discussed in detail in [BUDDHAGHOSA](#)’s [VISUDDHIMAGGA](#), where they are listed sequentially according to the degree of concentration necessary to develop them. These images are particularly associated with the use of the ten visualization devices ([KASINA](#)) that are used in the initial development of concentration. In these exercises, the meditator attempts to convert a visual object of meditation, such as soil, fire, or a color, into a mental projection or conceptualization that is as clear as the visual image itself. When the image the practitioner sees with his eyes (the so-called parikammanimitta or “preparatory image”) is equally clear when visualized in the mind, the practitioner is said to have obtained the uggahanimitta (eidetic image). This image, however, still represents a relatively weak degree of concentration, and it must be strengthened until the paṭibhāganimitta, or “representational image,” emerges, which marks the access to meditative absorption (P. [JHĀNA](#), S. [DHYĀNA](#)). This representational image is said to be a purely abstract, conceptual form of the visualized image that appears to “break out” from the eidetic sign, e.g., with the fire kasiṇa, the representational image of the visualized flame appears motionless, like a piece of red cloth hanging in space, or like a golden fan.

Pāṭikasutta. (C. Anouyi jing; J. Anuikyō; K. Anui kyōng 阿耨夷經). In Pāli, “Discourse on the [Ascetic] Pāṭika[putta],” the twenty-fourth sutta of the [DĪGHANIKĀYA](#) (a separate [DHARMAGUPTAKA](#) recension appears as the fifteenth sūtra in the Chinese translation of the [DĪRGHĀGAMA](#)); a discourse by the Buddha on the display of supernatural powers addressed to the mendicant Bhaggavagotta. The Buddha relates how his former disciple, Sunakkhatta, lost faith in the Buddha because the latter refused to display magical powers or speculate on such questions as the origin of the universe as other teachers of the time were wont to do. The Buddha explains that such displays of magic are trivial, and speculation on such matters does not lead to liberation. He does, however, relate the story of his defeat of the [JAINA](#) naked ascetic Pāṭikaputta, who challenges the Buddha to a miracle-working contest, but when the Buddha answers the challenge, he is unable to rise from his seat.

paṭipadāñānadassanavisuddhi. In Pāli, “purity of knowledge and vision regarding progress along the path”; according to the [VISUDDHIMAGGA](#), the sixth of seven “purities” ([VISUDDHI](#); cf. S. [VIŚUDDHI](#)) to be developed along the path to liberation. This purity consists of eight kinds of insight knowledge regarding phenomena, together with a ninth kind of knowledge that adapts itself to the supramundane path (P. ariyamagga; S. [ĀRYAMĀRGA](#)) and elements pertaining to enlightenment (P. bodhipakkhiyadhamma; S. [BODHIPĀKSIKADHARMA](#)). The nine kinds of knowledge are (1) knowledge arising from the contemplation of arising and passing away ([UDAYABBAYĀNUPASSANĀÑĀNA](#)), (2) knowledge arising from the contemplation of dissolution ([BHANĠĀNUPASSANĀÑĀNA](#)), (3) knowledge arising from the awareness of terror ([BHAYATUPATTHĀNĀÑĀNA](#)), (4) knowledge arising from the contemplation of danger ([ĀDĪNAVĀNUPASSANĀÑĀNA](#)), (5) knowledge arising from the contemplation of aversion ([NIBBIDĀNUPASSANĀÑĀNA](#)), (6) knowledge arising from the desire for deliverance ([MUCCITUKAMYATĀÑĀNA](#)), (7) knowledge arising from contemplation of reflection ([PATISAŊKHĀNUPASSANĀÑĀNA](#)), (8) knowledge arising from equanimity regarding all formations of existence ([SAŊKHĀRUPEKKHĀÑĀNA](#)), and (9) conformity knowledge ([ANULOMAÑĀNA](#)).

paṭipatti. (S. pratipatti; T. sgrub pa; C. xiuxing; J. shugyō; K. suhaeng 修行). In Pāli, “practice”; one of the two principal monastic vocations noted in the Pāli commentarial literature, along with [PARIYATTI](#) (scriptural mastery). Paṭipatti is the application in practice of the teachings outlined in the scriptures, as

distinguished from a purely theoretical understanding of the teachings. Monks in the contemporary Southeast Asian traditions who are primarily engaged in meditative practice, rather than study of the Pāli scriptures, are referred to as paṭipatti monks; thus the term means a “meditation monk.” The paṭipatti monk serves the laity by providing them with a [PUNYAKSETRA](#), or “field of merit”: i.e., by supporting monks who are striving to fully realize the Buddha’s teaching, the laity can plant the seeds of merit ([PUNYA](#)), which will improve both this and future lives. ¶ Paṭipatti is also the second of three progressive kinds of religious mastery. In this context, paṭipatti is understood as “practice” of the prescriptions encountered in the first type, pariyaatti, the mastery of Buddhist doctrine and textual literature. Paṭipatti results in paṭivedha (S. [PRATIVEDHA](#)), direct “penetration” to truth. See also [PRATIPATTI](#); [VIPASSANĀDHURA](#).

[Paṭisambhidāmagga](#). In Pāli, “Path to Analytical Knowledge,” the twelfth book of the [KHUDDAKANIKĀYA](#). Its chief subject is the attainment of “analytical knowledge” (P. paṭisambhidā, S. [PRATISAMVID](#)), this being the highest attainment available to the [ARHAT](#). This work is scholastic in nature, borrowing long passages from the [VINAYAPITAKA](#) and the [SUTTAPITAKA](#), suggesting that it is a work of a later date, despite its traditional attribution to Sāriputta (S. [ŚĀRIPUTRA](#)). The *Paṭisambhidāmagga* describes in detail the nature of wisdom, including the wisdom of the Buddha, in the style of an [ABHIDHAMMA](#) text, even though it is included in the [SUTTAPITAKA](#). It also discusses a range of central topics in Buddhist soteriology, including mindfulness of the breath (P. ānāpānasati; S. [ĀNĀPĀNasmRTI](#)), the [FOUR NOBLE TRUTHS](#) (P. cattāri ariyasaccāni; S. catvāry āryasatyāni), emptiness (P. suñña; cf. S. [ŚŪNYATĀ](#)), supranormal powers (P. iddhi; S. [RDDHI](#)), the foundations of mindfulness (P. [SATIPATTHĀNA](#); S. [SMRTYUPASTHĀNA](#)), serenity or calmness (P. samatha; S. [ŚAMATHA](#)), and insight (P. [VIPASSANĀ](#); S. [VIPĀŚYANĀ](#)). According to the account in the [DĪPAVAMSA](#), the *Paṭisambhidāmagga* was one of the works rejected by the [MAHĀSĀMGIKA](#) school from inclusion in the canon.

[paṭisaṅkhānupassanāñāna](#). In Pāli, “knowledge arising from contemplation of reflection”; according to the [VISUDDHIMAGGA](#), the seventh of nine types of knowledge ([ÑĀNA](#)) cultivated as part of “purity of knowledge and vision of progress along the path” ([PATIPADĀÑĀNADASSANAVISUDDHI](#)). This latter category, in turn, constitutes the sixth and penultimate purity ([VISUDDHI](#); cf. S. [VIŚUDDHI](#)) to be developed along the path to liberation. The practitioner cultivates this

knowledge as a means of escape from the conditioned factors (P. saṅkhāra; S. [SAMSKĀRA](#)) comprising the universe, having become desirous of deliverance from all forms of existence in the cycle of rebirth. He develops this by reflecting again upon the conditioned factors by noting how they are characterized by the three marks (P. tilakkhaṇa; S. [TRILAKSANA](#)) of impermanence (P. anicca; S. [ANITYA](#)), suffering (P. dukkha; S. [DUHKHA](#)) and nonself (P. anatta; S. [ANĀTMAN](#)). Seeing them as evanescent, temporary, limited by arising and passing away, perishable, unstable, formed, subject to annihilation and death, etc., the practitioner understands these formations to be impermanent. Seeing them as oppressed, unbearable, the cause of pain, a disease, a tumor, a dart, a calamity, subject to birth, aging, illness, sorrow, lamentation, despair, etc., he understands these conditioned factors to be suffering. Seeing them as alien, empty, vain, void, ownerless and without a master, as neither “I” nor “mine” nor belonging to anyone else, etc., he understands them to be nonself.

pātra. (P. patta; T. lhung bzed; C. bo; J. hachi; K. pal 鉢). In Sanskrit, “begging bowl” or “alms bowl,” the bowl that monks, nuns, female probationers, and male and female novices use for gathering alms food ([PINDAPĀTA](#)). The bowl is one of the eight requisites ([PARISKĀRA](#)) allowed the monk, and (along with robes), is the most visible possession of a monk. Because of its ubiquity in Buddhist monasticism, the bowl is an object of high practical and symbolic value within the tradition and thus figures prominently in Buddhist practice, institutions, and literature. There are rules of what materials bowls may, and may not, be made of. They are usually made of iron or clay and may be of three sizes, large, medium, or small. Offering food to monks is one of the primary means by which the laity may earn religious merit, and the bowl is symbolic of the close bonds of mutual support that are at the heart of monastic-lay relations. One of the most severe penalties the [SAMGHA](#) can administer to the laity, therefore, is to refuse their donations. This act of ultimate censure is called “overturning the bowl” (S. [PĀTRANIKUBJANA](#)), and is imposed on a layperson who has, for example, harmed the interests of the saṃgha, abused monks or nuns, or spoken disparagingly of the Buddha, dharma, or saṃgha. If the layperson makes amends, the saṃgha ends its boycott by “turning the bowl upright” and receiving gifts from him or her again. In all traditions of Buddhism, the bowls of past masters have functioned as relics (and were sometimes enshrined). In some traditions, most famously that of the [CHAN](#) school, the bowl was passed on from teacher to student as a symbol of lineage and as an insignia of authority. See also

[TAKUHATSU](#).

[pātranikubjana](#). (P. pattanikkujjana; T. lhung bzed khas phub pa; C. fubo/fubo jiemo; J. fuhatsu/fuhatsu konma; K. pubal/pubal kalma 覆鉢/覆鉢羯磨). In Sanskrit, “overturning the bowl,” a severe form of censure for laypeople. See [PĀTRA](#).

[patriarch\(s\)](#). See [ZUSHI](#).

[Paṭṭhāna](#). [alt. Paṭṭhānappakaraṇa]. In Pāli, lit. “Relations,” or “Foundational Conditions”; the sixth of the seven books of the Pāli [ABHIDHAMMAPITAKA](#) (but also sometimes considered the last book of that canon). This highly abstract work concerns the twenty-four conditions (P. paccaya; S. [PRATYAYA](#)) that govern the interaction of factors (P. dhamma; S. [DHARMA](#)) in the causal matrix of dependent origination (P. paṭiccasamuppāda; S. [PRATĪTYASAMUTPĀDA](#)). According to the Pāli [ABHIDHAMMA](#), these relations, when applied to all possible combinations of phenomena, describe the entire range of conscious experience. The *Paṭṭhāna* is organized into four main divisions based on four distinct methods of conditionality, which it calls the positive, or “forward,” method (anuloma); the negative, or “reverse,” method (paccanīya); the positive–negative method (anuloma–paccanīya); and the negative–positive method (paccanīya–anuloma). Each of these four is further divided into six possible combinations of phenomena, e.g., in triplets (tika) and pairs (duka): for example, each condition is analyzed in terms of the triplet set of wholesome (P. kusala; S. [KUŚALA](#)), unwholesome (P. akusala; S. [AKUŚALA](#)), and neutral (P. avyākata; S. [AVYĀKRTA](#)). The four main sections are each further subdivided into six sections, giving a total of twenty-four divisions, one for each possible mode of conditionality. The twenty-four modes are as follows: root condition (hetupaccaya), object condition (ārammaṇapaccaya), predominance condition (adhipatipaccaya), continuity condition (anantarapaccaya), immediate continuity condition (samanantarapaccaya), co-nascence condition (sahajātapaccaya), mutuality condition (aññamaññapaccaya), dependence condition (nissayapaccaya), reliance condition (upanissayapaccaya), antecedence condition (purejātapaccaya), consequence condition (pacchājātapaccaya), repetition condition (āsevanapaccaya), volitional action condition (kammaṇapaccaya), fruition condition (vipākapaccaya), nutriment condition (āhārapaccaya), governing faculty condition (indriyapaccaya), absorption condition (jhānapaccaya), path condition (maggapaccaya), association condition (sampayuttapaccaya), disassociation condition (vippayuttapaccaya), presence condition (atthipaccaya),

absence condition (*natthipaccaya*), disappearance condition (*vigatapaccaya*), and continuation condition (*avigatapaccaya*). The *Paṭṭhāna* is also known as the “Great Composition” (*Mahāpakaraṇa*) because of its massive size: the Pāli edition in Burmese script is 2,500 pages in length, while the Thai edition spans 6,000 pages. An abbreviated translation of the *Paṭṭhāna* appears in the Pali Text Society’s English translation series as *Conditional Relations*. ¶ In contemporary Myanmar (Burma), where the study of abhidhamma continues to be highly esteemed, the *Paṭṭhāna* is regularly recited in festivals that the Burmese call *pathan pwe*. *Pathan pwe* are marathon recitations that go on for days, conducted by invited [ABHIDHAMMIKA](#) monks who are particularly well versed in the *Paṭṭhāna*. The *pathan pwe* serves a similar function to [PARITTA](#) recitations, in that it is believed to ward off baleful influences, but its main designated purpose is to forestall the decline and disappearance of the Buddha’s dispensation (P. *sāsana*; S. [ŚĀSANA](#)). The Theravāda tradition considers the *Paṭṭhāna* to be the Buddha’s most profound exposition of ultimate truth (P. *paramatthasacca*; S. [PARAMĀRTHASATYA](#)) and, according to the Pāli commentaries, the *Paṭṭhāna* is the first constituent of the Buddha’s *sāsana* that will disappear from the world as the religion faces its inevitable decline. The abhidhammikas’ marathon recitations of the *Paṭṭhāna*, therefore, help to ward off the eventual demise of the Buddhist religion. See also [ANULOMAPRATILOMA](#).

[pattidāna](#). [alt. *patti*] (cf. S. *prāpti*; C. *de*; J. *toku*; K. *tūk* 得). In Pāli, lit. “assigned gift,” referring to merit (P. *puñña*, S. [PUNYA](#)) that has been obtained and then transferred (*parivaṭṭa*) to others; the term is thus often translated into English as the “transfer of merit.” The “transfer of merit” is one of the most common practices in [THERAVĀDA](#) Buddhism, in which the merit from a particular virtuous deed can be directed toward another person specified by the agent. In doing so, the agent of the deed does not lose the karmic benefit of the virtuous deed and accumulates further virtue through the gift. In the *Tirokuḍḍasutta*, a number of ghosts (P. *peta*, S. [PRETA](#)) cause a commotion in the palace of [BIMBISĀRA](#) after he serves a meal to the Buddha and his monks. The Buddha explains that they are former kinsmen of the king who have been reborn as ghosts, who can only be satiated by receiving merit. The king then offers alms to the Buddha and his monks the next day, verbally offering it to his relatives at the same time. The ghosts, who had been invisible, become visible and are seen receiving food and drink. When the king offers robes to the monks, they also receive robes. The transfer of merit is a practice found throughout the Buddhist

world, based on the belief that the dead cannot directly receive offerings; instead, those offerings must be made to virtuous recipients, such as the Buddha or the members of the [SAMGHA](#), with the merit of that deed then transferred to the departed. See also [PARINĀMANĀ](#); [PUNYĀNUMODANA](#).

[Paurṇagiri](#). (S). See [PŪRNAGIRI](#).

[pauṣṭika](#). (T. rgyas pa'i las; C. zengyi; J. zōyaku; K. chŭngik 增益). In Sanskrit, “increase,” one of the four types of deeds or powers (caturkarman) described in tantric texts. The others are the pacification of difficulties ([ŚĀNTIKA](#)), the control of negative forces ([VAŚĪKARANA](#)), and the destruction of enemies ([ABHICĀRA](#)). Tantric texts often contain rituals designed to bestow one or more of these powers. Rituals for pauṣṭika typically promise the ability to increase auspicious elements, both physical and spiritual. Thus, one finds rituals for increasing wealth and prosperity (sometimes through finding buried treasure), for increasing one’s intelligence, life span, fame, and beauty, and for avoiding famine and disease.

[Pāyāsisutta](#). (C. Bisu jing; J. Heishukukyō; K. P’yesuk kyōng 弊宿經). In Pāli, “Discourse to Pāyāsi,” the twenty-third sutta of the [DĪGHANIKĀYA](#) (a separate [DHARMAGUPTAKA](#) recension appears as the seventh [SŪTRA](#) in the Chinese translation of the [DĪRGHĀGAMA](#)); preached by the Buddha’s disciple Kumārakassapa (S. [KUMĀRA-KAŚYAPA](#)) to Pāyāsi, governor of the town of Setabyā in Kosala (S. [KOŚĀLA](#)) country. Pāyāsi held the wrong views that there is neither another world, nor life after death, nor consequences of good and bad actions. Kumārakassapa convinced him of his errors and converted him to Buddhism through the skillful use of similes. He then taught the governor the proper way to make offerings to the three jewels (S. [RATNATRAYA](#)) of the Buddha, the [DHARMA](#), and the [SAMGHA](#) so that they would bear the greatest fruition of merit.

[pāyattika](#). [alt. prāyaścittika, pātayantika, etc.] (P. pācittiya; T. ltung byed; C. danduo; J. tanda; K. tant’a 單墮). In Sanskrit, lit. “requiring expiation,” “transgression to be confessed,” a lesser category of violations of the monastic code ([PRĀTIMOKṢA](#)). Transgressions fall under three major headings: (1) those that result in “defeat” ([PĀRĀJIKĀ](#)), (2) those that are expiated through penance and probation imposed by the [SAMGHA](#) ([SAMGHĀVAŚEṢA](#)), and (3) those that are expiated simply by being confessed to another monk. The pāyattika constitute

this last category. In the Pāli [VINAYA](#), there are ninety-two acts that fall under this category, comprising a wide range of offenses, ranging from lying to digging in the earth, damaging a plant, lying down in the same lodging with a woman, not putting away bedding, sewing the robe of a nun who is not a relative, drinking alcohol, swimming for pleasure, offering food to a naked ascetic, staying more than two or three consecutive nights with an army, and hiding another monk's bowl as a joke. The term also appears in another category of transgressions, called "forfeiture" (S. [NAIHSARGIKAPĀYATTIKA](#); P. nissaggiyapācittiya), in which a monk or nun possesses an object that is prohibited or has been wrongly acquired; in that case, the object must be forfeited and the deed confessed.

Pegu. [alt. Bago]. Former capital of the Mon (Talaing) kingdom of Rāmaññadesa (1287–1539) in Lower Burma; also called Hanthawaddi. Founded c. 825 CE on the coast of the Bay of Bengal, Pegu served as an important entrepôt, which had flourishing commercial and cultural links with Sri Lanka, India, and ports farther east. The port was made the Mon capital in 1353 when the Mon court was transferred there from the city of Muttama (Martaban). The kingdom of Rāmaññadesa had originally gained independence in 1287 with the collapse of its former suzerain, the Burmese empire of [PAGAN](#) (Bagan), and for much of the next two and a half centuries it was engaged in internecine warfare with Pagan's landlocked successor state, [AVA](#), for control of the maritime province of Bassein on Pegu's western flank. As the capital of a wealthy trading kingdom, Pegu was filled with numerous Buddhist shrines and monasteries. These included the Kyaikpien, Mahazedi, Shwegugale, and Shwemawdaw pagodas, and the nearby Shwethalyaung, a colossal reclining buddha built in 994. The most important Mon king in the religious sphere to rule from Pegu was Dhammacedi (r. 1472–1492) who, in 1476, conducted a purification of the Mon sāsana along the lines of the reformed Sinhalese tradition. The purification is recorded in the [KALYĀNĪ INSCRIPTIONS](#) erected in Pegu at site of Kalyāṇī Sīmā Hall. Pegu fell to the Burmese in 1539, who retained it as the capital of their new Burmese Empire until 1599. The beauty of Pegu was regularly extolled in the travelogues of European merchants and adventurers. Pegu again briefly became the capital of an independent Mon kingdom between 1747 and 1757, after which it was utterly destroyed by the Burmese king [ALAUNGPAYA](#) (r. 1752–1760), founder of the Konbaung empire (1752–1885). It was rebuilt and subsequently served as the British capital of Lower Burma between 1852 and 1862 and is currently the capital of Bago District.

Pe har rgyal po. (Pehar Gyalpo). A god of the Tangut people (T. Mi nyag; C. Xixia), who was adopted into Tibetan Buddhism as the state oracle. According to Tibetan legend, at the completion of the [BSAM YAS](#) monastery at the end of the eighth century, the monastery was in need of a protector god. At that time, Pe har was in residence at a hermitage in Bhata hor, having come there from Bengal. In the early ninth century, the Tibetan king [KHRI SRONG LDE BTSAN](#) sent his nephew Prince Mu rug btsan po to conquer Mi nyag and destroy Bhata hor, which he did with the assistance of the god [VAIŚRAVANA](#). Pe har fled, turning himself into a vulture to escape. A [YAKSA](#) in Vaiśravaṇa's command shot him with an arrow, and brought him to Bsam yas, where [PADMASAMBHAVA](#) installed him as the monastery's protector. Other versions credit Padmasambhava with the actual capture of Pe har, and still others have [GE SAR](#) defeat Pe har. The kingdom of Mi nyag was finally destroyed by the Mongol Genghis Khan in the twelfth century, leading to an influx in Mi nyag refugees; this was a time when Pe har's legends were being developed. From that point, Pe har, as a captured deity made to serve the Tibetan state, is a figure much interwoven in the events of the history of Tibetan imperial expansion. Pe har is said to have resided at Bsam yas for some seven centuries before moving to the Gnas chung shrine below ['BRAS SPUNGS](#) monastery outside of [LHA SA](#) at the time of the fifth [DALAI LAMA](#). It is at [GNAS CHUNG](#), a monastery with both [RNYING MA](#) and [DGE LUGS PA](#) affiliations, that he serves as the state oracle. The legends of his move involve an initial move to a Rnying ma monastery on the banks of the Skyid chu upriver from Lha sa. Pe har and the abbot of the monastery did not get along, and, after causing a fair amount of mischief, Pe har was locked in a wooden box that was thrown into the river. Various accounts relate how the box was retrieved by monks of 'Bras spungs, and how Pe har then escaped, alighting in the form of a white dove in a tree below Gnas chung monastery where Pe har subsequently took up residence. (See [GNAS CHUNG ORACLE](#) for Pe har's activities as the Tibetan state oracle.) Pe har has been fully integrated into native Tibetan spirit pantheons: he is the head of the worldly [DHARMAPĀLA](#), chief of the three hundred sixty rgyal po spirits, and leader of a group of deities known as the rgyal po sku lnga, the "kings of the five bodies," who in addition to Pe har are Brgya byin, Mon bu pu tra, Shing bya can, and Dgra lha skyes gcig bu, all of whom are also seen as emanations of Pe har. His consort is named Bdud gza' smin dkar. In iconography Pe har is frequently pictured as white, with three faces and six arms riding a white lion, although he is also shown with one face and two hands. Finally, the spelling of his name varies considerably, including Dpe kar, Pe dkar, Spe dkar, Dpe dkar, Be dkar,

Dpe ha ra, and Pe ha ra.

Pelliot, Paul. (1878–1945). French Sinologist, whose retrieval of thousands of manuscripts from [DUNHUANG](#) greatly advanced the modern understanding of Buddhism along the ancient [SILK ROAD](#). A pupil of [SYLVAIN LÉVI](#) (1863–1935), Pelliot was appointed to the École Française d’Extrême-Orient in Hanoi in 1899. In 1906, Pelliot turned his attention to Chinese Central Asia, leading an expedition from Paris to Tumchuq and [KUCHA](#), where he unearthed documents in the lost [TOCHARIAN](#) language. In Urumchi, Pelliot received word of the hidden library cave at Dunhuang discovered by [AUREL STEIN](#) and arrived at the site in February 1908. There, he spent three weeks reading through an estimated twenty thousand scrolls. Like Stein, Pelliot sent thousands of manuscripts to Europe to be studied and preserved. Unlike Stein, who knew no Chinese or Prakritic languages, Pelliot was able to more fully appreciate the range of documents at Dunhuang, selecting texts in Chinese, Tibetan, Khotanese, Sogdian (see [SOGDIANA](#)), and Uighur and paying particular attention to unusual texts, including rare Christian and Manichaean manuscripts. Today these materials form the Pelliot collection of Dunhuang materials in the Bibliothèque nationale in Paris. Ironically, it was Pelliot’s announcement of the Dunhuang manuscript cache to scholars in Beijing in May 1908 that resulted in the immediate closing of the site to all foreigners. Pelliot returned to Paris in 1909, only to be confronted by the erroneous claim that he had returned with forged manuscripts. These charges were proved false only in 1912 with the publication of Stein’s book, *Ruins of Desert Cathay*, which made clear that Stein had left manuscripts behind in Dunhuang. In 1911, Pelliot was made chair of Central Asian Languages at the Collège de France and dedicated the rest of his career to the study of both China and Central Asia. During the First World War, Pelliot served as French military attaché in Beijing. In the postwar years he was an active member of the Société Asiatique. In 1920, he succeeded Édouard Chavannes as the editor of the journal *T’oung Pao*. His vast erudition, combined with his knowledge of some thirteen languages, made him one of the leading scholars of Asia of his generation.

Peng Shaosheng. (彭紹升) (1740–1796). A Confucian literatus turned Buddhist adherent during the Qing dynasty (1683–1839); his cognomen was Peng Jiqing. Peng authored several important biographical collections of Chinese Buddhist adherents who were mostly ignored in the traditional collections of biographies

of eminent monks ([GAOSENZHUAN](#)); these include a collection of biographies of laypeople, the [JUSHI ZHUAN](#) (“Record of [Eminent] Laymen”) and the [SHANNÜREN ZHUAN](#) (“Record of [Eminent] Laywomen”), along with a c. 1783 collection of biographies of pure land figures titled *Jingtu shengxian lu* (“A Record of Pure Land Sages”). See [JUSHI ZHUAN](#); [SHANNÜREN ZHUAN](#).

[perfection of wisdom sūtras](#). See [PRAJÑĀPĀRAMITĀ](#).

[perfection\(s\)](#). See [PĀRAMITĀ](#).

[person](#). See [PUDGALA](#).

[perverted views](#). See [VIPARYĀSA](#).

[Petakopadesa](#). In Pāli, “Piṭaka-Disclosure”; a paracanonical Pāli text dedicated to the interpretation of canonical texts, which is included in the longer Burmese edition of the [KHUDDAKANIKĀYA](#). The work is traditionally ascribed to the Buddha’s disciple Kaccāna (S. [KĀTYĀYANA](#); [MAHĀKĀTYĀYANA](#)), but was likely composed in India as early as the second century BCE. A work in eight chapters, it is meant to assist those who are already versed in the dharma in the proper exegesis and explanation of specific passages, allowing them to rephrase a passage in such a way that it remains consistent in meaning with the teaching as a whole. In this way it offers an early guide to authors of commentaries. In the Pāli tradition, it was superseded by a somewhat later and similar text, the [NETTIPPAKARANA](#). Both the *Netti* and the *Petakopadesa* develop an elaborate hermeneutical theory based on the broad rubrics of “interpretation” or “guidance” (P. *netti*; cf. S. *netri*) regarding “sense” (*vyañjana*) and interpretation regarding “meaning” (P. *attha*; S. [ARTHA](#)). See also [SANFEN KEJING](#); [VYĀKHYĀYUKTI](#).

[Petavatthu](#). In Pāli, “Accounts of Ghosts,” the seventh book of the [KHUDDAKANIKĀYA](#) of the Pāli [SUTTAPITAKA](#). It consists of fifty-one stories of *petas* (S. [PRETA](#), often translated as “ghosts” or “hungry ghosts”) who are suffering the negative consequences of their unsalutary deeds in a previous life.

The stories seem to have been intended to serve as cautionary tales for the laity; the *Petavatthu* describes the horrors that await the wicked, just as the [VIMĀNAVĀTTHU](#) describes the pleasures in the heavens that await the good. In most of the stories, a monk encounters a peta and asks how he or she has come to suffer this fate. The peta then recounts the negative deeds in a former life that led to the present sorrowful rebirth.

[Pha dam pa sangs rgyas](#). (Padampa Sangye) (d. 1117). An Indian tantric master renowned in Tibet for his teachings on the practice of “pacification” ([ZHI BYED](#)). His name in Sanskrit is sometimes given as Paramabuddha, although Pha dam pa is also regarded as an affectionate title, “Excellent Father.” According to traditional accounts, he was from a family of seafaring merchants on the southeast coast of India. After his father’s death, he was ordained at [VIKRAMAŚĪLA](#), with the ordination name Kamalaśīla, leading some Tibetan sources to claim that he was the great paṇḍita of the same name who participated in the [BSAM YAS DEBATE](#) several centuries earlier. Other sources give his Indian name as Kamalaśrī. He visited Tibet on numerous occasions (according to some sources, seven times). Referred to by Tibetans as the “little black Indian” (rgya gar nag chung), he attracted few disciples initially, gaining greater fame on subsequent visits. He spent much time in the region of Ding ri in central Tibet, especially around the village of [GLANG 'KHOR](#), where he is still venerated for the earthy and practical advice he gave on how to practice Buddhism. The most famous of these teachings is his *Ding ri brgya tsa ma* (“Dingri One Hundred”). He dressed as an Indian ascetic and sometimes taught simply through gestures, although it is unclear whether this was his tantric mode of expression or was because he initially spoke little Tibetan. Pha dam pa sangs rgyas reportedly encountered the famous [YOGIN MI LA RAS PA](#) on a nearby mountain pass, where they exchanged teachings and acknowledged each other’s spiritual attainment. He was known for including women among his disciples. Indeed, his most famous disciple, the great female adept [MA GCIG LAB SGRON](#), based her practice tradition known as severance ([GCOD](#)) partly on his instructions. After leaving Tibet for the last time, he is said to have traveled to China; according to a Tibetan tradition, he was known in China as [BODHIDHARMA](#).

[Phag mo gru pa Rdo rje rgyal po](#). (Pakmodrupa Dorje Gyalpo) (1110–1170). A Tibetan scholar and adept who is counted as one of the great disciples of the key [BKA' BRGYUD](#) founder [SGAM PO PA BSOD NAMS RIN CHEN](#), and is venerated as

the source for many subsequent Bka' brgyud lineages. Born in the 'Bri lung rme shod region of eastern Tibet, Phag mo gru pa's parents died while he was still young. Receiving ordination as a novice Buddhist monk at the age of eight, he studied under a variety of teachers during the early part of his life. At eighteen, he traveled to central Tibet, receiving full ordination at the age of twenty-five. There he trained under a number of [BKA' GDAMS](#) pa teachers, and later, under the great [SA SKYA](#) master [SA CHEN KUN DGA SNYING PO](#), from whom he received extensive instruction in the tradition of the path and its result ([LAM 'BRAS](#)). At the age of forty, he traveled to [DWAGS LHA SGAM PO](#) in southern Tibet, where he met Sgam po pa, who became his principal guru. Sgam po pa famously held up a half-eaten ball of parched barley flour mixed with tea and said to Phag mo gru pa, "This is greater than the results of all your previous meditation." After he demonstrated his humility by carrying stones to build a [STÜPA](#), Sgam po pa gave Phag mo gru pa the transmission of instructions on [MAHĀMUDRĀ](#) meditation and, through their practice, is said to have attained great realization. In 1158, Phag mo gru pa established a simple meditation hut where he lived until his death in 1170; this location later served as the foundation for the influential monastery of [GDAN SA MTHIL](#). Phag mo gru pa was renowned for his strict adherence to the [VINAYA](#), even going on alms rounds, a rare practice in Tibet. Several individuals among his many followers established a number of important branch lineages, the so-called "eight minor Bka' brgyud subsects" (see [BKA' BRGYUD CHE BZHI CHUNG BRGYAD](#)) that collectively came to be known as the Phag gru Bka' brgyud.

['Phags pa Blo gros rgyal mtshan](#). (Pakpa Lodrö Gyaltsen) (1235–1280). An eminent scholar of the [SA SKYA](#) sect of Tibetan Buddhism, famed for the position of political power he held at the court of the Mongol emperor of Qubilai Khan (r. 1260–1294). He is also revered as one of the five great Sa skya forefathers ([SA SKYA GONG MA RNAM LNGA](#)). 'Phags pa's uncle, [SA SKYA PANDITA](#), was summoned to the court of the Mongol prince Godan in 1244, eventually meeting the prince in 1247. 'Phags pa and his younger brother accompanied their uncle during this journey. After Sa skya Paṇḍita cured Godan Khan of a disease and converted him to Buddhism, the khan appointed him as regent of Tibet under Mongol patronage, and the young 'Phags pa was invited to remain at the Mongol court. After the death of Godan Khan, Qubilai Khan summoned 'Phags pa to his court (at what would come to be called Shangdu), seeking to solidify Mongol rule over Tibet by controlling the politically powerful Sa skya leaders. En route, he gave teachings in eastern Tibet and converted the Rdzong gсар region from [BON](#) to

Buddhism, establishing the Sa skya tradition there. According to some accounts, 'Phags pa arrived at Qubilai Khan's court in 1253. He soon impressed the emperor with his erudition and display of magical powers, which apparently outshone those of other religious figures at the Mongol court, defeating Daoist priests in debate. By 1258, 'Phags pa had so impressed his hosts, first the emperor's wife Chabi and then Qubilai himself, that he was asked to bestow tantric initiations and teachings, thus converting the imperial couple to Buddhism. According to an arrangement suggested by Chabi, 'Phags pa would sit in a lower position than the emperor during state rituals, and the emperor would sit in a lower position than 'Phags pa in religious rituals. 'Phags pa would later identify Qubilai Khan as an incarnation of [MAÑJUŚRĪ](#) and as a [CAKRAVARTIN](#). In 1260, the year Qubilai ascended to the rank of Great Khan, 'Phags pa was given the official positions of imperial preceptor (C. dishi) and state preceptor (C. [GUOSHI](#)). In this latter position, he was the head of the Buddhist clergy of the entire empire, including Tibet, although he himself remained in China. A new office of dpon chen (great minister) was created for a Mongol-appointed Tibetan official who would serve as civil and military administrator for Tibet. In 1280, 'Phags pa died, allegedly having been poisoned by the dpon chen. The relationship between 'Phags pa and Qubilai is often cited as the model for the subsequent relationship between Tibet and China known as "patron and priest" ([YON MCHOD](#)). According to the Tibetan view, this relationship was formed between the leading lama of Tibet (a position later filled by the [DALAI LAMAS](#)) who acted as chief spiritual advisor and priest to the emperor, who in return acted as patron and protector of the lama and the dominion of the Buddhist realm, Tibet. 'Phags pa is often called by the honorific title chos rgyal, or "dharma king," and is also credited with creating in 1269 a new script for the pan-empire use of the Mongolian language. The square forms of the 'Phags pa script had been thought by some scholars to have been the model for the creation of the indigenous Korean alphabet of Han'gŭl in the mid-fifteenth century. However, it is now generally believed that the shapes of the Han'gŭl letters mimic the mouth's shape when articulating classes of consonants, although probably with some influence from the 'Phags pa forms.

['Phags pa wa ti lha khang](#). (Pakpawati Lhakhang). A Nepalese pagoda-style temple located in the southwest Tibetan village of Skyid grong (Kyirong). It is named after its principal image, the famed 'Phags pa wa ti, said to be one of [FOUR BROTHER STATUES OF AVALOKITEŚVARA](#) (alt. three or five according to some

sources) miraculously formed from the trunk of a single sandalwood tree. The 'Phag pa wa ti of Skyid grong, also called the Skyid grong Jo bo (Kyirong Jowo), is a likeness of the bodhisattva Avalokiteśvara in the form known as Khasarpāṇi and is considered one of the most sacred Buddhist images in Tibet. Its praises have been sung by many of the country's leading masters. The image was secretly removed to India in 1959 by Tibetan guerilla fighters and currently resides in the private chapel of the present [DALAI LAMA](#) in [DHARMAŚĀLĀ](#). The other brother statues have been identified as the 'Phags pa Lokeśvara of the [PO TALA](#) palace and the white and red [MATSYENDRANĀTH](#) statues in the Kathmandu Valley.

phala. (T. 'bras bu; C. guo; J. ka; K. kwa 果). In Sanskrit and Pāli, lit. "fruition," and thus "effect" or "result"; the term has three principal denotations. First, in discussions of causation, phala refers to the physical or mental "effect" produced by a cause ([HETU](#)), such as a sprout produced from a seed, or a moment of sensory consciousness ([VIJÑĀNA](#)) produced through the contact ([SPARŚA](#)) between a sense base ([INDRIYA](#)) and a sense object ([ĀYATANA](#); [ĀLAMBANA](#)). Second, in discussions of the path ([MĀRGA](#)), phala refers to the fruition of the four supramundane paths ([ĀRYAMĀRGA](#)), i.e., stream-enterer ([SROTAĀPANNA](#)), once-returned ([SAKRDĀGĀMIN](#)), nonreturner ([ANĀGĀMIN](#)), and worthy one ([ARHAT](#)). Third, in discussions of the process of moral causality, the specific type of fruition called the [VIPĀKAPHALA](#) (retributive fruition) refers to the maturation of a deed ([KARMAN](#)). ¶ Given the centrality of theories of causation in Buddhist philosophy and practice, the notion of cause and effect is analyzed in detail in Buddhist literature, particularly in the [ABHIDHARMA](#) systems. In the [SARVĀSTIVĀDA](#) abhidharma and the [YOGĀCĀRA](#) system, five types of phala are enumerated. These are (1) [NISYANDAPHALA](#), "correlative fruition," wherein the effect may correlate with the cause of the previous action, e.g., as a result of giving a gift in a past life, a person might either enjoy the act of charity or receive charity in a future life; or, as a result of committing murder in a past life, a person might enjoy killing or be murdered in a future life; (2) [VIPĀKAPHALA](#) or "retributive fruition," which refers to the ripening of past actions; (3) [VISAMYOGAPHALA](#), or "disconnection fruition," which refers to the state of absence of, or separation from, the afflictions ([KLEŚA](#)), e.g., [NIRVĀNA](#) is an effect that is disconnected from the afflictions; (4) [PURUṢAKĀRAPHALA](#), lit. "effect caused by a being," or "virile fruition," which would include such things as a pot produced by a potter and a level of attainment that results from the practice of

meditation; (5) [ADHIPATIPHALA](#), or “predominant fruition,” which would include the effects of past deeds that take the form of one’s present environment and resources. ¶ Finally, the term phala is also used as one of the epithets of Buddhist [TANTRA](#), which is called the [PHALAYĀNA](#) or “fruition vehicle” because it incorporates the fruition of buddhahood into the practice of the path.

phalacitta. In Pāli, “fruition consciousness”; the moment or moments of consciousness following the practitioner’s entry into any of the four noble paths (P. ariyamagga, S. [ĀRYAMĀRGA](#)) of stream-enterer (P. sotāpanna, S. [SROTAĀPANNA](#)), once-returner (P. sakadāgāmi, S. [SAKRDĀGĀMIN](#)), nonreturner (P. anāgāmi, S. [ANĀGĀMIN](#)) or worthy one (P. arahant, S. [ARHAT](#)). These four paths are entered through attaining path consciousness ([MAGGACITTA](#)), and it is through the force of this moment of path consciousness that fruition consciousness (phalacitta) arises. Fruition consciousness continues for two or three moments, after which the mind subsides into the subconscious mental continuum ([BHAVAṄGASOTA](#)). The difference between path consciousness and fruition consciousness may be described in the following way with reference to the stream-enterer: through the path of stream-entry one *becomes* free of the first three fetters ([SAMYOJANA](#)), whereas through the fruition of stream-entry one actually *is* free of the first three fetters. Because path consciousness represents the first moment of attaining the path, it occurs only once to any given practitioner for each of the four noble paths. Fruition consciousness, on the other hand, is not so limited in its definition and therefore may repeat itself innumerable times during a lifetime. A synonym of phalacitta is phalañāṇa, or “knowledge of the path.”

phalapratipannaka. (P. phalapaṭipannaka; T. ’bras bu la zhugs pa; C. deguo; J. tokuka; K. tūkkwa 得果). In Sanskrit, “one who has entered upon the fruition [of the path]”; a term used to describe four preparatory steps on the path to becoming a “noble one” ([ĀRYA](#)). For each of the four stages of stream-enterer ([SROTAĀPANNA](#)), once-returner ([SAKRDĀGĀMIN](#)), nonreturner ([ANĀGĀMIN](#)), and worthy one ([ARHAT](#)), there are two steps: entering upon the fruition (phalapaṭipannaka) and abiding in the fruition ([PHALASTHITA](#)). These two steps are distinguished as (1) achieving one of the four stages of the path, followed by (2) the state of having achieved that step.

phalasthita. [alt. phalastha] (P. phalaṭhita; T. ’bras bu la gnas pa; C. zhuguo; J. jūka; K. chugwa 住果). In Sanskrit, “abiding in the fruition,” a term used to

describe four resultant steps on the path to becoming a “noble one” ([ĀRYA](#)). For each of the four stages of stream-enterer ([SROTAĀPANNA](#)), once-returner ([SAKRDĀGĀMIN](#)), nonreturner ([ANĀGĀMIN](#)), and worthy one ([ARHAT](#)), there are two steps: entering upon the fruition ([PHALAPATIPANNAKA](#)) and abiding in the fruition (phalasthita). These two steps are distinguished as (1) achieving one of the four stages of the path, followed by (2) the state of having achieved that step.

phalayāna. (T. 'bras bu theg pa). In Sanskrit, “fruition vehicle”; one of the epithets of the [VAJRAYĀNA](#). In this context, the “effect” or “fruition” ([PHALA](#)) refers to buddhahood, specifically the pure abode, body, resources, and deeds of a buddha. In tantric practice, one visualizes oneself as a buddha, in a [MANDALA](#) palace, with the possessions of a buddha such as the [VAJRA](#) and bell, performing the deeds of a buddha such as purifying environments and the beings who inhabit them. This practice is referred to as bringing the fruition to the path; as a means of proceeding quickly on the path to buddhahood, one imagines that the fruition of buddhahood has already been achieved.

Pháp Loa. (法螺) (1284–1330). In Vietnamese, “Dharma Conch”; the second patriarch of the [TRÚC LÂM](#) school of Vietnamese Buddhism. His personal name was Đồng Kiên Cương and was a native of Nam Sách (in northern Vietnam). He met [TRẦN NHÂN TÔNG](#) for the first time in 1304 and became his disciple. He received full ordination from Trần Nhân Tông in 1305 and was given the dharma name Pháp Loa. In 1308, he was officially recognized as the second patriarch of the Trúc Lâm School. Buddhism prospered under his leadership. In support of Trần Nhân Tông’s goal of a unified [SAMGHA](#), Pháp Loa established in 1313 a national monastic hierarchy, according to which all monks had to register and were under his jurisdiction. Every three years, he would organize a collective ordination ceremony. He also oversaw the construction of many monasteries. By 1314, some thirty-three monasteries had been built, several with large libraries. He was also a tireless teacher, who gave frequent lectures on Chan texts and Buddhist scriptures. This was a period when many aristocrats either entered the monastic order or received precepts as lay practitioners and donated vast tracts of land to Buddhist temples. Among his disciples were the kings Trần Anh Tông and Trần Minh Tông. In 1311, he oversaw the printing of the complete canon and other Buddhist manuals. He also composed several works, most now lost, including commentaries on several [MAHĀYĀNA](#) sūtras.

phi. In Thai, “spirit”; used to refer to a diverse group of entities believed to have

power over humans and thus requiring propitiation. In some cases, they are local demigods; in others, they are reincarnations of the dead. The category also includes the ghosts of the prominent dead as well as those who died mysterious or violent deaths. Phi inhabit trees, hills, water, the earth, and certain animals. “Spirit houses” are constructed for the phi, to which offerings are made.

'pho ba. (powa). In Tibetan, “transferring consciousness,” a tantric practice included among the “six yogas of [NĀROPA](#)” ([NĀ RO CHOS DRUG](#)) by which one is able to eject one’s consciousness from one’s body (through the aperture at the top of the skull) at the moment of death and send it into a pure realm, with [SUKHĀVATĪ](#) of the buddha [AMITĀBHA](#) generally the preferred destination. In order to gain this ability, the practitioner requires instruction and initiation. Although the practice is found in all sects of Tibetan Buddhism (as well as in [BON](#)), it is particularly associated with the [BKA' BRGYUD](#), and within it the 'BRI GUNG. It is one of the few forms of meditation in Tibet that is practiced by laypeople and one of the few forms that is practiced in a group setting.

phra. In Thai, “holy” or “venerable”; an honorific prefix used when referring to the Buddha (see [PHRA PHUTTHA JAO](#)) and before the names of monks, monasteries, relics, buddha images (e.g., [PHRA KAEW MORAKOT](#)), Hindu deities, and members of the Thai royal family. It is also used as a generic designation for “monk.”

Phra Bodhirak (Thai). See [BODHIRAK](#), [PHRA](#).

Phra Buddhacharn Toh Phomarangsi. (Thai). See [SOMDEJ TOH](#).

Phra Kaew Morakot. In Thai, “The Emerald Buddha” (full name: Phra Phuttha Maha Mani Ratana Patimakorn; P. Buddhamaḥamaṇiratnapaṭimā); this most sacred and venerated buddha image in Thailand is currently enshrined at Wat Phra Kaew (Temple of the Emerald Buddha), an ornate temple located on the grounds of the royal palace in the Thai capital of Bangkok. The image, which is in the seated meditation posture, is 29.5 inches (forty-five centimeters) tall; despite its name, it is in fact not made of emerald, but is carved from a single block of a green stone thought to be either jasper or jade. Kaew is an indigenous Thai word for “glass” or “translucence”; morakot derives from the Sanskrit word for emerald (S. morakata). According to legend, the Emerald Buddha was the first buddha image ever made and was carved five hundred years after the

Buddha's death out of a sacred gem that came from [INDRA](#)'s palace. The image is said to have been made by [NĀGASENA](#) (c. 150 BCE), the interlocutor of the [MILINDAPAÑHA](#), in the north Indian city of [PĀTALIPUTRA](#) around 43 BCE. The image was then taken to Sri Lanka in the fourth century CE, and was on its way to Burma in 457, when the ship carrying it went off course and the image next appeared in Cambodia. The image eventually came into Thai hands and made its way to [AYUTHAYA](#), Chiangrai, Chiangmai, and ultimately Bangkok. The image's actual provenance is a matter of debate. Some art historians argue that on stylistic grounds the Emerald Buddha appears to have been carved in northern Thailand around the fifteenth century, while others argue for a south Indian or Sri Lankan origin based on its meditative posture, which is uncommon in Thai buddha images. The Emerald Buddha first enters the historical record upon its discovery in 1434 CE, in the area that is now the northern Thai province of Chiangrai, when lightning struck a chedi (P. *cetiya*, S. [CAITYA](#)) and a buddha image made of stucco was found inside. As the stucco began to flake off, the image of the Emerald Buddha was revealed. At that time, Chiangrai was ruled by the Lānnā Thai kingdom, whose king attempted to bring the image back to his capital of Chiangmai. The chronicles relate that three times he sent an elephant to bring the Emerald Buddha to Chiangmai, but each time the elephant went to Lampang instead, so the king finally relented and allowed the image to remain there. In 1468, the new Chiangmai monarch, King Tiloka, finally succeeded in moving the image to Chiangmai and installed it in the eastern niche of a large [STŪPA](#) at Wat Chedi Luang. The image remained there until 1552, when it was taken to [LUANG PRABANG](#), then the capital of Laos, by the Lao ruler, who was also ruling Chiangmai at the time. In 1564, the king then took the image to Vientiane, where he set up a new capital after fleeing the Burmese. The Emerald Buddha remained in Vientiane for 214 years, until 1778 when the Siamese general Taksin captured the city and took the Emerald Buddha to Thonburi, then the Siamese capital. In 1784, when Bangkok was established as the capital, the image was installed there, in Wat Phra Kaew, the Temple of the Emerald Buddha, as the palladium of the nation (then known as Siam). Because Wat Phra Kaew is located within the palace grounds, the temple is unique in Thai Buddhism for having no monastic residences; the grounds contain only sacred shrines, stūpas, and the main ubosoth ([UPOSADHA](#) hall), where the Buddha resides. The image of the Emerald Buddha is always clothed in golden raiments, which are changed according to the seasons. King Rāma I (r. 1782–1809) had two seasonal costumes made for the statue: a ceremonial robe for the hot season

and a monastic robe for the rainy season. King Rāma III (1824–1851) had another costume made for the cold season: a mantle of gold beads. The ruling monarch performs the ceremonial changing of the garments each season.

Phra Malai. (P. Māleyya). A legendary arahant (S. [ARHAT](#)) and one of the most beloved figures in Thai Buddhist literature. According to legend, Phra Malai lived on the island of Sri Laṅka and was known for his great compassion and supramundane abilities, including the power to fly to various realms of the Buddhist universe. On one of his visits to the hells, he alleviated the suffering of hell beings and then returned to the human realm to advise their relatives to make merit on their behalf. One day as he was on his alms round, he encountered a poor man who presented him with eight lotus blossoms. Phra Malai accepted the offering and then took the flowers to tāvatimsa (S. [TRĀYASTRIMŚĀ](#)) heaven to present them at the Cūlāmaṇi cetiya (S. caitya), where the hair relic of the Buddha is enshrined. Phra Malai then met the king of the gods, [INDRA](#), and asked him various questions: why he had built the caitya, when the future buddha Metteya (S. [MAITREYA](#)) would come to pay respects to it, and how the other deities coming to worship had made sufficient merit to be reborn at such a high level. The conversation proceeded as one divinity after another arrived, with Indra’s explanation of the importance of making merit by practicing [DĀNA](#) (generosity), observing the precepts and having faith. Eventually Metteya himself arrived and, after paying reverence to the chedi, asked Phra Malai about the people in the human realm. Phra Malai responded that there is great diversity in their living conditions, health, happiness, and spiritual faculties, but that they all hoped to meet Metteya in the future and hear him preach. Metteya in response told Phra Malai to tell those who wished to meet him to listen to the recitation of the entire [VESSANTARA-JĀTAKA](#) over the course of one day and one night, and to bring to the monastery offerings totaling a thousand flowers, candles, incense sticks, balls of rice, and other gifts. In the northern and northeastern parts of Thailand, this legend is recited in the local dialects (Lānnā Thai and Lao, respectively) as a preface to the performance or recitation of the *Vessantara-Jātaka* at an annual festival. In central and south Thailand, a variant of the legend emphasizing the suffering of the hell denizens was customarily recited at funeral wakes, a practice that is becoming less common in the twenty-first century.

phra pa. In Thai, “forest monk,” referring to monks who live in the forests

rather than in towns or villages. The monks practice meditation and perform certain permitted forms of physical labor, rather than devoting their efforts to studying texts and interacting with laypeople, as village monks do. In Thailand, the most influential of the forest monk traditions was the [KAMMATTHANA](#) or “meditation” tradition begun by Ajahn (Āchān) Sao Kantisīla (1861–1941) and [AJAHN MUN BHŪRIDATTA](#), which emphasized strict adherence to the [VINAYA](#) and the practice of meditation techniques derived from the Pāli canon. See also [ARAÑÑAVASI](#), [ARANYA](#).

[Phra Pathom Chedi](#). In Thai, lit. “Noble First Shrine,” said to be the tallest Buddhist [CAITYA](#) (P. *ceṭī*) in the world at over 394 feet (120 meters); located in the Thai town of Nakhon Pathom. The original stūpa, located in the region where the first Buddhist missionaries taught in Thailand, may date from the fourth century CE. The stūpa was rebuilt in the Khmer style in the eleventh century and eventually fell into ruins. These ruins were visited by Prince Mongkut (the future [RĀMA IV](#)) during his years as a monk. After Mongkut ascended the throne, he ordered that a new stūpa be constructed at the site, which was completed in 1870 after seventeen years of construction.

[Phra Phuttha Jao](#). In Thai, “the Venerable Lord Buddha,” the most common vernacular Thai term for Gotama (S. [GAUTAMA](#)) Buddha.

[Phra Phuttha Sihing](#). A highly revered image of the Buddha ([PHRA PHUTTHA JAO](#)) in Thailand, second in importance only to the Emerald Buddha ([PHRA KAEW MORAKOT](#)). According to legend, the Phra Phuttha Sihing image was created in Sri Lanka, and was being transported across the ocean when the ship carrying it sank; the image next appeared in the southern Thai city of Nakhon Si Thammarat. Stylistically, the image, seated in the earth-touching posture ([BHŪMISPARŚAMUDRĀ](#)), with its broad chest, fleshy face, and open robe with a short flap on the left side, belongs to the Lānnā, or northern Thai school, which flourished around the fifteenth century. In addition to uncertainties concerning the image’s origin, there are questions of authenticity; at least three sculptures in Thailand are identified as the Phra Phuttha Sihing: they are found in the Buddhaisawan Chapel in the Bangkok National Museum compound, in an eponymous chapel in Nakhon Si Thammarat, and at Wat Phra Singh in Chiangmai.

[Phra Sangkachai](#). A figure depicted in Thai sculpture as a fat monk seated in

meditation. He resembles the figure of [BUDAI](#) (d. 916), the “Laughing Buddha,” found in East Asia, although he may represent Mahākaccāyana ([MAHĀKĀTYĀYANA](#)). He is believed to be of Mon origin.

[Phúc Điền](#). (福田) (c. late-nineteenth century). Scholar-monk of the Nguyễn dynasty, considered one of the most important historians of Buddhism in premodern Vietnam. His biography is recorded in the *Thiền Uyển Truyền Đăng Lục* (“Recorded Transmission of the Lamplight in the [CHAN](#) Community”). According to this source, he was a native of Sơn Minh, Hà Nội province. His family name was Vũ. He left home to become a monk at the age of twelve and first studied under the Venerable Viên Quang of Thịnh Liệt Đại Bi Temple. After three years, Viên Quang passed away, and Phúc Điền went to study under the Venerable Từ Phong of Nam Dư Phúc Xuân Temple. When he was twenty years old Từ Phong passed away, and Phúc Điền moved to Pháp Vân Temple in Bắc Ninh province and received full ordination under the Venerable Từ Quang. Phúc Điền’s biography shows that he was not only an author, translator, and historian, but also an activist who tirelessly built and repaired many monasteries. Besides reprinting, editing, translating (from classical Chinese into vernacular Nôm Vietnamese) numerous Buddhist texts, and recording detailed histories of various temples, he also left behind several independent works, the most important of which are the *Tam Giáo Nguyên Lưu* (“Sources of the Three Religions”), the *Đại Nam Thiền Uyển Truyền Đăng Tập Lục* (“Recorded Transmission of the Lamplight [in the Chan Community] of Vietnam”), and the *Thiền Uyển Truyền Đăng Lục* (“Transmission of the Lamplight in the Chan Community”). His extant writings include more works on history than on Buddhist doctrine. His aspiration was to collect all the extant materials regarding the origin and transmission of Vietnamese Buddhism. Because he was convinced that Vietnamese Buddhism was a continuation of the orthodox school of Chinese Buddhism (and specifically the [CHAN ZONG](#)), he implicitly accepted the hermeneutical strategies of Chinese Chan in constructing his view of Vietnamese Buddhist history. However, in addition to Chinese Chan documents, he also consulted Vietnamese sources, together with copious notes drawn from his own fieldwork at various temples. His writings, therefore, provide valuable sources for the understanding of Vietnamese Buddhist history.

[phur pa](#). [alt. phur bu] (S. kīla). A Tibetan ritual dagger. Although the word is used colloquially for any form of stake driven into the ground, such as a tent

peg, in the context of Tibetan Buddhism it refers to a ritual implement used in the performance of tantric ceremonies. In its most common design, the phur pa is shaped like a stake with a three-sided blade tapering to a point, while the shaft of its handle is frequently capped with three wrathful or semiwrathful faces and a half-[VAJRA](#). They are fashioned from a variety of materials and may be carved in clay, wood, or bone and are regularly cast from metal alloys. In some instances, phur ba daggers revealed as treasure ([GTER MA](#)) are said to be formed from meteorites (nam lcags). The phur pa is regularly used in rituals for the subjugation of harmful or obstructive forces, such as the “black hat dance” in which participants repeatedly strike an effigy believed to embody those forces. It is also associated with the tantric literature of Rdo rje phur ba (S. [VAJRAKĪLAYA](#)) attributed to [PADMASAMBHAVA](#), in which the lower portion of the central deity takes the form of a ritual dagger.

[Phyag chen chos sku mdzub tshugs](#). (Chakchen Chöku Dzuptionsuk). In Tibetan, “[MAHĀMUDRĀ](#): Pointing Out the [DHARMAKĀYA](#)”; the briefest of three major texts composed by the ninth [KARMA PA DBANG PHYUG RDO RJE](#) on the doctrine and practice of the great seal (mahāmudrā). See also [PHYAG CHEN MA RIG MUN GSAL](#) (“Mahāmudrā: Eliminating the Darkness of Ignorance”) and [PHYAG CHEN NGES DON RGYA MTSHO](#) (“Mahāmudrā: Ocean of Definitive Meaning”).

[Phyag chen ma rig mun gsal](#). (Chakchen Marik Munsel). In Tibetan, “[MAHĀMUDRĀ](#): Eliminating the Darkness of Ignorance”; the intermediate of three major texts composed by the ninth [KARMA PA DBANG PHYUG RDO RJE](#) on the doctrine and practice of the great seal (mahāmudrā). See also [PHYAG CHEN CHOS SKU MDZUB TSHUGS](#) (“Mahāmudrā: Pointing out the [DHARMAKĀYA](#)”) and [PHYAG CHEN NGES DON RGYA MTSHO](#) (“Mahāmudrā: Ocean of Definitive Meaning”).

[Phyag chen nges don rgya mtsho](#). (Chakchen Ngedön Gyatso). In Tibetan, “[MAHĀMUDRĀ](#): Ocean of Definitive Meaning”; the most extensive of three major texts composed by the ninth [KARMA PA DBANG PHYUG RDO RJE](#) on the doctrine and practice of the great seal (mahāmudrā). See also [PHYAG CHEN CHOS SKU MDZUB TSHUGS](#) (“Mahāmudrā: Pointing out the [DHARMAKĀYA](#)”) and [PHYAG CHEN MA RIG MUN GSAL](#) (“Mahāmudra: Eliminating the Darkness of Ignorance”).

[Phyag chen zla ba’i ’od zer](#). (Chakchen Dawe Öser). In Tibetan, “Moonbeams of [MAHĀMUDRĀ](#)”; an encyclopedic treatise on the doctrine and practice of the great seal (mahāmudrā) composed by the sixteenth-century [BKA’ BRGYUD](#) scholar

[DWAGS PO BKRA SHIS RNAM RGYAL](#). It is highly regarded as a sourcebook and meditation manual for the practice of mahāmudrā, offering many quotations from Indian and Tibetan sources. The work is divided into two major divisions: the first on the practice of [ŚAMATHA](#) and [VIPAŚYANĀ](#), the second on the practice of mahāmudrā.

[phyi dar](#). (chi dar). In Tibetan, “later dissemination.” Tibetan historians have traditionally divided the dissemination of Buddhist teachings in Tibet into two periods. The “earlier dissemination” ([SNGA DAR](#)) began in the seventh century with the conversion of king [SRONG BTSAN SGAM PO](#) to Buddhism and continued with the arrival of the Indian masters [ŚĀNTARAŚSITA](#) and [PADMASAMBHAVA](#) and the founding of the first monastery at [BSAM YAS](#) during the reign of king [KHRI SRONG LDE BTSAN](#). This period ended in 842 with the assassination of king [GLANG DAR MA](#) and the fall of the Tibetan monarchy. There ensued a “dark period” of almost two centuries, during which recorded contact between Indian and Tibetan Buddhists declined. The “later dissemination” commenced in earnest in the eleventh century. It is marked by patronage of Buddhism by king [YE SHES 'OD](#) in western Tibet and especially the work of the noted translator [RIN CHEN BZANG PO](#), who made three trips to India to study and to retrieve Buddhist texts, as well as the work of [RNGOG LEGS PA'I SHES RAB](#). The noted Bengali monk [ATIŚA DĪPAMKARAŚRĪJĀNA](#) arrived in Tibet in 1042. The “later dissemination” was a period of extensive translation of Indian texts; these new ([GSAR MA](#)) translations of tantras became central to the so-called “new” sects of Tibetan Buddhism: [BKA' GDAMS](#), [SA SKYA](#), [BKA' BRGYUD](#), and later [DGE LUGS](#), with the [RNYING MA](#) (“ancient”) sect basing itself on “old” translations from the earlier dissemination. Of particular importance during this later dissemination was the resurgence of monastic ordination, especially that of the [MŪLASARVĀSTIVĀDA VINAYA](#). New artistic styles were also introduced from neighboring regions during this period.

[Phywa pa \[alt. Cha pa\] Chos kyi Seng ge](#). (Chapa Chökyi Senge) (1109–1169). The sixth abbot of [GSANG PHU NE'U THOG](#), a [BKA' GDAMS](#) monastery founded in 1073 by [RNGOG LEGS PA'I SHES RAB](#). Among his students are included the first [KARMA PA](#), [DUS GSUM MKHYEN PA](#) and the [SA SKYA](#) hierarch [BSOD NAMS RTSE MO](#). His collected works include explanations of [MADHYAMAKA](#) and [PRAJÑĀPĀRAMITĀ](#). With his influential *Tshad ma'i bsdus pa yid kyi mun sel rtsa 'grel* he continued the line of [PRAMĀNA](#) scholarship started by [RNGOG BLO LDAN SHES RAB](#), one that would later be challenged by [SA SKYA PANDITA](#). He is credited

with originating the distinctively Tibetan [BSDUS GRWA](#) genre of textbook (used widely in [DGE LUGS](#) monasteries) that introduces beginners to the main topics in abhidharma in a peculiar dialectical form that strings together a chain of consequences linked by a chain of reasons. He also played an important role in the formation of the [BSTAN RIM](#) genre of Tibetan Buddhist literature, the forerunner of the more famous [LAM RIM](#).

[pibo sat'ap söl](#). (裨補寺塔說). In Korean, “reinforcing [the land] through monasteries and [STŪPAS](#)”; geomantic theory of the Korean monk [TOSŌN](#) (827–898), who proposed that building monasteries and pagodas at geomantically fragile locations around the Korean peninsula could correct adverse energy flows in the native geography and thus alleviate topological weaknesses, in much the same way that acupuncture could correct adverse energy flows within the physical body. This term pibo (lit. “assisting and supplementing,” and thus “reinforcing,” or “remediation”) is not attested as a technical term in Chinese geomancy, but seems to have been coined by Tosŏn. Pibo also comes to be used as an official ecclesiastical category to designate important monasteries that had figured in the founding of the Koryŏ dynasty.

[pilgrimage](#). See [MAHĀSTHĀNA](#); [GNAS SKOR BA](#); [XINGJIAO](#).

[Pilindavatsa](#). (P. Pilindavaccha; T. Pi lin da ba tsa; C. Bilingqie Pocuo; J. Hitsuryōgabasha; K. P'illŭngga Pach'a 畢陵伽婆蹉). An eminent [ARHAT](#) declared by the Buddha foremost among monk disciples who are beloved of the gods. According to the Pāli account, he was born to a brāhmaṇa family named Vaccha (S. Vatsa) in the city of Sāvatti (S. [ŚRĀVASTĪ](#)); Pilinda was his personal name. Pilinda became a hermit and mastered the magical science called cūḷa (or “lesser”) gandhāravijjā, which allowed him to make himself invisible and walk through walls. However, in the presence of the Buddha the science was ineffective. Believing the Buddha to have canceled out his power through a mastery of mahā (or “greater”) gandhāravijjā (the ability to read the minds of others and fly through the air), he entered the order to learn the Buddha’s science. The Buddha instructed him in meditation, by means of which Pilinda became an arhat. In a previous existence, Pilinda had been a righteous ruler who had led many of his subjects to a heavenly rebirth. As a consequence, many of his former subjects, now divinities ([DEVA](#)), waited upon Pilinda morning and evening in gratitude. It is for this reason that he earned distinction as the disciple most beloved of the gods. Pilinda had the unfortunate habit of addressing

everyone he met with the derogatory epithet of *vasala*, meaning outcaste. The Buddha explained that this was because he had been born an outcaste for a hundred lives. Once Pilinda inquired of a passerby carrying a bowl of peppers, “What is in the bowl, *vasala*?” Insulted, the passerby said, “rat dung,” whereupon the peppers turned to rat dung. The passerby begged Pilinda to return the contents to their original state, which he did using his powers. Pilinda used his extraordinary powers on several other occasions. Once, he created a crown of gold for an impoverished girl so that her family could partake of a feast day; on another occasion he rescued two girls who had been kidnapped by robbers and returned them to their family. The involvement with females prompted some of his fellow monks to blame him for impropriety, but the Buddha ruled that no misdeed had been committed. He figures in several [MAHĀYĀNA](#) sūtras, being mentioned as a member of the audience of the [SADDHARMAPUNĀRIKASŪTRA](#) and appearing in the [*ŚŪRAMGAMASŪTRA](#).

[pindapāta](#). (T. *bsod snyoms*; C. *qishi*; J. *kotsujiki*; K. *kōlsik* 乞食). In Sanskrit and Pāli, “alms food” (or, according to other etymologies, “alms bowl”); the food received in the alms bowl (S. [PĀTRA](#); P. *patta*) of a monk or nun; by extension, the “alms round” that monks and nuns make each morning to accept alms from the laity. There are numerous rules found in all Buddhist traditions concerning the proper ways of receiving and consuming alms food. In the Pāli [VINAYA](#), for example, this food must be received and consumed between dawn and noon and may consist of five types: cooked rice, baked or roasted flour, pulse and rice, fish, and meat. The monk may not, on his own initiative, intimate to the donor that he desires food or a specific kind of food; indeed, the monk makes little if any acknowledgement of receiving the food, but simply accepts whatever is offered and continues along his route. In East Asia, and especially Japan, [TAKUHATSU](#), lit., “carrying the bowl,” is often conducted by a small group of monks who walk through the streets with walking staffs ([KHAKKHARA](#)) and bells that alert residents of their presence. Because East Asian Buddhism was generally a self-sufficient cenobitic tradition that did not depend on alms food for daily meals, monks on alms round would typically receive money or uncooked rice in their bowls as offerings from the laity. The alms round was one of the principal points of interaction between monastic and lay Buddhists, and theirs was a symbiotic relationship: monks and nuns would receive their sustenance from the laity by accepting their offerings, the laity would have the opportunity to generate merit ([PUNYA](#)) for themselves and their families by

making offerings ([DĀNA](#)) to the monastics. Indeed, one of the most severe penalties the [SAMGHA](#) can administer to the laity is to refuse their donations; this act of censure is called “overturning the bowl” (see [PĀTRANIKUBJANA](#)).

[Piṇḍola-Bhāradvāja](#). (T. Bha ra dhwa dza Bsod snyoms len; C. Bintoulu Poluoduo zunzhe; J. Binzuruharada sonja; K. Pinduro Pallat’a chonja 賓頭盧頗羅墮尊者). Sanskrit and Pāli proper name of a prominent monk-disciple of the Buddha, born as the son of a brāhmaṇa priest in the service of King Udāyana of Kauśāmbī. He was a successful teacher of the Vedas, first encountering the Buddha when his travels took him to [RĀJAGRHA](#). Gluttonous by nature, he was impressed by all the offerings the Buddha’s disciples received and so resolved to enter the order. For this reason, he carried with him an exceptionally large alms bowl ([PĀTRA](#)) made from a gourd. After he was finally able to conquer his avarice, he became an [ARHAT](#) and uttered his “lion’s roar” ([SIMHANĀDA](#)) in the presence of the Buddha, for which reason he was declared the foremost lion’s roarer (simhanādin) among the Buddha’s disciples. In a famous story found in several recensions of the [VINAYA](#), the Buddha rebuked Piṇḍola for performing the following miracle before a crowd. A rich merchant had placed a valuable sandalwood alms bowl (pātra) atop a pole and challenged any mendicant to retrieve it with a magical display. Encouraged by [MAHĀMAUDGALYĀYANA](#), Piṇḍola entered the contest and used his magical powers to rise into the air and retrieve the bowl. The Buddha rebuked Piṇḍola for his crass exhibitionism, and ordered that the bowl be ground into sandalwood powder (presumably for incense). The incident was the occasion for the Buddha to pass the “rule of defeat” ([PĀRĀJIKĀ](#)), forbidding monks from displaying supernatural powers before the laity. Sanskrit sources state that the Buddha rebuked Piṇḍola for his misdeed and ordered him not to live in [JAMBUDVĪPA](#), but to move to aparagodānīya (see [GODĀNĪYA](#)) to proselytize (where he is said to reside with a thousand disciples). The Buddha also forbade him from entering [PARINIRVĀNA](#) so that he would remain in the world after the Buddha’s demise and continue to serve as a field of blessings ([PUNYAKSETRA](#)) for sentient beings; for this reason, Piṇḍola is also known in Chinese as the “World-Dwelling Arhat” (Zhushi Luohan). This is the reason why some traditions still today invoke his name for protection and why he is traditionally listed as the first of the sixteen [ARHAT](#) elders ([SODĀŚASTHAVIRA](#)), who are charged by the Buddha with protecting his dispensation until the advent of the next buddha, [MAITREYA](#). According to the [DIVYĀVADĀNA](#), Piṇḍola was given the principal seat at the third Buddhist council

([SAMGĪTI](#)) called by Emperor [AŚOKA](#) (see [COUNCIL, THIRD](#)); at that point, he was already several hundred years old, with long white hair and eyebrows that he had to hold back in order to see. In China, [DAO'AN](#) of the Eastern Jin dynasty once had a dream of a white-haired foreign monk, with long, flowing eyebrows. Later, Master Dao'an's disciple [LUSHAN HUIYUAN](#) read the [SARVĀSTIVĀDA VINAYA](#) and realized that the monk whom his teacher had dreamed about was Piṇḍola. From that point on, Dao'an offered Piṇḍola food every day, and, for this reason, a picture or image of Piṇḍola is often enshrined in monastic dining halls in China. This is also why Piṇḍola was given another nickname in Chinese, the “Long-Browed Monk” (Changmei Seng). In [CHANYUE GUANXIU](#)'s standard Chinese depiction of the sixteen arhats, Piṇḍola-Bharadvāja is portrayed as squatting on a rock, holding a staff in his left hand, leaning on a rock with his right, with a text placed on his knees. In Tibetan iconography Piṇḍola holds a pātra; other East Asian images depict him holding a text and either a chowrie (C. [FUZI](#); S. [VĀLAVYAJANA](#)) or a pātra.

pirit. In Sinhalese, “protection.” See [PARITTA](#).

piśāca. (P. piśāca; T. sha za; C. pisheshe; J. bishaja; K. pisasa 毘舍闍). In Sanskrit, “flesh-eater,” a class of ogres or goblins, similar to [RĀKSASA](#) and [YAKSA](#), who eat human flesh. A female ogress is called a piśācinī (P. piśācinī). Among the six rebirth destinies ([GATI](#)), they are included in the realm of the ghosts ([PRETA](#)). The term is also used to refer to the people of the Paiśācī district, who spoke one of the vernacular [PRAKRIT](#) dialects used during the Buddha's lifetime.

piṭaka. (T. sde snod; C. zang; J. zō; K. chang 藏). In Sanskrit and Pāli, “basket” (in a figurative sense), or canonical “collection,” viz. a collection of scriptures organized by category. (The Chinese translates piṭaka as “repository.”) The use of the term piṭaka to refer to such collections of scriptures may derive from the custom of collecting in baskets the individual bark slips on which the pages of the scriptures were written. The [VINAYA](#), [SŪTRA](#), and [ABHIDHARMA](#) (alt. śāstra) piṭakas together constitute the [TRIPITAKA](#) (P. tipiṭaka), the “three baskets” of the Buddhist canon, a term that is employed in both the mainstream and [MAHĀYĀNA](#) schools. The various schools of Indian Buddhism differ, however, on precisely which texts are to be included in these collections. The abhidharma was likely added later, since early texts refer only to monks who are masters of the [SŪTRAPITAKA](#) and the [VINAYAPITAKA](#). A number of the [MAINSTREAM BUDDHIST](#)

[SCHOOLS](#) seem also to have had a bodhisattvapīṭaka, which included texts related to the past lives of the [BODHISATTVA](#), such as the [JĀTAKA](#). This term [BODHISATTVAPITAKA](#) was adopted in the [MAHĀYĀNA](#), and it was used as the title of a single text, a specific set of Mahāyāna sūtras, as well as to refer to the Mahāyāna sūtras collectively. With the rise of tantric Buddhism, the term vidyādhara-pīṭaka, the pīṭaka of the “keepers of knowledge” ([VIDYĀDHARA](#)), came to be used to refer collectively to the Buddhist [TANTRAS](#). See also [DAZANGJING](#).

[Pitalkhorā](#). An early Buddhist monastic cave site in western India, around fifty miles southwest of the cave sites of [AJANTĀ](#) and twenty-three miles northwest of [ELLORĀ](#), which was connected to Pitalkhorā by an ancient caravan route. Most of the fourteen caves are in ruins today, due at least partly to the fact that the original excavators, when translating the forms of wooden architecture into stone, neglected the structural features necessary to support the stone’s extra weight. Cave 3, a large sanctuary ([CAITYA](#)), is divided by octagonal pillars (but without either bases or capitals) into a nave and two aisles, with half-barrel-vaulted side aisles flanking the central space; it resembles a similar sanctuary at [BHĀJĀ](#). The [STŪPA](#) in Cave 3 contained crystal reliquaries set into oblong sockets, which were then plugged with fitted stone slabs; their presence indicates the practice of relic ([ŚARĪRA](#)) enshrinement. Cave 4 is entered through a doorway that is flanked by two gently smiling door guardians ([DVĀRAPĀLA](#)) holding javelins and shields. Extending to the right of this entrance is a row of nine life-size carved elephants, who appear to be bearing the weight of the cave; the sculptures are remarkable for their realistic modeling and resemble those at the [SĀŅCĪ](#) stūpa.

[Pitāputrasamāgamasūtra](#). (T. Yab dang sras mjal ba’i mdo; C. Pusa jianshi jing/Fuzi heji jing; J. Bosatsu kenjitsukyō/Fushi gōjūkyō; K. Posal kyōnsil kyōng/Puja hapchip kyōng 菩薩見實經/父子合集經). In Sanskrit, “Sūtra on the Meeting of Father and Son,” a [MAHĀYĀNA](#) scripture found in the [RATNAKŪTASŪTRA](#), often cited in [MADHYAMAKA](#) texts, especially for its expositions of emptiness ([ŚŪNYATĀ](#)) and the two truths ([SATYADVAYA](#)). It is quoted in such famous works as [NĀGĀRJUNA](#)’s [SŪTRASAMUCCAYA](#) and [ŚĀNTIDEVA](#)’s [ŚIKṢĀSAMUCCAYA](#). The *Pitāputrasamāgamasūtra* was translated into Chinese by Rajendrayaśas in 568 as the *Pusa jianshi jing* and was included in the massive *Dabaoji jing (Ratnakūtasūtra)* compilation. It was subsequently retranslated in the eleventh century by Richeng and others as the *Fuzi heji jing*.

pīṭha. (T. gnas). In Sanskrit, “abode” or “seat,” in tantric literature, a location where [YOGINĪS](#) congregate and hence a potent site for tantric practice. There are various lists of such locations, sometimes numbering twelve, twenty-four, or thirty-two; the number twenty-four is the most common, but the lists of twenty-four vary in the names and locations of the specific sites. The pīṭha figure prominently in yoginītantras such as the [CAKRASAMVARATANTRA](#) and the [HEVAJRATANTRA](#). They also appear commonly in scenes from the lives of the [MAHĀSIDDHAS](#). Many of the sites can be linked to geographical locations on the Indian subcontinent, although some remain unidentified and the location of others shifts according to different traditions. They are considered, however, to form a network, both in the external world and inside the body of the tantric practitioner; the external sites are called bāhyapīṭha, and the internal sites are called nāḍīsthāna, that is, places where important energy channels ([NĀDĪ](#)) are located according to tantric physiology. In both their external and internal forms, the pīṭha are presumed to form a [MANDALA](#). The pīṭha are said to be the abodes of tantric goddesses, called yoginī or [DĀKINĪ](#), associated with a particular tantric cycle. They are described as places where male and female tantric practitioners congregate in order to engage in a variety of ritual practices, after having identified each other using secret codes. Tantric texts extol the benefits of visiting the pīṭha, either externally or internally, and Tibetan pilgrims have long sought to find the twenty-four sites. Based on the conquest and transformation of Maheśvara (Śiva) by the Buddhist deity [VAJRAPĀNI](#), the twenty-four names of the Cakrasaṃvara sacred sites are the four seats (pīṭha) Uḍḍiyāna, Jālandhara, Pullīramalaya, and Arbuda; four outer seats (upapīṭha) Godāvārī, Rāmeśvara, Devīkoṭa, and Mālava; two fields (kṣetra) Kāmarūpa and Oḍra; two outer fields (upakṣetra) Triśakuni and Kośala; two pleasing places (chandoha) Kalinga and Lampāka; two outer delightful places (upacchanda) Kāñci and Himālaya; two meeting places (melāpaka) Pretapuri and Gṛhadevatā; two outer meeting places (upamelāpaka) Saurāṣṭra and Suvarṇadvīpa; two cremation grounds ([ŚMAŚĀNA](#)) Nagara and Sindu; and two outer cremation grounds (upaśmaśāna) Maru and Kulatā. The twenty-four sites were later symbolically “transferred” to locations in Nepal and Tibet. To Newar Buddhists, the Kathmandu Valley conceptually mirrors the structure of the Cakrasaṃvara [MANDALA](#), and the twenty-four temples of different Cakrasaṃvara goddesses make the valley a sacred space. In Tibet, DAGS PA SHEL RI (Crystal Mountain) in the [TSA RI](#) region also mapped the Cakrasaṃvara maṇḍala. Every twelve years pilgrims would make the arduous pilgrimage around the sites mapped onto that sacred space.

pit:tantra. (T. pha rgyud). In Sanskrit, “father tantra,” one of the categories of [ANUTTARAYOGATANTRA](#). This category is paired with “mother tantra” ([MĀTRĀNTRA](#)); in some cases a third category of “nondual” ([ADVAYA](#)) tantras is added. The father tantras are those that place particular emphasis on method ([UPĀYA](#)) over wisdom ([PRAJÑĀ](#)), especially as it pertains to the achievement of the illusory body ([MĀYĀDEHA](#)) on the stage of generation ([UTPĀTIKRAMA](#)). The chief tantra of this category is the [GUHYASAMĀJATANTRA](#).

[Platform Sutra of the Sixth Patriarch.](#) See [LIUZU TAN JING](#).

[Pöbun.](#) (K) (法雲). See [CHINHŬNG WANG](#).

[Pohwa.](#) (普化) (1875–1958). Influential [SŎN](#) master and ecclesiastical leader in the modern Korean Buddhist tradition; also known as Sögu. In 1912, while he was studying the writings of [POJO CHINUL](#) (1158–1210) at the monastery of PŌMŎSA, he decided to become a monk and subsequently went to [CHANGANSA](#), where he was ordained by Yöndam Ŭngsin (d.u.). The same year Pohwa received the precepts from Tongson Chöngüi (1856–1936) at [YUJŎMSA](#). After spending twenty years at Yöngwönsa, he subsequently moved to Ch’ilbul hermitage on [CHIRISAN](#), established the Haegwan hermitage in Namhae, and taught at the major monastery of [HAEINSA](#). In 1955, at the end of the Japanese colonial period (1910–1945), Pohwa was appointed the first supreme patriarch ([CHONGJŎNG](#)) of the new Korean Buddhist [CHOGYE CHONG](#) after it was reorganized by [MANAM CHONGHŎN](#). During his three years as patriarch, he led a “purification movement” (chöngghwa undong) that sought to purge the Chogye order of what were considered to be the vestiges of nontraditional practices foisted on Korean Buddhism during the Japanese colonial period, such as clerical marriage and meat eating. Pohwa passed away at [TONGHWASA](#) near Taegu at the age of eighty-four.

[poisons, three.](#) See [TRIVISA](#).

[Pojo Chinul.](#) (C. Puzhao Zhine; J. Fushō Chitotsu 普照知訥) (1158–1210). In Korean, lit. “Shining Universally, Knowing Reticence”; the premier Korean [SŎN](#) master of the Koryō dynasty and one of the two most influential monks in the history of Korean Buddhism (along with [WŎNHYO](#)); he usually referred to himself using his cognomen Moguja (Oxherder). Chinul was a native of the Tongju district to the west of the Koryō capital of Kaesōng (present-day Söhung

in Hwanghae province). In 1165, he was ordained by the Sŏn master Chonghwi (d.u.) at Kulsansa on Mt. Sagul, one of the monastic centers of the so-called “Nine Mountains school of Sŏn” (see [KUSAN SŌNMUN](#)). In 1182, Chinul passed the Sŏn clerical examinations ([SŪNGKWA](#)) held at the monastery of Pojesa in the capital of Kaesŏng, but rather than take an ecclesiastical position he opted instead to form a retreat society ([KYŎLSA](#)) with some fellow monks. Chinul left the capital and headed south and began his residence at Ch’ŏngwŏnsa in Ch’angp’yŏng (present-day South Chŏlla province). There, Chinul is said to have attained his initial awakening while reading the [LIUZU TAN JING](#). In 1185, Chinul relocated himself to Pomunsa on Mt. Haga (present-day North Kyŏngsang province), where he had his second awakening while reading [LI TONGXUAN](#)’s [HUAYAN JING HELUN](#) (“Commentary to the [AVATAMSAKASŪTRA](#)”). In 1188, Chinul and the monk Tŭkchae (d.u.) launched the first Samādhi and Prajñā Retreat Society ([CHŎNGHYE KYŎLSA](#)) at the monastery of Kŏjosa on Mt. Kong (present-day North Kyŏngsang province). Chinul subsequently moved the community to the Kilsangsa on Mt. Songgwang, which was later renamed [SUSŎNSA](#), or the Sŏn Cultivation Community, by King Hŭijong (r. 1204–1211); this is the major monastery now known as [SONGGWANGSA](#). On his way to establish the retreat society, Chinul is said to have briefly resided at the hermitage Sangmujuam on [CHIRISAN](#), where he attained his final awakening while reading the recorded sayings ([YULU](#)) of the [CHAN](#) master [DAHUI ZONGGAO](#). In addition to reciting the [VAJRACCHEDIKĀPRAJÑĀPĀRAMITĀSŪTRA](#), the practice of the Sŏn Cultivation Community at Kilsangsa was purportedly based on the three principles of the concurrent practice of [SAMĀDHI](#) and [PRAJÑĀ](#) as taught in the *Liuzu tan jing*, faith and understanding of the perfect and sudden teachings (K. wŏndon kyo; C. [YUANDUN JIAO](#)) according to the *Avataṃsakasūtra*, and the shortcut method of “questioning meditation” (K. kanhwa Sŏn; C. [KANHUA CHAN](#)) developed by Dahui. Chinul is renowned for developing an ecumenical approach to Buddhist thought and practice, which sought to reconcile the insights of the “word of the Buddha”—viz., the scriptures, or [KYO](#)—with the “mind of the Buddha”—viz., Sŏn practice. He taught an approach to Buddhist practice that combined an initial sudden awakening followed by continued gradual cultivation (K. donŏ chŏmsu; C. [DUNWU JIANXIU](#)), which he saw as the optimal soteriological schema for most practitioners. Chinul also was the first to introduce “questioning meditation” (kanhwa Sŏn) into the Korean Sŏn tradition, and this type of meditation would hold pride of place in Korean Buddhism from that point forward. Chinul was later given the posthumous title Puril Pojo (Buddha-Sun

That Shines Universally). His many works include the [SUSIM KYŎL](#) (“Secrets on Cultivating the Mind”), [KANHWA KYŎRŬI RON](#) (“Resolving Doubts About Observing the Meditative Topic”), [WŎNDON SŎNGBUL NON](#) (“The Complete and Sudden Attainment of Buddhahood”), and his magnum opus, the [PŎPCHIP PYŎRHAENGNOK CHŎRYO PYŎNGIP SAGI](#) (“Excerpts from the ‘Dharma Collection and Special Practice Record’ with Personal Notes”), which is included in the [SAJIP](#) (“Fourfold Collection”).

[Polonnaruva](#). [alt. Polonaruva; Polonnaruwa]. An ancient capital of Sri Lanka, it was declared the capital by King Vijayabāhu I after his defeat of the Cōḷa in 1070. The city’s golden age occurred under King [PARĀKRAMABĀHU I](#), the grandson of Vijayabāhu, during whose reign agriculture and trade flourished and numerous architectural projects were undertaken. The city remained the capital until the late thirteenth century. Polonnaruva was the site of several important monasteries and [STŪPAS](#), the ruins of which remain today. The ancient city was declared a World Heritage Site in 1982. Perhaps its most famous site is the Gal Viharaya, where three large statues of the Buddha (standing, seated, and reclining) were cut from a single granite wall during the reign of Parākramabāhu I. A stone inscription at the site details the king’s efforts to unite the saṅgha (S. [SAMGHA](#)) under a single [NIKĀYA](#) tradition and sets forth his sāsana reforms of the dispensation (P. sāsana; S. [ŚĀSANA](#)).

[Pŏmnang](#). (法郎) (fl. c. 632–646). The proper name of the Korean monk who is credited by tradition with having first transmitted the teachings of the [SŎN](#) school (C. [CHAN ZONG](#)) to the Korean peninsula. Pŏmnang is said to have studied the East Mountain Teachings ([DONGSHAN FAMEN](#)) under the fourth patriarch of Chan, [DAOXIN](#) (580–651), but there is no independent evidence supporting this assertion. After returning to Korea, Pŏmnang is claimed to have passed his teachings on to Sinhaeng (704–779), a vaunt-courier in the Hŭiyangsan Sŏn school, thus making Pŏmnang the ancestor of this oldest lineage in the Nine Mountains school of Sŏn ([KUSAN SŎNMUN](#)). Unfortunately, next to nothing is known about Pŏmnang’s life and career, and he may have been introduced merely as a way of burnishing the luster of Sinhaeng’s lineage.

[Pŏmŏsa](#). (梵魚寺). In Korean, “[BRAHMĀ](#) Fish Monastery”; the fourteenth district monastery ([PONSĀ](#)) of the contemporary [CHOGYE CHONG](#) of Korean Buddhism, located on Kŭmjŏng (Golden Well) Mountain outside the southeastern city of Pusan. According to legend, Pŏmŏsa was named after a golden fish that

descended from heaven and lived in a golden well located beneath a rock on the peak of Kŭmjŏng mountain. The monastery was founded in 678 by [ŬISANG](#) (625–702) as one of the ten main monasteries of the Korean Hwaŏm (C. [HUAYAN](#)) school, with the support of the Silla king Munmu (r. 661–680), who had unified the three kingdoms of the Korean peninsula in 668. Korea was being threatened by Japanese invaders, and Munmu is said to have had a dream that told him to have Ŭisang go to Kŭmjŏng mountain and lead a recitation of the [AVATAMSAKASŪTRA](#) (K. *Hwaŏm kyŏng*) for seven days; if he did so, the Japanese would be repelled. The invasion successfully forestalled, King Munmu sponsored the construction of Pŏmŏsa. During the Koryŏ dynasty the monastery was at the peak of its power, with more than one thousand monks in residence, and it actively competed for influence with nearby [T'ONGDOSA](#). The monastery was destroyed during the Japanese Hideyoshi invasions of the late-sixteenth century, but it was reconstructed in 1602 and renovated after another fire in 1613. The only Silla dynasty artifacts that remain are a stone [STŪPA](#) and a stone lantern. Pŏmŏsa has an unusual three-level layout with the main shrine hall ([TAEUNG CHŎN](#)) located at the upper level and the Universal Salvation Hall (Poje nu) anchoring the middle level. The lower level has three separate entrance gates. Visitors enter the monastery through the One-Pillar Gate (Ilchu mun), built in 1614; next they pass through the Gate of the Four Heavenly Kings (Sach'ŏnwang mun), who guard the monastery from baleful influences; and finally, they pass beneath the Gate of Nonduality (Puri mun), which marks the transition from secular to sacred space. The main shrine hall was rebuilt by Master Myojŏn (d.u.) in 1614 and is noted for its refined Chosŏn-dynasty carvings and its elaborate ceiling of carved flowers. In 1684, Master Hyemin (d.u.) added a hall in honor of the buddha [VAIROCANA](#), which included a famous painting of that buddha that now hangs in a separate building; and in 1700, Master Myŏnghak (d.u.) added another half dozen buildings. Pŏmŏsa also houses two important stūpas: a three-story stone stūpa located next to the Poje nu dates from 830 during the Silla dynasty; a new seven-story stone stūpa, constructed following Silla models, enshrines relics (K. sari; S. [ŚARĪRA](#)) of the Buddha that a contemporary Indian monk brought to Korea. After a period of relative inactivity, Pŏmŏsa reemerged as an important center of Buddhist practice starting in 1900 under the abbot Sŏngwŏl (d.u.), who opened several hermitages nearby. Under his leadership, the monastery became known as a major center of the Buddhist reform movements of the twentieth century. Tongsan Hyeil (1890–1965), one of the leaders of the reformation of Korean

Buddhism following the Japanese colonial period (1910–1945), who also served as the supreme patriarch ([CHONGJŎNG](#)) of the [CHOGYE CHONG](#) from 1958 to 1961, resided at Pŏmŏsa.

[Pŏmŭmjong po](#). (梵音宗譜). In Korean, “Lineage of the Brahmā’s Voice School,” a one-roll lineage record of Korean chanting (pŏmp’ae) monks, written by [TAEHWI](#) (fl. c. 1748) during the Chosŏn dynasty, which traces this distinctive “Indian-style” of chanting back to [CHIN’GAM HYESO](#) (774–850). See [FANBAI](#).

[Pongsŏnsa](#). (奉先寺). In Korean, “Respecting Ancestors Monastery”; the twenty-fifth district monastery ([PONSA](#)) of the contemporary [CHOGYE CHONG](#) of Korean Buddhism, located on Mount Unak in Kyŏnggi province. The monastery was constructed by T’anmun (d.u.) in 968, in the twentieth year of the reign of Koryŏ King Kwangjong (r. 949–975), and was originally named Unaksa, after the mountain on which it was built. In 1469, the first year of the reign of King Yejong (r. 1468–1469), Queen Chŏnghŭi (1418–1483) decided that the tomb of her deceased husband, King Sejo (r. 1445–1468), should be established on this mountain, and she therefore had the monastery renamed “Respecting Ancestors Monastery” (Pongsŏnsa). The monastery became the headquarters of the [KYO](#) school when the two schools of Kyo (Doctrine) and [SŎN](#) (Meditation) were restored in 1551, during the reign of the Chosŏn king Myongjong (r. 1545–1567). The monastery was repeatedly destroyed by fire during several wars, including the Japanese Hideyoshi invasions of the late-sixteenth century, the Manchu invasions of the seventeenth century, and the Korean War.

[Pongwan](#). (K) (奉玩). See [HAN YONGUN](#).

[Pongwŏnsa](#). (奉元寺). In Korean, “Respecting Primacy Monastery”; the head monastery of the [T’AEGO CHONG](#) of Korean Buddhism. Pongwŏnsa was founded in 889 by state preceptor (K. kuksa; C. [GUOSHI](#)) [TOSŎN](#) (827–898) on the grounds of what is currently the campus of Yonsei University in Seoul. It was moved by the great masters ([TAESA](#)) Ch’anjŭp and Chŭngam up the hill overlooking the present-day sites of Yonsei and Ewha universities in 1748, during the reign of king Yŏngjo (r. 1724–1776). During the reign of the next king, Chŏngjo (r. 1776–1800), an institute to reform and police Buddhism was established at Pongwŏnsa. A signboard for the monastery shows the calligraphy of the noted Confucian scholar Chŏng Tojŏn (1337–1398). The monastery is arguably the most beautiful in Seoul, partially due to the now well-weathered reconstruction

carried out in 1911 by abbot Yi Podam (1859–?). The present main shrine hall ([TAEUNG CHŎN](#)) was built in 1966. Today the monastery is well known for its association with Korean Buddhist art and culture. Not only is it the current home of the troupe of monks who perform and preserve the Buddhist rite [YŎNGSANJAE](#), including the dances [NABICH'UM](#), [PARACH'UM](#), and [PŎPKO CH'UM](#), and the chanting of pŏmp'ae (C. [FANBAI](#)), but it has also been home to the premier master of [TANCH'ŎNG](#) and other types of Buddhist painting. The monastery also houses the Okchŏn Buddhist Music College, which trains laity as well as monks and nuns from other sects of Buddhism in traditional Korean music.

ponsa. (C. *bensi*; J. *honji* 本寺). In Korean, lit. “foundational monastery”; the major district or parish monasteries of the [CHOGYE CHONG](#) of Korean Buddhism; also referred to as *ponsan*, or “foundational mountain [monastery].” The institution of *ponsa* was started by the Korean state as one means of exerting state control over the Buddhist ecclesiastical community. When the Chosŏn king T'aejong (r. 1400–1418) in 1407 combined the preexisting eleven Buddhist schools into seven, a *ponsa* was designated for each school, all of them located in the vicinity of the Chosŏn capital of Hanyang (Seoul). King Sejong (r. 1418–1450) reduced the number of schools again in 1424 to the two schools of Doctrine ([KYO](#)) and Meditation ([SŎN](#)) ([SŎN KYO YANGJONG](#)) and designated [HŬNGCH'ŎNSA](#) and [HŬNGDŎKSA](#) as the *ponsa* of the Kyo and Sŏn schools, respectively. The institution of *ponsa* was discontinued during the reign of the Chosŏn king Myŏngjong (r. 1545–1567) because of the abolition of the two schools of Kyo and Sŏn. The institution was revived in 1911 during the Japanese colonial period (1910–1945), when the “Monastery Act” (*Sach'allyŏng*) of the Japanese government-general divided the colony into thirty districts, with a *ponsa* heading each of them. One more was added in 1924, creating a total of thirty-one *ponsa*. After Korea was liberated in 1945, the South Korean Buddhist community established an independent Chogye order, which organized the monasteries of the peninsula into twenty-four districts, each headed by a *ponsa*. Each district monastery loosely presides over several affiliated “branch monasteries” ([MALSA](#)), each located in the geographical vicinity of its *ponsa*. The twenty-five *ponsa* of the contemporary Chogye order are (1) [CHOGYESA](#), (2) [YONGJUSA](#), (3) [SINHŬNGSA](#), (4) [WŎLCH'ŎNGSA](#), (5) [PŎPCHUSA](#), (6) [MAGOKSA](#), (7) [SUDŎKSA](#), (8) [CHIKCHISA](#), (9) [TONGHWASA](#), (10) [ŬNHAESA](#), (11) [PULGUKSA](#), (12) [HAEINSA](#), (13) [SSANGGYESA](#), (14) [PŎMŎSA](#), (15) [T'ONGDOSA](#), (16) [KOUNSA](#), (17) [KŬMSANSA](#), (18) [PAEGYANGSA](#), (19) [HWAŎMSA](#), [(20) [SŎNAMSA](#) (control ceded to

the rival [T'AEGO CHONG](#))], (21) [SONGGWANGSA](#), (22) [TAEHŬNGSA](#), (23) [KWANŬMSA](#), (24) [SŎNUNSA](#), and (25) [PONGSŎNSA](#).

[ponsan](#). (本山). In Korean, “foundational mountain [monastery]” an alternate name for the major district or parish monasteries of the [CHOGYE](#) order of Korean Buddhism. See [PONSA](#).

[Pŏpchip pyŏrhaengnok chŏryo pyŏngip sagi](#). (法集別行錄節要竝入私禮). In Korean, “Excerpts from the ‘Dharma Collection and Special Practice Record’ with Personal Notes” (according to the traditional parsing of the title within the Korean commentarial tradition), and often known by its abbreviated title *Chŏryo* (“Excerpts”); the magnum opus of the mid-Koryŏ Sŏn master [POJO CHINUL](#) (1158–1210), which provides an exhaustive analysis of the sudden-gradual issue in East Asian Buddhist thought and practice. Chinul’s treatise is constructed around excerpts from a lesser-known work of the Chinese [CHAN](#) and [HUAYAN](#) teacher [GUIFENG ZONGMI](#) (780–841), which compares the approach to practice in four different schools of early Chinese Chan Buddhism. Chinul used Zongmi’s analysis as a foil for a wider exploration of the sudden-gradual issue. After examining in meticulous detail the various schemata of awakening and cultivation outlined by such Buddhist teachers as Zongmi, [CHENGGUAN](#) (738–839), and [YONGMING YANSHOU](#) (904–975), Chinul comes out strongly in favor of sudden awakening/gradual cultivation (K. donŏ chŏmsu; C. [DUNWU JIANXIU](#)), a soteriological approach championed by Zongmi. In this approach, the Buddhist path ([MĀRGA](#)) begins with an initial sudden “understanding-awakening” ([JIEWU](#)), in which one gains correct conceptual understanding of the Buddhist teachings and awakens to the fact that one is inherently a buddha. But simply knowing that one is a buddha is not enough to ensure that one is able always to act like a buddha. Only after continued gradual cultivation (*jianxiu*) following this initial understanding-awakening will one remove the habitual tendencies or predispositions ([VĀSANĀ](#)) that have suffused the mind for an essentially infinite amount of time, eventually integrating one’s knowledge and conduct. That correspondence marks the final “realization-awakening” ([ZHENGWU](#)) and is the point at which the practitioner truly realizes the complete, perfect enlightenment of buddhahood ([ANUTTARASAMYAKSAMBOHI](#)). This soteriological process is compared by Chinul to that of an infant who is born with all the faculties of a human being (sudden understanding-awakening) but who still needs to go through a long process of maturation (gradual cultivation) before he will be able

to embody his full potential as an adult human being (realization-awakening). While Chinul also accepts the validity of a “sudden awakening/sudden cultivation” (K. *tono tonsu*; C. *dunwu dunxiu*) approach, in which all aspects of cultivation are perfected simultaneously with the awakening experience, he ultimately concludes that this approach targets only the most advanced of practitioners and is actually sudden awakening/gradual cultivation when viewed from the standpoint of multiple lifetimes: viz., awakening and cultivation can be perfected simultaneously only for someone who has already had an initial sudden understanding-awakening in a previous life and who has been continuing to cultivate that experience gradually over multiple past lives. Chinul’s treatise is also important for being the first Korean work to advocate the practice of Sŏn “questioning meditation” (K. *kanhwa Sŏn*; C. [KANHUA CHAN](#)), a type of meditation that subsequently comes to dominate Korean Sŏn practice. The *Chŏryŏ* is included in the “Fourfold Collection” ([SAJIP](#)), the core of the Korean monastic curriculum since at least the seventeenth century.

[Pŏpchusa](#). (法住寺). In Korean, “Monastery Where the Dharma Abides”; the fifth district monastery ([PONSA](#)) of the contemporary [CHOGYE CHONG](#) of Korean Buddhism, located at the base of Songni (Leaving Behind the Mundane) Mountain in North Ch’ungch’ŏng province. Pŏpchusa was founded in 553, during the reign of the Silla King Chinhŭng (r. 540–576), by the monk Ŭisin (d.u.) who, according to legend, returned from the “western regions” (viz. Central Asia and India) with scriptures and resided at the monastery; hence the monastery’s name. In 1101, during the Koryŏ dynasty, [ŬICH’ŎN](#) (1055–1101) held an assembly to recite the [RENWANG JING](#) (“Scripture for Humane Kings”) here for the protection of the state (see [HUGUO FOJIAO](#)), which is said to have been attended by thirty thousand monks. On entering the monastery, to the back and left of the front gate there are two granite pillars that date from the eleventh century, which were used to support the hanging paintings ([KWAEBUL](#)) that were unfurled on such important ceremonial occasions as the Buddha’s birthday. A pavilion on the right houses a huge iron pot dated to 720 CE, which was purportedly once used to prepare meals for monks and pilgrims; off to the side is a water tank made of stone that would have held about 2,200 gallons (ten cubic meters) of water. There is also a lotus-shaped basin dating from the eighth century and a lion-supported stone lantern sponsored by the Silla monarch Sŏngdŏk (r. 702–737) in 720. The main shrine hall ([TAEUNG CHŎN](#)) houses images of [VAIROCANA](#), [ŚĀKYAMUNI](#), and Rocana buddhas. Behind these three

statues are three paintings of the same buddhas, accompanied by [BODHISATTVAS](#), a young [ĀNANDA](#), and the elderly [MAHĀKĀŚYAPA](#). In the paintings Śākyamuni and Rocana are surrounded by rainbows and Vairocana by a white halo. Pōpchusa is especially renowned for its five-story high wooden pagoda, which dates from the foundation of the monastery in 553; it may have been the model for the similar pagoda at [HORYŪJI](#) in Nara, Japan. The current pagoda was reconstructed in 1624 and is the oldest extant wooden pagoda in Korea. The pagoda is painted with pictures of the eight stereotypical episodes in the life of the Buddha (see [BAXIANG](#)). Inside are four images of Śākyamuni: the east-facing statue is in the gesture of fearlessness ([ABHAYAMUDRĀ](#)); the west, in the teaching pose ([DHARMAKRAMUDRĀ](#)); the south, in the touching-the-earth gesture ([BHŪMISPARŚAMUDRĀ](#)); and the north, in a reclining buddha posture, a rare Korean depiction of the Buddha's [PARINIRVĀNA](#). Around the four buddha images sit 340 smaller white buddhas, representing the myriad buddhas of other world systems. The ceiling inside is three stories high, and the beams, walls, and ceiling are painted with various images, including bodhisattvas and lotus flowers. Outside the pagoda is Pōpchusa's most striking image, the thirty-three-meter (108-foot), 160-ton bronze statue of the bodhisattva [MAITREYA](#). The original image is said to have been constructed by the Silla [VINAYA](#) master [CHINP'YO](#) (fl. eighth century), but was removed by the Taewōn'gun in 1872 and melted down to be used in the reconstruction of Kyōngbok Palace in Seoul. A replacement image was begun in 1939 but was never completed; another temporary statue was crafted from cement and installed in 1964. The current bronze image was finally erected in 1989. Near the base is a statue of a woman with a bowl of food, representing the laywoman [SUJĀTĀ](#), who offered [GAUTAMA](#) a meal of milk porridge before his enlightenment.

[Pōphae pobōl](#). (法海寶筏). In Korean, "Precious Raft on the Ocean of Dharma." See [SŌNMUN CH'WARYO](#).

[pōpkoch'um](#). (法鼓). In Korean, "dharma drum dance"; a [CHAKPŎP](#) ritual dance performed by Buddhist monks during such Korean Buddhist rites as the [YŌNGSANJAE](#). The dance is performed with a giant drum that has a head often almost as wide as a person's outstretched arms. The dance seeks to teach human beings about the prospect of rebirth in the heavens and to rescue the denizens of hell from their suffering. The dancer uses two drumsticks and beats the drum while drawing the Sinograph *sim* (mind). The actual dance is in two parts: the

first part, called the pŏpkoch'um, begins before the drumming, when the drummer is dancing without sound; the second part, called the honggoch'um, begins when the drumming starts. Because the dance is performed in conjunction with pŏmp'ae (C. [FANBAI](#)) chanting, the dancer moderates his movements and the strength of the drumbeats in accordance with the chant. The beating of the drum is intended to awaken all sentient beings in order to deliver them from suffering. Just as in the cymbal dance ([PARACH'UM](#)), the monk performing the dance wears grey ceremonial robes with long sleeves. This dance is sometimes performed with one drummer and one dancer on opposite sides of the drum.

[pŏpsŏng chong](#). (法性宗). In Korean, “dharma-nature school”; one of the five schools of Korean doctrinal Buddhism ([KYO](#)) that are traditionally presumed to have developed during the Silla dynasty (668–935). This school is most closely associated with the scholiast [WŎNHYO](#) (617–686) and his interest in the fundamental qualities that underlie all phenomenal existence, such as the [TATHĀGATAGARBHA](#). See [FAXING ZONG](#); [KYO](#).

[poṣadha](#). (S). See [UPOSADHA](#).

[posal](#). (菩薩). In Korean, “[BODHISATTVA](#).” In addition to its use as a transcription of bodhisattva, the term posal is also used in Korean to designate female adherents, and especially lay residents of monasteries, who assist with the menial chores of cooking, preserving food, doing laundry, *etc.* These women have often been widows or divorcées, who work for the monastery in exchange for room and board for themselves and their children. The posal often serve the monastery permanently and may even end up retiring there. The compound posal is generally followed by the honorific suffix -nim and then pronounced posallim.

[postulant](#). See [XINGZHE](#).

[postures, four](#). See [IRYĀPATHA](#).

[Po ta la](#). The most famous building in Tibet and one of the great achievements of Tibetan architecture. Located in the Tibetan capital of [LHA SA](#), it served as the winter residence of the [DALAI LAMAS](#) and seat of the Tibetan government from the seventeenth century until the fourteenth Dalai Lama's flight into exile in 1959. It takes its name from Mount [POTALAKA](#), the abode of [AVALOKITEŚVARA](#), the bodhisattva of compassion, of whom the three Tibetan dharma kings (chos

rgyal) and the Dalai Lamas are said to be human incarnations. The full name of the Potala is “Palace of Potala Peak” (Rtse po ta la’i pho brang), and it is commonly referred to by Tibetans simply as the Red Palace (Pho brang dmar po), because the edifice is located on Mar po ri (Red Hill) on the northwestern edge of Lha sa and because of the red palace at the summit of the white structure. In the early seventh century, the Tibetan king [SRONG BTSAN SGAM PO](#) is said to have meditated in a cave located on the hill; the cave is preserved within the present structure. The earliest structure to have been constructed there was an elevenstoried palace that he had built in 637 when he moved his capital to Lha sa. In 1645, three years after his installation as temporal ruler of Tibet, the fifth Dalai Lama [NGAG DBANG BLO BZANG RGYA MTSHO](#) began renovations of what remained of this original structure, with the new structure serving as his own residence, as well as the site of his government (known as the [DGA’ LDAN PHO BRANG](#)), which he moved from the [DGE LUGS PA](#) monastery of [’BRAS SPUNGS](#), located some five miles outside the city. The exterior of the White Palace (Pho brang dkar po), which includes the apartments of the Dalai Lama, was completed in 1648 and the Dalai Lama took up residence in 1649. The portion of the Po ta la known as the Red Palace was added by the regent [SANGS RGYAS RGYA MTSHO](#) in honor of the fifth Dalai Lama after his death in 1682. Fearing that the project would cease if news of his death became known, Sangs rgyas rgya mtsho was able successfully to conceal the Dalai Lama’s death for some twelve years (making use of a double who physically resembled the Dalai Lama to meet foreign dignitaries) until construction could be completed in 1694. The current structure is thirteen stories (approximately 384 feet) tall and is said to have over a thousand rooms, including the private apartments of the Dalai Lama, reception and assembly halls, temples, chapels containing the stūpas of the fifth and seventh through thirteenth Dalai Lamas, the Rnam rgyal monastery that performed state rituals, and government offices. From the time of the eighth Dalai Lama, the Po ta la served as the winter residence for the Dalai Lamas, who moved each summer to the smaller [NOR BU GLING KHA](#). The first Europeans to see the Po ta la were likely the Jesuit missionaries Albert Dorville and Johannes Grueber, who visited Lha sa in 1661 and made sketches of the palace, which was still under construction at the time. During the Tibetan uprising against the People’s Liberation Army in March 1959, the Po ta la was shelled by Chinese artillery. It is said to have survived the Chinese Cultural Revolution through the intervention of the Chinese prime minister Zhou Enlai, although many of its texts and works of art were looted or destroyed. In old Lha sa, the Po ta la stood

outside the central city, with the small village of Zhol located at its foot. This was the site of a prison, a printing house, and residences of some of the lovers of the sixth Dalai Lama. In modern Lha sa, the Po ta la is now encompassed by the city, and much of Zhol has been destroyed. The Po ta la still forms the northern boundary of the large circumambulation route around Lha sa, called the *gling bskor* (ling khor). Since the Chinese opened Tibet to foreign access in the 1980s, the Po ta la has been visited by millions of Tibetan pilgrims and foreign tourists. The stress of tourist traffic has required frequent restoration projects. In 1994, the Po ta la was designated a UNESCO World Heritage site. See also [PUTUOSHAN](#).

Potalaka. (T. Po ta la; C. Butuoluoshan; J. Fudarakusen; K. Pot'araksan 補陀落山). According to the [GANDAVYŪHASŪTRA](#), a mountain that is the abode of the bodhisattva of compassion, [AVALOKITEŚVARA](#). The precise location of the mountain is the subject of considerable speculation. According to [XUANZANG](#), it is located in southern India to the east of the Malaya Mountains. He describes it as a perilous mountain with a lake and a heavenly stone palace at the summit. A river flows from the summit, encircling the mountain twenty times before flowing into the South Sea. Those who seek to meet the bodhisattva scale the mountain, but few succeed. Xuanzang says that the bodhisattva appears to his devotees at the base the mountain in the form of Maheśvara (Śiva) or an ascetic sadhu covered in ashes. Modern scholarship has speculated that Xuanzang was describing the mountain called Potikai or Potiyil in Tamil Nadu. Other sources place the mountain on an island in the Indian Ocean. In East Asian Buddhism, it is called [PUTUOSHAN](#) and is identified as a mountainous island in the Zhoushan Archipelago, about sixty-two miles off the eastern coast of Zhejiang province. When the fifth [DALAI LAMA](#) constructed his palace in [LHA SA](#), he named it [PO TA LA](#), after this mountain identified with Avalokiteśvara, of whom he is considered the human incarnation.

Potaliyasutta. (C. Buliduo jing; J. Horitakyō; K. P'orida kyōng 晡利多經). The “Discourse to Potaliya,” the fifty-fourth sutta of the [MAJJHIMANIKĀYA](#) (a separate [SARVĀSTIVĀDA](#) recension appears as the 203rd sūtra in the Chinese translation of the [MADHYAMĀGAMA](#)); preached by the Buddha to the mendicant (P. paribbājaka, S. [PARIVRĀJAKA](#)) Potaliya at a grove in the town of Āpaṇa in the country of the Aṅguttarāpas. Potaliya had recently left the householder’s life to cut off his involvement with the affairs of the world and had taken up the life of

itinerant mendicancy. When the Buddha encounters him, Potaliya had not abandoned his ordinary layman's attire, so the Buddha addresses him as "householder," to which the new mendicant takes great offense. The Buddha responds by telling Potaliya that the noble discipline rests on the support of eight abandonments: the abandonment of killing, stealing, lying, maligning others, avarice, spite, anger, and arrogance. The Buddha then enumerates the dangers of sensual pleasure and the benefits of abandoning it. Having thus prepared the ground, the Buddha explains that the noble disciple then attains the three knowledges (P. *tevijja*, S. [TRIVIDYĀ](#)), comprised of (1) recollection of one's own previous existences (P. *pubbenivāsānussati*, S. [PŪRVANIVĀSĀNUMRTI](#)); (2) the divine eye (P. *dibbacakkhu*, S. [DIVYACAKSUS](#)), the ability to see the demise and rebirth of beings according to their good and evil deeds; and (3) knowledge of the extinction of the contaminants (P. *āsavakkhaya*, S. [ĀSRAVAKSAYA](#)). This, the Buddha explains, is true cutting off of the affairs of the world. Delighted and inspired by the discourse, Potaliya takes refuge in the three jewels ([RATNATRAYA](#)) and dedicates himself as a lay disciple of the Buddha.

[Potthapādasutta](#). (C. Buzhapolou jing; J. Futabarōkyō; K. P'ot'abaru kyōng 布吒婆樓經). In Pāli, "Discourse to Potthapāda," the ninth sutta of the [DĪGHANIKĀYA](#) (a separate [DHARMAGUPTAKA](#) recension appears as the twenty-eighth [SŪTRA](#) in the Chinese translation of the [DĪRGHĀGAMA](#)); preached by the Buddha to the mendicant (P. *paribbājaka*, S. [PARIVRĀJAKA](#)) Potthapāda in a hall erected in Mallika's park in Sāvatti (S. [ŚRĀVASTĪ](#)). The Buddha is invited to the hall by Potthapāda to express his opinion on the attainment of the cessation of thought (*abhisaññānirodha*). Various theories advocated by other teachers are put to the Buddha, all of which he rejects as unfounded. The Buddha then explains the means by which this attainment can be achieved, beginning with taking refuge in the Buddha, the [DHARMA](#), and the [SAMGHA](#), observing the precepts, renouncing the world to become a Buddhist monk, controlling the senses with mindfulness (P. *sati*, S. [SMRTI](#)), cultivating the four meditative absorptions (P. [JHĀNA](#), S. [DHYĀNA](#)), developing the four formless meditations (P. *arūpāvacarajhāna*, S. [ĀRŪPYĀVACARADHYĀNA](#)), and finally attaining the cessation of thought. Potthapāda then asks about the existence of the soul ([ĀTMAN](#)), and whether or not the universe is eternal. The Buddha responds that he holds no opinions on these questions as they neither relate to the holy life (P. *brahmacariya*; S. [BRAHMACARYA](#)) nor lead to [NIRVĀNA](#). Rather, he teaches only the [FOUR NOBLE TRUTHS](#) of suffering (P. *dukkha*; S. [DUHKHA](#)), its cause ([SAMUDAYA](#)), its cessation

([NIRODHA](#)), and the path leading thereto (P. *magga*, S. [MĀRGA](#)). Some days later, Poṭṭhapāda approaches the Buddha with his friend [CITTA](#), the elephant trainer’s son, and inquires again about the soul. Pleased with the Buddha’s response, he becomes a lay disciple. Citta enters the Buddhist order and in due time becomes an arahant (S. [ARHAT](#)).

[Pou](#). (K) (普雨). See [HÖŨNG POU](#).

[Pou](#). (K) (普愚). See [T’AEGO POU](#).

[Prabhākaramitra](#). (C. Boluopojialuomiduoluo; J. Harahakaramitsutara; K. Parap’agaramiltara 波羅頗迦羅蜜多羅) (564–633). A monk from [NALANDĀ](#) monastery who traveled to China in 626, where he translated a number of important texts, including the [MAHĀYĀNASŪTRĀLAMKĀRA](#) of [MAITREYANĀTHA](#) and the [PRAJÑĀPRADĪPA](#) of [BHĀVAVIVEKA](#).

[prabhākarībhūmi](#). (T. ’od byed pa; C. faguang di; J. hokkōji; K. palgwang chi 發光地). In Sanskrit, “illuminating,” the name of the third of the ten [BODHISATTVA BHŪMI](#), as found in a list of ten stages ([DAŚABHŪMI](#)) enumerated in the [DAŚABHŪMIKASŪTRA](#) (“Sūtra on the Ten Stages”), a sūtra that is later subsumed into the massive scriptural compilation, the [AVATAMSAKASŪTRA](#). The first bhūmi coincides with the attainment of the path of vision ([DARŚANAMĀRGA](#)), the remaining nine to the path of cultivation ([BHĀVANĀMĀRGA](#)). Prabhākarībhūmi is so called because the light of the bodhisattva’s wisdom burns brightly through the attainment of the four meditative absorptions ([DHYĀNA](#)) and the five superknowledges ([ABHIJÑĀ](#)). When the practice of the six (or ten) perfections ([PĀRAMITĀ](#)) is aligned with the ten bhūmi, the prabhākarībhūmi is especially an occasion for the practice of the perfection of patience ([KSĀNTIPĀRAMITĀ](#)), where the bodhisattva’s patience becomes so great that even if someone were to mutilate his body, he would not respond in anger. The bodhisattva remains on this bhūmi until he is able to abide consistently in the limbs of enlightenment ([BODHIPĀKSIKADHARMA](#)).

[prabhāsvara](#). (P. pabhassara; T. ’od gsal; C. guangming; J. kōmyō; K. kwangmyōng 光明). In Sanskrit, “luminous,” “resplendent”; referring to an effulgence of light and often used as a metaphor for either deep states of meditation or, especially, the nature of the mind. This notion of the innate effulgence of the mind has a long pedigree in Buddhism, and its locus classicus

is the oft-quoted passage in the Pāli [ĀṄGUTTARANIKĀYA](#): “The mind, O monks, is luminous (P. pabhassara), but is defiled by adventitious defilements” (pabhassaram idaṃ bhikkave cittaṃ tañ ca kho āgantukehi upakkilesehi upakkiliṭṭhaṃ). A similar sentiment appears in the early [MAHĀYĀNA](#) scripture [ĀSTASĀHASRIKĀPRAJÑĀPĀRAMITĀSŪTRA](#), where it states that the “thought of enlightenment is no thought, since in its essential original nature thought is transparently luminous.” Through enlightenment, the mind’s innate luminosity is restored to its full intensity so that it shines through all objects, revealing their inherent vacuity and lack of substance. This same strand eventually develops into [TATHĀGATAGARBHA](#) thought, which sees the mind as inherently enlightened, the defilements of mind as ultimately extrinsic to the mind (cf. [ĀGANTUKAKLEŚĀ](#)), and the prospect of buddhahood as innate in all sentient beings. The concept of the “mind of clear light” (see [PRABHĀSVARACITTA](#)) becomes particularly important in [ANUTTARAYOGATANTRA](#), where it is described as the primordial and fundamental form of consciousness, which becomes manifest at particular moments, such as falling asleep, awaking from sleep, orgasm, and especially, at the moment of death. Many practices of the stage of completion ([NISPANNAKRAMA](#)) are devoted to making manifest this mind of clear light and using it to understand the nature of reality. As such, the practice of clear light is one of the six yogas of Nāropa ([NA RO CHOS DRUG](#)).

[prabhāsvaracitta](#). [alt. ābhāsvaracitta] (T. ’od gsal gyi sems; C. guangmingxin; J. kōmyōshin; K. kwangmyōngsim 光明心). In Sanskrit, “mind of clear light.” According to the systems of [ANUTTARAYOGATANTRA](#), this state of mind is the most subtle form of consciousness, which must be used to perceive reality directly in order to achieve buddhahood. There are various views as to the location and accessibility of this type of consciousness, with some asserting that it resides in an indestructible drop ([BINDU](#)) located at the center of the heart [CAKRA](#) in the central channel ([AVADHŪTĪ](#)), entering at the moment of conception and departing at the moment of death. Because the mind of clear light must be made manifest in order to achieve buddhahood, various practices are set forth to simulate the process of its manifestation at the moment of death, including sexual yogas. Other views hold that the mind of clear light is present in all moments of awareness and needs only to be recognized in order to achieve enlightenment. See also [ĀGANTUKAKLEŚĀ](#); [PRABHĀSVARA](#).

[prabhava](#). (P. pabhava; T. rab tu skye ba). In Sanskrit, “successive production,”

or “series of causes,” used especially in the context of the process by which action ([KARMAN](#)) and the afflictions ([KLEŚA](#)) constantly produce different forms of suffering in an unrelenting manner. As such, prabhava is one of the four aspects of the second of the [FOUR NOBLE TRUTHS](#), the truth of origin ([SAMUDAYA](#)).

[Prabhūtaratna](#). (T. Mthu ldan rin chen; C. Duobao rulai; J. Tahō nyorai; K. Tabo yōrae 多寶如來). In Sanskrit, “Abounding in Jewels”; the name of a buddha who appears in chapter eleven of the [SADDHARMAPUNḌARĪKASŪTRA](#), the influential “Lotus Sūtra.” In this chapter, the audience is surprised to see a magnificent jeweled [STŪPA](#) emerge from the earth and float in space. The Buddha explains that it is the stūpa of the buddha Prabhūtaratna, who resides in a buddha-field ([BUDDHAKSETRA](#)) named ratnaviśuddha, or “bejeweled purity.” Prabhūtaratna appears because, as a [BODHISATTVA](#), he made a vow that he would appear in his bejeweled stūpa whenever the *Saddharmapuṇḍarīkasūtra* was taught by any [TATHĀGATA](#), in any world system. At the invitation of Prabhūtaratna, [ŚĀKYAMUNI](#) Buddha enters the jeweled stūpa, and the two buddhas sit side by side. The audience also rises into the sky so that they can see the two buddhas. Although Prabhūtaratna never became an object of cultic worship, the image of the two buddhas sitting together was a frequent subject of Buddhist sculpture as early as the fifth century.

[pradaksina](#). (P. padakkhiṇa; T. skor ba; C. yourao; J. unyō; K. uyo 右邊). In Sanskrit, “circumambulation” (lit. “moving to the right”); a common means of demonstrating reverence to a person, place, or sacred object in the Indian tradition, since it places the object of reverence at the center of one’s worship activity. Traditionally, circumambulation was performed in a clockwise direction with the worshipper’s right side facing the object (the left side being considered polluted because of Indian toilet practices). In Buddhism, adherents might circumambulate a relic ([ŚARĪRA](#)) or reliquary ([STŪPA](#)), a monastery, an image, or even an entire geographical location, such as a sacred mountain. Reliquary mounds were designed to facilitate this practice, as they are often surrounded by reliefs depicting important stereotypical episodes in the life of the Buddha (see [BAXIANG](#)), which worshippers would review and recollect as they circumambulated the stūpa. The custom of making ritual circumambulations around stūpas appears to have come into popularity early in the Buddhist tradition. See also [GNAS SKOR BA](#).

[pradāsa](#). [alt. pradāśa] (P. padāleti; T. ’tshig pa; C. nao; J. nō; K. noe 惱). In

Sanskrit, “irritation,” “maliciousness,” “vexation,” or “contentiousness”; one of the forty-six mental concomitants ([CAITTA](#)) according to the [SARVĀSTIVĀDA-VAIBHĀSIKA](#) school of [ABHIDHARMA](#) and one of the fifty-one according to the [YOGĀCĀRA](#) school. “Irritation” appears in conjunction with envy ([ĪRSYĀ](#)) and disparaging others’ achievements or wholesome qualities ([MRAKSA](#)), and may be viewed as one of the possible derivative emotions of hatred ([DVESA](#)) or aversion ([PRATIGHA](#)). “Irritation” is the compulsive resistance to letting anyone gain advantage over oneself. Irritation may also arise when one dwells compulsively on unpleasant events from the past or present and is closely associated with “remorse” ([KAUKRTYA](#)), “worries,” and “sadness.”

[pradhānacitta](#). (P. padhānacitta; T. gtso sems). In Sanskrit, “chief mind,” a term used in Buddhist epistemology in the context of treatments of mind ([CITTA](#)) and mental concomitants ([CAITTA](#)). A “chief mind” would refer to any instance of the six consciousnesses (citta, here the functional equivalent of [VIJÑĀNA](#))—visual, auditory, olfactory, gustatory, tactile, and mental consciousnesses. A moment of any one of these consciousnesses will be accompanied by a combination of various mental concomitants (caitta). These mental concomitants fall into five categories and include the omnipresent ([SARVATRAGA](#)), the determining (viṣayapratiniyama), the virtuous ([KUŚULA](#)), the root afflictions ([MŪLAKLEŚA](#)), the secondary afflictions ([UPAKLEŚA](#)), and the indeterminate ([ANİYATA](#)). The chief mind and the mental concomitants that accompany it are said to have five similarities. They have the same basis ([ĀŚRAYA](#)); in the case of sense perception, this would be the same organ. They have the same object ([ĀLAMBANA](#)). They are produced in the same aspect ([ĀKĀRA](#)) or image of the object. They occur at the same time ([KĀLA](#)). Finally, they are the same entity ([DRAVYA](#)), in the sense that the mind and its mental factors are produced, abide, and cease simultaneously.

[Pra dum rtse](#). (Tradumtse). In Tibetan, one of the four “extra taming temples” or “extra pinning temples” ([YANG 'DUL GTSUG LAG KHANG](#)) said to have been constructed during the time of the Tibetan king [SRONG BTSAN SGAM PO](#) to pin down the limbs of the demoness (T. srin mo) in order to introduce Buddhism into Tibet. It is located in Byang (Jang) and pins down her left knee.

[Prāgbodhi\(giri\)](#). (C. Qianzhengjueshan/Boluojiptishan; J. Zenshōgakusen/Haragōbodaisen; K. Chōnjōnggaksan/Pallagūpporisan 前正覺山/鉢羅笈菩提山). Literally, “Before Enlightenment,” or “Before Enlightenment Mountain,” a mountain near [BODHGAYA](#) that [ŚĀKYAMUNI](#) is said to have

ascended shortly before his enlightenment. In the account of his travels in India, [XUANZANG](#) recounts a story that does not seem to appear in Indian versions of the life of the Buddha. After accepting the meal of milk porridge from [SUJĀTĀ](#), the [BODHISATTVA](#) climbed a nearby mountain, wishing to gain enlightenment there. However, when he reached the summit, the mountain began to quake. The mountain god informed the bodhisattva that the mountain was unable to bear the force of his [SAMĀDHI](#), and if he practiced meditation there the mountain would collapse. As the bodhisattva descended the mountain he came upon a cave; he sat down there to meditate, but the earth began to tremble again. Deities then informed him that the mountain was not the appropriate place for him to achieve enlightenment and directed him to a pipal tree fourteen or fifteen leagues (li; approximately three miles) to the southwest. However, the dragon that lived in the cave implored him to stay and achieve enlightenment there. The bodhisattva departed, but left his shadow on the wall of the cave for the dragon; among the souvenirs that Xuanzang took back to China was a replica of this shadow. Based on Xuanzang's account, the story of the Buddha's ascent and descent of Prāgbodhi became popular in East Asia, and is the apparent source for the theme in poetry and painting of "[ŚĀKYAMUNI](#) Descending the Mountain."

[prahāna](#). [alt. pradhāna] (P. padrāna; T. spang ba; C. duan/si zhengqin; J. dan/shishōgon; K. tan/sa chōnggŭn 斷/四正勤). In Sanskrit, "abandonment," "relinquishment," "exertions," "right effort"; the effort that a practitioner must apply to ridding himself of the afflictions ([KLEŚA](#)) and wrong views ([MITHYĀDRSTI](#)) that bind one to suffering ([DUḤKHA](#)). Because the term implies the abandonment of the causes that bring about suffering, prahāṇa can also mean something that heals, thus an "antidote." Prahāṇa is commonly used to indicate the practice of meditation, through which afflictions and wrong views are abandoned; in the context of the *Abhisamācārikā Dharmāḥ*, for instance, the term is used when explaining how meditation is to be performed. ¶ Prahāṇa also has a second denotation of "strenuous exertion" or "right effort." This denotation is seen in a common list of four "exertions" (catvari prahāṇāni), also called the four "right efforts" ([SAMYAKPRADHĀNA](#)), viz., the practitioner exerts himself (1) to bring about the nonproduction [in the future] of evil and unwholesome dharmas that have not yet been produced; (2) to eradicate evil and unwholesome dharmas that have already been produced; (3) to bring about the production of wholesome dharmas that have not yet been produced; (4) to enhance those wholesome dharmas that have already been produced.

prahāṇaśālā. (T. spong khang; C. chanfang; J. zenbō; K. sōnpang 禪房/禪坊). In Sanskrit, lit. “hall for religious exertion”; a “meditation hall.” Prescriptions as to how and why to build such a structure are found in various literary sources, but most often in the [VINAYA](#). For example, in the [MŪLASARVĀSTIVĀDA VINAYA](#), the Buddha orders a prahāṇaśālā built so that monks will have some degree of privacy during their meditative practice. In the *Abhisamācārikā Dharmāḥ*, the Buddha lists the prahāṇaśālā as an appropriate place for the bimonthly confession and recitation of precepts ([UPOSADHA](#)) and explains how the hall is to be maintained from day to day. See also [SENGTANG](#).

prāhānika. (P. padhānika; T. spong ba bsam gtan pa). In Sanskrit, lit. “characterized by religious exertion,” viz., a “meditating monk.” This term is used in the [MULASARVĀSTIVĀDA VINAYA](#) to refer to monks who specialize in meditation training or more generally to monks who are involved in ascetic practices (see [DHUTAṄGA](#), [DUSKARACARYĀ](#)).

Prajāpati. (S). See [MAHĀPRAJĀPATĪ](#).

prajñā. (P. paññā; T. shes rab; C. bore/hui; J. hannya/e; K. panya/hye 般若/慧). In Sanskrit, typically translated “wisdom,” but having connotations perhaps closer to “gnosis,” “awareness,” and in some contexts “cognition”; the term has the general sense of accurate and precise understanding, but is used most often to refer to an understanding of reality that transcends ordinary comprehension. It is one of the most important terms in Buddhist thought, occurring in a variety of contexts. In Buddhist epistemology, prajñā is listed as one of the five mental concomitants ([CAITTA](#)) that accompany all virtuous ([KUSĀLA](#)) states of mind. It is associated with correct, analytical discrimination of the various factors ([DHARMA](#)) enumerated in the Buddhist teachings (dharmapracaya). In this context, prajñā refers to the capacity to distinguish between the faults and virtues of objects in such a way as to overcome doubt. Prajñā is listed among the five spiritual “faculties” ([PAÑCENDRIYA](#)) or “powers” ([PAÑCĀBALA](#)), where it serves to balance faith ([ŚRADDHĀ](#)) and to counteract skeptical doubt ([VICIKITSĀ](#)). Prajñā is also one of the three trainings ([TRISIKSĀ](#)), together with morality ([ŚĪLA](#)) and concentration ([SAMĀDHI](#)). In this context, it is distinguished from the simple stability of mind developed through the practice of concentration and refers to a specific understanding of the nature of reality, likened to a sword that cuts through the webs of ignorance (see [ADHIPRAJÑĀSĪKSĀ](#)). Three specific types of wisdom are set forth, including the wisdom generated by learning ([ŚRUTAMAYĪPRAJÑĀ](#)), an intellectual understanding gained through listening to teachings or reading texts; the wisdom generated by reflection ([CINTĀMAYĪPRAJÑĀ](#)), which includes conceptual insights derived from one’s own personal reflection on those teachings and from meditation at a low level of concentration; and the wisdom generated by cultivation ([BHĀVANĀMAYĪPRAJÑĀ](#)), which is a product of more advanced stages in meditation. This last level of wisdom is related to the concept of insight ([VIPĀŚYANĀ](#)). The term also appears famously in the term [PRAJÑĀPĀRAMITĀ](#) or “perfection of wisdom,” which refers to the wisdom whereby bodhisattvas achieved buddhahood, as well as a genre of

texts in which that wisdom is set forth.

Prajña. [alt. Prajñā] (C. Bore; J. Hannya; K. Panya 般若). The proper name of a northwest Indian monk who arrived in the Chinese capital of Chang’an during the middle of the ninth century. Prajña is best known for his forty-roll translation of the [GANDAVYŪHASŪTRA](#), the lengthy final chapter of the [AVATAMSAKASŪTRA](#); his rendering, which was finished in 798, is thus considered the third and final (though shortest) translation of the *Avataṃsakasūtra* made in China. Five other translations are also attributed to Prajña and collaborators. While in China, Prajña was also associated with the Japanese monk [KŪKAI](#) (774–835), the founder of the [SHINGONSHŪ](#) of Japanese esoteric Buddhism.

prajñācaksus. (P. paññācakkhu; T. shes rab kyi spany; C. zihui yan; J. chiegen; K. chihye an 智慧眼). In Sanskrit, “wisdom eye,” one of the five eyes or five sorts of vision ([PAÑCACAKSUS](#)), which are similar to the five (or six) “clairvoyances” or superknowledges ([ABHIJÑĀ](#)). In Pāli texts, the wisdom eye is one of the five sorts of extraordinary vision of a buddha. In [MAHĀYĀNA](#) sources, the wisdom eye knows all conditioned ([SAMSKRTA](#)) and unconditioned ([ASAMSKRTA](#)) dharmas and is free from all projections.

prajñājñānābhiseka. (T. shes rab ye shes kyi dbang). In Sanskrit, lit., “knowledge of the wisdom empowerment,” with wisdom ([PRAJÑĀ](#)) here referring to a tantric consort. It is the third of the four empowerments or initiations employed in the [ANUTTARAYOGATANTRAS](#), the other three being the vase empowerment ([KALĀŚĀBHISEKA](#)) and the secret empowerment ([GUHYĀBHISEKA](#)) that precede it, and the fourth empowerment ([CATURTHĀBHISEKA](#)), which follows it. Having received the vase empowerment, in the secret empowerment the disciple ingests a drop of fluid (called [BODHICITTA](#)) that results from the sexual intercourse of his master and a consort. In the knowledge of the consort empowerment, the disciple engages in sexual union with the same consort, resulting in increasing levels of bliss, which is said to result as a drop ([BINDU](#)) that ascends through the central channel ([AVADHŪTĪ](#)). Although later monastic exegetes would interpret these empowerments symbolically, it appears that they were originally practiced as the tantric systems developed in India, and they continued to be practiced among certain groups of adepts in Tibet.

Prajñākaragupta. (T. Shes rab ’byung gnas sbas pa) (c. 750–810?). Author of a long (16,200-verse) commentary, the *Pramāṇavārttikabhāṣya* (alt. title

Pramāṇavārttikālamkārabhāṣya) on [DHARMAKĪRTI](#)'s [PRAMĀNAVĀRTTIKA](#). The work was translated into Tibetan by Skal Idan rgyal po and [BLO LDAN SHES RAB](#) and was later revised by Kumāraśrī and 'Phags pa shes rab as *Tshad ma rnam 'grel gyi rgyan*. There are subcommentaries to the work by Jamāri and Jayanta, both of which are extant in Tibetan translation.

[Prajñākaramati](#). (T. Shes rab 'byung gnas blo gros) (950–1030). Indian author of an important pañjikā (commentary) on [ŚĀNTIDEVA](#)'s [BODHICARYĀVATĀRA](#). He also wrote a short but influential summary of Haribhadra's [ABHISAMAYĀLAMKĀRAVIVRTI](#). Tibetan sources list him among the so-called six gatekeepers of [VIKRAMAŚĪLA](#), a monastery that flourished during the Pāla dynasty in northeast India. According to one account, the six gatekeepers were [RATNĀKARAŚĀNTI](#) at the eastern gate, Vāgīśvarakīrti at the southern gate, Prajñākaramati at the western gate, [NĀROPA](#) at the northern gate, and Ratnavajra and Jñānaśrī in the center.

[prajñāpāramitā](#). (P. paññāpāramī; T. shes rab kyi pha rol tu phyin pa; C. bore boluomiduo/zhidu; J. hannya haramitta/chido; K. panya paramilta/chido 般若波羅蜜多/智度). In Sanskrit, “perfection of wisdom” or “perfect wisdom”; a polysemous term, which appears in Pāli accounts of the Buddha's prior training as a [BODHISATTVA](#) (P. bodhisatta), but is widely used in [MAHĀYĀNA](#) Buddhism. ¶ Prajñāpāramitā refers to a level of understanding beyond that of ordinary wisdom, especially referring to the the wisdom associated with, or required to achieve, buddhahood. The term receives a variety of interpretations, but it is often said to be the wisdom that does not conceive of an agent, an object, or an action as being ultimately real. The perfection of wisdom is also sometimes defined as the knowledge of emptiness ([ŚŪNYATĀ](#)). ¶ As the wisdom associated with buddhahood, prajñāpāramitā is the sixth of the six perfections ([PĀRAMITĀ](#)) that are practiced on the bodhisattva path. When the practice of the six perfections is aligned with the ten bodhisattva bhūmis, the perfection of wisdom is practiced on the sixth [BHŪMI](#), called [ABHIMUKHĪ](#). ¶ Prajñāpāramitā is also used to designate the genre of Mahāyāna sūtras that sets forth the perfection of wisdom. These texts are considered to be among the earliest of the Mahāyāna sūtras, with the first texts appearing sometime between the first century BCE and the first century CE. Here, the title “perfection of wisdom” may have a polemical meaning, claiming to possess a wisdom beyond that taught in the [MAINSTREAM BUDDHIST SCHOOLS](#). In addition to numerous descriptions of, and paeans to,

emptiness, the perfection of wisdom sūtras also extol the practice of the bodhisattva path as the superior form of Buddhist practice. Although emptiness is said to be the chief topic of the sūtras, their “hidden meaning” is said to be the detailed structure of the bodhisattva path. A number of later commentaries, most notably the [ABHISAMAYĀLAMKĀRA](#), extracted terminology from these sūtras in order to systematize the presentation of the bodhisattva path. There are numerous sūtras with prajñāpāramitā in their titles, the earliest of which are designated simply by their length as measured in [ŚLOKAs](#), a unit of metrical verse in traditional Sanskrit literature that is typically rendered in English as “stanza,” “verse,” or “line.” Scholars speculate that there was a core text, which was then expanded. Hence, for example, the prajñāpāramitā sūtra in eight thousand lines ([ASTASĀHASRIKĀPRAJÑĀPĀRAMITĀ](#)) is often thought to be one of the earliest of the genre, later followed by twenty-five thousand lines ([PAÑCAVIMŚATISĀHASRIKĀPRAJÑĀPĀRAMITĀSŪTRA](#)), and one hundred thousand lines ([ŚATASĀHASRIKĀPRAJÑĀPĀRAMITĀ](#)), as well as compilations many times longer, such as [XUANZANG](#)’s translation of the [MAHĀPRAJÑĀPĀRAMITĀSŪTRA](#). The texts known in English as the “Heart Sūtra” ([PRAJÑĀPĀRAMITĀHRDAYASŪTRA](#)) and the “Diamond Sūtra” ([VAJRACCHEDIKĀPRAJÑĀPĀRAMITĀ](#)) are both much shorter versions of these prajñāpāramitā sūtras. ¶ Perhaps because the Sanskrit term prajñāpāramitā is in the feminine gender, Prajñāpāramitā also became the name of a goddess, referred to as the mother of all buddhas, who is the embodiment of the perfection of wisdom. ¶ In the traditional Tibetan monastic curriculum, prajñāpāramitā is one of the primary topics of study, based on the *Abhisamayālamkāra* of [MAITREYANĀTHA](#) and its commentaries.

[Prajñāpāramitāhrdayasūtra](#). (T. Shes rab kyi pha rol tu phyin pa’i snying po’i mdo; C. Bore boluomiduo xin jing; J. Hannya haramitta shingyō; K. Panya paramilta sim kyōng 般若波羅蜜多心經). In English, the “Heart of the Perfection of Wisdom Sūtra” (or, in other interpretations, the “[DHĀRANĪ](#)-Sūtra of the Perfection of Wisdom”); a work known in English simply as the “Heart Sūtra”; one of only a handful of Buddhist [SŪTRAS](#) (including the “Lotus Sūtra” and the “Diamond Sūtra”) to be widely known by an English title. The “Heart Sūtra” is perhaps the most famous, and certainly the most widely recited, of all Buddhist sūtras across all Mahāyāna traditions. It is also one of the most commented upon, eliciting more Indian commentaries than any Mahāyāna sūtra (eight), including works by such luminaries as [KAMALAŚĪLA](#), [VIMALAMITRA](#), and [ATIŚA DĪPAMKARAŚRĪJĀNA](#), as well as such important East Asian figures as [FAZANG](#),

[KŪKAI](#), and [HAKUIN EKAKU](#). As its title suggests, the scripture purports to be the quintessence or heart (hr̥daya) of the “perfection of wisdom” ([PRAJÑĀPĀRAMITĀ](#)), in its denotations as both supreme wisdom and the eponymous genre of scriptures. The sūtra exists in long and short versions—with the longer version better known in India and the short version better known in East Asia—but even the long version is remarkably brief, requiring only a single page in translation. The short version, which is probably the earlier of the two recensions, is best known through its Chinese translation by [XUANZANG](#) made c. 649 CE. There has been speculation that the Chinese version may be a redaction of sections of the Chinese recension of the [MAHĀPRAJÑĀPĀRAMITĀSŪTRA](#) (also translated by Xuanzang) as a mnemonic encoding (dhāraṇī) of the massive perfection of wisdom literature, which was then subsequently translated back into Sanskrit, perhaps by Xuanzang himself. Although there is as yet no scholarly consensus on the provenance of the text, if this argument is correct, this would make the “Heart Sūtra” by far the most influential of all indigenous Chinese scriptures (see [APOCRYPHA](#)). The long version of the text, set on Vulture Peak ([GRDHRAKŪTAPARVATA](#)) outside [RAJAGRHA](#), begins with the Buddha entering [SAMĀDHI](#). At that point, the [BODHISATTVA ĀVALOKITEŚVARA](#) (who rarely appears as an interlocutor in the prajñāpāramitā sūtras) contemplates the perfection of wisdom and sees that the five aggregates ([SKANDHA](#)) are empty of intrinsic nature ([SVABHĀVA](#)). The monk [ŚĀRIPUTRA](#), considered the wisest of the Buddha’s [ŚRĀVAKA](#) disciples, is inspired by the Buddha to ask Avalokiteśvara how one should train in the perfection of wisdom. Avalokiteśvara’s answer constitutes the remainder of the sūtra (apart from a brief epilogue in the longer version of the text). That answer, which consists essentially of a litany of negations of the major categories of Buddhist thought—including such seminal lists as the five aggregates (skandha), twelve sense-fields ([ĀYATANA](#)), twelve links of dependent origination ([PRATĪTYASAMUTPĀDA](#)), and [FOUR NOBLE TRUTHS](#)—contains two celebrated statements. The first, made in reference to the first of the five aggregates, is “form ([RŪPA](#)) is emptiness ([ŚŪNYATĀ](#)); emptiness is form” ([RŪPAM ŚŪNYATĀ ŚŪNYATAIVA RŪPAM](#)). This is one of the most widely quoted and commented upon statements in the entire corpus of Mahāyāna sūtras and thus is not easily amenable to succinct explication. In brief, however, the line suggests that emptiness, as the nature of ultimate reality, is not located in some rarified realm, but rather is found in the ordinary objects of everyday experience. The other celebrated statement is the spell ([MANTRA](#)) that concludes Avalokiteśvara’s discourse—[GATE GATE PĀRAGATE PĀRASAMGATE BODHI SVĀHĀ](#)—which, unlike

many mantras, is amenable to translation: “gone, gone, gone beyond, gone completely beyond, enlightenment, svāha.” This mantra has also been widely commented upon. The presence of the mantra in the sūtra has led to its classification as a [TANTRA](#) rather than a sūtra in some Tibetan catalogues; it also forms the basis of Indian tantric [SĀDHANAS](#). The brevity of the text has given it a talismanic quality, being recited on all manner of occasions (it is commonly used as an exorcistic text in Tibet) and inscribed on all manner of objects, including fans, teacups, and neckties in modern Japan.

[Prajñāpāramitānayaśatapañcaśatikā](#). (T. Shes rab kyi pha rol tu phyin pa'i tshul brgya lnga bcu pa; C. Bore liqu fen; J. Hannya rishubun; K. Panya ich'wi pun 般若理趣分). In Sanskrit, “Way of the Perfection of Wisdom in One Hundred Fifty Lines,” a short [PRAJÑĀPĀRAMITĀ SŪTRA](#) in fifteen chapters of ten lines each, spoken by different buddhas, including [VAIROCANA](#). The presence of such terms as [VAJRA](#), guhya, and [SIDDHI](#) have caused some to classify it as “tantric.” The scripture is cited by both [CANDRAKĪRTI](#) and [HARIBHADRA](#) and was translated into Chinese five different times, by [XUANZANG](#), [BODHIRUCI](#), [VAJRABODHI](#), [AMOGHAVAJRA](#), and [DĀNAPĀLA](#).

[Prajñāpāramitāpindārtha](#). (T. Shes rab kyi pha rol tu phyin pa don bsdus pa). In Sanskrit, “Summary of the Perfection of Wisdom,” a commentary on the [ASTASĀHASRIKĀPRAJÑĀPĀRAMITĀ](#) attributed to [DIGNĀGA](#); also known as the *Prajñāpāramitāpiṇḍārthasaṃgraha* and the *Prajñāpāramitāsaṃgrahakārikā*. It is a short work in fifty-eight lines, which summarize the perfection of wisdom under thirty-two headings, including the ten misconceptions ([VIKALPA](#)) and their antidotes, as well as the sixteen types of emptiness ([ŚŪNYATĀ](#)). The opening stanza of the text is widely quoted: “The perfection of wisdom is nondual wisdom; it is the [TATHĀGATA](#). That term [is used] for texts and paths because they have that goal.” The work provides a [YOGĀCĀRA](#) perspective on the [PRAJÑĀPĀRAMITĀ](#), presenting a more systematic outline of doctrines than is typically found in the diffuse *prajñāpāramitā* literature. Doctrinally, the work is closely related to the [MADHYĀNTAVIBHĀGA](#). It appears to have been widely known; [HARIBHADRA](#) quotes from it five times in his [ABHISAMAYĀLAMKĀRĀLOKĀ](#). The text was translated into Chinese in 980 and into Tibetan in the eleventh century. There is a commentary on the text, entitled *Prajñāpāramitāpiṇḍārthasaṃgrahavivarāṇa*, by Triratnadāsa, a student of [VASUBANDHU](#).

See

[Prajñāpāramitāsarvatathāgatamātā-Ekāksarā.](#) (T. Shes rab kyi pha rol tu phyin pa de bzhin gshegs pa thams cad kyi yum yi ge gcig ma). In Sanskrit, “Perfection of Wisdom in One Letter, the Mother of All Tathāgatas.” The shortest of all the [PRAJÑĀPĀRAMITĀ](#) sūtras, it reads in its entirety: “Thus have I heard. At one time, the Lord ([BHAGAVAT](#)) was dwelling on Vulture Peak ([GRDHRAKŪTAPARVATA](#)) with a great assembly of 1,250 monks and many millions of bodhisattvas. At that time, the Lord said this to the venerable [ĀNANDA](#): ‘Ānanda, keep this perfection of wisdom in one letter for the benefit and happiness of sentient beings. It is thus: [A](#).’ So spoke the Lord and everyone—Ānanda, the monks, the [BODHISATTVA-MAHĀSATTVA](#)s—having understood and admired the perfection of wisdom, praised what the Lord had said.” “The Perfection of Wisdom in One Letter” thus refers to the letter “a,” the first letter of the Indic alphabet. See also [A](#); [AJIKAN](#).

[Prajñāpradīpa.](#) (T. Shes rab sgron me; C. Boredeng lun shi; J. Hannyatōron shaku; K. Panyadūng non sōk 般若燈論釋). In Sanskrit, “Lamp of Wisdom,” the commentary on [NĀGĀRJUNA](#)’s [MŪLAMADHYAMAKAKĀRIKĀ](#) by the sixth-century master [BHĀVAVIVEKA](#). The “Wisdom” in the title is a reference to Nāgārjuna’s text, the full title of which is *Prajñānāmamūlamadhyamakakārikā*. In his commentary on the first chapter of Nāgārjuna’s text, Bhāvaviveka criticized the earlier commentary by [BUDDHAPĀLITA](#), saying that it is insufficient simply to employ consequences ([PRASAṄGA](#)) and that one must also use autonomous syllogisms ([SVĀTANTRĀNUMĀNA](#)). [CANDRAKĪRTI](#), in his own commentary, the [PRASANNAPADĀ](#), came to Buddhapālita’s defense and attacked Bhāvaviveka. It is largely based on this exchange that later Tibetan scholars came to categorize Bhāvaviveka as a [*SVĀTANTRIKA](#) and Buddhapālita and Candrakīrti as [*PRĀSAṄGIKA](#). In addition to its intrinsic interest as a major work of an important Mahāyāna philosopher, Bhāvaviveka’s commentary is of historical interest because it makes specific reference to other commentators on Nāgārjuna, as well as the doctrines of various rival schools, both Buddhist and non-Buddhist. The text is lost in Sanskrit but is preserved in Chinese and Tibetan translations and has a lengthy commentary by [AVALOKITAVRATA](#) preserved in Tibetan translation.

[prajñapti.](#) (T. gdags pa/btags pa; C. jiaming; J. kemyō; K. kamyōng 假名). In Sanskrit, “designation,” “imputation,” or “convention,” a term used to describe

those things that are not intrinsic, ultimate, or primary, with phenomena whose reality is merely imputed (*prajñapti*), often contrasted with substantial phenomena (see [DRAVYASAT](#)). The various philosophical schools differ in the definition, extent, and deployment of the category, with the [MADHYAMAKA](#) arguing that all factors ([DHARMA](#)) are merely designations that exist only through imputation ([PRAJÑAPTISAT](#)), and nothing in the universe, including the Buddha or emptiness ([ŚŪNYATĀ](#)) exists substantially (*dravyasat*). However, the fact that conditioned dharmas are mere imputations does not imply that they lack functionality as conventional truths ([SAMVRTISATYA](#)). According to a [YOGĀCĀRA](#) explanation in the [CHENG WEISHI LUN](#) (**Vijñaptimātratāsiddhi*), all dharmas are said to have only imputed existence because (1) “dharmas are insubstantial and are contingent on fallacious imagining” (*wuti suiqing jia*); and (2) “dharmas have real substance but are real only in a provisional sense” (*youti shishe jia*). The first reason is based on the Yogācāra argument that the diversity, duality, and reality of things are merely mental projections (see [PARIKALPITA](#)), and are therefore artificial and imagined, existing only as fallacious conceptions. The second reason is based on the Yogācāra tenet of [PARATANTRA](#), the “dependent nature of things.” Accordingly, although things are “real” or “substantial” in that they have viable efficacy and functions, they are ultimately transformations of “activated” karmic “seeds” ([BĪJA](#)) stored within the eighth storehouse consciousness ([ĀLAYAVIJÑĀNA](#)). They are therefore said to be “dependent” on the consciousness and thus have only a “conditional” nature.

[Prajñaptibhāṣya\[pādaśāstra\]](#). [alt. *Prajñaptiśāstra*] (T. *Gdags pa'i gtsug lag bstan bcos*; C. *Shishe lun*; J. *Sesetsuron*; K. *Sisöl non 施設論*). In Sanskrit, “Treatise on Designations,” one of the earliest books of the [SARVĀSTIVĀDA ABHIDHARMAPITAKA](#); it is traditionally listed as the fourth of the six ancillary texts, or “feet” (*pāda*), of the [JÑĀNAPRASTHĀNA](#), which is the central treatise or body (*śarīra*) of the Sarvāstivāda abhidharma canon. The *Prajñaptibhāṣya* derives from the earliest stratum of Sarvāstivāda abhidharma literature, along with the [DHARMASKANDHA](#) and the [SAMGĪTIPARYĀYA](#). [YAŚOMITRA](#) and BU STON attribute authorship of the *Prajñaptibhāṣya* to [MAHĀMAUDGALYĀYANA](#). Unlike the rest of the canonical abhidharma texts of the Sarvāstivāda school, there is not a complete translation of this text in Chinese; the entire text survives only in a Tibetan translation ascribed to Prajñāsenā. Portions of the second section of the text are, however, extant in a late Chinese translation by Dharmarakṣa *et al.* made during the eleventh century. The Tibetan text is in three parts: (1)

lokaprajñapti, which deals with the cosmogonic speculations similar to such mainstream Buddhist texts as the [AGGAÑÑASUTTA](#); (2) kāraṇaprajñapti, which deals with the causes governing the various stereotypical episodes in a bodhisattva's career (see [BAXIANG](#)), from entering the womb for his final birth to entering [PARINIRVĀNA](#); and (3) karmaṇaprajñapti, a general discourse on the theory of moral cause and effect ([KARMAṆ](#)).

[prajñaptisat](#). (T. btags yod; C. jiaming you; J. kemyōyu; K. kamyōngyu 假名有). In Sanskrit, “imputed existence,” a term used by the Buddhist philosophical schools to describe the ontological status of those phenomena that exist as designations, imputations, or conventions. The term is often contrasted with [DRAVYASAT](#), or “substantial existence,” a quality of those phenomena that possess a more objective nature. The various school of Buddhist philosophy differ on the meaning and extension of the category of prajñaptisat. The [VAIBHĀSIKA](#) school of [SARVĀSTIVĀDA ABHIDHARMA](#) held that the world is composed of indivisible particles of matter and indivisible moment of time, which are dravyasat, and that everything composed of an aggregation of those particles or moments is prajñaptisat. In [MADHYAMAKA](#), all dharmas are prajñaptisat and no dharmas are dravyasat. See [PRAJÑAPTI](#); [DRAVYASAT](#).

[Prajñaptivāda](#). (P. Paññattivādā; T. Btags par smra ba; C. Shuojiabu; J. Setsukebu/Sekkebu; K. Sōlga pu 說假部). In Sanskrit, “Teaching of Designations”; one of the two schools of the [KAUKKUTIKA](#) branch of the [MAHĀSĀMĠHIKA](#) school of mainstream Buddhism, along with the [BAHUŚRUTIYA](#); it may have split off as a separate school around the middle of the third century CE. The Prajñaptivāda posits a distinction between reality and the way that reality is perceived by ordinary sentient beings. Beings use the “provisional designations” ([PRAJÑAPTI](#)) of concepts in order to describe what is real, but those concepts are merely imputations of reality and have only conventional validity ([PRAJÑAPTISAT](#)). The Prajñaptivāda also claims that the Buddha inevitably was compelled to use such provisional designations in order to convey his teachings to ordinary beings, a position distinct from the [LOKOTTARAVĀDA](#), one of the other major branches of the Mahāsāṃghika, which claims that the Buddha articulated the entirety of his teachings in a single utterance that was altogether transcendent ([LOKOTTARA](#)). Little is known about the regional center or geographic extent of the school.

[prajñāsīkṣā](#). (P. paññāsikkhā; T. shes rab kyi bslab pa; C. huixue; J. egaku; K.

hyehak 慧學). In Sanskrit, the “training in wisdom,” one of the three trainings ([TRISĪKṢĀ](#)), together with the training in ethics ([ŚĪLAŚIKṢĀ](#)) and the training in meditation ([SAMĀDHIŚIKṢĀ](#)). See [ADHIPRAJÑĀŚIKṢĀ](#) and [TRISĪKṢĀ](#).

prajñāvimukta. (P. paññāvimutta; T. shes rab kyis nam par grol ba; C. hui jietuo; J. egedatsu; K. hyehaet'al 慧解脫). In Sanskrit, “one who is liberated through wisdom.” The term refers specifically to a person who has attained liberation through insight ([VIPAŚYANĀ](#)) into the three marks of existence: impermanence ([ANITYA](#)), suffering ([DUḤKHA](#)), and nonself ([ANĀTMAN](#)). Anyone who has attained any of the four stages of sanctity ([ĀRYA](#))—stream-entry, once-returning, nonreturning, or arhatship—is said to have attained liberation through wisdom. Such liberation is equivalent to enlightenment ([BODHI](#)), results in the permanent eradication of the contaminants ([ĀSRAVAKṢAYA](#)), and leads to the cessation of [REBIRTH](#). In the Pāli abhidhamma and Sarvāstivāda [ABHIDHARMA](#), the person “liberated through wisdom” is the sixth of seven types of enlightened disciples (ārya); the other six are: (1) the saddhānusāri (S. [ŚRADDHĀNUSĀRIN](#)), or faith-follower; (2) dhammānusāri (S. [DHARMĀNUSĀRIN](#)); (3) saddhāvimutta (S. [ŚRADDHĀVIMUKTA](#)), or one liberated through faith; (4) diṭṭhippatta (S. [DRSTIPRĀPTA](#)), or vision-attainer; (5) kāyasakkhī (S. [KĀYASĀKSIN](#)), or witnessing with this very body; (6) ubhatobhāgavimutta (S. [UBHAYATOBHĀGAVIMUKTA](#)), or liberated in both ways. The prajñāvimukta who has attained liberation through the contemplation of no-self is contrasted with cetovimukta (P. cetovimutta; cf. [CETOVIMUKTI](#)), or “one liberated through mind,” who has mastery of meditative absorptions (P. [JHĀNA](#); S. [DHYĀNA](#)). The prajñāvimukta is also one of the [VIMŚATIPRABHEDASAMGHA](#) (“twenty varieties of the āryasaṃgha”) based on the list given in the [MAHĀVYUTPATTI](#).

Prakaraṇapāda[śāstra]. (T. Rab tu byed pa'i rkang pa; C. Pinlei zu lun; J. Honruisokuron; K. P'umnyu chok non 品類足論). In Sanskrit, “Exposition”; a book from the later stratum of the [SARVĀSTIVĀDA ABHIDHARMA](#), which is traditionally listed as the first of the six ancillary texts, or “feet” (pāda), of the [JÑĀNAPRASTHĀNA](#), the central treatise, or body (śārīra), of the Sarvāstivāda [ABHIDHARMAPITAKA](#). The *Prakaraṇapāda* is attributed by tradition to Vasumitra and dates from c. 160 to 320 CE, probably following the compilation of the [ABHIDHARMAMAHĀVIBHĀSĀ](#). The treatise is extant only in a complete Chinese translation made by [GUNABHADRA](#) and Bodhiyaśas between 435 and 443. The *Prakaraṇapāda* establishes the definitive Sarvāstivāda categorization of dharmas

into a fivefold grouping: materiality ([RŪPA](#)), mentality ([CITTA](#)), mental concomitants ([CAITTA](#) or [CAITASIKA](#)), conditioned factors dissociated from thought ([CITTAVIPRAYUKTASAMSKĀRA](#)), and uncompounded elements ([ASAMSKRTADHARMA](#)). This fivefold grouping is first employed in the [ABHIDHARMAMAHĀVIBHĀSĀ](#), whence it enters the mainstream of the Sarvāstivāda-[VAIBHĀSIKA](#) analysis of dharmas and is subsequently adopted by several other Buddhist schools, including the [SAUTRĀNTIKA](#), [MADHYAMAKA](#), and [YOGĀCĀRA](#) (see [BAIFA](#)). The *Prakaraṇapāda* also adds a new listing of [KUŚALAMAHĀBHŪMIKA](#), or factors always associated with wholesome states of mind. The *Prakaraṇapāda* was the first of the pādaśāstras to represent the mature synthesis of Sarvāstivāda doctrine, which was followed in later abhidharma manuals and primers. The text therefore represents a transitional point in Sarvāstivāda abhidharma writing between the pādaśāstras of the middle period and the commentarial writings of the later tradition.

[Prakrit](#). (S. Prākṛta). A term that literally means “natural” in Sanskrit, used to designate a group of Indo-Āryan vernacular languages in ancient India. The term “Sanskrit” (saṃskṛta) has the sense both of “constructed,” “perfected,” or “refined,” and thus describes a classical language that may not ever have been used for everyday verbal communication. The earliest extant written forms of Prakrit are found in the inscriptions of [AŚOKA](#). The Buddha is said to have spoken the Prakritic dialect of Māgadhī, the vernacular language of the Indian state of [MAGADHA](#). Also important for Buddhism is the [GANDHĀRĪ](#) form of Prakrit, from the [GANDHĀRA](#) region of northwest India. These Prakrit dialects eventually evolved into many of the modern Indian vernacular languages, such as Bengali, Gujarati, Oriya, and Hindi. Although some scholars do not consider [PALI](#) and [BUDDHIST HYBRID SANSKRIT](#) to be Prakrits in the technical sense, they are clearly influenced by various Prakrits current at the time of their formation.

[prakṛtiparinirvṛta](#). (T. rang bzhin gyis yongs su mya ngan las ’das pa; C. zixing niepan; J. jishō nehan; K. chasōng yōlban自性涅槃). In Sanskrit, “intrinsically extinguished”; a term used in a phrase common to the [PRAJÑĀPĀRAMITĀ](#) literature, in which all phenomena in the universe are described as being “unproduced (anutpanna, see [ANUTPĀDA](#)), unceasing (aniruddha), primordially at peace (ādiśānta), and intrinsically fully extinguished (prakṛtiparinirvṛta).” It refers to the state of quiescence in which all phenomena in the universe naturally abide. In the [MADHYAMAKA](#) school, the term is sometimes used as a synonym for

emptiness ([ŚŪNYATĀ](#)). See also [NIRVĀNA](#).

[prakṛtiśtagotra](#). (T. rang bzhin gnas rigs; C. benxing zhu zhongxing; J. honshōjūshushō; K. ponsōng chu chongsōng 本性住種性). In Sanskrit, “naturally endowed lineage” or “intrinsic lineage.” In certain strands of [YOGĀCĀRA](#) thought, it is believed that there are two kinds of “seeds” ([BIJA](#)) that lead to future [KARMA](#). The first is newly acquired karmic seeds (xinxun zhongzi), which are activated as suitable conditions arise and will expire once their karmic efficacy is spent. Second, there are also certain primordial seeds (benyou zhongzi), which remain indestructible and, in a sense, forever determine one’s spiritual tendency and potential. One such example is the “naturally endowed lineage” ([prakṛtiśtagotra](#)) that determines if a person will ultimately become an [ARHAT](#) (via either the [ŚRĀVAKA](#) or [PRATYEKABUDDHA](#) paths), a buddha, or forever remain as an unenlightened “incorrigible” ([ICCHANTIKA](#)). That is, whether one will attain enlightenment or not, and what spiritual status one will ultimately reach, is “predetermined” by such a predisposition. In this controversial tenet, a person lacking the “primordial seed” necessary to qualify one as belonging to a [MAHĀYĀNA](#) “lineage” ([GOTRA](#)), for example, is forever deprived of the potential to cultivate the path to buddhahood. Together, and in contrast to, the “lineage that is conditioned by habits” (see [SAMUDĀNĪTAGOTRA](#)), they are known as “the two lineages: intrinsic and acquired” (xingxi er[zhong]xing). For the two kinds of karmic seeds, see [ERZHONG ZHONGZI](#).

[prakṛtīśuddhi](#). (T. rang bzhin gyis rnam par dag pa; C. benxing jing; J. honshōjō; K. ponsōng chōng 本性淨). In Sanskrit, “intrinsic purity,” a term used to describe the inherent purity and luminosity of the mind, with the implication that all afflictions ([KLEŚA](#)) are therefore adventitious and extrinsic to the mind’s true nature.

[pralambapādāsana](#). (T. rkang pa brkyangs pa’i ’dug stangs; C. chuizuzuo; J. suisokuza; K. sujokchwa 垂足坐). In Sanskrit, lit. “pendant leg posture”; a posture ([ĀSANA](#)) sometimes called the “seated” or “European” pose, where both legs of a figure hang pendant, feet on the ground, usually from a throne or seat. Tibetan images of [MAITREYA](#) are commonly found in this posture (and thus it is also known as the [MAITREYĀSANA](#)); he is said to sit in this pose so that he can easily stand in preparation for his descent to the world as the next buddha. This position is sometimes known as the [BHADRĀSANA](#).

pramāda. (P. pamāda; T. bag med pa; C. fangyi; J. hōitsu; K. pangil 放逸). In Sanskrit, “heedlessness”; one of the forty-six mental concomitants ([CAITTA](#)) according to the [SARVĀSTIVĀDA-VAIBHĀSIKA](#) school of [ABHIDHARMA](#) and one of the fifty-one according to the [YOGĀCĀRA](#) school, where it is listed among the twenty secondary afflictions ([UPAKLEŚA](#)). Heedlessness refers to a lack of vigilance in one’s interaction with the external world so that one neglects salutary ([KUŚALA](#)) actions that will be conducive to the benefit of both oneself and others (see [SVĀRTHA](#); [PARĀRTHA](#)) and instead engages in morally questionable behavior. Heedlessness is the opposite of “heedfulness” ([APRAMĀDA](#)), which is considered foundational to any kind of ethical or virtuous behavior—so much so, in fact, that the Buddha is said to have recommended it in his last words delivered on his deathbed: “Indeed, monks, I declare to you: decay is inherent in all compounded things; strive on with heedfulness.” (P. handadāni bhikkhave amantayāmi vo: vayadhammā saṅkhārā; appamādena sampādeṭha.) **pramāṇa**. (T. tshad ma; C. liang; J. ryō; K. yang 量). In Sanskrit, “means of knowledge,” or “valid knowledge,” defined technically as a consciousness that is not deceived with regard to its object. Many schools of Buddhism posit two forms of valid knowledge: direct perception ([PRATYAKSA](#)) and inference ([ANUMĀNA](#)), with the former deriving from correct sense perception and the latter deriving from correct reasoning. Dharmakīrti states in his [PRAMĀNAVĀRTTIKA](#) that there are two forms of valid knowledge (pramāṇa) because there are two objects of comprehension (prameya). The two types of objects are the manifest ([ABHIMUKHĪ](#)) and the hidden ([PAROKSA](#)), with the former referring to objects that can be known through direct sense perception, the latter referring to those things that can be known only through inference. His limitation of forms of valid knowledge to only two is meant to distinguish Buddhist epistemology from that of the Hindu schools, where sound (śabda), especially in the sense of the sound of the Vedas, is counted as a valid form of knowledge. Discussions of these two forms of valid knowledge, especially as set forth in the works of [DIGNĀGA](#) and [DHARMAKĪRTI](#), encompassed a range of topics in epistemology and logic that became very influential in medieval India (among both Buddhists and non-Buddhists), and then in Tibet; its influence was less strong in East Asia. Thus, although the term pramāṇa technically refers to one of these two valid forms of knowledge, it comes by extension to refer to medieval and late Indian Buddhist epistemology and logic, in the latter case, especially as it pertains to the formal statement of syllogisms ([PRAYOGA](#)) to an opponent.

pramāṇabhūta. (T. tshad ma'i skyes bu). In Sanskrit, “authoritative one”; an epithet of the Buddha, which has also been variously translated as “he who is [like] valid knowledge,” and “he who has come into existence as [a form of] valid knowledge.” The epithet is most famously ascribed to the Buddha by [DIGNĀGA](#) in his [PRAMĀNASAMUCCAYA](#), and is variously commented upon by later Buddhist logicians. According to some commentators, the Buddha, unlike various Hindu deities, is like a form of valid knowledge ([PRAMĀNA](#)) because he is reliable, in the sense that he is not deceptive and because he makes known things that were not known before, such as the [FOUR NOBLE TRUTHS](#).

Pramāṇasamuccaya. (T. Tshad ma kun btus; C. Jiliang lun; J. Jūryōron; K. Chimnyang non 集量論). In Sanskrit, “Compendium on Valid Knowledge”; the most famous work of [DIGNĀGA](#), the great Buddhist logician of the late fifth and early sixth centuries, and considered the foundational text of Buddhist logic and epistemology. In it, Dignāga describes direct perception ([PRATYAKSA](#)) as being free from thought ([KALPANĀ](#)), and distinguishes between the objects of direct perception and thought, with direct perception able to discern specific characteristics ([SVALAKSANA](#)), while thought deals only with general characteristics ([SĀMĀNYALAKSANA](#)). In discussing the five sense consciousnesses and the mental consciousness ([MANOVIJÑĀNA](#)), he asserted that the sense consciousnesses operate exclusively through direct perception, whereas the mental consciousness knows objects through both direct perception and inference ([ANUMĀNA](#)). In explaining the function of thought, Dignāga described thought as operating through the negative route of [APOHA](#), whereby thought does not perceive its object directly, but instead through the conceptual elimination of everything that is not the object. In this work, Dignāga also examines the elements of a logical syllogism ([PRAYOGA](#)) and the relations that must pertain among its various constituents in order for that statement to result in a correct inference.

pramāṇavāda. (T. tshad ma smra ba). In Sanskrit, “proponent of valid knowledge,” a term used to describe the tradition of Buddhist logic deriving especially from the work of [DIGNĀGA](#) and [DHARMAKĪRTI](#). This tradition did not represent a self-conscious school of Buddhist philosophy, but rather an approach to issues in logic and epistemology that were central to [SAUTRĀNTIKA](#), [YOGĀCĀRA](#), and [MADHYAMAKA](#). See [PRAMĀNA](#).

Pramāṇavārttika. (T. Tshad ma rnam 'grel). In Sanskrit, “Commentary on

Valid Knowledge,” the most famous work of the great Buddhist logician [DHARMAKĪRTI](#). The “Pramāṇa” in the title of text is a reference to [DIGNĀGA](#)’s [PRAMĀNASAMUCCAYA](#); Dharmakīrti’s work is ostensibly a commentary on Dignāga’s text, although in fact Dharmakīrti’s work makes significant refinements in, and occasional departures from, Dignāga’s views. The *Pramāṇavārttika* is written in verse, with a prose commentary by the author, in four chapters, dealing with inference for oneself ([SVĀRTHĀNUMĀNA](#)), the proof of valid knowledge (pramāṇasiddhi), direct perception ([PRATYAKSA](#)), and inference for others ([PARĀRTHĀNUMĀNA](#)). The work was the subject of numerous commentaries in India, and later in Tibet, where it was studied by all sects and became one of the “five books” (zhung lnga) that provided the foundation for the [DGE LUGS](#) monastic curriculum.

[Pramāṇaviniścaya](#). (T. Tshad ma rnam par nges pa). In Sanskrit, “Determination of Valid Knowledge,” one of the seven treatises of the Indian master [DHARMAKĪRTI](#), perhaps second in fame to his [PRAMĀNAVĀRTTIKA](#), for which it serves as something of a summary. Following its translation into Tibetan by [RNGOG BLO LDAN SHES RAB](#), it was the main text for the study of [PRAMĀNA](#) (T. tshad ma) in Tibet, until Sa skya Paṇḍita’s [TSHAD MA RIGS GTER](#) that explained the *Pramāṇavārttika* in detail.

[pramuditā](#). (T. rab tu dga’ ba; C. huanxi di; J. kangiji; K. hwanhŭi chi 歡喜地). In Sanskrit, “joyous,” the first of the ten bodhisattva [BHŪMI](#), a list of ten stages ([DAŚABHŪMI](#)) deriving from the [DAŚABHŪMIKASŪTRA](#) (“Sūtra on the Ten Bhūmis”), a sūtra that is later subsumed into the massive scriptural compilation, the [AVATAMSAKASŪTRA](#). This first bhūmi coincides with the attainment of the path of vision ([DARŚANAMĀRGA](#)) and the remaining nine to the path of cultivation ([BHĀVANĀMĀRGA](#)). The first stage is called “joyous” because the bodhisattva rejoices at having seen reality for the first time, or because he feels joy at seeing that he is close to buddhahood, at which point he can achieve the aims of sentient beings. When the six perfections are aligned with the ten bhūmis, the pramuditā stage is an occasion for the bodhisattva to practice the perfection of giving ([DĀNAPĀRAMITĀ](#)) in particular and attracts disciples through the four means of gathering ([SAMGRAHAVASTU](#)). The bodhisattva remains at this stage as long as he remains unaware of subtle ethical transgressions; morality ([ŚĪLA](#)) is fully perfected on the second stage. On the first bhūmi, it is said that a bodhisattva can (1) see one hundred buddhas, (2) be blessed by one hundred

buddhas, (3) live for one hundred eons, (4) see the past and future in those one hundred eons with wisdom, (5) enter into and withdraw from one hundred [SAMĀDHIS](#), (6) vibrate one hundred worlds, (7) illuminate one hundred worlds, (8) bring one hundred sentient beings to spiritual maturity using emanations, (9) go to one hundred pure buddha-fields ([PARISUDDHABUDDHAKSETRA](#)), (10) open one hundred doors of doctrine, (11) display one hundred versions of his own body, and (12) surround each of those bodies with one hundred bodhisattvas. These numbers multiply as the bodhisattva proceeds to subsequent stages.

[prāna](#). (T. srog; C. bona; J. hana; K. pana 波那). In Sanskrit, “wind,” “breath,” or “vital force”; the winds that course through the network of channels ([NĀDI](#)) in the body, according to tantric physiognomy. There are various types of winds that perform functions such as movement, digestion, respiration, sexual activity, and sustenance of the life force. Much tantric practice is devoted, first, to causing these winds to flow freely through the system of channels and, subsequently, to gathering the various winds into the central channel in order to induce deep states of bliss.

[prānāyāma](#). (T. srog rtsol; C. tiaoxi; J. chōsoku; K. chosik 調息). In Sanskrit, lit., “restraint of breath,” “restraint of wind”; a term used to encompass various practices of breath control. During his six years of practice of asceticism prior to his achievement of enlightenment, some traditions say that the Buddha became adept at the practice of holding his breath for extended periods of time but eventually abandoned it as a form of self-mortification. Nonetheless, elaborate practices of breath control are found throughout Buddhism, especially in Buddhist [TANTRA](#). For example, at the beginning of a tantric meditative session, one is instructed to purify the breath by inhaling through one nostril and exhaling through the other by closing each nostril successively with the index finger. In the practice of [ANUTTARAYOGATANTRA](#), the term is used broadly to refer to all forms of meditation, including the visualization of seed syllables ([BĪJA](#)) that are intended to cause the various winds to enter into the central channel ([AVADHŪTĪ](#)). Such practices are to be distinguished from “mindfulness of breathing” ([ANĀPĀNASMṚTI](#)), which involves mindful awareness of the natural process of inhalations and exhalations, rather than any attempt to control or restrain the breath.

[pranidhāna](#). (P. panidhāna; T. smon lam; C. yuan; J. gan; K. wŏn 願). In Sanskrit, “vow” or “aspiration”; a statement expressing the solemn wish that a

specific aim be achieved. The most famous type of praṇidhāna is the vow the [BODHISATTVA](#) takes to become a buddha in order to liberate all sentient beings from suffering (see [PŪRVAPRANIDHĀNA](#)). Praṇidhāna is also listed as one of the ten perfections ([PĀRAMITĀ](#)) and as one of the ten powers ([BALA](#)) of a bodhisattva. A vow may take the form of an oath, in which one promises to achieve an aim, or the form of a prayer, in which one asks that an aim be fulfilled, often through dedicating merit toward that aim. The term occurs also in pūrvapraṇidhāna, or “prior vow,” a vow made in the past that has either been fulfilled in the present or will be fulfilled in the future, typically in conjunction with the aspiration to attain buddhahood. The term pūrvapraṇidhāna is used specifically in the [MAHĀYĀNA](#) to denote the vow made in the past by a bodhisattva to become a buddha himself, often specifying the place, the time, and the retinue that will be associated with that event. Since the buddhas succeeded in achieving their goal of buddhahood, their prior vows are therefore all considered to have been fulfilled. The most famous of all pūrvapraṇidhāna are the forty-eight vows that the monk [DHARMĀKARA](#) made before the buddha [LOKEŚVARARĀJA](#), which ultimately led to his becoming the buddha [AMITĀBHA](#) and creating the pure land of [SUKHĀVATĪ](#); these vows are described in the [SUKHĀVATĪVYŪHASŪTRA](#) and are foundational to the [PURE LAND](#) traditions of East Asia.

[praṇidhānapāramitā](#). (T. smon lam gyi pha rol tu phyin pa; C. yuan boluomi; J. ganharamitsu; K. wŏn paramil 願波羅蜜). In Sanskrit, “perfection of aspiration,” “prayer,” or “resolve”; the eighth of the traditional list of ten perfections ([PĀRAMITĀ](#)). According to the system of the ten bodhisattva [BHŪMI](#), this perfection, which is a subset of the “perfection of wisdom” ([PRAJÑĀPĀRAMITĀ](#)), is practiced on the eighth bhūmi, called the [ACALĀ](#) (immovable). Here, all of the aspirations ([PRANIDHĀNA](#); [PŪRVAPRANIDHĀNA](#)) made by the bodhisattva over the long path he has traversed leading up to buddhahood are considered to have been achieved.

[praṇidhicittotpāda](#). (T. smon pa'i sems bskyed; C. yuan puti xin; J. ganbodaishin; K. wŏn pori sim 願菩提心). In Sanskrit, lit., “aspirational creation of the intention,” where “intention” or “thought” ([CITTA](#)) refers to [BODHICITTA](#), the intention to achieve buddhahood in order to liberate all sentient beings from suffering. This is the first of two types of bodhicitta, the second being the [PRASTHĀNACITTOTPĀDA](#), lit., the “creation of the intention to set out.” In his [BODHICARYĀVATĀRA](#), [ŚĀNTIDEVA](#) compares the first type of bodhicitta to the

decision to undertake a journey and the second type to actually setting out on the journey. In the case of the [BODHISATTVA](#) path, the first refers to the process of developing the aspiration to buddhahood for the sake of others, while the second refers to undertaking the various practices of the bodhisattva path, such as the six perfections ([PĀRAMITĀ](#)). These two forms of bodhicitta are meant to be developed in sequence.

prapañca. (P. papañca; T. spros pa; C. xilun; J. keron; K. hūiron 戲論). In Sanskrit, lit. “diffusion,” “expansion”; viz. “conceptualization” or “conceptual proliferation”; the tendency of the process of cognition to proliferate the perspective of the self ([ĀTMAN](#)) throughout all of one’s sensory experience via the medium of concepts. The locus classicus for describing how sensory perception culminates in conceptual proliferation appears in the Pāli [MADHUPINDIKASUTTA](#). As that scripture explains, any living being will be subject to an impersonal causal process of perception in which consciousness (P. viññāṇa; S. [VIJÑĀNA](#)) occurs conditioned by an internal sense base ([INDRIYA](#)) and an external sense object ([ĀYATANA](#)); the contact among these three brings about sensory impingement or contact (P. phassa; S. [SPARŚA](#)), which in turn leads to the sensation ([VEDANĀ](#)) of that contact as pleasant, unpleasant, or neutral. At that point, however, the sense of ego intrudes and this process then becomes an intentional one, whereby what one feels, one perceives (P. saññā; S. [SAMJÑĀ](#)); what one perceives, one thinks about (P. vitakka; S. [VITARKA](#)); and what one thinks about, one conceptualizes (P. papañca; S. prapañca). By allowing oneself to experience sensory objects not as things-in-themselves but as concepts invariably tied to one’s own perspective, the perceiving subject then becomes the hapless object of an inexorable process of conceptual subjugation: viz., what one conceptualizes becomes proliferated conceptually (P. papañcasaññāsankhā; a term apparently unattested in Sanskrit) throughout all of one’s sensory experience. Everything that can be experienced in this world in the past, present, and future is now bound together into a labyrinthine network of concepts, all tied to oneself and projected into the external world as craving ([TRSNĀ](#)), conceit ([MĀNA](#)), and wrong views ([DRSTI](#)), thus creating bondage to [SAMSĀRA](#). By systematic attention ([YONIŚOMANASKĀRA](#)) to the impersonal character of sensory experience and through sensory restraint ([INDRIYASAMVARA](#)), this tendency to project ego throughout the entirety of the perceptual process is brought to an end. In this state of “conceptual nonproliferation” (P. nippapañca; S. [NIHPRAPAÑCA](#)), perception is freed from concepts tinged by this proliferating

tendency, allowing one to see the things of this world as impersonal causal products that are inevitably impermanent ([ANITYA](#)), suffering ([DUHKHA](#)), and nonself ([ANĀTMAN](#)). ¶ The preceding interpretation reflects the specific denotation of the term as explicated in Pāli scriptural materials. In a Mahāyāna context, prapañca may also connote “elaboration” or “superimposition,” especially in the sense of a fanciful, imagined, or superfluous quality that is mistakenly projected on to an object, resulting in its being misperceived. Such projections are described as manifestations of ignorance ([AVIDYA](#)); reality and the mind that perceives reality are described as being free from prapañca ([NISPRAPAÑCA](#)), and the purpose of Buddhist practice in one sense can be described as the recognition and elimination of prapañca in order to see reality clearly and directly. In the [MADHYAMA](#) school, the most dangerous type of prapañca is the presumption of intrinsic existence ([SVABHĀVA](#)). In [YOGĀCĀRA](#), prapañca is synonymous with the “seeds” ([BIJA](#)) that provide the basis for perception and the potentiality for future action. In this school, prapañca is closely associated with false discrimination ([VIKALPA](#)), specifically the bifurcation of perceiving subject and perceived object ([GRĀHYAGRĀHAKAVIKALPA](#)). The goal of practice is said to be a state of mind that is beyond all thought constructions and verbal elaboration. ¶ The precise denotation of prapañca has been the subject of much perplexity and debate within the Buddhist tradition, which is reflected in the varying translations for the term in Buddhist canonical languages. The standard Chinese rendering xilun means “frivolous debate,” which reflects the tendency of prapañca to complicate meaningful discussion about the true character of sensory cognition. The Tibetan spros ba means something like “extension, elaboration” and reflects the tendency of prapañca to proliferate a fanciful conception of reality onto the objects of perception.

prāpti. (T. 'thob pa; C. de; J. toku; K. tŭk 得). In Sanskrit, “possession,” “acquisition”; the first of the fourteen “conditioned forces dissociated from thought” ([CITTAVIPRAYUKTASAMSKĀRA](#)) listed in the [SARVĀSTIVĀDA-VAIBHĀSIKA ABHIDHARMA](#) and in the [YOGĀCĀRA](#) system. The function of prāpti is to serve as a kind of glue that causes the various independent constituents of existence ([DHARMA](#)) to adhere in seemingly permanent constructs. The leap the Sarvāstivāda school made was to assert that this factor of “possession” was a real dharma ([DRAVYADHARMA](#)), in distinction to other schools, which asserted that the notion of possession was simply an imputed designation ([PRAJŅĀPTI](#)).

Prāpti is the conditioned force that attaches a specific affliction, action, or dharma to the mental continuum ([SAMTĀNA](#)) of the individual, thus helping to maintain the semblance of the continuity of the person. Prāpti also receives and retains the effects of positive and negative volitional actions ([KARMAN](#)) and thus ensures karmic continuity. This same notion of prāpti is also deployed to clarify how the afflictions ([KLEŚA](#)) can be eradicated in a cognition of the [FOUR NOBLE TRUTHS](#) (catvāry āryasatyāni): viz., that cognition brings to an end the “possession” of the afflictions, thus ensuring that they may never arise again. This factor is the opposite of the related dissociated force of “dispossession” ([APRĀPTI](#)). The [PRAJÑĀPĀRAMITĀ](#) sūtras vehemently rejected any such notion of “possession,” even of [NIRVĀNA](#) itself, which they claimed could neither be attained nor possessed.

prasāda. (P. pasāda; T. dad pa/dang ba; C. chengjing; J. chōjō; K. chingjōng 澄淨). In Sanskrit, “clarity,” or “trust.” As “clarity,” the term is used to describe both the serene sense consciousnesses of someone whose mind is at peace as well as such a state of mind itself. As “trust,” the term is central to Buddhism, where it is employed in explanations of the psychology of faith or belief (see [ŚRADDHĀ](#)); it leads to zest or “desire-to-act” ([CHANDA](#)) that in turn leads to the cultivation of [SAMATHA](#) (serenity or calmness). These meanings of prasāda overlap when the term denotes the serenity or joy that results from trust. In the theology of the [JŌDO SHINSHŪ](#) school of Japanese [PURE LAND](#) Buddhism, it refers to a serene acceptance of the grace of [AMITĀBHA](#).

prasajyapratishedha. (T. med dgag). In Sanskrit, “nonaffirming negative,” or “nonimplied negation,” a negative declaration ([PRATISEDHA](#)) that is expressed in such a way that nothing positive is implied. The most famous such nonimplied negation is emptiness ([ŚŪNYATĀ](#)), which is the mere absence of intrinsic existence ([SVABHĀVA](#)). See also [PARYUDĀSAPRATISEDHA](#).

prasāṅga. (T. thal ’gyur). In Sanskrit, “consequence”; in Buddhist logic, a statement made to an opponent that uses the opponent’s assertions to demonstrate contradictions in the opponent’s position. It is not necessary that the person who states the consequence accept the subject, predicate, and reason of the consequence. There is a difference of opinion as to whether the statement of the consequence is sufficient to bring about correct understanding in the opponent or whether an autonomous syllogism ([SVATANTRAPRAYOGA](#)) stating the correct position (that is, the position of the person who states the consequence) is

also required. This was one of the points of disagreement that led to the designation of the [*PRĀSAṄGIKA](#) and [*SVĀTANTRIKA](#) branches of the [MADHYAMAKA](#) school.

[*Prāsaṅgika](#). (T. Thal 'gyur ba). In Sanskrit, “Consequentialist,” one of the two main branches of the [MADHYAMAKA](#) school, so called because of its use of consequences ([PRASAṄGA](#)) rather than autonomous syllogisms ([SVATANTRAPRAYOGA](#)) in debates about the nature of reality. Its leading proponents include [BUDDHAPĀLITA](#) and [CANDRAKĪRTI](#). The other branch of Madhyamaka is [*SVĀTANTRIKA](#), represented by such figures as [BHĀVAVIVEKA](#), [JÑĀNAGARBHA](#), [ŚĀNTARAKṢITA](#), and [KAMALAŚĪLA](#). The designation “Prāsaṅgika” as a subschool of Madhyamaka does not occur in Indian literature; it was coined retrospectively in Tibet to describe the later developments of the Indian Madhyamaka school. In the doxographical literature of the [DGE LUGS](#) sect in Tibet, where [*Prāsaṅgika](#) is ranked as the preeminent school of Indian Buddhist philosophy, [Prāsaṅgika](#) differs from [Svātantrika](#) primarily on questions of the nature of emptiness ([ŚŪNYATĀ](#)) and the correct role of reasoning in understanding it, although other points of difference are also enumerated, including the question of whether the arhat must understand the selflessness of phenomena ([DHARMANAIRĀTMYA](#)) in order to achieve liberation.

[Prasannapadā](#). (T. Tshig gsal). In Sanskrit, “Clear Words,” the commentary on [NĀGĀRJUNA](#)'s [MŪLAMADHYAMAKAKĀRIKĀ](#) by the seventh-century Indian master [CANDRAKĪRTI](#); its full title is *Mūlamadhyamakavṛtti-Prasannapadā*. Among Candrakīrti's major works, it is regarded as second in importance only to his independent treatise, the [MADHYAMAKĀVATĀRA](#), which was composed earlier. Apart from its importance as a commentary on Nāgārjuna's text, Candrakīrti's work is also important as the locus classicus for the division of Madhyamaka into the [*SVĀTANTRIKA](#) and [*PRĀSAṄGIKA](#). Candrakīrti's was the third in an influential series of commentaries. The first was that of [BUDDHAPĀLITA](#). The second was the [PRAJÑĀPRADĪPA](#) of [BHĀVAVIVEKA](#), who criticized Buddhapālita's commentary on the first chapter of Nāgārjuna's text, specifically the section in which Buddhapālita refutes the Sāṃkhya position that an effect is produced from a cause that is the same nature as itself. In the *Prasannapadā*, Candrakīrti defended Buddhapālita and attacked Bhāvaviveka. It is based largely on these exchanges that later Tibetan scholars came to designate Buddhapālita and Candrakīrti as [*Prāsaṅgikas](#) and Bhāvaviveka as a [*Svātantrika](#). Candrakīrti's

commentary is also valued by scholars for its many citations from Mahāyāna sūtras. The *Prasannapadā* has attracted the attention of modern scholars, in part because, unlike the commentaries of Buddhapālita and Bhāvaviveka, for example, it has been preserved in Sanskrit.

Prasenajit. (P. Pasenadi; T. Gsal rgyal; C. Bosini wang; J. Hashinoku ō; K. Pasanik wang 波斯匿王). In Sanskrit, the proper name of the king of the region of [KOŚALA](#) during the time of [GAUTAMA](#) or [ŚĀKYAMUNI](#) Buddha. Prasenajit's capital was the city of [ŚRĀVASTĪ](#), where the Buddha delivered many of his sermons. During his reign, Kośala was one of the two most powerful kingdoms in the Indian subcontinent, along with [MAGADHA](#), and seems to have exerted political control over the neighboring [ŚĀKYA](#) kingdom, where the Buddha was born. According to the tradition, Prasenajit was born in the same year as the Buddha. Because of his dedication to the propagation, protection, and preservation of the Buddhist order ([SAMGHA](#)), Prasenajit is often used as an example of Buddhist notions of proper kingship. In fact, several of the Buddha's sermons are given in response to a question asked by Prasenajit. Such devotion can also be seen in one particular distinction held by Prasenajit: legend has it that he was first person to have an image made of the Buddha. (Elsewhere, this distinction is given to King Udāyana or Rudrāyana; see [UDĀYANA BUDDHA](#).) According to the thirteenth-century Sinhalese source, the *Kosalabimbavaṇṇanā* ("Laudatory Account of the Kosala Image"), Prasenajit was disappointed when he went to visit the Buddha but found that the Buddha was away from his residence. He therefore requested that an image of the Buddha be made that would function as his double; the Buddha answered that whoever might create such an image would accumulate immeasurable merit. This first image was said to have been made of sandalwood and to have displayed the thirty-two marks of a great man ([MAHĀPURUSALAKSANA](#)); when the Buddha first came to see the image that Prasenajit had commissioned, it rose to greet him. Many members of Prasenajit's family also played important roles in Buddhist literature. His wife, [MALLIKĀ](#), was the person who initially encouraged him to become a follower of the Buddha. One of Prasenajit's sons was prince [JETA](#), from whom the banker [ANĀTHAPINDADA](#) (P. [ANĀTHAPINDIKA](#)) purchased the [JETAVANA](#) (Jeta's grove) to donate to the Buddha; this was one of the Buddha's favorite residences and the place where many of his sermons were delivered. Prasenajit was the father of the princess Śrīmālādevī, the protagonist of the [ŚRĪMĀLĀDEVĪSIMHANĀDASŪTRA](#). He was also the father of [VIRŪDHAKA](#), who, when he learned that his mother was not

of noble birth, made war on the [ŚĀKYA](#) clan. Prasenajit's sister was [VAIDEHĪ](#), the wife of king [BIMBISĀRA](#).

[Prasphuṭapadā](#). (T. Tshig rab tu gsal ba). In Sanskrit, “The Clearly Worded,” a work by the Indian scholiast Dharmamitra (c. ninth century); the full title of this text is *Abhisamayālaṃkārikāprajñāpāramitopadeśaśāstraṭīkā-prasphuṭapadā* or “The Clearly Worded, Commentary on Treatise Setting Forth the Perfection of Wisdom, the Verses of the Ornament of Realization.” The *Prasphuṭapadā* is a subcommentary on [HARIBHADRA](#)'s [ABHISAMAYĀLAMKĀRAVIVṚTI](#), which is intended to clarify points on the [ABHISAMAYĀLAMKĀRA](#), one of five texts that were purportedly revealed to [ASAṄGA](#) by the [BODHISATTVA MAITREYA](#) in the fourth or fifth centuries CE. The *Prasphuṭapadā* was written shortly after the composition of the *Abhisamayālaṃkāravivṛti* in the early ninth century. In the *Prasphuṭapadā*, Dharmamitra seeks to clarify Haribhadra's views as they appear in the *Vivṛti*, rather than put forth his own ideas regarding the *Abhisamayālaṃkāra*. In his work, Dharmamitra explains a number of doctrinal elements that would have a great impact on later forms of Tibetan Buddhism, including the [TATHĀGATAGARBHA](#) doctrine and the theory of multiple buddha bodies ([BUDDHAKĀYA](#)). For instance, in the *Prasphuṭapadā*, Dharmamitra asserts that the enjoyment body ([SAMBHOGAKĀYA](#)) is accessible only to a bodhisattva who has reached the tenth stage ([BHŪMI](#)) of the bodhisattva path (see [BODHISATTVABHŪMI](#)). Dharmamitra's text, together with the *Durbodhāloka*, the subcommentary on the *Abhisamayālaṃkāravivṛti* by [DHARMAKĪRTIŚRĪ](#) (the teacher of [ATIŚA DĪPAMKARAŚRĪJĪNĀNA](#)), is often cited in Tibetan [PRAJÑĀPĀRAMITĀ](#) commentaries.

[praśraddhi](#). (P. passaddhi; T. shin tu sbyang ba; C. qing'an; J. kyōan; K. kyōngan 輕安). In Sanskrit, “serenity,” “calm”; one of the forty-six mental concomitants ([CAITTA](#)) according to the [SARVĀSTIVĀDA-VAIBHĀSIKA](#) school of [ABHIDHARMA](#), one of the fifty-one according to the [YOGĀCĀRA](#) school, where it is listed among the salutary ([KUŚALA](#)) mental states and one of the fifty-two in the Pāli [ABHIDHAMMA](#). Praśraddhi refers to the state of mind associated with concentration ([SAMĀDHI](#)), referring especially to the serenity that brings pliancy to the mind and body that enables the adept to direct the mind and body toward wholesome actions.

[prasthānacittotpāda](#). (T. 'jug pa'i sems bskyed; C. xing putixin; J.

gyōbodaishin; K. haeng porisim 行菩提心). In Sanskrit, lit., “creation of the intention to set out,” where “intention” or “thought” ([CITTA](#)) refers to [BODHICITTA](#), the wish to achieve buddhahood in order to save all sentient beings from suffering. This is the second of two types of bodhicitta, the other being [PRANIDHICITTOTPĀDA](#), lit., “the aspirational creation of the intention.” In his [BODHICARYĀVATĀRA](#), [ŚĀNTIDEVA](#) compares the first type to the decision to undertake a journey and the second type to actually setting out on the journey. In the case of the [BODHISATTVA](#) path, the first refers to the process of developing the aspiration to buddhahood for the sake of others, while the second refers to the undertaking the various practices of the bodhisattva path, such as the six perfections ([PĀRAMITĀ](#)). These two forms of bodhicitta are meant to be developed in sequence.

[pratāpana](#). (P. mahātapa; T. rab tu tsha ba; C. dajiaore; J. daishōnetsu; K. taech’oyōl 大焦熱). In Sanskrit, “very hot,” one of the hot hells in Buddhist cosmology; its prefix distinguishes it from another hell, which is merely “hot” ([TĀPANA](#)). Pratāpana is the seventh of the eight hot hells in increasing order of horror, and is thus exceeded in this regard only by the worst hell of all, the “interminable” ([AVICI](#)). The sufferings of the pratāpana hell include being cast into a vast cauldron of molten metal and having one’s body wrapped with rods of burning iron.

[pratibhāna](#). (P. paṭibhāna; T. spobs pa; C. biancai; J. benzai; K. pyōnjae 辯才). In Sanskrit, “eloquence,” or “ready speech,” referring typically to the ability to inspire others through one’s words. Pratibhāna is included among the four types of analytical knowledge ([PRATISAMVID](#)) that are mastered by [BODHISATTVAS](#) at the ninth [BHŪMI](#). In the East Asian tradition, a bodhisattva is said to have, or is exhorted to attain, eight qualities of true eloquence when delivering Buddhist teachings. He should display eloquence that is (1) free of hectoring and bellowing (since an accomplished bodhisattva inherently possesses such majestic charisma that he does not need to inveigle his audience to pay attention); (2) unconfused and organized in his delivery; (3) confident and unfazed; (4) unconceited; (5) meaningful, wholesome, and conducive to skillfulness; (6) profound, interesting, and informed; (7) free from harshness; (8) seasonable, adaptive, and responsive to the conditions at hand.

[pratibhāsa](#). (T. snang ba; C. xianxian; J. kengen; K. hyōnhyōn 顯現). A polysemous term in Sanskrit, whose denotations include “appearance” and

“perception.” The term is often used to describe what is perceived by consciousness ([VIJÑĀNA](#)), as opposed to the true nature of the object perceived. The term therefore often carries a negative connotation of something ephemeral and deceptive. Tantric literature describes a practice of “pure appearance” in which the ordinary world is visualized as a [MANDALA](#) and one’s own body is visualized as the body of a buddha.

[pratideśanā](#). (P. paṭidesanā; T. so sor bshags pa; C. huiguo; J. keka; K. hoegwa 悔過). Often translated from Sanskrit as “confession,” but meaning something closer to “disclosure” or “acknowledgment”; the practice of acknowledging one’s misdeeds. It is the central practice of the fortnightly [UPOSADHA](#) rites, where monks and nuns “disclose” or “confess” their transgressions of the [PRĀTIMOKSA](#) precepts and is also an important part of [MAHĀYĀNA](#) liturgy, in which misdeeds are revealed during an additional recitation during the upoṣadha rites, or, in the absence of a community ([SAMGHA](#)), to an image of the buddha or to visualized buddhas. In the prātimokṣa, the related term [PRATIDEŚANĪYA](#) refers specifically to four infractions that need only be acknowledged.

[pratideśanīya](#). (P. pāṭidesanīya; T. so sor bshags par bya ba; C. duishou/boluotitisheni; J. taishu/haradaidaishani; K. taesu/parajejesani 對首/波羅提提舍尼). In Sanskrit, lit., “entailing acknowledgment” or “disclosure”; a group of four ecclesiastical offenses related to the receiving and eating of food, which are to be disclosed to, or confessed before, another monk. These offenses include (1) receiving food from an unrelated nun in an uninhabited area, (2) not dismissing a nun who is giving orders while monks are eating, (3) consuming food received from a “family in training,” that is, a family too poor to provide alms, and (4) consuming unsolicited food received in one’s own residence in the wilderness while one is not ill. In certain recensions of the [PRĀTIMOKSA](#), such as the Pāli and [MŪLASARVĀSTIVĀDA](#), the offenses entailing acknowledgment form a separate category of transgressions from other misdeeds that require confession, in that the words used in acknowledging the violation are specifically prescribed for these four rules.

[pratigha](#). (P. paṭigha; T. khong khro; C. chen; J. shin; K. chin 瞋). In Sanskrit, “aversion,” “hostility,” or “repulsion,” one of the primary mental afflictions ([KLEŚA](#)) and closely synonymous with “ill will” ([DVESA](#)). In the [VAIBHĀSIKA](#) school of [SARVĀSTIVĀDA ABHIDHARMA](#), pratigha is listed as the second of the six fundamental afflictions ([MŪLAKLEŚA](#)), along with greed ([RĀGA](#)), ignorance

([AVIDYĀ](#)), conceit ([MĀNA](#)), doubt ([VICIKITSĀ](#)), and wrong views ([DRSTI](#)). These six kleśas, along with bhavarāga (the desire for continued existence) constitute the latent afflictions (anusayakileśa) in the Pāli [ABHIDHAMMA](#). The [YOGĀCĀRA](#) school also uses the same list of six fundamental kleśas, including pratigha but replacing māna with stupidity (mūḍhi). In Buddhist psychology, when contact with sensory objects is made “without introspection” ([ASAMPRAJANYA](#)), aversion can arise. Since aversion is a psychological reaction that is associated with repulsion, resistance, and active dislike of a displeasing stimulus, it can also generate secondary mental afflictions ([UPAKLEŚA](#)) that have pratigha as their common foundation, including “anger” ([KRODHA](#)), “enmity” ([UPANĀHA](#)), “agitation” ([PRADĀSA](#)), “envy” ([ĪRSYĀ](#)), and “harmfulness” ([VIHIMSĀ](#)). Because pratigha includes both cognitive and affective dimensions, it is not removed through insight upon entry into the path of vision ([DARŚANAMĀRGA](#)), but is abandoned only after repeated training on the path of cultivation ([BHĀVANĀMĀRGA](#)).

[prātihārya](#). (P. pāṭihāriya; T. cho 'phrul; C. shixian; J. jigen; K. sihyōn 示現). In Sanskrit, “wonder” or “miracle,” miraculous powers generally said to be exclusive to a buddha. In this sense, the term is sometimes distinguished from [RDDHI](#), or “magical powers,” which results from the attainment of states of [DHYĀNA](#). Among the many miracles ascribed to the Buddha, two are particularly famous and are widely depicted in Buddhist iconography. Both took place at [ŚRĀVASTĪ](#), where the Buddha defeated a group of [TĪRTHIKAS](#). The first is the so-called “dual miracle” ([YAMAKAPRĀTIHĀRYA](#)) in which the Buddha caused both fire and water to emanate from his body. The second is the “great miracle” ([MAHĀPRĀTIHĀRYA](#)) in which the Buddha, seated on a great lotus, multiplied himself until the sky was filled with buddhas, some seated, some standing, some walking, some lying down, each teaching the dharma. Three categories of miracles (triprātihārya) are also enumerated. The first, the “miracle of magical power” (rḍhiprātihārya) includes the myriad supranormal powers of the Buddha, including the power to fly and to appear and disappear. The second, the “miracle of foretelling” (ādeśanāprātihārya), refers to the Buddha’s ability to know the thoughts of others. The third, the “miracle of instruction,” is the Buddha’s unique ability to teach the dharma. Eight deeds of the Buddha, sometimes referred to as miracles, are commonly depicted during the Pāla period. Taking place at the eight “great sites” ([MAHĀSTHĀNA](#)), the eight are (1) the miracle of his birth at [LUMBINĪ](#), (2) the defeat of [MĀRA](#) and achievement of

buddhahood at [BODHGAYĀ](#), (3) the turning of the wheel of the dharma ([DHARMAKAKRA](#)) at [RSIPATANA](#) ([SĀRNĀTH](#)), (4) miracles performed at [ŚRĀVASTĪ](#), (5) the descent from the [TRĀYĀSTRIMŚA](#) heaven at [SĀMKĀŚYA](#), (6) the taming of the elephant [NĀLĀGIRI](#) at [RAJAGRHA](#), (7) the receipt of the monkey's gift of honey at [VAIŚĀLĪ](#), and (8) the passage into [PARINIRVĀNA](#) at [KUSĪNĀGARĪ](#). (See also [BAXIANG](#)).

pratijñā. (T. dam bca'; C. lizong; J. risshū; K. ipchong 立宗). In Sanskrit, lit., “promise,” but used in Buddhist logic ([HETUVIDYĀ](#)) to mean “thesis” or “proposition,” that is, the position that one is seeking to prove to an opponent. In this sense, it is used synonymously with [PAKṢA](#) and [SĀDHYA](#) (“what is to be established”). A thesis is composed of a subject and a predicate; for example, “the mountain is on fire,” or “sound is impermanent,” with mountain and sound being the subject. There is considerable discussion in Buddhist logic on what constitutes a valid thesis. According to [DIGNĀGA](#), a thesis is a proposition intended by its proponent as something to be stated alone (i.e., without reasons or examples) and whose subject is not contradicted by direct perception ([PRATYAKṢA](#)), inference ([ANUMĀNA](#)), valid authorities ([PRAMĀNA](#)), or what is commonly accepted as true. In the works of Dignāga and [DHARMAKĪRTI](#) (and their commentators), there is also considerable discussion of whether, in debating with an opponent, one's own thesis needs to be explicitly stated, or whether it can be implied. The term *pratijñā* is also important in the [MADHYAMAKA](#) school, deriving from [NĀGĀRJUNA](#)'s famous declaration in his [VIGRAHAVYĀVARTANĪ](#) that he has no thesis, which became in Tibet one of the most commented upon statements in Madhyamaka literature.

prātimokṣa. (P. pāṭimokkha; T. so sor thar pa; C. boluotimucha; J. haradaimokusha; K. parajemokch'a 波羅提木叉). In Sanskrit, “code” or “rules,” referring to a disciplinary code of conduct (of which there are several versions) for fully ordained monks ([BHIKSU](#)) and nuns ([BHIKSUNĪ](#)), or a text that sets forth that code, which probably constitutes the oldest part of the various Buddhist [VINAYAS](#). The pre-Buddhist denotation of *prātimokṣa* is uncertain, and may perhaps mean a promise that is to be redeemed; the Buddhist etymologies seem to indicate a “binding obligation” and, by extension, a monastic regulation. Indian Buddhist schools tended to define themselves in terms of the particular monastic code to which they adhered, and differences in the interpretation of the rules of conduct resulted in the convening of councils ([SAMGĪTI](#)) to adjudicate

such differences and, ultimately, in the schisms that produced the various mainstream Buddhist schools. Several different recensions of the prātimokṣa are extant, but there are three main lineages followed within the Buddhist tradition today: the [THERAVĀDA](#) pāṭimokkha followed in Sri Lanka and Southeast Asian Buddhism; the [DHARMAGUPTAKA](#) prātimokṣa followed in Chinese and Korean Buddhism; and the [MŪLASARVĀSTIVĀDA](#) prātimokṣa followed in Tibetan Buddhism. Despite divergences in the numbers of rules listed in these codes (the Theravāda, for example, has 227 rules for bhikṣus, the Dharmaguptaka 250, and the Mūlasarvāstivāda 253, and all have considerably more rules for bhikṣuṇī), there is substantial agreement among the prātimokṣa of the various mainstream Buddhist schools. They are all similarly structured, with separate codes for monks and nuns, enumerating a set of categories of transgressions: (1) [PĀRĀJIKĀ](#) transgressions of ethical expectations that were so serious as to bring “defeat” and in some vinaya traditions to require expulsion from the order, e.g., engaging in sexual intercourse and murder; (2) [SAMGHĀVAŚEṢA](#), transgressions entailing temporary suspension from the order, such as masturbation, acting as a go-between for sexual liaisons, or attempting to cause schism in the order ([SAMGHABHEDA](#)); (3) [ANİYATA](#), undetermined cases exclusive to monks who are found with women, which require investigation by the saṃgha; (4) [NAIHSARGIKAPĀYATTIKĀ](#), transgressions requiring confession and forfeiture of a prohibited object, such as hoarding excessive numbers of robes ([CĪVARA](#)), begging bowls ([PĀTRA](#)), and medicine, or keeping gold and silver; (5) [PĀYATTIKĀ](#), transgressions that can be expiated through confession alone, such as lying; (6) [PRATIDEŚANĪYA](#), minor transgressions to be acknowledged, related to receiving and eating food, which were to be confessed; (7) [ŚAIKṢA](#), minor training rules governing monastic etiquette and deportment, such as not wearing robes sloppily or eating noisily, violations of which were called [DUṢKṚTA](#), lit. “bad actions.” Both the bhikṣu and bhikṣuṇī prātimokṣa also include (8) [ADHIKARANAŚAMATHA](#), seven methods of resolving ecclesiastical disputes. Regardless of the school, the prātimokṣa was recited separately during the fortnightly [UPOSADHA](#) ceremony by chapters of monks and nuns who gather inside a purified [SĪMĀ](#) boundary. All monks and nuns were expected to have confessed (see [PĀPADEŚANĀ](#)) to any transgressions of the rules during the last fortnight prior to the recitation of the code, thus expiating them of that transgression. At the conclusion of the recitation of each category of transgression, the reciter questions the congregation as to whether the congregation is pure; silence indicates assent.

prātimokṣasaṃvara. (T. so sor thar pa'i sdom pa; C. boluotimuchahu/biejietuo lüyi; J. haradaimokushago/betsugedatsu ritsugi; K. parajemokch'aho/pyörhaet'al yurüi 波羅提木叉護/別解脫律儀). In Sanskrit, “restraint proffered by the disciplinary code” ([PRĀTIMOKṢA](#)); one of the three types of restraint ([SAMVARA](#)) mentioned in the [VAIBHĀSIKA](#) school of [SARVĀSTIVĀDA ABHIDHARMA](#), which are associated with “unmanifest material force” or “hidden imprints” ([AVIJŅAPTIRŪPA](#)). In Sarvāstivāda literature, three types of restraint (saṃvara) against unwholesome ([AKUŚALA](#)) actions are mentioned: (1) the restraint proffered to a monk or nun when he or she accepts the disciplinary rules of the order (prātimokṣasaṃvara); (2) the restraint that is produced through mental absorption (dhyānasaṃvara); and (3) the restraint that derives from being free from the contaminants (anāsravasamvara). The restraint inherent in the disciplinary code creates a special kind of “force field” that automatically protects and dissuades monks and nuns from unwholesome activity, even when they are not consciously aware that they are following the precepts or when they are asleep. This specific type of restraint is what makes a person a monk or a nun, since just wearing robes and following an ascetic way of life would not in themselves be enough to instill in him or her the protective power offered by the prātimokṣa. This particular type of avijñaptirūpa thus creates an invisible and impalpable barrier that helps to protect the monk or the nun from unwholesome action. The prātimokṣasaṃvara is incorporated into later [MAHĀYĀNA](#) Buddhist and tantric Buddhist codes (see [SDOM GSUM](#); [TRISAMVARA](#)).

Prātimokṣasūtra. (T. So sor thar pa'i mdo; C. Jie ben; J. Kaihon; K. Kye pon 戒本). In Sanskrit, “Sūtra on the Code,” a scripture that provides a separate listing of the code of conduct and monastic rules ([PRĀTIMOKṢA](#)) for monks ([BHIKSU](#)) and for nuns ([BHIKSUNĪ](#)). Several of the mainstream Buddhist schools, including the [MAHĀSĀMGIKA](#) and [MŪLASARVĀSTIVĀDA](#) schools, had a separate text, called the *Prātimokṣasūtra*, that listed the prātimokṣa rules for monks and for nuns. There is no such separate text in the [THERAVĀDA](#) school, where the pāṭimokkha is included in the [SUTTAVIBHAṄGA](#), the first major section of the Pāli [VINAYAPITAKA](#), which includes the *mahāvibhaṅga* with the rules for monks and the *bhikkunīvibhaṅga* with the rules for nuns.

pratīnivāsana. See [NIVĀSANA](#).

pratīpakṣa. (P. paṭīpakkha; T. gnyen po; C. duizhi; J. taiji; K. taech'i 對治). In Sanskrit, lit., “opposite”; a “counteragent” or “antidote,” a factor which, when

present, precludes the presence of its opposite. In Buddhist meditation theory, an antidote may be a virtuous ([KUSĀLA](#)) mental state ([CAITTA](#)) that is applied as a counteragent against a nonvirtuous ([AKUSĀLA](#)) mental state. The Buddhist premise that two contrary mental states cannot exist simultaneously leads to the development of specific meditations to be used as such counteragents, sometimes called the five “inhibitory” contemplations (C. zhiguan, tingguan): (1) lust ([RĀGA](#)) is countered by the contemplations on impurity ([AŚUBHABHĀVANĀ](#)), e.g., the cemetery contemplations on the stages in the decomposition of a corpse; (2) hatred ([DVESA](#)) is countered by the divine abiding ([BRAHMAVIHĀRA](#)) of loving-kindness ([MAITRĪ](#)); (3) delusion ([MOHA](#)) is countered by contemplating the twelfefold chain of dependent origination ([PRATĪTYASAMUTPĀDA](#)); (4) ego-conceit (asmimāna) is countered by the contemplation on the eighteen sense-fields ([DHĀTU](#)); and (5) discursive thought ([VITARKA](#)) is countered by mindfulness of breathing ([ĀNĀPĀNASMRTI](#)). Progress on the path to liberation is also described technically in terms of the abandonment of a specific afflictive state ([KLEŚA](#)) through the application of its specific antidote. Thus, afflictions and their antidotes are enumerated for the nine levels of [SAMSĀRA](#) (the sensuous realm, or [KĀMADHĀTU](#), the four levels of the subtle-materiality realm, or [RŪPADHĀTU](#), and the four levels of the immaterial realm, or [ARŪPYADHĀTU](#)). In each case, the antidote is an increasingly powerful level of wisdom ([PRAJÑĀ](#)) that displaces increasingly subtle levels of the afflictions. Both the four types of noble persons ([ĀRYAPUDGALA](#)) and the ten stages ([BHŪMI](#)) of the bodhisattva are defined by which antidotes have been successfully applied to eradicate specific afflictions. Thus, the accumulation and application of various antidotes is one of the practices that a bodhisattva must learn to perfect. The Buddha is said to have taught 84,000 antidotes for the 84,000 afflictions.

pratipatti. (P. paṭipatti; T. sgrub pa; C. xiuxing; J. shugyō; K. suhaeng 修行). In Sanskrit, “practice,” “progress”; one of four aspects of the truth of the path ([MĀRGASATYA](#)), the fourth of the so-called [FOUR NOBLE TRUTHS](#) (catvāry āryasatyāni). The other aspects are mārga (path), nyāya (correct method), and nairyāṇika (providing a definite escape). As a word descriptive of the path, pratipatti is a word for all the practices, from the beginning practices of neophytes up to the final practices of noble beings ([ĀRYA](#)). In all cases the practice avoids the extremes (see [MADHYAMAPRATIPAD](#)) of self-indulgence and self-mortification, or the extreme views of eternalism ([ŚĀŚVATADRSTI](#)) and

annihilationism ([UCCHEDADRSTI](#)). See also [PATIPATTI](#).

[pratirūpaka](#). (S). See [SADDHARMAPRATIRŪPAKA](#).

[pratisamkākṣikā](#). (S). See [SAMKAKSIKĀ](#).

[pratisamkhyānirodha](#). (T. so sor brtags 'gog; C. zemie; J. chakumetsu; K. t'aengmyōl 擇滅). In Sanskrit, “analytical cessation,” the permanent elimination of an affliction ([KLEŚA](#)) that occurs as a result of meditative analysis of the true nature of phenomena; one of the un compounded factors ([ASAMSKRITA-DHARMA](#)) recognized in both the [VAIBHĀSIKA](#) school of [SARVĀSTIVĀDA ABHIDHARMA](#) and the [YOGĀCĀRA](#) schools. The “true cessations” or “truth of cessation” ([NIRODHASATYA](#)) that constitute the third of the four noble truths (see [NIRODHASATYA](#)) involve analytical cessations. Analytical cessations are permanent phenomena because they are the permanent absence of a specific kleśa, essentially serving as a kind of “place marker” that ensures that a kleśa, once eliminated, can never recur. Analytical cessations are distinguished from nonanalytical suppressions ([APRATISAMKHYĀNIRODHA](#)), which are neither an object of knowledge nor the result of insight; they suppress the production of any kind of dharma, ensuring (in the Sarvāstivāda interpretation) that they remain positioned in future mode and are never again able to arise in the present. The state of the analytical cessation of all the kleśas is synonymous with [NIRVĀNA](#).

[pratisamlayana](#). (P. paṭisallāna; T. nang du yang dag 'jog pa; C. yanmo/jimo; J. enmoku/jakumoku; K. yōnmuk/chōngmuk 宴默/寂默). In Sanskrit, “seclusion” or “retirement”; withdrawing to a secluded place, such as the proverbial “root of a tree,” so that one may rest or, in its technical usage, so that one may train in meditation free of distractions. By extension, pratisamlayana refers also to the mental “isolation” or “seclusion” that accompanies meditative practice. Pratisamlayana is listed as one of the constituents of practice (yogāṅga) and is sometimes described as a specific type of meditative absorption ([DHYĀNA](#)) in its own right.

[pratisamvid](#). (P. paṭisambhidā; T. so sor yang dag par rig pa; C. wu'ai jie; J. mugege; K. muae hae 無礙解). In Sanskrit, “analytical knowledge,” of which there are four kinds: knowledge of (1) factors or phenomena ([DHARMA](#)), viz., one makes no mistakes in understanding causes, conditions, or the relationships

pertaining between objects; (2) meaning ([ARTHA](#)), viz., to have no limitations with regard to the content, meaning, and analysis of one's teachings; (3) etymology or language ([NIRUKTI](#)), viz., the ability to comprehend all languages, including those of the divinities ([DEVA](#)) and other nonhuman beings ([YAKSA](#), [GANDHARVA](#), [ASURA](#), [GARUDA](#), [KIMNARA](#), [MAHORĀGA](#)), and to penetrate the full range of etymological or linguistic expressions; and (4) eloquence ([PRATIBHĀNA](#)), viz., ease in offering explanations and/or the ability to inspire others with one's words. These four types of knowledge are associated with both the attainment of arhatship and the achievement of the ninth of the ten stages ([DAŚABHŪMI](#)) of the [BODHISATTVA](#) path. In Chinese, these were known as the “unconstrained knowledges” (wu'ai jie).

[pratisaraṇa](#). [alt. pratiśaraṇa] (P. paṭisaraṇa; T. rton pa; C. yi; J. e; K. ūi 依). In Sanskrit, “reliance,” “support,” or “point of reference”; four things to be relied upon in the interpretation of a given teaching. The four are (1) to rely on the meaning ([ARTHA](#)), not the mere “letter” (vyañjana) or words; (2) to rely on the teachings ([DHARMA](#)), not the person ([PUDGALA](#)) who delivers those teachings; (3) to rely on true gnosis or knowledge ([JÑĀNA](#)), not the unreliable testimony of the ordinary consciousnesses ([VIJÑĀNA](#)); (4) to rely on the definitive meaning ([NĪTĀRTHA](#)), not the provisional meaning ([NEYĀRTHA](#)).

[pratisedha](#). (T. dgag pa; C. zhe; J. sha; K. ch'a 遮). In Sanskrit, “negative” or “negation,” the refutation of an opponent's position. The term is also used to mean “negative phenomenon,” that is, a phenomenon that is understood through the elimination of another factor. Examples would include [AKĀŚA](#) (“space,” when defined as the lack of obstruction) and [ANĀTMAN](#) (nonself), the absence of a self. In Buddhist logic, there are two types of negation, the “affirming negation” ([PARYUDĀSAPRATISEDHA](#)), which negates something while implying the existence of something else, and the “nonaffirming negation” ([PRASAJYAPRATISEDHA](#)), which negates without such implication.

[pratisedhya](#). (T. dgag bya). In Sanskrit, “object of negation,” that factor which is eliminated through the process of understanding a particular negative phenomenon ([PRATISEDHA](#)). The term is used especially in the context of discussions of nonself ([ANĀTMAN](#)) and emptiness ([ŚŪNYATĀ](#)), where the precise nature of what is being negated (that is, the meaning of self) is of great importance. If self is defined too narrowly, the conception of self that is the root cause of suffering may not be eliminated; if self is defined too broadly, there is a

danger of falling into nihilism by denying even the conventional existence of such things are rebirth, [KARMAN](#), and the efficacy of the path ([MĀRGA](#)).

[pratisthā](#). (P. patitṭhā; T. rab tu gnas pa; C. jianli; J. konryū; K. köllip 建立). In Sanskrit, lit. “establishment,” or “installation,” but often having the sense of “consecration,” especially of a monastery, temple, or buddha-image. There are numerous forms of consecration ceremonies across the Buddhist world. In the case of the consecration of buddha images, these ceremonies seek to cause the buddha to “enter” into his physical representation. In some cases, this consecration is done by reciting the life story of the Buddha in the presence of the image; in other cases, the [DHARMAKĀYA](#) of the buddha is invoked and requested to enter into the image. See also [DIANYAN](#); [KAIYAN](#); [BUDDHĀBHISEKA](#).

[pratisthitanirvāna](#). (T. gnas pa'i mya ngan las 'das pa; C. zhu niepan; J. jūnehan; K. chu yōlban 住涅槃). In Sanskrit, “static [NIRVĀNA](#)” or “localized nirvāna,” a term used in the [MAHĀYĀNA](#), often pejoratively, to describe the nirvāna of the [ARHAT](#), which is “static” or “located” in a state of isolated serenity that transcends [SAMŚĀRA](#). This type of nirvāna is contrasted with the “unlocalized nirvāna” ([APRATISTHITANIRVĀNA](#)) of a buddha which is not localized in either saṃsāra or the isolation of the arhat, but is instead a dynamic state that allows him to participate in the world while remaining forever untainted by it.

[pratītyasamutpāda](#). (P. paṭiccasamuppāda; T. rten cing 'brel bar 'byung ba; C. yuanqi; J. engi; K. yōn'gi 緣起). In Sanskrit, “dependent origination,” “conditioned origination,” lit., “origination by dependence” (of one thing on another); one of the core teachings in the Buddhist doctrinal system, having both ontological, epistemological, and soteriological implications. The notion of the conditionality of all existence is foundational in Buddhism. According to some accounts of the Buddha’s life, it constituted the fundamental insight on the night of his enlightenment. In other accounts, in the first seven days and nights following his enlightenment, he sat contemplating the significance of his experience; finally on the seventh night he is said to have contemplated the fully realized chain of dependent origination in both forward and reverse order. In one of the earliest summaries of the Buddha’s teachings (which is said to have been enough to bring [ŚĀRIPUTRA](#) to enlightenment), the Buddha is said to have taught: “When this is present, that comes to be. *From the arising of this, that arises.* When this is absent, that does not come to be. / From the cessation of this, that ceases.” (P. imasmiṃ sati idaṃ hoti/imasuppādā idaṃ uppajjati/imasmiṃ asati

idaṃ na hoti/imassa nirodhā idaṃ nirujjhati). This notion of causality (idaṃpratyayatā) is normatively described in a sequence of causation involving twelve interconnected links ([NIDĀNA](#)), which are often called the “twelfefold chain” in English sources: (1) ignorance ([AVIDYĀ](#), P. avijjā), (2) predispositions, or volitional actions (S. [SAMSKĀRA](#), P. saṅkhāra), (3) consciousness (S. [VIJÑĀNA](#), P. viññāṇa), (4) name and form, or mentality and materiality ([NĀMARŪPA](#)), (5) the six internal sense-bases ([ĀYATANA](#)), (6) sensory contact (S. [SPARŚA](#), P. phassa), (7) sensation, or feeling ([VEDANĀ](#)), (8) thirst, or attachment (S. [TRSNĀ](#), P. taṇhā), (9) grasping, or clinging ([UPĀDĀNA](#)), (10) existence or a process of becoming ([BHAVA](#)), (11) birth or rebirth ([JĀTI](#)), and (12) old age and death ([JARĀMARANA](#)), this last link accompanied in its full recital by sorrow (śoka), lamentation (parideva), pain ([DUHKHA](#)) grief (daurmanasya), and despair (upāyāsa). Some formulations of the chain, as in the [MAHĀPADĀNASUTTANTA](#), include only ten links (skipping the first two), suggesting that the standard list of twelve links developed over time. (The commentary to the *Mahāpadānasuttanta* explains away this inconsistency by noting that the ten-linked chain does not take past lives into account but applies only to the current life.) Each link in this chain of causality is said to be the condition for the following link, thus: “dependent on ignorance, predispositions (S. avidyāpratyayāḥ saṃskārāḥ; P. avijjāpaccayā saṅkhārā), ... dependent on birth, old age and death (S. jātipratyayāṃ jarāmaṇaṃ; P. jātipaccayā jarāmaṇaṃ).” This chain of dependent origination stands as the middle way ([MADHYAMAPRATIPAD](#)) between the two “extreme views” ([ANTAGRĀHDRSTI](#)) of eternalism ([ŚĀŚVATADRSTI](#))—viz., the view that there is a perduring soul that continues to be reborn unchanged from one lifetime to the next—and annihilationism ([UCCHEDADRSTI](#))—the view that the person ceases to exist at death and is not reborn—because it validates the imputed continuity ([SAMTĀNA](#)) of the personality, without injecting any sense of a permanent substratum of existence into the process. Thus, when the Buddha is asked, “Who is it who senses?,” he rejects the question as wrongly framed and rephrases it as, “With what as condition does sensation (vedanā) occur? By contact (sparśa).” Or when asked, “Who is it who is reborn?,” he would rephrase the question as “With what as condition does birth (jāti) occur? By becoming (bhava).” Accurate understanding of dependent origination thus serves as an antidote ([PRATIPAKSA](#)) to the affliction of delusion ([MOHA](#)) and contemplating the links in this chain helps to overcome ignorance ([AVIDYĀ](#)). ¶ The twelfefold chain of dependent origination is generally conceived to unfold in what are referred to as the “forward” and “reverse” orders, although in fact both versions proceed

through the chain in the same sequence. First, as a progressive process of ontological becoming (bhavānulomaparīkṣā), the forward version of the chain describes the process by which ignorance ultimately leads to birth and death and thus the full panoply of existence in the turning wheel of [SAMŚĀRA](#); in forward order, the chain is therefore an elaboration of the second noble truth, the truth of the origin of suffering ([SAMUDAYASATYA](#)). Second, the reverse order of the chain describes a negative process of soteriological eradication (kṣayavyayānulomaparīkṣā), where the cessation of ignorance serves as the condition for the cessation of predispositions, and so on through the entire chain until even old age and death are eradicated and the adept is released from continued rebirth in saṃsāra; in reverse order, the chain is therefore an elaboration of the third noble truth, the truth of the cessation of suffering ([NIRODHASATYA](#)). As a chain of ontological becoming, some traditional commentators organize the twelve links as occurring during the course of a single lifetime. Other commentators instead divide the twelve links over three lifetimes to illustrate explicitly the process of rebirth: ignorance and predispositions are assigned to a previous lifetime; consciousness, name and form, sense-fields, contact, sensation, thirst, grasping, and becoming are assigned to the current lifetime; and this leads to future birth, and eventual old age and death, in the immediately following lifetime. According to this interpretation, ignorance does not refer to a primordial ignorance, but rather to a specific moment of unsystematic reflection on things ([AYONIŚOMANASKĀRA](#)) that prompts a volitional action (saṃskāra). The predispositions created by that action imprint themselves on consciousness, which refers here to the “linking consciousness” (pratisaṃdhivijñāna) that links the past and present lives, a consciousness that is reborn, developing into a body with internal sense organs and a mind with sensory consciousnesses, which come into contact with external sensory objects, giving rise to sensations that are pleasant, unpleasant, or neutral. Sensations of pleasure, for example, can give rise to attachment to those sensations and then clinging, an intensification of that attachment. Such clinging at the end of life sustains the process of becoming, which leads to rebirth in the next existence, where one once again undergoes aging and death. This sequence of dependent conditions has repeated itself since time immemorial and will continue on indefinitely until liberation from rebirth is achieved. To illustrate the role of pratīyasamutpāda in the cycle of rebirth, its twelve links are sometimes depicted around the perimeter of the “wheel of life” ([BHAVACAKRA](#)). ¶ In the *Upanisāsutta* of the [SAMYUTTANIKĀYA](#), the standard twelvefold chain of

dependent origination is connected to an alternate chain that is designated the “supramundane dependent origination” (P. lokuttara-paṭiccasamuppāda; S. lokottara-pratītyasamutpāda), which explicitly outlines the process leading to liberation. Here, the last factor in the standard chain, that of old age and death (jarāmaraṇa), is substituted with suffering, which in turn becomes the first factor in this alternate series. According to the *Nettipakarāṇa*, a Pāli exegetical treatise, this chain of supramundane dependent origination consists of (1) suffering (P. dukkha; S. duḥkha), (2) faith (P. saddhā; S. [ŚRADDHĀ](#)), (3) delight or satisfaction (P. pāmojja; S. prāmodya), (4) rapture or joy (P. pīti; S. [PRĪTI](#)), (5) tranquillity or repose (P. passaddhi; S. [PRAŚRABDHI](#)), (6) mental ease or bliss ([SUKHA](#)), (7) concentration ([SAMĀDHI](#)), (8) knowledge and vision that accords with reality (P. yathābhūtañānadassana; S. [YATHĀBHŪTAJÑĀNADARŚANA](#)), (9) disillusionment (P. nibbidā; S. [NIRVEDA](#)), (10) dispassion (P. virāga; S. [VAIRĀGYA](#)), (11) liberation (P. vimutti; S. [VIMUKTI](#)), and (12) knowledge of the destruction of the contaminants (P. āsavakkhayañāṇa; S. āsraṇakṣayañāṇa; see [ĀSRAVAKSAYA](#)). The *Kimatthiyasutta* of the [AṄGUTTARANIKĀYA](#) gives a slightly different version of the first links, replacing suffering and faith with (1) observance of precepts (P. kusalasīla; S. kuśalaśīla) and (2) freedom from remorse (P. avippaṭisāra; S. avipratīṣāra). ¶ Another denotation of pratītyasamutpāda is a more general one, the notion that everything comes into existence in dependence on something else, with such dependence including the dependence of an effect upon its cause, the dependence of a whole upon its parts, and the dependence of an object on the consciousness that designates it. This second meaning is especially associated with the [MADHYAMAKA](#) school of [NĀGĀRJUNA](#), which sees a necessary relation between dependent origination and emptiness ([ŚŪNYATĀ](#)), arguing that because everything is dependently arisen, everything is empty of independence and intrinsic existence ([SVABHĀVA](#)). Dependent origination is thus central to Nāgārjuna’s conception of the middle way: because everything is dependent, nothing is independent, thus avoiding the extreme of existence, but because everything is originated, nothing is utterly nonexistent, thus avoiding the extreme of nonexistence. In East Asia, and specifically the [HUAYAN ZONG](#), this second interpretation of dependent origination is also recast as the unimpeded (wu’ai) “dependent origination of the [DHARMADHĀTU](#)” ([FAJIE YUANQI](#)), in which all things throughout the entire universe are conceived as being enmeshed in a multivalent web of interconnection and interdependency.

[Pratītyasamutpādahṛdayakārikā](#). (T. Rten cing ’brel bar ’byung ba’i snying

po'i tshig le'ur byas pa; C. Shi'er yinyuan lun; J. Jūniinnenron; K. Sibi inyōn non 十二因緣論). In Sanskrit, “Verses on the Essence of Dependent Origination,” a work attributed to [NĀGĀRJUNA](#) by [BHĀVAVIVEKA](#). The work seeks to reconcile the two major meanings of [PRATĪYASAMUTPĀDA](#): that of a twelvefold sequence of cause and effect and a more general sense of phenomena arising in dependence on causes, which he sets forth in his [MŪLAMADHYAMAKAKĀRIKĀ](#). Nāgārjuna qualifies the twelve links in the chain of causation under three headings, with ignorance ([AVIDYĀ](#)), attachment ([TRSNĀ](#)), and grasping ([UPĀDĀNA](#)) classified as afflictions ([KLEŚĀ](#)); predispositions ([SAMSKĀRA](#)) and existence ([BHAVA](#)) as action ([KARMAN](#)); and the remaining seven as forms of suffering ([DUHKHA](#)). Those five that are classified as kleśa and karman are also causes; the remaining seven are effects. The “essence” of pratīyasamutpāda in the title is the lack of self in both the person ([PUDGALA](#)) and the aggregates ([SKANDHA](#)).

***Pratīyasamutpādaśāstra.** (C. Yuansheng lun; J. Enshōron; K. Yōnsaeng non 緣生論). In Sanskrit, “Treatise on Dependent Origination,” a work by Ullaṅgha in thirty verses, with a prose explanation. The work is lost in Sanskrit and was translated into Chinese by Dharmagupta in 607 during the Daye era (605–616) of the Sui dynasty.

Pratīyasamutpādavibhaṅganirdeśasūtra. (T. Rten cing 'brel bar 'byung ba dang po dang rnam par dbye ba bstan pa zhes bya ba'i mdo). In Sanskrit, “Sūtra Setting Forth the Divisions of Dependent Origination,” also known as the *Pratīyasamutpādādivibhaṅganirdeśasūtra*, a work discovered inscribed on two bricks at [NALANDĀ](#) monastery. The sūtra was commented upon by [VASUBANDHU](#) in his *Pratīyasamutpādavyākhyā*, with a subcommentary by Guṇamati.

prativedha. (P. paṭivedha; T. khong du chud pa; C. tongda; J. tsūdatsu; K. t'ongdal 通達). In Sanskrit, “penetration,” or “direct realization,” signifying the direct realization of the truth. Commonly, this realization, or actualization, of the truth is contrasted with the textual study of descriptions of the truth ([PARIYATTI](#)), or the soteriological practice of it ([PATIPATTI](#)). Prativedha is the culmination and fulfillment of these two prior disciplines. Thus the dharma is to be first studied, then practiced, and ultimately realized. In Pāli sources, paṭivedha (S. prativedha) is stratified into four degrees of liberation, beginning with the attainment of a “stream-enterer” (P. sotāpanna, S. [SROTAĀPANNA](#)), then “once-returner” (P. sakadāgāmi, S. [SAKRDĀGĀMIN](#)), “nonreturner” (P. anāgāmi, S. [ANĀGĀMIN](#)), and finally arahant (S. [ARHAT](#)). It is understood that the last of these four degrees of

penetration into the truth frees one from suffering and the prospect of further rebirth.

pratyaksa. (T. mngon sum; C. xianliang; J. genryō; K. hyōllyang 現量). In Sanskrit, “direct perception,” cognition that is unmistakable in the sense that it correctly apprehends qualities such as shape and color, and is nonconceptual, in the sense that it does not perceive its object through the medium of an image, as does thought ([KALPANĀ](#)). In Buddhist epistemology, direct perception is one of only two forms of valid knowledge ([PRAMĀNA](#)), along with inference ([ANUMĀNA](#)). Four types of direct perception are enumerated. The first is sensory direct perception, in which the five external sense objects are perceived directly by the sense consciousnesses ([VIJÑĀNA](#)), in reliance on the five sense organs ([INDRIYA](#)). This form of direct perception is to be differentiated from [SAMJÑĀ](#), also sometimes translated as “perception.” The latter term refers to the specific function of consciousness to apprehend the various characteristics of a given object or to differentiate between two objects. The second kind of direct perception is mental direct perception ([MANONUBHAVAPRATYAKSA](#)), which, according to one interpretation, includes a brief and unnoticed moment of direct perception by the mind at the end of sensory direct perception, with that moment of mental direct perception inducing the conceptual cognition of the object. Mental direct perception also includes the five [ABHIJÑĀ](#), which result from states of deep concentration. The third type is self-knowing direct perception (svasaṃvedana), a function of self-consciousness, which observes a consciousness apprehending its object. It is this form of direct perception that makes possible memory of former moments of consciousness. The fourth type is yogic direct perception ([YOGIPRATYAKSA](#)), which occurs only on one of the noble paths ([ĀRYAMĀRGA](#)), where the truth is directly perceived through a union of [ŚAMATHA](#) and [VIPĀŚYANĀ](#).

pratyālīḍha. (T. g.yon brkyang ba; C. zhanzuo; J. tensa; K. chōnjwa 展左). In Sanskrit, lit., “extended to the left”; a term used to describe the Buddhist iconographical posture ([ĀSANA](#)), in which the figure holds the left leg bent forward at the knee with the right leg extended back in a lunging posture. While the term generally refers to standing postures, it may also apply to seated poses, and is distinguished from [ĀLĪDHA](#), where the leg positions are reversed. In Tibetan tantric art, the pratyālīḍha posture is often found in deities of the [PITRĀNTRĀ](#) class. See also [ĀSANA](#).

[pratyāstarana](#). (P. paccattharaṇa; T. gding ba; C. woju; J. gagu; K. wagu 臥具). A sheet or mat permitted as one of the possessions of a Buddhist monk. The Buddha initially had allowed monks to place their few belongings on a piece of cloth. When monks pointed out to the Buddha that their sitting mat ([NISĪDANA](#)) was too small for lying down, he allowed them to have a larger piece of cloth that they could spread on the ground or the floor of their cell where they could rest or sleep.

[pratyātmādhigama](#). (T. so sor rang gis rig pa; C. neizheng; J. naishō; K. naejūng 內證). In Sanskrit, “specific understanding” or “individual understanding,” a term used to describe the personal realization of a buddha, which is entirely nonconceptual and inexpressible. It is this realization that a buddha then compassionately translates into concepts and words in order to teach the dharma to sentient beings.

[pratyavekṣaṇājñāna](#). (T. so sor rtogs pa'i ye shes; C. miao guancha zhi; J. myōkanzatchi; K. myo kwanch'al chi 妙觀察智). In Sanskrit, “wisdom of specific knowledge” (the Chinese means “wisdom of sublime investigation”); one of the five wisdoms ([PAÑCAJÑĀNA](#)) of a buddha in the [MAHĀYĀNA](#), and specifically in the [YOGĀCĀRA](#) school, which are said to be achieved when consciousness is purified of afflictions ([KLEŚA](#)); each of these wisdoms thus entails a transformation of the one or more of the eight consciousnesses. According to the [CHENG WEISHI LUN](#), pratyavekṣaṇājñāna is a transformation of the sixth [MANOVIJÑĀNA](#) and is a buddha’s direct understanding of the general and specific characteristics of all the phenomena in the universe.

[pratyaya](#). (P. paccaya; T. rkyen; C. yuan; J. en; K. yŏn 緣). In Sanskrit, “condition”; referring generally to the subsidiary factors whose concomitance results in the production of an effect from a cause, especially in the compound [HETUPRATYAYA](#) (“causes and conditions”). For example, in the production of a sprout from a seed, the seed would be the cause ([HETU](#)), while such factors as heat and moisture would be conditions (pratyaya). Given the centrality of the doctrine of causality of Buddhist thought, detailed lists and descriptions of conditions appear in all strata of Buddhist literature. In the context of epistemology, in the case of the perception of a tree by a moment of visual consciousness ([CAKSURVIJÑĀNA](#)), the prior moment of consciousness that leads to this specific visual consciousness is called the immediately antecedent condition ([SAMANANTARAPRATYAYA](#)), the tree is called the object condition

([ĀLAMBANAPRATYAYA](#)), and the visual sense organ is called the predominant condition ([ADHIPATIPRATYAYA](#)); the “cooperative condition” ([SAHAKĀRIPRATYAYA](#)) is the subsidiary conditions that must be present in order for an effect to be produced, such as for light to be present in order to generate visual consciousness, or the presence of heat and moisture for a seed to grow into a sprout. ¶ A much more detailed roster of these conditions occurs in a detailed list of twenty-four conditions enumerated in the [PATTHĀNA](#), the seventh book of the Pāli [ABHIDHAMMAPITAKA](#), a work that applies twenty-four specific conditions to the mental and physical phenomena of existence and presents a detailed account of the Pāli interpretation of the doctrine of dependent origination (P. paṭiccasamuppāda; S. [PRATĪTYASAMUTPĀDA](#)). The twenty-four conditions are (1) the root condition (hetupaccaya), the condition upon which mental states entirely depend, such as a tree depending on its root. These root conditions are greed ([LOBHA](#)), hate (P. dosa, S. [DVESA](#)), and delusion ([MOHA](#)) in the case of unwholesome mental states, or greedlessness (alobha), hatelessness (adosa; [DVESA](#)), and undeludedness (amoha) in the case of wholesome mental states. Without these roots being present, the respective mental states cannot exist. (2) The object condition (ārammaṇapaccaya) is an object of perception and as such forms the condition for mental phenomena. External sense objects, such as a sound, comprise the object conditions for the five physical sense consciousnesses, while mental objects such as thoughts, emotions, and memories comprise the object condition for the single internal sense consciousness of mind. (3) The dominant condition (adhipatipaccaya) gives rise to mental phenomena by way of predominance and can be one of four types: intention (chanda), energy (viriya), consciousness (citta), and investigation (vīmaṃsā). At any given time only one of the four conditions can predominate in a state of consciousness. (4) The proximate condition (anantarapaccaya) and (5) the immediately antecedent condition (samanantarapaccaya) refer to any stage in the process of consciousness that serves as the condition for the immediately following stage. For example, an eye consciousness that sees a visual object functions as the immediately antecedent condition for the arising in the next moment of the mental consciousness that receives the visual image. The mental consciousness, in turn, serves as the immediately antecedent condition for the mental consciousness that performs the function of investigating the object. (6) The cooperative condition (sahajātapaccaya) is any phenomenon or condition the arising of which necessitates the simultaneous arising of another thing; for example, any one of the four mental aggregates (P. khandha; S. [SKANDHA](#)) of

feeling (vedanā), conception (P. saññā; S. [SAMJÑĀ](#)), conditioning factors (P. saṅkhāra; S. [SAMSKĀRA](#)), and consciousness (P. viññāna; S. [VIJÑĀNA](#)) functions as the cooperative condition for all the rest, since all four invariably arise together in the same moment. (7) The condition by way of mutuality (aññāmaññapaccaya) refers to the fact that all simultaneous phenomena, such as the mental aggregates mentioned above, are mutually supportive and so are also conditioned by way of mutuality; they arise and fall in dependence on one another. (8) The support condition (nissayapaccaya) is a preceding or simultaneous condition that functions as a foundation for another phenomenon in the manner of earth for a tree. An example is the five external sense organs (eye, ear, nose, tongue and body) and the one internal mental sense organ (mind), which are the preceding and simultaneous conditions for the six kinds of consciousness that arise when sense organs come into contact with their respective objects. (9) The decisive support condition (upanissayapaccaya) is anything that functions as a strong inducement to moral, immoral, or neutral mental or physical action. It is of three kinds: (a) by way of object (ārammaṇa), which can be any real or imaginary object of thought; (b) by way of proximity; and (c) by way of natural support (pakati), which includes such things as mental attitudes and associations with friends that can act as natural inducements to either wholesome or unwholesome behavior, or climate and food that induce health or illness of the body. (10) The prenascent condition (purejātapaccaya) is something previously arisen that forms a base for something arising later. An example is the five physical sense organs and the physical base of mind that, having already arisen, form the condition for the arising of consciousness through their operation. (11) The postnascent condition (pacchājātapaccaya) refers to consciousness arisen through the operation of the senses, because it serves as the necessary condition for the continued preservation of this already arisen body with its functioning senses. (12) The repetition condition (āsevanapaccaya) refers to impulsion moments of consciousness (javana) that arise in a series, each time serving as a condition for succeeding moments by way of repetition and frequency. (13) The action condition (kammapaccaya) refers to the [KARMAN](#) or karmic volitions (kammacetanā) of a previous birth that functioned to generate the physical and mental characteristics of an individual's present existence. (14) The karmaresult condition (vipākapaccaya) refers to the five karmically resultant external sense consciousnesses that function as simultaneous conditions for other mental and physical phenomena. (15) The nutriment condition (āhārapaccaya) is of four kinds and refers to material food

(kabalinkārāhāra), which is food for the body; sensory and mental contact (phassa), which is food for sensation (vedanā); mental volition ([CETANĀ](#) = karman), which is food for rebirth; and consciousness (viññāna), which is food for the mind-body complex ([NĀMARŪPA](#)) at the moment of conception. (16) The faculty condition (indriyapaccaya) refers to twenty of twenty-two faculties ([INDRIYA](#)) enumerated in the Pāli abhidhamma out of which, for example, the five external sense faculties form the condition for their respective sense consciousnesses. (17) The meditative-absorption condition (jhānapaccaya) refers to a list of seven jhāna factors as conditions for simultaneous mental and corporeal phenomena. They are thought (vitakka), imagination (vicāra), rapture (pīti), joy (sukha), sadness (domanassa), indifference (upekkhā), and concentration (samādhi). (18) The path condition (maggapaccaya) refers to twelve path factors that condition progress along the path. These are: wisdom (paññā), thought-conception (vitakka), right speech (sammavācā), right bodily action (sammakammanta), right livelihood (sammajīva), energy (virīya), mindfulness (sati), concentration (samādhi), wrong views (micchāditti), wrong speech (micchāvācā), wrong bodily action (micchākammanta), and wrong livelihood (micchājīva). (19) The association condition (sampayuttapaccaya) refers to the four mental aggregates of feeling (vedanā), perception (saññā), mental formations (saṅkhāra), and consciousness (viññāna), which assist one another by association through sharing a common physical base, a common object, and arising and passing away simultaneously. (20) The dissociation condition (vippayuttapaccaya) refers to phenomena that assist other phenomena by virtue of not having the same physical base and objects. (21 and 24) The presence condition (atthipaccaya) and the nondisappearance condition (avigatapaccaya) refer to any phenomenon that through its presence is a condition for other phenomena. (22 and 23) The absence condition (natthipaccaya) and the disappearance condition (vigatapaccaya) refer to any phenomenon, such as a moment of consciousness, which having just passed away constitutes the necessary condition for the immediately following moment of the same phenomenon by providing an opportunity for it to arise. ¶ The [SARVĀSTIVĀDA](#) school also recognizes a list of four conditions, all of which appear in the preceding Pāli list and thus appear to have evolved before the separation of the [SARVĀSTIVĀDA](#) and [STHAVIRANIKĀYA](#) schools: (1) [HETUPRATYAYA](#), or condition qua cause, corresponding to no. 1 in the Pāli list; (2) [SAMANANTARAPRATYAYA](#), or immediately antecedent condition, corresponding to no. 5 in the Pāli list; (3) [ĀLAMBANAPRATYAYA](#), or object

condition, corresponding to no. 2 in the Pāli list; (4) [ADHIPATIPRATYAYA](#), or predominant condition, corresponding to no. 3 in the Pāli list. These four pratyaya first appear in the first-century CE [VIJÑĀNAKĀYA](#) and antedate the related Sarvāstivāda list of six “causes” ([HETU](#)).

[pratyekabuddha](#). (P. paccekabuddha; T. rang sangs rgyas; C. yuanjue/dujue; J. engaku/dokukaku; K. yŏn’gak/tokkak 緣覺/獨覺). In Sanskrit, “individually enlightened one” or “solitary buddha”; an [ARHAT](#) who becomes enlightened through his own efforts without receiving instruction from a buddha in his final lifetime. Unlike the “perfectly enlightened buddhas” ([SAMYAKSAMBUDDHA](#)), the pratyekabuddha refrains from teaching others about his experience because he has neglected to develop the same degree of great compassion ([MAHĀKARUNĀ](#)) that motivates the samyakṣambuddhas. Even though he does not teach others, he may still guide by example, or through the use of gestures. Pratyekabuddhas are also distinguished from those who achieve the goal of arhat via the [ŚRĀVAKA](#) (“disciple”) path, because śrāvakas are unable to achieve enlightenment on their own and must be instructed in the principles of Buddhism in order to succeed in their practice. A pratyekabuddha is also distinguished from the śrāvaka by the duration of his path: the pratyekabuddha path is longer because he must accumulate the necessary amount of merit ([PUNYA](#)) to allow him to achieve liberation without relying on a teacher in his final lifetime. A pratyekabuddha is said to achieve liberation through contemplation of the principle of dependent origination ([PRATĪTYASAMUTPĀDA](#)), which accounts for the Chinese translation of yuanjue (“awakening via conditionality”). Two types of pratyekabuddhas are commonly enumerated in the literature: those who wander alone “like a rhinoceros” ([KHADGAVISĀNAKALPA](#)) and the “congregators” ([VARGACĀRIN](#)). According to the [MAHĀYĀNA](#), the path of the pratyekabuddha, together with the path of the śrāvaka, constitutes the [HĪNAYĀNA](#), or “lesser vehicle”; these two categories are also often referred to as the “two vehicles” (C. [ER SHENG](#)) and their followers as “two-vehicle adherents.” These lesser “two vehicles” contrast with the third and highest vehicle, the [BODHISATTVAYĀNA](#).

[pratyekabuddhayāna](#). (T. rang rgyal gyi theg pa; C. yuanjue sheng; J. engakujō; K. yŏn’gak sŏng 緣覺乘). In Sanskrit, “pratyekabuddha vehicle”; one of the three vehicles ([TRIYĀNA](#)), along with the [ŚRĀVAKAYĀNA](#) and the [BODHISATTAYĀNA](#). [MAHĀYĀNA](#) sūtras and treatises classify the pratyekabuddhayāna as a form of the [HĪNAYĀNA](#). Like the śrāvakayāna, the path

of the [PRATYEKABUDDHA](#) culminates in achieving the enlightenment of an [ARHAT](#), although according to some sources the path of the pratyekabuddha takes longer because he must master that path on his own, without instruction from a buddha in his final lifetime. In the [ABHISAMAYĀLAMKĀRA](#), pratyekabuddhas are said to eliminate the misconception of objects (grāhyavikalpa), but to be unable to eliminate the misconception of a subject (grāhakavikalpa); see [GRĀHYAGRĀHAKAVIKALPA](#).

[pratyekanaraka](#). (P. paccekaniraya; T. nye 'khor ba'i dmyal ba; C. gu diyu; J. kojigoku; K. ko chiok 孤地獄). In Sanskrit, “neighboring hell” or “surrounding hell,” a group of hells (S. naraka; cf. [NĀRAKA](#)). In traditional Buddhist cosmology the main hells are a system of eight hot hells and eight cold hells, located beneath the surface of the continent of [JAMBUDVĪPA](#). According to the [ABHIDHARMAKOŚABHĀSYA](#), four neighboring hells are located on each of the four sides of the eight hot hells. It is said that, as the hell denizens exit one of the hot hells, they must pass through these four. The four are named: (1) [KUKŪLA](#) or “heated by burning chaff,” a pit of hot ashes where the hell denizens are burned; seeing what appears to be water ahead, they plunge into (2) [KUNAPA](#), “mud of corpses,” a swamp of rotting corpses; emerging from this, they set out on (3) [KSURAMĀRGA](#), “razor road,” a road made of sword blades, which the hell denizens must walk before entering a grove of swords ([ASIPATTRAVANA](#)) where blades fall from the trees and where they are forced to climb trees embedded with iron spikes ([AYAḤŚĀLMALĪVANA](#)); finally they enter (4) [NADĪ VAITARANĪ](#), “river difficult to ford,” a river of boiling water in which the hell denizens are forced to swim.

[Pratyutpannabuddhasammukhāvasthitasamādhisūtra](#). (T. Da ltar gyi sangs rgyas mngon sum du bzhugs pa'i ting nge 'dzin gyi mdo; C. Banzhou sanmei jing; J. Hanju zanmaikyō; K. Panju sammae kyōng 般舟三昧經). In Sanskrit, “Sūtra on the [SAMĀDHI](#) for Encountering Face-to-Face the Buddhas of the Present,” often known by its abbreviated title *Pratyutpannasamādhisūtra*; one of the earliest [MAHĀYĀNA SŪTRAS](#), and one of the very first Mahāyāna sūtras to be translated into Chinese, by the Indo-Scythian monk [LOKAKSEMA](#) in 179 CE. (There are also three other Chinese translations, as well as Tibetan and Mongolian recensions.) The sūtra sets forth a meditation and visualization practice (which seems related to the traditional “recollection of the Buddha,” or [BUDDHĀNUMSMṚTI](#)), whereby one is able to come directly into the presence of the

buddhas of the present in various world systems. An adept was to sit in meditation for up to seven days, facing the direction of his or her preferred buddha and visualizing that buddha's thirty-two major marks ([MAHĀPURUṢĀLAKṢANA](#)) and his eighty minor characteristics ([ANUVYĀÑJANA](#)) until he had a vision of that buddha in his world system. Through this visualization, one could receive the teachings of one's preferred buddha, transmit those teachings to others, and then be reborn in that buddha's realm ([BUDDHAKSETRA](#)). Because [AMITĀBHA](#) is used as an example of how to apply this technique, this sūtra is retrospectively associated in East Asia with [PURE LAND](#) traditions. The sūtra also contains expositions of the doctrine of emptiness ([ŚŪNYATĀ](#)), in which the insubstantiality of meditative experiences can be extended to all phenomena, a perspective that seems to adumbrate later [YOGĀCĀRA](#) views on the projection of external phenomena by the mind. Like many other early Mahāyāna sūtras, the text also extols both lay and monastic practice, the worship of [STŪPA](#)s, the making of buddha images, and the veneration of texts. Because the sūtra describes a technique for hearing (viz. learning) new Buddhist teachings even after [ŚĀKYAMUNI](#) Buddha has passed into [PARINIRVĀNA](#), this technique might have been employed to authenticate the production of new Mahāyāna sūtras.

[pravāraṇā](#). (P. pavāraṇā; T. dgag phye; C. zizi; J. jishi; K. chaja 自恣). In Sanskrit, "invitation" or "presentation," the monastic ceremony that marks the end of the annual rains retreat ([VARṢĀ](#)). (The Tibetan translation denotes the "separation from prohibition" that accompanies the end of the rains retreat; the Chinese translation zizi has the connotation of "self-indulgence," suggesting that monks are then free to "follow their own bent.") The purity of the [SAMGHA](#) is reaffirmed by each monk by asking the community whether he committed any infraction of the code of discipline ([PRĀTIMOKṢA](#)) during the period of the retreat. In the Southeast Asian traditions, the ceremony is held at the end of the rains retreat (varṣā) on the full-moon day of the seventh or eighth lunar month (usually between September and November), at which time each monk resident at a monastery invites the monastic community to point out any wrongs he may have committed that were either seen, heard, or suspected. The pravāraṇā must be performed at a single site by all eligible members of a given saṃgha, although if a monk is ill, he may dispatch his invitation through an intermediary. A monk guilty of an offense that has not been expiated may not participate. According to [VINAYA](#) strictures, the pravāraṇā ceremony may not be performed in the presence

of the following kinds of persons: nuns, women in training to become nuns, male and female novices, persons who have seceded from the order, monastics guilty of a [PĀRĀJKA](#) offense, monks who refuse to acknowledge their own wrongdoing (of three kinds), eunuchs, false monks who wear monastic attire without having been ordained, monks who have joined other religions, nonhumans, patricides, matricides, murderers of an [ARHAT](#), seducers of nuns, schismatics, those who have shed the blood of a buddha, hermaphrodites, and laypersons. Traditionally on the pravāraṇā day, laypeople would come to the monastery and make offerings of necessary requisites to the monks throughout the day on behalf of their parents and deceased ancestors. The Chinese pilgrim [YIJING](#) (635–713) in his [NANHAI JIGUI NEIFA ZHUAN](#) describes pravāraṇā as an elaborate communal festival, with senior monks delivering protracted dharma lectures throughout the day and night; lamps were lit and flowers and incense offered as laypeople distributed gifts to the entire saṃgha.

[pravrājanīyakarman](#). (P. pabbājanīyakamma; T. bskrad pa'i las; C. quchu jiemo; J. kushutsukonma; K. kuch'ul kalma 驅出羯磨). In Sanskrit, “ecclesiastical act of banishment,” a temporary expulsion from full participation in the [SAMGHA](#), as a result of certain misdeeds. A monk may be subject to such banishment if he is guilty of corrupting good families (kuladūṣaka) or indulges in frivolous worldly behavior such as wearing garlands, playing, singing, or dancing; if he is quarrelsome or indiscreet in his behavior, or adheres to perverse doctrinal views; and if he criticizes any of the three jewels ([RATNATRAYA](#)) of the Buddha, the [DHARMA](#), or the saṃgha, harms others through unwholesome speech and action, or engages in wrong livelihood. A monk against whom a pravrājanīyakarman has been passed must leave his monastery and take up residence elsewhere while observing a number of restrictions. He may not confer [UPASAMPADĀ](#) ordination or offer guidance ([NĪŚRAYA](#)) to, or accept the services of, a novice; he may not accept an invitation to preach to nuns or actually preach to nuns; he should not repeat the offense for which he was banished or any similar or more serious offense; he should not criticize the decision passed against him or criticize the person(s) responsible for the decision. He may not object to the presence of any other monk at the [UPOSADHA](#) or [PRAVĀRANĀ](#) ceremonies or interrogate another monk about alleged offenses; he may not reprimand other monks or cause a quarrel among other monks. When the saṃgha is satisfied that he has been rehabilitated, it is enjoined to revoke the act of banishment and restore the monk to full membership in the saṃgha.

pravrajita. (P. pabbajjā; T. rab tu byung ba; C. chujia; J. shukke; K. ch'ulga 出家). In Sanskrit, lit. “going forth,” to leave behind the household life of a layperson in order to enter the monastic community as a religious mendicant; also pravrajyā and other variations. The term is often seen translated into English as “gone forth into homelessness” (the Chinese translation literally means “leaving home”). Pravrajita/pravrajyā is a technical term that refers to the lower ordination of a person as a [ŚRĀMANERA](#) or [ŚRĀMANERIKĀ](#), that is, as a male or female novice. Admission of a novice into the [SAMGHA](#) is performed with a simple ceremony. According to the Pāli tradition, the candidate shaves his hair and beard and, attiring himself in a monk’s robe ([CĪVARA](#)) received from a donor, he presents himself before an assembly of monks, or a single monk of ten years’ standing or more. Squatting on his haunches and folding his hands, the candidate recites the refuge formula three times ([TRISĀRANA](#)), whereupon he is made a novice. In most [VINAYA](#) traditions, a novice must observe ten precepts ([ŚIKSĀPADA](#), [ŚRĀMANERASAMVARA](#)): abstaining from (1) killing, (2) stealing, (3) sexual intercourse, (4) lying, (5) intoxicants, (6) eating after midday, (7) dancing, singing, music, and other unseemly forms of entertainment, (8) using garlands, perfumes, and unguents to adorn the body, (9) using high and luxurious beds and couches, and (10) accepting gold and silver. The [MŪLASARVĀSTIVĀDA VINAYA](#) (which is followed in Tibet) expands these ten precepts to thirty-six. After receiving the lower ordination, the novice is required to live under the guidance ([NĪSRAYA](#)) of a teacher until he or she receives higher ordination ([UPASAMPADĀ](#)) as a fully ordained monk ([BHIKSU](#)) or nun ([BHIKSUNĪ](#)). The novice may not attend the reading of the [PRĀTIMOKSA](#) during the bimonthly [UPOSADHA](#) (P. uposatha) ceremony, or participate in any formal acts of the order ([SAMGHAKARMAN](#)), such as giving ordination, and so on. At the beginning of his dispensation, the Buddha did not confer the lower ordination of a novice separately from the higher ordination, or upasampadā, of a fully ordained monk. In all cases, candidates simply took the going forth as a fully ordained monk by taking the refuge formula. Later, “going forth” and higher ordination (upasampadā) were made into separate ceremonies to initiate candidates into two hierarchically ranked institutions: the novitiate and full monkhood. The following types of persons may not be ordained as novices: branded thieves, fugitives from the law, registered thieves, those punished by flogging or branding, patricides, matricides, murderers of [ARHATS](#), those who have shed the blood of a buddha, eunuchs, false monks, seducers of nuns, hermaphrodites, persons who are maimed, disabled, or deformed in various ways, and those

afflicted with various communicable diseases.

[pravrajyā](#). (S). See [PRAVRAJITA](#).

[prāyaścittaka](#). (S). See [PĀYATTIKA](#).

[prayer flag](#). See [RLUNG RTA](#).

[prayer wheel](#). See [MA NI 'KHOR LO](#).

[prayoga](#). (T. sbyor ba; C. jiaxing; J. kegyō; K. kahaeng 加行). In Sanskrit, “application,” “preparation,” “joining together,” “exertion.” The term is widely used in soteriological, tantric, and astrological literature. It also functions as a technical term in logic, where it is often translated as “syllogism” and refers to a statement that contains a subject, a predicate, and a reason. A correct syllogism is composed of three parts, the subject (dharmin), the property being proved ([SĀDHYADHARMA](#)), and the reason ([HETU](#) or [LĪNGA](#)). For example, in the syllogism “Sound is impermanent because of being produced,” the subject is sound, the property being proved is impermanence, and the reason is being produced. In order for the syllogism to be correct, three relations must exist among the three components of the syllogism: (1) the reason must be a property ([DHARMA](#)) of the subject, also called the “position” ([PAKSA](#)), (2) there must be a relationship of pervasion ([VYĀPTI](#)) between the reason and the property being proved ([SĀDHYADHARMA](#)), such that whatever is the reason is necessarily the property being proved, and (3) there must be a relationship of “exclusion” or reverse pervasion (vyatirekavyāpti) between the property being proved and the reason, such that whatever is not the property being proved is necessarily not the reason.

¶ In the [PRAJÑĀPĀRAMITĀ](#) exegetical tradition based on the [ABHISAMAYĀLAMKĀRA](#), prayoga is the word used for the fourth to seventh of the eight [ABHISAMAYAS](#) (“clear realizations”). According to Ārya [VIMUKTISENA](#)’s commentary (*Vṛtti*), the first three chapters set forth the three knowledges ([JÑĀNA](#)) as topics to be studied and reflected upon (see [ŚRUTAMAYĪPRAJÑĀ](#), [CINTĀMAYĪPRAJÑĀ](#)); the next four chapters set forth the practice of those knowledges, *viz.* the practice of the knowledge of a buddha. This practice is called prayoga. It is primarily at the level of meditation ([BHĀVANĀMAYĪPRAJÑĀ](#)), and it leads to the [SARVĀKĀRAJÑĀTĀ](#), a buddha’s omniscient knowledge of all aspects. The first prayoga is habituation to the perfect realization of all aspects (sarvākārābhisambodha); the second is learning to remain at the summit of the

realization (mūrdhābhisamaya; cf. [MŪRDHAN](#)); the third is a further habituation to each aspect, one by one (anupūrvābhisamaya); and the fourth is the realization of all aspects in one single instant (ekakṣaṇābhisamaya). This is the moment prior to omniscience. This prayoga is first detailed in twenty subtopics beginning with the cryptic statement that the practice is no practice at all; the 173 aspects ([ĀKĀRA](#)) that together cover the entire range of a bodhisattva's practice are set forth at all the stages of development, through the paths of vision ([DARŚANAMĀRGA](#)) and cultivation ([BHĀVANĀMĀRGA](#)) up through the bodhisattva stages ([BHŪMI](#)) to the purification of the buddha-field ([BUDDHAKSETRA](#)) and final instants of the path. Through the first of the four prayogas, the bodhisattva gains mastery over all the aspects; through the second, he abides in the mastery of them; with the third, he goes through each and makes the practice special; and with the fourth, he enters into the state of a buddha. See also [PRAYOGAMĀRGA](#).

[prayogamārga](#). (T. sbyor lam; C. jiaxing dao; J. kegyōdō; K. kahaeng to 加行道). In Sanskrit, “path of preparation,” the second stage of the five-path ([PAÑCAMĀRGA](#)) soteriological schema, which follows the path of accumulation ([SAMBHĀRAMĀRGA](#)) and precedes the path of vision ([DARŚANAMĀRGA](#)). It is said to provide the “preparation” for the direct perception of reality that will occur on the path of vision. The path of preparation begins with the attainment of an understanding of reality at a level of concentration that is equal to or exceeding the state of serenity ([ŚAMATHA](#)). This understanding corresponds to the “wisdom generated by meditation” ([BHĀVANĀMAYĪPRAJÑĀ](#)). The path of preparation has four levels (see [NIRVEDHABHĀGĪYA](#)): heat ([ŪSMAN](#)), peak (MŪRDHA), forbearance ([KSĀNTI](#)), and supreme worldly dharmas ([LAUKIKĀGRADHARMA](#)). Like the preceding path of accumulation, it is not a “noble path” ([ĀRYAMĀRGA](#)) because the direct perception of reality has not yet not occurred here. With the completion of the path of preparation and the attainment of the path of vision, one passes from the state of being an ordinary being ([PṚTHAGJANA](#)) to that of a noble person ([ĀRYA](#)).

preta. (P. peta; T. yi dwags; C. egui; J. gaki; K. agwi 餓鬼). In Sanskrit, lit. “departed one” or “ghost”; typically translated into English as “hungry ghost” (reflecting the Chinese rendering egui). The realm of hungry ghosts is one of the three or four unfortunate realms of rebirth ([APĀYA](#); [DURGATI](#)), along with hell denizens ([NĀRAKA](#)), animals ([TIRYAK](#)), and sometimes demigods or titans ([ASURA](#)). Ghosts are most commonly depicted as having distended abdomens and emaciated limbs, like a human suffering from extreme malnutrition. Some traditions also say that they have gullets the size of the eye of a needle, so they are never able to consume enough to satiate their appetite. (This depiction of pretas as big-bellied and small-mouthed does not appear in Pāli and Southeast Asian sources until some late cosmological texts that date to the second millennium CE, suggesting that this is a north Indian or Sanskritic tradition, not a Pāli development.) Pretas are said to have been reborn in their unfortunate condition as a consequence of greed and avarice in a previous life. They spend their existence wandering in a futile search for food and drink; when they approach a river to drink, the water turns into blood and pus, and when they find food, they are unable to digest it due to various impediments, such as knots in their throats, or suffer when it is swallowed, when food turns into spears and molten iron. Traditions vary as to the location of the realm of ghosts, but there are many stories of the Buddha and his monks encountering ghosts. Feeding these departed spirits is an important ritual for Buddhist monks in many societies (see [FANG YANKOU](#)). Stories of encounters with such ghosts, who typically recount the unwholesome past deeds that led them to rebirth in such an unfortunate state, are common in Buddhist literature, as in the Pāli [PETAVATTHU](#). The realm of the pretas also includes other ogres and goblins, such as [PIŚĀCA](#).

Pretamukhāgnivālayaśarakāra. (S). See [FANG YANKOU](#).

Pretapuri. (S). One of the twenty-four sacred sites associated with the [CAKRASAMVARATANTRA](#). See [PĪTHA](#).

pride. See [MADA](#).

prīti. (P. pīti; T. dga' ba; C. xi; J. ki; K. hŭi 喜). In Sanskrit, “rapture,” “joy,” “zest”; the third of the five factors of meditative absorption ([DHYĀNĀṄGA](#)) and the fourth of the seven factors of enlightenment ([BODHYĀṄGA](#)); rapture helps to control the mental hindrances ([NĪVARANA](#)) of both malice ([VYĀPĀDA](#)) and sloth and torpor ([STYĀNA-MIDDHA](#)). A sustained sense of prīti is obstructed by malice (vyāpāda), the second of the five hindrances to [DHYĀNA](#). Prīti refreshes both body and mind and manifests itself as physical and mental tranquillity ([PRAŚRABDHI](#)). The most elemental types of prīti involve such physical reactions as horripilation (viz., hair standing on end). As the experience becomes ever more intense, it becomes “transporting rapture,” which is so uplifting that it makes the body seem so light as almost to levitate. Ultimately, rapture becomes “all-pervading happiness” that suffuses the body and mind, cleansing it of ill will and tiredness. As both a physical and mental experience, prīti is present during both the first and second of the meditative absorptions associated with the subtle-materiality realm ([RŪPĀVACARADHYĀNA](#)), but fades into equanimity ([UPEKSĀ](#)). In the even subtler third dhyāna, only mental ease ([SUKHA](#)) and one-pointedness ([EKĀGRATĀ](#)) remain. Divinities in the [ŚUDDHĀVĀSA](#) realm (viz., the five “pure abodes,” the upper five of the eight heavens associated with the fourth dhyāna) and the [ĀBHĀSVARĀLOKA](#) (heaven of universal radiance) divinities are said literally to “feed on joy” (S. prītibhakṣa; P. pītibhakkha), i.e., to survive solely on the sustenance of physical and mental rapture.

prītijanana. (P. pītijanana; T. dga' ba bskyed; C. faxi J. hōki; K. pŏphŭi 法喜). In Sanskrit, lit. “joy inducing,” viz. “joy of dharma,” referring to the uplifting feelings of rapture that derive from properly observing precepts ([ŚĪLA](#), e.g., to be morally “blameless” and harboring no regrets or shame) and from hearing, understanding, or practicing the dharma. Depending on its intensity, this joy may manifest in different ways, ranging from a radiant complexion, horripilation, and goose bumps, to ecstatic physical levitation. In the context of meditative absorption ([DHYĀNA](#)), such rapture is said to be conducive to the development of concentration and tranquillity.

priyavādita. (S). See [SAMGRAHAVASTU](#).

progressive instruction. See [ANUPUBBIKATHĀ](#).

prsthalabdhajñāna. [alt. tatprsthalabdhajñāna] (T. rjes thob ye shes; C. houde zhi; J. gotokuchi; K. hudŭk chi 後得智). In Sanskrit, “subsequent wisdom” or

“subsequently obtained wisdom”; a term used to describe one of the states of the noble path ([ĀRYAMĀRGA](#)). The attainment of the path of vision ([DARŚANAMĀRGA](#)) marks the first achievement of meditative equipoise ([SAMĀHITA](#)) in which the meditator has a direct and nonconceptual vision of reality. When the meditator withdraws from that state of direct realization to again perceive various phenomena, this state is called “subsequent wisdom.” Reality is no longer being directly and exclusively perceived, but the power of that vision is said to infuse one’s subsequent experience of the world, so that while objects may once again appear to be real, the meditator does not assent to that false appearance. Following the attainment of the path of vision, the meditator continues to proceed along the path through periods of meditative equipoise and subsequent wisdom.

prthagjana. (P. puthujjana; T. so so skye bo; C. fanfu; J. bonbu; K. pŏmbu 凡夫). In Sanskrit, “ordinary being,” or “common person”; sentient beings who are still bound by the ten fetters ([SAMYOJANA](#)) and thus have not attained the path of a noble person ([ĀRYAMĀRGA](#))—that is, they have not yet become a stream-enterer ([SROTAĀPANNA](#)) or achieved the path of vision ([DARŚANAMĀRGA](#)). The ordinary being is often compared (unfavorably) to the noble person ([ĀRYA](#)) in Buddhist texts. It is said, for example, that the [FOUR NOBLE TRUTHS](#) (catvāry āryasatyāni) are called “noble” because they are true for noble persons, not for ordinary beings. Elsewhere, it is said that the suffering ([DUHKHA](#)) associated with conditionality itself ([SAMSKĀRADUHKATĀ](#)) is like a wisp of wool in the palm of the hand for an ordinary person, in the sense that it is easily unnoticed; for the noble person, however, it is like a wisp of wool in the eye: It is utterly impossible not to notice it, and immediate effort is made to remove it.

prthivī. [alt. prthivīdhātu] (P. paṭhavī; T. sa; C. dida; J. jidai; K. chidae 地大). In Sanskrit, lit. “earth” or “ground,” viz., the property of “solidity”; one of the four “great elements” ([MAHĀBHŪTA](#)) or “major elementary qualities” of which the physical world comprised of materiality ([RŪPA](#)) is composed, along with wind (viz. motion, movement, [VĀYU](#), P. vāyu/vāyo), water (viz. cohesion, [ĀPAS](#), P. āpo), and fire (viz. temperature, warmth, [TEJAS](#), P. tejo). “Earth” is characterized by hardness and firmness, and can refer to anything that exhibits solidity. Because earth has temperature (viz. fire) and tangibility (viz. water), and is capable of motion (viz. wind), the existence of the other three elements may also be inferred even in that single element. In the physical body, this element is

associated with hair, bones, teeth, organs, and so on. ¶ Pṛthivī, “Earth,” is also the proper name of the goddess of the earth, also known as [STHĀVARĀ](#), or “Immovable,” who played a crucial role in the story of [GAUTAMA](#) Buddha’s enlightenment. When the [BODHISATTVA](#)’s right to occupy the sacred spot beneath the [BODHI TREE](#) was challenged by [MĀRA](#), Gautama touched the earth ([BHŪMISPARŚAMUDRĀ](#)) with his right hand, calling on the goddess of the earth to testify to his boundless meritorious deeds over his past lives. She responded by causing a mild earthquake or, in other versions of the story, emerging from the earth to bear witness. See also [THORANI](#).

Pucheng. (C) (普成). Son of the early Chinese lay figure [FU DASHI](#) (497–569). See [FU DASHI](#).

puch’ō[nim]. (K) (부처님). Standard term for “buddha” in Korean. The compound is composed of the transcription puch’ō (buddha), typically followed by the honorific suffix nim. See [BUDDHA](#).

pudgala. (P. puggala; T. gang zag; C. ren/buteqieluo; J. nin/futogara; K. in/pot’ūkkara 人/補特伽羅). In Sanskrit, “person.” Although all Buddhist schools deny the existence of a perduring, autonomous self ([ĀTMAN](#)), some schools accepted the provisional existence of a person that is associated with one or more of the aggregates ([SKANDHA](#)). There is a wide range of opinion as to the precise status of the person. Most Buddhist schools hold that the person is a provisional designation ([PRAJÑAPTI](#)), but differ as to which among the constituents of mind and body could be designated by the term “person,” with some schools asserting that all five aggregates are designated as the person, while others that only the mental consciousness ([MANOVIJÑĀNA](#)) is the person. The philosophical challenge faced by the Buddhist schools is to be able to uphold the continuity ([SAMTĀNA](#)) of the accumulation and experience of [KARMAN](#) over the course of a single lifetime as well as potentially infinite lifetimes in both past and future, while simultaneously upholding the fundamental impermanence of mind and matter and the absence of a permanent self ([ANĀTMAN](#)). The [VĀTSĪPUTRĪYA](#) and the [SAMMITĪYA](#) responded to the problem of accounting for personal continuity and rebirth when there is no perduring self by positing the existence of an “inexpressible” (S. avācya) “person” that is neither permanent nor impermanent and which is neither the same as nor different from the aggregates (skandha), but which is the agent of cognition and the bearer of action ([KARMAN](#)) from moment to moment and lifetime to lifetime. This position

was criticized by other Buddhist schools, including in the ninth chapter of the [ABHIDHARMAKOŚABHĀŚYA](#), where [VASUBANDHU](#) condemns this view as the heretical assertion of a permanent self or soul ([ĀTMAN](#)). Pudgala is more generically also used in a salutary sense in connection with noble persons ([ĀRYAPUDGALA](#)) who have achieved one of the four stages of sanctity. See also [ŚRENIKA HERESY](#).

[pudgalanairātmya](#). (T. gang zag gi bdag med; C. renwuwo; J. ninmuga; K. inmua 人無我). In Sanskrit, “selflessness of the person,” one of two types of nonself or selflessness, along with [DHARMANAIIRĀTMYA](#), the nonself or selflessness of phenomena. The absence of self ([ANĀTMAN](#)) is often divided into these two categories by [MAHĀYĀNA](#) philosophical schools, with the selflessness of persons referring to the absence of self among the five aggregates ([SKANDHA](#)) that constitute the person, and the selflessness of phenomena referring to the absence of self (variously defined) in all other phenomena in the universe, specifically the factors ([DHARMA](#)) that were posited to be real by several of the abhidharma traditions of mainstream Buddhism, and especially the [SARVĀSTIVĀDA](#). Numerous meditation practices are set forth that are designed to lead the realization of the selflessness of the person, many of which involve the close mental examination of the constituents of mind and body to determine which might constitute, individually or collectively, an independent and autonomous agent of actions and the experiencer of their effects, that is, the referent of the “I” and for whom possessions are “mine.” The central claim of Buddhism is that there is no such self to be found among the constituents of the person; thus, the realization of this fact constitutes a liberating knowledge that brings an end to suffering and the prospect of further rebirth. The relation between the selflessness of persons and the selflessness of phenomena is discussed at length in Buddhist philosophical literature. In some Mahāyāna systems, the selflessness of persons is considered to be less profound than the selflessness of phenomena, since an adept is able to achieve liberation as an [ARHAT](#) through cognition of the selflessness of persons alone, while cognition of the selflessness of phenomena is required of the [BODHISATTVA](#) in order to achieve buddhahood.

[pudgalātmagraha](#). (T. gang zag gi bdag ’dzin; C. renwozhi; J. ningashū; K. inajip 人我執). In Sanskrit, lit., “conception of a self of a person” or the “grasping at the personal self,” a term that is used in combination with [DHARMĀTMAGRAHA](#),

the “conception of the self of phenomena.” In the [MAHĀYĀNA](#) philosophical schools, the notion of self ([ĀTMAN](#)) is expanded beyond that of a permanent soul in each person, to a broader sense of independent existence or intrinsic existence ([SVABHĀVA](#)) that is falsely imagined to exist in all objects of experience. Sentient beings are thus said to falsely imagine the presence of such a self in two broad categories: persons ([PUDGALA](#)) and all other phenomena ([DHARMA](#)). Wisdom ([PRAJÑĀ](#)) entails understanding the lack of self in these two categories, referred to as the selflessness of persons ([PUDGALANĀIRĀTMYA](#)) and the selflessness of phenomena ([DHARMANĀIRĀTMYA](#)). Among the path theories of [YOGĀCĀRA](#) and [MADHYAMAKA](#), there are differences of opinion as to whether the conception of the self of persons is more easily uprooted than the conception of the self of phenomena. In addition, although all agree that both forms of the conception of self must be eradicated by the [BODHISATTVA](#) in order to become a buddha, there are differences of opinion as to whether both must be eradicated by the [ŚRĀVAKA](#) and [PRATYĒKABUDDHA](#) in order to become an [ARHAT](#).

[pudgalavāda](#). (P. puggalavāda; T. gang zag smra ba; C. buteqluo lun; J. futogaron; K. pot'ūkkara non 補特伽羅論). In Sanskrit, “proponents of a person” or “personalists,” a term (not apparently employed by its adherents) used to refer to several mainstream (that is, non-[MAHĀYĀNA](#)) schools of Indian Buddhism (including the [VĀTSĪPUTRĪYA](#) and the [SAMMĪTĪYA](#)) that responded to the problem of how to account for personal continuity and rebirth when there is no perduring self ([ANĀTMAN](#)) by positing the existence of an “inexpressible” (S. avācya) “person” that is neither permanent nor impermanent and which is neither the same as nor different from the aggregates ([SKANDHA](#)), but which is the agent of cognition and the bearer of action ([KARMAN](#)) from moment to moment and lifetime to lifetime. Although its adherents presumed that this position conformed to the Buddha’s dictum that there was no self to be discovered among the aggregates, it was criticized by other Buddhist schools, including in the ninth chapter of the [ABHIDHARMAKOSĀBHĀSYA](#), where it was seen as the heretical assertion of a permanent self or soul ([ĀTMAN](#)). Despite vehement opposition from rival mainstream Buddhist schools, Chinese pilgrims reported the prominence in India of schools that held pudgalavāda positions, although whether all the monks of a particular ordination lineage held all the philosophical positions associated with this tradition remains a question. The problem of personal and karmic continuity from lifetime to lifetime without positing a perduring a self or soul is a persistent issue throughout the history of

Buddhist thought, and it is addressed in the Mahāyāna, for example, through the [YOGĀCĀRA](#) school's doctrine of the foundational consciousness ([ĀLAYAVIJÑĀNA](#)). See also [ŚRENIKA HERESY](#).

[pudgalavāda](#). (P. *puggalavāda*; T. *gang zag smra ba*; C. *buteqieluo lun*; J. *futogararon*; K. *pot'ŭkkara non* 補特伽羅論). In Sanskrit, “proponents of a person” or “personalists,” a term (not apparently employed by its adherents) used to refer to several mainstream (that is, non-[MAHĀYĀNA](#)) schools of Indian Buddhism (including the [VĀTSĪPUTRĪYA](#) and the [SAMMITĪYA](#)) that responded to the problem of how to account for personal continuity and rebirth when there is no perduring self ([ANĀTMAN](#)) by positing the existence of an “inexpressible” (S. *avācya*) “person” that is neither permanent nor impermanent and which is neither the same as nor different from the aggregates ([SKANDHA](#)), but which is the agent of cognition and the bearer of action ([KARMAN](#)) from moment to moment and lifetime to lifetime. Although its adherents presumed that this position conformed to the Buddha’s dictum that there was no self to be discovered among the aggregates, it was criticized by other Buddhist schools, including in the ninth chapter of the [ABHIDHARMAKOŚABHĀSYA](#), where it was seen as the heretical assertion of a permanent self or soul ([ĀTMAN](#)). Despite vehement opposition from rival mainstream Buddhist schools, Chinese pilgrims reported the prominence in India of schools that held *pudgalavāda* positions, although whether all the monks of a particular ordination lineage held all the philosophical positions associated with this tradition remains a question. The problem of personal and karmic continuity from lifetime to lifetime without positing a perduring a self or soul is a persistent issue throughout the history of Buddhist thought, and it is addressed in the Mahāyāna, for example, through the [YOGĀCĀRA](#) school’s doctrine of the foundational consciousness ([ĀLAYAVIJÑĀNA](#)). See also [ŚRENIKA HERESY](#).

[Puggalapaññatti](#). In Pāli, lit., “Concept of the Person,” “Analysis of Character Types”; the fourth of the seven books of the Pāli [ABHIDHAMMAPITAKA](#). It is a classification of human personalities following the method of the [AṄGUTTARANIKĀYA](#), grouping types of persons in categories of from one to ten elements, in ascending order. In the [STHAVIRANIKĀYA](#), the person was seen not as a real phenomenon (P. *dhamma*, S. [DHARMA](#)), but was instead a mere designation or concept (P. *paññati*, S. [PRAJÑĀPTI](#)), hence the title of the work. Some sections of the *Puggalapaññatti* are drawn nearly verbatim from the *Aṅguttaranikāya*, while others are taken from the [SANGĪTISUTTA](#), a scripture in the [DĪGHANIKĀYA](#) that likewise uses the *Aṅguttara* method. Indeed, because the work draws much of its form and its content from discussions of the nature of the person in the

[SUTTAPIṬAKA](#), some scholars speculate that the *Puggalapaññatti* may belong to the earliest stratum of Pāli [ABHIDHAMMA](#) materials.

[Puhyu Sōnsu](#). (浮休善修) (1543–1615). Korean Sōn master of the Chosŏn dynasty. Sōnsu was a native of Osu in present-day North Chōlla province. In 1562, he went to [CHIRISAN](#), where he became the student of a certain Sinmyōng (d.u.) and later continued his studies under the Sōn master Puyong Yōnggwan (1485–1571). He was especially renowned for his calligraphy. Sōnsu survived the Japanese Hideyoshi invasions from 1592 to 1598 and resided after the war at the monastery of [HAEINSA](#). Sōnsu and his disciple [PYŎGAM KAKSŎNG](#) were once falsely accused by another monk and were subsequently imprisoned; they were released later when the king learned of their innocence. In 1614, Sōnsu went to the hermitage of Ch’ilburam at the monastery of [SONGGWANGSA](#) and passed away the next year after entrusting his disciples to Kaksōng. He was given the posthumous title Honggak Tūnggye (Expansive Enlightenment, Mastery of All). He left over seven hundred disciples, seven of whom became renowned Sōn masters in their own right and formed separate branches of Sōnsu’s lineage. His writings can be found in the *Puhyudang chip*.

[pūjā](#). (T. mchod pa; C. gongyang; J. kuyō; K. kongyang 供養). In Sanskrit, lit. “worship” and “offering”; any “ritual” at which offerings are made, or the offerings themselves. These offering rituals involve a number of standard liturgies, including those in three parts ([TRISKANDHAKA](#)) and seven parts ([SAPTĀNGAVIDHI](#)). In the [MAHĀYĀNA](#), many pūjās seem to derive from a simple three-part liturgy, which appeared in two forms. One form consisted of (1) the confession of transgressions ([PĀPADEŚANĀ](#)), (2) the admiration of others’ virtues ([ANUMODANA](#)), and (3) the dedication of merit ([PARINĀMANĀ](#)). The other consisted of (1) the confession of transgressions, (2) the admiration of others’ virtue, and (3) the request to the buddhas to turn the wheel of the dharma ([DHARMAKAPRAVARTANA](#)). This tripartite ritual was eventually expanded to include seven sections: obeisance, offering, confession, admiration, supplication to the buddhas and bodhisattvas to teach the dharma, entreaty not to pass into [PARINIRVĀNA](#), and dedication of any merit accrued by performing the preceding ritual to the enlightenment of all sentient beings. This sevenfold liturgy, presented most famously in the opening twelve stanzas of the [BHADRACARĪPRANIDHĀNA](#) (“Vow of [SAMANTABHADRA](#)’s Deeds”), the last section of the [GANDAVYŪHA](#) in the [AVATAMSAKASŪTRA](#), became a standard part of many

[MAHĀYĀNA](#) practices, often serving as a prolegomenon to a meditation session. This sevenfold liturgy became a common element of tantric pūjās as well.

Puji. (J. Fujaku; K. Pojōk 普寂) (651–739). In Chinese, “Universal Quiescence”; [CHAN](#) monk and disciple of [SHENXIU](#) (606?–706) in the so-called “Northern School” ([BEI ZONG](#)) of the early Chan tradition. In his youth, Puji is said to have studied a wide range of Buddhist scriptures before ordaining at the age of thirty-eight. Soon afterwards, he left to study with Shenxiu at Yuquansi (Jade Spring Monastery) on Mt. Dangyang in Jingzhou. As the best-known disciple of Shenxiu, Puji was one of the subjects of a series of polemical attacks by the [HEZE SHENHUI](#) (684–758) beginning in 732. Shenhui denounced Puji and other disciples of Shenxiu as representing a mere collateral branch of [BODHIDHARMA](#)’s lineage and for promoting what Shenhui called a “gradual” (jian) approach to enlightenment. Shenhui instead promoted a “sudden teaching” ([DUNJIAO](#)), which he claimed derived from a so-called “Southern school” ([NAN ZONG](#)) founded by [HUINENG](#) (638–713), whom Shenhui claimed was the true successor of the fifth patriarch [HONGREN](#) (601–74). Later Chan historians such as [GUIFENG ZONGMI](#) (780–841) came to refer to a “Northern school” (Bei zong) of Chan to describe this lineage of Shenxiu’s, to which Puji, Yifu (661–736), and [XIANGMO ZANG](#) (d.u.) were said to have belonged.

Pujian. (C) (普建). Son of the early Chinese lay figure [FU DASHI](#) (497–569). See [FU DASHI](#).

[Pulcho chikchi simch’e yojöl.](#) (佛組直指心體要節). In Korean, “Essential Excerpts of the Buddhas and Patriarchs Pointing Directly to the Essence of Mind,” also known by the abbreviated titles *Chikchi simch’e yojöl*, or simply *Chikchi*; the earliest surviving example from anywhere in the world of a text printed using movable metal type, predating Gutenberg’s 1455 printing of the Bible by seventy-eight years. The two-roll lineage anthology of the [CHAN](#) school was compiled in 1372 by [PAEGUN KYŎNGHAN](#) (1299–1374), one of the three great Sŏn masters of the late-Koryŏ dynasty. This anthology was first printed in 1377 at Hŭngdŏksa (the ruins of which were located in 1985 in Unch’ŏndong, near the city of Ch’ŏngju in South Korea) using movable cast-metal type. This printing technology was known to have been in use in Koryŏ-period Korea prior to the Mongol invasions of 1231–1232, but no examples survive. The metal-type printing of the *Chikchi* is held in the collection of the Bibliothèque nationale in Paris, and its existence was first noted by Maurice Courant in 1901. The first roll

of the anthology includes the enlightenment poems of the seven buddhas of antiquity ([SAPTATATHĀGATA](#)), the twenty-eight Indian patriarchs of the Sōn school (starting with [MAHĀKĀŚYAPA](#) and ending with [BODHIDHARMA](#)), the six Chinese patriarchs ([ZUSHI](#)) of Chan, and several later Sōn masters. The second roll is a collection of the poetry, epitaphs, discourse records, and seminal teachings of eminent masters of the Sōn school, such as the fourteen “nondualities” ([ADVAYA](#)) of Kyōnghān’s Indian teacher [ZHIKONG CHANXIAN](#) (K. Chigong Sōnhyōn; S. *Dhyānabhadra). Like many of these lineage anthologies, the text is derivative, drawing on such earlier genealogical collections as the [JINGDE CHUANDENG LU](#) and the [SŌNMUN YŌMSONG CHIP](#) of [CHIN’GAK HYESIM](#) (1178–1234). Although the entire first roll and the first page of the second roll of the metal-type recension are lost, a complete xylographic edition of the anthology survives, which dates to 1378, one year later than the metal-type recension.

[Pulguksa](#). (佛國寺). In Korean, “Buddha Land Monastery,” located outside [KYŎNGJU](#), the ancient capital of the Silla dynasty, on the slopes of T’oham Mountain; this Silla royal monastery is the eleventh district monastery ([PONSA](#)) of the contemporary [CHOGYE CHONG](#) of Korean Buddhism and administers over sixty subsidiary monasteries and hermitages. According to the [SAMGUK YUSA](#) (“Memorabilia of the Three Kingdoms”), Pulguksa was constructed in 751 by Kim Taesōng (700–774), chief minister of King Kyōngdōk (r. 742–765), and completed in 774; it may have been constructed on the site of a smaller temple that dated from c. 528, during the reign of the Silla King Pōphūng (r. 514–539). Although it was a large complex, Pulguksa was not as influential within the Silla Buddhist tradition as other Kyōngju monasteries, such as [HWANGNYONGSA](#) and [PUNHWANGSA](#). The monastery has since been renovated numerous times, one of the largest projects occurring at the beginning of the seventeenth century, after the monastery was burned during the Japanese Hideyoshi invasions of 1592–1598. Pulguksa’s temple complex is built on a series of artificial terraces that were constructed out of giant stone blocks and is entered via two pairs of stone “bridges” cum staircases, which are Korean national treasures in their own right and frequently photographed. The main level of the monastery centers on two courtyards: one anchored by the [TAEUNG CHŎN](#), or the main shrine hall, which houses a statue of [ŚĀKYAMUNI](#) Buddha, the other by the kŭngnak chŏn, or hall of ultimate bliss ([SUKHĀVATĪ](#)), which houses an eighth-century bronze statue of the buddha [AMITĀBHA](#). The taeung chŏn courtyard is graced with two stone pagodas,

the Sökka t'ap (Śākyamuni [STŪPA](#)) and the Tabo t'ap (Prabhūtaratna stūpa), which are so famous that the second of them is depicted on the Korean ten-wŏn coin. The juxtaposition of the two stūpas derives from the climax of the [SADDHARMAPUNĀRIKASŪTRA](#) (“Lotus Sūtra”), where the buddha [PRABHŪTARATNA](#) (Many Treasures) invites Śākyamuni to sit beside him inside his bejeweled stūpa, thus validating the teachings Śākyamuni delivered in the scripture. The Sökka t'ap represents Śākyamuni's solitary quest for enlightenment; it is three stories tall and is notable for its bare simplicity. This stūpa is in marked contrast to its ornate twin, the Tabo t'ap, or Pagoda of the buddha Prabhūtaratna, which is modeled after a reliquary and has elaborate staircases, parapets, and stone lions (one of which was removed to the British Museum). During a 1966 renovation of the Sökka t'ap, the world's oldest printed document was discovered sealed inside the stūpa: the [MUGUJÖNGGWANG TAEDARANI KYÖNG](#) (S. *Raśmivimalaviśuddhaprabhādhāraṇī*; “Great [DHĀRANĪ](#) of Immaculate Radiance”). The terminus ad quem for the printing of the *Dhāraṇī* is 751 CE, when the text was sealed inside the Sökka t'ap, but it may have been printed even earlier. Other important buildings include the Piro chŏn ([VAIROCANA](#) Hall) that enshrines an eighth-century bronze statue of its eponymous buddha, which is presumed to be the oldest bronze image in Korea; the Musŏl chŏn (The Wordless Hall), a lecture hall located directly behind the taeung chŏn, which was built around 670; and the Kwanŭm chŏn ([AVALOKITEŚVARA](#) hall), built at the highest point of the complex. Two and a half miles (4 kms) up T'oham Mountain to the east of Pulguksa is its affiliated [SÖKKURAM](#) grotto temple. Pulguksa and Sökkuram were jointly listed in 1995 as a UNESCO World Heritage Site.

[Pullīramalaya](#). (S). One of the twenty-four sacred sites associated with the [CAKRASAMVARATANTRA](#). See [PĪTHA](#).

[punarbhava](#). (P. punabbhava; T. yang srid pa; C. houyou; J. gou; K. huyu 後有). In Sanskrit, lit. “re-becoming,” one of the Sanskrit terms used for what in English is translated as “rebirth” or “reincarnation,” along with [PUNARJANMAN](#) (and [PUNARMRTYU](#), or “redeath”). See [REBIRTH](#).

[punarjanman](#). (T. yang skye; C. zaisheng; J. saishō; K. chaesaeng 再生). In Sanskrit, lit. “birth again.” See [REBIRTH](#).

[punarmrtyu](#). (T. yang shi; C. zaisi; J. saishi; K. chaesa 再死). In Sanskrit, lit.

“redeath.” See [REBIRTH](#).

[pundarīka](#). (T. padma dkar po; C. bailianhua/fentuoli hua; J. byakurenge/fundarike; K. paengnyŏnhwa/pundari hwa 白蓮華/芬陀利華). In Sanskrit, “white lotus” (*Nelumbo nucifera*), a specific species of lotus flower ([PADMA](#)), the ubiquitous flower appearing in Buddhist literature. The lotus is one of the most important symbols used in Buddhist literature and iconography. Because its spectacular flowers bloom above the muddy waters of stagnant ponds, the lotus is used as a symbol for the purity of mind that develops out of the pollution that is [SAMSĀRA](#). The puṇḍarīka lotus is especially famous in Buddhism as the “lotus” in the title of what is known in English as the “Lotus Sūtra”; the Sanskrit title is [SADDHARMAPUNḌARĪKASŪTRA](#), “White Lotus of the True Dharma.” See also [PADMA](#).

[Punhwangsa](#). (芬皇寺). In Korean, “Fragrant [viz. Virtuous] Sovereign Monastery”; one of the four major monasteries located in the Silla-dynasty capital of Kyŏngju. The monastery was built in 634 at the command of Queen Sŏndŏk (r. 632–647) and, at its peak, its campus covered several acres. Like its neighbor [HWANGNYONGSA](#), Punhwangsa was established with the support of the Silla royal family and was a center of rituals performed for the protection of the state (K. hoguk Pulgyo; C. [HUGUO FOJIAO](#)). Punhwangsa is perhaps best known for its massive stone pagoda, the oldest extant example from the Silla kingdom. The pagoda was erected following Chinese Tang-dynasty models, but was constructed with black andesite stone, rather than the fired bricks used in China. About 9,700 stone bricks remain from the pagoda, twenty-five percent of which are damaged or significantly weathered. The pagoda was once seven to nine stories tall with a hollow center, but only three stories remain, and the collapse of its upper stories has filled the center with debris. A partial restoration of the pagoda in 1915 revealed a reliquary box (K. sarigu; C. [SHELIJU](#)) hidden between the second and third stories. Gold ornaments, coins, scissors, and a needle were also found in the pagoda; these are thought to have once been owned by Queen Sŏndŏk herself. The pagoda is presumed to have had doorways on each of its four sides; two guardian figures flanked each doorway. Lion statues are placed at the four corners of the pagoda’s foundation platform, and lotus blossoms are carved into the granite. The famous Silla artist Sol Kŏ (d.u.), who lived during the reign of King Chinhŭng (r. 540–575), painted a famous fresco of the bodhisattva [AVALOKITEŚVARA](#) at the monastery. In 755, King Kyŏngdŏk (r. 742–

764) had a colossal standing image of [BHAIŠAJYAGURU](#), the medicine buddha, cast for Punhwangsa, which was said to have weighed some 36,000 catties (kŭn). Punhwangsa was the residence of many of the most famous Korean monks of the Silla dynasty. When the [VINAYA](#) teacher [CHAJANG](#) (d.u.; fl. c. 590–658) returned in 643 from a sojourn in Tang China with a set of the Buddhist canon, as well as Buddhist banners, streamers, and other ritual items, he resided at Punhwangsa at the queen’s request. The renowned monk-scholiast [WŎNHYO](#) (617–686) wrote many of his treatises and commentaries at Punhwangsa and was closely associated with the monastery. After he died, according to the [SAMGUK YUSA](#) (“Memorabilia of the Three Kingdoms”), his famous literatus son, Sŏl Ch’ong (c. 660–730), took Wŏnhyo’s ashes and cast them into a lifelike image, which he enshrined at the monastery. When Sŏl Ch’ong prostrated beside it, the image is said to have turned its head to look at the son, a posture it retained from that point on. Little of Punhwangsa remains today, but it is still a functioning monastery.

[punya](#). (P. puñña; T. bsod nams; C. fu; J. fuku; K. pok 福). In Sanskrit, “merit,” the store of wholesome [KARMA](#) created by the performance of virtuous deeds, which fructify in the form of happiness in the future. This merit may be accumulated (see [PUNYASAMBHĀRA](#)) over many lifetimes and dedicated toward a specific outcome (see [PARINĀMANĀ](#)), such as a favorable rebirth for oneself or another, or the achievement of buddhahood. The accumulation of merit, especially through charity ([DĀNA](#)) to the [SAMGHA](#), is one of the central practices of Buddhism across cultures and traditions, and numerous techniques for accumulating merit, increasing the store of merit, and protecting the store of merit from depletion or destruction are set forth in Buddhist texts. Pāli sources, for example, delineate three specific “grounds for producing merit” (puññakiriyavatthūni): giving (dāna), morality (P. sīla, S. [ŚĪLA](#)), and meditative practice ([BHĀVANĀ](#)). Merit can be dedicated toward a specific end, whether it is rebirth in the next lifetime, rebirth in the retinue of the future buddha [MAITREYA](#), or the achievement of buddhahood for the welfare of all sentient beings.

[punyajñānasambhāra](#). (T. bsod nams dang ye shes kyi tshogs; C. fuzhi ziliang; J. fukuchi shiryō; K. pokchi charyang 福智資糧). In Sanskrit, “equipment” or “collection of merit and knowledge,” a term that encompasses all the practices and deeds that a [BODHISATTVA](#) perfects along the path to buddhahood. It is said that a bodhisattva must amass both a collection of merit ([PUNYA](#)) and a collection

of knowledge ([JÑĀNA](#)) in order to achieve buddhahood; this is because merit will help to overcome the afflictions ([KLEŚA](#)), while knowledge will help to counter ignorance ([AVIDYĀ](#)). [MAHĀYĀNA](#) exegetes explain that the collection of merit fructifies as the material body ([RŪPAKĀYA](#)) of a buddha (which includes both the [SAMBHOGAKĀYA](#) and the [NIRMĀNAKĀYA](#)) and the collection of knowledge fructifies as the [DHARMAKĀYA](#). As such, the collection of merit is associated with [UPĀYA](#), or method, and the collection of knowledge is associated with [PRAJÑĀ](#), or wisdom. Mahāyāna scholiasts have also explored the question of the relationship between the accumulation of these two collections and the practice of the six perfections ([PĀRAMITĀ](#)). Among various opinions set forth, a common one states that practice of the first three perfections—of giving ([DĀNA](#)), morality ([ŚĪLA](#)), patience ([KSĀNTI](#))—contributes to the collection of merit; the practice of the last two perfections—concentration ([DHYĀNA](#)) and wisdom (prajñā)—contributes to the collection of knowledge; and the perfection of effort ([VĪRYA](#)) contributes to both.

[punyakriyāvastu](#). (P. puññakiriyāvasthu; T. bsod nams bya ba'i dngos po; C. fuye shi; J. fukugōji; K. pogōpsa 福業事). In Sanskrit, “things that create merit,” a term that appears in [ABHIDHARMA](#) materials to describe three practices: giving ([DĀNA](#)), moral behavior ([ŚĪLA](#)), and meditation ([BHĀVANĀ](#)). Among forms of moral behavior, the five precepts ([PAÑCAŚĪLA](#)) of abstaining from killing, stealing, sexual misconduct, lying, and using intoxicants are considered to be especially productive of merit. Among forms of meditation, meditation on the four [BRAHMAVIHĀRA](#) of loving-kindness, compassion, joy, and equanimity are considered to be especially productive of merit.

[punyaksetra](#). (P. puññakkhetta; T. bsod nams kyi zhing; C. futian; J. fukuden; K. pokch'ōn 福田). In Sanskrit, “field of merit,” referring specifically to a recipient (a “field”) that has a substantial potential to provide karmic compensation to a benefactor who “plants the seeds of merit” there by performing wholesome actions ([KUŚĀLA-KARMA](#)), especially through acts of charity ([DĀNA](#)). Traditionally, the Buddha, the [SAMGHA](#) as an institution, or individual monks and nuns were described as the primary fields of merit for the laity, and in this context these provide an “unsurpassed” (anuttara) “field of merit.” By providing material support (dāna) such as food and robes’ cloth (see [KATHINA](#)) to the monastic order and its members, the laity in return would reap spiritual rewards (i.e., receiving religious instructions from the renunciants) as

well as karmic rewards (viz. good fortune in this life and better rebirth in the next). The use of the term eventually expanded, as in the Chinese [SANJIE JIAO](#) (School of the Third Stage), to include one's parents, the poor, the sick, the community of monks and nuns, and ultimately all sentient beings, since serving any of them involves acts of charity that would lead to the accumulation of merit. Several pairs of fields of merit are variously described in the literature. (1) The merit field of the trainee, or [ŚAIKSA](#) (xueren tian), and the merit field of the accomplished adept, or [AŚAIKSA](#) (wuxue ren tian). By making offerings to and supporting the spiritually accomplished (in this case, he who is “beyond training”—viz. an [ARHAT](#)), it is said that the merit accrued therefrom is greater than if the offering and support are given to someone less spiritually worthy. (2) The merit field associated with compassion (beitian) and the merit field associated with reverence (jingtian). In the Sanjie jiao school, for example, the former is exemplified by the act of giving (dāna) when it is undertaken with compassion ([KARUNĀ](#)), such as in the case of helping the indigent; the latter is exemplified by the act of giving when it is undertaken with reverence, such as in the case of providing for the spiritually accomplished. (3) The merit field associated with anticipation (youzuo futian) and the merit field that is free from anticipation (wuzuo futian). The former refers to undertaking the act of giving with an active wish or anticipation of specific rewards; the latter is undertaken with no such wish or anticipation—and, since it is considered to stem from an unadulterated motive, will generate greater rewards. (4) The merit field associated with reverence (jingtian) and the merit field associated with (requiting) benefaction (en tian). The former is the act of giving directed toward the three jewels ([RATNATRAYA](#)); the latter, toward one's parents, teachers, and other benefactors.

[punyānumodana](#). (T. bsod nams rjes su yi rang; C. suixifu; J. zuikifuku; K. suhūibok 隨喜福). In Sanskrit, “taking delight in merit,” “admiration of merit,” or in some contexts, “accumulation of merit”; one of the ways of developing merit, according to which one admires and finds joy in ([ANUMODANA](#)) the meritorious deeds ([PUNYA](#)) of others, often those of the [SAMGHA](#) or of [BODHISATTVAS](#). It is sometimes said that, by admiring the meritorious deed of another person, one accumulates as much merit as if one had performed the deed oneself. Taking delight in others' merit is therefore considered an especially efficient way of accumulating merit and functions as a standard component of many Buddhist rituals and prayers.

[punyaprasava](#). (T. bsod nams skyes; C. fusheng tian; J. fukushōten; K. poksaeng ch'ōn 福生天). In Sanskrit, “merit born,” the second (lowest) of the eight heavens of the fourth concentration ([DHYĀNA](#)) of the subtle-materiality realm ([RŪPADHĀTU](#)). The divinities of this heaven are so called because of the great merit that resulted in their birth in the heaven. As with all the heavens of the subtle-materiality realm, one is reborn as a divinity there through achieving the same level of concentration (dhyāna) as the divinities of that heaven during one’s practice of meditation in a previous lifetime. This heaven has no analogue in Pāli.

[punyasambhāra](#). (T. bsod nams kyi tshogs; C. fude ziliang; J. fukutoku shiryō; K. poktōk charyang 福德資糧). In Sanskrit, “equipment” or “collection” “of merit,” one of the two accumulations (along with the [JÑĀNASAMBHĀRA](#)) amassed over the course of the [BODHISATTVA](#) path and required for the attainment of buddhahood. This type of collection refers to the myriad meritorious deeds performed by a bodhisattva over millions of lifetimes, deeds that are dedicated to the achievement of buddhahood for the welfare of all sentient beings. Between the two poles of skill in means ([UPĀYA](#)) and wisdom ([PRAJÑĀ](#)), the collection of merit is associated with upāya. Among the six perfections ([PĀRAMITĀ](#)), the first three perfections, of giving ([DĀNA](#)), morality ([ŚĪLA](#)), and patience ([KSĀNTI](#)), are traditionally associated with the collection of merit. The collection of merit, resulting from the performance of limitless meritorious deeds, is said to fructify as the [RŪPAKĀYA](#) of a buddha. See also [PUNYAJÑĀNASAMBHĀRA](#).

[Pūraṇa-Kāśyapa](#). (P. Pūraṇa-Kassapa; T. 'Od srung rdzogs byed; C. Fulanna Jiashe; J. Furannakashō; K. Puranna Kasōp 富蘭那迦葉). One of the so-called “six heterodox teachers” ([TĪRTHIKA](#)) often mentioned in Buddhist sūtras and criticized by the Buddha. (The other five are [MASKARIN GOŚĀLĪPUTRA](#), [AJITA KEŚAKAMBHALA](#), [KAKUDA KĀTYĀYANA](#), [SAÑJAYA VAIRĀTĪPUTRA](#), and [NIRGRANTHA JÑĀTĪPUTRA](#).) Pūraṇa-Kāśyapa is said to have propounded the view of akiriyavāda, literally “nonaction,” a kind of antinomianism that denied the law of moral cause and effect ([KARMA](#)). Pūraṇa claimed that, since there was no ultimate distinction between good and evil because actions did not have any effects, there was hence no harm in killing and stealing and no benefit in giving gifts and speaking truthfully. He also appears in accounts of the miracles the Buddha’s performed at [ŚRĀVASTĪ](#) (i.e., the [YAMAKAPRĀTIHĀRYA](#), or “dual miracle,” and the [MAHĀPRĀTIHĀRYA](#) or “great miracle”) as one of the heterodox

teachers who challenges the Buddha to a miracle contest. After the Buddha defeats the tīrthikas, Pūraṇa-Kāśyapa withdraws in despair and is said to have drowned himself in Lake Anavatapta.

pure land. (C. jingtu; J. jōdo; K. chōngt'o 淨土). An English term with no direct equivalent in Sanskrit that is used to translate the Chinese [JINGTU](#) (more literally, “purified ground”); the Chinese term may be related to the term [PARISUDDHABUDDHAKSETRA](#) (although this latter term does not appear in the [SUKHĀVATĪVYŪHASŪTRA](#), the text most closely aligned with pure land thought). The term “pure land” has several denotations in English, which have led to some confusion in its use. These include (1) a buddha-field ([BUDDHAKSETRA](#)) purified of transgressions and suffering by a buddha and thus deemed an auspicious place in which to take rebirth; (2) the specific (and most famous) of these purified fields, that of the buddha [AMITĀBHA](#), named [SUKHĀVATĪ](#); (3) the tradition of texts and practices in [MAHĀYĀNA](#) Buddhism dedicated to the description of a number of buddha-fields, including that of Amitābha, and the practices to ensure rebirth there; (4) a tradition of texts and practice in East Asian and Tibetan Buddhism, associated specifically with the goal of rebirth in the purified buddha-field of Amitābha; (5) the [JŌDOSHŪ](#) and [JŌDO SHINSHŪ](#) schools of Japanese Buddhism, deriving from the teachings of [HŌNEN](#) and [SHINRAN](#), which set forth a “single practice” for rebirth in sukhāvātī. It is important to note that, although the *Sukhāvātīvyūhasūtra* (and other sūtras describing other buddha-fields) originated in India, there was no “pure land school” in Indian Buddhism; rebirth in a buddha-field, and especially that of sukhāvātī, was one of the many generalized goals of Mahāyāna practice. Although there was an extensive tradition in China of scriptural exegesis of the major pure land sūtras, this was not enough in itself to constitute a self-consciously “pure land school”; indeed, techniques for rebirth in sukhāvātī became popular in many strands of Chinese Buddhism (see [NIANFO](#)), especially in light of theories of the disappearance of the dharma (see [MOFA](#)). Finally, it is important to note that the goal of rebirth in sukhāvātī was an important practice in Japan prior to the advent of Hōnen, and remained so in schools other than Jōdoshū and Jōdo Shinshū.

pure land school. See [JINGTU ZONG](#); [JISHŪ](#); [JŌDOSHŪ](#); [JŌDO SHINSHŪ](#); [YŪZŪNENBUTSUSHŪ](#).

Pūrṇa. (P. Puṇṇa; T. Gang po; C. Fulouna; J. Furuna; K. Puruna 富樓那). In Sanskrit, “Fulfilled,” a famous [ARHAT](#) and disciple of the Buddha, often known

as Pūrṇa the Great ([MAHĀPŪRNA](#)). There are various stories of his origins and encounter with Buddha, leading some scholars to believe that there were two important monks with this name. In some cases, he is referred to as Pūrṇa Maitrāyaṇīputra (P. Puṇṇa Mantāṇīputta) and appears in lists of the Buddha's ten chief disciples, renowned for his skill in preaching the [DHARMA](#). In the [SADDHARMAPUNDARĪKASŪTRA](#) ("Lotus Sūtra"), Pūrṇa is listed among the [SRĀVAKAS](#) who understand the parable in the seventh chapter on the conjured city; in the eighth chapter of that sūtra, the Buddha predicts Pūrṇa's eventual attainment of buddhahood. According to Pāli accounts, where he is known as Puṇṇa, he was a brāhmaṇa from Kapilavastu (S. [KAPILAVASTU](#)), the son of Mantāṇī, who was herself the sister of Aññā Koṇḍañña ([ĀJÑĀTAKAUNDINYA](#)), the first of five ascetics (P. pañcavaggiyā; S. [PAÑCAVARGIKA](#)) converted and ordained by the Buddha at the Isipatana (S. [RSIPATANA](#)) deer park ([MRGADĀVA](#)) after his enlightenment. After preaching to the five ascetics, the Buddha traveled to Rājagaha (S. Rājagṛha); Aññā Koṇḍañña instead went to Kapilavastu, where he proceeded to ordain his nephew Puṇṇa. Aññā Koṇḍañña retired to the forest while Puṇṇa remained in Kapilavastu, devoting himself to the study of scripture and the practice of meditation, soon becoming an arahant (S. [ARHAT](#)). He gathered around him five hundred disciples, all of whom became monks, and taught them the ten bases of discourse he had learned. All of them became arahants. At Sāvasthi ([ŚRĀVASTĪ](#)), the Buddha taught the dhamma to Puṇṇa in his private chambers, a special honor. While Puṇṇa was dwelling at the Andhavana grove, Sāriputta (S. [ŚĀRIPUTRA](#)) visited him to question him on points of doctrine. Puṇṇa was able to answer all of Sāriputta's queries. It was while listening to Puṇṇa's explication of causality that Ānanda became a stream-enterer (P. sotāpanna; S. [SROTAĀPANNA](#)). ¶ Other stories, most famously the *Pūrṇāvadāna* of the [DIVYĀVADĀNA](#), tell of a different Pūrṇa, known as Puṇṇa Suppāraka in Pāli sources. His father was a wealthy merchant in the seaport of Sūrpāraka in western India. The merchant became ill and was cured by a slave girl, who eventually bore him a son, named Pūrṇa, who became in turn a skilled merchant. During a sea voyage with some merchants from [ŚRĀVASTĪ](#), he heard his colleagues reciting prayers to the Buddha. Overcome with feelings of faith, he went to see the Buddha and was ordained. After receiving brief instructions from the Buddha, he asked permission to spread the dharma among the uncivilized people of Śroṇāparāntaka, where he converted many and became an arhat in his own right. He later returned to his home city of Sūrpāraka, where he built a palace of sandalwood and invited the Buddha and his monks for a meal.

Events from the story of Pūrṇa are depicted in cave paintings at [AJANTA](#) in India and [KIZIL](#) in Central Asia along the [SILK ROAD](#). A similar story of Pūrṇa's life as a merchant from a border region is recounted in still other Pāli accounts. After the Buddha preached the *Puṇṇovādasutta* to him, he is said to have joined the saṃgha and became an arahant. Puṇṇa won many disciples in his native land, who then wished to build a sandalwood monastery for the Buddha. The Buddha flew in celestial palanquins to Sunāparanta in the company of Puṇṇa and five hundred arahants in order to accept the gift. Along the way, the Buddha converted a hermit dwelling atop Mount Saccabandha and left a footprint ([BUDDHAPĀDA](#)) in the nearby Narmada River so that the [NĀGA](#) spirits might worship it. Sunāparanta of the Pāli legend is located in India, but the Burmese identify it with their homeland, which stretches from Middle to Upper Burma. They locate Mount Saccabandha near the ancient Pyu capital of Sirīkhettarā (Prome). The adoption of Puṇṇa as an ancient native son allowed Burmese chroniclers to claim that their Buddhism was established in Burma during the lifetime of the Buddha himself and therefore was older than that of their fellow Buddhists in Sri Lanka, who did not convert to Buddhism until the time of Asoka (S. [AŚOKA](#)) two and half centuries later.

[Pūrṇagiri](#). In Sanskrit, “Mountain of Abundance” (sometimes also seen written as Paurṇagiri); one of the four major geographical centers in India in the development of both the Hindu and the Buddhist tantric traditions, located near the city of Pitoragarh in the modern state of Uttar Pradesh. Many tantric texts, such as the eighth-century [HEVAJRATANTRA](#), identify Kāmākhyā, Śrīhaṭṭa, [UDDIYĀNA](#), and Pūrṇagiri as being the places where the secrets of tantra were first revealed. These four areas thus came to be known as śaktipīṭhas, or “seats of Śakti.” Mythologically, this claim means that Pūrṇagiri is one of the places where the body of the goddess Śakti landed when it fell from heaven after being carved up by the gods. Different tantric schools offer various explanations as to which part of Śakti fell to Pūrṇagiri: some say it was her navel, others her neck and shoulders, still others her nose. Pūrṇagiri remains a popular pilgrimage site.

[Pūrṇa-Maitrāyanīputra](#). (S). See [PŪRNA](#).

[purusa](#). (P. purisa; T. skyes bu; C. ren/shifu/shenwo; J. nin/jifu/jinga; K. in/sabu/sina 人/士夫/神我). In Sanskrit, “person” or “being,” a common term for an individual being or self in Indian literature. In the non-Buddhist Indian philosophical schools, especially Sāṃkhya, the term often refers to the

imperishable self that persists from lifetime to lifetime. However, in Buddhist scholastic literature, the term tends to function as a synonym for [PUDGALA](#), that is, the person or being created in each lifetime, which is the product of past action ([KARMA](#)) and devoid of any perduring self ([ĀTMA](#)). In less philosophical contexts, the term commonly means simply “man” or “(human) male.” Thus, the Buddha is called a [MAHĀPURUSA](#), “great man.” One of the famous uses of the term in Buddhist literature is found in the [BODHIPATHAPRADĪPA](#) of [ATĪŚA DĪPAMKARAŚRĪJĀNA](#). In this work, Atiśa divides all persons into three capacities ([TRĪNDRIYA](#)), based on their level of aspiration. Those who seek only happiness within [SAMSĀRA](#), whether in this life or a future life, are classified as beings of lesser capacity ([MRDVINDRIYA](#)). Those who seek liberation from rebirth for themselves alone are classified as beings of intermediate capacity ([MADYENDRIYA](#)). Those who seek to liberate all beings in the universe from suffering are beings of great capacity ([TĪKSNENDRIYA](#)). This threefold division provided the structure for [TSONG KHA PA](#)’s [LAM RIM CHEN MO](#).

[puruṣakārāphala](#). (T. skyes bu’i byed pa’i ’bras bu; C. shiyong guo; J. jiyūka; K. sayong kwa 士用果). In Sanskrit, “effect produced by a person,” or “virile fruition”; this is one of the five effects ([PHALA](#)) enumerated in the [SARVĀSTIVĀDA ABHIDHARMA](#) and the [YOGĀCĀRA](#) system. The [puruṣakārāphala](#) is the fruition of the coexistent cause ([SAHABHŪHETU](#)) and conjoined cause ([SAMPRAYUKTAHETU](#)) and refers to effects that are the result of human effort (rather than the result of the ripening of past [KARMA](#)), whether that effort be virtuous ([KUSĀLA](#)), unvirtuous ([AKUSĀLA](#)), or neutral. In this sense, the action performed by the person himself or herself leads to a result that is conjoined with that person: thus, a pot made by a potter would fall into this category of [phala](#), as would a meditator’s attainment of one of the noble paths ([ĀRYAMĀRGA](#)).

[pūrvanivāsānusmṛti](#). (P. pubbenivāsānussati; T. sngon gyi gnas rjes su dran pa; C. suzhu suinian; J. shukujūzuinen; K. sukchu sunyōm 宿住隨念). In Sanskrit, lit. “recollection of former abodes,” viz., “memory of past lives.”; a cardinal teaching of all schools of Buddhism and an element of meditative attainment in many Buddhist traditions. The term occurs most commonly as a component of one or another list, such as the superknowledges ([ABHIJÑĀ](#)), knowledges ([VIDYĀ](#)), or powers ([BALA](#)). Although lists of five, six, and seven [abhijñā](#) appear in Buddhist literature, the most common listing is of six, with the memory of past lives being fourth. The same memory of former abodes is sometimes called the

first of the three knowledges ([TRIVIDYĀ](#)) that are realized at the point of enlightenment, the other two being the divine eye ([DIVYACAKṢUS](#)) and the knowledge of the destruction of the contaminants ([ĀSRAVAKṢAYA](#)). In addition, the memory of former abodes occurs as the eighth of the ten powers (bala) of the [TATHĀGATA](#). ¶ In situating the memory of former abodes within broader descriptions of the practice of the path ([MĀRGA](#)), one general account describes the path of an average monk, while in another the Buddha relates his own experience. In the [SAMANÑAPHALASUTTA](#) of the Pāli [DIGHANIKĀYA](#), for example, the Buddha describes the benefits of the life of mendicancy, providing a chronological catalogue of the attainments of one who follows the path, starting from the occasion of first hearing the dharma and proceeding to the attainment of [NIRVĀNA](#). Among those attainments are the six abhiññā/abhijñā, including memory of past lives and culminating with the knowledge of the destruction of the contaminants. Yet another variety of the arhat path is described in great detail in the [CŪLAHATTHIPADOPAMASUTTA](#) of the [MAJJHIMANIKĀYA](#). This account differs from that in the *Dīgha* with respect to the superknowledges, in that here, having attained the fourth meditative absorption (P. jhāna, S. [DHYĀNA](#)), the monk achieves only the last three of the abhiññā: the knowledge of former abodes, the divine eye, and the knowledge of the destruction of the contaminants. Elsewhere, these three experiences are referred to as the three types of knowledge. In the [VISUDDHIMAGGA](#), [BUDDHAGHOSA](#) describes a regimen in which the meditator recalls his or her life in reverse order, beginning with the most recent act of sitting down to meditate, tracing the events of this life back to the moment of conception and back to the moment of death in the previous existence and so on through the eons. Non-Buddhists are said to be able to recollect as far back as forty eons, ordinary [ŚRĀVAKAS](#) one thousand eons, the eighty great śrāvakas one hundred thousand eons, [ŚĀRIPUTRA](#) and [MAHĀMAUDGALYĀYANA](#) an incalculable age plus one hundred thousand eons, [PRATYEKABUDDHAS](#) two incalculable eons plus one hundred thousand eons, and buddhas limitless past lives. In the more detailed “autobiographical” narratives of the Buddha’s enlightenment in mainstream sources, the bodhisattva becomes the Buddha by gaining the three types of knowledge: in the first watch of the night, the knowledge of former abodes; in the second watch, the divine eye; and in the third watch of the night, the knowledge of the destruction of the contaminants. In the second watch, he remembers his name, his clan, his caste, his food, his pleasure and pain, and his life span for individual lives over the incalculable past. In general, the achievement of the knowledge of former lives is described as the product of

deep states of concentration and, as such, is accessible also to non-Buddhist [YOGINS](#); for this reason it is considered a worldly or mundane (laukika) knowledge. In the [MAHĀYĀNA](#) sūtras, similar descriptions of the six abhijñā and three vidyā are found. However, the memory of former lives also occurs simply as the product of a certain meritorious deeds. The memory of past lives typically causes the person to practice virtue in order to avoid an unfortunate rebirth. In the [SUKHĀVATĪVYŪHASŪTRA](#), it is said that all beings reborn in [AMITĀBHA](#)'s [PURE LAND](#) will be endowed with memory of their former abodes going back trillions of eons.

[pūrvapraṇidhāna](#). (T. sngon gyi smon lam; C. benyuan; J. hongan; K. ponwŏn 本願). In Sanskrit, “prior vow,” a vow made in the past that has either been fulfilled in the present or will be fulfilled in the future, typically in conjunction with the attainment of buddhahood. The term pūrvapraṇidhāna is used specifically in the [MAHĀYĀNA](#) to denote the vow made in the past by a [BODHISATTVA](#) to become a buddha himself, often specifying the place, the time, and the retinue that will be associated with that achievement. Since the buddhas have perforce succeeded in achieving their goal of buddhahood, their prior vows are therefore all considered to have been fulfilled. The most famous of all prior vows are the forty-eight vows described in the [SUKHĀVATĪVYŪHASŪTRA](#), in which the bodhisattva [DHARMĀKARA](#) makes a series of forty-eight vows to create the [PURE LAND](#) of [SUKHĀVATĪ](#). These vows are narrated by the Buddha, who explains that the bodhisattva fulfilled all the vows and became the buddha [AMITĀBHA](#). The exegesis of the vows of Dharmākara was an important element of [JŌDOSHŪ](#) and [JŌDO SHINSHŪ](#) buddhology in Japan. (The Chinese translation of this term literally means “original vow,” and this English rendering is commonly seen in Western translations of [PURE LAND](#) works.) The compound *pubbepaṇidhāna is unattested in Pāli sources, but the term paṇidhāna is used to refer to this aspiration made in a previous life.

[Pūrvaśaila](#). (P. Pubbaseliya; T. Shar gyi ri bo; C. Dongshan; J. Tōzan; K. Tongsan 東山). In Sanskrit, “Eastern Hill,” the name of one of the offshoots of the [MAHĀSĀMGHKA](#), associated particularly with the [CAITYA](#) school centered in the Andhra region of southern India. The name of the school seems to derive from the location of its chief [VIHĀRA](#) on a hill to the east of the city of Dhānyakaṭaka; one finds reference to both schools called Uttaraśaila (“Northern Hill”) and Aparāśaila (“Western Hill”). Like other branches of the Caitya, the

school seems to have held the building and veneration of reliquaries ([CAITYA](#)) to be particularly efficacious forms of creating merit ([PUNYA](#)). Like other branches of the Mahāsāṃghika, they also held that the enlightenment of a buddha was superior to that of an [ARHAT](#). Much of what is known about their doctrinal positions derives from the reports of authors from other schools, such as [BUDDHAGHOSA](#) in his commentary to the [KATHĀVATTHU](#), where it is claimed that they asserted the existence of forces dissociated from thought ([CITTAVIPRAYUKTASAMSKĀRA](#)) and of an intermediate state ([ANTARĀBHAVA](#)) between death and rebirth.

[pūrvavideha](#). (S). See [VIDEHA](#).

[Pusa benye jing](#). (J. Bosatsu hongōkyō; K. Posal ponōp kyōng 菩薩本業經). In Chinese, “Original Acts [alt. Basic Endeavors] of the Bodhisattvas”; translated by [ZHI QIAN](#) (fl. c. 220–252). This scripture offers one of the earliest accounts of the ten [BODHISATTVA](#) stages (S. daśavihāra, [DAŚABHŪMI](#)) translated into Chinese. This text combines the variant versions of the ten bodhisattva stages found in the [GANDAVYŪHA](#) (viz. [AVATAMSAKASŪTRA](#)) and the [MAHĀVASTU](#). This translated scripture should be distinguished from the [PUSA YINGLUO PENYE JING](#), an indigenous Chinese sūtra attributed to the translator [ZHU FONIAN](#) (fl. c. 390), which may have been inspired by this similarly named text. In the tradition, the *Pusa benye jing* is usually abbreviated as the *Benye jing*, while that indigenous text is typically known by its abbreviated title *Yingluo jing*. (To confuse things even more, Zhu Fonian is also said to have translated a *Pusa yingluo jing*, which may be how his name became associated with the apocryphal *Pusa yingluo benye jing*.) [pusa jie](#). (J. bosatsukai; K. posal kye 菩薩戒). In Chinese, “[BODHISATTVA](#) precepts”; a set of precepts unique to the [MAHĀYĀNA](#) tradition, which bodhisattvas follow on the path to buddhahood. These precepts are regarded as independent from monastic precepts and can be taken and kept by monks and nuns, as well as laypeople. There are various enumerations of the vows, the most famous of which in East Asia is a list of ten major and forty-eight minor Mahāyāna precepts that derives from the apocryphal [FANWANG JING](#) (“Book of Brahmā’s Net”). See the extensive discussion in [BODHISATTVAŚĪLA](#) entry; see also [BODHISATTVASAMVARA](#).

[Pusajie jing](#). (S. *Bodhisattvaśīlasūtra; J. Bosatsukaikyō; K. Posalgye kyōng 菩薩戒經). In Chinese, “Book of the Bodhisattva Precepts”; independent title given to the second roll of the [FANWANG JING](#) (“Book of Brahmā’s Net”), which

provides a list of ten major and forty-eight minor [MAHĀYĀNA](#) precepts. This text is often cited by its reconstructed, but unattested, Sanskrit title, the **Bodhisattvaśīlasūtra*. See [FANWANG JING](#); [BODHISATTVAŚĪLA](#).

[Pusa yingluo benye jing](#). (J. Bosatsu yōraku hongōkyō; K. Posal yōngnak ponŏp kyōng 菩薩瓔珞本業經). In Chinese, “Book of the Original Acts that Adorn the Bodhisattva,” in two rolls, translation attributed to [ZHU FONIAN](#) (fl. c. 390); a Chinese indigenous sūtra (see [APOCRYPHA](#)) often known by its abbreviated title of *Yingluo jing*. The *Yingluo jing* was particularly influential in the writings of [CHAN](#) and [TIANAI](#) exegetes, including such seminal scholastic figures as [TIANAI ZHIYI](#), who cited the sūtra especially in conjunction with discussions of the [BODHISATTVA MĀRGA](#) and Mahāyāna [VINAYA](#). The *Yingluo jing* is perhaps best known for its attempt to synthesize the variant schemata of the Buddhist path (mārga) into a comprehensive regimen of fifty-two [BODHISATTVA](#) stages: the ten faiths, the ten abidings, the ten practices, the ten transferences, and the ten grounds (see C. [DAŚABHŪMI](#); [BHŪMI](#)); these then culminate in the two stages of buddhahood, virtual or equal enlightenment (dengjue) and sublime enlightenment (miaoju), which the *Yingluo jing* calls respectively the immaculate stage (wugou di, S. *amalabhūmi) and the sublime-training stage (miaoxue di). The *Yingluo jing* is one of the first texts formally to include the ten faiths in its prescribed mārga schema, as a preliminary level prior to the initiation onto the bodhisattva path proper, which is said to occur at the time of the first arousal of the thought of enlightenment ([BODHICITTOTPĀDA](#)) on the first level of the ten abidings. The text therefore adds an additional ten steps to the forty-two named stages of the path outlined in the [AVATAMSAKASŪTRA](#) (C. *Huayan jing*), providing a complete fifty-two-stage path, one of the most comprehensive accounts of the mārga to be found in East Asian Buddhist literature. The *Yingluo jing* also offers one of the most widely cited descriptions of the threefold classification of Buddhist morality (C. sanju jingji; S. [ŚĪLATRAYA](#)), a categorization of precepts found typically in [YOGĀCĀRA](#)-oriented materials. The *Yingluo jing* describes these as (1) the moral code that maintains both the discipline and the deportments (= S. [SAMVARAŚĪLA](#)) through the ten perfections ([PĀRAMITĀ](#)); (2) the moral code that accumulates wholesome dharmas (= S. kuśaladharmasamgrāhaka) through the eighty-four thousand teachings; and (3) the moral code that aids all sentient beings (= S. [SATTVĀRTHAKRIYĀ](#)), through exercising loving-kindness, compassion, sympathetic joy, and equanimity (viz. the four [BRAHMAVIHĀRA](#)). The *Yingluo jing*

specifies that these three categories of precepts are the foundation of morality for all bodhisattvas. The provenance and authorship of the *Pusa yingluo benye jing* have long been matters of controversy. In the fifth-century Buddhist catalogue [CHU SANZANG JIJI](#), the compiler Sengyou lists the *Pusa yingluo benye jing* among miscellaneous works by anonymous translators. In the 594 scriptural catalogue *Zhongjing mulu*, the scripture is ascribed to Zhu Fonian, while the [LIDAI SANBAO JI](#) instead claims that the text was translated by the dhyāna master Zhiyan in 427. Later cataloguers generally accept the attribution to Zhu Fonian, though some note that the translation style differs markedly from that found in other of his renderings. The attribution to Zhu Fonian is also suspect because it includes passages and doctrines that seem to derive from other indigenous Chinese sūtras, such as the [RENWANG JING](#), [FANWANG JING](#), etc., as well as passages that appear in earlier Chinese translations of the [AVATAMSAKASŪTRA](#), [PUSA BENYE JING](#), [SHENGMAN JING](#), *Pusa dichi jing*, and [DA ZHIDU LUN](#). Both internal and external evidence therefore suggests that the *Yingluo jing* is a Chinese apocryphon from the fifth century. ¶ The *Pusa yingluo benye jing* should be distinguished from the *Pusa benye jing* (“Basic Endeavors of the Bodhisattvas”), translated by [ZHI QIAN](#) (fl. c. 220–252), an authentic translation that offers one of the earliest accounts of the ten stages (S. daśavihāra, [DAŚABHŪMI](#)) translated into Chinese. (It is usually known by its abbreviated title of *Benye jing*.) This text seems to combine the accounts of the ten bodhisattva stages found in the [GANDAVYŪHA](#) (viz., *Avataṃsakasūtra*) and the [MAHĀVASTU](#) and may have been the inspiration for the composition of this indigenous Chinese sūtra. (Zhu Fonian also translated a *Pusa yingluo jing*, which may be how his name became associated with this apocryphal *Pusa yingluo benye jing*.) [Pusōksa](#). (浮石寺). In Korean, “Floating Rock Monastery,” located on Mt. Ponghwang, in North Kyōngsang province; one of the major Silla [HWAŎM](#) (C. [HUAYAN ZONG](#)) monasteries established by [ŬISANG](#) (625–702), the founder of the Hwaŏm school in Korea. According to the monastery’s foundation story in the [SAMGUK YUSA](#) (“Memorabilia of the Three Kingdoms”), while Ŭisang was studying in China, he stayed over at the home of a layman, whose daughter Sŏnmyo (C. Shenmiao) became enamored of the master. When the time came for Ŭisang to return to Silla, he went to see Sŏnmyo to let her know that he was leaving, but she was not at home, so he just left a note for her. After receiving the message, Sŏnmyo ran down to the waterfront, only to see that his ship had already disappeared over the horizon. In despair, she jumped into the sea and died, but was reborn as a dragon who protected Ŭisang on the voyage back to Silla. After returning home, Ŭisang tried to build a

monastery on Mt. Ponghwang in order to establish the Hwaŏm teachings in Silla. There were, however, five hundred bandits living on the mountain at the time, who stopped Ŭisang from proceeding. The dragon woman Sŏnmyo frightened them away by transforming herself into a huge rock floating in the air. The monastery takes its name “Pusŏk” (Floating Rock) from this rock, which is believed to be the massive boulder that sits next to the main shrine hall. Sŏnmyo Pavilion is named after this female dharma protector. Many Silla and Koryŏ monks studied Hwaŏm doctrine at Pusŏksa, including the Silla [SŎN](#) masters Hyech’ŏl (785–861) and Muyŏm (801–888), and the Koryŏ state preceptors Kyŏrŭng (964–1053) and Hagil (1052–1144). Despite its close sectarian associations with the Hwaŏm school, the monastery’s shrine halls are more directly linked to the [PURE LAND](#) teachings, reflecting Ŭisang’s eclectic approach to Buddhist thought and practice. These pure land linkages include (1) the Anyang nu (Pavilion of Peaceful Nurturing) is an alternative name for the pure land of [SUKHĀVATĪ](#); (2) Muryangsu chŏn (Hall of Immeasurable Life), the main shrine hall of the monastery, is dedicated to [AMITĀBHA](#), rather than to the [MAHĀVAIROCANA](#) image that might be expected in a Hwaŏm monastery; (3) the statue of [AMITĀBHA](#) in the main hall faces east so that worshippers will face west, in the direction of the Amitābha’s pure land, when worshipping in the hall; (4) after entering the Ilchu mun (One-Pillar Gate), the front entrance gate to the monastery grounds, the monastery is laid out over nine stone terraces, which is often interpreted as corresponding to the pure land theory of nine grades of the pure land (kup’um chŏngt’o; see C. [JIUPIN](#)), a sort of a soteriological outline of rebirth in the pure land, which ranges from the worst of the worst to the best of the best. Pusŏksa is currently a branch monastery ([MALSA](#)) of the sixteenth district monastery ([PONSA](#)) [KOUNSA](#) (Secluded Cloud Monastery), which was also founded by Ŭisang.

[Putuoshan](#). (J. Fudasen; K. Pot’asan 普陀山/補陀山). In Chinese, “Mount [POTALAKA](#)”; a mountainous island in the Zhoushan Archipelago, about sixty-two miles off the eastern coast of Zhejiang province; also known as Butuoshan, Butuoluojiashan, Xiaobaihuashan, *etc.* Putuoshan is considered one of the four Buddhist sacred mountains in China, along with [WUTAISHAN](#) in Shanxi, [EMEISHAN](#) in Sichuan, and [JIUHUASHAN](#) in Anhui. Each of the mountains is said to be the residence of a specific [BODHISATTVA](#), and Putuoshan is regarded as the sacred mountain of [AVALOKITEŚVARA](#), known in Chinese as [GUANYIN](#) pusa, the revered “bodhisattva of compassion.” There are many legends told about

Putuoshan. During the Tang dynasty, an Indian monk is said to have come to Putuoshan and immolated his ten fingers, after which Avalokiteśvara appeared and preached the dharma to him. As this legend spread, Putuoshan gained fame as the sacred site of Avalokiteśvara. In 916 CE, a Japanese monk was bringing a statue of Avalokiteśvara back to Japan from Wutaishan, but was delayed on Putuoshan by fierce storms. He built a monastery for Avalokiteśvara on the island and named it Baotuo monastery, an abbreviated Chinese transcription for the Sanskrit word Potalaka, an Indian holy mountain that, according to the [GANDAVYŪHA](#) of the [AVATAMSAKASŪTRA](#), is thought to be the abode of Avalokiteśvara. Since that sūtra said that Mt. Potalaka was an isolated mountainous island rising out of the ocean, the sacred geography seemed to match Putuoshan's physical geography. After the Southern Song dynasty, the scale of monasteries, nunneries, monks and nuns in Putuoshan increased significantly through donations from the imperial court and lay Buddhists. Many people came to Putuoshan, especially to pray for safe voyages. It was also popular for the emperor to perform religious rites on Putuoshan. In 1131, during the Southern Song dynasty, all Buddhist schools on Putuoshan were designated as [CHAN](#) monasteries. In 1214, Putuoshan was ordered to emphasize the worship of Avalokiteśvara. At the height of its prestige, there were as many as 218 monasteries on the island, housing more than two thousand monks and nuns. There are now three major monasteries on Putuoshan—Pujisi, Fayusi, and Huijisi—all affiliated with either the [LINJI ZONG](#) or the [CAODONG ZONG](#) of [CHAN](#) Buddhism, and seventy-two smaller temples. Pious pilgrims come to Putuoshan from all over China to worship Avalokiteśvara, and Putuoshan continues to be one of the most popular pilgrimage sites in China. See also [POTALAKA](#); [PO TALA](#).

[Puyan](#). (C) (普巖). See [YUN'AN PUYAN](#).

[Pyŏgam Kaksŏng](#). (碧巖覺性) (1575–1660). Korean [SŎN](#) master of the Chosŏn dynasty; also known as Chingwŏn. Kaksŏng was a native of Poŭn (in present-day North Ch'ungch'ŏng province). After losing his father at an early age, Kaksŏng became a monk under Sŏlmuk (d.u.) at the hermitage of Hwasanam. Kaksŏng received the full monastic precepts in 1588 from a certain Pojŏng (d.u.) and subsequently became the disciple of the eminent Sŏn master [PUHYU SŎNSU](#), whom he accompanied from one mountain monastery to another. When Japanese troops stormed the Korean peninsula in 1592 during the Hideyoshi invasions, Kaksŏng served in the war in place of his teacher, who had been

recommended earlier to the king by the eminent monk [SAMYÖNG YUJÖNG](#). Kaksöng launched a successful sea campaign against Japanese naval forces. Kaksöng was once falsely accused of a crime and imprisoned, but was later released and appointed prelate (p'ansa) of both the Sön and [KYO](#) traditions and abbot of the monastery Pongŭnsa in the capital of Seoul. In 1624, he was appointed the supreme director of the eight provinces (p'alto toch'ongsöp) and oversaw the construction of Namhansansöng. Kaksöng then spent the next few years in Chölla province, restoring the monasteries of [HWAÖMSA](#), [SONGGWANGSA](#), and [SSANGGYESA](#), which had been burned during the Hideyoshi invasions. He also taught at [HAEINSA](#), PAEGUNSA, and Sangsönam, but eventually returned to Hwaömsa, where he passed away in 1660. He produced many famous disciples, such as Ch'wimi Such'o (1590–1668), Paekkok Ch'önŭng (1617–1680), Moun Chinön (1622–1703), and Hoeün Ŭngjun (1587–1672). Kaksöng's lineage expanded into eight branches, and his influence on the subsequent development of Korean Sön rivalled that of [CH'ÖNGHÖ HYUJÖNG](#), the preeminent Korean monk during the Chosön dynasty. Kaksöng also composed many treatises, including the *Sönwönjipto chung kyörüi*, *Kanhwa kyörüi*, *Söngmun sangüi ch'o*, and others.

[P'yohunsa](#). (表訓寺). In Korean, “P'yohun's monastery”; one of the four major monasteries on the Buddhist sacred mountain of [KÜMGANGSAN](#) (Diamond Mountains), now in North Korea. The monastery is said to have been built in 598 during the Silla dynasty by Kwallŭk (d.u.) and Yungun (d.u.), and rebuilt in 675 by P'yohun (d.u.), one of the ten disciples of [ŬISANG](#) (625–702), the vaunt-courier of the Korean [HWAÖM](#) (C. [HUAYAN](#)) school. The present monastery was rebuilt after the Korean War (1950–1953) on the model of an earlier reconstruction project finished in 1778 during the late-Chosön dynasty. The main shrine hall of the monastery is named Panya Pojön (Prajñā Jeweled Basilica), rather than the typical [TAEUNG CHÖN](#) (basilica of the great hero [the Buddha]), and the image of the bodhisattva [DHARMODGATA](#) (Pöpki Posal) that used to be enshrined therein was installed facing Dharmodgata Peak (Pöpki bong) to the northeast of the hall, rather than toward the front. The relics ([ŚARĪRA](#)) of [NAONG HYGŬN](#) (1320–1376), a late-Koryö period Sön monk who introduced the orthodox [LINJI ZONG](#) (K. [IMJE CHONG](#)) lineage to Korea from China, were enshrined at P'yohunsa. The monastery also was famous for its iron pagoda ([STÜPA](#)) with fifty-three enshrined buddha images, but these were lost sometime during the Japanese occupation of Korea (1910–1945), along with

Naong's relics. Chöngyangsa, one of the branch monasteries of P'yohunsa, is said to have been built at the spot where Dharmodgata and his attendant bodhisattvas appeared before the first king of the Koryŏ dynasty, Wang Kŏn, T'aejo (877–943; r. 918–943), on his visit to Kŭmgangsan. The peak where Dharmodgata made his appearance is named Panggwangdae (Radiant Terrace), and the spot where T'aejo prostrated himself before Dharmodgata is called Paejŏm (Prostration Hill). Podŏgam, a hermitage affiliated with P'yohunsa, is notable for its peculiar construction: for four hundred years it has been suspended off a cliff, supported by a single copper foundation pillar.

P'yönyang Ön'gi. (鞭羊彦機) (1581–1644). Korean **SÖN** master and renowned painter during the Chosŏn period. Ön'gi entered the **SAMGHA** at the age of eleven and subsequently became a student of the Sŏn master **CH'ÖNGHÖ HYUJÖNG**. He taught at various monasteries and hermitages, including Ch'öndöksa, Taesöngsa on Mt. Kuryong, and Ch'önsuam on Mt. Myohyang. He died at sixty-three, leaving behind some thirty disciples, the largest group among Hyujöng's four direct lineages. His writings can be found in the *P'yönyangdang chip*.

[Qianfo dong](#). (C) (千佛洞). In Chinese, “Caves of the Thousand Buddhas.” See [DUNHUANG](#).

[Qianshou jing](#). (S. Nīlakaṇṭhakasūtra; T. Mgrin pa sngon po can [gyi mdo]; J. Senjūkyō; K. Ch’ōnsu kyōng 千手經). In Chinese, “Thousand Hands Sūtra”; in Sanskrit, “Blue-Throated [Avalokiteśvara] Sūtra”; an abbreviated title commonly used for the text that provides the scriptural foundation for the popular cult of Thousand-Armed and Thousand-Eyed [AVALOKITEŚVARA](#) ([SĀHASRABHUJASĀHASRANETRĀVALOKITEŚVARA](#)). There are several Chinese translations of the scripture, including Bhagavaddharma’s (fl. c. seventh century) *Qianshou Qianyan Guanshiyin pusa guangda yuanman wu’ai dabeixin tuoluoni jing* (“Dhāraṇī-Sūtra of Thousand-Eyed and Thousand-Armed Bodhisattva Who Regards the World’s Sounds and Feels Vast, Complete, Unimpeded Great Compassion”), translated between 650 and 661, and Zhitong’s (fl. c. seventh century) *Qianyan Qianbi Guanshiyin pusa tuoluoni shenzhou jing* (“Dhāraṇī-Sūtra of Thousand-Eyed and Thousand-Armed Bodhisattva Who Regards the World’s Sounds”), translated between 627 and 649. (There are additional translations by [BODHIRUCI](#), made in 709; [VAJRABODHI](#), made between 731 and 736; and [AMOGHAVAJRA](#), made during the eighth century.) Each version differs in its content and structure, but most include a spell dedicated to Thousand-Armed Avalokiteśvara (C. [GUANYIN](#)), which is commonly called the Qianshou (Thousand-Handed/Armed) or Dabei (Great Compassion) [DHĀRANĪ](#). There are at least eight different Chinese transcriptions of this dhāraṇī and two Tibetan transcriptions, suggesting that different Sanskrit recensions of the spell were in circulation. Bhagavaddharma’s translation of the sūtra has been the most popular in the East Asia and the title *Qianshou jing* typically refers to his recension. According to Bhagavaddharma’s translation of the text, innumerable eons ago, Avalokiteśvara received this dhāraṇī from a buddha named Qianguang Wangjing Zhu Rulai (Tathāgata Tranquil Abode who is King of the Thousandfold Radiance), and, after making ten vows to benefit all sentient beings, the bodhisattva came to be endowed with a thousand arms and a thousand eyes. The sūtra then explains the various benefits of keeping and reciting the dhāraṇī. Keeping the dhāraṇī ensures, for example, fifteen kinds of salutary rebirths, such as being born in a good country, living during a peaceful time, meeting good

friends, having sufficient money and food, and being protected by the divinities; it also ensures that the adept will avoid fifteen kinds of painful deaths, such as from hunger, madness, drowning, conflagration, poison, and suicide. These various sets of benefits are only included in Bhagavadharma's version, which may partly account for the greater popularity of his translation. His version also forgoes the complex instructions on ritual matters found in Zhitong's version, such as the detailed rules of creating an image of Guanyin, which were probably intended for ritual specialists. Bhagavaddharma's text introduced the dhāraṇī and the names of forty gestures ([MUDRĀ](#)) and their particular benefits; Amoghavajra's (705–774) later recension includes illustrations of these mudrā. Due to the great popularity of Bhagavaddharma's early translation, Thousand-Armed and Thousand-Eyed Avalokiteśvara became identified specifically with Avalokiteśvara's manifestation as Great Compassion (C. Dabei; S. [MAHĀKARUNIKA](#)). Based on the same version, the Song [TIANTAI](#) master [SIMING ZHILI](#) (960–1028) composed a manual for a repentance ritual using this scripture: the *Qianshou Qianyan Dabeixinzhou xingfa* ("Rules for Performing the Great Compassion Heart Dhāraṇī of the Thousand-Handed and Thousand-Eyed One"). A late-ninth-century abridgment of Bhagavaddharma's translation, the *Dabei qiqing* ("Great Compassion Invocation"), was also created, probably for use as a ritual manual. Bhagavaddharma's translation of the sūtra also became popular in Japan and Korea as well. In Korea, where the text is known as the *Ch'ōnsu kyōng*, another abridgment was made that included only the Thousand-Hands dhāraṇī and Avalokiteśvara's vows; it was probably intended as a type of ritual procedure. This version also cites materials that derive from a variety of different traditions, including [HWAŎM](#) (C. [HUAYAN](#)), [SŎN](#) (C. [CHAN](#)), [CH'ŎNT'AE](#) (C. [TIANTAI](#)), and [PURE LAND](#). Starting in the eighteenth century, several manuals were written with procedures for the ritual dedicated to Thousand-Armed Kwanŭm (Guanyin), all based on the dhāraṇī and vows. The current form of the rite is recited in the daily ritual of many Chinese and Korean monasteries. See also [OM MANI PADME HŪM](#).

qiao. (S. śarīre khāni; J. kyō; K. kyu 竅). In Chinese, the "bodily orifices," of which nine are listed: the two eyes, the two ears, the two nostrils, the mouth, the reproductive organ, and the anus. In one form of "foulness contemplation" (S. [AŚUBHABHĀVANĀ](#)), in which the impure aspects of the human body are concentrated upon in order to counter lust and excessive attachment to the body, practitioners focus on the way impurities (pus, blood, secretions, etc.) and odors

are constantly being secreted through these nine orifices.

qi miezheng fa. (七滅諍法). In Chinese, “seven means of settling disputes” ([SAPTĀDHĪKARANAŚAMATHA](#)). See also [ADHĪKARANAŚAMATHA](#).

Qimingsi. (齊明寺). In Chinese, “Brightness of Qi” convent, located in Yanguan county in Zhejiang province; the residence for several Qi-dynasty nuns listed in the [BIQIUNI ZHUAN](#) (“Lives of the Nuns”) collection, including Dele (421–501 CE), [SENGMENG](#) (418–489 CE), Chaoming (438–498 CE), and Shi Faxuan (434–516 CE). Differing explanations of its foundation appear in the *Biqiuni zhuan*. The first story credits Sengmeng for founding the convent. It is said that when her mother became ill, Sengmeng returned to her home in Yanguan county to tend to her. While there, Sengmeng decided to turn her residence into a convent. It is said that she participated actively in the construction of the convent’s various halls. The second account credits a devout layman named Yüan Jian for donating his residence to build the convent in 487 CE, during the Qi dynasty (479–502 CE). According to this version, the nun Dele was chosen as abbess of the convent because of her renowned lecturing skills and intellectual talent, her meditative expertise, and her ability to attract a wide following of both monks and nuns, including the aforementioned Shi Faxuan.

qinggou. (輕垢). In Chinese, “minor fault.” See [DUSKRĀ](#).

qinggui. (J. shingi; K. ch’ōnggyu 清規). In Chinese, lit. “rules of purity” or “rules for the pure (assembly),” a genre of monastic codes compiled by adherents within the [CHAN](#) tradition. According to such Song-period genealogical records as the [JINGDE CHUANDENG LU](#), the Tang Chan master [BAIZHANG HUAIHAI](#) (720–814) composed the first such Chan code, entitled the [BAIZHANG QINGGUI](#) (“Baizhang’s Rules of Purity”), in order to establish an independent Chan discipline distinct from the normative [VINAYA](#) tradition; his qinggui is not extant, however, and modern scholars doubt that it ever existed. There might have been some Chan monastic codes as early as the Tang dynasty, influenced by such Chinese codes as [DAO’AN’S](#) (312–384) *Sengni guifan* (“Standards for Monks and Nuns”) or [DAOXUAN’S](#) (596–667) *Jiaojie xinxue biqiu xinghu lüyi* (“Exhortation on Manners and Etiquette for Novices in Training”). However, the oldest surviving Chan code is the [CHANYUAN QINGGUI](#) compiled by the [YUNMEN ZONG](#) master [CHANGLU ZONGZE](#) (d. c. 1107). These types of texts were typically composed by the founding abbots of monasteries and thus include their vision of

how monks in their monasteries should conduct themselves. These codes deal with daily routines in the monastery, monthly schedules, annual festivals, titles and duties of the administrative monks in the monastery, and outlines of various religious services. They may also include monastic rules and regulations related to state policies regarding [SAMGHA](#) administration, such as rules on travel permits and the election of abbots. The codes differed in content, since each monastery compiled its own in accord with its own needs, e.g., as to whether it was a public or private monastery. For this reason, the Yuan Emperor Shun (r. 1333–1368) eventually compiled a unified code based on the rules attributed to Baizhang, entitled the *Chixiu Baizhang qinggui*. Although the term qinggui originally referred to the monastic codes associated with the Chan school, it later came to be used as a general term for the monastic codes used by other schools, such as in the [TIANTAI](#) monk Ziqing’s (fl. fourteenth century) *Jiaoyuan qinggui* (“Pure Rules for the Garden of Doctrine”) compiled in 1347. See also [BCA’ YIG](#).

[Qingliang guoshi](#). (清凉國師). See [CHENGGUAN](#).

[Qingyuan Xingsi](#). (J. Seigen Gyōshi; K. Ch’ōngwŏn Haengsa 青原行思) (d. 740). A Chinese [CHAN](#) master of the Tang dynasty, Qingyuan is said to have been a native of Jizhou in present-day Jiangxi province. Little is known of his career besides the fact that he was ostensibly the student of the sixth patriarch ([LIUZU](#)) [HUINENG](#). He later resided at the monastery of Jingjusi on Mt. Qingyuan (present-day Jiangxi province) and acquired many students, of whom [SHITOU XIQIAN](#) (700–790) is the most famous. Like many of the reputed disciples of Huineng (e.g., [YONGJIA XUANJUE](#) and [NANYUE HUAIRANG](#)), Qingyuan’s relation with Huineng is dubious. Later, three major “houses” (jia) of the Chan tradition, [YUNMEN](#), [CAODONG](#), and [FAYAN](#), traced their lineages back to Huineng via Shitou and his teacher Qingyuan (see [WU JIA QI ZONG](#)). Qingyuan was given the posthumous title Chan master Hongji (Universal Salvation).

[qini\[zui\]](#). (J. shichigyaku[zai]; K. ch’iryōk[choe] 七逆[罪]). In Chinese, “seven transgressions,” a listing of major moral transgressions in the Mahāyāna school as outlined in the Chinese *Book of Brahmā’s Net* ([FANWANG JING](#)). The seven are the following: inflicting injuries on the Buddha (“shedding the Buddha’s blood”), patricide, matricide, killing a renunciant, killing a preceptor, killing an [ARHAT](#), and causing schism within the monastic community ([SAMGHABHEDA](#)). If any of the seven are committed, one will not be eligible to receive precepts of any kind nor attain any considerable spiritual fruition within this lifetime. See

also [ICCHANTIKA](#); [SAMUCCHINNAKUŚĀLAMŪLA](#).

qinli jue. (J. shinrikaku; K. ch'illi kak 親里覺). In Chinese, lit. “affection for one’s relatives and hometown” or “partiality and nostalgia for one’s loved ones, relatives, or fellow townsmen,” one of the so-called eight kinds of misplaced attention (see [BA JUE](#)). This emotion refers to one’s identification with favoritism and nostalgia for loved ones, whether that be in the form of one’s land and country (guotu), family and clan (zuxing), or the endearing circle of familiar individuals (as in the case of this qinli jue). Especially for a monk who has become a homeless renunciant (see [PRAVRAJITA](#)), such attachment could be a subtle spiritual obstacle. It is said that only [ARHATS](#) or advanced bodhisattvas have perfected their equanimity and are therefore completely impartial to both strangers and acquaintances (wu qingyuan xiang) and devoid of any dualistic concept of friends versus enemies.

qiqi. (J. shichishichi; K. ch'ilch'il 七七). In Chinese, “seven periods of seven days,” viz., the forty-nine-day transitional period between rebirths. According to some Buddhist accounts, the forty-nine days following a person’s death is of crucial importance in his or her karmic destiny. A deceased with strong and unambiguous karmic propensities is said to be reborn immediately into the appropriate realm. However, for those whose karmic composition is of mixed evil and good deeds and whose temperaments do not draw them so decidedly toward any one particular kind of existence, there would not be such clear-cut and swift propulsion into any particular realm of rebirth. They are said to reside in an “intermediate state” ([ANTARĀBHAVA](#); see also [BAR DO](#)) for upward of forty-nine days, during which time the precarious equilibrium of their karmic indeterminacy is highly susceptible to conditions that would potentially tip the balance. These conditions might include a whimsical thought or emotion on the part of the intermediate-state being ([GANDHARVA](#)) or the intervening power of proper rituals and “transference of merits” ([PARINĀMANĀ](#)) performed on its behalf. For this reason, religious services of the latter sorts are widely performed in many Buddhist traditions during this “window of opportunity.” Thus, “qiqi” refers either to the forty-nine-day period in which such services are held or to the services themselves.

qiqi ji. [alt. qiqi [ri] zhai] (J. shichishichi no ki/shichishichi[nichi]sai; K. ch'ilch'il ki/ch'ilch'il [il] chae 七七忌/七七[日]齋). In Chinese, lit. “seven-sevens service,” the memorial services performed on the seven “seventh days”

following a person's death, culminating in the forty-ninth-day ceremony ([SISHIJIU \[RI\] ZHAI](#)) that marks the official point of rebirth. (For a discussion of the transitional period between rebirths, see [ANTARĀBHAVA](#); [BAR DO](#); [QIQI](#).) During this transitional period, intermediate-state beings ([GANDHARVA](#)) are presumed to be especially susceptible to the power of religious rituals, which transfers merit to them ([PARINĀMANĀ](#)) and thus potentially improves the quality of their next rebirth. For this reason, in many Buddhist traditions, but especially those in East Asia, the qiqi ji is performed weekly during this “window of opportunity,” which culminates in the final “forty-ninth-day ceremony.”

[qiqing](#). (七情). In Chinese, “seven emotions.” See [QIQING LIUYU](#).

[qiqing liuyu](#). (J. shichijō rokuyoku; K. ch'ilchōng yugyok 七情六欲). In Chinese, “seven emotions and six desires.” According to the [DAZHIDU LUN](#), the seven emotions of joy, anger, sadness, horror, love, hate, and desire are directed to other people's (1) physical body (se), (2) appearance (xingmao), (3) comportment (weiyi), (4) voice (yanyu yinsheng), (5) delicateness or smoothness [of skin] (xihua), and (6) physical features (renxiang).

[qiqi \[ri\] zhai](#). (七七[日]齋). In Chinese, “seven-sevens ceremony.” See [QIQI](#); [SISHIJIU \[RI\] ZHAI](#).

[qishan](#). (J. shichizen; K. ch'ilsōn 七善). In Chinese, “seven excellences [of the Buddha's teaching].” They are the following: the excellence of its timing (shishan), meaning (yishan), language (i.e., its adaptiveness to regional dialects; yushan), singular goal [of attaining “[NIRVĀNA](#)”] (dufa), completeness (juzu), melodiousness and edificatory properties (qingjing tiaorou), and conduciveness to living out the holy life (fanxing; see [BRAHMACARYA](#)).

[qisheng](#). (C) (七生). See [QIYOU](#).

[qishengshi](#). (J. shichishōji; K. ch'ilsūngsa 七勝事). In Chinese, “seven surpassing qualities [of the Buddha]”: his physical marks (shensheng; see [MAHĀPURUSALAKSANA](#)), his abiding in or perfect conformity to the dharma (rufa zhu sheng), wisdom (zhisheng), perfections (juzu sheng; see [PĀRAMITĀ](#)), practices (xingchu sheng), ineffability (buke siyi sheng), and liberation (jietuo sheng).

Qisong. (C) (契嵩). See [FORI QISONG](#).

qixian. (J. shichiken; K. ch'irhyōn 七賢). In Chinese, lit. “seven sagacities,” seven stages on the path of preparation ([PRAYOGAMĀRGA](#)) derived from the Chinese translation of the [ABHIDHARMAKOŚABHĀSYA](#). The first stage involves the cultivation of meditative “antidotes” ([PRATIPAKSA](#)) such as the contemplation of foulness, the contemplation of loving-kindness, and the contemplation of the breath to counter, respectively, the excessive tendencies toward lust, ill will, and discursiveness. The second involves the practice of the so-called four foundations of mindfulness, which involves insight ([VIPAŚYANĀ](#)) into real-time experiences as they unfold in the body and mind. The third focuses on the contemplation of the three marks of existence ([TRILAKSANA](#)), noticing the characteristics of impermanence, unsatisfactoriness, and selflessness in those psychophysical experiences. The fourth through seventh stages correspond to the “wholesome roots associated with the knowledge that penetrates reality” ([NIRVEDHABHĀGĪYA-KUŚĀLAMŪLA](#)): heat ([ŪSMAN](#)), summit ([MŪRDHAN](#)), receptivity or acquiescence ([KSĀNTI](#)), and highest worldly dharmas ([LAUKIKĀGRADHARMA](#)). These nirvedhabhāgīya open access to the path of vision ([DARŚANAMĀRGA](#)) where the first stage of sanctity, stream-entry ([SROTAĀPANNA](#)), is won.

qixing. (C) (七星). See [BEIDOU QIXING](#).

Qixin lun. (C) (起信論). See [DASHENG QIXIN LUN](#).

qiyou. (J. shichiu; K. ch'iryu 七有). In Chinese, “seven modes of existence”: the six destinies (see [GATI](#)) and the “intermediate state” of the [ANTARĀBHAVA](#).

qizhi. (J. shichichi; K. ch'ilchi 七知). In Chinese, “seven knowledges” or “seven discernments,” the specific types of understanding that are indispensable in order to be an effective [BODHISATTVA](#) according to the [MAHĀPARINIRVĀNASŪTRA](#). These are (1) knowing the [DHARMA](#) (zhifa); (2) understanding the implicit meanings of the dharma (zhiyi); (3) knowing the timing of different kinds of practices (zhishi); (4) knowing contentment (zhizu); (5) knowing one’s current level of spiritual capacity (zhizi); (6) a sense of the audience, viz., knowing how to adapt and cater to its specific backgrounds and abilities (zhizhong); and (7) realizing that reaching out to believers and nonbelievers requires different approaches and that there is a priority (zunbei) in saving oneself before one can save others (zhiren zunbei).

qizhongshe. (J. shichishu no sha; K. ch'ilchongsa 七種捨). In Chinese, “seven kinds of relinquishment.” They are as follows: (1) an expansive, imperturbable equanimity (see [UPEKSA](#)) that is devoid of attachments; (2) being impartial to all sentient beings, harboring no distinction between those who are endearing and those who are not; (3) not giving in to the effects of passion and enmity, craving, and ill will; (4) not harboring thoughts of anxiety, regret, or parsimony while one is overseeing the deliverance of sentient beings; (5) staying firmly anchored in the realization of emptiness ([ŚUNYATA](#)) and relinquishing all clinging to the superficial and contingent characteristics of things; (6) willingly sharing with and giving to others, even if that means parting with what one loves and takes delight in; and (7) harboring no expectation for reciprocity, gratitude, or any other reward in one’s acts of giving.

qizhongyu. (J. shichishugo; K. ch'ilchongŏ 七種語). In Chinese, the Buddha’s “seven modes of speech.” They are (1) yinyu, explanations of how a present cause will induce a specific future effect; (2) guoyu, explanations of how a present effect was a result of a specific past cause; (3) yinguo yu, explanations of the comprehensive principles and mechanisms of the operation of cause and effect; (4) yuyu, explanations through the use of parables, analogies, and illustrations; (5) buying [shuo] yu, a mode of speech that has been variously interpreted as either “enigmatic speech” (“buying” in this case is understood as “not connected with [logic or common sense or traditional tenets]”) or “spontaneous speech” (“buying” in this case is understood as “[to speak] without responding [to specific questions]”) and therefore is a “self-induced, spontaneous speech”); (6) shi liubu yu, explanations aimed at conforming and catering to worldly concerns, customs, or world views; in other words, these are mundane, provisional explanations not necessarily aimed at transmitting the highest truths; (7) ruyi yu, a mode of speech interpreted as either explanations made according to the likings and predilections of the audience (“ruyi” in this case means “conforming to the wishes” [of the audience]) or explanations that come from the Buddha’s ultimate intent—i.e., these are the ultimate, “definitive” explanations (“ruyi” in this case means “conforming to [the Buddha’s original] wish”).

Qizil. See [KIZIL](#).

qizuisheng. (J. shichisaishō; K. ch'ilch'oesŭng 七最勝). In Chinese, “the seven unsurpassed [qualities of the perfections].” According to the [CHENG WEISHI LUN](#)

(S. **Vijñaptimātratāsiddhi*), the “perfections” ([PĀRAMITĀ](#)) of a [BODHISATTVA](#) are distinguished from other forms of virtuous and wholesome practices because of their seven unsurpassed qualities. They are the following: (1) being firmly anchored in the [BODHISATTVA](#) lineage (see [GOTRA](#)) (anzhu zuisheng); (2) being firmly founded on [BODHICITTA](#), the bodhisattva’s aspiration to lead all beings to deliverance (yizhi zuisheng); (3) being permeated with the intention to take pity in all sentient beings (yiguo zuisheng); (4) implementing all good deeds, not just a limited number (shiye zuisheng); (5) being compatible with all skillful means (see [UPĀYA](#)) and not constrained by just a limited number of them (qiaobian zuisheng); (6) ultimately leading to perfect [BODHI](#) (huixiang zuisheng); and (7) being undefiled by the two obstructions of [KLEŚĀVARANA](#) (afflictive obstructions) and [JÑEYĀVARANA](#) (cognitive obstructions) (qingjing zuisheng).

[quanshen sheli](#). (J. zenshinshari; K. chōnsin sari 全身舍利). In Chinese, “whole-body relics,” the mummified remains of eminent masters. See [ŚARĪRA](#).

[quan shi](#). (J. gonjitsu; K. kwōn sil 權實). In Chinese, “provisional versus definitive” or “conventional versus absolute,” a bifurcation used in the [TIANTAI](#) school to refer to either the different grades of the Buddhist teachings or the different levels of truth to which the teaching points. In the former context, quan is equivalent to “provisional” as in “provisional teaching” ([NEYĀRTHA](#)), and shi is synonymous with “definitive” as in “definitive teaching” ([NĪTĀRTHA](#)). In the latter context, quan is equivalent to “conventional” as in the “conventional truth” ([SAMVRTISATYA](#), e.g., the relative existence of a “self”), and shi is equivalent to “absolute” as in the “absolute truth” ([PARAMĀRTHASATYA](#), e.g., all dharma lack a “self”). Used adjectivally, these two Sinographs modify a variety of other Chinese characters to form new compounds. See also [FAXING ZONG](#).

[Questions of King Milinda](#). See [MILINDAPAÑHA](#).

[Rabten, Geshe](#). (1920–1986). A Tibetan monk-scholar of the [DGE LUGS](#) sect who played an important role in the transmission of Tibetan Buddhism in the West. He was born into a farming family approximately fifty miles south of Dar rgyas (Dargye) monastery in the Tre hor region of Khams. At the age of seventeen Geshe Rabten began his studies at [SE RA](#) monastery in [LHA SA](#); he later became the teacher of the five-year-old incarnate lama Dgon gsar rin po che (Gonsar Rinpoche), who would remain his close disciple throughout Geshe Rabten's life. Geshe Rabten and Dgon gsar followed the [DALAI LAMA](#) into exile where he received his [DGE BSHES](#) lha ram pa degree in 1963 at the age of forty-three. He attracted many students, was appointed religious assistant (mtshan zhabs) to the [DALAI LAMA](#), and began to teach Western students in 1969. He started Tharpa Chöling Center of Higher Tibetan Studies near Lausanne, Switzerland, later in 1977. His full name is Dge bshes Rta mgrin rab brtan (Geshe Tamdin Rabten).

[Rādha](#). (C. Luotuo; J. Rada; K. Rada 羅陀). Sanskrit and Pāli proper name of an eminent [ARHAT](#) deemed by the Buddha to be foremost among his monk disciples who were able to inspire speech in others. According to the Pāli account, Rādha was an aging brāhmaṇa who was neglected by his children in his old age and sought to enter the order of monks ([SAMGHA](#)) for refuge. He initially went to a monastery in [RĀJAGRHA](#), where he performed chores, but was refused ordination by the monks because of his advanced age. Out of disappointment, Rādha began to grow thin. The Buddha, realizing that Rādha had the potential to achieve arhatship, summoned the monks and asked if any of them remembered any act of kindness performed for them by Rādha. [ŚĀRIPUTRA](#) recalled once receiving a ladle of food from Rādha's meager meal while on alms rounds in Rājagṛha, so the Buddha ordered Śāriputra to ordain him and soon afterward, he became an arhat. Śāriputra was pleased with Rādha's gentle behavior and kept him as an attendant; he also served for a time as an attendant to the Buddha. It was during that time that he was recognized for preeminence in inspiring others. His power even influenced the Buddha, who said that whenever he saw Rādha, he felt inclined to speak on subtle aspects of doctrine because of Rādha's wealth of

views and his constant faith.

rāga. (T. 'dod chags; C. tan; J. ton; K. t'am 貪). In Sanskrit and Pāli, “passion,” or “desire,” one of the six root afflictions ([MŪLAKLEŚA](#)) and typically listed along with aversion ([DVESA](#)) and ignorance ([MOHA](#)) as one of the three poisons ([TRIVISA](#)) that cause suffering. Rāga is defined as a mental factor that perceives an internal or external contaminated phenomenon to be pleasant and then seeks it. It is closely synonymous with “greed” ([LOBHA](#)). In this denotation, rāga is also sometimes called [KĀMARĀGA](#). In Buddhist psychology, when contact with objects is made “without proper comprehension” or “without introspection” ([ASAMPRAJANYA](#)), passion, aversion, and delusion arise. Passion—which is a psychological reaction that is associated with the pursuing, possessing, or yearning for a pleasing stimulus and with being discontent with unpleasant stimuli—may target a host of possible objects. Scriptural accounts list these objects of passion as sensual pleasures, material belongings, loved ones, fame, the five aggregates ([SKANDHA](#)), ideologies and views ([DRSTI](#)), the meditative absorptions ([DHYĀNA](#)) of the “subtle materiality” and “immaterial” realms, the future “rebecoming” of the “self” (S. bhavarāga), and “nonexistence,” viz., the future “annihilation” of the “self” (S. abhavarāga). It is noteworthy that the object of desire must be contaminated ([SĀSRAVA](#)), which in this context means that the object must be one whose observation results in an increase in such afflictions as hatred, ignorance, pride, and jealousy. This fact is relevant in light of the common question about whether the desire for enlightenment is a form of desire: it is not, because the object of that desire—[NIRVĀNA](#) or buddhahood—is not a contaminated object. See also [RŪPARĀGA](#).

Rāhula. (T. Sgra gcan 'dzin; C. Luohouluo; J. Ragora; K. Rahura 羅睺羅). In Sanskrit and Pāli, “Fetter”; proper name of the [ARHAT](#) who was the Buddha’s only child, born on the day his father renounced the world. According to the Pāli account, as soon as Prince [SIDDHARTHA](#) learned of the birth of his son, he immediately chose to become a mendicant, for he saw his son as a “fetter” binding him ever more tightly to the household life. In a famous scene, the prince looks at his sleeping wife and infant son before departing from the palace to seek enlightenment. He wishes to hold his son one last time but fears that he will awaken his wife and lose his resolve. In the [MŪLASARVĀSTIVĀDA VINAYA](#) version of the story, Rāhula was conceived on the night of his father’s departure from the palace and remained in gestation for a full six years, being born on the

night that his father achieved buddhahood. After his enlightenment, when the Buddha accepted an invitation to visit his father's palace, Rāhula's mother ([RĀHULAMĀTĀ](#)) [YAŚODHARĀ](#) sent her son to her former husband to ask for his inheritance, whereupon the Buddha ordered [ŚĀRIPUTRA](#) to ordain the boy. Rāhula thus became the first novice ([ŚRĀMANERA](#)) to enter the order. Knowing Yaśodharā's grief at the loss of her son, the Buddha's father, King [ŚUDDHODANA](#), requested that in the future no child should be ordained without the consent of his parents; the Buddha accepted his request and a question about parental consent was incorporated into the ordination procedure. Rāhula is described as dutiful and always in search of instruction. In one sermon to the young boy, the Buddha warns him never to lie, even in jest. Rāhula often accompanied the Buddha or Śāriputra on their alms rounds ([PINDAPĀTĀ](#)). The meditation topic the Buddha assigned to Rāhula was intended to counter the novice's strong carnal nature. When his mind was ready, the Buddha taught him the *Cūḷa-Rāhulovādasutta*, at the end of which Rāhula attained arhatship. Rāhula was meticulous in his observation of the monastic regulations, and the Buddha declared him foremost among his disciples in his eagerness for training. According to Chinese sources, Rāhula was also renowned for his patience. One day in [ŚRĀVASTĪ](#), he was harshly beaten and was bleeding badly from a head wound, but he bore his injury with composure and equanimity, which led the Buddha to praise him. Rāhula was also foremost in "practicing with discretion" (C. mixing diyi), meaning that he applied himself at all times in religious practice but without making a display of it. Rāhula passed away before both Śāriputra and the Buddha during a sojourn in [TRĀYASTRIMŚĀ](#) heaven. In previous lives, Rāhula had many times been the son of the bodhisattva. He was called "lucky Rāhula" by his friends and Rāhula himself acknowledged his good fortune both for being the Buddha's son and for attaining arhatship. In the [MAHĀYĀNA](#), Rāhula appears in a number of sūtras, such as the [SADDHARMAPUNĀRĪKASŪTRA](#), where his father predicts that he will become a buddha. Rāhula is also traditionally listed as eleventh of the sixteen [ARHAT](#) elders ([SODĀŚASTHAVIRA](#)), who were charged by the Buddha with protecting his dispensation until the advent of the next buddha, [MAITREYA](#). He is said to reside in Biliyangqu zhou (a Sanskrit transcription that supposedly means "land of chestnuts and grains") with 1,100 disciples. In [CHANYUE GUANXIU](#)'s standard Chinese depiction, Rāhula is portrayed sitting on a rock in wide-eyed meditation, with his right finger held above his chest, pointing outward, and his left hand resting on his left knee.

Rāhulamātā. In Pāli, “Mother of [RĀHULA](#),” in the Pāli scriptures, a common term for Prince [SIDDHĀRTHA](#)’s wife [YAŚODHARĀ](#). See [YAŚODHARĀ](#).

rainbow body. See [’JA’ LUS](#).

rains retreat. See [VARSĀ](#).

Rājagṛha. (P. Rājagaha; T. Rgyal po’i khab; C. Wangshe cheng; J. Ōshajō; K. Wangsa sōng 王舍城). Sanskrit name for the capital of the kingdom of [MAGADHA](#) during the time of the Buddha. Rājagṛha was known by several other names, including Girivraja, Vasumati, Bṛhadrathapura, Kuśāgarapura, Magadhapura, and Bimbisārapura. During the Buddha’s lifetime, Rājagṛha was the capital city of King [BIMBISĀRA](#), the ruler of Magadha and the first royal patron of the Buddha and his [SAMGHA](#). The Buddha’s first visit occurred prior to his enlightenment, when he passed through the city shortly after his renunciation. He was watched on his alms round by Bimbisāra, who offered him half of his kingdom. The prince refused but promised to visit the city after he achieved his goal. When the Buddha returned to the city in the first year after his enlightenment, Bimbisāra donated a grove for the use of the Buddha and his monks during the rains retreat ([VARSĀ](#)). It was called [VENUVANAVIHĀRA](#), or “Bamboo Grove Monastery,” and the Buddha spent several rains retreats after his enlightenment there (according to several sources, he spent his second, third, fourth, seventeenth, and twentieth rains retreat there). The Buddha received [ŚĀRIPUTRA](#) and [MAHĀMAUDGALYĀYANA](#) into the order in Rājagṛha. [GRDHRAKŪTAPARVATA](#), or “Vulture Peak,” the site where the [PRAJÑĀPĀRAMITĀ](#) sūtras, among many others, were delivered, was located outside the city. Together with [ŚRĀVASTĪ](#), Rājagṛha was one of the two most important centers of the Buddha’s activities. The Buddha made a final visit to the city shortly before his death. After his cremation, the city received a share of the Buddha’s relics ([ŚARĪRA](#)) and [AJĀTAŚATRU](#), Bimbisāra’s son and successor, erected a [STŪPA](#) to house them. It is said that Ajātaśatru later gathered seven of the shares of the Buddha’s relics and enshrined them in a single stūpa, from which [AŚOKA](#) later obtained the relics for the eighty-four thousand stūpas he is said to have erected. The first Buddhist council (see [COUNCIL, FIRST](#)) took place at Rājagṛha, during the first rains retreat immediately following the death of the Buddha. The great monastic university of [NĀLANDĀ](#) was located on the outskirts of Rājagṛha. Rājagṛha was in a dilapidated condition by the time the Chinese pilgrim [XUANZANG](#) visited the area in the seventh century CE.

rājalīāsana. (T. rgyal po rol pa'i stabs). In Sanskrit, “posture of royal ease,” a seated pose ([ĀSANA](#)) similar to [LALITĀSANA](#), formed with the right knee bent vertically and left knee horizontally, with the heels lightly touching on the seat. The leg positions may be reversed and one arm often rests atop the lifted knee with the other pushing up from the ground. This pose is characteristically found in certain bodhisattva images of [AVALOKITEŚVARA](#) or [MAÑJUŚRĪ](#), and in representations of the Tibetan religious kings. See also [ĀSANA](#).

rakṣā. [alt. rākṣā] (P. rakkhā; T. srung ba; C. yonghu; J. ōgo; K. ongho 擁護). In Sanskrit, “protection,” “safeguard,” referring to ritual actions or practices that are intended to ward off baleful and impure influences. These protective acts are often performed as a preliminary step in constructing a [MANDALA](#), performing an initiation ritual ([ABHISEKA](#)), or cultivating meditative practices. The ritual is performed by inviting or imagining deities who purify the body, speech, and mind of the practitioner, and remove all inner and outer obstacles and evils; a common form of the Tibetan ritual utilizes a distinctive form of propitiatory offering (S. bali) called a [GTOR MA](#) (torma), small conical cakes. The officiating tantric master ([VAJRĀCĀRYA](#)) attracts the negative forces (T. gegs) to the offering, where they are propitiated or bound and led away from the assembly. Setting up a “wheel of protection” is an integral part of many [ANUTTARAYOGATANTRA](#) ritual practices ([SĀDHANA](#)) (see [RAKṢĀCAKRA](#)). A “protection cord” (rakṣāsūtra; T. srung skud) is ritually imbued with protective power by a tantric master and given to each supplicant at the start of an initiation ritual; this is a piece of string or a narrow strip of cloth, usually red, that is tied around the neck, arm, or the wrist to protect the wearer. Tibetan religious figures often give visitors a “protection cord” as a gift. Small amulets (T. ga’u) housing protective buddhas, relics, or tightly rolled copies of ritual invocations or mantras believed to be particularly efficacious against harm are also carried on a belt or around the neck. See also [PARITTA](#); [RATANASUTTA](#).

rakṣācakra. (T. srung gi ’khor lo). In Sanskrit, “wheel of protection,” a figurative wheel used to destroy internal and external evils during tantric rituals and meditative practices. The wheel is created through ritual actions or visualization as a preliminary step in constructing a [MANDALA](#), performing an initiation ritual ([ABHISEKA](#)), or cultivating meditative practices. The wheel has various intents, including maintaining the faithfulness of the disciple toward one’s master, destroying the power of an enemy, preventing the intrusion of

baleful influences, preventing infectious diseases, or averting a curse. For example, in the [GUHYASAMĀJATANTRA](#), a practitioner visualizes a wheel with ten spokes, representing the ten directions ([DAŚADĪŚ](#)). Each spoke is occupied by the ten wrathful deities (daśakrodha), who conquer enemies or inner hindrances, the names and the locations of which are as follows: [YAMĀNTAKA](#) (east), Prajñāntaka (south), Padmāntaka (west), Vighnāntaka (north), [ACALA](#) (northeast), Ṭakkirāja (southeast), Nīladaṇḍa (southwest), Mahābala (northwest), Uṣṇīṣacakravartin (zenith), and Sumbha (nadir). The practitioner then imagines demonic beings filling the areas between the spokes, so that, as the wheel turns, the spokes destroy the demons. In a more detailed explanation, the demons are also bound by ropes and put in well-like cells in the ground. This wheel is also called “wheel of the ten spokes” (daśacakra).

[rākṣasa](#). [alt. rakṣas] (P. rakkhasa; T. srin po; C. luocha; J. rasetsu; K. rach'al/nach'al 羅刹). In Sanskrit, “ogre”; a species of demigod in Buddhist mythology (the female form is an “ogress,” or rākṣasī) usually described as a flesh-eating demon that is able to fly, run like the wind, and possess superhuman strength during the night. According to numerous Buddhist texts, including the [SADDHARMAPUNĀRIKASŪTRA](#) (“Lotus Sūtra”) and the [ABHINISKRAMANASŪTRA](#), the island of Sri Lanka is inhabited by ogres, who are able to shape-shift and seduce human beings in order to eat them. In the [MAHĀPARINIRVĀNASŪTRA](#), the king of the gods, [INDRA](#), is said to have assumed the form of a rākṣasa in order to test the spiritual resolve of a young ascetic—[ŚĀKYAMUNI](#) Buddha in one of his previous lifetimes. Rākṣasas are also described as horse-or ox-headed wardens of a hell, who torture the hell denizens ([NĀRAKA](#)); in this case, they are often identified with [YAKṢA](#). In the Buddhist pantheon, there is a rākṣasadeva (C. luocha tian), or lord of the rākṣasa, who presides over the southwest as one of the twelve directional guardians; this deva is also called [NIRRTI](#). The deva appears on the outer perimeter of the two [MANDALAS](#), the [VAJRADHĀTU](#) and [GARBHADHĀTU](#) maṇḍalas, at the bottom right side, representing the southwesterly direction. In Tibetan Buddhist accounts of the early spread of Buddhism ([SNGA DAR](#)), the land of Tibet is described as the supine body of a female ogress (rākṣasī; T. srin mo) who has to be pinned down with a series of temples ([MTHA' 'DUL GTSUG LAG KHANG](#)) built over strategic places on her body.

[Ral pa can](#). (Ralpachen) (r. 815–838). The name by which Khri gtsug lde btsan (Titsuk Detsen), the forty-first ruler of the Tibetan dynastic period, is best

known. He is considered to be the third of three great religious kings (chos rgyal) of Tibet, together with his predecessors [SRONG BTSAN SGAM PO](#) and [KHRI SRONG LDE BTSAN](#). All three are regarded as human incarnations of the bodhisattva [AVALOKITEŚVARA](#). Ral pa can is remembered as an enthusiastic patron of Buddhism, especially for raising the position and prestige of monks by establishing a tax to sustain their needs. He was so devoted to the [SAMGHA](#) that he is said to have allowed monks to sit on his long locks of hair; his sobriquet “ral pa can” means “having long locks.” He patronized the translation of Buddhist texts from a wide range of materials, including [TANTRAS](#) and [ŚĀSTRAS](#) that were not transmitted to other countries in East or Southeast Asia. The first standard Sanskrit–Tibetan lexicon, the [MAHĀVYUTPATTI](#), was also completed during his reign. In addition to his support for Buddhism, Ral pa can is known for his military conquests, which expanded the territory of the Tibetan empire to its largest extent, conquering regions of China, India, Nepal, Khotan, Turkestan, and Gansu. After Tibetan armies attacked Yanzhou in modern Shandong Province, the Chinese sued for peace. A peace treaty in 821 set the boundaries between the two countries, marking a period of peaceful relations along the border. Three great bilingual steles bearing the inscription of this treaty were fashioned. One, erected in 823, still stands in front of the [JO KHANG](#) temple. Ral pa can’s Buddhist sympathies eventually garnered the resentment of the aristocracy. In 838, he was assassinated by his elder brother, [GLANG DAR MA](#), thus ending the period of the religious kings and the early propagation ([SNGA DAR](#)) of Buddhism in Tibet. According to Buddhist accounts, his death initiated a period of persecution of Buddhism.

[Rāma IV](#). (Mongkut) (1804–1868). Thai monarch who spent twenty-seven years as a monk before becoming king of Siam. As a monk between 1824 and 1851 (his ordination name was Vajirañāna), Mongkut’s studies led him to conclude that the [VINAYA](#) was not being strictly observed by the Thai [SAMGHA](#) and that many rituals performed by monks did not derive from the Buddha’s teachings. In 1830, he organized a small group of reformist monks called the [THAMMAYUT](#) nikai (P. Dhammayuttikanikāya), “the group that adheres strictly to the dharma,” in contrast to what came to be known as the [MAHANIKAI](#) (P. Mahānikāya), the “great congregation” of monks who continued to follow the then-normative practices of Thai Buddhism. To establish this new reform tradition of Thai Buddhism, Mongkut drew on what he considered to be a pure ordination lineage from the Mon people of Burma (Myanmar). Prince Mongkut

also sought to produce an authentic recension of the Pāli canon after finding the extant editions deficient and incomplete. His new movement emphasized study of the tipitaka (S. [TRIPITAKA](#)) as the basis for understanding Buddhist doctrine and rejected as unorthodox many Buddhist texts popular in Thai Buddhism (such as the *Traiphumikatha* as well as the [JĀTAKA](#) tales). The Thammayut movement also stressed proper monastic discipline, particularly details such as the correct way of wearing the robes ([TRICĪVARA](#)) and carrying the alms bowl ([PĀTRA](#)), as well as the proper demarcation of monastic space ([SĪMA](#)). Mongkut's reforms began a trend that led to the [SANGHA ADMINISTRATION ACT](#), passed in 1902, establishing uniform practices for all monks throughout the country. Mongkut had considerable interaction with Western missionaries and was sensitive to their bias regarding Christianity's supposed superiority over Buddhism because of its affinities for science and technology. In possible response to this European influence, Mongkut and the Thammayut movement also emphasized the rational aspects of Buddhism that sought to make their religion compatible with science and modernity. Mongkut eventually became abbot of [WAT BOWONNIWET](#) (Wat Bovoranives) in the Thai capital of Bangkok, which continues to be the headquarters of the Thammayut sect. After Mongkut ascended to the throne, the Thammayut continued to be closely associated with the royal court; the majority of Thai monks, however, have remained in the Mahanikai order. Rāma IV, to the chagrin of many Thais, is the historical (if fanciful) figure behind Anna Leonowens's memoir about her experience in the Thai court as tutor to Mongkut's children, which became the inspiration for Margaret Landon's book *Anna and the King of Siam* and the Rodgers and Hammerstein musical *The King and I*.

[Rāma V](#). (Chulalongkorn) (1853–1910). Thai monarch revered for his efforts to modernize the country; credited with moving Thailand into the modern age and maintaining close relations with the European colonial powers, while protecting the independence of his kingdom. He was known in Thai as the Royal Buddha (“Phra Phutta Jao Luang”). Like his father, [RĀMA IV](#), he was a strong patron of Buddhism. In 1893, he had the Pāli tipitaka (S. [TRIPITAKA](#)) published in thirty-nine volumes and distributed to five hundred monasteries of the kingdom. This was the first time that a Buddhist canon had been printed in codex form. In 1895, he sent sets to 260 academic institutions and libraries around the world. Rāma V founded both of Thailand's public Buddhist universities, Mahachulalongkornrajavidyalaya (affiliated with the [MAHANIKAI](#) fraternity) and

Mahamakut Buddhist University (affiliated with the [THAMMAYUT](#) fraternity), in 1887 and 1893, respectively. Since the late 1980s, Rāma V has been the object of popular devotion. Books, portraits, amulets, and chanting of khatha (magic formulae) are among the manifestations of this reverence, which culminates on Chulalongkorn Day (October 23), a national holiday commemorating the monarch's death.

[Rāmañña Nikāya](#). Pāli name of one of the three predominant monastic fraternities (P. [NIKĀYA](#)) within the Sinhalese [THERAVĀDA SAṂGHA](#), the others being the majority [SIYAM NIKĀYA](#) and the [AMARAPURA NIKĀYA](#). The Rāmañña Nikāya is the smallest of these three, their monastic population being a third that of the Siyam Nikāya and half that of the Amarapura Nikāya. The Rāmañña Nikāya was one of several reform schools that appeared in Sri Lanka in the mid-nineteenth century. At that time, the dominant Siyam Nikāya only ordained members of the elite Goyigama caste. The Goyigama caste was concentrated in the interior highlands of Sri Lanka, which was governed by the Kandyan king. The lower castes—comprised of toddy tappers and cinnamon peelers (*salāgama*), who formed the majority population in the British-controlled coastal lowlands—were at most given lower ordination (P. *pabbajjā*; see S. [PRAVRAJITA](#)) as novices (P. *sāmaṇera*; S. [ŚRĀMANERA](#)). This discrimination led to the formation of as many as thirty religious orders whose members came from lower or rising castes. Members of the cinnamon-peeler caste sponsored delegations of religious aspirants who traveled to Burma (Myanmar) in order to receive ordination in an established lineage, ordination they could not receive in Sri Lanka. One such aspirant from the *salāgama* caste was Ambagahawatte Saranankara, who was ordained on June 12, 1861, by Venerable Gneyiadharmā Sangharāja of the Ratnapunna Vihāra in Burma. In 1864, Ambagahawatte Saranankara returned to Sri Lanka and established the Rāmañña Nikāya order. (Rāmañña is the Pāli name for the region of south-coastal Burma.) The Rāmañña Nikāya was established not only in response to caste discrimination but also as an attempt to reform the practices of the Sri Lankan saṅgha. Indeed, the Rāmañña Nikāya's official status as an institution that makes no distinction between castes is portrayed as a return to the Buddha's acceptance of all strata of the Indian caste system. The Rāmañña Nikāya is particularly strong in the southwestern coastal regions of Sri Lanka, where it was founded.

[Rāmeśvara](#). (S). One of the twenty-four sacred sites associated with the

[CAKRASAMVARATANTRA](#). See [PĪTHA](#).

[Ra mo che](#). One of the two oldest and most important religious institutions of [LHA SA](#), together with the [JO KHANG](#) temple. Constructed during the same period as the Jo khang, the Ra mo che temple was originally intended as the repository of the famed [JO BO SHĀKYAMUNI](#) statue brought to Tibet by King [SRONG BTSAN SGAM PO](#)'s Chinese bride, [WENCHENG](#). According to legend, when the statue was being transported into the city, the cart became stuck and the princess stated that the temple should be built at that spot. That statue was later moved to the Jo khang and replaced in Ra mo che by the statue that had originally been in the Jo khang, a statue of the Buddha called [JO BO MI BSKYOD RDO RJE](#), which had been brought to Tibet by [BHRKUTI](#), the Nepalese wife of Srong btsan sgam po. Prior to 1959, Ra mo che was the site of [RGYUD STOD](#), a tantric college of the [DGE LUGS](#) sect.

[Rang 'byung rdo rje](#). (Rangjung Dorje) (1284–1339). A Tibetan Buddhist master recognized as the third [KARMA PA](#), renowned for his erudition and his knowledge of practice traditions based on both new translation ([GSAR MA](#)) and old translation ([RNYING MA](#)) tantras. He was born either in the Skyid rong Valley or in the western Tibetan region of Ding ri and, according to traditional sources, as a child, was known for his exceptional perspicacity. The [DEB THER SNGON PO](#) ("Blue Annals") records that as a five-year-old boy, he met [O RGYAN PA RIN CHEN DPAL](#), his principal guru, who recognized the young boy as the reincarnation of his teacher [KARMA PAKSHI](#) when the child climbed up on a high seat that had been prepared for O rgyan pa Rin chen dpal and declared himself to have been Karma Pakshi in his previous life (this was before the institution of incarnate lamas was established in Tibet). Rang 'byung rdo rje trained first at [MTSHUR PHU](#) monastery. He also studied with teachers from [GSANG PHU](#) and [JO NANG](#). His collected works include explanations of the major [YOGĀCĀRA](#) and [MADHYAMAKA](#) treatises and commentaries and rituals based on the [CAKRASAMVARA](#), [HEVAJRA](#), [GUHYASAMĀJA](#), and [KĀLACAKRA](#) tantras. According to his traditional biographies, while in retreat, he had a vision of [VIMALAMITRA](#) and [PADMASAMBHAVA](#) in which he received the complete transmission of the Rnying ma tantras. He received instructions on the [RDZOGS CHEN](#) doctrine from Rig 'dzin Gzhon nu rgyal po, and wrote short works on rdzogs chen. He also discovered a treasure text ([GTER MA](#)), known as the *Karma snying thig*. He was a renowned poet and wrote important works on [GCOD](#) practice. The third Karma pa

was also a skilled physician and astrologer. He developed a new system of astrology known as Mtshur rtsi, or “Mtshur phu astrology,” on the basis of which a new Tibetan calendar was formulated and promulgated at Mtshur phu monastery. In 1331, he was summoned to the court of the Yuan emperor Tugh Temür, but stopped enroute when he correctly interpreted portents that the emperor had died. He later traveled to the Mongol capital of Daidu (modern Beijing) during the reign of Togon Temür, for whom he procured an elixir of long life. After returning to Tibet, he was summoned once again to the Mongol capital, where he passed away while meditating in a three-dimensional Cakrasaṃvara [MANDALA](#). Rang ’byung rdo rje’s writings include the influential tantric work *Zab mo nang don* (“Profound Inner Meaning”). It is said that his image appeared in the full moon on the evening of his death, and illustrations of the third Karma pa often portray him seated amid a lunar disk.

[Rang ’byung rig pa’i rdo rje](#). (Rangjung Rikpe Dorje) (1924–1981). A renowned and influential Tibetan Buddhist master, recognized as the sixteenth Karma pa, principal leader of the [KARMA BKA’ BRGYUD](#) sect of Tibetan Buddhism. He was born in 1924 in the [SDE DGE](#) area of Khams, eastern Tibet, to an aristocratic family, and was recognized as the incarnation of the fifteenth Karma pa by the eleventh [TAI SI TU](#). At the age of eight, the Karma pa was enthroned by the Tai Si tu at [DPAL SPUNGS](#) monastery in Khams. Soon after, he went to [MTSHUR PHU](#) monastery in central Tibet, where he undertook his studies. In his early years, he received many important Bka’ brgyud, [SA SKYA](#), and [RNYING MA](#) teachings from eminent masters of the time. In his teenage years, the Karma pa divided his time between Mtshur phu and Dpal spungs monasteries, settling at Mtshur phu at the age of eighteen for several years of retreat. In 1947, the Karma pa took his first long pilgrimage and visited the holy sites of India, Nepal, and Sikkim. In 1954, he accompanied the fourteenth [DALAI LAMA](#) to Beijing in attempts to find a peaceful agreement between the nations of China and Tibet. The next year, the Karma pa returned to Khams, where he sought to mediate conflicts between Tibetan militias and the Chinese military, which was beginning to establish a presence in Tibet. By the spring of 1959, the Karma pa decided that it would be better for the preservation of his tradition’s religious heritage to leave his homeland and move into exile. After informing the Dalai Lama of his decision, the Karma pa left for Bhutan with an entourage of one hundred fifty laypeople, incarnate lamas ([SPRUL SKU](#)), and monks. He soon moved to Rumtek (Rum theg) monastery in Sikkim, which had been founded

previously by the ninth Karma pa [DBANG PHYUG RDO RJE](#). By 1966, the sixteenth Karma pa and his followers had restored Rumtek and formed a new seat in exile for the Karma Bka' brgyud sect. Rang 'byung rig pa'i rdo rje was renowned for his erudition in Buddhist philosophy as well as his mastery of meditation and his ability to work miracles. Beginning in 1974, the sixteenth Karma pa undertook numerous journeys to Europe and North America, where he founded several important Karma bka' brgyud study and meditation centers. During this time, he traveled widely, attracting a great number of Western disciples. In 1981, the sixteenth Karma pa passed away in a hospital near Chicago. His attending physician attested to the fact that the Karma pa's body remained warm for three days after being pronounced dead. Rang 'byung rig pa'i rdo rje was succeeded by the seventeenth Karma pa, O rgyan 'phrin las rdo rje (Orgyan Tinkle Dorje).

[rang rgyud shar gsum](#). (rang gyu shar sum). In Tibetan, “the three [texts] of the eastern Svātantrikas,” a term used to refer to three important works of the [SVĀTANTRIKA MADHYAMAKA](#) school of Indian Buddhism (although the appellation “*Svātantrika” was not used in India and was applied retrospectively by Tibetan doxographers) composed by authors from eastern India. The three works are the [MADHYAMAKĀLAMKĀRA](#) by [ŚĀNTARAKSITA](#), the [MADHYAMAKĀLOKA](#) by [KAMALAŚĪLA](#), and the [SATYADVAYAVIBHAṄGA](#) by [JÑĀNAGARBHA](#).

[rang stong gzhan stong](#). (rang dong shen dong). In Tibetan, lit. “self-emptiness, other-emptiness,” an important and persistent philosophical debate in Tibetan Buddhism, dating to the fifteenth century. The opposing factions are the [DGE LUGS](#) sect on one side and the [JO NANG](#) sect on the other, with support from certain [BKA' BRGYUD](#) and [RNYING MA](#) authors. The debate concerns issues fundamental to their understanding of what constituted enlightenment and the path to its achievement. For the Dge lugs, the most profound of all Buddhist doctrines is that all phenomena in the universe are empty of an intrinsic nature ([SVABHĀVA](#)), that the constituents of experience are not naturally endowed with a defining characteristic. Emptiness ([ŚŪNYATĀ](#)) for the Dge lugs is the fact that phenomena do not exist in and of themselves; emptiness is instead the lack of intrinsic existence. The Dge lugs then, are proponents of “self-emptiness,” and argue that the hypostatized factor that an object in reality lacks (i.e., is empty of) is wrongly believed by the unenlightened to be intrinsic to the object itself. Everything, from physical forms to the omniscient mind of the Buddha, is thus

equally empty. This emptiness is described by the Dge lugs as a non-affirming or simple negation ([PRASAJYAPRATIṢEDHA](#)), an absence with nothing else implied in its place. From this perspective, the Dge lugs judge the sūtras of the second of the three turnings of the wheel of the dharma as described in the [SAMDHINIRMOCANASŪTRA](#), “the dharma wheel of signlessness” ([ALAKSANADHARMAKAKRA](#)), to contain the definitive expression of the Buddha’s most profound intention. By contrast, the Jo nang look for inspiration to the third turning of the wheel, “the dharma wheel for ascertaining the ultimate” ([PARAMĀRTHAVINIŚCAYADHARMAKAKRA](#); see also *[SUVIBHAKTADHARMAKAKRA](#)), especially to those statements that describe the nonduality of subject and object to be the consummate nature ([PARINISPANNA](#)) and the understanding of that nonduality to be the highest wisdom. They describe this wisdom in substantialist terms, calling it eternal, self-arisen, and truly established. This wisdom consciousness exists autonomously and is thus not empty in the way that emptiness is understood by the Dge lugs. Instead, this wisdom consciousness is empty in the sense that it is devoid of all afflictions and conventional factors, which are extraneous to its true nature. Hence, the Jo nang speak of the “emptiness of the other,” the absence of extrinsic and extraneous qualities. The Dge lugs cannot deny the presence of statements in the [MAHĀYĀNA](#) canon that speak of the [TATHĀGATAGARBHA](#) as permanent, pure, blissful, and endowed with self. But they argue that such statements are provisional, another example of the Buddha’s expedient means of attracting to the faith those who find such a description appealing. The true tathāgatagarbha, they claim, is the emptiness of the mind; it is this factor, present in all sentient beings, that offers the possibility of transformation into an enlightened buddha. This is the view of [CANDRAKĪRTI](#), they say, whom they regard as the supreme interpreter of the doctrine of emptiness. The Jo nang do not deny that this is Candrakīrti’s view, but they deny Candrakīrti the rank of premier expositor of [NĀGĀRJUNA](#)’s thought. For them, Candrakīrti teaches an emptiness which is a mere negation of true existence, which they equate with nihilism, or else a preliminary stage of negation that precedes an understanding of the highest wisdom. Nor do they deny that such an exposition is also to be found in Nāgārjuna’s philosophical corpus ([YUKTIKĀYA](#)). But those texts, they claim, do not represent Nāgārjuna’s final view, which is expressed instead in his devotional corpus ([STAVAKĀYA](#)), notably the [DHARMADHĀTUSTAVA](#) (“Praise of the Sphere of Reality”), with its more positive exposition of the nature of reality. Those who would deny its ultimate existence, such as Candrakīrti, they classify as “one-sided Madhyamakas” (phyogs gcig

pa'i dbu ma pa) as opposed to the “great Madhyamakas” ([DBU MA PA CHEN PO](#)), among whom they would include the Nāgārjuna of the four hymns and [ĀRYADEVA](#), as well as thinkers whom the Dge lugs classify as [YOGĀCĀRA](#) or [SVĀTANTRIKA-MADHYAMAKA](#): e.g., [ASAṄGA](#), [VASUBANDHU](#), [MAITREYANĀTHA](#), and [ŚĀNTARAKSITA](#). The Dge lugs attempt to demonstrate that the nature of reality praised by Nāgārjuna in his hymns is the same emptiness that he describes in his philosophical writings.

rasa. (T. ro; C. wei; J. mi; K. mi 味). In Sanskrit and Pāli, “taste,” sensory objects of the tongue; the contact ([SPARŚA](#)) between the gustatory sense organ ([JIHVENDRIYA](#)) and the gustatory sensory object leads to gustatory consciousness ([JIHVĀVIJÑĀNA](#)). Six types of taste are enumerated in the [ABHIDHARMA](#): sweet, sour, salty, pungent, bitter, and astringent.

rasanā. (T. ro ma). In tantric physiology, the channel ([NĀDĪ](#)) that runs from the left nostril to the base of the spine in males and from the right nostril to the base of the spine in females. It is one of three main channels, together with the central channel ([AVADHŪTĪ](#)) and the [LALANĀ](#), the left channel in females and the right channel in males. According to some systems, seventy-two thousand channels are found in the body, serving as the conduits for subtle energies or winds ([PRĀNA](#)). The most important of these channels are the avadhūti, the lalanā, and the rasanā. The central channel runs from the place between the eyebrows to the crown of the head and down in front of the spinal column, ending at the genitals. The right and left channels run parallel to the central channel on either side. These two channels wrap around the central channel at various points, of which as many as seven are enumerated. These points, called wheels ([CAKRA](#)), are located between the eyes, at the crown of the head, at the throat, at the heart, at the solar plexus, at the base of the spine, and at the tip of sexual organ. In [ANUTTARAYOGATANTRA](#), especially in practices associated with the “stage of completion” ([NISPANNAKRAMA](#)), much emphasis is placed on loosening these knots in order to cause the winds to flow freely through the central channel.

rasāyatana. (T. ro'i skye mched; C. weichu; J. misho; K. mich'ō 味處). In Sanskrit, “taste sense field” or “gustatory sense field,” i.e., tastes or flavors ([RASA](#)) as they occur in the list of twelve sense faculties or “bases of cognition” ([ĀYATANA](#)), which serve as the bases for the production of consciousness, viz., the six internal sense bases, or sense organs (eye, ear, nose, tongue, body, and mind), and the six external sense objects (forms, sounds, odors, tastes, tangible

objects, and mental phenomena). In the case of taste, the contact ([SPARŚA](#)) between the gustatory sense organ ([JIHVENDRIYA](#)) and its gustatory sensory object leads to gustatory consciousness ([JIHVĀVIJÑĀNA](#)).

[Ras chung pa Rdo rje grags](#). (Rechungpa Dorje Drak) (1083/4–1161). A close disciple of the Tibetan sage [MI LA RAS PA](#) and an early master of the [BKA' BRGYUD](#) sect of Tibetan Buddhism. He was born in the southwest Tibetan region of Gung thang and, while herding cattle at the age of eleven, met Mi la ras pa, who was meditating in a nearby cave. Much to the consternation of his family, Ras chung pa left his home to follow the [YOGIN](#), subsequently spending many years serving and training under his [GURU](#). As one of Milarepa's youngest disciples, he earned the name Ras chung pa, lit. "little cotton-clad one." He was later dispatched to India in order to retrieve several transmissions of the [LUS MED MKHA' 'GRO SNYAN RGYUD CHOS SKOR DGU](#) ("nine aural lineage cycles of the formless [DĀKINĪs](#)"); Mi la ras pa's teacher [MAR PA CHOS KYI BLO GROS](#) had only received five of these nine cycles during his own studies in India. Ras chung pa acquired these teachings from the brāhmaṇa-adept [TI PHU PA](#) in India and, returning to Tibet, spent many years in solitary meditation. He eventually taught numerous disciples of his own. Although Ras chung pa was not a central part of the Bka' brgyud sect's institutional development, a role played by Mi la ras pa's other well-known disciple [SGAM PO PA BSOD NAMS RIN CHEN](#), he figures prominently in the [MILA'IMGUR 'BUM](#) ("Hundred Thousand Songs of Milarepa"), the collected verse instructions of Mi la ras pa. He also transmitted an important tradition of tantric instructions that were redacted as the [RAS CHUNG SNYAN BRGYUD](#) (Aural Lineage of Ras chung). These teachings gained some importance over the next several centuries and were later revived during the fifteenth century by [GTSANG SMYON HERUKA](#) at a religious center founded at one of Ras chung pa's principal meditation caves, [RAS CHUNG PHUG](#).

[Ras chung phug](#). (Rechung puk). A Tibetan hermitage and monastic center founded around a principal retreat cave of [RAS CHUNG PA RDO RJE GRAGS](#), after whom the cave and complex are named. Located near the Yar klungs and Chong gye valleys of central Tibet, Ras chung phug housed over one thousand monks at the height of its florescence, although it was completely destroyed during the Chinese Cultural Revolution. During the fifteenth century, [GTSANG SMYON HERUKA](#), the so-called madman of Gtsang, spent time there and helped to revive the religious tradition of Ras chung pa known as the [RAS CHUNG SNYAN BRGYUD](#)

(aural lineage of Ras chung).

Ras chung snyan brgyud. (Rechung nyengyu). In Tibetan, lit. “the aural lineage of Ras chung,” referring to [RAS CHUNG PA RDO RJE GRAGS](#), a principal disciple of the [BKA’ BRGYUD](#) founder [MI LA RAS PA](#). Although called an aural lineage (snyan brgyud), it comprises a system of liturgies, ritual manuals, and tantric commentaries, together with their oral instructions, based primarily on the [CAKRASAMVARATANTRA](#). The lineage began with the [LUS MED MKHA’ ’GRO SNYAN RGYUD CHOS SKOR DGU](#) (“nine aural lineage cycles of the formless [DĀKINĪS](#)”) promulgated by the Indian adepts [TILOPA](#) and [NĀROPA](#). Five of these were subsequently transmitted in Tibet by the Bka’ brgyud founders [MAR PA CHOS KYI BLO GROS](#) and Mi la ras pa. Ras chung pa received them from Mi la ras pa and then journeyed to India, where he obtained the remaining instructions from the tantric master [TI PHU PA](#). The system of teachings that Ras chung pa subsequently passed on became known as the “aural lineage of Ras chung pa.” The fifteenth-century [YOGIN GTSANG SMYON HERUKA](#) later codified these teachings, together with those of Mi la ras pa’s other prominent disciples, [SGAM PO PA BSOD NAM RIN CHEN](#) and Ngan rdzongs ras pa (Ngendzong Repa), into the [SNYAN BRGYUD SKOR GSUM](#) (“three cycles of aural lineage instructions”).

Rāṣṭrapāla. (P. Raṭṭhapāla; T. Yul ’khor skyong; C. Laizhaheluo; J. Raitawara; K. Noet’ahwara 賴吒悉羅). In Sanskrit, an eminent [ARHAT](#) declared by the Buddha to be foremost among his monk disciples who renounced the world through faith. According to the Pāli account, he was born in Kuru as the son of a wealthy counselor who had inherited the treasure of a destroyed kingdom. He lived with his wives amid great luxury in his father’s house in the township of Thullakoṭṭhita. He went to listen to the Buddha preach when the latter was visiting his city and decided at once to renounce the world and become a monk in the Buddha’s dispensation. His parents refused to give their permission until he threatened to starve himself to death. They agreed on the condition that he return to visit their house as a monk. After his ordination, Rāṣṭrapāla accompanied the Buddha to [ŚRĀVASTĪ](#) (P. Sāvatti) and there, through assiduous practice, attained arhatship. Having received the Buddha’s permission, Rāṣṭrapāla resolved to fulfill his promise to his parents and returned to Thullakoṭṭhita, where he lived in the park of the Kuru king. On his alms round the next morning, he stopped at entrance of his parents’ house. His father did not recognize him and mistook him for one of the monks who had enticed his son to

abandon his home. He cursed Rāṣṭrapāla and ordered him away. But a servant girl recognized him and offered him the stale rice she was about to throw away and then announced his true identity to his father. His father, filled with joy and hope at seeing his son, invited him to receive his morning meal at his home the next day. When he returned at the appointed time, Rāṣṭrapāla's father tried to tempt him to return to the lay life with a vulgar display of the family's wealth and the beauty of his former wives. They taunted him about the celestial maidens for whose sake he had renounced the world. They fainted in disappointment when he addressed them as "sisters" in reply. At the end of his meal, he preached to his family about the impermanence of conditioned things, the uselessness of wealth, and the enticing trap of physical beauty. But even then they were not convinced, and it is said that Rāṣṭrapāla flew through the air to return to his abode after his father bolted the doors to keep him at home and had servants try to remove his robes and dress him in the garb of a layman.

[Rāṣṭrapālapariprcchā](#). (T. Yul 'khor skyong gis zhus pa; C. Huguo pusahui [jing]; J. Gokoku bosatsue[kyō]; K. Hoguk posal hoe [kyōng] 護國菩薩會[經]). In Sanskrit, "The Questions of [RĀSTRAPĀLA](#)," one of the earliest [MAHĀYĀNA](#) sūtras; the terminus ad quem for its composition is the third century CE, when [DHARMARAKSA](#) (c. 233–310) translated the sūtra into Chinese (c. 270 CE), probably following a manuscript from the [GANDHĀRA](#) region in the [KHAROSTHĪ](#) script. (The extant Sanskrit recension is much later.) There are also two later Chinese translations, one made c. 585–600 by [JĀNĀGUPTA](#) and other c. 980 by [DĀNAPĀLA](#). The *Rāṣṭrapāla* represents a strand of early [MAHĀYĀNA](#) (found also in such sūtras as the [KĀŚYAPAPARIVARTA](#) and the [UGRAPARIPRCCHĀ](#)) that viewed the large urban monasteries as being ill-suited to serious spiritual cultivation because of their need for constant fund-raising from the laity and their excessive entanglements in local politics. The *Rāṣṭrapāla* strand of early Mahāyāna instead dedicated itself to forest dwelling (see [ARAÑÑAVĀSI](#)) away from the cities, like the "rhinoceros" ([KHADGAVISĀNA](#)), and advocated a return to the rigorous asceticism (S. [DHŪTAGUNA](#); see P. [DHUTAṄGA](#)) that was thought to characterize the early [SAMGHA](#). To the *Rāṣṭrapāla* author(s), the Buddha's own infinitely long career as a bodhisattva was an exercise in self-sacrifice and physical endurance, which they in turn sought to emulate through their own asceticism. The physical perfection the Buddha achieved through this long training, as evidenced in his acquisition of the thirty-two major marks of the superman ([MAHĀPURUSALAKSANA](#)), receives special attention in the sūtra. This approach is

in marked contrast to other early Mahāyāna sūtras, such as the [ASTASĀHASRIKĀPRAJÑĀPĀRAMITĀ](#), which were suspicious of the motives of forest dwellers and supportive of cenobitic monasticism in the towns and cities, where monks and nuns would be in a better position to serve the laity by preaching the dharma to them.

[Ratanasutta](#). In Pāli, “Discourse on the Precious,” one of the best loved and most widely-recited Buddhist texts in the [THERAVĀDA](#) Buddhist world (there is no analogous recension in the Chinese translations of the [ĀGAMAS](#)). The *Ratanasutta* appears in an early scriptural anthology, the [SUTTANIPĀTA](#), a later collection, the [KHUDDAKAPĀTHA](#), and in a postcanonical anthology of [PARITTA](#) (“protection texts”). The Pāli commentaries say that the discourse was first delivered to the Buddha’s attendant [ĀNANDA](#), who then went around the city of the Licchavis reciting the text and sprinkling holy water from the Buddha’s own begging bowl ([PĀTRA](#)). Through this performance, the baleful spirits harassing the city were vanquished and all the people’s illnesses were cured. The text itself consists of a mere seventeen verses, twelve of which recount the virtues of the three jewels ([RATNATRAYA](#)) of the Buddha, [DHARMA](#), and [SAMGHA](#). The *Ratanasutta*’s great renown derives from its inclusion in the *Paritta* anthology, texts that are chanted as part of the protective rituals performed by Buddhist monks to ward off misfortunes; indeed, it is this apotropaic quality of the text that accounts for its enduring popularity. Paritta suttas refer to specific discourses delivered by the Buddha that are believed to offer protection to those who either recite the sutta or listen to its recitation. Other such auspicious apotropaic suttas are the [MAṄGALASUTTA](#) and the [METTĀSUTTA](#). In Southeast Asia, these paritta texts are commonly believed to bring happiness and good fortune when chanted by the saṃgha. See also [RAKSĀ](#).

[Rathavinītasutta](#). (C. Qiche jing; J. Shichishakyō; K. Ch’ilch’a kyōng 七車經). In Pāli, the “Discourse on the Relay Chariots,” the twenty-fourth scripture of the [MAJJHIMANIKĀYA](#) (a separate [SARVĀSTIVĀDA](#) version appears as the ninth sūtra in the Chinese translation of the [MADHYAMĀGAMA](#), as well as a recension of uncertain affiliation in the [EKOTTARĀGAMA](#)). This discourse recounts a dialogue between Sāriputta (S. [ŚĀRIPUTRA](#)) and Puṇṇa Mantāṇiputta (see [PŪRNA](#)) concerning the seven stages of purification (see [VISUDDHI](#)) that must be traversed in order to attain final liberation in nibbāna ([NIRVĀNA](#)), viz., the purification of (1) morality ([SĪLAVISUDDHI](#)); (2) mind ([CITTAVISUDDHI](#)); (3) views

([DITTHIVISUDDHI](#)); (4) overcoming doubt ([KAṆKHĀVITARANAṆVISUDDHI](#)); (5) the purity of knowledge and vision of what is and is not the path ([MAGGĀMAGGAÑĀNADASSANAṆVISUDDHI](#)); (6) knowledge and vision of progress along the path ([PATIPADĀÑĀNADASSANAṆVISUDDHI](#)); (7) knowledge and vision itself ([ÑĀNADASSANAṆVISUDDHI](#)). The seventh purification leads directly to final nibbāna. The seven stages are compared to a relay of seven chariots needed to transport the king of Kosala ([KOŚĀLA](#)) from his palace in Sāvatti ([ŚRĀVASTĪ](#)) to his palace in Sāketa.

ratna. (P. ratana; T. rin chen/dkon mchog; C. zhenbao; J. chinbō; K. chinbo 珍寶). In Sanskrit, “jewel,” “valuable,” or “treasure,” the most common term for a precious object in Buddhist texts and regularly used in Buddhist literature as a metaphor for enlightenment, since jewels represent purity, permanence, preciousness, rarity, *etc.* [TATHĀGATAGARBHA](#) texts often call the tathāgatagarbha or buddha-nature the jewel-nature, since the preciousness of a jewel is unaffected even when it is sullied by mud (defilements); the [TATHĀGATAGARBHASŪTRA](#), for example, specifically compares the tathāgatagarbha to a jewel buried in the dirt (see also [RATNAGOTRAVIBHĀGA](#)). In the [SADDHARMAPUNDIRĪKASŪTRA](#) (“Lotus Sūtra”), the buddha-nature is described in a simile as a jewel that a rich man (the Buddha) has surreptitiously sown into the robes of his destitute friend (sentient beings). Such [CHAN](#) masters as [GUIFENG ZONGMI](#) (780–840) and [POJO CHINUL](#) (1158–1210) use jewels as metaphors to explain their theories of the buddha-nature. A jewel is also used to represent the pristine nature of the realm of enlightenment: in the [AVATAMSAKASŪTRA](#), the bejeweled canopy of the king of the gods, [INDRA](#) (see [INDRAJĀLA](#)), is deployed to illustrate the mutual interdependence that pertains between all phenomena in the universe. Several different lists of jewels are found in Buddhist literature. The most important is the “three jewels” ([RATNATRAYA](#); [TRIRATNA](#)) of the Buddha, [DHARMA](#), and [SAMGHA](#); commentaries explain that these three are called jewels because they are difficult to find and, once found, are of great value. The Tibetan translation of “three jewels,” dkon mchog gsum (könchok sum) (lit. “three rare excellences”) reflects this meaning. There are also several different lists of “seven jewels” (saptaratna). One list describes the seven “valuables” that are essential to the successful reign of a wheel-turning monarch ([CAKRAVARTIN](#)): a wheel, elephant, horse, gems, a queen, an able minister or treasurer, and a loyal adviser. Another list of seven is of the jewels decorating [SUKHĀVATĪ](#), the [PURE LAND](#) of [AMITĀBHA](#); these are listed in the [AMITĀBHASŪTRA](#) (see also

[SUKHĀVATĪVYŪHASŪTRA](#)) as gold, silver, lapis lazuli, crystal, agate, ruby, and carnelian. Finally, there are seven “moral” jewels listed in mainstream Buddhist literature, as in the Pāli list of morality (P. *sīla*; S. [ŚĪLA](#)), concentration ([SAMĀDHI](#)), wisdom (P. *paññā*; S. [PRAJÑĀ](#)), liberation (P. *vimutti*; S. [VIMUKTI](#)), the knowledge and vision of liberation (P. *vimuttiñāṇadassana*; S. *vimuktijñānadarśana*), analytical knowledge (P. *paṭisambhidā*; S. [PRATISAMVID](#)), and the factors of enlightenment (P. *bojjhaṅga*; S. [BODHYAṄGA](#)).

[Ratnagiri](#). (T. Rin chen ri bo). In Sanskrit, “Bejeweled Mountain,” also known as Ratnagiri Mahāvihāra, or “the great monastery Ratnagiri”; the name of an ancient monastery located in the Jajapur district of the contemporary Indian state of Orissa. The site was discovered and excavated in the mid-twentieth century. Ratnagiri was established sometime around the fifth or sixth centuries CE and flourished until the twelfth century. Both textual and archaeological evidence indicates that Ratnagiri, like [NĀLANDĀ](#), was a prosperous and influential center of [MAHĀYĀNA](#) philosophy. Furthermore, the monastery appears to have played a significant role in the rise of [VAJRAYĀNA](#) and tantric Buddhism in India. The excavation of this site revealed two main monastic complexes, one of which was two stories high. The main reliquary mound ([STŪPA](#)) is nearly twenty feet high and fifty feet across at the base. Hundreds of smaller [STŪPAs](#) surround it on the main campus. The remains are decorated by carved depictions of buddhas, [BODHISATTVAs](#), and a variety of deities from the Mahāyāna pantheon.

[Ratna gling pa](#). (Ratna Lingpa) (1403–1478). An important treasure revealer ([GTER STON](#)) of the [RNYING MA](#) sect of Tibetan Buddhism, credited with discovering twenty-five collections of treasure texts ([GTER MA](#)). As a youth, he was identified as the reincarnation of Lang gro Dkon mchog ’byung gnas, one of the twenty-five disciples of [PADMASAMBHAVA](#). According to traditional sources, he is said to have uncovered in a single lifetime the treasures ordinarily discovered in three lifetimes, and therefore is known under three names: Zhig po gling pa (Shikpo Lingpa), ’Gro ’dul gling pa (Drodul Lingpa), and Ratna gling pa. The treasures included [RDZOGS CHEN](#) teachings, peaceful and wrathful guru [SĀDHANAs](#), [AVALOKITEŚVARA](#) practices, and [MAHĀMUDRĀ](#) texts. He also searched extensively for ancient tantras and oral traditions and compiled an extensive [RNYING MA’I RGYUD ’BUM](#), a compendium of the tantras and tantric exegetical literature of the Rnying ma sect; that compendium is no longer extant, but it served as the basis of the rnying ma’i rgyud ’bum of [’JIGS MED GLING PA](#).

[Ratnagoṭravibhāga](#). [alt. Ratnagoṭravibhaṅga] (T. Dkon mchog gi rigs nam par dbye ba; C. Jiujing yisheng baoxing lun; J. Kūkyō ichijō hōshōron; K. Kūgyōng ilsūng posōng non 究竟一乘寶性論). In Sanskrit, “Analysis of the Lineage of the [Three] Jewels,” a seminal Indian MAHĀYĀNA ŚĀSTRA on the doctrine of the “embryo of the tathāgatas” ([TATHĀGATAGARBHA](#)), probably dating from the fourth century CE. Its full title is *Ratnagoṭravibhāga-Mahāyāna-Uttaratantra* and the treatise is often referred to simply as the *Uttaratantra*, or “Sublime Continuation.” The Sanskrit recension is extant, along with Chinese and Tibetan translations. ([RATNAMATI](#)’s Chinese translation was finished in 508.) The Chinese tradition attributes the work to Sāramati (C. Jianyi), while the Tibetan tradition attributes the core verses of the text to [MAITREYA/MAITREYANĀTHA](#) and its prose commentary entitled the *Uttaratantravyākhyā* to [ASAṄGA](#). It is one of the “five books of Maitreya,” which, according to legend, were presented by the future buddha Maitreya to Asaṅga during the latter’s visit to the [TUSITA](#) heaven. The primary subject of the *Ratnagoṭravibhāga* is the tathāgatagarbha or buddha-nature; this is the element ([DHĀTU](#)) or lineage ([GOTRA](#)) of the buddhas, which is present in all beings. The text offers an extensive overview of the tathāgatagarbha doctrine as set forth in such sūtras as the [TATHĀGATAGARBHASŪTRA](#) and the [ŚRĪMĀLĀDEVĪSIMHANĀDASŪTRA](#). Like the *Śrīmālā Sūtra*, the treatise describes the tathāgatagarbha as being both empty (śūnya) of the afflictions ([KLEŚA](#)) but nonempty (aśūnya) of the buddhas’ infinite virtues. In ordinary beings, the tathāgatagarbha may be obscured by adventitious defilements, but when those defilements are removed, the state of enlightenment is restored. In proving this claim, the treatise examines in detail the “body of the tathāgata,” an alternate name for the buddha-nature, which is said to have four perfect virtues ([GUNAṖĀRAMITĀ](#)): permanence, bliss, selfhood, and purity. Those who have not realized the buddha-nature make two fundamental mistakes about emptiness ([ŚŪNYATĀ](#)): either viewing emptiness as annihilation (see [UCCHEDADRSTĪ](#)), assuming that the experience of [NIRVĀNA](#) requires the extinction of the phenomenal world; or substantiating emptiness by presuming that it is something distinct from materiality ([RŪPA](#)). Instead, the *Ratnagoṭravibhāga* asserts that the tathāgatagarbha is free from all the various types of afflictions, but fully contains the myriad inconceivable attributes of a buddha. The treatise also examines the specific deeds the buddhas perform for the welfare of all sentient beings. See also [FOXING](#).

[Ratnaguṇasamcayagāthā](#). (T. Yon tan rin po che sdud pa tshigs su bcad pa; C.

Fomu baodezang bore boluomi jing; J. Butsumo hōtokuzō hannya haramitsukyō; K. Pulmo podōkchang panya paramil kyōng 佛母寶德藏般若波羅蜜經). In Sanskrit, “Verses on the Collection of Precious Qualities,” the longer title is *Prajñāpāramitāratnaguṇasaṃcayagāthā*, or “Verses on the Collection of the Precious Qualities of the Perfection of Wisdom.” The *Ratnaguṇasaṃcayagāthā* epitomizes the early [MAHĀYĀNA](#) in its emphasis on the emptiness ([ŚŪNYATĀ](#)) of the aggregates ([SKANDHA](#)) and its praise of the path of the [BODHISATTVA](#) over that of the [ARHAT](#). The text is considered to be of particular importance in the history of the Mahāyāna because many of its verses, particularly those that appear early in the text, may represent some of the earliest expressions of Mahāyāna philosophy and may date as far back as 100 BCE. Another indication of the text’s antiquity is that it was translated into Chinese as early as the second century CE. The only extant Sanskrit version is that edited in the eighth century by [HARIBHADRA](#) to conform to the structure of the [ABHISAMAYĀLAMKĀRA](#), making the precise order of the original verses difficult to determine. Many Mahāyāna sūtras are composed of alternating verse and prose. The verses of the *Ratnaguṇasaṃcayagāthā* are written in an ancient meter, suggesting to some that they constitute part of an original sūtra, with the [AṢṬASĀHASRIKĀPRAJÑĀPĀRAMITĀ](#) (“Perfection of Wisdom in Eight Thousand Lines”) supplying the prose section. However, because the verses that appear in the *Ratnaguṇasaṃcayagāthā* are not in all cases identical to those in the *Aṣṭasāhasrikā*, the *Ratnaguṇasaṃcayagāthā* may have originally been a separate work. It appears as the verse recapitulations in the Chinese translation of the *Aṣṭasāhasrikā* and as the eighty-fourth chapter of the *Aṣṭadaśasāhasrikāprajñāpāramitā* (“Perfection of Wisdom in Eighteen Thousand Lines”) in its Tibetan translation.

[Ratnākaraśānti](#). (T. Shān ti pa/Rin chen ’byung gnas zhi ba) (c. late-tenth to early-eleventh century). Sanskrit proper name of an Indian scholar philosophically affiliated with the [YOGĀCĀRA](#) school, who resided and later taught at the monastic university of [VIKRAMAŚĪLA](#) in the northern region of ancient [MAGADHA](#) (modern Bengal). At Vikramaśīla, he studied under [RATNAKĪRTI](#) and [JITĀRI](#) and eventually become a prolific scholar of enormous breadth, who wrote significant works on logic, [MADHYAMAKA](#) and [PRAJÑĀPĀRAMITĀ](#), Yogācāra, and [TANTRA](#). Ratnākaraśānti composed at least thirteen works in Sanskrit. His writings on tantra are particularly noteworthy for their attempt to present a systematic view of tantric philosophy and practice from

the perspective of Buddhist scholasticism. His works on logic include the *Antarvyāptisamarthana*, on “pervasion” or “concomitance” ([VYĀPTI](#)). He wrote commentaries on the eight-thousand- and twenty-five-thousand-line [PRAJÑĀPĀRAMITĀ SŪTRAS](#) (entitled *Sārottamā* and *Śuddhamati*, respectively). His tantric works included commentaries on both the [HEVAJRATANTRA](#) and [GUHYASAMĀJATANTRA](#), as well as a work on the three vehicles, the *Triyānavyavasthāna*. During his tenure as a teacher at Vikramaśīla, he held the position of eastern gatekeeper. He was a teacher of [ATĪSA DĪPAMKARAŚRIJÑANA](#), and he offered instruction to Tibetan students, including the translator ['BROG MI SHĀKYA YE SHES](#), who transmitted the [LAM 'BRAS](#) (path and result) teachings to the 'Khon family, who founded the [SA SKYA](#) sect. Ratnākaraśānti's fame was so widespread that he was even invited by the Sinhalese king to travel to Sri Lanka and preach. In Tibetan sources, a Shānti pa (a common Tibetan abbreviation of the name Ratnākaraśānti) is reported to have been a student of the renowned tantric adept and scholar [NĀROPA](#) (1016–1100), and is listed as one of the eighty-four masters ([SIDDHAS](#)) in the [CATURAŚĪTISIDDHAPRAVṚTTI](#) (“History of the Eighty-Four Siddhas”).

[Ratnakīrti](#). (T. Dkon mchog grags pa). Eleventh-century [YOGĀCĀRA](#) logician and student of Jñānaśrīmitra at [VIKRAMAŚĪLA](#) monastery. He is the author of ten extant treatises on logic, including the *Apohasiddhi*, or “Proof of Exclusion.” The work deals with the topic of [APOHA](#), the theory that words refer to concepts rather than to objects in the world and that these concepts are the exclusion of their opposite, i.e., that one's idea of a table, for example, is not that of a specific table but rather a generic image of everything that is “non-nontable,” i.e., not not a table. Buddhist logicians considered the question of the negative and positive aspects of the meaning of words as well as their sequence; Ratnakīrti argued that they are simultaneous. The *Ratnakīrtikalā*, a commentary to the [ABHISAMAYĀLAMKĀRA](#), is attributed to Ratnakīrti, but its author may be a different scholar of the same name.

[ratnakula](#). (T. rin chen rigs; C. baobu; J. hōbu; K. pobu 寶部). In Sanskrit, “jewel family,” one of the “five lineages” or “five families” ([PAÑCAKULA](#); [PAÑCATATHĀGATA](#)) of tantric Buddhism. The five are usually given as the [TATHĀGATAKULA](#), [VAJRAKULA](#), [PADMAKULA](#), ratnakula, and the [KARMAKULA](#) (different tantras have different lists of these families). Those in the ratnakula become enlightened in the form of the buddha [RATNASAMBHAVA](#). Each of the

five families is associated with one of the five aggregates ([SKANDHA](#)), five wisdoms ([JÑĀNA](#)), five afflictions ([KLEŚA](#)), five elements, and five colors. For the ratnakula, the skandha is sensation ([VEDANĀ](#)), the wisdom is the wisdom of equality ([SAMATAJÑĀNA](#)); the affliction is pride, the color yellow, and the element earth.

[Ratnakūtasūtra](#). (T. Dkon mchog brtsegs pa'i mdo; C. Dabaoji jing; J. Daihōshakukyō; K. Taebojōk kyōng 大寶積經). In Sanskrit, “The Jewel-Heap Sūtra”; often known also as the *Mahāratnakūṭasūtra*, or “The Great Jewel-Heap Sūtra.” Despite its title, this is actually not one [SŪTRA](#) but rather an early collection of forty-nine independent [MAHĀYĀNA](#) sūtras. The texts contained in this collection cover a broad range of important [MAHĀYĀNA](#) topics, including detailed discussions of emptiness ([ŚŪNYATĀ](#)), [PURE LAND](#) practices, skillful means ([UPĀYA](#)), the importance of cultivating both compassion ([KARUNĀ](#)) and wisdom ([PRAJNĀ](#)), and other significant subjects. Many of the texts embedded in the collection are seminal to the Mahāyāna tradition. In this collection, we find treated such influential figures as the buddhas [AMITĀBHA](#) and [AKSOBHYA](#), the [BODHISATTVA MANJUŚRĪ](#), and the [ARHAT MAHĀKĀŚYAPA](#). Its [KĀŚYAPAPARIVARTA](#) chapter was widely cited in [MADHYAMAKA](#) treatises. The collections also contain pure land texts, including the longer [SUKHĀVATĪVYŪHASŪTRA](#) as well as the [AKSOBHATATHĀGATASYAVYŪHA](#) on the pure land of Akṣobhya. The *Trisaṃvaranirdeśaparivarta* explains the bodhisattva [VINAYA](#) and how it differs from the vinaya of the [ŚRĀVAKAS](#). Excerpts from the *Ratnakūṭasūtra* were translated into Chinese as early as the second century CE. While the entire collection is available in Chinese and Tibetan, only portions of it survive in Sanskrit. The *Ratnakūṭasūtra* occupies six volumes of the Tibetan canon ([BKA' 'GYUR](#)) (with fifty-two separate works in the [SDE DGE](#) edition, some with the same title but different content). In Chinese, the best-known recension of the *Ratnakūṭasūtra* is a massive 120-roll translation made by [BODHIRUCI](#) between 703 and 716 during the Tang dynasty; it incorporates in the collection some earlier translations of individual texts by [DHARMARAKSA](#), [KUMĀRAJĪVA](#), [ŚIKSĀNANDA](#), etc. There are also two shorter renderings of portions of the text, one attributed to [AN SHIGAO](#) in the latter half of the second century CE, the second to Jñānagupta (523–600) in 595 CE, both in only one roll.

[Ratnamati](#). (Rin chen blo gros; C. Lenamoti; J. Rokunamadai; K. Nūngnamaje 勒那摩提) (fl. c. 508 CE). In Sanskrit, “Bejeweled Intelligence,” name of an Indian

scholar and Chinese translator who lived during the fifth and sixth centuries CE. He was especially renowned for his prodigious memory of a great many [SŪTRA](#) verses. In 508 CE, Ratnamati traveled from India to the Northern Wei capital of Luoyang, where he began to work on a translation of [VASUBHANDU](#)'s "Treatise on the Ten Stages" (S. [DAŚABHŪMIVYĀKHYĀNA](#); C. [SHIDIJING LUN](#)) with [BODHIRUCI](#) and Buddhaśānta (d.u.). However, disagreements between the collaborators over the nature of the [ĀLAYAVIJÑĀNA](#) (viz., whether it was pure, impure, or both) led them to produce different translations. Those who studied Bodhiruci's rendering came to be known as the Northern [DILUN ZONG](#), while the followers of Ratnamati's version were known as the Southern Di lun zong. The Southern Di lun school was represented by Ratnamati's foremost pupil, Huiguang (468–537), who advocated that the ālayavijñāna was an ultimate truth ([PARAMĀRTHASATYA](#)) and coextensive with the buddha-nature ([FOXING](#)), which thus was in fact innate. Ratnamati subsequently went on to collaborate with other scholars on the translation of other works, including the [RATNAGOTRAVIBHĀGA](#), and the *Saddharmapuṇḍarīkopadeśa* attributed to [VASUBANDHU](#). ¶ Ratnamati is also the name of a bodhisattva who appears in various [MAHĀYĀNA](#) sūtras.

[Ratnameghasūtra](#). (T. Dkon mchog sprin gyi mdo; C. Baoyun jing; J. Hōungyō; K. Poun kyōng 寶雲經). The "Cloud of Jewels," an important Mahāyāna sūtra, perhaps dating from the third or fourth century CE. It opens with the Buddha residing on the peak of Mt. Gayāśīrṣa when the [BODHISATTVA SARVANĪVARANA VIŠKAMBHĪ](#) approaches the Buddha and asks him more than one hundred questions ranging from the practice of giving ([DĀNA](#)) and the six perfections ([PĀRAMITĀ](#)) to the means of swiftly attaining [ANUTTARASAMYAKSAMBODHI](#). The Buddha's answers to these questions are widely quoted in later [ŚĀSTRAS](#). In China, during the Ming dynasty, there were charges that interpolations were made in the sūtra during the reign of the Empress [WU ZETIAN](#) in order to legitimize her usurpation of the throne. These interpolations included the story of Prince Moonlight (Yueguang tongzi), who received a prediction from the Buddha that he would later become a great queen in China.

[Ratnapāni](#). (T. Lag na rin chen; C. Baoshou pusa; J. Hōshu bosatsu; K. Posu posal 寶手菩薩). In Sanskrit, lit. "Bejeweled Hand" i.e., "one whose hand holds a jewel"; the name of a [BODHISATTVA](#) who is most often associated with the

buddha [RATNASAMBHAVA](#), one of the five [TATHĀGATAS](#) ([PAÑCATATHĀGATA](#)) who are associated with the [SARVATATHĀGATATATTVASAMGRAHA](#)'s [VAJRADHĀTU](#) and [GARBHADHĀTU MANDALAS](#). Ratnapāṇi is usually depicted as seated with his right hand in the “gesture of generosity” or “boon-granting gesture” ([VARADAMUDRĀ](#)); his left hand sits in his lap and holds a wish-fulfilling gem ([CINTĀMANI](#)).

[Ratnasambhava](#). (T. Rin chen 'byung gnas; C. Baosheng rulai; J. Hōshō nyorai; K. Posaeng yōrae 寶生如來). In Sanskrit, “Born of a Jewel,” one of the [PAÑCATATHĀGATAS](#). He is the buddha of the ratna family ([RATNAKULA](#)) and his pure land is located in the south. He is often accompanied by the bodhisattva [RATNAPĀNI](#) and his [NIRMĀNAKĀYA](#) is [KĀŚYAPA](#). He is depicted as golden in hue, displaying the [VARADAMUDRĀ](#) with his right hand (often with jewels pouring forth), and a [CINTĀMANI](#) in his left hand; these jewels suggest his ability to both provide material wealth and to enrich one's knowledge of the dharma. He is sometime depicted riding a horse or a pair of lions. When depicted with a consort, it is either Locanā or Māmakī. The least developed of the five tathāgatas, Ratnasambhava is rarely depicted alone and does not seem to have become the object of cultic worship.

[ratnatraya](#). [alt. triratna] (P. ratanattaya/tiratana; T. dkon mchog gsum; C. sanbao; J. sanbō; K. sambo 三寶). In Sanskrit, the “three jewels,” also translated into English as the “triple gem” or the “three treasures”; the term is also often given as triratna. In the Buddhist tradition, [RATNATRAYA](#) refers to the three principal objects of veneration: the Buddha, the [DHARMA](#), and the [SAMGHA](#). One of the most common practices that define a Buddhist is “taking refuge” (see [ŚARANA](#)) in the three jewels. This formula, which accompanies many lay and monastic rituals, involves a formal declaration that the practitioner “goes to” each of the three jewels for refuge (śaraṇa) or protection. The Sanskrit formula is as follows: “Buddhaṃ śaraṇaṃ gacchāmi. Dharmāṃ śaraṇaṃ gacchāmi. Saṃghaṃ śaraṇaṃ gacchāmi.” meaning “I go to the Buddha for refuge. I go to the dharma for refuge. I go to the saṃgha for refuge.” By repeating this formula three times, one identifies oneself as a Buddhist. (See also [TRIŚARANA](#).) The precise meanings of these three terms, how they relate to one another, and exactly how each one is to be venerated are all subjects of extensive commentary within the tradition. The term buddha refers first, and most obviously, to the historical Buddha, [GAUTAMA](#) or [ŚĀKYAMUNI](#), the sage of ancient India who realized and then taught the way to end all suffering. But the Buddha may also

refer to any number of buddhas found in the extensive [MAHĀYĀNA](#) pantheon. In some varieties of the Mahāyāna, buddha may even refer to the inherent state of buddhahood that is the fundamental characteristic of all sentient beings. The term dharma refers to the teachings of a buddha, which can take a variety of possible forms including specific beliefs, texts, or practices; the dharma is sometimes divided into the scriptural dharma ([ĀGAMADHARMA](#)) and the realized dharma ([ADHIGAMADHARMA](#)). In the context of the three jewels, one is said to go for refuge in the latter. However, dharma may also refer to the pervasive, universal truth that is realized by a buddha, particularly as enshrined in the teaching of the [FOUR NOBLE TRUTHS](#) (catvāry āryasatyāni). Some commentators specify that in the context of the three jewels, the dharma refers to the third and fourth of the four truths, the truth of cessation ([NIRODHASATYA](#)) and the truth of the path ([MĀRGASATYA](#)), and most specifically to the truth of cessation. The term saṃgha refers to the community that seeks to realize and enact the teachings of a buddha for the sake of its own liberation and the liberation of others. Saṃgha is usually understood to include only those followers who have renounced the life of a householder ([PRAVRAJITA](#)) and taken up the life of a monk ([BHIKSU](#)) or nun ([BHIKSUNI](#)). However, the saṃgha is also sometimes interpreted to include both laymen ([UPĀSAKA](#)) and laywomen ([UPĀSIKĀ](#)) as well. In the context of refuge, the saṃgha is generally said to refer to those members of the community who are [ĀRYAPUDGALA](#). See [ĀRYASAMGHA](#).

[Ratnāvalī](#). (T. Rin chen phreng ba; C. Baoxingwang zheng lun; J. Hōgyō ō shōron; K. Pohaengwang chōng non 寶行王正論). In Sanskrit, “Garland of Jewels,” a Sanskrit work by the [MADHYAMAKA](#) philosopher [NĀGĀRJUNA](#). The work consists of five hundred verses arranged in five chapters. While the *Ratnāvalī* contains many of Nāgārjuna’s fundamental philosophical ideas, grounded primarily in the notion of emptiness ([ŚŪNYATĀ](#)), the work is more focused on issues of ethics. The *Ratnāvalī* is addressed to King Gautamīputra of [ĀNDHRA](#), a friend and patron of Nāgārjuna, and much of the text discusses the proper conduct of the laity, particularly those in administrative positions such as ministers and kings. In particular, the fourth chapter is devoted to an exploration of kingship and the proper management of a kingdom. The work also contains a defense of the Mahāyāna as the word of the Buddha ([BUDDHAVACANA](#)), an exposition of the collection of merit ([PUNYASAMBHĀRA](#)) and the collection of wisdom ([JÑĀNASAMBHĀRA](#)), a description of the ten bodhisattva stages ([BHŪMI](#)) based on the [DAŚABHŪMIKASŪTRA](#), and a correlation of the practice of specific

virtues with the achievement of the thirty-two marks of a superman ([MAHĀPURUṢĀLAKṢANA](#)). There are complete versions of the work extant in Tibetan and Chinese translations, but only parts survive in the original Sanskrit.

[Ratthapāla](#). (P). See [RĀSTRAPĀLA](#).

[raudracāra](#). (T. drag po'i las). In Sanskrit, “wrathful action,” a synonym for [ABHICARA](#). See [ABHICARA](#).

[raurava](#). (P. roruva; T. ngu 'bod; C. jiaohuan [diyu]; J. kyōkan[jigoku]; K. kyuhwan [chiok] 叫喚[地獄]). In Sanskrit, “crying” or “weeping,” the name of the fourth of the eight hot hells, described as a land of red-hot iron where the denizens constantly weep because of their horrendous suffering.

[rddhi](#). (P. iddhi; T. rdzu 'phrul; C. shenli; J. jinriki; K. sillyōk 神力). In Sanskrit, “psychic powers,” any number of supernatural powers regarded as a by-product of deep states of meditation ([DHYĀNA](#)). When listed as one of the six supranormal powers ([ABHIJÑĀ](#); see also [RDDHIVIDHĀBHIJÑĀ](#)), these psychic powers include: (1) the ability to replicate one's body and, having done so, to make it one again; (2) the ability to pass through solid objects, such as walls and mountains, as if they were air; (3) the ability to walk on water as if it were solid earth; (4) the ability to fly through the air like a bird, even with one's legs crossed; and (5) the ability to touch the sun and the moon with one's hand. Such powers may be attained by any [YOGIN](#), whether Buddhist or non-Buddhist, and are not in themselves an indicator of enlightenment. The Buddha is said to have generally dissuaded his monks from the display of such powers, although Buddhist texts are replete with accounts of such displays, including by the Buddha himself.

[rddhipāda](#). (P. iddhipāda; T. rdzu 'phrul gyi rkang pa; C. si shenzu; J. shijinsoku; K. sasinjok 四神足). In Sanskrit, “bases of psychic powers,” the four qualities that are regarded as prerequisites for the attainment of magical power. They are aspiration ([CHANDA](#)), thought ([CITTA](#)), effort ([VĪRYA](#)), and analysis (mīmāṃsā).

[rddhividhābhijñā](#). (P. iddhividhābhijñā; T. rdzu 'phrul mngon shes; C. shenjing zhizhengtong; J. jinkyōchishōtsū; K. sin'gyōng chijūngt'ong 神境智證通). In Sanskrit, “psychic supranormal powers,” referring to a set of five mundane

([LAUKIKA](#); P. lokiya) supranormal powers ([ABHIJÑĀ](#); P. abhiññā) produced through the perfection of meditative absorption ([DHYĀNA](#)). These psychic powers ([RDDHI](#)) include (1) the ability to replicate one's body and, having done so, to make it one again; (2) the ability to pass through solid objects, such as walls and mountains, as if they were air; (3) the ability to walk on water as if it were solid earth; (4) the ability to fly through the air like a bird, even with one's legs crossed; and (5) the ability to touch the sun and the moon with one's hand. See also [RDDHI](#).

[Rdo grub chen](#). (Do Drupchen). An important monastic seat of the [RNYING MA](#) sect of Tibetan Buddhism. The first Rdo grub chen lama, 'Jigs med phrin las 'od zer (Jigme Tinle Öser, 1742–1821) founded the monastery of Yar klungs Padma bkod in the Mgo log region of A mdo in 1810. His successor, 'Jigs med phun tshogs (Jikme Puntsok), founded another monastery in the same region at Rdo stod. The third Rdo grub chen lama, 'Jigs med bstan pa'i nyi ma (Jikme Tenpe Nyima, 1865–1926), a student of the [RIS MED](#) masters '[JAM DBYANGS MKHYEN BRTSE I DBANG PO](#) and '[JAM MGON KONG SPRUL BLO GROS MTHA' YAS](#), constructed a seminary there, attracting a large number of students.

[Rdo grub chen incarnations](#). (Do Drupchen). An important Tibetan Buddhist incarnation lineage associated with the transmission of the [KLONG CHEN SNYING THIG](#) tradition revealed by '[JIGS MED GLING PA](#). The incarnation lineage includes:

1. 'Jigs med phrin las 'od zer (1745–1821)
2. 'Jigs med phun tshogs 'byung gnas (1824–1863)
3. 'Jigs med bstan pa'i nyi ma (1865–1926)
- 4a. Rig 'dzin bstan pa'i rgyal mtshan (1927–1961)
- 4b. Thub bstan phrin las dpal bzang (b. 1927)

The first incarnation, 'Jigs med phrin las 'od zer (Jikme Tinle Öser), was born in the Rdo valley of Mgo log, in eastern Tibet, and for this reason was later known as Rdo grub chen, the “great adept (grub chen) of Rdo.” Despite the fact that he was not recognized as an incarnate lama ([SPRUL SKU](#)) at a young age, his youth is described as having been filled with visionary experiences of his past lives. He spent his early life studying under numerous masters throughout eastern, central, and southern Tibet, although it was only at the age of forty-one that he met his principal [GURU](#), 'Jigs med gling pa, from whom he received the entire [RNYING MA](#) transmissions of [BKA' MA](#) and [GTER MA](#) and by whom he was certified as the principal lineage holder of the klong chen snying thig tradition. His fame as a

spiritual luminary spread and traveled widely among the great monastic communities of eastern Tibet, teaching many of the great Rnying ma masters of his day and establishing the monastic center of Yar klungs Padma bkod in eastern Tibet. The second incarnation, 'Jigs med phun tshogs 'byung gnas (Jikme Puntsok Jungne), was known for his ability to perform miraculous feats, and he continued many of the traditions of his predecessor. He also laid the foundations for what would later become the famed Rdo grub chen monastery. The third incarnation, 'Jigs med bstan pa'i nyi ma (Jikme Tenpe Nyima), was born into a prominent family in the Mgo log region of eastern Tibet: his father was Bdud 'joms gling pa (1835–1903), a famed treasure revealer ([GTER STON](#)), and his seven younger brothers were all recognized as incarnate lamas. He studied under many great Rnying ma masters, including [DPAL SPRUL RIN PO CHE](#) and ['JAM DBYANGS MKHYEN BRTSE DBANG PO](#). Two individuals were recognized as the fourth incarnation and were enthroned simultaneously at Rdo grub chen monastery in about 1930. They continued their education together until the age of twenty. The first, Rig 'dzin bstan pa'i rgyal mtshan, was imprisoned during the Chinese invasion of Tibet and died in a prison labor camp. In 1957, the second incarnation, Thub bstan phrin las dpal bzang, escaped into exile in Sikkim where he established a permanent residence. He later became a representative at the Sikkim Research Institute of Tibetology in Gangtok and traveled widely throughout Europe and the United States.

[Rdo rje brag](#). (Dorje Drak). The monastic seat for the BYANG GTER or “Northern Treasure” tradition of the [RNYING MA](#) sect of Tibetan Buddhism, located on the Gtsang po (Tsangpo) River in central Tibet. The Byang gter tradition originated with the treasure revealer Dngos grub rgyal mtshan (Ngödrup Gyaltzen), better known as [RGOD LDEM CAN](#). His subsequent reincarnations, called the Rdo rje brag rig 'dzin (“the [VIDYĀDHARAs](#) of Dorje Drak”), became the institution’s principal teacher. Rdo rje brag monastery was established in its present location in the sixteenth century by the third Rdo rje brag rig 'dzin Ngag gi dbang po (Ngaki Wangpo, 1580–1639), together with his master Bkra shis stobs rgyal (Tashi Topgyal, 1550?–1603). It was greatly expanded by the fourth Rdo rje brag rig 'dzin Padma 'phrin las (Pema Trinle, 1641–1717), but was subsequently destroyed (and Padma 'phrin las himself killed) during the Dzungar Mongol invasion. It was again demolished during the Chinese Cultural Revolution and has since been rebuilt. The monastery takes its name, lit. “vajra cliffs,” from the shape of the surrounding rock face, said to resemble the shape of a [VAJRA](#). Rdo

rje brag is one of the six major Rnying ma monasteries; besides [SMIN GROL GLING](#) in central Tibet, they are [KAH THOG](#), [ZHE CHEN](#), [RDZOGS CHEN](#), and [DPAL YUL](#) in Khams.

[Rdo rje gling pa](#). (Dorje Lingpa) (1346–1405). A Tibetan Buddhist master, identified as the third of the five kingly treasure revealers ([GTER STON RGYAL PO LNGA](#)), and considered to be an emanation of the Tibetan king [KHRI SRONG LDE BTSAN](#). As a youth, he took monastic ordination and studied both the ancient ([RNYING MA](#)) and new ([GSAR MA](#)) traditions of the sūtras and tantras. At age thirteen he discovered his first treasure text ([GTER MA](#)) behind a miracle-performing image of [TĀRĀ](#) in the [KHRA 'BRUG](#) temple. He considered himself to be the incarnation of the translator [VAIROCANA](#) and was guided by visions of him. When doubts were raised about the authenticity of his treasures, he began discovering texts and sacred objects in public settings. In addition to his discoveries, he was famous for his eccentric behavior and spontaneous songs. Rdo rje gling pa is said to have unearthed forty-three sets of treasure, foremost of which was the *Bla rdzogs thugs gsum* (“Trio of the Guru, Great Perfection, and Great Compassionate One”).

[Rdo rje grags ldan](#). (Dorje Drakden). A Tibetan [DHARMAPĀLA](#) associated with [PE HAR RGYAL PO](#) as his “minister” (T. blon po) who also takes possession of Pe har’s medium, the [GNAS CHUNG](#) chos rje (Nechung Chöje), the “state oracle” of Tibet. One version of the origin of the oracle is that Rdo rje grags ldan, wishing to rise above his present status, began to appear to the monks of Tshal gung thang. Rather than inviting the god to take up residence at the monastery, they trapped him in a box, which they threw into the river. This box made its way to Gnas chung, where he escaped. The monks there thought it appropriate to invite the chief deity of the emanation, and thus Pe har was brought to the monastery to serve as the oracle. Elsewhere, it is explained that because Pe har will soon attain enlightened status as a supramundane protector (’jig rten las ’das pa’i srung ma), he is increasingly reluctant to answer questions pertaining to mundane matters. For this reason, he occasionally sends Rdo rje grags ldan to speak for him through the Gnas chung cho rje.

[Rdo rje gro lod](#). (Dorje Drolö). One of the eight forms of [PADMASAMBHAVA](#), that in which he subdued harmful spirits at Spa ro stag tshang (Paro Taktsang) and established Buddhism in Bhutan. He is wrathful with one face with three eyes, holds a [VAJRA](#) and a dagger ([PHUR PA](#)), and rides a tiger.

[rdo rje gsum gyi bsnyen sgrub](#). (dorje sumgyi nyendrup). A rare Tibetan Buddhist tradition, lit. “propitiation and achievement of the three adamantine states,” closely related to the [KALACAKRATANTRA](#). It was originally promulgated by the great Tibetan adept [O RGYAN PA RIN CHEN DPAL](#), who is said to have received the instructions directly from [VAJRAYOGINĪ](#) while traveling through northwest India. O rgyan pa’s disciples composed several commentaries on the teaching, but it seems to have since fallen into obscurity.

[Rdo rje legs pa](#). (Dorje Lekpa). A Tibetan deity who was subdued by [PADMASAMBHAVA](#) at ’O yug bge’u tshang and became a [DHARMAPĀLA](#). He is a member of the gter gyi srung ma sde bzhi, “the four guardians of treasure,” who guard the treasures of the four quarters of the world; he occupies the southern quarter and guards gold. He is depicted riding a goat and wearing a broad-brimmed hat. His origin legends include being born from the union of two demons ([BDUD](#)) as well as being the spirit of a learned but sinful Indian monk from [NALANDĀ](#). He is said to take possession of numerous mediums.

[Rdo rje shugs ldan](#). (Dorje Shukden). A protector of the [DGE LUGS](#) sect of Tibetan Buddhism. According to his legend, he is the spirit of Grags pa rgyal mtshan (Drakpa Gyaltsen), an alternate candidate for the position of fifth [DALAI LAMA](#) and a distinguished scholar who later was either assassinated or committed suicide. Grags pa rgyal mtshan was himself said to be the reincarnation of Paṅ chen Bsod nams grags pa (Sönam Drakpa), an important abbot of [’BRAS SPUNGS](#) monastery after the death of the third Dalai Lama. Following the death of Grags pa rgyal mtshan, numerous calamities struck the Tibetan capital and the person of the fifth Dalai Lama. The Tibetan government enlisted the aid of the abbot of [SMIN SGROL GLING](#) monastery, who successfully convinced the spirit to adopt the role of protector of the Dge lugs pa, in which role he is said to guard against the corrupting influences of other sects’ teachings, specifically those of the [RNYING MA](#) sect. He resides outside [GNAS CHUNG](#) monastery below ’Bras spungs monastery, outside of [LHA SA](#), where the east gate is always locked to keep him from entering and displacing the state oracle, [PE HAR RGYAL PO](#). He is depicted riding a snow lion. He has one face and three eyes and is holding a khaḍga and skull cup (S. [KAPĀLA](#)), with a mongoose and a golden goad (aṅkuśa) held in his left arm. Since the early twentieth century, Rdo rje shugs ldan became a widely worshipped protector of the Dge lugs pa due largely to the prominent Dge lugs cleric Pha bong kha pa (1878–

1943). Both the thirteenth and fourteenth Dalai Lamas outlawed his worship on the grounds that he is in fact a harmful spirit, with the proclamations of the fourteenth Dalai Lama generating opposition from within the Dalai Lama's own Dge lugs sect, especially from monks who had been close disciples of the Dalai Lama's junior tutor Khri byang rin po che. In 1997, the principal of the School of Buddhist Dialectics in [DHARMAŚĀLĀ](#), India, [DGE BSHEŠ](#) Blo bzang rgya mtsho (Geshe Losang Gyatso), a supporter of the Dalai Lama's position, was brutally murdered. The Indian authorities issued arrest warrants for six men, mainly from the Cha phreng region of eastern Tibet associated with a group supporting worship of Rdo rje shugs ldan.

[Rdo rje tshig rkang](#). (Dorje Tsikang). In Tibetan, “[VAJRA](#) Verses,” a text whose content is said to have originated with the Indian adept [VIRŪPA](#). The work forms a scriptural basis for the [SA SKYA](#) tradition of tantric theory and practice known as [LAM 'BRAS](#) (“path and result”). The work presents a summary of the entire tantric path to enlightenment, from the most basic points of doctrine to the consummate tantric meditative practices. The text is said to have been transmitted in purely oral form for at least eight generations. According to traditional accounts, Virūpa received the content of these teachings as a direct visionary transmission from the deity [NAIRĀTMYĀ](#), on the basis of which he formulated the condensed instructions known as the *Rdo rje tshig khang*. Virūpa first taught the verses to his disciple Kāṇha, who taught them to Ḍāmaruṇa. They were passed to Avadhūti and then to the master Gayadhara (d. 1103), who traveled to Tibet in 1041 and transmitted the teachings to the great Sa skya founder and translator ['BROG MI SHĀKYA YE SHES](#). The latter taught the work orally in Tibetan (translated from the Indian dialect) and it was memorized and transmitted in this fashion until the prominent Sa skya master [SA CHEN KUN DGA' SNYING PO](#) promulgated them in written form.

[rdzogs chen](#). (dzokchen). A Tibetan philosophical and meditative tradition, usually rendered in English as “great perfection” or “great completion.” Developed and maintained chiefly within the [RNYING MA](#) sect, rdzogs chen has also been embraced to varying degrees by other Tibetan Buddhist sects. The non-Buddhist Tibetan [BON](#) religion also upholds a rdzogs chen tradition. According to legend, the primordial buddha [SAMANTABHADRA](#) (T. Kun tu bzang po) taught rdzogs chen to the buddha [VAJRASATTVA](#), who transmitted it to the first human lineage holder, [DGA' RAB RDO RJE](#). From him, rdzogs chen was

passed to [MAÑJUŚRĪMITRA](#) and thence to [ŚRĪSIMHA](#), and the Tibetan translator Ba gor [VAIROCANA](#), who had been sent to India by the eighth-century Tibetan King [KHRI SRONG LDE BTSAN](#). In addition to Vairocana, the semimythical figures of [VIMALAMITRA](#) and [PADMASAMBHAVA](#) are considered to be foundational teachers of rdzogs chen in Tibet. Historically, rdzogs chen appears to have been a Tibetan innovation, drawing on multiple influences, including both non-Buddhist native Tibetan beliefs and Chinese and Indian Buddhist teachings. The term was likely taken from the [GUHYAGARBHATANTRA](#). In the creation and completion stages of tantric practice, one first generates a visualization of a deity and its [MANDALA](#) and next dissolves these into oneself, merging oneself with the deity. In the *Guhyagarbha* and certain other tantras, this is followed with a stage known as rdzogs chen, in which one rests in the unelaborated natural state of one's own innately luminous and pure mind. In the Rnying ma sect's nine-vehicle (T. [THEG PA DGU](#)) doxography of the Buddhist teachings, these three stages constitute the final three vehicles: the [MAHĀYOGA](#), [ANUYOGA](#), and [ATIYOGA](#), or rdzogs chen. The rdzogs chen literature is traditionally divided into three categories, which roughly trace the historical development of the doctrine and practices: the mind class ([SEMS SDE](#)), space class ([KLONG SDE](#)), and instruction class ([MAN NGAG SDE](#)). These are collected in a group of texts called the [RNYING MA'I RGYUD 'BUM](#) ("treasury of Rnying ma tantras"). The mind class is comprised largely of texts attributed to Vairocana, including the so-called eighteen tantras and the [KUN BYED RGYAL PO](#). They set forth a doctrine of primordial purity (ka dag) of mind (sems nyid), which is the basis of all things (kun gzhi). In the natural state, the mind, often referred to as [BODHICITTA](#), is spontaneously aware of itself (rang rig), but through mental discursiveness (rtog pa) it creates delusion ('khrul ba) and thus gives rise to [SAMŚĀRA](#). Early rdzogs chen ostensibly rejected all forms of practice, asserting that striving for liberation would simply create more delusion. One is admonished to simply recognize the nature of one's own mind, which is naturally empty (stong pa), luminous ('od gsal ba), and pure. As tantra continued to grow in popularity in Tibet, and new techniques and doctrines were imported from India, a competing strand within rdzogs chen increasingly emphasized meditative practice. The texts of the space class (klong sde) reflect some of this, but it is in the instruction class (man ngag sde), dating from the eleventh to fourteenth centuries, that rdzogs chen fully assimilated tantra. The main texts of this class are the so-called seventeen tantras and the two "seminal heart" collections, the [BI MA SNYING THIG](#) ("Seminal Heart of Vimalamitra") and the [MKHA' 'GRO SNYING THIG](#) ("Seminal Heart of the [DĀKINĪ](#)"). The seventeen tantras

and the “Seminal Heart of Vimalamitra” are said to have been taught by Vimalamitra and concealed as “treasure” ([GTER MA](#)), to be discovered at a later time. The “Seminal Heart of the Dākinī” is said to have been taught by Padmasambhava and concealed as treasure by his consort, [YE SHES MTSHO RGYAL](#). In the fourteenth century, the great scholar [KLONG CHEN RAB 'BYAMS PA DRI MED 'OD ZER](#) systematized the multitude of received rdzogs chen literature in his famous [MDZOD BDUN](#) (“seven treasures”) and the [NGAL GSO SKOR GSUM](#) (“Trilogy on Rest”), largely creating the rdzogs chen teachings as they are known today. With the man ngag sde, the rdzogs chen proponents made full use of the Tibetan innovation of treasure, a means by which later tantric developments were assimilated to the tradition without sacrificing its claim to eighth-century origins. The semilegendary figure of Padmasambhava was increasingly relied upon for this purpose, gradually eclipsing Vairocana and Vimalamitra as the main rdzogs chen founder. In subsequent centuries there have been extensive additions to the rdzogs chen literature, largely by means of the treasure genre, including the [KLONG CHEN SNYING THIG](#) of ['JIGS MED GLING PA](#) and the *Bar chad kun gsal* of [MCHOG GYUR GLING PA](#) to name only two. Outside of the Rnying ma sect, the authenticity of these texts is frequently disputed, although there continue to be many adherents to rdzogs chen from other Tibetan Buddhist lineages. Rdzogs chen practitioners are commonly initiated into the teachings with “pointing-out instructions” (sems khrid/ngos sprod) in which a lama introduces the student to the nature of his or her mind. Two main practices known as [KHREGS CHOD](#) (breakthrough), in which one cultivates the experience of innate awareness ([RIG PA](#)), and [THOD RGAL](#) (leap over), elaborate visualizations of external light imagery, preserve the tension between the early admonition against practice and the appropriation of complex tantric techniques and doctrines. Extensive practices engaging the subtle body of psychic channels, winds, and drops (rtsa rlung thig le) further reflect the later tantric developments in rdzogs chen. ¶ [RDZOGS CHEN](#) is also used as the short name for one of the largest and most active Tibetan monasteries, belonging to the Rnying ma sect of Tibetan Buddhism, located in the eastern Tibetan region of Khams; the monastery’s full name is Rus dam bsam gtan o rgyan chos gling (Rudam Samten Orgyan Chöling). It is a major center for both academic study and meditation retreat according to Rnying ma doctrine. At its peak, the monastery housed over one thousand monks and sustained more than two hundred branches throughout central and eastern Tibet. The institution was founded in 1684–1685 by the first [RDZOGS CHEN INCARNATION](#) Padma rig 'dzin (Pema Rikdzin) with the support of

the fifth [DALAI LAMA NGAG DBANG BLO BZANG RGYA MTSHO](#). Important meditation hermitages in the area include those of [MDO MKHYEN RTSE YE SHE RDO RJE](#) and [MI PHAM 'JAM DBYANGS RNAM RGYAL RGYA MTSHO](#). [DPAL SPRUL RIN PO CHE](#) passed many years in retreat there, during which time he composed his great exposition of the preliminary practices of Tibetan Buddhism entitled the [KUN BZANG BLA MA'I ZHAL LUNG](#) (“Words of My Perfect Teacher”).

[Rdzogs chen incarnations](#). A lineage of incarnate lamas ([SPRUL SKU](#)) associated with [RDZOG CHEN](#) monastery. The first Rdzog chen incarnation, Rdzogs chen Padma rig 'dzin (Dzokchen Pema Rikdzin), founded the monastery at the behest of the fifth [DALAI LAMA](#). The lineage comprises:

1. Rdzogs chen Padma rig 'dzin (1625–1697);
2. Rdzogs chen 'Gyur med theg mchog bstan 'dzin (Dzokchen Gyurme Tekchok Tendzin, 1699–1758);
3. Rdzogs chen Nges don bstan 'dzin bzang po (Dzokchen Ngedön Tendzin Sangpo, 1759–1792);
4. Rdzogs chen Mi 'gyur nam mkha'i rdo rje (Dzokchen Mingyur Namkhe Dorje, b. 1793);
5. Rdzogs chen Thub bstan chos kyi rdo rje (Dzokchen Tupten Chökyi Dorje, 1872–1935);
6. Rdzogs chen 'Jigs bral byang chub rdo rje (Dzokchen Jikdrel Jangchup Dorje, 1935–1959);
7. Rdzogs chen 'Jig med blo gsal dbang po (Jikme Losel Wangpo) (b. 1964).

[rdzogs chen sde gsum](#). (dzokchen desum). Three major divisions of [RDZOGS CHEN](#) teachings in the Tibetan Buddhist tradition: the [SEMS SDE](#) (mental class), the [KLONG SDE](#) (space class), and the [MAN NGAG SDE](#) (instruction class). Of them, only the man ngag sde is now widely disseminated based on the tradition going back to [KLONG CHEN PA](#).

[Rdzogs pa chen po klong chen snying thig](#). See [KLONG CHEN SNYING THIG](#).

[Rdzong gsar](#). (Dzongsar). A Tibetan Buddhist monastery established in 1253 by the illustrious [SA SKYA](#) hierarch ['PHAGS PA BLO GROS RGYAL MTSHAN](#) in the [SDE DGE](#) region of eastern Tibet. It was greatly expanded during the nineteenth century by the great master ['JAM DBYANG MKHYEN BRTSE DBANG PO](#) and his incarnation Rdzong gsar mkhyen brtse Chos kyi blo gros, who added a teaching institute ([BSHAD GRWA](#)). For the past several centuries, Rdzong gsar has been renowned as one of Tibet's premier centers for intellectual study. Its full name is Rdzong gsar bkra shis lha rtse (Dzongsar Tashi Lhatse).

[rebirth](#). An English term that does not have an exact correlate in Buddhist

languages, rendered instead by a range of technical terms, such as the Sanskrit [PUNARJANMAN](#) (lit. “birth again”) and [PUNARBHAVA](#) (lit. “rebecoming”), and, less commonly, the related [PUNARMRTYU](#) (lit. “redeath”). The Sanskrit term [JĀTI](#) (“birth”) also encompasses the notion of rebirth. The doctrine of rebirth is central to Buddhism. It was not an innovation of the Buddha, being already common to a number of philosophical schools of ancient India by the time of his appearance, especially those connected with the [ŚRAMANA](#) movement of religious mendicants. Rebirth (sometimes called metempsychosis) is described as a beginningless process in which a mental continuum (see [SAMTĀNA](#)) takes different (usually) physical forms lifetime after lifetime within the six realms ([GATI](#)) of [SAMSĀRA](#): divinities ([DEVA](#)), demigods ([ASURA](#)), humans ([MANUSYA](#)), animals ([TIRYAK](#)), ghosts ([PRETA](#)), and hell denizens ([NĀRAKA](#)). The cycle of rebirth operates through the process of activity ([KARMAN](#)), with virtuous ([KUŚĀLA](#)) actions serving as the cause for salutary rebirths among the divinities and human beings, and unvirtuous ([AKUŚĀLA](#)) actions serving as the cause of unsalutary rebirths ([DURGATI](#); [APĀYA](#)) among demigods, animals, ghosts, and hell denizens. The goal of the Buddhist path has been traditionally described as the cessation of the cycle of rebirth through the eradication of its causes, which are identified as the afflictions ([KLEŚA](#)) of greed, hatred, and ignorance and the actions motivated by those defilements. Despite this ultimate goal, however, much traditional Buddhist practice has been directed toward securing rebirth as a human or divinity for oneself and one’s family members, while avoiding rebirth in the evil realms. The issue of how Buddhism reconciles the doctrine of rebirth with its position that there is no perduring self ([ANĀTMAN](#)) has long been discussed within the tradition. Some schools of mainstream Buddhism, such as the [VĀTSĪPUTRĪYA](#) or [PUDGALAVĀDA](#), have gone so far as to posit that, while there may be no perduring “self,” there is an “inexpressible” (avācya) “person” ([PUDGALA](#)) that is neither the same as nor different from the five aggregates ([SKANDHA](#)), which transmigrates from lifetime to lifetime. A more widely accepted view among the traditions sees the person as simply a sequence of mental and physical processes, among which is the process called consciousness ([VIJÑĀNA](#)). Consciousness, although changing every moment, persists as a continuum over time. Death is simply the transfer of this conscious continuum ([SAMTĀNA](#)) from one impermanent mental and physical foundation to the next, just as the light from one candle may be transferred to the next in a series of candles. The exact process by which rebirth occurs is variously described in the different Buddhist traditions, with some schools asserting that rebirth occurs in

the moments immediately following death, with other schools positing the existence of an “intermediate state” ([ANTARĀBHAVA](#)) between death in one lifetime and rebirth in another, with that period lasting as long as forty-nine days (see [SISHIJU \[RI\] ZHAI](#)). This state, translated as [BAR DO](#) in Tibetan, became particularly important in Tibet in both funerary rituals and in tantric practice, especially that of the [RNYING MA](#) sect. The reality of rebirth is one of the cardinal doctrines of Buddhism, which the religion claims can be empirically validated through direct spiritual insight (see [YOGIPRATYAKSA](#)). Indeed, understanding the validity of this cycle of rebirth is associated with two of the three types of knowledge ([TRIVIDYĀ](#)) that are experienced through the enlightenment of an [ARHAT](#) or a buddha: the ability to remember one’s own former lives ([PŪRVANIVĀSĀNUMRTI](#)) in all their detail and insight into the future rebirth destinies of all other beings based on their own actions (S. [CYUTYUPAPĀDĀNUMRTI](#)). See also [SAMŚĀRA](#).

[Record of Buddhist Kingdoms](#). See [FAXIAN ZHUAN](#).

[Record of the Western Regions](#). See [DA TANG XIYU JI](#).

[Red Hats](#). (C. hongmao 紅帽). A popular designation in both European languages and Chinese for the [BKA’ BRGYUD](#) and sometimes the [RNYING MA](#) sects of Tibetan Buddhism, whose lamas do indeed wear red hats. Although the term [ZHWA DMAR](#), or “Red Hat,” is used to designate an important lineage of incarnate lamas within the [KARMA BKA’ RGYUD](#) sect, the Western and Chinese division of major Tibetan Buddhist sects into the [YELLOW HATS](#), Red Hats, and [BLACK HATS](#) has no corollary within the Tibetan tradition and should be avoided.

[reigen](#). (靈驗). In Japanese, lit. “numinous verification,” a term used to refer to the miraculous efficacy of a prayer, vow, or religious praxis. The benefits are often understood as the result of the “sympathetic resonance” (C. [GANYING](#)) between buddhas and/or deities who are the objects of the prayer and the subject who engages in prayer. The term can also refer to the miraculous power and virtue of the buddhas and deities to respond to the prayers of people.

[reincarnation](#). See [REBIRTH](#), [PUNARBHAVA](#), [PUNARJANMAN](#), [SPRUL SKU](#).

[Reiyūkai](#). (靈友会/靈友會). In Japanese, lit. “Numinous Friends Society,” or “Society of Friends of the Spirits”; a Japanese Buddhist lay organization,

deriving from the teachings of the [NICHIRENSHŪ](#). It was founded in 1925 by [KUBO KAKUTARŌ](#) (1892–1944) and [KOTANI KIMI](#) (1901–1971), the wife of Kubo’s elder brother, who took over leadership of the organization and became president in 1944 upon Kubo’s death. Kubo insisted that everyone keep a family death register and give posthumous names to venerated ancestors; these activities were formerly the domain of monks, who would be paid for their services. His other ideas included the classical directive to convert the world into a [PURE LAND](#) for Buddhism and the need to teach others the truth. He particularly emphasized the ability of each individual to improve him or herself. Kubo’s ideas appealed to the poor and he began to attract converts quickly, including his brother Kotani Yasukichi and Kotani’s wife, Kotani Kimi. In 1971 after Kotani Kimi died, Kubo’s son Kubo Tsugunari took over as the leader of the group. For years he had prepared for this future, including studying Indian philosophy and Buddhism at Risshō University. Despite this preparation, Reiyūkai was rocked by what some viewed as his personal failings and political maneuverings and Kubo Tsugunari eventually lost his leadership post. More recent leaders have been elected democratically. Some noted activities in recent years include opening the Lumbinī International Research Institute in Nepal and the International College for Advanced Buddhist Studies in Tōkyō. The organization reached its peak during the years surrounding the Second World War, when it claimed some three million members, and was the source of numerous Nichiren-related new religious movements, of which the [RISSHŌ KŌSEIKAI](#), founded in 1938, became the most prominent. Reiyūkai continues to be an active lay organization in both Japan and abroad. The Reiyūkai organization has no clergy and no formal affiliation with any other Buddhist school, but instead relies on volunteer lay teachers who lead informal group meetings and discussions. Reiyūkai focuses on the human capacity for lifelong self-cultivation in order to become ever more wise and compassionate. All its adherents must have a personal sponsor in order to join the order. The school stresses ancestor worship, believing that personal and social ills are the result of inadequate veneration of ancestor spirits who have been unable to attain buddhahood and instead became guardian spirits until the proper rites are performed so they may be liberated. Its followers believe that reciting the [SADDHARMAPUNDARĪKASŪTRA](#) (“Lotus Sūtra”) in abridged form during daily morning and evening services or a group meeting transfers merit to their ancestors.

relics. See [DHĀTU](#), [ŚARĪRA](#), [STŪPA](#), [SUISHEN SHELĪ](#).

reliquary. See [STŪPA](#), [SHELIJU](#).

Rennyō. (蓮如) (1415–1499). In Japanese, “Lotus Suchness”; proper name of the Japanese monk who played a crucial role in the consolidation of [JŌDO SHINSHŪ](#) tradition. Rennyō was born at the monastery of [HONGANJI](#) in the Higashiyama district of Kyōto. He was the son of Zonnyō (1396–1457), himself a descendent of [SHINRAN](#) and the seventh abbot of Honganji. Despite some opposition from his stepmother and her son Nyojō (1412–1460), Rennyō succeeded his father as abbot of Honganji after his father’s death in 1457. Rennyō began expanding his sphere of influence by proselytizing in the outskirts of Kyōto. In 1465, the monks of [HIEIZAN](#) (see [ENRYAKUJI](#)) destroyed Honganji in order to restrict the spread of Rennyō’s influence in regions under [TENDAI](#) control. Rennyō was able to save the portrait of Shinran (goei) from destruction and installed it temporarily at the temple of [MIIDERA](#). After the attack, Rennyō wandered from region to region until he settled down far away from Mt. Hiei in Hokuriku (present-day Echizen), where he acquired a large following (of mostly peasants) through active proselytizing and the writing of pastoral letters (ofumi). In 1475, Rennyō returned to Kyōto, where he began the construction of a new Honganji in the district of Yamashina the following year. Rennyō also restored the hōonko memorial service for Shinran and established the nenbutsu (C. [NIANFO](#); see [NAMU AMIDABUTSU](#)) inscriptions as an important object of worship. In his writings, Rennyō also systematized the teachings of Shinran and criticized priestly corruption and “heretical” teachings that did not emphasize exclusive faith in the buddha [AMITĀBHA](#) and his name. Under Rennyō’s tenure as abbot, the Honganji complex grew into one of the most powerful monasteries of its era, controlling a vast network of subtemples. This period is traditionally considered to represent the institutional formation of Jōdo Shinshū.

rentian jiao. (C) (人天教). See [HUAYAN WUJIAO](#).

Renwang baigaozuo hui. (J. Ninnō hyakukōzae; K. Inwang paekkojwa hoe 仁王百高座會). In Chinese, lit., “Humane Kings assembly of one hundred high seats.” See [RENWANG JING](#); [HUGUO FOJIAO](#).

Renwang bore boluomi jing. (C) (仁王般若波羅蜜經). See [RENWANG JING](#).

Renwang huguo bore boluomiduo jing. (C) (仁王護國般若波羅蜜多經). See [RENWANG JING](#).

Renwang jing. (J. Ninnōgyō; K. Inwang kyōng 仁王經). In Chinese, “Scripture for Humane Kings”; an influential indigenous Chinese scripture (see [APOCRYPHA](#)), known especially for its role in “state protection Buddhism” ([HUGUO FOJIAO](#)) and for its comprehensive outline of the Buddhist path of practice ([MĀRGA](#)). Its full title (infra) suggests that the scripture belongs to the “perfection of wisdom” ([PRAJÑĀPĀRAMITĀ](#)) genre of literature, but it includes also elements drawn from both the [YOGĀCĀRA](#) and [TATHĀGATAGARBHA](#) traditions. The text’s audience and interlocutors are not the typical [ŚRĀVAKAS](#) and [BODHISATTVAS](#) but instead kings hailing from the sixteen ancient regions of India, who beseech the Buddha to speak this sūtra in order to protect both their states and their subjects from the chaos attending the extinction of the dharma ([MOFA](#); [SADDHARMAVIPRALOPA](#)). By having kings rather than spiritual mentors serve as the interlocutors, the scripture thus focuses on those qualities thought to be essential to governing a state founded on Buddhist principles. The text’s concepts of authority, the path, and the world draw analogies with the “humane kings” of this world who serve and venerate the transcendent monks and bodhisattvas. The service and worship rendered by the kings turns them into bodhisattvas, while the soteriological vocation of the monks and bodhisattvas conversely renders them kings. Thus, the relationship between the state and the religion is symbiotic. The sūtra is now generally presumed to be an indigenous Chinese scripture that was composed to buttress imperial authority by exalting the benevolent ruler as a defender of the dharma. The *Renwang jing* is also known for including the ten levels of faith ([ŚRADDHĀ](#)) as a preliminary stage of the Buddhist path prior to the arousal of the thought of enlightenment ([BODHICITTOTPĀDA](#)). It is one of a number of Chinese Buddhist apocrypha that seek to provide a comprehensive elaboration of all fifty-two stages of the path, including the [PUSA YINGLUO BENYE JING](#) and the [YUANJUE JING](#). The *Renwang jing* is not known in Sanskrit sources, but there are two recensions of the Chinese text. The first, *Renwang bore boluomi jing*, is purported to have been translated by [KUMĀRAJĪVA](#) and is dated to c. 402, and the latter, titled *Renwang huguo bore boluomiduo jing*, is attributed to [AMOGHAVAJRA](#) and dated to 765. The Amoghavajra recension is based substantially on the Kumārajīva text, but includes additional teachings on [MANDALA](#), [MANTRA](#), and [DHĀRANĪ](#), additions that reflect Amoghavajra’s place in the Chinese esoteric Buddhist tradition. Furthermore, because Amoghavajra was an advisor to three Tang-dynasty rulers, his involvement in contemporary politics may also have helped to shape the later version. Chinese scriptural catalogues ([JINGLU](#)) were already suspicious about the

authenticity of the *Renwang jing* as least as early as Fajing's 594 *Zhongjing mulu*; Fajing lists the text together with twenty-one other scriptures of doubtful authenticity ([YIJING](#)), because its content and diction do not resemble those of the ascribed translator. Modern scholars have also recognized these content issues. One of the more egregious examples is the [RENWANG JING](#)'s reference to four different perfection of wisdom (prajñāpāramitā) sūtras that the Buddha is said to have proclaimed; two of the sūtras listed are, however, simply different Chinese translations of the same text, the [PAÑCAVIMŚATISĀHASRIKĀPRAJÑĀPĀRAMITĀSŪTRA](#), a blunder that an Indian author could obviously not have committed. Another example is the scripture's discussion of a three-truth [SAMĀDHI](#) (sandi sanmei), in which these three types of concentrations are named worldly truth (shidi), authentic truth (zhendi), and supreme-meaning truth (diyiyidi). This schema is peculiar, and betrays its Chinese origins, because "authentic truth" and "supreme-meaning truth" are actually just different Chinese renderings of the same Sanskrit term, [PARAMĀTHASATYA](#). Based on other internal evidence, scholars have dated the composition of the sūtra to sometime around the middle of the fifth century. Whatever its provenance, the text is ultimately reclassified as an authentic translation in the 602 catalogue *Zongjing mulu* by Yancong and continues to be so listed in all subsequent East Asian catalogues. See also [APOCRYPHA](#); [SANDI](#).

[requisites](#). [alt. four, eight, or eighteen]. See [PARISKĀRA](#); [NĪŚRAYA](#).

[Revata](#). (T. Nam gru; C. Lipoduo; J. Ribata; K. Ibada 離婆多). Sanskrit and Pāli proper name of an important [ARHAT](#) who was foremost among the Buddha's monk disciples in mastery of meditative absorption ([DHYĀNA](#); P. [JHĀNA](#)). He is typically known as "doubting Revata" ([KĀNKSĀ-REVATA](#); P. Kankhā-Revata), to distinguish him from several other Revatas who appear in the literature, because prior to his enlightenment he is said to have been troubled by doubt concerning what was permissible and what was not. According to the Pāli account, Revata was born into a wealthy family in the city of Sāvītthi (S. [ŚRĀVASTĪ](#)). One day he heard the Buddha preach in Kapilavatthu (S. [KAPILAVASTU](#)) and resolved to renounce the world and enter the order. He attained arhatship by relying on dhyāna, and his exceptional skill in these meditative states won him distinction. Revata had resolved to attain this distinction in a previous life as a brāhmaṇa when, during the time of the buddha Padmottara, he heard the Buddha describe one of his disciples as preeminent in his attainment of dhyāna. In another famous

story, the mother of Uttara had been reborn as a hungry ghost (S. [PRETA](#), P. peta) and after fifty-five years of wandering, encountered Revata and begged him for relief. He relieved her suffering by making various offerings to the [SAMGHA](#) in her name. ¶ There was a later monk named Revata who played a major role at the second Buddhist council ([SAMGĪTI](#); see [COUNCIL, SECOND](#)) held at [VAIŚĀLĪ](#). Some one hundred years after the death of the Buddha, the monk [YAŚAS](#) was traveling in Vaiśālī when he observed the monks there receiving alms in the form of gold and silver directly from the laity, in violation of the prohibition against monks' touching gold and silver. He also found that the monks had identified ten points in the [VINAYA](#) that were classified as violations but that they had determined were sufficiently minor to be ignored. Yaśas challenged the monks on these practices, but when he refused to accept their bribes to keep quiet, they expelled him from the order. Yaśas sought support of several respected monks in the west, including [ŚĀNAKAVĀSĪN](#) and Revata, and together they traveled to Vaiśālī. Once there, Revata went to Sarvagāmin, the eldest monk of his era, who is said to have been a disciple of [ĀNANDA](#), to question him about these ten points. At Revata's suggestion, a jury of eight monks was appointed to adjudicate, with four representatives selected from each party. Revata was selected as one of four from the party declaring the ten practices to be violations, and it was Revata who publically put the questions to Sarvagāmin. In each case, the senior monk said that the practice in question was a violation of the vinaya. Seven hundred monks then gathered to recite the vinaya. Those who did not accept the decision of the council held their own convocation, which they called the [MAHĀSĀMGHIKA](#), or "Great Assembly." This event is sometimes said to have led to the first "great schism" within the mainstream Buddhist tradition, between the [STHAVIRANIKĀYA](#), or Fraternity of the Elders, and the Mahāsāṃghika.

Revatī. (T. Nam gru ma). In Sanskrit and Pāli, a laywoman whose story illustrates the unsalutary consequences of niggardliness toward monks and the salutary power of taking delight ([MUDITĀ](#)) in the virtue of others. According to the Pāli account, Revatī was the daughter of a householder of Vārāṇasī, who had no faith in the Buddha and was extremely uncharitable. Her husband was the wealthy lay patron of the Buddha, Nandiya, who had her partake in his meritorious deeds. When he went abroad, he asked his wife to continue his meritorious deeds toward the [SAMGHA](#). Revatī did so for seven days but then stopped and began to abuse the monks who came to her house for alms

([PINDAPĀTA](#)). As a consequence of their respective actions, upon her death, Revatī was reborn in hell, while Nandiya was reborn as a divinity in the [TRĀYĀSTRIMŚĀ](#) heaven. When he saw with his divine eye ([DIVYACAḤSUS](#)) that his wife had become a denizen of hell, he went to her and asked her to take delight in his meritorious deeds. As soon as she did so, Revatī became a divinity herself and resided with Nandiya in that same heaven. In Buddhist [TANTRA](#), particularly in the [SA SKYA](#) and [DGE LUGS](#) sects of Tibet, Śrīmatī Revatī (T. Dmag zor ma) (rendered “magical weapon army”) is a form of the protectress (T. srung ma) Śrīdevī (T. [DPAL LDAN LHA MO](#)).

[Rgod ldem can Dngos grub rgyal mtshan](#). (Gödemchen Ngödrup Gyaltsen) (1337–1408). An important master and treasure revealer ([GTER STON](#)) of the [RNYING MA](#) sect of Tibetan Buddhism, often venerated with the title rig ’dzin (S. [VIDYĀDHARA](#)). According to traditional accounts, three vulture feathers miraculously grew from the crown of his head at the age of twelve; five more appeared when he turned twenty-four. For this reason he is known as Rgod ldem can, the “vulture quilled.” He began his career as treasure revealer at twenty-nine, forming an important lineage known as the Northern Treasure (BYANG GTER) tradition. The Northern Treasures were eventually seated at [RDO RJE BRAG](#) monastery south of [LHA SA](#), with Rgod ldem can’s subsequent incarnations, known as the Rdo rje brag rig ’dzin lineage, serving as the institution’s abbot.

[Rgod tshang pa Mgon po rdo rje](#). (Götshangpa Gönpo Dorje) (1189–1258). A Tibetan Buddhist master revered as the founder of the upper (stod) branch of the [’BRUG PA BKA’ BRGYUD](#) sect of Tibetan Buddhism. He was born in the [LHO BRAG](#) region of southern Tibet, and as a child was known for his pleasing appearance and his beautiful singing voice. In his youth, he studied under a number of tutors and finally reached [RWA LUNG](#) monastery, where he met his principal guru, the ’Brug pa Bka’ brgyud founder [GTSANG PA RGYA RAS YE SHES RDO RJE](#), from whom he received monastic ordination and extensive instruction. In accordance with his master’s advice, he spent much of his life as a wandering [YOGIN](#), traveling across central, southern, and western Tibet and visiting numerous pilgrimage places including [KAILĀSA](#), [TSA RI](#), and Jālandhara (the modern Kangra Valley of Himachal Pradesh in northwest India). He also established several important retreat centers where he passed many years in meditation, including Rgod tshang near modern-day Rtsib ri in Gtsang, Steng gro, Bde chen stengs, and Bar ’brogs Rdo rje gling.

[Rgya gar chos 'byung](#). (Gyakar Chöjung). In Tibetan, “History of the Dharma in India,” a detailed history of the development of Buddhism on the subcontinent written in 1608 by the Tibetan savant Kun dga' snying po (1575–1634), better known as [TĀRANĀTHA](#). The work's complete title is *Dam pa'i chos rin po che 'phags pa'i yul du ji ltar dar ba'i tshul gsal bar ston pa dgos 'dod kun 'byung*. It is often consulted by Tibetan and Western scholars of Buddhism because of its judicious use of earlier traditional sources and its sense of the larger history of the subcontinent, perhaps fostered by the author's access to Indian informants, unusual for such a late period in Indian Buddhist history. The work restricts itself largely to the history of Buddhism in India and follows a chronology that can be loosely characterized as historical: it is based on five time periods between the time of [AJĀTAŚATRU](#) and [AŚOKA](#), five time periods from there to the time of the third Buddhist council (see [COUNCIL, THIRD](#)), and remaining time periods covering the great [MAHĀYĀNA](#) masters, through the history of the Pāla dynasty. It ends with a history of Buddhism in different regions, a history of [TANTRA](#), and of image making. Tāranātha's *Rgya gar chos 'byung* is supplemented by his histories of [PADMASAMBHAVA](#), the [KĀLACAKRATANTRA](#), the [TĀRĀ](#) and [YAMĀNTAKA](#) lineages, and by his [BKA' 'BABS BDUN LDAN GYI RNAM THAR](#), “Biographies of the Seven Instruction Lineages.”

[Rgyal rabs gsal ba'i me long](#). (Gyalrab Salwe Melong). In Tibetan, “The Mirror Illuminating the Royal Genealogies,” an important chronicle of the early Tibetan dynastic period, written in the fourteenth century by the [SA SKYA](#) hierarch BSOD NAMS RGYAL MTSHAN. Although its precise dating has long been in question, current scholarship suggests it was compiled in 1368. The work was regarded highly in Tibet and is often cited in later Tibetan literature.

[Rgyal tshab Dar ma rin chen](#). (Gyaltsap Darma Rinchen) (1364–1432). One of the two principal disciples (together with [MKHAS GRUB DGE LEGS DPAL BZANG](#)) of the Tibetan Buddhist master [TSONG KHA PA](#). Ordained and educated in the [SA SKYA](#) sect, Rgyal tshab (a name he would only receive later in life) studied with some of the great teachers of the day, including Red mda' ba gzhon nu blo gros. Rgyal tshab was already an established scholar, known especially for his expertise in [PRAMĀNA](#), when he first met Tsong kha pa at Rab drong around 1400. According to a well-known story, Rgyal tshab sought to debate Tsong kha pa and asked a nun, “Where is Big Nose?” (impertinently referring to Tsong kha pa's prominent proboscis). The nun rinsed out her mouth and lit a stick of

incense before saying that the omniscient master Tsong kha pa was teaching in the temple. Rgyal tshab entered the temple and announced his presence, at which point Tsong kha pa interrupted his teaching and invited the great scholar to join him on the teaching throne. Rgyal tshab arrogantly accepted but as he listened to Tsong kha pa's teaching, he became convinced of his great learning and edged away from the master, eventually descending from the throne and prostrating before Tsong kha pa and taking his place in the assembly. From that point, he would become Tsong kha pa's closest disciple, credited with hearing and remembering everything that Tsong kha pa taught. He assisted Tsong kha pa in the founding of [DGA' LDAN](#) monastery and upon Tsong kha pa's death in 1419, Rgyal tshab assumed the golden throne of Dga' ldan, becoming the first [DGA' LDAN KHRI PA](#) or "Holder of the Throne of Dga' ldan," a position that would evolve into the head of the [DGE LUGS](#) sect. He was also called the "regent" (rgyal tshab) of Tsong kha pa, which became the name by which he is best known. He was a prolific author, known especially for his detailed commentaries on the works of [DHARMAKĪRTI](#), as well as such important Indian texts as the [ABHISAMAYĀLAMKĀRA](#), [BODHICARYĀVATĀRA](#), [RATNĀVALĪ](#), [CATUHŚATAKA](#), and [RATNAGOTRAVIBHĀGA](#). Rgyal tshab figures in the most common image in Dge lugs iconography, the rje yab sras gsum, or "the triumvirate, the lord father, and the sons," showing Tsong kha pa flanked by Rgyal tshab and Mkhas grub (with Rgyal tshab often shown with white hair). The collected works of these three scholars form something of a canon for the Dge lugs sect and are often printed together as the rje yab sras gsung 'bum or the "collected works of the lord father and the [two] sons."

[Rgyud smad](#). (Gyume). In Tibetan, the "Lower Tantric College," one of two major [DGE LUGS](#) centers for tantric studies in [LHA SA](#), together with [RGYUD STOD](#). Prior to his death in 1419, [TSONG KHA PA](#) is said to have enjoined his disciple Rgyud Shes rab seng ge (1383–1445) to spread his tantric teachings. In 1432, he founded a tantric college in the Sras district of Gtsang called the Sras rgyud grwa tshang (the "tantric college of Se") or as the Gtsang stod rgyud (the "tantric [college] of Tsang, the upper [region]"). The term stod, lit. "upper" in Tibetan, also means "western" and is sometimes used as a synonym for Gtsang, the province to the west of the central province of Dbus. In 1433, he returned to Lha sa and founded Rgyud smad grwa tshang, or the "tantric college of lower [Tibet]." The term smad, literally "lower," also means "eastern." In 1474, Shes rab seng ge's disciple, Rgyud chen Kun dga' don grub, left Rgyud smad when he

was not selected as the abbot. He later founded another tantric college in Lha sa, which he called Dbus stod 'Jam dpal gling grwa tshang or the “Garden of [MAÑJUŚRĪ](#) College of Upper Ü.” It eventually became known as Rgyud stod. Shortly after its founding, it moved to the [RA MO CHE](#) temple in Lha sa. Hence, the the standard translations “lower tantric college” for Rgyud smad and “upper tantric college” for Rgyud stod have no implications of hierarchy or curricular gradation, but refer simply to the geographical locations of the institutions from which they evolved. Monks from the three great Dge lugs monasteries of Lha sa (['BRAS SPUNGS](#), [SE RA](#), and [DGA' LDAN](#)) who had achieved one of the two higher [DGE BSHES](#) (geshe) degrees—the lha ram pa or the tshogs ram pa—could enter as a dge bshes bka' ram pa. Which of the two tantric colleges a geshe attended was determined by his birthplace. The curriculum of both of the tantric colleges involved study of the [GUHYASAMĀJATANTRA](#), [CAKRASAMVARATANTRA](#), and [VAJRABHAIRAVATANTRA](#) systems. These were studied through memorization and debate, as in the sūtra colleges. Monks also received instruction in the performance of ritual, the use of [MUDRĀ](#), the making of images, and the construction of [MANDALAS](#). Monks were also instructed in chanting; the deep chanting that has become famous in the West was taught at both Rgyud smad and Rgyud stod. Those who successfully completed the curriculum received the title of dge bshes sngags ram pa. Monks who were not already geshe of one of three monasteries could enter one of the tantric colleges to receive ritual instruction but received a lower degree, called bskyed rim pa. Becoming a dge bshes sngags ram pa and especially an officer of one of the tantric colleges (dge bskos or disciplinarian; bla ma dbu mdzad, lit. “chant leader” but the vice abbot; and mkhan po or abbot) was essential for holding positions of authority in the Dge lugs hierarchy. For example, the [DGA' LDAN KHRI PA](#) was required to be a former abbot of Rgyud smad or Rgyud stod. After the Chinese takeover of Tibet, Rgyud smad and Rgyud stod were reestablished in exile in India.

[Rgyud stod](#). (Gyutö). In Tibetan, “Upper Tantric College.” See [RGYUD SMAD](#).

[rhinoceros \[horn\] simile](#). See [KHADGAVISĀNA](#); [KHADGAVISĀNAKALPA](#).

[Rhys Davids, Caroline Augusta Foley](#). (1857–1942). A prominent scholar of Pāli Buddhism and wife of [THOMAS WILLIAM RHYS DAVIDS](#). Caroline Augusta Foley attended University College in London, where she studied Pāli language and literature. She later became a fellow at University College and worked as a Pāli reader at the School of Oriental and African Studies at the University of London. Known to be a brilliant Pāli scholar and teacher, Rhys Davids had many dedicated students when she lectured in Indian philosophy at Manchester University. In 1894, at the age of thirty-six, she married T. W. Rhys Davids. They had three children together. In 1922, Rhys Davids became the president of the [PALI TEXT SOCIETY](#), which had been founded by her husband, and served as president for twenty years. Rhys Davids published more than twenty-five monographs and translations. Two of her most famous books are *Gotama the Man* and *Sakya or Buddhist Origins*.

[Rhys Davids, Thomas William](#). (1843–1922). Preeminent British scholar of Pāli Buddhism, Thomas William Rhys Davids was born in Colchester, the son of a Congregationalist minister. He attended secondary school in Brighton and then went on to the University of Breslau in Germany, where he studied Sanskrit. He received a PhD from the University of Breslau before taking a position as a judge in the Ceylon Civil Service in 1864. He resigned from this position in 1872 and became a lawyer in 1877. Instead of practicing law, Rhys Davids turned to researching and writing about Pāli literature. His first book, *The Ancient Coins and Measures of Ceylon*, was published in 1877, after which he began to publish regularly in the *Journal of the Royal Asiatic Society*. In 1880, he translated the [NIDĀNAKATHĀ](#). His 1881 Hibbert Lectures became quite famous, and at the second lecture, Rhys Davids announced the creation of the [PALI TEXT SOCIETY](#), the first learned society in the West to focus on Pāli language and literature. In 1882, Rhys Davids became a professor of Pāli at University College, London. From 1885 to 1904, he also worked for the Royal Asiatic Society. In 1904, he became professor of comparative religion at Victoria University, Manchester. In 1894, Rhys Davids married Caroline August Foley (see [RHYS DAVIDS, CAROLINE AUGUST FOLEY](#)); the two worked and published together for the rest of their lives. Rhys Davids published many works,

including a *Manual of Buddhism*, the first two volumes of the “Sacred Books of the Buddhists” series, and the first volume of a *Pāli-English Dictionary*. The Rhys Davidses together translated the [DĪGHANIKĀYA](#) between 1910 and 1921.

[Ri bo che](#). (Riwoche). A branch monastic seat of the [STAG LUNG](#) subsect of the [BKA' BRGYUD](#) sect of Tibetan Buddhism, located near Chab mdo in eastern Tibet. Ri bo che's founder, Sangs rgyas dbon (Sangye Öñ, 1250/1–1296) better known as Dbon po bla ma (Öñpo Lama), previously served a brief period as abbot of Stag lung monastery, the subsect's main seat in central Tibet. According to traditional sources, Sangs rgyas dbon left central Tibet in order to fulfill the prophecy that he would construct an even greater monastic institution in the east. His departure, however, may have been hastened by political pressure exerted by Stag lung monastery's political patrons, who favored a rival abbot. Sangs rgyas dbon established Ri bo che in 1276, and while it originally served as a branch of Stag lung monastery, it later developed a strong, nearly independent tradition. With its grand, imposing structure, Ri bo che was renowned as one of the great centers of Buddhist learning in eastern Tibet, possessing an impressive library of religious works. Its monks were highly esteemed for their expertise in meditation.

[Ri bo dpal 'bar](#). (Riwo Palbar). A mountain in Skyid grong (Kyirong) county of southwestern Tibet on the Nepalese border believed to have been a retreat location of both the Indian sage [PADMASAMBHAVA](#) and the Tibetan [YOGIN MILLA RAS PA](#). According to the latter's biography, the village of Ragma at the mountain's base was home to many of the yogin's patrons and the site of his meditation cave called Byang chub rdzong (Jangchup Dzong), “The Fortress of Enlightenment.” Near the summit lies a small chapel, now in partial ruins, housing the relics of the great [RNYING MA](#) scholar and historian [KAH THOG RIG 'DZIN TSHE DBANG NOR BU](#).

rig pa. The standard Tibetan translation of the Sanskrit term [VIDYĀ](#), or “knowledge.” The Tibetan term, however, has a special meaning in the [ATIYOGA](#) and [RDZOGS CHEN](#) traditions of the [RNYING MA](#) sect of Tibetan Buddhism, where it refers to the most profound form of consciousness. Some modern translators of Tibetan texts into European languages consider the term too profound to be rendered into a foreign language, while others translate it as “awareness,” “pure awareness,” or “mind.” Unlike the “mind of clear light” ([PRABHĀSVARACITTA](#); ’od gsal gyi sems) as described in other tantric systems, rig pa is not said to be accessible only in extraordinary states, such as death and sexual union; instead, it is fully present, although generally unrecognized, in each moment of sensory experience. Rig pa is described as the primordial basis, characterized with qualities such as presence, spontaneity, luminosity, original purity, unobstructed freedom, expanse, clarity, self-liberation, openness, effortless, and intrinsic awareness. It is not accessible through conceptual elaboration or logical analysis. Rather, rig pa is an eternally pure state free from the dualism of subject and object (cf. [GRĀHYAGRĀHAKAVIKALPA](#)), infinite and complete from the beginning. It is regarded as the ground or the basis of both [SAM SĀRA](#) and [NIRVĀNA](#), with the phenomena of the world being its reflection; all thoughts and all objects of knowledge are said to arise from rig pa and dissolve into rig pa. The ordinary mind believes that its own creations are real, forgetting its true nature of original purity. For the mind willfully to seek to liberate itself is both inappropriate and futile because rig pa is already self-liberated. Rig pa therefore is also the path, and its exponents teach practices that instruct the student how to distinguish rig pa from ordinary mental states. These practices include a variety of techniques designed to eliminate karmic obstacles ([KARMĀVARANA](#)), at which point the presence of rig pa in ordinary experience is introduced, allowing the mind to eliminate all thoughts and experiences itself, thereby recognizing its true nature. Rig pa is thus also the goal of the path, the fundamental state that is free from obscuration. Cf. [LINGZHI](#).

[Rin chen bzang po](#). [alt. Lo tsā ba chen po, Lo chen] (Rinchen Sangpo) (958–1055). A Tibetan translator of Sanskrit Buddhist texts who helped to initiate the revival of Buddhism in Tibet known as the later dissemination ([PHYI DAR](#)) of the dharma. He was born in the western Tibetan region of [GU GE](#). According to traditional histories, at the age of seventeen, he was sent to India together with a group of twenty other youths by King [YE SHES 'OD](#) to study Sanskrit and Indian vernacular languages. Rin chen bzang po made several trips to India, spending a total of seventeen years in Kashmir and the monastic university of [VIKRAMAŚĪLA](#) before returning the Tibet. During the last years of his life, he collaborated with the Bengali master [ATĪŚA DĪPAMKARAŚRĪJÑĀNA](#) at [THO LING](#) monastery. Rin chen bzang po's literary career concentrated on new and revised translations of important Indian Buddhist works; he is credited with 178 translations spanning the [SŪTRAS](#), [TANTRAS](#), and commentarial literature. Apart from his literary activities, he also brought with him numerous artisans and craftsmen from Kashmir and, with their aid, was highly active in the construction of new monasteries, temples, and shrines across western Tibet. These institutions, and the artwork they house, were strongly influenced by the artistic styles and religious practices of northwest India and now serve as important records of a tradition otherwise nearly lost. Most important among these temples are Tho ling, [KHA CHAR](#), and [NYAR MA](#), although tradition ascribes him with founding 108 buildings in all. Rin chen bzang po is still considered a local hero in the regions of western Tibet, Ladakh, Lahul, Spiti, and Kinnaur, and the current reincarnation, [LO CHEN SPRUL SKU](#), maintains his monastic seat at Kyi monastery in Spiti.

[rin chen gter mdzod](#). (rinchen terdzö). In Tibetan, “treasury of precious treasure teachings”; a collection of root texts, liturgical and ritual works, meditation manuals ([SĀDHANA](#)), commentarial, and supplemental literature pertaining to the genre of discovered treasure teachings ([GTER MA](#)) of the [RNYING MA](#) sect of Tibetan Buddhism. The collection was compiled and edited by the nineteenth-century savant ['JAM MGON KONG SPRUL BLO GROS MTHA' YAS](#) and forms one of his five treasuries ([KONG SPRUL MDZOD LNGA](#)). Kong sprul's motivation for this massive project, resulting in sixty-three volumes of literature (over one hundred in modern redactions), was complex. The compilation preserves many systems of instruction that were in danger of being lost or forgotten, but it also forms a canonical collection of authoritative treasure texts—one of the first projects of its kind.

rin po che. In Tibetan, lit. “of great value,” hence “precious one”; most commonly an honorific added to the name of a Tibetan [BLA MA](#) (lama), which is also used as a term of respect for addressing and referring to one’s own or another’s lama or teacher. The term may be used for any lama, but the term is most commonly used for incarnate lamas ([SPRUL SKU](#)), in which case it is often affixed to the name of the lineage, for example, Rgyal ba rin po che (a common appellation of the [DALAI LAMA](#)), Paṅ chen rin po che (the [PAN CHEN BLA MA](#)), mkhan rin po che (“precious abbot”), and so on. In ordinary Tibetan parlance, to refer to someone as a rin po che means that he (rarely she) is a sprul sku (incarnate lama).

Rinzaishū. (臨濟宗). In Japanese, “Rinzai School”; one of the major Japanese [ZEN](#) schools established in the early Kamakura period. The various branches of the Japanese Rinzai Zen tradition trace their lineages back to the Chinese [CHAN](#) master [LINJI YIXUAN](#) (J. Rinzai Gigen) and his eponymous [LINJI ZONG](#); the name Rinzai, like its Chinese counterpart, is derived from Linji’s toponym. The tradition was first transmitted to Japan by the [TENDAISHŪ](#) monk [MYŌAN EISAI](#) (1141–1215), who visited China twice and received training and certification in the [HUANGLONG PAI](#) collateral line of the Linji lineage on his second trip. Eisai’s Zen teachings, however, reflected his training in the esoteric ([MIKKYŌ](#)) teachings of the Tendai school; he did not really intend to establish an entirely new school. After Eisai, the Rinzai tradition was transferred through Japanese monks who trained in China and Chinese monks who immigrated to Japan. Virtually all of the Japanese Rinzai tradition was associated with the [YANGQI PAI](#) collateral line of the Linji lineage (see [YANGQI FANGHUI](#)), which was first imported by the Japanese vinaya specialist Shunjō (1166–1227). According to the early-Edo-period *Nijūshiryū shūgen zuki* (“Diagrammatic Record of the Sources of the Twenty-Four Transmissions of the Teaching”), twenty-four Zen lineages had been transmitted to Japan since the Kamakura period, twenty-one of which belonged to the Rinzai tradition; with the exception of Eisai’s own lineage, the remaining twenty lineages were all associated with the Yangqi collateral line. Soon after its introduction into Japan, the Rinzai Zen tradition rose to prominence in Kamakura and Kyōto, where it received the patronage of shōguns, emperors, and the warrior class. The Rinzai teachers of this period included monks from Tendai and [SHINGONSHŪ](#) backgrounds, such as [ENNI BEN’EN](#) (1202–1280) and [SHINCHI KAKUSHIN](#) (1207–1298), who promoted Zen with an admixture of esoteric elements. Chinese immigrant monks like [LANXI](#)

[DAOLONG](#) (J. Rankei Dōryū, 1213–1278) and [WUXUE ZUYUAN](#) (J. Mugaku Sogen, 1226–1286) also contributed to the rapid growth in the popularity of the Rinzai tradition among the Japanese ruling classes, by transporting the Song-style Linji Chan tradition as well as Song-dynasty Chinese culture more broadly. With the establishment of the Ashikaga shogunate in 1338, the major Zen temples were organized following the Song Chinese model into the [GOZAN](#) (five mountains) system, a tripartite state control system consisting of “five mountains” (gozan), “ten temples” (jissetsu), and several associated “miscellaneous mountains” (shozan). The powerful gozan monasteries located in Kamakura and Kyōto functioned as centers of classical Chinese learning and culture, and continued to influence the ruling classes in Japan until the decline of the Ashikaga shogunate in the sixteenth century. The disciples of Enni Ben’en and [MUSŌ SOSEKI](#) (1275–1351) dominated the gozan monasteries. In particular, Musō Soseki was deeply engaged in both literary endeavors and political activities; his lineage produced several famous gozan poets, such as Gidō Shūshin (1325–1388) and Zekkai Chūshin (1336–1405). Outside the official gozan ecclesiastical system were the RINKA, or forest, monasteries. [DAITOKUJI](#) and [MYŌSHINJI](#), the two principal rinka Rinzai monasteries, belonged to the Ōtōkan lineage, which is named after its first three masters [NANPO JŌMYŌ](#) (1235–1309), [SŌHŌ MYŌCHŌ](#) (1282–1337), and [KANZAN EGEN](#) (1277–1360). This lineage emphasized rigorous Zen training rather than the broader cultural endeavors pursued in the gozan monasteries. After the decline of the gozan monasteries, the Ōtōkan lineage came to dominate the Rinzai Zen tradition during the Edo period and was the only Rinzai line to survive to the present. Despite the presence of such influential monks as [TAKUAN SŌHŌ](#) (1573–1645) and [BANKEI YŌTAKU](#) (1622–1693), the Rinzai tradition began to decline by the sixteenth and the seventeenth centuries. The monk credited with revitalizing the Rinzai tradition during the Edo period is the Myōshinji monk [HAKUIN EKAKU](#) (1685–1769). Hakuin systematized the [KŌAN](#) (see [GONG’AN](#); [KANHUA CHAN](#)) method of meditation, which is the basis of modern Rinzai Zen practice; it is also through Hakuin and his disciples that most Rinzai masters of today trace their lineages. The Rinzai tradition is currently divided into the fifteen branches named after each of their head monasteries, which represents the influence of the head and branch temple system designed in the Edo period. Of the fifteen branches, the Myōshinji branch has largely eclipsed its rivals and today is the largest and most influential of all the Rinzai lines.

ris med. (ri me). In Tibetan, lit. “unbounded,” “unlimited,” or “impartial”; often translated as “nonsectarian” or “eclectic” in conjunction with a religious ideal that appears to have gained widespread currency in the early nineteenth century, most famously in the Khams **SDE DGE** kingdom in eastern Tibet. The origins of the movement are traced to the founding of **DPAL SPUNGS** monastery, established in 1727 by the eighth **TAI SI TU CHOS KYI 'BYUNG GNAS**, a great **BKA' BRGYUD** scholar, historian, and linguist, with support from Sde dge's ruler Bstan pa tsering (Tenpa Tsering, 1678–1738), who sponsored the carving and printing of the Sde dge edition of the Tibetan **BKA' 'GYUR** and **BSTAN 'GYUR**. Si tu revitalized the study of Sanskrit and stressed the importance of older traditions that had fallen into decline after the rise to power of the **DGE LUGS** sect. The revitalization of religious learning in Sde dge spread to the Bka' 'brgyud and **RNYING MA** institutions in the region and reached its peak in the middle of the nineteenth century. When the Dpal spungs-based revitalization began to disturb the traditional **SA SKYA** affiliation of the Sde dge royal family (from the time of **'PHAGS PA'** 1235–1280), such leading figures as **'JAM MGON KONG SPRUL BLO 'GRO MTHA' YAS**, **'JAM DBYANG MKHYEN BRTSE DBANG PO**, and **MCHOG GYUR GLING PA** responded to the danger of conflict among powerful Sde dge clans by using impartial liturgies that did not stress one tradition over another. There is some evidence that another great ris med lama, **DPAL SPRUL RIN PO CHE**, extended the spirit to include even Dge lugs traditions. The frequency of the occurrence of the term ris med in Tibetan literature from that era has given rise in the West to the notion that something akin to a “nonsectarian movement” occurred in eastern Tibet in the nineteenth century, one in which scholars of the Rnying ma, Bka' brgyud, and Sa skya sects not only read and benefited from each other's traditions (as had long been the case), but also studied the works of the politically more powerful Dge lugs sect, which had been at odds with both Rnying ma and Bka' brgyud at various points since the seventeenth century. This idea that such a “movement” occurred has been largely drawn from preliminary studies of 'Jam mgon kong sprul. This Bka' brgyud lama (who was born into a **BON** family and initially ordained into a Rnying ma monastery) achieved a remarkable breadth and depth in his scholarship. In several collections of liturgical texts and lengthy treatises, he set forth a vision of a nonsectarian ideal in which intersectarian exchanges were valued, yet strict separations between the multiple lineages and orders were carefully upheld. Still, the notion that 'Jam mgon kong sprul, 'Jam dbyang mkhyen brtse, and Dpal sprul Rin po che were at the center of a “nonsectarian movement,” in the sense

that there was a widespread institutional reformation in their lifetimes, is not historically accurate. It is perhaps better to speak of the nonsectarian ideal and their own lives as models of its expression. That model was indeed much imitated in the early twentieth century, and the ris med ideal appears to have become a standard motif for the social and political unification of the Tibetan exile community since 1959. The current [DALAI LAMA](#), for example, is known to use the metaphor of the five-fingered hand (the four main Buddhist orders and the Bon religion) to describe a Tibetan society as fundamentally united yet respectful of its differences.

[Risshō Kōseikai](#). (立正佼成会). In Japanese, “Society for Establishing Righteousness and Peaceful Relations,” one of Japan’s largest lay Buddhist organizations. Risshō Kōseikai was founded in 1938 by [NIWANO NIKKYŌ](#) (1906–1999), the son of a farming family in Niigata prefecture, and [NAGANUMA MYŌKŌ](#) (1889–1957), a homemaker from Saitama prefecture. In 2007, it claimed 1.67 million member households, with 239 churches in Japan and fifty-six churches in eighteen countries outside of Japan. Originally formed as an offshoot of [REIYŪKAI](#), Risshō Kōseikai is strongly influenced by [NICHIRENSHŪ](#) doctrine, although it bears no organizational ties with the latter school. In terms of its ethos and organizational structure, it embodies many of the characteristics of Japan’s so-called new religions. Risshō Kōseikai emphasizes worship of the [SADDHARMAPUNḌARĪKASŪTRA](#) (“Lotus Sūtra”) as a means for self-cultivation and salvation as well as for the greater good of humanity at large. Religious practice includes recitation of chapters from the *Saddharmapuṇḍarīkasūtra* every morning and evening and chanting of the Japanese title of the sūtra, or [DAIMOKU](#), viz., [NAMU MYŌHŌRENGEKYŌ](#). As is common among schools associated with worship of the *Saddharmapuṇḍarīkasūtra*, Risshō Kōseikai believes that people share karmic links with their ancestors. Through recitation of *Saddharmapuṇḍarīkasūtra* passages and its title, along with repentance for one’s past transgressions, one can transfer merit to one’s ancestors. This transference aims to subdue the troubled spirits of ancestors who did not attain buddhahood, as well as to eliminate any negative karmic bonds with them. Risshō Kōseikai is headquartered in Tōkyō. However, its organization is largely decentralized and it has no priesthood. This structure places more value and responsibility on its laity, who are presumed to be capable of transferring merit and conducting funerals and ancestral rites on their own. Group gatherings generally address counseling issues for individuals and families alongside the study of Buddhist

doctrine. In contrast to Reiyūkai, which emphasizes devotional faith to the *Saddharmapuṇḍarīkasūtra* without the need for detailed doctrinal understanding of Buddhism, adherents of Risshō Kōseikai, in line with the school's founders, include the analytic study of doctrine as complementary to their faith.

Risshū. [alt. Ritsushū] (律宗). In Japanese, “School of Discipline,” one of the so-called six schools of the Nara tradition of early Japanese Buddhism (see [NARA BUDDHISM, SIX SCHOOLS OF](#)); the term is also sometimes seen transcribed as [RITSUSHŪ](#). Although its origins are uncertain, a decree by the Grand Council of State (J. Daijōkan) in 718 acknowledged Risshū as one of major schools of Buddhism in the Japanese capital of Nara. The school is dedicated to the exegesis and dissemination of the rules of Buddhist [VINAYA](#), especially those associated with the [SIFEN LŪ](#) (“Four-Part Vinaya”) of the [DHARMAGUPTAKA](#) school. Rather than an established religious institution, the Risshū, like the other contemporaneous schools of the Nara period (710–974), should instead be considered more of an intellectual tradition or school of thought. Risshū arose as an attempt to systematize monastic rules and practices on the basis of Chinese translations of Indian vinaya texts. Throughout the first half of the eighth century, Japanese monks relied on the Taihō Law Code (701), a set of government-mandated monastic regulations, to guide both their ordination ceremonies (J. jukai) and their conduct. Realizing that Japan lacked proper observance of the vinaya, Nara scholars who had studied monastic discipline in China sought the aid of [GANJIN](#) (C. Jianzhen; 687–763), a well-known Chinese master of the [NANSHAN LŪ ZONG](#) (South Mountain School of Discipline), the largest of the three vinaya traditions of China. Their attempts to use Ganjin to establish an orthodox ordination ceremony in Japan met with considerable resistance, first from the Chinese court, which did not want to part with Ganjin, and second with entrenched interests in Nara, which had grown accustomed to the Taihō regulations. After five failed attempts to travel to Japan at these monks’ invitation, Ganjin finally arrived in Japan in 754. Then sixty-six and blind, Ganjin finally established an ordination platform that summer at the great Nara monastery of [TŌDAIJI](#). Soon thereafter, two more ordination platforms were erected under the jurisdiction of Risshū: one at Yakushiji in Shimotsuke province (in present-day Tochigi prefecture), and one at Kanzeonji in Chikuzen province (in present-day Fukuoka prefecture). In his later years, Ganjin also founded the monastery of [TŌSHŌDAIJI](#) in Nara, where he trained monks according to his own codification of the rules. Risshū and the other Nara schools

fell into a period of decline over the course of the Heian period (794–1185), which ultimately set the stage for a restoration of Risshū in the early Kamakura period (1185–1333). Under the leadership of the Tendai priest Shunjō (1166–1227), who had studied in China, a group of monks with interests in vinaya assembled at Sennyūji in Kyōto. They would later become identified as the Hokkyō, or “northern capital,” branch of the Risshū school, in contrast to the Nankyō (southern capital) branch in Nara. Monks in Nara also attempted to restore Risshū, as exemplified by Kakujō’s (1194–1249) move to Tōshōdaiji and the efforts of Eizon (1201–1290), who incorporated esoteric practice (see [MIKKYŌ](#)) in his restoration of Risshū at Saidaiji in Nara. Today, Risshū survives in the two monasteries of Tōshōdaiji and Saidaiji, although the latter was officially joined with the [SHINGONSHŪ](#) during the Meiji Restoration (1868–1912).

[Ritsu School](#). (J). See [RISSHŪ](#).

[Ritsushū](#). (J) (律宗). See [RISSHŪ](#); [NANSHAN LŪ ZONG](#).

[rje](#). (je). A Tibetan title or honorific, lit. “one to be followed,” hence “leader.” It is affixed at the beginning or the end of a name, to indicate the person’s importance. The three founders of the [DGE LUGS](#) sect, for example, commonly have the title affixed to their names: Rje [RIN PO CHE](#) is [TSONG KHA PA](#); Rgyal tshab rje is [RGYAL TSHAB DAR MA RIN CHEN](#), and Mkhas grub rje is [MKHAS GRUB DGE LEGS DPAL BZANG](#); this triumvirate is commonly referred to be the abbreviation rje yab sras gsum (je yabse sum) (“triumvirate of the lord father and the [two] sons”). See also [RJE BSTUN](#); [RJE BTSUN DAM PA](#).

[rje ’bangs nyer lnga](#). (jebang nyernga). In Tibetan, lit. “the twenty-five, king and subjects,” referring to the twenty-five chief disciples of the eighth-century Indian adept [PADMASAMBHAVA](#) during his activity in Tibet. The king refers to the Tibetan ruler [KHRI SRONG LDE BTSAN](#), who was responsible for inviting Padmasambhava to Tibet to aid in the founding of [BSAM YAS](#) monastery. According to some lists, the remaining twenty-four disciples are:

1. Nam mkha’i snying po (Namke Nyingpo)
2. Sangs rgyas ye shes (Sangye Yeshe)
3. Rgyal ba mchog dbyangs (Gyalwa Chokyang)

4. Mkhar chen bza' (Karchensa)
5. Dpal gyi ye shes (Palgyi Yeshe)
6. Dpal gyi seng ge (Palgyi Senge)
7. Bai ro tsa na ([VAIROCANA](#))
8. Gnyags Jñānakumāra (Nyak Jñānakumāra)
9. G.yu sgra snying po (Yudra Nyingpo)
10. Rdo rje bdud 'joms (Dorje Dudjom)
11. Ye shes dbyangs (Yeshe Yang)
12. Sog po Lha dpal (Sokpo Lhapal)
13. Zhang [YE SHES SDE](#) (Shang Yeshe De)
14. Dpal gyi dbang phyug (Palgyi Wangchuk)
15. Ldan ma rtse mang (Denma Tsemang)
16. Ska ba [DPAL BRTSEGS](#) (Kawa Paltsek)
17. Shud bu dpal gyi seng ge (Shubu Palgyi Senge)
18. Rgyal ba'i blo gros (Gyalwe Lodrö)
19. Khye'u chung lo (Khye'u Chunglo)
20. 'O bran Dpal gyi dbang phyug (Odran Palgyi Wangchuk)
21. Rma Rin chen mchog (Ma Rinchen Chok)
22. Lha lung Dpal gyi rdo rje (Lhalung Palgyi Dorje)
23. Lang gro Dkon mchog 'byung gnas (Langdro Könchok Jungne)

24. La gsum rgyal ba byang chub (Lasum Gyalwa Jangchub)

Other lists include Padmasambhava's female disciples [MANDĀRAVĀ](#) and [YE SHES MTSHO RGYAL](#).

[rje btsun](#). (jetsün). In Tibetan, “lord” or “reverend,” a Tibetan honorific used especially for revered religious figures. The term is perhaps most commonly used to as a term of respect for [MILA RAS PA](#), so much so that the term rje btsun alone in Tibetan often refers to him. The word btsun (tsun) (S. and P. bhadanta) is usually reserved for monks, but by extension applies also to saintly persons; [RJE](#) means one to be followed. The feminine form of the term is rje btsun ma (jetsünma), often used to refer to [TĀRĀ](#), or to saintly women; it is used as a prefix to show respect to nuns or prominent female teachers.

[Rje btsun dam pa](#). (Jetsün Dampa). In Tibetan, “excellent lord,” the Tibetan name of the Khalkha Jebtsundamba Khutuktu, the lineage of incarnate lamas who serve as head of the [DGE LUGS](#) sect in Mongolia, also known as Bogd Gegen. The lineage was established by the fifth [DALAI LAMA](#), who, after his suppression of the [JO NANG](#) sect, declared that the renowned Jo nang scholar [TĀRANĀTHA](#) had been reborn in Mongolia, thus taking an important line of incarnations from a rival sect and transferring it to his own Dge lugs sect. The first Rje btsun dam pa was Blo bzang bstan pa'i rgyal mtshan (1635–1723), known in Mongolian as Bogdo Zanabazar or simply Zanabazar. He was the son of the Mongol prince Gombodorj, the Tosiyetu Khan, ruler of the Khan Uula district of Mongolia, and himself became the head of the Khalkha Mongols. He and the second Rje btsun dam pa lama were direct descendants of Genghis Khan. Zanabazar was ordained at the age of five and recognized as the incarnation of Tāranātha, this recognition confirmed by the fifth Dalai Lama and first [PAN CHEN LAMA](#). He spent 1649–1651 in Tibet where he received initiations and teachings from the two Dge lugs hierarchs. Zanabazar is remembered especially as a great sculptor who produced many important bronze images. He was also a respected scholar and a favorite of the Manchu Chinese Kangxi emperor. During the Qing dynasty, the Rje btsun dam pa was selected from Tibet, perhaps in fear that a Mongol lama would become too powerful. During the Qing, it was said that the Qing emperor, the Dalai Lama, and the Rje btsun dam pa were incarnations of [MAÑJUŚRĪ](#), [AVALOKITEŚVARA](#), and [VAJRAPĀṆĪ](#), respectively. When northern Mongolia sought independence, the eighth Rje btsun dam pa (1869–1924) assumed the title of emperor of Mongolia, calling himself Boghda Khan (also

“Bogd Khan”). He was the head of state until his death in 1924, after which the Communist government declared the end of the incarnation line. However, ’Jam dpal rnam grol chos kyi rgyal mtshan was recognized in [LHA SA](#) as the ninth Rje btsun dam pa; he fled into exile in India in 1959.

[rlung rta](#). (lung ta). In Tibetan, the word for “luck,” lit. “wind horse”; in its secondary meaning, it is commonly referred to in English as a “prayer flag.” It is a colored square of cloth, usually about one foot square, and often imprinted with a prayer. These flags are then attached to poles, the rooftops of monasteries and dwellings, or are strung from the cairns found at the summits of mountain passes. The wind is said to carry the benefits requested by the prayer imprinted on the fluttering flag, both to the person who flies the flag as well as to all beings in the region. The prayer flag has in its center an image of a deity or auspicious symbol usually two or three inches square, set within a single-line frame; the female bodhisattva [TARA](#) is commonly depicted, as is the “wind horse” itself, a horse carrying a jewel on its back. The prayer itself (often a series of mantras) appears on the flag as if on a sheet of paper, with lines breaking in the middle of the flag to accommodate the central image. Prayer flags are made from a wooden block print. The block is inked and the piece of cloth then laid across it and pressed with a roller to transfer the words and picture onto the cloth. With many prayer flags, there is a brief statement after the prayer of the benefits that will accrue from its flying.

[Rma chen spom ra](#). (Machen Pomra). A Tibetan mountain god whose seat is [A MYES RMA CHEN](#) in A mdo (today the Qinghai region of China) where he is the chief [SA BDAG](#), or “earth lord,” of the region. As with other pre-Buddhist Tibetan mountain deities, Rma chen spom ra was converted to Buddhism, in his case by [PADMASAMBHAVA](#). The mountain was inserted into a Tibetan list of the twenty-four [PĪTHA](#) from the [CAKRASAMVARATANTRA](#), and is further understood to be a three-dimensional Cakrasamvara [MANDALA](#). The cult of Rma chen spom ra was introduced to central Tibet by [TSONG KHA PA](#), a native of the region; he made Rma chen spom ra the chief [DHARMAPĀLA](#) of [DGA’ LDAN](#) monastery. That monastery used to remove his image from the monastery each night to a small shrine outside the walls: since the god is a layman and has a female consort, by the rules of the monastery he cannot sleep inside the walls. Later the practice was replaced with a formal daily request to the god to leave the monastery for the night. He is golden, wears a golden cuirass and a helmet, carries a lance with

a flag, a sack made from the skin of a mongoose and rides a white horse. His consort is the sman mo (menmo) Gung sman ma (Gungmenma). The [DGE LUGS](#) sect considers the god Phying dkar ba (Chingkarwa) to be an emanation of Rma chen spom ra.

[Rme ru snying pa](#). (Meru Nyingpa). A Tibetan monastery on the northeast side of the [JO KHANG](#) in the Tibetan capital of [LHA SA](#); one of six institutions constructed by the Tibetan king [RAL PA CAN](#), purportedly on the site where Thon mi Sambhoṭa (c. seventh century) developed the Tibetan script. The Indian master [ATIŚA DĪPAMKARAŚRĪJÑĀNA](#) refurbished the monastery and it was later converted to the [DGE LUGS](#) sect in the sixteenth century under the third [DALAI LAMA](#), [BSOD NAMS RGYA MTSHO](#). Me ru nying pa is dedicated primarily to [RDO RJE GRAGS LDAN](#), one of Tibet’s central protector deities and the spirit that possesses the medium of [GNAS CHUNG](#), the state oracle of Tibet.

[rnam thar](#). (namtar). In Tibetan, “complete liberation,” translating the Sanskrit [VIMOKSA](#). In the Tibetan context, rnam thar refers to a widespread literary genre of sacred biography or autobiography. As its translation suggests, the term usually indicates an emphasis on the stereotypically Buddhist aspects of the subject’s life, including his or her religious training, practice of meditation, and eventual liberation. Such works often incorporate elements of the fabulous and the fantastic and have parallels with the genre of hagiography. Three types of rnam thar are often enumerated: the “outer autobiography” (phyi’i rnam thar), which narrates the important events of daily life, including travels and meetings with prominent persons; the “inner autobiography” (nang gi rnam thar), which describes religious teachings received and relationships with teachers and disciples; and the “secret autobiography” ([GSANG BA’I RNAM THAR](#)), which describes religious experiences, with the author often writing from the perspective of a transcendental subject.

[Rngog Blo ldan shes rab](#). (Ngok Loden Sherap) (1059–1110). A Tibetan scholar and translator, nephew of [RNGOG LEGS PA’I SHES RAB](#). After studying under his uncle and participating in the “Council of [THO LING](#)” in [GU GE](#), he left for India at the age of eighteen with a group of companions, including [RWA LO TSA BA](#). He spent seventeen years pursuing the study of Buddhist texts, including the [SŪTRAS](#), [TANTRAS](#), and Buddhist sciences; his main teacher of [PRAMĀNA](#) was the Kashmiri logician Bhavyarāja. At the age of thirty-five, he returned to Tibet to become the second abbot of [GSANG PHU NE’U THOG](#) monastery near [LHA SA](#). He

translated numerous works still found in the [BKA' 'GYUR](#) and [BSTAN 'GYUR](#) sections of the Tibetan Buddhist canon. These include the [PRAMĀNAVINIŚCAYA](#) of [DHARMAKĪRTI](#), the five works of [MAITREYA](#), and the major works of what would be dubbed the [YOGĀCĀRA SVĀTANTRIKA](#) school. He also composed a number of works himself, which do not seem to have survived. Along with [RIN CHEN BZANG PO](#), he is often referred to as a “great translator” (lo chen); in later works sometimes simply as bdag nyid chen po (S. mahātma). Because of the influence of his translations and his own substantial writings, he is considered along with [SA SKYA PANDITA](#) to be a founding figure of Tibetan Buddhist scholasticism.

[Rngog Legs pa'i shes rab](#). (Ngog Lekpe Sherap) (fl. eleventh century). Tibetan scholar and translator venerated as an important founder of the [BKA' GDAMS](#) sect of Tibetan Buddhism. The exact year of his year of birth is unclear, although it is known that he was born in the western Tibetan region of [GU GE](#). According to Tibetan histories, he was one of twenty-one young scholars sent to India by the region's king, [YE SHES 'OD](#), to study Sanskrit, Buddhist philosophy, and [TANTRA](#). He returned to Tibet and became an important disciple of the Bengali master [ATIŚA DĪPAMKARASŪJĀNA](#). He also studied under and collaborated with the famed translator [RIN CHEN BZANG PO](#). Together with Atiśa and ['BROM STON RGYAL BA'I 'BYUNG GNAS](#), Ngog Legs pa'i shes rab is considered an important Bka' gdams forefather. In 1073, he laid the foundations for an early monastic center for Buddhist learning, [GSANG PHU NE'U THOG](#), south of [LHA SA](#). He is also known as Rngog lo tsā ba (Ngog, the translator) and Rngog lo chung (Ngog, the junior translator) in distinction to Rin chen Bzang po, the great translator (lo chen).

[Rnying ma](#). (Nyingma). In Tibetan, “Ancient,” the name of one of the four major sects of Tibetan Buddhism. The name derives from the sect's origins during the “early dissemination” ([SNGA DAR](#)) of Buddhism in Tibet and its reliance on translations of [TANTRAS](#) made during that period; this is in distinction to the new ([GSAR MA](#)) sects of [BKA' BRGYUD](#), [SA SKYA](#), and [DGE LUGS](#), all of which arose during the later dissemination ([PHYI DAR](#)) and make use of newer translations. The Rnying ma is thus “ancient” in relation to the new sects and only began to be designated as such after their appearance. The sect traces its origins back to the teachings of the mysterious figure of [PADMASAMBHAVA](#), who visited Tibet during the eighth century and is said to have hidden many texts, called “treasures” ([GTER MA](#)), to be discovered in the future. In addition to the

Buddhist canon accepted by all sects of Tibetan Buddhism, the Rnying ma adds another collection of tantras (the [RNYING MA'I RGYUD 'BUM](#)) as well as the discovered “treasure” ([GTER MA](#)) texts to their canonical corpus, works that in many cases the other sects regard as [APOCRYPHA](#), i.e., not of Indian origin. Rnying ma identifies nine vehicles among the corpus of Buddhist teachings, the highest of which is known as [ATIYOGA](#) or, more commonly, the “great perfection” ([RDZOGS CHEN](#)). These teachings describe the mind as the primordial basis, characterized by qualities such as presence, spontaneity, luminosity, original purity, unobstructed freedom, expanse, clarity, self-liberation, openness, effortless, and intrinsic awareness. It is not accessible through conceptual elaboration or logical analysis. Rather, the primordial basis is an eternally pure state free from the dualism of subject and object, infinite and perfect from the beginning, and ever complete. The technique for the discovery of the ubiquitous original purity and self-liberation is to engage in a variety of practices designed to eliminate karmic obstructions, at which point the mind eliminates all thoughts and experiences itself, thereby recognizing its true nature. The rdzogs chen doctrine does not seem to derive directly from any of the Indian philosophical schools; its precise connections to the Indian Buddhist tradition have yet to be established. Some scholars have claimed an historical link and doctrinal affinity between rdzogs chen and the [CHAN](#) tradition of Chinese Buddhism, but the precise relationship between the two remains to be fully investigated. It is noteworthy that certain of the earliest extant rdzogs chen texts specifically contrast their own tradition with that of Chan. In comparison to the Dge lugs, Bka' brgyud, and Sa skya, the Rnying ma (with some important exceptions, notably at the time of the fifth [DALAI LAMA](#)) remained largely uninvolved in state politics, both within Tibet and in foreign relations. Although they developed great monasteries, such as [SMIN GROL GLING](#), [RDZOGS CHEN](#), and [RDO RJE BRAG](#), the Rnying ma also maintained a strong local presence as lay tantric practitioners (sngags pa) who performed a range of ritual functions for the community. The Rnying ma produced many famous scholars and visionaries, such as [KLONG CHEN RAB 'BYAMS](#), ['JIGS MED GLING PA](#), and [MI PHAM](#). In the nineteenth century, Rnying ma scholars played a key role in the so-called nonsectarian movement ([RIS MED](#)) in eastern Tibet, which produced many important new texts.

[Rnying ma'i rgyud 'bum](#). (Nyingme Gyübum). A compendium of the tantras and tantric exegetical literature of the [RNYING MA](#) sect of Tibetan Buddhism;

considered apocryphal by the redactors of the Tibetan Buddhist canon ([BKA' 'GYUR](#)), the collection thus represents an alternative or supplementary Rnying ma canon of tantric scriptures. Numerous editions are extant, including the [SDE DGE](#) edition (twenty-six volumes), the *Gting kye* (twenty-six volumes), the *Skyi rong* (thirty-seven volumes), the *Tsham brag* (forty-six volumes), and the *Vairo rgyud 'bum* (eight volumes). All but the last divide the tantras into the standard Rnying ma doxographical categories of [MAHĀYOGA](#), [ANUYOGA](#), and [ATIYOGA](#), although within those categories differences emerge (the *Vairo rgyud 'bum*, for example, includes only atiyoga). Further editions include those recently discovered in Kathmandu and the so-called Waddell edition, a close relative to the *Gting kye*. All but the *Sde dge* are manuscripts. Catalogues of Buddhist texts were made as far back as the eighth century, but the roots of the Rnying ma'i rgyud 'bum go back to the second propagation of Buddhism in Tibet (roughly the eleventh to thirteenth centuries). In opposition to the new translation sects ([GSAR MA](#)) that developed around newly imported tantras, adherents of the earlier translations coalesced into the Rnying ma, or “ancients,” sect. There is evidence that 'Gro mgon Nam mkha' 'phel, the son of one of the earliest proponents of the Rnying ma sect, [NYANG RAL NYI MA 'OD ZER](#), arranged a collection of early tantras in eighty-two volumes, which is no longer extant. The *Vairo rgyud 'bum* also may date as far back as the twelfth century, although its origins are unclear. When [BU STON RIN CHEN GRUB](#) edited the Tibetan Buddhist canon in the fourteenth century, he excluded the tantras found in the Rnying ma'i rgyud 'bum on the basis that he could find no Indic originals with which to authenticate them. Bu ston's position has been shown by Tibetan and Western scholars to have been partisan and inconsistent, and several tantras he excluded, such as the [VAJRAKĪLAYA](#) tantras, are accepted by other sects. Some excluded tantras do in fact appear to be early combinations of Indic and Tibetan material, while others, especially later revelatory scriptures ([GTER MA](#)) are entirely of Tibetan composition. An early version of the Rnying ma'i rgyud 'bum that may have influenced later editions was that of [RATNA GLING PA](#), no longer extant. The *Tshams brag* appears to have been commissioned by Tsham brag bla ma Ngag dbang 'brug pa (1682–1748) and was based on a still earlier Bhutanese version. [GTER BDAG GLING PA](#)'s edition later became the basis for that of ['JIGS MED GLING PA](#), in twenty-five volumes, which was produced in 1772, and is known as the *Padma 'od gling* edition. This in turn was the basis for the *Sde dge* block-print edition, carved between 1794 and 1798 and overseen by Dge rtse paṅ chen 'Gyur med mchog grub (1761–1829) of [KAH THOG](#) monastery.

Rnying ma pa. (Nyingmapa). A person affiliated with the [RNYING MA](#) sect of Tibetan Buddhism.

Rōben. (J) (良辨). See [RYŌBEN](#).

Roerich, George (Yuri). (1902–1960). George (Yuri) Nikolaevich Roerich was the son of Russian painter and mystic Nikolai Roerich and Helena Ivanova, a Theosophist who translated Madame Blavatsky’s *The Secret Doctrine* into Russian. Roerich spent much of his childhood traveling the world. The family traveled to Urga, in the far western region of Siberia, and their journeys took them to Ladakh as well as later to Europe and America. He studied Asian languages at the University of London, at Harvard University, and at Paris, where he studied with [SYLVAIN LÉVI](#). Nikolai Roerich believed that [ŚAMBHALA](#) was located in Central Asia, perhaps in the Gobi Desert, and from 1925 to 1928 he led an expedition through Chinese Turkestan, Mongolia, and Tibet, in search of evidence of the hidden kingdom of śambhala, the supposed abode of the mahātmās, the spiritual masters of all religions. In 1928, George and his father established the Urusvati Himalayan Research Institute in Darjeeling, India, moving later to the Kullu Valley in the western Himalayas. George Roerich was a scholar in Tibetology and Mongolian studies, later serving as the first director of the Buddhist Branch of the Institute of Oriental Studies in Moscow. Roerich played a significant role in reviving Russian Orientalism after returning from exile in 1957. Under Khrushchev’s government, Roerich was able to revive the Biblioteca Buddhica Series, which had ceased publication in 1937. He worked with Bidiya Dandaron and [GUNAPALA PIYASENA MALALASEKERA](#) (1899–1973) and succeeded in printing the first Russian version of the [DHAMMAPADA](#) in 1960. He died suddenly from a heart attack that same year. Among his publications, his most important for Buddhist studies was his translation (with the assistance of [DGE ’DUN CHOS ’PHEL](#)) of the [DEB THER SNGON PO](#) (“Blue Annals”) by ’Gos lo tsā ba Gzhon nu dpal.

rōhatsu sesshin. (臘八攝心). In Japanese, lit. “retreat on the eighth [day] of the last [month],” typically referring to an intensive week-long session of meditation ([SESSHIN](#)) that ends on the eighth day of the twelfth lunar month (rōhatsu), the reputed day of the Buddha’s enlightenment according to the East Asian calendar. The retreat begins with a ceremony on the first of the twelfth lunar month and ends on the morning of the eighth with another ceremony, which usually consists of a lecture by the abbot known as the rōhatsu jōdo, and offerings made to an

image of [ŚĀKYAMUNI](#) emerging from the mountains (shussan Shaka). (Cf. [PRĀGBODHI\[GIRI\]](#).) The rōhatsu sesshin performed in the [SAMGHA](#) hall ([SENGTANG](#)) at [ZEN](#) monasteries often entails nonstop meditative practice with little or no sleep. See also [YONGMAENG CHŎNGJIN](#).

[Rong ston Smra ba'i seng ge](#). (Rongtön Mawe Senge) (1367–1449). A Tibetan Buddhist master, especially revered within the [SA SKYA](#) sect, also known as Rong ston Shes bya kun rig Shākya rgyal mtshan (Rongton Sheja Kunrik Shākya Gyaltsen). Born into a [BON](#) family in Rgyal rong (Gyarong) in eastern Tibet, Rong ston traveled to the famed [BKA' GDAMS](#) institution of SANG PHU NE'U THOG, where he received ordination and studied all the major branches of Buddhist learning. He furthered his education under numerous masters across central Tibet and became renowned for his writings on [PRAMĀNA](#) and [PRAJÑĀPĀRAMITĀ](#). His two most famous students were [SHĀKYA MCHOGLDAN](#) and [GO BO RAB 'BYAMSPA BSOD NAMS SENG GE](#), both prolific scholars known for polemical exchanges with early defenders of [TSONG KHA PA](#). Rong ston founded [NA LAN DRA](#) monastery in 'Phan yul (Penyul), north of [LHA SA](#), which later became an important Sa skya institution.

[Rong zom Chos kyi bzang po](#). (Rongzom Chökyi Sangpo) (1012–1088). An important figure in the renaissance of the [RNYING MA](#) tradition in Tibet. His collected works in two volumes include the *Rdzogs pa chen po'i lta sgom* (“Instructions on Cultivating the View of the Great Perfection”) (see [RDZOGS CHEN](#)) and a seminal work on [SDOM GSUM](#) (“three codes”) *Dam tshig mdo rgyas*. He was learned in the older traditions based on earlier translations and in the new traditions that spread after the return of the translators [RIN CHEN BZANG PO](#) and [RNGOG LEGS PA'I SHES RAB](#). Traditionally, he is said to be the recipient of teachings deriving from Heshang [MOHEYAN](#), [VAIROCANA](#), and [VIMALAMITRA](#)—important figures of the early dissemination ([SNGA DAR](#))—and it is said that upon meeting [ATIŚA DĪPAMKARĀŚRĪJÑĀNA](#) after his arrival in Tibet, Atiśa considered him a manifestation of his teacher Nag po pa (Kṛṣṇapāda). Rong zom instructed many important figures of the day, including the translator [MAR PA](#), prior to his departure for India.

[rosary](#). See [JAPAMĀLĀ](#); [MĀLĀ](#).

[rōshi](#). (老師). In Japanese, lit. “old master,” an honorific typically used with reference to a senior Buddhist teacher or monk, sometimes interpreted to be a

contraction of the compound *rōdaishūshi* (“elder teacher of the tradition”). In the Japanese [ZEN](#) schools, *rōshi* is a technical term used to designate a senior teacher who is authorized to offer spiritual guidance and to hold higher ecclesiastical positions. Within the [RINZAISHŪ](#), *rōshi* specifically refers to a Zen master who has received certification to teach (J. *inka*; C. [YINKE](#)) from another *rōshi* and who is thereafter authorized to sanction the awakening of others during private interviews known as *sanzen*. In the [SŌTŌSHŪ](#), one becomes a *rōshi* through a *shihō* or series of ordination ceremonies with one’s teacher, which acknowledge mastery of the precepts and receipt of dharma transmission, so that the recipient is then authorized to teach and receive appointment as abbot of a Sōtō monastery. Despite its literal denotation, the term *rōshi* may also be used as an honorary appellation for older monks who are not yet teachers, or even to refer to monks in general. Thus the term *rōshi* is not necessarily used to imply old age but rather respect or veneration.

[Rṣipātana](#). (P. *Isipātana*; T. *Drang srong lhung ba*; C. *Xianren duochu*; J. *Sennin dasho*; K. *Sōnin t’ach’ō* 仙人墮處). In Sanskrit, lit. “Place where Holy Men Descend”; referring specifically to the *Rṣipātana* (P. *Isipātana*) [MRGADĀVA](#) (Deer Park), located just northeast of the city of *Vārāṇasī*, where the Buddha spoke his first sermon, the “Turning of the Wheel of the Dharma” ([DHARMAKAPRAVARTANASŪTRA](#); [P. DHAMMACAKKAPPAVATTANASUTTA](#)); this site is also commonly known as the Deer Park (*Mṛgadāva*) in [SĀRNĀTH](#). Explanations for the name *Rṣipātana* generally involve slight variations of a story set in the time of the previous buddha [KĀŚYAPA](#). Just before the advent of *Kāśyapa*, five hundred [PRATYEKABUDDHAs](#) were said to be living in the hills of the park. When they heard of the coming of this Buddha, they flew into the air, attained [NIRVĀNA](#), and manifested the fire element; the fire burned their material bodies, which fell as ashes to the park below. Thus, the site came to be called “the place where holy men descend.” Others argue that *Rṣipātana* is instead a variation of *Rṣipātana*, meaning “gathering place of holy men.”

[rtsod grwa](#). (tsōdra). In Tibetan, lit. “debating institution,” particularly a large [DGE LUGS](#) monastery where a central part of the monastic complex is the *chos ra* (*chōra*), literally “fenced enclosure for dharma,” hence “debate courtyard,” often an enclosed open space close to the main assembly hall where monks who study scriptures assemble to debate points of doctrine. The term *mtshan nyid grwa tsang* (*tsenyi dratsang*) is often used in place of *rtsod grwa*. The origins of the

rtsod grwa may go back to the model of study followed in [BKA' GDAMS](#) monasteries like [GSANG PHU NE'U THOG](#), although such debate was also a part of the curriculum in the large monastic universities of northeast India, such as [VIKRAMAŚĪLA](#), [NĀLANDĀ](#), and [ODANTAPURĪ](#). The rtsod grwa is sometimes contrasted with teaching institutes (BSHAD GRWA) and places given over to meditation (sgrub khang), although most monasteries have parts dedicated to those activities as well. The best-known rtsod grwa are the six great Dge lugs monasteries of pre-1959 Tibet where the calendar year had strict debating periods; debate was raised to a high level there, forming a central part of the curriculum. For a month during the winter, 'Jang phu monastery to the southwest of [LHA SA](#) was the site of an intensive debate called the 'Jang dgun chos (Janggünchö) attended by students from the major Dge lugs monasteries in the greater Lha sa area, where debate focused particularly on the [PRAMĀNAVĀRTTIKA](#) of [DHARMAKĪRTI](#).

[Ru fajie pin](#). (S. *Dharmadhātupraveśanaparivarta; J. Nyūhokkaibon; K. Ip pöpkye p'um 入法界品). In Chinese, “Chapter on ‘Entering the [DHARMADHĀTU](#).’” See [GANDAVYŪHA](#); [AVATAMSAKASŪTRA](#).

[rūpa](#). (T. gzugs; C. se; J. shiki; K. saek 色). In Sankrit and Pāli, “body,” “form,” or “materiality,” viz., that which has shape and is composed of matter. The term has two primary doctrinal denotations. More generally, rūpa refers to materiality, which serves as objects of the five sensory consciousnesses ([VIJÑĀNA](#)): visual, auditory, olfactory, gustatory, and tactile. This is the meaning of rūpa as the first of the five aggregates ([SKANDHA](#)), where it includes all the physical constituents of the person. The second sense is more limited; the colors and shapes that serve as objects of the visual consciousness ([CAKSURVIJÑĀNA](#)) are designated as rūpa (and this accounts for the Chinese translation of the term as “color”); this second denotation is a subset of the first, and much more limited, referring only to the objects of the visual consciousness ([CAKSURVIJÑĀNA](#)). It is in this second sense that rūpa is counted among the twelve [ĀYATANA](#) and eighteen [DHĀTU](#). In formulations of the person as “name and form” ([NĀMARŪPA](#)), viz., an individual’s mental and physical constituents, “name” ([NĀMA](#)) subsumes the four mental aggregates ([SKANDHA](#)) of sensation ([VEDANĀ](#)), perception ([SAMJÑĀ](#)), conditioning factors ([SAMSKĀRA](#)), and consciousness ([VIJÑĀNA](#)), while “form” (rūpa) refers to the materiality aggregate ([RŪPASKANDHA](#)), viz., the physical body. In some [MAHĀYĀNA](#) sūtras, rūpādi (“form, and so on”) means all dharmas because form

is the first in the all-inclusive list of [SAMKLIṢṬA](#) and [VYAVADĀNA](#) dharmas that are declared to be empty of an essential identity ([SVABHĀVA](#)).

rūpadhātu. (T. gzugs kham; C. sejie; J. shikikai; K. saekkye 色界). In Sanskrit and Pāli, the “realm of subtle materiality” or “form realm,” which together with the sensuous, or desire, realm ([KĀMADHĀTU](#)) and the immaterial, or formless, realm ([ĀRŪPYADHĀTU](#)) constitute the three realms ([TRAI DHĀTUKA](#)) of [SAMSĀRA](#); the term is synonymous with rūpāvacara. The subtle-materiality realm is located above the heavens of the sensuous realm, which are situated on and above Mount [SUMERU](#). This realm is divided into four meditative heavens associated with the four meditative concentrations of the subtle-materiality realm ([RŪPĀVACARADHYĀNA](#)). These meditative heavens are places of rebirth in saṃsāra and are accessible only through mastery of a specific rūpāvacaradhyāna; the beings reborn there are classified as [BRAHMĀ](#) gods. Rebirth in these meditative heavens is the result of a specific kind of virtuous action, called an “immovable action” (S. [ANĪṆJYAKARMAṆ](#)), in which the action has the definite and specific effect of bringing about rebirth in either the subtle-materiality or immaterial heavens. The immovable action that would result in rebirth in, for example, the second concentration of the subtle-materiality realm, is the achievement of that specific state of dhyāna as a human in the immediately preceding lifetime. This realm is called the “subtle-materiality realm” because the beings there are free of the desires of the sensuous realm yet retain at least some semblance of physicality, albeit extremely subtle, and have a vestigial attachment to form ([RŪPA](#)). Only three of the five sensory objects remain in the subtle-materiality realm: visual objects, auditory objects, and objects of touch; hence, the deities there have only three physical sense organs, of sight, hearing, and touch. Each of the four concentrations of the subtle-materiality realm has its own sublevels, with three levels in the the first heaven, three in the second, three in the third, and eight in the fourth, totaling seventeen. In each ascending level, the heaven is situated farther above Mount Sumeru, the height of its beings grows taller, and their life spans increase. Although the characteristics of the various heavens within the subtle-materiality realm are described in some detail, the greater emphasis in Buddhist literature is on the states of meditative absorption that characterize each, how they are achieved, and how they differ from each other, with particular attention paid to the highest of the four, the fourth dhyāna of the subtle-materiality realm. The first three absorptions are characterized by a feeling of physical rapture ([PRĪTI](#)) and mental ease or bliss

([SUKHA](#)), whereas the fourth and subtlest of these dhyānas is characterized by one-pointedness of mind ([CITTAIKĀGRATĀ](#)) and equanimity ([UPEKSĀ](#)). It is therefore considered an ideal state from which to achieve [NIRVĀNA](#): for example, when the Buddha entered [PARINIRVĀNA](#), his mind passed through each of the four subtle-materiality and immaterial absorptions before passing into nirvāṇa directly from the fourth absorption. The fourth absorption also received particular attention as a place of rebirth. While the first three concentrations each have only three divisions, the fourth concentration has eight, with the additional five reserved for those beings who become [ĀRYA](#), or noble beings, through direct insight into the nature of reality. In the fourfold division of noble persons ([ĀRYAPUDGALA](#); viz., stream-enterer, once-returner, nonreturner, and [ARHAT](#)), the nonreturner ([ANĀGĀMIN](#)) is defined as that noble person who is never again reborn in the sensuous realm. Such a person may be reborn in the subtle-materiality realm, however, and the upper five heavens of the fourth absorption are a special place of rebirth called the pure abodes ([ŚUDDHĀVĀSA](#)) that are reserved just for such beings. See also [DEVA](#).

[rūpakāya](#). (T. gzugs sku; C. seshen; J. shikishin; K. saeksin 色身). In Sanskrit and Pāli, “physical body,” a term that seems to have been used originally to refer to the physical body of the Buddha, as opposed to the body or corpus of the Buddha’s marvelous qualities, which were referred to as the [DHARMAKĀYA](#). In the [MAHĀYĀNA](#) tradition, the rūpakāya refers to two specific visible forms of a Buddha: the [NIRMĀNAKĀYA](#), or “emanation body,” which is visible to ordinary beings, and the [SAMBHOGAKĀYA](#), or “enjoyment body,” which appears only to advanced bodhisattvas. When texts refer to the two bodies of a buddha, these refer to the rūpakāya and the dharmakāya. When texts refer to the three bodies ([TRIKĀYA](#)) of a buddha, these refer to the two types of the rūpakāya—the [nirmāṇakāya](#) and the [saṃbhogakāya](#)—along with the dharmakāya.

[rūpaloka](#). (S). See [RŪPADHĀTU](#).

[rūpam śūnyatā śunyataiva rūpam](#). (T. gzugs stong pa’o stong pa nyid gzugs so; C. se jishi kong kong jishi se; J. shikisokuzekū kūsokuzeshiki; K. saek chūksi kong kong chūksi saek 色即是空空即是色). In Sanskrit, “form is emptiness, emptiness is form”; a famous line from [PRAJÑĀPĀRAMITĀ](#) sūtras, known particularly from the [PRAJÑĀPĀRAMITĀHRDAYASŪTRA](#) (“Heart Sūtra”). The line is widely commented upon in India, Tibet, and East Asia, but is generally presumed to describe the relationship between the objects of ordinary experience

(represented by “form,” or [RŪPA](#), the first of the five aggregates, or [SKANDHA](#); see [RŪPASKANDHA](#)) and ultimate reality (here “emptiness,” or [ŚŪNYATĀ](#)). Some Sanskrit editions of the sūtra read the first phrase as “form is empty,” a reading reflected also in the Tibetan translation. In brief, the line might be interpreted to mean that the nature of the objects of ordinary experience is emptiness and that the ultimate truth *cum* emptiness is to be found in the objects of ordinary experience.

[rūparāga](#). (T. gzugs la chags ba; C. se tan; J. shikiton; K. saek t’am 色貪). In Sanskrit and Pāli, “craving for existence in the subtle-materiality realm,” the sixth of ten “fetters” ([SAMYOJANA](#)) that keep beings bound to [SAMSĀRA](#). Rūparāga is the desire to be reborn as a divinity ([DEVA](#)) in the subtle-materiality realm ([RŪPADHĀTU](#)) where beings are possessed of refined material bodies, are free from physical passions, and have minds that are perpetually absorbed in the rapture, ease, and equanimity of meditative absorption ([DHYĀNA](#)). According to this interpretation, craving for subtle-material existence is permanently eliminated upon attaining the stage of an [ARHAT](#), the fourth and highest degree of Buddhist sanctity ([ĀRYAPUDGALA](#)). Other schools of [ABHIDHARMA](#) use the name “free from attachment to form” (rūpavītarāga) to refer to a subset of nonreturners ([ANĀGĀMIN](#)) who eliminate all attachment to the subtle-materiality absorptions ([RŪPĀVACARADHYĀNA](#)) while in a sensuous-realm body, take rebirth in an immaterial state ([ĀRŪPYADHĀTU](#)), and go on to the [BHAVĀGRA](#) where they finally reach [NIRVĀNA](#).

[rūpaskandha](#). (P. rūpakkhandha; T. gzugs kyi phung po; C. se yun; J. shikiun; K. saek on 色蘊). In Sanskrit, “materiality aggregate,” the first of the five aggregates ([SKANDHA](#)). It includes all material elements of the body, including the five sense objects of visual forms, sounds, tastes, odors, and tangible objects, and the five sense organs ([INDRIYA](#)).

[rūpāvacaradhyāna](#). (P. rūpāvacarajhāna; T. gzugs na spyod pa’i bsam gtan; C. sejie ding; J. shikikaijō; K. saekkye chōng 色界定). In Sanskrit, “meditative absorption associated with the subtle-materiality realm”; in some Buddhist schools, one of the two main classifications of meditative absorption ([DHYĀNA](#)), along with [ĀRŪPYĀVACARADHYĀNA](#), meditative absorption associated with the immaterial realm. In both cases, dhyāna refers to the attainment of single-pointed concentration of the mind on an object of meditation. The four absorptions of the subtle-materiality realm are characterized by an increasing

attenuation of consciousness as one progresses from one stage to the next. By entering into any one of the dhyānas, the meditator temporarily allays the five hindrances ([NĪVARANA](#)) through the force of concentration, which puts in place the five constituents of absorption ([DHYĀNĀNGA](#)). The five hindrances are (1) sensuous desire ([KĀMACCHANDA](#)), which hinders the constituent of one-pointedness of mind ([CITTAIKĀGRATĀ](#)); (2) malice ([VYĀPĀDA](#)), hindering physical rapture ([PRĪTI](#)); (3) sloth and torpor ([STYĀNA-MIDDHA](#)), hindering applied thought ([VITARKA](#)); (4) restlessness and worry ([AUDDHATYA-KAUKRTYA](#)), hindering mental ease and bliss ([SUKHA](#)); and (5) skeptical doubt ([VICIKITSĀ](#)), which hinders sustained thought ([VICĀRA](#)). These hindrances thus specifically obstruct one of the factors of absorption (dhyānāṅga), and once they are allayed the first subtle-materiality dhyāna will be achieved. In the first subtle-materiality dhyāna, all five constituents of dhyāna are present; as concentration deepens, these gradually fall away, so that in the second dhyāna, both types of thought vanish and only prīti, sukha, and ekāgratā remain; in the third dhyāna, only sukha and ekāgratā remain; and in the fourth dhyāna, concentration is now so rarified that only ekāgratā is left. Mastery of the fourth rūpāvacaradhyāna is required for the cultivation of the supranormal powers ([ABHIJÑĀ](#)) and also provides the foundation for the cultivation of the four dhyānas of the immaterial realm ([ĀRŪPYĀVACARADHYĀNA](#)). Mastery of any of the subtle-materiality absorptions can result in rebirth as a [BRAHMĀ](#) god within the corresponding plane of the subtle-materiality realm ([RŪPADHĀTU](#)).

[rūpāyatana](#). (T. gzugs kyī skye mched; C. sechu; J. shikisho; K. saekch'ŏ 色處). In Sanskrit and Pāli, “visual sense field,” i.e., visible form ([RŪPA](#)) as it occurs in the list of twelve sense faculties or “bases of cognition” ([ĀYATANA](#)), which serve as the bases for the production of consciousness, viz., the six internal sense bases, or sense organs (eye, ear, nose, tongue, body, and mind) and the six external sense objects (forms, sounds, odors, tastes, tangible objects, and mental phenomena). In the case of form, the contact ([SPARŚA](#)) between the visual sense base ([CAKSURINDRIYA](#)) and its corresponding visual sensory object (rūpa) leads to visual consciousness ([CAKSURVIJÑĀNA](#)).

[Rwa lo tsā ba Rdo rje grags](#). (Ra Lotsawa Dorje Drakpa) (1016–1128?). A prominent translator and [YOGIN](#) of the “later dissemination” ([PHYI DAR](#)) of Buddhism to Tibet. While still in his teens, he went to Nepal, where he received instructions and transmissions of a number of tantric cycles; he received the

[VAJRABHAIRAVA](#) and [VAJRAVĀRĀHĪ](#) transmissions from the Nepalese master Bharo. Upon his return to Tibet, he attracted many students and received generous offerings from patrons, which he used for the support of the dharma; among his many projects was the rebuilding of [BSAM YAS](#) after it was destroyed by fire. He translated many tantric texts and is known especially for his translations of texts connected with [YAMĀNTAKA](#). He also translated the [KĀLACAKRATANTRA](#) into Tibetan; the tradition deriving from his translation is known as the Rwa lugs. He was also a controversial figure, known to have little patience with those who opposed him; he is said to have used his tantric powers to “liberate” (i.e., kill) thirteen rivals, including according to some accounts, [MAR PA](#)’s son [DAR MA SDO SDE](#).

Rwa lung. (Ralung). A principal monastic seat of the [’BRUG PA BKA’ BRGYUD](#) sect of Tibetan Buddhism, located southwest of [LHA SA](#). The monastery was established in 1180 by the ’Brug pa founder [GTSANG PA RGYA RAS YE SHES RDO RJE](#) on a site consecrated by his master [GLING RAS PA](#). According to traditional accounts, the site takes its name from a sacred goat whose milk was accidentally splashed on a rock. When the milk dried, the mantra om̐ aḥ hūṃ was found miraculously inscribed on the rock face. Gling ras pa took this as an important omen and called the site Rwa lung, lit. “Goat’s Omen.” Rwa lung was first directed by Gtsang pa rgya ras and later, beginning in the fifteenth century, by his successive reincarnations ([SPRUL SKU](#)) known as the [’BRUG CHEN INCARNATIONS](#).

Rwa sgrenḡ. (Reting). A principal monastery of the [BKA’ GDAMS](#) sect in central Tibet, located in the region of ’Phan po north of [LHA SA](#). The monastery was established in 1056 by [’BROM STON RGYAL BA’I ’BYUNG GNAS](#), foremost disciple of the Bengali master [ATIŚA DĪPAMKARAŚRĪJÑĀNA](#). The institution was greatly expanded under the direction of ’Brom ston pa’s successors Rnal ’byor pa chen po and Po to ba (b. 1031), although it was sacked by Mongol invaders in 1240. In 1397, the eminent scholar [TSONG KHA PA](#) visited Rwa sgrenḡ and experienced a vision of Atiśa, prompting him to compose his celebrated work [LAM RIM CHEN MO](#) there. The monastery subsequently became an important [DGE LUGS](#) institution. The monastery was severely damaged during the Chinese Cultural Revolution, but has since been partially rebuilt. From the time of the seventh [DALAI LAMA](#), the abbots of Rwa sgrenḡ became eligible to serve as regents during the interregnum between the Dalai Lama’s death and his reincarnation’s

majority. The Rwa sgreng lamas served as regent two times: between the reigns of the eleventh and twelfth Dalai Lamas and between that of the thirteenth and fourteenth.

Ryōanji. [alt. Ryūanji] (龍安寺). In Japanese, “Dragon Peace Monastery,” located in northwest Kyōto and famous for its dry landscape garden (J. karesansui). Originally an estate of the Fujiwara clan, the site was converted into a [ZEN](#) temple in 1450 by order of the military leader Hosokawa Katsumoto (1430–1473), a vassal of the Ashikaga shōgun. He installed Giten Genshō, the fifth abbot of [MYŌSHINJI](#), as its founding religious leader (see [KAISAN](#)); since that time the monastery has been affiliated with the Myōshinji branch of the [RINZAISHŪ](#) of Zen Buddhism. The site of bloody fighting during the Ōnin civil war (1467–1477), Ryōanji had to be rebuilt by Hosokawa Katsumoto’s son Hosokawa Masamoto between 1488 and 1499. Much of the monastery burned down in 1789 and was subsequently reconstructed. The monastery was a relatively obscure temple in the first half of the twentieth century, but the garden gained great fame in 1949 when it was used in a scene of Ozu Yasujirō’s film *Banshun* (*Late Spring*). Beginning in the 1950s, the garden began to be described as a “Zen garden” and has since come to be considered one of Japan’s cultural masterpieces. The garden has fifteen moss-covered boulders set in a sea of white pebbles. During the nineteenth century, the arrangement of the stones was called “tiger cubs crossing a river,” referring to a Chinese folktale, although many other interpretations have been offered in more recent decades. The temple grounds are the burial site of seven Hosokawa lords. Ryōanji was listed as a UNESCO World Heritage Site in 1994.

Ryōben. [alt. Rōben] (良辨) (689–773). Founder of the Japanese Kegonshū (C. [HUAYAN ZONG](#)) during the Nara period (710–784) and the first abbot of [TŌDAIJI](#), the major Kegon monastery and the headquarters of the [KOKUBUNJI](#) network of provincial temples. Ryōben originally studied the teachings of the Hossō (C. [FAXIANG](#)) school under Gien (d. 728) and resided at the monastery of Konshuji. Under the patronage of the emperor Shōmu (r. 724–749), Tōdaiji and its network of provincial temples was completed and the colossal [NARA DAIBUTSU](#) consecrated in 752; Ryōben was appointed the monastery’s first abbot and he formally established the Kegon school at the site. The Kegon school, one of the six major scholastic traditions of Nara Buddhism (see [NARA BUDDHISM, SIX SCHOOLS OF](#)), is said to date from 740, when Ryōben invited the Korean monk

[SIMSANG](#) (J. Shinjō, d. c. 744), a disciple of [FAZANG](#) (643–712), to Konshōji to lecture on the [AVATAMSAKASŪTRA](#) to Emperor Shōmu. Simsang is therefore typically considered the first patriarch of the Kegon school and Ryōben the second.

[ryōbu](#). (兩部). In Japanese, the “two groupings,” also known as ryōkai (“two realms”); referring to the [TAIZŌKAI](#) and [KONGŌKAI](#) systems and their related [MANDALAS](#) in the esoteric tradition ([MIKKYŌ](#)) of Japan. See [TAIZŌKAI](#) and [KONGŌKAI](#).

[Ryōgen](#). (良源) (912–985). In Japanese, “Virtuous Fount”; a tenth-century exponent of the [TENDAISHŪ](#) during the Heian Period, also known posthumously as Jie Daishi. Born in Ōmi province (present-day Shiga prefecture), Ryōgen became the eighteenth appointed head (zasu) of the Tendai school in 966 and spent the last nineteen years of his life at [ENRYAKUJI](#) reforming monastic discipline, promoting doctrinal studies, and writing works of his own. He used strategic political alliances to help what was then a marginalized Tendai school become the most powerful religious institution in Japan; in addition, he raised funds both to reconstruct burned monastic buildings on [HIEIZAN](#) and to construct new monasteries within its precincts. In response to escalating disputes among regional monastic communities, Ryōgen also established in 970 the first permanent fighting force to defend and serve the interests of the Mt. Hiei monks. While this move appears to contradict a set of reforms he had previously issued that forbade his monks from carrying weapons, it seems that his first troops may actually have been hired mercenaries rather than “monk soldiers” (J. [SŌHEI](#)). Among Ryōgen’s disciples, perhaps the best known is [GENSHIN](#) (942–1017), the author of the influential [ŌJŌ YŌSHŪ](#).

[ryōkai](#). (J) (兩界). See [RYŌBU](#).

[Ryōkan](#). (良寛) (1758–1831). In Japanese, “Virtuous Liberality”; Edo-period [ZEN](#) monk in the [SŌTŌSHŪ](#), often known as Ryōkan Taigu (lit. Ryōkan, the Great Fool). Ryōkan was associated with a reformist group within the contemporary Sōtō monastic community that sought to restore formal meditative practice and the study of the writings of [DŌGEN KIGEN](#). Ryōkan grew up in Echigo province (present-day Niigata prefecture), the son of a [SHINTŌ](#) priest. He became a novice monk at age seventeen at the nearby Sōtō monastery of Kōshōji and was ordained when he turned twenty-one under a Sōtō monk named Kokusen (d.

1791). He left for Kokusen's monastery in the Bitchū province (present-day Okayama prefecture) and subsequently inherited the temple after Kokusen died. Soon afterward, however, he departed from the monastery, choosing instead to follow an itinerant lifestyle for the next several years. In 1804, he settled down for twelve years in a hut on Mt. Kugami, situated near his hometown. In 1826 Ryōkan met Teishin (d. 1872), a young nun who had been previously widowed, and the two remained close companions until Ryōkan's death. Ryōkan eventually chose for himself a radically simple existence, living much of his life as a hermit, owning few possessions and begging for alms. He was well regarded for his love of children and his compassion for people from all social strata, including prostitutes. His expression of compassion was so extreme that he is even said to have placed lice inside his robes so they would not get cold and to have exposed his legs to mosquitoes while he slept. Ryōkan was a renowned calligrapher and poet (in both Chinese and vernacular Japanese). Most of his verses are written as thirty-one-syllable tanka, although he also wrote ninety chōka (long poems) and at least twenty other verses in nonstandard form. Ryōkan's poetry addressed his common everyday experiences in the world in direct, humble terms. Ryōkan did not publish during his lifetime; rather, his verses were collected and published posthumously by his companion Teishin.

Ryōnin. (良忍) (1072–1132). In Japanese, “Virtuous Forbearance”; founder of the [YŪZŪNENBUTSUSHŪ](#), an early [PURE LAND](#) school in Japan. Ryōnin traveled to [HIEIZAN](#) at the age of twelve to study the [TENDAISHŪ](#) (C. [TIANAI ZONG](#)) teachings and was ordained at the age of fifteen. He retreated to Ōhara, a rural area north of Kyōto, in 1095, where he spent the next thirty years. There, Ryōnin at first studied the [SADDHARMAPUNĀRĪKASŪTRA](#) and the [AVATAMSAKASŪTRA](#), but later concentrated on reciting the [SUKHĀVATĪVYŪHASŪTRA](#). Through a revelation from the buddha [AMITĀBHA](#) that he received in 1117, Ryōnin began teaching his principle of [YŪZŪNENBUTSU](#) (perfect-interpenetration recitation of the Buddha's name), in which every individual benefits from both his own and others' chanting of the Buddha's name (J. nenbutsu; C. [NIANFO](#)) through a mutual transfer of merit. In 1124, Ryōnin began traveling throughout Japan to spread the practice. His decision to begin teaching evokes Śākyamuni Buddha's own life story: after realizing this principle, Ryōnin was content dwelling in solitude, but [VAIŚRAVANA](#) (J. Tabun tennō) appeared before Ryōnin to ask him to teach his revelation and disseminate the chanting practice among the people. As Ryōnin traveled around Japan, he carried with him a booklet in which he recorded the

names of all the people who agreed to practice the chanting of the Buddha's name everyday. Soon after beginning his campaign, Ryōnin received the imperial bell from the retired monarch Toba (r. 1107–1123), who also added his name to this register of adherents: both the bell and the register are now housed at Dainenbutsuji, the headquarters of the Yūzūnenbutsu school. Such a sign of imperial support for Ryōnin's campaign attracted many new followers to his school. Ryōnin continued his evangelical efforts until his death in 1132 at Raigōin, one of the two cloisters (along with Jōrengin) that he established in Ōhara. Ryōnin also studied Buddhist "[BRAHMĀ](#) chanting" (J. bonbai; see C. [FANBAI](#); K. pŏmp'ae) and founded his own lineage of bonbai chanting during his thirty years in Ōhara.

S

Sabbāsavasutta. (C. Loujin jing; J. Rojinyō; K. Nujin kyōng 漏盡經). In Pāli, “Discourse on All the Contaminants,” the second sutta in the Pāli [MAJJHIMANIKĀYA](#) (a separate [SARVĀSTIVĀDA](#) recension appears as the tenth [SŪTRA](#) in the Chinese translation of the [MADHYAMĀGAMA](#); there is also a recension of unidentified affiliation in the [EKOTTARĀGAMA](#)); preached by the Buddha to a gathering of monks in the [JETAVANA](#) grove in the town of Sāvatti (S. [ŚRĀVASTĪ](#)). The Buddha describes the contaminants or outflows ([ĀSRAVA](#)) that afflict the minds of ordinary worldlings and keep them bound to the cycle of birth and death. He then prescribes seven methods for controlling and eradicating the contaminants: by correct vision (of the nature of the self), restraint (of the senses), usage (i.e, correct usage of the monastic requisites), endurance (e.g., bearing hunger, climate, physical pain), avoidance (e.g., bad friends, unsuitable residences), removal (e.g., of sensuality and ill will), and development (of the seven limbs of awakening).

sa bdag. (sadak). In Tibetan, lit. “lord of the earth” or “owner of the earth”; a term that encompasses a number of deities who are the rightful owners of particular sites, such as lakes, hills, mountains, and valleys, and who must be properly propitiated before using, and especially digging at, a site. If not properly propitiated, they may cause a wide range of maladies, including epidemics among humans and livestock. These deities can be of either Tibetan or Indian origin, the latter including such beings as [NĀGAs](#).

śabda. (P. sadda; T. sgra; C. sheng; J. shō; K. sōng 聲). In Sanskrit, “sound,” or “auditory object”; the object of the auditory consciousness and one of the five sense objects, the others being visible forms ([RŪPA](#)), smells ([GANDHA](#)), tastes ([RASA](#)), and tangible objects ([SPARŚA](#)). Sounds are the object of the auditory sense organ ([ŚROTRENDRIYA](#)) and lead to the production of auditory consciousness ([ŚROTRAVIJÑĀNA](#)). In the [ABHIDHARMAKOŚABHĀSYA](#), sounds are categorized according to their source, being divided into those sounds caused by elements conjoined with consciousness (upāttamahābhūtahetuka) and sounds caused by elements not conjoined with consciousness (anupāttamahābhūtahetuka). The former would include the sound made by the clapping of hands or the vocalization of a human or animal; the latter would

include sounds in the natural world, such as the sound of wind or water. Each of these two types is further subdivided into the articulate (sattvākhyā, lit. “sentient being’s utterance”) and the inarticulate (asattvākhyā, lit. “not a sentient being’s utterance”) based on whether or not the sound communicates meaning to a sentient being. Each of these is further divided into two types, the pleasant (yaśā) and the unpleasant (ayaśā), yielding eight types of sound. The nature of sound is an important point of controversy between Buddhist and Hindu thinkers in India, with Buddhists arguing that sound is impermanent ([ANITYA](#)) against Mīmāṃsakas who claim that the Vedas are eternal sounds that are not created by persons (apauruṣeya) and hence permanent.

[śabdāsāmānya](#). (T. sgra spyi). In Sanskrit, lit. “sound generality” or “sound universal”; a term that appears in Buddhist logic and epistemology in discussions of the operations of thought and the relations between thought and language. The term refers to the sound or phonetic component that appears to the mind, regardless of whether the meaning of that sound is understood. The referent, or semantic content, of the sound that appears to the mind is called arthasāmānya, literally “meaning generality” or “meaning universal.” It is possible to have a sound generality independent of meaning generality, as in the case of hearing a word in a language that one does not understand. It is also possible to have a meaning generality alone, as in the case of seeing an object or hearing a description of an object, but not knowing its name. A conceptual consciousness (see [KALPANĀ](#)) is defined as one in which a sound generality and a meaning generality are suitable to be mixed, that is, for the name of the object to be associated with its mental image. The term appears in [DIGNĀGA](#) and is important in Tibetan Buddhist epistemology.

[śabdāyatana](#). (P. saddāyatana; T. sgra’i skye mched; C. shengchu; J. shōsho; K. sōngch’ō 聲處). In Sanskrit, “auditory sense-field,” that is, sound ([ŚABDA](#)) as it occurs in the list of twelve sense faculties or “bases of cognition” ([ĀYATANA](#)), which serve as the bases for the production of consciousness: viz., the six internal sense bases, or sense organs (eye, ear, nose, tongue, body, and mind) and the six external sense objects (forms, sounds, odors, tastes, tangible objects, and mental phenomena). In the case of sound, the contact ([SPARŚA](#)) between the auditory sense base and its corresponding auditory sensory object leads to auditory consciousness ([ŚROTRAVIJÑĀNA](#)).

[sabhāgahetu](#). (T. skal mnyam gyi rgyu; C. tonglei yin; J. dōruin; K. tongnyuin

同類因). In Sanskrit, “homogeneous cause”; the fourth of the six types of causes ([HETU](#)) outlined in the [JÑĀNAPRASTHĀNA](#), the central text of the [SARVĀSTIVĀDA ABHIDHARMA](#), wherein a cause is always antecedent to its incumbent effect. This homogeneity can occur in a number of guises. In the case of physical causation, an apple seed would be a homogenous cause to the production of an apple. In the case of mental causation, a moment of wisdom that derives from what is heard ([ŚRUTAMAYĪPRAJÑĀ](#)) would be a homogenous cause to subsequent moments of the wisdom that derives from reflection ([CINTĀMAYĪPRAJÑĀ](#)). In the case of actions, a wholesome ([KUŚALA](#)) action ([KARMA](#)) is a homogeneous cause to wholesome effects. This homogeneity extends throughout all of the three realms ([TRAI DHĀTUKA](#)) of [SAMSĀRA](#), viz., the sensuous realm ([KĀMADHĀTU](#)), the subtle-materiality realm ([RŪPADHĀTU](#)), and the immaterial realm ([ĀRŪPYADHĀTU](#)). In these cases, a cause may produce an effect that is superior to it, as long as the effect is produced in the same realm. For example, a moment of the wisdom that derives from what is heard ([śrutamayīprajñā](#)) in the sensuous realm might serve as a homogeneous cause for a moment of the wisdom that derives from reflection ([cintāmayīprajñā](#)) in the sensuous realm.

[sābhisamskāraparinirvāyin](#). (T. mngon par 'du byed dang bcas pa yongs su mya ngan las 'das pa; C. youxing banniepan; J. ugyōhatsunehan; K. yuhaeng panyōlban 有行般涅槃). In Sanskrit, “one who achieves [NIRVĀNA](#) through effort”; a particular sort of nonreturner ([ANĀGĀMIN](#)), one of the twenty members of the [ĀRYASAMGHA](#) (see [VIMŚATI PRABHEDASAMGHA](#)). According to the [ABHIDHARMAKOŚABHĀSYA](#), the [sābhisamskāraparinirvāyin](#) are nonreturners who, having achieved any of the sixteen birth states of the immaterial realm ([ĀRŪPYADHĀTU](#)), enter “nirvāṇa with remainder” ([SOPADHIŚESANIRVĀNA](#)) at that support, but only after they have made a conscious effort and applied a little force. This differentiates them from the [UPAPADYAPARINIRVĀYIN](#) and the [ANABHISAMSKĀRAPARINIRVĀYIN](#).

[Saccaka](#). (P). See [MAHĀSACCAKASUTTA](#).

[Sa chen Kun dga' snying po](#). (Sachen Kunga Nyingpo) (1092–1158). A great scholar and adept of the [SA SKYA](#) sect of Tibetan Buddhism, renowned especially for his writings on the tantric system of [LAM 'BRAS](#), or “path and result.” He is usually referred to simply as Sa chen, or “Great Master of Sa skya.” Born the son of [DKON MCHO G RGYAL PO](#), another important Sa skya master and first throne-holder of Sa skya monastery, he was a child prodigy. He first trained

under the Sa skya hierarch Ba ri lo tsā ba Rin chen grags pa (Bari Lotsāwa Rinchen Drakpa, 1040–1111), from whom he received numerous transmissions of both [SŪTRA](#) and [TANTRA](#). At the age of eleven he began a meditation retreat in which he had a visionary encounter with the bodhisattva [MAÑJUŚRĪ](#). The bodhisattva spoke to him four lines that subsequently became a fundamental Sa skya teaching called the zhen pa bzhi bral (“parting from the four attachments”): If you are attached to this life, you are not a religious person.

If you are attached to SAMSĀRA, you do not have renunciation.

If you are attached to your own welfare, you do not have [BODHICITTA](#).

If grasping occurs, you do not have the view.

In 1111, at the age of twenty, he received the throne of Sa skya monastery from Ba ri lo tsā ba and became the institution’s third abbot, a position he held for the remainder of his life. Beginning in 1120, Sa chen received the seminal Sa skya instructions on lam ’bras from Zhang ston chos ’bar (Shangtön Chöbar, 1053?–1135?), a [YOGIN](#) who initially claimed not to know anything about the topic. However, he eventually provided instruction to Sa chen for eight years, after which he instructed him not to teach lam ’bras for the next eighteen years. Sa chen then spent those eighteen years in retreat, practicing these instructions. During this time, he had a vision of the Indian adept [VIRŪPA](#), founder of the lam ’bras lineage, who bestowed on him the lam ’bras teachings in their entirety. After completing his retreat, Sa chen put Virūpa’s instructions on lam ’bras, known as the [RDO RJE TSHIG RKANG](#) (“Vajra Verses”), into writing for the first time, eventually composing eleven commentaries on them. Later, Sa chen was poisoned and went into a coma. When he regained consciousness, he had suffered complete memory loss. He thus went to his former teachers to receive instructions again. However, there was no one to provide the lam ’bras teachings and Zhang ston chos ’bar had passed away. Sa chen went into retreat, during which Zhang ston chos ’bar appeared to him and repeated his previous teachings. Among Sa chen’s four sons, two became prominent Sa skya leaders: [BSOD NAMS RTSE MO](#) and Grags pa rgyal mtshan (Drakpa Gyaltsen, 1147–1216). Another of his sons, Dpal che ’od po (Palche Öpo, 1150–1204), was the father of [SA SKYA PANDITA KUN DGA’ RGYAL MTSHAN](#), who would become one of Tibet’s most influential religious figures. Kun dga’ snying po and the most illustrious of his offspring over the next two generations (Grags pa rgyal mtshan, Bsod nams rtse mo, Kun dga’ snying po, and [’PHAGS PA](#)) are known as [SA SKYA GONG MA](#)

[LNGA](#) (the five Sakya hierarchs) and as such have iconic status in Sa skya ritual.

[Sacred Books of the Buddhists](#). A pioneering series of translations of Buddhist texts, initially edited by [F. MAX MÜLLER](#) and later by [CAROLINE A. F. RHYS DAVIDS](#). After Müller had completed the Sacred Books of the East series (ten of whose forty-nine volumes were devoted to Buddhist works), he continued to receive requests to publish translations of more texts, especially Asian texts. He decided to start a new series for Buddhism, with financial support provided by the Thai king Chulalongkorn ([RĀMA V](#)). The first volume was published in 1895 by Oxford University Press. Publication was eventually taken over by the [PALI TEXT SOCIETY](#). To date, some fifty volumes have been published in the series.

[sadaksari](#). [alt. ṣaḍakṣarīvidyā] (T. yi ge drug pa'i rig sngags; C. liuzi daming/liuzi zhangju; J. rokujīdaimyō/rokuji shōku; K. yukcha taemyōng/yukcha changgu 六字大明/六字章句). In Sanskrit, “six-syllable spell”; the renowned [MANTRA](#) associated with the [BODHISATTVA](#) of compassion, [AVALOKITEŚVARA](#): viz., “[OM MANI PADME HŪM](#).” The mantra has six syllables and is used to call upon the bodhisattva, using his epithet Maṇipadma or “Jewel Lotus,” a four-armed form who holds both a rosary of jewels ([RATNA](#)) and a lotus flower ([PADMA](#)). Hence, the mantra means “Om, O Jewel-Lotus,” not “jewel in the lotus,” contrary to popular belief. The earliest textual source for this mantra is the [KĀRANDAVYŪHA](#) [alt. Avalokiteśvaragaṇa-Kāraṇḍavyūha]. See [OM MANI PADME HŪM](#).

[Sadāparibhūta](#). (T. Rtag tu mi brnyas pa; C. Changbuqing pusa; J. Jōfukyō bosatsu; K. Sangbulgyōng posal 常不輕菩薩). In Sanskrit, “Never Disparaging,” the name of a [BODHISATTVA](#) described in the eponymous nineteenth or twentieth chapter (depending on the version) of the [SADDHARMAPUNḌARĪKASŪTRA](#) (“Lotus Sūtra”). The Buddha explains that long ago there was a bodhisattva named Sadāparibhūta who did not study or recite the sūtras. Whenever he saw a monk ([BHIKSU](#)), nun ([BHIKSUNĪ](#)), male lay disciple ([UPĀSAKA](#)), or female lay disciple ([UPĀSIKĀ](#)), he would say, “I dare not belittle you because you will all become buddhas.” Arrogant monks, nuns, and male and female lay disciples began to sarcastically refer to him as “Never Disparaging.” When the bodhisattva was about to die, he heard millions of verses of the *Saddharmapuṇḍarīkasūtra* in the sky and as a result his life span was increased by many eons, during which he taught the sūtra. Those who had mocked him were reborn in [AVICI](#) hell, but were eventually reborn as his disciples and later became the five hundred bodhisattvas

in the assembly of the *Saddharmapuṇḍarīkasūtra*. The Buddha reveals that he had been the bodhisattva Sadāparibhūta in a previous life. The bodhisattva's famous statement, "I dare not belittle you because you will all become buddhas," came to be known as the "twenty-four character 'Lotus Sūtra'" because in [KUMĀRAJĪVA](#)'s translation, the line is twenty-four Sinographs long. The chapter was especially important to the Japanese reformer [NICHIREN](#), who noted the importance of developing even a negative relationship with the true teaching, as evidenced by the fact that those who slandered Sadāparibhūta eventually became bodhisattvas themselves.

[Sadāprarudita](#). (T. Rtag tu ngu; C. Changti [pusa]; J. Jōtai [bosatsu]; K. Sangje [posal] 常啼[菩薩]). In Sanskrit, "Ever Weeping," the name of a [BODHISATTVA](#) whose story appears in the [ASTASĀHASRIKĀPRAJÑĀPĀRAMITĀ](#). He sets out in search of a teacher who will teach him the perfection of wisdom ([PRAJÑĀPĀRAMITĀ](#)) but, unable to find one, is constantly crying. He eventually learns that the bodhisattva [DHARMODGATA](#) is teaching in a faraway city. He has nothing to offer his teacher and thus announces that he is willing to sell his body. [ŚAKRA](#), the king of the gods, decides to test his commitment and takes the form of an old man who agrees to buy some of Sadāprarudita's flesh. He cuts off a piece of his thigh and gives it to the man. The man then asks for some bone marrow. Sadāprarudita is about to break his leg to extract the marrow when a wealthy merchant's daughter, impressed by his dedication, offers to provide the necessary gifts for Dharmodgata. Śakra then reveals his true form and heals Sadāprarudita's body. Sadāprarudita, the merchant's daughter, and her five hundred attendants then proceed to the city where Dharmodgata is residing and receive his teachings. The story is a famous example of [DEHADĀNA](#), the "gift of the body" that bodhisattvas make out of their dedication to the welfare of others. It is also an important example of devotion to the teacher.

[sadāyatana](#). (P. saḷāyatana; T. skye mched drug; C. liuchu; J. rokusho; K. yukch'ō 六處). In Sanskrit, "six bases of cognition"; the fifth link in the twelvefold chain of dependent origination ([PRATĪTYASAMUTPĀDA](#)), preceded by "name and form" ([NĀMARŪPA](#)) and followed by "contact" ([SPARŚA](#)). Here, the six bases of cognition refer to the six sense organs ([INDRIYA](#)): the eye, ear, nose, tongue, body, and mentality. In some interpretations of the twelvefold chain, the term refers specifically to the formation of the sense organs in the womb, on the basis of the prior link, "name and form" (nāmarūpa), which refers to the five

aggregates ([SKANDHA](#)) directly after conception. The term “bases” or “sources” ([ĀYATANA](#)) more commonly refers to the twelve bases of cognition—the six sense organs and their six objects—but in the context of dependent origination, it refers specifically to the sense organs.

[Saddanīti](#). In Pāli, the “Practice of Grammar,” an important work on Pāli grammar and philology by the twelfth century Burmese monk Aggavaṃsa. Composed in 1154, it is considered the most important of the extant Pāli grammars. It draws both on the first known Pāli grammar, written by Kaccāyana, as well as Pāṇini’s Sanskrit grammar. Its twenty-eight chapters contain a detailed morphology of Pāli and discussions of prefixes and particles.

[Saddarśanasamuccaya](#). In Sanskrit, “Compendium of the Six Views,” a work by the eighth-century Indian scholar Haribhadra (or Haribhadra Sūri) of the Śvetāmbara school of Jainism. The six views refer to six schools of Indian philosophy: Buddhism, Jainism (see [JAINA](#)), and the four Hindu schools of Nyāya, Sāṃkhya, Vaiśeṣika, and Mīmāṃsā. The work also contains an appendix on the so-called “materialist” school, Cārvāka. The work remains useful to scholars of Buddhism for articulating how Buddhist doctrines were interpreted by non-Buddhist schools.

[Saddhammapajjotikā](#). [alt. [Saddhammaṭṭhitikā](#)]. In Pāli, “Illumination of the True Dharma,” a commentary on the [NIDDESA](#) of the [KHUDDAKANIKĀYA](#), written by [UPASENA](#) of Sri Lanka, probably in either 817 or 877 CE. The text borrows heavily from the [VISUDDHIMAGGA](#) of [BUDDHAGHOSA](#).

[Saddhammappakāsinī](#). In Pāli, “Explanation of the True Dharma,” a commentary on the [PATISAMBHIDĀMAGGA](#) of the [KHUDDAKANIKĀYA](#), attributed to Mahānāma of Sri Lanka. According to its colophon, the commentary was composed in the first half of the sixth century CE. The text contains numerous quotations from the [VISUDDHIMAGGA](#) of [BUDDHAGHOSA](#).

[Saddhammasaṅgaha](#). In Pāli, “Chronicle of the True Dharma,” an ecclesiastical and literary history of [THERAVĀDA](#) Buddhism, written by Dhammakitti Mahāsāmī at the Thai capital [AYUTHAYA](#) during the reign of PARAMARĀJĀ I (1370–1388 CE); it is the earliest Buddhist chronicle composed in Southeast Asia. The author was inspired to write the history after his return from Sri Lanka, where he had participated in an ongoing purification and revival of

Buddhism on the island. The work relies heavily on the [DĪPAVAMSA](#), [MAHĀVAMSA](#), and [VINAYA](#) commentary, [SAMANTAPĀSĀDIKĀ](#), as well as on the historical introduction to the twelfth-century [MAHĀPARĀKRAMABĀHU-KATIKĀVATA](#) of [PARĀKRAMABĀHU I](#). The work is divided into eleven chapters and concludes with an account of the benefits of listening to the preaching of the dharma. The *Saddhammasaṅgaha* was translated into English in 1941 by B. C. Law under the title, *A Manual of Buddhist Historical Traditions*.

[saddharma](#). (P. saddhamma; T. dam pa'i chos; C. zhengfa; J. shōbō; K. chōngpōp 正法). In Sanskrit, “true dharma” or “right dharma” (and often translated as “true law” in the nineteenth century), a term for the teaching of the Buddha. The term appears widely in Buddhist literature, including the Pāli canon. The term [DHARMA](#) has many meanings in Indian literature in general and in Indian Buddhism in particular. Scholars speculate that [SADDHARMA](#) was coined to indicate specifically that the saddharma was “the teaching of the Buddha,” in order to distinguish his doctrine from those of non-Buddhist teachers (whose doctrines were also termed dharma). It may have also been intended to imply a truer, in the sense of a more definitive, teaching within the teachings of the Buddha, as in the title of the “Lotus Sūtra,” [SADDHARMAPUNDARĪKASŪTRA](#), lit., “White Lotus of the True Dharma,” where the Buddha explains that his teaching on the one vehicle ([EKAYĀNA](#)) supersedes his previous teaching of three vehicles ([TRIYĀNA](#)). Saddharma was also used to refer to that period after the [PARINIRVĀNA](#) of a particular buddha, when his teaching remained complete and intact and its practice was faithful and virtuous; this period preceded their inevitable decline (see [SADDHARMAPRATIRŪPAKA](#) and [SADDHARMAVIPRALOPA](#)).

[saddharmapratirūpaka](#). (T. dam pa'i chos kyi gzugs brnyan; C. xiangfa/xiangsi zhengfa; J. zōhō/zōjishōbō; K. sangpōp/sangsajōngpōp 像法/像似正法). In Sanskrit, “semblance dharma,” or “counterfeit dharma” (although this latter translation has a pejorative connotation in English that is not present in the Sanskrit); the term more literally means “a [mere] reflection of the true dharma.” The term occurs most commonly in [MAHĀYĀNA](#) literature and is largely absent in the texts of the [MAINSTREAM BUDDHIST SCHOOLS](#), suggesting that it came into use around the beginning of the Common Era. In its most general sense, it refers to the entire period during which the true dharma ([SADDHARMA](#)) of a given buddha exists in the world, i.e., from the time that the buddha passes into [PARINIRVĀNA](#) to

the time that his dharma finally vanishes completely. In some texts, this term refers specifically to the second of two periods in the duration of the dharma: the first is the saddharma, or true dharma, the second is the saddharmapratirūpaka, or reflection of the true dharma. In East Asian eschatological traditions, saddharmapratirūpaka came to refer to the second of three periods in the disappearance of the dharma from the world: there was a period of the true dharma (zhengfa), a period of “semblance dharma” (called [XIANGFA](#) in Chinese), and a period of final dharma (see [MOFA](#), [SADDHARMAVIPRALOPA](#)). See also [ANTARADHĀNA](#).

[Saddharmapuṇḍarīkasūtra](#). (T. Dam pa'i chos padma dkar po'i mdo; C. Miaofa lianhua jing/Fahua jing; J. Myōhōrengekyō/Hokekyō; K. Myobōp yōnhwa kyōng/Pōphwa kyōng 妙法蓮華經/法華經). In Sanskrit, “Sūtra of the White Lotus of the True Dharma,” and known in English simply as the “Lotus Sūtra”; perhaps the most influential of all [MAHĀYĀNA](#) sūtras. The earliest portions of the text were probably composed as early as the first or second centuries of the Common Era; the text gained sufficient renown in India that a number of chapters were later interpolated into it. The sūtra was translated into Chinese six times and three of those translations are extant. The earliest of those is that made by [DHARMARAKSA](#), completed in 286. The most popular is that of [KUMĀRAJĪVA](#) in twenty-eight chapters, completed in 406. The sūtra was translated into Tibetan in the early ninth century. Its first translation into a European language was that of [EUGÈNE BURNOUF](#) into French in 1852. The *Saddharmapuṇḍarīkasūtra* is perhaps most famous for its parables, which present, in various versions, two of the sūtra’s most significant doctrines: skill-in-means ([UPĀYA](#)) and the immortality of the Buddha. In the parable of the burning house, a father lures his children from a conflagration by promising them three different carts, but when they emerge they find instead a single, magnificent cart. The three carts symbolize the [ŚRĀVAKA](#) vehicle, the [PRATYEKABUDDHA](#) vehicle, and the [BODHISATTVA](#) vehicle, while the one cart is the “one vehicle” ([EKAYĀNA](#)), the buddha vehicle ([BUDDHAYĀNA](#)). This parable indicates that the Buddha’s previous teaching of three vehicles ([TRIYĀNA](#)) was a case of upāya, an “expedient device” or “skillful method” designed to attract persons of differing capacities to the dharma. In fact, there is only one vehicle, the vehicle whereby all beings proceed to buddhahood. In the parable of the conjured city, a group of weary travelers take rest in a magnificent city, only to be told later that it is a magical creation. This conjured city symbolizes the [NIRVĀNA](#) of the [ARHAT](#); there is in

fact no such nirvāṇa as a final goal in Buddhism, since all will eventually follow the bodhisattva's path to buddhahood. The apparently universalistic doctrine articulated by the sūtra must be understood within the context of the sectarian polemics in which the sūtra seems to have been written. The doctrine of upāya is intended in part to explain the apparent contradiction between the teachings that appear in earlier sūtras and those of the *Saddharmapuṇḍarīkasūtra*. The former are relegated to the category of mere expedients, with those who fail to accept the consummate teaching of the *Saddharmapuṇḍarīkasūtra* as the authentic word of the Buddha ([BUDDHAVACANA](#)) repeatedly excoriated by the text itself. In a device common in Mahāyāna sūtras, the sūtra itself describes both the myriad benefits that accrue to those who recite, copy, and revere the sūtra, as well as the misfortune that will befall those who fail to do so. The immortality of the Buddha is portrayed in the parable of the physician, in which a father feigns death in order to induce his sons to commit to memory an antidote to poison. The apparent death of the father is compared to the Buddha's entry into nirvāṇa, something which he only pretended to do in order to inspire his followers. Elsewhere in the sūtra, the Buddha reveals that he did not achieve enlightenment as the prince Siddhārtha who left his palace, but in fact had achieved enlightenment eons before; the well-known version of his departure from the palace and successful quest for enlightenment were merely a display meant to inspire the world. The immortality of the Buddha (and other buddhas) is also demonstrated when a great [STŪPA](#) emerges from the earth. When the door to the funerary reliquary is opened, ashes and bones are not found, as would be expected, but instead the living buddha [PRABHŪTARATNA](#), who appears in his stūpa whenever the *Saddharmapuṇḍarīkasūtra* is taught. [ŚĀKYAMUNI](#) joins him on his seat, demonstrating another central Mahāyāna doctrine, the simultaneous existence of multiple buddhas. Other famous events described in the sūtra include the miraculous transformation of a [NĀGA](#) princess into a buddha after she presents a gem to Śākyamuni and the tale of a bodhisattva who immolates himself in tribute to a previous buddha. The sūtra contains several chapters that function as self-contained texts; the most popular of these is the chapter devoted to the bodhisattva [AVALOKITEŚVARA](#), which details his ability to rescue the faithful from various dangers. The *Saddharmapuṇḍarīkasūtra* was highly influential in East Asia, inspiring both a range of devotional practices as well as the creation of new Buddhist schools that had no Indian analogues. The devotional practices include those extolled by the sūtra itself: receiving and keeping the sūtra, reading it, memorizing and reciting it, copying it, and

explicating it. In East Asia, there are numerous tales of the miraculous benefits of each of these practices. The practice of copying the sūtra (or having it copied) was a particularly popular form of merit-making either for oneself or for departed family members. Also important, especially in China, was the practice of burning either a finger or one's entire body as an offering to the Buddha, emulating the self-immolation of the bodhisattva [BHAIŚAJYARĀJA](#) in the twenty-third chapter (see [SHESHEN](#)). In the domain of doctrinal developments, the *Saddharmapuṇḍarīkasūtra* was highly influential across East Asia, its doctrine of upāya providing the rationale for the systems of doctrinal taxonomies (see [JIAOXIANG PANSHI](#)) that are pervasive in East Asian Buddhist schools. In China, the sūtra was the central text of the [TĪANTAI ZONG](#), where it received detailed exegesis by a number of important figures. The school's founder, [TĪANTAI ZHIYI](#), divided the sūtra into two equal parts. In the first fourteen chapters, which he called the "trace teaching" (C. jimen, J. [SHAKUMON](#)), Śākyamuni appears as the historical buddha. In the remaining fourteen chapters, which Zhiyi called the "origin teaching" (C. benmen, J. [HONMON](#)), Śākyamuni reveals his true nature as the primordial buddha who achieved enlightenment many eons ago. Zhiyi also drew on the *Saddharmapuṇḍarīkasūtra* in elucidating two of his most famous doctrines: the three truths ([SANDI](#), viz., emptiness, the provisional, and the mean) and the notion of [YINIAN SANQIAN](#), or "the trichiliocosm in an instant of thought." In the [TENDAISHŪ](#), the Japanese form of Tiantai, the sūtra remained supremely important, providing the scriptural basis for the central doctrine of original enlightenment ([HONGAKU](#)) and the doctrine of "achieving buddhahood in this very body" ([SOKUSHIN JŌBUTSU](#)); in [TAIMITSU](#), the tantric form of Tendai, Śākyamuni Buddha was identified with [MAHĀVAIROCANA](#). For the [NICHIREN](#) schools (and their offshoots, including [SŌKA GAKKAI](#)), the *Saddharmapuṇḍarīkasūtra* is not only its central text but is also considered to be the only valid Buddhist sūtra for the degenerate age (J. mappo; see C. [MOFA](#)); the recitation of the sūtra's title is the central practice in Nichiren (see [NAMU MYŌHŌRENKĒKYŌ](#)). See also [SADĀPARIBHŪTA](#).

[saddharmavipralopa](#). (T. dam pa'i chos rab tu rnam par 'jig pa; C. mofa; J. mappō; K. malpōp 末法). In Sanskrit, "disappearance of the true dharma," the predicted demise of the Buddha's dispensation ([ŚĀSANA](#)) from the world. Mainstream Buddhist doctrine holds that all evidence of the teaching of the previous buddha must vanish before the next buddha can appear in the world. The precise length of the duration of [ŚĀKYAMUNI](#) Buddha's dispensation is a

persistent issue in Buddhist literature. The most common, and probably the oldest, of these predictions occurs in the accounts of the Buddha's decision to permit the ordination of women, where he says that if he had not ordained women, the true dharma ([SADDHARMA](#)) would have endured for one thousand years; however, because of his decision to ordain women, it will only last five hundred years (see [MAHĀPRAJĀPATĪ](#)). A variety of other predictions for the decline and disappearance of the dharma appear in various sūtras, with the period of the duration of the dharma ranging from as short as five hundred years to as long as twelve thousand years (in some Chinese sources); other figures include seven hundred, one thousand, one thousand five hundred, two thousand, two thousand five hundred, and five thousand years. The majority of periods involving one thousand years or more occur in [MAHĀYĀNA](#) sūtras. However, in [BUDDHAGHOSA](#)'s [MANORATHAPŪRANĪ](#), a chronology of five thousand years is provided, in which the dharma gradually disappears over five periods of one thousand years each. During the first millennium after the Buddha's demise, there will be a disappearance of the attainments (P. [ADHIGAMA](#)), at the end of which no disciple will have the capacity to attain the rank of stream-enterer (P. sotāpanna; S. [SROTAĀPANNA](#)). During the second millennium, there will be a disappearance of practice (P. [PATIPATTI](#)) at the end of which no disciple will be able to attain meditative states or maintain the precepts. During the third millennium, there will be a disappearance of learning (P. [PARIYATTI](#)), at the end of which all books of the tipitaka (S. [TRIPITAKA](#)) will be lost. During the fourth millennium, the indicators or signs ([NIMITTA](#)) of monastic life will begin to vanish, at the end of which all monks will stop wearing saffron robes and will return to lay life. During the fifth and final millennium, there will be a disappearance of the relics ([DHĀTU](#), see [ŚARĪRA](#)), at the end of which the relics of the Buddha will reassemble and, after being worshipped by the divinities, will burst into flame and vanish. Buddhaghosa's five thousand-year timetable has become standard in the Pāli tradition. The doctrine of the disappearance of the dharma is central to the various East Asian theories of decline. See also [MOFA](#); [ANTARADHĀNA](#).

[Saddhatissa, Hammalawa](#). (1914–1990). A prolific Pāli scholar, translator, social activist, and senior Buddhist monk. Born at Hammalawa in Satkorale province, Sri Lanka, he was ordained a [BHIKSU](#) in 1926 and pursued his undergraduate studies in Sri Lanka at Vidyodaya Pirivena and Prachina Bhasopakara Samagama. He continued his studies in Benares in India, the

School of Oriental and African Studies (SOAS) in London, and ultimately received his Ph.D. at Edinburgh in 1965. He was proficient in Pāli, Sanskrit, Prakrit, Sinhala, and Hindi and held numerous academic posts in Asia, Europe, and North America, including Professor of Pāli at Banaras Hindu University from 1956 to 1957, Lecturer in Sinhala at SOAS from 1958 to 1960, Professor of Buddhism and Pāli at the University of Toronto from 1966 to 1969, and Visiting Lecturer at Oxford in 1973. While holding these posts, he also conducted numerous lecture tours in Europe, the United States, and Japan. In 1956, he served as an advisor to Dr. [BHIMRAO RAMJI AMBEDKAR](#) (1891–1956) at Nagpur, India, during the organization of mass conversions of members of the Dalit caste (the so-called untouchables) to Buddhism. Between 1957 and 1985 he served as head of London Buddhist Vihara, and in 1966 revived the British [MAHĀBODHI SOCIETY](#), which had been defunct since World War II, serving as its president. He also helped found the New London Buddhist Vihara in 1964; the Buddhist Center, Oakenholt, in Oxford in 1971; the Buddhist Research Library, in Nugegoda, Sri Lanka in 1984; and the Buddha Vihara, Handsworth, in Birmingham in 1986. He was appointed president of the Saṅgha Council of Great Britain in 1966, and the Sanghanayaka Thera of the United Kingdom in 1980. In 1984 he served as vice-president of the Pali Text Society. His English publications and critical editions and translations include *The Buddha's Way*, *Buddhist Ethics*, *The Birth-Stories of the Ten Bodhisattas and the Dasabodhisattuppattikathā*, *Sutta Nipāta*, *Upāsakajanālakāra*, *Handbook for Buddhists*, *Introduction to Buddhism*, and *The Life of the Buddha*.

[sadgati](#). (P. *chagati; T. 'gro ba rigs drug; C. liuqu; J. rokushu; K. yukch'wi 六趣). In Sanskrit, “six destinies”; an expansion of the more common list of five rebirth destinies ([PAÑCAGATI](#)), adding demigods or titans ([ASURA](#)) to the usual five: divinities ([DEVA](#); including those of the sensuous, subtle-materiality, and immaterial realms); asuras, humans ([MANUSYA](#)), animals ([TIRYAK](#)), ghosts ([PRETA](#)), and hell beings ([NĀRAKA](#)). See [GATI](#); [PAÑCAGATI](#).

[sādhana](#). (T. sgrub thabs; C. chengjiu fa; J. jōjuhō; K. sōngch'wi pōp 成就法). In Sanskrit, “method” or “technique,” used especially in reference to a tantric ritual designed to receive attainments ([SIDDHI](#)) from a deity. Tantric sādhanas generally take one of two forms. In the first, the deity (which may be a buddha, [BODHISATTVA](#), or another deity) is requested to appear before the meditator and is then worshipped in the expectation of receiving blessings. In the other type of

tantric sādhanā, the meditator imagines himself or herself to be the deity at this very moment, that is, to have the exalted body, speech, and mind of an enlightened being. Tantric sādhanas tend to follow a fairly set sequence, whether they are simple or detailed. More elaborate sādhanas may include the recitation of a lineage of [GURUS](#); the creation of a protection wheel guarded by wrathful deities to subjugate enemies; the creation of a body [MANDALA](#), in which a pantheon of deities take residence at various parts of the meditator's body, *etc.* Although there are a great many variations of content and sequence, in many sādhanas, the meditator is instructed to imagine light radiating from the body, thus beckoning buddhas and bodhisattvas from throughout the universe. Visualizing these deities arrayed in the space, the meditator then performs a series of standard preliminary practices called the sevenfold service ([SAPTĀNGAVIDHI](#)), a standard component of sādhanas. The seven elements are (1) obeisance, (2) offering (often concluding with a gift of the entire physical universe with all its marvels), (3) confession of misdeeds, (4) admiration of the virtuous deeds of others, (5) entreaty to the buddhas not to pass into [NIRVĀNA](#), (6) supplication of the buddhas and bodhisattvas to teach the dharma, and (7) dedication of the merit of performing the preceding toward the enlightenment of all beings. The meditator then goes for refuge to the three jewels ([RATNATRAYA](#)), creates the aspiration for enlightenment ([BODHICITTA](#); [BODHICITTOTPĀDA](#)), the promise to achieve buddhahood in order to liberate all beings in the universe from suffering, and dedicates the merit from the foregoing and subsequent practices toward that end. The meditator next cultivates the four “boundless” attitudes ([APRAMĀNA](#)) of loving-kindness ([MAITRĪ](#)), compassion ([KARUNĀ](#)), empathetic joy ([MUDITĀ](#)), and equanimity or impartiality ([UPEKṢĀ](#)), before meditating on emptiness ([ŚŪNYATĀ](#)) and reciting the purificatory mantra, om svabhāvaśuddhāḥ sarvadharmāḥ svabhāvaśuddho 'haṃ (“Om, naturally pure are all phenomena, naturally pure am I”), understanding that emptiness is the primordial nature of everything, the unmoving world and the beings who move upon it. Out of this emptiness, the meditator next creates the maṇḍala. The next step in the sādhanā is for the meditator to animate the residents of the maṇḍala by causing the actual buddhas and bodhisattvas, referred to as “wisdom beings” ([JÑĀNASATTVA](#)), to descend and merge with their imagined doubles, the “pledge beings” ([SAMAYASATTVA](#)). Light radiates from the meditator's heart, drawing the wisdom beings to the maṇḍala where, through offerings and the recitation of mantra, they are prompted to enter the residents of the maṇḍala. With the preliminary visualization now complete, the stage is set for the central

meditation of the *sādhana*, which varies depending upon the purpose of the *sādhana*. Generally, offerings and prayers are made to a sequence of deities and boons are requested from them, each time accompanied with the recitation of appropriate [MANTRA](#). At the end of the session, the meditator makes mental offerings to the assembly before inviting them to leave, at which point the entire visualization, the palace and its residents, dissolve into emptiness. The *sādhana* ends with a dedication of the merit accrued to the welfare of all beings.

[sādhana](#). (T. sgrub pa; C. nengli; J. nōryū; K. nūngnip 能立). In Sanskrit, “proof”; a term used in Indian logic in the sense of a proof statement or syllogism. The Indian Nyāya (Logic) school advocated that there were five necessary stages in syllogistic reasoning: (1) probandum or proposition ([PRATIJÑĀ](#)), viz., “The mountain is on fire”; (2) reason ([HETU](#)), “because there is smoke,” (3) analogy (udāharaṇa), “Whatever is smoky is on fire, like a stove, but unlike a lake”; (4) application (upanaya), “Since this mountain is smoky, it is on fire”; (5) conclusion (nigamana), “The mountain is on fire.” Using the same example, the Buddhist logician [DIGNĀGA](#) reduced the syllogism down to just three essential steps: (1) thesis or proposition ([PAKSA](#)), “the mountain is on fire”; (2) reason ([HETU](#)), “because there is smoke”; (3) exemplification (dṛṣṭānta), “whatever is smoky is on fire, like a stove,” and “whatever is not on fire is not smoky, like a lake,” or, more simply, “like a stove, unlike a lake.” See also [LIṄGA](#); [PRAYOGA](#).

[Sāadhanamālā](#). (T. Sgrub thabs rgya mtsho). In Sanskrit, “Garland of Methods,” sometimes attributed to [ABHAYĀKARAGUPTA](#); an important compendium of some three hundred individual tantric [SĀDHANAS](#), the latest of which were composed around the twelfth century. In addition to the details it provides about tantric practice during this period, the detailed descriptions of the deities to be visualized are an important source of tantric Buddhist iconography. The version preserved in Tibetan is entitled *Sādhanasāgara*, “Ocean of Methods.”

[sādhāraṇasiddhi](#). (T. thun mong gi dngos grub). In Sanskrit, “common attainment,” a term used, especially in the tantric context, to refer to various supranormal powers, such as the ability to fly, walk through walls, and find buried treasure, which can be attained through the recitation of [MANTRAS](#) and the propitiation of deities by both Buddhist and non-Buddhist [YOGINS](#). It is contrasted with the “uncommon attainment” (asādhāraṇasiddhi), which is synonymous with “supreme attainment” ([UTTAMASIDDHI](#)), viz., the attainment of

buddhahood.

sādhumatī. (T. legs pa'i blo gros; C. shanhui di; J. zen'eji; K. sōnhye chi 善慧地). In Sanskrit, “auspicious intellect,” the ninth of the ten bodhisattva **BHŪMI**s. A list of ten stages (**DAŚABHŪMI**) is most commonly enumerated, deriving from the **DAŚABHŪMIKASŪTRA** (“Sūtra on the Ten Bhūmis”), a sūtra that is later subsumed into the massive scriptural compilation, the **AVATAMSAKASŪTRA**. The first bhūmi coincides with the attainment of the path of vision (**DARŚANAMĀRGA**) and the remaining nine to the path of cultivation (**BHĀVANĀMĀRGA**). Together with the eighth and tenth bhūmis, this is one of the three “pure bhūmis,” because at the end of the seventh bhūmi, the bodhisattva has abandoned all afflictions (**KLEŚA**), and is devoted to destroying the remaining obstructions (**ĀVARANA**). On this bhūmi, the bodhisattva practices the ninth of the ten perfections, the perfection of power (**BALAPĀRAMITĀ**). This stage is called “auspicious intellect” because at this stage the bodhisattva gains a special understanding of the dharma, which allows him to teach others without error. This special understanding comes from his attainment of the four analytical knowledges (**PRATISAMVID**). By means of the analytical knowledge of phenomena or factors (dharmapratiṣamvid; see **DHARMA**), he gains a thorough knowledge of the specific characteristics of all phenomena. By means of the analytical knowledge of meanings (arthapratiṣamvid; see **ARTHA**), he gains a thorough knowledge of the categories of all phenomena. Through the analytical knowledge of etymology (niruktiṣamvid; see **NIRUKTI**) he gains perfect facility in language so that he can teach without confusing doctrines. With the analytical knowledge of eloquence (pratibhānapratiṣamvid; see **PRATIBHĀNA**), he is able to inspire others with his words. Another explanation says that through dharmapratiṣamvid, the bodhisattva knows the words in the twelve branches of the Buddha’s teaching (dharma); through arthapratiṣamvid, he knows the content or meaning of the twelve branches of the Buddha’s teaching (**DVĀDAŚĀṄGA [PRAVACANA]**); through niruktiṣamvid, he knows the languages of each region (nirukti); and through pratibhānapratiṣamvid, he possesses the above three knowledges and thus has confidence to teach others. The bodhisattva remains on this stage as long as he is unable to display the land, retinue, and emanations of a buddha, make full use of the qualities of a buddha, and bring sentient beings to spiritual maturity.

sādhya-dharma. (T. sgrub bya'i chos; C. suoli/suochengli; J. shoryū/shojōryū; K. sorip/sosōngnip 所立/所成立). In Sanskrit, the “property being proven,” a term

in Buddhist logic that designates one of the elements of a correct syllogism or proof ([PRAYOGA](#)) leading to inference ([ANUMĀNA](#)). A syllogism is composed of three parts, the subject (dharmin), the property being proved (sādhya-dharma), and the reason ([HETU](#) or [LIṄGA](#)). It is called sādhya-dharma because the sādhya (“what is being proved”) must be a dharma (“property”) of the logical subject. For example, in the syllogism, “Sound is impermanent because of being produced,” the subject is sound, the property being proved is impermanence, and the reason is being produced. In order for the syllogism to be correct, three relations must exist among the three components of the syllogism: (1) the reason must be a property ([DHARMA](#)) of the subject, also called the “position” ([PAKSA](#)), (2) there must be a relationship of pervasion ([VYĀPTI](#)) between the reason and the property being proved, such that whatever is the reason is necessarily the property being proved, and (3) there must be a relationship of “exclusion” or reverse pervasion (vyatirekavyāpti) between the property being proved and the reason such that whatever is not the property being proved is necessarily not the reason. In the example, the syllogism “Sound is impermanent because of being produced,” is correct because the reason (being produced) is a quality of the subject (sound), there is pervasion because whatever is produced is necessarily impermanent, and there is reverse pervasion because whatever is not impermanent is necessarily not produced. See [ANUMĀNA](#); [LIṄGA](#).

[sad mi bdun](#). (se mi dūn). In Tibetan, lit. “seven men who were tested”; the first seven Tibetans to be ordained as Buddhist monks at [BSAM YAS](#) monastery under the preceptor [ŚĀNTARAKṢITA](#) during the late seventh century. The seven were: (1) Sba khri gzigs (Ba Tisik), ordained as Śrīghoṣa (T. Dpal byangs); (2) Sba gsal snang (Ba Selnang), ordained as Jñānendra (T. Ye shes dbang po); (3) Sba khri bzher/bzhir (Ba Tisher); (4) Ba gor [VAIROCANA](#), or Vairocanarakṣita; (5) Rma rin chen mchog (Ma Rinchen Chok); (6) Rgyal ba mchog dbyangs (Gyelwa Chokyang); and (7) ’Khon klu’i dbang po srung ba (Könlu Wangpo Sungwa) (Nāgendararakṣita). Alternate lists occasionally include: Rtsang legs grub (Tsang Lekdrup), or La sum rgyal ba’i byang chub (La sum Gyelwe Jangchup).

[sadmūlakleśa](#). (T. rtsa ba’i nyon mongs drug; C. liu genben fannao; J. roku konpon bonnō; K. yuk kūnbon pōnnoe 六根本煩惱). In Sanskrit, “six root afflictions,” as outlined in the [SARVĀSTIVĀDA ABHIDHARMA](#) and in the [YOGĀCĀRA](#) list of dharmas (see [BAIFA](#)); the six unsalutary mental states that serve as the sources for all the other [KLEŚA](#). They are: desire ([RĀGA](#)), anger ([PRATIGHA](#)), pride

([MĀNA](#)), ignorance ([AVIDYĀ](#)), doubt ([VICIKITSA](#)), and wrong view ([DRSTI](#)). See [ANUŚAYA](#); [KLEŚAMAHĀBHŪMIKA](#); [MŪLAKLEŚA](#); [SAMYOJANA](#).

sadpāramitā. (T. phar phyin drug; C. liu boluomi; J. ropparamitsu; K. yuk paramil 六波羅蜜). In Sanskrit, the “six perfections,” the six bodhisattva perfections ([PĀRAMITĀ](#)) of giving ([DĀNA](#)), morality ([ŚĪLA](#)), patience ([KSĀNTI](#)), effort ([VĪRYA](#)), meditative absorption ([DHYĀNA](#)), and wisdom ([PRAJÑĀ](#)). In the [DAŚABHŪMIKASŪTRA](#), four additional perfections are added, such that one perfection is associated with each of the ten bodhisattva stages ([BHŪMI](#)). These additional four perfections are understood as additional elements of the sixth perfection, prajñāpāramitā. They are the perfection of expedient means ([UPĀYAPĀRAMITĀ](#)), the perfection of the vow (to attain buddhahood) ([PRANIDHĀNAPĀRAMITĀ](#)), the perfection of powers ([BALAPĀRAMITĀ](#)) and the perfection of knowledge ([JÑĀNAPĀRAMITĀ](#)). In Pāli materials, there is a different set of ten perfections ([PĀRAMĪ](#)) that are practiced by the bodhisattva. See [PĀRAMITĀ](#) and the specific types of perfections.

sadvārgika. (P. chabbaggiya; T. drug sde; C. liuqun [biqiu]; J. rokugun [biku]; K. yukkun [pigu] 六群[比丘]). In Sanskrit, the “group of six,” a notorious group of six mischievous monks ([BHIKSU](#)), whose misbehavior led to the promulgation of many rules of conduct for the Buddhist order. According to the tradition, the rules of the [VINAYA](#) were not formulated hypothetically. Instead, when a monk acted in an inappropriate way, the Buddha would then make a rule prohibiting that action in the future. Thus, for each infraction, the vinaya provides an account of the circumstances that led to its formulation. The names of these six monks, individually and collectively, figure prominently in an inordinate number of those accounts. They are also often portrayed as actively resisting the enforcement of the rules of discipline. The names of the members of this infamous group of malefactors differ in Sanskrit and Pāli sources. In Sanskrit, they are usually listed as Nanda, Upananda, Udāyin (alt. Kālodāyin), Chanda, Aśvaka, and Punarvasu. The Pāli typically gives instead Assaji, Punabhasu, Paṇḍuka, Lohitaka, Mettiya, and Bhummajaka. According to Pāli sources, prior to their ordination, they were acquaintances of each other, living in [ŚRĀVASTĪ](#). Unable to earn a living, they decided to enter the order. Deciding that it was unwise to remain together, they divided into three groups of two (Assaji and Punabhasu, Paṇḍuka and Lohitaka, and Mettiya and Bhummajaka). Each pair attracted a following of five hundred monks. The followers of Paṇḍuka and

Lohitaka, living at [JETAVANA](#), were the most virtuous, remaining near the Buddha and accompanying him in his travels. Some sources also offer a salutary motivation behind their frequent transgressions: to provide a wide range of test cases leading to specific monastic rules, so that the [SAMGHA](#) would be protected against future unscrupulous behavior.

[Sagaing](#). One of five Burmese capitals that flourished in Upper Burma (Myanmar) after the fall of [PAGAN](#) between the fourteenth and nineteenth centuries, the others being Pinya, [AVA](#) (Inwa), Amarapura and [MANDALAY](#). The city of Sagaing lies adjacent to the Sagaing Hills along the Irrawaddy (Ayeyarwady) River to the west of Mandalay in central Burma. The Irrawaddy flows from north to south as it passes Mandalay and then turns west for several miles. Sagaing is named for this point on the river, “the beginning of the bend.” Following the collapse of the Pagan empire, Sagaing served as the capital city of a much reduced Burmese state between 1316 and 1364, after which the capital was moved across the river to Ava. Sagaing has been an important Buddhist center since Pagan times, and tradition claims the Buddha visited the site himself. The city and the surrounding hills contain hundreds of pagodas, monasteries, nunneries, and cave retreats, and many of Burma’s most celebrated scholars hailed from Sagaing over the centuries. Sagaing retains its preeminence as one of the country’s main centers of Buddhist scholarship and meditation practice.

[Sāgara](#). (T. Rgya mtsho; C. Suojieluo/Suoqieluo; J. Shakara [alt. Shakatsura]/Shagara; K. Sagalla/Sagara 娑竭羅/娑伽羅). In Sanskrit, “Ocean”; one of the eight dragon kings ([NĀGA](#)) who served as guardians of the [BUDDHADHARMA](#). His name appears alongside those of the other seven dragon kings who were in the audience when the Buddha taught the [SADDHARMAPUNḌARĪKASŪTRA](#). Sāgara is believed to be the dragon king of the ocean, who governs precipitation. He resides in a palace beneath the ocean that surrounds Mt. [SUMERU](#). Sāgara occasionally appears as a flanking-attendant of the [BODHISATTVA AVALOKITEŚVARA](#). In his palace, Sāgara is said to store a [MANI](#) jewel, which he sometimes offers to the bodhisattva. In the twelfth chapter of the *Saddharmapuṇḍarīkasūtra*, Sāgara also appears as the father of the eight-year-old nāga princess who, by offering a jewel to the Buddha, instantaneously turns into a male, traverses the ten bodhisattva stages ([BHŪMI](#)), and achieves buddhahood, evidence to some exegetes in the tradition that women have the

capacity to achieve buddhahood.

[sāgaramudrāsamādhi](#). (T. rgya mtsho'i phyag rgya ting nge 'dzin; C. haiyin sanmei; J. kaiin zanmai; K. haein sammae 海印三昧). In Sanskrit, “ocean-seal samādhi,” or “oceanic reflection samādhi,” a concentration ([SAMĀDHI](#)) often treated as emblematic of the [HUAYAN ZONG](#)'s most profound vision of reality. “Ocean seal” is a metaphor for the pure and still mind that is able to reflect all phenomena while remaining perpetually unaffected by them, just as the calm surface of the ocean is said to be able to reflect all the phenomena in the universe. The [AVATAMSAKASŪTRA](#) includes the sāgaramudrāsamādhi among several other types of samādhi that it mentions. In the “[SAMANTABHADRA](#) Bodhisattva Chapter” (Puxian pusa pin), the first of the ten samādhis taught by this bodhisattva is the sāgaramudrāsamādhi; through its power, a buddha is enabled to perform all types of works to rescue sentient beings, such as manifesting himself as a buddha and using numerous skillful means ([UPĀYA](#)) in order to guide them. The “Ten Bhūmis Chapter” (Shidi pin) mentions sāgaramudrāsamādhi as one of a list of eleven samādhis that occur to bodhisattvas who reach the tenth stage ([BHŪMI](#)) on the path. The “Manifestation of the Tathāgata Chapter” (Rulai chuxian pin) says that sāgaramudrāsamādhi is so named because it is like the ocean that reflects the images of all sentient beings. In the Huayan scholastic tradition, sāgaramudrāsamādhi is raised to pride of place within its doctrinal system. Sāgaramudrāsamādhi is considered to be the generic samādhi (zongding) that the Buddha enters prior to beginning the elucidation of the various assemblies recounted in the *Avatamsakasūtra* itself; the seven subsequent samādhis that the Buddha enters as he preaches the teaching of the *Avatamsakasūtra* at each of the eight assemblies (hui) (there is no samādhi prior to the second assembly) are regarded instead as specific types of samādhis (bieding). [ZHIYAN](#) (602–668), the second Huayan patriarch, associated sāgaramudrāsamādhi with the teaching of one vehicle ([EKAYĀNA](#)) in his [KONGMU ZHANG](#), where he says that the common and distinctive teachings of the one vehicle (yisheng tongbie) are revealed through the “ocean-seal” samādhi, while the teachings of the three vehicles ([TRIYĀNA](#)) are revealed through the subsequently obtained wisdom (C. houde zhi; S. [PRSTHALABDHĀJÑĀNA](#)). [FAZANG](#) (643–712), the third Huayan patriarch, following his teacher Zhiyan's view, declares at the beginning of his [HUAYAN WUJIAO ZHANG](#) that his work was written to reveal the teaching of the one vehicle that the Buddha attained through the “ocean-seal” samādhi. It is Fazang who formalized the place of the

sāgaramudrāsamādhi in the Huayan doctrinal system. In his XIU HUAYAN AOZHI WANGJIN HUANYUAN GUAN, Fazang noted that the “ocean-seal” samādhi and the Huayan samādhi (C. Huayan sanmei), both mentioned among the ten samādhis in the Xianshou pusa pin of the *Avatamsakasūtra*, correspond to the “two functions” (er [YONG](#)): respectively, to the “function of the eternal abiding of all things reflected on the ocean” (haiyin senluo changzhu yong) and the “function of the autonomy of the perfect luminosity of the [DHARMADHĀTU](#)” (fajie yuanming zizai yong). Both of these types of functions were subordinated to the highest category of the “one essence” (yi [TI](#)), viz., the “essence of the pure and perfect luminosity of the self-nature” (*zixing qingjing yuanming ti*). The first type of function, which was associated with the sāgaramudrāsamādhi, was the perfect reflection of all things in the pure mind; like the unsullied ocean that reflected all phenomena, it also was freed from any type of delusion or falsity. For Fazang, “ocean seal” (haiyin) was interpreted to mean the “original enlightenment of true thusness” ([ZHENRU BENJUE](#)) by correlating this function with the “ocean of the thusness of the dharma nature” (faxing zhenru hai) as mentioned in the [DASHENG QIXIN LUN](#) (“Awakening of Faith According to the Mahāyāna”). In Fazang’s *Huayan youxin fajie ji*, the “ocean-seal” samādhi was classified as a cause and the Huayan samādhi as a fruition. Elsewhere, in his [HUAYAN JING TANXUAN JI](#), Fazang additionally differentiates the ocean-seal samādhi itself into two phases of cause and fruition: the stage of the cause is attained by the bodhisattva [SAMANTABHADRA](#) at the tenth of the ten stages of faith, while the fruition stage corresponds to the samādhi of a tathāgata. In addition to its importance in the *Avatamsakasūtra* and the Huayan school, there are several other sūtras that also mention the sāgaramudrāsamādhi. For example, the [MAHĀPRAJÑĀPĀRAMITĀSŪTRA](#) says that the sāgaramudrāsamādhi incorporates all other samādhis. The [RATNAKŪTASŪTRA](#) states that one should abide in sāgaramudrāsamādhi in order to obtain complete, perfect enlightenment ([ANUTTARASAMYAKSAMBODHI](#)). Finally, the [MAHĀSAMNIPĀTASŪTRA](#) says that one can see all sentient beings’ mental functions and gain the knowledge of all teaching devices ([DHARMAPARYĀYA](#)) through the sāgaramudrāsamādhi.

[sa ga zla ba](#). (saga dawa). The name of the fourth Tibetan month, the holiest month of the year, when it is believed the results of wholesome actions increase a hundred thousand times; the fifteenth day of this month is particularly auspicious, commemorating the day when [ŚĀKYAMUNI](#) was born, enlightened, and entered [NIRVĀNA](#). See [WESAK](#).

sahabhūhetu. (T. lhan cig 'byung ba'i rgyu; C. juyouyin; J. kuuin; K. kuyuin 俱有因). In Sanskrit, the “coexistent cause”; the second of the six types of causes (**HETU**) outlined in the **JÑĀNAPRASTHĀNA**, the central text of the **SARVĀSTIVĀDA ABHIDHARMA**. This type of cause refers to the fact that coexistent dharmas simultaneously condition one another, as with a great element (**MAHĀBHŪTA**) and its derivatives, or a specific dharma and its four conditioned characteristics (**SAMSKRTALAKSANA**). This process is comparable to the coexistence of the three legs of a tripod: if any one leg is missing, the other two legs are unable to function; thus, these coexistent dharmas must all exist simultaneously, so that if one is missing, all are missing. In the case of perception, for example, the Sarvāstivāda claimed that a moment of visual perception required that the visual sense-faculty (viz., the eye; **INDRIYA**), the visual object, and visual consciousness all had to exist simultaneously. This interpretation of the coexistent cause is subsequently adapted as a crucial component of the **YOGĀCĀRA** theory of representation-only (**VIJÑAPTIMĀTRATĀ**).

sahaja. (T. lhan skyes; C. jushengqi; J. kushōki; K. kusaenggi 俱生起). A polysemous Sanskrit term, variously translated as “coemergence,” “connate,” “simultaneously arisen,” and “the innate.” This term is used frequently in the tantric Buddhist verses composed by the **SIDDHAS** of medieval north India such as **SARAHA**, Kāṇha, and **TILOPA**; these include collections of **DOHĀ** recorded in **APABHRAMŚA** and Bengali compilations of caryāgīti (see **CARYĀGĪTIKOŚA**). In these contexts, sahaja refers most generally to the ultimate and innermost true nature, as well as to its realization through the spontaneous and uninhibited lifestyle and practice associated with tantric adepts. The term may be used as a noun for the ultimate state itself, or as an adjective describing a state or condition as natural and uncontrived. In the context of the **YOGINĪ** tantras such as the **HEVAJRATANTRA**, the term sahaja is used to refer to the highest of four states of ecstasy—innate ecstasy (sahajānanda)—which can be gained through the visualized or actual practice of sexual yoga, and through which one comes to realize the mind’s luminosity and natural purity. Early twentieth-century authors—beginning with the Bengali scholars and translators who first published studies on the collections of tantric verses—described what they called the sahajayāna (“path of sahaja”) and the sahajiyās who followed it, although neither term is found in traditional Indian Buddhist literature. The Tibetan form, lhan skyes (short for lhan cig tu skyes pa) appears widely in the subsequent literature of **MAHĀMUDRĀ**.

sahajakleśāvaraṇa. (T. nyon sgrib lhan skyes; C. jusheng fannaο zhang/jusheng huo; J. kushō no bonnōshō/kushō no waku; K. kusaeng pōnnoe chang/kusaeng hok 俱生煩惱障/俱生惑). In Sanskrit, “innate afflictive obstructions,” those obstructions ([ĀVARANA](#)) to liberation that derive from mistaken conceptions of self ([ĀTMAN](#)) that are generated and reinforced over many lifetimes. This type is in distinction to [PARIKALPITAKLEŚĀVARANA](#) (T. nyon sgrib kun btags) or “artificial afflictive obstructions,” which are mistaken conceptions of self that are generated through the study of flawed philosophical systems or ideologies in the present lifetime. The latter are understood to be more easily abandoned than the sajakleśāvaraṇa.

sahajātmagraha. (T. bdag ’dzin lhan skyes; C. jusheng wuming; J. kushō no mummyō; K. kusaeng mummyōng 俱生無明). In Sanskrit, “innate conception of self,” a term used to refer to the deep-seated conception of self that is maintained by all sentient beings from lifetime to lifetime. It is contrasted with the artificial conception of self ([PARIKALPITĀTMAGRAHA](#)), which is acquired during a human lifetime through the study of false tenet systems, such as those that assert the existence of a perduring self ([ĀTMAN](#)). Those on the path to enlightenment abandon the artificial conception of self more easily than they do the innate conception of self.

sahajāvidyā. (T. lhan cig skyes pa’i ma rig pa; C. jusheng wuming; J. kushō no mummyō; K. kusaeng mummyōng 俱生無明). In Sanskrit, “innate ignorance,” a term used to refer to the deep-seated ignorance that is maintained by sentient beings from lifetime to lifetime. It is contrasted with artificial ignorance ([PARIKALPITĀVIDYĀ](#)), the ignorance acquired during a human lifetime through the study of false tenet systems, such as those that assert the existence of a perduring self ([ĀTMAN](#)). Those on the path to enlightenment abandon the artificial ignorance more easily than the innate ignorance.

sahajayāna. (T. lhan skyes theg pa). In Sanskrit, “innate vehicle” or “spontaneous vehicle.” See [SAHAJA](#).

sahakāripratyaya. (T. lhan cig byed pa’i rkyen; C. zhuyuan; J. joen; K. choyōn 助緣). In Sanskrit, the “cooperative condition,” referring to those subsidiary conditions that must be present in order for an effect to be produced, such as the presence of heat and moisture for a seed to grow into a sprout. In the context of epistemology, sahakāripratyaya is the last of four types of conditions

([PRATYAYA](#)) that must be present in order for consciousness to occur: for example, in the case of the perception of a tree by a moment of visual consciousness ([CAKSURVIJÑĀNA](#)), the prior moment of consciousness that leads to this visual consciousness is called the immediately antecedent condition ([SAMANANTARAPRATYAYA](#)), the tree is called the object condition ([ĀLAMBANAPRATYAYA](#)), and the visual sense organ is called the predominant condition ([ADHIPATIPRATYAYA](#)); the cooperative condition would be the light that must be present in order to see.

sahāloka. (T. mi mjed kyi 'jig rten; C. suopo shijie; J. shaba sekai; K. saba segye 娑婆世界). In Sanskrit, lit. “world of endurance,” in the [MAHĀYĀNA](#), the name of the world system we inhabit where the buddha [ŚĀKYAMUNI](#) taught; the term may also be seen written as sahālokadhātu. The tradition offers at least two explanations for designating this realm as the sahāloka. First, it is called the “world of endurance” because of the suffering endured by the beings that populate it. Second, the Sanskrit term sahā can also mean “together with, conjointly,” and in this sense the term is understood to indicate that in this realm karmic causes and their effects are inextricably bound together. There is a range of opinion concerning the extent of the sahā world. Some texts identify this land with the continent of [JAMBUDVĪPA](#), some with all four continents of this world system, and some with the entire trichiliocosm ([TRISĀHASRAMAHĀSĀHASRALOKADHĀTU](#)). The sahāloka is the buddha-field ([BUDDHAKṢETRA](#)) of Śākyamuni, which is described as an impure field because it includes animals, ghosts, and hell denizens. In both the [SADDHARMAPUNĀRĪKASŪTRA](#) and the [VĪMALAKĪRTINIRDEŚA](#), however, Śākyamuni indicates that while unenlightened beings may perceive it as a world of suffering and desire, the sahā world is in reality his pure buddha field, a fact that is fully perceived by those who have achieved enlightenment. The highest divinity ([DEVA](#)) in the sahāloka is [BRAHMĀ](#), one of whose epithets is [SAHĀMPATI](#), “Lord of the Sahā World.”

Sahāmpati. (P. Sahampati; T. Mi mjed kyi bdag po; C. Suopo shijie zhu; J. Shabasekaishu; K. Saba segye chu 娑婆世界主). In Sanskrit, “Lord of the Sahā World,” the epithet of a [BRAHMĀ](#) deity. The first concentration ([DHYĀNA](#)) of the realm of subtle materiality ([RŪPADHĀTU](#); see [RŪPĀVACARADHYĀNA](#)) has three levels, called [BRAHMAKĀYIKA](#), [BRAHMAPUROHITA](#), and [MAHĀBRAHMĀ](#). The most senior of the deities of this third and highest level within the first concentration

is called Brahmā Sahāmpati. He plays a crucial role in the inception of the Buddhist teaching ([ŚĀSANA](#)). After his enlightenment, the newly enlightened Buddha is said to have wondered whether there was anyone in this world who would be able to understand his teaching. Brahmā Sahāmpati then appeared to him and implored him to teach, convincing him that there were persons “with little dust in their eyes” who would be able to understand his teachings. According to [BUDDHAGHOSA](#), the Buddha had every intention to teach but feigned reluctance in order that Brahmā Sahāmpati would make the request, knowing that if the most powerful divinity in the [SAHĀLOKA](#) implored the Buddha to teach, those who honored Brahmā would heed the Buddha’s teachings. Brahmā Sahāmpati also assured the Buddha that in their last lifetimes, none of the buddhas of the past had had a teacher other than the [DHARMA](#) they discovered themselves. According to some accounts, he is divinity not of the mahābrahmā realm but rather of the [ŚUDDHĀVĀSA](#).

[Sāhasrabhujasāhasranetrāvalokiteśvara](#).

[alt.

Sahasrabhujasahasranetrāvalokiteśvara] (T. Sphyan ras gzigs phyag stong sphyan stong; C. Qianshou Qianyan Guanyin; J. Senju Sengen Kannon; K. Ch’ōnsu Ch’ōnan Kwanūm 千手千眼觀音). In Sanskrit, “Thousand-Armed and Thousand-Eyed [AVALOKITEŚVARA](#)”; one of the manifestations of the bodhisattva of compassion, Avalokiteśvara (C. [GUANYIN](#)). The iconographical representations of this manifestation are usually depicted in abbreviated form with forty arms, each of which has an eye on its palm, indicating its ability compassionately to see and offer assistance to suffering sentient beings. Every arm also holds a different instrument, such as an axe, a sword, a bow, an arrow, a staff, a bell, or blue, white, and purple lotuses, each symbolizing one of the bodhisattva’s various skills in saving sentient beings. The forty arms and eyes work on behalf of the sentient beings in the twenty-five realms of existence, giving the bodhisattva a total of a thousand arms and eyes. The images also typically are depicted with eleven or twenty-seven heads, although images with five hundred heads are also found. The origin of this manifestation is uncertain; the prototype may be such Indian deities as Viṣṇu, [INDRA](#), and Śiva, who are also sometimes depicted with multiple hands and eyes. Since no image of this form of the [BODHISATTVA](#) has been discovered in India proper, some scholars suggest that the form may have originated in Kashmir (See [KASHMIR-GANDHĀRA](#)) and thence spread north into Central and East Asia; this scenario is problematic, however, because the earliest such image found at [DUNHUANG](#), the furthest Chinese

outpost along the [SILK ROAD](#), dates to 836, about two hundred years later than the first such image painted in China, which is said to have been made for the Tang emperor by an Indian monk sometime between 618 and 626. The Thousand-Armed and Thousand-Eyed Guanyin became popular in China through translations of the [QIANSHOU JING](#) (“Thousand Hands Sūtra”; *Nīlakaṇṭhakasūtra*) made between the mid-seventh and early-eighth centuries. Due to the great popularity of Bhagavaddharma’s (fl. c. seventh century) early translation, which was rendered between 650 and 658, the Thousand-Armed and Thousand-Eyed Avalokiteśvara became identified specifically with Avalokiteśvara’s manifestation as Great Compassion (C. Dabei; S. [MAHĀKARUNIKA](#)), although the epithet is used also to refer to Avalokiteśvara more generally. The Guanyin cult was popular in Chang’an and Sichuan during the Tang period and became widespread throughout China by the Song period; this bodhisattva was subsequently worshipped widely in Korea, Japan, and Tibet, as well. The ritual of repentance offered to the bodhisattva was created by the [TIANTAI](#) monk [ZHILI](#) (960–1028); the ritual is still widely performed in Taiwan and China. By the twelfth century, the Thousand-Armed and Thousand-Eyed Guanyin also came to be identified with the legendary princess [MIAOSHAN](#), who was so filial that she offered her own eyes to save her father’s life. In Tibet, this form of Avalokiteśvara is called *Sāhasrabhuja-ekādaśamukha Avalokiteśvara* (Spyan ras gzigs phyag stong zhal bcu gcig), with one thousand arms (often depicted in a fan formation) and eleven heads. According to a well-known story, the bodhisattva of compassion had vowed that if he ever gave up his commitment to suffering sentient beings and sought instead his own welfare, his head would break into ten pieces and his body into a thousand. In a moment of despair at the myriad sufferings of the world, his head and body exploded. The buddha [AMITĀBHA](#) put his body back together, crafting one thousand arms and ten heads, placing a duplicate of his own head at the top. This form of Avalokiteśvara is therefore known as, “one thousand arms and eleven heads” (phyag stong zhal bcu gcig).

[Sahasrākṣa](#). (P. Sahassākṣha; T. Mig stong can; C. Qianyan; J. Sengen; K. Ch’ōnan 千眼). In Sanskrit, “One-Thousand Eyes,” an epithet of [INDRA](#). In Sanskrit and Pāli sources, Indra is known by several names, the most frequent being [ŚAKRO DEVĀNĀM INDRAH](#) (P. Sakko devānām indo), meaning “[ŚAKRA](#), king of the gods.” A number of Indra’s various epithets are explained in one section of the Pāli [SAMYUTTANIKĀYA](#); there, the name “One-Thousand Eyes” (P.

Sahassākṣha) is explained by saying that in one instant Indra can consider one thousand different matters. The broader Indian religious tradition, from which Buddhism appropriated the divinity Indra, also has a number of stories explaining why Indra is called “One-Thousand Eyes.” In the most popular of these stories, Indra seduces the wife of a famous seer (ṛṣi). The ṛṣi punishes Indra with a curse—causing one thousand vulvas (S. bhaga) to appear on his body. The ṛṣi is later persuaded to remove the curse and he turns each one of the vulvas into an eye.

[sahā world](#). (S). See [SAHĀLOKA](#).

[Saichō](#). (最澄) (767–822). In Japanese, “Most Pure”; the monk traditionally recognized as the founder of the [TENDAISHŪ](#) in Japan; also known as Dengyō Daishi (Great Master Transmission of the Teachings). Although the exact dates and place of Saichō’s birth remain a matter of debate, he is said to have been born to an immigrant Chinese family in Ōmi province east of [HIEIZAN](#) in 767. At age eleven, Saichō entered the local Kokubunji and studied under the monk Gyōhyō (722–797), a disciple of the émigré Chinese monk Daoxuan (702–766). In 785, Saichō received the full monastic precepts at the monastery of [TŌDAIJI](#) in Nara, after which he began a solitary retreat in a hermitage on Mt. Hiei. In 788, he built a permanent temple on the summit of Mt. Hiei. After Emperor Kanmu (r. 781–806) moved the capital to Kyōto in 794, the political significance of the Mt. Hiei community and thus Saichō seem to have attracted the attention of the emperor. In 797, Saichō was appointed a court priest (naigubu), and in 802 he was invited to the monastery of Takaosanji to participate in a lecture retreat, where he discussed the writings of the eminent Chinese monk [TIANTAI ZHIYI](#) on the [SADDHARMAPUNḌARĪKASŪTRA](#). Saichō and his disciple [GISHIN](#) received permission to travel to China in order to acquire Tiantai texts. In 804, they went to the monastery or Guoqingsi on Mt. Tiantai and studied under Daosui (d.u.) and Xingman (d.u.), disciples of the eminent Chinese Tiantai monk [JINGQI ZHANRAN](#). Later, they are also known to have received [BODHISATTVA](#) precepts (bosatsukai) from Daosui at Longxingsi. He is also said to have received tantric initiation into the [KONGŌKAI](#) and [TAIZŌKAI \(RYŌBU\) MANDALAS](#) from Shunxiao (d.u.). After nine and a half months in China, Saichō returned to Japan the next year with numerous texts, which he catalogued in his *Esshūroku*. Emperor Kanmu, who had been ill, asked Saichō to perform the esoteric rituals that he had brought back from China as a therapeutic measure. Saichō received

permission to establish the Tendai sect and successfully petitioned for two Tendai monks to be ordained each year, one for doctrinal study and one to perform esoteric rituals. After the death of Kanmu in 806, little is known of Saichō's activities. In 810, he delivered a series of lectures at Mt. Hiei on the *Saddharmapuṇḍarīkasūtra*, the [SUVARNAPRABHĀSOTTAMASŪTRA](#), and the [RENWANG JING](#) ("Scripture for Humane Kings"). In 812, Saichō also constructed a meditation hall known as the Hokkezanmaidō. Later, Saichō is also said to have received kongōkai initiation from [KŪKAI](#) at the latter's temple Takaosanji, but their relations soured after a close disciple of Saichō's left Saichō for Kūkai. Their already tenuous relationship was sundered completely when Saichō requested a tantric initiation from Kūkai, who replied that Saichō would need to study for three years with Kūkai first. Saichō then engaged the eminent Hossōshū ([FAXIANG ZONG](#)) monk Tokuitsu (d.u.) in a prolonged debate concerning the buddha-nature (see [BUDDHADHĀTU](#), [FOXING](#)) and Tendai doctrines, such as original enlightenment (see [HONGAKU](#)). In response to Tokuitsu's treatises *Busshōshō* and *Chūhengikyō*, Saichō composed his *Shōgonjikyō*, *Hokke kowaku*, and *Shugo kokkaishō*. Also at this time, Saichō began a prolonged campaign to have an independent [MAHĀYĀNA](#) ordination platform established at Mt. Hiei. He argued that the bodhisattva precepts as set forth in the [FANWANG JING](#), traditionally seen as complementary to monastic ordination, should instead replace them. He argued that the Japanese were spiritually mature and therefore could dispense entirely with the [HĪNAYĀNA](#) monastic precepts and only take the Mahāyāna bodhisattva precepts. His petitions were repeatedly denied, but permission to establish the Mahāyāna ordination platform at Mt. Hiei was granted a week after his death. Before his death Saichō also composed the *Hokke shūku* and appointed Gishin as his successor.

Saidaiji. (西大寺). In Japanese, "Great Monastery to the West"; one of the seven major monasteries in the ancient Japanese capital of Nara (J. [NANTO SHICHIDAIJI](#)); the headquarters of the True Word Precepts (SHINGON-Ritsu) school in Japan. As its name implies, Saidaiji is located in the western part of Nara and was first constructed in 765 in accordance with a decree from [SHŌTOKU TAISHI](#) (572–622). The monastery originally had two main halls, one dedicated to the buddha [BHAIŚAJYAGURU](#) and the other to the bodhisattva [MAITREYA](#). After conflagrations in 846 and 860, the monastery began to decline, but revived when Eison (Kōshō bosatsu; 1201–1290) moved there in 1235 and made it the center of his movement to restore the [VINAYA](#). After another major fire in 1502, the

Tokugawa Shogunate supported a rebuilding project. The monastery enshrines four bronze statues of the four heavenly kings ([CATURMAHĀRĀJA](#)), dating to the Nara (710–794) period. The main hall is dominated by a statue of [ŚĀKYAMUNI](#) said to have been carved cooperatively by eleven sculptors in 1249. To its right is a statue of [MAÑJUŚRĪ](#) riding a lion, to its left, a statue of Maitreya dating from 1322.

[Saigyō](#). (西行) (1118–1190). A Japanese Buddhist poet of the late Heian and early Kamakura periods, especially famous for his many waka poems, a traditional style of Japanese poetry; his dharma name literally means “Traveling West,” presumably referring to the direction of the [PURE LAND](#) of [AMITĀBHA](#). Born as Satō Norikiyo into a family of the warrior class, he served during his youth as a guard for the retired emperor Toba (r. 1107–1123) before becoming a monk at the age of twenty-two. Although relatively little is known about his life, Saigyō seems to have traveled around the country on pilgrimage before eventually settling in relative seclusion on [KŌYASAN](#), the headquarters of the [SHINGONSHŪ](#). Virtually all of his poems are written in the thirty-one-syllable waka form favored at court and cover most of the traditional topics addressed in such poems, including travel, reclusion, cherry blossoms, and the beauty of the moon in the night sky. His poetry also reflects the desolation and despondency that Japanese of his time may have felt was inevitable during the degenerate age of the dharma (J. mappō; C. [MOFA](#)). Saigyō’s *Sankashū* (“Mountain Home Collection”) includes some fifteen hundred poems written in the course of his career; ninety-four of these poems were included in the imperially sponsored waka collection, the *Shinkokinshū* (“New Collection of Ancient and Modern Times”), compiled in 1205, making him one of Japan’s most renowned and influential poets.

[śaikṣa](#). (P. sekha; T. slob pa; C. xueren; J. gakunin; K. hagin 學人). In Sanskrit, “neophyte,” “acolyte,” one who is undergoing religious training. The path to enlightenment is often divided into the path of training and the path of no further training ([AŚAIKṢA](#)), with the former including (1) the seven paths of enterer and abider in the stages of the stream-enterer, once-returner, and nonreturner, and the enterer in the stage of the arhat; and (2) the paths of accumulation, preparation, vision, and meditation. The adept path where no further training is necessary ([AŚAIKṢAMĀRGA](#)) is the state of an [ARHAT](#) or a buddha.

[śaikṣadharmā](#). (P. sekhiyadhamma; T. bslabs pa’i chos; C. zhongxue; J.

shugaku; K. chunghak 衆學). In Sanskrit, lit., “qualities in which to be trained”; in the [PRĀTIMOKSA](#), a large set of rules to be followed in the course of daily monastic life, the violation of which entails no sanction beyond the need for confession. They are for the most part items of etiquette with regard to dress, accepting and eating food, teaching the dharma, and using the toilet. The number of these precepts varies by [VINAYA](#) recension, with the Chinese [MAHĀSĀMGHIKA](#) having sixty-six and the Chinese [SARVĀSTIVĀDA](#) having 113. In the Pāli vinaya, the term refers to a group of seventy-five precepts found in the *Pāṭimokkha* divided into seven sections. The first two rules concern proper dress. The next twenty-four rules concern the proper way to enter villages and inhabited areas and interact with the laypeople there. A set of thirty rules concerns the proper way to take meals. The next fifteen rules concern the preaching of dharma, and the last three rules concern the use of the toilet. Śaikṣa rules are the same for monks and nuns. One who knowingly transgresses these rules is guilty of an “offense of wrongdoing” (S. [DUŠKRTA](#); P. dukkata).

[Sajip](#). (四集). In Korean, “Fourfold Collection,” a compilation of three Chinese [CHAN](#) and one Korean [SŎN](#) texts that has been used in Korean Buddhist seminaries (kangwŏn) since at least the eighteenth century as the core of the monastic curriculum. The four books in the collection provide monks and nuns with, first, a systematic overview of mature Korean Buddhist thought and soteriology, focusing on the accommodation between Buddhist doctrinal study ([KYO](#))—specifically [HUAYAN](#) (K. Hwaŏm) thought—and [CHAN](#) (Sŏn) meditation practice and different schemata of awakening (C. [WU](#); K. o) and cultivation (C. xiu; K. su); and second, extensive grounding in the theory and mode of practice of “questioning meditation” (K. kanhwa Sŏn; C. [KANHUA CHAN](#)), the predominant form of meditative practice in Korea since the middle of the Koryŏ dynasty. The books of the “Fourfold Collection” are, in their traditional order: (1) The “Letters of Dahui” (C. [DAHUI PUJUE CHANSHI SHU](#), better known in Korea by its abbreviated title *Sŏjang*, C. [SHUZHUANG](#)), a collection of the correspondence between the Chinese [LINJI](#) master [DAHUI ZONGGAO](#) (1089–1163) and various of his lay and ordained students, which describe the specifics of kanhua Chan meditation; (2) The “Chan Prolegomenon” ([CHANYUAN ZHUQUANJI DUXU](#), known in Korea by its abbreviated title of [TOSŎ](#)), by [GUIFENG ZONGMI](#) (780–841), which provides an overarching hermeneutical framework—drawing on a series of polarities such as sudden and gradual, emptiness and self-nature, true and provisional—through which to understand the relationships among the

teachings of representative traditions of Chan and the various doctrinal traditions, leading to a vision of Buddhism that reconciles the scholastic schools and the Chan schools; (3) The “Essentials of Chan” ([GAOFENG HESHANG CHANYAO](#), typically known in Korea as the SÖNYO), by [GAOFENG YUANMIAO](#) (1238–1295), which Koreans have considered one of the clearest expositions of kanhwa Sōn in all of Sōn literature and use as a primer on the technique; (4) The “Excerpts from the ‘Dharma Collection and Special Practice Record’ with Personal Notes” ([PÖPCHIP PYÖRHAENGNOK CHÖRYO PYÖNGIP SAGI](#), usually known by its abbreviated title [CHÖRYO](#)) by [POJO CHINUL](#) (1158–1210), which offers an exhaustive examination of the question of whether enlightenment is achieved via a sudden or gradual process of soteriological development, advocating as the optimal stratagem the approach of sudden awakening followed by gradual cultivation (K. *tono chōmsu*; C. [DUNWU JIANXIU](#)), and first introducing to Korea the kanhwa Sōn technique; through this examination, Chinul specifically correlates the path as described in the doctrinal teachings of Buddhism (Kyo) with the practice of Sōn, an approach that subsequently becomes emblematic of Korean Buddhism. The four books of the *Sajip* are thus intended to provide monks and nuns with substantial grounding in the theory and practice of kanhwa Sōn prior to their beginning intensive training in the meditation hall (Sōnbang).

[sākāra](#). (T. *mam bcas*; C. *youxiang*; J. *usō*; K. *yusang* 有相). In Sanskrit, lit. “having aspects,” a term used in Buddhist epistemological accounts of perception, which asserts that what is perceived in sensory perception is not the object itself, but the “aspect” ([ĀKĀRA](#)) of the object. Buddhist philosophical schools differ as to whether or not such an “aspect” is required in order for sense perception to occur. [VAIBHĀSIKAS](#) are “non-aspectarians” ([NIRĀKĀRAVĀDA](#)), who hold that mind knows objects directly; [SAUTRĀNTIKAS](#) are “aspectarians” ([SĀKĀRAVĀDA](#)), who say mind knows its object through an image of the object that is taken into the mind. [YOGĀCĀRA](#) also holds that the mind knows its object through an image. However, there is an internal debate within the school as to whether the appearance is a true aspect (*satyākāra*) or a false aspect (*alīkākāra*). In the late eighth century in north India, in the [MADHYAMAKĀLAMKĀRA](#) of [ŚĀNTARAKSITA](#), and the commentaries on his work by his students [KAMALAŚĪLA](#) and [HARIBHADRA](#), this terminology was central in a discussion of how the [TATHĀGATA](#) can be all-knowing (literally, “knowing all aspects,” [SARVĀKĀRAJÑATĀ](#)) while possessing [ADVAYAĀJÑĀNA](#) (nondual knowledge). See [ĀKĀRA](#).

sākāravāda. (T. nmam pa dang bcas par smra ba). In Sanskrit, “proponent of having aspects,” or “aspectarians”; a position in Buddhist epistemology, according to which sensory perception is not of the object itself but of an “aspect” ([ĀKĀRA](#)) of the object. See [ĀKĀRA](#); [SĀKĀRA](#).

Sāketa. (T. Gnas bcas; C. Suozhiduo cheng; J. Shagita jō; K. Sagida sōng 娑枳多城). In Sanskrit and Pāli, a town in [KOŚALA](#) regarded during the Buddha’s time as one of the six great cities of India, said to be located six or seven leagues ([YOJANA](#)) from [ŚRĀVASTĪ](#). The other cities are Kauśāmbī, Campā, Vārāṇasī, Śrāvastī, and [RĀJAGRHA](#). The city has been identified by some with Ayodhyā. The Buddha and his disciples visited the city often; it is the setting for the *Sāketa Jātaka* and the *Sāketasutta*.

Sakkapañhasutta. (C. Di-Shi suowen jing; J. Taishaku shomongyō; K. Che-Sōk somun kyōng 帝釋所問經). In Pāli, “Discourse on Sakka’s Question”; the twenty-first sutta of the [DIGHANIKĀYA](#) (there are three separate recensions in Chinese: an independent sūtra translated by [FAXIAN](#); a [SARVĀSTIVĀDA](#) recension that appears as the fourteenth sūtra in the Chinese translation of the [DIRGHĀGAMA](#); and a [SARVĀSTIVĀDA](#) recension that appears as the 134th sūtra in the Chinese translation of the [MADHYAMĀGAMA](#)). The sūtra is preached to [ŚAKRA](#) (P. Sakka), king of the gods, by the Buddha while he dwelt in the Indraśāla [alt. Indraśaila] (P. Indasāla) cave near [RĀJAGRHA](#). Śakra inquired as to why there was so much hostility between beings. The Buddha explained that hostility is caused by selfishness; that selfishness is caused by likes and dislikes, and that likes and dislikes, in turn, are caused by desire. Desire is produced by mental preoccupations (S. [VITARKA](#), P. vitakka) born from the proliferation of concepts (S. [PRAPAÑCA](#), P. papañca) that gives rise to [SAMSĀRA](#). The Buddha then delineates a practice to be pursued and a practice to be abandoned for subduing this conceptual proliferation.

Śakra. (P. Sakka; T. Brgya byin; C. Di-Shi; J. Taishaku; K. Che-Sōk 帝釋). Sanskrit name of a divinity who is often identified with the Vedic god [INDRA](#) (with whom he shares many epithets), although it is perhaps more accurate to describe him as a Buddhist (and less bellicose) version of Indra. Typically described in Buddhist texts by his full name and title as “Śakra, the king of the gods” ([ŚAKRO DEVĀNĀM INDRAH](#)), he is the divinity ([DEVA](#)) who appears most regularly in Buddhist texts. Śakra is chief of the gods of the heaven of the thirty-three ([TRĀYASTRIMŚA](#)), located on the summit of Mount [SUMERU](#). As such, he is a

god of great power and long life, but is also subject to death and rebirth; the Buddha details in various discourses the specific virtues that result in rebirth as Śakra. In both the Pāli canon and the [MAHĀYĀNA](#) sūtras, Śakra is depicted as the most devoted of the divine followers of the Buddha, descending from his heaven to listen to the Buddha's teachings and to ask him questions (and according to some accounts, eventually achieving the state of stream-enterer), and rendering all manner of assistance to the Buddha and his followers. In the case of the Buddha, this assistance was extended prior to his achievement of buddhahood, both in his previous lives (as in the story of Vessantara in the [VESSANTARA JĀTAKA](#)) and in his last lifetime as Prince [SIDDHĀRTHA](#); when the prince cuts off his royal locks and throws them into the sky, proclaiming that he will achieve buddhahood if his locks remain there, it is Śakra who catches them and installs them in a shrine in the heaven of the thirty-three. When the Buddha later visited the heaven of the thirty-three to teach the [ABHIDHARMA](#) to his mother [MĀYĀ](#) (who had been reborn there), Śakra provided the magnificent ladder for his celebrated descent to [JAMBUDVĪPA](#) that took place at [SĀMKĀŚYA](#). When the Buddha was sick with dysentery near the end of his life, Śakra carried his chamber pot. Śakra often descends to earth disguised as a brāhmaṇa in order to test the virtue of the Buddha's disciples, both monastic and lay, offering all manner of miraculous boons to those who pass the test. In the Pāli canon, a section of the [SAMYUTTANIKĀYA](#) consists of twenty-five short suttas devoted to him.

sakṛdāgāmin. (P. sakadāgāmi; T. lan gcig phyir 'ong ba; C. yilai/situohan; J. ichirai/shidagon; K. illae/sadaham 一來/斯陀含). In Sanskrit, lit. "once-returned"; the second (in ascending order) of the four grades of noble person ([ĀRYAPUDGALA](#)), the others being the [SROTAĀPANNA](#) or "stream-enterer" (the first grade), the [ANĀGĀMIN](#) or "nonreturner" (the next grade above sakṛdāgāmin), and the [ARHAT](#) or "worthy one" (the highest grade). The sakṛdāgāmin is one who has completely put aside the first three of ten fetters ([SAMYOJANA](#)) that bind one to the cycle of rebirth; namely, (1) belief in the existence of a self in relation to the body ([SATKĀYADRSTI](#)), (2) doubt about the efficacy of the path ([VICIKITSĀ](#)), (3) belief in the efficacy of rites and rituals ([ŚILAVRATAPARĀMARŚA](#)); and in addition, he has made progress in substantially overcoming the fourth and fifth fetters, namely, (4) sensual craving ([KĀMARĀGA](#)), and (5) malice ([VYĀPĀDA](#)). Having put aside the first three fetters completely and mitigated the fourth and fifth fetters, the sakṛdāgāmin is destined to be reborn in the sensuous realm ([KĀMADHĀTU](#)) at most one more time, although he may be reborn in the realm of subtle

materiality ([RŪPADHĀTU](#)) or the immaterial realm ([ĀRŪPYADHĀTU](#)) before attaining [NIRVĀNA](#). Both [SAKRDĀGĀMIPHALAPRATIPANNAKA](#) and [SAKRDĀGĀMIPHALASTHA](#) are once-returners. The sakṛdāgāmin is also one of the twenty members of the [ĀRYASAMGHA](#) (see [VIMŚATIPRABHEDASAMGHA](#)). In this context sakṛdāgāmin is the name for candidates (pratipannaka) for the fruition of sakṛdāgāmin [SAKRDĀGĀMIPHALAPRATIPANNAKA](#)). They may be either a follower through faith ([ŚRADDHĀNUSĀRIN](#)) or a follower through doctrine ([DHARMĀNUSĀRIN](#)) with either dull ([MRDVINDRIYA](#)) or keen faculties ([TĪKSNENDRIYA](#)). In all cases they are those who, before reaching the path of vision ([DARŚANAMĀRGA](#)), have eliminated six or seven of the levels of afflictions ([KLEŚA](#)) that cause rebirth in the sensuous realm ([KĀMADHĀTU](#)) that the ordinary ([LAUKIKA](#)) path of meditation ([BHĀVANĀMĀRGA](#)) removes, but they will not have eliminated the eighth or ninth level. Were they to have done so, they would be called candidates for the third fruit of nonreturner ([ANĀGĀMIPHALAPRATIPANNAKA](#)).

[sakṛdāgāmiphalapratipannaka](#). (P. sakadāgāmimagga; T. phyir 'ong zhugs pa; C. yilai xiang; J. ichiraikō; K. illae hyang 一來向). In Sanskrit, candidate for the fruit of once-returner. If they are [VĪTARĀGAPŪRVIN](#) (those who have already eliminated afflictions ([KLEŚA](#)) associated with the sensuous realm prior to reaching the path of vision) and ānupūrvin (those who reach the four fruits of the noble path in a series), they are [SROTAĀPANNAPHALASTHA](#). See [SAKRDĀGĀMIPHALASTHA](#).

[sakṛdāgāmiphala](#). (P. sakadāgāmiphala; T. phyir 'ong 'bras gnas; C. zheng yilai guo; J. shōichiraika; K. chŭng illae kwa 證一來果). In Sanskrit, “one who has reached, or is the recipient of, the fruit of once-returner”; this term is paired with the [SAKRDĀGĀMIPHALAPRATIPANNAKA](#), one who is a candidate for the fruit of once-returner. Both refer to the “once-returner” ([SAKRDĀGĀMIN](#)), one of the four types of noble persons ([ĀRYA](#)); the sakṛdāgāmiphalapratipannaka has, however, only reached the [ĀNANTARYAMĀRGA](#) (unimpeded path), while the sakṛdāgāmiphala has reached the [VIMUKTIMĀRGA](#) (path of freedom). In general, according to the [ABHIDHARMAKOŚABHĀSYA](#), a noble person reaches the goal of [ARHAT](#) by becoming free of all the afflictions ([KLEŚA](#)) of the three realms, from the sensuous realm to the [BHAVĀGRA](#), the highest level of the immaterial realm. There are nine levels to the three realms: the level of the sensuous realm is counted as one, and each of the four meditative absorptions ([DHYĀNA](#)) of the

realms of both subtle materiality and immateriality are counted as one each. The path of vision ([DARŚANAMĀRGA](#)) has sixteen instants, eight ānantaryamārga and eight vimuktimārga. The first four instants (consisting of two pairs of ānantaryamārga and vimuktimārga) are focused on the truth of suffering as it pertains to the sensuous realm, and then to the remaining eight levels of the two upper realms. The second four instants are focused on the truth of origination as it pertains to the sensuous realm, and then to the remaining eight levels of the two upper realms (see [DHARMAKSĀNTI](#)). In this way, during sixteen instants that systematize the path of vision, all the afflictions to be eliminated by the path of vision are removed. The sharpest people ([TĪKSNENDRIYA](#)), with the finest store of previous actions, like the Buddha, know all three realms are equally conditioned by suffering ([SAMSKĀRADUHKHATĀ](#)) and feel disgust for all of it equally as [SAMSĀRA](#); they enter into the path of vision, eliminate the fetters, and awaken as arhats. Others have gradations of good fortune, ranging from those who will reach the final goal after death, to those who spend many lives taking rebirth in different heavens in the upper two realms before finally reaching the goal of arhatship. Those whose prior store of actions is such that, prior to reaching the path of vision, they have eliminated all, some, or none of the nine sets of afflictions that specifically cause rebirth in the sensuous realm reach the intermediate fruits of nonreturner, once-returner, and stream-enterer, respectively, when they reach the path of vision. The number of births they will take, and the places they take them, give rise to an āryasaṃgha made up of twenty different persons ([VIMŚATIPRABHEDASAMGHA](#)). In the Mahāyāna didactic reformulations of [ABHIDHARMA](#), sakṛdāgāmin is a name for celestial bodhisattvas who are in their last life before taking birth in the [TUSITA](#) heaven prior to becoming complete and perfect buddhas (samyaksaṃbuddha).

[Śakro devānām indrah](#). (P. Sakko devānām indo). In Sanskrit, “[ŚAKRA](#), king of the gods.” See [ŚAKRA](#), [INDRA](#).

[Śakulā](#). (P. Sakulā; C. Shejuli; J. Shakuri; K. Saguri 奢拘梨). An eminent [ARHAT](#) nun declared by the Buddha as foremost among his nun disciples in mastery of the divine eye (S. [DIVYACAKSUS](#), P. dibbacakkhu). She was the daughter of a brāhmaṇa family in the city of [ŚRĀVASTĪ](#) (P. Sāvatti), who became a lay follower of the Buddha when she witnessed him accept the gift of the [JETAVANA](#) grove offered by [ANĀTHAPINDADA](#). Once, while listening to an arhat monk preach, she became overwhelmed with a sense of the transience of worldly

things and joined the order as a nun. Through cultivating insight, she eventually attained arhatship. One of the extraordinary powers ([ABHIJÑĀ](#)) she developed as a consequence of her practice was the divine eye, or the ability to perceive the past lives of other beings and to understand the karmic consequences of the actions that led them from one existence to the next. It was because of her exceptional ability that she was deemed foremost in this regard. During the time of Padmottara (P. Padumuttara) Buddha, she was the half-sister of the Buddha and overheard one of his nun disciples being called foremost in mastery of the divine eye. It was at that time that she resolved to attain that distinction during the dispensation of a future buddha.

Śākya. (P. Sākiya; T. Shākya; C. Shijia; J. Shaka; K. Sökka; V. Thích ca 釋迦). Name of an ancient north Indian tribe that flourished in the southern foothills of the Himālayas near what is now the border between Nepal and India. This tribe produced the historical buddha, called either [GAUTAMA](#) or [ŚĀKYAMUNI](#), whose name means “Sage of the Śākya Clan.” Unfortunately virtually no sources referring to the Śākyas can be found outside the Buddhist tradition. The origin of the name is uncertain, being variously described as synonymous with the Sanskrit term śākya, meaning “able,” or as a derivative of the noun śāka, a kind of tree used by this clan in construction. Texts describe this clan as ruled by [KSATRIYAS](#), the military or administrative caste of the Indian social system. At the time of the Buddha, the Śākyas were ruled by his father, King [ŚUDDHODANA](#). The Śākyas made [KAPILAVASTU](#) the capital of their region. Both the [MAHĀVASTU](#) and the [BUDDHACARITA](#) name the Śākyas as descendants of the legendary solar king Ikṣvāku; the ultimate progenitor of the Śākyas was [MAHĀSAMMATA](#), the first king of the present world system. In the time of the Buddha, the Śākyas, although they were self-governing, were subjects of the neighboring kingdom of [KOŚALA](#). According to various accounts, [VIRŪDHAKA](#) (P. Viḍūḍabha), the king of [KOŚALA](#), annexed the territory of the Śākyas and killed most of its inhabitants after they insulted him by revealing that his mother, whom they had provided as a bride to his father [PRASENAJIT](#), was a servant. Prior to their demise, the Buddha himself is said to have dissuaded Virūḍhaka from invading the territory of the Śākyas. In East Asian Buddhism after the fourth century CE, monks and nuns traditionally abandoned their family surnames and adopted instead the Buddha’s clan name Śākya (C. Shi); see [SHI](#).

śākyabhikṣu. (P. sākiyabhikkhu or sakkabhikkhu; T. shākya dge slong; C. shijia

seng; J. shakasō; K. sōkka sūng 釋迦僧). Literally “[ŚĀKYA](#) monk,” a term for a Buddhist monk that appears most frequently in Buddhist donor inscriptions, but also occasionally in non-Buddhist Indian sources. Śākya refers to the northern Indian clan into which was born the historical buddha, who is thus known as [ŚĀKYAMUNI](#), or “Sage of the Śākya Clan.” In its most general use, the term refers to any Buddhist monk, in distinction to mendicants of other Indian religious traditions, such as the [JAINA](#). This figurative use of the term Śākya—i.e., all monks as members of the Śākya clan—is common in Buddhist texts. Often monks are described as kinsmen or sons of the Buddha or the Śākyas. In its more specific use, śākyabhikṣu refers to those monks who, like the Buddha, actually belonged to the Śākya clan. Some scholars have argued that, in the Indian context, the term śākyabhikṣu was used specifically and exclusively by [MAHĀYĀNA](#) monks. Many East Asian monastic traditions use their pronunciations of the Sinographic transcription of the name Śākya as the “clan name” for all their ordained members (see [SHI](#)).

[Śākyamuni](#). (P. Sakkamuni; T. Shākya thub pa; C. Shijiamouni; J. Shakamuni; K. Sōkkamoni 釋迦牟尼). In Sanskrit, “Sage of the [ŚĀKYA](#) Clan,” one of the most common epithets of [GAUTAMA](#) Buddha, especially in the [MAHĀYĀNA](#) traditions, where the name [ŚĀKYAMUNI](#) is used to distinguish the historical buddha from the myriad other buddhas who appear in the [SŪTRAS](#). The Śākyas were a tribe in northern India into which was born [SIDDHĀRTHA GAUTAMA](#), the man who would become the historical buddha. According to the texts, the Śākya clan was made up of [KSATRIYAS](#), warriors or political administrators in the Indian caste system. The Śākya clan flourished in the foothills of the Himālayas, near the border between present-day Nepal and India. Following the tradition’s own model, which did not seek to provide a single and seamless biography of Gautama or Śākyamuni until centuries after his death, this dictionary narrates the events of the life of the Buddha in separate entries about his previous lives, his teachings, his disciples, and the places he visited over the course of his forty-five years of preaching the dharma. In India, accounts of events in the life of the Buddha first appeared in [VINAYA](#) materials, such as the Pāli [MAHĀVAGGA](#) or the [LOKOTTARAVĀDA](#) school’s [MAHĀVASTU](#). Among the Pāli [SUTTAS](#), one of the most detailed accounts of the Buddha’s quest for enlightenment occurs in the [ARIYAPARIYESANĀSUTTA](#). It is noteworthy that many of the most familiar events in the Buddha’s life are absent in some of the early accounts: the miraculous conception and birth; the death of his mother, Queen [MĀYĀ](#); his sheltered youth;

the four chariot rides outside the palace where he beholds the four portents ([CATURNIMITTA](#)); his departure from the palace; and his abandonment of his wife, [YAŚODHARĀ](#), and his newborn son, [RĀHULA](#). Those stories appear much later, in works like [AŚVAGHOŚA](#)'s beloved verse narrative, the [BUDDHACĀRITA](#), from the second century CE; the [SARVĀSTIVĀDA](#) school's third-or fourth-century CE [LALITAVISTARA](#); and the [NIDĀNAKATHĀ](#), the first biography of the Buddha in Pāli, attributed to [BUDDHAGHOŚA](#) in the fifth century CE, some eight centuries after the Buddha's passing. Even in that later biography, however, the "life of the Buddha" ends with [ANĀTHAPINDADA](#)'s gift of [JETAVANA](#) grove to the Buddha, twenty years after the Buddha's enlightenment and twenty-five years before his death. Other biographical accounts end even earlier, with the conversion of [ŚĀRIPUTRA](#) and [MAHĀMAUDGALYĀYANA](#). Indeed, Indian Buddhist literature devotes more attention to the lives of previous buddhas and to the former lives ([JĀTAKA](#)) of Gautama or Śākyamuni than they do to biographies of his final lifetime (when biography is taken to refer to a chronological account from birth to death). And even there, the tradition takes pains to demonstrate the consistency of the events of his life with those of previous buddhas; in fact, all buddhas are said to perform the same eight or twelve deeds (see [BAXIANG](#); [TWELVE DEEDS OF A BUDDHA](#)). The momentous events of his birth, renunciation, enlightenment under the [BODHI TREE](#), and first turning of the wheel of the dharma ([DHARMAKĀRAPRAVARTANA](#)) are described in detail in a range of works, and particular attention is given to his death, in both the Pāli [MAHĀPARINIBBĀNASUTTA](#) and the Sanskrit [MAHĀPARINIRVĀNASŪTRA](#). And all traditions, whether [MAINSTREAM BUDDHIST SCHOOLS](#) or the Mahāyāna, are deeply concerned with the question of the location of the Buddha after his passage into [PARINIRVĀNA](#).

Śākyaprabha. (T. Shākya 'od). (d.u.) Medieval Indian master of the [VINAYA](#), renowned in Tibet, together with [GUNAPRABHA](#), as one of the "two supreme ones" (mchog gnyis). Apparently from [KASHMIR](#), he was an expert in the [MŪLASARVĀSTIVĀDA VINAYA](#). He is best known for his work *Śrāmaṇeratriśatakārikā* ("Three Hundred Verses on the Novice"), to which he wrote an autocommentary entitled *Prabhāvati*.

Śākyāśrībhadrā. (T. Shākya shrī) (1127–1225). Also known as Śākyāśrī, a monk and scholar from [KASHMIR](#) who played an important role in the later dissemination ([PHYI DAR](#)) of Buddhism in Tibet, especially for the [SA SKYA](#) sect

of Tibetan Buddhism. He served as abbot at both [NĀLANDĀ](#) and [VIKRAMAŚĪLA](#) monasteries. As the last abbot of Vikramaśīla monastery, he witnessed its destruction by Muslim troops. Declaring that Buddhism had been destroyed in India, he traveled to Tibet in 1204 (at the age of seventy-seven, if his birth year of 1127 is accurate) at the invitation of the Tibetan translator Khro phu lo tsā ba, in the company of nine Indian and Nepalese paṇḍitas. There, he gave teachings on [PRAMĀNA](#), [ABHIDHARMA](#), [VINAYA](#), the [ABHISAMAYĀLAMKĀRA](#), [MADHYAMAKA](#), [TANTRA](#), and Sanskrit grammar and poetics. His most famous Tibetan disciple was [SA SKYA PANDITA KUN DGA' RGYAL MTSHAN](#), whom he ordained as a [BHIKSU](#) in 1208. It is said that Śākyaśrībhadrā gave him the name Sa skya Paṇḍita (“Scholar from Sa skya”) because of his ability to spontaneously translate Tibetan into Sanskrit. The two worked together on a new translation of [DHARMAKĪRTI](#)'s [PRAMĀNAVĀRTTIKA](#), marking the beginning of Sa skya Paṇḍita's influence in the field of pramāṇa. Śākyaśrībhadrā's ordination lineage, known as the Kha che lugs, or “Kashmiri system,” would be adopted by the [GSAR MA](#) sects. Śākyaśrībhadrā gave teachings at many monasteries in central and western Tibet, ordained many monks, translated Sanskrit texts, and established several monasteries. While at [BSAM YAS](#), he discovered a manuscript of the [GUHYAGARBHATANTRA](#) and vouched for its authenticity. He is also credited with providing the Tibetans with a more accurate chronology of the life of the Buddha. In 1212, he consecrated a great statue of [MAITREYA](#) at Khro pu. After ten years in Tibet, he returned to his native Kashmir where he spent the last decade of his life. He is often referred to in Tibetan simply as Kha che paṇ chen, the “great paṇḍita from Kashmir.”

śāla. (P. sāla; T. sā la; C. shaluoshu; J. saraju/sharaju; K. sarasu 沙羅樹). In Sanskrit, the “sal” tree (*Shorea robusta*, [alt. *Vatica robusta*]); a species of tree native to South Asia, which figures prominently in the Buddhist tradition. In India, the tree grows upwards of one hundred feet in height and provides both timber and fragrant resin, which is burned for incense. In several of his discourses, the Buddha uses the growth of the śāla tree as an analogy for the development of wholesome qualities ([KUŚĀLA](#)). This tree also is particularly significant in Buddhist hagiography because it was under this type of tree that the Buddha was born and died. Queen [MĀYĀ](#), the Buddha's mother, is said to have given birth to the prince while clinging for support to the branches of a śāla tree that had bent itself down to help her. The Buddha chose a grove of śāla trees near the town of [KUŚINAGARĪ](#) as the site of his [PARINIRVĀNA](#). Different versions

of the Buddha's demise represent these trees in various ways. One version says that the Buddha laid down between twin śāla trees and passed away. Another version says that the Buddha's deathbed was surrounded by pairs of śāla trees—two in each of the four cardinal directions—and at the moment of his death these trees blossomed out of season, rained petals upon him, and their trunks turned white. See also [SIKU](#).

[Sāleyyakasutta](#). In Pāli, the “Discourse to the Sāleyyakas”; the forty-first sutta contained in the [MAJJHIMANIKĀYA](#) (a separate [SARVĀSTIVĀDA](#) recension appears, but without title, in the Chinese translation of the [SAMYUKTĀGAMA](#)); preached by the Buddha to a group of brāhmaṇa householders at the town of Sālā in the Kosala (S. [KOŚALA](#)) country. The Buddha describes for them the ten nonvirtuous actions that lead to unhappiness and unfortunate rebirths and the ten virtuous actions that lead to happiness and fortunate rebirths (see [KARMAPATHA](#)). The ten nonvirtuous actions are divided into three kinds of bodily misdeed: (1) killing, (2) stealing, (3) and sexual misconduct; four kinds of verbal misdeed: (4) lying, (5) divisive speech, (6) harsh speech, and (7) senseless prattle; and three kinds of mental misdeed: (8) covetousness, (9) harmful intent, and (10) wrong views. The ten virtuous actions are explained as the abstaining from the ten virtuous actions. The Buddha then describes the fortunate rebirths among humans and divinities that may be expected by those who perform virtuous deeds.

[Śālistambasūtra](#). (T. Sā lu ljang pa'i mdo; C. Daogan jing; J. Tōkangyō; K. Togan kyōng 稻釋經). In Sanskrit, the “Rice Seedling Sūtra,” a MAHĀYĀNA SŪTRA noted for its detailed presentation of the doctrine of dependent origination ([PRATĪTYASAMUTPĀDA](#)). The sūtra begins with the Buddha gazing at a rice seedling and then declaring, “Monks, he who sees dependent origination sees the dharma. He who sees the dharma sees the Buddha.” [ŚĀRIPUTRA](#) asks [MAITREYA](#) what this statement means, and the majority of the sūtra is devoted to his answer. This sūtra provides one of the most detailed treatments of the doctrine of dependent origination found anywhere in the scriptural literature. The doctrine had been set forth in various ways in previous sūtras, and the Śālistambasūtra appears to be something of a digest of these various presentations. The sūtra is widely quoted by Indian commentators in their own expositions of dependent origination, including [MADHYAMAKA](#) authors, although the sūtra does not connect dependent origination with emptiness ([ŚŪNYATĀ](#)). Indeed, the text is so widely quoted that, although the sūtra is lost in the original Sanskrit,

approximately ninety percent of the Sanskrit text can be recovered from citations of it in various Indian treatises.

Sallekhasutta. (C. Zhouna wenjian jing; J. Shūna monkengyō; K. Chuna mun'gyōn kyōng 周那問見經). In Pāli, “Discourse on Effacement,” the eighth sutta in the [MAJJHIMANIKĀYA](#) (a separate [SARVĀSTIVĀDA](#) recension appears as the ninety-first sūtra in the Chinese translation of the [MADHYAMĀGAMA](#), as well as a recension of unidentified affiliation in the [EKOTTARĀGAMA](#)); preached by the Buddha to Mahācunda, a master of meditative absorption (P. [JHĀNA](#), S. [DHYĀNA](#)) in the [JETAVANA](#) grove in the town of Sāvattī (S. [ŚRĀVASTĪ](#)). The Buddha explains that pride and speculative views regarding self and the nature of the world cannot be overcome by mere meditative absorption, but only through insight into the Buddhist truths (insight that implicitly will lead to stream-entry). Furthermore, true austerity is nothing other than refraining from forty-four types of unwholesome qualities; one mired in sensuality cannot help bring another to purity.

samādhi. (T. ting nge 'dzin; C. sanmei; J. sanmai; K. sammae 三昧). In Sanskrit, “concentration”; a foundational term in Buddhist meditation theory and practice, which is related to the ability to establish and maintain one-pointedness of mind ([CITTAIKĀGRATĀ](#)) on a specific object of concentration. The [SARVĀSTIVĀDA](#) school of [ABHIDHARMA](#) and the [YOGĀCĀRA](#) school list samādhi as one of a group of five determinative ([VINIYATA](#)) mental concomitants ([CAITTA](#)), whose function is to aid the mind in ascertaining or determining its object. The five are: aspiration or desire-to-act ([CHANDA](#)), determination or resolve ([ADHIMOKSA](#)), mindfulness or memory ([SMṚTI](#)), concentration ([SAMĀDHI](#)), and wisdom or cognition ([PRAJÑĀ](#)). According to [ASAṄGA](#), these five determinative factors accompany wholesome ([KUŚALA](#)) states of mind, so that if one is present, all are present. In Pāli [ABHIDHAMMA](#) materials, concentration is one of the seven mental factors (P. cetasika) that are invariably associated with all moments of consciousness ([CITTA](#), [MANAS](#), or [VIJÑĀNA](#)). Concentration occurs in many other important lists, including as the second of the three trainings ([TRISĪKSĀ](#)), and the last stage of the eightfold path ([ĀRYĀSTĀNGAMĀRGA](#)). Concentration is distinguished according to the quality of consciousness with which it is associated. “Right concentration” ([SAMYAKSAMĀDHI](#), P. sammāsamādhi) is concentration associated with wholesome ([KUŚALA](#)) states of mind; it is listed not only as one element of the eightfold noble path, but as one of seven factors of

enlightenment ([BODHYAṄGA](#), P. bojjaṅga), and, in an incipient state, as one of five powers ([BALA](#)) and the other categories that together make up the [BODHIPĀKSIKADHARMA](#) (thirty-seven factors associated with awakening). High degrees of concentration can be developed through the practice of meditation ([BHĀVANĀ](#)). Concentration of such intensity receives the designation “one-pointedness of mind” (cittaikāgratā). When developed to its greatest degree, mental concentration leads to the attainment of [DHYĀNA](#) (P. [JHĀNA](#)), “meditative absorption.” It is also the main mental factor defining the four magical powers ([RDDHIPĀDA](#), P. iddhipāda). The cultivation of concentration for the purposes of attaining meditative absorption is called tranquility meditation ([ŚAMATHA](#)). In the Pāli abhidhamma, three levels of concentration are distinguished in the practice of tranquility meditation: (1) preparatory concentration ([PARIKAMMASAMĀDHI](#)) is the degree of concentration established at the beginning of a meditation session. (2) Access or neighborhood concentration ([UPACĀRASAMĀDHI](#)) arises just as the practitioner approaches but does not enter the first level of meditative absorption; it is marked by the appearance in the mind of a representational image ([PATIBHĀGANIMITTA](#)) of the object of meditation. (3) “Attainment” or “full” concentration ([APPANĀSAMĀDHI](#)) is the level of concentration that arises upon entering and abiding in any of the meditative absorptions. In the [MAHĀYĀNA](#) sūtras, a wide variety of profound meditative experiences are described as samādhis and are mentioned as attainments of the bodhisattva as he ascends through the ten [BHŪMIS](#). The [MAHĀVYUTPATTI](#) lists 118 different samādhis that are specified by name in the [PRAJÑĀPĀRAMITĀ](#) sūtras, such as candravimala (stainless moon), sarvadharmodgata (surpassing all dharmas), siṃhavikrīḍita (lion’s play), anantaprabha (limitless light), and acala (immovable). See also [YATHĀBHŪTAJÑĀNADARŚANA](#).

[Samādhirājasūtra](#). (T. Ting nge ’dzin rgyal po’i mdo; C. Yuedeng sanmei jing; J. Gattōsanmaikyō; K. Wōltūng sammae kyōng 月燈三昧經). The “King of Concentrations Sūtra”; an important [MAHĀYĀNA](#) sūtra (also known as the *Candrapradīpa*) composed in India, probably in the fourth century CE, with the text undergoing expansion in subsequent centuries. The text is a mixture of poetry and prose, with the verse sections considered to be the older stratum. The sūtra is cited often in Mahāyāna śāstras, especially in the [PRASANNAPADĀ](#) of [CANDRAKĪRTI](#) and the [ŚIKSĀSAMUCCAYA](#) of [ŚĀNTIDEVA](#), and is also one of the foundational texts, or “nine dharmas” (see [NAVAGRANTHA](#)), of Newar Buddhism.

A Chinese translation of the complete sūtra was made by Narendrayaśas in 557. The *Samādhirājasūtra* is composed of a dialogue between the Buddha and the bodhisattva Candragupta, and sets forth various forms of meditation for bodhisattvas, including the “king of concentrations” of the sūtra’s title, which is defined as “the proclamation that all phenomena are of the same nature.” The sūtra does not offer instructions for developing these samādhis, but instead provides their names and recounts their wondrous effects. The sūtra describes at some length the two (rather than three) bodies of a buddha, the [DHARMAKĀYA](#) and the [RŪPAKĀYA](#), with the former identified with the “mind of clear light” ([PRABHĀSVARACITTA](#)).

[samādhiśikṣā](#). (T. ting nge ’dzin gyi bslab pa). In Sanskrit, “training in meditation.” See [ADHISAMĀDHIŚIKṢĀ](#).

[samādhisūtra](#). In Sanskrit, “meditation sūtra.” See [SANMEIJING](#).

[samāhita](#). (T. mnyam bzhag; C. dengyin; J. tōin; K. tūngin 等引). In Sanskrit and Pāli, “equipoise” (lit. “composed” or “collected”); a past passive participle formed from the Sanskrit root √dhā (“to place”) with the prefixes sam (“fully”) and ā (“from all sides”) (and etymologically related to [SAMĀDHI](#)), in which the mind of the practitioner is linked to its object, in such a way that discursive thought no longer intrudes. A paranomastic gloss interprets it as linking (āhita) the mind to equanimity (sama). The term is sometimes contrasted with subsequent attainment (prṣṭhalabha), when discursiveness returns. The decision to include samāhita in the Buddhist narrative on meditation, but to emphasize instead samādhi, could be a reaction to brahmanical discourses on meditative states, which tend to emphasize samāhita over samādhi. In the Buddhist tradition, the notion of samāhita as an attainment is incorporated in different ways from one meditation model to another. In the [YOGĀCĀRABHŪMIŚĀSTRA](#) of the [YOGĀCĀRA](#) school, for example, samāhita is listed as the sixth of seventeen stages ([BHŪMI](#)) by which progress is made toward the state of a buddha. See also [SAMĀPATTI](#).

[samāhitajñāna](#). (T. mnyam bzhag ye shes; C. dengyin zhi; J. tōinchi; K. tūngin chi 等引智). In Sanskrit, “wisdom of equipoise,” the state of direct realization of reality in which the ultimate truth is perceived without mediation by thought in a state of yogic direct perception ([YOGIPRATYAKṢA](#)). In descriptions of the five paths ([PAÑCAMĀRGA](#)) to enlightenment, the attainment of such wisdom occurs on

the path of vision ([DARŚANAMĀRGA](#)) and is repeated over the course of the path of cultivation ([BHĀVANĀMĀRGA](#)). It has two parts, the [VIMUKTIMĀRGA](#) and the [ĀNANTARYAMĀRGA](#).

[samanantarapratyaya](#). (P. samanantarapaccaya; T. de ma thag pa'i rkyen; C. dengwujian yuan; J. tōmuken'en; K. tūngmugan yōn 等無間緣). In Sanskrit, “immediate-antecedent condition”; the second of the four types of conditions ([PRATYAYA](#)) recognized in the [VAIBHĀSIKA](#) school of [SARVĀSTIVĀDA](#) [ABHIDHARMA](#) and the [YOGĀCĀRA](#) school. Samanantarapratyaya is also listed as one of the twenty-four conditions (P. paccaya) in the massive Pāli [ABHIDHAMMA](#) text, the [PATTHĀNA](#). This type of condition refers to the immediately antecedent moment, which through its cessation enables a subsequent moment to arise; in the case of consciousness ([VIJÑĀNA](#)), it therefore refers to the prior moment of consciousness that is a necessary antecedent to the next moment of consciousness. All types of thought in the conditioned ([SAMSKRTA](#)) realm serve as immediate-antecedent conditions. The only exception is the final thought-moment in the mental continuum of an [ARHAT](#): because the next thought-moment involves the experience of the unconditioned ([ASAMSKRTA](#)), no further thoughts from the conditioned realm can ever again recur. This type of condition is also called the “antecedent condition” ([ANANTARAPRATYAYA](#)); the [VISUDDHIMAGGA](#) explains that samanantarapratyaya and anantarapratyaya are essentially the same, except that the former emphasizes the immediacy of the connection between the two moments.

[samānapratibhāsadharmin](#). (T. chos can mthun snang). In Sanskrit, lit. “subject that appears the same” or “commonly appearing subject,” a term in Buddhist logic, particularly important in Tibetan Buddhism. This term refers to the common basis (T. gzhi mthun) that must be present in order for a reasonable and constructive debate to occur. In other words, if adherents of two different doctrinal systems try to debate, but employ only terms and ideas that are unique to their own systems, then no position can be effectively proven or refuted. Furthermore, the participants in a debate must have a common understanding of the subject that is being debated and a shared understanding of what constitutes a logical example. This term is also understood to mean that the participants in a debate must understand the scripture on which the debate is based. Some Buddhist philosophers, such as Jayānanda, refuted the notion that debate or inference ([ANUMĀNA](#)) was in any way constructive on the following general

grounds: to the enlightened mind, all phenomena are devoid of substance or definition and therefore no phenomenon can serve as a samānapratibhāsadharmin. This is a central issue in [MADHYAMAKA](#), where the proponent of emptiness ([ŚŪNYATĀ](#)) rejects the notion of anything that possesses its own nature ([SVABHĀVA](#)). This raises the question of whether there is a commonly appearing subject in a debate between a Madhyamaka and non-Madhyamaka; if there is, to what degree is the appearance “common”; and how does the Madhyamaka present his position under such circumstances.

[samānārthatā](#). (P. samānattatā; T. don mthun pa; C. tongshi; J. dōji; K. tongsa 同事). In Sanskrit, “consistency”; viz., acting in accordance with one’s own teachings, or demonstrating consistency between one’s words and deeds. See [SAMGRAHAVASTU](#).

[Sāmaññaphalasutta](#). (S. Śrāmaṇyaphalasūtra; C. Shamenguo jing; J. Shamongakyō; K. Samun’gwa kyōng 沙門果經). In Pāli, the “Discourse on the Fruits of Mendicancy,” the second sutta of the [DĪGHANIKĀYA](#) (a separate [DHARMAGUPTAKA](#) recension appears as the twenty-seventh sūtra in the Chinese translation of the [DĪRGHĀGAMA](#); another unidentified recension also is included in the Chinese translation of the [EKOTTARĀGAMA](#)). The patricide king [AJĀTAŚATRU](#) (P. Ajātasattu) and the physician [JĪVAKA](#) visit the Buddha dwelling at Jīvaka’s mango grove, Ambavana. Impressed by the silence and discipline of the Buddha’s disciples gathered there, Ajātaśatru thinks that it would be good if his own son, Udayabhadra (P. Udāyibaddha), were to join such an assembly of mendicants. He asks the Buddha about the benefits of mendicancy here and now, such that men would put aside worldly pursuits and join the Buddhist order. According to the Pāli recension, he states that he had already put this question to six other famous recluses of the day—namely, [PŪRANA-KĀŚYAPA](#), [MASKARIN GOŚĀLĪPUTRA](#), [AJITA KEŚAKAMBALA](#), [KAKUDA KĀTYĀYANA](#), [NIRGRANTHA-JŪNĀTĪPUTRA](#), and [SAÑJAYA VAIRĀTĪPUTRA](#) (P. Pūraṇa Kassapa, Makkhali Gosāla, Ajita Kesakambala, Pakudha Kaccāyana, Nigaṇṭha Nātaputta and Sañjaya Belaṭṭiputta)—but received no satisfactory answer. In response to the king’s query, the Buddha describes the immediate benefits of mendicancy from the most mundane to the most exalted. He notes that even a servant or householder who becomes a mendicant receives the honor of kings. Moreover, the mendicant is free of taxation and the burden of supporting a family and learns control of the senses, mindfulness ([SMṚTI](#), P. sati) and contentment. Being content, the

mendicant becomes glad and calm, which provide the foundation for attaining the four meditative absorptions ([DHYĀNA](#), P. [JHĀNA](#)). Higher than any of these and on the basis of having mastered the four meditative absorptions, the mendicant can develop the six higher knowledges or supranormal powers ([ABHIJÑĀ](#), P. [abhiññā](#)), which culminate in enlightenment and liberation from the cycle of rebirth. Upon hearing this discourse, Ajātaśatru expressed regret at having murdered his father and took refuge in the Buddha. After the king's departure, the Buddha noted to his disciples that were it not for the fact that the king had murdered his father, he would have attained the stage of stream-enterer ([SROTAĀPANNA](#)) then and there.

Samantabhadra. (T. Kun tu bzang po; C. Puxian; J. Fugen; K. Pohyŏn 普賢). The Sanskrit name of both an important bodhisattva in Indian and East Asian Buddhism and of an important buddha in Tibetan Buddhism. As a bodhisattva, Samantabhadra is a principal bodhisattva of the [MAHĀYĀNA](#) pantheon, who is often portrayed as the personification of the perfection of myriad good works and spiritual practices. He is one of the [ASTAMAHOPIPUTRA](#), and an attendant of [ŚĀKYAMUNI](#) Buddha, standing opposite [MAÑJUŚRĪ](#) at the Buddha's side. In the [PAÑCATATHĀGATA](#) configuration, he is associated with the buddha [VAIROCANA](#). Samantabhadra figures prominently in the [AVATAMSAKASŪTRA](#). In a chapter named after him, he sets forth ten [SAMĀDHIS](#). In the [GANDAVYŪHA](#) (the final chapter of the *Avataṃsakasūtra*), the bodhisattva [SUDHANA](#) sets out in search of a teacher, encountering fifty-two beings (twenty of whom are female), including the Buddha's mother Mahāmāyā ([MĀYĀ](#)), the future buddha [MAITREYA](#), as well as [AVALOKITEŚVARA](#) and [MAÑJUŚRĪ](#). His final teacher is the bodhisattva Samantabhadra, who sets forth the ten vows in his famous [BHADRACARĪPRANIDHĀNA](#). In China, the center of Samantabhadra's worship is [EMEISHAN](#) in Sichuan province, which began to develop in the early Tang. According to legend, Samantabhadra arrived at the mountain by flying there on his white elephant, his usual mount. As a buddha, Samantabhadra is the primordial buddha ([ĀDIBUDDHA](#)) according to the [RNYING MA](#) sect of Tibetan Buddhism. He is depicted naked, blue, and in sexual union with his consort Samantabhadrī. He is embodiment of the original purity of all phenomena of [SAMSĀRA](#) and [NIRVĀNA](#). Called the "primordial basis" (ye gzhi), he is regarded as the eternal union of awareness ([RIG PA](#)) and emptiness ([ŚŪNYATĀ](#)), of emptiness and appearance, and of the nature of the mind and compassion. As such he is the wellspring of the [ATIYOGA](#) teachings.

Samantabhadracarī-praṇidhāna-rāja. (S). See [BHADRACARĪPRANIDHĀNA](#).

Samantagandha. (T. Kun tu dri bsung; C. Puxiang; J. Fukō; K. Pohyang 普香). In Sanskrit and Pāli, “Universal Fragrance.” In the [SADDHARMAPUNDARĪKASŪTRA](#) (“Lotus Sūtra”), Samantagandha is listed as one of the many divinities ([DEVA](#)) who accompany [ŚAKRA](#), the king of the gods, and are present from the outset of the Buddha’s sermons. In other texts, such as the [MAHĀVASTU](#), Samantagandha is listed as one of the divinities who appears on more than one occasion to honor the Buddha by scattering in the sky such articles as flowers (see [KHAPUSPA](#)) and sandalwood powder. In the [APADĀNA](#), a Pāli collection of hagiographical narratives found in the [KHUDDAKANIKĀYA](#), Samantagandha is listed as a name for one of the hundreds of [ARHATS](#) whose prior births are recounted in the text. In the distant past, the [ARHAT](#) Pādapūjaka Thera was born thirteen times as a king under the name Samantagandha.

sāmantaka. (T. nyer bsdogs; C. jinfen; J. gonbun; K. kŭnbun 近分). In Sanskrit, “preparation,” “neighboring state”; according to the [YOGĀCĀRABHŪMI](#) and the [ABHIDHARMASAMUCCAYA](#), each of the four concentrations ([DHYĀNA](#)) and attainments ([SAMĀPATTI](#)) has two parts: maula (fundamental state) and sāmantaka (a neighboring part that is preparatory to that fundamental state). The fundamental state is [ŚAMATHA](#) (serenity, calmness) and the sāmantaka (preparation) is included under the heading of [VIPĀŚYANĀ](#) (insight). Six or seven types of attentions ([MANASKĀRA](#)) are listed as preparations for the attainment of the first dhyāna. These include attention that contemplates marks (lakṣaṇapratīsamvedīmanaskāra), arises from belief (ādhimokṣikamanaskāra), arises from separation (prāvivekyamanaskāra), contemplates joy and withdrawal (ratīsamgrāhakamanaskāra), investigates (mīmāṃsakamanaskāra), is a final practice (prayogaṇīṣṭamanaskāra), and leads to the result of the final practice (prayogaṇīṣṭaphalamanaskāra). There are nine impediments (heya) between the fundamental stages of the first and second concentrations (dhyāna), for example. Attention is then paid to the marks of the lower as coarse (audārika) and the higher as delightful (śānta). The first attention identifies the impediments and focuses the mind on removing them; the second brings vigor or energy ([VĪRYA](#)); the third, fourth, and six actually counteract the three sets of three impediments; the fifth investigates to see whether the impediments have actually been eliminated. The seventh is the fundamental state. See also [UPACĀRASAMĀDHI](#).

Samantapāsādikā. (C. Shanjianlü piposha; J. Zenkenritsubibasha; K.

Sōn'gyōnyul pibasa 善見律毘婆沙). In Pāli, lit. “Entirely Pleasing”; the title of a fifth-century commentary on the [VINAYAPITAKA](#), written in Sri Lanka by the renowned exegete [BUDDHAGHOSA](#). The *Samantapāsādikā* contains a lengthy introduction called *Bāhīranidāna*, which recounts the early history of the dispensation from the death of the Buddha through the convocation of the first three Buddhist councils (see [SAMGĪTĪ](#)) and to the recitation of the [VINAYA](#) in Sri Lanka by [MAHĀRITTHA](#) during the reign of the Sinhalese king [DEVĀNAMPIYATIṢṢA](#). A translation of the *Bāhīranidāna* appears in the Pali Text Society's English translation series as *The Inception of Discipline*. The remainder of the *Samantapāsādikā* covers a broad array of topics, touching on many points of historical and geographical interest. The commentary makes reference to the specific locations of a host of Indian [VIHĀRA](#)s and [CAITYA](#)s (P. cetiya). It also offers details on the life and works of [AŚOKA](#), [BIMBISĀRA](#), [AJĀTAŚATRU](#), and other Indian kings as well as information on the missionaries that Aśoka sent throughout South and Southeast Asia. The *Samantapāsādikā* includes an account of the life of the elder [MOGGALIPUTTATIṢṢA](#), compiler of the [KATHĀVATTHU](#) in the Pāli [ABHIDHAMMAPITAKA](#). The three classifications of vinaya, [SUTTA](#), and abhidhamma piṭakas are also explained by Buddhaghosa in this commentary.

[sāmānyalakṣaṇa](#). (T. spyi mtshan; C. gongxiang; J. gūsō; K. kongsang 共相). In Sanskrit, “general characteristic,” “generic quality,” “shared mark”; a term used in contrast to [SVALAKṢANA](#) (“specific characteristic,” “own mark”) to describe qualities that are generic to a class of phenomena, as opposed to those qualities that are unique to a given object. In the [SAUTRĀNTIKA](#) school, *sāmānyalakṣaṇa* refers to the objects of thought ([KALPANĀ](#)) that must be apprehended through a mental image and thus lack the specificity of the impermanent objects of direct perception ([PRATYAKṢA](#)).

[samāpatti](#). (T. snyom 'jug; C. dengzhi/zhengshou; J. tōji/shōju; K. tūngji/chōngsu 等至/正受). In Sanskrit and Pāli, “attainment” or “trance,” a state of deep concentration produced through the practice of meditation; the term literally means “correct entrance.” Specifically, *samāpatti* refers to eight levels of attainment, which correlate with the eight meditative absorptions ([DHYĀNA](#)), the four absorptions of the realm of subtle materiality ([RŪPĀVACARADHYĀNA](#)) and the four of the immaterial realm ([ĀRŪPYĀVACARADHYĀNA](#)). However, unlike the *dhyāna* model, *samāpatti* may also add a ninth attainment, called either the

attainment of the cessation of perception and sensation ([SAMJÑĀVEDAYITANIRODHA](#)) or the trance of cessation ([NIRODHASAMĀPATTI](#)). The four attainments of the realm of subtle materiality are named for the order in which they occur. Thus, in ascending order, they are the first concentration (prathamadhyāna, P. paṭhamajjhāna), the second concentration (dvitīyadhyāna, P. dutiyajjhāna), the third concentration (tṛtīyadhyāna, P. tatiyajjhāna), and the fourth concentration (caturthadhyāna, P. catutthajjhāna). The four levels of the immaterial realm are the attainment of the sphere of boundless space (ākāśānāntyāyatanasamāpatti, P. ākāśānāñcāyatanasamāpatti), attainment of the sphere of boundless consciousness (vijñānānāntyāyatanasamāpatti, P. vinñānāñcāyatanasamāpatti), attainment of the sphere of nothingness (ākiñcanyāyatanasamāpatti, P. ākiñcaññāyatanasamāpatti), and attainment of the sphere of neither perception nor nonperception (naivasamjñānāsamjñāyatanasamāpatti, P. nevasanññānāsaññāyatanasamāpatti). As indicated earlier, a ninth stage, the attainment of the cessation of perception and sensation (samjñāvedayitanirodha) or the attainment of cessation (nirodhasamāpatti), is often added to these latter four. These eight or nine states are also known as the “successive dwellings” (anupūrvavihāra). By achieving one of these states of absorption through the practice of meditation while still a human being, one will be reborn in the respective level of these realms of existence in the next lifetime. Similar samāpatti schemes, which present stratified levels of meditative attainment, also appear in non-Buddhist yogic systems. See also [ASAMJÑĀSAMĀPATTI](#).

[samāpattidhyāna](#). (S). See [DHYĀNASAMĀPATTI](#).

[samāropa](#). (T. sgro ’dogs; C. zengyi; J. zōyaku; K. chūngik 增益). In Sanskrit, “superimposition,” “reification,” or “erroneous affirmation”; the mistaken attribution to an object of a quality that the object does not in fact possess. The term samāropa is sometimes paired with [APAVĀDA](#) (“denigration” or “denial”), where samāropa would refer to the claim or belief that something that in fact does not exist, does exist, while apavāda would refer to the claim or belief that something that in fact does exist, does not exist (such as the [FOUR NOBLE TRUTHS](#)). In Buddhist philosophy, the most important of such erroneous superimpositions is the attribution of a perduring self ([ĀTMAN](#)) to the impermanent aggregates ([SKANDHA](#)). In [MADHYAMAKA](#), samāropa refers to the false ascription of intrinsic nature ([SVABHĀVA](#)) to phenomena ([DHARMA](#)). The purpose of the Madhyamaka

critique is to refute these false qualities that have been superimposed by ignorance onto the objects of experience; the conventionally existent objects that serve as the object of these false projections are not refuted. In [YOGĀCĀRA](#), samāropa is often used to refer to the superimposition of objective existence to phenomena that are in fact of the nature of consciousness.

[samatājñāna](#). (T. mnyam nyid ye shes; C. pingdengxing zhi; J. byōdōshōchi; K. p'yōngdūngsōng chi 平等性智). In Sanskrit, “wisdom of equality” or “impartial wisdom”; one of the five wisdoms ([PAÑCAJÑĀNA](#)) of a buddha. Through the samatājñāna, a buddha sees beyond all superficial distinctions and differentiations and perceives the fundamental nature of all things as emptiness ([ŚŪNYATA](#)). Thus, a buddha makes no distinction between one sentient being and another, and no distinction between self and other; in addition, no ultimate difference is perceived between [SAMSĀRA](#) and [NIRVĀNA](#). Such undifferentiated perception gives rise to equality, impartiality, and compassion for all beings. In [YOGĀCĀRA](#) theory, samatājñāna is understood to arise through the cessation of attachment to conceptions of self and pride. In [TANTRA](#), among the five buddhas ([PAÑCATATHĀGATA](#)), this type of wisdom is associated with [RATNASAMBHAVA](#).

[śamatha](#). (P. samatha; T. zhi gnas; C. zhi; J. shi; K. chi 止). In Sanskrit, variously translated as “calmness,” “serenity,” “quiescence,” or “tranquillity” (and sometimes as “stopping,” following the Chinese rendering of the term); one of the two major branches of Buddhist meditative cultivation ([BHĀVANĀ](#)), along with insight ([VIPĀŚYANĀ](#)). Calmness is the mental peace and stability that is generated through the cultivation of concentration ([SAMĀDHI](#)). Śamatha is defined technically as the specific degree of concentration necessary to generate insight ([VIPĀŚYANĀ](#)) into reality and thus lead to the destruction of the afflictions ([KLEŚĀ](#)). Śamatha is a more advanced degree of concentration than what is ordinarily associated with the sensuous realm ([KĀMADHĀTU](#)) but not fully that of the first meditative absorption ([DHYĀNA](#)), viz., the first absorption associated with the subtle-materiality realm ([RŪPĀVACARADHYĀNA](#)). According to the [YOGĀCĀRABHŪMI](#) and the [ABHIDHARMASAMUCCAYA](#), śamatha is the fundamental state (maula) of each of the four concentrations (dhyāna) and attainments ([SAMĀPATTI](#)), in distinction to a neighboring part that is preparatory to that fundamental state (see [SĀMANTAKA](#)), which is vipaśyanā. The process of meditative cultivation that culminates in calmness is described in one account as having nine stages. In the account found in the [MADHYĀNTAVIBHĀGA](#), for

example, there are eight forces that operate during these stages to eliminate five hindrances: viz., laziness, forgetting the object of concentration, restlessness and worry, insufficient application of antidotes (anabhisamkāra), and over-application of the antidotes (abhisamkāra). During the initial stage, when first placing the mind on its object, the first hindrance, laziness, is counteracted by a complex of four motivational mental factors: [CHANDA](#) (desire-to-do), vyāyāma (resolve), [ŚRADDHĀ](#) (faith), and [PRAŚRABDHI](#) (pliancy or readiness for the task). When the cultivation of calmness has reached a slightly more advanced stage, mindfulness ([SMRTI](#)) counteracts the forgetfulness that occurs when concentration wanders away from the meditation object. When a stream of concentration is first achieved, a meta-awareness called introspection or clear comprehension ([SAMPRAJANYA](#)) operates to counteract dullness and restlessness. Finally, in the last stages of the process, there is an application (abhisamkāra) in order to heighten the intensity of the concentration to the requisite level, and to avoid the subtle overexcitement that comes with feelings of great ease; and just prior to the attainment of śamatha, there is the setting aside of any application of conscious effort. At that point, calmness continues on its own as a natural stream of tranquillity, bringing great physical rapture ([PRĪTI](#)) and mental ease ([SUKHA](#)) that settles into the advanced state of serenity called śamatha. ¶ In the context of monastic discipline, śamatha, in its denotation as calming, is also used technically to refer to the formal settlement of monastic disputes. See [ADHIKARANAŚAMATHA](#); [SAPTĀDHIKARANAŚAMATHA](#).

[śamathavipaśyanā](#). (P. samathavipassanā; T. zhi gnas lhag mthong; C. zhiguan; J. shikan; K. chigwan 止觀). In Sanskrit, “calmness and insight,” a term used to describe a meditative state that combines the clarity and stability of [ŚAMATHA](#) with the understanding of the nature of reality associated with [VIPAŚYANĀ](#). In Indian [ŚĀSTRA](#) literature, vipaśyanā is defined as insight into reality that is conjoined with śamatha and induced by analytical meditation. Thus, true vipaśyanā includes śamatha. The combination of śamatha and vipaśyanā marks the attainment of the wisdom arisen from reflection ([CINTĀMAYĪPRAJÑĀ](#)); and the combination of the two with emptiness ([ŚŪNYATĀ](#)) as their object marks the beginning of the path of preparation ([PRAYOGAMĀRGA](#)). In [YOGĀCĀRA](#) accounts, as in the [YOGĀCĀRABHŪMI](#) and the [ABHIDHARMASAMUCCAYA](#), the four concentrations ([DHYĀNA](#)) and attainments ([SAMĀPATTI](#)) are said to have two parts: a fundamental state (maula), which is śamatha, and a neighboring part that is preparatory to that fundamental state ([SĀMANTAKA](#)), which is vipaśyanā; this

explanation suggests the vital interconnection between these two terms. Samatha and vipassanā are known in Pāli, but chiefly in a later stratum of the suttas and in commentarial literature. The terms are also important in Chinese Buddhism, serving for example as the subject of the magnum opus of [Tiantai Zhiyi](#), the [Mohe Zhiguan](#), or the “Great Calmness and Insight.”

[samaya](#). (T. dam tshig; C. sanmoye; J. sanmaya; K. sammaya 三摩耶). In Sanskrit and Pāli, “vow,” “occasion,” a polysemous term within the tradition. This term is especially important in tantric Buddhism, where it refers to a specific set of vows (see [SAMVARA](#)) taken in conjunction with an initiation rite ([ABHISEKA](#), dīkṣā). These vows are considered to represent a powerful bond between student and teacher and a commitment to maintain them is deemed essential to success in tantric practice. A breach of one’s samaya vows is often said to have serious consequences, including rebirth in hell. Pledging to keep tantric practices secret and pledging never to bring harm to one’s teacher are two examples of a samaya vow. A student of tantra will often take more and more of these vows as he or she progresses. In the Tibetan categorization of tantras into four sets, these vows are systematized into codes. In [ANUTTARAYOGATANTRA](#), there is a set list of nineteen samayas associated with the [PAÑCATATHĀGATA](#). The term samaya may also refer to the symbolic representation of a buddha, [BODHISATTVA](#), or deity, such as with a [VAJRA](#), a sword, or a lotus flower. These symbols may represent the divinity itself or more often an attribute of that divinity, such as a vow taken by a buddha or bodhisattva. ¶ In Sanskrit, samaya also indicates a general unit of time that is understood as one specific occasion or as a season of the year. The term samaya is often seen in [ABHIDHARMA](#) analyses of distinct chronological moments. For example, in the [ATTHASĀLINĪ](#), a Pāli commentary on the [DHAMMASAṄGANI](#), [BUDDHAGHOSA](#) analyzes the term samaya into five specific meanings related to the passage of time.

[Samayabhedoparacanacakra](#). (T. Gzhung tha dad pa rim par bklag pa’i ’khor lo; C. Yibuzonglun lun; J. Ibushūrinron; K. Ibujongnyun non 異部宗輪論). In Sanskrit, “The Wheel of the Formations of Divisions of the Doctrine”; the title of an important historiographical text written by [VASUMITRA](#), a prominent scholar of the [SARVĀSTIVĀDA](#) school, who wrote in [KASHMIR](#) sometime around the second century CE. The text records the Sarvāstivāda account of the evolution of the various schools ([NIKĀYA](#)) that arose in the mainstream Buddhist community in the years after the Buddha’s death. Thus, it is an important source

of information on the schools and subschools of mainstream Nikāya Buddhism in ancient India. In [VASUMITRA](#)'s version, the divisions in the Buddhist sects occur roughly one hundred years later than they do in the Sinhalese Pāli records of the same events. According to Vasumitra, the major disagreement that led to the first major schism in the [SAMGHA](#) was the result of five propositions put forward by the monk [MAHĀDEVA](#) concerning the nature and achievements of an [ARHAT](#). The [MAHĀSĀMGHIKA](#) agreed with Mahādeva's five theses, while the [STHAVIRANIKĀYA](#) did not, thus leading to the split.

[samayamudrā](#). (T. dam tshig gi phyag rgya; C. sanmoye yin; J. sanmayain; K. sammaya in 三摩耶印). In Sanskrit, “seal of the vow,” “seal of time,” or “seal of the symbol,” all three denotations related to objects of meditation in tantric Buddhism. The samayamudrā is usually listed as the third of four “seals” ([MUDRĀ](#)), “seal” here being used in the sense of a doorway through which one must pass in order to attain full realization; the other three are the [KARMAMUDRĀ](#), the [JÑĀNAMUDRĀ](#), and the [MAHĀMUDRĀ](#). In the context of sexual yoga, the term is also used to refer to a tantric consort who maintains the tantric pledges, as opposed to a karmamudrā (a consort who does not maintain such pledges) and a jñānamudrā (a consort who is not a physical person but is visualized in meditation). As “seal of the vow,” the samayamudrā involves sustained focus on one's intention to keep a specific set of vows received as part of one's initiation ([ABHISEKA](#), dīkṣā) into tantric practice. As “seal of time,” samaya carries its temporal denotation and the meditation involves an abandonment of past and future for the sake of a sustained experience of the present moment. As “seal of the symbol,” the object of attention is a symbolic representation of various aspects of a buddha, [BODHISATTVA](#), or deity.

[samayasattva](#). (T. dam tshig sems dpa'; C. sanmeiye saduo; J. sanmayasatta; K. sammaeya salt'a 三昧耶薩埵). In Sanskrit, “pledge being,” an important element in tantric visualization. Prior to inviting a deity to appear, the meditator visualizes the body of the deity. This visualized image is called the “pledge being.” The actual deity, called the “wisdom deity” ([JÑĀNASATTVA](#)), is then invited to descend into and fuse with the visualized form. In this context, the term [SAMAYA](#) may be understood in two different ways. First, the term is synonymous with “conventional,” indicating that the visualized body of the deity is not his or her actual body. The term samaya is also understood to indicate the practitioner's “vow” or “pledge” to undertake those practices that will evoke the actual

presence of the deity. When the meditator visualizes himself or herself as the deity, the initial visualization is the “pledge being.” In some tantric circles, the term *samayasattva* is also used to indicate one who has been newly initiated into esoteric practice.

[samayavimukta](#). (T. *dus kyis rnam par grol ba*; C. *shi jietuo*; J. *jigedatsu*; K. *si haet'al* 時解脫). In Sanskrit, “one liberated dependent upon a specific occasion”; one of the twenty members of the [ĀRYASAMGHA](#) (see [VIMŚATIPRABHEDASAMGHA](#)). The term refers to an [ARHAT](#) who is a [ŚRADDHĀNUSĀRIN](#) and who, because of weaker faculties, has limited periods of meditative concentration during which it is possible to achieve [NIRVĀNA](#).

[śambhala](#). (T. *bde 'byung*). Often spelled Shambhala. In the texts associated with the [KĀLACAKRATANTRA](#), the kingdom of śambhala is said to be located north of the Himālayan range. It is a land devoted to the practice of the *Kālacakratantra*, which the Buddha himself had entrusted to śambhala’s king [SUCANDRA](#), who had requested that the Buddha set forth the tantra. The kingdom of śambhala is shaped like a giant lotus and is filled with sandalwood forests and lotus lakes, all encircled by a massive range of snowy peaks. In the center of the kingdom is the capital, Kalapa, where the luster of the palaces, made from gold, silver, and jewels, outshines the moon; the walls of the palaces are plated with mirrors that reflect a light so bright that night is like day. In the very center of the city is the [MANDALA](#) of the buddha Kālacakra. The inhabitants of the 960 million villages of śambhala are ruled by a beneficent king, called the Kalkin. The laypeople are all beautiful and wealthy, free of sickness and poverty; the monks maintain their precepts without the slightest infraction. They are naturally intelligent and virtuous, devoted to the practice of the [VAJRAYĀNA](#), although all authentic forms of Indian Buddhism are preserved. The majority of those reborn there attain buddhahood during their lifetime in śambhala. The *Kālacakratantra* also predicts an apocalyptic war. In the year 2425 CE, the barbarians (generally identified as Muslims) and demons who have destroyed Buddhism in India will set out to invade śambhala. The twenty-fifth Kalkin, Raudracakrin, will lead his armies out of his kingdom and into India, where they will meet the forces of evil in a great battle, from which the forces of Buddhism will emerge victorious. The victory will usher in a golden age in which human life span will increase, crops will grow without being cultivated, and the entire population of the earth will devote itself to the practice of Buddhism. Given the importance of the

Kālacakratantra in Tibetan Buddhism, śambhala figures heavily in Tibetan Buddhist belief and practice; in the [DGE LUGS](#) sect, it is said that the [PAN CHEN LAMAs](#) are reborn as kings of śambhala. There is also a genre of guidebooks (lam yig) that provide the route to śambhala. The location of śambhala has long been a subject of fascination in the West. Śambhala plays an important role in the Theosophy of [HELENA PETROVNA BLAVATSKY](#), and the Russian Theosophist Nicholas Roerich led two expeditions in search of śambhala. The name śambhala is considered the likely inspiration of “Shangri-La,” described in James Hilton’s 1933 novel *Lost Horizon*.

sambhāra. (T. tshogs; C. ziliang; J. shiryō; K. charyang 資糧). In Sanskrit, “equipment,” requisite,” “accumulation.” This term is used to indicate those qualities that are necessary for the realization of some religious attainment, usually progress along the path to enlightenment. For example, in a common formulation of the stages of the path that successively lead one to enlightenment, the [SAMBHĀRAMĀRGA](#), or “path of accumulation,” is the first of the five paths ([PAÑCAMĀRGA](#)). On this path, the practitioner attains a degree of three prerequisite qualities that must be developed before one can begin to undertake the religious life: morality ([ŚĪLA](#)), merit ([PUNYA](#)), and concentration ([SAMĀDHI](#)). Similarly, [MAHĀYĀNA](#) literature cites merit (puṇya) and knowledge ([JNĀNA](#)) as the saṃbhāra, or “equipment,” of the [BODHISATTVA](#). In this sense, the term saṃbhāra is also understood to indicate “accumulation” in that it is amassing these qualities that brings about progress on the path. See also [BODHISAMBHĀRA](#).

sambhāramārga. (T. tshogs lam; C. ziliang dao; J. shiryōdō; K. charyang to 資糧道). In Sanskrit, “path of accumulation” or “path of equipment”; the first of two parts of the preparatory adhimukticyābhūmi, literally, “level of belief performance” (see [ADHIMOKSA](#)); the first of the five paths ([PAÑCAMĀRGA](#)), which begins the accumulations of merit and wisdom necessary to achieve [NIRVĀNA](#) or [BODHI](#), respectively, on the [ŚRĀVAKA](#), [PRATYEKABUDDHA](#), or [BODHISATTVA](#) paths. The path of accumulation is said to begin with the authentic wish to achieve the goal of one’s path, viz., with [NIRVEDA](#) (P. nibbidā) (i.e., disgust for [SAMSĀRA](#)) in the case of those who wish for nirvāṇa, and with the development of [BODHICITTA](#) (the aspiration to enlightenment) in the case of those suited for the Mahāyāna. In the first pañcamārga model, the path of accumulation, like the path of preparation ([PRAYOGAMĀRGA](#)) that follows it, is not a noble path of a noble being ([ĀRYA](#)) because the direct perception of reality does not occur there. The

sambhāramārga is subdivided into the three stages of small, middling, and large: at the first stage, the cultivation of the four applications of mindfulness ([SMR̥TYUPASTHĀNA](#)) is primary, at the second the four resolves ([PRAHĀNA](#)), and at the third the four legs of miraculous attainment ([RDDHIPĀDA](#)). In Mahāyāna [ABHIDHARMA](#), the first level of the path of accumulation is exemplified by earth because it is the ground for all good qualities. The second level is exemplified by gold because from that time on the aspiration to reach enlightenment will not change to anything baser; a bodhisattva is no longer capable of retrogressing from the Mahāyāna and gains an initial capacity to hear the voice of an actual buddha through the achievement of the [SROTO'NUGATO NĀMA SAMĀDHIH](#). On the third level of the path of accumulation, the bodhisattva is able to see the [NIRMĀNAKĀYA](#) of buddhas directly and receive teachings from them.

[sambhinnapralāpāt prativirati](#). (P. samphappalāpā paṭivirata; T. ngag 'khyal ba spong ba; C. bu qiyu; J. fukigo; K. pul kiō 不綺語). In Sanskrit, “[the monk] abstains from idle chatter,” one of ten wholesome ([KUSĀLA](#)) ways of action (see [KARMAPATHA](#)); it refers to the effort or vow to abstain from speech that is either nonsensical or unwholesome. As a moral offense, speaking idly or nonsensically is of greater or lesser severity depending upon how often one engages in it. According to the [CŪLAHATTHIPADOPAMASUTTA](#) in the Pāli [MAJJHIMANIKĀYA](#), one who abstains from idle chatter instead speaks at the right time (kālavādī), speaks only of facts (bhūtavādī), speaks of the goal (atthavādī), speaks of the teaching (dhammavādī), and speaks of religious discipline (vinayavādī).

[sambhogakāya](#). (T. longs spyod rdzogs pa'i sku; C. baoshen; J. hōjin; K. posin 報身). In Sanskrit, “enjoyment body” or “reward body”; in the [MAHĀYĀNA](#), the second of the three bodies of a buddha ([TRIKĀYA](#)), along with the body of reality ([DHARMAKĀYA](#)) and the transformation body ([NIRMĀNAKĀYA](#)). The sambhogakāya is described as simultaneously a body for one’s own enjoyment (C. zi shouyong shen), in which the buddha knows the joy that comes from experiencing the dharma for oneself; and a body for others’ enjoyment (C. ta shouyong shen), in which advanced bodhisattvas experience the increasing magnificence of the buddha’s grandeur as they continue to move up the bodhisattva path ([MĀRGA](#)). The sambhogakāya buddha is adorned with all the accoutrements that are received as rewards for his advanced spiritual experience, which are only visible to similarly advanced beings, specifically bodhisattvas at the first bodhisattva stage ([BODHISATTVABHŪMI](#)) and upwards who are dwelling

in buddha-fields ([BUDDHAKSETRA](#)). Lesser beings, such as humans, are only able to view the manifestation body (nirmāṇakāya) of a buddha, not his saṃbhogakāya. In bipartite divisions of the buddhas' bodies as a flesh body ([RŪPAKĀYA](#)) and a body of reality (dharmakāya), the saṃbhogakāya and nirmāṇakāya are subsumed within the rūpakāya. A saṃbhogakāya is defined by five certainties: it will always be in an [AKANISTHA](#) heaven, it will always teach Mahāyāna doctrine, it will always last until the end of [SAMSĀRA](#), it will always be surrounded exclusively by bodhisattvas who have reached the bodhisattva bhūmis, and it will always be endowed with the thirty-two major and eighty minor marks of a great person (see [MAHĀPURUSALAKSANA](#)).

[sambodhi](#). (T. rdzogs pa'i byang chub; C. zhengjue; J. shōgaku; K. chōnggak 正覺). In Sanskrit, “complete enlightenment” or “full awakening,” a synonym for buddhahood. See [ANUTTARASAMYAKSAMBOODHI](#); [MAHĀBODHI](#).

[sambo sach'al](#). (三寶寺刹). In Korean, “three-jewel monasteries”; three major Korean monasteries that by tradition represent one of the three jewels ([RATNATRAYA](#)) of Buddhism: [T'ONGDOSA](#), the Buddha jewel monastery (Pulbo sach'al), because of its ordination platform and the relics (K. sari; S. [ŚARĪRA](#)) of the Buddha enshrined behind its main shrine hall ([TAEUNG CHŎN](#)); [HAEINSA](#), the [DHARMA](#)-jewel monastery (Pōppo sach'al), because it preserves the xylographs of the Korean Buddhist canon ([KORYŎ TAEJANGGYŎNG](#)); and [SONGGWANGSA](#), the [SAMGHA](#)-jewel monastery (Sūngbo sach'al), because of the series of state preceptors (K. kuksa; C. [GUOSHI](#)) during the Koryŏ dynasty who practiced at the monastery.

[Samcayagāthāprajñāpāramitā](#). (S). See [RATNAGUNASAMCAYAGĀTHĀ](#).

[Samdhinirmocanasūtra](#). (T. Mdo sde dgongs 'grel; C. Jieshenmi jing; J. Gejinmikkyō; K. Haesimmil kyōng 解深密經). In Sanskrit, variously interpreted to mean the sūtra “Unfurling the Real Meaning,” “Explaining the Thought,” or “Unraveling the Bonds”; one of the most important Mahāyāna sūtras, especially for the [YOGĀCĀRA](#) school. The sūtra is perhaps most famous for its delineation of the three turnings of the wheel of the dharma ([DHARMAKAPRAVARTANA](#)), which would become an influential schema for classifying the teachings of the Buddha. The sūtra has ten chapters. The first four chapters deal with the nature of the ultimate ([PARAMĀRTHA](#)) and how it is to be understood. The fifth chapter discusses the nature of consciousness, including the storehouse consciousness

([ĀLAYAVIJÑĀNA](#)) where predispositions ([VĀSANĀ](#)) are deposited and ripen. The sixth chapter discusses the three natures ([TRISVABHĀVA](#)). In the seventh chapter, the division of the Buddha's teachings into the provisional ([NEYĀRTHA](#)) and the definitive ([NĪTĀRTHA](#)) is set forth. The eighth chapter explains how to develop [ŚAMATHA](#) and [VIPĀŚYANĀ](#). The ninth chapter describes the ten bodhisattva [BHŪMIS](#) and the final chapter describes the nature of buddhahood. Each of these chapters contains important passages that are cited in subsequent commentaries and treatises. ¶ Perhaps the most influential of all the sūtra's chapters is the seventh, which discusses the three turnings of the wheel of the dharma (dharmacakrapravartana). There, the bodhisattva Paramārthasamudgata explains that the first turning of the wheel had occurred at [RSIPATANA](#) (the Deer Park at [SĀRNĀTH](#)), where the Buddha had taught the [FOUR NOBLE TRUTHS](#) to those of the [ŚRĀVAKA](#) ("listener, disciple") vehicle. This first turning of the wheel is called the [CATUḤSATYADHARMAKAKRA](#), the "dharma wheel of the four truths." The bodhisattva says, "This wheel of dharma turned by the Buddha is surpassable, an occasion [for refutation], provisional, and subject to dispute." Referring presumably to the perfection of wisdom ([PRAJÑĀPĀRAMITĀ](#)) sūtras, the bodhisattva then goes on to explain that the Buddha then turned the wheel of dharma a second time for those who had entered the Mahāyāna, teaching them the doctrine of emptiness ([ŚŪNYATĀ](#)), that phenomena are "unproduced, unextinguished, originally quiescent, and inherently beyond sorrow." Commentators would call this second turning of the wheel the [ALAKSANADHARMAKAKRA](#), "the dharma wheel of signlessness." But this wheel also is provisional. The Buddha finally turned the wheel of doctrine a third time for those of all vehicles, clearly differentiating how things exist. "This wheel of doctrine turned by the [BHAGAVAT](#) is unsurpassed, not an occasion [for refutation], of definitive meaning; it is indisputable." Commentators would call this third turning of the wheel the [PARAMĀRTHAVINIŚCAYADHARMAKAKRA](#), "the dharma wheel for ascertaining the ultimate"; it is also called "the dharma wheel that makes a fine delineation" (*[SUVIBHAKTADHARMAKAKRA](#)). The sūtra thus takes something of an historical perspective on the Buddha's teaching, declaring both that his first sermon on the four noble truths addressed to śrāvakas and his teaching of the perfection of wisdom addressed to bodhisattvas was not his final and most clearly delineated view. That consummate view, his true intention, is found in the third turning of the wheel of dharma, a wheel that includes, at very least, the *Samdhinirmocanasūtra* itself. The *Samdhinirmocanasūtra* was translated into Chinese four times: by [GUNABHADRA](#), [BODHIRUCI](#), [PARAMĀRTHA](#),

and [XUANZANG](#). Of these recensions, the translations by Bodhiruci and Xuanzang are complete renderings of the sūtra and circulated most widely within the East Asian tradition; the other two renderings were shorter digests of the sūtra.

[samdhyābhāsyā](#). (S). See [SANDHYĀBHĀSĀ](#).

[saṃgha](#). (P. saṅgha; T. dge 'dun; C. sengqie; J. sōgya; K. sūngga 僧伽). A [BUDDHIST HYBRID SANSKRIT](#) term, generally translated as “community” or “order,” it is the term most commonly used to refer to the order of Buddhist monks and nuns. (The classical Sanskrit and Pāli of this term is saṅgha, a form often seen in Western writings on Buddhism; this dictionary uses saṃgha as the generic and nonsectarian Buddhist Hybrid Sanskrit form.) The term literally means “that which is struck together well,” suggesting something that is solid and not easily broken apart. In ancient India, the term originally meant a “guild,” and the different offices in the saṃgha were guild terms: e.g., [ACĀRYA](#), which originally meant a “guild master,” was adopted in Buddhism to refer to a teacher or preceptor of neophytes to the monastic community. The Buddhist saṃgha began with the ordination of the first monks, the “group of five” ([PAÑCAVARGIKA](#)) to whom the Buddha delivered his first sermon, when he turned the wheel of the dharma ([DHARMAKAKRAPRAVARTANA](#)) at [SĀRNĀTH](#). At that time, there was no formal ordination ceremony; the Buddha simply used the [EHIHĪKSUKĀ](#) formula, lit. “Come, monk,” to welcome someone who had joined the order. The order grew as rival teachers were converted, bringing their disciples with them. Eventually, a more formal ritual of ordination ([UPASAMPADĀ](#)) was developed. In addition, as circumstances warranted, the Buddha slowly began making rules to organize the daily life of the community as a whole and its individual members (see [VINAYA](#)). Although it seems that in the early years, the Buddha and his followers wandered without fixed dwellings, donors eventually provided places for them to spend the rainy season (see [VARSĀ](#)) and the shelters there evolved into monasteries ([VIHĀRA](#)). A saṃgha came to be defined as a group of monks who lived within a particular geographical boundary ([SĪMĀ](#)) and who gathered fortnightly (see [UPOSADHA](#)) to recite the monastic code ([PRĀTIMOKSA](#)). That group had to consist of at least ten monks in a central region and five monks in more remote regions. In the centuries after the passing of the Buddha, variations developed over what constituted this code, leading to the formation of “fraternities” or [NIKĀYAS](#); the tradition typically

recognizes eighteen such groups as belonging to the [MAINSTREAM BUDDHIST SCHOOLS](#), but there were clearly more. ¶ There is much discussion in Buddhist literature on the question of what constitutes the saṃgha, especially the saṃgha that is the third of the three jewels ([RATNATRAYA](#)), to which Buddhists go for refuge ([ŚARANA](#)). One of the oldest categories is the eightfold saṃgha, composed only of those who have reached a certain level of spiritual attainment. The eight are four groups of two, in each case one who is approaching and one who has attained one of the four ranks of stream-enterer, or [SROTAĀPANNA](#); once-returned, or [SAKRDĀGĀMIN](#); nonreturner, or [ANĀGĀMIN](#); and worthy one, or [ARHAT](#). This is the saṃgha of the saṃgha jewel, and is sometimes referred to as the [ĀRYASAMGHA](#), or “noble saṃgha.” A later and more elaborate category expanded this group of eight to a group of twenty, called the [VIMŚATIPRABHEDASAMGHA](#), or “twenty-member saṃgha,” based on their different faculties ([INDRIYA](#)) and the ways in which they reach [NIRVĀNA](#); this subdivision appears especially in [MAHĀYĀNA](#) works, particularly in the [PRAJÑĀPĀRAMITĀ](#) literature. Whether eight or twenty, it is this group of noble persons ([ĀRYAPUDGALA](#)) who are described as worthy of gifts (dakṣiṇīyapudgala). Those noble persons who are also ordained are sometimes referred to as the “ultimate saṃgha” ([PARAMĀRTHASAMGHA](#)) as distinguished from the “conventional saṃgha” ([SAMVRTISAMGHA](#)), which is composed of the ordained monks and nuns who are still ordinary persons ([PRTHAGJANA](#)). In a still broader sense, the term is sometimes used for a fourfold group, composed of monks ([BHIKSU](#)), nuns ([BHIKSUNĪ](#)), lay male disciples ([UPĀSAKA](#)), and lay female disciples ([UPĀSIKĀ](#)). However, this fourfold group is more commonly called [PARISAD](#) (“followers” or “congregation”), suggesting that the term saṃgha is more properly used to refer to the ordained community. In common parlance, however, especially in the West, saṃgha has come to connote any community of Buddhists, whether monastic or lay, or a combination of the two. In the long history of Buddhism, however, the presence or absence of the Buddhist dispensation ([ŚĀSANA](#)) has traditionally been measured by the presence or absence of ordained monks who virtuously maintain their precepts. In the history of many Buddhist lands, the establishment of Buddhism is marked by the founding of the first monastery and the ordination of the first monks into the saṃgha. See also [SAMGHABHEDA](#); [SAMMUTISANĜHA](#); [ĀRYAPUDGALA](#); [SŪNGT’ONG](#); [SAṄGHARĀJA](#).

[Saṃgha Administration Act](#). See [SAṄGHA ADMINISTRATION ACT](#).

Samghabhadra. (T. 'Dus bzang; C. Zhongxian; J. Shugen; K. Chunghyŏn 衆賢) (c. fifth century CE). In Sanskrit, “Auspicious to the Community”; the proper name of an influential Indian master of the [VAIBHĀSIKA](#) school of [SARVĀSTIVĀDA ABHIDHARMA](#). Historical sources suggest that Samghabhadra hailed from [KASHMIR](#) and was a younger contemporary of his principal rival [VASUBANDHU](#). The historical records of [XUANZANG](#) and [PARAMĀRTHA](#) agree that Samghabhadra publicly challenged Vasubandhu to debate, but his challenge was never accepted. Samghabhadra’s most famous works include the [*NYĀYĀNUSĀRA](#), or “Conformity with Correct Principle,” and the **Abhidharmasamayapradīpikā* (C. Xianzong lun), or “Exposition of Accepted Doctrine.” The **Nyāyānusāra* is both a clarification of the [ABHIDHARMA](#) philosophy of the Vaibhāṣika school and a critical commentary on the presentation found in Vasubandhu’s [ABHIDHARMAKOŚABHĀSYA](#). The later *Samayapradīpikā* is a shorter explanation of the doctrines of the Vaibhāṣikas, which in large measure summarizes the positions explored in the **Nyāyānusāra*. Neither of these works survives in their Sanskrit originals but only in their Chinese translations. Samghabhadra’s defense of Kashmir Sarvāstivāda-Vaibhāṣika positions ushered in the neo-Vaibhāṣika period of Sarvāstivāda thought, which took the **Nyāyānusāra* and the *Samayapradīpikā* as its main texts.

samghabheda. (P. saṅghabheda; T. dge 'dun gyi dbyen byed pa; C. poseng; J. hasō; K. p'asŭng 破僧). In Sanskrit, “splitting the community”; the act of causing a schism in the community of Buddhist monks and nuns ([SAMGHA](#)). Technically, a schism occurs when nine or more fully ordained monks separate themselves from the order; a faction of less than nine monks constitutes a “dissension” (saṅgharāji) rather than a schism. These schisms may occur over disagreements in the teachings ([DHARMA](#)) or details of monastic life ([VINAYA](#)). The [ABHIDHARMAMAHĀVIBHĀSĀ](#) distinguishes two different types of samghabheda, one in which there are two separate saṅghas established within a single [SĪMĀ](#) boundary, the second in which a group attempts to establish a new dispensation with a different teacher. The first and most infamous example of this latter type of schism is the one caused by Buddha’s cousin [DEVADATTA](#), who declared that he, and not [GAUTAMA](#), was the real master and that his five practices were the correct dispensation. After failing in his attempts to take Gautama’s life, Devadatta convinced a group of monks in the city of [VAISĀLĪ](#) that the asceticism advocated by Gautama and his followers was not rigorous enough; five hundred

monks chose to enlist in Devadatta's new order. The act of causing or encouraging such a rift in the saṃgha is presented as the worst of the five "uninterrupted deeds" ([ĀNANTARYAKARMA](#)) and is so heinous that it guarantees the perpetrator a [KALPA](#)-long lifetime in [AVĪCI](#)—the worst of the various Buddhist hells. According to the *Abhidharmamahāvibhāṣā*, the consequences of saṃghabheda are so odious that if the malefactor's sentence in hell has not been completed by the time of the annihilation accompanying the end of the kalpa, he will be reborn into another world-system's hell to complete his term. The seriousness of the saṃghabheda offense is also demonstrated by the fact that King [AŚOKA](#) himself warns against it in one of his rock edicts. Therein, he states that any monk who causes schism should be cast from the monastery and returned to the status of a layman. Despite this censure, the Buddhist tradition is full of instances of such divisions in the monastic community. As Buddhism spread through India, a host of different schools ([NIKĀYA](#)) emerged, some based on significant doctrinal distinctions, others on regional variations in monastic and ritual observances. Texts that document the proceedings of the third Buddhist council ([SAMGĪTI](#), see [COUNCIL, THIRD](#)), which occurred sometime around 250 BCE, list eighteen to twenty major schools.

[samghakarman](#). (P. saṅghakamma; T. dge 'dun gyi las; C. seng jiemo; J. sōkonma; K. sūng kalma 僧羯磨). In Sanskrit, an "ecclesiastical act," such as admission into the order as novices ([PRAVRAJITĀ](#)), full ordination of monks and nuns ([UPASAMPADĀ](#)); the fortnightly confession ceremony recitation of the [PRĀTIMOKṢA](#) ([UPOṢADHA](#)), the ceremony closing the rains retreat ([PRAVĀRANĀ](#)), giving cloth for robes ([KATHINA](#)), the adjudication of rules, the administration of punishments to transgressors of the precepts, and the settlement of disputes among the clergy. See [KARMA](#).

[samgharājan](#). (S). See [SAṄGHARĀJA](#).

[samghāta](#). (P. saṅghāta; T. bsdus 'joms; C. zhonghe [diyu]; J. shugō[jigoku]; K. chunghap [chiok] 衆合[地獄]). In Sanskrit, lit. "crushing"; the name of the third of eight stratified hot hells that are detailed in many Buddhist cosmological models. The Sanskrit term saṅghāta has a variety of meanings and the exact nature and method of the torment experienced in this hell varies from source to source. One of its meanings is "crushing" and thus saṅghāta is often rendered in English as the "crushing hell." Creatures unfortunate enough to be reborn in this destiny are commonly described as being continually crushed together between mountain

ranges. Alternatively, they may be crushed by iron rollers, plates, and even iron elephants that come at them from the four directions while they are trapped waist-deep in a thick sheet of iron. This form of the saṃghāta hell is most often associated with sexual misconduct. However, the *Sadgatikārikā* describes saṃghāta in altogether different terms. It takes the Sanskrit term saṃghāta as meaning “heap” or “collection,” and beings reborn in that hell are piled into heaps and slaughtered together as punishment for having killed living creatures.

[saṃghāṭī](#). (P. saṅghāṭi; T. snam sbyar; C. sengqieli/dayi; J. sōgyari/daie; K. sūnggari/taeüi 僧伽梨/大衣). In Sanskrit, “outer robe”; the largest of the “three robes” ([TRICĪVARA](#)) worn by a monk or nun, along with the “lower robe” or waistcloth (S. [ANTARVĀSAS](#), P. antaravāsaka), and the upper robe (S. [UTTARĀSAMGA](#), P. uttarāsaṅga). This particular robe was in two layers and was required to be tailored in patches, numbering from nine up to twenty-five, depending on the account in the various [VINAYA](#) recensions. This use of patches of cloth is said to have been modeled after plots of farmland in [MAGADHA](#) that the Buddha once surveyed. See also [CĪVARA](#); [KĀSĀYA](#).

[saṃghātiśeṣa](#). (S). See [SAMGHĀVAŚEṢA](#).

[Saṃghavarman](#). (C. Sengqiebamo; J. Sōgyabatsuma; K. Sūnggabalma 僧伽跋摩) (fl. c. fifth century). Sanskrit proper name of an Indian monk who in 433 presided over the first ordination of nuns ([BHIKSUNĪ](#)) in China performed according to the correct ecclesiastical act ([SAMGHAKARMA](#)) of the [VINAYA](#). At this time, [SENGGUO](#) and over three hundred other nuns were ordained with both an assembly of monks and an assembly of nuns in attendance, thereby officially instituting the monastic order for women in China. Saṃghavarman also translated [DHARMATRĀTA](#) II’s [SAMYUKTĀBHIDHARMAHRDAYA](#) into Chinese. See [SENGGUO](#).

[saṃghāvaśeṣa](#). [alt. saṃghātiśeṣa] (P. saṅghādiseṣa; T. dge ’dun lhag ma; C. sengcanzui/sengcanfa; J. sōzanzai/sōzanhō; K. sūngjanjoe/sūngjanpōp 僧殘罪/僧殘法). In Sanskrit, “probationary offense”; a category of offenses in the roster of monastic rules ([PRĀTIMOKSA](#)) that require penance and/or probation. The saṃghāvaśeṣa offenses are the second most serious category of offense in the [VINAYA](#), second only to the “defeats” ([PĀRĀJIKĀ](#)), which render a monk or nun “not in communion” ([ASAMVĀSA](#)) with the community. A saṃghāvaśeṣa infraction requires either an open confession of the offense before a gathering of

monks or else expulsion from the order ([SAMGHA](#)) if the offender refuses to confess. According to one paranomastic gloss, because the remedy for these offenses requires the intervention of the saṃgha at both the beginning (ādi) and the end (śeṣa) of the expiation process, these offenses are known collectively as saṃghādiśeṣa. The probationary offender receives two different kinds of punishments: penance ([MĀNATVA](#)) and temporary probation ([PARIVĀSA](#)). The mānatva penance is imposed on a monk who commits a saṃghāvaśeṣa offense when that monk immediately confesses the infraction to another monk. In the Pāli vinaya, the penance imposed in this circumstance is called “penance for unconcealed offenses” (apaṭicchannamānatta), which entails the loss of the usual privileges of monkhood for a set period of six nights. If a monk instead conceals a saṃghāvaśeṣa offense for a period of time before confessing it, he must undergo a “probationary penance” called either parivāsa or, in Pāli, “penance for concealed offenses” (paṭicchannamānatta). This probationary penance likewise entails the loss of privileges, but in this case that probation must last for as long as the offense was concealed. After the parivāsa penance is completed, the monk must then undergo mānatta penance for six nights. These penances are similar in some vinaya traditions to those meted out to “pārājika penitents” ([ŚIKSĀDATTAKA](#)). During his probationary period, the offender is stripped of his seniority and expected to observe certain social constraints. For example, the [VINAYAPITAKA](#) states that such offenders may not leave the monastery grounds without being accompanied by at least four monks ([BHIKSU](#)) who are not themselves on probation. Also, every day of his probation, the offending monk must inform the other monks of the offense for which he is being punished. The exact number of precepts that fall under the category of saṃghāvaśeṣa varies somewhat among the different vinaya traditions; a typical list of thirteen rules for monks includes (1) willingly emitting semen, (2) engaging in lustful physical contact with a woman, (3) using sexually inappropriate language toward a woman, (4) praising sexual intercourse as a religious act, (5) acting as the liaison in the arrangement of a marriage, (6) building a personal hut that is larger than the prescribed dimensions, (7) building a monastery ([VIHĀRA](#)) for the community that does not meet the prescribed specifications, (8) falsely and maliciously accusing another monk of an infraction, (9) taking up an issue as a ploy to falsely accuse another monk of an infraction, (10) taking any action that may result in a schism within the community ([SAMGHABHEDA](#)), (11) siding with or following a monk who has created a schism in the order, (12) refusing to acknowledge and to heed the admonishments of training given by other monks,

and finally (13) corrupting families. Nuns are typically subject to seventeen rules, including a few additional restrictions enumerated in the *bhikṣuṇīprātimokṣa*. After completing the parivāsa penance and his six nights of mānatva, the monk approaches the saṃgha, which in this case means a quorum of monks consisting of at least twenty members, and requests to be “called back into community” (S. [ABHYĀYANA](#), P. abbhāna). If the saṃgha agrees, the monk is declared free of the saṃghāvaśeṣa offense and is restored to his former status.

samgīti. (P. saṅgīti; T. bka’ bsdu; C. jieji; J. ketsujū; K. kyōlchip 結集). In Sanskrit, “chant,” “recitation,” and, by extension, “council.” The term is used to refer to both the recitation of scripture and a communal gathering of monks held for the purpose of such recitation; for this reason, the term is often translated as “council,” or “synod,” such as the first council, second council, etc., following the death of the Buddha. These councils were held to resolve questions of orthodoxy and typically involved the recitation and redaction of the Buddhist canon ([TRIPITAKA](#)). At such Buddhist councils, the Buddhist canon was communally rehearsed, agreed upon, and codified; in the Pāli account, the same procedure was followed for redacting the exegetical commentaries, called [ATTHAKATHĀ](#). In this same Pāli narrative, a saṃgīti was convened at the conclusion of a successful purification of the dispensation (P. sāsanavisodhana) in which false monks and heretics are expelled, schism healed, and the [SAMGHA](#) reunified. A saṃgīti is conducted by representatives of that newly purified saṃgha, who in a public forum unanimously affirm the authority of a common canon. For a detailed description of the major councils, see [COUNCIL](#) (s.v.). ¶ The term saṃgīti may also be used to refer to the “recitation” of a specific scripture itself. A famous such text is the [MAÑJUŚRĪNĀMASAMGĪTI](#) or “Recitation of the Names of Mañjuśrī.”

samgītikāra. [alt. saṃgītikāraka] (T. bka’ sdud pa po; C. jieyizhe; J. ketsujūsha; K. kyōlchipcha 結集者). In Sanskrit, “rapporteur,” the person who recites a discourse that they have heard spoken by the Buddha, e.g., the “I” in “thus have I heard” ([EVAM MAYĀ ŚRUTAM](#)). This person is typically identified as [ĀNANDA](#) (for the [SŪTRAPITAKA](#)) or [UPĀLI](#) (for the [VINAYAPITAKA](#)), but the identity of the saṃgītikāra became a topic of discussion in the [MAHĀYĀNA](#), which asserted that the Buddha also delivered discourses outside the physical presence or mental comprehension of Ānanda. In those cases, the saṃgītikāra was usually a [BODHISATTVA](#), such as [MAÑJUŚRĪ](#).

[Saṃgītiparyāya\[pādaśāstra\]](#). (T. 'Gro ba'i nram grangs; C. Jiyimen zulun; J. Shūimonsokuron; K. Chibimun chok non 集異門足論). In Sanskrit, “Treatise on Pronouncements,” one of the earliest books of the [SARVĀSTIVĀDA ABHIDHARMAPITAKA](#); it is traditionally listed as the last of the six ancillary texts, or “feet” (pāda), of the [JÑĀNAPRASTHĀNA](#), the central treatise, or body (śārīra), of the Sarvāstivāda abhidharma-piṭaka. The text is a commentary on the *Saṃgītisūtra* (“Discourse on Communal Recitation”; see [SAṄĪTISUTTA](#)) and is attributed either to Mahākauṣṭhila (according to [YAŚOMITRA](#) and [BU STON](#)) or to [ŚĀRIPUTRA](#) (according to Chinese tradition). Following closely the structure of the *Saṃgītisūtra*, the author sets out a series of dharma lists ([MĀTRKĀ](#)), given sequentially from ones to tens, to organize the Buddha’s teachings systematically. The sets of twos, for example, cover name and form ([NĀMARŪPA](#)); the threes, the three unwholesome faculties ([AKUŚĀLAMŪLA](#)) of greed ([LOBHA](#)), hatred ([DVESA](#)), and delusion ([MOHA](#)); the fives, the five aggregates ([SKANDHA](#)), etc. Its ten sections (nipāta) cover a total of 203 sets of factors ([DHARMA](#)). Sanskrit fragments of the *Saṃgītiparyāya* were discovered at [BĀMIYĀN](#) and [TURFAN](#), but the complete text is only extant in a Chinese translation made by [XUANZANG](#) and his translation team between 660 and 664. The *Saṃgītiparyāya* derives from the earliest stratum of Sarvāstivāda abhidharma literature, along with the [DHARMASKANDHA](#) and the [PRAJÑĀPTIBHĀSYA](#). The *Saṃgītiparyāya*’s closest analogue in the Pāli [ABHIDHAMMA](#) literature is the [DHAMMASAṄGANĪ](#).

[saṃgrahavastu](#). (T. bsdu ba'i dngos po; C. si sheshi; J. shishōji; K. sa sōpsa 四攝事). In Sanskrit, translated variously as “grounds for assembling,” “means of conversion,” or “articles of sympathy”; in the Mahāyāna sūtras, these are four methods by which bodhisattvas attract and retain students. The four are: (1) generosity ([DĀNA](#)), (2) kind words (priyavādita), (3) helpfulness, viz., teaching others to fulfill their aims (arthacaryā), and (4) acting in accordance with one’s own teachings, viz., consistency between words and deeds, or perhaps even the “common good” ([SAMĀNĀRTHATĀ](#)). There is an extensive description of these four qualities in the sixteenth chapter of the [MAHĀYĀNASŪTRĀLAMKĀRA](#), an important Mahāyāna [ŚĀSTRA](#) said to have been presented to [ASAṄGA](#) by the bodhisattva [MAITREYA](#) in the [TUSITA](#) heaven (see also [MAITREYANĀTHA](#)).

[Samguk yusa](#). (三國遺事). In Korean, “Memorabilia of the Three Kingdoms”; a collection of historical records and legends from the Three Kingdoms period in

Korea, attributed to the Korean monk [IRYŎN](#) (1206–1289), although the extant version may well have been expanded and emended by one of his disciples. The *Samguk yusa* was written c. 1282–1289, during the period of Mongol suzerainty over Korea, which began in 1259. In his miscellany, Iryŏn includes a variety of hagiographies of eminent monks in the early Korean Buddhist tradition, often drawing from local accounts of conduct (haengjang) rather than official biographies, and from stories of early Korean Buddhist miracles and anomalies drawn from regional lore. In its emphasis on local narrative, where Buddhism dominated, over official discourse, Iryŏn’s *Samguk yusa* contrasts with Kim Pusik’s (1075–1151) earlier *Samguk sagi* (“Historical Annals of the Three Kingdoms”), which included little information on Buddhism. The text is divided into nine sections, in five rolls: a dynastic chronology of early Korean kingdoms; “wonders” from the three kingdoms of Koguryŏ, Paekche, and Silla and their predecessor states; the rise of Buddhism; [STŪPAs](#) and images; exegetes; divine spells; miraculous responses of bodhisattvas; the lives of recluses; and expressions of filial piety. The dynastic chronology that appears at the beginning of the definitive 1512 edition of the text contains several discrepancies with information that appears later in the text and may be a later addition from the fourteenth century. The *Samguk yusa* also makes one of the earliest references to the Tan’gun foundation myth of the Korean state and contains many indigenous Korean songs known as hyangga.

[samjīva](#). (P. sañjīva; T. yang gsos; C. denghuo [diyu]; J. tōkatsu [jigoku]; K. tūnghwal [chiok] 等活[地獄]). In Sanskrit, “revival,” or “repetition”; the name of one of the many hells in Buddhist cosmology, usually listed as the first of eight hot or burning hells. The exact punishment meted out on those unfortunate enough to be reborn in this hell varies depending on how the Sanskrit term samjīva is understood. First, samjīva may be interpreted as “reanimation” or “regeneration.” Thus, beings born into this realm are injured—in some versions by each other—in a variety of cruel ways, e.g., mangled, stabbed, pounded, and crushed. After meeting their demise so cruelly, they are then brought back to life and their bodies revived by a cool wind that sweeps over the entire realm; the same tortures are then repeated. Second, the term samjīva may be understood as “repetition,” and beings in this hell are understood to undergo the sufferings they inflicted upon others.

[samjñā](#). (P. saññā; T. ’du shes; C. xiang; J. sō; K. sang 想). In Sanskrit,

“perception,” “discrimination,” or “(conceptual) identification.” The term has both positive and negative connotations. As one of the five omnipresent factors ([SARVATRAGA](#)) among the listings of mental concomitants ([CAITTA](#), P. [CETASIKA](#)) in the [VAIBĀSIKA](#) school of [SARVĀSTIVĀDA ABHIDHARMA](#) and in the [YOGĀCĀRA](#) school, saṃjñā might best be translated as “discrimination,” referring to the mental function of differentiating and identifying objects through the apprehension of their specific qualities. Saṃjñā perceives objects in such a way that when the object is perceived again it can be readily recognized and categorized conceptually. In this perceptual context, there are six varieties of saṃjñā, each derived from one of the six sense faculties. Thus we have perception of visual objects (rūpasamjñā), perception of auditory objects (śabdasaṃjñā), perception of mental objects (dharmaśamjñā), and so on. As the third of the five aggregates ([SKANDHA](#)), saṃjñā is used in this sense, particularly as the factor that perceives pleasant or unpleasant sensations as being such, giving rise to attraction, aversion and other afflictions ([KLEŚA](#)) that motivate action ([KARMA](#)). In the compound “equipoise of nonperception” ([ASAMJÑĀSAMĀPATTI](#)), saṃjñā refers to mental activities that, when temporarily suppressed, bring respite from tension. Some accounts interpret this state positively to mean that the perception aggregate itself is no longer functioning, implying a state of rest with the cessation of all conscious thought. In other accounts, however, asaṃjñāsamāpatti is characterized as a nihilistic state of mental dormancy, which some non-Buddhist teachers had mistakenly believed to be the ultimate, permanent quiescence of the mind and to have become attached to this state as if it were final liberation. In Pāli materials, saññā may also refer to “concepts” or “perceptions” that may be used as objects of meditation. The Pāli canon offers several of these meditative objects, such as the perception of impermanence (aniccasaññā, see S. [ANITYA](#)), the perception of danger ([ĀDĪNAVA](#)-saññā), the perception of repugnance (paṭighasaññā, see [PRATIGHA](#)), and so on.

saṃjñāvedayitanirodha. (P. saññāvedayitanirodha; T. ’du shes dang tshor ba ’gog pa; C. xiangshou mie; J. sōjumetsu; K. sangsu myōl 想受滅). In Sanskrit, lit. “the suppression ([NIRODHA](#)) of perception ([SAMJÑĀ](#)) and sensation (vedayita)”; an experience specific to states of deep meditative attainment (e.g., [SAMĀPATTI](#)). The term refers to the last in a series of nine stratified meditative attainments (samāpatti), which involve the progressive suppression (S. anupūrvanirodha, P. anupubbanirodha) of subtle elements that constitute conscious experience. The series begins with the first [DHYĀNA](#), in which the awareness of all sense objects

is temporarily allayed, and culminates in a state “beyond” the last of the four immaterial absorptions ([ARŪPYĀVACARADHYĀNA](#)), where there is the cessation of all sensations and perceptions. Saṃjñāvedayitanirodha is understood to be an experience of consciousness in its purest form, without any attributes or objects to distort it. Despite being free of content and/or objects, however, consciousness is still said to persist in some form. In [VASUBANDHU](#)’s *Mahāyānaśatadharmavidyādvāraśāstra* (“Mahāyāna Treatise on Entry into Knowledge of the Hundred Dharmas”), Vasubandhu lists saṃjñāvedayitanirodha as one of six unconditioned factors ([ASAMSKRTADHARMA](#)). See also [NIRODHASAMĀPATTI](#).

samkaksikā. (P. saṅkacchika; T. rngul gzan; C. sengzhizhi; J. sōgishi; K. sūnggiji 僧祇支). In Sanskrit, “undershirt,” “vest,” or “waistcloth”; an article of clothing worn by Buddhist monks, which is a standard part of a monk’s accoutrements in some, but not all, Buddhist monastic traditions. Although the exact function and details of the garment vary slightly, the saṃkaksikā is generally described as a kind of undershirt that leaves one shoulder (usually the right one) bare. Often this garment is completely covered by other robes (see [CĪVARA](#)) that are worn over it, especially when monks and nuns are outside the precincts of the monastery. The Tibetan translation of this term, rngul gzan, literally means “shawl for sweat,” and refers to a garment intended for use during the day; a “night sweatshirt” (rngul gzan gyi gzan, which is a translation of the Sanskrit term pratisaṃkaksikā) is intended for use in the evening. In some traditions, the saṃkaksikā is also known as the aṃsavatṭaka; in others, it is known as the [UTTARĀSAMGA](#).

Śaṃkarasvāmin. (T. Bde byed bdag po; C. Shangjieluo-zhu; J. Shōkarashu; K. Sanggallaju 商羯羅主) (c. sixth century CE). Sanskrit proper name of an Indian philosopher and logician, who was a student of the Indian logician [DIGNĀGA](#). Śaṃkarasvāmin is credited with the authorship of the *Nyāyapraveśa*, or “Primer on Logic,” which became an important work in many Asian schools. Some have argued, based on the Tibetan tradition, that the *Nyāyapraveśa* was actually written by Śaṃkarasvāmin’s teacher Dignāga, and that the recension translated into Chinese is a version that Śaṃkarasvāmin later edited. The *Nyāyapraveśa* provides an introduction to the logical system of Dignāga, covering such subjects as valid and invalid methods of proof, methods of refutation, perception, erroneous perception, inference, and erroneous inference. Although

Śaṃkarasvāmin's work was not as extensive, detailed, or original as Dignāga's, it proved to be popular within the tradition, as attested by its extensive commentarial literature, including exegeses by non-Buddhists. Large parts of the work survive in the original Sanskrit. See [NYĀYAPRAVEŚA](#).

Sāṃkāśya. (P. Saṅkassa; T. Sang kha sa; C. Sengqieshi; J. Sōgyase; K. Sūnggasi 僧伽施). City in northern India, near [ŚRĀVASTĪ](#), renowned as the site where the Buddha descended to earth from the heaven of the thirty-three ([TRĀYASTRIMŚĀ](#)), after spending the rains retreat ([VARŚĀ](#)) there teaching [ABHIDHARMA](#) to his mother, [MĀYĀ](#); also known as Kapitha. At the time for his descent, [ŚAKRA](#) and [BRAHMĀ](#) made three ladders or staircases—one of gold, one of silver, and one of jewels—with the Buddha descending from heaven on the staircase of jewels, Śakra on the staircase of gold, and Brahmā on the staircase of silver. This descent is often depicted in Buddhist iconography and the city of Sāṃkāśya, said to be the place where all buddhas descend to earth from the heaven of the thirty-three, was one of the eight “great sites” ([MAHĀSTHĀNA](#)) and an important place of pilgrimage. The event is often referred to as the [DEVĀVATĀRA](#), or “descent of the divinities,” which is another alternate name for Sāṃkāśya.

saṃkleśa. (P. saṃkilesa; T. kun nas nyon mongs pa; C. ran; J. zen; K. yōm 染). In Sanskrit, “impurity,” “defilement,” or “pollution,” sometimes used interchangeably with the more frequent term “affliction” ([KLEŚA](#)). There are two basic kinds of impurities (saṃkleśa): craving ([TRSNĀ](#)) and ignorance ([AVIDYĀ](#)). These impurities lead to a whole host of more specific impurities, such as the desire for sensual pleasure, and erroneous views, such as the views of eternalism and annihilationism. The goal of the Buddhist path is to cleanse the mind of these impurities. Saṃkleśa is frequently seen used in contrast to the term purity ([VYAVADĀNA](#)) and indicates a mode of causation that inevitably leads one to suffering. Beings are constantly engaged in the process of either purification (vyavadāna) or defilement (saṃkleśa), depending upon their actions and thoughts at any given moment. In some [MAHĀYĀNA](#) texts, it is understood that the ultimate result of the process of purification is the realization that all phenomena ([DHARMA](#)) are ultimately devoid of any distinction between pure and impure.

saṃklista. [alt. saṃkleśika] (T. kun nas nyon mongs pa; C. bujing; J. fujō; K. pujōng 不淨). In Sanskrit, “afflicted,” “defiled,” “soiled,” a polysemous term used to describe the predominate characteristic of [SAMSĀRA](#), applied in a variety

of contexts related to the cause and fact of suffering. More specifically, *saṃkliṣṭa* is used to describe the truth of suffering ([DUHKHASATYA](#)) and the truth of origination ([SAMUDAYASATYA](#)). In the [PRAJÑĀPĀRAMITĀ](#) literature, dharmas are divided into two classes, the afflicted and the pure (*viśuddha*), often referred to by the abbreviation *rūpādi* (“form and so on”), where form is the first term in the list of the afflicted class, viz., the first of the five skandhas that are associated with suffering. The list includes the [SKANDHAS](#), [ĀYATANAS](#), [DHĀTUS](#), the twelfefold chain of dependent origination ([PRATĪTYASAMUTPĀDA](#)), and so on, all of which are *saṃkliṣṭa* (“afflicted”) dharmas. In the *prajñāpāramitā*, the list of dharmas goes on to the list of pure dharmas as well, ending with the fruits of the noble path, the unshared qualities of a buddha ([ĀVENIKA|BUDDHA|DHARMA](#)), and the knowledge of all aspects ([SARVĀKĀRAJÑATĀ](#)).

[Saṃkusumitarājendra](#). (T. [Rgyal dbang] Me tog cher rgyas; C. Kaifuhua wang [rulai]; J. Kaifukeō [nyorai]; K. Kaebuhwa wang [yōrae] 開敷華王[如來]). In Sanskrit, “Flowering [viz., Fully-Manifested] King,” the name of a [TATHĀGATA](#) who is mentioned in the [MAÑJUŚRĪMŪLAKALPA](#), an influential tantric text from India composed around the seventh century; also known as *Saṃkusumitarājan*. At one point in the *Mañjuśrīmūlakalpa*, the buddha [ŚĀKYAMUNI](#) enters into a deep state of concentration, and causes a ray of light to shoot from his head. The light travels to *Kusumāvātī*, where dwells the *tathāgata* *Saṃkusumitarājendra* with a host of [BODHISATTVAS](#). [MAÑJUŚRĪ](#) sees the light and understands that it is a beacon from *Śākyamuni*. *Saṃkusumitarājendra* encourages *Mañjuśrī* to visit *Śākyamuni*, ostensibly to inquire about his well-being, which is a pretext for *Mañjuśrī* to learn a [MANTRA](#) from him. *Saṃkusumitarājendra* is one of the five buddhas who appears in the [GARBHADHĀTUMANDALA](#); he usually sits to the right of [VAIROCANA](#), the cosmic buddha at the center of the [MANDALA](#). One interpretation of his name is that *Saṃkusumitarājendra* spreads virtue and compassion through the universe as if they were flowers.

[Sammāditthi](#)sutta. In Pāli, “Discourse on Right View,” the ninth sutta in the [MAJJHIMANIKĀYA](#) (a somewhat similar [SARVĀSTIVĀDA](#) recension appears as the twenty-ninth sūtra in the Chinese translation of the [MADHYAMĀGAMA](#), although with a different title and interlocutor; there is also an untitled *Sarvāstivāda* recension in the Chinese translation of the [SAMYUKTĀGAMA](#)); preached by [ŚĀRIPUTRA](#) (P. *Sāriputta*) to a group of monks in the [JETAVANA](#) grove in the town of [ŚRĀVASTĪ](#) (P. *Sāvattī*). *Śāriputra* explains that when actions of body, speech,

and mind are motivated by greed, hatred, and delusion they are deemed unwholesome (P. akusala; S. [AKUŚĀLA](#)). When they are motivated by nongreed, nonhatred and nondelusion they are deemed wholesome (P. kusala; S. [KUŚĀLA](#)). He further explains the significance of the [FOUR NOBLE TRUTHS](#), the twelve links of dependent origination (P. paṭiccasamuppāda, S. [PRATĪTYASAMUTPĀDA](#)), and the afflictions.

[Sammitīya](#). (T. Mang bkur ba; C. Zhengliang bu; J. Shōryōbu; K. Chōngnyang pu 正量部). One of the “mainstream” (that is, non-Mahāyāna) schools of Indian Buddhism, a subsect of the [VĀTSĪPUTRĪYA](#), and remembered primarily for its affirmation of the notion of a “person” ([PUDGALA](#)) that is neither the same as nor different from the aggregates ([SKANDHA](#)). Because of their assertion of such an “inexpressible” (avācya) person, the adherents of the school were dubbed [PUDGALAVĀDA](#) (“proponents of the person”) and were criticized by other Buddhist schools for asserting the existence of a self, a position anathema to the mainstream Buddhist position of nonself ([ANĀTMAN](#)). Despite this apparent heresy, the school enjoyed considerable popularity in India; the seventh-century Chinese pilgrim [XUANZANG](#) describes it as the largest of the mainstream Buddhist schools in India, representing one quarter of all active monks. See [VĀTSĪPUTRĪYA](#).

[Sammohavinodanī](#). In Pāli, “The Dispeller of Delusion,” a commentary by the influential Pāli scholar [BUDDHAGHOSA](#) on the [VIBHAṄGA](#), the second book of the Pāli [ABHIDHAMMAPITAKA](#). This work covers much of the same material found in Buddhaghosa’s [VISUDDHIMAGGA](#), which is thought to be the earlier of the two works. In his introduction to *Sammohavinodanī*, Buddhaghosa claims to have drawn his analysis from more ancient commentaries. The work is divided into eighteen sections, beginning with an exposition on the five aggregates (P. khandha, S. [SKANDHA](#)). Each subsequent section covers a different element of the *Vibhaṅga*’s content, including analyses of the sense spheres ([ĀYATANA](#)), elements ([DHĀTU](#)), stages of meditative absorption (P. [JHĀNA](#), S. [DHYĀNA](#)), the path (P. magga, S. [MĀRGA](#)), rules of training (P. sikkhāpada, S. [ŚIKSĀPADA](#)), and so on. This commentary is particularly well known for its analysis of conditioned origination (P. paṭiccasamuppāda, S. [PRATĪTYASAMUTPĀDA](#)), which offers perhaps the most detailed examination of this doctrine found in the Pāli abhidhamma; there, Buddhaghosa represents the entire chain of causes and effects as occurring in both an entire lifetime as well as in single moment of

consciousness. The *Sammohavinodanī* itself became the subject of extensive exegesis in the Pāli tradition.

sammutisaṅgha. (S. saṃvṛtisaṅgha; T. kun rdzob pa'i dge 'dun; C. shisu seng; J. sezokusō; K. sesok sūng 世俗僧). In Pāli, “conventional order”; the community of legally ordained monks and nuns. A technical term used in the Pali commentaries, the sammutisaṅgha is comprised of monks and nuns who are still puthujjana (S. [PRTHAGJANA](#)), or ordinary unenlightened persons. This contrasts with the [PARAMATTHASAṄGHA](#), or “ultimate order,” comprised of noble (P. āriya, S. [ĀRYA](#)) monks and nuns.

samnāha. (T. go cha; C. beijia; J. hikō; K. p'igap 被甲). In Sanskrit, “armor”; a term that occurs especially in the tradition of the [ABHISAMAYĀLAMKĀRA](#), where the term “armor practice” (saṃnāhapratipatti) refers both to the bodhisattva path in general as well as to specific practices begun on the path of accumulation or equipment ([SAMBHĀRAMĀRGA](#)). In the [PRAJÑĀPĀRAMITĀ](#) sūtras (which are termed the jinajananī, “mother of victors”), bodhisattvas are said to be armed with a great armor (saṃnaddhasaṃnāha), an equipment made out of the interwoven six perfections ([PĀRAMITĀ](#)); and to set out (prasthāna) for the difficult work (duṣkaracaryā) necessary to become “victors” ([JINA](#)). This “difficult work” involves activities done for the sake of others. Each of the perfections is said to subsume all the other perfections, so that, for example, when bodhisattvas engage in exceptional acts of giving away their wealth or limbs ([DĀNA](#)), the act is informed by the bodhisattva’s morality ([ŚĪLA](#)); done with forbearance ([KSĀNTI](#)) that can withstand the difficulty involved; propelled by perseverance ([VĪRYA](#)), and informed by concentration ([SAMĀDHI](#)), which enables the bodhisattva to stay focused on the aim of enlightenment while remaining tranquil and at ease; and is grounded on the wisdom ([PRAJÑĀ](#)) that understands that the act of giving, the carrying out of the act, and the donor are all interdependent and without any inherent nature ([SVABHĀVA](#)). When bodhisattvas are armed with this great armor, they do not become discouraged by the long and difficult task of looking after the welfare of others ([PARĀRTHA](#)) who are “numberless like the sands of the Ganges” ([GAṄĀNADĪVĀLUKĀ](#)). Buckling on the armor (saṃnāha) and setting out (prasthāna) on their quest, bodhisattvas ultimately accumulate all their necessary equipment ([SAMBHĀRA](#)) and go forth (niryāṇa) to the final goal of buddhahood.

sampannakrama. (S) (T. rdzogs rim). See [NISPANNAKRAMA](#).

Sampasādanīyasutta. (C. Zihuanxi jing; J. Jikangikyō; K. Chahwanhŭi kyōng 自歡喜經). In Pāli, “Discourse on Serene Faith”; the twenty-eighth sutta of the [DĪGHANIKĀYA](#) (a separate [DHARMAGUPTAKA](#) recension appears as the eighteenth [SŪTRA](#) in the Chinese translation of the [DĪRGHAGĀMA](#); there is also a separate but untitled [SARVĀSTIVĀDA](#) recension in the Chinese translation of the [SAMYUKTĀGAMA](#)); addressed to [ŚĀRIPUTRA](#) at [NĀLANDĀ](#) in Pāvārika’s mango grove. Śāriputra declares that there has never been nor will there ever be anyone equal to the Buddha in wisdom. When questioned by the Buddha whether he had ever met a buddha of the past or had been able to fathom the Buddha’s own mind, Śāriputra admits he had done neither but nevertheless proceeds to justify his faith on the basis of the Buddha’s unsurpassable qualities. The Buddha approves of Śāriputra’s explanation and advises him to preach it often to others.

samprajanya. (P. sampajañña; T. shes bzhin; C. zhengzhi; J. shōchi; K. chōngji 正知). In Sanskrit, “clear comprehension,” “circumspection,” “introspection”; a term that is closely related to, and often appears in compound with, mindfulness (S. [SMṚTI](#), P. sati). In descriptions of the practice of developing meditative absorption ([DHYĀNA](#)), smṛti refers to the factor of mindfulness that ties the mind to the object, while samprajanya is the factor that observes the mind to determine whether it has strayed from its object. Specifically, Pāli sources refer to four aspects of clear comprehension, which involve the application of mindfulness in practice. The first is purpose (P. sātthaka), viz., whether the action will be in the best interests of oneself and others; its principal criterion is whether it leads to growth in dharma. Second is suitability (P. sappāya): whether an action is in accord with the appropriate time, place, and personal capacity; its principal criterion is skillfulness in applying right means (P. upāyakosalla; S. [UPĀYAKAUŚALYA](#)). Third is the domain of meditation (gocara): viz., all experiences should be made a topic of mindful awareness. Fourth is nondelusion (asammoha): viz., recognizing that what seem to be the actions of a person are in fact an impersonal series of mental and physical processes; this aspect of samprajanya helps to counteract the tendency to view all events from a personal point of view. Samprajanya thus expands upon the clarity of thought generated by mindfulness by incorporating the additional factors of correct knowledge ([JÑĀNA](#)) or wisdom ([PRAJÑĀ](#)).

samprayukta. (T. mtshungs ldan; C. xiangying; J. sōō; K. sangŭng 相應). In Sanskrit, literally “yoked,” “harnessed,” “joined together.” This term is used in

the [ABHIDHARMA](#) in the sense of “concomitant” or “associated”; its nominal counterpart *saṃprayoga* may be translated as “concomitance.” The term *saṃprayukta* is used to describe the relationship between mind ([CITTA](#)) and mental concomitants ([CAITTA](#)). This relationship is described as “concomitant” in that the origination and specific features of one are closely related to the origination and specific features of the other. The [SARVĀSTIVĀDA](#) enumerated five ways in which the mind and mental functions are concomitant by listing five features that they share: sense base ([ĀŚRAYA](#)), object ([ĀLAMBANA](#)), aspect of the object ([ĀKĀRA](#)), moment of arising ([KĀLA](#)), and substance ([DRAVYA](#)).

[saṃprayuktahetu](#). (T. *mtshungs ldan gyi rgyu*; C. *xiangying yin*; J. *sōin*; K. *sangūngin* 相應因). In Sanskrit, “conjoined” or “associative” “cause”; the third of the six kinds of causes ([HETU](#)) outlined in the [JÑĀNAPRASTHĀNA](#), the central text of the [SARVĀSTIVĀDA ABHIDHARMA](#), which accounts for the fact that mental events cannot exist in isolation but instead mutually condition, or are “associated” with, one another. This type of cause is effectively a subsection of the coexistent cause ([SAHABHŪHETU](#)). Mind ([CITTA](#)) or consciousness ([VIJÑĀNA](#)) cannot exist in isolation; they are always conjoined with various related mental concomitants ([CAITTA](#)). Thus the conjoined causes exist in a relationship of mutuality or reciprocation, e.g., mind causes mental concomitants, but mental functions also cause mind. Because of this reciprocity, the functioning of the visual organ (viz., the eye) leads to an associated visual consciousness ([CAKSURVIJÑĀNA](#)) and associated mental concomitants, such as visual sensations ([VEDANĀ](#)), perceptions ([SAMJÑĀ](#)), emotions that derive from those perceptions, and so forth.

[saṃprayuktasamskāra](#). In Sanskrit, “forces conjoined [with thought].” See [CITTASAMPRAYUKTASAMSKĀRA](#).

[Sampūṭa Tantra](#). (S). See [HEVAJRATANTRA](#).

[samsāra](#). (T. *'khor ba*; C. *lunhui/shengsi lunhui*; J. *rinne/shōjirinne*; K. *yunhoe/saengsa yunhoe* 輪迴/生死輪迴). In Sanskrit and Pāli, “wandering,” viz., the “cycle of [REBIRTH](#).” The realms that are subject to rebirth are typically described as composed of six rebirth destinies ([GATI](#)): divinities ([DEVA](#)), demigods or titans ([ASURA](#)), humans ([MANUSYA](#)), animals ([TIRYAK](#)), ghosts ([PRETA](#)), and hell denizens ([NĀRAKA](#)). These destinies are all located within the three realms of existence ([TRAIDHĀTUKA](#)), which comprises the entirety of our

universe (see also [AVACARA](#); [LOKADHĀTU](#)). At the bottom of the sensuous realm ([KĀMADHĀTU](#); *kāmāvacara*) are located the denizens of the hells ([NĀRAKA](#)), the lowest of which is named the interminable ([AVĪCI](#)). This most illfated of existences is followed by ghosts, animals, humans, demigods, and the divinities of the six heavens of the sensuous realm. Higher levels of the divinities occupy the upper two realms of existence, the subtle-materiality realm ([RŪPADHĀTU](#)) and the immaterial realm ([ĀRŪPYADHĀTU](#)). The bottom three destinies, of hell denizens, hungry ghosts, and animals, are referred to as the three evil bournes ([DURGATI](#)); these are destinies where suffering predominates because of the past performance of unwholesome ([AKUŚALA](#)) actions ([KARMAN](#)). In the various levels of the divinities, happiness predominates, because of the past performance of wholesome ([KUŚALA](#)) actions. By contrast, the human destiny is thought to be ideally suited for religious training, because it is the only bourne where both suffering and happiness can be readily experienced, allowing the adept to recognize more easily the true character of life as impermanent ([ANITYA](#)), suffering ([DUHKHA](#)), and nonself ([ANĀTMAN](#)). Saṃsāra is said to have no beginning and to come to end only for those individuals who achieve liberation from rebirth through the practice of the path ([MĀRGA](#)) to [NIRVĀNA](#). Saṃsāra is depicted iconographically as a “wheel of existence” ([BHAVACAKRA](#)), which shows the six rebirth destinies, surrounding a pig, a rooster, and a snake, which symbolize ignorance ([AVIDYĀ](#)), desire ([LOBHA](#)), and hatred ([DVESA](#)), respectively. Around the edge of the wheel are scenes representing the twelve links of dependent origination ([PRATĪTYASAMUTPĀDA](#)). The relation between saṃsāra and nirvāṇa is discussed at length in Buddhist texts, with [NĀGĀRJUNA](#) famously declaring that there is not the slightest difference between them, because the true nature of both is emptiness ([ŚŪNYATĀ](#)).

samskāra. (P. *saṅkhāra*; T. 'du byed; C. *xing*; J. *gyō*; K. *haeng* 行). In Sanskrit, a polysemous term that is variously translated as “formation,” “volition,” “volitional action,” “conditioned,” “conditioning factors.” In its more passive usage (see [SAMSKRITA](#), P. *saṅkhata*), *samskāra* refers to anything that has been formed, conditioned, or brought into being. In this early denotation, the term is a designation for all things and persons that have been brought into being dependent on causes and conditions. It is in this sense that the Buddha famously remarked that “all conditioned things (*samskāra*) are impermanent” (*anityāḥ sarvasamskārāḥ*), the first of the four criteria that “seal” a view as being authentically Buddhist (see [CATURNIMITTA](#)). In its more active sense, *samskāra* as

latent “formations” left in the mind by actions ([KARMA](#)) refers to that which forms or conditions other things. In this usage, the term is equivalent in meaning to action. It is in this sense that saṃskāra serves as the second link in the twelvefold chain of dependent origination ([PRATĪTYASAMUTPĀDA](#)). There, saṃskāra refers specifically to volition ([CETANĀ](#)) and as such assumes the karmically active role of perpetuating the rebirth process; alternatively, in the [YOGĀCĀRA](#) school, saṃskāra refers to the seeds ([BĪJA](#)) left in the foundation or storehouse consciousness ([ĀLAYAVIJÑĀNA](#)). Saṃskāra is also the name for the fourth of the five aggregates ([SKANDHA](#)), where it includes a miscellany of phenomena that are both formed and in the process of formation, i.e., the large collection of factors that cannot be conveniently classified with the other four aggregates of materiality ([RŪPA](#)), sensation ([VEDANĀ](#)), perception ([SAMJÑĀ](#)), and consciousness ([VIJÑĀNA](#)). This fourth aggregate includes both those conditioning factors associated with mind ([CITTASAMPRAVAYUKTASAMSKĀRA](#)), such as the mental concomitants ([CAITTA](#)), as well as those conditioning forces dissociated from thought ([CITTAVIPRAYUKTASAMSKĀRA](#)), such as time, duration, the life faculty, and the equipoise of cessation ([NIRODHASAMĀPATTI](#)).

[saṃskāraduḥkhatā](#). (T. 'du byed kyi sdug bsngal; C. xingku; J. gyōku; K. haenggo 行苦). In Sanskrit, “suffering inherent in conditioning,” the third of the three types of suffering, together with [DUḤKHADUḤKHATĀ](#) and [VIPARIṆĀMADUḤKHATĀ](#). This is the most subtle and most pernicious of the three types of suffering, since it conditions all of [SAMSĀRA](#). Saṃskāraduḥkhatā is identified as neutral sensations and their objects, which, due to impermanence, can turn into sensations of pain in the next instant. It is said that this form of suffering generally goes unnoticed by ordinary beings ([PṚTHAGJANA](#)), where it is like a wisp of wool in the palm of the hand, but it cannot be ignored by noble beings ([ĀRYAPUDGALA](#)), where it is like a wisp of wool in the eye. An example for the three types of suffering is a burn: as a conditioned event, it is suffering just because of what it is (saṃskāraduḥkhatā); when soothed with a cooling ointment it feels better, but when the temporary relief ends it will inevitably become suffering again (vipariṇāmaduḥkhatā); and when jabbed, it causes excruciating pain (duḥkhaduḥkhatā).

[saṃskṛta](#). (T. 'dus byas; C. youwei; J. ui; K. yuwi 有爲). In Sanskrit, “conditioned,” a term that describes all impermanent phenomena, that is, all conditioned factors (saṃskṛtadharma) that are produced through the

concomitance of causes and conditions; these phenomena are subject to the four characteristics ([CATURLAKSANA](#)) governing all conditioned objects ([SAMSKRTALAKSANA](#)), viz., “origination,” or birth ([JĀTI](#)), “continuance,” or maturation ([STHITI](#)), “senescence,” or decay ([JARĀ](#)), and “desinence,” or death ([ANITYA](#)). Samskṛta is contrasted with [ASAMSKRTA](#), “unconditioned,” a common adjective of [NIRVĀNA](#), but also a category that in some traditions includes space ([ĀKĀŚA](#)) and other types of absence and cessation. The fact that the objects of ordinary experience are conditioned is commonly cited as a reason why they are unreliable and thus should be abandoned, and why the unconditioned state should be sought. See also [SAMSKĀRA](#).

samskrtalaksana. (T. ’dus byas kyi mtshan nyid; C. youwei xiang; J. uisō; K. yuwi sang 有爲相). In Sanskrit, “compounded characteristics”; according to the [SARVĀSTIVĀDA ABHIDHARMA](#) analysis of causality, four “forces dissociated from thought” ([CITTAVIPRAYUKTASAMSKĀRA](#)) that govern conditioned existence: viz., origination or birth ([JĀTI](#)), continuance or maturation ([STHITI](#)), “senescence” or decay ([JARĀ](#)), and “desinence” or extinction, viz., death ([ANITYA](#)). See [CATURLAKSANA](#).

samtāna. (P. santāna; T. rgyud / rgyun; C. xiangxu; J. sōzoku; K. sangsok 相續). In Sanskrit, “continuum,” a term used to designate an uninterrupted sequence of cause and effect, especially a sequence of mental moments. Because there is nothing permanent in the mind and body, but there is continuity in the ways in which they are made manifest, they are described as a continuum. The term is used most commonly to refer to the mental continuum, both within a single lifetime and as it extends over many lifetimes. In the [VAIBHĀSIKA](#) school of [SARVĀSTIVĀDA ABHIDHARMA](#), the “immediate-antecedent condition” ([SAMANANTARAPRATYAYA](#)) accounts for the immediately preceding moment in the samtāna, which by coming to an end, enables a subsequent moment of thought to arise. All types of thought in the conditioned ([SAMSKRTA](#)) realm serve as immediate-antecedent conditions that enable the mental continuum to persist. The only exception is the final thought-moment in the mental continuum of an [ARHAT](#): the immediate-antecedent condition does not function at the specific moment, because the arhat’s next thought-moment involves the experience of the unconditioned ([ASAMSKRTA](#)); thus, no further thoughts from the conditioned realm can ever again recur and the arhat is liberated from [SAMŚĀRA](#). This notion of a mental continuum also serves to counter annihilationist interpretations (see

[UCCHEDAVĀDA](#), [UCCHEDĀNTA](#)) of the quintessential Buddhist doctrine of nonself ([ANĀTMAN](#)): there may be no permanent, underlying substratum of being that can be designated as a self or soul ([ĀTMAN](#)), but this fact does not controvert the continuity that pertains in the flow of moral cause and effect ([KARMAN](#)) or the possibility of [REBIRTH](#).

[samucchinnakuśalamūla](#). (T. dge rtsa bcad pa; C. duanshangen; J. danzengon; K. tansŏn'gŭn 斷善根). In Sanskrit, “those whose wholesome roots are eradicated,” referring to beings who have performed the most heinous of acts, or who are unable to engage in even the most basic of wholesome activities. Their wholesome roots ([KUŚALAMŪLA](#)) being thereby eradicated, they are thus condemned to subsequent rebirth in the hells (see [NĀRAKA](#)), where they may spend an “indefinite” period. The samucchinnakuśalamūla is related to the [MAHĀYĀNA](#) term for the spiritual bereft, or incorrigibles ([ICCHANTIKA](#)), who also may be condemned to a virtual eternity in the hells. A person can become samucchinnakuśalamūla through lack of faith ([ĀSRADDHYA](#)), wrong views ([MITHYĀDRSTI](#)), or by being swayed by the afflictions (kleśasaṃyoga). It is said that the inability to engage in charity ([DĀNA](#)), the foundation of Buddhist ethical practice, is the determining factor that leads to a person becoming samucchinnakuśalamūla.

[samudācāra](#). (T. kun tu spyod pa; C. xianxing; J. gengyō; K. hyŏnhaeng 現行). In Sanskrit, the term has two important denotations: “proper conduct,” or “intention, purpose, habitual idea”; and “manifest action.” Samudācāra designates religious action that is undertaken for the sake of attaining liberation for oneself and either liberation or an improved state of rebirth for others. Thus, the term can refer to a buddha’s unceasing effort and the influence he exerts to help beings attain liberation. In its description of the first [BHŪMI](#), the [MAHĀVASTU](#) lists eight types of samudācāra for a [BODHISATTVA](#). These are generosity (tyāga), compassion ([KARUNĀ](#)), relentlessness (aparikheda), humility (amāna), study of all the treatises (sarvaśāstrādhyāyitā), courage (vikrama), social skills (lokānujñā), and resolve (dhṛti). Deriving from its denotation of volitional impulse, samudācāra also comes to be used in the [YOGĀCĀRA](#) school to indicate the emergence of conditioned factors (saṃskṛtadharma) from the [ĀLAYAVIJÑĀNA](#), since, once they have arisen and are no longer dormant, they influence conscious action. In the context of Yogācāra thought, then, samudācāra is often translated as “manifest action.” The term is also used in the sense of the special qualities of

the practice of bodhisattvas, who are habituated to the ultimate nature of things ([TATHATĀ](#), literally, “suchness”). The dependent origination of an action and the ultimate way in which that action occurs are inseparable; hence samudācāra, and in particular actions prompted by the aspiration for enlightenment, are “manifest actions.” In tantric literature, the term is used for the four types of activities, also known as the [CATURKARMAN](#).

[samudānītagotra](#). (T. yang dag par bsgrub pa’i rigs; C. xizhongxing; J. shūshushō; K. sūpchongsōng 習種性). In Sanskrit, “the [karmic] lineage that is conditioned by habits.” In the [YOGĀCĀRA](#) school, a distinction is made between the indestructible, inherent “naturally endowed lineage” ([PRAKṚTISTHAGOTRA](#)) and this changeable, continuously acquired “lineage conditioned by habits” (samudānītagotra). In contrast to the former, which predetermines a person’s orientation toward the two vehicles of either [MAHĀYĀNA](#) or [HĪNAYĀNA](#), the latter allows for some leeway for personal adaptations and change through doctrinal study, practice, and exposure (these are what are meant by “habits”). According to this controversial Yogācāra tenet, whereas a person cannot effect change in terms of his highest spiritual potential and vehicular predisposition because of his “naturally endowed lineage,” he can nevertheless influence the speed with which he is able to attain enlightenment, and other extrinsic variations within his predetermined “lineage.” This flexibility is the lineage that is conditioned, and can be altered, by “habits.” Together and in contrast with the “naturally endowed lineage,” they are known as “the two lineages: intrinsic and acquired” (xingxi er[zhong]xing). ¶ In another interpretation based on the [BODHISATTVABHŪMI](#) and [MAHĀYĀNASAMGRAHA](#), the naturally endowed (prakṛtistha) lineage is present since time immemorial (anādikālika) and is called śrutavāsanā (the residual impression left by listening). In Yogācāra, where there are no external objects, and the [ĀLAYAVIJÑĀNA](#) is the storehouse of all seeds ([BĪJA](#)), the śrutavāsanā is a seed planted in the deepest recesses of the ālaya (see [AMALAVIJÑĀNA](#)) and helps explain how those who first hear the different branches of the Buddha’s doctrine thereby learn and reach the goal of full enlightenment. In this interpretation, the difference between the prakṛtisthagotra and the samudānītagotra is only one of time: when the lineage (understood on the analogy of a seed or capacity) is dormant it is the naturally endowed lineage; when, nurtured by the practices leading up to the path of vision ([DARŚANAMĀRGA](#)), it comes closer to the [ĀŚRAYAPARĀVṚTTI](#) (fundamental transformation of the basis) on the eighth bodhisattva bhūmi, it is

samudānītagotra.

samudaya. (T. kun 'byung; C. ji; J. jū; K. chip 集). In Sanskrit and Pāli, “origination” or “arising.” In the *Samudayasutta*, the 132nd sutta of the twenty-second section of the Pāli [SAMYUTTANIKĀYA](#), samudaya refers to the origination of the five aggregates (P. khandha; S. [SKANDHA](#)), which is followed by their subsistence and passing away. In this basic sense, samudaya conveys the sense that the aggregates that make up a person are not miraculously there, or there permanently, but arise as the result of specific causes and conditions. The term is most widely used in the compound [SAMUDAYASATYA](#) (“truth of the origin [of suffering]”) the second of the [FOUR NOBLE TRUTHS](#). In the more detailed explanation of the truth of origination, samudaya is the second of four aspects ([ĀKĀRA](#)), each of which counteract a mistaken view about the origin of suffering (see [SAMUDAYASATYA](#)). It counteracts the view that suffering is created only once, in a single act by a creator god, because the skandhas arise continually in a stream or continuum ([SAMTĀNA](#)).

samudayasatya. (P. samudayasacca; T. kun 'byung gi bden pa; C. jidi; J. jittai; K. chipche 集諦). In Sanskrit, “truth of origination”; the second of the so-called [FOUR NOBLE TRUTHS](#) (catvāry āryasatyāni) promulgated by the Buddha in his first sermon (see [DHAMMACAKKAPPAVATTANASUTTA](#)) in the Deer Park at [SĀRNĀTH](#). In this context, [SAMUDAYA](#) refers to the origination or cause of the first truth, suffering ([DUHKHA](#); [DUHKHASATYA](#)). The origination of suffering is identified as [KARMAN](#) and [KLEŚA](#). Karman or past actions, in this case unwholesome ([AKUŚALA](#)) actions, are identified as the immediate cause of suffering, with negative deeds fructifying as experiences of mental and physical pain. The afflictions (kleśa), often enumerated in this context as greed, hatred, and delusion, are the mediate causes of suffering, motivating the nonvirtuous deeds that result in future suffering. Among these three, delusion, understood as the mistaken conception of a perduring self ([ĀTMAGRAHA](#)), is the root cause of suffering, and produces greed and hatred. The implication of the second truth is that if one can eliminate the cause or origin of suffering, one can then put an end to suffering itself. This truth of the origin of suffering has four aspects ([ĀKĀRA](#)): it is the cause ([HETU](#)), origination ([SAMUDAYA](#)), producer (saṃbhava), and condition ([PRATYAYA](#)). These four aspects counteract respectively the mistaken views that (1) suffering is arbitrary and has no cause, (2) there is only a single cause for suffering even though it is diverse and ongoing, (3) suffering is just the

imaginary transformations of reality, and (4) suffering is the result of a particular mental focus, not the inexorable result of a mind governed by kleśa and karman. These four aspects of the truth of origination are like a disease (in the sense that kleśa and karman are the root cause of suffering), like a boil that is the origin of ongoing pain, like a thorn that produces intense suffering immediately, and like misfortune, in that the unbroken continuum ([SAMTĀNA](#)) of the aggregates ([SKANDHA](#)) is the condition for a life that is governed by suffering.

[samvara](#). (P. saṃvara; T. sdom pa; C. lüyi/sanbaluo; J. ritsugi/sanbara; K. yurüi/samballa 律儀/三跋羅). In Sanskrit, “restraint,” referring generally to the restraint from unwholesome ([AKUŚALA](#)) actions ([KARMAN](#)) that is engendered by observance of the monastic disciplinary code ([PRĀTIMOKSA](#)), the [BODHISATTVA](#) precepts, and tantric vows. In the [VAIBHĀSIKA](#) school of [SARVĀSTIVĀDA ABHIDHARMA](#), three specific types of restraint ([SAMVARA](#)) against unwholesomeness (akuśala) are mentioned, which are all associated with “unmanifest material force” or “hidden imprints” ([AVIJÑAPTIRŪPA](#)): (1) the restraint proffered to a monk or nun when he or she accepts the disciplinary rules of the order ([PRĀTIMOKSASAMVARA](#)); (2) the restraint that is engendered by mental absorption (dhyānaśaṃvara); and (3) the restraint that derives from being free from the contaminants (anāsravaśaṃvara). The restraint inherent in the disciplinary code (prātimokṣasaṃvara) creates a special kind of protective force field that helps to dissuade monks and nuns from unwholesome activity, even when they are not consciously aware they are following the precepts or even when they are asleep. This specific type of restraint is what makes a person a monk, since just wearing robes or following an ascetic way of life would not in themselves be sufficient to instill in him the protective power offered by the prātimokṣa. The restraint engendered by [DHYĀNA](#) (dhyānaśaṃvara) refers to the fact that absorption in meditation was thought to confer on the monk protective power against physical harm: the literature abounds with stories of monks who discover tiger tracks all around them after withdrawing from dhyāna, thus suggesting that dhyāna itself was a force that provided a protective shield against accident or injury. Finally, anāsravaśaṃvara is the restraint that precludes someone who has achieved the extinction of the contaminants ([ĀSRAVA](#))—that is, enlightenment—from committing any action (karman) that would produce a karmic result ([VIPĀKA](#)), thus ensuring that their remaining actions in this life do not lead to any additional rebirths. ¶ In [MAHĀYĀNA](#) materials, such as the [BODHISATTVABHŪMI](#), the first of three types of morality that together codify the

moral training of a bodhisattva is called *saṃvaraśīla* (“restraining morality”); under this heading is included the different sets of rules for [BHIKSU](#), [BHIKSUNĪ](#) and so on in the *prātimokṣa*, taken as a whole; two further codifications of rules called the morality of collecting wholesome factors (*kuśalasaṃgrāhakaśīla*), and the morality that acts for the welfare of beings (*sattvārthakriyāśīla*; see [ARTHAKRIYĀ](#)); together, these three constitute the definitive and exhaustive explanation of bodhisattva morality, known as [TRISAMVARA](#), the “three restraints” or “triple code.” The original meaning of *saṃvara* as “restraint” remains central in the *Bodhisattvabhūmi*’s account, but the text expands the scope of morality ([ŚIKSĀPADA](#)) widely, incorporating all altruistic acts under the rubric of skillful means employed for the sake of others, in essence formulating a code for bodhisattvas who are committed to acting like buddhas. In Indian and Tibetan tantra, the meaning of *trisaṃvara* undergoes yet further expansion. Each of the five buddha *KULA* (in one list [AKSOBHYA](#), [VAIROCANA](#), [RATNASAMBHAVA](#), [AMITĀBHA](#), and [AMOGHASIDDHI](#)) has a vowed morality, called [SAMAYA](#). This tantric code is the third of the three codes, the other two being the *prātimokṣa* codes and the *Bodhisattvabhūmi*’s code for bodhisattvas. These three, then, are called the *prātimokṣasaṃvara*, the *bodhisattvasaṃvara*, and the *guhyanmantrasaṃvara* (“secret mantra vows”) (see [SDOM GSUM RAB DBYE](#)). ¶ In tantric literature, *saṃvara* also has the sense of “union,” a meaning that is conveyed in the proper name of (CAKRA)SAMVARA (see also [HERUKA](#)), a principal deity of the VAJRAYĀNA ANUTTARAYOGATANTRA tradition. A god named *Saṃvara* appears in the *R̥g Veda* as an enemy of the gods who hoarded the precious soma (the divine nectar) and kept it from [INDRA](#), who eventually destroyed *Saṃvara*’s mountain fortress. The myth suggests the possibility that *Saṃvara* or *Cakrasaṃvara* began his existence as a pre-Vedic Indian deity preserved in Buddhist tantra in a subordinated position. With his adoption into the Buddhist pantheon, *Saṃvara* (likely the Buddhist version of Śiva) himself vanquishes the Vedic god—he is commonly depicted trampling [BHAIRAVA](#) (Śiva) and/or his consort. Alternate Indian names for him include Śambara and Paramasukha *Cakrasaṃvara*. The Tibetan *Bde mchog*, or “supreme bliss,” is a translation of *paramasukha*. Tantric cycles connected to *Saṃvara* were introduced to Tibet by the translator [MAR PA](#) in the eleventh century CE. He is said to reside at the mountain of [TSHA RI](#) in Rdza yul, southern Tibet, as well as in the *Bde mchog pho brang* on Mount [KAILĀSA](#), where the nearby Lake Manasarovar is sacred to him. His consort is [VAJRAVĀRĀHĪ](#).

samvartakalpa. (P. samvattakappa; T. 'jig pa'i bskal pa; C. huaijie; J. ekō; K. koegöṃ 壞劫). In Sanskrit, “eon of dissolution,” one of the four periods in the cycle of the creation and destruction of a world system, according to Buddhist cosmology. These are: the eon of creation ([VIVARTAKALPA](#)); the eon of abiding ([VIVARTASTHĀYIKALPA](#)); the eon of dissolution (samvartakalpa); and the eon of nothingness ([SAMVARTASTHĀYIKALPA](#)). According to the [ABHIDHARMAKOŚABHĀSYA](#), each of the four eons lasts twenty intermediate eons. After the complete dissolution of the previous world system, an eon of nothingness occurs, during which the universe remains in a state of vacuity, with the sentient beings who had populated that world system reborn in other worlds or in the second absorption ([DHYĀNA](#)) of the subtle-materiality realm ([RŪPADHĀTU](#)). The eon of creation begins when a wind begins to blow in space, impelled by the previous actions ([KARMA](#)) of sentient beings. A circle of wind forms, followed by a circle of water, followed by a circle of golden earth. The entire world-system of the sensuous realm ([KĀMADHĀTU](#)) then forms, including Mount [SUMERU](#), the four continents and their subcontinents, the heavens, and the hells. These are then populated by beings, reborn in the various realms as a result of their previous actions. When all realms of the world system have been populated, the eon of creation ends and the eon of abiding begins. At the beginning of the eon, the human life span is said to be “infinite” and decreases until it eventually reaches ten years of age. It then increases to eighty thousand years, before decreasing again to ten years. It takes one intermediate eon for the life span to go from ten years to eighty thousand years to ten years again. The eon of abiding is composed of twenty eons, beginning with the intermediate eon of decrease (in which the life span decreases from “infinite” to ten years), followed by eighteen intermediate eons of increase and decrease, and ending with an intermediate eon of increase, when the life span increases from ten years to eighty thousand years, at which point the next eon, the eon of dissolution begins. Buddhas only appear during periods of decrease. [ŚĀKYAMUNI](#) Buddha appeared when the life span was one hundred years. It is said that [MAITREYA](#) will come when the human life span next reaches eighty thousand years. The eon of dissolution begins when sentient beings are no longer reborn in the hell realms of that world system. After that point, the hell realms of that world then disappear. (Beings who subsequently commit deeds warranting rebirth in hell are reborn into the hell realms of other universes.) The realms of ghosts and animals then disappear. Through the practice of meditation, humans are reborn in the first [DHYĀNA](#) and then into the second dhyāna. When the karman that has caused

beings to be reborn in that world is exhausted, such that the physical world is depopulated, seven suns appear in the sky and incinerate the entire world system, including Mount Sumeru and all of the first dhyāna. This is followed by another eon of nothingness. See also [SATTVALOKA](#).

[samvartasthāyikalpa](#). (P. saṃvaṭṭatṭhāyīkappa; T. stong pa'i bskal pa; C. kongjie; J. kūkō; K. konggōp 空劫). In Sanskrit, “eon of nothingness”; one of the four periods in the cycle of the creation and destruction of a world system, according to Buddhist cosmology. These are: the eon of creation ([VIVARTAKALPA](#)); the eon of abiding ([VIVARTASTHĀYIKALPA](#)); the eon of dissolution ([SAMVARTAKALPA](#)); and the eon of nothingness (samvartasthāyikalpa). According to the [ABHIDHARMAKOŚABHĀSYA](#), each of the four eons lasts twenty intermediate eons. After the complete dissolution of the previous world system, an eon of nothingness occurs in which the universe remains in a state of vacuity, with the sentient beings who had populated that world system reborn in other worlds or in the second concentration ([DHYĀNA](#)) of the realm of subtle materiality ([RŪPADHĀTU](#)). (For the remainder of this cosmology, see the preceding entry [SAMVARTAKALPA](#), s.v.) After successive eons of formation, abiding, and dissolution, the karma that had caused beings to be reborn into the world is exhausted, such that the physical world is depopulated; seven suns then appear in the sky and incinerate the entire world system, including Mount [SUMERU](#) and all of the first dhyāna. Thus begins a new eon of nothingness, a period of twenty intermediate eons of vacuity. See also [BHĀJANALOKA](#).

[samvṛti](#). (P. sammuti; T. kun rdzob; C. shisu/su; J. sezoku/zoku; K. sesok/sok 世俗/俗). In Sanskrit, “conventional” or “relative”; a term used to designate the phenomena, concepts, and understanding associated with unenlightened, ordinary beings ([PRTHAGJANA](#)). Saṃvṛti is akin to the Sanskrit term [LAUKIKA](#) (mundane), in that both are used to indicate worldly things or unenlightened views, and is typically contrasted with [PARAMĀRTHA](#), meaning “ultimate” or “absolute.” In Sanskrit the term carries the connotation of “covering, concealing,” implying that the independent reality apparently possessed by ordinary phenomena may seem vivid and convincing, but is in fact ultimately illusory and unreal. Much analysis and debate has occurred within the various philosophical schools regarding the questions of if, how, and in what way saṃvṛti or conventional phenomena exist. For example, in his [PRASANNAPADĀ](#), the seventh-century scholar [CANDRAKĪRTI](#) lists the following three characteristics

of saṃvṛti. First, they conceal reality (avacchādana). Second, they are mutually dependent (anyonyasamāśraya), meaning that saṃvṛti phenomena are dependent on causes and conditions. Finally, they are concerned with worldly activities or speech (lokavyavahāra). Buddhas and [BODHISATTVA](#)s use their understanding of conventional reality to help them convey the [DHARMA](#) to ordinary beings and lead them away from suffering. See also [SAMVṚTISATYA](#).

[samvṛtibodhicitta](#). (T. kun rdzob byang chub kyi sems). In Sanskrit, “conventional (or relative) aspiration to enlightenment.” In Indian [MAHĀYĀNA](#) scholastic literature, this term is contrasted with the “ultimate aspiration to enlightenment” ([PARAMĀRTHABODHICITTA](#)). The term saṃvṛtibodhicitta is used to refer to [BODHICITTA](#) in its more common usage, as the aspiration to achieve buddhahood for the sake of all sentient beings. It is the generation of this aspiration for enlightenment ([BODHICITTOTPĀDA](#)) that marks the beginning of the bodhisattva path and the Mahāyāna path of accumulation ([SAMBHĀRAMĀRGA](#)). The ultimate aspiration or mind of enlightenment refers to the bodhisattva’s direct realization of the ultimate truth ([PARAMĀRTHASATYA](#)). In the case of the [MADHYAMA](#) school’s interpretation, this would be the direct realization of emptiness ([ŚŪNYATĀ](#)). Such realization, and hence the ultimate aspiration to enlightenment, occurs beginning on the Mahāyāna path of vision ([DARŚANAMĀRGA](#)) and is further developed on the path of cultivation ([BHĀVANĀMĀRGA](#)). These two types of bodhicitta explain how bodhicitta is present both during periods of concentration or equipoise (see [SAMĀPATTI](#), [SAMĀHITA](#)) on the ultimate truth and during all the other stages of the path, called subsequent attainment (pr̥ṣṭhalabdha; cf. [PRSTHALABDHĀJÑĀNA](#)). These two terms inform the presentation of bodhicitta in the [BODHICITTAVIVARANA](#), attributed to [NĀGĀRJUNA](#), and are widely employed in Tibetan [BLO SBYONG](#) literature.

[samvṛtisamgha](#). (S). See [SAMMUTISANĠHA](#).

[samvṛtisatya](#). (P. sammutisacca; T. kun rdzob bden pa; C. shisu di/sudi; J. sezokutai/zokutai; K. sesok che/sokche 世俗諦/俗諦). In Buddhist Sanskrit, “conventional truth” or “relative truth”; the term carries the pejorative connotation of deception, concealment, and obscuration. Conventional truth (saṃvṛtisatya) and ultimate truth ([PARAMĀRTHASATYA](#)) constitute the “two truths” ([SATYADVAYA](#)), a philosophical bifurcation that is widely referenced and analyzed in Buddhism. All dharmas are said to be included in one of these two categories. Saṃvṛtisatya is variously defined by the Buddhist philosophical

schools, but it is generally understood to refer to objects of ordinary experience that involve misperceptions tainted by ignorance, in distinction to the true or ultimate nature of those objects, which are ultimate truths (paramārthasatya). It is important to note that conventional truths, although misperceived, nonetheless exist conventionally or have conventional utility. The object of the most consequential misconception, a perduring self ([ĀTMAN](#)), is not a conventional truth because it is utterly nonexistent. Saṃvṛtisatya is also understood to mean the unavoidable domain through which sentient beings must navigate and communicate with one another in the mundane world. Thus buddhas and [BODHISATTVAS](#) use their knowledge of conventional truths to teach unenlightened beings and lead them away from suffering. Some Buddhist schools further subdivide saṃvṛtisatya into two categories: tathyasamvṛtisatya (correct conventional truth) and atathyasamvṛtisatya (or mithyāsamvṛtisatya, incorrect or false conventional truth), a distinction based upon whether or not the object can perform functions in accordance with their appearance. For example, a face would be a tathyasamvṛtisatya but a reflection of a face in a mirror would be a mithyāsamvṛtisatya.

[samyagājīva](#). (P. sammājīva; T. yang dag pa'i 'tsho ba; C. zhengming; J. shōmyō; K. chōngmyōng 正命). In Sanskrit, “right livelihood” or “correct livelihood”; the fifth constituent of the noble eightfold path ([ĀRYĀSTĀNGAMĀRGA](#)). “Right” (samyak) in this context is interpreted as “resulting in a decrease in the net suffering experienced by oneself and others.” Of the three divisions of the eightfold path—morality ([ŚĪLA](#)), concentration ([SAMĀDHI](#)), and wisdom ([PRAJÑĀ](#))—samyagājīva is the third of the three aspects of moral training. It involves abstention from engaging in occupations that are considered to be incompatible with morality because they bring harm to other beings, either directly or indirectly. Such inappropriate occupations include selling weapons, or working as a butcher, fisherman, or soldier. Right livelihood also involves abstention from any occupation that may cause oneself, or encourage others, to break precepts associated with right speech ([SAMYAGVĀC](#)) and right action ([SAMYAKKARMĀNTA](#)). For this reason, selling intoxicants is considered to be a breach of right livelihood. The tradition provides examples of wrong livelihoods for both monastics and the laity. In Pāli literature, the [BRAHMAJĀLASUTTA](#) and [SĀMAÑÑAPHALASUTTA](#) of the [DĪGHANIKĀYA](#) list several “wrong livelihoods” for monks. These include performing divination and astrology as well as casting spells. [MAHĀYĀNA](#) interpretations stress the absence

of absolutes, and the relative merits or demerits of any occupation based on the situation at hand and its value to the larger goal of promoting the welfare of others. In the inversion of categories that is characteristic of much of tantric literature, many of the [MAHĀSIDDHAS](#) are involved in professions that do not constitute right livelihood according to mainstream Buddhist definitions.

[samyagdṛsti](#). (P. sammādiṭṭhi; T. yang dag pa'i lta ba; C. zhengjian; J. shōken; K. chōnggyōn 正見). Often translated as “right view” or “correct view,” the first constituent of the noble eightfold path ([ĀRYĀSTĀṄGAMĀRGA](#)). It is described as the correct understanding of the [FOUR NOBLE TRUTHS](#) (catvāry āryasatyāni); namely, the truth of suffering, the truth of the cause of suffering, the truth of cessation of suffering, and the truth of the path leading to the end of suffering. The last truth is itself the same as the eightfold path. Right view is also identified as the correct understanding of nonself ([ANĀTMAN](#)). In the [MADHYĀNTAVIBHĀGA](#), right view refers to the understanding of the vision of truth that has just been witnessed, the unique formulation of the inexpressible in the mind of the awakened one who has just emerged from equipoise ([SAMĀHITA](#)).

[samyagvāc](#). (P. sammāvācā; T. yang dag pa'i ngag; C. zhengyu; J. shōgo; K. chōngō 正語). In Sanskrit, “right speech” or “correct speech,” the third constituent of the noble eightfold path ([ĀRYĀSTĀṄGAMĀRGA](#)), described as refraining from the four types of unwholesome verbal action: viz., lying, divisive speech, harsh speech, and frivolous prattle. See [KARMAPATHA](#).

[samyagvyāyāma](#). (P. sammāvāyāma; T. yang dag pa'i rtsol ba; C. zhengjingjin; J. shōshōjin; K. chōngjōngjin 正精進). In Sanskrit, “right effort” or “correct effort”; the sixth constituent of the noble eightfold path ([ĀRYĀSTĀṄGAMĀRGA](#)), which is divided into four progressive endeavors: (1) preventing the arising of unwholesome ([AKUŚALA](#)) mental states that have not yet arisen, (2) continuing to abandon unwholesome mental states that have already arisen, (3) generating wholesome ([KUŚALA](#)) mental states that have not yet arisen, and (4) continuing to cultivate wholesome mental states that have already arisen. These wholesome mental states are characterized by mindfulness ([SMṚTI](#)), energy ([VĪRYA](#)), rapture ([PRĪTI](#)), concentration ([SAMĀDHI](#)), and equanimity ([UPEKṢĀ](#)), with the emphasis on energy or vigor (vīrya), here called effort (vyāyāma). In a more technical sense, as the sixth constituent of the eightfold noble path as set forth in the [MADHYĀNTAVIBHĀGA](#), [MAHĀYĀNASŪTRĀLAMKĀRA](#), and parts of the [ABHIDHARMAKOŚABHĀSYA](#), samyagvyāyāma is the right effort required to

eliminate the specific sets of afflictions ([KLEŚA](#)) that are to be abandoned on the path of cultivation ([BHĀVANĀMĀRGA](#)). The same force, required right from the start of the development of the path to enlightenment, is systematized as the four pradhāna (effort) or [PRAHĀNA](#) (abandonments). Like smṛti and samādhi (see [RDDHIPĀDA](#)), effort is singled out for special treatment because of its importance at all stages of the path. The word [SAMYAKPRADHĀNA](#) (correct effort) is synonymous with samyakvyāyāma when it describes pradhāna that is fully developed. See also [SAMYAKPRADHĀNA](#).

[samyakkarmānta](#). (P. sammākammanta; T. yang dag pa'i las kyī mtha'; C. zhengye; J. shōgō; K. chōngōp 正業). In Sanskrit, lit. “correct ends of actions,” commonly translated as “right action” or “correct action” and is the fourth constituent of the noble eightfold path ([ĀRYĀSTĀNGAMĀRGA](#)). Of the three divisions of the eightfold path—morality ([ŚĪLA](#)), concentration ([SAMĀDHI](#)), and wisdom ([PRAJÑĀ](#))—samyakkarmānta is the second of the three types of moral training. It is described as refraining from the three unwholesome physical actions of killing, stealing, and sexual misconduct. Thus three of the five most fundamental Buddhist precepts ([PAÑCAŚĪLA](#)) are encompassed by samyakkarmānta (the other two being abstinence from false speech and abstinence from intoxicants). Action is considered to be particularly significant in the Buddhist tradition because it is understood to be a product of mental volition ([CETANĀ](#)). Various schools variously interpret the nuances of right action. For example, East Asian Buddhism has generally concluded that meat-eating inevitably causes animals to suffer and is therefore inconsistent with samyakkarmānta, even though meat-eating is not specifically proscribed in the mainstream Buddhist [VINAYAS](#).

[samyakpradhāna](#). (P. sammāpadhāna; T. yang dag par spong ba; C. zhengqin; J. shōgon; K. chōnggŭn 正勤). In Sanskrit, “right effort” or “correct effort”; in Tibetan (which reads the term as [PRAHĀNA](#)), “right abandonment.” There are four right efforts, which are set forth within the presentation of the second set of dharmas making up the thirty-seven constituents of enlightenment ([BODHIPĀKSIKADHARMA](#)). The four pradhānas (efforts or, as prahāna, abandonments) describe effort at incipient stages of the path or religious training; by contrast, right effort ([SAMYAKVYĀYĀMA](#)), the sixth constituent of the eightfold path ([ĀRYĀSTĀNGAMĀRGA](#)), denotes the effort or abandonment that occurs during the path of vision ([DARŚANAMĀRGA](#)) or the path of cultivation

([BHĀVANĀMĀRGA](#)), when the path is more fully developed. Pradhāna involves the effort to abandon unwholesome ([AKUŚĀLA](#)) mental states—and their resulting actions via body, speech, and mind—that are conducive to suffering. Simultaneously, samyakpradhāna encompasses the effort to cultivate those wholesome ([KUŚĀLA](#)) mental states that are conducive to happiness for both oneself and others. These wholesome mental states are characterized by mindfulness ([SMṚTI](#)), energy ([VĪRYA](#)), rapture ([PRĪTI](#)), concentration ([SAMĀDHI](#)), and equanimity ([UPEKṢĀ](#)). At the first stage of practice, the focus is on [SMṚTI](#), which, as the foundations of mindfulness ([SMṚTYUPASTHĀNA](#)), involves mindfulness of the [FOUR NOBLE TRUTHS](#) as applied to the body, sensations, states of mind, and wholesome and unwholesome dharmas. At the second stage of the practice, the focus is on the effort needed to develop samādhī. When fully developed in the mind of the awakened person, the practice of mindfulness is called right mindfulness; concentration, rapture, and equanimity are included under right concentration; and energy is called right effort (samyakvyāyāma).

[samyaksamādhī](#). (P. sammāsamādhī; T. yang dag pa'i ting nge 'dzin; C. zhengding; J. shōjō; K. chōngjōng 正定). In Sanskrit, “right concentration” or “correct concentration,” the eighth constituent of the noble eightfold path ([ĀRYĀSTĀNGAMĀRGA](#)). It is defined generally as the concentration of the mind on wholesome objects. When fully developed, such concentration results in the attainment of the four levels of meditative absorption ([DHYĀNA](#)) associated with the realm of subtle materiality ([RŪPADHĀTU](#)). In this context, two types of samyaksamādhī are described. The first, called mundane, or [LAUKIKA](#), is associated with all forms of ordinary concentration up to and including the four stages of dhyāna. The second type is associated with the attainment of the four supramundane ([LOKOTTARA](#)) paths of the stream-enterer, once-returner, nonreturner, and arhat.

[samyaksambodhi](#). (P. sammāsambodhi; T. yang dag par rdzogs pa'i byang chub; C. zhengdengjue; J. shōtōgaku; K. chōngdūnggak 正等覺). In Sanskrit, “complete, perfect enlightenment.” The term, along with its synonym, [ANUTTARASAMYAKSAMBODHI](#), is commonly used to refer to the enlightenment of a buddha, achieved under the [BODHI TREE](#). Different schools of Buddhist thought distinguish this samyaksambodhi from the simple enlightenment ([BODHI](#)) of an [ARHAT](#) in a variety of ways, with the [MAHĀYĀNA](#) schools asserting, for example, that a buddha has destroyed both the afflictive obstructions ([KLEŚĀVARANA](#)) and

the obstacles to omniscience ([JÑEYĀVARANA](#)), while an arhat has only destroyed the former.

[samyaksambuddha](#). (P. sammāsambuddha; T. yang dar par rdzogs pa'i sangs rgyas; C. zhengbianzhi; J. shōhenchi; K. chōngp'yōnji 正遍知). In Sanskrit, “complete and perfect buddha” or “complete and perfect enlightened one,” a common epithet of a buddha, emphasizing that he has achieved the ultimate enlightenment, one that surpasses all others, including the enlightenment of the [ARHAT](#).

[samyaksamkalpa](#). (P. sammāsankappa; T. yang dag pa'i rtog pa; C. zhengsiwei; J. shōshiyui; K. chōngsayu 正思惟). In Sanskrit, “right attitude” or “right intention”; the second constituent of the noble eightfold path ([ĀRYĀSTĀNGAMĀRGA](#)), described as the intention to avoid thoughts of attachment, hatred, and harmful intent, and to promote loving-kindness and nonviolence. Alternatively, it is the mental articulation or conceptualization ([SAMKALPA](#)) of the content of the inexpressible vision of the [FOUR NOBLE TRUTHS](#) that occurs on the path of vision ([DARŚANAMĀRGA](#)) and that motivates one to teach it to others; [SAMYAGDRSTI](#) (right view) is, by contrast, the nonconceptual understanding of that content.

[samyaksmṛti](#). (P. sammāsati; T. yang dag pa'i dran pa; C. zhengnian; J. shōnen; K. chōngnyōm 正念). In Sanskrit, “right mindfulness” or “correct mindfulness,” the seventh constituent of the noble eightfold path ([ĀRYĀSTĀNGAMĀRGA](#)). It is defined as the full development of the cultivation of the four foundations of mindfulness ([SMRTYUPASTHĀNA](#)) on the body ([KĀYA](#); [KĀYĀNUPAŚYANĀ](#)), sensations ([VEDANĀ](#)), mind ([CITTA](#)), and various factors ([DHARMA](#)).

[samyaktvaniyāmāvākṛānti](#). (P. sammattaniyāma-okkanti; T. yang dag pa nyid skyon med pa la zhugs pa; C. zhengxing lisheng; J. shōshōrishō; K. chōngsōng isaeng 正性離生). In Sanskrit, “access to the certainty that one will eventually win liberation” or “entering the stage of certainty that one is destined for enlightenment.” In the five-stage path structure ([PAÑCAMĀRGA](#)) of the [SARVĀSTIVĀDA](#) school of [ABHIDHARMA](#), the third stage, the path of vision ([DARŚANAMĀRGA](#)), is marked by single thought-moments of realization regarding the [FOUR NOBLE TRUTHS](#) (catvāry āryasatyāni), divided into four insights for each of the four truths. The second of these sixteen moments involves the “knowledge of the fact of suffering” (duḥkhe dharmajñāna) with regard to the sensuous realm

of existence ([KĀMADHĀTU](#)). This acceptance marks the access to the stage of certainty that one is destined for enlightenment (samyaktvaniyāmāvakrānti). This certainty is catalyzed by the highest worldly dharmas ([LAUKIKĀGRADHARMA](#)), the fourth and last of the four aids to penetration ([NIRVEDHABHĀGĪYA](#)). This process leads to stream-entry ([SROTAĀPANNA](#)), the first of the four stages of sanctity ([ĀRYAMĀRGA](#)).

samyojana. (T. kun tu sbyor ba; C. jie; J. ketsu; K. kyōl 結). In Sanskrit and Pāli, “fetter.” There are ten fetters that are commonly listed as binding one to the cycle of rebirth ([SAMSĀRA](#)): (1) [SATKĀYADRSTI](#) (P. sakkāyadiṭṭhi) is the mistaken belief in the existence of a self in relation to the five aggregates ([SKANDHA](#)). (2) [VICIKITSA](#) (P. vicikicchā) is doubt about the efficacy of the path ([MĀRGA](#)). Such skeptical doubt is also classified as one of five hindrances ([NĪVARANA](#)) that prevent the mind from attaining meditative absorption ([DHYĀNA](#)). (3) [ŚĪLAVRATAPARĀMARŚA](#) (P. sīlabbataparāmāsa), “attachment to rules and rituals,” one of four kinds of clinging ([UPĀDĀNA](#)), is the mistaken belief that, e.g., purificatory rites, such as bathing in the Ganges River or performing sacrifices, can free a person from the consequences of unwholesome ([AKUŚALA](#)) actions ([KARMAN](#)). (4) [KĀMARĀGA](#) (“craving for sensuality”), or [KĀMACCHANDA](#) (“desire for sense gratification”), and (5) [VYĀPĀDA](#) (“malice”), synonymous with [DVESA](#) (P. dosa; “hatred”), are both also classified as hindrances to meditative absorption; along with greed ([LOBHA](#)) and ignorance ([AVIDYĀ](#), P. avijjā; see the tenth fetter below), dveṣa is also one of the three unwholesome faculties ([AKUŚALAMŪLA](#)). (6) [RŪPARĀGA](#) (“craving for existence in the realm of subtle-materiality”) is the desire to be reborn as a divinity in the realm of subtle materiality ([RŪPADHĀTU](#)), where beings are possessed of refined material bodies and are perpetually absorbed in the bliss of meditative absorption (dhyāna). (7) [ĀRŪPYARĀGA](#) (“craving for immaterial existence”) is the desire to be reborn as a divinity in the immaterial realm ([ĀRŪPYADHĀTU](#)), where beings are comprised entirely of mind and are perpetually absorbed in the meditative bliss of the immaterial attainments ([SAMĀPATTI](#)). (8) [MĀNA](#) (“pride”) arises from comparing oneself to others and manifests itself in three ways, in the feeling that one is superior to, equal to, or inferior to others. (9) [AUDDHATYA](#) (P. uddhacca) is the mental restlessness or excitement that impedes concentration. (10) [AVIDYĀ](#) is ignorance regarding the [FOUR NOBLE TRUTHS](#) whereby one sees what is not self as self, what is not profitable as profitable, and what is painful as pleasurable. The first three fetters vanish when one reaches the level of stream-enterer; there is a

reduction in the other fetters when one reaches the level of once-returner and nonreturner; and all the fetters vanish when one reaches the stage of arhatship. See also [ANUŚAYA](#); [ĀRYAMĀRGAPHALA](#); [ANĀGĀMIN](#).

[Samyōng Yujōng](#). (四溟惟政) (1544–1610). Influential Korean [SŎN](#) master during the Chosŏn dynasty and important resistance leader during the Japanese Hideyoshi invasions of the late sixteenth century. Yujōng was a native of Miryang in present-day South Kyōngsang province. He was ordained by a monk named Sinmuk (d.u.) at the monastery of [CHIKCHISA](#) on Mt. Hwanghak (in present-day North Kyōngsang province). In 1561, he passed the clerical examinations ([SŪNGKWA](#)) for Sŏn monks and was appointed the abbot of Chikchisa in 1573. He later became the disciple of the eminent Sŏn master [CH'ŎNGHŎ HYUJŎNG](#) (a.k.a. [SŎSAN TAESA](#)). When the Japanese invaded the Korean peninsula in 1592, Yujōng took over his teacher Hyujōng's place as leader of the monks' militia (ŭisŭnggun) against the invading troops. Leading several thousand monk-soldiers, Yujōng's army played a crucial role in several battles where the Japanese were defeated. After the war ended, Yujōng is also said to have gone to Japan as an emissary of the Korean king to negotiate peace with the new shōgun Tokugawa Ieyasu (1543–1616); he also helped to negotiate the release of some three thousand Korean hostages and prisoners of war taken during the invasion. For his valor during the war, Yujōng was appointed prelate (p'ansa) of the [SŎN](#) (Meditation) and [KYO](#) (Doctrine) schools of the Chosŏn-dynasty ecclesia. By the eighteenth century, Yujōng had become the object of a popular cult in Korea, and shrines to Yujōng and his teacher Hyujōng were erected around the country.

[Samyuktābhidharmahrdaya](#). (C. Za apitan xin lun; J. Zōabidon shinron; K. Chap abidam sim non 雜阿毘曇心論). In Sanskrit, “Heart of Abhidharma with Miscellaneous Additions”; the last of a series of expository treatises that summarized the [SARVĀSTIVĀDA ABHIDHARMA](#) as it was prevailing in [BACTRIA](#) and [GANDHĀRA](#). The treatise was based on Dharmaśreṣṭhin's [ABHIDHARMAHRDAYA](#) and includes material adapted from the [ABHIDHARMAMAHĀVIBHĀSĀ](#). The text is available only in a Chinese translation made by [SAMGHAVARMAN](#) in the Liu Song capital of Jiankang in 434 CE; it is divided into eleven rolls, which correspond to separate chapters, on such topics as the elements ([DHĀTU](#)), conditioned factors ([SAMSKĀRA](#)), [KARMA](#), *etc.* This treatise was composed during the early fourth century CE by the Sarvāstivāda [ĀBHIDHARMIKA DHARMATRĀTA](#) II (d.u.). The text

was probably composed during a third major stage in the development of Sarvāstivāda abhidharma literature, following the [JÑĀNAPRASTHĀNA](#) and its six traditional ancillary treatises, or “feet” (pādaśāstra), and then the major *Vibhāṣā* exegeses; this stage eventually culminated in the composition of [VASUBANDHU](#)’s celebrated [ABHIDHARMAKOŚABHĀSYA](#). This Dharmatrāta is often designated in the scholarly literature as Dharmatrāta II, to distinguish him from the Dārṣṭāntika Dharmatrāta I, who was one of the four great ābhidharmikas whom [XUANZANG](#) says participated in the fourth Buddhist council ([SAMGĪTI](#); see [COUNCIL, FOURTH](#)) convened by the [KUSHAN](#) king [KANISKA](#) (r. c. 127–151 CE). Dharmatrāta II also composed the *Pañcavastuvibhāṣā* (C. *Wushi piposha lun*; “Exposition of the Fivefold Classification”), a commentary on the first chapter of Vasumitra’s [PRAKARANAPĀDA](#), one of the seven major texts of the Sarvāstivāda [ABHIDHARMAPĪṬAKA](#), which was translated by Xuanzang in 663; it involves a discussion of the mature Sarvāstivāda school’s fivefold classification system for dharmas: materiality ([RŪPA](#)), mentality ([CITTA](#)), mental concomitants ([CAITTA](#)), forces dissociated from thought ([CITTAVIPRAYUKTASAMSKĀRA](#)), and the unconditioned ([ASAMSKRĀTA](#)).

[Samyuktāgama](#). (P. *Samyuttanikāya*; T. Yang dag par ldan pa’i lung; C. *Za ahan jing*; J. *Zōagongyō*; K. *Chap aham kyōng* 雜阿含經). In Sanskrit, “Connected Discourses,” a division of the [ĀGAMAS](#) corresponding roughly to the Pāli [SAMYUTTANIKĀYA](#). The collection was probably compiled sometime between 200 and 400 CE. Some Sanskrit fragments, especially of the *nidānasamyukta* section, were discovered in [TURFAN](#), but the full collection is only preserved in a Chinese translation, in fifty rolls, made by [GUNABHADRA](#) between 435 and 443 CE, with a second partial Chinese translation (in sixteen rolls) made by an anonym and a brief one-roll version (with only twenty-seven sūtras) apparently translated by [AN SHIGAO](#). The longer Chinese translation is presumed to belong to the [SARVĀSTIVĀDA](#) school, with the shorter partial translation perhaps attributed to the [KĀŚYAPĪYA](#) school. The *Samyuktāgama* collects 1,362 sūtras (compared to 2,872 for the Pāli *Samyuttanikāya*), with some nascent attempts at a subject-matter arrangement, but nothing nearly as systematic as that found in the *Samyuttanikāya*. The Chinese translated title of *Za Ahan jing* (lit. “Miscellaneous Āgama”) corresponds more closely to a Sanskrit **Kṣudrakāgama* (cf. P. [KHUDDAKANIKĀYA](#)), a “miscellaneous” collection of sūtras that is not known to have existed in the Sarvāstivāda school, although the content is more closely aligned with the *Samyuttanikāya*.

Samyuttanikāya. (S. Saṃyuktāgama; T. Yang dag par ldan pa'i lung; C. Zāhan jing; J. Zōagongyō; K. Chap aham kyōng 雜阿含經). In Pāli, “Collection of Related Discourses” (or in its nineteenth-century translation *Book of Kindred Sayings*); the third of the five divisions of the Pāli [SUTTAPITAKA](#) and corresponds roughly to the [SAMYUKTĀGAMA](#) of the [SARVĀSTIVĀDA](#) and [KĀŚYAPIYA](#) schools, which is now extant only in its Chinese translations. The Pāli recension is comprised of some 2,872 individual suttas. Because of questions as to what constitutes a sutta in this case (some are only one sentence in length), enumerations of the number of suttas in the various saṃyutta/saṃyukta collections vary widely, from just under three thousand to over seven thousand (the longer of the two Chinese recensions contains 1,362 sūtras). The *Samyuttanikāya* is divided into five chapters, or vaggas, which are subdivided into fifty-six saṃyuttas, arranged largely by subject matter. The collection derives its title from this classificatory system. The five vaggas are devoted to: (1) verses (sagātha), suttas that in the majority of cases contain verses; (2) causation ([NIDĀNA](#)), suttas that deal primarily with epistemology and psychology; (3) the aggregates (P. khandha, S. [SKANDHA](#)) on the five aggregates; (4) the six sense-fields (P. saḷāyatana, S. [SADĀYATANA](#)), dealing with the six sources of consciousness; and (5) the great division (mahāvagga), which contains suttas on the noble eightfold path ([ĀRYĀSTĀṄGAMĀRGA](#)), the states of concentration ([DHYĀNA](#)), the establishments of mindfulness ([SMRTYUPASTHĀNA](#)), and other important doctrines.

Śāṅakavāsin. (T. Sha na'i gos can; C. Shangnahexiu/Shangnuojiafusuo; J. Shōnawashu/Shōnyakabasha; K. Sangnahwasu/Sangnakkabaksa 商那和修/商諾迦縛娑). In Sanskrit, “Linen Wearer” [alt. Śāṅakavāsa]; the third (or fourth according to [SARVĀSTIVĀDA](#) sources) successor to the Buddha in some of the traditional dharma lineages preserved in Nepal, Tibet, and East Asia. His name derives from a legend that, from the moment he was born following a six-year-long period of gestation in his mother’s womb, he was always dressed in linen garments. Before becoming a monk, he was a rich merchant in [RĀJAGRHA](#), who frequently offered alms to the [SAMGHA](#). He entered the religious order on the recommendation of [ĀNANDA](#), and eventually succeeded him. After mastering all the canons, Śāṅakavāsin traveled around India, propagating Buddhism. He converted many people to the religion, including [UPAGUPTA](#), who became his successor. He also played a role in the second Buddhist council (see [COUNCIL, SECOND](#)). He is believed to have died in [MATHURĀ](#).

Sanbōe. (三宝絵). In Japanese, “The Three Jewels,” a work composed by Minamoto Tamenori (d. 1011); also known as *Sanbōekotoba*. In this preface, Tamenori laments the fact that the world has now entered into the age of the final dharma (J. mappō; see C. [MOFA](#)) and speaks of the need to honor the [DHARMA](#). Tamenori’s text largely consists of three sections corresponding to the three jewels ([RATNATRAYA](#)), namely the Buddha, dharma, and saṃgha. In the buddha-jewel section, Tamenori provides [JĀTAKA](#) stories from various sources. In the dharma-jewel section, he describes the history of Buddhism in Japan from the rise of [SHŌTOKU TAISHI](#) (574–622) to the end of the Nara period. In the saṃgha-jewel section, Tamenori relies on many temple records and texts to speak of the representative ceremonies and rituals of Japanese Buddhism, their provenance, and the biographies of some important monks who carried out these events. The *Sanbōe* serves as a valuable source for studying the history of Buddhism during the Nara period.

Sāñcī. A famous [STŪPA](#) or [CAITYA](#) about six miles southwest of Vidiśā in the Indian state of Madhya Pradesh; often seen transcribed as Sanchi. The Sāñcī stūpa and its surrounding compound is one of the best-preserved Buddhist archeological sites in the world and is well known for its many monasteries, reliquaries, pillars, and stone relief carvings. Sāñcī was an active site of worship and pilgrimage in India between the third century BCE and the twelfth century CE. However, unlike other pilgrimage sites such as [SĀRNĀTH](#) and [BODHGAYA](#), Sāñcī is not known to be a place that was associated with the historical Buddha and there are no records or stories of the Buddha himself ever visiting the site. The emperor [AŚOKA](#) is credited with laying the foundation of the compound by erecting a stūpa and a pillar on the site. Other stories mention a Vidiśā woman whom Aśoka married, called Vidiśā Devī, who was a devout Buddhist; according to tradition, she was the one who initiated construction of a Buddhist monastery at the site. When Aśoka ascended the throne at [PĀTALIPUTRA](#), she did not accompany him to the capital, but remained behind in her hometown and later became a nun. Sāñcī and the nearby city of Vidiśā were located near the junction of two important trading routes, and the city’s wealthy merchants munificently supported its monasteries and religious sites. Structures erected during the rule of the Śuṅgas and the Śātavāhanas still stand today, and the area flourished after 400 CE during the reign of the Guptas. Sāñcī subsequently fell into a lengthy decline and seems to have been completely deserted at least by the end of the thirteenth century. The site was rediscovered in 1818 by a certain

British General Taylor, who excavated the western section of the stūpa; his archeological work was continued by F. C. Maisay and Alexander Cunningham, who discovered relics ([ŚARĪRA](#)) believed to be those of the Buddha’s two major disciples [ŚĀRIPUTRA](#) and [MAHĀMAUDGALYĀYANA](#) in the center of the dome of the main stūpa. There was ongoing controversy within different divisions of the British colonial government over whether or not Sāñcī artifacts should be shipped to British museums; finally, in 1861, the Archeological Survey of India was established and the area was preserved and protected. See also [NASIK](#).

[sandaihihō](#). (三大秘法). In Japanese, “three great esoteric laws,” three secret teachings that are presumed to have been hidden between the lines of the [SADDHARMAPUNDAṚĪKASŪTRA](#) (“Lotus Sūtra”) until [NICHIREN](#) (1222–1282) discovered them and revealed them to the world. The three are: (1) the [DAI-GOHONZON](#) (J. honmon no honzon), the main object of worship in the [NICHIREN SHŌSHŪ](#) school, which is a cosmological chart ([MANDALA](#)) of the universe surrounding an inscription of homage to the title of the “Lotus Sūtra” and Nichiren’s own name; (2) the sanctuary (J. honmon no kaidan) where the dai-gohonzon is enshrined at KAISEKIJI, the head temple of Nichiren Shōshū; and (3) the teaching of [NAM MYŌHŌRENGEKYŌ](#) (J. honmon no [DAIMOKU](#)), “Homage to the ‘Lotus Sūtra,’” the recitation that is central to Nichiren practice.

[sandao](#). (J. sandō; K. samdo 三道). In Chinese, lit. “three destinies,” in East Asian Buddhist iconography, the “triple fold” of skin at the base of the neck on images of the buddhas and bodhisattvas, which is intended to indicate the inevitability of rebirth and the operation of cause and effect. These three folds of skin are interpreted to represent the “three destinies” that inevitably accrue to life in the realm of [SAMSĀRA](#), viz., the afflictions (S. [KLEŚA](#), C. fannaο dao), actions (S. [KARMA](#), C. ye dao), and suffering (S. [DUHKHA](#), C. ku dao).

[sandhyābhāṣā](#). [alt. saṃdhyābhāṣyā] (T. dgongs bshad/dgongs skad). In Sanskrit, “intentional language,” often mistranslated as “twilight language”; a kind of secret or coded speech, used especially, but not exclusively, in [TANTRA](#). The term is used in a broader hermeneutical sense to explain how a difficult or otherwise problematic text requires commentary in order to bring out its doctrinally consistent meaning. The term is also used in an exclusively tantric sense to refer to a secret linguistic code that is understood and used by initiates of a particular tantric circle: e.g., “frankincense” means “blood” and “camphor” means “semen.” The *Pradīpoddyotana* commentary by the tāntrika Candrakīrti

on the *Guhyasamājamūlatantra* explains sandhyābhāṣā with a scheme of six alternatives (ṣaṭkoṭi) in a series of four modes going from less to more profound. The six alternatives are provisional ([NEYĀRTHA](#)) and definitive ([NĪTĀRTHA](#)); requiring interpretation (ābhiprāyika) and not requiring interpretation (anābhiprāyika); and ayathāruta (when one cannot take words literally) and yathāruta (when one can take words literally). Complicated or obscure language (called [VAJRA](#) expression) that can be taken literally (yathāruta), or that can be taken at face value to convey meaning, provides a provisional meaning, i.e., a meaning that requires interpretation (neyārtha); this leads to what the statement does not say literally (ayathāruta), which is its definitive meaning (nītārtha). A passage about a topic not addressed in statements about lower stages of the tantric path, and therefore couched in words that are coded and apparently contradictory to other statements, in the sense that other passages about practices at lower stages of the tantric path contradict what it says, are ābhiprāyika, while straightforward statements about a topic that is not addressed at lower stages of the tantric path are anābhiprāyika; for example, direct statements about clear light ([PRABHĀSVARA](#)) and illusory bodies (māyākāya), the culminating attainments in the Guhyasamāja system. Finally, a statement couched in ordinary language about a topic that is relevant to both earlier and later stages of the tantric path is yathāruta (can be taken literally); statements using a specialized argot, using unusual words that are ordinarily meaningless, like some words in [MANTRAS](#), are ayathāruta. See also [ABHIPRĀYA](#); [ABHISAMDHI](#).

[sandhyābhāṣita](#). (S). See [SANDHYĀBHĀṢĀ](#).

[sandi](#). (J. santai; K. samje 三諦). In Chinese, “three truths,” “threefold truth,” or “three judgments”; a tripartite exegetical description of reality as being empty, provisional, and their mean, used in both the [SAN LUN ZONG](#) and [TIAN TAI ZONG](#) of Chinese Buddhist philosophy. The three truths are said to have been first taught by [SÜNGNANG](#) (c. 450–c. 520), whom tradition considers an important vaunt courier in the development of the Chinese San lun school, the Chinese counterpart of the [MADHYAMA](#) branch of Indian philosophical exegesis, and then developed by later thinkers in both the San lun and Tiantai traditions. This Chinese notion of three truths is said to derive from a verse appearing in the Chinese translation of [NĀGĀRJUNA](#)’s [MŪLAMADHYAMAKĀRIKĀ](#) (C. *Zhong lun*): “All phenomena that are produced from causes and conditions,/These in fact are empty. *They are also provisional names.* This as well is the meaning of the

middle way.” This account is then systematized by Chinese exegetes into: (1) the authentic truth of emptiness (*kongdi*), viz., all things are devoid of inherent existence and are empty in their essential nature; (2) the conventional truth of being provisionally real (*jiadi*), viz., all things are products of a causal process that gives them a derived reality; and (3) the ultimate truth of the mean (*zhongdi*), viz., all things, in their absolute reality, are neither real nor unreal, but simply thus. This three-truth schema may have been influenced by indigenous Chinese scriptures (see [APOCRYPHA](#)) such as the [RENWANG JING](#) and the [PUSA YINGLUO BENYE JING](#). The *Renwang jing*, for example, discusses a three-truth [SAMĀDHI](#) (*sandi sanmei*), in which these three types of concentrations are named worldly truth (*shidi*), authentic truth (*zhendi*), and supreme-meaning truth (*diyiyidi*). In this treatment, worldly truth is the affirmation of the dualistic phenomena of ordinary existence, while authentic truth is presumed to be the denial of the reality of those phenomena; both are therefore aspects of what is typically called conventional truth ([SAMVRTISATYA](#)) in the two-truth schema (see [SATYADVAYA](#)). The supreme-meaning truth transcends all dichotomies, including affirmation and negation, to provide an all-embracing perspective and corresponds to ultimate truth ([PARAMĀRTHASATYA](#)). This schema is peculiar, and betrays its Chinese origins, because “authentic truth” and “supreme-meaning truth” are actually just different Chinese renderings of the same Sanskrit term, *paramāthasatya*. Zhiyi also interprets the statement “neither the same nor different” in the [SADDHARMAPUNDIRĪKASŪTRA](#) (“Lotus Sūtra”) as referring implicitly to the three-truth schema: “different” is the conventional truth of provisional reality, “same” is the authentic truth of emptiness, and the whole phrase is the ultimate truth of the mean. These presentations demonstrate that the Chinese were grappling with what they considered to be an unresolved internal tension in Indian presentations of conventional and ultimate truth and were exploring a three-truth schema as one means of resolving that tension.

[sanfen kejing](#). (J. *sanbunkakyō*; K. *sambun kwagyōng* 三分科經). In Chinese, “threefold division of a scripture,” an exegetical technique developed by the pioneering scholiast and cataloguer [DAO’AN](#) (312–385) to analyze a specific [SŪTRA](#)’s narrative structure. Dao’an’s scriptural commentaries posited the following three major sections that were common to all sūtras: (1) the prefatory setting (C. *xufen*; S. *nidāna*), which specifies the time and place where the sūtra was delivered; (2) the “text proper” (*zhengzongfen*), viz., the main body of the sūtra, which relates the doctrines and practices that were the subject of the

discourse; and (3) the “dissemination section” (liutongfen; S. parīdanā), which describes the confidence and insight the scripture inspired in its audience. This schema was frequently employed in subsequent scriptural exegesis of most of the major scholastic schools of East Asian Buddhism and is still widely used even today. See also [NETTIPPAKARANA](#); [PETAKOPADESA](#); [VYĀKHYĀYUKTI](#); [WUZHONG XUANYI](#).

saṅgha. Pāli and classical Sanskrit variant of “community.” See also the [BUDDHIST HYBRID SANSKRIT](#) form [SAMGHA](#) and its various compound forms.

Saṅgha Administration Act. A law enacted in Thailand in 1902 designed to bring the entire Buddhist order (P. saṅgha, S. [SAMGHA](#)) of Thailand under a single administrative authority. It was primarily an initiative of Prince Wachirayān, brother of King Chulalongkorn ([RĀMA V](#)) and the son of King Mongkut ([RĀMA IV](#)). The law was initially applied only to royal monasteries and several other important monasteries, but in 1908 it was extended to encompass the entire northeast region. It established a single system for monastic education and standardized the ordination procedure. Under this act, all abbots in Thailand were appointed by government officials or the king. The act was revised in 1941 and in 1962. It has not met with universal acceptance or compliance, being challenged especially by the tradition of the forest monks ([ARAÑÑAVĀSĪ](#)).

Saṅghamittā. (S. Saṅghamitrā; C. Sengqiemiduo; J. Sōgyamitta; K. Sūnggamilta 僧伽蜜多). In Pāli, “Friend of the Community,” proper name of the nun ([BHIKSUNĪ](#)) who was the daughter of the Indian king Asoka (S. [AŚOKA](#)) and sister of [MAHINDA](#) (S. Mahendra). According to some accounts, Mahinda and Saṅghamittā were twins; others claim, instead, that Mahinda was one or two years her senior. According to Pāli sources, Saṅghamittā was born in Ujjeni (S. Ujjayinī) and married to Aggibrahmā (S. Agnibrahmā), with whom she had a son named Sumana. The most detailed account of her life comes to us in the [MAHĀVAMSA](#) (c. fifth century CE). There, she is said to have been ordained when she was eighteen years old. When Mahinda went to Sri Lanka and converted King [DEVĀNAMPRIYATIṢṢA](#), the king’s daughter Anulā asked to be ordained. Mahinda replied that monks cannot ordain women, but that his sister was a nun and that she should be invited to come from India. Saṅghamittā traveled to the island kingdom, bringing along with her eleven other nuns in order to establish her ordination lineage in that new region, as well as a branch from the [BODHI TREE](#). The *Mahāvamsa* tells us that during her voyage to Sri Lanka, nineteen

[NĀGAs](#) threatened to use their magic to steal the bodhi tree, but Saṅghamittā defended it by taking the form of a [GARUDA](#) (the natural enemy of the nāgas). Tradition holds that the bodhi tree she brought took root in [ANURĀDHAPURA](#) and it remains to this day an object of worship. Neither Mahinda nor Saṅghamittā returned to India. Upon her death, her body was cremated and her remains were enshrined in a [STŪPA](#) in Cittasālā, near the site of the bodhi tree.

[saṅgharāja](#). In Pāli, lit. “ruler of the community,” often rendered into English as “supreme patriarch”; a title used in the predominantly [THERAVĀDA](#) traditions of Sri Lanka, Thailand, and Cambodia. The title is given to one monk who serves as the head of a single monastic school ([NIKĀYA](#)), or the head of the entire national saṅgha (S. [SAMGHA](#)). The procedure for appointing a saṅgharāja differs across traditions. At times, the title has been given to the most senior monk in the saṅgha, that is, the one who has been ordained the longest. At other times, designating a saṅgharāja has been the prerogative of the king, as was the case for the first saṅgharāja to be appointed in Southeast Asia: Mahākassapa, a forest-dwelling monk of Sri Lanka who, in the twelfth century, helped King [PARĀKRAMABĀHU](#) I reform the Ceylonese saṅgha. The duties of the saṅgharāja have varied widely. In some instances, the title is honorific and the office holder wields little or no administrative power; in such instances, the saṅgharāja serves as a figurehead and spokesman for the saṅgha. In other instances, such as with Mahākassapa, the saṅgharāja has the authority to enact dramatic changes in the order and structure of the Buddhist saṅgha. Another title related to the saṅgharāja is that of upasaṅgharāja, a deputy who is appointed to assist the saṅgharāja in carrying out his duties. The Burmese equivalent of saṅgharāja is thathanabaing. See also [CHONGJŌNG](#).

[Saṅgītisutta](#). (S. Saṅgītisūtra; C. Zhongji jing; J. Shushūkyō; K. Chungjip kyōng 衆集經). In Pāli, “Discourse on Communal Recitation,” the thirty-third sutta of the [DĪGHANIKĀYA](#) (a separate [DHARMAGUPTAKA](#) recension appears as the ninth sūtra in the Chinese translation of the [DĪRGHĀGAMA](#)); preached by Sāriputta (S. [ŚĀRIPUTRA](#)) to a congregation of monks at Pāvā in Malla country. The followers of the [JAINA](#) leader Nigaṅṭha-Nātaputta (S. [NIRGRANTHA-JÑĀTĪPUTRA](#)) had begun to quarrel following the death of their master. Śāriputta related to the monks at Pāvā that this occurred because Jñātīputra was not enlightened and so his teachings were erroneous and not well taught, but the Buddha, by contrast, was enlightened and his teachings were well taught. Śāriputta suggested that the

dharma be chanted by the congregation in unison as a means of preserving it. He then summarized the dharma under numerical classifications ranging from groups of ones to groups of tens as a device for memorization. This exegetical stratagem provides one of the first canonical recensions of the “matrices” (P. *mātikā*, S. [MĀTRKĀ](#)) that are thought to mark the incipency of the [ABHIDHARMA](#), and its style of exposition is closely connected to that employed in the [DASUTTARASUTTA](#) (S. *Daśottarasūtra*); several of its exegetical categories are also reproduced in the [SAMGĪTIPARYĀYA](#) of the [SARVĀSTIVĀDA ABHIDHARMA](#).

[Saṅgītivamsa](#). In Pāli, “Chronicle of the Councils”; a history of nine [THERAVĀDA](#) (i.e., [STHAVIRANIKĀYA](#)) Buddhist councils, or saṅgīti (S. [SAMGĪTI](#)), according to the Thai reckoning. Written in Pāli in Bangkok in 1789 by the monk Somdet Phra Wannarat, the text describes the three Buddhist councils held in ancient India, followed by an account of councils four through eight in Sri Lanka, and concludes with the ninth Buddhist council (see [COUNCIL](#), NINTH) held in Bangkok under King Rāma I in 1788–1789. The work contains much information on the religion and polity of Thailand through the establishment of the Cakri dynasty (1782-present).

[sangong](#). (三公). In Chinese, lit. “three gentlemen”; the three great lay masters of Chinese Buddhism recognized by [PENG SHAOSHENG](#) (1740–1796) in his [JUSHI ZHUAN](#) (“The Biographies of [Eminent] Laymen”): [LIU CHENGZHI](#) (354–410), for his mastery of [PURE LAND](#) ([JINGTU](#)) practice; [LI TONGXUAN](#) (635–730), for his scholarship on [HUAYAN](#); and [PANG YUN](#) (740–803), for his practice of [CHAN](#). See individual entries for the three.

[sang rgyas](#). (sang gye). The Tibetan translation of buddha. In coining neologisms to render Buddhist terminology, Tibetan translators sometimes sought to evoke multiple meanings of a single Sanskrit term. In the case of buddha, they knew that the Sanskrit root $\sqrt{\text{budh}}$ has the meaning of both “awaken” and “open” or “spread.” They therefore translated buddha as “awakened” and “spread,” meaning that a buddha has awakened from the sleep of ignorance and spread his mind to all objects of knowledge.

[Sangs rgyas gling pa](#). (Sangye Lingpa) (1340–1396). Tibetan treasure revealer ([GTER STON](#)) and master of the [RNYING MA](#) sect of Tibetan Buddhism. He was born in the southern Tibetan region of Rkong po (Kongpo) and experienced visions of [AVALOKITEŚVARA](#) as a child. He was ordained as a [BHIKSU](#) at Byang

chub gling monastery on [TSA RI](#). From the age of thirty-four onward, he is credited with discovering numerous treasure cycles, especially from the region of Rkong po. Foremost among these are the “six root tantras of the gathering intentions” (dgongs ’dus rtsa ba’i rgyud drug), which he later divided into thirteen volumes. These teachings were acclaimed by masters of varied sectarian affiliation including the fourth and fifth [KARMA PAs](#), the latter transmitting them to the Ming emperor Yongle.

[sanguan](#). (J. sangan; K. samgwan 三觀). In Chinese, “threefold contemplation”; several versions of such a threefold contemplation are elaborated in Chinese exegetical traditions, of which the most influential was the [TIANTAI](#) version outlined by [TIANTAI ZHIYI](#) in his [MOHE ZHIGUAN](#). Zhiyi’s version entails a system of contemplative practice that leads to the attainment of insight into the nature of reality. Zhiyi’s “threefold contemplation” consists of the contemplations of the “three truths: ([SANDI](#)): emptiness, conventional existence, and their mean (C. kong jia zhong sanguan; J. kū ge chū sangan; K. kong ka chung samgwan). The first, “contemplation on emptiness” (kongguan), is the step of practice that advances beyond naïve realism by penetrating into the conditionally constructed, and therefore insubstantial, nature of all phenomena (see [ŚUNYATĀ](#)). The second, the “contemplation on conventionality” (jiaguan), involves the reaffirmation of the conventional existence of all phenomena, whereby a bodhisattva actively engages the world in spite of his awareness of the reality of emptiness. The third, the “contemplation of their mean” (zhongguan), is understood as a dialectical transcendence of the previous two modes of practice. This transcendence has two aspects: it is transcendent because it is neither (“the middle that negates both,” C. shuangfei zhi zhong) and because it affirms both (“the middle that illuminates both,” C. shuangzhao zhi zhong). It is “neither” because the middle way is not fixed exclusively on either abiding in emptiness or on wallowing in mundane existence. It is “both” because it elucidates that “emptiness” and “conventionality” are not opposing realities but are in fact mutually validating. “The threefold contemplation” is understood variously as a gradual or a simultaneous practice (“two kinds of ‘threefold contemplation,’” C. erzhong sanguan; J. nishu no sangan; K. ijong samgwan). The gradual practice of the “threefold contemplation” begins with the contemplation of emptiness, advances to that of conventional existence, and culminates in the contemplation of their mean. Tiantai exegetes variously labeled this approach “the threefold contemplation” by either “graduated stages” (C. cidi sanguan; J. shidai sangan;

K. ch'aje samgwan) or “differentiation” (C. biexiang sanguan; J. bessō no sangan; K. pyōlsang samgwan). As a simultaneous practice, all three aspects of the reality are to be contemplated simultaneously within any given instant of thought: a true understanding of “emptiness” is the same as the correct understanding of “conventional existence,” for they are just different emphases of the same truth of conditionality; only an erroneous construction of “emptiness” and “conventional existence” would lead to the conclusion that they are separate, contradictory realities. This approach is variously referred to as “the threefold contemplation that does not involve graduated stages” (C. buci di sanguan; J. fushidai sangan; K. pulch'aje samgwan), “the perfectly interfused threefold contemplation” (C. yuanrong sanguan; J. ennyū no sangan; K. wōnyung samgwan), or “the threefold contemplation [that is to be conducted within] a single moment of thought” (C. yixin sanguan; J. isshin sangan; K. ilsim samgwan). See also [SANZHI](#).

[sanimitta](#). (T. mtshan bcas). In Sanskrit, literally “with marks” or “with signs,” a term that has at least two principal denotations. In the context of [MADHYAMAKA](#), sanimitta is a pejorative term, implying that one perceives the world via the chimeric signs or marks of intrinsic nature ([SVABHĀVA](#)). Because all phenomena are ultimately “signless” ([ĀNIMITTA](#)), to perceive them as having signs is a benighted form of ignorance. In the context of tantric meditation, however, the term has a more salutary meaning. Tantric texts and especially [YOGATANTRAS](#), mention two forms of meditation, one called “yoga with signs” ([SANIMITTAYOGA](#)), the other “yoga without signs” ([ANIMITTAYOGA](#)). Yoga with signs refers to meditation in which one visualizes oneself as a deity, one’s environment as a [MANDALA](#), etc. Yoga without signs refers to meditation in which one meditates on emptiness ([ŚŪNYATĀ](#)). In certain tantric [SĀDHANAS](#), both forms of meditation are performed.

[sanimittayoga](#). (T. mtshan bcas kyi mal 'byor). Literally, “yoga with signs,” a term that occurs in Buddhist tantric literature, and is especially associated with [YOGATANTRA](#) class of tantric texts. Yoga with signs refers to those meditation practices that entail dualistic appearances or “signs,” in the sense that the meditator visualizes seed syllables ([BĪJA](#)) and deities. It is contrasted with [ANIMITTAYOGA](#), or “yoga without signs,” those meditation practices in which one meditates on emptiness ([ŚŪNYATĀ](#)) in such a way that there are no dualistic appearances or signs.

Sañjaya Vairātīputra. [alt. Saṃjayin Vairātīputra] (P. Sañjaya/Sañcaya Belaṭṭhiputta; T. Smra 'dod kyi bu mo'i bu yang dag rgyal ba can; C. Shansheyē Piluozhizi; J. Sanjaya Birateishi; K. Sansaya Pirajija 刪闍耶毘羅胝子). One of the so-called “six heterodox teachers” often mentioned in Buddhist sūtras, whose views and/or practices were criticized by the Buddha, along with [PŪRANA-KĀŚYAPA](#), [MASKARIN GOŚĀLĪPUTRA](#), [AJITA KEŚAKAMBALA](#), [KAKUDA KĀTYĀYANA](#), and [NIRGRANTHA-JÑĀTĪPUTRA](#). Sañjaya was a skeptic who doubted the possibility of knowledge and the validity of logic. On questions such as the presence of a world beyond the visible world, the nature of the postmortem condition, and whether actions done in this life had effects in the next, he found the four traditional answers—affirmation, negation, partial affirmation and partial negation, and neither affirmation or negative—to each be unacceptable, and therefore gave evasive answers when asked such speculative questions. The Buddha’s two foremost disciples, [ŚĀRĪPUTRA](#) and [MAHĀMAUDGALYĀYANA](#), were originally disciples of Sañjaya before encountering the teachings of the Buddha. They are said to have each taken 250 of Sañjaya’s followers with them when they abandoned him for the Buddha. Upon hearing the news of their departure, Sañjaya vomited blood and fainted.

Sanjie jiao. (J. Sangaikyō/Sankaikyō; K. Samgye kyo 三階教). In Chinese, often translated as the “Three Stages School,” but more probably referring to the “School of the Third Stage.” The Sanjie jiao was a Chinese religious movement that was inspired by the influential teachings of the Chinese monk [XINXING](#) (540–594). The community shared Xinxing’s belief in the decline of the [DHARMA](#) ([MOFA](#)) and the concomitant decay of one’s potential or capacity (genji) for attaining buddhahood. According to the Three Stages teachings, the capacities of sentient beings are roughly divided into the so-called three stages (sanjie). The first two stages, now past, are those of the one vehicle ([YISHENG](#); cf. [EKAYĀNA](#)) or three vehicles ([TRIYĀNA](#)), during which correct views about Buddhism were still present in the world. The current “third stage” (i.e., the present) was characterized instead by the proliferation of false views and prejudices. Because people during this degenerate age of the dharma were inevitably mistaken in their perceptions of reality, it was impossible for them to make any correct distinctions, whether between right and wrong, good and evil, ordained and lay. To counter these inveterate tendencies toward discrimination, Sanjie jiao adherents were taught instead to treat all things as manifestations of the buddha-nature ([FOXING](#)), leading to a “universalist teaching” (pufa) of Buddhism that was

presumed to have supplanted all the previous teachings of the religion. Xinxing advocated that almsgiving ([DĀNA](#)) was the epitome of Buddhist practice during the degenerate age of the dharma and that the true perfection of giving ([DĀNAPĀRAMITĀ](#)) meant that all people, monks and laypeople alike, should be making offerings to relieve the suffering to those most in need, including the poor, the orphaned, and the sick. In its radical reinterpretation of the practice of giving in Buddhism, even animals were considered to be a more appropriate object of charity than were buddhas, bodhisattvas, monks, or the three jewels ([RATNATRAYA](#)); members of the community were even said to bow down to dogs. As the only reliable practice during this degenerate third stage, the Sanjie jiao community institutionalized giving in the form of an “inexhaustible storehouse cloister” ([WUJINZANG YUAN](#)). Donations made to the inexhaustible storehouse established by the Three Stages community at the monastery Huadusi in Chang’an would be distributed again during times of famine. The offerings were also used to fund the restoration of monasteries and the performance of religious services (i.e., the reverence field of merit, C. jingtian), and to provide alms to the poor (i.e., the compassion field of merit, C. beitian; see [PUNYAKSETRA](#)). The inexhaustible storehouse also came to serve as a powerful money-lending institution. The Three Stages community was labeled a heresy during the persecution of Buddhism during the Tang dynasty and, in 713, the Tang emperor Xuanzong (r. 712–756) issued an edict closing the inexhaustible storehouse due to charges of embezzlement; its scriptures were eventually labeled spurious (see [APOCRYPHA](#)) and dropped out of circulation, only to be rediscovered in the [DUNHUANG](#) manuscript cache. Despite these persecutions, the school continued to be influential for several more centuries.

[sanju](#). (J. sanku; K. samgu 三句). In Chinese, “three propositions,” a unique set of precepts taught by [CHŌNGJUNG MUSANG](#) (680–756, alt. 684–762) in the [JINGZHONG ZONG](#) lineage of the early [CHAN](#) school. Musang sought to summarize the method of practice taught by the founder of Chinese Chan school, [BODHIDHARMA](#), in three propositions, which he described as “no-recollection” (wuyi), which he equated with morality ([ŚĪLA](#)); “no-thought” ([WUNIAN](#)), which corresponded to concentration ([SAMĀDHI](#)); and “not-forgetting” (mowang), which was the equivalent of wisdom ([PRAJÑĀ](#)). In other Jingzhong zong texts, Musang’s successor [BAOTANG WUZHU](#) later claims that he was in fact the creator of these three propositions and makes the explicit connection between them and the three trainings ([TRISIKSĀ](#)) of mainstream Buddhism. [GUIFENG ZONGMI](#) later explains

the first proposition, “no-recollection,” as not tracing back the past; the second “no-thought,” as not yearning for the future; and the third “not-forgetting” as “always conforming to this knowledge without confusion or mistake.”

Sanjūsangendō. (三十三間堂). In Japanese, “Hall of Thirty-Three Bays”; a Buddhist temple in Kyōto, Japan, also known as “Hall of the Lotus King” (J. Rengeōin); it is part of the Myōhōin (Sublime Dharma Hall), a temple affiliated with the Japanese [TENDAISHŪ](#). The number thirty-three refers to the belief that the [BODHISATTVA](#) Kannon (S. [AVALOKITEŚVARA](#)) saves humanity by transforming himself into thirty-three different figures. Taira no Kiyomori (1118–1181) completed the temple at the command of former emperor Goshirakawa (1127–1192) in 1164. After a fire destroyed the temple hall in 1249, the reconstruction of the building was completed in 1266 by former emperor Gosaga (1220–1272). The principal image of the temple is the “Eleven-Headed and Thousand-Armed Kannon” (see S. [EKĀDAŚAMUKHĀVALOKITEŚVARA](#) and [SĀHASRABHUJASĀHASRANETRĀVALOKITEŚVARA](#)). This deity was made of Japanese cypress in the yosegi zukuri style (viz., using several blocks of wood) by the artist Tankei (1173–1256) during the Kamakura period. It has eleven faces on its head and twenty-one pairs of arms that symbolize his one thousand arms. On both sides of the central seated statue are one thousand more standing images of the same type of Kannon, in five rows, each about five feet five inches in height, each said to be different from the other. Along with these statues, the school of Unkei (1151–1223) and Tankei also made twenty-eight statues of guardian deities. Additionally, flanking the right and left side of this arrangement are the statues of the Wind God (J. Fūjin) and the Thunder God (J. Raijin), respectively.

saṅkhārupekkhāñāna. In Pāli, “knowledge arising from equanimity regarding all formations”; according to the [VISUDDHIMAGGA](#), the eighth of nine knowledges (P. ñāṇa, S. [JÑĀNA](#)) cultivated as part of “purity of knowledge and vision of progress along the path” ([PATIPADĀÑĀNADASSANAVISUDDHI](#)). This latter category, in turn, constitutes the sixth and penultimate purity (P. visuddhi, S. [VISUDDHI](#)) to be developed along the path to liberation. Knowledge arising from equanimity regarding all formations arises as a consequence of understanding all conditioned formations (S. [SAMSKĀRA](#)) that comprise the individual and the universe as being characterized by the three marks (S. [TRILAKSANA](#)) of impermanence (S. [ANITYA](#)), suffering (S. [DUHKHA](#)) and nonself (S. [ANĀTMAN](#)). This understanding is the product of the immediately preceding (seventh)

knowledge called “knowledge arising from contemplation of reflection” ([PATISAṆKHĀNUPASSANĀÑĀNA](#)). Understanding the formations to be void (see [ŚŪNYATĀ](#)) in this way, the practitioner abandons both terror and delight, and, regarding them as neither “I” nor “mine,” he becomes indifferent and neutral towards them. The sixth, seventh, and eighth knowledges when taken together are called “insight leading to emergence” (*vuṭṭhānagāmini vipassanā*) because they stand at the threshold of liberation. The *Visuddhimagga* states that, at this stage in the practice, one can continue to contemplate the formations with equanimity, or, if the mind turns towards the nibbāna element (S. [NIRVĀNADHĀTU](#)) as its object, one of three types of liberation (S. [VIMUKTI](#)) ensues. If liberation occurs while contemplating impermanence, it is called “signless liberation,” if it occurs while contemplating suffering it is called “wishless liberation,” and if it occurs while contemplating nonself it is called “empty liberation” (see [VIMOKSAMUKHA](#)).

[San lun xuanyi](#). (J. Sanron gengi; K. Sam non hyōnūi 三論玄義). In Chinese, “Profound Meaning of the Three Treatises,” composed by the monk [JIZANG](#) sometime around 597. Although the title mentions the so-called “three treatises” (see [SAN LUN ZONG](#)), the *San lun xuanyi* is actually a commentary on four influential texts, namely the *Zhong lun* (cf. S. [MŪLAMADHYAMAKAKĀRIKĀ](#)), [BAI LUN](#) (S. *[ŚATAŚĀSTRA](#)), [SHI’ERMEN LUN](#) (S. **Dvādaśamukhaśāstra*), and [DAZHIDU LUN](#) (**Mahāprajñāpāramitāśāstra*). The *San lun xuanyi* systematically presents the teachings of [NĀGĀRJUNA](#) and provides a succinct explanation of the notion of emptiness ([ŚŪNYATĀ](#)). Jizang’s treatise consists of two main sections, which he terms the destruction of heresies and the elucidation of truth. His first section discusses the non-Buddhist teachings of India and the traditions of Zhuangzi, Laozi, and the *Zhouyi* in China. He also condemns [ABHIDHARMA](#) as [HĪNAYĀNA](#) teachings, the *[TATTVASIDDHI](#) as provisional [MAHĀYĀNA](#), and the teachings of the five periods (see [WUSHI BAJIAO](#)) as a misleading attachment to [MAHĀYĀNA](#). In the second section, Jizang explains the appearance of Nāgārjuna and the teachings of the *Zhong lun*, *Bai lun*, *Shi’ermen lun*, and *Dazhidu lun*. Jizang’s explanations rely heavily upon the notion of the two truths ([SATYADVAYA](#)).

[San lun zong](#). (J. Sanronshū; K. Sam non chong 三論宗). In Chinese, the “Three Treatises school,” a Chinese analogue of the [MADHYAMAKA](#) school of Indian Buddhism philosophy; a largely exegetical tradition that focused on three important texts translated by [KUMĀRAJĪVA](#), namely the *Zhong lun* (“Middle

Treatise”), [BAILUN](#) (“Hundred [Verse] Treatise”), and [SHI’ERMEN LUN](#) (“Twelve [Chapter] Treatise”). The *Zhong lun* is ostensibly a translation of [NĀGĀRJUNA](#)’s [MŪLAMADHYAMAKAKĀRIKĀ](#). Kumārajīva’s translation (dated 409), however, also contains his own notes as well as a commentary on Nāgārjuna’s text by Piṅgala (fl. c. 4 CE). The *Bai lun* (*[ŚATAŚĀSTRA](#)) is attributed to [ĀRYADEVĀ](#) and was translated into Chinese by Kumārajīva in 404. In this text, the author employs the apophatic language of the Madhyamaka school and refutes the arguments of rival traditions. The *Shi’ermen lun* (*[Dvādaśamukhaśāstra](#)) is also attributed to Nāgārjuna and is purportedly an introductory manual to the *Zhong lun*. In this text, the author provides an interpretation of emptiness ([ŚŪNYATĀ](#)) in twelve chapters. No Sanskrit or Tibetan recensions of the *Bai lun* or *Shi’ermen lun* are extant. The “three treatises,” however, exerted much influence in East Asia, where they functioned as the central texts for students of emptiness and Madhyamaka doctrine. [JIZANG](#) (549–623) wrote influential commentaries on the three treatises and came to be regarded as the systematizer of the San lun school. He retrospectively traces the school to two important vaunt couriers: [SENGZHAO](#) (374–414), an influential early Chinese exegete and cotranslator of the perfection of wisdom ([PRAJÑĀPĀRAMITĀ](#)) literature, whose writings helped to popularize the works of the Madhyamaka school in China; and [SŪNGNANG](#) (c. 450–c. 520), who is claimed to have taught the notion of “three truths” or “three judgments” ([SANDI](#))—the truths of emptiness, provisional reality, and their mean—an exegetical schema that was influential in the subsequent development of both the San lun and [TIANTAI](#) schools. The writings of San lun exegetes were also influential in Korea during the Three Kingdoms period (where the tradition was known as Sam non) and during the Nara and Heian periods in Japan (where it was called Sanron).

[sanmei jing](#). (S. samādhisūtra; J. sanmaikyō; K. sammae kyōng 三昧經). In Chinese, “[SAMĀDHI](#) scriptures”; a category of [MAHĀYĀNA](#) sūtras that are primarily or exclusively concerned with the practice or experience of meditation ([SAMĀDHI](#)), or whose title contains the term sanmei. The earliest reference to sanmei jing as a scriptural category appears in the oldest extant Chinese scriptural catalogue, [CHU SANZANG JIJI](#) (“Compilation of Notices on the Translation of the [TRIPITAKA](#)”), compiled by [SENGYOU](#) (445–518) around 515; there, Sengyou remarks that Zhu Fahu ([DHARMARAKSA](#)) translated several sanmei jings. The Chinese Buddhist canon ([DAZANGJING](#)) contains more than fifty sūtras that use the term sanmei in their titles. These include sanmei jings

whose Sanskrit titles do not use the term samādhi and to which the term sanmei was added when these scriptures were translated into Chinese. There are also other scriptures of uncertain provenance whose titles in earlier Chinese translations did not contain the term sanmei. An examination of successive Chinese Buddhist scriptural catalogues ([JINGLU](#)) in fact reveals that there were several sūtras that circulated first with one title, and later with a revised title that added sanmei to the original. Furthermore, there are a number of indigenous Chinese Buddhist scriptures (see [APOCRYPHA](#)), that were not entered into the canon, which call themselves sanmei jing. This phenomenon began early in the history of Chinese Buddhism. [DAO'AN](#)'s 374 CE scriptural catalogue ([ZONGLI ZHONG-JING MULU](#)), which is no longer extant but portions of which are excerpted in Sengyou's *Chu sanzang jiji*, lists twenty-six scriptures of dubious authenticity; of these, six are titled sanmei jing. Several sanmei jings, such as the *Banzhou sanmeijing* (S. [PRATYUTPANNABUDDHASAMMUKHĀVASTHITASAMĀDHISŪTRA](#)), offer instruction regarding the full range of practices involved in cultivating a specific samādhi technique. The majority of sanmei jings, however, are instead concerned with the various states of mind that the Buddha or [BODHISATTVAS](#) attained through samādhi, praising that samādhi, and/or emphasizing the merit gained through keeping and transmitting the text of the sanmei jing. The popularity of the sanmei jing genre in Chinese Buddhism can be at least partially attributed to Chinese Buddhists' faith and interest in the religious practice of copying and reciting scriptures, which most sanmei jings encourage as a means of attaining enlightenment. Higher meditative states like samādhi sometime seem ancillary to the topic of certain sanmei jings: the [JINGDU SANMEI JING](#), for example, offers a detailed account of thirty separate levels of the hells and the incumbent punishments meted out there; in order to avoid the torments of hell, the scripture exhorts laypeople not to meditate, but instead to observe the five precepts ([PAÑCAŚĪLA](#)) and perform the "eight-restrictions fast" ([BAGUAN ZHAI](#)) on specific Chinese seasonal days.

[sanmi](#). (三密). In Chinese, "three mysteries." See [SANMITSU](#).

[sanmitsu](#). (C. sanmi, K. sammil 三密). In Japanese, "three secrets" or "three mysteries"; an esoteric Buddhist teaching that posits that the body, speech, and mind of sentient beings, which are understood to be the source of the three forms of [KARMAN](#) in standard Buddhist doctrine, abide in a nondual relationship with

the body, speech, and mind of [MAHĀVAIROCANA](#), the [DHARMAKĀYA](#) buddha. All speech is therefore in actuality the speech of this buddha, all forms are his body, and all mental formations are at their root the mind of Mahāvairocana. The doctrine of the three mysteries appears in various strata of [MAHĀYĀNA](#) materials, but is featured most prominently in esoteric literature. In China, [TIANTAI](#) thinkers such as [TIANTAI ZHIYI](#) and [ZHANRAN](#) argued that the Buddha taught via his [NIRMĀNAKĀYA](#), [SAMBHOGAKĀYA](#), or dharmakāya, depending on the capacities of his audience. On another level, however, these three bodies of the Buddha were said to be nondual. In Japan, [KŪKAI](#) argued that all beings had the capacity to experience the teaching of the dharmakāya directly, a position that later Japanese [TENDAI](#) thinkers argued was implicit in the earlier Chinese Tiantai teachings on the three mysteries. Kūkai’s sanmitsu theory held that ordinary beings may rapidly realize their buddha-nature through [ABHISEKA](#), or ritual initiation, and [ADHISTHĀNA](#), or ritual empowerment, which allowed for the efficacious performance of [MUDRĀ](#), the chanting of [MANTRA](#) and [DHĀRANĪ](#), and the contemplation of the [MANDALA](#) of a chosen object of devotion. These forms of initiation and empowerment, when followed by these three modes of ritual comportment, were said to reveal that the sublime reality of buddhahood is alive within the mundane reality that beings ordinarily inhabit. Once the body, speech, and mind of beings and buddhas are recognized as nondual, an ordinary being is then able to acquire [SIDDHI](#), or supernatural powers, which may be used to effect change in the world, up to and including achieving buddhahood in this very body (J. [SOKUSHIN JŌBUTSU](#); C. [JISHEN CHENGFO](#)).

[Sansheng yuanrong guan](#). (三聖圓融觀). In Chinese, “contemplation on the consummate interfusion of the Three Sages,” viz., [VAIROCANA](#) Buddha and the two bodhisattvas [MAÑJUŚRĪ](#) and [SAMANTABHADRA](#). See treatment in [YUANRONG](#).

[Śāntaraksita](#). (T. Zhi ba ’tsho) (725–788). Eighth-century Indian Mahāyāna master who played an important role in the introduction of Buddhism into Tibet. According to traditional accounts, he was born into a royal family in Zahor in Bengal and was ordained at [NĀLANDĀ](#) monastery, where he became a renowned scholar. He is best known for two works. The first is the [TATTVASAMGRAHA](#), or “Compendium of Principles,” a critical survey and analysis of the various non-Buddhist and Buddhist schools of Indian philosophy, set forth in 3,646 verses in twenty-six chapters. This work, which is preserved in Sanskrit, along with its commentary by his disciple [KAMALAŚĪLA](#), remains an important source on the

philosophical systems of India during this period. His other famous work is the [MADHYAMAKĀLAMKĀRA](#), or “Ornament of the Middle Way,” which sets forth his own philosophical position, identified by later Tibetan doxographers as [YOGĀCĀRA-**SVĀTANTRIKA-MADHYAMAKA*](#), so called because it asserts, as in [YOGĀCĀRA](#), that external objects do not exist, i.e., that sense objects are of the nature of consciousness; however, it also asserts, unlike Yogācāra and like [MADHYAMAKA](#), that consciousness lacks ultimate existence. It further asserts that conventional truths ([SAMVRTISATYA](#)) possess their own character ([SVALAKSANA](#)) and in this regard differs from the other branch of Madhyamaka, the **PRĀSAṄGIKA*. The Yogācāra-Madhyamaka synthesis, of which Śāntarakṣita is the major proponent, was the most important philosophical development of late Indian Buddhism, and the *Madhyamakālamkāra* is its locus classicus. This work, together with the [MADHYAMAKĀLOKA](#) of Śāntarakṣita’s disciple Kamalaśīla and the [SATYADVAYAVIBHAṄGA](#) of [JÑĀNAGARBHA](#), are known in Tibet as the “three works of the eastern **Svātantrikas*” (rang rgyud shar gsum) because the three authors were from Bengal. Śāntarakṣita’s renown as a scholar was such that he was invited to Tibet by King [KHRI SRONG LDE BTSAN](#). When a series of natural disasters indicated that the local deities were not positively disposed to the introduction of Buddhism, he left Tibet for Nepal and advised the king to invite the Indian tantric master [PADMASAMBHAVA](#), who subdued the local deities. With this accomplished, Śāntarakṣita returned, the first Buddhist monastery of [BSAM YAS](#) was founded, and Śāntarakṣita invited twelve [MŪLASARVĀSTIVĀDA](#) monks to Tibet to ordain the first seven Tibetan monks. Śāntarakṣita lived and taught at Bsam yas from its founding (c. 775) until his death (c. 788) in an equestrian accident. Tibetans refer to him as the “bodhisattva abbot.” The founding of Bsam yas and the ordination of the first monks were pivotal moments in Tibetan Buddhist history, and the relationship of Śāntarakṣita, Padmasambhava, and Khri srong lde btsan figures in many Tibetan legends, most famously as brothers in a previous life. Prior to his death, Śāntarakṣita predicted that a doctrinal dispute would arise in Tibet, in which case his disciple Kamalaśīla should be invited from India. Such a conflict arose between the Indian and Chinese factions, and Kamalaśīla came to Tibet to debate with the Chan monk Moheyan in what is referred to as the [BSAM YAS DEBATE](#), or the “Council of Lhasa.”

[Santi Asoke](#). A modern reform movement in Thailand that began under the leadership of Bodhirak (P. Bodhirakka), a monk who had a storied past as a television entertainer, spirit medium, and bhikkhu (S. [BHIKSU](#)). In 1975 he set up

an independent saṅgha, ordaining monks and nuns himself, thereby ignoring the traditional requirement that a monk must have a minimum of ten years of seniority before ordaining others. For this reason, along with his violation of several other rules in the monastic code, Bodhirak was officially defrocked by the Supreme Saṅgha Council of Thailand. Santi Asoke emphasizes a semi-ascetic lifestyle for the laity and austerity for the monks, as opposed to what he criticized as the luxurious living conditions enjoyed by many popular monks around the country, some of whom live in modern buildings, travel in private cars, and have meals brought to their residences. Santi Asoke monks wear brown robes rather than the traditional saffron color commonly worn by many monks in Thailand, do not shave their eyebrows, and adhere to a strict vegetarian diet. Laypeople also observe vegetarianism and many observe the eight precepts (see [ŚĪLA](#), [ASTĀNGASAMANVĀGATAM UPAVĀSAM](#)) in their daily lives. The group criticizes lavish merit-making as lacking in moral virtue, which it feels can be attained by working hard, avoiding unnecessary consumption, and sharing one's surplus with the rest of society. In addition to avoiding traditional metaphysical beliefs and practices, the group is also opposed to meditation. It views the concept of right concentration ([SAMYAKSAMĀDHI](#)), the eighth step of the eightfold path ([ĀRYĀSTĀNGAMĀRGA](#)), as the culmination of the other steps, not as a separate stage of practice. Santi Asoke also differs from more mainstream forms of Buddhism in that its temples do not have any images of the Buddha, explaining that only the dharma can represent the Buddha. Its adherents view themselves as followers of “authentic Buddhism,” as opposed to: (1) occult Buddhism, whose followers believe in superstition, fortune-telling, and the power of amulets; (2) capitalistic Buddhism, which Santi Asoke contends is composed of business people who practice meditation in order to become more competitive; and (3) hermetic Buddhism, which encourages asceticism and which the Asoke group criticizes as selfish. Santi Asoke affords a somewhat higher status to its female renunciants than does the mainstream Thai saṅgha, granting female monastics status and title equivalent to that of novice monks, rather than the mainstream's wholly lay [MAE CHI](#) designation. Bodhirak and scores of his followers were arrested in 1989 at the behest of Thailand's Supreme Saṅgha Council for committing the criminal act of impersonating monks. All were convicted, but given suspended sentences. While opposed by the federal government and the saṅgha, Santi Asoke maintains its existence and influence through the efforts of a small number of politically connected lay followers, most notably a former governor of Bangkok.

śānticāra. (S). See [ŚĀNTIKA](#).

Śāntideva. (T. Zhi ba lha). Eighth-century Indian monk of [NĀLANDĀ](#) monastery, renowned as the author of two influential [MAHĀYĀNA](#) texts: the [BODHICARYĀVATĀRA](#) (a long poem on the practice of the bodhisattva path) and the [ŚIKSĀSAMUCCAYA](#) (a compendium of passages from Mahāyāna sūtras corroborating the explanations given in the *Bodhicaryāvatāra*). Nothing is known of his life apart from legends. According to these tales, he was of royal birth but renounced the world before his investiture as king. At Nālandā monastery, he was known as an indolent monk. In order to humiliate him, his fellow monks challenged him to recite sūtras before the assembly. He asked whether they wished to hear something old or something new. When they requested something new, he recited the *Bodhicaryāvatāra*. When he reached the ninth chapter, on wisdom ([PRAJÑĀ](#)), he began to rise into the air and disappeared, never to return. For this reason, there is some controversy as to how the ninth chapter ends, and indeed, there are different recensions of the text, one longer and one shorter. Based on the contents of the *Bodhicaryāvatāra*'s ninth chapter, Tibetan doxographers count Śāntideva as a proponent of the *[PRĀSANGIKA-MADHYAMAKA](#). The *Bodhicaryāvatāra* was very influential in Tibet; particularly noteworthy is the [BKA' GDAMS](#) tradition of dge bshes Po to ba, who lists it and the *Śikṣāsamuccaya*, along with the [BODHISATTVABHŪMI](#), [MAHĀYĀNASŪTRĀLAMKĀRA](#), Āryaśūra's [JĀTAKAMĀLĀ](#), and the [UDĀNAVARGA](#), as the six fundamental treatises of the Bka' gdams tradition.

śāntika. (T. zhi ba'i las; C. xizai; J. sokusai; K. sikchae 息災). In Sanskrit, “pacifying activities,” (also seen written as śānticāra); one of the four types of activities ([CATURKARMAN](#)) set forth in the Buddhist [TANTRAS](#). The other three are: activities of increase ([PAUSTIKA](#)) to increase prosperity, lengthen life, etc.; control or subjugation ([VAŚĪKARANA](#)) of the unruly or unwilling; and violent or drastic measures ([ABHICĀRA](#)), such as killing and warfare. Pacifying activities involve those rituals that purify baleful influences that appear in such forms as hindrances and illness.

sanyao. (J. san'yō; K. samyo 三要). In Chinese, the “three essentials,” of meditation practice in the [CHAN](#) school: (1) the faculty of great faith (da xingen; cf. [ŚRADDHĀ](#) and [INDRIYA](#)), (2) great ferocity or tenacity of purpose (da fenzhi), and (3) the sensation of great doubt (da [YIQING](#)). These essentials are specifically relevant to cultivation of the “Chan of observing the meditative topic” ([KANHUA](#)

[CHAN](#)), or “questioning meditation.” This list was first compiled by the Yuan-dynasty Chan monk [GAOFENG YUANMIAO](#) (1238–1295) in his *Gaofeng heshang chanyao*, better known as simply the [CHANYAO](#) (“Essentials of Chan”; K. Sōnyo); the list figures prominently in the presentation of [SŌN](#) in the [SŌN’GA KWIGAM](#) by the Korean Sōn monk [CH’ŌNGHŎ HYUJŎNG](#) (1520–1604), whence it enters into the Japanese [ZEN](#) tradition. As Gaofeng explains them, the faculty of great faith (*śraddhendriya*) refers to the steadfastness of belief in the inherency of the buddha-nature ([FOXING](#)) as the ground of enlightenment. Great ferocity means intense passion toward practice, which he compares to the emotions you would feel if you came across your father’s murderer. Gaofeng describes the sensation of doubt ([YIQING](#)) regarding the intent behind Chan meditative topics ([HUATOU](#)) as like the anxiety and anticipation you feel when you are about to be exposed for some heinous act you committed. All three of these factors are essential, Gaofeng says, if the adept is to have any hope of mastering the kanhua Chan technique.

[sanzhi](#). (J. sanshi; K. samji 三止). In Chinese, “threefold calming” or “threefold concentration”; a complement to the “threefold contemplation” ([SANGUAN](#)) taught by [TIANTAI ZHIYI](#) of the [TIANTAI ZONG](#). These three types of calming or concentration are: (1) the “concentration that [leads to the] experience of reality” (*tizhen zhi*); (2) the “concentration that [leads to] expedient responses to conditions” (*fangbian sui yuan zhi*); and (3) the “concentration that [leads to the] cessation of the two discriminatory extremes” (*xi erbian fenbie zhi*). The first concentration corresponds to the “contemplation of emptiness” in the “threefold contemplation” scheme; this is because, by bringing to cessation the various forms of conceptual proliferation ([PRAPAÑCA](#)) and bringing the practitioner to a direct experience of emptiness ([ŚUNYATĀ](#)), it generates an insight into the fact that all things are dependent for their existence on conditions and therefore lack a “self” or any abiding substance. The second mode of concentration corresponds to the “contemplation of conventional existence”; this is because, by abiding in this concentration, the bodhisattva understands emptiness without becoming stuck in inactivity or unresponsiveness to worldly phenomena, such as the suffering of other sentient beings. He is able to function dynamically in the world without becoming disquieted or contaminated by those conditions he is responding to or participating in. The third complements the “contemplation of the mean” in the “threefold contemplation” scheme, and brings an end to such dualistic concepts as [SAMŚĀRA](#) and [NIRVĀNA](#). The “discriminatory extremes” are

sometimes read as referring to the excesses that are potentially involved in practicing exclusively the first two modes of concentration.

[sanzhi sanguan](#). (C) (三止三觀). See [SANZHI](#) and [SANGUAN](#).

[sanzhong shijian](#). (J. sanshuseken; K. samjong segan 三種世間). In Chinese, “the three types of world systems”: the world of sentient beings ([SATTVALOKA](#)), the receptacle world ([BHĀJANALOKA](#)), and the world of the five aggregates (C. [WUYUN SHIJIAN](#)). See [SATTVALOKA](#).

[sapakṣa](#). (T. mthun phyogs; C. tongpin; J. dōhon; K. tongp’um 同品). In Sanskrit, “similar instance”; one of three related Sanskrit terms used in Buddhist logic ([HETUVIDYĀ](#)): viz., [PAKṢA](#) (logical subject), [sapakṣa](#) (similar instance), and [VIPAKṢA](#) (dissimilar instance). For example, in the syllogism ([PRAYOGA](#)) “sound is impermanent because it is produced,” sound is the pakṣa; a pot is [sapakṣa](#) (similar instance or in the similar class), and space is [vipakṣa](#) (dissimilar instance or in the dissimilar class). The [VYĀPTI](#) (positive concomitance) is established based on the similar instance, i.e., the opponent’s knowledge that a pot breaks because it is produced is extended to sound; the [VYATIREKA](#) (negative concomitance) is established based on the dissimilar instance, i.e., the opponent’s knowledge that space is permanent because it is not produced is extended to exclude a sound from the dissimilar class because it is produced. See also [PAKSADHARMA](#), [PRAYOGA](#).

[Sa pan](#). (T). See [SA SKYA PANDITA KUN DGA’ RGYAL MTSHAN](#).

[sap’ansŭng](#). (事判僧). In Korean, “administrative monk,” monks who are responsible for the administrative and financial affairs of a Korean monastery; one of the two major divisions of Korean monastic vocations, along with [IP’ANSŬNG](#), practice monks who are engaged in scriptural study, meditative training, and ritual chanting. A large social organization like a monastery required a whole range of ecclesiastical positions to administer the monastic office, treasury, kitchen, etc.; the monks who occupied these offices are collectively referred to as [sap’ansŭng](#). In the past, these monks would also have managed the various economic activities that took place in the monastery, including farming, book printing, paper making, and straw-sandal production. See also [TOUSHOU](#); [ZHISHI](#).

saptabuddha. (S). See [SAPTATATHĀGATA](#).

saptadhana. (P. sattadhana; T. nor bdun; C. qi cai; J. shichizai; K. ch'il chae 七財). In Sanskrit, “seven kinds of riches [in the dharma].” They are: (1) faith or confidence ([ŚRADDHĀ](#)), (2) vigor or effort ([VĪRYA](#)), (3) virtue or moral restraint ([ŚĪLA](#)), (4) sense of shame ([HRĪ](#)) and fear of blame ([APATRĀPYA](#)), (5) listening to or learning the dharma (lit. “hearing,” śruta), (6) relinquishment ([PRAHĀNA](#)), and (7) the wisdom arising from meditative training ([BHĀVANĀMAYĪPRAJÑĀ](#)).

saptādhikaraṇasamatha. (P. sattādhikaraṇasamatha; T. rtsod pa nye bar zhi ba bdun; C. qi miezheng fa; J. shichimetsujōhō; K. ch'il myōlchaeng pōp 七滅諍法). In Sanskrit, “seven methods of settling disputes.” In confronting monastic members who have transgressed the rules and regulations of the order (see [PRĀTIMOKSA](#)), or when there are disputes about meting out the appropriate sanctions for such infraction, the [VINAYA](#) outlines seven methods for dealing with the transgressors and resolving the differences, respectively. According to the [CŪLAVAGGA](#) section of the Pāli pāṭimokkha (using the Sanskrit name for each section): (1) Saṃmukha-vinaya involves the appeal to scriptural and vinaya laws or to direct evidence of transgression. (2) Smṛti-vinaya relies on character witness, testimony of witness[es] of the infraction, and the memory of the transgressor himself if he or she has a clean record and is of trustworthy temperament. In the latter case, an otherwise trustworthy suspect who claims to have no memory of the infraction is presumed innocent. (3) Amūḍha-vinaya is resorting to insanity claims. “Temporary insanity” or the loss of judgment due to different causes at the time of the infraction is considered mitigating and even exculpatory. The transgressor is only brought to the monastic hearing when his sanity or consciousness is restored. (4) Tatsvabhāvaiṣīya-vinaya is the postponement of appropriate punishment after the transgressor has offered a voluntary confession. (5) Yadbhūyasikīya-vinaya is used when a suspect intransigently refuses to confess. It is the citing of contrary evidence to, and self-contradictions and variances in, the suspect’s account. (6) Pratijñākāraka-vinaya is the verdict of the majority through voting. Typically elder monks of renowned virtue are assembled for the vote. (7) Tṛṇastāraka-vinaya is interpreted in two ways. One account explains this procedure as having the disputing parties each elect a senior representative to argue their respective cases. Another account has it that, in the case of ultimately irresolvable disputes, both parties should bow down to each other reverentially like “grass in the wind,” offering apologies and

divulging how oneself could have possibly been more culpable. The Tibetan translation (rtswa bkram pa lta bur 'os pa) suggests a procedure “that strews grass over it [as a covering].” See also [ADHIKARANAŚAMATHA](#).

[saptakṛdbhavaparama](#). (T. re ltar thogs na srid pa lan bdun pa; C. jiqi fanyou; J. gokushippon'u; K. kūch'il panyu 極七返有). In Sanskrit, “one who takes up to seven existences” before [NIRVĀNA](#); a specific type of stream-enterer ([SROTAĀPANNA](#)), one of the twenty members of the [ĀRYASAMGHA](#) (see [VIMŚATIPRABHEDASAMGHA](#)). According to the [ABHIDHARMAKOŚABHĀSYA](#), they are those who, on reaching the path of vision ([DARŚANAMĀRGA](#)), have not yet eliminated even one of the set of nine levels of afflictions ([KLEŚA](#)) that cause rebirth in the sensuous realm ([KĀMADHĀTU](#)), these being the impediments to the first [DHYĀNA](#) that the mundane ([LAUKIKA](#)) path of cultivation ([BHĀVANĀMĀRGA](#)) removes; they will therefore take up to a maximum of seven rebirths in the sensuous realm before they reach the goal of [ARHAT](#).

[saptāṅgavidhi](#). (T. yan lag bdun pa'i cho ga; C. qizhi zuofa; J. shichishisahō; K. ch'ilchi chakpöp 七支作法). In Sanskrit, “seven-branched worship,” a common component of [MAHĀYĀNA](#) Buddhist liturgy, often performed as a means of accumulating merit at the beginning of a Mahāyāna or tantric ritual or meditation session. The list may include more than seven items, but its standard form includes: obeisance (vandanā), offering (pūjana), confession of wrongdoing ([PĀPADEŚANA](#)), admiration or rejoicing ([ANUMODANA](#)), requesting the buddhas to turn the wheel of dharma (dharmacakrapravartanacodana), requesting the buddhas not to pass into [PARINIRVĀNA](#) (aparinirvṛtādhyeṣaṇa), and the dedication of merit ([PARINĀMANĀ](#)). Obeisance includes reciting the three refuges ([TRISĀRANA](#)) formula and praising the excellent qualities of the Buddha, [DHARMA](#), and [SAMGHA](#); the offering branch is expanded to include elaborate offerings to each of the senses, and, in tantric rituals, so-called inner and secret offerings. In the [BHADRACARĪPRANIDHĀNA](#), the final part of the [GANDAVYŪHA](#) (and itself the final chapter of the [AVATAMSAKASŪTRA](#)), the bodhisattva [SAMANTABHADRA](#) reveals the worship in its fullest Mahāyāna formulation: he prefaces his famous ten vows with a version in which he imagines, on each atom in the universe, as many buddhas and bodhisattvas as there are atoms in the universe, and before each atom he imagines beings, as many as there are atoms in the universe, making obeisance, offering, confessing, and so on.

[Saptaśatikāprajñāpāramitā](#). (T. Shes rab kyi pha rol tu phyin pa bdun brgya

pa; C. Qibai song bore; J. Shichihyakuju hannya; K. Ch'ilbaek song panya 七百頌般若). In Sanskrit, the “Perfection of Wisdom in Seven Hundred Lines,” a [PRAJÑĀPĀRAMITĀ](#) sūtra in which the interlocutors include the Buddha, [MAÑJUŚRĪ](#), [MAITREYA](#), [ŚĀRIPUTRA](#), [ĀNANDA](#), and Nirālambā Bhaginī. It sets forth such topics as the true nature of the [TATHĀGATA](#), the ultimate nonexistence of enlightenment and the stages leading to it, and the samādhi of the “single array” (ekavyūhasamādhi, see [YIXING SANMEI](#)). Like the [VAJRACCHEDIKĀPRAJÑĀPĀRAMITĀSŪTRA](#), it emphasizes the paradoxical nature of the teachings of the perfection of wisdom.

[saptatathāgata](#). (P. sattatathāgata; T. de bzhin gshegs pa bdun; C. qifo/guoqu qifo; J. shichibutsu/kako shichibutsu; K. ch'ilbul/kwagŏ ch'ilbul 七佛/過去七佛). In Sanskrit, the “seven buddhas [of antiquity]”; a list of seven past buddhas bridging the last two cyclical periods of the universe, which include [ŚĀKYAMUNI](#) and the six buddhas who preceded him, i.e., [VIPAŚYIN](#) (P. Vipassin), Śikhin (P. Sikhī), Viśvabhū (P. Vessabhū), Krakucchanda (P. Kondañña), Kanakamuni (P. Konāgamana) and [KĀŚYAPA](#) (P. Kassapa). The first three buddhas are the last three of the one thousand buddhas who appeared in the preceding “glorious eon” (vyūhakalpa), the cyclic period of a universe just prior to the present “auspicious eon” ([BHADRAKALPA](#)), and the remaining four buddhas are the first four of the one thousand buddhas during the present bhadrakalpa. Śākyamuni will be succeeded by [MAITREYA](#), the fifth buddha in the current cycle. The seven buddhas of antiquity are widely discussed in the [ĀGAMA](#) literature and in such texts as the [BHADRAKALPIKASŪTRA](#), where their activities, lineages, parents, offspring, disciples, residences, and teachings are recorded in great detail. Initially depicted symbolically, such as at [BHĀRHUT](#) and [SĀÑCĪ](#) in the form of a row of seven [BODHI TREES](#), the seven tathāgatas were shown in human form by the time of the Kushan dynasty and are common in monastic art across Central and East Asia. The buddhas are often differentiated only by the [MUDRĀs](#) they display. [MAITREYA](#) is often added as an eighth figure, distinguished by his bodhisattva guise.

[Śāradvatīputra](#). (S). See [ŚĀRIPUTRA](#).

Saraha. (T. Sa ra ha; C. Shaluohē; J. Sharaka; K. Saraha 沙羅訶). An eighth-century Indian tantric adept, counted among the eighty-four [MAHĀSIDDHAs](#) and renowned for his songs of realization ([DOHA](#)); also known as Sarahapāda. There are few historical facts regarding Saraha, but according to traditional sources he was born into a Bengali brāhmaṇa family. He is often known by the appellation “Great Brāhmaṇa.” In his youth he entered the Buddhist monastic order but later abandoned the clergy in favor of living as a wandering [YOGIN](#). During a visionary experience, he was exhorted to train under a female arrowsmith, who, by means of symbolic instruction, taught Saraha the means for piercing through discursiveness and dualistic thought. Having realized the nature of [MAHĀMUDRĀ](#), he earned the name Saraha, lit., “piercing arrow” or “he who has shot the arrow.” Saraha is an important member in Tibetan lineages for the instructions on mahāmudrā. He also composed numerous spiritual songs (dohā) popular among Newari and Tibetan Buddhists. Originally recorded in an eastern Indian [APABHRAMŚA](#) dialect, these songs were later collected and translated into Tibetan as the well-known [DO HA SKOR GSUM](#) (“Three Cycles of Songs”).

śarana. (P. saraṇa; T. skyabs; C. guiyi; J. kie; K. kwiūi 歸依). In Sanskrit, “refuge,” “shelter,” or “haven”; referring specifically to the “three refuges” ([TRISĀRANA](#)) of the Buddha, [DHARMA](#), and [SAMGHA](#), where Buddhists seek safe haven. The recitation of the three refuges is one of the foundational ritual practices in Buddhism: “I go for refuge to the Buddha (buddhaṃ śaraṇaṃ gacchāmi). I go for refuge to the dharma (dharmaṃ śaraṇaṃ gacchāmi). I go for refuge to the saṃgha (saṃghaṃ śaraṇaṃ gacchāmi).” Reciting this formula three times was one of the first ways supplicants gained admittance to the Buddhist community, which initially began with wandering monks and later expanded into different levels of both clergy and lay. Separate rituals for each level of ordination developed, but the triśaraṇa recitation is found in them all. In general, after identifying the three objects of refuge through their special features and unique qualities, supplicants are instructed to keep a set of rules; the most basic rule is associated with the dharma (“the actual refuge”), i.e., not willfully hurting any living being ([AHIMSA](#)). It is not clear how the triśaraṇa recitation became associated with conversion (see [AMBEDKAR, BHIMRAO RAMJI](#)), although in modern contexts it is often the formula associated with that religious event. See [TRISĀRANA; RATNATRAYA](#).

Saranamkara. (1698–1778). Sinhalese monk instrumental in the founding of the

[SIYAM NIKĀYA](#). At the time of his youth, the tradition of full ordination ([UPASAMPADĀ](#)) of monks had died out in Sri Lanka because there were not the requisite number of bhikkhus (S. [BHIKṢU](#)) on the island to ordain others. All monks were therefore novices ([ŚRĀMAṆERA](#)), many of whom do not wear saffron robes and had wives and children. Despite not having received a legitimate ordination, Saraṇaṃkara and a group of like-minded ascetics sought instead to live the life of the bhikkhu and maintain all 227 rules of the Pāli pāṭimokkha (S. [PRĀTIMOKSA](#)). He eventually petitioned the king to allow monks from abroad to be invited so they could restore the tradition of full ordination (as had been done twice before in the previous five centuries) but his request was rejected and he was banished to a remote region of the island. Saraṇaṃkara eventually returned and became tutor to the next king. During the reign of the following king, Kīrti Śrī Rājasimha, a group of Thai monks, led by Upāli, was invited to Sri Lanka at the entreaty of Saraṇaṃkara, where they reestablished full ordination and began what became known as the Siyam Nikāya, since Upāli was from Siam (Thailand). Based at Kandy, it would become the largest of the Sinhalese monastic lineages. In 1760, Saraṇaṃkara was implicated in a plot to overthrow the Sinhalese king and install a Thai prince on the throne of Sri Lanka, but he was later cleared of any wrongdoing. Among his important writings is the *Sāratthadīpanī*.

[Sarasvatī](#). (T. Dbyangs can ma; C. Biancaitian/Miaoyintian; J. Benzaiten/Myōonten; K. Pyōnjaech'ōn/Myōūmch'ōn 辯才天/妙音天). An Indian goddess revered in both Hinduism and Buddhism as the goddess of composition (including music and poetry) and of learning. She is often depicted playing a vīṇā lute and riding on a swan. She appears in a number of Buddhist sūtras, including the [SUVARNAPRABHĀSOTTAMASŪTRA](#). Because of that sūtra's articulation of a role for Buddhism in “state protection” (see [HUGUO FOJIAO](#)), Sarasvatī came to be regarded as important goddess in Japan, where, as Benzaiten, she was included among the “seven gods of good fortune” ([SHICHIFUKUJIN](#)).

[Sāratthappakāsinī](#). In Pāli, “Revealer of Essential Meaning,” a commentary on the [SAMUDDANIKĀYA](#) by [BUDDHAGHOSA](#).

[sārdhavihārin](#). (P. saddhivihārika [alt. saddhivihārī]; T. lhan cig gnas pa; C. gongxing dizi; J. gūgyō deshi; K. konghaeng cheja 共行弟子). In Sanskrit, lit. “one who lives with,” or “one who lives in accord with,” but often translated as

“disciple” or “apprentice” (see [ANTEVĀSIKA](#)). Although the term can simply refer to one of the residents of a monastery, as “disciple” it refers to a novice or a monk who dwells with his [UPĀDHYĀYA](#) or preceptor for the purpose of receiving instruction in the dharma and training in the [VINAYA](#). A disciple in residence with his preceptor is said to be under “guidance” ([NĪŚRAYA](#)). The relationship of the sārdhavihārin and the upādhyāya is described as being like that of a son and a father. Accordingly, the disciple is required to serve the daily needs of his preceptor, by, for example, providing him with water, washing and preparing his robes and alms bowl, cleaning his residence, accompanying him on journeys, and attending him when he is sick. The sārdhavihārin requires the permission of the upādhyāya to attend others, to accompany others on alms rounds, to seek instruction from others, *etc.* The sārdhavihārin is required to seek pardon from his upādhyāya for any wrongdoing, and may be expelled for bad behavior. If he loses his upādhyāya while he is still in need of guidance, because the latter dies, goes away, secedes from the order, or changes religions, the disciple is to seek out a competent teacher ([ĀCĀRYA](#)) to serve in place of the upādhyāya. A fully ordained monk must remain under the guidance of either an upādhyāya or ācārya for a minimum of five years from the time of his ordination. A monk may be required to live under niśraya for a longer period, or for his whole life, if he is unable to become competent in dharma and vinaya.

Śāriputra. (P. Sāriputta; T. Shā ri bu; C. Shelifu; J. Sharihotsu; K. Saribul 舍利弗). In Sanskrit, “Son of Śārī”; the first of two chief disciples of the Buddha, along with [MAHĀMAUDGALYĀYANA](#). Śāriputra’s father was a wealthy brāhmaṇa named Tiṣya (and Śāriputra is sometimes called Upatiṣya, after his father) and his mother was named Śārī or Śārikā, because she had eyes like a śārika bird. Śārī was the most intelligent woman in [MAGADHA](#); she is also known as Śāradvatī, so Śāriputra is sometimes referred to as Śāradvatīputra. Śāripūtra was born in Nālaka near [RAJAGRHA](#). He had three younger brothers and three sisters, all of whom would eventually join the [SAMGHA](#) and become [ARHATS](#). Śāriputra and Mahāmaudgalyāyana were friends from childhood. Once, while attending a performance, both became overwhelmed with a sense of the vanity of all impermanent things and resolved to renounce the world together. They first became disciples of the agnostic [SAÑJAYA VAIRĀTĪPUTRA](#), although they later took their leave of him and wandered through India in search of the truth. Finding no solution, they parted company, promising one another that whichever one should succeed in finding the truth would inform the other. It was then that

Śāriputra met the Buddha's disciple, [AŚVAJIT](#), one of the Buddha's first five disciples ([PAÑCAVARGIKA](#)) and already an arhat. Śāriputra was impressed with Aśvajit's countenance and demeanor and asked whether he was a master or a disciple. When he replied that he was a disciple, Śāriputra asked him what his teacher taught. Aśvajit said that he was new to the teachings and could only provide a summary, but then uttered one of the most famous statements in the history of Buddhism, "Of those phenomena produced through causes, the [TATHĀGATA](#) has proclaimed their causes ([HETU](#)) and also their cessation ([NIRODHA](#)). Thus has spoken the great renunciant." (See [YE DHARMĀ](#) s.v.). Hearing these words, Śāriputra immediately became a streamenterer ([SROTAĀPANNA](#)) and asked where he could find this teacher. In keeping with their earlier compact, he repeated the stanza to his friend Mahāmaudgalyāyana, who also immediately became a streamenterer. The two friends resolved to take ordination as disciples of the Buddha and, together with five hundred disciples of their former teacher Sañjaya, proceeded to the [VENUVANAVIHĀRA](#), where the Buddha was in residence. The Buddha ordained the entire group with the [EHIBHIKSUKĀ](#) ("Come, monks") formula, whereupon all except Śāriputra and Mahāmaudgalyāyana became arhats. Mahāmaudgalyāyana was to attain arhatship seven days after his ordination, while Śāriputra reached the goal after a fortnight upon hearing the Buddha preach the *Vedanāpariggahasutta* (the Sanskrit recension is entitled the *Dīrghanakhaparivrājakaparipṛcchā*). The Buddha declared Śāriputra and Mahāmaudgalyāyana his chief disciples the day they were ordained, giving as his reason the fact that both had exerted themselves in religious practice for countless previous lives. Śāriputra was declared chief among the Buddha's disciples in wisdom, while Mahāmaudgalyāyana was chief in mastery of supranormal powers ([RDDHI](#)). Śāriputra was recognized as second only to the Buddha in his knowledge of the dharma. The Buddha praised Śāriputra as an able teacher, calling him his dharmasenāpati, "dharma general" and often assigned topics for him to preach. Two of his most famous discourses were the [DASUTTARASUTTA](#) and the [SAṄĪTISUTTA](#), which the Buddha asked him to preach on his behalf. Śāriputra was meticulous in his observance of the [VINAYA](#), and was quick both to admonish monks in need of guidance and to praise them for their accomplishments. He was sought out by others to explicate points of doctrine and it was he who is said to have revealed the [ABHIDHARMA](#) to the human world after the Buddha taught it to his mother, who had been reborn in the [TRĀYĀSTRIMŚĀ](#) heaven; when the Buddha returned to earth each day to collect

alms, he would repeat to Śāriputra what he had taught to the divinities in heaven. Śāriputra died several months before the Buddha. Realizing that he had only seven days to live, he resolved to return to his native village and convert his mother; with this accomplished, he passed away. His body was cremated and his relics were eventually enshrined in a [STŪPA](#) at [NĀLANDĀ](#). Śāriputra appears in many [JĀTAKA](#) stories as a companion of the Buddha, sometimes in human form, sometimes in animal form, and sometimes with one of them a human and the other an animal. Śāriputra also plays a major role in the [MAHĀYĀNA](#) sūtras, where he is a common interlocutor of the Buddha and of the chief [BODHISATTVAS](#). Sometimes he is portrayed as a dignified arhat, elsewhere he is made the fool, as in the [VĪMALAKĪRTINIRDEŚA](#) when a goddess turns him into a woman, much to his dismay. In either case, the point is that the wisest of the Buddha’s arhat disciples, the master of the abhidharma, does not know the sublime teachings of the Mahāyāna and must have them explained to him. The implication is that the teachings of the Mahāyāna sūtras are therefore more profound than anything found in the canons of the [MAINSTREAM BUDDHIST SCHOOLS](#). In the [PRAJÑĀPĀRAMITĀHRDAYA](#) (“Heart Sūtra”), it is Śāriputra who asks [AVALOKITEŚVARA](#) how to practice the perfection of wisdom, and even then he must be empowered to ask the question by the Buddha. In the [SADDHARMAPUNĀRIKASŪTRA](#), it is Śāriputra’s question that prompts the Buddha to set forth the parable of the burning house. The Buddha predicts that in the future, Śāriputra will become the buddha Padmaprabha.

śārīra. (P. sarīra; T. lus/sku/ro/ring bsrel; C. sheli; J. shari; K. sari 舍利). In Sanskrit, a common term for “body” in both the literal and metaphoric sense (as in the “main body” of a text as opposed to a commentary). The term is also used to refer to a corpse, especially that of a monk or of the Buddha, both before and after cremation; in the latter case, the term is often translated as “relic” (śārīra). However, this is not always the meaning in the mortuary context, and the term śārīrapūjā, “worship of the śārīra,” often seems to mean the funeral ceremony for the Buddha or a monk, rather than the worship of relics. Relics entombed in a [STŪPA](#) were indeed worshipped; in those contexts, the term generally appears in the plural. In general, relics include whole-body relics (C. [QUANSHEN SHELİ](#); J. zenshin shari; K. chönsin sari)—e.g., the mummified remains of eminent masters—and partial-body relics (C. [SUISHEN SHELİ](#); J. saishin shari; K. swaesin sari)—e.g., portions of the physical body, such as a finger bone, [TOOTH RELIC](#), or crystalline substances that are presumed to be the condensation of the sanctified

remains of an enlightened person that occurs during cremation. Such physical remains were believed to represent the Buddha's or the sages' ongoing presence and power and have been objects of worship since the time of the Buddha's own [PARINIRVĀNA](#). According to written sources, the śarīra left after the cremation of the Buddha were apportioned by the brāhmaṇa [DRONA](#), who divided the relics into eight shares and distributed them among the kingdoms of north India. Nevertheless, the “war of the relics” that was supposed to have broken out over the disposition of the relics—depicted on two friezes appearing on architraves on the southern and western gateways of the great [STŪPA](#) of [SAÑCĪ](#)—probably never occurred. Emperor [AŚOKA](#) is said to have subsequently collected and redistributed these relics by erecting eighty-four thousand [STŪPAS](#) throughout his realm to enshrine them. Nineteen such stūpas were “discovered” in China before the Tang dynasty, among them one at Changgansi on Ayuwangshan and another on [WUTAISHAN](#). Major śarīra like the finger bone of the buddha at [FAMENSI](#) also became the objects of fervent cults in medieval China. Buddhist scriptures, which were the “relics of the [DHARMAKĀYA](#)” (C. fashen sheli; J. hosshin shari; K. pōpsin sari), also came to be enshrined in stūpas and Buddhists worshipped them just as they worshipped physical remains. See also [DHARMAŚARĪRA](#); [DHĀTU](#).

[Sārnāth](#). The modern place name for a site approximately four miles outside of Vārāṇasī and the location of the Deer Park ([MRGADĀVA](#)) in [RSIPATANA](#) where the Buddha is said to have first “turned the wheel of dharma” ([DHARMAKĀPRĀVARTANA](#)), viz., delivered his first sermon. Sārnāth is thus considered one of the holiest sites in the Buddhist world and has long been an important place of pilgrimage. Seven weeks after the Buddha became enlightened at [BODHGAYĀ](#), he started out for the Deer Park at Rṣipatana, where he met and preached to his five former ascetic companions, the [PAÑCAVARGIKA](#). To these five men, the Buddha preached the [FOUR NOBLE TRUTHS](#) (catvāry āryasatyāni). Of the five, the first to become enlightened was [ĀJŃĀTAKAUNDINYA](#), followed shortly thereafter by the other four. Soon after the Buddha began teaching, a young man named [YAŚAS](#) arrived from Vārāṇasī with fifty-four other people, who all asked to be ordained. Later, Emperor [AŚOKA](#) had a large [STŪPA](#) and other monuments erected at the spot. When [FAXIAN](#) visited Sārnāth during his fifth-century pilgrimage, the site was an active religious center, with two monasteries and four stūpas. The monastic community was still thriving during the seventh century when [XUANZANG](#) visited. Today, the Dhamek stūpa is the major surviving architectural structure, likely the restoration of a stūpa dating

back to the Aśokan period. Ruins of the monastery are also visible, along with an important edict on an Aśokan pillar forbidding activities that might cause a schism in the order ([SAMGHABHEDA](#)).

[Sarvadurgatipariśodhanatantra](#). (T. Ngan song thams cad yongs su sbyong ba'i rgyud; C. Zuisheng foding tuoluoni jingchu yezhang zhou jing; J. Saishōbutchōdarani jōjogōshōjūkyō; K. Ch'oesūng pulchōng tarani chōngje ōpchang chu kyōng 最勝佛頂陀羅尼淨除業障呪經). In Sanskrit, “Tantra on the Complete Purification of All Negative Places of Rebirth,” an important Indian tantra classified sometimes as a [CARYĀTANTRA](#), but most commonly as a [YOGATANTRA](#), associated with the [SARVATATHĀGATATATTVASAMGRAHA](#). In the text, [ŚAKRA](#) asks the Buddha [ŚĀKYAMUNI](#) about the fate of a deity named Vimalamañiprabha, who is no longer living in the [TRĀYASTRIMŚĀ](#) heaven. The Buddha explains that he has been reborn in the [AVĪCI](#) hell. The gods then ask the Buddha how to avoid rebirth in the three “evil destinies” ([DURGATI](#)) of animals, ghosts, and hell denizens. The Buddha sets forth a variety of rituals, including rituals for the four kinds of activities ([ŚĀNTIKA](#), [PAUSTIKA](#), [VAŚĪKARANA](#), [ABHICĀRA](#)) as well as rituals for the dead. The text was widely commented upon in Tibet, where it was a major source of rituals for the fortunate rebirth of the dead.

[sarvajñatā](#). (P. sabbaññu; T. kun shes/thams cad mkhyen pa; C. yiqie zhi; J. issaichi; K. ilch'e chi 一切智). In Sanskrit, “all-knower,” “all-knowledge,” or “omniscience”; in early versions of the perfection of wisdom ([PRAJÑĀPĀRAMITĀ](#)) sūtras, the name for a buddha’s knowledge; later, the term was used for the knowledge of a [ŚRĀVAKA](#) or [PRATYEKABUDDHA](#), in contrast to a buddha’s knowledge of all aspects ([SARVĀKĀRAJÑATĀ](#)), which is reached by cultivating a bodhisattva’s knowledge of the paths ([MĀRGAJÑATĀ](#)). The “all” (sarva) means all the grounds (vastu) of the knowledge of defiled ([SAMKLISTA](#)) and pure (viśuddha, see [VIŚUDDHI](#)) dharmas systematized in the [FOUR NOBLE TRUTHS](#). In the [ABHISAMAYĀLAMKĀRA](#) and [VIMUKTISENA](#)’s commentary to that text, sarvajñatā has both a positive and a negative meaning. In the opening verses of the *Abhisamayālamkāra*, for example, sarvajñatā is called the mother of the perfection of wisdom. In such cases it is a positive term for the part of a buddha’s knowledge that is shared in common with śrāvakas, and so on. In the third chapter of the same work, sarvajñatā is a negative term used to identify the absence of skillful means ([UPĀYA](#)) and the lack of the total absence of subject-

object conceptualization ([GRĀHYAGRĀHAKAVIKALPA](#)) in śrāvakas, in order to point clearly to the superiority of the [BODHISATTVA](#) path.

[sarvajñatājñāna](#). (P. sabbaññutāñña; T. thams cad mkhyen pa'i ye shes; C. yiqiezhhi zhi; J. issaichichi; K. ilch'ejhi chi 一切智智). In Sanskrit, “omniscient knowledge”; a buddha’s knowledge of all the grounds (vastu) of the knowledge of defiled ([SAMKLISTA](#)) and purified (viśuddha, see [VIŚUDDHI](#)) dharmas systematized in the [FOUR NOBLE TRUTHS](#). In the [ABHISAMAYĀLAMKĀRA](#) and its commentarial tradition, sarvajñatājñāna also refers to the knowledge of the four noble truths in the mental continuum of a bodhisattva or buddha. See [SARVAJÑATĀ](#).

[sarvākārajñatā](#). (T. rnam pa thams cad mkhyen pa; C. yiqiezhong zhi; J. issaishuchi; K. ilch'ejong chi 一切種智). In Sanskrit, “knowledge of all aspects,” the preferred term in the [ABHISAMAYĀLAMKĀRA](#) and its commentaries for the omniscience of a buddha, which simultaneously perceives all phenomena in the universe and their final nature. When explained from the perspective of the goal that bodhisattvas will reach, the knowledge of all aspects is indicated by ten dharmas, among which are cittotpāda (cf. [BODHICITTOTPĀDA](#)), defining all the stages of all the Buddhist paths; [AVAVĀDA](#), defining all the instructions relevant to those stages, the stages leading to the elimination of the subject-object conceptualization ([GRĀHYAGRĀHAKAVIKALPA](#)) along the entire range of accomplishments up to and including the state of enlightenment itself (see also [NIRVEDHABHĀGIYA](#)); the substratum ([GOTRA](#)), objective supports ([ĀLAMBANA](#)) and aims (uddeśa) of the practice; and the practices ([PRATIPATTI](#)) incorporating the full range of skillful means ([UPĀYAKAUŚĀLYA](#)) necessary to turn the wheel of the dharma ([DHARMACAKRAPRAVARTANA](#)) in all its variety. When described from the perspective of the bodhisattva’s practice that leads to it, sarvākārajñatā has 173 aspects: twenty-seven aspects of a [ŚRĀVAKA](#)’s knowledge of the four noble truths ([SARVAJÑATĀ](#)), thirty-six aspects of a [BODHISATTVA](#)’s knowledge of paths ([MĀRGAJÑATĀ](#)) and one hundred ten aspects that are unique to a buddha. These are again set forth as the thirty-seven aspects of all-knowledge, thirty-four aspects of the knowledge of the paths, and the thirty-nine aspects of the knowledge of all aspects itself. See also [ĀKĀRA](#).

[Sarvamandalasāmānyavidhiguhyatantra](#). (T. Gsang ba spyi rgyud; C. Ruixiye jing; J. Suikiyakyō; K. Yuhūiya kyōng 蕤耶經). In Sanskrit, “Secret Tantra for the Common Ritual for all [MANDALAS](#)”; a text that belongs, according to Tibetan

categorization of tantras, to the [KRIYĀTANTRA](#) class.

[Sarvanīvaraṇaviskambhin](#). (T. Sgrib pa thams cad rnam par sel ba; C. Chugaizhang pusa; J. Jogaishō bosatsu; K. Chegaejang posal 除蓋障菩薩). In Sanskrit, “Blocking all Hindrances”; a [BODHISATTVA](#) who is the interlocutor of the [KĀRANDAVYŪHA](#); in the [GUHYASAMĀJATANTRA](#), he is listed as one of the eight great bodhisattvas (see [ASTAMAHOAPUTRA](#)); he associated with the buddha [AMOGHASIDDHI](#). See [KĀRANDAVYŪHA](#).

[Sarvāstivāda](#). (T. Thams cad yod par smra ba; C. Shuo yiqieyou bu/Sapoduo bu; J. Setsuissaiubu/Satsubatabu; K. Sōrilch’eyu pu/Salbada pu 說一切有部/薩婆多部). In Sanskrit, “Teaching that All Exists,” one of the most influential of all the mainstream (that is, non-Mahāyāna) schools of Indian Buddhism, named after its doctrine that all conditioned factors ([DHARMA](#)) continue to exist (sarvam asti) throughout all three time periods ([TRIKĀLA](#)) of past, present, and future. The Sarvāstivāda had one of the most elaborate [ABHIDHARMA](#) canons ([ABHIDHARMAPITAKA](#)) in all of Buddhism and the school was especially known for its distinctive and influential dharma theory. The Sarvāstivāda identified seventy-five dharmas that the school held were substantially existent (dravyasat) and endowed with intrinsic nature ([SVABHĀVA](#)): viz., the five sense organs ([INDRIYA](#)), the five sense objects, nonmanifest materiality ([AVIJŅAPTIRŪPA](#)), mind ([CITTA](#)), forty-six mental concomitants ([CAITTA](#)), fourteen conditioned forces dissociated from thought ([CITTAVIPRAYUKTASAMSKĀRA](#)), and three unconditioned ([ASAMSKRTA](#)) factors. Although the conditioned dharmas always existed, they still were impermanent and thus still moved between temporal periods because of specific “forces dissociated from thought” ([CITTAVIPRAYUKTASAMSKĀRA](#)): the “compounded characteristics” ([SAMSKRTALAKSANA](#), [CATURLAKSANA](#)) of origination ([JĀTI](#)), continuance ([STHITI](#)), “senescence” or decay ([JARĀ](#)), and “desinence,” viz., extinction ([ANITYATĀ](#)). In the Sarvāstivāda treatment of causality, these four characteristics were forces that exerted real power over compounded objects, escorting those objects along the causal path until the force “desinence” finally extinguished them; this rather tortured explanation was necessary in order to explain how factors that the Sarvāstivāda school posited continued to exist in all three time periods yet still appeared to undergo change. Even after enlightenment, those dharmas still continued to exist, although they were then effectively “canceled out” through the force of the “nonanalytical suppressions” ([APRATISAMKHYĀNIRODHA](#)), which kept in check the production of

all types of dharmas, ensuring that they remained positioned in future mode forever and were never again able to arise in the present. This distinctive dharma theory of the Sarvāstivāda was probably what the [MADHYAMAKA](#) philosopher [NĀGĀRJUNA](#) was reacting against in his clarion call that all dharmas were devoid of intrinsic existence ([NIHŠVABHĀVA](#)) and thus characterized by emptiness ([ŚŪNYATĀ](#)). The Sarvāstivāda school's elaborate abhidharma was also the inspiration for the still more intricate "Mahāyāna abhidharma" of the [YOGĀCĀRA](#) school (see [BAIFA](#)), which drew much of its classification scheme and many of its specific dharmas directly from the Sarvāstivāda. In describing the path of the [ARHAT](#), the Sarvāstivāda set forth a five-stage path system ([PAÑCAMĀRGA](#), of accumulation/equipment, preparation, vision, cultivation, and no further learning) for the [ARHAT](#) and asserted that the [BODHISATTVA](#) practices six perfections ([PĀRAMITĀ](#)) in the course of his training. This five-stage path was also adopted by the Yogācāra in its own theory of the bodhisattva [MĀRGA](#). The Sarvāstivāda developed an elaborate view of the Buddha and the events of his life, as represented in the famous [LALITAVISTARA](#). In its view of death and rebirth, Sarvāstivāda accepted the reality of the "intermediate state" ([ANTARĀBHAVA](#)) between rebirths, which in the Sarvāstivāda analysis could range from instantaneous rebirth, to rebirth after a week, indeterminate duration, and as many as forty-nine days; the latter figure seems to have become dominant in later traditions, including Mahāyāna, after it was adopted by the [ABHIDHARMAKOŚABHĀSYA](#) and the [YOGĀCĀRABHŪMI](#). The Sarvāstivāda was one of the main subgroups of the [STHAVIRANIKĀYA](#) (School of the Elders), which split with the [MAHĀSĀMGHIKA](#) in the first centuries following the Buddha's death. The Sarvāstivāda evolved as one of the three major subdivisions of the Sthaviranikāya, perhaps as early as a century or two following the first schism, but certainly no later than the first century CE. Sarvāstivāda was one of the most enduring and widespread of the mainstream Buddhist schools. It was especially important in northern India in such influential Buddhist regions as [KASHMIR](#) and [GANDHĀRA](#) and eventually along the [SILK ROAD](#) in some of the Indo-European petty kingdoms of the Tarim River basin, such as [KUCHA](#). Its geographical location along the major overland trade routes also led to it becoming the major mainstream school known to East Asian Buddhism. The Sarvāstivāda school includes an important subgroup, the [VAIBHĀSIKA](#) ("Followers of the Vibhāṣā"), who were the [ĀBHIDHARMIKA](#)s associated with the Sarvāstivāda school, especially in Kashmir in northwestern India but also in Gandhāra and even [BACTRIA](#). Because these masters considered their teachings to be elaborations of

doctrines found in the encyclopedic Sarvāstivāda abhidharma treatise, the [ABHIDHARMAMAHĀVIBHĀSĀ](#), they typically referred to themselves as Sarvāstivāda-Vaibhāṣika or simply Vaibhāṣika. This group was later also distinguished from the [MŪLASARVĀSTIVĀDA](#) (“Root Sarvāstivāda”), a distinction that may have originated in a dispute over [VINAYA](#) recensions between the northwestern Sarvāstivāda-Vaibhāṣika school in Kashmir and Gandhāra and the Sarvāstivāda school of [MATHURĀ](#) in north-central India. The Mūlasarvāstivāda is best known for its massive [MŪLASARVĀSTIVĀDA VINAYA](#), one of the oldest and by far the largest (by up to a factor of four) of the major monastic codes (see [VINAYAPITAKA](#)) of the mainstream Buddhist schools; because of its eclectic content, it functioned almost as a proto-canon. The Mūlasarvāstivāda vinaya is the monastic code still followed today in the Tibetan traditions of Buddhism. See also [SAUTRĀNTIKA](#).

[Sarvatathāgatattvasaṃgraha](#). (T. De bzhin gshegs pa thams cad kyi de kho na nyid bsdus pa; C. Yiqie rulai zhenshishe dasheng xianzheng sanmei dajiaowang jing; J. Issainyorai shinjitsushō daijōgenshōzanmai daikyōōgyō; K. Ilch'e yōrae chinsilsōp taesūng hyōnjūng sammae taegyowang kyōng 一切如來真實攝大乘現證三昧大教王經). In Sanskrit, “Compendium of Principles of All the Tathāgatas”; one of the most important Buddhist tantras, whose influence extended through India, China, Japan, and Tibet. Likely dating from the late seventh century, the text presented a range of doctrines, themes, and practices that would come to be regarded as emblematic of tantric practice. These include the view that [ŚĀKYAMUNI](#) Buddha did not actually achieve enlightenment under the [BODHI TREE](#) but did so through ritual consecration. The commentaries to the *Sarvatathāgatattvasaṃgraha* recount that Prince [SIDDHĀRTHA](#) was meditating on the banks of the [NAIRAÑJANĀ](#) River when he was roused by the buddha [VAIROCANA](#) and all the buddhas of the ten directions, who informed him that such meditation would not result in the achievement of buddhahood. He thus left his physical body behind and traveled in a mind-made body ([MANOMAYAKĀYA](#)) to the [AKANISTHA](#) heaven, where he received various consecrations and achieved buddhahood. He next descended to the summit of Mount [SUMERU](#), where he taught the [YOGATANTRAS](#). Finally, he returned to the world, reinhabited his physical body, and then displayed to the world the well-known defeat of [MĀRA](#) and the achievement of buddhahood under the Bodhi tree. The tantra also includes the violent subjugation of Maheśvara (Śiva) by the wrathful bodhisattva [VAJRAPĀNI](#), suggesting competition between Hindu and

Buddhist tantric practitioners at the time of its composition and the increasing importance of violent imagery in Buddhist tantra. Such important elements as the five buddha families ([PAÑCATATHĀGATA](#)) and the practice of visualizing oneself as a deity also appear in the text. The tantra is also important for the prominent role given to the buddha Vairocana. In East Asia, the *Sarvatathāgatatattvasaṃgraha* was particularly influential in the form of the [VAJRAŚEKHARA](#), the reconstructed Sanskrit title derived from the Chinese translations of the first chapter of the *Sarvatathāgatatattvasaṃgraha* made by [VAJRABODHI](#) and [AMOGHAVAJRA](#) during the Tang dynasty. This would become a central text for the esoteric traditions of China and Japan. The full text of the *Sarvatathāgatatattvasaṃgraha* was not translated into Chinese until Dānapāla completed his version in 1015. Ānandagarbha (fl. c. 750) wrote an important commentary on the *Sarvatathāgatatattvasaṃgraha* called *Tattvālokarī* (“Illumination of the Compendium of Principles Tantra”), and Śākyamitra (fl. c. 750) wrote a commentary called *Kosalālaṃkāra* (“Ornament of Kosala”). Ānandagarbha’s maṇḍala ritual called *Sarvavajrodayamaṇḍalavidhi* is a ritual text based on the first chapter of the *Sarvatathāgatatattvasaṃgraha*. The tantra was very influential in Tibet during both the earlier dissemination ([SNGA DAR](#)) and the later dissemination ([PHYI DAR](#)) periods. Classified as a yogatantra, it was an important source during the later period, for example, for such scholars as [BU STON RIN CHEN GRUB](#) and [TSONG KHA PA](#) in their systematizations of tantra.

sarvatraga. (T. kun ’gro; C. bianxing; J. henyō; K. p’yōnhaeng 遍行). In Sanskrit, “allpervasive” or “omnipresent”; referring specifically to the five omnipresent (sarvatraga) mental concomitants ([CAITTA](#)) that are present to varying degrees in all conscious states according to the analysis of the [YOGĀCĀRA ABHIDHARMA](#). These five factors are: sensory contact ([SPARŚA](#)), sensation ([VEDANĀ](#)), volition ([CETANĀ](#)), perception or discrimination ([SAMJÑĀ](#)), and attention ([MANASKĀRA](#)). It is not possible to identify consciousness or mind ([CITTA](#)) except through these omnipresent factors; each has a specific mental function, and when these functions operate together they produce what is conventionally called a conscious state or mind. Thus manaskāra functions as a basic level of mental activity; cetanā functions to make consciousness nonarbitrary, giving consciousness intention relative to its object; sparśa functions to connect consciousness with its object; vedanā extends mere contact into the realm of sentient experience; and samjñā functions to differentiate and identify a particular object. These five factors are included among the ten

[MAHĀBHŪMIKA](#) dharmas in the seventy-five dharmas of the [SARVĀSTIVĀDA](#) school. In the Pāli [ABHIDHAMMA](#), there are seven mental factors (P. cetisika) that are associated with all states of consciousness, these five together with concentration ([SAMĀDHI](#)) and mental vitality ([JĪVITA](#)).

[sarvatragahetu](#). (T. kun 'gro'i rgyu; C. bianxing yin; J. hengyōin; K. p'yōnhaeng in 遍行因). In Sanskrit, “allpervasive,” or “universally active,” “cause,” the fifth of the six types of causes ([HETU](#)) outlined in the [JÑĀNAPRASTHĀNA](#), the central text of the [SARVĀSTIVĀDA ABHIDHARMA](#). This type of cause refers to the fact that the unwholesome proclivities ([ANUŚAYA](#)) of mind produce not only identical types of subsequent proclivities, but also serve as the root cause of all other types of afflictions, thus obstructing a person’s capacity to understand the true nature of reality. The unwholesome cause and effect must occur in the same realm (such as the [RŪPADHĀTU](#)), but the cause and effect can be different types of unwholesome states, e.g., ignorance can produce attachment.

[Sarvodaya](#). Also known as Sarvodaya Shramadana, a reform movement founded in Sri Lanka in 1958 by A. T. Ariyaratne. This lay Buddhist movement sought to promote, as its name suggests, “the welfare of all” through “the donation of labor,” especially at the local level, through various public works and relief projects, such as building roads, digging wells, and bringing better healthcare and farming techniques to the village. Sarvodaya also sought to reestablish what it considered to be the traditional relationship between the village and its monastery.

[Sasaki, Ruth Fuller](#). (1892–1967). An influential Western scholar of the [CHAN](#) ([ZEN](#)) Buddhist tradition. Ruth Fuller Everett had been married to Charles Everett, who died in 1940. She was introduced to Asian religions while living in Nyack, New York, and more specifically to Buddhism while on a world cruise that took her and her husband to Japan in 1930. There, she met [DAISETZ TEITARO SUZUKI](#). Two years later, she returned to Japan and spent more than three months at the monastery of [NANZENJI](#), where she was allowed to practice with the monks. She met [ALAN WATTS](#) when she traveled to London with her daughter Eleanor, who married Watts in 1938, the same year that Fuller joined Sokeian, Shigetsu Sasaki’s Buddhist Society of America, and began to edit the Society’s Journal (*The Cat’s Yawn*). Fuller and Sasaki translated the [YUANJUE JING](#) (“Perfect Enlightenment Sūtra”) together. Sasaki was imprisoned in 1942 during the American internment of Americans of Japanese heritage in World War II. In

prison, his health deteriorated. Fuller and Sasaki were married in 1944, but he died in 1945, at which time Fuller became the leader of the Zen Institute in New York City. She moved to Japan in 1949 in order to find a teacher for the Institute and finish translating her husband's work. Fuller was ordained in 1958, and traveled between Japan and the United States until her death in 1967. She published *Zen Dust* with Miura Isshū, and *Zen: A Method for Religious Awakening*.

sāsana. (P. *sāsana*; T. *bstan pa*; C. *shengjiao*; J. *shōgyō*; K. *sōnggyo* 聖教). In Sanskrit, “dispensation,” “teachings”; the Buddha’s teachings especially as conceived historically as an institutionalized religion; a common term for the teachings of the Buddha, or what is typically known in the West as “Buddhism.” The Pāli commentaries analyze the teachings of the Buddha according to both a twofold and threefold system of classification. The twofold dispensation is comprised of the “teaching for monks” (P. *bhikkhusāsana*) and “teaching for nuns” (P. *bhikkhunīsāsana*). The threefold dispensation is comprised of the “teaching on scriptural study” (P. *pariyattisāsana*), “teaching on practice” (P. *paṭipattisāsana*), and the “teaching on realization” (P. *paṭivedhasāsana*). According to this system, scriptural study constitutes the foundation of the Buddha’s teaching, without which there can be no successful practice of the path (**MĀRGA**) and hence no realization of the Buddhist truths or of enlightenment. The same Pāli commentaries state that the teachings of **GAUTAMA** Buddha will last for five thousand years and propose a variety of scenarios as to how it will suffer gradual decline until its complete disappearance (see **ANTARADHĀNA**). According to the **THERAVĀDA** calculation, the *sāsana* reached its halfway point in 1956.

Sāsanavaṃsa. In Pāli, “Chronicle of the Dispensation,” an ecclesiastical history written by the Burmese (Myanmar) scholiast Paññāsāmi at Mandalay in 1861. Written from the perspective of the royally sponsored **THUDHAMMA** Council, the text purports to record the history of the **THERAVĀDA** saṅgha from the time of the Buddha, through its introduction into Burma in ancient times, up to the author’s own period. Based on the earlier Burmese-language Buddhist chronicle, *Thathanalinkara Sadan* (1831), the *Sāsanavaṃsa* was the last of a series of such chronicles, all representing the Thudhamma point of view, to be produced during the Konbaung dynasty (1752–1885). The text was edited for the **PALI TEXT SOCIETY** by Mabel Bode in 1897, and was translated as *The History of the*

Buddha's Religion by B. C. Law in 1952.

[sāsanavisodhana](#). In Pāli, “purification of the Buddha’s teaching”; referring specifically to the expulsion of malefactors and heretics from the congregation of Buddhist monks and nuns (P. saṅgha; S. [SAMGHA](#)). It is typically, but not necessarily followed by a communal recitation ([SAMGĪTI](#)) of the Buddhist canon (P. tipīṭaka; S. [TRIPITAKA](#)) by the newly purified and reunited saṅgha. The monastic code ([VINAYA](#)) severely limits the ability of the saṅgha as a body or its leaders to force the secession of false monks, monks guilty of [PĀRĀJIKA](#) offenses, schismatics, or heretics. For this reason this authority has been ceded by historical precedent and tradition (but not by vinaya law) to the state, embodied ideally in the person of the pious Buddhist king. In the Pāli tradition, the ultimate paradigm for royal interventionism in saṅgha affairs is King Dhammāsoka (see [AŚOKA](#)), who is portrayed in the Pāli chronicles of Sri Lanka and the Pāli commentaries as having purged the saṅgha of malefactors at the behest of the saṅgha and under the guidance of the elder [MOGGALIPUTTATIṢṢA](#). After the saṅgha was purified, Moggaliputtatissa convened the third Buddhist council (see COUNCIL, THIRD) to rehearse and reaffirm the Buddha’s true teachings. Cf. [SIKKHĀPACCAKKHĀNA](#); [ŚIKSĀDATTAKA](#).

[Sa skya](#). (Sakya). In Tibetan, lit. “gray earth”; a principal sect and monastery of the Tibetan tradition. The Sa skya was politically powerful during the thirteenth and fourteenth centuries and renowned for its scholastic training and emphasis on the tantric system of [LAM ’BRAS](#), or “path and result.” Its name is derived from the sect’s original institution of Sa skya monastery (see infra), which was named after a place by that name, meaning “gray earth”; the monastery is painted with a distinctive gray-blue wash. Sa skya doctrinal history extends back to the Indian adept [VIRŪPA](#), who is considered a primary source for the instructions on the [HEVAJRATANTRA](#) and lam ’bras, and the Tibetan translator [’BROG MI SHĀKYA YE SHES](#), who carried these teachings to Tibet. The founding of the Sa skya sect in Tibet is attributed to members of the ancient ’Khon family including [DKON MCHOG RGYAL PO](#), a disciple of ’Brog mi. Dkon mchog rgyal po founded Sa skya monastery in 1073, with its tantric practice based on the new tantras that were then being brought from India; Sa skya is thus one of the “new translation” ([GSAR MA](#)) sects. His son [SA CHEN KUN DGA’ SNYING PO](#) promulgated the seminal Sa skya instructions on the *Hevajratantra* and lam ’bras. In 1247 the acclaimed scholar [SA SKYA PANDITA KUN DGA’ RGYAL MTSHAN](#) fashioned an agreement with

the Mongol ruler Godan Khan, in which the Tibetan monk was granted supreme political authority in Tibet. Later, Sa skya Paṇḍita's nephew, 'PHAGS PA BLO BROS RGYAL MTSHAN formed a similar agreement with Qubilai Khan, establishing Sa skya rule into the fourteenth century. The principal leaders of the Sa skya were traditionally chosen from among members of the 'Khon family and the position of [SA SKYA KHRI 'DZIN](#), or “Sakya Throne Holder,” continues to be a hereditary, as opposed to an incarnation-based, position. Beginning in the fifteenth century several branches of the Sa skya sect developed. The [NGOR](#) subsect was established by [KUN DGA' BZANG PO](#), known as Ngor chen (“great man of Ngor”), who founded a seat at [NGOR E WAM CHOS LDAN](#) in 1429. Blo gsal rgya mtsho (Losel Gyatso, 1502–1566), called Tshar chen (“great man of Tshar”), established the Tshar Sa skya lineage. Also counted among the greatest Sa skya masters are the [SA SKYA GONG MA RNAM LNGA](#), the so-called “five Sa skya forefathers.” ¶ Sa skya is also the name of the monastery that is the monastic seat of the Sa skya sect of Tibetan Buddhism, located in Gtsang (Tsang) in central Tibet, and founded in 1073 by the Sa skya hierarch Sa chen kun dga' snying po. It served as the site of Tibetan political power during the period of Sa skya dominance in the thirteenth and fourteenth centuries. The central monastic complex is a massive, imposing structure, renowned for its extensive library.

[Sa skya gong ma rnam lnga](#). (Sakya Gongma Namnga). In Tibetan, “five Sa skya forefathers,” or “five hierarchs of Sa skya.” Five great masters, the most illustrious scholar-saints of the aristocratic 'Khon family, revered as early founders and teachers of the [SA SKYA](#) sect of Tibetan Buddhism.

They are:

1. [SA CHEN KUN DGA' SNYING PO](#) (1092–1158)
2. [BSOD NAMS RTSE MO](#) (1142–1182)
3. Grags pa rgyal mtshan (Drakpa Gyaltsen, 1147–1216)
4. [SA SKYA PANDITA KUN DGA' RGYAL MTSHAN](#) (1182–1251)
5. ['PHAGS PA BLO GROS RGYAL MTSHAN](#) (1235–1280)

Kun dga' snying po (called Sa chen) was instrumental in making the [LAM 'BRAS](#)

tradition a central pillar of the Sa skya sect, Kun dga' rgyal mtshan (called Sa paṅ) was one of the greatest scholars Tibet has produced, and 'Phags pa (called Dharmarāja, T. Chos rgyal) forged an alliance with the Mongolian rulers of China and instituted Sa skya rule over much of Tibet in the thirteenth century. The different subsects of Sa skya all give the five an iconic role in their practices and rituals.

Sa skya khri 'dzin. (Sakya Tridzin). In Tibetan, lit. “throne holder of [SA SKYA](#),” used as a title for the principal religious leader of the Sa skya sect of Tibetan Buddhism. It is a hereditary position assumed by male members (often a son or nephew) of the ancient 'Khon family that traces its lineage back to 'Khon [DKON MCHOG RGYAL PO](#), who founded Sa skya monastery in 1073. The forty-first holder of the Sa skya throne, Ngag dbang kun dga' theg chen dpal 'bar (Ngawang Kunga Tekchen Pelbar) (b. 1945), was born in southern Tibet. Following his enthronement at Sa skya monastery in 1959, he escaped the Chinese communist invasion by fleeing to India where he established a new seat near the former British hill station of Dehradun. He continues to travel throughout Asia, Europe, and North America, where he teaches to a wide audience.

Sa skya pa. An adherent of the [SA SKYA](#) sect of Tibetan Buddhism.

Sa skya pa'i bka' 'bum. (Sakya Kabum). In Tibetan, “Collected Works of the Sa skya”; the collected writings of the [SA SKYA GONG MA RNAM LNGA](#), the first five great hierarchs of the [SA SKYA](#) tradition: [SA CHEN KUN DGA SNYING PO](#), [BSOD NAMS RTSE MO](#), Grags pa rgyal mtshan (Drakpa Gyaltsen, 1147–1216), [SA SKYA PANDITA KUN DGA' RGYAL MTSHAN](#), and ['PHAGS PA BLO GROS RGYAL MTSHAN](#). The standard edition of the collected works is in fifteen volumes carved on wood blocks at the [SDE DGE](#) printery in Khams in eastern Tibet in 1736.

Sa skya Paṅḍita Kun dga' rgyal mtshan. (Sakya Paṅḍita Kunga Gyaltsen) (1182–1251). Although associated primarily with the [SA SKYA](#) sect, Sa skya Paṅḍita is traditionally considered one of the greatest savants and religious luminaries in the history of Tibetan Buddhism. He authored a number of seminal philosophical treatises, and beyond his role as scholar and logician, played an instrumental role in forging a relationship with the Mongol court. The name Sa skya Paṅḍita is an honorific title, meaning “Scholar of Sa skya,” often abbreviated as Sa paṅ. Born into a renowned family, he was the grandson of [SA CHEN KUN DGA' SNYING PO](#) and the nephew of the Sa skya [BSOD NAMS RTSE MO](#)

and Grag pa rgyal mtshan (Drakpa Gyaltsen, 1147–1216), from whom he received teachings. Sa paṅ began his studies at a young age, and was quickly recognized as a prodigy. He studied extensively with the leading masters of his day, including scholars from the great centers of learning in India, such as [ŚĀKYAŚRĪBHADRA](#), from whom he received [BHIKSU](#) ordination in 1208. He excelled in all fields of Buddhist knowledge, especially Sanskrit grammar and poetics and the logical treatises on epistemology ([PRAMĀNA](#)). In 1216, Grag pa rgyal mtshan passed away, and Sa paṅ became the principal religious master of Sa skya. The next twenty-eight years of his career were highly productive. It was during this time that he composed his pramāṇa masterpiece, [TSHAD MA RIGS GTER](#) (“Treasury of Logical Reasoning”) circa 1219, and his great synthetic doctrinal tract, [SDOM GSUM RAB DBYE](#) (“Clear Differentiation of the Three Vows”), in about 1232. He was renowned as both a debater (famously defeating a renowned Hindu scholar) and a polemicist, composing works critical of various doctrines of the rival [BKA’ BRGYUD](#), [RNYING MA](#), and [JO NANG](#) sects. In 1244 Sa paṅ received a summons to the court of the Mongol prince Godan for the purpose of negotiating the submission of Tibet to Mongol authority. Traveling slowly across Tibet together with his nephew and eventual successor [’PHAGS PA BLO GROS RGYAL MTSHAN](#), he reached the Mongol court and met with Godan in 1247. The prince was greatly impressed by Sa paṅ’s erudition, as well as his magical and medical powers; the prince is said to have converted to Buddhism after Sa paṅ cured him of a skin disease. Tibet was subsequently spared Mongol occupation, and the Sa skya sect, with Sa paṅ as its chief prelate, was granted political authority within Tibet, a position that was later passed on to ’Phags pa by Qubilai Khan. The relation of Sa paṅ, and later ’Phags pa, with the Mongol ruler would be cited as the paradigm of the so-called “priest-patron” ([YON MCHOD](#)) relationship. Sa paṅ did not live to return to Tibet, passing away at the capital of Godan’s court. Sa paṅ authored more than a hundred works and translated many texts from Sanskrit into Tibetan. Among his compositions, the five most famous are, including the two listed above: *Legs bshad* (“Elegant Sayings”), *Mkhas pa rnams ’jug pa’i sgo* (“Entrance Gate for the Wise”), and *Thub pa’i dgongs gsal* (“Elucidating the Intention of the Sage”).

[sāsrava](#). (P. sāsava; T. zag bcas; C. youlou; J. uro; K. yuru 有漏). In Sanskrit, lit. “with outflows,” hence, “contaminated,” “tainted.” Just as a leaky roof lets in rain that destroys a residence and all its contents, the edifice of the five aggregates ([SKANDHA](#)) is a ruin dampened by the afflictions ([KLEŚA](#)) of greed,

hatred, and delusion and riddled with the rot of [KARMA](#) (viz., the formative forces left by the actions motivated by the afflictions). Sāsrava is similar in meaning to [SAMKLISTA](#) (defilement, affliction), although wider in application because unwholesome ([AKUŚALA](#)) and wholesome ([KUŚALA](#)) states are sāsrava if they lead to a future state with outflows, even if that is a fortunate state of happiness in this lifetime or the next. In this sense, sāsrava is a common designation for the aggregates (skandha) and refers to those objects that may serve as an occasion for the increase of kleśa. Thus, even an inanimate object can be considered “contaminated” in the sense that it can serve as a cause for the increase of the afflictions, such as greed. According to the [ABHIDHARMAKOŚABHĀSYA](#), only four dharmas are uncontaminated. Three of these are permanent: space ([ĀKĀŚA](#)), nonanalytical cessation ([APRATISAMKHYĀNIRODHA](#)), and analytical cessation ([PRATISAMKHYĀNIRODHA](#)), which would include [NIRVĀNA](#). The only impermanent dharma that is uncontaminated is the truth of the path or true path ([MĀRGASATYA](#)); technically, this would refer to the equipoise of nonperception ([ASAMJÑĀSAMĀPATTI](#)) when absorbed in a perfect vision of the [FOUR NOBLE TRUTHS](#), or, in the [MAHĀYĀNA](#), in the perfect vision of the emptiness ([ŚŪNYATĀ](#)) of all dharmas. The [SĀSRAVASKANDHA](#) (contaminated aggregates) is the entire heap of dharmas that make up a person ([PUDGALA](#)), with the sole exception of the [NIRVĀNA](#) element, or in Mahāyāna the pure element ([DHĀTU](#)) that locates the lineage ([GOTRA](#)) of all beings destined for the final perfect enlightenment. The [ABHIDHARMASAMUCCAYA](#) gives six meanings for sāsrava, which it says can be (1) a contaminant ([ĀSRAVA](#)) itself, i.e., an actual kleśa, (2) the other parts of the mind that are necessarily present when obscuration ([ĀVARANA](#)) is present, (3) the aggregates when kleśa is operating, (4) the future contaminated aggregates that arise from the earlier cause, (5) the higher stages of the path because, although not governed by kleśa, they are tied up with thought construction, and (6) even the very final stage of the bodhisattva path, because it is affected by residual impressions left by earlier contaminated states.

[sāsravaskandha](#). (P. sāsavakhandha; T. zag bcas kyi phung po; C. youlou yun; J. uroun; K. yuru on 有漏蘊). In Sanskrit, “aggregates associated with the contaminants,” the entire heap of dharmas, systematized as the “five aggregates that are the objects of clinging” (pañcopādānaskandha) that comprise the person ([PUDGALA](#)). See [SĀSRAVA](#); [SKANDHA](#).

śāstr. (P. satthar; T. ston pa; C. shi; J. shi; K. sa 師). In Sanskrit, “teacher”; referring to any teacher and a common epithet for the Buddha, who is often referred to as the “teacher of gods and men [or princes and people]” (śāstā devamanuṣyāṇām; see discussion in the conclusion to [DEVA](#), s.v.). Among the various terms for a teacher in Buddhist literature, including [GURU](#), [ĀCĀRYA](#), and [UPĀDHYĀYA](#), śāstr was a term of particular respect. In early Buddhist literature, it seems to have been reserved exclusively for the Buddha and past buddhas and not for disciples ([ŚRĀVAKA](#)) of the Buddha; thus, whenever the term “teacher” appears, it typically refers to the Buddha himself. To recognize the Buddha as the true teacher and to declare him as such is regarded as a central determinant of Buddhist identity. Outside the Buddhist community, the term was also used to refer to the so-called “six heterodox teachers,” such as [PŪRANA KĀŚYAPA](#).

śāstra. (T. bstan bcos; C. lun; J. ron; K. non 論). In Sanskrit, “treatise,” a term used to refer to works contained in the various Buddhist canons attributed to various Indian masters. In this sense, the term is distinguished from [SŪTRA](#), a discourse regarded as the word of the Buddha or spoken with his sanction. In the basic division of Buddhist scripture in the Tibetan canon, for example, the translations of śāstra ([BSTAN 'GYUR](#)) are contrasted with the words of the Buddha (or a buddha) called [BKA' 'GYUR](#). A Buddhist śāstra can be in verse or prose, and of any length, and it includes the different Sanskrit compositional genres (vṛtti, vārttika, bhāṣya, ṭīkā, vyākhyā, pañjikā, and so on) often rendered by the single English word “commentary.” In the Buddhist context, the genre is typically a form of composition that explains the words or intention of the Buddha. The word śāstra is found in the actual title of a number of works, for example, the *Prajñāpāramitopadeśaśāstrakārikā*, an alternate title of the [ĀBHISAMAYĀLAMKĀRA](#), and the *Mahāyānottaratantraśāstravyākhyā*, another name for the [RATNAGOTRAVIBHĀGA](#).

śāstrsamjñā. (T. ston par 'du shes; C. dashi xiang; J. daishisō; K. taesa sang 大師想). In Sanskrit, “recognition as the teacher,” a term that appears especially in the [MAHĀYĀNA](#) sūtras in a variety of contexts. In addition to its denotation of recognizing the Buddha as the true teacher ([ŚĀSTR](#)), the Mahāyāna also claims that a bodhisattva should regard all other bodhisattvas as his teachers, as if they were the Buddha himself; one should regard as one’s teacher the person from whom one hears the perfection of wisdom ([PRAJÑĀPĀRAMITĀ](#)); one should regard the text of the prajñāpāramitā itself as one’s teacher; and one should regard all

sentient beings as one's teacher.

***śāstrapitaka**. (C. lunzang; J. ronzo; K. nonjang 論藏). In Sanskrit reconstruction, “treatise basket,” a more inclusive designation for the ABHIDHARMAPITAKA, the third “basket” of the Buddhist canon (TRIPITAKA), which expands this section of the canon to take in scholastic treatises (ŚĀSTRA) from the MAHĀYĀNA exegetical schools in addition to the ABHIDHARMA texts of the MAINSTREAM BUDDHIST SCHOOLS. The Sanskrit term appears in Western literature on the canon, but seems not to be attested in Indian sources (or in their Tibetan translation) and may be a back-translation from the Chinese locution lunzang. Since virtually the inception of Buddhism in China, the Mahāyāna tradition dominated. This allegiance is apparently why Chinese scriptural catalogues (JINGLU), since at least the time of the definitive KAIYUAN SHIJIAO LU (730), had listed Mahāyāna materials first in their respective rosters of SŪTRA and śāstra texts. This same order is subsequently followed in the traditional printed versions of the Chinese Buddhist canon (DAZANGJING; see also KORYŌ TAEJANGGYŎNG). To the Chinese, who proudly identified with the Mahāyāna, it must have seemed anathema to treat as canonical ABHIDHARMA works by the ARHAT-ĀBHIDHARMIKAS (such as KĀTYĀYANĪPUTRA or VASUMITRA) but not the scholastic treatises by the Indian BODHISATTVA-exegetes of Mahāyāna (such as NĀGĀRJUNA and ASUBANDHU) who were much more renowned to the Chinese. In order to give pride of place to the works of these influential Mahāyāna scholiasts, the Chinese listed them before abhidharma texts in the roster of śāstra materials collected in the Chinese Buddhist canon, and referred to this third basket more expansively as a “treatise basket” (lunzang) rather than merely an abhidharmapiṭaka.

śāśvatadrsti. (P. sassatadiṭṭhi; T. rtag lta; C. changjian; J. jōken; K. sanggyōn 常見). In Sanskrit, “eternalism,” one of the two “extreme views” (ANTAGRĀHADRSTI), along with “annihilationism” (UCCHEDADRSTI). Eternalism is the mistaken belief or view that a self (ĀTMAN) exists independently of the five aggregates (SKANDHA) and that it continues to exist eternally, transmigrating from one rebirth to the next. Annihilationism (ucchedadrṣṭi) is, by contrast, the mistaken belief that the self is the same as the aggregates and that the continuum (SAMTĀNA) of consciousness ceases to exist at death. See also ŚĀŚVATĀNTA.

śāśvatānta. (P. sassata; T. rtag pa'i mtha'; C. changbian; J. jōhen; K. sangbyōn 常邊). In Sanskrit, “extreme of eternalism”; one of the two extremes (along with

the extreme of annihilationism, or [UCCHEDĀNTA](#)) included in the [ANTAGRĀHADRSTI](#), or “extreme views.” There are six root afflictions ([MŪLAKLEŚA](#)), according to the hundred-dharma list ([BAIFA](#)) of the [YOGĀCĀRA ABHIDHARMA](#), the last of which is [DRSTI](#) ([wrong] views); *drṣṭi* is further subdivided into five types of wrong views, which in turn include *antagrāhadṣṭi*. The “extreme view” refers specifically to the mistaken notion that (1) there is a perduring soul that continues to be reborn unchanged from one lifetime to the next, or (2) the continuum ([SAMTĀNA](#)) of consciousness is annihilated at death and thus not subject to rebirth. The former view is called the extreme of eternalism ([ŚĀŚVATADRSTI](#); P. *sassatadiṭṭhi*); the latter, the extreme of annihilationism ([UCCHEDADRSTI](#); P. *ucchedadiṭṭhi*). The praise of the Buddha by [NĀGĀRJUNA](#) at the opening of his [MŪLAMADHYAMAKAKĀRIKĀ](#) says that the Buddha avoided these two and six other extremes (the extremes of cessation and production, coming and going, difference and sameness) by teaching that all dharmas are products of a process of dependent origination ([PRATĪTYASAMUTPĀDA](#)) and are thus free from any essential nature ([SVABHĀVA](#)). Although variously defined, the term *sāśvānta* is generally used in descriptions of the view that phenomena possess a greater degree of permanence and reality than they in fact do, a tenet that is often ascribed to non-Buddhist schools, such as Sāṃkhya. The various schools of Buddhist philosophy also deploy the term polemically to denigrate the tenets of a rival. The [SAUTRĀNTIKA](#) school, for example, could claim that the Sarvāstivāda position that dharmas exist throughout all three time periods represented a mistaken attachment to the extreme of permanence; the [MADHYAMAKA](#) school could claim that the [YOGĀCĀRA](#) assertion that all objects have the nature of consciousness represented a mistaken attachment to the extreme of permanence. The extremes (*anta*) are contrasted with the middle (*madhyama*) that defines freedom from [SAMSĀRA](#), or, in Mahāyāna works, freedom from the extremes of both [SAMSĀRA](#) and [NIRVĀNA](#). The Buddhist middle way ([MADHYAMAPRATIPAD](#)) between these two extremes posits that there is no permanent, perduring soul (countering eternalism), and yet there is karmic continuity from one lifetime to the next (countering annihilationism). See also [SATKĀYADRSTI](#).

[śatadharmā](#). In Sanskrit, “hundred factors”; the normative roster of factors ([DHARMA](#)) recognized in the [YOGĀCĀRA](#) school’s system of [MAHĀYĀNA ABHIDHARMA](#). See [BAIFA](#); and, for the full roster, the List of Lists.

[Śataka](#). (S). See *ŚATAŚĀSTRA.

[Śatasāhasrikāprajñāpāramitāsūtra](#). (T. Shes rab kyi pha rol tu phyin pa stong phrag brgya pa; C. Shiwansong bore; J. Jūmanju hannya; K. Simmansong panya 十萬頌般若). In Sanskrit, the “Perfection of Wisdom in One Hundred Thousand Lines,” the longest of the [PRAJÑĀPĀRAMITĀ](#) sūtras. Some scholars regard the [ASTASĀHASRIKĀPRAJÑĀPĀRAMITĀ](#) (eight thousand lines) to be the earliest of the prajñāpāramitā sūtras, which was then expanded into the *Aṣṭadaśasāhasrikāprajñāpāramitāsūtra* (eighteen thousand lines) and the [PAÑCAVIMŚATISĀHASRIKĀPRAJÑĀPĀRAMITĀSŪTRA](#) (twenty-five thousand lines). According to this explanation, the most extensive of the expansions is the *Śatasāhasrikāprajñāpāramitā*, sometimes referred to as the “great mother [of the victors].” The composition sequence of these different sūtras is not as clear as once thought, however, and there appear to be parts of the *Śatasāhasrikā* not found in the *Aṣṭa*, which may go back to very early material. The text is in three major sections, with the first two expanding on the contents of the *Aṣṭasāhasrikāprajñāpāramitā*. The third section, which seems to be an independent text, contains discussions of topics such as the nature of enlightenment, the Buddha’s omniscience, the body of the Buddha, and the six perfections. Unlike the other two briefer expansions, the version in one hundred thousand lines omits four chapters that occur in the *Aṣṭasāhasrikāprajñāpāramitā*. It is said that after the Buddha taught the *Śatasāhasrikāprajñāpāramitā*, he entrusted it to the [NĀGAS](#), who kept it in a jeweled casket in the bottom of the ocean, where it was eventually retrieved and brought to the human world by [NĀGĀRJUNA](#).

*[Śatasāstra](#). (C. Bai lun [alt. Bo lun]; J. Hyakuron; K. Paek non 百論). In Sanskrit, lit., “The Hundred Treatise,” a work attributed to the [MADHYAMAKA](#) master [ĀRYADEVĀ](#), and counted as one of the “three treatises” of the [SAN LUN ZONG](#) of Chinese Buddhism, together with the *Zhong lun* (“Middle Treatise”) and [SHI’ERMEN LUN](#) (“Twelve Gate Treatise”), both attributed to [NĀGĀRJUNA](#). The *Zhong lun* is ostensibly a translation of Nāgārjuna’s [MŪLAMADHYAMAKAKĀRIKĀ](#); however, [KUMĀRAJĪVA](#)’s translation (dated 409) also contains his own annotation and a commentary to Nāgārjuna’s text by Piṅgala (fl. fourth century CE). The *Shi’ermen lun* (**Dvādaśamukhaśāstra*) is also attributed to Nāgārjuna and is purportedly an introductory manual to the *Zhong lun*. The *Śatasāstra* was translated into Chinese by Kumārajīva in 404. No Sanskrit or Tibetan recensions

of the work are known to exist; the Sanskrit title is a reconstruction. Some have speculated that the work is an abbreviated version of Āryadeva’s most famous work, the [CATUḤŚATAKA](#). The two works consider many of the same topics, including the nature of [NIRVĀNA](#) and the meaning of emptiness ([ŚŪNYATĀ](#)) in a similar fashion and both refute Sāṃkhya and Vaiśeṣika positions, but the order of their treatment of these topics and their specific content differ; the *Śataśāstra* also contains material not found in the *Catuḥśataka*. The *Śataśāstra* is therefore probably not a mere summary of the *Catuḥśataka*, but may instead represent Kumārajīva’s interpretation of Āryadeva’s text.

śāṭhya. (P. sāṭheyya; T. g.yo; C. kuang; J. ō; K. kwang 誑). In Sanskrit, “dissimulation” or “deception”; the sixth of the twenty secondary afflictions ([UPAKLEŚA](#)) in the [SARVĀSTIVĀDA](#) list of seventy-five dharmas. Śāṭhya is the attempt to conceal one’s faults out of a desire to receive goods or services from others. Dissimulation is said to prevent one from meeting spiritual mentors ([KALYĀNAMITRA](#)) in this or subsequent lives. Dissimulation differs from deceit ([MĀYĀ](#)) in that deceit is the pretension to have good qualities that one in fact lacks, while dissimulation is the concealment of faults that one possesses.

sati. (P). See [SMṚTI](#).

satipatthāna. (P). See [SMṚTYUPASTHĀNA](#).

Satipatthānasutta. (S. *Smṛtyupasthānasūtra; T. Dran pa nye bar bzhag pa’i mdo; C. Nianchu jing; J. Nenjogyō; K. Yōmch’ō kyōng 念處經). In Pāli, “Discourse on the Foundations of Mindfulness”; the tenth sutta in the [MAJJHIMANIKĀYA](#) (a separate [SARVĀSTIVĀDA](#) recension appears as the ninety-eighth [SŪTRA](#) in the Chinese translation of the [MADHYAMĀGAMA](#); there is another unidentified recension in the Chinese translation of the [EKOTTARĀGAMA](#)). An expanded version of the same sutta, titled the “Great Discourse on the Foundations of Mindfulness” ([MAHĀSATIPATTHĀNASUTTANTA](#)), which adds extensive discussion on mindfulness of breathing (P. ānāpānasati, S. [ĀNĀPĀNASMṚTI](#)), is the twenty-second sutta in the Pāli [DĪGHANIKĀYA](#). This sutta is one of the most widely commented upon texts in the Pāli canon and continues to hold a central place in the modern [VIPASSANĀ](#) (S. [VIPĀŚYANĀ](#)) movement. The sutta was preached by the Buddha to a gathering of disciples in the town of Kammāsadhamma in the country of the Kurus. The discourse enumerates twenty-one meditation practices for the cultivation of mindfulness (P. sati, S.

[SMRTI](#)), a term that refers to an undistracted watchfulness and attentiveness, or to recollection and thus memory. In the text, the Buddha explains the practice under a fourfold rubric called the four foundations of mindfulness (P. satipaṭṭhāna, S. [SMRTYUPASTHĀNA](#)). The four foundations are comprised of “contemplation of the body” (P. kāyānupassanā, S. [KĀYĀNUPAŚYANĀ](#)); “contemplation of sensations” (P. vedanānupassanā, S. vedanānupaśyanā), that is, physical and mental sensations ([VEDANĀ](#)) that are pleasurable, painful, or neutral; “contemplation of mind” (P. cittānupassanā, S. cittānupaśyanā), in which one observes the broader state of mind ([CITTA](#)) as, e.g., shrunken or expanded, while under the influence of various positive and negative emotions; and “contemplation of phenomena” (P. dhammānupassanā, S. dharmānupaśyanā), which involves the contemplation of several key doctrinal categories, such as the five aggregates (P. khandha, S. [SKANDHA](#)) and the [FOUR NOBLE TRUTHS](#). The first of the four, the mindfulness of the body, involves fourteen exercises, beginning with the mindfulness of the inhalation and exhalation of the breath (P. ānāpānasati, S. [ANĀPĀNASMRTI](#)). Mindfulness of the breath is followed by mindfulness of the four physical postures (P. iriyāpatha, S. [IRYĀPATHA](#)) of walking, standing, sitting, and lying down. This is then extended to a full general awareness of all physical activities. Thus, mindfulness is something that is also meant to accompany all of one’s actions in the course of the day, and is not restricted to formal meditation sessions. This discussion is followed by mindfulness of the various components of the body, an intentionally revolting list that includes fingernails, bile, spittle, and urine. Next is the mindfulness of the body as composed of the four great elements ([MAHĀBHŪTA](#)) of earth, water, fire, and air. Next are the “contemplations on the impure” (P. asubhabhāvanā, S. [AŚUBHABHĀVANĀ](#)), viz., contemplation of a corpse in nine successive stages of decomposition. The practice of the mindfulness of the body is designed to induce the understanding that the body is a collection of impure elements that arise and cease in rapid succession, utterly lacking any kind of permanent self. This insight into the three marks of existence—impermanence, suffering, and no-self—leads in turn to enlightenment. Mindfulness of the body is presented as the core meditative practice, with the other three types of mindfulness applied as the meditator’s attention is drawn to those factors. The sutta calls the foundations of mindfulness the ekayānamagga, which in this context might be rendered as “the only path” or “the one way forward,” and states that correct practice of the four foundations of mindfulness will lead to the stage of the worthy one (P. arahant, S. [ARHAT](#)), or at least the stage of the

nonreturner (P. anāgāmi, S. [ANĀGĀMIN](#)), in as little as seven days of practice, according to some interpretations. See also [ANUPASSANĀ](#).

[satkāyadr̥ṣṭi](#). (P. sakkāyadiṭṭhi; T. 'jig tshogs la lta ba; C. youshenjian; J. ushinken; K. yusin'gyōn 有身見). In Sanskrit, “[wrong] view of a real person,” “view of a existent body”; the wrong view that the impermanent components of the body ([KĀYA](#)) are in fact real (sat). This wrong view is related to the (mis)conceptions of I ([AHAMKĀRA](#)) and mine ([MAMAKĀRA](#)). It is classed as a type of afflicted view (kliṣṭadr̥ṣṭi), that is, a mistaken belief about a self in relation to the five aggregates ([SKANDHA](#)). In mainstream Buddhist materials, satkāyadr̥ṣṭi is listed as the first of ten fetters ([SAMYOJANA](#)) that keep beings bound to the cycle of rebirth ([SAMSĀRA](#)) and as the sixth of ten fundamental afflictions ([MŪLAKLEŚA](#)). Pāli materials delineate four types of satkāyadr̥ṣṭi for each of the five aggregates (P. khandha, S. [SKANDHA](#)), for a total of twenty varieties in all. The four types are: (1) the belief that the self is the same as the aggregates; i.e., the same as materiality ([RŪPA](#)), sensations ([VEDANĀ](#)), perception ([SAMJÑĀ](#)), conditioning factors ([SAMSKĀRA](#)), and consciousness ([VIJÑĀNA](#)); (2) the belief that the self is contained in the aggregates, (3) the belief that the self is different from the aggregates, and (4) the belief that the self is the owner of the aggregates. Satkāyadr̥ṣṭi is permanently eradicated by attaining the state of a streamenterer ([SROTAĀPANNA](#)), the first of four degrees of sanctity (see [ĀRYAPUDGALA](#)).

[satori](#). (悟). In Japanese, “awakening,” “enlightenment.” See [WU](#); [DUNWU](#); [BODHI](#).

[sattva](#). (P. satta; T. sems can; C. youqing/zhongsheng; J. ujō/shujō; K. yujōng/chungsaeng 有情/衆生). In Sanskrit, “living being,” commonly translated into English as “sentient being”; a generic term for any being in the cycle of rebirth ([SAMSĀRA](#)), including the five or six rebirth destinies ([GATI](#)) of divinities ([DEVA](#)), demigods or titans ([ASURA](#)), humans ([MANUSYA](#)), animals ([TIRYAK](#)), ghosts ([PRETA](#)), and hell denizens ([NĀRAKA](#)). Buddhism, unlike the [JAINA](#) tradition, does not generally accept that plants are endowed with consciousness and thus does not typically include plant life among sentient beings (although this claim later becomes a matter of debate within the tradition, especially in East Asia). The term sattva technically does not include buddhas and [ARHATS](#), because they are no longer subject to rebirth. In the word [BODHISATTVA](#) and [MAHĀSATTVA](#), sattva may retain a meaning closer to its mainstream Indian usage as “spiritual essence,” as in the Sāṃkhya school, where sattva is conceived as the

spiritual, enlightening “strand” (guṇa) that interacts with tamas (dullness) and rajas (energy) to explain the dispositions of people and the changes that occur in the environment.

[sattvakaṣāya](#). (T. sems can snyigs ma; C. zhongsheng zhuo; J. shujōjoku; K. chungsaeng t’ak 衆生濁). In Sanskrit, “degeneracy of beings,” one of the five signs of the degeneration of a world system that, according to Buddhist cosmology, occur between the time when the average human life span is one hundred years and when it is ten years. The term *sattvakaṣāya* refers to the fact that the intelligence and moral character of the beings who populate the world deteriorate during this period. See [KĀSĀYA](#); [SAMVARTAKALPA](#).

[sattvaloka](#). (P. sattaloka; T. sems can ’jig rten; C. zhongsheng shijian/youqing shijian; J. shujō seken/ujōseken; K. chungsaeng segan/yujōng segan 衆生世間/有情世間). In Sanskrit, “world of sentient beings”; a term used to refer to the sentient beings ([SATTVA](#)) who are the inhabitants of the realms of [SAMŚĀRA](#). The *sattvaloka* is used in distinction to, and in conjunction with, its companion term [BHĀJANALOKA](#), the “receptacle world” that is the physical environment or “container” for those sentient beings. The inanimate *bhājanaloka* and the animate *sattvaloka* together make up the three realms of existence ([TRILOKAIDHĀTU](#)). The *bhājanaloka* is formed during the first of the twenty intermediate-length eons ([KĀLPA](#)) that make up the one great eon ([MAHĀKĀLPA](#)), called the “kalpa of creation” ([VIVARTAKALPA](#)); the *sattvaloka* comes into existence during the remaining nineteen intermediate-length kalpas as sentient beings begin to be reborn in the *bhājanaloka*, beginning in the heavens and ending in the hells. The disappearance of the *sattvaloka* takes the form of a gradual depopulation of the *bhājanaloka* during the “kalpa of dissolution” ([SAMVARTAKALPA](#)). This process begins with the cessation of those beings’ rebirth in hell, which is followed by the dissolution of the hells themselves. (Those beings whose time in hell is not yet exhausted will be reborn in a hell in another universe.) The same twofold process then occurs for the realms of animals and ghosts. After that, seven suns appear in the sky, incinerating the remaining *bhājanaloka*, including Mount [SUMERU](#), the four continents, and the subtle-materiality heavens of the first [DHYĀNA](#). Beings in the first [DHYĀNA](#) who can achieve the second *dhyāna* escape destruction. When the kalpa of creation begins again, the *bhājanaloka* and the *sattvaloka* reappear due to the inertial force of the [KARMA](#) of sentient beings. These two worlds and the world of the

five aggregates (C. [WUYUN SHIJIAN](#)) together constitute the three types of world systems (C. [SANZHONG SHIJIAN](#)).

[sattvaparyāṅka](#). (T. skyil krung). In Sanskrit, “heroic cross-legged posture,” the *sattvaparyāṅka* is a seated pose formed with both legs bent horizontally with the shins lying flat on the seat and one foot lying slightly in front of the other. See also [ĀSANA](#).

[sattvārdhaparyāṅka](#). (T. skyil krung phyed pa). In Sanskrit, “heroic half cross-legged posture,” the *sattvārdhaparyāṅka* is a seated pose similar to [SATTVAPARYĀṅKA](#), where one leg is bent horizontally with the shin lying flat on the seat and the other leg bent and hanging somewhat pendant. See also [ĀSANA](#).

[sattvārtha](#). (T. sems can gyi don; C. raoyi youqing; J. nyōyakuujō; K. yoik yujōng 饒益有情). In Sanskrit, the “welfare of sentient beings,” a term that occurs in Buddhist morality in the phrase *sattvārthakriyāśīla*, “the precept of acting for the welfare of sentient beings,” the third of the bodhisattva’s “three sets of pure precepts” (*trividhāni śīlāni*, see [ŚĪLATRAYA](#)) as systematized in the [BODHISATTVABHŪMI](#). This set refers to practices that accrue to the welfare of others, in distinction to the *saṃvaraśīla*, or “restraining precepts,” which refers to the [HĪNAYĀNA](#) rules of discipline ([PRĀTIMOKSA](#)) that help adepts restrain themselves from all types of unwholesome conduct; and practicing all types of virtuous deeds (*kuśaladharmasaṃgrāhakaśīla*), which accumulates the various sorts of wholesome conduct. The welfare of sentient beings emphasizes a more active involvement in the lives of others through such deeds as nursing the sick, offering charity to the poor, protecting the helpless from harm, comforting the afflicted, and providing hospitality to travelers. It also includes more unusual forms of aid, such as using one’s supranormal powers to reveal to potential transgressors the consequences of suffering in hell. The welfare of sentient beings is ultimately achieved by teaching them the dharma. In the case of the bodhisattva, *sarvasattvārtha*, the “welfare of all sentient beings,” is one of the two goals that bodhisattvas have vowed to achieve, the other being buddhahood. It is said that by achieving buddhahood, the bodhisattva fulfills two aims or goals, his own welfare ([SVĀRTHA](#)) and the welfare of others ([PARĀRTHA](#)), the latter term being a synonym of *sattvārtha*. Of the three buddha bodies ([BUDDHAKĀYA](#)), the [SAMBHOGAKĀYA](#) and [NIRMĀNAKĀYA](#) are described as bodies that serve the welfare of others, and the [DHARMAKĀYA](#) is described as completing one’s own aims or welfare.

satya. (P. sacca; T. bden pa; C. di; J. tai; K. che 諦). In Sanskrit, “truth,” in the sense of that which is nondeceptive and exists as it appears. The term appears in two famous lists: the [FOUR NOBLE TRUTHS](#) (catvāry āryasatyāni) that were set forth in the Buddha’s first sermon, the [DHAMMACAKKAPPAVATTANASUTTA](#) (S. [DHARMACAKRAPRAVARTANASŪTRA](#)); and the two truths ([SATYADVAYA](#)) discussed in the Buddhist philosophical schools and especially in [MADHYAMAKA](#), viz., the conventional truth, or [SAMVRTISATYA](#), and the ultimate truth, or [PARAMĀRTHASATYA](#). In Madhyamaka, satya is also used in the compound satyasiddha, “truly existent” or “truly established,” to refer to a false degree of truth or autonomy imagined by ignorance. It is also found in the compound [SATYAVACANA](#) (“statement of truth”), where magical powers derive from the truth inherent in one’s words. In the [MAHĀYĀNA](#), such solemn asseverations of truth reflect the power of a bodhisattva’s aspiration to bring about the welfare of all sentient beings. See also [SANDI](#).

satyadvaya. (P. saccadvaya; T. bden pa gnyis; C. erdi; J. nitai; K. ije 二諦). In Sanskrit, “the two truths,” viz., “ultimate truth” ([PARAMĀRTHASATYA](#)) and “conventional truth” ([SAMVRTISATYA](#)). The two truths are central terms in Buddhist philosophy for categorizing the phenomena of the universe. Regardless of the school, the two truths are presumed to be exhaustive, with everything that exists, that is, all [DHARMAS](#), falling into one of the two categories. This bifurcation is associated especially with the [MADHYAMAKA](#) school, but it occurs in other schools as well, with each providing its own view of what constitutes the two truths. In each case, however, conventional truths might be described as the objects of ordinary experience that tend to be misperceived by the unenlightened, by mistakenly ascribing to them a greater degree of reality than they in fact possess. Thus, despite being “truths,” conventional truths are falsely perceived, as implied in the term samvṛti, with its connotation of deception. Ultimate truths, literally “supreme object truths,” might be described as those realities that exist as they appear and whose direct perception can lead to liberation from rebirth. For the [VAIBHĀSIKA](#) branch of [SARVĀSTIVĀDA ABHIDHARMA](#), a conventional truth is any phenomenon that can be either physically or mentally broken down into parts; an ultimate truth is a partless particle of matter or an indivisible moment of consciousness. For the [YOGĀCĀRA](#), conventional truths are dependent phenomena ([PARATANTRA](#)) as well as permanent phenomena such as space ([ĀKĀŚA](#)); ultimate truths are consummate

natures ([PARINISPANNA](#)). In Madhyamaka, conventional truths are all phenomena other than emptiness ([ŚŪNYATĀ](#)), which is the ultimate truth. The Chinese [SAN LUN ZONG](#)(Madhyamaka) master [JIZANG](#) (549–623) discusses the three stages of the two truths, in which each of these stages serves to correct any possible reification of Buddhist truth.

[Satyadvayavibhaṅga](#). (T. Bden pa gnyis rnam par 'byed pa). In Sanskrit, “Distinction Between the Two Truths,” a work by the eighth-century [MADHYAMAKA](#) master [JÑĀNAGARBHA](#). According to Tibetan classification, the work belongs to the [SVĀTANTRIKA-MADHYAMAKA](#), and within that, the [SAUTRĀNTIKA-SVĀTANTRIKA-MADHYAMAKA](#). This work, together with the [MADHYAMAKĀLAMKĀRA](#) by [ŚĀNTARAKṢITA](#) and the [MADHYAMAKĀLOKA](#) of [KAMALAŚĪLA](#) are known in Tibet as the “three works of the eastern *[SVĀTANTRIKAS](#)” (rang rgyud shar gsum) because the three authors were from Bengal. The *Satyadvayavibhaṅga* is composed in verses (kārikā) and includes a prose autocommentary (vṛtti) by the author. There is also a commentary (pañjikā) by Śāntarakṣita, who is said to have been a student of Jñānagarbha. The text presumably takes its title from Nāgārjuna’s statement in his [MŪLAMADHYAMAKAKĀRIKĀ](#): “Those who do not comprehend the distinction between these two truths do not know the nature of the profound doctrine of the Buddha.” The ultimate truth ([PARAMĀRTHASATYA](#)) is nondeceptive; its nature accords not with appearance, but with valid knowledge gained through reasoning (nyāya). It is also free from discursive thought ([NIRVIKALPA](#)). The conventional truth ([SAMVRTISATYA](#)) includes ordinary appearances, or as the text says, “whatever appears even to cowherds and women.” Within the category of the conventional, there are true and false conventions, which are distinguished based on their ability to perform a function ([ARTHAKRIYĀ](#)) in accordance with their appearance; thus water is a true convention and a mirage is a false convention. The work ends with a discussion of the three bodies ([TRIKĀYA](#)) of a buddha.

*[Satyasiddhiśāstra](#). (C. Chengshi lun; J. Jōjitsuron; K. Sōngsil non 成實論). See [CHENGSHI LUN](#); *[TATTVASIDDHI](#).

[satyavacana](#). (P. saccavacana, [alt. saccakiriyā]; T. bden pa'i ngag; C. shiyu; J. jitsugo; K. sirō 實語). In Sanskrit, “asseveration of truth,” or “statement of truth”; a solemn declaration or oath in which the truth inherent in its words generates magical or protective powers (see [PARITTA](#)). For example, when Prince [SIDDHĀRTHA](#) first renounced the world and cut off his hair, he threw it into the air

and said, “If I am to become a buddha, may it stay in the sky.” Due to this asseveration of truth, his hair was caught by the chief of the gods [ŚAKRA](#), who enshrined it in a [CAITYA](#) in the [TRĀYASTRIMŚA](#) heaven. The Buddha’s disciple [AᅅGULIMĀLA](#) offered a well-known asseveration of truth to help ease a woman’s labor pains: “Since I was born of āryan birth, O sister, I am not aware of having intentionally deprived any living being of its life. By this asseveration of truth, may you be well and may your unborn child be well.” (There is intentional irony in this statement, since Aᅅgulimāla was a murderer before he became a monk; his “āryan birth” here refers to his ordination into the [SAMGHA](#).) In Buddhist literature, miraculous events are said to be a result of an asseveration of truth. Often, when a bodhisattva has given away some body part as an act of [DĀNA](#) (see [DEHADĀNA](#); [SHESHEN](#)) that body part is restored as a result of one’s solemn declaration, as in the case of [SADĀPRARUDITA](#). In the [JĀTAKAMĀLĀ](#) of Āryaśūra, Śakra appears in the form of a blind brāhmaᅇa to test the generosity of King [ŚIBI](#), one of the Buddha’s previous lives. The king goes blind when he donates his eyes to the brāhmaᅇa, but his sight is restored when he makes a solemn statement of truth that his charity is sincere, articulating, in effect, the bodhisattva’s aspiration to seek the welfare of all beings ([SATTVĀRTHA](#)). According to another story, a young boy was bitten by a poisonous snake. The distraught parents stopped a passing monk and asked him to use his medical knowledge to save the child. The monk replied that the situation was so grave that the only possible cure was an asseveration of truth. The father said, “If I have never seen a monk that I did not think was a scoundrel, may the boy live.” The poison left the boy’s leg. The mother said, “If I have never loved my husband, may the boy live.” The poison retreated to the boy’s waist. The monk said, “If I have never believed a word of the dharma, but found it utter nonsense, may the boy live.” The boy rose, completely cured. Such is the power of the truth.

[Saundarananda](#). (T. Mdzes dga’ bo). In Sanskrit, “Handsome Nanda,” the Indian philosopher-poet [AŚVAGHOSA](#)’s verse recounting of [NANDA](#)’s transformation from enamored husband, to ascetic, and finally to enlightened [ARHAT](#), written c. second century CE. “Handsome Nanda” is the epithet of [NANDA](#), the younger half brother of the Buddha. The first half of this ornate poem provides a elaborate retelling of Nanda’s forced ordination into the Buddhist order, his humiliation due to his erotic attachments to both his wife Sundarī (a.k.a. [JANAPADAKALYĀNĪ NANDĀ](#)) and various heavenly nymphs

([APSARAS](#)), and finally his decision to abandon carnality and seek enlightenment. In the second half of the poem, the Buddha offers Nanda instruction in moral and sensory restraint, leading up to the [FOUR NOBLE TRUTHS](#), and finally the achievement of the “deathless,” a synonym for [NIRVĀNA](#). The poem ends with the now-enlightened Nanda compassionately teaching to others the path to liberation. Aśvaghoṣa’s elaborate kāvya version of this well-known tale of conversion is a classic of early Indian Buddhist literature. There is some controversy over its influence and popularity, however, since unlike most of Aśvaghoṣa’s other works, there are no Indian commentaries, and the poem was never translated into either Chinese or Tibetan.

Saurāstra. (S). One of the twenty-four sacred sites associated with the [CAKRASAMVARATANTRA](#). See [PĪTHA](#).

Sautrāntika. (T. Mdo sde pa; C. Jingliang bu; J. Kyōryōbu; K. Kyōngnyang pu 經量部). In Sanskrit, “Followers of the Sūtras,” one of the “mainstream” (that is, non-[MAHĀYĀNA](#)) schools of Indian Buddhism, which may have been a dissenting offshoot of the [SARVĀSTIVĀDA](#) school. Its name was apparently meant to distinguish this school from those [ĀBHIDHARMIKAS](#) who based themselves on [ABHIDHARMA](#) treatises, such as the [ABHIDHARMAMAHĀVIBHĀSĀ](#). The Sautrāntika were “Followers of the Sūtras” because they were said to have rejected the validity of the abhidharma as being the word of the Buddha ([BUDDHAVACANA](#)) and advocated a doctrine of momentariness ([KŚANIKAVĀDA](#)), in which (again in distinction to the Sarvāstivāda) only present activity exists. No texts of the school are extant, but its positions are represented in the [ABHIDHARMAKOŚABHĀŚYA](#), which presents the [SARVĀSTIVĀDA-VAIBHĀSIKA](#) positions in detail, and as deficient relative to a putative Sautrāntika position. According to Tibetan accounts, [VASUBANDHU](#), the author of the *Abhidharmakośabhāṣya*, wrote from the perspective of the Sautrāntika position even while he himself was a [YOGĀCĀRA](#) adherent. Similarly, some of the chapters of the Yogācāra [DHARMAKĪRTI](#)’s explanation of Dignāga’s logical system are written from the Sautrāntika perspective. According to [ŚĀNTARAKSITA](#) and his student [KAMALAŚĪLA](#), one major difference between the Vaibhāṣika and Sautrāntika schools is their respective rejection or acceptance of [SVASAMVEDANA](#) (“self-cognizing awareness”). Although both schools accept that atoms ([PARAMĀNU](#)) build up to form external objects that are perceived by consciousness, the Vaibhāṣika say that the mind knows these objects directly,

while the Sautrāntika position is that it knows them through images (ākāra). In late Indian and Tibetan classifications, the Sautrāntika and Vaibhāṣika are called the two [ŚRĀVAKA](#) schools (T. nyan thos sde pa), to distinguish them from the two Mahāyāna schools of [YOGĀCĀRA](#) and [MADHYAMAKA](#).

[Sautrāntika-Svātantrika-Madhyamaka](#). (T. Mdo sde spyod pa'i dbu ma rang rgyud pa). One of the two subschools (along with the [YOGĀCĀRA-SVĀTANTRIKA-MADHYAMAKA](#)) of the *[SVĀTANTRIKA](#) branch of [MADHYAMAKA](#), as identified by Tibetan exegetes. This is the school of [BHĀVAVIVEKA](#), his commentator [AVALOKITAVRATA](#), and [JÑĀNAGARBHA](#). Like other Svātantrikas, these three exegetes assert that phenomena exist conventionally by way of their own qualities ([SVALAKSANA](#)). They thus declare that external objects exist conventionally and deny the existence of a self-cognizing awareness ([SVASAMVEDANA](#)). With regard to the path, they contend that [ŚRĀVAKAS](#) and [PRATYEKABUDDHAS](#) understand the selflessness of the person ([PUDGALANĀIRĀTMYA](#)) but not the selflessness of phenomena ([DHARMANĀIRĀTMYA](#)), whereas [BODHISATTVAS](#) understand both kinds of nonself.

[sayadaw](#). In Burmese, an honorific used for a respected monk. The term was originally used specifically to designate the senior monk (mahathera) who was selected to serve as royal preceptor, but it eventually came to be used more generically as a term of respect for any eminent monk.

[Sba bzhed](#). (Bashe). In Tibetan, the “Annals of Sba,” a ninth-century history of the early Tibetan dynastic period and the activities of King [KHRI SRONG LDE BTSAN](#), traditionally attributed to the author Sba Gsal snang (Ba Salnang, c. late-eighth century)—a leading member of the Sba (Ba) clan and abbot of [BSAM YAS](#) monastery during the years leading up to the [BSAM YAS DEBATE](#). The text thus discusses the founding of Bsam yas, the debate, and other events surrounding the establishment of Buddhism during the period. It contains the earliest reference to [PADMASAMBHAVA](#), describing him as a water diviner. Modern scholarship tends to date the complete version of the work to the twelfth or even fourteenth century, although there are extant fragments that are likely earlier. The complete title is *Sba bzhed ces bya ba las sba gsal snang gi bzhed pa bzhugs*.

[sbas yul](#). (beyul). In Tibetan, “hidden land,” often translated as “hidden valley,” a paradisaical land whose existence is not often known until the land is “opened” by a lama ([BLA MA](#)). Such lands are typically located in southern Tibet, northern

Nepal, and Sikkim and are associated especially with the [RNYING MA](#) sect as sites where [PADMASAMBHAVA](#) hid treasure texts ([GTER MA](#)). After converting the local gods to Buddhism, Padmasambhava “sealed” the lands so that they could be discovered at a time in the future and serve as a refuge from the vicissitudes of the world; the weather is clement, the harvests are good, and there is no disease or conflict. They are special places for the practice of [TANTRA](#) during the degenerate age of the dharma, where an adept can make rapid progress on the path; in this regard, they are akin to Buddhist [PURE LANDS](#), even though they are located on earth. Hidden lands are considered safe havens, inaccessible to the enemies of the dharma and of Tibet, where one may live a long and peaceful life. According to some traditions, there are 108 hidden lands. In addition to concealing treasure texts in the hidden lands, Padmasambhava also left guidebooks for their discovery. One of the most famous of the hidden lands is [PADMA BKOD](#).

[scripture, nine/twelves divisions of](#). See [NAVAṄGA\[PĀVACANA\]](#); [DVĀDAŚĀṄGA\[PRAVACANA\]](#).

[Sde dge](#). (Derge). A region on the Tibet-China border, which until the 1950s was one of the most famous kingdoms in Khams; now incorporated into China’s Sichuan province. The kingdom with its twenty-five districts enjoyed the autonomy of an independent state throughout much of its existence. Included among its famous monasteries are [DPAL SPUNGS](#), [KAH THOG](#), [RDZOGS CHEN](#), [ZHE CHEN](#), and [DPAL YUL](#). From the eighteenth century onward, its royal family supported a famous printery that became the repository of hundreds of thousands of woodblock prints. The printing of the entire [BKA’ ’GYUR](#) and [BSTAN ’GYUR](#) edited by [TAI SI TU](#) Gstug lag chos kyi ’byung gnas (1700–1774) and of the foundational texts of the [SA SKYA](#) and [RNYING MA](#) sects, among others, were started there in 1729 and completed in 1744. In the nineteenth century, the region became the center of the Khams [RIS MED](#) (nonsectarian) movement; many of the modern traditions of Tibetan Buddhism can be traced back to its founders ’[JAM MGON KONG SPRUL](#), ’[JAM DBYANGS MKHYEN BRTSE](#), and [DPAL SPRUL RIN PO CHE](#).

[Sde srid Sangs rgyas rgya mtsho](#). (Desi Sangye Gyatso) (1653–1705). The third and final regent of the fifth [DALAI LAMA NGAG DBANG BLO BZANG RGYA MTSHO](#), serving as regent of Tibet from 1679 until his death. He successfully concealed the death of the fifth Dalai Lama in 1682 for some fifteen years, in

part to allow for the completion of the [PO TA LA](#) Palace. During this time, he served as ruler of Tibet, overseeing (and keeping secret) the discovery of the sixth Dalai Lama, [TSHANGS DBYANGS RGYA MTSHO](#). In addition to being a skilled politician, Sangs rgyas rgya mtsho was one of the most learned and prolific authors in the history of Tibet, composing important treatises on all manner of subjects, including statecraft, ritual, astrology and calendrics, poetics, architecture, and court etiquette. He had a special interest in medicine, composing his famous treatise entitled [BAIDŪRYA SNGON PO](#) and founding a medical college on Lcag po ri near the Po ta la. His largest literary project was his seven-thousand page work on the life of the fifth Dalai Lama and his previous incarnations. More than any other author, he was responsible for solidifying the mythic identity of the Dalai Lama as an incarnation of the bodhisattva [AVALOKITEŚVARA](#) and establishing the line of incarnations over the centuries in India and Tibet, which culminated in the person of the fifth Dalai Lama. He was a staunch supporter and active promoter of the [DGE LUGS](#) sect, greatly increasing the number of its monasteries and the size of its monastic population. After the Mongol chieftain Lha bzang Khan claimed rulership over Tibet in 1700, Sangs rgyas rgya mtsho agreed to share power with him, but was soon deposed. Armed conflict occurred between the factions despite a series of truces. Sde srid Sangs rgyas rgya mtsho was captured and beheaded by Mongol troops in 1705.

[sdom gsum](#). (domsum). In Tibetan, “three vows” or “three codes”; variously the three sets of vows or restraints ([TRISAMVARA](#)) set forth in the śīlaparivarta (morality chapter) of the [BODHISATTVABHŪMI](#); or (1) the seven sets of [VINAYA](#) rules that make up the [PRĀTIMOKSA](#) code of the [HĪNAYĀNA](#), (2) the three sets of vows or restraints defining bodhisattva morality in the [BODHISATTVABHŪMI](#), and (3) the nineteen [SAMAYAs](#) that codify tantric morality, particularly as found in the Tibetan version of the [VAJRAŚEKHARATANTRA](#). See also [TRISAMVARA](#), [SAMVARA](#), [ŚĪLATRAYA](#).

[Sdom gsum rab dbye](#). (Domsum Rapye). In Tibetan, “Clear Differentiation of the Three Vows,” an important work by the Tibetan master [SA SKYA PANDITA KUN DGA’ RGYAL MTSHAN](#). Composed in verse, around 1232, it deals with the three vows or codes: the [PRĀTIMOKSA](#) vows, the [BODHISATTVA](#) vows, and the tantric vows ([SAMAYA](#)). In Tibet, it was considered possible, and in some cases ideal, for the Buddhist practitioner to receive and maintain all three sets of

precepts: the monk’s precepts (prātimokṣa), which from the Tibetan perspective derived from the [HĪNAYĀNA](#); the bodhisattva precepts, which derived from the [MAHĀYĀNA](#), and the tantric precepts, which derived from the [VAJRAYĀNA](#). However, there was a wide range of opinion on the relation among these three and how to resolve contradictions among them. The “Clear Differentiation of the Three Vows” is not an exposition of the three sets of precepts, but rather a polemical work in which Sa skya Paṇḍita criticizes interpretations of the three then current in the other sects of Tibetan Buddhism. Sa skya Paṇḍita’s own view, in brief, was that the prātimokṣa and the bodhisattva precepts provided the foundation for the tantric precepts, such that someone receiving tantric initiation should already hold the other two sets. The work provoked hostile responses from those whose views were criticized in the text, leading Sa skya Paṇḍita to reply to his critics in a series of letters. His text sparked the development in subsequent centuries of a genre of texts on the three vows or codes ([SDOM GSUM](#)).

[Sdom gsum rnam nges](#). (Domsum Namnge). A work in the [SDOM GSUM](#) (three codes) genre by Mnga’ ris paṇ chen Padma dbang rgyal (Ngari Panchen Pema Wangyel, 1487–1542). It is a work of the [RNYING MA](#) sect, but is influenced both by the [SDOM GSUM RAB DBYE](#) and by works on ethics by [TSONG KHA PA](#). It became widely known through [LO CHEN DHARMA SHRI](#)’s detailed explanation, which is a central part of the curriculum of many Rnying ma [BSHAD GRWA](#) (monastic schools).

[secession from the order](#). See SIKKHĀPACCAKKHĀNA.

[seiban](#). (西班). In Japanese, “west rank”; the offices of the prefects (C. [TOUSHOU](#)) at a [CHAN](#) or [ZEN](#) monastery. These offices are often located on the west side of the monastery and are hence referred to as the west rank. On the east are the stewards (C. [ZHISHI](#)), who are thus referred to as the east section or rank. The [CHANYUAN QINGGUI](#), for instance, refers to the stewards as the east section (C. dongxu) and the prefects as the west section (C. xixu).

[Sekhasutta](#). In Pāli, “Discourse on the Disciple in Higher Training,” the fifty-third sutta in the [MAJJHIMANIKĀYA](#) (no precise equivalent appears in the Chinese translations of the [ĀGAMAS](#), but the sūtra is cited in the [DAZHIDU LUN](#), indicating it was known in other mainstream Buddhist traditions); preached by the Buddha’s attendant [ĀNANDA](#) to the leader of the Sakiya ([ŚĀKYA](#)) tribe, Mahānāma, and his entourage in the meeting hall of the Sakiyans in the city of

Kapilavatthu (S. [KAPILAVASTU](#)). Ānanda teaches them about the higher training practiced by the disciple who has entered the path. Such a disciple practices morality (P. *sīla*, S. [ŚĪLA](#)) which includes observance of the monastic code, guarding the sense faculties, moderation in all things, and wakefulness. He is further possessed of seven wholesome qualities, including faith, a sense of shame, fear of blame, learning, energy, mindfulness, and wisdom. He is master of the four meditative absorptions (P. [JHĀNA](#), S. [DHYĀNA](#)) and possesses the three knowledges (P. *tevijja*, S. [TRIVIDYA](#)). The three knowledges are comprised of (1) recollection of one's previous existences (P. *pubbenivasanusati*, S. [PŪRVANIVĀSĀNUMRTI](#)); (2) the divine eye (P. *dibbacakkhu*, S. [DIVYACAKSUS](#)) or the ability to see the demise and rebirth of beings according to their good and evil deeds; and (3) knowledge of the extinction of contaminants (P. *āsavakkhayañāna*, S. [ĀSRAVAKṢAYAJÑĀNA](#)), which encompasses knowledge of the [FOUR NOBLE TRUTHS](#) and is equivalent to arhatship.

[sekishu kōan](#). (隻手公案). In Japanese, “the case of one-hand [clapping]”; a famous kōan (C. [GONG'AN](#)) attributed to the Japanese RINZAI ZEN master [HAKUIN EKAKU](#) (1685–1769), in which he asks, “What is the sound of one hand [clapping]?” The kōan is included in his 1752 collection *Yabukōji*, along with Hakuin's autocommentary. The sekishu kōan came to be used within some Rinzaï kanna Zen (see [KANHUA CHAN](#)) systems as the first case given to neophytes in Zen training and, along with the mu kōan (C. [WU GONG'AN](#)), continues to be one of the emblematic kōans used in Japanese Rinzaï Zen circles.

[self-immolation](#). See [DEHADĀNA](#); [SHESHEN](#); [YŌNJI](#).

[sems sde](#). (sem de). In Tibetan, literally “mind class,” one of the three divisions of [RDZOGS CHEN](#), together with [KLONG SDE](#), or “expanse class,” and the [MAN NGAG SDE](#), or “instruction class.” It appears that the three classes were created simultaneously rather than sequentially, probably dating to the [PHYI DAR](#), or later period of the dissemination of Buddhism in Tibet, that began in the eleventh century. It is possible that the classification scheme was invented by members of the Zur clan, who were involved in codifying the [RNYING MA](#) texts that were circulating at that time. Within the threefold division, the texts classified do not necessarily share a single set of characteristics. However, it can be said that the works in the *sems sde* are often earlier than those in the other two classes. The root tantra of the *sems sde* is the [KUN BYED RGYAL PO](#), where a number of short early-period rdzogs chen texts were gathered into a single new tantra. The *sems*

sde works tend toward simple, evocative statements that deny the need for any practice or moral concerns.

Senart, Émile. (1847–1928). French Indologist who made significant contributions to the study of Indian Buddhism. His knowledge of Middle Indic languages allowed him to do important work on Indian epigraphy, most notably the edicts of [AŚOKA](#), in his *Les inscriptions de Piyadasi*, first published in a series of articles in *Journal Asiatique* between 1881 and 1886. His research suggested that the Aśoka inscriptions represented a popular Buddhism in which following an ethical code led to rebirth in heaven, with less emphasis on [NIRVĀNA](#). His most famous and controversial work was on the biography of the Buddha, presented in his *Essai sur la légende du Buddha* (1882). There, he argued that the life of the Buddha was not a series of originally historical events that over time became encrusted with legendary elements, but rather that those mythological elements of the Buddha’s life formed a coherent whole that was fully formed in India before the Buddha’s birth, with the Buddha as a solar deity. His argument was famously opposed by [HERMANN OLDENBERG](#). Senart also argued that a pre-classical version of Yoga played a significant role in the formation of Buddhist thought and practice. Senart also made major contributions through his editing of Buddhist texts. Among his editions, the most substantial was his three-volume edition of the [MAHĀVASTU](#), published between 1882 and 1897. He was also among the first to study the [KHAROSTHĪ](#) fragments of the [DHARMAPADA](#). See also [DHAMMAPADA](#).

Senchakushū. (選擇集). In Japanese, “Collection of Selections,” composed by the Japanese [PURE LAND](#) monk [HŌNEN](#) in 1198; also known as *Senjakushū* or *Senchaku hongan nenbutsushū* (“Collection of Selections on Nenbutsu and the Original Vow”). Hōnen’s *Senchakushū* is one of the most influential texts in Japan on the practice of nenbutsu (see [NIANFO](#)), i.e., the invocation of the name of the buddha [AMITĀBHA](#); it is also traditionally regarded as the founding scripture of the [JŌDOSHŪ](#) tradition of Japanese pure land. Relying on the three pure land sūtras ([JINGTU SANBUJING](#), viz., the longer and shorter [SUKHĀVĀTĪVYŪHASŪTRA](#) and the [GUAN WULIANGSHOU JING](#)) and a number of important commentaries by [SHANDAO](#) and [TANLUAN](#), Hōnen attempted to elucidate the importance of the practice of nenbutsu in the context of Amitābha’s original vows as described in the *Sukhāvātīvyūhasūtra*. He first cites [DAOCHUO](#)’s division of Buddhist practice into that of the sacred path (that is, the traditional

Buddhist path) and the pure land path, and then cites [SHANDAO](#)'s division into proper and miscellaneous. These divisions are used as an argument for the practice of exclusive nenbutsu. Hōnen then demonstrates that exclusive nenbutsu is the practice advocated by Amitābha in his original vows. In the next few sections of his text, Hōnen also mentions the benefits of exclusive nenbutsu and explains why this practice is most appropriate for those in the age of the final dharma (J. mappō; see [MOFA](#)). The other sections of the *Senchakushū* provide further scriptural evidence for the importance of nenbutsu and discuss the proper method for practicing it. At Hōnen's request, the work was not widely circulated until after his death. Numerous commentaries on this text exist in Japanese.

[Sengai Gibon](#). (仙崖義梵) (1750–1837). Japanese [ZEN](#) monk in the [RINZAISHŪ](#), known for his whimsical teachings, his poetry, and especially for his calligraphy and sumi-e paintings. His best-known work in the West is a simple ink drawing of a circle, triangle, and square. He spent much of his life at SHŌFUKUJI, where he served as abbot.

[Sengcan](#). (J. Sōsan; K. Sŭngch'an 僧粲) (d. 606?). Chinese monk and reputed third patriarch of the [CHAN](#) tradition. Although the influential Chan poem [XINXIN MING](#) ("Faith in Mind") is attributed to Sengcan, little is actually known of this mysterious figure, and he may simply have been a later invention created to connect the [BODHIDHARMA-HUIKE](#) line of early Chan with the East Mountain teachings ([DONGSHAN FAMEN](#)) of [DAOXIN](#) (580–651) and [HONGREN](#) (602–675). Most of what is known of Sengcan is constructed retrospectively in such early Chan genealogical histories as the [BAOLIN ZHUAN](#), [LENGQIE SHIZIJI](#), [CHUAN FABAO JI](#), and [LIDAI FABAO JI](#), and in later Chan histories known as "transmission of the lamplight records" ([CHUANDENG LU](#)). Sengcan is claimed to have studied under Huike, the first Chinese disciple of the Chan founder, Bodhidharma, and the second patriarch of the Chan school. During Emperor Wu's (r. 502–549) persecution of Buddhism, Sengcan is said to have gone into hiding and later resided on Mt. Sikong in Shuzhou (present-day Anhui province). The *Lengqie shizi ji* and *Chuan fabao ji* claim that Daoxin became Sengcan's disciple sometime in the late-sixth century, but Daoxin's connection to this dubious figure is tenuous at best and most probably spurious. Sengcan was later given the posthumous title Chan Master Jingzhi (Mirror-like Wisdom).

[Sengguo](#). (J. Sōka; K. Sŭngkwa 僧果) (b. 408). In Chinese, "Fruition of the Saṃgha"; a Buddhist nun from Xiuwu in northern China during the Liu-Song

dynasty (420–479), the first of the four short-lived southern dynasties that formed during the Six Dynasties period. Her biography, contained in the [BIQIUNI ZHUAN](#), exemplifies several prevalent characteristics of early Chinese Buddhist nuns' hagiographies. She engaged in a strict observance of the monastic rules ([VINAYA](#)), which inspired her disciples. Her contemplative practice, which began from a young age, was reputed to be so intense that it often produced trance states resembling death. She left secular life as an adult and practiced at a convent near the Song capital, where a number of Ceylonese nuns resided. Upon conversing with them, Sengguo discovered that while Chinese nuns had previously accepted monastic obligations from an assembly of monks ([BHIKSU](#)), they had not received them from an assembly of nuns ([BHIKSUNI](#)), as was required by the [VINAYA](#). After consulting with the Indian monk [GUNAVARMAN](#) (367–431) on the issue, she resolved that she and her fellow nuns should be reordained. Thus in 433, in an ordination ceremony presided over by [SAMGHAVARMAN](#), Sengguo and over three hundred other nuns were ordained with both an assembly of monks and an assembly of nuns in attendance, thereby officially instituting the monastic order for women in China.

Sengmeng. (J. Sōmō; K. Sŭngmaeng 僧猛) (418–489). A Buddhist nun ([BHIKSUNI](#)) from Yanguan County in southeastern China during the Qi dynasty (479–502). As was common in the biographies collected in the [BIQIUNI ZHUAN](#), she left secular life at a young age. Despite her family's long fealty to Daoism, Sengmeng alone rejected Daoism in favor of Buddhism, strictly adhering to the monastic precepts. Sengmeng demonstrated a penetrating grasp of scripture and was extremely diligent in her study. In addition, she could recite from memory extraordinary amounts of text, often after only a single reading. Sengmeng demonstrated her Buddhist compassion in many ways, including dramatic moments when she used her own body as a barricade to protect animals from predators, enduring pecks and bites as a result. Her exemplary deeds were cited as ideal models for Buddhist monastics and laity alike.

sengtang. (J. sōdō; K. sŭngdang 僧堂). In Chinese, the “[SAMGHA](#) hall,” or “monks' hall”; also known as the yuntang (lit. cloud hall; J. undō) or xuanfochang (site for selecting buddhas). The saṃgha hall was the center of monastic practice in the Chinese [CHAN](#) school. The hall, often large enough to hold hundreds of monks, was traditionally built on the west side of a Chan monastery. The foundation of the saṃgha hall is traditionally attributed to the

Chan master [BAIZHANG QINGGUI](#) (749–814). According to Baizhang’s [CHANMEN GUISHI](#), Chan monks were obligated throughout the day and night to eat, sleep, and meditate in the saṃgha hall. There, they would sit according to seniority on a long platform. A similar description of the saṃgha hall is also found in the [CHANYUAN QINGGUI](#) of [CHANGLU ZONGZE](#) (d.u.; fl. c. late-eleventh to early-twelfth century). During the Song dynasty, the saṃgha hall became incorporated into the monastic plans of all large public monasteries ([SHIFANG CHA](#)) in China, regardless of sectarian affiliation. The saṃgha hall was introduced into Japan by the [SŌTŌSHŪ](#) master [DŌGEN KIGEN](#) (1200–1253), who built the first sōdō in 1236 at the monastery of Kōshōji; for this reason, the sōdō is most closely associated with the Sōtō tradition. Dōgen also wrote detailed instructions in his [BENDŌHŌ](#) (“Techniques for Pursuing the Way,” 1246) on how to practice in the sōdō. Stemming from a practice initiated by [DAO’AN](#), an image of the [ARHAT PINḌOLA](#) was usually placed in the middle of the saṃgha hall. Sometimes an image of [MAÑJUŚRĪ](#), [ĀJÑĀTAKAUNDINYA](#), or [MAHĀKĀŚYAPA](#) was installed in lieu of Piṇḍola. The Sōtō Zen tradition, for instance, often places a statue of Mañjuśrī in the guise of a monk in its saṃgha halls. The Japanese [RINZAISHŪ](#) chose to call their main monks’ hall a zendō (meditation hall) rather than a saṃgha hall. Unlike the Sōtō sōdō, which was used for eating, sleeping, and meditating, the Rinzai zendō was reserved solely for meditation (J. [ZAZEN](#)). Japanese [ŌBAKUSHŪ](#), following Ming dynasty (1368–1644) Chinese customs, also called their main hall a zendō. In Korea, the term sŭngdang is no longer used and the main meditation hall is typically known as a sŏnbang (lit. meditation room). See also [PRAHĀNAŚĀLĀ](#).

[Sengyou](#). (J. Sōyū; K. Sŭngu 僧祐) (445–518). Early Chinese [VINAYA](#) teacher and scriptural cataloguer, whose career is indicative of early Chinese Buddhism’s concerns to preserve the integrity of the dispensation and to transmit its beliefs and practices accurately. According to his biography in the [GAOSENZHUAN](#) (“Biographies of Eminent Monks”), Sengyou was born in Jianye (present-day Nanjing, Jiangsu province), the capital of the Liu-Song dynasty (420–479), the first of the four short-lived southern dynasties that formed during the Six Dynasties period. He became a monk at an early age, and studied under vinaya master Faying (416–482). Later, Sengyou himself gained a reputation as a vinaya master; the *Gaoseng zhuan* says that, whenever he was invited by the prince Wenxuan (406–494) of the Qi dynasty (479–502) to lecture on the vinaya, typically seven or eight hundred people would attend. During the Yongming era

(483–493) of the Qi dynasty, Sengyou received an imperial order to travel to the Wu region (in present-day Jiangnan) to lecture on the *Shisong lü*, the [SARVĀSTIVĀDAVINAYA](#), as well as to explain the methods for receiving the precepts. In addition to his vinaya-related activities, Sengyou also tried to establish an authoritative canon of Buddhist texts by compiling the [CHU SANZANG JIJ](#) (“Compilation of Notices on the Translation of the [TRIPITAKA](#)”), the earliest extant Buddhist scriptural catalogue ([JINGLU](#)). In his catalogue, Sengyou introduced three criteria for distinguishing an apocryphal scripture (see [APOCRYPHA](#)) from a genuine one: (1) the meanings and expressions found in a text were “shallow and coarse”; (2) a text did not come from “foreign regions”; (3) a text was not translated by a “Western guest.” While the first criterion was a more subjective form of internal evidence, the latter two were important pieces of external evidence that all subsequent cataloguers adopted as objective standards for determining textual authenticity. Sengyou’s other extant major works include the *Shijia pu* (“Genealogy of [ŚĀKYAMUNI](#)”), in five rolls, and the Buddhist apologetic [HONGMING JI](#) (“Collection for the Propagation and Clarification [of Buddhism]”), in fourteen rolls.

[Sengzhao](#). (J. Sōjō; K. Sŭngjo 僧肇) (374–414). Influential early Chinese monk and exegete, whose writings helped to popularize the works of the [MADHYAMAKA](#) school in China. Sengzhao is said to have been born into an impoverished family but was able to support himself by working as a copyist. Thanks to his trade, he was able to read through much of traditional Chinese literature and philosophy, including such Daoist classics as the *Zhuangzi* and *Laozi*, and is said to have resolved to become a monk after reading the [VIMALAKĪRTINIRDEŚA](#). He later became a disciple of [KUMĀRAJĪVA](#) and served as the Chinese-language stylist for Kumārajīva’s translations. After Yao Xing (r. 394–416) of the Latter Qin dynasty (384–417) destroyed the state of Liang in 401, Sengzhao followed his teacher to Chang’an, where he and his colleague Sengrui (352–436) were appointed as two of the main assistants in Kumārajīva’s translation bureau there. Yao Xing ordered them to elucidate the scriptures Kumārajīva had translated, so Sengzhao subsequently wrote his [BORE WUZHILUN](#) to explicate the [PAÑCAVIMŚATISĀHASRIKĀPRAJÑĀPĀRAMITĀSŪTRA](#) that Kumārajīva and his team had translated in 404. This and other influential treatises by Sengzhao were later compiled together as the [ZHAO LUN](#). Sengzhao’s treatises and his commentary on the *Vimalakīrtinirdeśa* played a crucial role in the development of [MAHĀYĀNA](#) thought in China. Sengzhao is treated

retrospectively as a vaunt courier in the [SAN LUN ZONG](#), the Chinese analogue of the Madhyamaka school, which was formally established some two centuries later by [JIZANG](#) (549–623). The influential [BAOZANG LUN](#) is also attributed to Sengzhao, although that treatise is probably a later work of the early [CHAN](#) tradition.

[Sensōji](#). ([淺草寺](#)). In Japanese, “Low Grass Monastery,” located in the Asakusa (lit. Low Grass) district of Tōkyō; it is the oldest monastery in the current Japanese capital. Legend says that in 628 a statue of the [BODHISATTVA](#) Kannon ([AVALOKITEŚVARA](#)) was found by fishermen in the Sumida River and the village elder turned his home into a shrine for the image; this image remains an important object of veneration in Japanese Buddhism. Originally called Komagatadō, the current monastery was built in 645 and is the oldest in Tōkyō. Sensōji was formerly associated with the [TENDAISHŪ](#) (C. [TIANTAI ZONG](#)), but has been independent since after World War II. The monastery is entered through the Kaminarimon, or Thunder Gate, which is graced by a gigantic paper lantern that is vividly painted to evoke storm clouds and lightning. This gate was built by the governor of the Musashi District, Tairano Kinmasa, in 942, as was the inner Hōzō gate; both have subsequently been reconstructed following fires. The main Kannon-dō hall at Sensōji is devoted to Avalokiteśvara; it burned down during a World War II air raid but has been rebuilt. The monastery grounds also include a five-story pagoda, a beautiful garden, and many oracle stalls (omikuji). Next door is an important [SHINTŌ](#) shrine, the Asakusa Jinja, which may partially explain why Sensōji is the site of the biggest festival in Tōkyō, the Sanja Matsuri, which is held annually in the late spring.

[sensory restraint](#). See [INDRIYASAMVARA](#).

[sentient beings](#). See [SATTVA](#).

[Se ra](#). A large monastic complex counted among the “three seats” ([GDAN SA GSUM](#)) of the [DGE LUGS](#) sect of Tibetan Buddhism, located at the north end of the [LHA SA](#) valley. [TSONG KHA PA](#) wrote *Rtsa she tik chen rigs pa'i rgya mtsho*, his commentary on [NĀGĀRJUNA](#)'s [MŪLAMADHYAMAKĀRIKĀ](#), in a hermitage above the future site of the monastery and predicted that it would become a great seat of learning. Foundations for the complex were laid in 1419 by Byams chen chos rje Shākya ye shes (Jamchen Chöje Shākya Yeshe, 1354–1435), a disciple of Tsong kha pa. Begun as a center for tantric studies, four colleges were later

established, which were later consolidated into two: Se ra smad (Sera Me) and Se ra byes (Sera Je). Se ra byes, the larger of the two, was constructed by Kun mkhyen blo gros rin chen seng ge (Künkyen Lodrö Rinchen Senge, fl. fifteenth century), a disciple of both Tsong kha pa and Byams chen chos rjes. A third college, the Sngags pa drwa tshang (Ngakpa Dratsang) or tantric college, was established in the eighteenth century, most likely under the patronage of the Mongolian ruler Lha bzang Khan. Traditionally said to house 5,500 monks, Se ra was home to roughly eight thousand monks at its peak, with some thirty-five regional dormitories (khams tshan). Monks from Se ra participated in the 1959 uprising against the Chinese People’s Liberation Army, which led to the monastery being closed and used as an army barracks. It also suffered significant damage during the Chinese Cultural Revolution. After that, it reopened as a monastery, but with a much smaller monastic population. Following the exodus of Tibetans into exile after 1959, a new Se ra monastery was also established in south India, near the town of Bylakuppe.

Sesshū Tōyō. (雪舟等楊) (1420–1506). A Japanese monk-painter of the Muromachi (1337–1573) period, best known for his use of realism in landscape painting. He was born to a warrior family in Bitchū province (present-day Okayama Prefecture, in the southwestern part of the main Japanese island of Honshū) and became a [ZEN](#) monk in the [RINZAISHŪ](#) tradition in 1431. From early in his monastic career, however, Sesshū (lit. Snow Boat) showed more interest in painting than in Zen training. Around 1440, he moved to [SHŌKOKUJI](#), one of the [GOZAN](#) (five mountains) temples of Kyōto, where he received formal training in Chinese painting of the Song-dynasty (960–1279) style from Tenshō Shūbun (d. c. 1444–1450), the most famous monk-painter of his time. In 1467, Sesshū traveled to China, where he studied the emerging Ming style of painting. After returning to Japan in 1469, he established an atelier in present-day Ōita Prefecture in Kyūshū; subsequently, he moved to present-day Yamaguchi prefecture in the far west of Honshū in 1486. Using his “splashed-ink” (haboku) style, he established a style of realism in landscape painting, which included bold brush strokes and splashes of ink, with subtle tones. Many students gathered around him, later forming what became known as the Unkoku-rin (Cloud Valley) school, after the name of the monastery where Sesshū served as abbot. Sesshū’s best-known works include his 1486 *Sansui chōkan* (“Long Landscape Scroll”), a fifty-foot-long scroll depicting the four seasons; *Haboku sansui* (“Splashed-Ink Landscape”) of 1495; and the *Ama-no-Hashidate zu*

(“View of Ama-no-Hashidate”) of c. 1501–1505, which offers an unusual bird’s-eye view of a picturesque sandbar, bay, and mountains in Tango province facing the Sea of Japan/East Sea. Sesshū is often judged to be the greatest of all Japanese painters.

[Sgam po pa Bsod nams rin chen](#). (Gampopa Sönam Rinchen) (1079–1153). A principal disciple of the Tibetan [YOGIN MI LA RAS PA](#) and leading figure in the early formation of the [BKA’ BRGYUD](#) sect of Tibetan Buddhism. At an early age, Sgam po pa trained as a physician but renounced his career and received monastic ordination at the age of twenty-five following the death of his wife and child. He is often known as Dwags po lha rje (Dakpo Lhaje), “the physician from Dakpo,” because of his vocation. Sgam po pa initially trained in the [BKA’ GDAMS](#) tradition under the master Snyug rum pa Brtson ’grus rgyal mtshan (Nyukrumpa Tsöndru Gyaltzen, b. eleventh century) as well as Po to ba Rin chen gsal. At the age of thirty-one, he heard three beggars discussing Mi la ras pa and experienced a strong feeling of faith. He asked permission of his Bka’ gdams teachers to study with him, which they granted under the condition that he not renounce his monk’s precepts. When he met Mi la ras pa in 1109, Sgam po pa offered him gold and tea, which he refused. Mi la ras pa offered him a skullcup full of wine, which Sgam po pa initially declined but then drank, even though it was a violation of his monk’s vows. He received a number of teachings from Mi la ras pa, first concerning [VAJARVĀRĀHĪ](#), and later the transmission of [MAHĀMUDRĀ](#) instructions and the “six yogas of Nāropa” ([NĀ RO CHOS DRUG](#)), stemming from the Indian [MAHĀSIDDHAS TILOPA](#) and [NĀROPA](#). Later, Sgam po pa developed his own system of exposition, fusing elements of his Bka’ gdams pa training with the perspectives and practices of mahāmudrā. This has been called the “confluence of the two streams of Bka’ gdams pa and mahāmudrā” (bka’ phyag chu bo gnyis ’dres). Unlike Mi la ras pa, he kept the practices of mahāmudrā and sexual yoga separate, teaching the latter only to select disciples. Sgam po pa remained a monk, founding his monastic seat at [DWAGS LHA SGAM PO](#) in southern Tibet and composing numerous works on Buddhist doctrine and practice. His work entitled [THAR PA RIN PO CHE’I RGYAN](#) (“Jewel Ornament of Liberation”), remains a seminal Bka’ rgyud textbook. He also promulgated the controversial system of mahāmudrā instructions known as the [DKAR PO CHIG THUB](#), or “self-sufficient white [remedy].” The lineage of Bka’ brgyud masters and teachings following Sgam po pa came to be known collectively as the [DWAGS PO BKA’ BRGYUD](#). The division of the lineage into numerous subsects

called the [BKA' BRGYUD CHE BZHI CHUNG BRGYAD](#) or “four major and eight minor Bka' brgyud subsects” stem from the disciples of Sgam po pa and his nephew Dwags po Sgom tshul (Dakpo Gomtsul, 1116–1169). Sgam po pa's principal disciples included the first [KARMA PA DUS GSUM MKHYEN PA](#) and [PHAG MO GRU PA RDO RJE RGYAL PO](#).

[Sgam po pa'i chos bzhi](#). (Gampope chöshi). In Tibetan, “the four dharmas of Sgam po pa,” a series of brief instructions encompassing the entirety of the Buddhist path composed by the [BKA' BRGYUD](#) founder [SGAM PO PA BSOD NAMS RIN CHEN](#). The instructions are often recited in the form of a prayer: Grant your blessings that my mind may turn toward the dharma. *Grant your blessings that the dharma may follow the path.* Grant your blessings that the path may clarify confusion. / Grant your blessings that confusion may arise as wisdom.

[Sgang steng](#). (Gangteng). A monastery located in the Shar district of central Bhutan, founded by Padma 'phrin las (Pema Trinle, b. sixteenth century), son of the great treasure revealer [PADMA GLING PA](#). It serves as the principal monastic seat for Padma gling pa's speech incarnation (gsung sprul) lineage.

[Sgrag yang rdzong](#). (Drakyang Dzong). One of two labyrinthine cave complexes located near [RDO RJE BRAG](#) monastery, south of [LHA SA](#) in central Tibet; venerated as a site where the Indian adept [PADMASAMBHAVA](#) and his consort [YE SHES MTSHO RGYAL](#) remained in meditation retreat.

[Sgrol ma lha khang](#). (Drölma Lhakhang). In Tibetan, “Tārā Temple,” a temple in the central Tibetan region of Snye thang (Nyetang) where the Bengali scholar [ATIŚA DĪPAMKARASŪJĀNA](#) lived for much of his time in Tibet, where he made his principal seat, and later died. The primary image is a statue of [TĀRĀ](#) (T. Sgrol ma), the female bodhisattva of compassion who served as Atiśa's personal protector, after which the temple takes its name. Constructed in the mid-eleventh century, it was spared major damage during the Chinese Cultural Revolution due to the intervention of officials from the Indian state of Bengal, which was ruled at the time by the Communist Left Front. Consequently, the temple still houses Atiśa's relics and original artwork of great value and beauty.

[sgrub brgyud shing rta chen po brgyad](#). (drupgyü shingta chenpo gye). In Tibetan, literally “eight great conveyances that are lineages of achievement,” referring to a system of classifying the various tantric traditions and transmission

lineages in Tibet. This schema developed in about the thirteenth century, during the initial period of the later dissemination ([PHYI DAR](#)) of Buddhism, based upon the preeminence of individual masters, their regional affiliations, and especially their traditions of esoteric instruction. The classification of Tibetan tantric traditions into “eight great conveyances” was adopted by later Tibetan historians and exegetes, perhaps most famously by the Tibetan master [’JAM MGON KONG SPRUL BLO GROS MTHA’ YAS](#) in his [GDAMS NGAG MDZOD](#) (“Treasury of Practical Instructions”). According to his reckoning, the eightfold classification consists of the following categories:

1. [SNGA’ ’GYUR RNYING MA](#) “Ancient Translation Tradition”
2. [BKA’ GDAMS](#) “Tradition of Precepts and Instructions”
3. [LAM ’BRAS](#) “Tradition of the Path and Result”
4. [MAR PA BKA’ BRGYUD](#) “Tradition of the Transmitted Precepts of Marpa”
5. [SHANGS PA BKA’ BRGYUD](#) “Tradition of the Transmitted Precepts of the Shang Valley”
6. [ZHI BYED GCOD](#) “Traditions of Pacification and Severence”
7. [RDO RJE’I RNAL ’BYOR](#) “Tradition of Vajrayoga”
8. [RDO RJE’I GSUM GYI BSNYEN SGRUB](#) “Propitiation and Attainment of the Three Adamantine States.”

[sgrub pa bka’ brgyad](#). (drup pa ka gye). In Tibetan, “eight transmissions for attainment,” referring to the eight chief deities of the [MAHĀYOGA](#) class of [RNYING MA](#) doctrine together with their corresponding [TANTRAS](#) and [SĀDHANAS](#). They are (1) ’Jam dpal sku, (2) Padma gsung, (3) Yang dag thugs, (4) Bdud rtsi yon tan, (5) Phur pa phrin las, (6) Ma mo rbod gtong, (7) Dmog pa drag snags, and (8) ’Jig rten mchod bstod.

[shakumon](#). (C. jimen; K. chǒngmun 迹門). In Japanese, lit. “trace teaching,” or “teaching involving traces”; the provisional teaching of the [SADDHARMAPUNĀRĪKASŪTRA](#) (“Lotus Sūtra”), which appears in the first half of the twenty-four chapters of the scripture; in distinction to [HONMON](#) (fundamental

teaching), the definitive final fourteen chapters of the scripture. The term is especially important in both the [Tiantai](#) (J. [Tendai](#)) and [Nichiren](#)-oriented schools of East Asian Buddhism. The Tiantai master [Tiantai Zhiyi](#) (538–597) first applied the two terms to refer to these two distinctive parts of the *Saddharmapuṇḍarīkasūtra*, adapting the terms traces (C. ji, J. shaku) and root (C. ben, J. hon) that had originally been used by [Sengzhao](#) (374–414), a disciple of [Kumārajīva](#) (344–413), to explain the inconceivable relationship between skillful means ([Upāya](#)) and enlightened wisdom ([Prajñā](#)). Zhiyi made a distinction between the transient buddha who attained the buddhahood during his lifetime in India and the universal buddha who attained buddhahood infinite numbers of [kalpas](#) ago. Zhiyi regarded shakumon to be the teaching of the transient buddha, and honmon the teaching of the universal buddha. The shakumon of the *Saddharmapuṇḍarīkasūtra* is also called the practice or causal section of the sūtra, since it details the stages of [Bodhisattva](#) practices over countless lifetimes that serve as the prerequisites of future buddhahood. The shakumon thus emphasizes the various skillful means that lead to the one buddha vehicle (see [Yisheng](#); [Ekayāna](#)).

Shaku Sōen. (釋宗演) (1859–1919). Influential early [Zen](#) figure in the West. Ordained as a novice in the [Rinzai](#) at the age of twelve, Shaku Sōen studied under the Rinzai master Imakita Kōsen (1816–1892). Shaku Sōen trained under Kōsen at the famous [Engakuji](#) monastery in Kamakura, receiving dharma transmission, and the authority to teach, at the age of twenty-four. He attended Keiō University and then traveled to Ceylon to study Pāli and live as a [Theravāda](#) monk. Upon his return, he became chief abbot of Engakuji in 1892. He gave instruction in Zen meditation to laymen and laywomen, both in Kamakura and Tōkyō. One of his most influential students was [Daisetz Teitaro Suzuki](#). In 1893, Shaku Sōen was chosen to represent the Zen tradition at the World's Parliament of Religions in Chicago. While in the United States, he met [Paul Carus](#), and later arranged for D. T. Suzuki to work with Carus in LaSalle, Illinois. He served as Buddhist chaplain to the Japanese First Army Division after the outbreak of the Russo-Japanese War in 1904. He later lectured on Zen in Europe, America, India, and Ceylon. He spent the remainder of his life lecturing extensively on Zen to lay audiences. He served as president of Rinzai College of Hanazono University in Kyōto from 1914 to 1917, before returning as abbot of Engakuji. His 1906 *Sermons of a Buddhist Abbot* was the first book on Zen to appear in English.

[Shākya mchog ldan](#). (Shākya Chokden) (1428–1507). A celebrated Tibetan scholar associated with the [SA SKYA](#) sect. A renowned scholar of [MADHYAMAKA](#), he defended the [GZHAN STONG](#) (“other emptiness”) view of the [JO NANG](#). He was a student of the Sa skya master Rong ston Shes bya kun rig (Rongtön Sheja Künrik, 1367–1149). His explanation of the [SDOM GSUM RAB DBYE](#) was intended as a defense of [SA SKYA PANDITA](#)’s views, but later Sa skya writers rejected it as authoritative in favor of the works of his contemporary, the Sa skya master [GO BO RAB ’BYAMS PA BSOD NAMS SENG GE](#). Shākya mchog ldan’s collected works fill twenty-four volumes and are known for their consistently high quality of scholarship and erudition. He was particularly critical of the views of [TSONG KHA PA](#), and engaged in a polemical exchange with Rje btsun pa Chos kyi rgyal mtshan (Jetsünpa Chökyi Gyeltsen, 1469–1546) whose works became the standard textbooks of the Byes (Je) college of [SE RA](#) monastery.

[Shambhala](#). See [ŚAMBHALA](#).

[Shamen bujing wangzhe lun](#). (J. Shamon fukyōōsharon; K. Samun pulgyōng wangja non 沙門不敬王者論). In Chinese, “The [ŚRAMANA](#) Does Not Pay Homage to the Ruler Treatise.” In response to the anticlerical policy of the monarch Huanxuan (who reigned for less than three months as King of Chu in 404) [LUSHAN HUIYUAN](#) compiled this apologetical treatise in 404. It is preserved in the fifth roll of the [HONGMING JI](#). The treatise is comprised of five sections. The first two sections, on householders and monks, detail the differences in their social status and way of life. The other three sections are concerned with more doctrinal and theoretical issues, which are presented in the form of a debate between imaginary opponents. In the third section, Huiyuan, as the “host,” argues that monks, unlike householders including the worldly ruler, seek the “truth” and thus strive to free the “spirit” from the realm of worldly desires and emotions, or [SAMSĀRA](#). In the fourth section, the opponent argues that there is no truth beyond that which has been revealed by the sages of the past. In the last section, Huiyuan replies that these sages are merely manifestations of the Buddha, or the immortal spirit. Although the immortal spirit “mutually resonates” ([GANYING](#)) with [SAMSĀRA](#), it is not, Huiyuan explains, a worldly thing itself. The argument for the immortality of the spirit also appears in Zongbing’s (375–443) *Mingfo lun* (“Treatise on Clarifying Buddhism),” the [MOUZI LIHUO LUN](#), and various other treatises found in the *Hongming ji*.

[Shandao](#). (J. Zendō; K. Sōndo 善導) (613–681). In Chinese, “Guide to Virtue”;

putative third patriarch of the Chinese [PURE LAND](#) tradition; also known as Great Master Zhongnan. At an early age, Shandao became a monk under a certain [DHARMA](#) master Mingsheng (d.u.), with whom he studied the [SADDHARMAPUNĀRIKASŪTRA](#) and the [VĪMALAKĪRTINIRDEŚA](#); he later devoted himself to the study of the [GUAN WULIANGSHOU JING](#), which became one of his major inspirations. In 641, Shandao visited the monk [DAOCHUO](#) (562–645) at the monastery of Xuanzhongsi, where he is said to have cultivated vaipulya repentance (fangdeng canfa). Shandao also continued to train himself there in the visualization practices prescribed in the *Guan Wuliangshou jing*, which led to a profound vision of the buddha [AMITĀBHA](#)'s [PURE LAND](#) ([JINGTU](#)) of [SUKHĀVATĪ](#). Shandao subsequently eschewed philosophical exegesis and instead devoted himself to continued recitation of the Buddha's name ([NIANFO](#)) and visualization of the pure land as detailed in the *Guan jing*. After Daochuo's death, he remained in the Zongnan mountains before eventually moving to the Chinese capital of Chang'an, where he had great success in propagating the pure land teachings at the monastery of Guangmingsi. Shandao is also known to have painted numerous images of the pure land that appeared in his vision and presented them to his devotees. He was also famous for his continuous chanting of the [AMITĀBHASŪTRA](#). Shandao's influential commentary on the *Guan Wuliangshou jing* was favored by the Japanese monk [HŌNEN](#), whose teachings were the basis of the Japanese pure land tradition of [JŌDOSHŪ](#).

[Shangs pa bka' brgyud](#). (Shangpa Kagyü). In Tibetan, "Succession of the Transmitted Precepts of the Shang Valley"; a lineage of Tibetan Buddhism traced back to its founder [KHYUNG PO RNAL 'BYOR TSHUL KHRIMS MGON PO](#) who was active in the Shangs Valley of western Tibet. It is generally counted as one of the eight great conveyances that are lineages of attainment ([SGRUB BRGYUD SHING RTA CHEN PO BRGYAD](#)). The teachings and practice of the Shangs pa bka' brgyud are in many ways similar to those of the [MAR PA BKA' BRGYUD](#) and stem from two principal sources: (1) a tantric system of instruction known as the six doctrines of [NIGUMA](#) (Ni gu chos drug), similar to those associated with [NĀROPA](#), of whom Niguma is said to have been the wife or sister; and (2) the [MAHĀMUDRĀ](#) text entitled [PHYAG CHEN GA'U MA](#) ("Amulet Box Mahāmudrā"). Few Shangs pa bka' brgyud institutions were ever constructed, and the sect has almost disappeared as an independent entity. However, the Shangs pa bka' brgyud was highly influential in Tibet and its most important instructions were also transmitted within the [BKA' BRGYUD](#), [DGE LUGS](#), [SA SKYA](#), [JO NANG](#), and [RNYING](#)

[MA](#) sects. Shangs pa teachings have been especially promulgated in modern times by the late contemporary master [KALU RINPOCHE](#).

[shangtang](#). (J. jōdō; K. sangdang 上堂). In Chinese, lit. “ascending the hall”; a public lecture or sermon delivered by a [CHAN](#), [SŌN](#), or [ZEN](#) master at the dharma hall. The master, often the abbot of the monastery, would typically ascend the dais in the dharma hall to deliver his sermon, hence the term shangtang, or “ascending the hall.” The dharma hall of a Chan monastery typically did not house any icons, for the master himself was considered a living buddha while he was preaching on the dais. These shangtang lectures came to be carefully recorded by the disciples of the master and were typically edited together with other minor sermons like the xiaocan into the “recorded sayings” ([YULU](#)) of the master. By the medieval period, shangtang became more formalized, taking place at regular intervals; thus there are several specific types of shangtang described in the literature. Those that occurred on a bi-monthly basis were called danwang shangtang, since the sermons were given on the first (dan) and the fifteenth (wang) of each lunar month. Those that took place on the fifth, tenth, fifteenth, twentieth, twenty-fifth of each lunar month were called wucan shangtang, because there were a total of five assemblies (wucan) each month. Those held once every three days were called jiucan shangtang, because there were approximately nine such assemblies (jiucan) each lunar month. Shangtang that occurred on the birthday of the reigning emperor were called shengjie (occasion of His Majesty) shangtang, while those that took place as funerary memorials and deliverance rituals for a recently deceased emperor were called daxing zhuiyan shangtang. Shangtang that occurred after the abbot of the monastery had returned from a begging round were called chudui (troupe on a mission) shangtang. Those that took place to resolve an ongoing issue in the monastic community, such as quarrels, disputes, or other emergencies, were called yinshi shangtang (ascending the hall due to an exigency). Those that occurred to honor monastery staff overseeing internal affairs were called xie bingfu shangtang, while shangtang to honor monastery staff overseeing external and financial affairs were called xie dusizhai shangtang.

[Shang Tianzhusi](#). (上天竺寺). In Chinese, “Upper Tianzhu Monastery,” located on Mt. Tianzhu in Hangzhou, along the southern coast of China. ([TIANZHU](#) is one of the common Sinographic transcriptions of Sindu, or India.) Founded by King Qian Liu (852–932 CE) of the Kingdom of Wuyue (907–978 CE) during the Five

Dynasties and Ten Kingdoms period following the demise of the Tang dynasty. According to certain sources, before he became king, Qian Liu dreamed of a woman dressed in white robes, who promised to protect him and his descendants if he was compassionate and did not kill living creatures. She then informed him that she could be found on Mt. Tianzhu in Hangzhou twenty years hence. When Qian Liu ascended the throne, he dreamed once more of this white-robed woman, whom he realized was [BAIYI GUANYIN](#) (White-Robed [AVALOKITEŚVARA](#)). In this dream, she informed Qian Liu that she needed a residence, in return for which she would bestow her patronage on his kingdom. When the king discovered that, of all the monasteries on Mt. Tianzhu, only one housed a Baiyi Guanyin icon, he became its patron and named it the Tianzhu Kanjing Yuan (Tianzhu Center for Reading Scriptures). Later renamed Upper Tianzhu monastery, it became renowned as a [GUANYIN](#) pilgrimage site. The monastery is also known for its association with the Song-dynasty legend of Princess [MIAOSHAN](#) (first complete rendition 1100 CE) when Jiang Zhiqi (1031–1104 CE), prefect of Ruzhou in Henan province, was transferred to Hangzhou in 1104 CE. Upon his arrival, he had the Miaoshan legend inscribed on a stele to be enshrined in Upper Tianzhu monastery.

[Shanhui dashi](#). (C) (善慧大士) (497–569). See [FU DASHI](#).

[Shanjia Shanwai](#). (J. Sange Sangai; K. San'ga Sano 山家山外). In Chinese, “On-Mountain, Off-Mountain”; two factions in a debate that engulfed the [Tiantai ZONG](#) during the eleventh century over issues of the school's orthodoxy and orthopraxy. The Shanjia (On-Mountain) faction was led by the monk [SIMING ZHILI](#) (960–1028) and his disciples; they pejoratively referred to their opponents within the Tiantai school, such as Ciguang Wu'en (912–988), Yuanqing (d. 997), Qingzhao (963–1017), Zhiyuan (976–1022) and their disciples, as Shanwai (Off-Mountain), for drawing on non-Tiantai elements in their exegeses. The debate began over an issue of textual authenticity, but soon came to cover almost all major facets of Tiantai doctrine and practice. The On-Mountain faction criticized their rivals for attempting to interpret Tiantai doctrine using concepts borrowed from texts such as the [DASHENG QIXIN LUN](#), which had not previously been an integral text in Tiantai exegesis, and from rival exegetical traditions, such as the [HUAYAN ZONG](#). These Shanwai monks argued that the doctrine of the “[TRICHILIOCOSM](#) in an single instant of thought” ([YINIAN SANQIAN](#)) should be understood in the Huayan framework of the suchness that is in accord with

conditions (zhenru sui yuan): in this understanding, an instant of thought is identified with the true mind that in its essence is pure, unchanging, and inherently enlightened; subsequently, by remaining in accord with conditions, that suchness in turn produces the trichiliocosm in all its diversity. From this perspective, they argued that the true mind should be the focus of contemplative practice in Tiantai. Shanjia masters feared such interpretations were a threat to the autonomy of the Tiantai tradition and sought to remove these Huayan elements so that the orthodox teachings of Tiantai would be preserved. Zhili, the major proponent of the Shanjia faction, argued that the Shanwai concept of suchness involved the principle of separation (bieli), since it excluded the afflicted and the ignorant, and only encompassed the pure and the enlightened. According to Zhili, suchness does not produce the trichiliocosm only when it is in accord with conditions, as the Huayan-influenced Shanwai exegetes asserted, because suchness is in fact identical to the trichiliocosm; therefore the instant of thought that encompasses all the trichiliocosm, including both its pure and impure aspects, should be the true focus of contemplative practice in Tiantai. Zhili's disciple Renyue (992–1064) and his fourth-generation successor Congyi (1042–1091) were subsequently branded the “Later Off-Mountain Faction,” because they accepted some of the Shanwai arguments and openly rejected parts of Zhili's argument. Nevertheless, the Shanjia faction eventually prevailed, overshadowing their Shanwai rivals and institutionalizing Zhili's interpretations as the authentic teachings of the Tiantai tradition. Two Tiantai genealogical histories from the Southern Song dynasty, the *Shimen zhengtong* (“Orthodox Transmission of Buddhism”) and the [FOZU TONGJI](#) (“Chronicle of the Buddhas and Patriarchs”), list Zhili as the last patriarch in the dharma transmission going back to the Buddha, thus legitimating the orthodoxy of the Shanjia faction from that point forward.

[Shannüren zhuan](#). (善女人傳). In Chinese, lit., “Record of Good Women,” “Record of [Eminent] Laywomen,” by the Qing-dynasty author [PENG SHAOSHENG](#) (1740–1796), a Confucian literatus turned Buddhist layman; in two rolls. The “Record” is the only surviving collection in Chinese Buddhist literature of the biographies of exemplary laywomen disciples ([UPĀSIKĀ](#)). The collection compiles 138 biographies of Chinese Buddhist laywomen from the inception of Buddhism in China through the mid-Qing dynasty, including empresses, concubines, wives of officials, and commoners from various walks of life. The stories of these laywomen are characterized by their pious faith in the

three jewels ([RATNATRAYA](#)) and their devout practice. Peng also explores the ways in which these exemplary Buddhist laywomen embodied such traditional Confucian values as filiality, chastity, and obedience to fathers, husbands, and eldest sons, in order to demonstrate how Buddhism was also concerned with women's broader social roles. Peng Shaosheng adapts the entries included in the anthology from such biographical, historical, and genealogical works as the [GAOSEN ZHUAN](#), [FAYUAN ZHULIN](#), [CHUANDENG LU](#), *Wudeng huiyuan*, [FOZU TONGJI](#), *Jingtu wen*, and *Mingxiang ji*, as well as various literary works. Prior to completing this record of female lay disciples of Buddhism, Peng also authored a parallel collection of the biographies of Buddhist laymen, the [JUSHI ZHUAN](#). The *Shannüren zhuan* is also included as the last chapter of the *Moni zhukun jiyao* by the Qing-dynasty laywoman Shanyi.

[Shansuibu](#). (C) (善歲部). The Suvarṣaka school. See [KAŚYAPIYA](#).

[Shaolinsi](#). (J. Shōrinji; K. Sorimsa 少林寺). In Chinese, “Small Grove Monastery”; located at the foot of [SONGSHAN](#) in Dengfeng county, Henan province. According to the [XU GAOSEN ZHUAN](#) (“Continued Biographies of Eminent Monks”), the Xiaowen emperor (r. 471–500 CE) of the Northern Wei dynasty built the monastery in 496 CE for the Indian monk Fotuo (d.u.). Shaolinsi initially was an important center of translation activities, and many famous monks, including [BODHIRUCI](#), [RATNAMATI](#), [JINGYING HUIYUAN](#), and [XUANZANG](#), resided at the monastery. But the monastery is best known in the East Asian tradition as the putative center of martial arts in China. Fotuo, the monastery's founder, is claimed to have had two disciples who displayed sublime acrobatic skills, perhaps a harbinger of later martial-arts exercises. Li Shimin (599–649; r. 626–649), second ruler and Taizong emperor of the Tang dynasty (618–907), is said to have used the Shaolin monks' martial talents, especially with the heavy cudgel, to help his father found their new dynasty. Within another century, Shaolinsi became associated with the legend of the Indian monk [BODHIDHARMA](#) (c. early fifth century), the putative founder of the [CHAN](#) school, who is said to have practiced wall-gazing meditation ([BIGUAN](#)) for nine years in a cave above the monastery; according to later traditions, Bodhidharma also taught himself self-defense techniques both to protect himself against wild animals and for exercise, which he transmitted to his disciples at the monastery. In subsequent years, the monastery continued to be renowned as a center of both martial arts and Chan Buddhism. In 1245, the Yuan emperor Shizu (r. 1260–1294) appointed

the Chan master Xueting Fuyu (1203–1275) abbot of Shaolinsi, and under Xueting’s guidance the monastery flourished. At least by the fifteenth century, the connection between Shaolinsi and the martial arts became firmly established in the Chinese popular imagination and “Shaolin monks” remain popular on the international performing-arts circuit.

shaoshen. (J. shōshin; K. sosin 燒身). In Chinese, “autocremation.” See [SHESHEN](#).

Shasekishū. (沙石集). In Japanese, “Sand and Pebbles Collection”; an anthology of edifying folkloric tales from the Kamakura period (1185–1333). The collection was compiled by a [RINZAISHŪ](#) monk named [MUJŪ ICHIEN](#) (1227–1312) between 1279 and 1283 and contains 150 stories in a total of ten rolls. After finishing his initial compilation, Mujū continued to add the stories to the collection, so there are different editions of varying length. The preface to the collection explains the title: “Those who search for gold extract it from sand; those who treasure jewels gather pebbles that they then polish.” The collection, therefore, seeks to explain profound Buddhist truths as they are found in mundane affairs. Mujū demonstrates throughout the collection his belief in “crazy words and embellished phrases” (kyōgen kigo) as an expedient means of articulating ultimate religious goals. He even argues that the traditional waka style of Japanese poetry is in fact [DHĀRANĪ](#), a mystic code that encapsulates the essence of Buddhist teachings. Most of the stories in the collection offer edifying lessons in such basic Buddhist beliefs as nonattachment and karmic retribution and in such ethical values as loyalty, filial piety, and fidelity. The idea of expedient means ([UPĀYA](#)) is also applied to the various Buddhist schools and to Japanese traditional religion: all the various teachings of Buddhism are depicted as expedient means of conveying the religion’s beliefs, and Mujū denounces Buddhist practitioners who exclusively promote the teachings of only their own sects. The collection also introduced the idea of the “unity of [SHINTŌ](#) and Buddhism” ([SHINBUTSU SHŪGŌ](#)) by describing Japanese indigenous spirits, or [KAMI](#), as various manifestations of the Buddha. The humorous tone of the collection attracted many readers during the Tokugawa period (1603–1868), when it was reprinted several times.

She dasheng lun. (J. Shōdaijōron; K. Sōp taesŭng non 攝大乘論). See [MAHĀYĀNASAMGRAHA](#).

sheliju. (J. sharigu; K. sarigu 舍利具). In Chinese, a “reliquary container”

containing the relics ([ŚARĪRA](#)) of the Buddha or a sage; also written as [SHELIQI](#). The relics were deposited in a set of nested caskets and were placed inside or buried below the foundation of a [STŪPA](#). A tiny glass bottle placed inside several layered caskets served as the innermost container for the crystalline relic-grains remaining after cremation. The shape of the caskets differed according to time and region, from a stūpa shape to the shape of a bowl or tube, and the caskets were made of gold, silver, gilt bronze, lacquered wood, porcelain, or stone. The sides of the caskets were often incised with buddha images or guardian deities. In addition to the relic, the donors frequently deposited a multitude of objects of intrinsic or artistic value in the containers, including beads, pearls, jewelry, or coins. The earliest known reliquary is a steatite casket found in the stūpa of Piprāwā (fifth–fourth centuries BCE) in India. In China, the reliquary chamber excavated at the [FAMENSI](#) pagoda is the most widely researched. In contrast to most Chinese reliquary chambers, which were only accessible prior to the construction of a pagoda, the Famensi relic was escorted to and from the imperial palace. Further outstanding examples of reliquaries have been excavated at Songnimsa and Kamūnsa in Korea. Both reliquaries date from the Silla period and show the refined amalgamation of foreign influences and native Silla craftsmanship. The center of the Songnimsa reliquary is a small green glass bottle, placed in a green glass cup decorated with twelve rings of coiled glass, which derives from Persian or Syrian prototypes. The Kamūnsa reliquary contains a vessel in the shape of a miniature pavilion and an outer container decorated on each side with the four heavenly kings, pointing to the [LOKAPĀLA](#) cult that thrived in Silla society at that time.

[sheliqi](#). (J. sharigu; K. sarigi 舍利器). In Chinese, “reliquary container.” See [SHELIJU](#).

[She lun zong](#). (J. Shōronshū; K. Sōp non chong 攝論宗). In Chinese, “School of the [MAHĀYĀNASAMGRAHA](#)”; one of the early Chinese indigenous doctrinal schools, focusing on [YOGĀCĀRA](#) philosophy. The school has its origins in exegetical traditions that began with [PARAMĀRTHA](#)’s (499–569) translation of [ASAṄGA](#)’s *Mahāyānasamgraha* (C. *She Dasheng lun*). The school played a central role in early Chinese doctrinal controversies concerning the interpretation of consciousness in two different Indian Buddhist systems of thought: Yogācāra and [TATHĀGATAGARBHA](#). The controversies revolved around the issue of the nature of the eighth storehouse consciousness ([ĀLAYAVIJÑĀNA](#)), based on

[VASUBANDHU](#)'s ambiguous position in the [SHIDIJING LUN](#) ([DAŚABHŪMIVYĀKHYĀNA](#)), a commentary on the [DAŚABHŪMIKASŪTRA](#). In some passages, Vasubandhu implied that the ālayavijñāna was the tainted source from which [SAMSĀRA](#) arises; in others, he implied instead that the ālayavijñāna was coextensive with suchness ([TATHATĀ](#)) and thus fundamentally pure. The northern branch of the [DILUN ZONG](#) argued that the storehouse consciousness was impure; it is a tainted source that produces only defiled dharmas. By contrast, the southern branch argued that the ālayavijñāna was fundamentally pure but came to be adventitiously associated with impure elements: it was the functioning of suchness and thus was pure, but it also was subject to the same laws of conditioned origination ([PRATĪTYASAMUTPĀDA](#)) as the sensory consciousnesses and thus on that level was also impure. The She lun school sought to integrate these two interpretations by drawing on Paramārtha's concept of an immaculate consciousness ([AMALAVIJÑĀNA](#)). Paramārtha in his personal writings condemned the ālayavijñāna as being fundamentally impure, positing instead that only a ninth mode of consciousness, which he termed the immaculate consciousness, was pure. Following Paramārtha, She lun exegetes treated the ālayavijñāna as impure, and instead established the amalavijñāna as the pure ninth consciousness. They identified this new consciousness with suchness (tathatā) by using it as a synonym for [PARINISPANNA](#), the perfected nature described in Yogācāra philosophy. In the She lun zong interpretation, amalavijñāna thus came to be regarded as the absolute basis for all previous eight types of consciousness; the eighth consciousness, the ālayavijñāna, was instead seen as the provisional basis of afflictions ([KLEŚA](#)). Several She lun masters advocated this admixture between ālayavijñāna and tathāgatagarbha thought, including Huikai (518–568), Daoni (fl. 590), Huikuang (534–613), and Tanqian (542–607). Tanqian was especially influential and was even invited by the Sui emperor Wendi (r. 581–604) to the imperial capital of Chang'an in 587 to preach the She lun teachings. The emperor later built the monastery of Chandingsi in the capital and appointed Tanqian as its first abbot, which became the center of the She lun zong. Sengbian (568–642), a She lun master from Daoni's lineage, was one of the teachers of the renowned Korean Yogācāra master [WŌNCH'ŪK](#) (613–696). Doctrinal positions held in the She lun zong were crucial in the evolution of the [HUAYAN](#) school of the mature Chinese tradition.

[shenguang](#). (J. shinkō; K. sin'gwang 身光). In Chinese, lit. "body light"; a "mandorla" surrounding the body of holy figures in Buddhist painting and

sculpture. See [KĀYAPRABHĀ](#).

[Shenhui](#). (C) (神會). See [HEZE SHENHUI](#).

[Shenxiu](#). (J. Jinshū; K. Sinsu 神秀) (606?–706). Chinese [CHAN](#) master of the Tang dynasty and putative founder of the “Northern school” ([BEI ZONG](#)) of early Chan Buddhism. Shenxiu was a native of Kaifeng in present-day Henan province. As an extraordinarily tall man with well-defined features, Shenxiu is said to have had a commanding presence. In 625, Shenxiu was ordained at the monastery of Tiangongsi in Luoyang, but little is known of his activities in the first two decades following his ordination. In 651, Shenxiu became a disciple of [HONGREN](#) (601–674), cofounder of the East Mountain Teachings ([DONGSHAN FAMEN](#)) and the monk later recognized as the fifth patriarch of the Chan school; indeed, by many early accounts, such as the [CHUAN FABAO JI](#) and [LENGQIE SHIZIJI](#), Shenxiu became Hongren’s legitimate successor. According to the famous story in the [LIUZU TANJING](#) (“Platform Sūtra of the Sixth Patriarch”), however, Shenxiu lost a verse-writing contest to the unlettered [HUINENG](#) (638–713), whom Hongren then in secret sanctioned as the sixth patriarch. However, it is unclear how long Shenxiu studied with Hongren. One source states that it was for a period of six years, in which case he would have left Hongren’s monastery long before Huineng’s arrival, making the famous poetry contest impossible. Regardless of the date of his departure, Shenxiu eventually left Hongren’s monastery for Mt. Dangyang in Jingzhou (present-day Hubei province), where he remained for over twenty years and attracted many disciples. Shenxiu and his disciples were the subjects of a polemical attack by [HEZE SHENHUI](#) (684–758), who disparaged Shenxiu as representing a mere collateral branch of [BODHIDHARMA](#)’s lineage and for promoting what Shenhui called a “gradual” (jian) approach to enlightenment. Shenhui instead promoted a “sudden teaching” ([DUNJIAO](#)), which he claimed derived from a so-called “Southern school” ([NAN ZONG](#)) founded by Huineng, another (and relatively obscure) disciple of Hongren, whom Shenhui claimed was Hongren’s authentic successor and the true sixth patriarch ([LIUZU](#)). Later Chan historians such as [GUIFENG ZONGMI](#) (780–841) began to use the designation “Northern school” (Bei zong) to describe the lineage of Shenxiu and his disciples [YIFU](#) (661–736), [PUJI](#) (651–739), and [XIANGMO ZANG](#) (d.u.). While Shenhui’s characterization of Shenxiu and his supposed “gradualism” is now known to be misleading, subsequent histories of the Chan tradition (see [CHUANDENG LU](#)) more or less adopted Shenhui’s vision of

early Chan; thus Huineng, rather than Shenxiu, comes to be considered the bearer of the orthodox Chan transmission. As one mark of Shenxiu's high standing within the Chan tradition of his time, in 700, Shenxiu was invited to the imperial palace by Empress [WU ZETIAN](#), where the empress prostrated herself before the nonagenarian monk. She was so impressed with the aged Chan master that she decided to build him a new monastery on Mt. Danyang named Dumensi. She also gave him the title of state preceptor ([GUOSHI](#)). Upon his death, he was given a state funeral. He is one of only three Buddhist monks whose biography is included in the *Tang shi* ("Tang Annals"). This is clearly not the profile of an imposter within the Chan lineage. Shenxiu's teachings are known to have focused on the transcendence of thoughts (linian) and the five expedient means (fangbian; S. [UPĀYA](#)); these teachings appear in "Northern school" treatises discovered at Dunhuang, such as the [YUANMING LUN](#), *Guanxin lun*, and [DASHENG WUSHENG FANGBIAN MEN](#). Shenxiu was an expert on the [LAṆKĀVATĀRASŪTRA](#), a text favored by Hongren and the early Chan tradition, and is also thought to have written a substantial commentary on the [AVATAMSAKASŪTRA](#). Despite the uncomplimentary portrayal of the "Northern school" in mainstream Chan materials, it is now recognized that Shenxiu and his disciples actually played a much more important role in the early growth and development of the Chan school than the mature tradition acknowledged.

[Shes bya kun khyab mdzod](#). (Sheja Kunkyap Dzö). In Tibetan, "Treasury Embracing All Knowledge"; the title of a multivolumed encyclopedic compendium of Tibetan Buddhist thought, composed by the Tibetan luminary 'JAM MGON KONG SPRUL BLO GROS MKTHA' YAS between 1862 and 1864. The work consists of a brief root text in verse together with an extensive prose autocommentary, and is one of the earliest examples of the author's place in the nonsectarian ([RIS MED](#)) movement. The work is one of five "treasuries" ([KONG SPRUL MDZOD LNGA](#)) written and edited by the master.

sheshen. (S. ātmaparit̥yāga/dehadāna; T. rang gi lus yongs su gtong ba / lus kyi sbyin pa; J. shashin; K. sasin 捨身). In Chinese, lit. “relinquishing the body,” viz., “self-immolation”; a whole complex of religiously motivated types of suicide in the [MAHĀYĀNA](#) tradition, of which “autocremation” (shaoshen) is best known but which may also include suicide by drowning, starvation, feeding oneself to wild animals, *etc.* (The Sanskrit ātmabhāvaparit̥yāga means “giving up one’s self,” as soldiers might for their country, and by extension an act of extreme charity.) This practice is associated with the perfection of giving ([DĀNAPĀRAMITĀ](#)) that occurs on the first [BHŪMI](#), [PRAMUDITĀ](#) (joyful), of the bodhisattva path, where the bodhisattva learns to abandon everything that is most precious to him, including his wealth, his wife and family, and even his own body. Self-immolation is a common trope in Indian Mahāyāna literature, where this “gift of the body” ([DEHADĀNA](#)) is performed as an ultimate act of self-sacrifice. One of best-known examples is [BHAIŚAJYAGURURĀJA](#) (Medicine King) in the [SADDHARMAPUNĀRĪKASŪTRA](#), who pays homage to the buddhas by burning himself alive. Self-immolation goes back to at least the late-fourth century in Chinese Buddhism but is perhaps best known today through the suicides of such Vietnamese monks as [THICH QUANG ĐUĆ](#) (1897–1963), whose autocremation in 1963 at his residence of [THIÊN MU TU](#) drew attention to the persecution of Buddhists by the pro-Catholic Vietnamese government of Ngô Đĩnh Diệm. The legitimacy of the act of self-immolation was a matter of continued debate within the Buddhist tradition, since suicide could be viewed as a form of attachment or passion ([RĀGA](#)), viz., the attachment to “nonexistence” (S. abhavarāga; C. wuyou ai). But there were also vehement supporters of self-immolation, who saw it as the consummate expression of asceticism (see [DHUTĀNGA](#)) and selflessness ([ANĀTMAN](#)). The Chinese term sheshen is used interchangeably with the synonyms wangshen (to lose the body) and yishen (to let go of the body); an analogous Sanskrit term is svadehaparit̥yāga (abandoning the body). See also [DEHADĀNA](#).

Shes rab rgyal mtshan. (Sherap Gyaltzen) (1356–1415). One of the most influential Tibetan masters of the [BON](#) religion. In 1405 he founded the monastery of [SMAN RI](#) in central Tibet, which became one of Tibet’s premier Bon religious institutions. He is often known as Mnyam med (Nyame), “the Incomparable.”

shi. (J. ji; K. sa 事). In Chinese, “phenomenon,” “event,” “object”; the specific

elements of the empirical world as they are experienced conventionally. In East Asian Buddhism, shi is typically used in distinction to “principle” ([LI](#)): li refers to the fundamental pattern or principle that underlies all phenomena, thus representing the true nature of reality; shi by contrast refers to all the particular expressions of this li in the phenomenal world. This interrelationship thus implies the inherent presence of li within shi. Teachers within the [TIANTAI ZONG](#) were among the first to employ the two terms in their systematic analysis of Buddhist thought. [TIANTAI ZHIYI](#) (538–597), the systematizer of the Tiantai zong, applied the terms to refer not only to doctrinal but also to the practical dimensions of Buddhism. In the contexts of Buddhist practice, shi refers to such specific ritual and meditative activities as repentance, circumambulation, reciting the sūtras, and sitting meditation, which could lead to the realization of the principle of emptiness or the truth of the median (see [SANDI](#)). The term shi is especially crucial in [HUAYAN](#) doctrinal analysis, where it is deployed in the taxonomy of the four realms of reality ([DHARMADHĀTU](#)), four successively more profound levels of experience (see [SI FAJIE](#)). According to Huayan doctrine, because each and every individual phenomenon (shi) is pervaded by principle (li), all the various discrete phenomena pervade, and are in turn pervaded by, each and every other discrete phenomenon in the experience of what Huayan terms the “dharma-realm of the unimpeded interpenetration between phenomenon and phenomena” ([SHISHI WU’AI FAJIE](#)). As the individual products of dependent origination ([PRATĪTYASAMUTPĀDA](#)), shi thus represents the organic totality of reality, in which every phenomenon is in multivalent interaction with everything else in the universe, mutually creating, and being created by, all other things.

Shi. (J. Shaku; K. Sōk; V. Thich 釋). The transcription of the first syllable of the Buddha’s clan name, [ŚĀKYA](#) (C. Shijia), as found in the Buddha’s appellation [ŚĀKYAMUNI](#), “Sage of the Śākya Clan.” In East Asian Buddhism since the time of [DAO’AN](#) (312–385), monks traditionally abandoned their family’s surname and used in its place the Buddha’s own clan name; hence, monks and nuns in premodern East Asia typically took the surname Shi. Before Dao’an, ordinands had adopted the surname of their preceptors, including using ethnicons in case their master was a foreigner, e.g., [AN](#) for monks and missionaries who hailed from [PARTHIA](#), also known as Aršak or Arsakes (C. [ANXIGUO](#))—viz., the Arsacid kingdom (c. 250 BCE–224 CE) southeast of the Caspian Sea; [ZHU](#) for Indians; [ZHI](#) for monks from [KUSHAN](#) (Yuezhi) in northwest India; [YU](#) for monks from

[KHOTAN](#); [KANG](#) for monks from [SOGDIANA](#); and [BO](#) for monks from [KUCHA](#). While Dao'an was resided in Xiangyang (in present-day Hubei province) between 365 and 379, he introduced the custom of adopting Shi as the monastic surname so that all Buddhist monks would have a common religious identity. The adoption of the Buddha's surname signified the monks' and nuns' severance of their ties with their natal families and worldly society, as well as the dedication of their lives to the lineage of the Buddha. The custom became general practice after 385, when there seemed to be textual justification for the practice in a translated passage from the *Zengyi ahan jing* ([EKOTTARĀGAMA](#)), which referred to “[ŚRAMANAS](#) who were sons of the Śākya” (C. shamen Shijiazi; S. śramaṇa-śākyaputrīyāḥ). Zhu [DAOSHENG](#) (355–434) was one of the last influential Chinese monks to adopt the surname of his preceptor, rather than that of the Buddha. See also [FAMING](#); [ŚĀKYABHIKSU](#).

[Shibei](#). (C) (師備) (835–908). See [XUANSHA SHIBEI](#).

[shi bushanye dao](#). (C) (十不善業道). In Chinese, “ten unwholesome ways of action.” See [KARMAPATHA](#).

[shichidō garan](#). (七堂伽藍). In Japanese, “seven-halled temple”; an early Japanese monastic layout consisting of seven main structures (shichidō). The oldest extant example of this layout in Japan can be seen in the Kudara (viz., the Korean Paekche) layout at [HÖRYŪJI](#). The seven halls of the monasteries built in the Nara period (646–794) generally included the golden hall (kondō), pagoda (tō), lecture hall (kōdō), bell tower (shurō), scriptorium (kyōzō), monks' dormitories (sōbō), and refectory (jigidō). This term, however, does not seem to appear in any Chinese or Japanese materials predating its use by the Japanese monk Ichijō Kanera (1402–1481) to refer to the layout of [ZEN](#) monasteries. His list of the seven halls consists of the mountain gate (sanmon), buddha hall (butsuden), [DHARMA](#) hall (hattō), kitchen-office (kuin), [SAMGHA](#) hall (sōdō; see [SENGTANG](#)), bathhouse (yokushitsu), and latrine (seijō or tōsu). The seven-hall design is now commonly laid out in anthropomorphic form, consisting of a central axis—the mountain gate (the privates), buddha hall (heart), and dharma hall (head)—flanked by two pairs of buildings, namely (1) the latrine (left leg) and bathhouse (right leg) and (2) the saṃgha hall (left arm) and kitchen-office (right arm).

[Shichifukujin](#). (七福神). In Japanese, “Seven Gods of Good Fortune”; an

assembly of seven deities dating from at least the fifteenth century, which gained popularity in Japan's folk religious setting and are still well known today. Those who have faith in the group are said to gain happiness and good fortune in their lives. Before their grouping, each of the individual gods existed independently and historically shared little in common. Of the seven, Ebisu is the only god with an identity linked to the Japanese islands. Daikokuten (C. Dahei tian; S. [MAHĀKĀLA](#)), Bishamonten (C. Pishamen tian; S. [VAIŚRAVAṆA](#)), and Benzaiten (C. Biancai tian; S. [SARASVATĪ](#)) originated in India, and Hotei (C. [BUDAI](#), d. 917), Jurōjin (C. Shoulaoren), and Fukurokuju (C. Fulushou) come from the Chinese Buddho-Daoist traditions. Their grouping into seven gods of good fortune likely occurred in the Japanese Kansai region, with the commerce-affiliated Daikoku and Ebisu gaining initial popularity among merchants. Early mention of them appears in a reference from 1420, when they were said to have been escorted in procession through Fushimi, a southern ward of Kyōto, in imitation of a daimyō procession. ¶ Ebisu (a.k.a. Kotoshiro-nushi-no-mikoto, the abandoned child of Izanami and Izanagi) is the god of fishermen and the sea, commerce, good fortune, and labor. Among its etymological roots, the term “ebisu” traces back to the Ainu ethnic group of Hokkaidō, connecting them to fishermen who came from abroad. Ebisu is often depicted with a fishing rod in one hand and either a large red sea bream (J. tai) or a folding fan in the other. Since the inception of the Shichifukujin, he is often paired with Daikokuten as either son or brother. ¶ Daikokuten, or “Great Black Spirit,” comes originally from India (where he is called Mahākāla); among the Shichifukujin, he is known as the god of wealth, agriculture, and commerce. Typically portrayed as standing on two bales of rice, Daikokuten carries a sack of treasure over his shoulder and a magic mallet in one hand. He is also considered to be a deity of the kitchen and is sometimes found in monasteries and private kitchens. Prior to the Tokugawa period, he was called Sanmen Daikokuten (Three-Headed Daikokuten), a wrathful protector of the three jewels ([RATNATRAYA](#)). ¶ Bishamonten, also originally from India (where he is called Vaiśravaṇa), is traditionally the patron deity of the state and warriors. He is often depicted holding a lance in one hand and a small pagoda in the palm of his other hand with which he rewards those he deems worthy. Through these associations, he came to represent wealth and fortune. His traditional residence is Mt. [SUMERU](#), where he protects the Buddha's dais and listens to the dharma. ¶ Benzaiten ([alt. Myōonten]; C. Miaoyin tian) is the Indian goddess Sarasvatī. She is traditionally considered to be a goddess of music, poetry, and learning but among the Shichifukujin, she also represents good fortune. She takes two forms:

one playing a lute in both hands, the other with eight arms. ¶ Hotei is the Japanese name of Budai (d. 916), a Chinese thaumaturge who is said to have been an incarnation of the BODHISATTVA MAITREYA (J. Miroku bosatsu). The only historical figure among the Shichifukujin, Hotei represents contentment and happiness. Famous for his fat belly and broad smile, Hotei is often depicted holding a large cloth bag (Hotei literally means “hemp sack”). From this bag, which never empties, he feeds the poor and needy. In some places, he has also become the patron saint of restaurants and bars, since those who drink and eat well are said to be influenced by Hotei. ¶ Jurōjin and Fukurokuju, often associated with one another and said to share the same body, originated within the Chinese Daoist tradition. Jurōjin (lit. “Gaffer Long Life”), the deity of longevity within the Shichifukujin, is possibly a historical figure from the late eleventh through twelfth century. Depicted as an old man with a long, white beard, he is often accompanied by a crane or white stag. Fukurokuju (lit. “Wealth, Happiness, and Longevity”) has an elongated forehead, a long, white beard and usually a staff in one hand; he is likely based on a mythical Daoist hermit from the Song period. ¶ This set of seven gods is most commonly worshipped in Japan. There are, however, other versions. Especially noteworthy is a listing found in the 1697 *Nihon Shichifukujinden* (“The Exposition on the Japanese Seven Gods of Good Fortune”), according to which Fukurokuju and Jurōjin are treated as a single god named Nankyoku rōjin and a new god, Kichijōten (C. Jixiang tian; S. Śrīmahādevī), the goddess of happiness or auspiciousness, is added to the group.

Shide. (J. Jittoku; K. Sǔptūk 捨得) (d.u.). In Chinese, lit. “Picked Up”; a legendary layman of the Tang dynasty. The young Shide is said to have acquired his name from having been adopted or “picked up” by the hermit Fenggan (d.u.). Shide is known to have worked in the kitchen of the monastery of Guoqingsi on Mt. [Tiantai](#) in present-day Zhejiang province. Shide became a favored subject in brushstroke art and was often depicted madly wielding his broom around the monastery, often together with the legendary poet [Hanshan](#). Fenggan, Hanshan, and Shide are collectively known as the “three hermits of Guoqing.”

Shidijing lun. (T. Sa bcu’i nram par bshad pa; J. Jūjikyōron; K. Sipchigyōng non 十地經論). In Chinese, “Explanation of the [DAŚABHŪMIKASŪTRA](#).” See [DAŚABHŪMIVYĀKHYĀNA](#); [DILUN ZONG](#).

Shi’ermen lun. (S. *Dvādaśamukhaśāstra, J. Jūnimonron; K. Sibimun non 十二門

論). In Chinese, lit., “Twelve Gate Treatise,” a Chinese translation of the **Dvādaśamukhaśāstra*, made by [KUMĀRAJĪVA](#) in 409. As one of the “three treatises” of the [SAN LUN ZONG](#), the Chinese counterpart of the [MADHYAMA](#) school of Indian Buddhist philosophy, along with the [BAILUN](#) (S. **ŚATAŚĀSTRA*; “The Hundred Treatise”) and the *Zhong lun* (“Middle Treatise”), the *Shi’ermen lun* is purportedly an introductory manual to [NĀGĀRJUNA](#)’s [MŪLAMADHYAMAKAKĀRIKĀ](#) (C. *Zhong lun*), which was also translated by [KUMĀRAJĪVA](#) in the same year (409) as this text. No Sanskrit or Tibetan recensions of the *Shi’ermen lun* are known to have existed and the Sanskrit title is a tentative reconstruction. In this text, the putative author Nāgārjuna provides an interpretation of emptiness ([ŚŪNYATĀ](#)) in twelve chapters. Each chapter begins with an introductory verse, supplemented in some cases with additional exegetical verses; the text is thus composed of twenty-six verses in total. Prose exegeses follow, explaining each of the verses. All verses except the seven opening ones are quoted from the *Mūlamadhyamakakārikā* (seventeen verses) or the *Śūnyatāsaptatikārikā* (C. *Kong qishi lun*) (two verses), which is also attributed to Nāgārjuna. The authorship of this text has been questioned even within the tradition. The San lun exegete [JIZANG](#) (549–623), in his commentary to the text, the *Shi’ermen lun shu*, attributes the verses to Nāgārjuna and the prose part to Piṅgala (d.u.), the sixth patriarch of the Madhyamaka school.

[shi fajie](#). (J. jihokkai; K. sa pŏpkye 事法界). In Chinese, “dharma-realm of phenomena,” the first of the four [DHARMADHĀTUS](#) (see [SI FAJIE](#)), according to the [HUAYAN ZONG](#). The “dharma-realm of phenomena” refers to the fact that all phenomena ([SHI](#)) are discrete events, created according to their own unique causal process and demonstrating their own distinctive function. They are characterized by a conditioned, and therefore illusory, nature, and stand as objects of cognizance that abide by rules of causality and conventional language. A common Huayan simile compares the different phenomena to the waves on the ocean, each composed and sustained by different sets of causes and conditions. The Huayan school polemically designates this particular level of reality as belonging to the purview of the “[HĪNAYĀNA](#) teachings” ([XIAOSHENG JIAO](#))—which is called the xiaojiao, or “lesser vehicle,” in the Huayan school’s fivefold taxonomy of the teachings ([HUAYAN WUJIAO](#))—and specifically to the [ABHIDHARMA](#), with its meticulous treatment of distinct factors ([DHARMA](#)), categories of dharmas, and the causal relations that pertain between them all.

shi fajie. (J. jippōkai; K. sip pōpkye 十法界). In Chinese, “ten [DHARMADHĀTU](#)”; the ten realms of reality according to Buddhist cosmology as described, e.g., in the Chinese [TĪANTAI ZONG](#): the realms of hell denizens ([NĀRAKA](#)), hungry ghosts ([PRETA](#)), animals ([TIRYAK](#)), demigods ([ASURA](#)), humans ([MANUSYA](#)), and celestial divinities ([DEVA](#)) belong to the six destinies ([GATI](#)) of unenlightened beings, whereas the realms of [ŚRĀVAKAs](#), [PRATYĒKABUDDHAs](#), [BODHISATTVAs](#), and buddhas make up the four categories of enlightened beings. See also [DAŚADHĀTU](#).

shifang cha. (J. jippōsetsu; K. sibang ch'al 十方刹). In Chinese, lit. “realms of the ten directions,” referring to all the world systems or universes in existence. The “cha” in shifang cha is a transcription of the Sanskrit term [KSETRA](#), and means realm, world, land, etc.; thus, it may also refer to a universe consisting of three thousand large chiliocosms, thus a “trichiliocosm” ([TRISĀHASRAMAHĀSĀHASRALOKADHĀTU](#)). “Ten directions” (C. shifang; S. [DAŚADĪŚ](#)) refers to the four cardinal directions (north, east, south, west), the four ordinal, or intercardinal, directions (northeast, southeast, southwest, northwest), plus the zenith and the nadir. By covering every possible direction, the “ten directions” therefore comes to be used by extension to mean “everywhere.” Thus, shifang cha is similar in connotation to the expressions “worlds of the ten directions” (shifang shijie; daśadiglokadhātu) or “lands of the ten directions” (shifang chatu). ¶ Shifang cha is also used in Chinese to mean “monastery of the ten directions,” referring to Song-dynasty public monasteries that adopted the “institution of the abbacy of the ten directions” ([SHIFANG ZHUCHI ZHI](#)). In this usage, “cha” is instead a transliteration of the first syllable of the Sanskrit term [CAITYA](#), a reliquary cairn or [STŪPA](#) that often was placed in front of the main shrine hall in a monastery and thus by metonymy indicated the monastery itself. The abbacy of the ten directions referred to a system of monastic succession in which a monk of particular renown was invited to serve as abbot of the monastery, regardless of his personal connection to the lineage of the preceding abbot. Monasteries whose abbots were thus chosen from the broader “ten directions,” rather than from within a single, narrow monastic or ordination lineage, were termed “monasteries of the ten directions” (shifang cha, alt. shifang conglin). Monasteries whose control was passed within a single monastic lineage were private monasteries, and called lit. “small temples” ([XIAOMIAO](#)).

shifang conglin. (十方叢林). In Chinese, “monasteries of the ten directions”; an alternate term for [SHIFANG CHA](#).

shifang zhuchi zhi. (十方住持制). In Chinese, “institution of the abbacy of the ten directions.” See [SHIFANG CHA](#).

shijiao. (始教). In Chinese, “inception teaching” of the [MAHĀYĀNA](#). See [HUAYAN WUJIAO](#).

Shijingshan. (石經山). In Chinese, “Stone Scriptures Hill.” See [FANGSHAN SHIJING](#); [YUNJUSI](#).

shijue. (J. shikaku; K. sigak 始覺). In Chinese, “acquired,” or “actualized enlightenment,” one of the two main subdivisions of enlightenment outlined in the [DASHENG QIXIN LUN](#) (“Awakening of Faith According to the Mahāyāna”), along with “original” or “inherent enlightenment” ([BENJUE](#)). As the *Dasheng qixin lun* explains, although enlightenment is in fact innate in the mind of any sentient being, that mind is still subject to “production-and-cessation” (shengmie), viz., the continual process of creation and passing away that is inevitable in the conditioned realm of existence ([SAMSĀRA](#)). But because that production-and-cessation aspect of mind is itself grounded on the embryo of buddhahood ([TATHĀGATAGARBHA](#)), conventional states of mind inherently retain the capacity to be transformed into “true thusness” ([ZHENRU](#)), the ultimate state of reality. This transformation takes place through the process of “actualized enlightenment,” that is, undertaking religious cultivation, which in the *Dasheng qixin lun* specifically means serenity and insight meditation (ZHIGUAN) and no-thought practice ([WUNIAN](#)). This process of actualizing enlightenment occurs over four stages of cultivation: (1) the “nonenlightenment” (bujue) of the ordinary worldling who has just entered the path at the level of the ten stages of faith (shixin); (2) the “apparent enlightenment” (xiangshijue) of two-vehicle adherents ([ER SHENG](#)) and beginning [BODHISATTVAS](#) on the stages of the “three worthies” (sanxian), that is, the ten abodes (shizhu), ten practices (shixing), and ten transferences or dedications (shihuixiang); (3) the “approximate enlightenment” (suifen jue) of [DHARMAKĀYA](#) bodhisattvas (fashen pusa) at the stage of the first [BHŪMI](#) and above; and (4) the “ultimate enlightenment” (jiujingjue), which occurs at the consummation of the ten bhūmis (pusa jindi). At the completion of this actualization process, however, one realizes that the enlightenment one has achieved through practice is in fact identical to the

enlightened dharma-body ([DHARMAKĀYA](#)) that has always been innate; thus “actualized enlightenment” is no different from “original enlightenment.” Any apparent differences between these two are but a matter of perspective: the innate luminosity and purity of the tathāgatagarbha and dharmakāya are seen as “original” (viz., “intrinsic”) by the sage, but as something that must be “actualized” by the ordinary person.

[shikan taza](#). (C. zhiguan dazuo; K. chigwan t’ajwa 祇/只管打坐). In Japanese, “just sitting”; a style of meditation emblematic of the Japanese [SŌTŌSHŪ](#) of [ZEN](#), in which the act of sitting itself is thought to be the manifestation of enlightenment. The Sōtō school attributes the introduction of this style of practice to [DŌGEN KIGEN](#) (1200–1253), who claimed to have learned it from his Chinese [CAODONG ZONG](#) teacher [TIANTONG RUJING](#) (1162–1227). In this degenerate age of the dharma (J. mappō; C. [MOFA](#)), Sōtō claims, a radical simplification of practice was necessary. Rather than attempting to master the full range of meditative techniques used for concentrating the mind, such as counting the breaths (J. susokukan) or investigating a Zen question (J. kanna Zen; C. [KANHUA CHAN](#)), Dōgen is claimed to have advocated “just sitting” in the posture that had been used by the buddhas (e.g., [ŚĀKYAMUNI](#)’s seven days beneath the [BODHI TREE](#)) and the patriarchs of Zen (e.g., [BODHIDHARMA](#)’s “wall contemplation,” C. [BIGUAN](#)). As the later Sōtō school interprets shikan taza, by maintaining this posture of “just sitting,” the mind would also become stabilized and concentrated in a state of full clarity and alertness, free from any specific content (i.e., “with body and mind sloughed off,” J. [SHINJIN DATSURAKU](#)). By adopting this posture of the buddhas and patriarchs, the student’s own body and mind would thus become identical to the body and mind of his spiritual ancestors. Shikan taza is therefore portrayed as the most genuine form of meditation in which a Buddhist adept can engage. The Sōtō tradition also deploys shikan taza polemically against the rival [RINZAISHŪ](#), whose use of kōans (C. [GONG’AN](#)) in meditation training was portrayed as an inferior, expedient attempt at concentration. In Dōgen’s own writings, however, there is little of this later Sōtō portrayal of the psychological dimensions of “just sitting”; instead, Dōgen uses shikan taza simply as a synonym of “sitting in meditation” (zazen, C. [ZUOCHAN](#)), and may have spent most of his time while “just sitting” in the contemplation of kōans.

[shi mi](#). (事密). In Chinese, “esoteric as to practices.” See [ER MI](#).

Shin Araham. An eleventh-century Mon monk credited with bringing [THERAVĀDA](#) Buddhism to Burma (Myanmar). According to legend, Shin Araham (in Pāli, Dhammadassi) was the reincarnation of a [NAT](#), born to a brāhmaṇa virgin wife in the Thaton region in the south of Burma. He attained the state of [ARHAT](#) shortly after his ordination. He learned that the dharma was being practiced impurely in the “western regions” (viz., [PAGAN](#) [Bagan]) and proceeded there. In Pagan, monks called ari had polluted the dharma, proclaiming that murder was permissible if the proper spells ([MANTRA](#)) are recited. They also required that all virgins have intercourse with them before marriage. The newly ordained king [ANAWRAHTA](#) (Anuruddha, r. 1044–1077) recognized that these monks were corrupt but was unable to remove them from the order. When Shin Araham arrived in Pagan, he was discovered by a hunter who had never seen a monk before. Mistaking him for a spirit, he took him to the king. Shin Araham preached a sermon that impressed the king, who asked him where the Buddha was, how much of the dharma remained, and if there were other disciples of the Buddha. Shin Araham recounted the history of the Buddha and his relics and described the Pāli canon and the monastic order. The king then adopted Theravāda as the practice of his kingdom and defrocked the ari monks. He asked the Mon king to send a copy of the tipitaka (S. [TRIPITAKA](#)) and some relics of the Buddha. When the Mon king refused, Anawrahta invaded Thaton in 1057, taking the Mon king and his family captive. He also took monks and skilled craftsmen, as well as Pāli scriptures, back with him to Pagan.

shinbutsu bunri. (神佛分離). In Japanese, lit. “separation of spirits and buddhas” (spirits here referring to the deities, or [KAMI](#), associated with the indigenous Japanese religion now referred to as [SHINTŌ](#)); an official policy established at the beginning of the Meiji period (1868–1912) to dissociate all aspects of indigenous Japanese religion, or Shintō, from Buddhism. Prior to this separation, Buddhist temples (J. *tera*) and Shintō shrines (J. *jinja*) were intimately connected complexes (J. *jingūji*; see [SHINBUTSU SHŪGŌ](#)), as were the practice, beliefs, and vocations of the two traditions. The policy of shinbutsu bunri was based in part on an argument first broached by Nativist scholars during the Tokugawa period (1600–1868): viz., that Shintō reflected Japan’s true spirit, while the “foreign” imports of Buddhism and Confucianism had corrupted Japanese culture and tainted Japanese indigenous religion. The Meiji government built its foundation on this rhetoric by making Shintō a state cult and asserting that the emperor was a descendant of the indigenous deities (*kami*) described in the *Kojiki* (712), an

early historical collection. Shinbutsu bunri was a successful government policy in that it helped to strengthen Shintō and give the tradition its own identity independent from the Buddhist institutions that had been patronized by the earlier Tokugawa bakufu government. Moreover, shrines around the country were ranked in a national hierarchy and provided with state funding; all citizens were also required to register as adherents at these shrines. The policy, however, also had a damaging impact on both Shintō and Buddhism. By forcibly separating many practices that had previously been shared between Shintō and Buddhism, shinbutsu bunri ended up replacing many long-held traditions in local communities with a newly imposed set of national practices and beliefs. State-sponsored shrines were now expected to comply with nationally oriented ceremonies and carry out government-specific agendas. Many smaller Shintō shrines, which did not receive state sponsorship, were forced to merge with larger regional shrines, thus severely diminishing their presence in many communities. As for Buddhist institutions, the government remained silent as a wave of anti-Buddhist sentiment known as [HAIBUTSU KISHAKU](#) swept the country, leaving temples to face targeted violence and destruction. The mountain complexes of [SHUGENDŌ](#), which had never differentiated between the two traditions, received the harshest treatment from the policy: all their established practices were abolished and Shugendō priests were forced either to laicize or to become Shintō priests.

[shinbutsu shūgō](#). (神佛習合). In Japanese, “unity of spirits and buddhas” (spirits here referring to the [KAMI](#) associated with the indigenous Japanese religion now referred to as [SHINTŌ](#)). The practice of associating local gods and spirits with buddhas and [BODHISATTVA](#)s is documented as early as the late seventh century. By the eighth century, Shintō shrines (J. jinja) and Buddhist temples (J. [TERA](#)) were being jointly constructed beside one another. Over the course of the Heian period (794–1185), Buddhism gradually became ingrained deeply within local belief systems in communities across Japan, requiring some sort of accommodation between local and imported religions. As Buddhism became central to Japanese religious practice, the kami were sometimes either categorized as inferior beings subject to suffering who therefore needed the guidance of the Buddhist teachings, or tasked with guarding Buddhist temples and shrines. Ultimately, kami were redefined, using the principle of [HONJI SUIJAKU](#), as local manifestations of the universal deities of the Buddhist religion. The development of temple-shrine complexes (J. jingūji), which did not

differentiate between the two traditions, followed, although the shrine priests were generally subservient to their better educated, and politically and socially connected, Buddhist counterparts. During the Tokugawa period (1600–1868), tensions appeared as Nativist scholars began identifying “Shintō” as Japan’s pure, indigenous religion, which they advocated should be decontaminated of so-called “foreign” elements like Buddhism and Confucianism. When the Meiji government took power in 1868, it instituted a policy known as [SHINBUTSU BUNRI](#), which forcibly separated the putative native “Shintō” tradition from Buddhism. See also [HAIBUTSU KISHAKU](#).

[Shinchi Kakushin](#). (心地覺心) (1207–1298). Japanese [ZEN](#) teacher in the [RINZAISHŪ](#), who is retrospectively regarded as the founder of the small [FUKESHŪ](#) branch of the Zen tradition; also known by his posthumous title [HOTTŌ KOKUSHI](#). He became a monk at the age of fourteen in the [SHINGONSHŪ](#) esoteric tradition, and received full ordination at twenty-nine at [TŌDAIJI](#) in Nara, the ancient capital of Japan. Shinchi studied esoteric teachings at [KŌYASAN](#), the headquarters of the Shingon school, and engaged in Zen training under the Rinzai master Taikō Gyōyū (1163–1241) and the [SŌTOSHŪ](#) master [DŌGEN KIGEN](#) (1200–1253). Shinchi left for China in 1249 to study under the Chinese Linji master [WUZHUN SHIFAN](#) (1177–1249). Unfortunately, the master died before Shinchi arrived, so Shichi instead traveled to Hangzhou to study under [WUMEN HUIKAI](#) (1183–1260), in the [YANGQI PAI](#) of the [LINJI ZONG](#). Wumen is said to have given Shinchi dharma transmission ([CHUANFA](#)) after just six months of training. Shinchi returned to Japan in 1254 with the master’s robe and portrait, as well as a copy of the master’s [WUMEN GUAN](#), which was the first introduction of that famous [GONG’AN](#) (J. kōan) collection to the Japanese isles. In present-day Wakayama prefecture, Shinchi built a monastery called Saihōji, which was later renamed Kōkokuji. Shinchi resided there for the rest of his life, but often traveled to Kyōto to lecture on Buddhism before the retired monarchs Gofukakusa (r. 1246–1259), Kameyama (r. 1259–74) and Gouda (r. 1274–87). Kameyama granted him the honorary title “Hottō Zenji” (Zen Master Dharma Lamp). After his death, the Emperor Godaigo (r. 1318–1339) later bestowed on him the posthumous title of Hottō Enmyō Kokushi (State Preceptor Lamp of Dharma that is Perfectly Bright). Shinchi came to be regarded as the founder of the Fukeshū, a smaller secondary school of Japanese Zen, whose itinerant practitioners played the bamboo flute (shakuhachi) as a form of meditation and wore a distinctive bamboo hat that covered the entire face. The school was

proscribed in 1871 and vanished from the scene.

Shingonshū. (眞言宗). In Japanese, lit. “True Word School.” Shingon is the Japanese pronunciation of the Chinese term [ZHENYAN](#) (true word), which in turn is a translation of the Sanskrit term [MANTRA](#). In Japan, Shingon has also come to serve as the name for the various esoteric ([MIKKYŌ](#)) traditions that traced their teachings back to the eminent Japanese monk [KŪKAI](#). In his voluminous oeuvre, such as the [HIMITSU MANDARA JŪJŪSHINRON](#), [HIZŌ HŌYAKU](#), *Sokushin jōbutsugi*, and *Shōji jissōgi*, Kūkai laid the foundations of a new esoteric discourse that allowed the Buddhist institutions of the Heian period to replace Confucian principles as the ruling ideology of Japan. Kūkai was able to effect this change by presenting the court and the Buddhist establishment with an alternative conception of Buddhist power, ritual efficacy, and the power of speech acts. Through Kūkai’s newly imported ritual systems, monks and other initiated individuals were said to be able to gain access to the power of the cosmic buddha Mahāvairocana, understood to be the [DHARMAKĀYA](#), leading to all manner of feats, from bringing rain and warding off disease and famine, to achieving buddhahood in this very body ([SOKUSHIN JŌBUTSU](#)). Kūkai taught the choreographed ritual engagement with [MANDALA](#), the recitation of [MANTRAS](#) and [DHĀRANĪ](#), and the performance of [MUDRĀ](#) and other ritual postures that were said to transform the body, speech, and mind of the practitioner into the body, speech, and mind of a particular buddha. Kūkai’s ritual teachings grew in importance to the point that he was appointed to the highest administrative post in the Buddhist establishment (sōgō). From this position, Kūkai was able to establish ordination platforms at the major monasteries in Nara and the capital in Kyōto. Later, the emperor gave Kūkai both [TŌJI](#) in Kyōto and [KŌYASAN](#), which subsequently came to serve as important centers of esoteric Buddhism. Kūkai’s Shingon mikkyō lineages also flourished at the monasteries of Ninnaji and DAIGOJI under imperial support. Later, Tōji rose as an important institutional center for the study of Kūkai’s esoteric Buddhist lineages under the leadership of the monk Kangen (853–925), who was appointed head (zasu) of Tōji, Kongōbuji, and Daigoji. The Mt. Kōya institution also grew with the rise of [KAKUBAN](#), who established the monasteries of Daidenbōin and Mitsugonin on the mountain. Conflict brewed between the monks of Kongōbuji and Daidenbōin when Kakuban was appointed the head of both institutions, a conflict that eventually resulted in the relocation of Daidenbōin to nearby Mt. Negoro in Wakayama. The Daidenbōin lineage came to be known as the Shingi branch of

Shingon esoteric Buddhism. Attempts to unify the esoteric Buddhist traditions that claimed descent from Kūkai were later made by Yūkai (1345–1416), who eradicated the teachings of the “heretical” [TACHIKAWARYŪ](#) from Mt. Kōya, and worked to establish a Kūkai-centered Shingonshū orthodoxy. By the late medieval period, the major monastic landholding institutions in Kyōto, Nara, and Mt. Kōya, many of which were profoundly influenced by the teachings of Kūkai, suffered economic hardship with the initiation of the Warring States period (1467–1573) and the growing popularity of the so-called “Kamakura Schools” (e.g., [JŌDOSHŪ](#), [JŌDO SHINSHŪ](#), [ZENSHŪ](#), and [NICHIRENSHŪ](#)). In particular, Oda Nobunaga (1534–1582) had crushed the major Buddhist centers on [HIEIZAN](#). However, Mt. Kōya, which was still a thriving center for the study of Kūkai’s Shingon esoteric Buddhism, was spared the same fate because the monks resident at the mountain successfully convinced Toyotomi Hideyoshi (1536–1598) not to burn down their center. Thanks to the political stability of the Tokugawa regime, studies of esoteric Buddhism thrived until the harsh persecution of Buddhism by the Meiji government (see [HAIBUTSU KISHAKU](#)). As an effort to recover from the Meiji persecution, the disparate traditions of esoteric Buddhism came together under the banner of the Shingonshū, but after World War II, the various sub-lineages reasserted their independence.

[Shin hpyu Shin hla Pagoda](#). Shin hpyu Shin hla Pagoda or Zedi (Pāli, cetī) was built by the famous king of [PAGAN](#) (Bagan), Alaung-sithu (r. 1112/3–1168). It is located in the Sagaing Hills, which lie along the Irrawaddy (Ayeyarwady) River in Upper Burma (Myanmar). The pagoda receives its name from the two images of the Buddha interred in it, named Shin hpyu and Shin hla. It is said that Alaung-sithu received these statues as a gift from the king of the gods Thagya Min (P. Sakka; S. [ŚAKRA](#)) when the latter descended from his abode in the heaven of the thirty-three (P. tāvatīmsa; S. [TRĀYASTRIMŚA](#)). King Alaung-sithu was particularly beloved by his subjects and is regarded in Burmese chronicles as one of the few Burmese monarchs to have been a hpaya-laung (P. bodhisatta; S. [BODHISATTVA](#)). An annual festival is held at Shin hpyu Shin hla Pagoda on the new moon day of the Burmese month of Tawthalin (September-October).

[shinjin daturaku](#). (C. shenxin tuoluo; K. sinsim t’allak 身心脫落). In Japanese, lit. “body and mind sloughed off,” the psychological state generated during the practice of “just sitting” ([SHIKAN TAZA](#)), a style of meditation emblematic of the Japanese [SŌTŌSHŪ](#) of [ZEN](#). The Sōtō school attributes this term to [DŌGEN KIGEN](#)

(1200–1253), who claimed to have learned it from his Chinese [CAODONG](#) teacher [TIAN TONG RUJING](#) (1162–1227). During the practice of “just sitting,” the adept should sit with “body and mind sloughed off,” that is, with the body and mind stabilized and concentrated in a state of full clarity and alertness that is free from any specific content. Once all conception of body and mind had fallen away, the “original face” (J. *honrai menmoku*, C. [BEN LAI MIAN MU](#)) of inherent enlightenment will then appear. Dōgen is said to have achieved enlightenment through hearing his teacher Rujing describe practice as “the sloughing off of body and mind.” This phrase is mentioned in only a single passage of Rujing’s discourse record ([YULU](#)), however. Rujing’s record also includes the homophonous phrase *shinjin daturaku* (C. *xinchen tuoluo*), or “defilements of mind sloughed off.” It is uncertain which form of the phrase Dōgen might have heard, but it seems to have had much more significance for Dōgen than for Rujing.

Shinran. (親鸞) (1173–1262). Japanese priest who is considered the founder of the [JŌDO SHINSHŪ](#), or “True [PURE LAND](#) School.” After the loss of his parents, Shinran was ordained at age nine by the [TENDAISHŪ](#) monk Jien (1155–1225) and began his studies at [HIEIZAN](#). There, he regularly practiced “perpetual nenbutsu” (J. *nenbutsu*; C. [NIAN FO](#)), ninety-day retreats in which one circumambulated a statue of the buddha [AMITĀBHA](#) while reciting the nenbutsu. In 1201, he left Mt. Hiei and became the disciple of [HŌNEN](#), an influential monk who emphasized nenbutsu recitation. Shinran was allowed to copy Hōnen’s most influential (and at that time still unpublished) work, the [SENCHAKUSHŪ](#). When Hōnen was exiled to Tosa in 1207, Shinran was defrocked by the government and exiled to Echigo, receiving a pardon four years later. He did not see Hōnen again. Shinran would become a popular teacher of nenbutsu practice among the common people, marrying (his wife Eshinni would later write important letters on pure land practice) and raising a family (the lineage of the True Pure Land sect is traced through his descendants), although he famously declared that he was “neither a monk nor a layman” (*hisō hizoku*). While claiming simply to be transmitting Hōnen’s teachings, Shinran made important revisions and elaborations of the pure land doctrine that he had learned from Hōnen. In 1214, he moved to the Kantō region, where he took a vow to recite the three pure land sūtras (J. *Jōdo sanbukyō*; C. [JING TU SAN BU JING](#)) one thousand times. However, he soon stopped the practice, declaring it to be futile. It is said that from this experience he developed his notion of *shinjin*. Although literally translated as “the mind of

faith,” as Shinran uses the term shinjin might best be glossed as the buddha-mind realized in the entrusting of oneself to Amitābha’s name and vow. Shinran often would contrast self-power ([JIRIKI](#)) and other-power ([TARIKI](#)), with the former referring to the always futile attempts to secure one’s own welfare through traditional practices such as mastering the six perfections ([PĀRAMITĀ](#)) of the bodhisattva path to buddhahood, and the latter referring to the sole source of salvation, the power of Amitābha’s name and his vow. Thus, Shinran regarded the Mahāyāna practice of dedicating merit to the welfare of others to be self-power; the only dedication of merit that was important was that made by the bodhisattva [DHARMĀKARA](#), who vowed to become the buddha Amitābha and establish his pure land of [SUKHĀVATĪ](#) for those who called his name. He regarded the deathbed practices meant to bring about birth in the pure land to be self-power; he regarded multiple recitations of [NAMU AMIDABUTSU](#) to be self-power. Shinran refers often to the single utterance that assures rebirth in the pure land. This utterance need not be audible, indeed not even voluntary, but is instead heard in the heart as a consequence of the “single thought-moment” of shinjin, received through Amitābha’s grace. This salvation has nothing to do with whether one is a monk or layperson, man or woman, saint or sinner, learned or ignorant. He said that if even a good man can be reborn in the pure land, then how much more easily can an evil man; this is because the good man remains attached to the illusion that his virtuous deeds will somehow bring about his salvation, while the evil man has abandoned this conceit. Whereas Hōnen sought to identify the benefits of the nenbutsu in contrast to other teachings of the day, Shinran sought to reinterpret Buddhist doctrine and practice in light of Amitābha’s vow. For example, the important Mahāyāna doctrine of the [EKAYĀNA](#), or “one vehicle,” the buddha vehicle whereby all sentient beings will be enabled to follow the bodhisattva path to buddhahood, is interpreted by Shinran to be nothing other than Amitābha’s vow. Indeed, the sole purpose of [ŚĀKYAMUNI](#) Buddha’s appearance in the world was to proclaim the existence of Amitābha’s vow. These doctrines are set forth in Shinran’s magnum opus, an anthology of passages from Buddhist scriptures, intermixed with his own comments and arranged topically, entitled [KYŌGYŌ SHINSHŌ](#) (“Teaching, Practice, Faith, and Realization [in Pure Land]”), a work that he began in 1224 and continued to expand and revise over the next three decades. Shinran did not consider himself to be a master and did not establish a formal school, leading to problems of authority among his followers when he was absent. After he left Kantō for Kyōto, for example, problems arose among his followers in Kantō,

leading a disciple to record a series of conversations, later collected as [TANNISHŌ](#) (“Lamentations on Divergences”).

Shintō. (J) (神道). In Japanese, lit. “The Way of the Spirits ([KAMI](#))”; modern designation used to refer to a supposedly indigenous religion of Japan distinct from Buddhism. Shintō (alt. jindō) was originally a Buddhist term that designated the realm or course (tō) of the local gods and spirits (shin), in distinction to tendō, the Indian divinities who populated the Buddhist celestial heavens ([SVARGA](#)). The term therefore referred to an amorphous complex of local beliefs, myths, and rituals that were focused on village and clan tutelary gods called [KAMI](#). During the medieval period, this amorphous set of beliefs was gradually being systematized on a broader scale, but always in conjunction with, and under the strong influence of, Buddhism. It was only in 1868, with the start of the Meiji Restoration, that there was a forced separation of the kami and the buddhas ([SHINBUTSU BUNRI](#)), which artificially created two distinct and autonomous religions: the putatively autochthonous Japanese religion of Shintō and the imported traditions of Japanese Buddhism. See [HAIBUTSU KISHAKU](#); [HONJI SUJAKU](#); [KAMI](#); [SHINBUTSU BUNRI](#); [SHINBUTSU SHŪGŌ](#).

Shin Upagot. A semi-immortal [ARHAT](#) who, according to Burmese (Myanmar) and Thai popular tradition, dwells in a gilded palace beneath the southern ocean. Shin Upagot (P. Upagutta, S. [UPAGUPTA](#)) is endowed with extraordinarily long life and is destined to survive until the coming of the future buddha, [MAITREYA](#). According to Burmese legend, Shin Upagot was ordered by the Buddha not to pass into [PARINIRVĀNA](#) until Maitreya had appeared so that he might protect the Buddha’s religion during times of crisis. Shin Upagot is renowned for assisting King [AŚOKA](#) to construct eighty-four thousand [STŪPAS](#), and for vanquishing [MĀRA](#) and converting him to Buddhism. The earliest known record of the legend of Shin Upagot as it is known in Southeast Asia is found in the *Lokapaññatti*, a Pāli cosmological text said to have been written at Thaton in the twelfth century. That recension of the legend, in turn, is based on Sanskrit Buddhist antecedents found in such works as the [AŚOKĀVADĀNA](#), all of which recount the exploits of the Upagutta. The legend of Shin Upagot is celebrated in the Burmese royal chronicles (yazawin), *Mahayazawin-gyi* (c. 1730) and *Hmannan Mahayazawin-daw-gyi* (1829), while the story is omitted from all Burmese ecclesiastical chronicles (thathanawin), presumably because it is not attested in Pāli sources. Shin Upagot is regarded as a protector of sailors, and because of his powers to

control the weather, he is propitiated to prevent rainfall at inopportune times. He is depicted iconographically as a monk seated cross-legged, looking skyward, with his right hand reaching into his alms bowl.

[shi rushi](#). (J. jūnyoze; K. sip yōsi 十如是). In Chinese, the “ten suchnesses” (also known as the shiru); ten “suchlike” aspects of reality, as outlined in the [SADDHARMAPUNBARĪKASŪTRA](#): all dharmas are of suchlike characteristics (xiang), nature (xing), essence ([TI](#)), efficacy (li), function ([YONG](#)), causes (yin), conditions (yuan), fruitions (guo), retributions (bao), and suchlike “equivalency ultimately from beginning and end” (benmuo jiuqing deng; referring to all the nine previous “suchnesses”). The doctrinal significance of these “ten suchnesses” was interpreted and promoted by the [Tiantai Zong](#). [Tiantai Zhiyi](#) argued that by reading this passage with different emphases, it corresponds respectively to each of the three independent modes of contemplation in the “threefold contemplation” system (see [Sanguan](#)). By emphasizing the term “suchness”—i.e., the characteristics of all dharmas are such (shixiang ru), the nature of all dharmas is such (shixing ru), etc.—this passage illuminates the “contemplation of emptiness,” because emptiness ([Śūnyatā](#)) is the unifying principle for all ten aspects of reality and the term “empty” is synonymous with “suchness.” By emphasizing the suchlike characteristics (rushixiang), suchlike nature (rushixing), etc., this same passage could instead illuminate the “contemplation of conventional existence,” since existence is characterized by myriad distinct aspects that can be differentiated by such conventional categories as “characteristics,” “nature,” and “essence.” Finally, by emphasizing “the suchness of characteristics” (xiang rushi), the “suchness of nature” (xing rushi), etc., the passage points out how this profound “suchness” contains and simultaneously affirms the aspects of both “emptiness” and “conventional existence,” therefore corresponding to the “contemplation of the middle” in the “threefold contemplation” scheme. See also [Tathata](#).

[shi shenme](#). (J. kore ikana; K. si simma 是甚麼). In Chinese, “What is it?”; the fundamental existential question (see [Gong’an](#), [Huatou](#)) asked within the [Chan](#) school, especially in association with the technique of “questioning meditation” ([Kanhua Chan](#)). See also [Imwōtko](#).

[shishi wu’ai fajie](#). (J. jijimugehokkai; K. sasa muae pōpkye 事事無礙法界). In Chinese, “dharma-realm of the unimpeded interpenetration between phenomenon and phenomena,” the fourth of the four dharma-realms

([DHARMADHĀTU](#)), according to the [HUAYAN ZONG](#). In this Huayan conception of ultimate reality, what the senses ordinarily perceive to be discrete and separate phenomena ([SHI](#)) are actually mutually pervading and mutually validating. Reality is likened to the bejeweled net of the king of the gods [INDRA](#) (see [INDRAJĀLA](#)), in which a jewel is hung at each knot in the net and the net stretches out infinitely in all directions. On the infinite facets of each individual jewel, the totality of the brilliance of the expansive net is captured, and the reflected brilliance is in turn re-reflected and multiplied by all the other jewels in the net. The universe is in this manner envisioned to be an intricate web of interconnecting phenomena, where each individual phenomenon owes its existence to the collective conditioning effect of all other phenomena and therefore has no absolute, self-contained identity. In turn, each individual phenomenon “creates” the universe as it is because the totality of the universe is inconceivable without the presence of each of those individual phenomena that define it. The function and efficacy of individual phenomena so thoroughly interpenetrate all other phenomena that the respective boundaries between individual phenomena are rendered moot; instead, all things are mutually interrelated with all other things, in a simultaneous mutual identity and mutual intercausality. In this distinctively Huayan understanding of reality, the entire universe is subsumed and revealed within even the most humble of individual phenomena, such as a single mote of dust, and any given mote of dust contains the infinite realms of this self-defining, self-creating universe. “Unimpeded” (*wu'ai*) in this context therefore has two important meanings: any single phenomenon simultaneously creates and is created by all other phenomena, and any phenomenon simultaneously contains and is contained by the universe in all its diversity. A common Huayan simile employs the image of ocean waves to describe this state of interfusion: because individual waves form, permeate, and infuse all other waves, they both define all waves (which in this simile is the ocean in its entirety), and in turn are defined themselves in the totality that is the ocean. The Huayan school claims this reputedly highest level of understanding to be its exclusive sectarian insight, thus ranking it the “consummate teaching” ([YUANJIAO](#)) in the scheme of the [HUAYAN WUJIAO](#) (Huayan fivefold taxonomy of the teachings).

[Shitennōji](#). (四天王寺). In Japanese, “Four Heavenly Kings Monastery,” a Buddhist temple located in Ōsaka, Japan, which tradition presumes to be the oldest monastery in Japan. The *Nihon shoki* (“Chronicles of Japan”), compiled in

720, claims that the monastery was founded in 593 by the semilegendary figure Prince Shōtoku ([SHŌTOKU TAISHI](#), 572–621) who made a vow that he would build a temple dedicated to the four heavenly kings ([CĀTURMAHĀRĀJA](#)), the guardian divinities ([DEVĀ](#)) of Buddhism, if his pro-Buddhist [SOGA](#) clan was able to defeat the anti-Buddhist Mononobe clan in battle in 587. At the time of its construction, as the monastery's name indicates, the four heavenly kings were enshrined as the main objects of veneration in the monastery; but from the Heian period (794–1185) onward, the bodhisattva Kannon ([AVALOKITEŚVARA](#)) replaced them as the main tutelary deity in the monastery. The temple was affiliated with the [TENDAISHŪ](#) until 1948, when it became nonsectarian. Shitennōji has been reconstructed several times during its history; the main basilica in the monastery was rebuilt in 1963.

[Shitou Xiqian](#). (J. Sekitō Kisen; K. Sōktu Hūich'ōn 石頭希遷) (700–790). In Chinese, “Rare Transformation Atop a Stone”; master in the Tang-dynasty [CHAN ZONG](#), who was an important ancestor in the lineages of the [CAODONG ZONG](#), [YUNMEN ZONG](#), and [FAYAN ZONG](#), three of the five major houses of the mature Song-dynasty Chan tradition (see [WU JIA QI ZONG](#)). Xiqian is claimed to have studied with the sixth patriarch ([LIUZU](#)) [HUINENG](#) (638–713) while still a youth and was present at the master's deathbed. He subsequently traveled to Qingyuanshan in modern-day Jiangxi province to study with a monk who was claimed to have been one of the sixth patriarch's most eminent disciples: [QINGYUAN XINGSI](#) (d. 740). Xingsi is said to have thought highly of his new disciple, famously calling him a unicorn among the other horned animals in his congregation, and eventually made Xiqian his principal dharma heir ([FASI](#)). In 742, after his teacher's death, he traveled to Mt. Nanyue (present-day Hunan province), where he lived in a hermitage built on top of a large boulder, hence his cognomen Shitou (“Atop a Stone”). In 762, he traveled to Tanzhou near present-day Changsha, before returning to Mt. Nanyue, where he passed away at the age of ninety. Although during his lifetime Xiqian seems to have been a fairly obscure teacher in a little-known regional lineage, he retrospectively came to be viewed as one of the two most influential teachers of the classical Chan period, along with [MAZU DAOYI](#) (709–788). This inflated appraisal is largely a result of the prominence of Xiqian's third-generation successor [DONGSHAN LIANGJIE](#) (807–869), one of the two teachers after whom the Caodong school is named. Xiqian is the author of the [CANTONG QI](#), regarded by the Chinese Caodong zong and Japanese [SŌTŌSHŪ](#) as one of their foundational scriptures.

Xiqian’s short verse, in a total of 220 Sinographs, is highly regarded for its succinct and unequivocal expression of the teaching of nonduality.

[shiwang](#). (J. jūō; K. siwang 十王). In Chinese, “ten kings” [of hell]. See [YAMA](#).

[shi xuanmen](#). (J. jūgenmon; K. sip hyōnmun 十玄門). In Chinese, “the ten mysteries”; the systematic elaboration of the implications of causality ([PRATĪTYASAMUTPĀDA](#)) and existence in the doctrinal system of the [HUAYAN ZONG](#). [ZHIYAN](#) (602–668), the second patriarch of the Huayan lineage, first elaborated the ten profound mysteries in order to outline ten specific perspectives on the “dependent origination of the [DHARMADHĀTU](#)” ([FAJIE YUANQI](#)), viz., the perspectives of: (1) the interrelationship between all things, (2) simile (i.e., of Indra’s Net, [INDRAJĀLA](#)), (3) conditionality, (4) characteristics, (5) time, (6) practice, (7) principle, (8) function, (9) mind, and (10) wisdom. This original listing was elaborated by [FAZANG](#) (643–712), the third patriarch of the school, to explain instead the dharmadhātu of the unimpeded interpenetration between all phenomena (see [SHISHI WU’AI FAJIE](#)): viz., all dharmas simultaneously have a distinct, independent existence, and yet are still thoroughly pervaded by one other; they thus mutually define, yet do not impede the distinctiveness of, each other. Fazang’s revised listing of the “ten mysteries” comes to be definitive within the school:

1. Simultaneity (tongshi juzu xiangying men): The mutual creation of any one thing and all things does not take place sequentially, but simultaneously.
2. Immensity (guangxia zizai wu’ ai men): The relative size of any single thing is derived from that of all things, just as the immensity of all things is derived from any one thing.
3. Abundance (yiduo xiangrong butong men): The number “one” is meaningful only in distinction to “many,” and vice versa. “One” and “many” thus define and pervade one another, and yet the distinctiveness of the two concepts is left intact.
4. Identity (zhufa xiangji zizai men): Any one thing is defined by all other things, and vice versa; there is no identity of any one thing beyond the contextual definition it derives from the totality of all things, and vice versa.
5. Manifestation (yinmi xianliao jucheng men): The revelation of any one thing relies on the concealment of all other things, just as the manifestation of all other things requires the concealment (e.g., the shifting of attention away from) of any one thing, and vice versa.

6. Diminutiveness (*weixi xiangrong anli men*): The smallest number encapsulates infinity, the smallest mote of dust contains the most immense of world-systems, and the shortest duration of time spans incalculable eons. Yet, number, size, and time retain their logical order of magnitude amidst this scheme of things.
7. Indra's Net (*Yintuoluo wang fajie men*): Just as with the reflective jewels at each knot of the infinitely expansive *Indrajāla*, any one phenomenon captures and reflects the images of all phenomena. The images of all phenomena are thus reflected infinitely in a single instant as they are redirected to, and multiplied within, all the facets of the myriad jewels that make up Indra's Net.
8. Analogy (*tuoshi xianfa shengjie men*): The abstruse can be made known by analogies that draw on the plain and the obvious. Although the abstruse and the plain are distinct in their relative profundity, the principle they thus evince is one and the same.
9. Time (*shishi gefa yicheng men*): Although time can be divided into past, present, and future, from the perspectives of each of the three temporal periods, different sets of the past, present, and future can be delineated. All of the nine temporal periods (*viz.*, the past, present, and future of the past, present, and future) are in turn subsumed in one instant of thought, which together make a total of ten temporal periods. These ten thus mutually "enter" (*ru*), subsume, and define each other.
10. Centrality (*zhuban yuanming jude men*): Each of the aforementioned categories explains and validates all the others. When focus is directed at any particular category, all the others become subordinate, and the one at hand becomes predominant. Each category involves the same principle of being collectively substantiated by all categories together. The same is true with all phenomena: the relation between centrality and marginality is relative and mutually substantiating.

Shiyuan. (C) (師遠). See [KUO'AN SHIYUAN](#).

shizhong. (C) (示衆). See [CHUISHI](#).

Shizun nianhua. (J. *Seson nenge*; K. *Sejon yŏmhwa* 世尊拈花). In Chinese, "The World-Honored One holding up a flower." See [NIANHUA WEIXIAO](#).

Shōbōgenzō. (正法眼藏). In Japanese, "Treasury of the True Dharma Eye"; the magnum opus of the Japanese [ZEN](#) master [DŌGEN KIGEN](#) (1200–1253); the title

refers to the Zen (C. [CHAN](#)) school, which is considered to be the repository of the insights of the buddha [ŚĀKYAMUNI](#) himself, transmitted through the lineage of the [CHAN](#) patriarchs ([ZUSHI](#)) starting with [MAHĀKĀŚYAPA](#). A work bearing the same title (C. [ZHENGFAZHANG](#)) by the eminent Song-dynasty Chinese monk [DAHUI ZONGGAO](#) was probably the inspiration for Dōgen's own title. Dōgen's oeuvre contains two works with this title. The first is a collection of 301 kōan (C. [GONG'AN](#)) cases, composed in literary Chinese, known as the *Shinji Shōbōgenzō* or the *Mana Shōbōgenzō*. The second is a collection of essays written in Japanese, known as the *Kana* [viz., “vernacular”] *Shōbōgenzō*, which is the better known of the two and which will be the focus of this account. The *Shōbōgenzō* is a collection of individual essays and treatises that Dōgen composed throughout his eventful career. Its earliest included treatise is the [BENDŌWA](#) composed in 1231 and the latest is the *Hachidainingaku* composed in 1253, the year of Dōgen's death. Although the *Shōbōgenzō* seems to have been all but forgotten after Dōgen's death, later successors in the Japanese Sōtō Zen tradition, such as [MANZAN DŌHAKU](#) (1636–1715), [TENKEI DENSON](#) (1648–1735), and [MENZAN ZUIHŌ](#) (1683–1769), and the layman Ōuchi Seiran (1845–1918) rediscovered the text and their influential commentaries on it helped to make Dōgen's magnum opus the central scripture of the Sōtō Zen tradition. Six different editions of the *Shōbōgenzō* are known to exist: the “original” volume edited by Dōgen in seventy-five rolls, the twelve-roll Yōkōji edition, the sixty-roll Eihei-ji edition edited by Giun (1253–1333), the eighty-four roll edition edited by Bonsei (d. 1427) in 1419, the eighty-nine roll edition edited by Manzan Dōhaku (1636–1715) in 1684 at Daishō-ji, and the ninety-five roll edition edited by Kōzen (1627–1693) in 1690 at Eihei-ji. The seventy-five roll edition is today the most widely consulted and cited. Many of the essays were originally sermons delivered by Dōgen, such that some are written by him and others were recorded by his disciples. Late in his life, he began to revise the essays, completing the revision of twelve of them before his death. The essays are renowned for their subtle and elliptical style, clever word play, and sometimes enigmatic meanings. Part of their difficulty arises from the fact that Dōgen quotes liberally from Buddhist sūtras and the works of Chinese masters, but also interprets these passages quite ingeniously. Dōgen also invented a number of Buddhist neologisms that were largely unique to him, including creative “mis”-readings of original Chinese passages. For example, in his famous essay “Uji” (“Being Time”), Dōgen reads the quotidian Chinese compound *youshi* (“at a certain time”) to suggest the identity of “being” (C. you,

J. u) and “time” (C. shi, J. ji): i.e., since impermanency governs all compounded things, those things are in fact time itself. The text includes extensive discussions of the foundations of Zen thought, the meaning and significance of awakening ([SATORI](#)), as well as detailed instructions on the ritual procedures for performing sitting meditation (J. [ZAZEN](#); C. [ZUOCHAN](#)), as in the chapter [FUKAN ZAZENGI](#). The *Shōbōgenzō* remains a source of great interest to scholars and practitioners of Zen. See also [SŌTŌSHŪ](#).

[Shōbōgenzō zuimonki](#). (正法眼藏隨聞禮). In Japanese, lit., “Treasury of the Eye of the True Dharma, Record of What Was Heard,” a work by Koun Ejō (1198–1280), a disciple of [DŌGEN KIGEN](#). The book is essentially a collection of notes taken by Kuon on talks, instructions, and advice given by Dōgen. Kuon’s notes circulated in manuscript form before finally being printed in 1651. The text is considered to be more practical and accessible than Dōgen’s much larger and prolix [SHŌBŌGENZŌ](#).

[Shōkokuji](#). (相国寺). In Japanese, “Ministering to the State Monastery,” an important [ZEN](#) Buddhist monastery located just adjacent to the old imperial grounds in the ancient Japanese capital of Kyōto. The monastery was built in 1382 by Ashikaga Yoshimitsu (1358–1408), the third shōgun of the Muromachi (1337–1573) shogunate. The Zen master Shunnoku Myōha (1311–1388) was supposed to be installed as the abbot of the new monastery, but he instead insisted that his own teacher, [MUSŌ SOSEKI](#) (1275–1351), an eminent Zen master associated with the [RINZAISHŪ](#), be posthumously designated its founding abbot. The temple was listed as the second of the so-called [GOZAN](#) (five mountains) temples of Kyōto, and served as a center of Zen culture during the period. The monastery continued to be sponsored by the subsequent Tokugawa (1603–1868) shogunate. The temple structures often suffered serious damage, including the monastery’s complete destruction during the Ōnin war (1467–1477), and has been repeatedly reconstructed. The temple now serves as the head monastery of the Shōkokuji branch of the contemporary Rinzai school and has nearly a hundred affiliated branch temples, including the famous Golden Pavilion ([KINKAKUJI](#)).

[Shōrai mokuroku](#). (J) (請來目錄). In Japanese, “Catalogue of Items Brought from China”; a roster of esoteric scriptures and ritual implements that the Japanese [SHINGONSHŪ](#) founder [KŪKAI](#) brought back with him to Japan in the early ninth century. See [KŪKAI](#).

[Shōshitsu rokumonshū](#). (少室六門集). In Japanese, “Collection of Six Treatises from Small Caves,” a Japanese anthology of works attributed to [BODHIDHARMA](#), the legendary Indian monk and founder of the [CHAN](#) school. “Small caves” (shaoshi) refers to the western peak of [SONGSHAN](#), where Bodhidharma purportedly spent nine years facing a wall in meditation (see [BIGUAN](#)) near the monastery of [SHAOLINSI](#). The anthology includes the *Xinjing song* (“Panegyric to the ‘Heart Sūtra’”), *Poxiang lun*, *Erzhong ru* (see [ERRU SIXING LUN](#)), *Anxin famen*, *Wuxing lun*, and [XUEMO LUN](#). The *Shōshitsu rokumonshū* was published sometime during the late Kamakura period and was republished in 1647, 1667, and 1675.

[Shōtoku Taishi](#). (聖德太子) (572–622). Japanese statesman of the Asuka period (593–710) and second son of Emperor Yōmei (r. 585–587), who is traditionally assumed to have played an important role in the early dissemination of Buddhism in Japan. He is also known as Umayado no Miko (Prince Stable Door), but by the eighth century, he became known as Shōtoku Taishi (lit. Prince Sagacious Virtue). Given that the earliest significant writings on the life of Shōtoku Taishi come from two early histories, the *Kojiki* (712) and *Nihon shoki* (720), which are both written nearly a century after his death, little can be said definitively about his biography. According to the traditional accounts in these two texts, Suiko (554–628), the aunt of Prince Shōtoku and the Japanese monarch, appointed her nephew regent in 593, giving him broad political powers. Thanks to his enlightened leadership, Prince Shōtoku is credited with numerous historical achievements. These include the promotion of Buddhism within the court under an edict he issued in 594; promulgation of the Seventeen-Article Constitution in 604, which stresses the importance of the monarchy and lays out basic Buddhist and Confucian principles; sponsorship of trade missions to China; construction of the monasteries of [HORYŪJI](#) and [SHITENNŌJI](#); authorship of two chronological histories (*Tennōko* and *Kokki*); and composition of three of the earliest Buddhist commentaries in Japan, on the [SADDHARMAPUNḌARĪKASŪTRA](#) (“Lotus Sūtra”), [VIMALAKĪRTINIRDEŚA](#), and [ŚRĪMĀLĀDEVĪSIMHANĀDASŪTRA](#) (“Lion’s Roar of Queen Śrīmālā”), which demonstrate his deep familiarity with Mahāyāna Buddhist doctrine. The credibility of Prince Shōtoku’s achievements as described in the *Kojiki* and *Nihon Shoki* is undermined by fact that both texts were commissioned by the newly empowered monarchy in an attempt to strengthen its political standing.

Some scholars have thus argued that because the new royal family wanted to identify itself with the powerful instrument of the new religion, they selected the person of Prince Shōtoku, who shared their lineage, to serve as the first political patron of Buddhism in Japan. This historical narrative focused on Prince Shōtoku thus denigrated the importance of the defeated [SOGA](#) clan's extensive patronage of Buddhism. As early as the Nara period (710–794), Prince Shōtoku began taking on legendary, even mythical status, and was eventually transformed into one of Japan's greatest historical figures, representing the quintessence of Buddhist religious virtue and benevolent political leadership. Priests often dedicated temples to him or transferred the merit of religious enterprises to Shōtoku. Both [SHINRAN](#) (1173–1263) and [NICHIREN](#) (1222–82) dedicated written works to his name. Throughout the Heian (794–1185) and Kamakura (1185–1333) periods, what is now referred to as the cult of Shōtoku Taishi was widely popular and members of the aristocracy regularly venerated him (a practice referred to as Taishi shinkō, lit. devotion to the Prince).

[Shouduan](#). (C) (守端) (1025–1072). See [BAIYUN SHOUDUAN](#).

[Shousui](#). (C) (守遂) (1072–1147). See [DAHONG SHOUSUI](#).

[shouzuō](#). (J. shuza; K. sujwa 首座). In Chinese, “chief seat,” the title held by one of the six prefects (C. [TOUSHOU](#)) of a [CHAN](#) monastery. The chief seat is in charge of dealing with any infractions of the monastic code and notifying the appropriate authorities of any problems within the monastery. His primary role is to serve as a model of good behavior for the other monks in the [SAMGHA](#) hall ([SENGTANG](#)). The chief seat, for instance, leads the assembly in various matters such as eating, chanting, and meditating.

[shuchao](#). (J. shuchō/juchō; K. such'o 豎超). In Chinese, “the tortuous (lit. vertical) deliverance/escape.” In [PURE LAND](#) polemics, it is claimed that if a practitioner strictly relies on one's own effort (see [JIRIKI](#)) to attain liberation, it would involve an arduous, “vertical” ascent through successive stages of ever-deeper meditative absorptions and ever-more-daunting spiritual fruitions. Pure land followers argue that an expeditious, “horizontal” shortcut (cf. [HENGCHAO](#)) is possible, by which one simply has to travel “westward” instead of “upward”—i.e., by being reborn into [AMITĀBHA](#) Buddha's western pure land (see [SUKHĀVATĪ](#)), one will be liberated from the rounds of rebirth in one fell swoop.

Shugendō. (修験道). In Japanese, lit. the “Way of Cultivating Supernatural Power,” a Japanese esoteric tradition that is focused on an intensive ascetic regiment of training in the mountains. Its practitioners claim as their founder [EN NO OZUNU](#) ([alt. En no Gyōja], En the Ascetic) (b. 634), a semilegendary ascetic from the mountains of [KATSURAGISAN](#) on the border between present-day Nara and Ōsaka prefectures, who is venerated for his shamanic powers and for being the prototypical shugenja (lit. one who cultivates supernatural powers). Before it evolved into an independent religious entity, Shugendō was a wide-ranging set of religious practices that included elements drawn from many traditions, lineages, and institutions, including Japanese [TENDAI \(TIANTAI\)](#), [SHINGON](#), Nara Buddhism, [ZEN](#), [PURE LAND](#) movements, Daoism, and local indigenous beliefs. Its practitioners, who were known as [YAMABUSHI](#) (lit. those who lie down [or sleep] in the mountains), were largely itinerant, spending much of their time in the mountains, which Japanese regarded as numinous places that housed the spirits of the dead. Through severe austerities in the mountains, such as immersion under waterfalls, solitary confinement in caves, fasting, meditating, and the recitation of spells ([MANTRA](#)), practitioners strove to attain buddhahood in this very body ([SOKUSHIN JŌBUTSU](#)) and accumulate power that would benefit others. As Shugendō evolved into a distinctive tradition during the mid-to late-Heian period (794–1185), Shugendō mountain centers either became linked with Tendai and Shingon institutions or continued to operate and expand independently. Mountains that were especially important to Shugendō included the Yoshino peaks in Nara prefecture, [KUMANO](#) in Wakayama prefecture, Haguro in Yamagata prefecture, Hiko in Kyūshū, and Ishizuchi in Shikoku. During this period, the aristocratic nobility, including a long succession of monarchs and retired monarchs, patronized the Yoshino and Kumano mountains. Shugenja guided these visitors on pilgrimage and performed magical and religious rites for them. Pilgrimages became increasingly popular and became a significant source of revenue for many of these mountain centers. Under the temple regulations (J. jiin hatto) imposed by the shōgun Tokugawa Ieyasu (1543–1616) at the start of the Tokugawa period (1600–1868), Shugendō sites were forced to align with either the Tendai Shugen branch of Honzan, administered by the temple of Shōgoin, or the Shingon branch of Tōzan, administered by Sanbōin, both located in Kyōto. Itinerant practitioners largely settled down and began performing rituals and offering prayers in villages. Due to sectarian strife between the two schools, in 1707 the Tōzan branch named as its founder Shōbō (a.k.a. Rigen Daishi; 832–909), who had established Daigoji

at Mt. Yoshino. Shugendō was proscribed in 1872 during the Meiji persecution of Buddhism, as the government tried to purge Shintō-affiliated traditions of their “foreign” elements. However, Shōgoinryū, the primary branch of the Honzan school, was returned to the religious rolls in 1892. When religious freedom was restored in postwar Japan, many Shugendō institutions resumed their former rituals and traditions, although not to the same extent as they had previously. While a multitude of indigenous gods ([KAMI](#)), buddhas, and bodhisattvas have been venerated historically at Shugendō sites around Japan, Kongō Zaō Gongen, a deity in the Ōmine mountains who was venerated by En no Ozunu, gradually became the central deity in Shugendō. Other significant objects of worship include En no Ozunu himself, who is thought to have manifested himself as Hōki Bosatsu (the bodhisattva [DHARMODGATA](#)); Shōbō, an incarnation of Nyoirin Kannon (Cintāmaṇicakra [AVALOKITEŚVARA](#)); and Fudō Myōō ([ACALANĀTHA-VIDYĀRĀJA](#)), a wrathful [DHARMAPĀLA](#) of the [VAJRAYĀNA](#) pantheon.

[shugenja](#). (J) (修験者). In Japanese, lit. “one who cultivates supernatural powers”; a shaman or, in specific contexts, a practitioner of [SHUGENDŌ](#). See also [YAMABUSHI](#).

[Shug gseb](#). (Shuksep). A Tibetan nunnery located south of [LHA SA](#) on a site originally sanctified by the great female adept [MA GCIG LAB SGRON](#). The nunnery and its connected retreat center were established by [GYER SGOM TSHUL KHRIM SENG GE](#), founder of the [SHUG GSEB BKA’ BRGYUD](#) subsect of Tibetan Buddhism. Due to its close proximity to [GANGS RI THOD DKAR](#), a favored retreat site of [RNYING MA](#) master [KLONG CHEN RAB ’BYAMS](#), the nunnery developed a close relationship with the Rnying ma sect from the fourteenth century onwards. The nunnery was home to an important female incarnate lama ([SPRUL SKU](#)), the Shug gseb Rje btsun ma (Shuksep Jetsunma).

[Shug gseb bka’ brgyud](#). (Shuksep Kagyü). One of the four major and eight minor subsects of the [BKA’ BRGYUD](#) sect of Tibetan Buddhism ([BKA’ BRGYUD CHE BZHI CHUNG BRGYAD](#)), considered to have been founded by [GYER SGOM TSHUL KHRIM SENG GE](#), a disciple of the Bka’ brgyud hierarch [PHAG MO GRU PA RDO RJE RGYAL PO](#).

[Shūhō Myōchō](#). (J) 宗峰妙超. See [SŌHŌ MYŌCHŌ](#).

shuilu hui. (J. *suirikue*; K. *suryuk hoe* 水陸會). In Chinese, “water and land assembly,” a Buddhist ritual intended for universal salvation, although it was also sometimes directed only to deceased next of kin; the ceremony was also performed for a variety of this-worldly purposes, such as state protection (see [HUGUO FOJIAO](#)) and rain-making. The name “water and land” derives from its intent to save living creatures who inhabit the most painful domains of [SAMSĀRA](#), whether in water or on land. The ceremony, which typically took seven days to complete, was held at two different sites, the inner altar and the outer altar. The main performance was held at the inner altar, which was divided into an upper hall and a lower hall. The enlightened beings—buddhas, [BODHISATTVAS](#), [ARHATS](#), and guardian deities of the three jewels ([RATNATRAYA](#))—were invited and feted with offerings at the upper hall; the unenlightened beings, specifically beings subject to the six rebirth destinies ([GATI](#)), were invited and feted at the lower hall. Once summoned to the lower hall at the inner altar, the unenlightened assembly was divested of its afflictions ([KLEŚA](#)), asked to pay homage to the enlightened assembly, and received offerings of both food and the dharma, which sent them on their way to the [PURE LAND](#). According to the earliest extant records of the ceremony, none of which predate the Song period, the shuilu hui was first performed in 505 by the monk [BAOZHI](#) (418–514) at the behest of Emperor Wu (r. 502–549) of the Liang dynasty, with the [VINAYA](#) master and scriptural cataloguer [SENGYOU](#) (445–518) serving as chief celebrant. The same Song-period sources claim that the ceremony was revived by a monk during the Xianheng era (670–674), after its sudden disappearance following the collapse of the Liang dynasty. It was not until the tenth century, however, that there is independent confirmation in non-Buddhist sources of actual performances of the ceremony and it was not until the eleventh century that it seems to have achieved widespread popularity. According to the monk Zunshi (964–1032), the larger monasteries in the southeast of China maintained separate halls, called either shuilu tang or shuilu yuan, which were devoted entirely to the performance of the ceremony. In the Southern Song period, many of the largest monasteries throughout the realm had a “water and land hall” on their grounds. In Korea, the *suryuk hoe* was first performed in 971 and became popular during the early Chosŏn dynasty, with the royal family being its main supporter. There are several Chinese and Korean manuals that provide directions for performing the ritual, including the *Shuilu yiwen* (“Ritual Text for the Water and Land Ceremony”) in three rolls, written by a Song-dynasty layman in 1071. The canonical locus classicus for the practice is the story of Jalavāhana in the

[SUVARNAPRABHĀSOTTAMASŪTRA](#).

[Shuiyue Guanyin](#). (J. Suigatsu Kannon; K. Suwŏl Kwanŭm 水月觀音). In Chinese, “Moon in the Water [AVALOKITEŚVARA](#)”; a representation of the [BODHISATTVA GUANYIN](#) that is frequently depicted in East Asian art. The name of this bodhisattva derives from this image’s most characteristic feature: a luminous disk that encircles the bodhisattva and evokes both a nimbus (see [KĀYAPRABHĀ](#)) and a full moon, effectively suggesting its power to dispel the darkness of the night. Another connotation is indicated in texts such as the [DAZHIDU LUN](#) (**Mahāprajñāpāramitāsāstra*), where the term “moon in the water” connotes that all phenomena are like reflections of the moon on the surface of the water, thereby signifying insubstantiality and impermanence. The origin of Shuiyue Guanyin and its iconography is said to be based on the [GANDAVYŪHA](#) section of the [AVATAMSAKASŪTRA](#), which describes the quest for ultimate truth by the youth [SUDHANA](#). During his pilgrimage, Sudhana encounters Guanyin at the latter’s sacred island home of [POTALAKA](#). Artists used this account of Potalaka as the basis for Shuiyue Guanyin images from the eighth century onwards. The first Shuiyue Guanyin is presumed to have been painted by Zhou Fang (active c. 780–810 CE), but the earliest extant depiction appears on a silk banner at [DUNHUANG](#) dated to 943: Shuiyue Guanyin appears in the lower right of a large painting of the thousand-armed and thousand-eyed Guanyin ([SĀHASRABHUJASĀHASRANETRĀVALOKITEŚVARA](#)). There, the deity is seated on a rock outcropping surrounded by water, posed in majestic ease, attired in beautiful robes and sashes with intricate details on his robes and jewelry. Behind him is a lush bamboo grove with sheer, mountainous cliffs. Further standard attributes of Shuiyue Guanyin are the image of the buddha [AMITĀBHA](#) in his crown as well as a willow branch and a [KUNDIKĀ](#) bottle placed to the figure’s right. Water spread by means of a willow branch was thought to have a healing effect on the believer. The island of Potalaka was believed to be located somewhere in the ocean south of India, but by the late Tang dynasty the Chinese had identified it with [PUTUOSHAN](#), an island offshore from Zhejiang province near the seaport of Ningbo. It is probably due to maritime contacts between Ningbo and the Korean peninsula that Shuiyue Guanyin depictions became popular during the Koryŏ dynasty in Korea. Koryŏ images of Shuiyue Guanyin are especially renowned for their splendor and this form of the bodhisattva remains common in Korean Buddhist painting.

shuji. (J. shoki; K. sōgi 書禮). In Chinese, “scribe.” Also known as the [SHUZHANG](#) (lit. “letters”); one of the six prefects (C. [TOUSHOU](#)) at a [CHAN](#) monastery. The “scribe” was in charge of writing all the letters, prayers, and documents for the monastic community.

shumidan. (C. xumi tan; K. sumi tan 須彌壇). In Japanese, “[MT. SUMERU](#) altar,” also known as the shumiza, or Mt. Sumeru throne; the elevated altar or platform in a Japanese Buddhist shrine, on which the central icons are placed. The shumidan is so named because it was modeled after Mt. Sumeru, the central axis of the world in Buddhist cosmology. The altar’s origins are found in a legend about the buddha [ŚĀKYAMUNI](#), who was said to have gone away for several months to [TRĀYĀSTRIMŚĀ](#) heaven, located at the peak of Mt. Sumeru, to preach to his mother, [MAYĀ](#). Due to his long absence, some of his adherents made images of the missing Śākyamuni (see [UDĀYANA BUDDHA](#)), which they placed on a model of the mountain. Typically constructed in either square or octagonal shape, the shumidan is usually made of wood, metal, or stone and is decorated with various symbols. The square shape may symbolize the four sides of Mt. Sumeru, which are made of four types of jewels, generally listed as silver in the east, crystal in the west, lapis lazuli in the south, and gold in the north. The octagonal shape, by contrast, is said to represent the eightfold path ([ĀRYĀSTĀNGAMĀRGA](#)). The shumidan is composed of upper, middle, and lower tiers. The Kamakura-period shumidan is a square-shaped altar constructed in a sophisticated style rich with symbolic meaning: its middle level consists of one thick, but narrow, tier, along with sixteen thinner tiers that gradually widen out in each direction toward both the top and the bottom. According to Buddhist esoteric teachings, the sixteen tiers toward the top represent the sixteen great bodhisattvas in the wisdom gate (J. *emon*); the sixteen tiers toward the bottom represent the sixteen great bodhisattvas in the meditation gate (J. *jōmon*); the four jewels, represented by a square shape, symbolize the five wisdoms, because the four jewels as a group symbolize the “wisdom that is the essential nature of the dharma realm” (J. *hokkai taishōchi*) and each jewel symbolizes the remaining four of the five wisdoms. Finally, the total of these thirty-two square-shaped tiers symbolizes the beings depicted in the diamond realm (J. [KONGŌKAI](#)) [MANDALA](#). The shumidan as a whole represents the mind of awakening (J. *bodaishin*; S. [BODHICITTA](#)), with which all sentient beings are endowed. In [CHAN](#) and [ZEN](#) monasteries, a shumidan without any displayed icon is placed in the dharma hall for the abbot or master to ascend for such occasions as the

[SHANGTANG](#) ceremony.

shuzhuang. (J. shojō; K. sōjang 書狀). In Chinese, “letters.” Epistolary exchanges between monks and their disciples seems to have been an important didactic technique in China, especially from the Song dynasty onwards. The most prominent monks were members of the lettered intelligentsia in China and letters were an important means of transmitting their teachings. Such didactic correspondence was typically not meant to be private and an eminent monk was well aware that the letters he wrote would circulate among his students and disciples. Such letters might be framed as an exchange with the recipient, but they typically remove the formulaic openings and conclusions common with personal letters and thus become virtually indistinguishable from essays. In addition to such didactic letters, a teacher’s letters might also include formulaic ritual letters and personal notes between master and student or close acquaintances, which would typically not have circulated beyond the recipient. Chan masters in particular were well known for their wide-ranging epistolary exchanges with literatocrats (shidafu) and other monks. One of the most famous set of letters is the [DAHUI PUJUE CHANSHI SHU](#), the letters of the [LINJI ZONG CHAN](#) teacher [DAHUI ZONGGAO](#); of the sixty-two letters in Dahui’s collection, sixty of them were written to laypeople and only two to fellow monks. ¶ The term shuzhuang can also refer to the “scribe” ([SHUJI](#)) at a Buddhist monastery, who was in charge of drafting all letters, announcement posters, and written prayers for the monastic community. See also [SŌJANG](#); [YULU](#).

Shwedagon. In Burmese, “Golden Dagon”; monumental golden pagoda (B. [JEDI](#); S. [STŪPA](#); P. thūpa) that dominates the skyline of Rangoon (Yangon), capital of Burma (Myanmar); named after Dagon, the ancient name of Rangoon. According to Burmese and Mon legend, the pagoda was built during the Buddha’s lifetime to house eight hair relics given to [TRAPUSA](#) and [BHALLIKA](#), two merchants from Ukkala who are said to have been the first disciples of the Buddha. The original account, which appears in the Pāli canon, places Ukkala in what is most likely modern-day [ĀNDHRA](#), on the eastern coast of India. Mon-Burmese recensions of the story locate Ukkala at Dagon, acknowledgement of which is retained in the names Myauk Okkala-pa (North Ukkala) and Daung Okkala-pa (South Ukkala) given to Rangoon’s suburbs. The Shwedagon is situated atop a two hundred-foot high hill, whose summit was leveled to create the four-acre plaza or platform that now surrounds the base of the shrine. The

pagoda platform is approached by four covered stairways facing the cardinal directions, at the base of which are ornate entrances flanked by colossal Chinthe lions. The pagoda itself was repeatedly expanded and embellished over the centuries, reaching its current height of 326 feet in the fifteenth century. Constructed of brickwork, it is in the classical Burmese pagoda form of an inverted bell rising from an octagonal pyramidal base. These elements support a graceful spire crowned with a hti, or finial umbrella, that is encrusted with diamonds, rubies, pearls, and other gems of inestimable value. The hti also has many wind chimes, which gently tinkle in the constant breeze. The base of the pagoda is more than a quarter-mile in circumference and the entire structure is covered in gold, the accumulated munificence of generations of royal donors. Sixty-four smaller pagodas surround the main structure at its base, and at the four cardinal directions are shrines containing colossal statues of the four buddhas who have appeared in the world during the present fortunate eon (P. bhaddakappa; S. [BHADRAKALPA](#)). (See [SAPTATATHĀGATA](#).) At one corner of the platform is a miniature replica of the main shrine, no more than a hundred feet tall. The smaller pagoda is affectionately known as the Shwedagon's older brother, as it was the model upon which the current main pagoda was based. At each corner of the Shwedagon's octagonal base is an alabaster statue of the Buddha dedicated to one of the eight days of the Burmese week (Wednesday being counted as two days), where it is believed to be especially auspicious for people born on those days to pray. A broad circumambulatory walkway paved in white marble rings the Shwedagon, which in turn is flanked with hundreds of lesser shrines dating mostly from the colonial period. Many types of religious piety are performed individually and in groups on the platform of the pagoda, such as the giving of [DĀNA](#), freeing captured animals, processing candidates for the novitiate (B. shin-pyu), sweeping the plaza, lustrating images, reciting [PARITTA](#) texts, taking precepts, silent prayer, and meditation (B. taya a-to; P. [BHĀVANĀ](#)).

Shwegyin. The second largest monastic fraternity (B. [GAING](#); P. [GANĀ](#)) of modern Myanmar (Burmese) Buddhism comprising approximately five percent of the monastic population of the country. It is preceded in size by the majority [THUDHAMMA GAING](#), which comprises 85–90% of the Burmese monkhood. The Shwegyin gaing was founded in the mid-nineteenth century and was one of three reformist monastic gaing to emerge during the reign of the Burmese king, [MINDON](#) (r.1853–1878), along with the [DWAYA GAING](#) and the Hngettwin gaing.

The Shwegyin gaing takes its name from its founder, the first [SHWEGYIN SAYADAW](#), U Zagara (P. Jāgara) (1822–1893), a renowned scholar-monk from the village of Shwegyin in Upper Burma. U Zagara was especially strict in his observance of [VINAYA](#) and insisted, as did the leaders of the other reformist gaing, that monks who scrupulously followed the vinaya were in no need of oversight by the royally appointed [THUDHAMMA](#) Council, an ecclesiastical body established to govern the Burmese saṅgha (S. [SAMGHA](#)) throughout the kingdom. King Mindon granted U Zagara and his disciples autonomy (P. gaṇavimutti) from Thudhamma control in 1860, marking the beginning of the Shwegyin gaing as an independent self-governing monastic fraternity. The Shwegyin Sayadaw established a network of monasteries in Upper and Lower Burma that were uniform in practice and institutional structure and regulated by its own gaing-specific hierarchical leadership. The Shwegyin gaing thus replicated for itself a system of monastic governance that the Thudhamma Council had been designed to provide for the Burmese saṅgha as a whole. This internal organization, along with the fraternity’s emphasis on monastic discipline and Buddhist scholarship, enabled the Shwegyin gaing to survive and even flourish during the dislocations brought about by British conquest in 1885, which led to the dissolution of the Thudhamma Council and disestablishment of Buddhism as the state religion. Shwegyin monks can be distinguished from monks of other gaing by minor points of outward deportment. They are required to cover both shoulders with the upper robe whenever leaving their monastic compound, for example, unlike Thudhamma monks who require this style of attire only on such formal occasions as alms rounds or giving sermons. Shwegyin monks are not allowed to smoke tobacco, use umbrellas, or handle money. Shwegyin monasteries are also distinguished from those of other gaing in that they do not require lay people to remove their footwear when entering the monastic compound.

[Shwegyin Sayadaw](#). (1822–1893). In Burmese, “Senior Monk from Shwegyin,” honorific title of U Zagara (P. Jāgara), a prominent nineteenth-century reformist scholar-monk and founder of the [SHWEGYIN GAING](#), which today is the second largest monastic fraternity (B. [GAING](#); P. [GANĀ](#)) in the Burmese saṅgha (S. [SAMGHA](#)). U Zagara was born in Shwegyin village near Shwebo in Upper Burma. As a novice (P. sāmaṇera; S. [ŚRĀMANERA](#)) and as a young monk (P. [BHIKKHU](#); S. [BHIKSU](#)) he studied under many of the prominent abbots of his time, and according to some sources was a colleague of the learned and ultra-orthodox Okpo Sayadaw, U Okkamwuntha (P. Okkaṃvaṃsa), founder of the [DWAYA](#)

[GAING](#), in British-occupied Lower Burma. Like the Okpo Sayadaw, U Zagara emphasized Pāli scholarship and scrupulous attention to monastic discipline (P. [VINAYA](#)) as the foundation of the Buddha's religion (P. *sāsana*; S. [ŚĀSANA](#)), qualities which brought him to the attention of the Burmese king, [MINDON](#) (r. 1853–1878). King Mindon, who had inaugurated a revival and reform of Buddhism throughout his kingdom, appointed U Zagara as a royal preceptor (B. [SAYADAW](#)) and built for him an elaborate monastic complex at the foot of Mandalay Hill. This attention soon brought U Zagara into conflict with the powerful [THUDHAMMA](#) Council, a royally appointed ecclesiastical body charged with governing the Burmese saṅgha of the kingdom. After a falling out with the Thudhamma patriarch (B. *thathanabaing*; P. [SAṄGHARĀJĀ](#)), U Zagara petitioned the king for autonomy (P. *gaṇavimutti*) from Thudhamma control, which the king granted. He and his disciples thus formed the nucleus of the new Shwegyin gaing. Some years after the death of the Thudhamma patriarch, during the reign of Burma's last king, Thibaw (1878–1885), U Zagara was invited along with another senior monk to jointly head the Thudhamma Council. U Zagara declined the offer, focusing his energies instead on expanding the reach of the Shwegyin gaing throughout Upper and Lower Burma. The strong emphasis placed by U Zagara and his successors on Buddhist scholarship, monastic discipline, and strict institutional organization of member monasteries allowed the Shwegyin gaing to successfully weather the tumultuous years following the British conquest of the Burmese kingdom in 1885, which saw the dissolution of the Thudhamma Council and disestablishment of Buddhism as the state religion.

[Śibi](#). (P. *Sivi*; T. *Shi bi*; C. *Shipi*; J. *Shibi*; K. *Sibi* 尸毘). A king who is the protagonist of a famous [JĀTAKA](#) tale. There are two different stories associated with him. In the first, versions of which also appear in the Hindu epics, Śibi is a king renowned for his generosity. Seeking to test the limits of his charity, the divinities ([DEVA](#)) [ŚAKRA](#) and [AGNI](#) take the form of a hawk and a dove. Pursued by the hawk, the dove seeks shelter in the king's lap. The hawk agrees to spare the dove if the king will offer in exchange flesh equal to the weight of the dove. A scale is produced and the king cuts off a piece of his own flesh. However, the gods manipulate the scale so that no matter how much of his flesh the king cuts off and places on the scale, it never equals the weight of the dove. Eventually, the king is reduced to a skeleton, at which point the gods reveal their true identity and make the king whole again. In the second version of the story, which appears in the [JĀTAKAMĀLĀ](#) and other sources, Śakra, the king of the gods,

hears of the king's generosity and seeks to test it. He takes the form of a blind brāhmaṇa, who goes to King Śibi and asks that the king give him his eyes. The king agrees and has his eyes removed and given to the blind man, restoring his sight. Again, the god reveals his true identity and returns the king's eyes. Both versions are famous examples of the [BODHISATTVA](#)'s "gift of the body" ([DEHADĀNA](#)), which he makes as part of his practice of the perfection of giving ([DĀNAPĀRAMITĀ](#)). See also [SHE SHEN](#).

[sidalingshan](#). (C) (四大靈山). In Chinese, "four great numinous mountains"; the four major sacred mountains of Chinese Buddhism. See [EMEISHAN](#); [JIUHUASHAN](#); [PUTUOSHAN](#); [WUTAISHAN](#).

[siddha](#). (T. grub thob). In Sanskrit, lit. "accomplished," viz., an "adept," referring especially in tantric literature to a person who is accomplished in tantric practice and has attained [SIDDHI](#). The siddha began to emerge in India as a new kind of Buddhist saint as early as the fifth century, perhaps under the influence of Śaivism, and continuing through the decline of Buddhism in India. The siddha embodies an ideal that stands outside both the monastic context as well as that of conventional lay Buddhist practice. See [MAHĀSIDDHA](#).

[Siddham](#). (C. Xitan; J. Shittan; K. Siltam 悉曇). In Sanskrit, "Accomplished" or "Perfected"; a North Indian written script descended from [BRAHMĪ](#) and an ancestor of Devanāgarī, the script in which Sanskrit and Hindi are written today. The use of Siddham is preserved only in East Asian Buddhism, the script having been introduced to China in the eighth century in order to transcribe [DHĀRANĪ](#) and [MANTRA](#). [KŪKAI](#) is said to have introduced the Siddham script to Japan from China in 806 CE. The script is closely associated with the esoteric Buddhist traditions of East Asia (J. [MIKKYŌ](#)), in which the writing system itself became an object of visualization and veneration, as a written representation of the sounds enunciated in mantra and dhāraṇī. Siddham is also said to have influenced the development of the indigenous Japanese kana writing system, which is associated with Kūkai. Often in traditional sources, when an East Asian monk is said to know "Sanskrit" (Fanwen), what is really meant is that he is able to read Siddham and to recite correctly passages written in that script.

[siddhānta](#). (T. grub mtha'; C. zong; J. shū; K. chong 宗). In Sanskrit, "conclusion" or "tenet," the term is used to refer to the various schools of Indian philosophy (both Buddhist and non-Buddhist), to their particular positions, and

to texts that set out those positions in a systematic fashion. The most important examples of Buddhist siddhānta texts in India are [BHĀVAVIVEKA](#)'s [alt. Bhavya] autocommentary (called [TARKAJVĀLĀ](#)) on his [MADHYAMAKAHRDAYAKĀRIKĀ](#) and [ŚĀNTARAKSITA](#)'s [TATTVASAMGRAHA](#); both set forth the positions of non-Buddhist and Buddhist philosophies in order to demonstrate the superiority of their respective [MADHYAMAKA](#) positions. They are paralleled in Indian non-Buddhist literature by Śāṅkarācārya's *Brahmasūtrabhāṣya*, for example, that sets forth the views of nāstika (heterodox) and āstika (orthodox) schools and shows the weaknesses and strengths in each as a strategy to demonstrate the superiority of Śāṅkara's own Advaita Vedānta philosophy. None of these Indian works were written simply as informative textbooks about the tenets of different Indian schools of thought. They instead have clear polemical agendas: namely, demonstrating the superiority of their own position, and showing how the lesser philosophies are either a hindrance or a stepping stone to their own philosophy, as revealed by the Buddha in the case of Buddhist siddhānta, and by the Vedas in the case of non-Buddhists. The *Sarvadarśanasamgraha*, a medieval work written from the perspective of a later Advaita school based on Śāṅkara's model, was important during the early reception of Buddhism in Europe and America in the nineteenth century because it cites the works of different schools of philosophy, including [YOGĀCĀRA](#) and Madhyamaka writers that were otherwise unknown at the time. As a literary genre, siddhānta reaches its full development in Tibet, where ever more detailed classifications of Indian and later Chinese, Tibetan, and Mongolian schools of Buddhism are found. Of particular importance are works known by the names of their authors: Dbu pa blo gsal (Upa Losel) (fl. fourteenth century), the first ['JAM DBYANGS BZHAD PA](#) (1648–1721), and Lcang skya Rol pa'i rdo rje (1717–1786). Customarily Tibetan Buddhist siddhāntas employ the following structure: under the rubric of non-Buddhist (T. phyi pa) philosophies, they discuss the positions of the six schools that include Nyāya, Vaiśeṣika, [JAINA](#), Sāṃkhya, Yoga, and Mīmāṃsā. They are all dismissed as inferior, based on their assertion of the existence of a self ([ĀTMAN](#)) and a creator deity (īśvara), both positions that are refuted in Buddhism. The Buddhist schools are set forth in ascending order, starting with the [HĪNAYĀNA](#) schools of [VAIBHĀSIKA](#) and [SAUTRĀNTIKA](#), followed by the Mahāyāna schools of Yogācāra and Madhyamaka. A typical structure for the presentation of each school was a tripartite division into the basis (gzhi), which set forth matters of epistemology and ontology; the path (lam), which set forth the structure of the path according to the particular school; and the fruition ('bras

bu), which set forth the school's understanding of the enlightenment of [ARHATS](#) and buddhas. In Tibet, the genre of siddhānta was later expanded to include works that set forth the various sects and schools of Tibetan Buddhism and Chinese Buddhism. Cf. [JIAOXIANG PANSHI](#).

Siddhārtha. (P. Siddhattha; T. Don grub; C. Xidaduo; J. Shiddatta/Shittatta; K. Siltalta 悉達多). In Sanskrit, “He Who Achieves His Goal,” the personal name of [GAUTAMA](#) Buddha, also known as [ŚĀKYAMUNI](#). In some accounts of the life of the Buddha, after his royal birth as the son of King [ŚUDDHODANA](#), the [BODHISATTVA](#) was given this name and is referred to by that name during his life as a prince and his practice of asceticism. In the [LALITAVISTARA](#), he is named Sarvārthasiddha, “He Who Achieves the Welfare of All.” After his achievement of buddhahood, Siddhārtha is instead known as Gautama, Śākyamuni, or simply the [TATHĀGATA](#). The name is perhaps best known in English as the title of the 1922 novel by Hermann Hesse, in which the protagonist (who is not the Buddha) is named Siddhartha.

siddhi. (T. dngos grub; C. xidi/chengjiu; J. shiji/jōju; K. silchi/sōngch’wi 悉地/成就). In Sanskrit, “attainment” or “success,” a power attained through tantric practice, often through the propitiation of a deity and the recitation of [MANTRAS](#). Two types are identified: (1) mundane attainments (S. [SĀDHĀRANASIDDHI](#)), which are magical powers such as the ability to fly, to paralyze an enemy, to attract a lover, and to find buried treasure; and (2) the supreme attainment (S. [UTTAMASIDDHI](#)), viz., the attainment of buddhahood.

si fajie. (J. shihōkai/shihokkai; K. sa pōpkye 四法界). In Chinese, “four [DHARMADHĀTUS](#)”; four successively more profound levels of reality as outlined in the [HUAYAN ZONG](#): (1) the dharmadhātu of phenomena ([SHI FAJIE](#)); (2) the dharmadhātu of principle ([LI FAJIE](#)); (3) the dharmadhātu of the unimpeded interpenetration between phenomena and principle ([LISHI WU’AI FAJIE](#)); (4) the dharmadhātu of the unimpeded interpenetration between phenomenon and phenomena ([SHISHI WU’AI FAJIE](#)). This understanding of four successive levels of reality is widely used in Huayan classificatory schemata (see [JIAOXIANG PANSHI](#); [HUAYAN WIJIAO](#)) of Buddhist doctrines and is also employed as a justification for the different soteriological techniques prescribed by the various Buddhist schools. See also [DHARMADHĀTU](#).

Sifen lü. (J. Shibunritsu; K. Sabun yul 四分律). In Chinese, “Four-Part [VINAYA](#)”;

the Chinese translation of the [DHARMAGUPTAKA](#) vinaya, the most influential of the different vinaya translations in East Asia, so-named because of the four main divisions into which the text was divided: (1) bhikṣuvibhaṅga, (2) bhikṣuṇīvibhaṅga, (3) [SKANDHAKA](#), which includes a life of the Buddha and the twenty skandhaka, and (4) two Appendices, of saṃyuktavarga and vinayaikottara. The collection probably derives from some time in the first century BCE. With the support of the ruler Yao Xing (r. 394–416), the Kashmiri monk [BUDDHAYAŚAS](#) (d.u.; fl. c. early fifth century) recited the text from memory and translated it into Chinese with the help of the Chinese monk [ZHU FONIAN](#) (d.u.). Their work was carried out in the Chinese capital of Chang’an between 408 and 413 and was completed in sixty rolls. The Chinese translation is especially important because the Sanskrit recension is no longer extant and the text was never translated into Tibetan. The “Four-Part Vinaya” first circulated in the Chinese metropolitan centers of Chang’an and Luoyang, eventually replacing the other vinayas then circulating in China to become the definitive monastic code in East Asia. Exegetical schools such as [DAOXUAN](#)’s [NANSHAN LÜ ZONG](#) (South Mountain vinaya school) and [HUAISU](#)’s [DONGTA LÜ ZONG](#) (East Pagoda vinaya school), as well as the Korean [YUL CHONG](#) and the Japanese [RITSUSHŪ](#), all focused on the explication of the “Four-Part Vinaya.” Among the numerous commentaries on the “Four-Part Vinaya,” [DAOXUAN](#)’s *Sifen lü shanfan buque xingshi chao* came to be regarded as most authoritative.

[Sigālovādasutta](#). (S. Śīgālovādasūtra; C. Shansheng jing; J. Zenshōkyō; K. Sōnsaeng kyōng 善生經). In Pāli, “Instructions to Sigāla” (also known as the *Sīgālovādasutta* and *Sigālakasutta*); thirty-first discourse in the Pāli [DĪGHANIKĀYA](#) (several different recensions appear in Chinese translations, including a [DHARMAGUPTAKA](#) recension that is the sixteenth sūtra in the [DĪRGHĀGAMA](#), a [SARVĀSTIVĀDA](#) recension that is the 135th sūtra in the [MADHYAMĀGAMA](#), and other recensions as well in the [EKOTTARĀGAMA](#) and [SAMYUKTĀGAMA](#)); often interpreted within the tradition to offer the outlines of a code of conduct ([VINAYA](#)) for the laity. The buddha preached this discourse at Rājagaha (S. [RĀJAGRHA](#)) to Sigāla [alt. Sīgāla], a young brāhmaṇa householder. Following the wishes of his deceased father, it was Sigāla’s practice to worship the six cardinal directions of east, south, west, north, nadir and zenith. The Buddha explains to him that the directions so worshipped are actually meant to symbolize, respectively, parents, teachers, wife and children, friends and associates, servants and workmen, and finally religious mendicants ([ŚRAMANA](#))

and brāhmaṇas. True veneration thus consists of fulfilling one’s incumbent responsibilities toward each of these six groups of people, responsibilities that should be reciprocated in turn by each group. For instance, students should minister to teachers by rising to greet them, waiting on them, paying attention to their instructions, serving them, and mastering what they are taught; teachers in turn should minister to their students by thoroughly instructing them, making sure they have understood, grounding them in essential skills, recommending them to colleagues, and offering them security. The Buddha also offers practical advice on how to follow a well-lived life as a layperson, such as avoiding six ways of squandering wealth (viz., alcoholism, wandering the streets at inappropriate times, attending fairs and shows, gambling, keeping bad company, laziness), each of which in turn has six dangers.

sights, four. See [CATURNIMITTA](#).

sign. See [LAKSANA](#); [NIMITTA](#).

signless. See [ĀNIMITTA](#).

Sīhaḷadīpa. In Pāli, “Island of Sīhaḷa”; the modern nation of Sri Lanka. According to Pāli sources, the island received the name Sīhaḷadīpa after it was colonized in the sixth century BCE by the Āryan Sīhaḷa peoples from northern India, led by Vijaya. Sīhaḷadīpa was the destination of one of nine Buddhist missions dispatched during the reign of King [AŚOKA](#) from Pātaliputta (S. [PĀTALIPUTRA](#), modern Patna) by the elder [MOGGALIPUTTATIṢṢA](#) after the third Buddhist council (see [COUNCIL, THIRD](#)) in the third century BCE. Aśoka’s son, the elder [MAHINDA](#) (S. Mahendra), was sent to Sīhaḷadīpa as a missionary, and since that time the island has been one of the major bastions of Buddhism in the region. Another common name for the island was Tambapaṇṇīdīpa, “Copper Island,” named after the first capital, Tambapaṇṇī, founded by Vijaya.

siho. (C. shihao; J. shigō 諡號). In Korean, lit. “posthumous title,” honorific title and/or name granted posthumously to an especially eminent Buddhist monk by the king. In ancient China, the shihao was originally a commendatory (or in some cases derogatory) title that was given to members of the royal clan and high government officials in accordance with their deeds. In Korea, the posthumous title came to be used in Confucian, secular, and Buddhist contexts, but virtually always in a commendatory denotation; it could signify both a name

and/or an honorific title, presumably depending on the hierarchical status of the person. Siho became extremely popular in Korea, especially during the Chosŏn period, when Chosŏn kings received two-Sinograph-long siho from the Chinese emperor, which then became their posthumous names; officials also received siho, which were posthumous honorific titles bestowed by the king. Since the Koryŏ period, renowned Korean monks were given honorific titles such as “state preceptor” (KUKSA) and “royal preceptor” (wangsa), sometimes combined with posthumous names, as in the case of Chinul (1158–1210), who received both the posthumous title kuksa and the posthumous name Puril Pojo (Buddha Sun that Shines Universally; see [POJO CHINUL](#)). See also [TANGHO](#).

[si hongshiyuan](#). (J. shiguzeigan/shikuseigan; K. sa hongsoŭwŏn 四弘誓願). In Chinese, the “four capacious vows,” commonly known in English as the “four great vows”; a specific set of vows (S. [PRANIDHĀNA](#)) an adept takes that mark his initiation into the [BODHISATTVA](#) path and outline his continuing aspiration to seek buddhahood. There are two different formulations. By far the most common is the following list: (1) However innumerable sentient beings may be, I vow to save them all; (2) However inexhaustible the afflictions ([KLEŚA](#)) may be, I vow to eradicate them all; (3) However immeasurable the teachings may be, I vow to study them all; (4) However unsurpassed the path to buddhahood may be, I vow to attain it. This version of the bodhisattva vows is generally presumed to have first been formulated by [TIANAI ZHIYI](#) (538–597) in his [MOHE ZHIGUAN](#). These four great bodhisattva vows are frequently recited at the conclusion of [MAHĀYĀNA](#) Buddhist rituals in East Asia targeting both ordained and lay adherents. There is also an alternate list, known in India and Tibet, which runs as follows: (1) Those who are yet to be saved, I will save; (2) Those who are frightened, I will soothe; (3) Those who are unenlightened, I will awaken; (4) Those who are not yet in [NIRVĀNA](#), I will bring to nirvāṇa.

[sihuo](#). (J. shiwaku; K. saho 思惑). In Chinese, “misapprehensions associated with [instinctive] mentation”; the afflictions with which a person is born, also called “misapprehensions that arise at birth (jusheng qi).” The “misapprehensions associated with mentation” are ingrained patterns of reacting to sensory stimuli that involve clinging, revulsion, restlessness, or confusion. In contrast to the related “misapprehensions associated with [wrong] views” ([JIANHUO](#)), which are misapprehensions acquired and developed through wrong views ([MITHYĀDRSTI](#)) and fallacious ideologies in the postnatal environment,

sihuo operate at a level that is more subtle and reflexive. Jianhuo must be eradicated first before one can proceed to attenuate, and eventually eradicate, sihuo on the path of cultivation ([BHĀVANĀMĀRGA](#)); for this reason, sihuo are also known as “afflictions [that are eradicated at the stage of] the path of practice” (xiuhuo/xiudao suoduan huo). See also [PARIKALPITAKLEŚĀVARANA](#); [SAHAJAKLEŚĀVARANA](#).

[sikkhāpaccakkhāna](#). [alt. sikkhāpaccakkhāta] (S. śikṣāpratyākhyāna; T. bslab pa spong ba/bslab pa ’bul pa; C. shexuejie; J. shagakukai; K. sahakkye 捨學戒). In Pāli, lit “disavowing/abandoning the training”; “secession from the order,” or more colloquially “disrobing.” In the contemporary [THERAVĀDA](#) tradition, monks (P. [BHIKKHU](#); S. [BHIKSU](#)) are free to leave the [SAMGHA](#) at any time and, upon secession are no longer bound by the monastic rules of conduct. However, a set procedure must be followed for that act to be considered valid. If that procedure is not followed, the person will still officially continue to be considered a monk, for whom the monastic code remains binding. According to the Pāli [VINAYA](#), for the act of secession from the order to be valid for a monk or a nun, four conditions must be met. (1) The monk or nun must be sane, and not overwhelmed by pain, delirium, or intoxication, or be possessed by spirits. (2) The monk or nun must have the intention of leaving the saṃgha; the act does not count if it is performed in jest or is coerced. (3) The monk or nun must make a clear, definitive statement that he or she is leaving the order; this statement must be made in the present tense, not in a conditional or a future tense. (4) The monk or nun must make his or her declaration before a competent human witness, who must be conscious and sane and understand what the monk or nun is saying and doing; making the declaration before a nonhuman being or an image, etc., is not sufficient. In addition to these minimum requirements laid down in the vinaya, the various national traditions of Sri Lanka and Southeast Asia typically enjoin further steps in the procedure to solemnify the ritual aspects of the act. In the Theravāda tradition of Thailand, a monk is allowed to secede from the order and reordain a maximum of seven times.

[śikṣā](#). (P. sikkhā; T. bslab pa; C. xue; J. gaku; K. hak 學). In Sanskrit, “training,” a general term for the practice of the dharma. It occurs in two major contexts. The first is the three trainings ([TRISIKSĀ](#)), three overarching categories of Buddhist practice. They are (1) the training in higher morality ([ADHĪŚĪLAŚIKSĀ](#)), which encompasses all forms of restraint of body and speech, including lay and

monastic precepts that serve as the foundation for the cultivation of concentration and wisdom; (2) the training in higher meditation ([ADHISAMĀDHIŚIKSĀ](#), also called *adhicittaśikṣā*), which encompasses all forms of meditative practice directed toward the achievement of states of concentration; and (3) the training in higher wisdom ([ADHIPRAJÑĀŚIKSĀ](#)), which includes all study and meditation directed toward developing insight into the nature of reality. The second major denotation appears in the [VINAYA](#), where the term *śikṣā* refers to the proper conduct of a monk, nun, novice, or layperson. In this context, *śikṣā* means behavior that conduces to following enjoined conduct. For laymen ([UPĀSAKA](#)) and laywomen ([UPĀSIKĀ](#)), for example, behavior conducive to keeping the five lay precepts ([PAÑCAŚĪLA](#)) would include treating even old and discarded cloth from the robe of a monk or nun with respect, making offerings of food and other requisites to monks and nuns, and refraining from privileging any doctrine above the Buddha’s teachings.

[śikṣādattaka](#). (T. *bslab pa sbyin pa*; C. *yuxue*; J. *yogaku*; K. *yōhak* 與學). In Sanskrit, lit. “one who has been given [penance] training,” viz., a “*pārājika* penitent”; a monk (or nun) who had transgressed one of the major precepts that bring “defeat” ([PĀRĀJIKA](#)) but continues to live in the monastery as a lifelong penitent. A *pārājika* monk or nun, such as one who engaged in sexual intercourse, would be given the lifelong punishment of being “not in communion” ([ASAMVĀSA](#)) with the monastic community. The monk who is *asamvāsa* is not permitted to participate in any of the official monastic proceedings or ecclesiastical acts ([KARMAṆ](#)), thus effectively ostracizing him from the formal activities of the monastery. But in almost all extant recensions of the [VINAYA](#) (including those associated with the [SARVĀSTIVĀDA](#), [MŪLASARVĀSTIVĀDA](#), [MAHĀSĀMGIKA](#), [DHARMAGUPTAKA](#), and [MAHĪŚĀSAKA](#) schools), monks who have received the *asamvāsa* punishment could continue to live in the monastery even after their transgressions in the special status of a *śikṣādattaka* (or *śikṣādattā* for a nun). (The Pāli vinaya of the [THERAVĀDA](#) school is apparently the only recension that does not recognize the status of a *śikṣādattaka*, although the term is known to the Pāli commentarial tradition.) The *śikṣādattaka* was superior in status to regular novices ([ŚRĀMANERA](#)), the subordinate members of the [SAMGHA](#), but inferior to the most junior of monks ([BHIKSU](#)). The *śikṣādattaka* was assigned such menial daily tasks as serving food to the senior monks or cleaning the toilets, and his actions were severely restricted: he was forbidden from teaching others, making extended trips outside

the monastery, accepting the types of salutations and respect that monks normally would receive, or, in some traditions, listening to the [PRĀTIMOKSA](#) recitation. These penances are similar to those meted out to monks on temporary probation ([PARIVĀSA](#) and [MĀNATVA](#)) for committing the [SAMGHĀVAŚEṢA](#) offenses. The lifelong penance of the śikṣādattaka could be rescinded and the penitent restored to good standing if he subsequently became an [ARHAT](#).

[śikṣamānā](#). (P. sikkhamānā; T. dge slob ma; C. shichamona; J. shikishamana; K. sikch'amana 式叉摩那). In Sanskrit, female “postulant,” or “probationer”; one of the categories of ordained women. Prior to receiving the full ordination ([UPASAMPADĀ](#)) of a nun ([BHIKSUNĪ](#)), a female novice ([ŚRĀMAṆERIKĀ](#)) was required to undergo a concurrent two-year period of probationary postulancy. During this period, she was expected to observe six specific rules of training ([ŚIKSĀPADA](#)): (1) abstention from killing, (2) abstention from stealing, (3) abstention from sexual activity, (4) abstention from false speech, (5) abstention from intoxicants, and (6) abstention from eating after midday. (As a śrāmaṇerikā, she would also be expected to follow the usual set of ten precepts, or [DAŚAŚĪLA](#), for novices, which subsume these six rules.) Only after completing this period would a śrāmaṇerikā be allowed to take full ordination. This postulancy requirement was the sixth of the eight “weighty rules” ([GURUDHARMA](#)) that the Buddha imposed on nuns as a condition of establishing the nun’s [SAMGHA](#). Male novices ([ŚRĀMANERA](#)) were not required to undergo such a probationary period of training.

[śikṣamānāsamvara](#). (T. dge slob ma'i sdom pa; C. shichamona jie; J. shikishamanakai; K. sikch'amana kye 式叉摩那戒). In Sanskrit, “restraints for a probationer”; the [VINAYA](#) rules to be followed by a female postulant ([ŚIKSAMĀNĀ](#)) during the probationary period before a female novice ([ŚRĀMAṆERIKĀ](#)) received full ordination ([UPASAMPADĀ](#)) as a nun ([BHIKSUNĪ](#)). In conjunction with the typical set of ten precepts ([DAŚAŚĪLA](#)) taken by novices (subdivided into thirty-six separate rules in the [MŪLASARVĀSTIVĀDA](#) school), these are six specific rules of training ([ŚIKSĀPADA](#)): (1) abstention from killing, (2) abstention from stealing, (3) abstention from sexual activity, (4) abstention from false speech, (5) abstention from intoxicants, and (6) abstention from eating after midday. This additional set of rules, which had to be followed for two years before full ordination was allowed, constituted the sixth of the eight “weighty rules” ([GURUDHARMA](#)) that the Buddha imposed on nuns as a condition of establishing

the nun's [SAMGHA](#). Some commentators say their purpose was to ensure that a probationer was not pregnant at the time of full ordination.

[Śikṣānanda](#). (C. Shichanantuo; J. Jisshananda; K. Silch'anant'a 實叉難陀) (652–710). A monk from [KHOTAN](#) (C. Yutian), who was an important translator of Buddhist texts into Chinese during the Tang dynasty. The Empress [WU ZETIAN](#) (r. 690–705) invited Śikṣānanda to the Chinese capital of Luoyang, asking him to bring from Khotan its Sanskrit recension of the [AVATAMSAKASŪTRA](#) (alt. *Buddhāvataṃsakasūtra*; C. *Dafangguang Fo huayan jing*), which was longer and more comprehensive than the sixty-roll version then in use in China, which had previously been translated by the Indian monk [BUDDHABHADRA](#) (359–429). Śikṣānanda arrived in Luoyang in 695 and supervised a translation team in rendering this Khotanese recension into Chinese; his team included [BODHIRUCI](#) (693–727), [YIJING](#) (635–713), and [WŌNCH'ŪK](#) (613–696). Śikṣānanda and his team finished their translation in 699, after four years of work, in a total of eighty rolls. The translation that Śikṣānanda supervised is typically called within the tradition the “new” (xin) translation, in contrast to Buddhahadra's “old” translation. ([LI TONGXUAN](#)'s commentary to Śikṣānanda's new rendering of the text is, for example, called the *Xin Huayan jing lun*; see [HUAYAN JING HELUN](#).) Śikṣānanda continued with his translation projects until 705, when he returned to Khotan to care for his aged mother. Some thirteen other translations are attributed to him, including the [LANKĀVATĀRASŪTRA](#) and several shorter [DHĀRANĪ](#) sūtras, as well as a version of the [DASHENG QIXIN LUN](#) (“Awakening of Faith According to the Mahāyāna”). Emperor Zhongzong (r. 705–710) invited Śikṣānanda to return once again to China in 708, but he died of illness in 710 at the age of fifty-nine without beginning any new translation work. It is reported that after his cremation, his tongue remained untouched by flames—an indication of his remarkable erudition.

[śikṣāpada](#). (P. sikkhāpada; T. bslab pa'i gzhi; C. xuechu; J. gakusho; K. hakch'ŏ 學處). In Sanskrit, lit. “training step”; “training rules,” “precepts,” or “moral instructions”; viz., various rules of conduct incumbent on both lay and monastic adherents of Buddhism. Theoretically, the number of śikṣāpadas, in the sense of situations where it is incumbent on an adherent to maintain proper moral decorum, is infinite, but the number of rules a specific adherent was expected to follow depended on his or her level of commitment. All these moral instructions are administered in the formula, “I undertake the training rule (śikṣāpada) to

abstain from...” Thus, the Buddhist moral codes are not regarded as commandments handed down from on high, but steps in training that are found to be useful in promoting wholesome actions ([KUŚALA-KARMAN](#)) and in weaning the individual from clinging and attachment. It is generally understood that the practitioner must become adept in following these basic rules of training before he or she can go on to higher levels of training: the effective engagement in the cultivation of concentration ([SAMĀDHI](#)), wisdom ([PRAJÑĀ](#)), and so on. The five basic rules of conduct required of all Buddhists, and specifically the laity, are the five precepts ([PAÑCAŚĪLA](#)), viz., “undertaking the training rule to abstain from”: (1) killing, (2) stealing, (3) sexual misconduct, (4) false speech, and (5) intoxicants. On full-and new-moon days (S. [UPOSADHA](#), P. uposatha), the laity had the option of increasing the number of śikṣāpada for their training in morality and keeping an expanded set of eight precepts (P. uposathasīla, see [ASTĀṄGASAMANVĀGATAM UPAVĀSAM](#)) as a sort of temporary renunciation. These added three precepts to the preceding list of five, viz., abstaining from: (6) eating after midday, (7) dancing, singing, music, and other unseemly forms of entertainment, and using garlands, perfumes, and unguents (viz., cosmetics) to adorn the body, and (8) using high and luxurious beds and couches. Additionally on that day, the layperson was also expected to abstain from all sexual activity, rather than just sexual misconduct defined specifically for the lay person. Ordination as a male novice ([ŚRĀMANERA](#)) or female novice ([ŚRĀMANERIKĀ](#)) required the ordinand to increase the number of śikṣāpada (grounds for moral training) to ten ([DAŚAŚĪLA](#)) in the Pāli [VINAYA](#), a number expanded to thirty-six in the [MŪLASARVĀSTIVĀDA VINAYA](#). Fully ordained monks ([BHIKSU](#)) and nuns ([BHIKSUNĪ](#)) observed, in turn, a greatly expanded set of śikṣāpada codified in hundreds of specific training rules, set out in great detail in the various vinaya traditions. In [MAHĀYĀNA](#) and tantric Buddhist traditions, the śikṣāpada are expanded to include various activities, even those that seem antithetical to morality, under the general rubric of skillful means ([UPĀYA](#)). See also [ŚĪLA](#); [SAMVARA](#); [PRĀTIMOKSA](#).

Śikṣāsamuccaya. (T. Bslab pa kun las btus pa; C. Dasheng ji pusa xue lun; J. Daijōjū bosatsugakuron; K. Taesūng chip posal hak non 大乘集菩薩學論). In Sanskrit, “Compendium of Training,” a work by the eighth-century Indian [MAHĀYĀNA](#) master [ŚĀNTIDEVA](#). It consists of twenty-seven stanzas on the motivation and practice of the [BODHISATTVA](#), including [BODHICITTA](#), the six perfections ([PĀRAMITĀ](#)), the worship of buddhas and bodhisattvas, the benefits of

renunciation, and the peace derived from the knowledge of emptiness ([ŚŪNYATĀ](#)). The topic of each of the stanzas receives elaboration in the form of a prose commentary by the author as well as in illustrative passages, often quite extensive, drawn from a wide variety of Mahāyāna [SŪTRAS](#). Some ninety-seven texts are cited in all, many of which have been lost in their original Sanskrit, making the *Śikṣāsamuccaya* an especially important source for the textual history of Indian Buddhism. These citations also offer a window into which sūtras were known to a Mahāyāna author in eighth-century India. The digest of passages that Śāntideva provides was repeatedly drawn upon by Tibetan authors in their citations of sūtras. Although Śāntideva's [BODHICARYĀVATĀRA](#) and *Śikṣāsamuccaya* both deal with similar topics, the precise relation between the two texts is unclear. Several of the author's verses appear in both texts and some of the sūtra passages from the *Śikṣāsamuccaya* also appear in the *Bodhicaryāvatāra*. One passage in the *Bodhicaryāvatāra* also refers readers to the *Śikṣāsamuccaya*, but this line does not occur in the [DUNHUANG](#) manuscript of the text and may be a later interpolation.

[siku](#). (J. shiko; K. sago 四枯). In Chinese, “four witherings.” When the Buddha passed into [PARINIRVĀNA](#), there were said to be four pairs of [ŚĀLA](#) trees surrounding his body in the four cardinal directions. At his passing, one tree in each pair blossomed and the other withered. The four witherings are said to represent the four inverted views ([VIPARYĀSA](#)) as they pertain to the Buddha. These four views are typically listed as to see that which is painful as pleasurable, to see that which is impermanent as permanent, to see that which is impure as pure, and to see that which is without self as having self. In some texts, such as the [ŚRĪMĀLĀDEVĪSIMHANĀDASŪTRA](#), the [TATHĀGATAGARBHA](#) is said to be endowed with the four perfect qualities ([GUNAPĀRAMITĀ](#)) of blissfulness, permanence, purity, and selfhood; however, in the context of the “four witherings,” it is said to be a mistake to view [NIRVĀNA](#) as blissful, the [DHARMAKĀYA](#) as eternal, the body of the Buddha as pure, and the tathāgatagarbha as self.

[śīla](#). (P. sīla; T. tshul khirms; C. jie; J. kai; K. kye 戒). In Sanskrit, “morality”; those practices whose aim is to restrain nonvirtuous deeds of body and speech, often in conjunction with the keeping of precepts. Morality constitutes one of the three trainings ([TRĪŚIKSĀ](#)), together with [SAMĀDHI](#) and [PRAJÑĀ](#), and the second of the six perfections ([PĀRAMITĀ](#)). In the traditional organization of the constituents

of the noble eightfold path ([ĀRYĀSTĀNGAMĀRGA](#)) under the rubrics of the three higher trainings (*adhiśikṣā*), the “morality group” (*śīlaskandha*; see [ADHIŚĪLAŚIKSĀ](#)) consists of right speech (S. [SAMYAGVĀC](#); P. *sammāvācā*), right action (S. [SAMYAKKARMĀNTA](#); P. *sammākammanta*), and right livelihood (S. [SAMYAGĀJĪVA](#); P. *sammājīva*). The term also appears in the five precepts, or [PAÑCAŚĪLA](#), the five precepts taken by the Buddhist laity: “I undertake the training rules ([ŚIKSĀPADA](#)) to abstain from” (1) killing living creatures, (2) stealing, (3) sexual misconduct, (4) false speech, and (5) consuming intoxicants. On full-and new-moon days ([UPOSADHA](#)), the laity had the option of taking a modified version of these precepts as a sort of temporary renunciation, which are termed the eight precepts (S. see [ASTĀNGASAMANVĀGATAM UPAVĀSAM](#); [BAGUAN ZHAI](#)). They are (1) not to kill living beings, (2) not to steal, (3) not to engage to sexual activity, (4) not to lie about spiritual attainments, (5) not to use intoxicants, (6) not to eat after twelve noon, (7) not to sing, dance, play music, or attend entertainments and not to wear perfumes, garlands, or cosmetics, (8) not to sleep on high beds. All male novices ([ŚRĀMANERA](#)) and female novices ([ŚRĀMANERIKĀ](#)) were required to follow as part of their training the ten precepts ([DAŚAŚĪLA](#)), which were an expansion and enhancement of the five lay precepts (*pañcaśīla*): “I undertake the training rule to abstain from” (1) killing, (2) stealing, (3) sexual activity, (4) false speech, (5) intoxicants, (6) eating after midday, (7) dancing, singing, music, and other unseemly forms of entertainment, (8) using garlands, perfumes, and cosmetics to adorn the body, (9) using high and luxurious beds and couches, (10) handling money. In the context of the bodhisattva’s perfection of morality ([ŚĪLAPĀRAMITĀ](#)), the meaning of *śīla* is expanded to encompass the taking and keeping of the bodhisattva precepts ([BODHISATTVASAMVARA](#)); see [SAMVARA](#); [ŚĪLAPĀRAMITĀ](#); [ŚĪLATRAYA](#).

Śīlabhadra. (T. Ngang tshul bzang po; C. Jiexian; J. Kaigen; K. Kyehyōn 戒賢) (529–645). Indian [YOGĀCĀRA](#) monk who hailed from the [NALANDĀ](#) monastic university in India. A native of the Samatāṭa kingdom in eastern India, he resided at Nālandā after meeting [DHARMAPĀLA](#) (530–561) there. Śīlabhadra is perhaps best known as the principal teacher of [XUANZANG](#), the great Chinese pilgrim and translator. Through Xuanzang’s contact with Śīlabhadra, Dharmapāla’s scholastic lineage was brought back to China, where it served as the foundation of the Chinese [FAXIANG ZONG](#), which was developed by Xuanzang and his two main disciples, [WŌNCH’ŪK](#) and [KUIJI](#). It is recorded that Śīlabhadra was already 106 years old when Xuanzang came to Nālandā to study

with him. [FAZANG](#) (643–712) in his *Dasheng qixinlun yiji* quotes Divākara (613–687, C. Rizhao), a monk from central India, who describes the controversy between Śīlabhadra, as the successor of Dharmapāla within the Indian Yogācāra tradition, and Jñānaprabha (d.u., C. Zhiguang), a successor of [BHĀVAVIVEKA](#) (c. 490–570) in the [SVĀTANTRIKA-MADHYAMA](#) tradition.

[Śīladharma](#). (C. Shiluodamo/Jiefa; J. Shiradatsuma/Kaihō; K. Siradalma/Kyeböp 尸羅達摩/戒法) (d.u., fl. c. eighth-ninth centuries). A translator-monk from [KHOTAN](#) (C. Yutian), who stayed at the monastery of Longxingsi in Beiting (present-day Inner Mongolia), during the Tang dynasty. Wukong (d. 812), a Chinese pilgrim who spent some forty years sojourning in India and Central Asia, arrived in Beiting in 789 with several Sanskrit manuscripts of Indian scriptures. Wukong asked Śīladharma to collaborate with him in translating two of the sūtras he brought back with him into Chinese: the [DAŚABHŪMIKASŪTRA](#) (*Foshuo shidi jing*) and the *Pariṇāmacakrasūtra* (*Huixianglun jing*). Upon completing the translations, Śīladharma accompanied Wukong to the Tang capital of Chang’an in 790, where they had an audience at the imperial court, after which Śīladharma returned to his home country.

[śīlapāramitā](#). (P. sīlapāramī; T. tshul khriṃs kyī pha rol tu phyin pa; C. jie boluomi; J. kaiharamitsu; K. kye p’aramil 戒波羅蜜). In Sanskrit, “perfection of morality,” the second of the six or ten “perfections” ([PĀRAMITĀ](#)) of the [BODHISATTVA](#), along with the perfection of charity ([DĀNAPĀRAMITĀ](#)), forbearance ([KSĀNTIPĀRAMITĀ](#)), effort ([VĪRYAPĀRAMITĀ](#)), meditation ([DHYĀNAPĀRAMITĀ](#)), and wisdom ([PRAJÑĀPĀRAMITĀ](#)); and, in the longer list, the perfection of expedients ([UPĀYAPĀRAMITĀ](#)), vow ([PRANIDHĀNAPĀRAMITĀ](#)), power ([BALAPĀRAMITĀ](#)), and knowledge ([JÑĀNAPĀRAMITĀ](#)). In the [MAHĀYĀNA](#) tradition, the perfection of morality is accomplished through the bodhisattva precepts, and specifically “three sets of pure precepts” (trividhāni śīlāni; C. sanju jingjie, see [ŚĪLATRAYA](#)): (1) the samvaraśīla (see [PRĀTIMOKSASAMVARA](#)), or “restraining precepts,” which refers to the rules of discipline ([PRĀTIMOKSA](#)) and deportment that help adepts restrain themselves from all types of unwholesome conduct; (2) the accumulation of wholesome qualities (kuśaladharmasamgrāhaka), which accumulates all types of wholesome conduct that give rise to the buddhadharmas; and (3) [SATTVĀRTHAKRIYĀ](#), acting for the welfare of beings, which involve giving aid and comfort to sentient beings. Here, the first group corresponds to the preliminary “[HĪNAYĀNA](#)” precepts, while the second and third

groups are regarded as reflecting a Mahāyāna position on morality. Thus, the perfection of morality, through the three sets of pure precepts, is conceived as a comprehensive description of Buddhist views on precepts, which incorporates both hīnayāna and Mahāyāna perspectives into an overarching system. According to the [CHENG WEISHI LUN](#) (**Vijñaptimātratāsiddhi*), each of the ten stages ([BHŪMI](#)) of the bodhisattva path leads to the attainment of one of the ten kinds of suchness ([TATHATĀ](#)), through practicing one of the ten perfections (pāramitā) and thus overcoming one of the ten types of obstructions ([AVARANA](#)). As the second perfection, śīlapāramitā is practiced on the second stage of the bodhisattva path, the [VIMALĀ](#) (immaculate, stainless) bhūmi, and leads to the attainment of supreme suchness (paramarthatathatā; C. zuisheng zhenru), by overcoming the obstruction of deluded conduct (mithyāpratipattyāvaraṇa; C. xiexing zhang).

śīlatraya. (T. tshul khirms gsum; C. sanju jingjie; J. sanju jōkai; K. samch'wi chōnggye 三聚淨戒). In Sanskrit, “three categories of morality” (also called the trividhāni śīlāni); a categorization of moral codes found typically in [YOGĀCĀRA](#)-oriented materials, which also becomes especially popular in indigenous East Asian scriptures (see [APOCRYPHA](#)). They are: (1) the restraining precepts, which maintain both the discipline and the departments (saṃvaraśīla; see [PRĀTIMOKSASAMVARA](#)); (2) the accumulation of wholesome qualities (kuśaladharmasamgrāhaka); and (3) acting for the welfare of beings ([SATTVĀRTHAKRIYĀ](#)). Here, the first group corresponds to the preliminary “[HĪNAYĀNA](#)” precepts, while the second and third groups are regarded as reflecting a Mahāyāna position on morality. Thus, the three sets of pure precepts are conceived as a comprehensive description of Buddhist views on precepts, which incorporates both hīnayāna and Mahāyāna perspectives into an overarching system; and it is these three categories that are said to constitute the perfection of morality ([ŚĪLAPĀRAMITĀ](#)). These three categories are explained in such Yogācāra materials as the [BODHISATTVABHŪMI](#) section of the [YOGĀCĀRABHŪMIŚĀSTRA](#) and in the [MAHĀYĀNASŪTRĀLAMKĀRA](#) and in several East Asian apocryphal scriptures, including the [FANWANG JING](#), [PUSA YINGLUO BENYE JING](#), [*VAJRASAMĀDHISŪTRA](#) ([KŪMGANG SAMMAE KYŌNG](#)), and the [ZHANCHA SHAN'E YEBAO JING](#). See also [SAMVARA](#); [SDOM GSUM](#).

śīlavisuddhi. (P. sīlavisuddhi; T. tshul khirms rnam par dag pa; C. jingjie; J. jōkai; K. chōnggye 淨戒). In Sanskrit, “purity of morality.” In Pāli sources, the

“purity of morality” was the first of seven “purities” (P. [VISUDDHI](#)) that were to be developed along the path to liberation. According to the treatment in [BUDDHAGHOSA](#)’s [VISUDDHIMAGGA](#), purity of morality refers to the proper observance of morality by a monk and is of four kinds: (1) “Morality of restraint according to the monastic code” (P. [pāṭimokkhasaṃvarasīla](#); see S. [PRĀTIMOKSASAMVARA](#)); here the monk is perfect in observance of the rules of discipline laid down in the [VINAYA](#), seeing danger in even minor offenses. (2) “Morality of restraint of the senses” ([INDRIYASAMVARA-sīla](#)); the monk guards his senses so that unwholesome states of mind do not arise. (3) “Morality of the purity of livelihood” (P. [ājīvapārisuddhisīla](#)); the monk refrains from means of support that are not allowed by the rules of discipline. (4) “Morality with regard to the requisites” (P. [paccayasannissitasīla](#)); the monk mindfully makes proper use of the four requisites (see [NĪŚRAYA](#); [PARISKĀRA](#)) allowed to the monk; namely, alms food ([PINDAPĀTA](#)), robes ([CĪVARA](#)), dwelling places, and medicine. Alms food is to be consumed merely to support the body. Robes are to be used merely to protect the body from heat and cold. Dwelling places are to be used merely to protect the body from the elements and to encourage solitude. Medicine is to be used merely to alleviate symptoms of illness and pain so that the monk may pursue the religious life.

[śīlavrataparāmarśa](#). (P. [sīlabbataparāmāsa](#); T. tshul khirms dang brtul zhugs mchog tu ’dzin pa; C. jiejinqu jian; J. kaigonjuken; K. kyegŭmch’wi kyŏn 戒禁取見). In Sanskrit, “attachment to rites and rituals” or “clinging to faulty disciplinary codes and modes of conduct” (lit. “holding [mistaken] rites and conduct to be superior”); the third of ten fetters ([SAMYOJANA](#)) that keep beings bound to the cycle of rebirth ([SAMSĀRA](#)). This type of attachment is one of the first three fetters that are permanently abandoned upon becoming a stream-enterer ([SROTAĀPANNA](#)), along with belief in the existence of a perduring self ([SATKĀYADRSTI](#)) and doubts about the efficacy of the path ([VICIKITSĀ](#)). This specific type of attachment constitutes the wrong view ([DRSTI](#)) that certain purificatory rites, such as bathing in the Ganges River or performing ritual sacrifices, can free a person from the consequences of unmeritorious action ([AKUŚALA-KARMA](#)). Attachment to rites and rituals thus often constitutes either a belief in non-Buddhist religious systems, or a clinging to those elements of non-Buddhist systems that run contrary to Buddhist doctrine. Attachment to rites and rituals is also one of the four kinds of clinging ([UPĀDĀNA](#)), along with clinging to sensuality ([RĀGA](#)), which is a strong attachment to pleasing sense objects;

clinging to false views and speculative theories ([DRSTI](#)); and clinging to mistaken beliefs in a perduring self ([ĀTMAVĀDA](#)), viz., the attachment to the transitory mind and body as a real I and mine.

[Silent Illumination Zen](#). See [MOZHAO CHAN](#).

[Silk Road](#). (C. Silu 絲路; J. Shiruku rōdo シルクロード; K. Pidan kil 緋緞). Term coined by the German geographer Baron Ferdinand von Richthofen in 1877 to describe the ancient caravan routes through Central Asia that connected China, India, Syria, and the Roman Empire; also called the Silk Route. (Translations or transcriptions of the English term are now widely used in Asian languages as well, as in the CJK examples above.) Because silk was among the most highly prized commodities in this East–West trade, von Richthofen chose it as the symbolic designation for these trade routes. Other commodities that were traded along these routes included spices, livestock, perfumes, precious metals, and ceramics. The term Silk Road does not refer to a single road, but rather to a network of major and minor trade routes running through Central Asia that connected East and West. Looked at broadly, the Silk Road ultimately extended as far west as the Mediterranean Sea and as far east as modern Guangzhou (Canton) in China. In addition to facilitating trade, these routes also served as a principal conduit for cultural and religious interaction between the peoples of the different regions of Asia. Thus, it was via the Silk Road that Buddhism migrated out of its Indian homeland and into Central and East Asia; over the centuries, adherents of other religions, such as Nestorian Christianity, Manichaeism, and eventually Islam, would follow the same routes into India and China. From the Indian subcontinent, the Silk Road led northwest through [KASHMIR](#) to the outpost of Kashgar; there, it split, with a western route leading to [SOGDIANA](#) and eventually Damascus in the Middle East, and an eastern route leading through Central Asia into China and the rest of East Asia. There were two main routes through the oasis kingdoms of Central Asia, both skirting the Takla Makan desert in the Tarim basin. Starting at the city of Kashgar in the west, the northern route moved along the oases kingdoms of [KUCHA](#), [TURFAN](#), and [KIZIL](#) along the Tian Mountains; the southern route traveled along the base of the Kunlun Mountains through Niya and [KHOTAN](#), until both routes reconnected at [DUNHUANG](#), often the farthest outpost of the Chinese empire. From Dunhuang the route continued east until it terminated in the Chinese co-capitals of Chang'an and Luoyang, whence it connected to domestic feeder routes

spreading throughout East Asia. Many of these Central Asian city-states were populated by various Indo-European peoples. The only remaining evidence of the long-lost native languages of these peoples are inscriptions and fragments of religious and civil-government manuscripts, such as the Niya documents, Gandhāran texts in the [KHAROSTHĪ](#) script, documents written in the [TOCHARIAN](#) and Kuchean languages, and so on. Scores of these documents were discovered in the nineteenth and twentieth centuries. In missions that began shortly after the death of the Buddha, Indian Buddhist monks accompanied the trading caravans that plied the overland Silk Road. These missions lasted for centuries and changed the religious and cultural landscape of Asia. Buddhist inscriptions, sculptures, manuscripts, reliquary mounds ([STŪPA](#)), and paintings have been discovered along the Silk Road. From northwestern India, Buddhism was taken to Central Asia. We find a host of inscriptions, texts, and images in the regions of modern-day Pakistan, Afghanistan, Russia, and the Islamic states of the former Soviet Union. By the first century CE, there existed a network of Buddhist religious centers stretching from northwestern India, to the Tarim basin, and into China. Buddhism entered East Asia along the Silk Road as well. According to Chinese sources, interaction between Indian and Chinese culture began as early as the first century BCE, when an emperor of the Han dynasty—by some accounts Emperor Wu (156–87 BCE), by others Emperor Ming ([MINGDI](#)) (r. 58–76 CE)—is said to have sent an emissary to the west along the Silk Road in response to the expansion of the [KUSHAN](#) empire to gather evidence of the new religion of Buddhism. In the second century CE, monks from India and the oasis kingdoms along the Silk Road began translating Indian and Central Asian Buddhist texts into Chinese. One of the earliest of these translators was [AN SHIGAO](#), who translated dozens of Indian works into Chinese. In the centuries that followed, East Asian pilgrims such as [FAXIAN](#), [XUANZANG](#), [YIJING](#), and [HYECH'Ō](#) used the Silk Road to make their way back and forth between East Asia and the Buddhist homeland of India. From India, these pilgrims brought back manuscripts, relics, and insights into proper religious practice. Today the travelogues of these East Asian monks provide invaluable information regarding the development of Buddhism in Asia. Of the regions along the Silk Road where Buddhism flourished, China, Tibet, and Mongolia are the only ones where Buddhism survived beyond the first millennium CE. This decline was the result of a number of historical factors, including the revival of brahmanical Hinduism in India and the expansion of Islam into Central Asia.

[śilpanirmānakāya](#). [alt. śilpinirmānakāya] (T. bzo bo sprul sku). In Sanskrit, “artisan emanation body,” one of the various of emanation bodies ([NIRMĀNAKĀYA](#)) in which a buddha may appear to the world. As the name suggests, in this case, a buddha may appear as a skilled artisan. The example that is typically cited for this type of body is when the Buddha, shortly before his passage into [NIRVĀNA](#), took the form a celestial musician ([GANDHARVA](#)) and challenged Sunanda, the king of the celestial musicians, to a lute-playing competition. The Buddha defeated him by playing a beautiful melody on a lute that had no strings. It is said that an artisan emanation body may also take the form of a work of art that is inspiring or calming.

[sīmā](#). (T. mtshams; C. jiejie; J. kekkai; K. kyōlgye 結界). In Sanskrit and Pāli, lit. “boundary”; the line that marks the geographical area within which monks and nuns gather fortnightly to recite the [PRĀTIMOKSA](#) and perform other required acts and duties, called collectively ecclesiastical acts ([SAMGHAKARMA](#)). The term is used by extension to refer to the area itself and the congregation that resides within it. The area encompassed by a sīmā boundary may vary in size and include more than one [VIHĀRA](#) or monastic residence within its perimeter. In order to establish a sīmā, the [SAMGHA](#) enacts a [JŅAPTIDVITĪYĀ KARMAVĀCANĀ](#), an ecclesiastical act comprised of a resolution and a proclamation, whereby the boundaries of the sīmā are marked. A marker (nimitta) may be a natural object or be man-made; possible markers include a mountain, a large stone, a grove, a tree, a road, an ant hill, a river, or an expanse of water. In some cases, sīmās are not demarcated with physical objects and do not require a resolution and proclamation to establish them. For example, when monks live near a village, the natural boundary of the village itself may be taken as the sīmā. When dwelling in a forest, an area encompassed by seven specific units of length could comprise the sīmā. When monks were on a boat in a river, lake, or the sea, the sīmā could be established by the distance a person of average strength could throw water in a perimeter around the boat. In tantric Buddhism, sīmā is used to describe the boundaries practitioners draw for themselves when they enter into a retreat (T. mtshams). The boundaries can be drawn (T. mtshams tho) narrowly when there are others to bring food and other requisites, or more widely as circumstances require.

[sīmāsamūhana](#). (T. mtshams ’jig pa; C. shejie/jiejie; J. shakai/gekai; K. sagye/haegye 捨界/解界). In Sanskrit and Pāli, “abolition of a boundary”; an

ecclesiastical act (P. saṅghakamma; S. [SAMGHAKARMA](#)) whereby an existing boundary ([SĪMĀ](#)) is either abolished or altered. The sīmāsamūha may be performed when the resident [SAMGHA](#) determines that the existing sīmā boundaries are either too small or too large. Since the boundaries of separate sīmās may neither overlap nor encompass one another, it is customary (as, for example, in Burma) when preparing an area for a new sīmā to perform a sīmāsamūhana ceremony beforehand in order to remove any sīmā that might previously have been established at the spot. The [MŪLASARVĀSTIVĀDA VINAYA](#) describes five ways in which a sīmā boundary may be abolished (including by a complete sex change for the entire saṅgha).

[sīmhanāda](#). (P. sīhanāda; T. seng ge'i nga ro; C. shizi hu; J. shishiku; K. saja hu 師子吼). In Sanskrit, “lion’s roar,” a phrase commonly used to describe the teaching of the Buddha or his disciples. It is said that when the lion roars in the forest, all other animals become silent and listen; in the same way, the Buddha’s proclamation of the [DHARMA](#) silences all non-Buddhist teachers ([TĪRTHIKA](#)), who are afraid to challenge him. The Buddha is often compared to a lion, the king of beasts: “lion among men” (S. narasiṃha) is an epithet of the Buddha, the Buddha’s seat is called the lion’s throne ([SĪMĀSANA](#)), and his walk is called the lion’s gait (siṃhavikrānta). According to the Pāli commentaries, there are two kinds of lion’s roar: that of the Buddha and that of his disciples. The former applies specifically to those cases in which the Buddha proclaims his own attainments or the power of the dharma. The latter refers to those cases when disciples announce their attainment of the rank of [ARHAT](#) and their subsequent inspirational teachings. The Buddha declared that [PINDOLA-BHĀRADVĀJA](#) was the foremost lion-roarer (siṃhanādin) among his disciples. These utterances are described as a lion’s roar in the [ĀGAMAS](#) and Pāli [NIKĀYAS](#) because of their incontrovertible veracity, boundless self-confidence, and ability to inspire others to urgency in their practice. Just as the lion’s roar may horrify other creatures, a lion’s roar may also instill fear in lesser beings, such as teachings on impermanence that strike fear into the hearts of long-lived divinities ([DEVA](#)) who mistakenly presume they are immortal. One of the best-known siṃhanāda in the literature (as recorded, e.g., in the [NIDĀNAKATHĀ](#)), is the lion’s roar that [GAUTAMA](#) is said to have uttered immediately after his birth. Pointing to heaven and earth, he took seven steps and said: “I am the chief of the world.” The term figures prominently in Buddhist literature, as in the [MAHĀSĪHANĀDASUTTA](#) and the [CŪLASĪHANĀDASUTTA](#) of the [MAJJHIMANIKĀYA](#), and in the

[ŚRĪMĀLĀDEVĪSIMHANĀDASŪTRA](#). It also occurs in the names of deities, such as Lokeśvara Siṃhanāda, a form of [AVALOKITEŚVARA](#).

[simhāsana](#). (P. sīhāsana; T. seng ge'i khri; C. shizi zuo; J. shishiza; K. saja chwa 師子座). In Sanskrit, “lion’s throne,” or “lion’s seat”; the seat that a buddha or an enlightened master uses when delivering a discourse. One of the buddha’s epithets is “lion among men” (naraṣiṃha, P. naraṣiṃha) and where he sits therefore comes to be called the “lion’s throne,” regardless of whether that seat is a high platform or the bare ground. Throughout the Buddhist tradition, images of lions are carved not only on the seats of buddha images but on various other Buddhist architectural structures, such as [STŪPAS](#). The siṃhāsana is also one of two most prevalent platforms for a buddha image in East Asian Buddhism, along with the “lotus seat” (padmasaṃstha, C. lianhwa zuo).

[Siming shiyi shu](#). (J. Shimei jūgisho; K. Samyōng sibūi sō 四明十義書). In Chinese, “Siming’s Letters on Ten Issues”; a collection of letters compiled by the [TIANTAI](#) monk [SIMING ZHILI](#) (960–1028) and edited together in 1006. The *Siming shiyi shu* is a valuable source of information on the [SHANJIA SHANWAI](#), or “Home-Mountain/Off-Mountain,” debate within the Song-dynasty Tiantai school. Two recensions of [TIANTAI ZHIYI](#)’s commentary on the [SUVERNAPRABHĀSOTTAMASŪTRA](#), an expanded and an abridged version, were known to have circulated during the late Tang and early Five Dynasties period. Zhili and the Shanjia faction, which later came to define Tiantai orthodoxy, defended the expanded recension when the monk Ciguang Wu’en (912–986) and others of the so-called Shanwai faction began questioning the authenticity of certain of its passages, particularly the ten modes of contemplation found in the text. The *Siming shiyi shu* speaks of Zhiyi’s teachings on contemplation in ten general points: (1) not discerning the subject of contemplation, (2) not discerning the object of contemplation, (3) not distinguishing between inside and outside, (4) not constructing the duality of principle and phenomena, (5) not elucidating the workings of contemplation, (6) not lingering on the difficulties of the mind, (7) not knowing the levels of contemplation, (8) not collecting the meanings of contemplation, (9) not being skilled at collecting passages, (10) not being skilled at studying principle.

[Siming Zhili](#). (J. Shimei Chirei; K. Samyōng Chirye 四明知禮) (960–1028). Chinese monk of the [TIANTAI](#) tradition. Zhili was a native of Siming in present-day Zhejiang province. After losing his mother at an early age, Zhili resolved to

become a monk and he received the full monastic precepts at age fifteen. He then studied the [VINAYA](#) and the scriptures of the Tiantai tradition. In 991, he became the abbot of Ganfusi, and four years later he began his residence at the monastery Bao'enyuan on Mt. Siming, whence his toponym. In 1009, he completed the restoration of Bao'enyuan and the following year his monastery received the official plaque renaming it Yanqingsi. Zhili later found himself at the center of the [SHANJIA SHANWAI](#) or “Home-Mountain/Off-Mountain” debate that racked the Song-dynasty Tiantai school. Zhili’s Shanjia (Home Mountain) faction and the Tiantai monk Ciguang Wu’en’s (912–986) Shanwai (Off Mountain) faction were split over the authenticity of one of [TIANTAI ZHIYI](#)’s texts and the practice of contemplation, as well as the role and value of practices and concepts generated from outside the Tiantai tradition in explicating Tiantai doctrine. In response to this debate, Zhili composed a series of letters, which were edited together as the [SIMING SHIYI SHU](#). Zhili also composed the *Shibu'er men zhiyao chao* and wrote extensively on various [PURE LAND](#)-related repentance rituals. Zhili’s disciples later comprised three separate branches of the Chinese Tiantai tradition.

Simsang. (C. Shenxiang; J. Shinjō 審祥) (d. c. 744). Putative Korean disciple of [FAZANG](#) (643–712) in the Chinese [HUAYAN ZONG](#). Simsang is considered the first transmitter of the Huayan teachings in Japan, and his Japanese disciple [RYŌBEN](#) (689–773) is considered the official founder of the Japanese Kegonshū during the Nara period.

sin. See [PĀPA](#); [AKUŚĀLA](#); [AKUŚĀLAKARMAPATHA](#); [KARMAN](#); [KARMAPATHA](#).

Sindu. (S). One of the twenty-four sacred sites associated with the [CAKRASAMVARATANTRA](#). See [PĪTHA](#).

Sin'gyesa. (神溪寺). In Korean, “Divine Brook Monastery”; one of the major monasteries on the Korean sacred mountain of [KŪMGANGSAN](#) (Diamond Mountains), now in North Korea. The monastery is claimed to have been constructed in 519 during the Silla dynasty by the monk Poun (d.u.). Its original name, Sin'gyesa, “Silla Brook Monastery,” uses instead the homophonous sin (lit. new), the first character in Silla (Sin-la), presumably in honor of the Silla dynasty. The monastery received its current name after the founding monk Poun is said to have used his magical powers ([RDDHI](#)) to move fish that people were trying to catch out of the brook next to the monastery, because he thought that

fishing corrupted the sacred place. The monastery underwent frequent repairs and reconstructions, before being completely destroyed in 1950 during the Korean War (1950–1953). Sin'gyesa was reconstructed starting in 2004 through the cooperative efforts of the South Korean [CHOGYE CHONG](#) and the North Korean Buddhist Federation.

[Sinhŭngsa](#). (神興寺). In Korean, “Divinely Flourishing Monastery”; the third district monastery ([PONSA](#)) of the contemporary [CHOGYE CHONG](#) of Korean Buddhism, located in Outer Sŏraksan (Snowy Peaks Mountain) near the town of Sokch'o. The monastery was founded in 652 by the Silla [VINAYA](#) master [CHAJANG](#) (d.u.; fl. c. mid-seventh century), who named it Hyangsŏngsa, or City of Fragrances [see [GANDHAVATĪ](#)] (monastery), but it has been nicknamed “Monastery of Frequent Changes” because it has changed its location, name, and school affiliation so many times over the centuries. When Hyangsŏngsa burned down in 698, the Silla Hwaŏm (C. [HUAYAN](#)) teacher [ŬISANG](#) (625–702) had it rebuilt three years later near its current site and renamed it Sŏnjŏngsa (Meditative Absorption Monastery). The monastery was damaged during the Japanese Hideyoshi invasions of 1592–1598 and burned to the ground in 1642. The three monks who remained after the conflagration each dreamed of a spirit who told them that relocating the monastery's campus would protect it from any future damage by fire, water, or wind. Following the spirit's recommendation, the monks moved the site ten leagues (K. i; C. li) below where the monastery was then located and renamed it Sinhŭngsa, the name it has kept ever since. Sinhŭngsa proper is built on a foundation of natural stone with four large cornerstones. The visitor reaches the monastery along a half-mile-long path that is flanked by reliquaries and memorial stele until reaching the Ilchumun (Single Pillar Gate). Sinhŭngsa's main shrine hall is the Kŭngnak pojŏn ([SUKHĀVATĪ](#) Basilica), which faces west and is decorated on the outside by the ten ox-herding paintings (see [OXHERDING PICTURES, TEN](#)). Inside, [AMITĀBHA](#) is enshrined together with his companion [BODHISATTVAS](#), [AVALOKITEŚVARA](#) and [MAHĀSTHĀMAPRĀPTA](#); they sit below a canopy of yellow dragons and in front of a painting of [ŚĀKYAMUNI](#) with an elderly [KĀŚYAPA](#) and a young-looking [ĀNANDA](#). Right after entering the Ilchumun is found the 14.6-meter (48 foot) high T'ongil Taebul (Unification Great Buddha) sitting on a 4.3 meter (14 foot) pedestal. Casting of this bronze image started in 1987 and was finished ten years later; it is now the largest seated bronze buddha image in the world, larger even than the Japanese [KAMAKURA DAIBUTSU](#) (at 13.35 meters, or 44 feet, high). Its

pedestal is decorated with images of the sixteen [ARHAT](#) protectors of Buddhism (see [SODĀŚASTHAVIRA](#)). This monastery should be distinguished from the homophonous Sinhŭngsa (Newly Flourishing Monastery), located in the T'aebaek Mountains near the city of Samch'ök in Kangwŏn province; that temple is the fourth district monastery of the Chogye order.

sinjung. (C. shenzhong; J. shinshū 神衆). In Korean, “host of spirits”; referring to the [LOKAPĀLAS](#), the protectors of the dharma ([DHARMAPĀLA](#)). The sinjung are often headed by [KUMĀRABHŪTA](#) (K. Tongjin), who appears in a grand, feathered headdress accompanied by over a dozen associates, who aid him in protecting the religion. Originally Hindu deities, the sinjung were adopted into Buddhism as guardian deities after being converted by the Buddha's teachings. In particular, [BRAHMĀ](#) (K. Pŏm Ch'ŏnwang), [INDRA](#) (K. Chesŏk ch'ŏn), the four heavenly kings (S. [CATURMAHĀRAJA](#); K. sa ch'ŏn wang), and [WEITUO](#) (K. Wit'a) were so popular that many statues and paintings were made of them. As the [SUVERNAPRABHĀSOTTAMASŪTRA](#) gained popularity in East Asian Buddhism, the sinjung also came to be regarded as protectors of the state as well as the dharma. Imported to Korea along with Buddhism, the sinjung also came to be worshipped in state Buddhist services. During the Chosŏn dynasty, when Neo-Confucianism replaced Buddhism as the state religion, the role of the sinjung stretched into the personal realm as well, including protecting against disease. Many of the sinjung derive from such Buddhist sūtras as the [AVATAMSAKASŪTRA](#), the [SADDHARMAPUNĀRIKASŪTRA](#) (“Lotus Sūtra”), and the [RENWANG JING](#) (“Scripture for Humane Kings”), but there are also indigenous sinjung who originated from within the Chinese and Korean religious traditions. Hanging paintings ([T'AENGHWA](#)) of the sinjung are often displayed on the right wall of the main shrine halls ([TAEUNG CHŎN](#)) in Korean monasteries. These paintings vary widely, and the main figures include: (1) Chesŏk ch'ŏn (Indra), alone without associates; (2) Yejŏk Kŭmgang (the vajra-ruler who purifies unclean places), with Chesŏk ch'ŏn on his left side and Pŏm Ch'ŏnwang (Brahmā) on his right; (3) Wit'a (Weituo) with the same associates of Yejŏk Kŭmgang to his sides; (4) thirty-nine sinjung from the *Avatamsakasūtra*; (4) 104 sinjung, including all the indigenous sinjung.

Siri Sanga Bō. (P. Saṅghabodhi). A Sri Lankan king (r. 252–254 CE) whose story of utter devotion to Buddhism is told in the [MAHĀVAMSA](#). The king was said to have been so committed to the Buddha's teachings that he refused to

execute criminals. When his prime minister led a rebellion against him, he could not bear the thought of the bloodshed that would result from putting down the rebellion, so he voluntarily abdicated and retired to the forest to live as an ascetic. The prime minister, now King Gathābhaya, fearing the return of the rightful king, offered a reward to anyone who would bring him the head of Siri Sanga Bō. One day, a poor peasant shared his meal with Siri Sanga Bō who, having nothing to give him in return, informed the man of his identity and offered him his head, decapitating himself. Siri Sanga Bō is regarded as a great Buddhist saint in Sri Lanka.

[Sishi'er zhang jing](#). (J. Shijūnishōgyō; K. Sasibi chang kyōng 四十二章經). In Chinese, “Scripture in Forty-two Sections,” a short collection of aphorisms and pithy moralistic parables traditionally regarded as the first Indian Buddhist scripture to be translated into Chinese, but now generally presumed to be an indigenous scripture (see [APOCRYPHA](#)) that was compiled in either China or Central Asia. Most scholars believe that the “Scripture in Forty-Two Sections” began to circulate during the earliest period of Buddhism in China. According to tradition, the “Scripture in Forty-Two Sections” was translated at the behest of [MINGDI](#) of the Han dynasty (r. 58–75 CE). According to the earliest surviving account, Emperor Ming had a dream one evening in which he saw a spirit flying in front of his palace. The spirit had a golden body and the top of his head emitted rays of light. The following day the emperor asked his ministers to identify the spirit. One minister replied that he had heard of a sage in India called “Buddha” who had attained the way (dao) and was able to fly. The emperor presumed that this must have been the spirit he observed in his dream, so he dispatched a group of envoys led by Zhang Qian who journeyed to the Yuezhi region (Indo-Scythia) to search out this sage; he returned with a copy of the “Scripture in Forty-Two Sections.” A fifth-century source reports that the envoys also managed to secure the famous image of the [UDAYANA BUDDHA](#), the first buddha-image. In fifth- and sixth-century materials, there is additionally mention of two Indian monks, [KĀŚYAPA MATAṄGA](#) (d. u.) and Dharmaratna (d. u.), who returned with the Chinese envoys. By the medieval period these monks are regularly cited as cotranslators of the scripture. According to a relatively late tradition, the Emperor Ming also built the first Chinese Buddhist temple—[BAIMASI](#) in Luoyang—as a residence for the two Indian translators. Early Buddhist catalogues refer to the text simply as “Forty-Two Sections from Buddhist Scriptures,” or “The Forty-Two Sections of Emperor Xiao Ming.” The

text consists largely of snippets culled from longer Buddhist sūtras included in the Buddhist canon; parallel sections are found in the [ĀGAMAS](#) and [NIKĀYAS](#), as well as the [MAHĀVAGGA](#). The text also bears a number of Chinese stylistic features. The most obvious is the phrase “The Buddha said” which is used to introduce most sections, rather than the more common Buddhist opening “Thus have I heard” ([EVAM MAYĀ ŚRUTAM](#)). This opening is reminiscent of Confucian classics such as the *Xiaojing* (“Book of Filial Piety”) and the *Lunyu* (“Analects”), where maxims and illustrative anecdotes are often prefaced with the phrase, “The master said.” The terminology of the *Sishi’er zhang jing* borrows heavily from Daoism and the philosophical tradition known as [XUANXUE](#) (Dark Learning).

[sishijiu \[ri\] zhai](#). (J. shijūku[nichi]sai; K. sasipku [il] chae 四十九[日]齋). In Chinese, “forty-ninth day ceremony,” the final funeral service performed on the day when rebirth will have occurred. The “forty-ninth day ceremony” is the culmination of the funeral observances performed every seventh day for seven weeks after a person’s death, lit. the “seven sevens [days] services” (C. [QIQI JI/qiqi \[ri\] zhai](#); J. shichishichi no ki/shichishichi [nichi] sai; K. ch’ilch’il ki/ch’ilch’il [il] chae), a term that is also used as an alternate for “forty-ninth day ceremony.” Many traditions of Buddhism believe that the dead pass through an “intermediate state” ([ANTARĀBHAVA](#)) that leads eventually to the next rebirth. The duration of this intermediate period is variously presumed to be essentially instantaneous, to one-week long, indeterminate, and as many as forty-nine days; of these, forty-nine days eventually becomes a dominant paradigm. Ceremonies to help guide the transitional being ([GANDHARVA](#)) through the rebirth process take place once each week, at any point of which rebirth might occur; these observances culminate in a “forty-ninth day ceremony” ([SISHIJIU \[RI\] ZHAI](#)), which is thought to mark the point at which rebirth certainly will have taken place. Since the transitional being in the antarābhava is released from the physical body, it is thought to be unusually susceptible to the influence of the dharma during this period; hence, the preliminary weekly ceremonies and the culminating forty-ninth day ceremony both include lengthy chanting of [SŪTRAS](#) and [MANTRAS](#), often accompanied by the performance of [MUDRĀS](#), in order to help the being understand the need to let go of the attachment to the previous life and go forward to at least a more salutary rebirth, if not to enlightenment itself. In Korea, the forty-ninth-day ceremony is usually performed in the Hall of the Dark Prefecture ([MYŎNGBU CHŎN](#)), the shrine dedicated to [KSITIGARBHA](#), the

patron bodhisattva of the denizens of hell, and the ten kings of hell ([SHIWANG](#); see [YAMA](#)), the judges of the dead.

Sitātapatrā. (T. Gdugs dkar; C. Baisangaifoding; J. Byakusangaibutchō; K. Paeksan'gae Pulchōng 白傘蓋佛頂). In Sanskrit, “White Parasol,” an important female bodhisattva in the [MAHĀYĀNA](#) and tantric pantheons. In some accounts, she is said to have emerged from the Buddha’s crown protrusion ([USNĪSA](#)) and therefore is sometimes called Uṣṇīṣasitātapatrā. She has numerous forms, but the most famous has a thousand heads, a thousand arms, and a thousand feet, with three eyes in each head and an eye in each hand and foot. Sitātapatrā is regarded as a powerful deity, capable of destroying enemies and removing obstacles. During the Mongol Yuan dynasty, she was venerated by emperors because she was believed to be able to destroy armies and overcome disasters. She continues to be highly venerated in Tibetan Buddhism.

Sitatārā. (T. Sgrol dkar). In Sanskrit, “White Tārā,” one of the two most significant forms of the goddess [TĀRĀ](#), one of the most important female deities of late Indian Mahāyāna and an object of particular devotion in Tibet. Her other famous form is “Dark Tārā” or “Green Tārā” ([ŚYĀMATĀRĀ](#)). Sitatārā is white in color and is depicted seated in the lotus posture ([PADMĀSANA](#)). Her right hand makes the boon-granting gesture ([VARĀDAMUDRĀ](#)) and her left hand make the gesture of protection ([ABHAYAMUDRĀ](#)). She has seven eyes: her two eyes, a third eye in her forehead, and eyes in the palms of her hands and the soles of her feet. She has a somewhat more peaceful mien than Green Tārā, and is propitiated especially for health and long life. In the story of King [SRONG BTSAN SGAM PO](#) and his two wives, one Chinese and one Nepalese, the Chinese wife, Princess [WENCHENG](#), is said to have been an incarnation of Sitatārā.

Si tu incarnations. See [TAI SI TU INCARNATIONS](#).

Sīvalī. (C. Shipoluo; J. Shibara; K. Sibara 尸婆羅). In Sanskrit and Pāli, the proper name of an eminent [ARHAT](#) who was foremost among the Buddha’s disciples in receiving gifts. According to the Pāli account, Sīvalī was the son of Princess Suppavāsā of Kōḷiya (see [SUPPAVĀSĀ-KOLIYADHĪTĀ](#)), who was pregnant with him for seven years. For another seven days she was in labor and, believing that she was about to die from the ordeal, she sent a gift to the Buddha to earn merit. The Buddha accepted the gift and blessed her, and immediately she gave birth to a son. Sīvalī was possessed of extraordinary powers from infancy.

[ŚĀRIPUTRA](#) is said to have conversed with him on the day of his birth and ordained him with Suppavāsā's consent. He attained the stage of stream-enterer ([SROTAĀPANNA](#)) and once-returner ([SAKRDĀGĀMIN](#)) during his ordination as a novice, and while dwelling alone in the jungle, subsequently attained arhatship by contemplating the reasons for his delayed birth. (Some accounts say that Sīvalī learned he had been compelled to stay in his mother's womb for so long in retribution for having once laid siege for seven days to the city of Vārāṇasī during a previous existence.) Sīvalī's good luck at receiving gifts was the result of generosity shown by him in previous lifetimes to previous buddhas and the resolution he made during the time of Padmottara (P. Padumuttara) Buddha to one day be preeminent in this regard. The Buddha took Sīvalī with him on his journey to visit Khadiravaniya Revata because he knew provisions were scarce along the way. When Sīvalī and five hundred others journeyed to the desolate Himālaya mountains, the gods provided him and his companions with everything they needed. In Burma, Sīvalī is believed never to have passed into [PARINIRVĀNA](#), but to still remain in the world today; he is worshipped for good fortune and is depicted as a standing monk, holding a fan and an alms bowl.

[sixteen arhats/sthaviras](#). See [SODAŚASTHAVIRA](#).

[sixth patriarch](#). See [LIUZU](#); [HUINENG](#).

[six yogas of Nāropa](#). See [NĀ RO CHOS DRUG](#).

[Siyam Nikāya](#). The largest of the monastic orders in Sri Lanka, dating from 1753, so named because it derives from an ordination lineage that came from Thailand (Siam); today approximately half of the monks in Sri Lanka belong to this order. In the preceding five centuries, the tradition of full ordination ([UPASAMPADĀ](#)) of [BHIKSU](#)s had died out in Sri Lanka because there was not the requisite number of five fully ordained monks to ordain new monks. Thus, all Sri Lankan monks remained as novices ([ŚRĀMANERA](#)). The tradition of full ordination had been reintroduced twice before, but it had died out each time. In 1753, with the support of King Kīrti Śrī Rājasimha, the novice [SARANAMKARA](#) invited the Thai elder Upāli to come to Sri Lanka to officiate at an ordination ceremony. The Siyam Nikāya is principally based around the city of Kandy and only accepts upper-caste males for full ordination.

[skandha](#). (P. khandha; T. phung po; C. yun; J. un; K. on 蘊). In Sanskrit, lit. “heap,” viz., “aggregate,” or “aggregate of being”; one of the most common categories in Buddhist literature for enumerating the constituents of the person. According to one account, the Buddha used a grain of rice to represent each of the many constituents, resulting in five piles or heaps. The five skandhas are materiality or form ([RŪPA](#)), sensations or feeling ([VEDANĀ](#)), perception or discrimination ([SAMJÑĀ](#)), conditioning factors ([SAMSKĀRA](#)), and consciousness ([VIJÑĀNA](#)). Of these five, only rūpa is material; the remaining four involve mentality and are collectively called “name” ([NĀMA](#)), thus the compound “name-and-form” or “mentality-and-materiality” ([NĀMARŪPA](#)). However classified, nowhere among the aggregates is there to be found a self ([ĀTMAN](#)). Yet, through ignorance ([AVIDYĀ](#) or [MOHA](#)), the mind habitually identifies one or another in this collection of the five aggregates with a self. This is the principal wrong view ([DRSTI](#)), called [SATKĀYADRSTI](#), that gives rise to suffering and continued existence in the cycle of rebirth ([SAMŚĀRA](#)).

[skandhaka](#). (T. phung po; P. khandhaka; C. jiandu; J. kendo; K. kōndo 犍度). In Sanskrit, “chapter,” or “division,” especially referring to a major section of the [VINAYA](#). Whereas the [PRĀTIMOKSA](#) largely deals with the conduct of individual monk or nuns, the skandhaka primarily deals with the conduct of monks and

nuns in their capacity as collective members of the [SAMGHA](#). In the extant Sanskrit vinayas, this section is sometimes called the [VINAYAVASTU](#). The Pāli vinaya has twenty-two sections (khandhaka). Most of the Sanskrit vinayas have twenty skandhaka, as follows. (1) pravrajyāvastu: this section deals with matters related to admission into the order as a novice (pravrajyā; see [PRAVRAJITA](#)), ordination as a fully ordained monk ([UPASAMPADĀ](#)), admission of novices ([ŚRĀMANERA](#)), regulations for the interactions with the preceptor ([UPĀDHYĀYA](#)) or teacher ([ACĀRYA](#)), and circumstances that disqualify one from being admitted to the monastic order; (2) poṣadhavastu: this section deals with the [UPOSADHA](#), or confession ceremony, including a history of its origin and the rules for its performance. (3) varṣāvastu: this section deals with the annual rains retreat ([VARŚĀ](#)) and the rules to be observed during that period, including what kinds of dwelling are permitted. (4) pravāraṇāvastu: this section deals with the ceremony that marks the end of the annual rains retreat ([PRAVĀRANĀ](#)) and elimination of any disharmony that may have arisen during the retreat. (5) carmavastu: this section deals with leather and especially the usage of shoes. (6) bhaiṣajyavastu: this section deals with both medicine and food, setting forth which medicines are permitted and when they may be used; the rules concerning food set forth which foods may be accepted, how invitations from the laity should be treated; how food is to be prepared, and how the monastery storeroom should be utilized. (7) cīvaravastu: this section deals with robes ([CĪVARA](#)), including how many robes a monk may possess, how robes are to be received from the laity, how robes are to be worn, and how robes are to be sewn; (8) kaṭhinavastu: this section deals specifically with the cloth ([KATHINA](#)) that monks receive from the laity at the end of the rains retreat; (9) kośambakavastu: this section deals with the dispute that occurred between the Kauśāmbī monks and how it was resolved by the Buddha, who allowed an expelled monk to be reinstated upon confession. (10) karmavastu: this section deals with ecclesiastical acts ([SAMGHAKARMA](#)) taken by the community in various assemblies. (11) pāṇḍulohitavastu: this section deals with disciplinary measures that are taken when violations of the monastic code occur. (12) pudgalavastu: this section deals with [SAMGHĀVAŚĒSA](#) infractions, the types of probationary periods (e.g., [MĀNATVA](#); [PARIVĀSA](#)), and the procedure for reinstatement after probation. (13) pārivāsikavastu: this section describes the proper conduct of a monk during the probationary period. (14) poṣadhasthāpanavastu: this section sets forth the circumstances under which a monk may be excluded from the [UPOSADHA](#) ceremony. (15) śamathavastu: this section deals with legal cases ([ADHIKARANA](#)) and their resolution. (16)

saṃghabhedavastu: this section deals with the schisms in the saṃgha ([SAMGHABHEDA](#)), including the schism caused by [DEVADATTA](#). (17) śayanāsanavastu: this section deals with the various dwelling places of members of the saṃgha. (18) ācāravastu: this section deals with conduct, especially in interactions with others, including laity, visiting monks, and forest-dwelling monks. (19) kṣudrakavastu: this section deals with miscellaneous minor rules. (20) bhikṣuṇīvastu: this section deals with the rules specific to nuns. The skandhaka begins with a biography of the Buddha that includes his genealogy, his birth, and his life up to the conversion of [ŚĀRIPUTRA](#) and [MAHĀMAUDGALYĀYANA](#). It concludes with the story of the Buddha's death and goes on to describe the first Buddhist council ([SAMGĪTI](#), see COUNCIL, FIRST) at [RĀJAGRHA](#) and the second council (COUNCIL, SECOND) at [VAIŚĀLĪ](#). In the Tibetan [BKA' 'GYUR](#), the vinaya section includes the above materials in the following sections: 'dul ba'i gzhi (vinayavastu), so sor thar pa (prātimokṣa), 'dul ba mnam par 'byed pa (vinayavibhaṅga), dge slong ma'i so sor thar pa'i mdo (bhikṣuṇī prātimokṣasūtra), dge slong ma'i 'dul ba mnam par 'byed pa (bhikṣuṇī vinayavibhaṅga), 'dul ba phran tshogs (vinayakṣudraka), 'dul ba gzhung bla ma/dam pa (vinayottaragrantha).

[skandhamāra](#). (T. phung po'i bdud; C. yunmo; J. unma; K. onma 蘊魔). In Sanskrit, "Māra of the aggregates," one of the four forms of the demon [MĀRA](#), along with the Māra of the afflictions (kleśamāra), the Māra of death ([MRTYUMĀRA](#)), and the divinity Māra (DEVAPUTRAMĀRA). The deity Māra refers to the demonic entity that attacked the Buddha on the night of his enlightenment; the other three are figurative forms, which are also called Māra to indicate their pernicious nature. Skandhamāra is said to have two forms. The coarse form is the five appropriated aggregates ([UPĀDĀNASKANDHA](#)) that arise in dependence on [KARMA](#). The subtle form is the mental body that arises as a result of the predispositions of ignorance ([AVIDYĀ-VĀSANĀ](#)).

[skill-in-means](#). See [UPĀYAKAUŚALYA](#).

[Sku 'bum](#). (Kumbum). In Tibetan, literally "one hundred thousand images," referring to a general architectural style of elaborate, multistoried [CAITYA](#)s, including the Rgyal rtse sku 'bum (Gyantse Kumbum), [GCUNG RI BO CHE](#), Jo nang sku 'bum, and Rgyang 'bum mo che (Gyang Bumoche). ¶ Sku 'bum is also the name of a Tibetan monastery founded in 1560 by Rin chen brtson 'grus rgyal mtshan (d.u.) commemorating the birthplace of [DGE LUGS](#) founder [TSONG KHA PA](#)

[BLO BZANG GRAGS PA](#); it is situated near Lake Kokonor and close to Xining, the capital of Qinghai province (incorporating much of the Tibetan A mdo region) in China. In 1583, the third DALAI LAMA, BSOD NAMS RGYA MTSHO , expanded the site by adding a temple dedicated to [MAITREYA](#) (T. Byams pa), after which the complex became known as Sku 'bum Byams pa gling (Kumbum Jampa Ling). The institution is centered around a miraculous tree marking Tsong kha pa's actual birthplace. It is also the site where Tsong kha pa's mother is said to have fashioned a [STŪPA](#) in 1379. Unlike other Tibet sites with the name sku 'bum, the name of the monastery does not derive from its architectural style but rather from a white sandalwood tree that grew at the spot where Tsong kha pa's father planted his placenta (in other versions, it grew from a drop of blood from the umbilical cord). The tree is said to have one hundred thousand leaves, with each leaf bearing an image of the seed syllables ([BĪJA](#)) and hand implements of the buddha Sīmhanāda, the buddha whom Tsong kha pa will eventually become. Over the centuries, Sku 'bum developed into an enormous complex, one of the largest in the region, with thirty temples, over a thousand buildings, and some 3,600 monks. It had four colleges, one each for the study of doctrine, tantra, medicine, and the [KĀLACAKRATANTRA](#). The monastery's hereditary abbot was the A skya Rin po che, considered the incarnation of Tsong kha pa's father. Sku 'bum is counted among the six great Dge lugs monasteries in Tibet, traditionally drawing large numbers of monks from Mongolia, as well as parts of eastern Tibet. Since 1959, the size of the monastic population has been drastically reduced and, since the 1990s, the monastery has become a popular destination for Han Chinese tourists.

[skull \(cup\)](#). See [KAPĀLA](#).

[Skyid grong](#). (Kyirong). A village and surrounding region in southwestern Tibet, on the border with Nepal. Numerous religious centers and pilgrimage sites are located in the area including the '[PHAGS PA WA TI LHA KHANG](#), [RI BO DPAL 'BAR](#), and the [YOGIN MI LA RAS PA](#)'s hermitage [BRAG DKAR RTA SO](#). Skyid grong was an important staging post on the foremost ancient trade route between Tibet and Nepal.

[śloka](#). (P. siloka; T. tshigs bcad; C. ji/song; J. ge/ju; K. ke/song 偈/頌). In Sanskrit, "stanza," referring to a unit of metrical verse in traditional Sanskrit literature. Although the exact form of the verse may vary, the most common form of [ŚLOKA](#) is composed of four "feet" (pāda), each foot consisting of eight

syllables, for a total of thirty-two; this form is called the *anuṣṭubh*. Other forms include the *triṣṭubh*, which has four feet of eleven syllables each, and the *gāyatrī*, which has three feet of eight syllables each. The form is widely used in Buddhist and non-Buddhist Indian literature, which is often composed in a mixture of prose and verse. The term is implied in the titles of the [PRAJÑĀPĀRAMITĀ SŪTRAS](#): e.g., in the [ASTASĀHASRIKĀPRAJÑĀPĀRAMITĀ](#), which is often translated as “The Perfection of Wisdom in Eight Thousand Lines,” where lines refers to ślokaś.

[Sman ri](#). (Menri). One of the largest and most influential [BON](#) monasteries, founded in 1405 by [SHES RAB RGYAL MTSHAN](#) in central Tibet.

[Smar tshang bka' brgyud](#). (Martsang Kagyü). One of the four major and eight minor subsects of the [BKA' BRGYUD](#) sect of Tibetan Buddhism ([BKA' BRGYUD CHE BZHI CHUNG BRGYAD](#)), originating with Smar pa Shes rab seng ge (Marpa Sherap Senge, d.u.), student of Bka' brgyud hierarch [PHAG MO GRU PA RDO RJE RGYAL PO](#).

[śmaśāna](#). (P. *susāna*; T. *dur khrod*; C. *shilin/hanlin*; J. *shirin/kanrin*; K. *sirim/hallim* 屍林/寒林). In Sanskrit, “charnel ground,” “cemetery”; funerary sites in ancient India where corpses were left to decompose. The charnel ground was recommended as a site for monks to practice meditation in order to overcome attachment to the body. In the [MAHĀSATIPATTHĀNASUTTA](#), the Buddha recommends nine “charnel ground contemplations” (*śīvathikā manasikāra*). There is a set of “contemplations on the foul” ([AŚUBHABHĀVANĀ](#)) described in mainstream Buddhist literature that were to take place in the charnel grounds, where the monks would sit next to the dead and contemplate the nine or ten specific stages in the decomposition of a corpse; this meditation was a powerful antidote to the affliction of lust ([RĀGA](#)). The traditional list of thirteen authorized ascetic practices (S. *dhūtaguṇa*; P. [DHUTAṄGA](#)) also includes dwelling in a charnel ground (no. 11) and wearing only discarded cloth (no. 1), which typically meant to use funerary cloth taken from rotting corpses to make monastic raiments ([CĪVARA](#)), thus weaning the monk or nun from attachment to material possessions. The ideal charnel ground is described as a place where corpses are cremated daily, where there is the constant smell of decomposing corpses, and where the weeping of the families of the dead can be heard. The practice of meditation there is said to result in an awareness of the inevitability of death, the abandonment of lust, and the overcoming of attachment to the body. In India, the charnel ground was a frightful place not only because of the presence of corpses but also for the creatures, including wild animals and

various demons, that frequented it at night. Thus, in tantric Buddhism, the charnel ground was considered to be inhabited by wrathful deities, [DĀKINĪs](#), and [MAHĀSIDDHA](#)s, making it a potent place for the performance of ritual and meditation. Mahāsiddhas are sometimes depicted in charnel grounds, sitting on corpses and drinking from skull cups. [ANUTTARAYOGATANTRA](#) texts also refer to a set of “eight great charnel grounds” (S. [ASTAMAHĀŚMAŚĀNA](#)), which are also frequently depicted in tantric Buddhist art. While the eight sites are often equated with actual geographic locations in India, they also carry a deeper symbolism, referring to regions of tantric sacred geography, points on a [MANDALA](#) or a deity’s body, and elements of tantric physiology such as the channels ([NĀDĪ](#)) in the subtle body of a meditating [YOGIN](#). Their origin myth describes the defeat of the demon Rudra, after which the charnel grounds arose in the eight cardinal and intermediate directions, each from a piece of his dismembered body. They are described as wild and terrifying places, littered with human corpses and wild animals, each with their own trees, protectors, [STŪPA](#)s, [NĀGA](#)s, jewels, fires, clouds, mountains, and lakes. They are inhabited by a host of spirits and nonhuman beings, as well as meditating yogins and [YOGINĪ](#)s. In general, charnel grounds and similar frightening locations are said to be efficacious for the practice of tantric meditation. The aṣṭamahāśmaśāna are also usually depicted as forming part of the outer protection wheel in maṇḍalas of anuttarayogatantra. There are varying lists of the eight great charnel grounds, one of which is: caṇḍogrā (most fierce), gahvara (dense thicket), vajrajvala (blazing vajra), endowed with skeletons (karaṅkin), cool grove (śītavana), black darkness (ghorāndhakāra), resonant with “kiliki” (kilikiārava), and cries of “ha ha” (aṭṭahāsa); Tibetan sources give the names of the eight great charnel grounds as gtum drag (caṇḍogra), tshang tshing ’khrigs pa (gahvara), rdo rje bar ba (vajrajvala), keng rus can (karaṅkin), bsil bu tshal (śītavana), mun pa nag po (ghorāndhakāra) ki li ki lir sgra sgrog pa (kilikiārava), and ha ha rgod pa (aṭṭahāsa).

[Smin grol gling](#). (Mindroling). Largest monastery of the [RNYING MA](#) sect of Tibetan Buddhism in central Tibet; established in 1670 by [GTER BDAG GLING PA](#), the brother of [LO CHEN DHARMA SHRI](#), and a close associate and supporter of the fifth [DALAI LAMA](#). It was founded on the site of an earlier structure built in the early eleventh century by Klu mes Shes rab tshul khriṃs (Lume Sherap Tsultrim, b. c. tenth century). Smin grol gling flourished as the center of the Southern Treasure tradition ([LHO GTER](#)), which originated with the teachings and

revelations of Gter bdag gling pa. The monastic compound was severely damaged by the Dzungar army in the early eighteenth century and again during the Chinese Cultural Revolution, although it has since undergone significant restoration. The abbots of Smin grol gling became known as the Smin gling khri can (Throne Holder of Mindroling), a line of important masters descending in a familial lineage from Gter bdag gling pa. The lineage of Smin grol gling throneholders is

1. Gter bdag gling pa 'Gyur med rdo rje (1646–1714)
2. Padma 'gyur med rgya mtsho (Pema Gyurme Gyatso, 1686–1717)
3. Rin chen mam rgyal (Rinchen Namgyal, 1694–1758)
4. 'Gyur med padma bstan 'dzin (Gyurme Pema Tendzin, b. eighteenth century.)
5. 'Phrin las mam rgyal (Trinle Namgyal, 1765–1812)
6. Padma dbyang rgyal (Pema Wangyal, b. eighteenth century)
7. 'Gyur med sangs rgyas kun dga' (Gyurme Sangye Kunga, born c. late eighteenth/early nineteenth century)
8. Khri can Yid bzhin dbyang rgyal (Trichen Yishin Wangyal, d.u.)
9. Bde chen chos grub (Dechen Chödrup, d.u.)
10. Kun dga' bstan 'dzin (Kunga Tendzin, d.u.)
11. Don grub dbang rgyal (Döndrup Wangyal, d.u.)
12. Kun bzang dbang rgyal (Kunzang Wangyal, b. 1931).

[Smon lam chen mo](#). (Mönlam Chenmo). In Tibetan, “great prayer,” the great prayer festival that took place in the Tibetan capital of [LHA SA](#) as part of the celebration of the Tibetan lunar New Year (and thus occurring in February and sometimes March). The festival was established by [TSONG KHA PA](#), the founder of the [DGE LUGS](#) sect, in 1409, to commemorate the Buddha’s defeat of the heretical teachers ([TĪRTHIKA](#)) at [ŚRĀVASTĪ](#). Lasting until the twenty-fifth day of the first month of the new year, the festival included prayers performed three times each day at the [JO KHANG](#), the chief temple of Lha sa, as well as rituals for the expiation of misdeeds committed during the previous year and a rededication to the principles of Buddhism for the coming year. During the festival, the city would be filled with pilgrims from all over Tibet as well as with monks from the three Dge lugs monasteries in the vicinity of Lha sa. Elaborate butter sculptures ([GTOR MA](#)) were made and ['CHAM](#) dances were performed. The examinations for the granting of the [DGE BSHES](#) lha ram pa degree took place at this time. For the period of the festival, the lay officials of the city of Lha sa turned over civil authority to the monks of ['BRAS SPUNGS](#) monastery. The festival was suspended after the Tibetan uprising in 1959, but began again in 1986 with the political liberalization that followed the death of Mao Zedong, but was banned again in

1990. In times of conflict it has served as a focus for Tibetan political and cultural identity.

smṛti. (P. sati; T. dran pa; C. nian; J. nen; K. yŏm 念). In Sanskrit, “mindfulness” or “memory” and often seen in Western sources in the Pāli equivalency sati; a polysemous term, but commonly used in meditative contexts to refer to the ability to remain focused on a chosen object without forgetfulness or distraction. The [SARVĀSTIVĀDA](#) school of [ABHIDHARMA](#) lists smṛti as one of a group of five determinative ([VINIYATA](#)) mental concomitants ([CAITTA](#)), whose function is to aid the mind in ascertaining or determining its object. The five are: aspiration or desire-to-act ([CHANDA](#)), determination or resolve ([ADHIMOKṢA](#)), mindfulness or memory (smṛti), concentration ([SAMĀDHI](#)), and wisdom or cognition ([PRAJÑĀ](#)). According to [ASAṄGA](#), these five determinative factors accompany wholesome ([KUŚĀLA](#)) states of mind, so that if one is present, all are present. Mindfulness is crucial to all types of formal meditative practice because of its role in bringing clarity to the perceptual process; it leaves the mind in a purely receptive state that inhibits the unwholesome responses to sensory stimuli, such as greed, hatred, and delusion. Mindfulness also contributes to control of the mind, by eliminating distraction and helping the meditator gain mastery of his thought processes. Smṛti is also a catalyst of the related term “circumspection” or “introspection” ([SAMPRAJANYA](#)) and ultimately of wisdom ([PRAJÑĀ](#)). As the third of the five spiritual faculties ([PAÑCENDRIYA](#)), smṛti helps to balance faith ([ŚRADDHĀ](#)) and wisdom (prajñā)—which could degenerate into blind faith or skepticism, respectively—as well as vigor ([VĪRYA](#)) and concentration ([SAMĀDHI](#))—which could degenerate respectively into restlessness and indolence. Smṛti is thus the keystone that ensures the uniform development of all five faculties; for this reason, unlike the other four factors, there can never be too much mindfulness, because it cannot degenerate into a negative state. The emphasis on mindfulness is one of the most distinctive features of Buddhist meditation theory. Consequently, the term appears in numerous lists of virtuous qualities, especially in those pertaining to meditation. For example, in perhaps its most popular usage, right mindfulness ([SAMYAKSMṚTI](#)) is the seventh of the eight aspects of the noble eightfold path ([ĀRYĀSTĀṄGAMĀRGA](#)). Generally in this context, the cultivation of the “foundations of mindfulness” ([SMṚTYUPASTHĀNA](#)) is understood to serve as a basis for the development of liberating wisdom (prajñā). Thus, meditation exercises involving smṛti are often discussed in connection with those related to [VIPĀŚYANĀ](#), or “insight.” In one of the most

widely read discourses on mindfulness, the [MAHĀSATIPATTHĀNASUTTANTA](#), the Buddha offers four specific foundations of mindfulness training, namely, on the body ([KĀYA](#)), sensations ([VEDANĀ](#)), mental states ([CITTA](#)), and specific factors (P. dhamma; S. [DHARMA](#)). In his *Prajñāpāramitāhṛdayanāmaṭīkā*, a commentary on the [PRAJÑĀPĀRAMITĀHRDAYASŪTRA](#) (“Heart Sūtra”), [KAMALAŚĪLA](#) lists mindfulness as the third of five “powers” ([BALA](#)) that are attained on the path of preparation ([PRAYOGAMĀRGA](#)). In another popular schema, smṛti is listed as the first of seven “limbs of awakening” or factors of enlightenment ([BODHYAṄGA](#)); these are seven factors that contribute to enlightenment. See also [ANUSMRTI](#); [SMRTYUPASTHĀNA](#); [SATIPATTHĀNASUTTA](#).

smṛtyupasthāna. (P. satipaṭṭhāna; T. dran pa nyer bzhag; C. nianchu; J. nenjo; K. yōmch’ō 念處). In Sanskrit, “foundations of mindfulness,” a meditative training in which one contemplates with mindfulness ([SMRTI](#)): one’s (1) body ([KĀYĀNUPAŚYANĀ](#); P. kāyānupassanā), by mean of mindfulness of breathing, mindfulness of postures, full awareness of bodily actions, contemplation of bodily impurities, contemplation of elements, and nine cemetery meditations; (2) sensations (vedanānupaśyanā; P. vedanānupassanā), viz., pleasant, unpleasant, or neutral sensations ([VEDANĀ](#)); (3) mental states (cittānupaśyanā; P. cittānupassanā), such as whether the mind ([CITTA](#)) generally is elated or depressed, distracted or concentrated; and (4) factors (dharmānupaśyanā; P. dhammānupassanā), such as the five hindrances ([NĪVARANA](#)), the five aggregates ([SKANDHA](#)), the seven factors of enlightenment ([BODHYAṄGA](#)); the [FOUR NOBLE TRUTHS](#), etc. The explanation of smṛtyupasthāna, as the first of the thirty-seven dharmas associated with enlightenment (bodhyaṅga) details the role of mindfulness in the eightfold noble path ([ĀRYĀSTĀṄGAMĀRGA](#)). See also [SMRTI](#); [SATIPATTHĀNASUTTA](#).

Smṛtyupasthānasūtra. In Sanskrit, “Discourse on the Foundations of Mindfulness.” See [SATIPATTHĀNASUTTA](#).

Snar thang. (Nartang). A Tibetan monastery famous as the source for an important printed edition of the Buddhist canon, the [BKA’ ’GYUR](#) and [BSTAN ’GYUR](#). It was located a short distance west of Gzhis ka rtse (Shigatse). The monastery was founded in 1153 and was originally a [BKA’ GDAMS](#) center. The edition of the canon produced there appears to derive from a manuscript edition prepared between 1312 and 1320. The engraving of the woodblocks was completed in 1730. The main buildings of the monastery, the woodblock

collection, and many of its art treasures were destroyed in 1966 during the Chinese Cultural Revolution.

snga dar. (ngadar). In Tibetan, “earlier dissemination” or “first dissemination,” the first of two historical periods when Buddhism was disseminated to Tibet. The beginning of the period is variously indicated, sometimes being traced as far back as the first (and likely legendary) Tibetan king, Gnya’ khri btsan po, sometimes to the king Lha tho tho ri. However, it is agreed that the dissemination became well established during the reign of king [SRONG BTSAN SGAM PO](#) in the seventh century, with his marriage to a Chinese princess and a Nepalese princess, each a Buddhist and each of whom brought a statue of the Buddha with her to Tibet. It continued through the reign of King [KHRI SRONG LDE BTSAN](#), during which [ŚĀNTARAKSITA](#) and [PADMASAMBHAVA](#) came to Tibet, the first Tibetan monastery at [BSAM YAS](#) was founded, and the [BSAM YAS DEBATE](#) took place. Traditionally the end of the first dissemination is associated with the murder of the great patron of Buddhism, King [RAL PA CAN](#), by his brother [GLANG DAR MA](#) in 838, who then seized the throne and instituted a suppression of Buddhism. The beginning of the second or later dissemination ([PHYI DAR](#)) is traditionally dated from the first journey of the translator [RIN CHEN BZANG PO](#) to India. Subsequent research has shown that the dissemination of Buddhism in general did not end with the death of Ral pa can, but that there was a decline in particular forms of monasticism that disadvantaged institutional forms of religious expression. See [JO KHANG](#).

Sngags rim chen mo. (Ngak rim chenmo). In Tibetan, “Great Exposition of the Stages of [MANTRA](#),” an extensive theoretical work on the classes and stages of [TANTRA](#), written by the [DGE LUGS](#) savant [TSONG KHA PA BLO BZANG GRAGS PA](#). The work is regarded as the tantric companion to his most famous work, the [LAM RIM CHEN MO](#), or “Great Exposition of the Stages of the Path.” The work begins with an influential discussion of what distinguishes the [MAHĀYĀNA](#) from the [HĪNAYĀNA](#), and within Mahāyāna, what distinguishes the perfection vehicle ([PĀRAMITĀYĀNA](#), phar phyin theg pa) from the mantra vehicle ([MANTRAYĀNA](#), sngags kyi theg pa), with Tsong kha pa arguing that the practice of “deity yoga” ([DEVATĀYOGA](#), lha’i rnal ’byor) is the distinguishing feature of tantric practice. The text then goes on to set forth the principal practices of each of the four major divisions of tantras according to Dge lugs: [KRIYĀTANTRA](#), [CARYĀTANTRA](#), [YOGATANTRA](#), and [ANUTTARAYOGATANTRA](#), with the greater part of the text

devoted to the last of these divisions, regarded as essential for the achievement of buddhahood.

Snga 'gyur rnying ma. (Ngagyur nyingma). A Tibetan term referring to the **RNYING MA** sect of Tibetan Buddhism, lit. “Early Translation Ancient Tradition,” referring to the fact that the Rnying ma sect relies on translations, especially translations of **TANTRAS**, that were made prior to the later dissemination (**PHYI DAR**) of Buddhism to Tibet. In distinction, the other sects of Tibetan Buddhism are called “new” (**GSAR MA**).

sngon 'gro. (ngöndro). In Tibetan, lit “going before,” viz., “preliminary practices”; referring generally to practices that are performed in order to establish proper motivation, to purify the mind of afflictions, and to remove obstacles before embarking upon tantric practice. Although present in all sects of Tibetan Buddhism, “preliminary practices” are especially associated with the **RNYING MA** and **BKA' BRGYUD** sects. One of the most famous presentations of the preliminary practices is found in the nineteenth-century Rnying ma pa work, the **KUN BZANG BLA MA'I ZHAL LUNG** (“Words of My Perfect Teacher”) by **DPAL SPRUL RIN PO CHE**. The text first sets forth the “common preliminaries,” reflections on central points of Buddhist doctrine, intended to turn one’s interests away from **SAMSĀRA** and toward the wish for liberation from rebirth. These are: (1) the rarity of human birth, (2) the uncertainty of the time of death, (3) the causes and effect of actions, (4) and the sufferings incumbent in the six rebirth destinies (**GATI**) of **SAMSĀRA**. The “uncommon preliminary practice” entail the accumulation of a specific number (usually one hundred thousand) of specific practices. It is these practices that are intended to purify afflictions and remove obstacles. These are (1) recitation of the refuge formula while performing a hundred thousand prostrations; (2) cultivation of **BODHICITTA** (often in the form of a hundred thousand repetitions of a prayer); (3) recitation of the hundred-syllable **MANTRA** of the buddha **VAJRASATTVA**; (4) a hundred thousand offerings of a **MANDALA**; (5) the practice of **GURU** yoga through a hundred thousand repetitions of the name mantra of the guru. In each case, these practices are to be performed with the appropriate visualization. In order to complete the uncommon preliminary practices, disciples would often go on retreat, during which they would devote all their time to the practices.

snyan brgyud. (nyen gyü). In Tibetan, “hearing lineage” or “aural lineage,” a term used to refer to teachings, especially tantric teachings, that are not

committed to writing but that are instead transmitted orally from master to disciple from one generation to the next.

[snyan brgyud skor gsum](#). (nyen gyü kor sum). In Tibetan, “the three aural lineage cycles”; a compilation of instructions based on the [CAKRASAMVARATANTRA](#), including liturgies, ritual manuals, and commentarial works, together with their oral commentaries, stemming from [MI LA RAS PA](#)’s three principal disciples: [RAS CHUNG PA RDO RJE GRAGS](#), [SGAM PO PA BSOD NAMS RIN CHEN](#), and Ngan rdzongs ras pa Byang chub rgyal po (Ngendzong Repa Jangchup Gyalpo). The three cycles are respectively known as the [RAS CHUNG SNYAN BRGYUD](#), Dwags po snyan brgyud (Dakpo nyengyu), and Ngan rdzongs snyan brgyud (Ngendzong nyengyu). They were later edited and systematized by the adept [GTSANG SMYON HERUKA](#) during the fifteenth century. See also [SNYAN BRGYUD](#).

[Snyder, Gary](#). (1930–). American poet and prominent figure in Zen Buddhism in America. Gary Snyder was born in San Francisco and raised on a farm outside Seattle, Washington. He attended Reed College in Oregon, where he studied literature and anthropology. Inspired by [DAISETZ TEITARO SUZUKI](#)’s *Essays in Zen Buddhism*, he taught himself to meditate, and devoted himself to the practice of Zen meditation while working as a fire lookout in Washington state. In 1952, he enrolled in the Department of Oriental Languages at the University of California, Berkeley, to study Chinese and Japanese. He met [ALLEN GINSBERG](#) and [JACK KEROUAC](#) in San Francisco and participated in the famous Six Gallery reading in 1955, where Ginsberg first read *Howl*. Snyder traveled to Japan in 1956, returning again in 1958 to spend seven years practicing Zen meditation at the monastery of [DAITOKUJI](#). He returned to San Francisco in 1966. His work and his poetry have remained committed both to the exploration of Buddhist, especially Zen, practice and to the protection of the environment. Snyder served on the California Arts Council from 1974 to 1980 and taught at the University of California, Davis, where he helped found the Nature and Culture curriculum. He founded the Ring of Bone Zendo at his mountain farm in the northern Sierra Nevada range in California.

[snying thig](#). (nyingtik). In Tibetan, “heart drop” or “heart essence” (an abbreviation of snying gi thig le), a term used to describe an important genre of texts of the [RNYING MA](#) sect of Tibetan Buddhism. The master [ŚRISIMHA](#) is said to have divided the “instruction class” ([MAN NGAG SDE](#)) of the great completion

([RDZOGS CHEN](#)) teachings into four cycles: the outer, inner, secret, and the most secret unexcelled cycle (yang gsang bla na med pa). In Tibet, [VIMALAMITRA](#) organized the teachings of this fourth cycle into an explanatory lineage with scriptures and an aural lineage without scriptures and then concealed these teachings, which were later revealed as the [BI MA'I SNYING THIG](#) (“Heart Essence of Vimalamitra”). During his stay in Tibet, [PADMASAMBHAVA](#) concealed teachings on the most secret unexcelled cycle, called “heart essence of the [DĀKINĪ](#)” ([MKHA' 'GRO SNYING THIG](#)). In the fourteenth century, these and other teachings were compiled and elaborated upon by [KLONG CHEN RAB 'BYAMS](#) into what are known as the “four heart essences” ([SNYING THIG YA BZHI](#)): (1) the “heart essence of [VIMALAMITRA](#)” (Bi ma'i snying thig), (2) the “ultimate essence of the lama” (bla ma yang thig), (3) the “heart essence of the [dākinī](#)” (mkha' 'gro snying thig), and (4) two sections composed by Klong chen pa, the “ultimate essence of the [dākinī](#)” (mkha' 'gro yang thig) and the “ultimate essence of the profound” (zab mo yang thig). Although tracing its roots back to Padmasambhava and Vimalamitra in the eighth century, the snying thig texts and their practices likely derive from Tibetan reformulations of great completion teachings beginning in the eleventh century, when new translations of Indian tantras were being made in Tibet. A wide range of new meditative systems were added into the rdzogs chen corpus, which would prove to be essential to Tibetan Buddhist practice, especially in the [RNYING MA](#) and [BKA' BRGYUD](#) sects in subsequent centuries.

[snying thig ya bzhi](#). (T). See [SNYING THIG](#).

[Sobhana Mahāthera](#). (1904–1982). See [MAHASI SAYADAW](#).

[Śobhita](#). (P. Sobhita; T. Mdzes pa; C. Guoyi; J. Kae; K. Kwaüi 菓衣). An eminent [ARHAT](#) elder declared by the Buddha to be foremost among his monk disciples in remembering past births ([PŪRVANIVĀSĀNUMRTI](#)). He was born the son of a brāhmaṇa family and dwelled in the city of [ŚRĀVASTĪ](#). Hearing the Buddha preach one day, he resolved to renounce the world and enter the order as a monk. After some time he attained arhatship. During the time of Padmottara (P. Padumuttara) Buddha, when he was a householder living in the city of Haṃsavatī, he heard the Buddha praise a monk disciple as foremost in his ability to recall previous lives. It was then that he resolved to earn that same distinction during the dispensation of a future buddha. During the time of Sumedha Buddha, Śobhita was a learned brāhmaṇa who was expert in the Vedas. He renounced the

householder's life to observe piety as a hermit in the environs of the Himālaya mountains. When he heard a Buddha had appeared in the world, he rushed to Bandhumatī to sing the Buddha's praises.

sodaśasthavira. (T. gnas brtan bcu drug; C. shiliu zunzhe; J. jūrokusonja; K. simnyuk chonja 十六尊者). In Sanskrit, “the sixteen elders” (most commonly known in the East Asian tradition as the “sixteen [ARHATs](#)”); a group of sixteen venerated arhat (C. [LUOHAN](#)) disciples of the Buddha whom the Buddha orders to forgo [NIRVĀNA](#) and to continue to dwell in this world in order to preserve the Buddhist teachings until the coming of the future buddha, [MAITREYA](#). Each of these arhats is assigned an (often mythical) residence and a retinue of disciples. With Maitreya's advent, they will gather the relics of the current buddha [ŚĀKYAMUNI](#) and erect one last [STŪPA](#) to hold them, after which they will finally pass into [PARINIRVĀNA](#). The *Śāriputrapariṣcchā* (“Sūtra on Śāriputra's Questions”), which was translated at least by the Eastern Jin dynasty (317–420 CE) but may date closer to the beginning of the millennium, mentions four great monks (mahā-[BHIKSU](#)) to whom the Buddha entrusted the propagation of the teachings after his death: [MAHĀKĀŚYAPA](#), [PINDOLA](#), Kundovahan (C. Juntoupohan, “Holder of the Mongoose,” apparently identical to [BAKKULA](#)), and [RAHULA](#). The [MILE XIASHENG JING](#) (“Sūtra on the Advent of Maitreya”), translated in 303 CE by [DHARMARAKSA](#), states instead that the Buddha instructed these same four monks to wait until after the buddhadharma of the current dispensation was completely extinct before entering [PARINIRVĀNA](#). The *Śāriputrapariṣcchā*'s account is also found in the [FAHUA WENJU](#) by [TIANTAI ZHIYI](#) (538–597) of the Sui dynasty. The *Mahāyānāvātāra* (C. *Ru dasheng lun*; “Entry into the Mahāyāna”), a treatise written by Sāramati (C. Jianyi) and translated into Chinese c. 400 CE by Daotai of the Northern Liang dynasty (397–439) first mentions “sixteen” great disciples (mahā-[ŚRĀVAKA](#)) who disperse throughout the world to preserve the Buddha's teachings after his death, but does not name them. Indeed, it is not until the Tang dynasty that the full list of sixteen disciples who preserve the buddhadharma is first introduced into the Chinese tradition. This complete list first appears in the *Nandimitrāvādāna* (*Da aluohan Nantimiduo luo suoshuo fazhu ji*, abbr. *Fazhu ji*, “Record of the Duration of the Dharma Spoken by the Great Arhat [NANDIMITRA](#)”), which was translated by [XUANZANG](#) in 654 CE. (Nandimitra [C. Qingyou zunzhe] was born in the second century CE in Sri Lanka.) This text tells the story of the Buddha's special charge to this group of elders and offers each of their names, residences, and numbers of

disciples. [JINGQI ZHANRAN](#)'s (711–782) *Fahua wenju ji*, a commentary to [Tiantai Zhiyi](#)'s (538–597) *Fahua wenju*, also cites an account from the apocryphal *Ratnameghasūtra* (*Bao yun jing*) that the Buddha charged sixteen “worthy ones” (S. arhat; C. luohan) with preserving the [BUDDHADHARMA](#) until the advent of Maitreya, after which they could then enter parinirvāṇa. Zhanran's citation of this sūtra gives the names of each of the sixteen arhats, along with their residence and the number of their followers; but while Piṇḍola's and Rāhula's names are included in the sixteen, Mahākāśyapa is not mentioned. According to the *Xuanhe huapu* (“The Xuanhe Chronology of Painting”), the earliest Chinese iconography showing a group of sixteen disciples probably dates to the Liang dynasty (502–557), when [Zhang Sengyao](#) (d.u.; fl. c. 502–549) first painted a rendering of the ṣoḍaśasthavira. After the *Nandimitrāvādāna* was translated into Chinese in the middle of the seventh century, the group of sixteen elders became so universally revered within China that many verses, paintings, and sculptures were dedicated to them. As a group, they appear frequently in East Asian monastic art, each arhat specifically identified by his unique (and often wildly exaggerated) physical characteristics. The most renowned such painting was made at the end of the ninth century by the monk [Chanyue Guanxiu](#) (832–912); his work became the standard presentation of the sixteen. His vivid portrayal of the arhats offers an extreme, stylized rendition of how the Chinese envisioned “Indians” (fan) or “Westerners” (hu). He gives each of his subjects a distinctive bearing and deportment and unique phenological features and physical characteristics; these features are subsequently repeated routinely in the Chinese artistic tradition. The standard roster of arhats now recognized in the East Asian tradition, in their typical order, are (1) [PINDOLA BHĀRADVĀJA](#); (2) [KANAKAVATSA](#); (3) [KANAKA BHĀRADVĀJA](#); (4) [SUBINDA](#) [alt. Suvinda]; (5) [BAKKULA](#) [alt. Bākula, Nakula]; (6) [BHADRA](#); (7) [KĀLIKA](#) [alt. Karīka]; (8) [VAJRAPUTRA](#); (9) [JĪVAKA](#); (10) [PANTHAKA](#); (11) [RĀHULA](#); (12) [NĀGASENA](#); (13) [AṄGAJA](#); (14) [VANAVĀSIN](#); (15) [AJITA](#); (16) [CŪDAPANTHAKA](#). Sometime before the Song dynasty, the Chinese occasionally added two extra arhats to the roster, possibly in response to Daoist configurations of teachers, giving a total of eighteen. The most common of these additional members were Nandimitra (the putative subject of the text in which the protectors are first mentioned by name) and Piṇḍola Bhāradvāja (another transcription of the arhat who already appears on the list), although Mahākāśyapa also frequently appears. The Tibetan tradition adds still other figures. In a standard form of the Tibetan ritual, the sixteen elders are listed as Aṅgaja, Ajita, Vanavāsin, Kālika,

Vajraputra, Bhadra, Kanakavatsa, Kanaka Bhāradvāja, Bakkula, Rāhula, Cūḍapanthaka, Piṇḍola Bhāradvāja, Panthaka, Nāgasena, [GOPAKA](#) (Sbed byed), and Abhedā (Mi phyed pa). They are visualized together with Śākyamuni Buddha whose teaching they have been entrusted to protect, their benefactor the layman ([UPĀSAKA](#)) Dharmatāla [alt. Dharmatāra, Dharmatrāta], and the four great kings ([CATURMAHĀRĀJA](#)) [VAIŚRAVANA](#) [alt. Kubera], [DHRTARĀSTRA](#), [VIRŪDHAKA](#), and [VIRŪPĀKSA](#). Each of the elders is described as having a particular scroll, begging bowl, staff, and so on, and in a particular posture with a set number of arhats. They come miraculously from their different sacred abodes, assemble, are praised, and worshipped with the recitation of the bodhisattva [SAMANTABHADRA](#)'s ten vows in the [BHADRACARĪPRANIDHĀNA](#). Then, with solemn requests to protect the dispensation by watching over the lives of the gurus, they are requested to return to their respective homelands. In other rituals, one finds [BUDAI](#) heshang (Cloth-Bag Monk, viz., [ANGAJA](#)), the Buddha's mother, Queen [MĀYĀ](#), and his successor, Maitreya; or the two ancient Indian Buddhist sages "Subduer of Dragons" (C. Xianglong) and "Subduer of Lions" (C. Fuhu). See also [LUOHAN](#); and individual entries on each of the sixteen arhats/sthaviras.

Soga. (蘇我). A powerful clan (J. uji) in Japan from the sixth through the mid-seventh centuries and early patrons of Buddhism in the Japanese isles. The Soga may have been descendants of immigrants from the Korean peninsula, as suggested in part by their close ties with the Korean Paekche kingdom; Soga no Iname (d. 570) appears to have been one of the first supporters of Buddhism in Japan, learning about the tradition via Paekche. As no textual sources exist from this early period, ascertaining their role in the Yamato court remains a difficult task and a topic much debated among scholars. Not until the *Nihon shoki* ("Chronicles of Japan"; 720) do we arrive at a historical account of the clan. This text was commissioned by the lineage of Tenmu (r. 672–686), who may have wanted to cast the Soga in negative light. Nevertheless, it offers the following narrative. Beginning with Soga no Iname, four generations of the Soga clan served as chief ministers (J. ōomi) to the Yamato court. Two of Iname's daughters were married to the emperor Kinmei (r. 531 or 539?–571), and three of his grandchildren are purported in the *Nihon shoki* to have been monarchs: Yōmei (r. 585–587), Sushun (r. 587–592), and Suiko (r. 593–628). It is also asserted that Soga no Umako (d. 626), son of Iname, commissioned the construction of the monastery of [ASUKADERA](#). Archeological evidence suggests

that this monastery was the greatest temple of its time in size and influence, despite the fact that it receives little attention in the *Nihon shoki*. By the mid-seventh century, the Soga clan heads, notably Umako's son, Emishi (d. 645), and Emishi's son, Soga no Iruka (d. 645), appear to have been the most powerful members of the Yamato court. According to the *Nihon shoki*, in 643, Iruka made a successful attack on [SHŌTOKU TAISHI](#)'s surviving son, Yamashiro no Ōe and others. Prince Naka no Ōe, later enthroned as Tenji (r. 661–672), counterattacked in 644, killing Iruka and other Soga family members. Emishi and much of the rest of the Soga clan are said to have been forced to commit suicide the following day. Soga no Akae (623–672?), grandson of Umako, survived the coup, serving as ōomi through the Taika Reform (645). With the massacre of most of the clan, however, its power was substantially diminished.

Sogdiana. A kingdom in Inner Asia (the Greek Transoxiana) centered on the Zeravshan River in modern Uzbekistan. The Sogdians dominated trade between China and India from the second through the tenth centuries CE. Their language, Sogdian (a branch of Indo-Iranian), was used along the [SILK ROAD](#) as a mercantile language and Buddhist texts from China were translated into Sogdian and used by Buddhists in this region. (There is no evidence that Buddhist texts in Indian languages were translated into Sogdian.) In East Asia, monks from the kingdom of Sogdiana were designated with the ethnicon [KANG](#), as in the case of the early translator [KANG SENGHUI](#) (d. 280).

sōhei. (僧兵). In Japanese, “monks’ militia.” During the mid-Heian period, the major Buddhist monasteries near Nara and Kyōto, such as [KŌFUKUJI](#), [ENRYAKUJI](#), and Onjōji (later called [MIIDERA](#)), became large landholders and were deeply immersed in political activities. The monasteries maintained small armies of private warriors to protect their assets and promote their interests. Although these warriors wore Buddhist robes and lived inside the temple complexes, they were not formally ordained; on the battlefield, they also wore full armor, making them virtually indistinguishable from ordinary warriors. During this period, these warriors were called simply “members of the congregation” (shuto; daishu) or pejoratively referred to as “evil monks” (akusō); the term sōhei seems not to have been used until 1715, when it first appeared in the *Dainihon shi* (“The History of Great Japan”). These monks’ militias were mustered against both rival temples and secular authorities. From the tenth to the twelfth centuries, monks’ militias engaged in pitched battles with their rivals, as in the

intrasectarian rivalry between the Tendai monasteries of Enryakuji and Onjōji, and the intersectarian rivalries between Kōfukuji and its two Tendai counterparts. During this same period, monks' militias also participated in the Genpei War of 1180–1185, which led to the establishment of the Kamakura shogunate. There were more than two hundred major violent incidents involving monks' militias between the late-tenth and early-sixteenth centuries. The monks' militia of Enryakuji also battled the temples established by the new schools of [JODO SHINSHŪ](#) and [NICHIRENSHŪ](#), which gained popularity among commoners and local warlords during the fifteenth and sixteenth centuries: for example, Enryakuji sōhei attacked and destroyed the original [HONGANJI](#) in Ōtani (east of Kyōto) in 1465 and twenty-one Nichiren temples in Kyōto in 1536. However, the power of monks' militias diminished significantly after 1571, when the warlord Oda Nobunaga (1534–1582) massacred the Buddhist clerics and sōhei on [HIEIZAN](#) and burned down Enryakuji, which had threatened him with its military power. Monks' militias are not an exclusively Japanese phenomenon but are found across much of the Buddhist tradition. See also [HUGUO FOJIAO](#).

[Sōhō Myōchō](#). [alt. Shūhō Myōchō] (宗峰妙超) (1282–1337/8). Japanese [ZEN](#) master of the [RINZAISHŪ](#); commonly known as [DAITŌ KOKUSHI](#) (State Preceptor Great Lamp). Daitō was a native of Harima in present-day Hyōgo prefecture. At the age of ten, he entered the nearby [TENDAI](#) monastery of Engyōji on Mt. Shosha and received Tendai training under a [VINAYA](#) master Kaishin (d.u.). Later, Daitō visited the Zen master [KŌHŌ KENNICHI](#) at the monastery of Manjuji in Kamakura and received the full monastic precepts. In 1304, Daitō began his training under [NANPO JŌMYŌ](#) at the temple of Tōkōan in Kyoto. He followed Nanpo to Manjuji in Kyōto and again to [KENCHŌJI](#) in Kamakura. At Kenchōji, Daitō had his first awakening. According to legend, Daitō is said to have been instructed by Nanpo to continue his post-[SATORI](#) (awakening) cultivation for another twenty years. During this period of training, Daitō is said to have once lived as a beggar underneath the Gojō Bridge in Kyōto. Shortly after his teacher's death in 1308, Daitō left for Kyōto where he did indeed live for twenty years in a hermitage known as Ungoan. Later, Daitō moved to the Murasakino district in Kyōto and established the monastery of [DAITOKUJI](#). In 1323, he was summoned by retired Emperor Hanazono (r. 1308–1318) and was given the title State Preceptor Master Daitō. Daitō also received the patronage of Emperor Godaigo (r. 1318–1339). They elevated the status of Daitokuji to that of [NANZENJI](#), then the most powerful [GOZAN](#) monastery in Kyōto. Daitō and

Nanpo's lineage, now known as the Ōtōkan, came to dominate the Rinzai Zen tradition.

sojae toryang. (消災道場). In Korean, “calamities-solving ritual”; one of the four most important annual rituals performed at court during the Koryŏ dynasty (918–1392), second only to the [YŎNDŬNGHOE](#) (lantern ritual). The sojae toryang is a representative of the esoteric Buddhist rituals that became popular in Korea during the Koryŏ dynasty. The first record of the ritual's performance dates from 1046, the last from 1399, a short time after the demise of the dynasty. This ritual to prevent natural calamities probably derives originally not from Buddhist cosmology but from the theory of heavenly retribution that was foundational in traditional East Asian thought. Koryŏ's ritual system, modeled after that of Tang China, presumed that cosmological influences dominated human life and activities. Since droughts, floods, and epidemics were considered “calamities from Heaven” (Ch'ŏnjae), and indicated Heaven's dissatisfaction with the quality of terrestrial governance, the sojae toryang sought to draw on various religious and astral powers in order to ward off these threats and to enhance the longevity of its royal sponsors. Koryŏ kings lavished riches on the monasteries whose monks performed these rituals, particularly when Koryŏ was threatened by foreign invasion or occupation. This concern explains why the majority of the recorded performances of the sojae toryang occurred during the reigns of kings Kojong (1231–1259), Wŏnjong (1259–1274), and Ch'ungnyŏl (1274–1308), who all ruled during the period of Mongol domination in Korea. During King Wŏnjong's thirteen-year reign, for example, the sojae toryang was performed twenty-three times, or about three times every two years. Historical sources provide little information on how the ritual was actually performed, but its conduct can be inferred from esoteric Buddhist sources. These sources require the monks to establish a purified ritual venue, install a buddha image there, and then make offerings of incense, flowers, and lanterns; once the site is prepared, they are then to recite various codes or spells ([DHĀRANĪ](#)) in order to invoke the power of the [BODHISATTVA](#)s, the seven stars of the Big Dipper (see [BEIDOU QIXING](#)), the gods of the zodiacal mansions and the constellations, the sun and moon, etc., to overcome calamities and transform disasters into blessings. In the case of the Koryŏ dynasty, the ritual was always held at court, and the king himself was both participant and presider at the ritual, indicating the close association between court and the religion during this period in Korean history.

Sōjiji. (總持寺). In Japanese, “**DHĀRANĪ** Monastery”; one of the two main monasteries of the **SŌTŌSHŪ** of **ZEN** Buddhism, located in Tsurumi, Yokohama. This monastery was originally established on the Noto peninsula (present-day Ishikawa prefecture) in 740 as Morookadera by the monk **GYŌGI** (668–749), who also founded **TŌDAJI**. In 1321, **KEIZAN JŌKIN** (1268–1325), the founding patriarch of the Sōtō Zen institution, came into possession of this local monastery, which he renamed Sōjiji. In 1322, Sōjiji were sanctioned as an official monastery by Emperor Godaigo (r. 1318–1339), an event that is traditionally considered to mark the official establishment of Sōtō as an independent Zen institution in Japan. Keizan later entrusted Sōjiji to his disciple Gasan Jōseki (1276–1366). Sōjiji was an important government-sponsored monastery during the Muromachi and Edo periods and its status rivaled that of the other main Sōtō monastery, **EIHEIJI**; in its heyday, the monastery is said to have had more than seventy buildings within its precincts. After burning to the ground in 1898, the monastery was rebuilt in Yokohama in 1911, because Sōtō Zen leaders calculated that a location near Tokyo would have strategic value for the growth of the sect. Sōjiji is entered through a gigantic copper-roofed gate (sanmon) that was built in 1969. The butsuden, or main buddha hall, was completed in 1915 and enshrines a statue of **ŚĀKYAMUNI** with his disciples **MAHĀKĀŚYAPA** and **ĀNANDA**. There is a founders’ hall (taisodō) for Keizan Jōkin that displays statues of the major historical figures of the Sōtō Zen tradition and that also doubles as a lecture hall; in addition, there is a large **SAMGHA** hall (daisōdō) for ordaining and training monks, which displays a statue of the **BODHISATTVA MAÑJUŚRĪ**. Other buildings at the monastery include additional living quarters for the monks, a hall for Emperor Godaigo, and a hōmotsukan, or treasure house, full of important cultural properties held at the monastery, including a hanging tapestry from the Edo period that originally served as a cover for the chair of senior monks delivering sermons, and several precious buddha images.

sōjō. (僧正). In Japanese, “**SAMGHA** primate”; one of the two earliest ecclesiastical positions created within the Japanese Buddhist church. According to the *Nihon shoki* (“Chronicles of Japan”), the first person to hold this position was the early-seventh-century Korean monk **KWALLŪK** (d.u.). Kwallŭk came to Japan in 602 from the southwestern Korean kingdom of Paekche and was appointed as sōjō in 624, when the government, alarmed by a widespread lack of discipline among the monks, established the sōgō (office of monastic affairs) to supervise national

ecclesiastical affairs. The sōjō was later divided into three sub-positions, each of which was appointed by the government on the recommendation of the Buddhist order. In the early-Heian period, monks from the Nara Buddhist establishment (see [NARA BUDDHISM, SIX SCHOOLS OF](#)) dominated the sōjō positions. By the middle of the ninth century, however, monks from the [TENDAISHŪ](#) and [SHINGONSHŪ](#) schools held most of the appointments, and during the Kamakura period, Zen and pure land monks also were appointed sōjō. By the time of the Tokugawa regime, almost all Buddhist sects, including Tendai, Shingon, [PURE LAND](#), and [NICHIRENSHŪ](#), had adherents who were appointed to the sōjō positions. Once the Meiji government in 1872 split Buddhist ecclesiastical positions off from official government posts, each sect then established its own sōjō positions, each with slightly different administrative systems.

[Sōka Gakkai](#). (創價學會/創価学会). In Japanese, “Value-Creating Society,” a Japanese Buddhist lay organization associated with the [NICHIRENSHŪ](#), founded by [MAKIGUCHI TSUNESABURO](#) (1871–1944) and his disciple Toda Jōsei (1900–1958). Formerly a teacher, Makiguchi became a follower of Nichiren’s teachings, finding that they supported his own ideas about engendering social and religious values, and converted to [NICHIREN SHŌSHŪ](#) in 1928. In 1930, he established a lay organization under the umbrella of the Nichiren Shōshū, which initially called itself the Sōka Kyōiku Gakkai (Creating Educational Values Society), and led its first general meeting. After its inauguration, the society began to take on a decidedly religious character, focusing on missionary work for Nichiren Shōshū. As the Pacific War expanded, Makiguchi and his followers refused to cooperate with state-enforced [SHINTŌ](#) practices, leading to a rift between them and [TAISEKIJI](#), the head monastery of Nichiren Shōshū. In 1943, the society almost disintegrated with the imprisonment of Makiguchi and Toda, along with twenty other leaders charged with lèse-majesté and violations of the Public Order Act, which required each family to enshrine a Shintō talisman in its home. Makiguchi died in 1944 in prison, but Toda survived and was released on parole in July 1945. After his release, Toda took charge of the organization, renaming it Sōka Gakkai in 1946. He successfully led a massive proselytization campaign that gained Sōka Gakkai and Nichiren Shōshū vast numbers of new converts and by the late 1950s, upwards of 750,000 families had become adherents. After Toda died in 1958, [IKEDA DAISAKU](#) (b. 1928) became its third president and the society grew even more rapidly in Japan during the 1960s and the 1970s. In 1975, Ikeda also founded Sōka Gakkai International (SGI), which

disseminated the society's values around the world. Sōka Gakkai publishes numerous books and periodicals, as well as a daily newspaper in Japan. During this period, Sōka Gakkai also became involved in Japanese domestic politics, establishing its own political party, the Kōmeitō (Clean Government Party) in 1964, which became completely separate and independent from the Sōka Gakkai in 1970. The society also supported Taiseikiji with massive donations, including raising the funds for a new main shrine hall for the monastery. Sōka Gakkai, like other groups in the Nichiren lineage, focuses on worship of the [SADDHARMAPUNDARĪKASŪTRA](#) ("Lotus Sūtra") and its adherents are expected to chant daily the title ([DAIMOKU](#)) of the sūtra, [NAM MYŌHŌRENKĒKYŌ](#), as well as recite the most important sections of the sūtra and study Nichiren's writings. Sōka Gakkai believes that all beings possess the capacity to attain buddhahood and emphasizes the ability of each person's buddha-nature to overcome obstacles and achieve happiness. Sōka Gakkai followers can accomplish these goals through a "human revolution" (the title of one of Ikeda's books) that creates a sense of oneness between the individual and the environment, thus demonstrating how each individual can positively affect the surrounding world. As tensions grew between the Nichiren Shōshū and its increasingly powerful lay subsidiary, Nikken (b. 1922), the sixty-seventh chief priest of Nichiren Shōshū, tried to bring its membership directly under his control. His efforts were ultimately unsuccessful and he excommunicated the Sōka Gakkai in 1991, forbidding Sōka Gakkai followers from having access to the holiest shrines associated with Nichiren. Sōka Gakkai remains at the center of controversy because of its strong emphasis on recruitment and proselytization, its demonization of enemies, and a mentorship structure within the organization that some claim creates a cult of personality centered on Ikeda. Sōka Gakkai remains among the largest Buddhist organizations in the Western world.

[Sōkkuram](#). (石窟庵). In Korean, "Stone Grotto Hermitage"; a Silla-period, man-made grotto located high on Mt. T'oham behind the monastery of [PULGUKSA](#), which houses what is widely considered to be the most impressive buddha image in Korea. According to the [SAMGUK YUSA](#) ("Memorabilia of the Three Kingdoms," written c. 1282–1289), the master builder Kim Taesōng (d. 774), who also designed Pulguksa, constructed the cave as an expression of filial piety toward his deceased parents. However, because the grotto directly faces the underwater tomb of the Silla king Munmu (r. 661–680) in the East Sea/Sea of Japan, the site may also have been associated with a funerary cult surrounding

the Silla royal family or with state-protection Buddhism (K. hoguk Pulgyo; C. [HUGUO FOJIAO](#)). The construction of both monasteries began around 751 CE, during the reign of the Silla king Kyōngdōk (r. 742–764), and the grotto temple was completed a few years after Kim Taesōng’s death in 774 CE. The site was originally named [SŎKPULSA](#), or “Stone Buddha Monastery.” Since the Korean peninsula has no natural stone grottos like those found in India or Central Asia, the cave was excavated out of the mountainside, and some 360 large granite blocks in various shapes were used to create the ceiling of the shrine. In addition, granite carvings were attached to the inner walls. The result was what appears for all intents and purposes to be a natural cave temple. The finished grotto combines two different styles of Buddhist architecture, the domed rotunda design of the [CAITYA](#) halls of India and the cave-temple design of Central Asia and China as seen in [DUNHUANG](#) and others sites along the [SILK ROAD](#). At the Sōkkuram grotto, a rectangular antechamber with two guardians carved on either side leads into a short, narrow passageway that opens onto the thirty-foot-(nine m.) high domed rotunda. In the vestibule itself are carvings of the four heavenly kings as guardians of the dharma. The center of the rotunda chamber enshrines the Sōkkuram stone buddha, a seated-buddha image in the “earth-touching gesture” ([BHŪMISPARŚAMUDRĀ](#)). This image is 10 ft. 8 in. (3.26 meters) in height and carved from a single block of granite; it sits atop a lotus-throne base that is 5 ft. 2 in. (1.58 meters) high. The image is generally accepted to be that of [ŚĀKYAMUNI](#) Buddha, although some scholars instead identify it as an image of [VAIROCANA](#) or even [AMITĀBHA](#). In the original layout of the grotto, the morning sunshine would have cascaded through the cave’s entrance and struck the jeweled [ŪRNĀKEŚA](#) in the Buddha’s forehead. On the inner walls surrounding the statue are thirty-nine carvings of Buddhist figures, including the Indian divinities [BRAHMĀ](#) and [INDRA](#), the two flanking bodhisattvas [SAMANTABHADRA](#) and [MAÑJUŚRĪ](#), and the buddha’s ten principal [ARHAT](#)-disciples. On the wall directly behind the main image is a carving of the eleven-headed [AVALOKITEŚVARA](#). The combination of exquisite architectural beauty and sophisticated design is widely considered to be the pinnacle of Silla Buddhist culture. Despite its fame and reputation during the Silla kingdom, Sōkkuram fell into disrepair during the suppression of Buddhism that occurred during the Chosōn dynasty (1392–1910). Almost everyone except locals had forgotten the grotto until one rainy day in 1909, when a weary postman traveling over the ridge of Mt. T’oham accidentally rediscovered the grotto as he sought shelter from a sudden thunderstorm. He found a narrow opening to a small cave, and as his eyes

adjusted to the dark, he was startled to see the massive stone image of the Buddha along with exquisite stone wall carvings. In 1913, the Japanese colonial government spent two years dismantling and repairing the structure, using cement and iron, which later collected moisture and began to decay, threatening the superstructure of the grotto. In 1920, the earth was removed in order to secure the foundation and tar and asphalt were used to waterproof the roof. No further renovations were made until a UNESCO survey team came to evaluate the cave temple and decided to aid the Korean government in further restoring the site between 1961 and 1964. Nowadays, visitors enter the grotto from the side, rather than its original front entrance, and must view the buddha image from behind a protective glass window. Sōkkuram is Korean National Treasure No. 24 and was also added to the list of UNESCO World Heritage Sites in 1995.

[Sōkpulsa](#). (K) (石佛寺). See [SÖKKURAM](#).

[sokushin jōbutsu](#). (C. jishen chengfo; K. chūksin sōngbul 即身成佛). In Japanese, “attainment of buddhahood in this very body.” This doctrine is generally first attributed to [KŪKAI](#) (774–835), the founder of the [SHINGONSHŪ](#), who argued in a work entitled *Sokushin jōbutsugi* (“The Meaning of Attaining Buddhahood in This Very Body”) that the ultimate goal of practice was to attain awakening in this lifetime. By strictly adhering to Kūkai’s ritualization of the body (through gestures, or [MUDRĀ](#)), speech (through spells, or [MANTRA](#)) and mind (as a [MANDALA](#)), one could therefore align oneself with the cosmic buddha, [MAHĀVAIROCANA](#), and become a buddha in one’s own right. Kūkai’s contemporary, [SAICHŌ](#) (767–822) of the [TENDAISHŪ](#), located the notion of sokushin jōbutsu in the exoteric teachings of the [SADDHARMAPUNĀRĪKASŪTRA](#) (“Lotus Sūtra”). By following its teachings, he believed that anyone could achieve universal salvation and become a buddha. In contrast to Kūkai’s esoteric interpretation of sokushin jōbutsu, however, Saichō presumed this process of achieving buddhahood would require several lifetimes to complete. Given the two models, it is easy to understand the appeal of Kūkai’s esoteric version, which promised immediate transformation into buddhahood, over the traditional Tendai doctrine cited by Saichō. As the interest in esotericism increased among the aristocracy during the Heian period (794–1185), Tendai Buddhism became more associated with esoteric ritual and less with practice derived from the *Saddharmapūṇḍarīkasūtra*. This shift toward esoteric Buddhism was completed under the Tendai master [ANNEN](#) (841–889?), who asserted not only that sokushin

jōbutsu was attainable in a single lifetime, but that it was central to the Tendai ordination procedure. Given that the two dominant institutions of Heian Buddhism relied heavily on the doctrine of sokushin jōbutsu, it is not surprising that [SHUGENDŌ](#), a movement heavily influenced by both of these schools, would also develop its own interpretation of this doctrine. The means Shugendō advocated for attaining buddhahood, however, were quite varied, as most Shugen mountains operated independently up until the Tokugawa period. One common ritual performed in both the Yoshino/[KUMANO](#) region and on Mt. Haguro, for instance, was passage through the ten realms of being (J. jikkai, S. [DAŚADHĀTU](#)). Physical structures placed along a pilgrimage route, such as torii gates and steps, served as symbolic gateways through the realms. By progressing from the lowest realm of the hells (see S. [NĀRAKA](#)) to the highest realm of the buddhas, the pilgrim could ritually enact his journey toward his own attainment of buddhahood. Furthermore, the concept of mountain geography as a maṇḍala in Shugendō created a space through which one entered the sacred realm of buddhahood. By crossing the border separating the mundane from the sacred, the practitioner would undergo a spiritual transformation by directly encountering the Buddha and immediately awakening. In a more severe example, ascetics at Mt. Yudono known as isse gyōnin (lifetime ascetics) practiced sokushin jōbutsu during the Tokugawa period by undergoing strict austerities in the mountains for from one to three thousand days. Once this period ended, a handful of these gyōnin ascetics, following the alleged precedent of Kūkai, entered a nearly airtight, underground chamber to die. Soon afterward, they were mummified as buddhas “in this very body” and venerated by their followers. During the Kamakura period, [NICHIREN](#) (1222–1282), who, like Saichō, emphasized the superiority of the *Saddharmapuṇḍarīkasūtra*, further claimed that chanting the title ([DAIMOKU](#)) of the sūtra could lead to the attainment of buddhahood in this very body. Relying on the [FAHUA XUANYI](#), an important commentary on the *Saddharmapuṇḍarīkasūtra* by the Chinese monk [TIANAI ZHIYI](#) (538–597), Nichiren claimed that the essence of the sūtra was distilled in its title and that chanting the title (see [NAMU MYŌHŌRENKĒKYŌ](#)) could therefore lead to the attainment of sokushin jōbutsu.

[solitary buddha](#). See [PRATYĒKABUDDHA](#).

[Sōltu Yuhyōng](#). (雪竇有炯) (1824–1889). Korean [SŌN](#) master of the Chosŏn dynasty, also known as Pongmun and Ponggi. In 1842, Sōltu entered the

monastery under the guidance of Chǒnggwan K'waeil (d.u.) on Mt. Paegyang, and the following year he received the precepts from Ch'immyǒng Hansǒng (1801–1876). Sǒltu studied at various places throughout the country before visiting the Sǒn master [PAEKPA KÜNGSÖN](#). In 1870, Sǒltu began restoration of the monastery of Pulgapsa on Mt. Moak. In 1889, he taught Sǒn meditation at the monastery of Ponginsa at the request of Hwanong Hwanjin (1824–1904). Sǒltu became ill shortly after his trip to Ponginsa, so he entrusted his robe and bowl to his disciple Sǒryu Ch'ǒmyǒng (1858–1903) and retired to the hermitage of Sorimgul, where he passed away in 1889. Sǒltu was a prolific writer whose works include the *Haejǒng nok*, *T'ongbang chǒngan*, *Sǒnwǒn soryu*, *Sǒltu sijip* and others. His *Sǒnwǒn soryu* was written as a response to [CH'ŬI ŬISUN](#) (1786–1866) and [UDAM HONGGI](#) (1822–1881) who criticized Paekp'a's influential treatise, *Sǒnmun sugyǒng* (“Hand Mirror of the Sǒn School”).

[Somapura](#). A large Buddhist monastery in northern Bangladesh, near the modern town of Ompur, probably built in the early-ninth century by the Pāla dynasty ruler Devapāla (r. 810–850 CE), the son of Dharmapāla, who had built [VIKRAMAŚĪLA](#). Somapura was a mahāvihāra, or “great monastery,” under royal supervision and was known as the Dharmapāla Mahāvihara of Somapura. The monastery, which had a unique architectural style, included 177 monks' cells organized on four floors around a courtyard. It was one of the largest monasteries of its day, probably housing some eight hundred monks at the apex of its influence. The most architecturally significant element of the monastery is the Pāhārpur Temple, which is unlike other Indian temples, Hindu or Buddhist. It has a cruciform base, a terraced structure with inset chambers, and a pyramid form, quite similar to Buddhist temples in Burma, Java, and Cambodia. It remains a matter of controversy whether Somapura monastery might have served as a model for Southeast Asian temple architecture. In the mid-eleventh century, the monastery was burned by a Hindu king, but seems to have been restored. It is said that [ATISA DĪPAMKARASŪJĀNA](#) stopped at Somapura on his way to Tibet, translating there [BHĀVAVIVEKA](#)'s [MADHYAMAKARATNAPRADĪPA](#) into Tibetan.

[Somdej Toh](#). [alt. Somdet Toh] (1788–1872). The popular name of Phra Buddhacharn Toh Phomarangsi, one of the most famous Thai monks of the nineteenth century. He was born in Kamphaeng Phet province and, according to some accounts, was the son of King Rāma II. After his ordination, he distinguished himself as a scholar of Pāli scriptures and was eventually

appointed as preceptor to Prince Mongkut (later King [RAMA IV](#)) when the prince was ordained as a novice. Somdej Toh retired to the forest shortly thereafter, returning to Bangkok when he was summoned by Mongkut after his coronation as king. He remained a mentor to the king throughout his life and many stories are told of their friendship. He served first as abbot of Wat Rakhang, across the river from the Thai royal palace. Somdej Toh was renowned for his eloquent sermons and his skills as a poet, as well as for being a meditation and [VINAYA](#) master. He also was famous as a maker of highly prized amulets. After his death, he became the object of a devotional cult, with mediums who claim to speak in his voice.

Sŏn. (禪). In Korean, “Meditation”; the Korean branch of the broader East Asian Chan school, which includes Chinese [CHAN](#), Japanese [ZEN](#), and Vietnamese [THIỀN](#). Sŏn is the Korean pronunciation of the Chinese term [CHAN](#), which in turn is a transcription of the Sanskrit term [DHYĀNA](#), or meditative absorption. More specifically, Sŏn denotes the Korean Buddhist traditions that trace their origins back to the Chinese Chan school, or [CHAN ZONG](#). Koreans such as [CHŎNGJUNG MUSANG](#) were important participants in the development of the new teachings of the Chan zong on the Chinese mainland; in addition, Korean pilgrims were bringing this tradition home to the peninsula no later than the early-ninth century during the Silla dynasty. At least nine of these pilgrims are known to have established their own Sŏn lineages, which are traditionally referred to as the Nine Mountains School of Sŏn ([KUSAN SŎNMUN](#)). Eight of these nine traditions were associated with the lineage of [MAZU DAOYI](#) and the [HONGZHOU ZONG](#), which was known for its iconoclastic approach to Chan pedagogy. The Sŏn tradition flourished during the Koryŏ dynasty largely through the efforts of [POJO CHINUL](#) and his successor [CHIN’GAK HYESIM](#), and the late-Koryŏ and early-Chosŏn figures [T’AEGO POU](#), [MUHAK CHACH’O](#), and [NAONG HYGŬN](#). During this period, the teachings of masters associated with the Chinese Imje chong (C. [LINJI ZONG](#)) lineage became especially influential in Korea, and Sŏn practice came to focus on the meditative technique of “observing the meditative topic,” or “questioning meditation” (K. kanhwa Sŏn, C. [KANHUA CHAN](#)). The Sŏn schools, like all of the religion, suffered under the centuries-long suppression of Buddhism during the Chosŏn dynasty, which reduced all the different strands of Korean Buddhism to the “two traditions of Sŏn (Meditation) and Kyo (Doctrine)” ([SŎN KYO YANGJONG](#)). Even during this period of crisis, however, Korean Sŏn produced some of its most eminent teachers, including [CH’ŎNGHŎ](#)

[HYUJŎNG](#) and his student [SAMYŎNG YUJŎNG](#). Sŏn was revitalized during the late-nineteenth and early-twentieth centuries thanks to the efforts of such monks as [KYŎNGHŎ SŎNGU](#) and [MAN'GONG WŎLMYŎN](#). Two of the dominant schools of contemporary Korean Buddhism, the [CHOGYE CHONG](#) and [T'AEGO CHONG](#), both consider themselves predominantly Sŏn traditions.

[Soṇā](#). (C. Shuna; J. Shuna; K. Suna 輸那). The Sanskrit and Pāli proper name of an eminent nun declared by the Buddha to be foremost among nuns in her capacity for effort. According to the Pāli account, she belonged to a clan from Sāvatti (S. [ŚRĀVASTĪ](#)) and had ten sons and daughters, whence she acquired the epithet Bahuputtikā, meaning “possessed of many children.” Her husband left home to become a mendicant, after which she distributed her estate among her children. Despite her generosity, her children neglected her in her old age, so she entered the nuns’ order. She devoted herself to serving the other nuns by performing chores and menial tasks for them and in the evening she devoted herself to study. When the Buddha became aware of her efforts, he magically appeared before her to encourage her striving, whereupon she became an [ARHAT](#). Since the other nuns had been in the habit of finding fault with Soṇā despite her services, Soṇā was concerned that they would accrue demerit if they continued to do so now that she had attained arhatship. She devised a display of magical power to demonstrate her superior attainment: in the morning when the nuns arrived at the refectory, she supplied them with water heated not with fire but with the supernatural power ([RDDHI](#)). Recognizing her attainment, the other nuns begged her forgiveness for their previous wrongdoing.

[Soṇa and Uttara](#). [alt. Soṇuttara] (S. *Śroṇa; C. Xunajia; J. Shunaka; K. Sunaga 須那迦; S. Uttara; C. Yuduoluo; J. Uttara; K. Ultara 鬱多羅). According to Pāli sources, two [ARHAT](#) elders dispatched as missionaries to [SUVANNABHŪMI](#) (S. Suvaṇṇabhūmi) to convert its inhabitants to Buddhism; one of nine missions commissioned by the elder [MOGGALIPUTTATIṢṢA](#) after the conclusion of the third Buddhist council ([SAMGĪTI](#); see COUNCIL, THIRD) to propagate the doctrine. When Soṇa and Uttara arrived in Suvaṇṇabhūmi, they subdued a group of ocean-dwelling ogres who used to devour the newborn sons of the king; in memory of this victory, all the princes of the royal house were thereafter named Soṇuttara. The elders then went on to convert sixty thousand inhabitants of Suvaṇṇabhūmi by preaching the [BRAHMAJĀLASUTTA](#). In addition, five hundred noblemen became monks and fifteen hundred women became nuns. The Mons identify

their homeland of Rāmaññadesa in Lower Burma as Suvannabhūmi and date the second foundation of their religion to the mission of Soṇa and Uttara. They attribute the first foundation of the dharma to the elder Gavampati (S. [GAVĀMPATI](#)), who first invited the Buddha to preach in Suvannabhūmi and who, after the Buddha's death, brought thirty-two tooth relics of the Buddha for interment in [STŪPA](#)s throughout the country.

[Sonadandasutta](#). (S. *Suvaṇḍaṇḍasūtra; C. Zhongde jing; J. Shutokugyō; K. Chongdōk kyōng 種德經). In Pāli, “Sermon to Soṇadaṇḍa,” the fourth sutta of the [DĪGHANIKĀYA](#) (a [DHARMAGUPTAKA](#) recension appears as the twenty-second sūtra in the Chinese translation of the [DĪRGHĀGAMA](#)); a discourse delivered by the Buddha to the learned and wealthy brāhmaṇa Soṇadaṇḍa (S. Suvaṇḍaṇḍa) on what makes a person a true brāhmaṇa. Despite the protests of his fellow brāhmaṇas, Soṇadaṇḍa visited the Buddha while the latter sojourned in Campā on the banks of the Gaggarā lake. There, the Buddha convinces Soṇadaṇḍa that family lineage is of no consequence, and that only by virtue and moral action is one rightly called a brāhmaṇa. The Buddha describes how the mendicant refrains from evil deeds through the observance of morality and guards his senses ([INDRIYASAMVARA](#)) with mindfulness (P. sati, S. [SMṚTI](#)) whereby he achieves contentment. He goes on to say that being content, the mendicant becomes glad and calm, whereby he can attain the four meditative absorptions (P. [JHĀNA](#), S. [DHYĀNA](#)). Further, on the basis of having mastered the four meditative absorptions, the mendicant can develop the six higher knowledges or supranormal powers (P. abhiññā, S. [ABHIJÑĀ](#)), which culminate in enlightenment and liberation from the cycle of rebirth. Soṇadaṇḍa was pleased with the discourse and requests that the Buddha, together with a group of his monks, accept a meal from him. At the conclusion of the meal, Soṇadaṇḍa asks the Buddha to pardon him for not showing enough deference to him; the commentary explains that this was because Soṇadaṇḍa had been embarrassed to make obeisance to the Buddha in the presence of his brāhmaṇa colleagues.

[Soṇa-Kolivīsa](#). (S. Śrona-Viṃśatikoti/Śrona-Koṭivimśa; T. Gro bzhin skyes bye ba nyi shu pa; C. Shoulongna/Ershiyi'er; J. Shurōna/Nijūokuni; K. Surongna/Isibōgi 守籠那/二十億耳). Pāli name of an [ARHAT](#) declared by the Buddha to be foremost among his monk disciples in striving energetically. According to the Pāli account, he was born the son of a wealthy man in the country of Campā. Because he had given a precious ring to a [PRATYEKABUDDHA](#) (P. paccekabuddha)

in a previous life, his body was the color of burnished gold. His hands and feet were delicate, and fine curly hair covered his feet. King [BIMBISĀRA](#) of [MAGADHA](#) wished to see the unusual markings of the youth and sent for him. While at the Magadha capital of [RĀJAGRHA](#), Soṇa and eighty thousand companions went to see the Buddha, who was preaching at that time in the city. Impressed by the miraculous powers displayed by Sāgata (S. [SVĀGATA](#)), the Buddha's attendant, Soṇa asked his parents to allow him to enter the order. After his ordination, the Buddha gave Soṇa a subject of meditation ([KAMMATTHĀNA](#)), and Soṇa retired to the Śītavana grove to practice. Soṇa strove diligently, taking up walking meditation as his main practice; however, because he was interrupted by frequent visitors, he made little progress and grew despondent. His feet became blistered and bled, so much so that the meditation path (P. caṅkama, S. [CAṅKRAMA](#)) upon which he walked was soaked in blood like a slaughter house. Seeing this scene, the Buddha instructed Soṇa on how to temper his energy with tranquility, and in due time he attained arhatship. Because of his delicate feet, the Buddha is said to have given Soṇa dispensation to wear sandals of a single layer, even though monks and nuns were required to go barefoot. Soṇa declined the exemption, however, for he did not wish to be treated more leniently than his fellow monks. In response, the Buddha then gave permission to all his monks to use such sandals.

[Soṇa-Koṭikaṇṇa](#). (S. Śroṇa-Koṭikaṇṇa; T. Gro bzhin skyes ma ba bye ba; C. Yi'er; J. Okuni; K. Ŏgi 億耳). Pāli name of an [ARHAT](#) declared by the Buddha to be foremost among monks in eloquence (S. [PRATIBHĀNA](#); P. paṭibhāna). Soṇa's mother was Kālī Kuraragharikā and his father a wealthy merchant. He received the epithet Koṭikaṇṇa (S. Koṭikaṇṇa) because he wore an earring (kaṇṇa) worth a crore ([KOTI](#)). Soṇa's mother had become a stream-enterer ([SROTAĀPANNA](#)) on the night he was born. The monk [MAHĀKĀŚYAPA](#) was a family friend and often visited the family in the town of Kuraraghara. As a young man, Soṇa once traveled with a caravan headed towards Ujjayinī (P. Ujjeni), but along the way got left behind. Continuing the journey alone, he encountered a hungry ghost in the form of a man eating his own flesh. He learned that in an earlier existence the ghost had been a miserly merchant who cheated his customers. He then encountered two ghosts in the form of boys spitting up blood. In a previous life they had criticized their mother for feeding an arhat. Filled with misgiving, he returned to his home and related what he had seen to Mahākāśyapa, after which he requested permission to enter the order. Mahākāśyapa immediately ordained

Soṇa as a novice and after three years gave him the [UPASAMPADĀ](#) higher ordination as a monk (P. bhikkhu, S. [BHIKSU](#)). The delay was caused by the fact that in the outlying town of Kuraraghara it was difficult to gather the quorum of ten monks needed to perform the upasampadā ceremony. Soṇa gained preeminence for perfectly reciting the [ATTHAKAVAGGA](#) for the Buddha, a text he had learned from Mahākāśyapa. To reward his skill, the Buddha granted Soṇa a boon. Soṇa requested to be allowed to ordain new monks using a quorum of only five rather than ten monks to facilitate the performance of the ritual procedure in outlying areas.

[Sōnamsa](#). (仙巖寺). In Korean, “Monastery of the Peaks of the Perfected,” one of the main mountain monasteries of the [T’AEGO CHONG](#) of Korean Buddhism; located on the opposite side of [CHOGYE](#) Mountain from [SONGGWANGSA](#), and near the city of Sunch’ōn, in South Chōlla province. The monastery claims to have been founded in 529 by the legendary Koguryō monk ADO. In 861, the monk [TOSŎN](#) (827–898) enlarged the monastery and gave it its current name Sōnamsa. During the Koryō dynasty, the royal monk [ŬICH’ŎN](#) (1055–1101) expanded the monastery again, making it a center for ecumenical training in both Doctrine ([KYO](#)) and Meditation ([SŎN](#)). The monastery was destroyed during the Japanese Hideyoshi invasions of the late-sixteenth century; rebuilt, it burned again in the eighteenth century and was reconstructed by the monks Nuram Sikhwal (1752–1830) and Haebung Chollyōng (d. 1826) during the reign of the Chosōn King Sunjo (r. 1800–1834). During the Japanese colonial period (1910–1945), Sōnamsa was one of the thirty-one major district monasteries (ponsan) of the Buddhist ecclesiastical administration. After the purification movement (chōnghwa undong) that occurred in Korean Buddhism after the end of Japanese colonial rule and the Korean War, Sōnamsa was the only major mountain monastery to remain under the control of the married monks in the T’aego order. The contemporary [CHOGYE CHONG](#) claims legal title to Sōnamsa and lists it officially as the twentieth of its twenty-five parish monasteries ([PONSA](#)), but has ceded control to the T’aego order. In 1985, the T’aego order opened a center at Sōnamsa to train a new generation of priests in its order. The entrance to Sōnamsa is graced by two bridges, one of which, the Sūngsōn Bridge, is considered one of the most beautiful in Korea, especially when its view is combined with nearby Kangsōllu Tower and a pond that includes a tree-studded island. Sōnamsa also preserves one of the largest hanging pictures (see [KWAEBUL](#), [T’AENGHWA](#)) in Korea, which depicts in intricate detail all the

assemblies of the [AVATAMSAKASŪTRA](#) (K. *Hwaŏm kyŏng*).

[Sŏn chong](#). (禪宗). In Korean, “Sŏn school.” See [SŌN](#).

[Sŏn’ga kwigam](#). (C. Chanjia gujian; J. Zenke kikan 禪家龜鑑). In Korean, “Mirror of the Sŏn House”; one of the most widely read [SŌN](#) texts not only in Korea but also in Japan and China, composed by the Chosŏn-period Sŏn master [CH’ŎNGHŎ HYUJŎNG](#) (1520–1604), a.k.a. [SŌSAN TAESA](#), to whom most modern Korean Sŏn teachers trace their lineage. Hyujŏng composed the text around 1564 by adding his own commentary to excerpts he had culled from about fifty different Buddhist scriptures and [CHAN](#) and Sŏn texts. The text was originally written in literary Chinese, but was first published in a 1569 Korean vernacular (ŏnhae) edition. The first literary Chinese edition was published in 1579; the Chinese edition was introduced into China and Japan and has been frequently reprinted since in all three countries. The text is also included as the last section of Hyujŏng’s *Samga kwigam* (“Mirror of the Three Houses” [of Confucianism, Daoism, and Buddhism]), but that version records only the excerpts without Hyujŏng’s commentary. Hyujŏng wrote the *Sŏn’ga kwigam* as a concise primer of Korean Buddhist doctrines and practices for his students. According to Hyujŏng’s preface and the postface of his disciple [SAMYŎNG YUJŎNG](#) (1544–1610), the primary motive for composing the text was to advocate the fundamental harmony between Sŏn and the scriptural teachings of Buddhism ([KYO](#)). While supporting the unity between these two major strands of the Buddhist tradition, Hyujŏng’s treatment ultimately subordinates Kyo beliefs to Sŏn practices. This approach is adopted from that of the eminent Koryŏ state preceptor [POJO CHINUL](#) (1158–1210). In particular, the text proposes the practical model of “relinquishing Kyo and entering into Sŏn” (sagyŏ ipsŏn), by integrating doctrinal studies and the technique of “questioning meditation” (K. kanhwa Sŏn; C. [KANHUA CHAN](#)) into Chinul’s preferred soteriological schema of sudden awakening/gradual cultivation (K. tono chŏmsu; C. [DUNWU JIANXIU](#)). In addition, the *Sŏn’ga kwigam* also offers the technique of reciting the name of the buddha [AMITĀBHA](#) (K. yŏmbul; C. [NIANFO](#)) as an alternative practice for those of inferior spiritual capacity who are not yet able to cultivate the kanhwa Sŏn technique. The text also outlines the styles and lineages of the “five houses” (see [WU JIA QI ZONG](#)) of the mature Chan school: in particular, the text promotes the [LINJI ZONG](#) as the true heir of the sixth patriarch ([LIUZU](#)) of Chan, [HUINENG](#) (638–713), and presents a different lineage from the traditional one by suggesting that

the four Chan lineages of Linji zong, [GUIYANG ZONG](#), [FAYAN ZONG](#), and [YUNMEN ZONG](#) all originated from [MAZU DAOYI](#) (707–788). The text thus provides a basic framework for the doctrines and practices that most of the modern Korean tradition follows, and thus remains widely read and studied in Korea today.

[Sǒngch'ong](#). (K) (性聰). See [PAEGAM SǒNGCH'ONG](#).

[Song gaoseng zhuan](#). (J. Sō kōsōden; K. Song kosǔng chǒn 宋高僧傳). In Chinese, “Biographies of Eminent Monks [compiled during the] Song dynasty”; a thirty-roll hagiographical collection compiled by the Buddhist historian and [VINAYA](#) master [ZANNING](#) (919–1001). The compilation of the text began in 980 by Song-dynasty imperial edict and was entered into the official canon ([DAZANGJING](#)) in 988. The text records the lives of monks who primarily were active during the period between the early Tang dynasty and the early Song, or some 340 years after the period covered by [DAOXUAN](#)'s (596–667) [XU GAOSENG ZHUAN](#) (“Continued Biographies of Eminent Monks”). The *Song gaoseng zhuan* contains 531 major and 124 appended biographies, for a total of 655 biographies. The text offers valuable material on the Buddhist history of the Tang dynasty, including information that is not recorded in the official dynastic history. The collection is organized according to the ten categories of monastic expertise used in Daoxuan's collection: translators (yijing), exegetes (yijie), practitioners of meditation (xichan), specialists in vinaya (minglü), protectors of the [DHARMA](#) (hufa), sympathetic resonance (gantong), self-immolators ([YISHEN](#)), chanters (dusong), benefactors (xingfu), and miscellaneous (zake). What is noteworthy in comparison to its immediate predecessor is that the number of the monks categorized as exegetes (yijie) was reduced significantly from 246 in Daoxuan's collection to ninety-four in Zanning's. This traditional nonsectarian approach to Buddhist biographical writing was soon supplanted by genealogical collections, such as Daoyuan's (d.u.) 1004 [JINGDE CHUANDENG LU](#), which organized the biographies of Chan monks according to explicit sectarian lineages, and ZHIPAN's (1220–1275) [FOZU TONGJI](#), which did the same for the lineage of the [Tiantai zong](#). The *Song gaoseng zhuan* is not included in the Korean Buddhist canon ([KORYŎ TAEJANGGYŎNG](#)), but does appear in Chinese canons compiled during the Song, Yuan, and Ming periods. Unlike its two predecessor collections, the *Song gaoseng zhuan* is included in the Qing-dynasty imperial archive, the *Siku quanshu* (“Complete Library of the Four Repositories”), compiled between 1773 and 1782.

songgu. (J. juko; K. songgo 頌古). In Chinese, “[attaching] verses to ancient [cases]”; a “lettered Chan” ([WENZI CHAN](#)) literary style, which used verses to comment on the prose narratives of [CHAN](#) public cases ([GONG’AN](#)). See [HUANGLONG PAI](#).

Songgwangsa. (松廣寺). In Korean, “Piney Expanse Monastery”; the twenty-first district monastery ([PONSA](#)) of the contemporary [CHOGYE CHONG](#) of Korean Buddhism, located on Mount Chogye in South Chōlla province. Along with [HAEINSA](#) and [T’ONGDOSA](#), Songgwangsa is one of the “three-jewel monasteries” ([SAMBO SACH’AL](#)), which represent one of the three jewels ([RATNATRAYA](#)) of Buddhism; Songgwangsa has traditionally been considered the “[SAMGHA](#)-jewel monastery” (sŭngbo sach’al), because of the succession of sixteen state preceptors (K. kuksa; C. [GUOSHI](#)) who resided at the monastery during the Koryō dynasty. According to legend, Songgwangsa began as a small monastery named Kilsangsa, which was founded by a certain Hyerim (d.u.). In 1197, that monastery was restored and expanded by the eminent Sōn master [POJO CHINUL](#), who moved his [SAMĀDHI](#) and [PRAJÑĀ](#) Community ([CHŎNGHYE KYŎLSA](#)) to the Kilsangsa site. To commemorate the establishment of the expanded monastery, King Hŭijong (r. 1204–1211) renamed it [SUSŎNSA](#), or Sōn Cultivation Community, in 1208. (Still today, the meditation hall at the monastery uses the name Susōnsa.) Chinul’s reliquary [STŪPA](#), the Kamno t’ap (Sweet Dew Reliquary), sits on a hill behind the meditation hall, overlooking the monastery he founded. During the Chosōn dynasty, Songgwang, the original name of the mountain on which Susōnsa was built, became the name of the monastery itself, and the mountain came to be known instead as Mt. Chogye. One of the most famous buildings at the monastery is the Kuksa chōn (State Preceptors Hall), built in 1369 and now listed as Korean National Treasure no. 56, which enshrined early Chosōn-period portraits ([CHINYŎNG](#)) of Chinul and the sixteen state preceptors at Songgwangsa. (The portraits were themselves collectively listed as cultural treasure no. 1043.) The portraits were stolen in 1995 in a brazen late-night heist and only three have been recovered. In 1969, Songgwangsa was elevated to the status of an ecumenical monastery ([CH’ONGNIM](#)), and is one of the five such centers in the contemporary Chogye order, which are all expected to provide training in the full range of practices that exemplify the major strands of the Korean Buddhist tradition. Songgwangsa is thus also known as the Chogye Ch’ongnim.

Songshan. (J. Sūzan; K. Sungsan 嵩山). In Chinese, “Lofty Mountain”; sacred mountain located in northern Henan province. Mt. Song, also known as Zhongyue (Middle Marchmount), belongs to what is known as the wuyue, or five marchmounts. Mt. Song is actually a mountain range consisting of two groups of peaks. To the east there are twenty-four peaks known collectively as Taishi, and to the west twenty-six peaks known as Shaoshi. Since ancient times, Mt. Song has been considered sacred. Emperors frequently made visits to the mountain and many who sought physical immortality found it to be an ideal dwelling place. Mt. Song has also been the home of many Buddhist monks. Sometime during the Han dynasty, a monastery known as Fawangsi (Dharma King Monastery) was built on Mt. Song. For centuries, the monastery received the support of many emperors, such as Emperor Wendi of the Sui dynasty, who renamed it Shelisi ([ŚARĪRA](#) Monastery), Emperor Taizong (r. 626–649) who renamed it Gongdesi (Merit Monastery), and Emperor Daizong (r. 762–779) who renamed it Wenshushili Guangde Bao’ensi (Mañjuśrī’s Vast Virtue, Requiting Kindness Monastery). During the Song dynasty, the monastery was supported by Emperor Renzong (r. 1022–1063), who once again renamed it Fawangsi. Mt. Song was also the home of the famous monastery of [SHAOLINSI](#), which is claimed to have been built on its Shaoshi peaks by a certain Indian monk named Fotuo (d.u.) in 496. Shaolinsi is perhaps best remembered as the home of the semilegendary Indian monk [BODHIDHARMA](#), who is presumed to have dwelled in a cave nearby for nine years, engaged in [BIGUAN](#) (wall contemplation). To the west of Fawangsi, there was also a monastery by the name of Xianjusi (Tranquil Dwelling Monastery), which had once been the private villa of Emperor Xuanwudi (r. 499–515) of the Northern Wei dynasty. Xianjusi was the residence of the meditation master Sengchou (480–560), and also [PUJI](#) (651–739), the disciple of [CHAN](#) master [SHENXIU](#), and his disciple [YIXING](#). Other monasteries such as Yongtaisi, Fengchansi, and Qingliangsi were also built on Mt. Song.

Sōngu. (K) (惺牛). See [KYŎNGHŎ SŎNGU](#).

Sōnirei. (僧尼令). In Japanese, “Regulations for Monks and Nuns”; a decree issued in 701 by the Japanese imperial court to regulate the activities of Buddhist clerics; the extant twenty-seven-article recension of these regulations was codified within the *Yōrō ritsurei* (“Civil and Penal Codes of the Yōrō Era”), which was compiled in 718 and promulgated in 757. The *Sōnirei* is believed to

be modeled after the Tang-dynasty code regulating the activities of Daoist and Buddhist clerics, the *Daoseng ge*. The *Sōnirei* was also based on the traditional Buddhist precepts of the Chinese translation of the [DHARMAGUPTAKA VINAYA](#) (C. [SIFEN LÜ](#)): for example, it stipulated that committing a [PĀRĀJIKĀ](#) transgression, the most serious category of monastic offense—viz., sexual intercourse, murder, grand theft, and false claims of spiritual achievement—required punishment in accord with civil law. The code also forbade monks from consuming alcohol, meat, and strong-smelling herbs, and prohibited a monk from entering a nun’s cell, and vice versa. The *Sōnirei* also reflected the state’s concern about the possible threat to its power from an unregulated Buddhist clergy, as shown in the example of [GYŌGI](#) (668–749), a Hossō ([FAXIANG ZONG](#)) monk who disseminated Buddhism among the commoners and gained widespread popularity as a charismatic teacher and thaumaturge. Many of the *Sōnirei* regulations targeted such maverick clerics: to give but a few examples, monks and nuns were prohibited from predicting good and bad fortunes based on heavenly portents; speaking against the state; studying military tactics; living outside the temples or building a Buddhist chapel off temple grounds; giving scriptures or buddha images to a layperson or teaching outside the monastery; or accumulating private property or wealth. The *Sōnirei* also required all monks and nuns to receive official permission before ordaining. However, violations of the *Sōnirei* were widespread and the regulations had lost much of their effectiveness by the middle of the Heian period.

[Sōnjong sōn](#). (禪宗選). In Korean, the “Meditation ([SŎN](#)) School examination”; see [SŪNGKWA](#).

[Sōn Kyo yangjong](#). (禪教兩宗). In Korean, “Two Traditions of [SŎN](#) (Meditation) and [KYO](#) (Doctrine)”; a Chosŏn-dynasty period designation for the two major strands of the Korean Buddhist tradition. See [KUSAN SŎNMUN](#); [KYO](#); [OGYO KUSAN](#); [OGYO YANGJONG](#); [SŎN](#).

[Sōnmun ch’waryo](#). (禪門撮要). In Korean, “Selected Essentials from the Gate of Sōn”; a Korean anthology of the essential canon of the Korean [SŎN](#) ([CHAN](#)) school, in two rolls. Although the *Sōnmun ch’waryo* is often attributed to the late-Chosŏn-period Sōn master [KYŎNGHŎ SŎNGU](#) (1849–1912), its authorship remains a matter of debate. The text uses as its primary source material the *Pōphae pobŏl* (“Precious Raft on the Ocean of Dharma”), which was compiled in 1883 at Kamnosa. The *Sōnmun ch’waryo* contains texts that are foundational

to the Korean Sōn tradition. The first roll consists of the writings of the Chinese Chan patriarchs and teachers: the *Xuemo lun* (“Treatise of the Blood Lineage”), the *Guanxin lun* (“Treatise of Contemplating the Mind,” sometimes otherwise attributed to [SHENXIU](#) [606?–706]), and the [ERRU SIXING LUN](#) (“Treatise on the Two Accesses and Four Practices”), all attributed to the first Chan patriarch, [BODHIDHARMA](#); the *Xiuxin yao lun* (“Treatise on the Essentials of Cultivating the Mind”), attributed to the fifth patriarch [HONGREN](#) (600–674); the *Wanleng lu* (“Wanleng Record”) and the [CHUANXIN FAYAO](#) (“Essential Teachings on Transmitting the Mind”), attributed to [HUANGBO XIYUN](#) (d. 850); the *Mengshan fayu* (“Mengshan’s Dharma Discourses”) composed of eleven dharma-talks by five masters including Mengshan Deyi (1231–1308) and [NAONG HYGŪN](#) (1320–1376); and an excerpt from the *Canchan jingyu* (“Words of Admonition on Investigating Chan”) attributed to Boshan Wuyi (1575–1630). The second roll consists of the writings of eminent Korean Sōn monks from the Koryŏ and Chosŏn periods: [POJO CHINUL](#)’s (1158–1210) [SUSIM KYŎL](#) (“Secrets on Cultivating the Mind”), *Chinsim chiksŏl* (“Straight Talk on the True Mind”), *Kwŏnsu Chŏnghye kyŏlsa mun* (“Encouragement to Practice: The Compact of the Samādhi and Prajñā Community”), and [KANHWA KYŎRŪI NON](#) (“Resolving Doubts About Observing the Hwadu”); the [SŌNMUN POJANG NOK](#) (“Record of the Treasure Trove of the Sōn Tradition”) and the *Sŏnmun kangyo* (“Essentials of the Sōn Gate”), both attributed to [CH’ŌNCH’AEK](#) (b. 1206); and the *Sŏn’gyo sŏk* (“Explication of Sōn and Kyo”) attributed to [CH’ŌNGHŎ HYUJŎNG](#) (1520–1604). The first roll of the *Sŏnmun ch’waryo* was published in 1907 at the monastery of Unmunsa and the second in 1908 at [PŌMŎSA](#). Among the 118 total xylographs of the book, the seventy-eighth and 118th xylographs list the names of people involved in the publication of the text, such as proofreaders, transcribers, and engravers, as well the donors, government officials, and landed gentry who contributed to the cost of the publication.

[Sŏnmun pojang nok](#). (禪門寶藏錄). In Korean, “Record of the Treasure Trove of the Sōn Tradition”; an anthology, in three rolls, of stories excerpted from various Chinese [CHAN](#) and Korean [SŌN](#) texts. Although the preface of the *Sŏnmun pojangnok* was written in 1293 by the Koryŏ [CH’ŌNTAE](#) (Ch. [TIAN TAI](#)) monk [CH’ŌNCH’AEK](#) (1206–?) to whom it is attributed, the exact authorship of the anthology is still a matter of some debate. The epilogue to the text was written in 1294 by the Koryŏ lay Buddhist literatus Yi Hon (1252–1312). The first roll, “The Gate That Compares Sōn and Kyo” (*Sŏn’gyo taebŏn mun*) advocates that

Sōn is distinct from, and surpasses, [KYO](#) (Doctrinal Teachings) because, unlike Kyo, Sōn directly reveals Buddhist truth without relying on verbal explanation. The second roll, “The Gate through which all Kyo Lecturers Return and Yield” (Chegang kwibok mun) illustrates this superiority of Sōn over Kyo by citing several examples in which Kyo monks were embarrassed, or guided to an authentic awakening, by Chan or Sōn monks. The third roll, “The Gate Revered and Trusted by Kings and Vassals” (Kunsin sungsin mun) includes stories of kings and government officials respecting and honoring Chan and Sōn monks. One of the most interesting stories collected in the *Sōnmun pojang nok* relates to the otherwise-unknown Patriarch Chin’gwi (Chin’gwi chosa). The story is recited twice in the first roll and once in the third, excerpted respectively from the *Talma millok* (“Secret Record of Bodhidharma”), the *Haedong ch’iltae nok* (“Record of the Seven Generations of the Patriarchs of Haedong [Korea]”), and the *Wimyōngje somun chegyōng p’yōn* (“Section on the Emperor Ming of Wei Inquires about the Sūtras”), none of which are extant. The story is extremely controversial, because it states that because [ŚĀKYAMUNI](#) Buddha’s awakening under the [BODHI TREE](#) was still imperfect, he continued to wander looking for guidance, until he met a Chan patriarch in the Snowy Mountains (Himālaya) who was finally able to lead him to true awakening. Later, the renowned Chosōn monk SŌNSAN HYUJŌNG also included the same story in his *Sōn’gyo sōk* (“Exposition of Sōn and Kyo”), but cited it instead from the *Pōmil kuksa chip* (“Collected Works of the State Preceptor Pōmil”), which is also not extant. However, since neither the story itself nor even the titles of any of the three texts cited in the *Sōnmun pojang nok* are found in any Chinese Buddhist sources, it is presumed that the story itself was fabricated in Korea sometime between the times of PŌMIL (810–889) and Ch’ōnch’aek. The *Sōnmun pojang nok* is now embedded in the [SŌNMUN CH’WARYO](#) and is also published in volume six of the *Han’guk Pulgyo chōnsō* (“Collected Works of Korean Buddhism”).

[Sōnmun yōmsong chip](#). (禪門拈頌集). In Korean, “Collection of Analyses and Verses on [Ancient Precedents] of the Sōn School,” the first and largest indigenous Korean kongan (C. [GONG’AN](#), J. kōan; public case) anthology, compiled in thirty rolls by [CHIN’GAK HYESIM](#) (1178–1234) in 1226. The collection covers 1,463 kongan, along with annotations (yōm), verses (song), and variant explanations, such as responding on behalf of a figure who does not answer during the kongan exchange (tae, lit. on his behalf), responding in a different way from the response given in the kongan exchange (pyōl, lit.

differently), and inquiring about the exchange (ch'ōng, lit. soliciting, or verifying). The first xylographic edition of the collection was destroyed in 1232, just six years after its publication, during the Mongol invasions of the Korean peninsula. The second woodblock edition was carved sometime between 1244 and 1248 as a part of the massive project to remake the entire Koryō Buddhist canon ([KORYŎ TAEJANGGYŎNG](#)). The postface to the second edition notes that 347 more kongan was added to the original for a total of 1,472; the current edition, however, includes only 1,463 kongan, a discrepancy that remains unexplained. The collection shows the influence of the Song gong'an literature, especially the *Chanzong songgu lianzhu tongji* (“Comprehensive Collection of the Chan School’s Verses on Ancient [Precedents] That Are a String of Jewels”), compiled in 1179. The ancient cases (viz., the kongan) are arranged in the order of the three jewels ([RATNATRAYA](#)), i.e., the Buddha, dharma, and saṃgha. The first thirty-seven kongan are attributed to [ŚĀKYAMUNI](#) Buddha himself. The next set of twenty-four is derived from Buddhist sūtras, including the [AVATAMSAKASŪTRA](#), the [SADDHARMAPUNDARĪKASŪTRA](#) (“Lotus Sūtra”), the [*ŚŪRAMGAMASŪTRA](#), and the [VAJRACCHEDIKĀPRAJÑĀPĀRAMITĀSŪTRA](#) (“Diamond Sūtra”). The remaining 1,402 kongan are taken from stories of the Indian and Chinese Sōn (Chan) patriarchs and teachers, along with a few unknown lay Sōn masters. The *Sōnmun yōmsong chip* was one of the official textbooks used for the monastic examinations ([SŪNGKWA](#)) in the Sōn school during the early Chosōn dynasty. There are a few important Korean commentaries to the anthology, including the *Sōnmun yōmsong sōrhwa* (“Tales about the Sōn School’s Analyses and Verses”) in thirty rolls, by Hyesim’s disciple Kagun (c. thirteenth century), [IRYŎN](#)’s (1206–1289) *Sōnmun yōmsong sawōn* (“Garden of Affairs on the Sōn School’s Analyses and Verses”) in thirty rolls, and [PAEKŬ’A KŪNGSŎN](#)’s (1767–1852) *Sōnmun yōmsong ki* (“Record of the Sōn School’s Analyses and Verses”) in five rolls.

[Sōnsu](#). (K) (善修). See [PUHYU SŎNSU](#).

[Sōnunsā](#). (禪雲寺). In Korean, “Cloud of Meditation Monastery”; the twenty-fourth district monastery ([PONSA](#)) of the contemporary [CHOGYE CHONG](#) of Korean Buddhism, located on Mount Tosol ([TUSITA](#)) in North Chōlla province. There are several conflicting narratives concerning its foundation, but the prevailing view is that the monastery was founded by the meditation master Kōmdan (fl. c. 577) during the reign of the Paekche king Widōk (r. 554–598). Sōnunsā has a history

of repeated destruction and reconstruction through the Koryŏ and Chosŏn periods. Most of the monastery's present structures, including its main shrine hall ([TAEUNG CHŎN](#)), were built during the reign of the Chosŏn-dynasty King Kwanghae (r. 1608–1623). The monastery is famous for its associations with worship of [KSITIGARBHA](#) (K. Chijang posal) and is well known for its many camellia bushes, one of the few flowers that bloom during the harsh Korean winter.

[sopadhīśesanirvāṇa](#). (P. sopādisesanibbāna; T. phung po lhag ma dang bcas pa'i mya ngan las 'das pa/lhag bcas myang 'das; C. youyu niepan; J. uyonehan; K. yuyŏ yŏlban 有餘涅槃). In Sanskrit, “nirvāṇa with remainder”; one of the two kinds of [NIRVĀNA](#), along with the “nirvāṇa without remainder” ([ANUPADHĪŚESANIRVĀNA](#)), “with remainder” here meaning the residue of the aggregates ([SKANDHA](#)). At the time of his enlightenment under the [BODHI TREE](#), the Buddha achieved the nirvāṇa with remainder, because he had destroyed all causes for future rebirth, but the “remainder” of his mind and body, viz., a substratum ([UPADHI](#)) of existence, persisted. At the time of his death, there was nothing more of the skandhas remaining, thus producing the “nirvāṇa without remainder,” a synonym for [PARINIRVĀNA](#). According to those [MAHĀYĀNA](#) schools which assert that there is only one vehicle ([EKAYĀNA](#)) and that all sentient beings will achieve buddhahood, [ARHAT](#)s who appear to enter the nirvāṇa without remainder at death actually do not do so; for if they did, it would be impossible for them to enter the bodhisattva path. Instead, they enter the uncontaminated realm ([ANĀSRAVADHĀTU](#)), where they remain in states of deep concentration (inside lotus flowers according to some texts) until they are roused by the buddhas and exhorted to abandon their “unafflicted ignorance” ([AKLISTĀJÑĀNA](#)) and proceed on the path to buddhahood. ¶ In a *[PRĀSANGIKA-MADHYAMAKA](#) interpretation, the vision of reality free from all elaborations ([PRAPAÑCA](#)) or dualistic subject-object conceptualization ([GRĀHYAGRĀHAKAVIKALPA](#)) in a state of absorption or equipoise (samāhitajñāna)—a state that occurs on the path of vision ([DARŚANAMĀRGA](#)) and the path of cultivation ([BHĀVANĀMĀRGA](#))—is referred to as “nirvāṇa without remainder,” because there is no appearance of any conventional reality ([SAMVRTI](#)) while the meditator is in that state. In the subsequent state ([PRSTHALABDHAJÑĀNA](#)), conventional reality reappears; this state is called nirvāṇa with remainder. In this explanation, upadhi means any appearance of conventional reality.

Sōsan taesa. (西山大師) (1520–1604). In Korean, “Great Master West Mountain.” See [CH’ŎNGHŎ HYUJŎNG](#).

Soseki. (J) (疎石) (1275–1351). See [MUSŌ SOSEKI](#).

Sot’aesan. (K) (少太山) (1891–1943). Cognomen of the founder of the Korean new religion of [WŎNBULGYO](#). See [PAK CHUNGBIN](#).

Sōtōshū. (曹洞宗). One of the three major branches of the Japanese Zen tradition, along with the [RINZAISHŪ](#) and [ŌBAKUSHŪ](#). The Sōtō tradition traces its lineage back to [DŌGEN KIGEN](#) (1200–1253), who is credited with transmitting to Japan the [CAODONG ZONG](#) line of the Chinese [CHAN](#) teacher [TIANTONG RUJING](#) (1162–1227). After returning from China in 1227, Dōgen settled in Kyōto and sought to create a new Zen community. Because of resistance from the [TENDAI](#) and Rinzai traditions that were already firmly entrenched in the capital (see [ENNI BEN’EN](#)), Dōgen and his followers eventually left for the rural area of Echizen (in the northern part of present-day Fukui prefecture), and founded [EIHEIJI](#), which came to serve as the center of this new Zen institution. In Echizen, Dōgen devoted his time and energy to securing the doctrinal and institutional bases for his community. Dōgen’s venture was aided by several adherents of the [DARUMASHŪ](#), who joined the community. Among them were Koun Ejō (1198–1280), the editor of the seventy-five-roll version of Dōgen’s magnum opus, the [SHŌBŌGENZŌ](#), and Tettsū Gikai (1219–1309), whose lineage subsequently came to dominate the Sōtō school; these monks later served as the second and the third abbots of Eiheiji. Modern scholars believe that a dispute between Gikai and a fellow disciple of Koun Ejō named Gien (d. 1313) concerning the abbotship of Eiheiji prompted Gikai to move to Daijōji in Ishikawa. Gikai was succeeded by his disciple [KEIZAN JŌKIN](#) (1268–1325), who is honored as “the second patriarch” of Sōtō by the school’s modern followers. Keizan revitalized the Sōtō community by synthesizing Zen practice with the worship of local gods ([KAMI](#)), thus appealing to the local populace. Keizan also established [SŌJJI](#), which along with Eiheiji came to serve as the headquarters (honzan) of the Sōtō tradition. Gazan Shōseki (1275–1365), a successor of Keizan, produced several disciples, including Taigen Sōshin (d. c. 1371) and Tsūgen Jakurei (1322–1391), who are credited with the Sōtō school’s rapid expansion throughout Japan during the medieval period. Sōtō monks of this period, especially those belonging to Keizan-Gazan lines, proselytized in the rural areas of Japan, which had been largely neglected by the established Buddhist traditions at court, and attracted a

following among commoners and local elites by engaging in such social activities as building bridges and irrigation systems, as well as by performing rituals that met their religious needs, such as funeral services and mass ordinations (*jukai e*). Each lineage of the Sōtō tradition also developed its own secret *kōan* manuals (*monsan*), only available to selected monks, which gave a received set of questions and answers regarding each *kōan* (C. [GONG'AN](#)). During the Tokugawa period, the Sōtō school developed into one of the largest Buddhist sects in Japan, with a stable financial base, thanks to the mandatory parish system ([DANKA SEIDO](#)) that the government launched, in which every household was required to register as a member of a local Buddhist temple and was responsible for the financial support for the temple. By the middle of the eighteenth century, there were more than 17,500 Sōtō temples across Japan. Although the religious life of the majority of the Sōtō monks and lay followers during this period was focused on practical religious benefits, such as faith healing and funeral services, a restoration movement eventually developed that sought to return to the putative “original teachings and practices” of the founder Dōgen. [MANZAN DŌHAKU](#) (1636–1714) opposed the custom of [IN'IN EKISHI](#), or “changing teachers according to temple,” which was widespread in the Sōtō tradition during the sixteenth and seventeenth centuries and was required in order to inherit the dharma lineage of a temple ([GARANBŌ](#)). Instead, Manzan called for a direct, face-to-face transmission (*menju shihō*) from one master to his disciple (*isshi inshō*), which he claimed Dōgen had established for the Sōtō tradition. After several failed attempts, he finally succeeded in persuading the bakufu government to ban the *in'in ekishi* and *garanbō* practice in 1703. [TENKEI DENSON](#) (1648–1735) and [MENZAN ZUIHŌ](#) (1683–1769) also composed influential commentaries to Dōgen’s magnum opus, the *Shōbōgenzō*, which led to a renaissance in Dōgen studies. After the Meiji reforms of 1868, the two head monasteries of Eiheiji and Sōjiji, which had remained rivals through the Tokugawa period, worked together to reform the school, issuing several standardizations of the rules for temple operation, ritual procedures, *etc.* In 1890, Azegami Baisen (d.1901) from Sōjiji and Takiya Takushū (d. 1897) from Eiheiji edited the layman Ōuchi Seiran’s (1845–1918) introductory work on the *Shōbōgenzō* and distributed it under the title of the *Sōtō kyōkai shushōgi* (“Meaning of Practice and Realization in the Sōtō Sect”). This text played a major role in the popularization of the school’s meditative practice of “just sitting” ([SHIKAN TAZA](#)), which fosters a psychological state in which “body and mind are sloughed off” ([SHINJIN DATSURAKU](#)); sitting practice itself is therefore

regarded as the manifestation of the perfect enlightenment of buddhahood. The Sōtō school continues to thrive today, with the great majority of its more than fourteen thousand contemporary temples affiliated with Sōjiji.

[sotthika/sotthiya](#). (P). See [SVASTIKA](#).

[sound of one hand clapping](#). See [SEKISHU KŌAN](#).

[Southern School \(of Chan\)](#). See [NAN ZONG](#).

[sparśa](#). (P. phassa; T. reg pa; C. chu; J. soku; K. ch'ok 觸). In Sanskrit, “contact,” used technically as the sixth of the twelve links of dependent origination ([PRATĪTYASAMUTPĀDA](#)), referring to the sensory contact between a sense organ ([INDRIYA](#)) and a sense object ([ĀLAMBANA](#)), resulting in a corresponding sensory consciousness ([VIJÑĀNA](#)), with the function of distinguishing an object as pleasant, unpleasant, or neutral. Based on this contact, sensation or feeling ([VEDANĀ](#)), the next link in the chain ([NIDĀNA](#)), occurs. Thus, the term sparśa does not refer to the physical contact of the body and a physical object. It is instead the mental factor by which consciousness “touches” the object, setting in motion the process of cognition. The Buddha said that prior to his enlightenment, he sought to understand the nature of sensation, including its origin ([SAMUDAYA](#)) and its cessation ([NIRODHA](#)). He understood that sensation arose from contact, which in turn arose from the coming together of an object and one of the six sense organs ([SADĀYATANA](#)), such that if the six sense organs ceased, contact would cease, and sensation would cease. The six sense organs are sometimes referred to as the sparśāyatana, the “bases of contact” or “sources of contact.”

[Spa tshab lo tsā ba Nyi ma grags](#). (Patsap Lotsawa Nyima Drak) (1055–1145?). A Tibetan scholar of the eleventh and twelfth centuries who played a major role in establishing [MADHYAMAKA](#) in Tibet during the period of the second dissemination ([PHYI DAR](#)) of the dharma, through his translation of the two major works of [CANDRAKĪRTI](#), the [PRASANNAPADĀ](#) and the [MADHYAMAKĀVATĀRA](#), as well as [ĀRYADEVA](#)'s [CATUḤŚATAKA](#) and Candrakīrti's commentary on it. At any early age, he made the arduous journey to Kashmir, where he spent the next twenty-three years, the first ten studying Sanskrit and the remaining years translating Madhyamaka works into Tibetan in collaboration with Kashmiri paṇḍitas at the monastery of Ratnaguptavihāra near modern-day Srinagar. His

teachers and collaborators included Mahājana and Sūkṣmajana, the sons of the master Sajjana, as well as Mahāsumati, the disciple of Parahita. He eventually returned to Tibet, accompanied by two Kashmiri scholars: Kanakavarman and Tilakakalaśa. Basing himself at the [RA MO CHE](#) temple in [LHA SA](#), he taught Madhyamaka and revised earlier translations of Madhyamaka texts. He thus played a major role in introducing what came to be known as *[PRĀSAṄGIKA](#) into Tibet and providing the texts upon which the distinction between Prāsaṅgika and *[SVĀTANTRIKA](#) could be made. Those terms were not names of branches of Madhyamaka school in India; rather, those designations were coined in Tibet, and Spa tshab may have been the first to use the term *Prāsaṅgika (thal 'gyur pa). He is credited by Tibetan historians as making the *Prāsaṅgika perspective, that is, the perspective of Candrakīrti, the prevailing interpretation of the works of Nāgārjuna and Āryadeva in Tibet.

[Sphuṭārthā](#). (T. 'Grel pa don gsal). A common abbreviated title of the [SPHUTĀRTHĀ-ABHIDHARMAKOŚAVYĀKHYĀ](#) by [YAŚOMITRA](#) (fl. sixth century?); also a mistaken Sanskrit reconstruction of the [PRAJÑĀPĀRAMITĀ](#) writer [HARIBHADRA](#)'s short commentary (vivṛti) on the [ABHISAMAYĀLAMKĀRA](#), known in Tibetan sources (based on Haribhadra's description of his work) as 'Grel pa don gsal; see [ABHISAMAYĀLAMKĀRAVIVṚTI](#).

[Sphuṭārthā-Abhidharmakośavyākhyā](#). [alt. Abhidharmakośaṭīkā] (T. Chos mngon pa'i mdzod kyi 'grel bshad). A widely cited exegesis of Vasubandhu's [ABHIDHARMAKOŚABHĀSYA](#) by [YAŚOMITRA](#) (fl. sixth century?). Written in Sanskrit, the title means "Clear Meaning Explanation of [Vasubandhu's] *Abhidharmakośabhāṣya*." Yaśomitra calls his work *Sphuṭārthā* ("in which the topics burst forth clearly") at the beginning of his text.

[sprastavya](#). (P. phoṭṭhabba; T. reg bya; C. suochu; J. shosoku; K. soch'ok 所觸). In Sanskrit, lit., "object of touch," or "tangible object," the object of tactile consciousness ([KĀYAVIJÑĀNA](#)) and one of the five sense objects ([ĀLAMBANA](#)), the others being visible form ([RŪPA](#)), sounds ([ŚABDA](#)), smells ([GANDHA](#)), and tastes ([RASA](#)). The contact ([SPARŚA](#)) between a tangible object and the tactile sense organ ([KĀYENDRIYA](#)) produce tactile consciousness ([KĀYAVIJÑĀNA](#)). In the [ABHIDHARMA](#), tangible objects are divided into two main categories, the physical elements ([BHŪTA](#); [MAHĀBHŪTA](#)) and those derived from the elements ([BHĀTIKA](#)). The four elements are earth, water, fire, and wind. The seven tangible objects derived from the elements are smoothness, roughness, heaviness, lightness, cold,

hunger, and thirst.

[sprastavyāyatana](#). (P. phoṭṭhabbāyatana; T. reg bya'i skye mched; C. chuchu; J. sokusho; K. ch'okch'ō 觸處). In Sanskrit, “tactile sense-field,” that is, tangible objects ([SPRASTAVYA](#)) as they occur in the list of twelve sense faculties or “bases of cognition” ([ĀYATANA](#)), which serve as the bases for the production of consciousness: viz., the six internal sense bases, or sense organs (eye, ear, nose, tongue, body, and mind) and the six external sense objects (forms, sounds, odors, tastes, tangible objects, and mental phenomena). In the case of tangible objects, the contact ([SPARŚA](#)) between the tactile sense base and its corresponding tangible object leads to tactile consciousness ([KĀYAVIJÑĀNA](#)).

[sprul sku](#). A Tibetan term often seen transcribed in English as “tulku”; it is the Tibetan translation of the Sanskrit term [NIRMĀNAKĀYA](#), the third of the three bodies of a buddha ([TRIKĀYA](#)), the “emanation body” that appears in the world for the benefit of sentient beings. Although the term retains this standard Buddhological meaning in Tibetan, sprul sku is used by extension to refer to an “incarnate lama,” and the term is sometimes translated as such. It is not believed in every case that each incarnate lama is the emanation body of a buddha. However, the implication is that there is a difference in the processes whereby ordinary beings and incarnate lamas take birth in the world. For the former, rebirth is process over which one has no control, with a strong possibility that one’s new life will be in the lower rebirth destinies ([DURGATI](#)) as an animal, hungry ghost, or hell denizen. The rebirth of an “emanation body” is instead considered to be a voluntary choice. The sprul sku are said to exercise control over their rebirth; a dying incarnation will often leave instructions for his disciples as to where to find his next rebirth. The practice of identifying children as the incarnations of deceased masters may date from as early as the eleventh or twelfth century. By the fifteenth century, all sects of Tibetan Buddhism had adopted the practice of identifying the successive rebirths of a great teacher, the most famous instance of which are the [DALAI LAMAs](#). There were some three thousand lines of incarnation in Tibet (only several of whom are female). It was also the case that a single lama may have more than one incarnation; there were sometimes three, which were considered individual incarnations of the body, speech, and mind of the deceased master. The institution of the incarnate lama became a central component of Tibetan society, providing the means by which authority and charisma, both symbolic and material, was passed from one

generation to another. The spread of Tibetan Buddhism can be traced by the increasingly large geographical areas in which incarnate lamas have been discovered. A variety of types and levels of sprul sku are identified. A mchog gi sprul sku (choki tulku) ([UTTAMANIRMĀNAKĀYA](#)) is a buddha, such as [ŚĀKYAMUNI](#), who appears in the world with a body adorned with the major and minor marks of a [MAHĀPURUSA](#). A skye ba'i sprul sku (kyewe tulku) ([JANMANIRMĀNAKĀYA](#)) is the appearance of a buddha in the form of an animal, human, or divinity. Tibetan incarnate lamas would fall into this category. Also in this category would be those cases in which a buddha appears as an inanimate object that provides benefit to sentient beings, such as a bridge across a river, a path, a tree, or a cooling breeze. A bzo bo sprul sku (sowo tulku) ([ŚILPANIRMĀNAKĀYA](#)) is an artisan or craftsman or a particular manifestation of artistic beauty that subdues the afflictions ([KLEŚA](#)). Within the the large [DGE LUGS PA](#) monasteries, a monk with the title of tshogs chen sprul sku (tsokchen tulku, “great assembly tulku”) is excused from performing regular assembly duties. In Tibetan, an incarnate lama is addressed and referred to as [RIN PO CHE](#) (precious one), although that term is also used for abbots and other holders of high ecclesiastical office; it may also be used for one’s teacher, even if he or she is not an incarnate lama. The term [BLA MA](#) (lama) is typically used to refer to incarnations but is also used widely for a teacher.

[śraddhā](#). (P. saddhā; T. dad pa; C. xin; J. shin; K. sin 信). In Sanskrit, “faith” or “confidence,” a term that encompasses also the sense of “belief.” Faith has a wide range of meanings in Buddhism, ranging from a kind of mental clarity and positive disposition toward the Buddha (which is often attributed to an encounter with a buddha or with the bodhisattva in a former life), to a sense of conviction about the efficacy of the Buddhist path ([MĀRGA](#)), to a commitment to follow that path. In addition to its cognitive dimensions, which will be described more fully below, faith also has important conative and affective dimensions that are frequently recounted in Buddhist literature. The conative is suggested in the compulsion towards alms-giving ([DĀNA](#)), as described for example in encounters with previous buddhas in the Pāli [APADĀNA](#), or in the pilgrim's encounter with an object of devotion. The affective can be seen, perhaps most famously, in Ānanda’s affection-driven attachment to the Buddha, which is described as a result of his deep devotion to, and faith in, the person of the Buddha. These multiple aspects of faith find arguably their fullest expression in the various accounts of the story of the Buddha’s [ARHAT](#) disciple [VAKKALI](#), who is said to

have been completely enraptured with the Buddha and is described as foremost among his monk disciples in implicit faith. In the [ABHIDHARMA](#), faith is listed as the first of the ten major omnipresent wholesome factors ([KUŚALAMAHAĀBHŪMIKA](#)) in the seventy-five dharmas list of the [SARVĀSTIVĀDA](#) school and as a virtuous ([KUŚALA](#)) mental factor ([CAITTA](#)) in the hundred-dharmas roster ([BAIFA](#)) of the [YOGĀCĀRA](#) school and in the Pāli abhidhamma. Faith is one of the foundational prerequisites of attainment, and its cognitive dimensions are described as a clarity of mind required for realization, as conviction that arises from the study of the dharma, and as a source of aspiration that encourages one to continue to develop the qualities of enlightenment. Faith is listed as the first of the five spiritual faculties ([INDRIYA](#)), together with diligence ([VĪRYA](#)), mindfulness ([SMṚTI](#)), concentration ([SAMĀDHI](#)), and wisdom ([PRAJÑĀ](#)). The faculty of faith is usually considered to be the direct counteragent ([PRATIPAKṢA](#)) of ill-will ([DVESA](#)), not of doubt ([VICIKITSA](#)), demonstrating its affective dimension. Faith generates bliss ([PRĪTI](#)), by which brings about serenity of mind and thought; in addition, faith also produces self-confidence, engendering the conative characteristic of diligence (vīrya). Faith and wisdom (prajñā) were to be kept constantly counterpoised by the faculty of mindfulness (smṛti). By being balanced via mindfulness, faith would guard against excessive wisdom, which could lead to skepticism, while wisdom would protect against excessive faith, which could lead to blind, uncritical acceptance. Thus faith, in the context of the spiritual faculties, is a tacit acceptance of the soteriological value of specific beliefs, until such time as those beliefs are verified through practice and understood through one's own insight. There are four main soteriological objects of faith: (1) the efficacy of moral cause and effect (viz., [KARMA](#)) and the prospect of continued rebirth ([PUNARJANMAN](#)) based on one's actions; (2) the core teachings about the conditioned nature of the world, such as dependent origination ([PRATĪYASAMUTPĀDA](#)) and the three marks of existence ([TRILAKṢANA](#)), viz., impermanence ([ANĪYATA](#)), suffering ([DUHKHA](#)), nonself ([ANĀTMAN](#)); (3) the three jewels ([RATNATRAYA](#)) of the Buddha, [DHARMA](#), and [SAMGHA](#); and (4) the general soteriological outline of the path ([MĀRGA](#)) and the prospect of release from affliction through the experience of [NIRVĀNA](#).

[śraddhādhimukta](#). (P. saddhādhimutta; T. dad pas lhag par mos pa; C. xinjie; J. shinge; K. sinhae 信解). In Sanskrit, “one who aspires through faith” or “one inclined to faith”; one of the twenty members of the [ĀRYASAMGHA](#) (see [VIMŚATIPRABHEDASAMGHA](#)). In Sanskrit sources, the name is given to those with

dull faculties ([MRDVINDRIYA](#)) when they reach one of the first three results of the noble path ([ĀRYAMĀRGA](#)) or religious life ([ŚRĀMANYAPHALA](#)). They reach the result when they pass from the path of vision's ([DARŚANAMĀRGA](#)) uninterrupted path ([ĀNANTARYAMĀRGA](#)) to its path of freedom ([VIMUKTIMĀRGA](#)). While on the uninterrupted path, they are called [ŚRADDHĀNUSĀRIN](#). Contingent on the number of sets of afflictions ([KLEŚA](#)) causing rebirth in the sensuous realm ([KĀMADHĀTU](#)) that they have already eliminated prior to reaching the uninterrupted path, they become either [SROTAĀPANNAPHALASTHA](#), [SAKRDĀGĀMIPHALASTHA](#), or [ANĀGĀMIPHALASTHA](#) when they reach the path of liberation ([VIMUKTIMĀRGA](#)). Both the name śraddhānusārin and the śraddhādhimukta appear to have been borrowed from the list of noble persons ([ĀRYAPUDGALA](#)) found, for example, in the *Kīṭāgirisutta* of the [MAJJHIMANIKĀYA](#). The name [ŚRADDHĀVIMUKTA](#) found in the list of seven noble persons is changed to śraddhādhimukta in the expanded list of twenty members of the āryasaṅgha. See [ŚRADDHĀVIMUKTA](#).

[śraddhānusārin](#). (P. saddhānusāri; T. dad pa'i rjes su 'brang ba; C. suixin xing; J. zuishingyō; K. susin haeng 隨信行). In Sanskrit, “follower of faith.” The [SARVĀSTIVĀDA](#) (e.g., [ABHIDHARMAKOŚABHĀŚYA](#)) and Pāli (e.g., [VISUDDHIMAGGA](#)) traditions of mainstream Buddhism both recognize seven types of noble ones ([ĀRYA](#), P. ariya): (1) follower of faith (S. śraddhānusārin; P. saddhānusāri); (2) follower of the dharma (S. [DHARMĀNUSĀRIN](#), P. dhammānusāri); (3) one liberated through faith (S. [ŚRADDHĀVIMUKTA](#); P. saddhāvimutta); (4) one who has formed right view (S. [DRṢṬIPRĀPTA](#); P. diṭṭhippatta), by developing both faith and wisdom; (5) the bodily witness (S. [KĀYASĀKSIN](#); P. kāyasakkhi), viz., through the temporary suspension of mentality in the equipoise of cessation ([NIRODHASAMĀPATTI](#)); (6) one who is freed by wisdom (S. [PRAJÑĀVIMUKTA](#); P. paññāvimutta), by freeing oneself through analysis; and (7) one who is freed both ways (S. [UBHAYATOBHĀGAVIMUKTA](#); P. ubhatobhāgavimutta), by freeing oneself through both meditative absorption and wisdom. A follower of faith is a person who has attained the fruit of stream-enterer ([SROTAĀPANNA](#)) and in whom the faculty ([INDRIYA](#)) of faith ([ŚRADDHĀ](#)) is predominant. Such a person will eventually become one who is freed through faith ([ŚRADDHĀVIMUKTA](#)). In the *Abhidharmakośabhāṣya*, there is a basic division of path types and personality types, where a faith-follower and a dharma-follower eliminate hindrances to goals all at once or in a series, and respectively either pass through the intermediate stages of once-returner and nonreturner, or else skip such stages completely, before finally becoming [ARHAT](#)s. In general, dharma-followers are

those who proceed based on knowledge of the [FOUR NOBLE TRUTHS](#) as it pertains to all three realms of existence; they eliminate hindrances to all goals all at once, while the achievements of faith-followers are more progressive. According to the Sarvāstivāda [VAIBHĀSIKA](#) school of [ABHIDHARMA](#), an [ARHAT](#) whose liberation is grounded in faith may be subject to backsliding from that state, whereas those who are dharmānusārin are unshakable ([AKOPYA](#)), because they have experienced the knowledge of nonproduction ([ANUTPĀDAJÑĀNA](#)), viz., that the afflictions ([KLEŚA](#)) can never occur again, the complement of the knowledge of extinction ([KSAYAJÑĀNA](#)). In the [MAHĀYĀNA](#) interpretation of the terms, bodhisattvas who are dharma-followers have knowledge of emptiness ([ŚŪNYATĀ](#)), i.e., they have gained a knowledge of the way things are ([TATTVA](#)) even at early stages of the path and will never revert to the [HĪNAYĀNA](#); the faith-followers are not irreversible ([AVAIVARTIKA](#)) in that way until higher levels of the path. The śraddhānusārin is also found in the list of the members of the saṃgha when it is subdivided into twenty ([VIMŚATIPRABHEDASAṂGHA](#)). Among the śraddhānusārin, there are candidates for the fruit of stream-enterer ([SROTAĀPANNAPHALAPRATIPANNAKA](#)), once-returner ([SAKRDĀGĀMIPHALAPRATIPANNAKA](#)), and nonreturner ([ANĀGĀMIPHALAPRATIPANNAKA](#)). The first has eliminated up to five of the nine sets of afflictions ([KLEŚA](#)) that cause rebirth in the sensuous realm ([KĀMADHĀTU](#)), the second all but the final set, and the last all of the afflictions. The first takes a number of births (never more than seven) in the sensuous realm before reaching nirvāṇa, the second has only one rebirth in the sensuous realm left, and the nonreturner will never again take rebirth in the sensuous realm prior to reaching nirvāṇa.

śraddhāvimukta. (P. saddhāvimutta; T. dad pas rnam par grol ba; C. xinshengjie; J. shinshōge; K. sinsūnghae 信勝解). In Sanskrit, “liberated through faith.” In the *Kīṭāgirisutta* of the [MAJJHIMANIKĀYA](#), the Buddha describes seven types of noble persons ([ĀRYAPUDGALA](#), P. ariyapuggala). They are: (1) the follower of faith ([ŚRADDHĀNUSĀRIN](#), P. saddhānusāri), (2) the one liberated through faith (śraddhāvimukta), (3) the bodily witness ([KĀYASĀKSIN](#), P. kāyasakkhi), (4) the one liberated both ways ([UBHAYATOBHĀGAVIMUKTA](#), P. ubhatobhāgavimutta), (5) the follower of the dharma ([DHARMĀNUSĀRIN](#), P. dhammānusāri), (6) the one who has attained understanding ([DRSTIPRĀPTA](#), P. diṭṭhippatta), and (7), the one liberated through wisdom ([PRAJÑĀVIMUKTA](#), P. paññāvimutta). A person liberated through faith is a noble person at any stage of

the path, from the fruit of stream-enterer to the path of the arhat, who has understood the [FOUR NOBLE TRUTHS](#) and eliminated some of the defilements, but has not attained any of the [DHYĀNA](#) levels of the immaterial realm and who has a predominance of faith. Such a person may or may not have attained the levels of the subtle-materiality realm. The śraddhāvimukta is also found in the list of the members of the saṃgha when it is subdivided into twenty ([VIMŚATIPRABHEDASAMGHA](#)). There are three śraddhāvimukta: recipients of the fruit of stream-enterer ([SROTAĀPANNAPHALASTHA](#)), once-returner ([SAKRDĀGĀMIPHALASTHA](#)), and nonreturner ([ANĀGĀMIPHALASTHA](#)). These parallel the three śraddhānusārin that are candidates for these same first three fruits of the noble path. See [ĀRYAPUDGALA](#); [ĀRYAMĀRGAPHALA](#).

śramaṇa. (P. samaṇa; T. dge sbyong; C. shamen; J. shamon; K. samun 沙門). In Sanskrit “renunciant,” “mendicant,” or “recluse,” a term used in ancient India to refer to male religious of a number of different itinerant sects, including Buddhism, often associated with the warrior ([KSĀTRIYA](#)) caste, which challenged the hegemony of the brāhmaṇa priests and mainstream Brahmanical religion deriving from the Vedas. Whereas the Brahmanical tradition traces itself back to a body of literature centered on the Vedas, the śramaṇa movements instead derive from historical persons who all flourished around the sixth century BCE. Six different śramaṇa groups are mentioned in the [SĀMAÑÑAPHALASUTTANTA](#) of the [DĪGHANIKĀYA](#), each representing different trends in Indian thought, including antinomianism ([PŪRANA-KĀŚYAPA](#)); fatalism ([MASKARIN-GOŚĀLĪPUTRA](#) of the [ĀJĪVAKA](#) school); materialism ([AJITA-KEŚAKAMBALA](#) of the [LOKĀYATA](#) school); atomism ([KAKUDA-KĀTYĀYANA](#)); and agnosticism ([SAÑJAYA-VAIRĀṬĪPUTRA](#)); the sixth group is the [JAINA](#) tradition of [NIRGRANTHA JÑĀTĪPUTRA](#), also known as [MAHĀVĪRA](#), with which Buddhism shares many affinities. These six are typically referred to in Buddhist materials as the six “heterodox teachers” ([TĪRTHIKA](#)) and are consistently criticized by the Buddha for fostering wrong views ([MITHYĀDRSTI](#)). Some scholars suggest that these groups were loosely associated with a third phase in the development of pan-Indian religion called the āraṇyaka (forest dwellers) movement, where the highly specialized fire rituals ([HOMA](#)) set forth in the *Brāhmaṇas* for the propitiation of Vedic gods gave way to a more internalized form of spiritual praxis. These itinerant ascetics or wanderers were also called [PARIVRĀJAKA](#) (P. paribbājaka; “those who go forth into homelessness”), in direct contrast to the householders ([GRHASTHA](#)) whose behavior was governed by the laws set down in dharmaśāstras. Because so many of the beliefs and practices

emblematic of the śramaṇa movement have no direct Vedic antecedents, however, other scholars have proposed that the śramaṇa groups may instead exemplify the resurfacing in Indian religion of aboriginal elements that had long been eclipsed by the imported rituals and beliefs that the Āryans brought with them to India. These doctrines, all of which have their parallels in Buddhism, include rebirth and transmigration (e.g., [PUNARJANMAN](#)); notions that actions have effect (e.g., [KARMAN](#)); asceticism ([TAPAS](#), [DHUTAṄGA](#)) and the search for ways of behavior that would not bind one to the round of [SAMSĀRA](#); and liberation ([MOKSA](#), [VIMOKSA](#)) as the goal of religious practice. In Buddhism, śramaṇa is also used generically to refer to all monks, including the Buddha, whose epithets include Śramaṇa Gautama and Mahāśramaṇa, “Great Renunciant.” The term often occurs in the compound śramaṇabrāhmaṇa (P. samaṇabrāhmaṇa), “recluses and brāhmaṇas.” This compound has a range of meanings. In some cases, it refers simply to those who practice and benefit from the Buddha’s teachings. In other cases, it refers to non-Buddhist religious practitioners. In the edicts of [AŚOKA](#), the term is used to refer to those who are worthy of respect and offerings, with śramaṇa taken to mean Buddhist monks (and possibly other ascetics) and brāhmaṇa taken to mean brāhmaṇa priests. The term śramaṇa should be carefully distinguished from [ŚRĀMANERA](#) (s.v.), a novice monk.

śrāmaṇera. (P. sāmaṇera; T. dge tshul; C. shami; J. shami; K. sami 沙彌). In Sanskrit “[male] novice”; a preliminary stage a man must pass through before he can be ordained as a fully ordained monk ([BHIKSU](#)). The admission into the order (S. pravrajyā, P. pabbajjā; see [PARIVRĀJAKA](#)) of a novice is performed with a simple ceremony. The candidate shaves his hair and beard, attires himself in a monk’s robe received from a donor, and presents himself before an assembly of monks, or a single monk of ten years’ standing or more. Squatting on his haunches and folding his hands, he recites the three refuges ([TRISĀRANA](#)) formula three times, whereupon he is made a novice. According to the Pāli [VINAYA](#), a novice must observe ten precepts ([DAŚAŚĪLA](#)) or “rules of training” ([ŚIKSĀPADA](#)), viz., abstaining from: (1) killing, (2) stealing, (3) sexual misconduct, (4) false speech, (5) intoxicants, (6) eating after midday, (7) dancing, singing, music, and other unseemly forms of entertainment, (8), using garlands, perfumes, and cosmetics to adorn the body, (9) using high and luxurious beds and couches, and (10) accepting gold and silver. The [MŪLASARVĀSTIVĀDA VINAYA](#) expands these ten precepts to thirty-six. After receiving the lower ordination, the novice is

required to live under the guidance ([NĪŚRAYA](#)) of a teacher until he receives higher ordination ([UPASAMPADĀ](#)) as a bhikṣu. The novice may not attend the reading of the [PRĀTIMOKṢA](#) during the bimonthly [UPOSADHA](#) (P. uposatha) ceremony, or participate in any formal ecclesiastical acts ([SAMGHAKARMAN](#)) such as giving ordination and so on. There are a variety of lists of persons who are not permitted to be ordained as novices: one list names branded thieves, fugitives from the law, registered thieves, those punished by flogging or branding, patricides, matricides, murderers of [ARHATs](#), those who have shed the blood of a buddha, eunuchs, false monks, seducers of nuns, hermaphrodites, persons who are maimed, disabled, or deformed in various ways, and those afflicted with various communicable diseases.

[śrāmaṇerasaṃvara](#). (P. sāmaṇerasaṃvara; T. dge tshul gyi sdom pa; C. qince lüyi; J. gonsakuritsugi; K. künch'aek yurüi 勤策律儀). In Sanskrit, “restraints for novices”; the ten precepts ([DAŚAŚĪLA](#)) that govern the conduct of a [ŚRĀMANERA](#) (male novice). The ten are framed in terms of training rules ([ŚIKSĀPADA](#)): viz., “I undertake the training rule to abstain from”: (1) killing, (2) stealing, (3) sexual activity, (4) false speech, (5) intoxicants, (6) eating after midday, (7) dancing, singing, music, and other unseemly forms of entertainment, (8) using garlands, perfumes, and cosmetics to adorn the body, (9) using high and luxurious beds and couches, (10) handling gold and silver (viz., money). On full-and new-moon days ([UPOSADHA](#)), the laity had the option of taking all these precepts except no. 10; nos. 7 and 8 were then combined to give a set of eight precepts to be specially followed on these retreat days (see S. [ASTĀṄGASAMANVĀGATAM UPAVĀSAM](#)) as a sort of temporary renunciation. In the [MŪLASARVĀSTIVĀDA VINAYA](#) these ten precepts are expanded to thirty-six.

[śrāmaṇerikā](#). [alt. śrāmaṇerī] (P. sāmaṇerī; T. dge tshul ma; C. shamini; J. shamini; K. samini 沙彌尼). In Sanskrit, [female] “novice”; also spelled śrāmaṇerakā. The rules of admission and observance as a female novice are the same as for the [ŚRĀMANERA](#) (male novice) with the exception that a female novice is required to practice as a [ŚIKSAMĀNĀ](#) (“postulant” or “trainee”) for at least two years before being granted permission to receive the [UPASAMPADĀ](#) higher ordination as a [BHIKSUNĪ](#), or fully ordained nun. In addition, in the case of a woman, the higher ordination must be conferred twice instead of only once, first by the bhikṣuṇī [SAMGHA](#) (nuns’ order), and a second time by the [BHIKSU](#) saṃgha.

[śrāmaṇerikāsamvara](#). (T. dge tshul ma'i sdom pa; C. qince lüyi; J. gonsakuritsugi; K. kŭnch'aek yurŭi 勤策律儀). In Sanskrit, the restraints, or precepts, governing the conduct of a [ŚRĀMANERIKĀ](#) (female novice); see [ŚRĀMANERASAMVARA](#).

[śrāmaṇyaphala](#). (P. sāmaññaphala; T. dge sbyong gi tshul gyi 'bras bu; C. shamen'guo; J. shamonka; K. samun'gwa 沙門果). In Sanskrit, “the fruit of recluseship,” viz., “the beneficial effects of religious practice.” “Fruit” in this compound refers to the benefits that come to fruition in a recluse’s current or future life. The latter type includes both merit ([PUNYA](#)) and a favorable rebirth. The former benefits are expounded by the Buddha in various versions of the *Śrāmaṇyaphalasūtra* (see [SĀMAÑÑAPHALASUTTANTA](#)). These benefits include respect from members of higher classes, sensory restraint, contentedness, abandonment of the hindrances, attainment of the four meditative absorptions, insight, supranormal powers, clairaudience, recollection of past lives, and so on. In regard to the progressive path to liberation, śrāmaṇyaphala refers to the four stages of sanctity that culminate in the realization of [NIRVĀNA](#): the fruits of the stream-enterer ([SROTAĀPANNA](#)), once-returner ([SAKRDĀGĀMIN](#)), nonreturner ([ANĀGĀMIN](#)), and worthy one ([ARHAT](#)).

[Sras mkhar dgu thog](#). (Sekar Gutok). In Tibetan, “Nine-Storied Son’s Tower”; a tower purportedly constructed in the late eleventh century by the Tibetan saint [MILA RAS PA](#) as part of his training under the master [MAR PA CHOS KYI BLO GROS](#). Located in the [LHO BRAG](#) region of southern Tibet, on the bank of the Gsas River, the nine-storied tower was originally constructed as a memorial for Mar pa’s son [DAR MA MDO SDE](#), although because of its location it likely had strategic value as well. The building was renovated in the sixteenth century by [DPA' BO GTSUG LAG PHRENG BA](#), who fashioned a golden roof and added a large monastic institution at the site. The tower remains an important pilgrimage site for Tibetan Buddhists.

[śrāvaka](#). (P. sāvaka; T. nyan thos; C. shengwen; J. shōmon; K. sŏngmun 聲聞). In Sanskrit, lit. “listener”; viz., a direct “disciple” of the Buddha who “listened” to his teachings (and sometimes seen translated over-literally from the Chinese as “sound-hearer”). In the [MAHĀYĀNA](#), the term was used to describe those who (along with [PRATYEKABUDDHA](#)s) sought their own liberation from suffering as an [ARHAT](#) by following the [HĪNAYĀNA](#) path (see [ER SHENG](#)), and was contrasted (negatively) to the [BODHISATTVA](#)s who seeks buddhahood for the sake of all

beings. There is an issue in the Mahāyāna concerning whether śrāvakas will eventually enter the bodhisattva path and become buddhas, or whether arhatship is a final state where no further progress along the path ([MĀRGA](#)) will be possible (see [ŚRĀVAKAGOTRA](#)). The [SADDHARMAPUNDIRĪKASŪTRA](#), for example, declares that they will, and in the sūtra the Buddha makes prophecies about the future buddhahood of several famous śrāvakas. In many Mahāyāna sūtras, śrāvakas are often described as being in the audience of the Buddha's teaching, and certain śrāvakas, such as [ŚĀRIPUTRA](#), play important roles as interlocutors. In the third chapter of the [VIMALAKĪRTINIRDEŚA](#), a series of śrāvakas explain why they are reluctant to visit the bodhisattva [VIMALAKĪRTI](#), because of the insurmountable challenge his profound understanding of the dharma will present to them.

Śrāvakabhūmi. (T. Nyan thos kyi sa; C. Shengwen di; J. Shōmonji; K. Sōngmun chi 聲聞地). In Sanskrit, the “Stage of the Listener” or “Stage of the Disciple,” a work by [ASAṄGA](#) included in the first and main section (Bahubhūmika/Bhūmivastu, “Multiple Stages”) of his massive compendium, the [YOGĀCĀRABHŪMI](#). The work, which also circulated as an independent text, deals with practices associated with the [ŚRĀVAKA](#) (disciples) and consists of four major sections (yogasthāna), which treat spiritual lineage ([GOTRA](#)), different types of persons ([PUDGALA](#)), preparation for practice ([PRAYOGA](#)), and the mundane path ([LAUKIKAMĀRGA](#)) and supramundane path ([LOKATTARAMĀRGA](#)). The first yogasthāna on spiritual lineage is divided into three parts. First, the stage of lineage (gotrabhūmi) discusses the spiritual potentiality or lineage (gotra) of the śrāvaka from four standpoints: its intrinsic nature, its establishment or definition (vyavasthāna), the marks ([LĪNGA](#)) characterizing the persons belonging to that lineage, and the classes of people in that lineage. Second, the stage of entrance (avatārabhūmi) discusses the stage where the disciple enters upon the practice; like the previous part, this section treats this issue from these same four standpoints. Third, the stage of deliverance (naiṣkramyabhūmi) explains the stage where the disciple, after severing the bonds of the sensual realm ([KĀMADHĀTU](#)), practices to obtain freedom from passion ([VAIRĀGYA](#)) by following either the mundane or supramundane path; this section subsequently discusses thirteen collections or equipment (saṃbhāra) necessary to complete both paths, such as sensory restraint, controlling food intake, *etc.* This stage of deliverance (naiṣkramyabhūmi) continues over the second through fourth yogasthānas to provide an extended treatment of śrāvaka practice. The second yogasthāna discusses the theoretical basis of śrāvaka practice in terms of persons

(pudgala), divided into nineteen subsections on such subjects as the classes of persons who cultivate the śravāka path, meditative objects, descriptions of various states of concentration ([SAMĀDHI](#)), hindrances to meditation, *etc.* The third yogasthāna concerns the preliminary practices (prayoga) performed by these persons, describing in detail the process of training. This process begins by first visiting a teacher. If that teacher identifies him as belonging to the śrāvaka lineage, the practitioner should then cultivate in five ways: (1) guarding and accumulating the requisites of samādhi (samādhisaṃbhāra-rakṣopacaya), (2) selection (prāvivekya), (3) one-pointedness of mind ([CITTAIKĀGRATĀ](#)), (4) elimination of hindrances ([ĀVARANA](#)-viśuddhi), and (5) cultivation of correct mental orientation ([MANASKĀRA](#)-bhāvanā). Among these five, the section on cittaikāgratā contains one of the most detailed discussions in Sanskrit sources of the meditative procedures for the cultivation of [ŚAMATHA](#) and [VIPAŚYANĀ](#). In the fourth yogasthāna, the practitioner, who has accomplished the five stages of application (prayoga), proceeds to either the mundane (laukika) or supramundane (lokottara) path. On the mundane path, the practitioner is said to be reborn into the various heavens of the subtle-materiality realm ([RŪPADHĀTU](#)) or the immaterial realm ([ĀRŪPYADHĀTU](#)) by cultivating the four subtle-materiality meditative absorptions ([RŪPĀVACARADHYĀNA](#)) or the four immaterial meditative absorptions ([ĀRŪPYĀVACARADHYĀNA](#)). On the supramundane path, the śravāka practices to attain the stage of worthy one ([ARHAT](#)) by relying on the insight of the [FOUR NOBLE TRUTHS](#) (catvāry āryasatyāni). See also [BODHISATTVABHŪMI](#).

[śrāvakagotra](#). (T. nyan thos kyi rigs; C. shengwen zhongxing; J. shōmon shushō; K. sōngmun chongsōng 聲聞種姓). In Sanskrit, “lineage of the disciples,” a term that is used in the [MAHĀYĀNA](#) to describe a person who is predisposed toward the practice of the [HĪNAYĀNA](#). Certain strands of the [YOGĀCĀRA](#) school advocated that there were five distinct spiritual lineages or destinies ([PAÑCAGOTRA](#)): (1) the [TATHĀGATA](#) lineage ([GOTRA](#)), for those destined to become buddhas; (2) the [PRATYEKABUDDHA](#) lineage, for those destined to become [ARHAT](#)s via the pratyekabuddha path; (3) the [ŚRĀVAKAYĀNA](#) lineage, for those who will become arhats via the [ŚRĀVAKA](#) vehicle; (4) those of indefinite ([ANĪYATA](#)) lineage, who may follow any of three vehicles; and (5) those without lineage (agotra), who are incapable of liberation, or who have lost the potential to achieve enlightenment by becoming incorrigibles ([ICCHANTIKA](#)). Persons are predisposed to follow the path of their lineage, with śrāvakas and pratyekabuddhas eventually achieving the enlightenment of the arhat and

bodhisattvas achieving the enlightenment of a buddha, or tathāgata. A person of indeterminate lineage may become either an arhat or a buddha, and the icchantikas neither of the two.

śrāvakayāna. (T. nyan thos kyi theg pa; C. shengwen sheng; J. shōmonjō; K. sōngmun sūng 聲聞乘). In Sanskrit, “vehicle of the disciples,” in [MAHĀYĀNA](#) treatments of the path, one of the two constituents (along with [PRATYĒKABUDDHAYĀNA](#)) of the so-called “lesser vehicle” ([HĪNAYĀNA](#)). These two vehicles (C. [ER SHENG](#)), together with the third vehicle of the [BODHISATTVA](#), are the “three vehicles” ([TRĪYĀNA](#)) often mentioned in Mahāyāna sūtras. The proponents of the various Mahāyāna philosophical schools disagree as to whether or not the śrāvakayāna is an expedient stratagem ([UPĀYA](#)), with the [MADHYAMAKA](#) arguing that it is and that all beings, including [ŚRĀVAKA](#)s, will eventually enter the Mahāyāna and achieve buddhahood, and the some [YOGĀCĀRA](#) thinkers holding that śrāvakas will only become arhats and cannot go on to become buddhas.

Śrāvastī. (P. Sāvatti; T. Mnyan yod; C. Shewei guo; J. Shae koku; K. Sawi kuk 舍衛國). Capital city of [KOŚALA](#) and one of the major cities of India at the time of the Buddha. The Pāli commentator [BUDDHAGHOSA](#) states implausibly that there were 5.7 million families living in Śrāvastī during the Buddha’s lifetime. The Buddha spent many years there after he attained enlightenment, and he is reported to have passed twenty-five rains retreats ([VARŚĀ](#)) in the city. Śrāvastī was ruled by the Buddha’s royal patron, King [PRASENAJIT](#), and was home to his wealthiest patron, [ANĀTHAPINDADA](#), who offered to the Buddha the famous [JETAVANA](#) grove and its residences. Hundreds of sūtras are set in Śrāvastī. The city is also the site where the Buddha (and, according to some accounts, all previous buddhas) performed two miracles: the “great miracle” ([MAHĀPRĀTIHĀRYA](#)), in which the Buddha creates various replicas of himself and appears simultaneously in various terrestrial and celestial abodes; and the “twin miracle” ([YAMAKAPRĀTIHĀRYA](#)) in which the Buddha, in response to a challenge from non-Buddhist [YOGIN](#)s, rose into the air and simultaneously emitted fire and water from his body.

Śrāvastī miracles. See [MAHĀPRĀTIHĀRYA](#); [YAMAKAPRĀTIHĀRYA](#).

Śreṇika heresy. (C. Xianni waidao, J. Senni gedō, K. Sōnni oedo 先尼外道). A heresy that originated with Śreṇika [VATSAGOTRA](#), an ascetic wanderer

([PARIVRĀJAKA](#)) and contemporary of [GAUTAMA](#) Buddha, who claimed that the impermanent physical body was simply a temporary vessel for a permanent self ([ĀTMAN](#)); also known as the Senika heresy. In the *Aggi-Vacchagottasutta* (“Discourse to Vatsagotra on the [Simile of] Fire”), the seventy-second sutta in the Pāli [MAJJHIMANIKĀYA](#), Vacchagotta (the Pāli equivalent of Vatsagotra) has a celebrated exchange with the Buddha concerning ten “indeterminate questions” ([AVYĀKRTA](#))—i.e., whether the world is eternal or not eternal, infinite or finite, what is the state of the [TATHĀGATA](#) after death, *etc.* The Buddha refuses to respond to any of the questions, since an answer would entangle him in an indefensible philosophical position. Instead, to convey some semblance of the state of the tathāgata after death, the Buddha uses the simile of extinguishing of fire: just as, after a fire has been extinguished, it would be inappropriate to say that it has gone anywhere, so after the tathāgata has extinguished each of the five aggregates ([SKANDHA](#)), they cannot be said to have gone anywhere. At the conclusion of the discourse, Vatsagotra accepts the Buddha as his teacher. (The *Ānandasutta* of the [SAMYUTTANIKĀYA](#) explains that the Buddha kept silent in response to Vatsagotra’s questions about the nature of the self in order to prevent him from falling into the extremes of either [ŚĀŚVATAVĀDA](#), “eternalism,” or [UCCHEDAVĀDA](#), “annihilationism.”) The [DAZHIDU LUN](#) (**Mahāprajñāpāramitāsāstra*) identifies the Vacchagotta of the Pāli suttas with Śreṇika Vatsagotra, the namesake of what in [MAHĀYĀNA](#) sources is termed the Śreṇika heresy. The locus classicus for this heresy appears in the [MAHĀPARINIRVĀNASŪTRA](#). There, when Śreṇika raises the question about whether there is a self or not, the Buddha keeps silent, so Śreṇika himself offers a fire simile, but with a radically different interpretation from what is found in the *Aggi-Vacchagottasutta*. He instead compares the physical body and the self to a house and its owner: even though the house may burn down in a fire, the owner is safe outside the house; thus, the body and its constituents (skandha) may be impermanent and subject to dissolution, but not the eternal self. The Śreṇika heresy is a frequent topic in the [CHAN](#) literature of East Asia. [NANYANG HUIZHONG](#) (675?–775), a successor of the sixth patriarch ([LIUZU HUINENG](#) (638–713), is said to have criticized the “mind itself is buddha” (zixin shi fo) teaching of [MAZU DAOYI](#) (709–788) and other [HONGZHOU ZONG](#) teachers as being akin to the Śreṇika heresy. The Japanese [SŌTŌSHŪ ZEN](#) master [DŌGEN KIGEN](#) (1200–1253), in his [BENDŌWA](#) and [SHŌBŌGENZŌ](#), criticizes as equivalent to the Śreṇika heresy the view that the mind-nature is eternal (shinshō jōjū) even though the body perishes. There is much scholarly debate about whether Dōgen’s criticism

was directed at the “original enlightenment” ([HONGAKU](#); cf. [BENJUE](#)) thought of the medieval [TENDAISHŪ](#), or against the teachings of his rival Zen school, the [DARUMASHŪ](#), whose similar declarations that the mind is already enlightened and that practice was not necessary opened it to charges of antinomianism.

[Śṛgālakamātr](#). (P. Sigālakamātā; C. Shikeluoge zhangzhe mu; J. Shikaraka chōjamo; K. Silgaraga changja mo 室珂羅哥長者母). In Sanskrit, “Śṛgālaka’s (“Jackal”) Mother”; an eminent [ARHAT](#) declared by the buddha to be foremost among his nun disciples who aspire through faith ([ŚRADDHĀDHIMUKTA](#), P. saddhādhimutta). According to the Pāli account, she was born into a wealthy merchant’s family in Rājagaha (S. [RĀJAGRHA](#)) and after marriage gave birth to a son named Sigālaka (S. Śṛgālaka), hence her epithet. Once she overheard the Buddha preach to her son concerning the brahmanical practice of worshipping the four directions and, immediately comprehending his words, she instantly became a stream-enterer ([SROTAĀPANNA](#), P. sotāpanna). When later she renounced the world and entered the order (P. saṅgha; S. [SAMGHA](#)), she was filled with faith and would gaze at the Buddha during his sermons, infatuated with his beauty. Knowing her nature, the Buddha preached to her in such a way that her infatuation would lead her to enlightenment. Many lifetimes before, during the time of Padmottara Buddha, she is said to have resolved to be foremost among those who aspire through faith. She was at that time the daughter of a minister and once accompanied him to hear the Buddha preach. Inspired by faith, she entered the order and, hearing the Buddha praise someone as foremost in faith, vowed to attain the same distinction in a future life.

[Śrīmālādevīsīmaṇādasūtra](#). (T. Lha mo dpal phreng gi seng ge’i sgra’i mdo; C. Shengman shizihou yisheng da fangbian fangguang jing; J. Shōman shishiku ichijōdaihōben hōkōgyō; K. Sūngman sajahu ilsūng tae pangp’yōn panggwang kyōng 勝鬘師子吼一乘大方便方廣經). In Sanskrit, “Sūtra on the Lion’s Roar of Queen Śrīmālā,” one of the earliest [TATHĀGATAGARBHA](#) texts, composed about the third century CE, probably by [MAHĀSĀMGHIKA](#) adherents in the [ĀNDHRA](#) region of southern India. The original Sanskrit has not survived, except in quotations in such texts as the [RATNAGOTRAVIBHĀGA](#). The first translation of this sūtra into Chinese was made by the central Indian missionary [DHARMAKSEMA](#) (d. 433) in the 420s, which was no longer extant by the Yuan dynasty. The second and most popular Chinese translation was made in 436 by [GUNABHADRA](#) (394–468), also a native of central India. Although its full title is *Shengman shizihu yisheng da*

fangbian fanguang jing, Guṇabhadra's title is abbreviated in six different ways in the Chinese commentarial literature, the shortest and the best-known of which is simply as the *Shengman jing* (*Śrīmālā Sūtra*). A third translation was made in the early eighth century by [BODHIRUCI](#) (672–727), a native of southern India. The sūtra is exceptional in its distinctive stance on laypeople and laywomen. The chief character of the sūtra is Queen Śrīmālā, the daughter of King [PRASENAJIT](#). The sūtra is considered one of the authoritative texts for the doctrine of tathāgatagarbha and buddha-nature (S. [BUDDHADHĀTU](#); C. [FOXING](#)), even though the concept of tathāgatagarbha does not receive extensive treatment in the text. In the sūtra, the tathāgatagarbha is the basis of the one vehicle ([EKAYĀNA](#)); since all sentient beings share in the same tathāgatagarbha, they will all equally reach [NIRVĀNA](#). The *Śrīmālā Sūtra* criticizes rigidly apophatic interpretations of the doctrine of emptiness ([ŚŪNYATĀ](#)), maintaining that tathāgatagarbha is both empty (*śūnya*) and nonempty (*aśūnya*), because it simultaneously is empty of all afflictions ([KLEŚA](#)) but “nonempty” (viz., full) of all the Buddha's virtues. The sūtra explains the Buddha's virtues using kataphatic language, such as permanence (*nitya*) and selfhood ([ĀTMAN](#)). The *Śrīmālā Sūtra* was especially influential in East Asian Buddhism. Over twenty Chinese commentaries were composed, the most influential being those by [JINGYING HUIYUAN](#) (523–592), [JIZANG](#) (549–623), and [KUIJI](#) (632–682).

Śrīmālā Sūtra. (S). See [ŚRĪMĀLĀDEVĪSIMHANĀDASŪTRA](#).

Śrīsimha. (T. Shrī sing ha) (fl. eighth century). Sanskrit proper name of an important figure in the early dissemination ([SNGA DAR](#)) of Buddhism to Tibet, especially in the propagation of the [RDZOGS CHEN](#) teachings. According to some Tibetan accounts, he was born in China, although other sources identify his birthplace as Khotan or Kinnaur. At the age of eighteen, he is said to have traveled to Suvarṇadvīpa, often identified as the island of Sumatra. There he has a vision of [AVALOKITEŚVARA](#), who advised him to go to India. Before doing so, he studied at “five-peak mountain,” which some sources assume is [WUTAISHAN](#) in China. He next went to the Sosadvīpa charnel ground ([ŚMAŚĀNA](#)), where he studied with [MAÑJUŚRĪMITRA](#) for twenty-five years. After his teacher's death, he traveled to [BODHGAYĀ](#), where he unearthed tantric texts hidden there by Mañjuśrīmitra. Śrīsimha is especially remembered in Tibet as the teacher of [VAIROCANA](#), one of the most important figures in the earlier dissemination of Buddhism to Tibet. Vairocana was one of the first seven Tibetans ([SAD MI BDUN](#))

ordained as Buddhist monks by [ŚĀNTARAKSITA](#) at the monastery of [BSAM YAS](#), and he soon became an illustrious translator. He is said to have been a disciple of [PADMASAMBHAVA](#) and a participant on the Indian side in the [BSAM YAS DEBATE](#). After Padmasambhava's departure from Tibet, the king required a fuller exposition of [TANTRA](#) and sent Vairocana to India to obtain further tantric instructions. After many trials, he arrived in India, where he was instructed by Śrīsiṃha. Fearing that other Indian masters would object to his imparting the precious esoteric teachings to a foreigner, Śrīsiṃha insisted that he study sūtras and less esoteric tantric texts with other teachers during the day, conveying the most secret teachings to him under the cover of darkness; these were the rdzogs chen teachings that Vairocana took back to Tibet and taught to king [KHRI SRONG LDE BTSAN](#). Among other esoteric teachings that Vairocana gave to Śrīsiṃha is Śrīsiṃha's tantric commentary on the [PRAJÑĀPĀRAMITĀHRDAYASŪTRA](#).

[śrīvatsa](#). (T. dpal be'u; C. jixiang haiyun; J. kichijōkaiun; K. kilsang haeun 吉祥海雲). In Sanskrit, literally, “beloved of Śrī,” an epithet of Viṣṇu but used to describe a triangular pattern on the chest of Viṣṇu. The term is generally translated as “endless knot,” and is considered to be one of the eight auspicious symbols ([ASTAMAṄGALA](#)) of Buddhism. Usually depicted as a closed design of intertwined lines at right angles, it is said to symbolize the endless wisdom and compassion of the Buddha. It is often listed as the last of the eighty secondary marks ([ANUVYAÑJANA](#)) of a superman ([MAHĀPURUṢA](#)), and is said to adorn the soles of a buddha's feet.

[Śrīvijaya](#). (T. Dpal nam par rgyal ba; C. Shilifoshi; J. Shitsuribussei; K. Sillibulsŏ 室利佛逝). A kingdom located on the island of Sumatra (in modern Indonesia) which was an important center of Buddhism from the seventh through the eleventh centuries. Located along the key maritime routes of Southeast Asia, it was a major political power in the region. The Chinese pilgrim [YIJING](#) (635–713 CE) made extended stays in the kingdom on both his trip to India and his return to China, stopping there first for six months to study Sanskrit, and then making a more lengthy stay beginning in 687, where he translated a number of texts, including much of the massive [MŪLASARVĀSTIVĀDA VINAYA](#), and wrote an account of his journey, the [NANHAI JIGUI NEIFA ZHUAN](#); because there was no paper and ink in Sumatra, Yijing made a short trip to China to retrieve these items before returning to Śrīvijaya to continue his work. He reported that in the city of Bhoga there were more than a thousand monks, whom

he praised for their learning and their adherence to the vinaya, which he said was the same as that practiced in India. He advised Chinese monks to stop in Śrīvijaya for preparatory studies before proceeding to India. In the eleventh century, the Bengali monk [ATIŚA DĪPAMKARAŚRĪJĀNA](#) may have visited Śrīvijaya to study with [DHARMAKĪRTIŚRĪ](#); the sources say that he visited Suvarṇadvīpa, a term that seemed to encompass a larger region, which included Sumatra.

[Śronāparānta](#). (P. Sunāparanta; C. Shuluna; J. Shurona; K. Surona 輸盧那). The region lying along the Narmadā River and traversing the present western Indian states of Rajasthan and Gujarat, most likely identical to Aparanta. The elder [PŪRNA](#) (P. Puṇṇa) hailed from Śronāparānta. According to the Pāli legend, the elder Puṇṇa once invited the Buddha to accept the donation of a sandalwood monastery constructed by the inhabitants of Sunāparanta. The Buddha accepted this offer and traveled there by flying, accompanied by a host of 499 arhats. Along the way he descended to Saccabaddha (S. Satyabaddha) mountain and converted the sage dwelling there. The Burmese (Myanmar) identify Sunāparanta as a portion of their homeland named Sunāparanta-Tambdīpa along the northern reaches of the Irrawaddy (Ayeyarwady) river basin in Upper Burma. On the basis of the Puṇṇa legend, Burmese chroniclers also claim that Buddhism was established among the Burmese during the lifetime of the Buddha and therefore is older than the Buddhism of Sri Lanka. Later Burmese chroniclers also identify Sunāparanta with Aparanta, thus allowing them to claim that their homeland received the [AŚOKA](#)-era Buddhist mission of the Yavana (Greek) Dharmarakṣita (P. Yonaka Dhammarakkhita).

[Srong btsan sgam po](#). (Songtsen Gampo) (r. c. 605–650). The thirty-third Tibetan religious king (chos kyi rgyal po) who reigned during the period of the Yar klungs dynasty; credited with establishing Buddhism as the predominant religion in Tibet. He is considered the first of three great religious kings, along with [KHRI SRONG LDE BTSAN](#) and [RAL PA CAN](#). Although the historical facts of his life are somewhat murky, stories of Srong btsan sgam po's activities pervade Tibetan culture. His rule forged a cohesive national center and brought Tibet to the zenith of its military expansion, shaping an empire that rivaled any in Asia. During Srong btsan sgam po's reign, Tibet was surrounded by Buddhist currents to the south and west, which appear to have had a particularly profound effect on Tibetan civilization. According to traditional sources, the king and his two

wives, the Nepalese [BHRKUTI](#) and the Chinese [WENCHENG](#), were instrumental in the early promulgation of Buddhist practice in his kingdom. An important Tibetan text, the [MANI BKA' 'BUM](#) (“One Hundred Thousand Instructions on the Maṇi”), describes the monarch as an earthly manifestation of [AVALOKITEŚVARA](#), the [BODHISATTVA](#) of compassion, and his wives as forms of the female bodhisattva [TĀRĀ](#). These accounts are at the heart of Tibet’s Buddhist myth of origin and play a central role in how most Tibetans understand the history of their country and religion. After ascending the throne, Srong btsan sgam po moved his capital from the heartland of the Yar klungs Valley in the south to its modern location in [LHA SA](#). With the support of their monarch, each queen established an important Buddhist temple to house a statue she had carried to Tibet: Bhr̥kuti founding the [JO KHANG](#) temple for an image of [ŚĀKYAMUNI](#) called [JO BO MI BSKYOD RDO RJE](#), Wencheng founding what is now the [RA MO CHE](#) temple for her statue of Śākyamuni called [JO BO SHĀKYAMUNI](#) or Jo bo rin po che. These images were later switched, and today the Jo bo Śākyamuni statue sits in the Jo khang, where it is venerated as Tibet’s holiest Buddhist relic. According to legend, the Tang princess Wencheng also imported Chinese systems of geomancy and divination through which the Tibetan landscape was viewed as a supine demoness requiring subjugation in order for Buddhism to take root and flourish. Srong btsan sgam po purportedly constructed a series of “taming temples” that acted as nails pinning down the limbs of the demoness (T. *srin mo*), rendering her powerless. The Jo khang was constructed over the position of the demoness’ heart. In addition to the Jo khang, traditional sources count twelve main taming (T. *'dul*) temples spread across the Himalayan landscape, each pinning down a point on the demoness’s body. These structures appear to be in concentric circles radiating out from her heart at Lha sa. Out from the heart are the “edge-pinning temples” ([MTHA' 'DUL GTSUG LAG KHANG](#)) of [KHRA 'BRUG](#), *'GRUM*, [BKA' TSHAL](#), and [GRUM PA RGYANG](#), said to pin down her right and left shoulders and right and left hips, respectively; and beyond that four “extra-pinning temples” ([YANG 'DUL GTSUG LAG KHANG](#)) [BU CHU](#), [MKHO MTHING](#), [DGE GYES](#), and [PRA DUM RTSE](#) that pin down her right and left elbows and right and left knees, respectively. In 637, Srong btsan sgam po established an eleven-storied palace on the hill of northeast Lha sa called Mar po ri. While this structure was later destroyed by fire, it served as the foundation for the [PO TALA](#) palace constructed in the seventeenth century under the direction of the fifth [DALAI LAMA NGAG DBANG BLO BZANG RGYA MTSHO](#). The king is also said to have commissioned his minister Thon mi Sambhota to create a new script (what is

now known as Tibetan) in order to translate Buddhist texts from Sanskrit. He also established what is known as the “great legal code” (gtsug lag bka’ khriims chen po). While contemporary scholars now question the portrait of Srong btsan sgam po as a pious convert to Buddhism (it is known, for example, that he maintained close ties to the early [BON](#) religion), many of Tibet’s most important Buddhist institutions were established during his time.

srotaāpanna. [alt. srotāpanna; śrotāpanna] (P. sotāpanna; T. rgyun du zhugs pa; C. yuliu [guo]/xutuohuan; J. yoru[ka]/shudaon; K. yeryu [kwa]/sudawŏn 預流[果]/須陀洹). In Sanskrit, “stream-enterer” or “stream-winner”; the first of four stages of sanctity (see [ĀRYAPUDGALA](#)) in mainstream Buddhism, followed by the once-returned ([SAKRDĀGĀMIN](#)), nonreturner ([ANĀGĀMIN](#)) and worthy one ([ARHAT](#)). These four stages are together referred to as “the fruits of recluship” ([ŚRĀMANYAPHALA](#)), viz., “the effects of religious practice.” The term srotaāpanna appears very often in the Buddhist sūtras, with members of the Buddha’s audience said to have attained this stage immediately upon hearing him preach the dharma. The stage of stream-enterer begins with the initial vision of the reality of [NIRVĀNA](#), at which point one “enters the stream” leading to liberation. Because of this achievement, the srotaāpanna has abandoned completely the first three of ten fetters ([SAMYOJANA](#)) that bind one to the cycle of rebirth ([SAMSĀRA](#)): (1) belief in the existence of a self in relation to the body ([SATKĀYADRSTI](#)), (2) doubt about the efficacy of the path ([VICIKITSĀ](#)), (3) belief in the efficacy of rites and rituals ([ŚĪLAVRATAPARĀMARŚĀ](#)). For this reason, after becoming a stream-enterer, the adept will never again be reborn into the unfortunate rebirth destinies ([APĀYA](#), [DURGATI](#)) as a demigod, animal, ghost, or hell denizen and is destined to become an arhat in a maximum of seven more lifetimes (see [SAPTAKRDBHAVAPARAMA](#)). There are two stages to stream-entry: [SROTAĀPANNAPHALAPRATIPANNAKA](#), or one who is practicing, or is a candidate for, the fruition of stream-entry; and [SROTAĀPANNAPHALASTHA](#), or one who has reached, or is the recipient of, the fruition of stream-entry. The srotaāpannaphalapratiannaka has only reached the [ĀNANTARYAMĀRGA](#) (unimpeded path), whereas the srotaāpannaphalastha has reached the [VIMUKTIMĀRGA](#) (path of freedom). In the five-path system ([PAÑCAMĀRGA](#)), stream-entry is equivalent to the path of vision ([DARŚANAMĀRGA](#)) on the [ŚRĀVAKA](#) and [PRATYEKABUDDHA](#) paths. The srotaāpanna is also one of the twenty members of the [ĀRYASAMGHA](#) (see [VIMŚATIPRABHEDASAMGHA](#)). In this context srotaāpanna is the name for candidates (pratipannaka) for srotaāpanna (the first fruit of the noble path). They may be either a follower through faith ([ŚRADDHĀNUSĀRIN](#)) or a follower through doctrine ([DHARMĀNUSĀRIN](#)) with either dull ([MRDVINDRIYA](#)) or keen faculties ([TĪKSNENDRIYA](#)). In all cases, they may have destroyed from none up to as many as five of the sets of afflictions ([KLEŚA](#)) that cause rebirth in the sensuous realm ([KĀMADHĀTU](#)) that the ordinary ([LAUKIKA](#)) path of meditation ([BHĀVANĀMĀRGA](#)) removes, but they will not have eliminated

the sixth to the ninth sets. Were they to have removed the sixth set they would be called candidates for the second fruit of once-returner (sakṛdāgāmin), and were they to have removed the ninth set they would be called candidates for the third fruit of nonreturner (anāgāmin).

śrotaāpannaphalapatipannaka. (P. sotāpattimagga; T. rgyun du zhugs pa'i 'bras bu la zhugs pa; C. yuliu xiang; J. yorukō; K. yeryu hyang 預流向). In Sanskrit, one who is practicing, or is candidate for the fruit of stream-enterer. Both the śrotaāpannaphalapatipannaka and **ŚROTAĀPANNAPHALASTHA** (one who has reached, or is the recipient of the fruit of stream-enterer) are called “stream-enterer” (**ŚROTAĀPANNA**) and are noble persons (**ĀRYA**); the śrotaāpannaphalapatipannaka has only reached the **ANANTARYAMĀRGA** (unimpeded path), the śrotaāpannaphalastha has reached the **VIMUKTIMĀRGA** (path of freedom) of the path of vision (**DARŚANAMĀRGA**). The level of ordinary humans is the sensuous realm (**KĀMADHĀTU**), viz., the level where beings are dominated by sense pleasure (**KĀMA**). Those whose prior store of actions is such that, prior to reaching the path of vision, they have eliminated as many as five of the nine sets of afflictions (**KLEŚA**) that cause rebirth in the sensuous realm, are candidates for the fruit stream-enterer when they reach the path of vision's unimpeded path; and they are recipients of the fruit of stream-enterer when they reach the path of freedom. This is one of the **VIMŚATIPRABHEDASAMGHA** (“twenty varieties of the ārya saṃgha”) based on the list given in the **ABHISAMAYĀLAMKĀRA**; śrotaāpannaphalapatipannaka is also included in the category of follower of faith (**ŚRADDHĀNUSĀRIN**).

śrotaāpannaphalastha. (P. sotāpattiphala; T. rgyun du zhugs pa'i 'bras bu la gnas pa; C. zheng yuliu guo; J. shōyoruka; K. chŭng yeryu kwa 證預流果). In Sanskrit, one who has reached, or is the recipient of the fruit of stream-enterer, one of the eight **ĀRYAPUDGALA** (“noble persons”) and one of the **VIMŚATIPRABHEDASAMGHA** (“twenty varieties of the āryasaṃgha”) based on the list given in the **ABHISAMAYĀLAMKĀRA**. The śrotaāpannaphalastha is also included in the category of those who have aspired through faith (**ŚRADDHĀDHIMUKTA**). See **SAKRDĀGĀMIPHALASTHA**.

śroto'nugato nāma samādhiḥ. (T. rgyun gyi rje su song ba zhes bya ba'i ting nge 'dzin/chos rgyun gyi ting nge 'dzin; C. suiliuxiang chanding; J. zuirukō zenjō; K. suryuhyang sŏnjŏng 隨流向禪定). In Sanskrit, “continuous instruction concentration”; a **SAMĀDHI** achieved on the path of accumulation

([SAMBHĀRAMĀRGA](#)), in which a [BODHISATTVA](#) is able to magically receive continuous instruction ([AVAVĀDA](#)) in the dharma. The path of accumulation is subdivided into three sections, lesser, intermediate, and greater; when one reaches the intermediate stage, a bodhisattva is no longer capable of retrogressing from the [MAHĀYĀNA](#) and gains an initial capacity to hear the voice of an actual buddha. The bodhisattva hears instructions systematized in ten topics: practice (S. pratipatti, see [PATIPATTI](#)), [FOUR NOBLE TRUTHS](#), three refuges ([TRISĀRANA](#)), nonattachment (asakti), indefatigability (apariśrānti), full acceptance (saṃparigraha) of infinite instructions from infinite buddhas, the five types of eyes ([PAÑCACAKSUS](#)), the six supranormal powers ([ABHIJÑĀ](#)), the path of vision ([DARŚANAMĀRGA](#)), and the path of cultivation ([BHĀVANĀMĀRGA](#)).

[śrotravijñāna](#). (P. sotaviññāṇa; T. rna ba'i rnam par shes pa; C. ershi; J. nishiki; K. isik 耳識). In Sanskrit, “auditory consciousness,” or “ear consciousness,” one of the five sensory consciousnesses (along with those of the eye, nose, tongue, and body) and one of the six sensory consciousnesses (adding the mental consciousness, or [MANOVIJÑĀNA](#)). The auditory consciousness perceives sounds ([ŚABDA](#)). Like the other sensory consciousnesses, auditory consciousness is produced through the contact ([SPARŚA](#)) between an auditory sensory object (śabda) and the auditory sense base ([ŚROTRENDRIYA](#)) and in dependence on three conditions (pratyaya): the object condition ([ĀLAMBANAPRATYAYA](#)), in this case, a sound; a dominant condition ([ADHIPATIPRATYAYA](#)), here, the ear sense organ (śrotrendriya); and the immediately preceding condition ([SAMANANTARAPRATYAYA](#)), a prior moment of consciousness. The auditory consciousness is counted as one of the six consciousnesses ([VIJÑĀNA](#)) and eighteen elements ([DHĀTU](#)).

[śrotrāyatana](#). (P. sotāyatana; T. rna ba'i skye mched; C. erchu; J. nisho; K. ich'ō 耳處). In Sanskrit, “auditory sense-base,” or “base of cognition”; the auditory sense base or ear sense organ ([ŚROTRENDRIYA](#)) as it occurs in the list of the twelve sense fields ([ĀYATANA](#)), which are called “bases of cognition” because each pair of sense-base and sense-object produces its respective sensory consciousness. In this case, the contact ([SPARŚA](#)) between an auditory sensory object ([ŚABDA](#)) and the auditory sense base (śrotrendriya) produces an auditory consciousness ([ŚROTRAVIJÑĀNA](#)).

[śrotrendriya](#). (P. sotindriya; T. rna ba'i dbang po; C. ergen; J. nikon; K. igūn 耳根). In Sanskrit, “auditory sense base,” the physical organ located in the ear that

makes it possible to hear auditory objects or “sounds” ([ŚABDA](#)). This sense base is not the ear itself, but a form of subtle materiality ([RŪPA](#)) located within the ear and invisible to the naked eye. It is said to be round in shape with many hollow openings, like a sheaf of hay that has been cut. If this sense organ is absent or damaged, hearing is not possible. The auditory sense organ serves as the dominant condition ([ADHIPATIPRATYAYA](#)) for the production of auditory consciousness ([ŚROTRAVIJÑĀNA](#)).

[śrutamayīprajñā](#). (P. sutamayāpaññā; T. thos pa las byung ba'i shes rab; C. wenhui; J. mon'e; K. munhye 聞慧). In Sanskrit, “wisdom derived from hearing [viz., learning],” the first of the three types of wisdoms, which refers to understanding derived from listening to (and, by extension, reading and studying about) the dharma. This type of wisdom provides a grounding for the development of mental attention and concentration, which is crucial for meditative calmness ([ŚAMATHA](#)). It is not as profound as the second type of wisdom, which arises as a result of thinking about or reflecting on what one has learned ([CINTĀMAYĪPRAJÑĀ](#)); or the third type of wisdom, which is generated through meditation ([BHĀVANĀMAYĪPRAJÑĀ](#)) at the level of [VIPĀŚYANĀ](#).

[Ssanggyesa](#). (雙溪[碕]寺). In Korean, “Twin Brooks Monastery”; the thirteenth district monastery ([PONSA](#)) in the contemporary [CHOGYE CHONG](#) of Korean Buddhism. Ssanggyesa was founded in 722 during the Silla dynasty by two monks, Taebi (d.u.) and Sampöp (d.u.). The pair returned to Korea from Tang-dynasty China after having a dream that instructed them to enshrine the head of the sixth patriarch ([LIUZU](#)) [HUINENG](#) (638–713) of the Chinese [CHAN](#) school at a place where arrowroot flowers were blooming in the snow. Guided by a tiger (symbolizing the mountain spirit), they found the intended location on the mountain of [CHIRISAN](#) and constructed a monastery at the spot. The [SŎN](#) monk [CHIN'GAM HYESO](#) (774–850) rebuilt the monastery with the new name of Okch'ōnsa (Jade Fount Monastery) after returning to Korea in 840 from studying Chan on the Chinese mainland. The name Ssanggyesa was eventually given to the monastery in 887 by the Silla king Chōnggang (r. 886–887). Ssanggyesa is said to have been the site where Hyeso first introduced tea and tea culture to the Korean peninsula and the green tea grown in the mountains surrounding the monastery is still renowned in Korea for its quality. Ssanggyesa was burned to the ground during the Japanese Hideyoshi invasions (1592–1598) and the present monastery dates from the reconstruction spearheaded by [PYŎGAM](#)

[KAKSÖNG](#) (1575–1660) in 1632.

stage of completion. See [NISPANNAKRAMA](#).

stage of generation. See [UTPATTIKRAMA](#).

Stag lung. (Taklung). The central Tibetan monastic seat of the [STAG LUNG](#) subsect of the [BKA' BRGYUD](#) sect of Tibetan Buddhism. Originally founded north of [LHA SA](#) in 1180 by [STAG LUNG THANG PA BKRA SHIS DPAL](#), the monastery flourished under the guidance of his successors Sku yal ba Rin chen mgon po (Kuyalwa Rinchen Gönpö, 1191–1236) and Sangs rgyas yar byon (Sangye Yarjön, 1203–1272; also known as Prajñāguru). Under the latter's stewardship, Stag lung attained considerable power within the [SA SKYA](#)-Mongol political structure at the Yuan court. Together with his disciple and eventual successor Maṅgalaguru (T. Bkra shis bla ma, 1231–1297), he forged close ties with the Sa skya hierarch '[PHAGS PA BLO GROS RGYAL MTSHAN](#) and towards the end of his life entrusted the monastery's welfare and security to the Sa skya prelate. Stag lung was renowned for its strict adherence to monastic discipline as well as for its prodigious atelier, which produced some of central Tibet's finest paintings of the period. During its peak, the monastic population grew to some seven thousand monks. At that time, the saying originated that monks of other monasteries were "unable to rival even a dog of Stag lung." After Sangs rgyas yar byon's death, the throne fell briefly to his nephew Sangs rgyas dbon (Sangye Wön, 1250/1–1296, better known as Dbon po bla ma). Sangs rgyas dbon was compelled to flee into exile after a single year, due to Maṅgalaguru's close ties with the politically powerful 'Phags pa Blo gros rgyal mtshan. In 1276, Sangs rgyas dbon established a new seat for the Stag lung bka' brgyud tradition at [RI BO CHE](#) monastery in the eastern Tibetan region of Khams. This eventually came to eclipse the original monastery in importance. From the sixteenth century onwards, Stag lung was increasingly influenced by officials from [SE RA](#) and '[BRAS SPUNGS](#) monasteries in [LHA SA](#). Stag lung monastery was completely destroyed during the Chinese Cultural Revolution.

Stag lung bka' brgyud. (Taklung Kagyü). One of the four major and eight minor subsects of the [BKA' BRGYUD](#) sect of Tibetan Buddhism ([BKA' BRGYUD CHE BZHI CHUNG BRGYAD](#)), founded by [STAG LUNG THANG PA BKRA SHIS DPAL](#), a principal disciple of the Bka' brgyud hierarch [PHAG MO GRU PA RDO RJE RGYAL PO](#). Its original seat was [STAG LUNG](#) monastery located north of [LHA SA](#), although

a branch institution was later founded in the eastern Tibetan region of Khams at [RI BO CHE](#), which eventually eclipsed the former as a center of learning and formed a strong, nearly independent lineage.

[Stag lung Thang pa bkra shis dpal](#). (Taklung Tangpa Tashipel) (1142–1210). Founder of the [STAG LUNG BKA' BRGYUD](#), one of the four major and eight minor subsects of the [BKA' BRGYUD](#). After being ordained as a novice, he studied the main texts of the [BKA' GDAMS PA](#). In 1165, inspired by a vision, he went to meet the great Bka' brgyud hierarch [PHAG MO GRU PA RDO RJE RGYAL PO](#), becoming his personal attendant and scribe. He received many teachings from him, including “the six yogas of Nāropa” ([NĀ RO CHOS DRUG](#)). He was ordained as a [BHIKSU](#) in 1172. Stag lung thang pa was known for his commitment to monastic discipline; he was a vegetarian and did not enter the homes of laypeople. He would teach during the first half of the month and remain in retreat in the second half. He also maintained silence during each morning. He was also renowned for his tantric practice, especially [MAHĀMUDRĀ](#) and of the [HEVAJRATANTRA](#). In 1180, he founded [STAG LUNG](#) monastery, which came to have more than three thousand monks in residence during his lifetime. He is also known as Stag lung thang pa chen po, “the Great Stag lung thang pa.”

[Stag tshang](#). (Taktsang). In Tibetan, “Tiger’s Lair,” a complex of meditation caves and temples located in Paro, Bhutan, considered one of the most important sacred Buddhist sites in the Himalayan region associated with the Indian adept [PADMASAMBHAVA](#); also known as Spa gro Stag tshang (Paro Taktsang). Situated on a sheer cliff more than two thousand feet above the valley floor, the complex is the best known among numerous Stag tshang, or “Tiger’s Lair,” sites located across eastern Tibet. According to traditional accounts, Padmasambhava miraculously flew to the spot in wrathful form as [RDO RJE DROD LO](#), seated on the back of a tigress believed to have been his consort [YE SHES MTSHO RGYAL](#), and remained there for three months. In 853, one of Padmasambhava’s twenty-five main disciples, Glang chen Dpal gyi seng ge (Langchen Palkyi Sengye), went to meditate in the main cave at Stag tshang, after which it became known as Stag tshang dpal phug, or “Pal’s cave at Taktsang.” Later, many great masters undertook meditation retreats there; these include [PHA DAM PA SANGS RGYAS](#), [MA GCIG LAB SGRON](#), [THANG STONG RGYAL PO](#), and, according to one tradition, the great [YOGIN MI LA RAS PA](#). The first buildings were likely erected in the fourteenth century. However, it was under the direction of the Bhutanese

reformer [ZHABS DRUNG NGAG DBANG RNAM RGYAL](#) and later his regent Bstan 'dzin rab rgyas, that the modern structure was completed in 1692. In 1998, the complex was destroyed by fire.

[State-Protection Buddhism](#). See [HUGUO FOJIAO](#).

[stavakāya](#). (T. bstod tshogs). In Sanskrit, “collection of hymns,” or “corpus of hymns”; the devotional works attributed to [NĀGĀRJUNA](#). There are traditionally four works in this group, known collectively as the [CATUHSTAVA](#). They are the [LOKĀTĪTASTAVA](#), the [NIRAUPAMYASTAVA](#), the [ACINTYASTAVA](#), and the [PARAMĀRTHASTAVA](#), although a number of other important hymns, including the [DHARMADHĀTUSTAVA](#), are also ascribed to Nāgārjuna. This group of texts is often referred to in connection with [YUKTIKĀYA](#), the “corpus of reasoning” or “collection of reasoning,” a term used to refer collectively to six works that traditionally constitute [NĀGĀRJUNA](#)'s philosophical oeuvre. Those six works are the [MŪLAMADHYAMAKĀRIKĀ](#), the [YUKTISASTIKĀ](#), the [ŚŪNYATĀSAPTATI](#), the [VIGRAHAVYĀVARTANĪ](#), the [VAIDALYASŪTRANĀMA](#), and the [RATNĀVALĪ](#). In some versions, there are only five works in this corpus, with the *Ratnāvalī* eliminated. These two collections of Nāgārjuna's works figure prominently in the “self-emptiness, other-emptiness” ([RANG STONG GZHAN STONG](#)) debate in Tibetan Buddhism, where the parties disagree on the question of which corpus represents Nāgārjuna's definitive view. The proponents of the rang stong, or “self-empty” position, see a consistent philosophical view between the two collections, whereas the proponents of gzhan stong, or “other-emptiness,” find a more substantialist position in the corpus of hymns and regard this as Nāgārjuna's true position.

[Stcherbatsky, Fyodor Ippolitovich](#). (1866–1942). The leading Russian scholar of Buddhism of the early twentieth century; born in Kielce, Poland, to a Russian military family. Stcherbatsky was one of the first Russian Orientalists to study Buddhism; his main areas of scholarly interest were [SARVĀSTIVĀDA](#) and [MAHĀYĀNA](#) literature. He worked with [EUGÈNE OBERMILLER](#) (1901–1935), who was also his student, and knew [SYLVAIN LÉVI](#) (1863–1935) and other members of the French school of Buddhist Studies. Stcherbatsky conveyed messages between the Russian monk [AGVAN DORZHIEV](#) and the thirteenth [DALAI LAMA](#), and traveled extensively in Mongolia and Trans-Baikalia. Stcherbatsky taught Sanskrit at St. Petersburg (Leningrad) University from 1900–1941. He was also the head of the Oriental Institute of the Imperial Russian Academy of Sciences.

He often worked with Dorzhiev, and rescued him from jail on at least one occasion. He helped construct Dorzhiev's St. Petersburg Temple, which was consecrated in 1915, and was eventually entrusted with its care when the monks were forced to flee in 1918. He traveled to western Europe on a book-buying mission for the academy, and attended the First All-Russian Buddhist Congress in 1927. Because he supported the Bolshevik revolution, Stcherbatsky was not personally persecuted; his teacher, [SERGE OLDENBURG](#), was a friend of Lenin. He remained an active scholar during the Soviet period, leading an expedition to acquire Tibetan manuscripts from Buryat monasteries in 1924. Along with other scholars, Stcherbatsky was evacuated from Leningrad to Kazakhstan in 1941, and died there the following year. Stcherbatsky's published works include *The Soul Theory of Buddhists* (1920), *The Central Conception of Buddhism and the Meaning of the Word Dharma* (1923), *The Conception of Buddhist Nirvana* (1927), and *Buddhist Logic* (1932).

[Stein, Sir Marc Aurel](#). (1862–1943). Hungarian-born archaeologist who led four British expeditions through Central Asia to document and collect artifacts from the lost cultures of the ancient [SILK ROAD](#). After receiving his doctorate in Sanskrit and Oriental religions under Rudolf von Roth at the University of Tübingen, Stein moved to England where he made use of the resources at the Ashmolean Museum, the Bodleian Library, the India Office Library, and the British Museum to further his study of Sanskrit. During his service in the Hungarian military, Stein learned both surveying and map-making, skills that would aid him in his career. Stein's greatest discovery was made at the [DUNHUANG](#) caves in northwest China. There, he came across a hidden library cave (Cave 17) containing over forty thousand scrolls, many of which he sent back to England for study. The Stein collection at the British Library contains over thirty thousand manuscripts and printed documents in languages as varied as Chinese, Tibetan, Sanskrit, Mongolian, Tangut, Khotanese, Kuchean, Sogdian, and Uighur. The art objects Stein collected are now divided between the British Museum, the British Library, the Srinigar Museum, and the Indian National Museum at New Delhi. In addition, thousands of photographs taken by Stein dating from the 1890s to 1938 have been preserved, as well as several volumes published by Stein detailing his explorations. These items are critical to the study of the history of Central Asia generally and the spread of Buddhist art and literature. Stein died and was buried in Kabul, Afghanistan.

***sthāpyabhāvanā**. (T. 'jog sgom). In Sanskrit, “stabilizing meditation,” the one-pointed concentration on a single object without discursive reflection. An example of such stabilizing meditation would be the concentration on the breath or the golden body of the Buddha, eventually resulting in a state of [ŚAMATHA](#) or [DHYĀNA](#). The term is often paired with [*VICĀRABHĀVANĀ](#), those forms of meditation that involve discursive reflection on points of Buddhist doctrine, such as the investigation of the constituents of mind and body. In instructions on meditation practice, advice is often given to alternate between these two forms of meditation, first arriving at a conclusion or conviction through analytical meditation and then focusing on that conclusion through stabilizing meditation, resulting in [VIPĀŚYANĀ](#).

Sthāvarā. (T. Sa'i lha mo; C. Anzhu dishen; J. Anjūjijin; K. Anju chisin 安住地神). In Sanskrit, “Immovable,” the goddess of the earth, also known as [PRTHIVĪ](#). She plays an important role in the story of [ŚĀKYAMUNI](#) Buddha’s enlightenment. After [MĀRA](#) and his armies were unable to unseat the [BODHISATTVA](#), Māra challenged his right to occupy the space beneath the [BODHI TREE](#), claiming that he, Māra, had a greater right since, as a god, he had greater merit; his army boisterously attested to Māra’s claim. The bodhisattva responded that his merit was greater because he had practiced the ten perfections ([PĀRAMITĀ](#)) for many lifetimes. When Māra asked who would attest to the Bodhisattva’s claim, he touched the earth with his right hand in the famous “earth-touching gesture” ([BHŪMISPARŚAMUDRĀ](#)), calling on the goddess of the earth to attest to the truth of his statement. She responded by causing a tremor; in some versions, she emerges from the earth to bear witness. In the [GANDAVYŪHA](#) (the final chapter of the [AVATAMSAKASŪTRA](#)), the bodhisattva [SUDHANA](#) sets out in search of a teacher, encountering fifty-two beings (twenty of whom are female), including the Buddha’s mother [MAHĀMĀYĀ](#), the future buddha [MAITREYA](#), as well as [AVALOKITEŚVARA](#) and [MAÑJUŚRĪ](#). The thirtieth being he encounters is Sthāvarā, whom he meets at [BODHGAYĀ](#). She also bears witness to his practice of virtue and predicts that he will achieve buddhahood. See also [THORANI](#).

sthavira. (P. therā; T. gnas brtan; C. shangzuo; J. jōza; K. sangjwa 上座). In Sanskrit, “elder,” a term of respect for a senior monk, and typically one with at least a decade of seniority as a fully ordained monk or nun ([BHIKSU](#), [BHIKSUNĪ](#)), with seniority measured not by age but by the length of time since the monk or nun’s full ordination ([UPASAMPADĀ](#)). One’s years of ordination as a novice monk

or nun ([ŚRĀMANERA](#), [ŚRĀMANERIKĀ](#)) do not count in determining one's seniority within the order. The term also refers to sixteen (or in some lists, eighteen) [ARHAT](#)-disciples of the Buddha and were entrusted by him with preserving the teaching until the coming of the future buddha, [MAITREYA](#). These monks became objects of devotion, especially in Tibet and East Asia; see [SODĀŚASTHAVIRA](#).

***[Sthaviranikāya](#)**. (T. Gnas brtan sde pa; C. Shangzuo bu; J. Jōzabu; K. Sangjwa pu 上座部). In Sanskrit, “School of the Elders”; one of the important “mainstream” (that is, non-[MAHĀYĀNA](#)) schools of Indian Buddhism, which later split into several other important [MAINSTREAM BUDDHIST SCHOOLS](#). The Sthaviranikāya is thought to have come into existence in a dispute over monastic practice that occurred about a century after the Buddha's death, at the so-called second Buddhist council ([SAMGĪTI](#); see [COUNCIL, SECOND](#)) held at [VAISĀLĪ](#). The Sthaviranikāya resolved that ten rules of the [VINAYA](#) must be observed, while another faction, which came to call itself the [MAHĀSĀMĠHIKA](#) (“Great Congregation”) held that these rules could be ignored. The ten violations of monastic practice that the Sthaviranikāya sought to proscribe were: (1) carrying salt in an animal horn, (2) eating when the shadow of the sundial is two fingerbreadths past noon, (3) after eating, traveling to another village on the same day to eat another meal, (4) holding several monastic assemblies within the same boundary ([SĪMĀ](#)) during the same fortnight, (5) making an ecclesiastical decision with an incomplete assembly and subsequently receiving the approval of the absent monks, (6) citing precedent as a justification for violating monastic procedures, (7) drinking milk whey after mealtime, (8) drinking unfermented wine, (9) using mats with fringe, and (10) accepting gold and silver. A rival, and apparently larger, group of monks held that these actions did not constitute violations of the vinaya and thus called themselves the “Great Congregation.” The other [NIKĀYAS](#) or schools subsequently branched off from the Sthaviranikāya and the Mahāsāṃghika strands of mainstream Buddhism. The Sthaviranikāya itself subsequently divided into three major branches. The earliest subgroup to evolve was the [VĀTSĪPUTRĪYA](#) or [SAMMITĪYA](#), commonly known as the [PUDGALAVĀDA](#) (Teaching of the Person), which advocated that the continuity of karmic experience and the prospect of rebirth demanded some sort of entity (the person, or [PUDGALA](#)) that was neither identical to, nor distinct from, the aggregates ([SKANDHA](#)). Despite the reproach the school received from virtually all other mainstream schools—which viewed this doctrine of the person as tantamount to a teaching about a perduring self ([ĀTMAN](#)), anathema to the

quintessential Buddhist teaching of [ANĀTMAN](#)—the Pudgalavāda seems in fact to have been widespread and popular. The second major school was the [SARVĀSTIVĀDA](#) (Teaching that All Exists), a highly influential school especially in the northwest regions of [KASHMIR](#) and [GANDHĀRA](#), which developed one of the most elaborate [ABHIDHARMA](#) traditions in mainstream Buddhism, and which had a significant influence on the development of later [MAHĀYĀNA](#) scholasticism. The third was the [VIBHAJYAVĀDA](#) (Teaching of Differentiation), a broad designation for non-Sarvāstivāda strands of the Sthaviranikāya, which included such later mainstream schools as [MAHĪSĀSAKA](#), [DHARMAGUPTAKA](#), and [KĀŚYAPIYA](#). The only surviving strand of the Sthaviranikāya is the [THERAVĀDA](#). However, the Sanskrit form *Sthaviravāda, which would be the rendering for the Pāli term Theravāda, is not attested in any Indian source; attested Sanskrit forms (both very rare) include sthāvira or sthāvārīya (“followers of the elders”). In addition, the Tibetan and Sinographic renderings of the term would both be reconstructed in Sanskrit as *Sthaviranikāya, suggesting again that Sthaviravāda or Theravāda was not the traditional designation of this school. Scholars have therefore questioned the historical ties between the Sthaviranikāya and the Theravāda, especially given the rare use of the term Theravāda as a term of self-identification prior to the early twentieth century.

***Sthaviravāda.** See [STHAVIRANIKĀYA](#); [THERAVĀDA](#).

Sthiramati. (T. Blo gros brtan pa; C. Anhui; J. An’e/Ane; K. Anhye 安慧) (475–555). Indian Buddhist philosopher associated particularly with [YOGĀCĀRA](#) school. His dates are uncertain (leading one scholar to posit three figures with this name), but he is generally placed in the sixth century, although he is said to have been a disciple of both [VASUBANDHU](#) and Guṇamati. Sthiramati seems to have been primarily based in [VALABHĪ](#), but may have also studied at [NĀLANDĀ](#). He wrote a number of important commentaries on such Yogācāra works as the [MAHĀYĀNASŪTRĀLAMKĀRA](#) and [MADHYĀNTAVIBHĀGA](#) of [MAITREYANĀTHA](#) and [VASUBANDHU](#)’s [TRIMŚIKĀ](#).

sthiti. (P. ṭhiti; T. gnas pa; C. zhu; J. jū; K. chu 住). In Sanskrit, “continuance,” “abiding,” or “duration,” one of the four characteristics ([CATURLAKSANA](#)) governing all conditioned objects, along with origination or birth ([JĀTI](#)), “senescence” or decay ([JARĀ](#)), and “desinence” or extinction ([ANITYA](#)). Sthiti refers to the characteristic of impermanent things to remain for one moment prior to their senescence and ultimate extinction. In the [SARVĀSTIVĀDA](#) school,

sthiti was treated as a “force dissociated from thought” ([CITTAVIPRAYUKTASAMSKĀRA](#)): in this case, the force “continuance” remained in place until the object began to decay through the force of “senescence” and ultimately was extinguished through the force “desinence.” This rather tortured explanation was necessary in order to explain how factors ([DHARMA](#)) that the school presumed continued to exist in all three time-periods nevertheless still appeared to undergo change. Some Sarvāstivāda [ABHIDHARMA](#) texts, however, accept only three characteristics, omitting continuance.

[sthūlātyaya](#). (P. thullaccaya; T. nyes pa sbom po; C. toulanzhe; J. chūranja/chūransha; K. t’uranch’a 偷蘭遮). In Sanskrit, “grave offense” or “important fault”; a category of misdeed in the Buddhist [VINAYA](#), it includes the most serious offenses that can be expiated through simple confession to another monk, rather than the more severe sanction of “defeat” ([PĀRĀJIKĀ](#)) or the sanction of confession at a formal meeting of the order ([SAMGHĀVAŚĒSA](#)). The misdeeds that fall under this category generally involve a failed or lesser version of a misdeed that would otherwise entail a stronger sanction. Such transgressions would include, for example, attempting to kill someone but only inflicting injury, testing poison on a human being, killing a nonhuman being, such as a [PRETA](#), [NĀGA](#), or [YAKSA](#), stealing something of little or no value (defined in the Pāli vinaya as being worth more than one māśaka and less than five māśaka), touching the hem of a woman’s garment with a lustful motivation, making lustful contact with an animal that one has mistaken for a woman, seeking to ejaculate but failing to do so, attempting to have sexual intercourse with a corpse, lustfully touching the genitals of cattle, making lascivious reference to a woman’s private parts without her understanding the reference, performing two of the three deeds of a go-between (accepting the request, inquiring, reporting back), going naked, wearing a garment made of owls’ wings, wearing a garment of bark, castrating oneself, eating human flesh, giving away a monastery, giving away a metal pot, causing a boat to rock in place although it does not move up or down stream, delivering the penultimate blow in chopping down a tree, causing an animal to move any of its feet, moving a boundary marker ([SĪMĀ](#)), causing an owner to give up attempts to regain possession of property, implying (although not stating explicitly) that one is endowed with supranormal powers, and unsuccessfully attempting to cause a schism in the order ([SAMGHABHEDA](#)).

[storehouse consciousness](#). See [ĀLAYAVIJÑĀNA](#).

stream-enterer. See [SROTAĀPANNA](#).

stūpa. (P. thūpa; T. mchod rten; C. ta; J. tō; K. t'ap 塔). In Sanskrit, “reliquary”; a structure, originally in the shape of a hemispherical mound, that contains the relics ([ŚARĪRA](#)) or possessions of the Buddha or a saint, often contained within a reliquary container. In the [MAHĀPARINIBBĀNASUTTA](#), the Buddha says that after he has passed away, his relics should be enshrined in a stūpa erected at a crossroads, and that the stūpa should be honored with garlands, incense, and sandalwood paste. Because of a dispute among his lay followers after his death, his relics were said to be divided into ten portions and distributed to ten groups or individuals, each of whom constructed a stūpa to enshrine their share of the relics in their home region. Two of these sites were the Buddha’s home city of [KAPILAVASTU](#), and [KUŚINAGARĪ](#), the place of his death, as well as [RAJAGRHA](#) and [VAIŚĀLI](#). The original stūpas were later said to have been opened and the relics collected by the emperor [AŚOKA](#) in the third century BCE so that he could subdivide them for a larger number of stūpas in order to accumulate merit and protect his realm. Aśoka is said to have had eighty-four thousand stūpas constructed. The stūpa form eventually spread throughout the Buddhist world (and during the twentieth century into the Western hemisphere), with significant variations in architectural form. For example, the dagoba of Sri Lanka and the so-called “[PAGODA](#)” (derived from a Portuguese transcription of the Sanskrit [BHAGAVAT](#) [“blessed,” “fortunate”] or the Persian but kadah [“idol house”]), which are so ubiquitous in East Asia, are styles of stūpas. The classical architectural form of the stūpa in India consisted of a circular platform surmounted by a hemisphere made of brick within which the relics were enshrined. At the summit of the hemisphere, one or more parasols were affixed. A walking path (see [CANKRAMA](#)) enclosed by a railing was constructed around the stūpa, to allow for clockwise circumambulation of the reliquary. Each of these architectural elements would evolve in form and eventually become imbued with rich symbolic meaning as the stūpa evolved in India and across Asia. The relics enshrined in the stūpa are considered by Buddhists to be living remnants of the Buddha (or the relevant saint) and pilgrimage to, and worship of, stūpas has long been an important type of Buddhist practice. For all Buddhist schools, the stūpa became a reference point denoting the Buddha’s presence in the landscape. Although early texts and archeological records link stūpa worship with the Buddha’s life and especially the key sites in his career, stūpas are also found at places that were sacred for other reasons, often through an association

with a local deity. Stūpas were constructed for past buddhas and for prominent disciples ([ŚRĀVAKA](#)) of the Buddha. Indeed, stūpas dedicated to disciples of the Buddha may have been especially popular because the monastic rules stipulate that donations to such stūpas became the property of the monastery, whereas donations to stūpas of the Buddha remained the property of the Buddha, who continued to function as a legal resident of most monasteries. By the seventh century, the practice of enshrining the physical relics of the Buddha ceases to appear in the Indian archeological record. Instead, one finds stūpas filled with small clay tablets that have been stamped or engraved with a four-line verse (often known by its first two words [YE DHARMĀ](#)) that was regarded as conveying the essence of the Buddha’s teaching: “For those factors that are produced through causes, the [TATHĀGATA](#) has set forth their causes ([HETU](#)) and also their cessation ([NIRODHA](#)). Thus has spoken the great renunciant.” For the [MAHĀYĀNA](#), the stūpa conveyed a variety of meanings, such as the Buddha’s immortality and buddhahood’s omnipresence, and served a variety of functions, such as a site of textual revelation and a center guaranteeing rebirth in a [PURE LAND](#). Stūpas were also pivotal in the social history of Buddhism: these monuments became magnets attracting monastery building and votive construction, as well as local ritual traditions and regional pilgrimage. The economics of Buddhist devotion at these sites generated income for local monasteries, artisans, and merchants. The great stūpa complexes (which often included monasteries with endowed lands, a pilgrimage center, a market, and support from the state) were essential sites for the Buddhist polities of Asia. See [CAITYA](#) and entries for specific stūpas, including [FAMENSI](#), [RATNAGIRI](#), [SAÑCI](#), [SHWEDAGON](#), [SVAYAMBHŪ/SVAYAMBHŪNĀTH](#), [THIÊN MU TU](#), [THŪPĀRĀMA](#).

[styāna](#). (P. thina; T. rmug pa; C. hunchen; J. konjin; K. honch’im 惛沉). In Sanskrit, “torpor,” often paired with “sloth” ([MIDDHA](#)). As a compound, styānamiddha constitute the third of the five “hindrances” ([NĪVARANA](#)) to the attainment of the first meditative absorption ([DHYĀNA](#)), along with sensual desire ([KĀMACCHANDA](#)), malice or ill-will ([VYĀPĀDA](#)), restlessness and worry ([AUDDHATYA-KAUKRTYA](#)), and skeptical doubt ([VICIKITSĀ](#)). Because of the laziness generated by this mental concomitant, styānamiddha specifically hinders the meditative constituent ([DHYĀNĀNGA](#)) of applied thought ([VITARKA](#)). This hindrance is countered by the spiritual faculty ([INDRIYA](#)) of effort ([VĪRYA](#)). Ways of countering sloth and torpor include memorizing the doctrine, developing the perception of light, or simply walking around in the open air.

Subāhuparipṛcchātantra. (T. Dpung bzangs kyis zhus pa'i rgyud; C. Supohu tongzi qingwen jing; J. Sobakodōji shōmongyō; K. Sop'aho tongja ch'ōngmun kyōng 蘇婆呼童子請問經). In Sanskrit, “Tantra Requested by Subāhu,” an important Buddhist **TANTRA**, translated into Chinese by **ŚUBHAKARASIMHA** in 726. In the text, the bodhisattva **VAJRAPĀNI** explains a range of tantric practices at the request of the youth Subāhu. It is one of the earliest tantras to set forth elements that would come to be considered standard in tantric practice, especially of the wrathful variety, including the performance of rituals to obtain magical powers (**SIDDHI**), the importance of cemeteries and charnel grounds (**ŚMAŚĀNA**) as a site for tantric practice, the use of human corpses in the **MANDALA**, the use of bones, and the practice of sexual rites with semi-divine women (yakṣiṇī/yakṣī).

Subhadra. (T. Rab bzang; P. Subhadda; C. Xubatuoluo; J. Shubatsudara; K. Subaltara 須跋陀羅). The last person converted by the Buddha before he passed into **PARINIRVĀNA**. According to some accounts, he was a 120-year-old brāhmaṇa, according to others, a young ascetic. Hearing that the Buddha would be passing away that night at **KUŚINAGARĪ**, Subhadra went to see the Buddha and asked **ĀNANDA** for permission to speak with him. Ānanda refused the request three times, saying that the Buddha was weary. The Buddha overheard their conversation and told Subhadra to come forward, saying, “Do not keep out Subhadra. Subhadra may be allowed to see the Tathāgata. Whatever Subhadra will ask of me, he will ask from a desire for knowledge, and not to annoy me, and whatever I may say in answer to his questions, that he will quickly understand.” Subhadra began to ask the Buddha about the doctrines of various other teachers, but the Buddha cut him short, explaining that only one who knows the noble eightfold path (**ĀRYĀSTĀṄGAMĀRGA**) is a true **ŚRAMANA**. Subhadra then asked to be ordained. The Buddha replied that adherents of other sects first had to undergo a probationary period of four months before ordination. When Subhadra announced his willingness to do so, the Buddha waived the requirement and instructed Ānanda to shave the hair and beard of Subhadra. He was then escorted back to the Buddha who ordained him, making him the last person that Buddha personally ordained. The Buddha then gave him a subject of meditation. Walking up and down in the grove, he quickly became an **ARHAT** and came and sat by the Buddha. According to some accounts, Subhadra felt that he was unworthy to witness the passage of the Buddha into parinirvāṇa and thus asked the Buddha for permission to die first. The Buddha gave his permission. ¶ Subhadra is also the name of a former barber who entered

the order late in life. He always carried a certain animus against the Buddha, because, while Subhadra was still a layman, the Buddha refused to accept a meal that he had prepared for him. After the Buddha's death, Subhadra told monks who were weeping at his passing that they should instead rejoice: since the Buddha would no longer be telling them what they could and could not do, monks would now be free to do as they pleased. [MAHĀKĀŚYAPA](#) overheard this remark and was said to have been so alarmed by it that he convened what came to be known as the first Buddhist council ([SAMGĪTI](#); see [COUNCIL, FIRST](#)) to codify the monastic rules and the Buddha's discourses.

[Śubhakarasiṃha](#). (C. Shanwuwei; J. Zenmui; K. Sōnmuo 善無畏) (637–735). Buddhist [ACĀRYA](#) and Chinese translator, who played a major role in the introduction into China and translation of seminal Buddhist texts belonging to what is now known as the esoteric tradition, or [MIJIAO](#) (see [MIKKYŌ](#); [TANTRA](#)); also known as Śubhakarasiṃha's place of origin is unclear. Some sources say he hailed from the Indian kingdom of Oḍra, and others say [MAGADHA](#) or the Central Asian kingdom of Udyāna. According to his biography in the [SONG GAOSENG ZHUAN](#), Śubhakarasiṃha was born into a royal family of Oḍra. A fratricidal feud over the throne led Śubhakarasiṃha to renounce the throne and become a monk. He later visited the famed monastic university of [NALANDĀ](#) and became the disciple of a certain Dharmagupta. His mastery of morality ([ŚĪLA](#)), concentration ([DHYĀNA](#)), and wisdom ([PRAJÑĀ](#)) under Dharmagupta earned him the title of [TREPITAKA](#), and he later also gained fame as a thaumaturge. With Dharmagupta's permission, Śubhakarasiṃha left for China. Traveling north on the Central Asian trade routes, in 716, Śubhakarasiṃha arrived in the western capital of the Tang dynasty, Chang'an. The emperor invited him to stay at the monastery of Xingfusi. In 717, Śubhakarasiṃha began translating some of the Sanskrit texts that he had brought with him to China. In 724, he accompanied the emperor to the eastern capital of Luoyang, where he continued his translation work. During his stay in Luoyang, Śubhakarasiṃha translated the [MAHĀVAIROCANĀBHISAMBODHISŪTRA](#), a central scripture of the East Asian esoteric traditions. He was assisted by his Chinese disciple [YIXING](#), who also composed an important commentary on the sūtra. In 726, Śubhakarasiṃha also translated the important *[SUSIDDHIKARASŪTRA](#). Five years after his death, Śubhakarasiṃha's body was buried on the grounds of the monastery of Guanghuasi in [LONGMEN](#). According to his biography, Śubhakarasiṃha's body did not decay (see [ŚARĪRA](#)) and thus became an object of fervent worship.

śubhakṛtsna. (P. subhakiṇṇā; T. dge rgyas; C. bianjing tian; J. henjōten; K. pyŏnjŏng ch'ŏn 遍淨天). In Sanskrit, “pervasive purity,” the highest of the three heavens of the third absorption ([DHYĀNA](#)) of the realm of subtle materiality ([RŪPADHĀTU](#)). The divinities of this heaven are so-called because the radiance emanating from their bodies is of a steady brightness and does not occur in flashes. As with all the heavens of the realm of subtle materiality, one is reborn as a divinity there through achieving during one’s practice of meditation in the preceding lifetime the same level of absorption as the divinities of that heaven. When the universe is destroyed by flood, the waters are said to rise to the level of this heaven.

Subhasuttanta. (C. Yingwu jing; J. Ōmukyō; K. Aengmu kyŏng 鸚鵡經). In Pāli, “Discourse to Subha”; tenth sutta of the [DIGHANIKĀYA](#) (a related Pāli recension is included as the ninety-ninth sūtra of the [MAJJHIMANIKĀYA](#) and a separate [SARVĀSTIVĀDA](#) recension as the 152nd sūtra in the Chinese translation of the [MADHYAMĀGAMA](#)); preached by Ānanda at Sāvatti (S. [ŚRĀVASTĪ](#)) to the brāhmaṇa Subha Todeyyaputta shortly after the Buddha’s demise. In content that is very similar to the [SĀMAÑÑAPHALASUTTANTA](#) (S. Śrāmaṇyaphalasūtra), Subha invites Ānanda to tell him what things the Buddha extolled, what he inspired others to follow, and what he established others in. Ānanda responds that there were three bodies, or categories, of things which the Buddha extolled, inspired others to follow, and established them in. These were the noble body of morality (P. ariyasīlakkhandha, S. āryasīlaskandha), the noble body of concentration (P. ariyasamādhikkhandha, S. āryasamādhiskandha), and the noble body of wisdom (P. ariyapaññākkhandha, S. āryaprajñāskandha). Under the noble body of morality ([ŚĪLA](#)), Ānanda enumerates the following points: the appearance of the Buddha in the world, understanding his teachings and entering the Buddhist order, training in the restraint of action and speech, and observance of minor points of morality, all of which leads to an absence of fear and a confidence of heart. Under the noble body of concentration ([SAMĀDHI](#)), he enumerates guarding the senses, mindfulness, contentment with little, freedom from the five hindrances, joy and peace of mind, and the four meditative absorptions (P. [JHĀNA](#), S. [DHYĀNA](#)). Under the noble body of wisdom ([PRAJÑĀ](#)), he enumerates insight into the conditioned nature and impermanence of body and mind, the power to conjure up mind-made bodies ([MANOMAYAKĀYA](#)), knowledge of the [FOUR NOBLE TRUTHS](#), and destruction of the contaminants (P. āsava, S. [ĀSRAVA](#)).

Subhūti. (T. Rab 'byor; C. Xuputi; J. Shubodai; K. Subori 須菩提). Sanskrit and Pāli proper name of an eminent [ARHAT](#) who was foremost among the Buddha's disciples in dwelling at peace in remote places and in worthiness to receive gifts. He was the younger brother of [ANĀTHAPINDADA](#) and took ordination on the day the [JETAVANA](#) grove was dedicated, when he heard the Buddha preach. He mastered the ubhatovibhaṅga, the two collections comprising the [VINAYAPITAKA](#), after which he retired to the forest to practice meditation. He attained arhatship on the basis of maitrīdhyāna (P. mettājhāna), meditative absorption cultivated through contemplation of loving-kindness ([MAITRĪ](#)). On his alms-rounds, Subhūti would cultivate loving-kindness at the door of every house where he stopped, thus expanding the amount of merit accrued by his donor. Subhūti taught the dharma without distinction or limitation, for which reason the Buddha singled him out for praise. Subhūti was widely revered for his holiness and was sought out as a recipient of gifts. King [BIMBISĀRA](#) once promised to build a cave dwelling for him in [RĀJAGRHA](#) but later forgot. Without a dwelling place, Subhūti sat in the open air to practice meditation. Over time, this caused a drought in the region, for the clouds would not rain lest this disturb the saint's meditations. When Bimbisāra became aware of this issue, he built a grass hut for him, and as soon as Subhūti sat inside it, the clouds poured down rain. During the time of Padmottara Buddha, Subhūti had been a famous hermit named Nanda with forty thousand disciples. Once when the Buddha was visiting his hermitage, he directed one of his monks proficient in loving-kindness and foremost in worthiness to receive gifts to preach to his host. Upon hearing the sermon, all forty thousand disciples of Nanda became arhats, while Nanda, enthralled by the charisma of the preaching monk, resolved one day to earn the same distinction. Subhūti also plays a prominent role in a number of [MAHĀYĀNA](#) sūtras. The most famous of these roles is as the Buddha's chief interlocutor in [PRAJÑĀPĀRAMITĀ](#) sūtras like the [VAJRACCHEDIKĀPRAJÑĀPĀRAMITĀSŪTRA](#). In the [SADDHARMAPUNĀRĪKASŪTRA](#), Subhūti is one the four [ŚRĀVAKA](#)s who understands the parable of the burning house; later his buddhahood is prophesied by the Buddha. In the [VIMALAKĪRTINIRDEŚA](#), Subhūti is one of the arhats who is reluctant to visit Vimalakīrti. Among the Buddha's ten major disciples, he is said to have been foremost in the knowledge of insubstantiality.

Subinda. [alt. Suvinda] (C. Supintuo; J. Sobinda; K. Sobint'a 蘇頻陀). The Sanskrit name of the fourth of the sixteen [ARHAT](#) elders ([SODĀŚASTHAVIRA](#)), according to the roster of arhats now recognized in the East Asian tradition; he is

said to reside in [UTTARAKURU](#) with seven hundred disciples. Subinda is said to have been the last personal disciple of the Buddha and for this reason is shown holding a small [STŪPA](#) (symbolizing the Buddha), which he carried with him wherever he went; he is thus known in Chinese as the “Pagoda-Holding Arhat.” Subinda has various portrayals in Chinese paintings. In the Mogao caves of [DUNHUANG](#), he is shown sitting in full-lotus posture on a rock, with his right arm bent upwards and his left hand holding a water bottle in front of his chest. In [CHANYUE GUANXIU](#)’s standard Chinese depiction, Subinda sits in meditation on a rock, with his robe worn across both his shoulders, his right fist holding fast to the front of his chest, and his left hand placed on his knee. He is not included in the Tibetan list of the sixteen.

subitism. See [DUNWU](#); [DUNWU JIANXIU](#).

Sucandra. (T. Zla ba bzang po). The king of [ŚAMBHALA](#) who requested the Buddha to deliver the [KĀLACAKRATANTRA](#). According to legend, the king traveled to India from śambhala and asked that the Buddha set forth a teaching that would allow him to practice the dharma without renouncing the world. In response, the Buddha, while continuing to wear the robes of a monk on Vulture Peak ([GRDHRAKŪTA](#)) in [RĀJAGRHA](#), set forth the *Kālacakratantra* at Dhānyakaṭaka in southern India in the guise of the buddha Kālacakra. The king returned to śambhala, where he transcribed this tantra in twelve thousand verses. This text is referred to as the root tantra (mūlatantra) and is no longer extant. Sucandra also wrote a commentary in sixty thousand verses, now also lost. The king finally built a three-dimensional Kālacakra [MANDALA](#) at the center of the kingdom, which was transformed into an ideal realm for Buddhist practice. The king, considered an incarnation of [VAJRAPĀNI](#) died two years after receiving the *Kālacakratantra* from the Buddha.

suchness. See [TATHATĀ](#).

Sudāna Jātaka. (C. Xudana bensheng; J. Shudainu honjō; K. Sudaena ponsaeng 須大拏本生). An alternate name for the bodhisattva Viśvaṃtara and the popular *Viśvantara Jātaka* (P. [VESSANTARA-JĀTAKA](#)).

sudarśana. (P. sudassī; T. shin tu mthong ba; C. shanjian tian; J. zenkenten; K. sŏn’gyŏn ch’ŏn 善見天). In Sanskrit, “perfect vision,” the name of the second highest of the eight heavens of the fourth meditative absorption ([DHYĀNA](#)) of the

realm of subtle materiality ([RŪPADHĀTU](#)), and one of the five heavens that constitute the [ŚUDDHĀVĀSA](#), the “pure abodes” where those who have attained the rank of [ANĀGĀMIN](#) become [ARHATS](#). As with all the heavens of the realm of subtle materiality, one is reborn as a divinity there through achieving the same level of concentration (dhyāna) as the gods of that heaven during one’s practice of meditation in a previous lifetime.

[Sudatta](#). (T. Legs byin; C. Xuda; J. Shudatsu; K. Sudal 須達). The personal name of the Buddha’s patron [ANĀTHAPINDADA](#). See [ANĀTHAPINDADA](#).

[sudden enlightenment](#). See [DUNWU](#); [DUNWU JIANXIU](#).

[sudden-gradual issue](#). See [BSAM YAS DEBATE](#); [DUNJIAO](#); [DUNWU](#); [DUNWU JIAOXIU](#); [GUIFENG ZONGMI](#); [KAMALAŚĪLA](#); [POJO CHINUL](#).

[sudden teachings](#). See [DUNJIAO](#).

[śuddhāvāsa](#). (P. suddhāvāsa; T. gnas gtsang; C. wujingju tian; J. gojōgoten; K. ojonggō ch’ōn 五淨居天). In Sanskrit, “pure abodes,” the term used to refer collectively to the five highest of the eight heavens that constitute the fourth meditative absorption ([DHYĀNA](#)) of the subtle-materiality realm ([RŪPADHĀTU](#)); the divinities residing there are called the śuddhāvāsakāyika gods. In some traditions, the śuddhāvāsa are said to be the abode of nonreturners ([ANĀGĀMIN](#)), the third of the four types of advanced adepts ([ĀRYAPUDGALA](#)), who are in their final rebirth before achieving arhatship (see [ARHAT](#)) and thus need never again to be reborn in, or return to, the sensuous realm ([KĀMADHĀTU](#)). Since nonreturners have removed the first five fetters ([SAMYOJANA](#)) associated with the sensuous realm, and weakened the latter five, they are “nonreturners” to the sensuous realm and are instead reborn into the pure abodes, whence they will complete their practice and attain enlightenment as an arhat. The pure abodes therefore serve as a kind of way station for advanced beings ([ĀRYA](#)) in their last lives before final liberation. In the [ABHIDHARMAKOŚABHĀSYA](#), the explanation of nonreturners differs; before they reach [NIRVĀNA](#) they never take rebirth in the sensuous realm, but they may pass through each of the heavens before entering nirvāṇa, or skip over one or more heavens and enter into nirvāṇa from any heaven, depending on their aptitude. In certain Mahāyāna interpretations, such as in the [ABHISAMAYĀLAMKĀRA](#), the pure abodes are adjacent to the fourth dhyāna, like suburbs of that meditative absorption, and the [AKANISTHA](#) heaven of the pure

abodes is considered to be the abode of the enjoyment body ([SAMBHOGAKĀYA](#)) of a buddha. Some say the pure abodes remain empty even for several eons ([KALPA](#)) when there are no buddhas. When a bodhisattva is in his last life before attaining buddhahood, it is said that the divinities of the pure abodes provide the four portents ([CATURNIMITTA](#), viz., an old man, a sick man, and corpse, and a mendicant) that cause the bodhisattva to renounce the life of the householder and go forth to the homeless life. The five heavens that constitute the pure abodes are [AVRHA](#), [ATAPA](#), [SUDRŚA](#), [SUDARŚANA](#), and [AKANISTHA](#).

śuddhāvāsakāyika. (S; T. gnas gtsang ma'i ris; C. jingju tian; J. jōgoten; K. chōnggǒ ch'ōn 淨居天). Beings belonging to the [ŚUDDHĀVĀSA](#), or “pure abodes,” a region of the fourth dhyāna of the subtle-materiality realm ([RŪPADHĀTU](#)) where only noble beings ([ĀRYA](#)) are reborn.

Śuddhipanthaka. (S; C. Zhoulipante; J. Shuribandoku; K. Churibant'ūk 周利槃特). See [CŪDAPANTHAKA](#).

Śuddhodana. (P. Suddhodana; T. Zas gtsang; C. Jingfan wang; J. Jōbon ō; K. Chōngban wang 淨飯王). In Sanskrit, lit. “Pure Rice”; the royal father of [GAUTAMA](#) Buddha. Śuddhodana was the son of Siṃhahanu (P. Sīhahanu), a king of the [ŚĀKYA](#) clan, and ruled in [KAPILAVASTU](#) (P. Kapilavatthu) in the foothills of the Himālayas, in present-day Nepal. Śuddhodana's wife was [MAHĀMAYĀ](#), who died seven days after giving birth to prince Gautama. According to some accounts of the Buddha's life, Śuddhodana was also already married to, or subsequently married, [MAHĀPRAJĀPATĪ](#), Māyā's sister and thus Gautama's aunt, who raised the infant and eventually became the first woman to be ordained as a Buddhist nun ([BHIKSUNĪ](#)). At the time of the bodhisattva's birth, his father asked eight priests to examine the child and predict his future. There are several versions of this event, but in the Pāli [NIDĀNAKATHĀ](#), seven predict that he will become either a [CAKRAVARTIN](#) or a buddha, while one, Koṇḍañña (S. [KAUNDINYA](#); see [ĀJÑĀTAKAUNDINYA](#)), predicts that it is certain that he will become a buddha, and will do so after seeing four portents ([CATURNIMITTA](#))—viz., of a sick man, an old man, a corpse, and a religious mendicant. Koṇḍañña and the sons of four of the eight court priests would eventually become the group of five ascetics (S. [PAÑCAVARGIKA](#), P. pañcavaggiyā) who would be the Buddha's first disciples. In order to prevent his son's exposure to the sufferings of life, the king built three palaces filled only with youth and beauty. His father paid homage to his young son on two occasions, first when the ascetic Asita bowed to

the infant and second, when, during a ploughing festival, he saw his young son meditating under a tree; the sun had stopped its course across the sky in order that the child would remain in shadow of a jambu tree. Despite his attempts to distract his son with all manner of sensual pleasures in his three palaces, the king's efforts were ultimately in vain and the prince eventually determined to leave behind the household life ([PRAVRAJITA](#)) after witnessing each of the portents. His father sought unsuccessfully to dissuade him, saying that it was not the right time for the prince, now with a wife and child, to renounce the world. Years later, when Gautama returned to Kapilavastu as an enlightened buddha, Śuddhodana became a devoted follower of his son. However, he objected to the Buddha's ordination of his young son [RĀHULA](#), causing the Buddha to promulgate a rule that in the future, parents must give permission before their son is ordained. The king became a stream-enterer ([SROTAĀPANNA](#)) himself, his success at meditation initially hindered by his excessive joy that his son was the Buddha. Shortly before his death, the king became an [ARHAT](#).

[Sūden](#). (J) (崇傳) (1569–1633). See [ISHIN SŪDEN](#).

[Sudhana](#). (T. Nor bzang; C. Shancai; J. Zenzai; K. Sōnjae 善財). A youth who is the major protagonist of the [GANDAVYŪHA](#), the final section of the [AVATAMSAKASŪTRA](#). The story of Sudhana's search is related in the *Avatamsakasūtra*'s massive final chapter, the “Entrance into the Dharmadhātu” (C. Ru fajie pin), which also circulated independently as the [GANDAVYŪHA](#). On the instructions of the [BODHISATTVA MAÑJUŚRĪ](#), Sudhana sets out to the south in search of a spiritual mentor ([KALYĀNAMITRA](#)), ultimately encountering fifty-two beings (sometimes counted as fifty-three, because Mañjuśrī is repeated) including the future buddha [MAITREYA](#), as well as the bodhisattvas [AVALOKITEŚVARA](#) and Mañjuśrī; twenty of his teachers are female, including the Buddha's mother [MAHĀMĀYĀ](#). His final teacher is the bodhisattva [SAMANTABHADRA](#), who sets forth in the famous [BHADRACARĪPRANIDHĀNA](#) the ten vows he took to realize and access the [DHARMADHĀTU](#), which thereby enable him to benefit sentient beings. After this encounter, Sudhana attains enlightenment and roams freely himself in the dharmadhātu. Sudhana's pilgrimage has been the inspiration for much East Asian Buddhist art and his statue often appears at the side of Buddhist altars as a boy bowing to the Buddha.

[Sudinna](#). (T. Bzang byin; C. Xutina; J. Shudaina; K. Sujena 須提那). The Buddhist Hybrid Sanskrit and Pāli name of a disciple of the Buddha whose

actions prompted the Buddha to formulate the first rule of the monastic code, the “defeat” offense (S. [PĀRĀJIKĀ](#)) forbidding sexual intercourse (abrahmacarya); his name is a Middle Indic form of the classical Sanskrit Sudatta. The monastic code ([VINAYA](#); [PRĀTIMOKṢA](#)) was not formulated as a complete system. Rather, it is said that the Buddha formulated each rule in response to a specific misdeed by a monk, with the Buddha subsequently declaring a rule prohibiting that particular misdeed. Sudinna had been ordained with the grudging consent of his parents; he was their only child, was already married, and had not had a child at the time of his ordination. During a period of famine, he returned to his home region in order to beg for alms. When he was offered food at his parents’ house, they, together with his wife, urged him to return to lay life. He refused, addressing his wife as “sister,” which caused her to faint. His mother later visited him, imploring him to impregnate his wife so that his family would at least have an heir, thus preventing their property from being confiscated upon the death of his parents. Sudinna agreed and had intercourse with his wife three times, supposedly not out of lust but out of concern for the financial future of his family. He soon felt remorse for his deed. Upon learning of the reason for his remorse, his fellow monks informed the Buddha, who told him it would have been better for him to have inserted his penis into the mouth of a poisonous snake than to have placed it in a woman’s vagina. The Buddha then established a rule of “defeat” ([PĀRĀJIKĀ](#)) forbidding monks from engaging in sexual intercourse, the first rule that the Buddha had ever had to promulgate in some twenty years of teaching. It was by no means the last: the monks’ and nuns’ codes of conduct (prātimokṣa) eventually included hundreds of specific rules of conduct.

[Sudōksa](#). (修德寺). In Korean, “Cultivating Merit Monastery”; the seventh district monastery ([PONSA](#)) of the contemporary [CHOGYE CHONG](#) of Korean Buddhism, located on the slopes of Tōksung (Virtue Exalted) mountain in South Ch’ungch’ōng province. According to Sudōksa’s monastic records, the monastery was first constructed at the end of the Paekche dynasty by Sungje (d.u.). During the reign of the Paekche king Mu (r. 600–641) the monk Hyehyōn (d.u.) is said to have lectured there on the [SADDHARMAPUNĀRĪKASŪTRA](#) (“Lotus Sūtra”). Alternate records state, however, that the monastery was founded by Chimyōng (d.u.) during the reign of the Paekche king Pōp (r. 599–600). The monastery was subsequently repaired by the renowned Koryō-dynasty Sōn monk [NAONG HYGŪN](#) (1320–1376), and since that time Sudōksa has been one of the

major centers of [SŎN](#) (C. [CHAN](#)) practice in Korea. Sudōksa is best known for its [TAEUNG CHŎN](#), the main shrine hall. The taeung chŏn was rebuilt in 1308 and is presumed to be the oldest wooden building in Korea, having been spared the conflagrations that struck many Korean monasteries during the Japanese Hideyoshi invasions (1592–1598). It was constructed in the Chusimp’o style, so that its support pillars are wider in the middle than they are at the bottom or top. The Tap’o-style bracketing, imported from Fujian during the Southern Song dynasty, is similar to other Koryŏ-era monasteries, such as Pongjŏngsa and [PUSŎKSA](#). Inside the hall are images of three buddhas, [ŚĀKYAMUNI](#), [AMITĀBHA](#) and [BHAIJAGURU](#), and two bodhisattvas, [MAÑJUŚRĪ](#) and [SAMANTABHADRA](#). Paintings depict [KSITIGARBHA](#), the ten kings of hell (see [SHIWANG](#); [YAMA](#)), and some indigenous Korean divinities. Many of the oldest original wall paintings were damaged during the Korean War and have now been removed to the safety of the monastery’s museum. The courtyard holds two [STŪPAS](#), a three-story stone pagoda probably from the Koryŏ dynasty, and an older seven-story granite pagoda from the late Paekche dynasty, with typical upward curving corners. There is a thirty-three foot high statue of Maitreya a short walk up the mountain; the statue is unusual in that it is wearing Korean clothes, including a double cylindrical hat. It was erected by the Sŏn master [MAN’GONG WŎLMYŎN](#) (1872–1946), one of the renowned Sŏn teachers of the modern era who taught at Sudōksa; other famous masters associated with the monastery include [KYŎNGHŎ SŎNGU](#) (1849–1912), the nun [KIM IRYŎP](#) (1869–1971), and Hyeam Hyŏnmun (1884–1985). Sudōksa recently opened a museum near its entrance to hold the large number of important historical artistic and written works the monastery owns, such as the exquisite wall paintings that formerly were located in the taeung chŏn. In 1996, Sudōksa was elevated to the status of an ecumenical monastery ([CH’ONGNIM](#)), and is one of the five such centers in the contemporary Chogye order, which are all expected to provide training in the full range of practices that exemplify the major strands of the Korean Buddhist tradition; the monastery is thus also known as the Tōksung Ch’ongnim.

[sud:śa](#). (P. sudassā; T. gya nom snang ba; C. shanxian tian; J. zengenten; K. sŏnhyŏn ch’ŏn 善現天). In Sanskrit, “perfect form,” or “skillful manifestation”; the name of the third highest of the eight heavens of the fourth meditative absorption ([DHYĀNA](#)) of the realm of subtle materiality ([RŪPADHĀTU](#)), and one of the five heavens that constitute the [ŚUDDHĀVĀSA](#), the “pure abodes” where those who have attained the rank of [ANĀGĀMIN](#) become [ARHATS](#). As with all the

heavens of the realm of subtle materiality, one is reborn as a divinity there through achieving the same level of concentration (dhyāna) as the gods of that heaven during one's practice of meditation in a previous lifetime.

sudurjayā. (T. sbyang dka' ba; C. nansheng di; J. nanshōji; K. nansŭng chi 難勝地). In Sanskrit, “unconquerable,” the name of the fifth of the ten bodhisattva stages ([BHŪMI](#)). A list of ten stages ([DAŚABHŪMI](#)) is most commonly enumerated, deriving from the [DAŚABHŪMIKASŪTRA](#) (“Sūtra on the Ten Bhūmis”), a sūtra that is later subsumed into the massive scriptural compilation, the [AVATAMSAKASŪTRA](#). The first bhūmi coincides with the attainment of the path of vision ([DARŚANAMĀRGA](#)) and the remaining nine to the path of cultivation ([BHĀVANĀMĀRGA](#)). This bhūmi is called “unconquerable” because, from this point on the path, the bodhisattva cannot be overcome by demons. On this bhūmi, the bodhisattva practices the perfection of meditative absorption ([DHYĀNAPĀRAMITĀ](#)), the fifth of the ten perfections ([PĀRAMITĀ](#)), achieving myriad forms of [SAMĀDHI](#). Here, the bodhisattva also gains understanding of the subtle nature of the [FOUR NOBLE TRUTHS](#). The bodhisattva remains on his stage as long as his distress deriving from his analysis of [SAMŚĀRA](#) prevents him entering into meditative equipoise ([SAMĀHITA](#)) on the signless ([ĀNIMITTA](#)).

suffering. See [DUHKHA](#).

sugata. (T. bde bar gshegs pa; C. shanshi; J. zenzei; K. sŏnsŏ 善逝). In Sanskrit and Pāli, lit., “well gone,” one in a standard list of epithets of the Buddha. Su (cognate with Greek eu) is a prefix meaning good and gata is the past passive particle of “to go.” Among other meanings, [BUDDHAGHOSA](#) says the Buddha is sugata because both the way he took (gata) is good (su) and where he has gone (gata) is good (su). The [MAHĀYĀNA](#) author [HARIBHADRA](#) also says the Buddha is sugata because he is one from whom all faults are totally (suṣṭhu) gone (gata), or into whom all good qualities have gone (gata) with none remaining (suparipūrṇa). It is customary to relate three denotations of sugata with three stages through which a buddha must pass in order to reach the goal of enlightenment: he has gone well beyond rebirth in [SAMŚĀRA](#), he has gone well into [NIRVĀNA](#), and he has gone well into the state of perfect buddhahood ([SAMYAKSAMBUDDHA](#)).

sugatagarbha. (T. bde bar gshegs pa'i snying po). In Sanskrit, “essence of the [SUGATA](#),” a synonym for [TATHĀGATAGARBHA](#).

sugati. (T. bde 'gro; C. shanqu; J. zenshu; K. sŏnch'wi 善趣). In Sanskrit and Pāli, lit. “good destiny,” a term used to refer to the realms of rebirth as a human or a divinity of either the sensuous realm ([KĀMADHĀTU](#)), the realm of subtle materiality ([RŪPADHĀTU](#)), or the immaterial realm ([ĀRŪPYADHĀTU](#)). This term contrasts with [DURGATI](#), or “baleful destiny,” which refers to the realms of rebirth as an animal, ghost, or hell denizen. One is reborn as a human or divinity as a result of virtuous practice in the past.

Sugi. (守其) (c. mid-thirteenth century). Korean monk during the Koryŏ dynasty who served as editor-in-chief of the second carving of the Korean Buddhist canon ([KORYŌ TAEJANGGYŎNG](#)). To supervise this massive editorial project, Sugi established a main editorial headquarters at Kanghwa Island, off the west-central coast of Korea, and a branch at Namhae in the far south of the Korean peninsula. Sugi gathered an army of scholars, first to collate the various editions of the scriptures and to establish the correct reading, and then to proofread meticulously the finished xylographs to ferret out any misprints. In editing this new canon, Sugi and his editorial team consulted principally three earlier canons: (1) the Chinese canon, carved during the Song-dynasty's Kaibao reign era between 971 and 983, which he called variously the Old Song edition (Ku-Song pon), Song edition (Song pon), etc.; (2) the Khitan Liao canon, printed c. 1031–1055, which he generally referred to as the Khitan edition (Tan pon); and (3) the first Koryŏ canon of 1011, which he usually called the State edition (Kuk pon). Foremost among these editions was the Liao canon of the Khitans, a complete copy of which Koryŏ had received in 1064. The xylographs of 1,514 texts in 6,815 rolls were carved between 1236 and 1251 in a total of 81,258 wood blocks—the oldest of the few complete xylographic canons still extant in East Asia. This second Koryŏ canon continues to be stored today in paired wooden archives at [HAEINSA](#) in Kyŏngsang province, as they have been since 1398. Sugi documented in remarkable detail the process he and his editorial team followed in compiling this new canon in his thirty-roll [KORYŌGUK SINJO TAEJANG KYOJŎNG PYŎLLOK](#) (“Supplementary Record of Collation Notes to the New Carving of the Great Canon of the Koryŏ Kingdom”), which was finished around 1247. In these notes, Sugi collated seventy-six passages from sixty-five different texts. In his textual analysis of a specific scripture, Sugi generally treated major issues of structure, translator attribution, textual lineage, and the like; he did not discuss minor variations in readings of a few Sinographs. In a typical entry for a specific text, Sugi lists the case character in the second Koryŏ

canon where the work appears; the title of the text and the roll (K. kwŏn; C. quan) in which the disputed point appears; followed by the passage itself, generally indicated by kwŏn, scroll (p'ok) and line (haeng) numbers. The most common types of textual problems noted by Sugi in earlier canons were transpositions of passages (K. chŏnhu toch'ak) and dittographies (K. chungsa; chungch'ŏm). After evaluating the discrepancies in the different canonical editions, Sugi then indicated which reading he preferred and this reading was then entered into the second Koryŏ carving. Sugi also treated issues of textual authenticity in the course of editing his canon, especially in attempting to adjudicate the authenticity of some of the variant Chinese translations of Indic Buddhist scriptures. The information Sugi provides in his “Collation Notes” offers important information on how East Asian Buddhist scholars in the premodern era went about the task of collating and editing multiple recensions of thousands of scriptures into a definitive canonical collection. Sugi's notes also help to document the textual genealogies of the various East Asian canons and provide definitive proof that, in style and format, the second Koryŏ canon imitated both the Chinese Kaibao and first Koryŏ canons, but its readings followed more closely those found in the Khitan Liao canon. Sugi's annotations are thus an extremely valuable source for detailing medieval Chinese xylographic lineages. In making editorial decisions, Sugi rejects such discredited techniques as following the reading of the majority of manuscripts—as when he rejects the readings of both the Kaibao and first Koryŏ canons—or following uncritically the “best” manuscript, as in the cases where he rejects the reading of the Khitan edition. Sugi's reputation for scholarly accuracy was such that Japanese scholars adopted the second Koryŏ canon as the textus receptus for the modern Taishō printed edition of the canon, the [TAISHŌ SHINSHŪ DAIZŌKYŌ](#), compiled in Japan between 1922 and 1934.

[Suhrllekha](#). (T. Bshes pa'i spring yig; C. Longshu pusa quanjie wang song; J. Ryūju bosatsu kankaiōju; K. Yongsu posal kwŏn'gye wang song 龍樹菩薩勸誡王頌). In Sanskrit, “Friendly Letter,” a famous work by the Madhyamaka exegete [NĀGĀRJUNA](#). Like the [RATNĀVALĪ](#), the work takes the form of advice to a king. In this case, scholars speculate that the king may be Gautamīputra Śatakarṇī of the Śātavāhana dynasty. The work is not concerned with philosophical doctrine but instead consists of advice to a Buddhist layperson on how to live an ethical life and accumulate merit ([PUNYA](#)). It is clearly a [MAHĀYĀNA](#) work, mentioning [ĀVALOKITEŚVARA](#) and [ĀMITĀBHA](#), but also contains numerous allusions to the

Sanskrit [ĀGAMAS](#).

[suishen sheli](#). (J. saishinshari; K. swaesin sari 碎身舍利). In Chinese, “partial-body relics,” crystalline substances that are the condensation of the remains of a holy person after death and cremation. See [ŚARĪRA](#).

Sujātā. (T. Legs skyes ma; C. Xusheduo; J. Shujata; K. Susada 須闍多). The Sanskrit and Pāli proper name of a female lay disciple declared by the Buddha to be foremost among laywomen who had taken refuge in the three jewels (**RATNATRAYA**). According to the Pāli account, Sujātā was the daughter of a landowner named Senānī who lived in a village near Uruvelā. She had petitioned the spirit (**YAKSA**) of a banyan tree for a son and when she gave birth to a boy she resolved to make an offering of rice milk to the spirit in gratitude. On the day of her offering, she sent her servant Puṇṇā to prepare a place beneath the tree. There, the servant encountered the bodhisattva **SIDDHĀRTHA** sitting in meditation, soon after he had decided to give up the practice of strict asceticism. Seeing the bodhisattva's emaciated body, the servant mistook him for the tree spirit and informed Sujātā of his physical presence. Sujātā prepared rice milk and offered it to the bodhisattva in a golden bowl. This offering was praised by the gods as important and praiseworthy, for it enabled the bodhisattva to regain his strength so that he could make the final push to achieve enlightenment as a perfect buddha (**SAMYAKSAMBUDDHA**). One of Sujātā's sons was **YAŚAS** (P. Yasa), who became the Buddha's sixth convert after the enlightenment. Yaśas attained arhatship and was ordained, after which he received alms at his parents' house in the company of the Buddha. At that time, having listened to the Buddha's sermon, Sujātā and Yaśas' former wife became stream-enterers (**SROTAĀPANNA**) and took refuge in the three jewels, thus becoming the first female disciples to do so.

sūkaramaddava. (S. sūkaramārdava; C. zhantanshu'er; J. sendanjuni; K. chōndansui 梅檀樹耳). In Pāli, lit., “soft pig,” the last meal of the Buddha before his passage into **PARINIRVĀNA**. According to the **MAHĀPARINIBBĀNASUTTA**, the Buddha and his disciples were invited to a meal by **CUNDA**, the son of a goldsmith. He served them sweet rice, cakes, and sūkaramaddava. The Buddha told Cunda to serve the sūkaramaddava only to him and to bury the rest in the ground because no one other than the Buddha would be able to digest it. The Buddha praised Cunda for the meal but shortly thereafter suffered an attack of dysentery. He proceeded to **KUŚINAGARĪ**, where he instructed **ĀNANDA** to visit Cunda and tell him that he should not feel remorse; he had in fact gained great merit by serving the Buddha his last meal. There has been much debate as to the meaning of sūkaramaddava. It is unclear whether this means something soft that is consumed by pigs, such as a type of mushroom or truffle, or perhaps bamboo

shoots that had been trampled by pigs. The compound could also be the name of some kind of pork dish. The Indian and Sinhalese commentators prefer, although not unanimously, the latter interpretation. The Chinese rendering for the term means “sandalwood tree fungus,” implying perhaps a kind of truffle, and the passage in the [DĪRGHĀGAMA](#) recension of the sūtra suggests that the dish was a delicate broth boiled with this ingredient. Some modern interpreters, trying to avoid the suggestion that the Buddha consumed pork, have insisted, following the Chinese, that it was a mushroom dish.

sukha. (T. bde ba; C. le; J. raku; K. nak 樂). In Sanskrit and Pāli, “bliss,” “ease,” or “joy”; the fourth of the five constituents of meditative absorption ([DHYĀNĀṄGA](#)). A sustained sense of sukha is obstructed by restlessness and worry ([AUDDHATYA-KAUKRTYA](#)), the fourth of the five hindrances ([NĪVARANA](#)) to [DHYĀNA](#). Sukha is the maturation of the physical and mental tranquillity ([PRAŚRABDHI](#)) that is associated with the coarser experience of physical “rapture” ([PRĪTI](#)). Sukha always appears in conjunction with prīti, but not necessarily the converse; whereas sukha is part of the perception aggregate ([SAMJÑĀ](#)), prīti is instead grouped with the conditioning factors aggregate ([SAMSKĀRA](#)). Sukha leaves one “feeling well” and catalyzes the development of expansive mental states. Sukha is present in the first, second, and third of the meditative absorptions (dhyāna) associated with the realm of subtle materiality ([RŪPĀVACARADHYĀNA](#)), but fades into equanimity ([UPEKṢĀ](#)) in the even subtler fourth dhyāna, wherein the meditator experiences neither pleasure nor pain and is left only with one-pointedness of mind ([CITTAIKĀGRATĀ](#)). The term sukha is also important in Buddhist [TANTRA](#), especially [ANUTTARAYOGATANTRA](#), where the movement of winds ([PRĀNA](#)) and drops ([BINDU](#)) up and down the central channel generate various forms of bliss; the bliss created by the upward movement of the winds and drops are particularly powerful. In order to achieve buddhahood, the bliss consciousness is used to understand emptiness ([ŚŪNYATĀ](#)).

sukhāvātī. (T. bde ba can; C. jile jingtu; J. gokurakujōdo; K. kūngnak chōngt’o 極樂淨土). In Sanskrit, “blissful” or “full of happiness” (the Chinese translates the name as “ultimate bliss”); the name of the buddha-field ([BUDDHAKSETRA](#)) or [PURE LAND](#) of the buddha [AMITĀBHA](#) as described in what are referred to in East Asia as the three pure land sūtras ([JINGTU SANBUJING](#)): the larger and smaller [SUKHĀVĀTĪVYŪHASŪTRAS](#) (see [AMITĀBHASŪTRA](#)) and [GUAN WULIANGSHOU JING](#) (**Amitāyurdhyānasūtra*). Although many buddha-fields are enumerated and

described in the Mahāyāna sūtras, sukhāvātī is the most famous and is often referred to as “the western pure land” in East Asia. In India, rebirth in sukhāvātī appears to have been something of a generalized soteriological goal, disconnected from devotion to the buddha Amitābha; references to sukhāvātī appear in a number of important Mahāyāna sūtras, including the [SAMĀDHIRĀJASŪTRA](#), which likely dates to the second century CE. The most detailed description of sukhāvātī appears in the larger *Sukhāvātīvyūhasūtra*, discussed in the next entry. See also [PURE LAND](#) and [ANLE GUO](#).

[Sukhāvātīvyūhasūtra](#). (T. Bde ba can gyi bkod pa'i mdo; C. Wuliangshou jing; J. Muryōjukyō; K. Muryangsu kyōng 無量壽經). Literally, the “Sūtra Displaying [the Land of] Bliss,” the title of the two most important Mahāyāna sūtras of the “[PURE LAND](#)” tradition. The two sūtras differ in length, and thus are often referred to in English as the “larger” and “smaller” (or “longer” and “shorter”) *Sukhāvātīvyūhasūtras*; the shorter one is commonly called the [AMITĀBHASŪTRA](#). Both sūtras are believed to date from the third century CE. The longer and shorter sūtras, together with the [GUAN WULIANGSHOU JING](#) (**Amitāyurdhyānasūtra*), constitute the three main texts associated with the pure land tradition of East Asia (see [JINGTU SANBUJING](#)). There are multiple Sanskrit, Chinese, and Tibetan versions of both the longer and shorter sūtras, with significant differences among them. ¶ The longer *Sukhāvātīvyūhasūtra* begins with [ĀNANDA](#) noticing that the Buddha is looking especially serene one day, and so asks him the reason. The Buddha responds that he was thinking back many millions of eons in the past to the time of the buddha [LOKEŚVARARĀJA](#). The Buddha then tells a story in the form of a flashback. In the audience of this buddha was a monk named [DHARMĀKARA](#), who approached Lokeśvararāja and proclaimed his aspiration to become a buddha. Dharmākara then requested the Buddha to describe all of the qualities of the buddha-fields ([BUDDHAKSETRA](#)). Lokeśvararāja provided a discourse that lasted one million years, describing each of the qualities of the lands of trillions of buddhas. Dharmākara then retired to meditate for five eons, seeking to concentrate all of the marvelous qualities of the millions of buddha-fields that had been described to him into a single pure buddha-field. When he completed his meditation, he returned to describe this imagined land to Lokeśvararāja, promising to create a place of birth for fortunate beings and vowing that he would follow the bodhisattva path and become the buddha of this new buddha-field. He described the land he would create in a series of vows, stating that if this or that marvel was not present in his pure land, may he not

become a buddha: e.g., “If in my pure land there are animals, ghosts, or hell denizens, may I not become a buddha.” He made forty-eight such vows. These included the vow that all the beings in his pure land will be the color of gold; that beings in his pure land will have no conception of private property; that no bodhisattva will have to wash, dry, or sew his own robes; that bodhisattvas in his pure land will be able to hear the dharma in whatever form they wish to hear it and whenever they wish to hear it; that any woman who hears his name, creates the aspiration to enlightenment ([BODHICITTA](#)), and feels disgust at the female form, will not be reborn as a woman again. Two of these vows would become the focus of particular attention. In the eighteenth vow (seventeenth in the East Asian versions), Dharmākara vows that when he has become a buddha, he will appear at the moment of death to anyone who creates the aspiration to enlightenment, hears his name, and remembers him with faith. In the nineteenth vow (eighteenth in the East Asian versions), he promises that anyone who hears his name, wishes to be reborn in his pure land, and dedicates their merit to that end, will be reborn there, even if they make such a resolution as few as ten times during the course of their life. Only those who have committed one of the five inexpiable transgressions bringing immediate retribution ([ĀNANTARYAKARMAN](#), viz., patricide, matricide, killing an [ARHAT](#), wounding a buddha, or causing schism in the [SAMGHA](#)) are excluded. The scene then returns to the present. Ānanda asks the Buddha whether Dharmākara was successful, whether he did in fact traverse the long path of the bodhisattva to become a buddha. The Buddha replies that he did indeed succeed and that he became the buddha Amitābha (Infinite Light). The pure land that he created is called sukhāvātī. Because Dharmākara became a buddha, all of the things that he promised to create in his pure land have come true, and the Buddha proceeds to describe sukhāvātī in great detail. It is carpeted with lotuses made of seven precious substances, some of which reach ten leagues ([YOJANA](#)) in diameter. Each lotus emits millions of rays of light and from each ray of light there emerge millions of buddhas who travel to world systems in all directions to teach the dharma. The pure land is level, like the palm of one’s hand, without mountains or oceans. It has great rivers, the waters of which rise as high or sink as low as one pleases, from the shoulders to the ankles, and vary in temperature as one pleases. The sound of the river takes the form of whatever auspicious words one wishes to hear, such as “buddha,” “emptiness,” “cessation,” and “great compassion.” The words “hindrance,” “misfortune,” and “pain” are never heard, nor are the words “day” and “night” used, except as metaphors. The beings in the pure land do not need

to consume food. When they are hungry, they simply visualize whatever food they wish and their hunger is satisfied without needing to eat. They dwell in bejeweled palaces of their own design. Some of the inhabitants sit cross-legged on lotus blossoms while others are enclosed within the calyx of a lotus. The latter do not feel imprisoned, because the calyx of the lotus is quite large, containing within it a palace similar to that inhabited by the gods. Those who dedicate their merit toward rebirth in the pure land yet who harbor doubts are reborn inside lotuses where they must remain for five hundred years, enjoying visions of the pure land but deprived of the opportunity to hear the dharma. Those who are free from doubt are reborn immediately on open lotuses, with unlimited access to the dharma. Such rebirth would become a common goal of Buddhist practice, for monks and laity alike, in India, Tibet, and throughout East Asia. ¶ The “shorter” *Sukhāvativyūhasūtra* was translated into Chinese by such famous figures as [KUMĀRAJĪVA](#) and [XUANZANG](#). It is devoted largely to describing this buddha’s land and its many wonders, including the fact that even the names for the realms of animals and the realms of hell-denzens are not known; all of the beings born there will achieve enlightenment in their next lifetime. In order to be reborn there, one should dedicate one’s merit to that goal and bear in mind the name of the buddha here known as [AMITĀYUS](#) (Infinite Life). Those who are successful in doing so will see Amitāyus and a host of bodhisattvas before them at the moment of death, ready to escort them to sukhāvātī, the land of bliss. In order to demonstrate the efficacy of this practice, the Buddha goes on to list the names of many other buddhas abiding in the four cardinal directions, the nadir, and the zenith, who also praise the buddha-field of Amitāyus. Furthermore, those who hear the names of the buddhas that he has just recited will be embraced by those buddhas. Perhaps to indicate how his own buddha-field (that is, our world) differs from that of Amitāyus, Śākyamuni Buddha concludes by conceding that it has been difficult to teach the dharma in a world as degenerate as ours.

[Sukhothai](#). The first Thai polity in mainland Southeast Asia. Located in the central Menam valley, it began as a frontier outpost of the Khmer empire. In 1278 two local princes raised a successful rebellion to create a new kingdom with the city of Sukhothai as its capital. Under King Ramkhamhaeng (r. 1279–1298), Sukhothai brought several neighboring states under its sway and by the early 1300s enjoyed suzerainty over entire the Menam river basin, and westward across the maritime provinces of Lower Burma. Ramkhamhaeng established

diplomatic and commercial relations with China and its envoys twice visited the Chinese capital on tributary missions to the emperor. Having won independence, the kings of Sukhothai chose a new cultural orientation to buttress their rule. The former Khmer overlords were votaries of Hinduism and [MAHĀYĀNA](#) Buddhism and the earliest [CAITYA](#)s in the city display the architectural features of traditional Khmer tower pyramids. The Thai ruling house abandoned these traditions in favor of Sinhalese-style Pāli Buddhism. In the 1330s a charismatic monk named Si Satha introduced a Sinhalese ordination lineage into the kingdom along with a collection of buddha relics around which was organized a state cult. The shift in religious affiliation is reflected in the lotus-bud and bell-shaped caityas built during the period, which have their prototypes in Sri Lanka. Sukhothai is upheld as a golden age in Thai cultural history. Known for its innovations in architecture and iconography, the kingdom also gave definitive form to the modern Thai writing system which is based on Mon and Khmer antecedents. By the mid-fourteenth century, with the rise of the kingdom of [AYUTHAYA](#) to its south, Sukhothai entered a period of decline from which it never recovered. In 1378, Ayuthaya occupied Sukhothai's border provinces, reducing it to the status of a vassal state. After unsuccessful attempts to break free from her southern overlord, Sukhothai was finally absorbed as a province of the Ayuthaya kingdom in the fifteenth century.

[sukkhavipassaka](#). In Pāli, lit., “dry insight worker,” i.e., “one supported by insight alone.” It refers to a person who has attained any of the four fruits of recluseship ([ŚRĀMANYAPHALA](#))—stream-enterer ([SROTAĀPANNA](#)), once-returned ([SAKRDĀGĀMIN](#)), nonreturner ([ANĀGĀMIN](#)), or [ARHAT](#)—by mere insight (P. [VIPASSANĀ](#), S. [VIPAŚYANĀ](#)) without reliance on any of the meditative absorptions (P. [JHĀNA](#), S. [DHYĀNA](#)). Some contemporary Burmese [VIPASSANĀ](#) meditation theory emphasizes this style of practice.

[Sule Paya](#). A famous Burmese (Myanmar) pagoda complex located in the center of Rangoon (Yangon), with entrances in the four cardinal directions. It likely was first constructed by the Mon people, but has been restored and expanded repeatedly. The central [STŪPA](#), which is octagonal in shape, is 152 feet tall, is said to contain one of the hairs that the Buddha gave to his first lay disciples, the merchants [TRAPUSA](#) and [BHALLIKA](#). The name Sule comes from a Burmese word for “gathering.” The location of the pagoda is said to mark the place where divinities and humans gathered to ask an ancient [NAT](#) where the hairs of the

Buddha should be enshrined. His answer led to construction of the pagoda of [SHWEDAGON](#). When the British redesigned the surrounding city in the 1880s, they used the central pagoda as the center point of the grid design. The pagoda served as an important gathering place for monks during the uprisings of 1988 and 2007.

[Sumaᅅgala](#). (Venerable Hikkaduva Sri Sumaᅅgala Nayaka Mahāthera) (1827–1911). Sumaᅅgala, whose given name was Niclaus, was born in the town of Hikkaduwa in the Galle District of southern Sri Lanka. Sumaᅅgala received his early education at the local village temple and, at age thirteen, began his monastic education at Totagamuwa. He received full ordination from the Malwatte chapter in Kandy in 1848. Sumaᅅgala is considered to be one of the most influential Pāli scholars of his time. He took a significant role in the Sinhalese Buddhist revival, especially in Colombo. He helped [GUNĀNANDA](#) prepare for the famous Panadura debate. An accomplished scholar, Sumaᅅgala studied Buddhist history, arithmetic, and archeology; he also knew Sinhala, Pāli, Sanskrit, and English. In 1867 he received the title Sripada from the British government, making him the high priest of Adam’s Peak (Mt. Sumanakūta). The principal and founder of Vidyodaya College, Sumaᅅgala worked with Colonel [HENRY STEEL OLCOTT](#) and together they established Ananda College and Mahinda College in Colombo and Dharmaraja College in Kandy during the early 1890s. These schools helped to revitalize Buddhist education, which had dwindled under British colonialism. In 1891, Sumaᅅgala became the president of the Bodh Gaya Maha Bodhi Society in Colombo. [SUMAᅅGALA](#) was an inspirational figure for [ANAGĀRIKA DHARMAPĀLA](#) and the next generation of Sinhalese Buddhist scholars.

[Sumaᅅgalavilāsini](#). A Pāli commentary on the [DĪGHANIKĀYA](#) written by [BUDDHAGHOSA](#). It is quoted in the [AᅅGUTTARANIKĀYA](#) commentary, [MANORATHAPŪRANĪ](#).

[Sumedha](#). [alt. Sumegha] (C. Shanhui; J. Zen’e; K. Sōnhye 善慧). Sanskrit and Pāli name of the [BODHISATTVA](#) who would become [GAUTAMA](#) Buddha. He was an ascetic at the time of [DĪPAMKARA](#) Buddha. Sumedha was born into a wealthy brāhmaᅇa family of [AMARĀVATĪ](#). Disenchanted with the vanities of the householders’ life, he renounced the world and took up his abode in the Himalaya mountains as an ascetic. There, he practiced assiduously and ultimately gained great yogic power. Once, when flying over the town of

Ramma Nagara, he saw a crowd. He landed and asked a member of the crowd why they had gathered and was told that Dīpaṃkara Buddha was approaching. When he heard the word “buddha,” he was overcome with joy. Seeing that people of the town were festooning the road Dīpaṃkara would be using with decorations, Sumedha decided to prepare and decorate a portion of the road himself. The Buddha arrived before his work was completed and, seeing that the Buddha was walking toward a mud puddle, Sumedha lay facedown and spread his long matted locks over the mud. While lying in the mud, Sumedha realized that, were he to follow Dīpaṃkara’s teachings, he could become an [ARHAT](#) in that very lifetime. However, he resolved instead to achieve enlightenment at a time when there was no other buddha in the world, vowing to become a fully enlightened buddha ([SAMYAKSAMBUDDHA](#)) like Dīpaṃkara himself. Dīpaṃkara, using his supranormal powers, looked into the future and confirmed that Sumedha’s vow ([PŪRVAPRANIDĀNA](#)) would be fulfilled and he would one day become [GAUTAMA](#) Buddha, the fourth of five perfect buddhas of the present age. It was with this vow, and with this confirmation by Dīpaṃkara Buddha, that the bodhisattva began the path to buddhahood, which, according to the Pāli tradition, he would complete four innumerable plus one hundred thousand eons later.

[Sumeru, Mount.](#) (T. Ri rab; C. Xumishan/Miaogaoshan; J. Shumisen/Myōkōsen; K. Sumisan/Myogosan 須彌山/妙高山). The central axis of the universe in Buddhist cosmology; also known as Mount Meru. Mount Sumeru stands in the middle of the world as its axis and is eight leagues ([YOJANA](#)) high. It is surrounded by seven mountain ranges of gold, each separated from the other by an ocean. At the foot of the seventh range, there is a great ocean, contained at the perimeter of the world by a circle of iron mountains ([CAKRAVĀDA](#)). In this vast ocean, there are four island continents in the four cardinal directions, each flanked by two island subcontinents. The northern continent is square, the eastern semicircular, the southern triangular, and the western round. Although humans inhabit all four continents, the “known world” is the southern continent, named [JAMBUDVĪPA](#), where the current average height is four cubits and the current life span is one hundred years. The four faces of Mount Sumeru are flat, and are each composed of a different precious stone: gold in the north, silver in the east, lapis lazuli in the south, and crystal in the west. The substance determines the color of the sky over each of the four continents. The sky is blue in the southern continent of Jambudvīpa because the southern face of the Mount Sumeru is made of lapis. The slopes of Sumeru are the abode of demigods

([ASURA](#)), and its upper reaches are the heavens of the four heavenly kings (see [CĀTURMAHĀRĀJAKĀYIKA](#), [LOKAPĀLA](#)). At the summit of the mountain is the heaven of the thirty-three ([TRĀYASTRIMŚĀ](#)), ruled by the king of the gods, [ŚAKRA](#). Above Mount Sumeru are located the remaining heavens of the sensuous realm ([KĀMADHĀTU](#)). Different Buddhist traditions identify Mount Sumeru with different local mountains, including Mount [KAILĀSA](#) in the Indian and Tibetan traditions, [NAMSAN](#) in the Korean tradition, *etc.* See also [SHUMIDAN](#).

[Sum rtags](#). (Sumtak). In Tibetan, lit. “the Thirty and Signs”; a common abbreviation for two works on Tibetan grammar, the *Lung du ston pa rtsa ba sum cu pa* (“Root Grammar in Thirty Verses”) and *Lung du ston pa rtags kyī ’jug pa* (“Grammatical Guide to Signs”). The former is often called simply *Sum cu pa* (“The Thirty”) and the latter *Rtags ’jug* (“Guide to Signs”). These works are traditionally said to have been composed c. 650, and are the only two extant treatises of eight works on grammar attributed to Thon mi Sambhota, the scholar who, according to legend, was dispatched to India by the Tibetan king [SRONG BTSAN SGAM PO](#) in order to devise an alphabet and grammar for the Tibetan language. The remaining six works in his oeuvre are said to have been destroyed during the persecution of Buddhism under the Tibetan king [GLANG DAR MA](#). Both texts are still included as a part of the Tibetan Buddhist curriculum. The traditional dating of the texts as we now have them has been called into question because neither appears in its present redaction until about the twelfth century.

[Sunakṣatra](#). (P. Sunakkhatta; T. Legs pa’i skar ma; C. Shanxing; J. Zenshō; K. Sōnsōng 善星). The Sanskrit proper name of the man who, according to some sources, was the Buddha’s half-brother and personal attendant prior to that position being held by [ĀNANDA](#). Despite his personal connection to the Buddha and his extensive knowledge of his teachings, Sunakṣatra had no respect for the Buddha, saying that in his twenty-four years of service to him, he saw no difference whatsoever between the Buddha and himself apart from the fact that the Buddha had a six-foot aura. One week after resigning from his position, he died and was reborn as a [PRETA](#). His story is often told as a cautionary tale about disparaging one’s teacher. He appears in several Pāli suttas, both before and after he left the order, living longer than seven days after disparaging the Buddha. There, he is described as a Licchavi prince from Vesāli (S. [VAIŚĀLĪ](#)), who served as the Buddha’s personal attendant but then left the order to become a disciple of the naked ascetic Korakkhattiya, the “dog man” who walked on all fours, barked

like a dog, and ate like a dog without using his hands. Sunakṣatra (P. Sunakkhatta) disparaged the Buddha and said that the dharma did not put an end to suffering, criticizing the Buddha for not performing miracles and showing the origin of things. The Buddha warned him that Korakkhattiya would die in seven days and be reborn as an [ASURA](#), which in fact occurred. Sunakṣatra then became the disciple of another naked ascetic, who also died according to the Buddha's prediction. In the [MAHĀPARINIRVĀNASŪTRA](#), Sunakṣatra is described as a monk who achieved the four levels of [DHYĀNA](#) but later, under the influence of other teachers, came to lose faith in the Buddha.

[Sundarananda](#). (T. Mdzes dga'; C. Suntuoluonantuo; J. Sondarananda; K. Sondaranant'a 孫陀羅難陀). In Sanskrit and Pāli, "Handsome Nanda," an epithet of [NANDA](#), either the cousin or a younger half-brother of the buddha [GAUTAMA](#). In the second century CE, the Indian poet [AŚVAGHOSA](#) wrote a famous verse retelling of Nanda's journey from enamored paramour and fiancé to enlightened ascetic in his verse narrative [SAUNDARANANDA](#). See [NANDA](#).

[Sundarīnandā](#). (T. Mdzes dga' mo; C. Suntuoli; J. Sondari; K. Sondari 孫陀利). In Pāli and Sanskrit, "Gorgeous Nandā"; one of three prominent nuns named Nandā mentioned in the Pāli canon (the others being [ABHIRŪPĀ-NANDĀ](#) and [JANAPADAKALYĀNĪ-NANDĀ](#)), all of whom share similar stories. She is also called simply Sundarī. According to the Pāli account, she was an eminent [ARHAT](#) declared by the Buddha to be foremost among his nun disciples in meditative powers. She was the daughter of [ŚUDDHODANA](#) and [MAHĀPRAJĀPATĪ](#) and so the sister of the arhat [NANDA](#) and the half-sister of the Buddha. Most of her male and female relatives had joined the order of monks and nuns, and so out of loyalty to them rather than strong faith she also joined. She received the sobriquet Sundarī because of her extraordinary beauty. She was by nature extremely vain about her looks and so reluctant to visit the Buddha lest he rebuke her for her vanity. When finally one day she accompanied other nuns to hear the Buddha preach, he, knowing her disposition, created an apparition of a most beautiful woman fanning him. Sundarī was entranced by the beauty of the conjured female, whom the Buddha then caused to age, grow haggard, die, and rot. Having shocked her with this horrible vision, the Buddha then preached to her of the frailty of physical beauty, whereupon Sundarī became a stream-enterer ([SROTAĀPANNA](#)). He then gave her a suitable subject of meditation (P. [KAMMATTHĀNA](#)) through which, after intense practice, she gained insight into the impermanence ([ANITYA](#)),

suffering ([DUHKHA](#)) and absence of self ([ANĀTMAN](#)) of all conditioned things and attained arhatship. She won preeminence through the strength of her meditation, a distinction she had resolved to earn during the time of Padmottara Buddha.

Sundo. (C. Shundao 順道) (c. late-fourth century). In Korean, “In Accordance with the Way”; proper name of the Chinese monk to whom Korean historical sources attribute the official introduction of Buddhism into the Korean peninsula. In 372, King Fu Jian (337–385) of the Former Qin dynasty (351–394) is said to have sent Sundo as his personal envoy to the court of King Sosurim (r. 371–384) of the northern Korean kingdom of Koguryō. Sundo’s mission appears to have been an expression of gratitude for Koguryō’s help in vanquishing their common foe, the Former Yan (337–370) state. Sundo is said to have brought Buddhist images and scriptures with him to Koguryō. We have no record of specifically which images or texts Sundo may have brought; however, since Fu Jian actively supported the dissemination of [MAITREYA](#) images throughout his realm, we may assume Sundo’s gifts would probably have included such images. This hypothesis is also supported by the prevalence of Maitreya piety in the early Korean tradition. The scriptures he brought were probably early texts of the [MAHĀYĀNA](#) tradition, or perhaps [SARVĀSTIVĀDA](#) materials. The Former Qin kingdom had established hegemony over eastern Turkestan, which exposed northern China, and thus Koguryō, to influences from across the Asian continent. Three years after his arrival in Korea, Sundo is said to have collaborated with two other monks in founding a Buddhist monastery in the new Koguryō capital near present-day P’yōngyang, the first such monastery established on Korean soil. See also [ZHI DUN](#).

sŭngkwa. (C. sengke; J. sōka 僧科). In Korean, “ecclesiastical examinations,” a clerical examination system used in Korea from the early Koryō through early Chosŏn dynasties to exert state control over the ecclesiastical institution, by selecting monks who would hold official monastic positions. The examination system was established in 958 during the reign of the Koryō king Kwangjong (r. 949–975) and the examinations were originally administered every three years. There is no direct Chinese analogue for this kind of selective examination system conducted at the state level and it seems to have been a distinctively Korean creation. There were two separate examinations to select official monks: the Doctrinal ([KYO](#), C. Jiao) school selection ([KYOJONG SŎN](#)) and the Meditation ([SŎN](#), C. [CHAN](#)) school selection ([SŎNJONG SŎN](#)). The selection examination for

the Doctrinal (Kyo) school was held at [WANGNYUNSA](#), one of the ten major monasteries built in the Koryŏ capital of Kaesŏng by Wang Kŏn (T'aejo, r. 918–943), the first king of the Koryŏ dynasty; the Meditation (Sŏn) exams were held at [KWANGMYŎNGSA](#), also located in the capital. Monks who passed the examination were qualified to hold official ecclesiastical status. Monks in both the Kyo and Sŏn schools who passed the examinations were appointed, in ascending order, to the positions of taedŏk (great virtue), taesa (great master), ijungdaesa (second-grade great master), and samjungdaesa (third-grade great master). Beyond these positions common to both schools, there were two supreme positions exclusive to each school: sujwa (head seat) and [SŪNGT'ONG](#) for Kyo monks; and sŏnsa (Sŏn master) and taesŏnsa (great Sŏn master) for Sŏn monks. State preceptors (KUKSA) and royal preceptors (WANGSA), the highest ecclesiastical offices during the Koryŏ dynasty and the symbolic religious teachers to the state and the king, were appointed from monks who held the positions of sŭngt'ong or taesŏnsa. The subject matter for the Kyo examination was derived from the [AVATAMSAKASŪTRA](#) (*Huayan jing*) and the [DAŚABHŪMIVYĀKHYĀNA](#) ([SHIDIJING LUN](#)); for the Sŏn examination, materials were taken from the [JINGDE CHUANDENG LU](#) and the [SŌNMUN YŎMSONG CHIP](#). The examination system continued during the Chosŏn dynasty despite the state suppression of Buddhism, but was abolished during the reign of King Chungjong (r. 1506–1544). The monastic examinations were subsequently revived in 1550 during the reign of King Myŏngjong (r. 1545–1567), but again abolished in 1565.

[sŭngmu](#). (僧舞). In Korean, “monk’s dance”; a form of Korean Buddhist ritual dance that was originally performed by monks. During the Chosŏn dynasty (1392–1910), the sŭngmu gradually transformed into a dance performed primarily for artistic and entertainment purposes and is nowadays regarded as one of the major types of Korean traditional folk dance. The dance is typically performed to the accompaniment of a single drum. Modern professional solo dancers wear a white jacket with long and trailing sleeves, a white hood, a blue skirt, and a red sash crossing from shoulder to waist. The sophisticated gestures and delicate rhythmic sequences, as well as the mobile lines created by the long sleeve extension that cover the dancer’s hands, create a peaceful yet dynamic composition. The delicate unison of dynamism and stillness in the sŭngmu is emblematic of Korean dance aesthetics. The [T'AEKO CHONG](#) of modern Korean Buddhism has sought to revive the sŭngmu as a specifically Buddhist dance

form.

Sǔngnang. (C. Senglang; J. Sōrō 僧朗) (c. 450–c. 520). A monk putatively from the early Korean kingdom of Koguryō, whom **JIZANG** (549–623) credits with being an important vaunt courier in the development of the Chinese **SAN LUN ZONG** (K. Sam non chong), the Chinese counterpart of the **MADHYAMA** branch of Indian philosophical exegesis. Sǔngnang is claimed to have taught the notion of “three truths” or “three judgments” (**SANDI**)—the truths of emptiness, provisional reality, and their mean—an exegetical schema that was influential in the subsequent development of both the San lun and **TIANTAI** schools. It is uncertain whether Sǔngnang actually hailed from Koguryō, or was instead either a Koguryō hostage of the Northern Wei dynasty or a person of Chinese ancestry from the Liaodong region (which had been captured in 397 CE by the Koguryō king Kwanggaet’o).

sǔngt’ong. (僧統). In Korean, “**SAMGHA** overseer,” the highest ecclesiastical position that could be achieved by **KYO** (Doctrine) monks in the Korean monastic examination system (**SŪNGKWA**), especially during the Koryō dynasty. The position was first established in 551 by the Silla king Chinhŭng (r. 540–576) for the monk Hyeryang (c. sixth century). Initially, the appointee’s major role was to help protect the court by hosting such national Buddhist services as the Inwang Paekkojwa hoe (Renwang Assembly of One-Hundred Seats) (see **HUGUO FOJIAO**). Later, as the Silla institution developed, the samgha overseer took actual charge of the national ecclesiastical affairs. During the Koryō dynasty, sǔngt’ong was the highest of the six positions that could be achieved by Kyo monks through the monastic examinations (sǔngkwa) (the equivalent in the Sōn school of great Sōn master, or taesōnsa). The six Kyo positions in descending order were sǔngt’ong, sujwa (head seat), samjung taesa (third-grade great master), ijung taesa (second-grade great master), taesa (great master), and taedök (great virtue). Appointing an official national leader of the samgha became a long-standing Chinese tradition starting in the Six Dynasties period, when the Emperor Daowu (r. 386–409) of the Northern Wei dynasty appointed Faguo (fl. fourth century) as overseer of religion (daoren tong) probably around 396 and 397. During the Northern Dynasties, the position was called shamen tong (**ŚRAMANA** overseer) or zhaoxuan tong (luminous mystery overseer); under the Southern Dynasties, it was called sengzheng (samgha rectifier), sengzhu (samgha head), or daseng tong (great samgha overseer). Many later dynasties, including

the Sui and Tang, had an equivalent ecclesiastical post.

[sūnim](#). (스님). In Korean, lit. “honored monastic”; a generic term used to refer to any ordained monk, nun, or novice. These different categories of the saṃgha are distinguished as pigu ([BHIKSU](#)) sūnim, piguni ([BHIKSUNI](#)) sūnim, *etc.* Individual monastics in Korea are always referred to by their ordained names followed by sūnim, thus Kusan sūnim, Hyemyōng sūnim, *etc.* The term is a contraction of the Korean pronunciation of sūng, the Sinograph that transcribes [SAMGHA](#) (monastic congregation), plus the vernacular honorific suffix -nim.

[śūnyatā](#). (T. stong pa nyid; C. kong; J. kū; K. kong 空). In Sanskrit, “emptiness”; the term has a number of denotations, but is most commonly associated with the perfection of wisdom ([PRAJÑĀPĀRAMITĀ](#)) sūtras and the [MADHYAMAKA](#) school of Mahāyāna philosophy. In its earlier usage, “emptiness” (as śūnya) is the third of the four aspects of the truth of suffering ([DUHKHASATYA](#)), the first of the [FOUR NOBLE TRUTHS](#): viz., the aggregates ([SKANDHA](#)) are (1) impermanent, (2) associated with the contaminants, (3) empty of cleanliness, and (4) nonself. There are a number of explanations of emptiness in this early usage, but most suggest the absence of cleanliness or attractiveness in the body that would lead to grasping at the body as “mine” (S. ātmīya, mama). This misapprehension is counteracted by the application of mindfulness with regard to the body ([KĀYĀNUPAŚYANĀ](#)), which demonstrates the absence or emptiness of an independent, perduring soul ([ĀTMAN](#)) inherent in the skandhas. In its developed usage in the Madhyamaka school, as set forth by [NĀGĀRJUNA](#) and his commentators, emptiness becomes an application of the classical doctrine of no-self ([ANĀTMAN](#)) beyond the person ([PUDGALA](#)) and the skandhas to subsume all phenomena ([DHARMA](#)) in the universe. Emptiness is the lack or absence of intrinsic nature ([SVABHĀVA](#)) in any and all phenomena, the final nature of all things ([DHARMATĀ](#)), and the ultimate truth ([PARAMĀRTHASATYA](#)). Despite its various interpretations among the various Madhyamaka authors, emptiness is clearly neither nothingness nor the absence of existence, but rather the absence of a falsely imagined type of existence, identified as svabhāva. Because all phenomena are dependently arisen, they lack, or are empty of, an intrinsic nature characterized by independence and autonomy. Nāgārjuna thus equates śūnyatā and the notion of conditionality ([PRATĪYASAMUTPĀDA](#)). The [YOGĀCĀRA](#) school introduces the concept of the “three natures” ([TRISVABHĀVA](#)) to give individual meanings to the lack of intrinsic existence ([NIHSVABHĀVA](#)) in the imaginary

nature ([PARIKALPITASVABHĀVA](#)), the dependent nature ([PARATANTRASVABHĀVA](#)), and the consummate nature ([PARINIṢPANNASVABHĀVA](#)). Pariniṣpanna in this Yogācāra interpretation is emptiness in the sense of the absence of a difference of entity between object and subject; it is the emptiness of the parikalpitasvabhāva or imagined nature in a paratantra or dependent nature. In Tibet, the question of the true meaning of emptiness led to the [RANG STONG GZHAN STONG](#) debate.

[Śūnyatāsaptati](#). (T. Stong pa nyid bdun cu pa). In Sanskrit, “Seventy Stanzas on Emptiness”; one of the major works of [NĀGĀRJUNA](#), and counted by Tibetans as part his philosophical corpus ([YUKTIKĀYA](#)). It is a work in seventy-three stanzas, which serves as a kind of appendix to the [MŪLAMADHYAMAKAKĀRIKĀ](#), summarizing what is said there while adding some new topics. It declares that all phenomena, including the twelve links in the chain of dependent origination ([PRATĪTYASAMUTPĀDA](#)) exist only conventionally; the statement that everything is impermanent does not imply the existence of entities that have the property of impermanence. Reasoning ([YUKTI](#)) demonstrates that ultimately everything is unproduced ([ANUTPANNA](#)), including [NIRVĀNA](#). All entities ([BHĀVA](#)) are dependently arisen and empty (śūnya), including [KARMA](#) and the five aggregates ([SKANDHA](#)). Ignorance ([AVIDYĀ](#)) disappears when it is understood that there is no self. The ultimate ([PARAMĀRTHA](#)) is emptiness ([ŚŪNYATĀ](#)) but this realization is gained through the conventional ([SAMVṚTTI](#)); the person endowed with faith ([ŚRADDHĀ](#)) who investigates dependent origination with reasoning will achieve tranquility. There is an autocommentary (svavṛtti) to the text ascribed to Nāgārjuna. There is also a commentary by [CANDRAKĪRTI](#), the *Śūnyatāsaptativṛtti*. The *Śūnyatāsaptati* is not included in the Chinese canon.

[śūnyatāsūnyatā](#). (T. stong pa nyid kyi stong pa nyid; C. kongkong; J. kūkū; K. konggong 空空). In Sanskrit, lit. the “emptiness of emptiness,” the most famous of the sixteen, eighteen, or twenty types of emptiness, indicating that emptiness is itself devoid of intrinsic nature ([NIHVSABHĀVA](#)) and is therefore itself empty. [YOGĀCĀRA](#)-influenced interpretations of śūnyatāsūnyatā associate it with the emptiness of knowledge (jñānāsūnyatā). According to these interpretations, the first three in the list of emptinesses are inner (adhyātma) emptiness, outer (bahirdhā) emptiness, and the emptiness of both (ubhaya), where inner is a word for the six sense bases ([INDRIYA](#)), outer for their six sensory objects ([VISAYA](#)) and both for the physical receptacles (the physical eye and so on) of the six sense

bases. Having understood the emptiness of all those elements, only the knowledge of emptiness remains; hence, the emptiness of that knowledge is called the emptiness of emptinesses, the fourth in the list.

Śūnyavāda. (T. Stong pa nyid smra ba; C. Kong zong; J. Kūshū; K. Kong chong 空宗). In Sanskrit, “Proponent of the Empty,” another name for the [MADHYAMAKA](#) school, one usually used by the Buddhist and non-Buddhist opponents of Madhyamaka, who regarded the Madhyamaka view as a form of nihilism. However, it is important to note that [CANDRAKĪRTI](#) uses the term śūnyatādarśana, “the philosophical school of emptiness.” The term also indicates that, although the terms śūnya and [ŚŪNYATĀ](#) are employed in all schools of Buddhist philosophy, they were associated particularly with the Madhyamaka.

Suppavāsā-Koliyadhītā. (S. Supravāsā-Koliyadhītr). The Pāli name of an eminent lay disciple of the Buddha declared by him to be foremost among laywomen who give choice alms food. According to the Pāli account, she was the daughter of the king of Koḷiya and was married to a Licchavi chieftain named Mahāli. She lived in the village of Sajjana and later moved to [ŚRĀVASTĪ](#). On a visit to Sajjana, the Buddha once preached to her on the merits of giving alms food. She was always careful to give the best of foods to the Buddha and his monks, for which reason she attained preeminence in this regard, an honor she aspired to in a previous life during the time of Padmottara Buddha. She is praised along with the renowned donors [ANĀTHAPINDADA](#) and [VIŚĀKHĀ](#) for her exceptional gifts, which were always welcomed by members of the order. Suppavāsā is most famous as the mother of the arhat [SĪVALI](#). She was pregnant with him for seven years and for seven days she was suffering through protracted labor. Believing that she would not survive the ordeal, she sent a gift to the buddha through her husband so that she could earn merit before her death. The buddha received the gift and she immediately gave birth to her son. Sīvali was compelled to stay in her womb for so long in retribution for having once laid siege to the city of Vārāṇasī for seven days while he was a prince in a previous existence. Suppavāsā had been his mother in that life as well.

Supriyā. (P. Suppiyā; T. Rab dga’ ba; C. Xupiyē nü; J. Shubiyanyo; K. Subiyanyō 須毘耶女). Sanskrit name of an eminent lay disciple ([UPĀSIKĀ](#)) of the Buddha, whom he declared foremost among laywomen who comfort the sick. Supriyā lived in Vārāṇasī with her husband Supriya. Both were devoted followers of the Buddha and generous patrons of the order. Once, while visiting

a monastery, Supriyā encountered a sick monk in need of meat broth. She sent a servant to market to fetch some meat but none was to be had in all of Vārāṇasī. She therefore cut a piece of flesh from her thigh and gave it to her servant to make into broth, after which, ill from her injury, she lay on her bed. Her husband rejoiced at her piety and invited the Buddha to the morning meal the next day. When the Buddha was informed of her deed, he praised her for her generosity and through his supranormal powers magically healed her wounds. As a consequence of Supriyā's offering, however, the Buddha passed a rule forbidding monks to eat human flesh, even when it is freely given.

Sūra Ambattha. (S. Śūra Āmraṣṭha; C. Yongjian zhangzhe; J. Yūken chōja; K. Yonggōn changja 勇健長者). The Pāli name of an eminent lay disciple (**UPĀSAKA**) of the Buddha declared by him to be foremost among laymen in unwavering trust. Sūra Ambatṭha in Pāli means “hero who stays by the mango tree”; he was born into the family of a wealthy banker dwelling in **ŚRĀVASTĪ**. According to the Pāli account, he was originally the follower of a rival sect of recluses (**ŚRAMANA**). One day, the Buddha saw Sūra and, noting that he was ripe for conversion, went to his door for alms. Although his allegiance was to another teacher, out of deference Sūra invited the Buddha into his home to partake of his morning meal. When the Buddha spoke to him after the meal, Sūra became a stream-enterer (**SROTAĀPANNA**), thus marking his conversion. **MĀRA**, hoping to shake Sūra's newfound faith, appeared at his door in the guise of the Buddha. He said he had returned to correct a mistake he had made when preaching to him earlier. Believing Māra's conjured body to be the Buddha, Sūra let him in. Māra stated that whereas he had explained that all conditioned things were impermanent, he should have said that only some were impermanent. Since Sūra was already a stream-enterer, he easily saw through the ruse and promptly drove Māra from his house.

śūraṃgamasamādhi. (T. dpa' bar 'gro ba'i ting nge 'dzin; C. shoulengyan sanmei; J. shuryōgon zanmai; K. sunūngōm sammae 首楞嚴三昧). In Sanskrit, “heroic-march concentration,” a **SAMĀDHI** in which the mind becomes free and unimpeded like the “march” (gama) of a “hero” (śūra), who “walks alone, fearlessly, like a lion.” The śūraṃgama concentration (samādhi) as taught in the **ŚŪRAMGAMASAMĀDHISŪTRA**, an eponymously titled early **MAHĀYĀNA** sūtra, not only enables **BODHISATTVA**s quickly to attain complete, perfect enlightenment (**ANUTTARASAMYAKSAMBODHI**), but also ensures that even **ŚRĀVAKAS**,

[PRATYEKABUDDHAS](#), and [ARHATS](#) who benightedly believe themselves to be practicing correctly by following the [HĪNAYĀNA](#) are actually put on the right path leading to buddhahood. In addition, the *śūraṃgamasamādhi* also permits enlightened beings to manifest themselves in any variety of forms in order to teach sentient beings, so that ultimately anyone one encounters in life may in fact be an enlightened buddha. In the Chinese apocryphon, *Shoulengyan jing* ([*ŚŪRAMGAMASŪTRA](#)), the Buddha also teaches a different version of the *śūraṃgamasamādhi*, where the concentration counters the false views about the aggregates ([SKANDHA](#)) and consciousness ([VIJÑĀNA](#)) and reveals the [TATHĀGATAGARBHA](#) that is inherent in all sentient beings. This tathāgatagarbha, or buddha-nature, is made manifest through the *śūraṃgamasamādhi*, which constitutes the “heroic march” forward toward enlightenment.

[Śūraṃgamasamādhisūtra](#). (T. Dpa’ bar ’gro ba’i ting nge ’dzin gyi mdo; C. Shoulengyan sanmei jing; J. Shuryōgon zanmaikyō; K. Sunŭngōm sammae kyōng 首楞嚴三昧經). In Sanskrit, “Sūtra on the Heroic-March Concentration,” an early [MAHĀYĀNA](#) sūtra that explains how the mind becomes free and unimpeded like the “march” (gama) of a “hero” (śūra), who “walks alone, fearlessly, like a lion.” (This translated sūtra should be distinguished from the [*ŚŪRAMGAMASŪTRA](#), a Chinese apocryphal scripture of similar name, which dates from the early eighth century.) The [ŚŪRAMGAMASAMĀDHI](#) as taught in this sūtra not only enables [BODHISATTVAS](#) quickly to attain complete, perfect enlightenment ([ANUTTARASAMYAKSAMBODHI](#)), but also ensures that even [ŚRĀVAKAS](#), [PRATYEKABUDDHAS](#), and [ARHATS](#) are put on the right path leading to buddhahood. In addition, the *śūraṃgamasamādhi* also permits enlightened beings to manifest themselves in any variety of forms in order to teach sentient beings. The sūtra also includes descriptions of the world systems of many other buddhas ([BUDDHAKSETRA](#)), including [ABHIRATI](#), the buddha-land of [AKSOBHYA](#). Although some fragments of the Sanskrit recension of the *Śūraṃgamasamādhisūtra* have survived, the full sūtra is extant only in an early-fifth-century translation attributed to the eminent Kuchean translator [KUMĀRAJĪVA](#), in two rolls, and in an early-ninth-century Tibetan translation.

[*Śūraṃgamasūtra](#). (T. Dpa’ bar ’gro ba’i mdo; C. Shoulengyan jing; J. Shuryōgongyō; K. Sunŭngōm kyōng 首楞嚴經). A Chinese indigenous scripture (see [APOCRYPHA](#)), usually known in the West by its reconstructed Sanskrit title *Śūraṃgamasūtra*, meaning “Heroic March Sūtra.” Its full title is *Dafoding rulai*

miyin xiuzheng liaoyi zhu pusa wanxing Shoulengyan jing; in ten rolls. (This indigenous scripture should be distinguished from an early-fifth century Chinese translation of the [ŚŪRAMGAMASAMĀDHISŪTRA](#), attributed by [KUMĀRAJĪVA](#), in two rolls, for which Sanskrit fragments are extant.) According to the account in the Chinese cataloguer Zhisheng's *Xu gujin yijing tuji*, the *Śūramgamasūtra* was brought to China by a [ŚRAMANA](#) named Pāramiti. Because the *Śūramgamasūtra* had been proclaimed a national treasure, the Indian king had forbidden anyone to take the sūtra out of the country. In order to transmit this scripture to China, Pāramiti wrote the sūtra out in minute letters on extremely fine silk, then he cut open his arm and hid the small scroll inside his flesh. With the sūtra safely hidden away, Pāramiti set out for China and eventually arrived in Guangdong province. There, he happened to meet the exiled Prime Minister Fangrong, who invited him to reside at the monastery of Zhizhisi, where he translated the sūtra in 705 CE. Apart from Pāramiti's putative connection to the *Śūramgamasūtra*, however, nothing more is known about him and he has no biography in the [GAOSEN ZHUAN](#) ("Biographies of Eminent Monks"). Zhisheng also has an entry on the *Śūramgamasūtra* in his [KAIYUAN SHIJIAO LU](#), but there are contradictions in these two extant catalogue accounts of the sūtra's transmission and translation. The *Kaiyuan Shijiao lu* merely records that the śramaṇa Huidi encountered an unnamed Western monk at Guangdong, who had with him a copy of the Sanskrit recension of this sūtra, and Huidi invited him to translate the scripture together. Since the names of this Western monk and his patron Fangrong are not mentioned, the authenticity of the scripture has been called into question. Although Zhisheng assumed the *Śūramgamasūtra* was a genuine Indian scripture, the fact that no Sanskrit manuscript of the text is known to exist, as well as the inconsistencies in the stories about its transmission to China, have led scholiasts for centuries to question the scripture's authenticity. There is also internal evidence of the scripture's Chinese provenance, such as the presence of such indigenous Chinese philosophical concepts as yin-yang cosmology and the five elements (wuxing) theory, the stylistic beauty of the literary Chinese in which the text is written, etc. For these and other reasons, the *Śūramgamasūtra* is now generally recognized to be a Chinese apocryphal composition. The sūtra opens with one of the most celebrated stories in East Asian Buddhist literature: the Buddha's attendant [ĀNANDA](#)'s near seduction by the harlot Mātāṅgī. With Ānanda close to being in flagrante delicto, the Buddha sends the bodhisattva [MAÑJUŚRĪ](#) to save him from a [PĀRĀJIKĀ](#) offense, by employing the śūramgama [DHĀRANĪ](#) to thwart Mātāṅgī's seductive magic. The

Buddha uses the experience to teach to Ānanda and the congregation the [ŚŪRAMGAMASAMĀDHI](#), which counters the false views about the aggregates ([SKANDHA](#)) and consciousness ([VIJÑĀNA](#)) and reveals the [TATHĀGATAGARBHA](#) that is inherent in all sentient beings. This tathāgatagarbha, or buddha-nature, is made manifest through the śūraṃgamasamādhī, which constitutes the “heroic march” forward toward enlightenment. The *Śūraṃgamasūtra* was especially influential in the [CHAN](#) school during the Song and Ming dynasties, which used the text as the scriptural justification for the school’s distinctive teaching that Chan “points directly to the human mind” ([ZHIZHI RENXIN](#)), so that one may “see the nature and achieve buddhahood” ([JIANXING CHENGFO](#)). Several noted figures within the Chan school achieved their own awakenings through the influence of the *Śūraṃgamasūtra*, including the Ming-dynasty master [HANSHAN DEQING](#) (1546–1623), and the sūtra was particularly important in the writings of such Ming-dynasty Chan masters as [YUNQI ZHUHONG](#) (1535–1615). The leading Chan monk of modern Chinese Buddhism, [XUYUN](#) (1840–1959), advocated the practice of the *Śūraṃgamasūtra* throughout his life, and it was the only scripture that he ever annotated. As a mark of the sūtra’s influence in East Asian Buddhism, the *Śūraṃgamasūtra* is one of the few apocryphal scriptures that receives its own mention in another indigenous sūtra: the apocryphal *Foshuo fa miejin jing* (“The Sūtra on the Extinction of the Dharma”) states that the first sūtra to disappear from the world during the dharma-ending age ([MOFA](#)) will in fact be the *Śūraṃgamasūtra*. The Tibetan translation of this Chinese apocryphon was produced during the Qianlong era (1735–1796) of the Qing dynasty; the scripture was apparently so important in contemporary Chinese Buddhism that it was deemed essential for it to be represented in the Tibetan canon as well.

***[Susiddhikarasūtra](#)**. (C. Suxidi jieluo jing; J. Soshijjikarakyo; K. Sosilchi kalla kyōng 蘇悉地羯羅經). In Sanskrit, “Perfect Achievement Sūtra”; an important [SŪTRA](#) of the esoteric Buddhist traditions (see [TANTRA](#) and [MIKKYŌ](#)). No Sanskrit edition of the *Susiddhikarasūtra* is known to exist; the Sanskrit title is reconstructed from the Chinese translation (726) attributed to the Indian [TREPITAKA ŚUBHAKARASIMHA](#). The *Susiddhikaramahātantrasādhanopāyikapāṭala* found in the Tibetan canon is a translation in seventy-five folios (*Legs par grub par byed pa’i rgyud chen po las sgrub pa’i thabs rim par phye pa*) and is categorized by the editor [BU STON](#) as an important [KRIYĀTANTRA](#). The Tibetan title means “[SĀDHANA](#) Section of the Susiddhikara Great Tantra.” The *Susiddhikarasūtra*, along with the [MAHĀVAIROCANĀBHISAMBODHISŪTRA](#) and the

[SARVATATHĀGATATATTVASAMGRAHA](#), is considered one of the three central texts of the esoteric branch of the [TENDAI](#) tradition known as [TAIMITSU](#).

[Susim kyōl](#). (C. Xiuxin jue 修心訣). In Korean, “Secrets on Cultivating the Mind,” one of the most popular tracts on the practice of [SŎN](#) (C. [CHAN](#)), by the Korean Sŏn master [POJO CHINUL](#) (1158–1210); composed c. 1203–1205 at the newly established [SUSŎNSA](#) religious community. The tract provides a detailed outline of Chinul’s preferred soteriological stratagem of “sudden awakening/gradual cultivation” (K. tono chŏmsu; [DUNWU JIANXIU](#)), that is, an initial sudden awakening to one’s buddha-nature, followed by gradual cultivation of that awakening until one is able not only to be but also to act enlightened. Chinul also covers here the cultivation in tandem of concentration ([SAMĀDHI](#)) and wisdom ([PRAJÑĀ](#)), which treats these two meditative aids not as stages in a sequential series of meditative practices but instead as the calm and alert aspects of the mind-nature itself. The *Susim kyōl* was lost in Korea following the Mongol invasions of the mid-thirteenth century and was not reintroduced to the peninsula (via a Northern Ming edition) until about two centuries later. It was translated into the Korean vernacular in 1467 and remains today one of the most widely read Korean Sŏn works.

[Susōnsa](#). (修禪社). In Korean, “[SŎN](#) Cultivation Community”; the later name for the meditation retreat known originally as the [CHŎNGYE KYŎLSA](#) or “[SAMĀDHI](#) and [PRAJÑĀ](#) Community,” established by the Korean Sŏn master [POJO CHINUL](#) (1158–1210) at the monastery of Kōjosa on Mt. Kong in 1188. As the community grew, Chinul had to search for a more suitable location that would accommodate the large number of participants. In 1197, Chinul’s disciple Suu (d.u.) began reconstruction of a small, dilapidated temple known as Kilsangsa on Mt. Songgwang. The community was relocated to the new site in 1200, but because a nearby monastery was also called Chŏnghyesa (Samādhi and Prajñā Monastery), Chinul was forced to seek another name for his community. King Hŭijong (r. 1204–1211) gave the community its new name of Susōnsa, or Sŏn Cultivation Community. Largely through the efforts of Chinul’s successor [CHIN’GAK HYESIM](#), the Susōnsa community became an influential Buddhist institution and remained so throughout the Koryŏ dynasty. Susōnsa eventually became the influential monastery that has been known since the Chosŏn dynasty as [SONGGWANGSA](#). The meditation hall at Songgwangsa is still called Susōnsa.

[sūtra](#). (P. sutta; T. mdo; C. jing; J. kyō; K. kyŏng 經). In Sanskrit, lit.

“aphorism,” but in a Buddhist context translated as “discourse,” “sermon,” or “scripture”; a sermon said to be delivered by the Buddha or delivered with his sanction. A term probably used originally to refer to sayings of the Buddha that were preserved orally by his followers (and hence called “aphorisms”), the sūtra developed into its own genre of Buddhist literature, with a fairly standard set of literary conventions. The most famous of these conventions was the phrase used to begin a sūtra, “Thus have I heard” ([EVAM MAYĀ ŚRUTAM](#)), intended to certify that what was to follow was the first-person report of the Buddha’s attendant [ĀNANDA](#) (see [SAMGĪTIKĀRA](#)) who was most often in the Buddha’s presence and was renowned for his prodigious memory. Also standard was the [NIDĀNA](#), which describes the setting of the sūtra, noting where the Buddha was residing at the time, who was in the audience, who was the interlocutor, *etc.* According to tradition, the sūtras were first codified when Ānanda recited them at the first Buddhist council (see [COUNCIL, FIRST](#)), shortly after the Buddha’s death. This conceit of orality was maintained even for sūtras that were literary compositions, written long after the Buddha, most notably, the hundreds of [MAHĀYĀNA](#) sūtras that began to appear in India starting some four hundred years after the Buddha’s [NIRVĀNA](#). An important theme in these sūtras and their commentaries is the claim that they are indeed the word of the Buddha ([BUDDHAVACANA](#)). In the standard threefold division of the Buddha’s teachings, sūtra indicates the contents of the [SŪTRAPITAKA](#), a grouping of texts that together with the [VINAYA](#) and [ABHIDHARMA](#) together constitute the [TRIPITAKA](#), or “three baskets.” In tantric literature, sūtra is used to refer to the exoteric teachings of the Buddha, in contrast to the tantras, his esoteric teachings. It is also one of the nine ([NAVAṄGA\[PĀVACANA\]](#)) (Pāli) or twelve ([DVĀDAŚĀNGA\[PRAVACANA\]](#)) (Sanskrit) categories ([AṄGA](#)) of Buddhist scripture, according to structure or literary style.

[Sūtrālamkāra](#). (S). See [MAHĀYĀNASŪTRĀLAMKĀRA](#).

[sūtrānta](#). (P. *suttanta*; T. *mdo sde*). A synonym for [SŪTRA](#), used also to designate the category of sūtras. In Pāli, [SUTTANTA](#) is typically reserved for the longer suttas collected in the [DĪGHANIKĀYA](#).

[sūtrapitaka](#). (P. *suttapitaka*; T. *mdo sde’i sde snod*; C. *jingzang*; J. *kyōzō*; K. *kyōngjang* 經藏). In Sanskrit, “basket of discourses,” one of the three constituents of the [TRIPITAKA](#) (together with the [VINAYAPITAKA](#) and the [ABHIDHARMAPITAKA](#)). This basket is a disparate collection of thousands of texts attributed to the Buddha (or said to be spoken with his sanction), varying in length from extended

narrative accounts to short epigrams. The Pāli suttapiṭaka is divided into five groups, or [NIKĀYA](#). These are the [DĪGHANIKĀYA](#), or “Long Group,” comprising thirty-four lengthier sūtras; the [MAJJHIMANIKĀYA](#), or “Middle [Length] Group,” comprising 152 sūtras; the [SAMYUTTANIKĀYA](#) or “Related Group,” comprising (by some counts) some seven thousand sūtras, organized largely by subject matter in fifty-six categories; the [AṄGUTTARANIKĀYA](#), literally, the “Group Increasing by a Factor,” or more generally, the “Numerical Group,” an anthology of nearly ten thousand brief texts organized by the number of the subject, with the first group dealing with single things, the second dealing with pairs, the third dealing with things that occur in threes, up to things that occur in groups of eleven; and finally the [KHUDDAKANIKĀYA](#), or “Small Group,” a diverse collection of miscellaneous texts, including such famous works as the Pāli [DHAMMAPADA](#). Although the *Khuddakanikāya* contains some early works, as an independent nikāya, it appears to have been the last to be added to the tipiṭaka and is not mentioned in early accounts. The suttapiṭaka seems to have been preserved orally for centuries, before being committed to writing in Sri Lanka at the end of the first century BCE. The sūtrapiṭakas of other Indian [NIKĀYAS](#) (schools) translated from a number of Indian languages into Chinese and Tibetan use the word [ĀGAMA](#) (tradition) in place of nikāya (group) for the groupings of sūtras in their respective canons. In their Chinese translations, the [DĪRGHĀGAMA](#) or “Long Discourses,” belonging to the [DHARMAGUPTAKA](#) school, corresponds to the Pāli *Dīghanikāya*; the [MADHYAMĀGAMA](#) or “Middle-Length Discourses” of the [SARVĀSTIVĀDA](#) school corresponds to the Pāli *Majjhimanikāya*; the [SAMYUKTĀGAMA](#) or “Connected Discourses,” belonging to the Sarvāstivāda school (with a partial translation perhaps belonging to the [KAŚYAPIYA](#) school) corresponds to the Pāli *Samyuttanikāya*; and the [EKOTTARĀGAMA](#) or “Numerically Arranged Discourses,” variously ascribed to the [DHARMAGUPTAKAS](#), or less plausibly the [MAHĀSĀMGHIKA](#) school or its [PRAJÑAPTIVĀDA](#) offshoot, corresponds to the Pāli *Āṅguttaranikāya*. Despite the similarities in the titles of these collections, there are substantial differences between the contents of the Sanskrit āgamas and the Pāli nikāyas. The *Khuddakanikāya* (“Miscellaneous Collection”), the fifth nikāya in the Pāli canon, has no equivalent in the extant Chinese translations of the āgamas; such miscellanies, or “mixed baskets” (S. *kṣudrakapiṭaka*), were however known to have existed in several of the mainstream Buddhist schools, including the Dharmaguptaka, Mahāsāṃghika, and [MAHĪŚĀSAKA](#).

Sūtrasamuccaya. (T. Mdo kun las btus pa; C. Dasheng baoyaoyi lun; J. Daijō hōyōgiron; K. Taesŭng poyoŭi non 大乘寶要義論). In Sanskrit, “Compendium of Sūtras,” a work attributed to [NĀGĀRJUNA](#), an anthology of passages from sixty-eight mainly [MAHĀYĀNA](#) sūtras (or collections of sūtras), organized under thirteen topics. These topics extol the bodhisattva and the Mahāyāna path, noting the rarity and hence precious nature of such things as faith in the Buddha, great compassion, and laymen who are able to follow the bodhisattva path. The text is of historical interest because it provides evidence of the Mahāyāna sūtras that were extant at the time of Nāgārjuna. These include, in addition to various [PRAJÑĀPĀRAMITĀ](#) sūtras, such famous works as the [LAŅKĀVĀTĀRASŪTRA](#), the [DAŚABHŪMIKASŪTRA](#), the [SADDHARMAPUNĀRIKASŪTRA](#), and the [VIMALAKĪRTINIRDEŚA](#). The Chinese translation was made by Dharmarakṣa (c. 1018–1058) during the Northern Song dynasty and was among the last stratum of Indian materials to be entered into the Chinese Buddhist canon (C. [DAZANGJING](#)).

sūtravibhaṅga. (P. suttavibhaṅga; T. mdo rnam par ’byed pa; C. jingfenbie; J. kyōfunbetsu; K. kyōngbunbyōl 經分別). In Sanskrit, “analysis of the [SŪTRAS](#),” a section of the [VINAYA](#) that comments on the [PRĀTIMOKṢA](#); also known as the [VINAYAVIBHAṅGA](#). The prātimokṣa is a list of rules that monks and nuns must follow. The sūtravibhaṅga comments on each rule according to a fourfold structure. First, the text recounts the occasion for the formulation of the rule. According to the tradition, the Buddha did not initially impose rules on the [SAMGHA](#), but created the monastic code gradually as misconduct that required correction began to appear in the order. Thus, each rule was declared by the Buddha in a specific circumstance, only after a misdeed had occurred. The Buddha would then make a rule prohibiting that deed, without any retrospective sanction against the original perpetrator, since no rule was in place at the time of the misdeed. This section explains the circumstances that led to the Buddha’s announcement of the rule and may include more than one story. (In the case of subcategories of a misdeed, the Buddha is not always mentioned.) This section of the text provides important insights into monastic life in India at the time. Second, the specific prātimokṣa rule is stated. Third, the text provides a word-for-word commentary on the rule as it is set forth in the prātimokṣa. Finally, accounts are provided of circumstances under which the rule might be violated without sanction or with reduced sanction. The sūtravibhaṅga is organized according to the eight sections of the prātimokṣa. There are separate versions of

the text for [BHIKSUS](#) and [BHIKSUNĪs](#), with the former also being known as the mahāvibhaṅga. In most vinaya traditions, a prātimokṣa exists as a separate text, but in the Pāli vinaya, the pāṭimokkha is embedded within the [SUTTAVIBHAṄGA](#).

sutta. In Pāli, “discourses.” See [SŪTRA](#).

Suttanipāta. In Pāli, “Sutta Collection”; the fifth book of the [KHUDDAKANIKĀYA](#) of the Pāli [SUTTAPITAKA](#), which includes texts that derive from the earliest stratum of the Pāli canon. It is comprised of five [VAGGAS](#) or chapters, the *Uragavagga*, *Cūlavagga*, [MAHĀVAGGA](#), [ATTHAKAVAGGA](#), and the *Pārāyaṇavagga*. The *Atthakavagga* and *Pārāyaṇavagga* are believed to have been early collections that circulated independently, as there is a canonical commentary on them, the [NIDDESA](#), that ignores the other vaggas. They also include verse passages that metrical evidence places as among the most archaic in the canon.

suttanta. In Pāli, a synonym for [SŪTRA](#), used also to designate the category of scriptural literature. In Pāli, suttanta is typically reserved for the longer suttas collected in the [DĪGHANIKĀYA](#). See also [SŪTRĀNTA](#).

suttapitaka. In Pāli, “basket of discourses,” the first of the “three baskets” (P. [TIPITAKA](#); S. [TRIPITAKA](#)) of the Buddhist canon. See [SŪTRAPITAKA](#).

suttavibhaṅga. In Pāli, “analysis of the suttas”; the first major section of the Pāli [VINAYAPITAKA](#). Embedded within the suttavibhaṅga is the pāṭimokkha (S. [PRĀTIMOKSA](#)), a collection of 227 rules (311 for nuns) that were to be followed by fully ordained members of the Buddhist monastic community. The bulk of the suttavibhaṅga contains narratives and commentaries related to the promulgation of the pāṭimokkha rules, which explain the events that led to the Buddha’s decision to establish a specific rule. Following the Buddha’s pronouncement of the rule, the rule may be interpreted with word-for-word commentary and/or details that might justify an exception to the rule. In the suttavibhaṅga, these narrative and commentarial treatments are organized in the same way as the pāṭimokkha itself, that is, according to the category of offense. Thus, the suttavibhaṅga begins with the [PĀRĀJIKĀ](#) (defeat) offenses and works its way through the remaining sections of the pāṭimokkha. See also [SŪTRAVIBHAṄGA](#).

Suvannabhūmi. (S. *Suvarṇabhūmi*). In Pāli, “The Golden Land,” a territory

generally identified with the Mon homeland of Rāmaññadesa in Lower Burma (Myanmar) lying along the coast of the Bay of Bengal from the Irrawaddy (Ayeyarwady) river delta in the west to Martaban in the east. Some chroniclers locate Suvannabhūmi to the east of the Isthmus of Kra along the southern Thai coast. According to Pāli sources, it was the destination of one of nine Buddhist missions dispatched during the reign of [AŚOKA](#) from Pātaliputta (S. [PĀTALIPUTRA](#), modern Patna) to adjacent lands by the elder [MOGGALIPUTTATIṢṢA](#) after the convention of the third Buddhist council (see [COUNCIL, THIRD](#)) in the third century BCE. The elders [SONA AND UTTARA](#) were sent as missionaries to convert Suvannabhūmi. The third Buddhist council at Pātaliputta and the nine Buddhist missions are known only in Pāli sources and are first recorded in the fifth-century [DĪPAVAMSA](#).

[Suvannadvīpa](#). (S). One of the twenty-four sacred sites associated with the [CAKRASAMVARATANTRA](#). See [PĪTHA](#).

[Suvannaprabhāsottamasūtra](#). (T. Gser 'od dam pa'i mdo; C. Jinguangming zuishengwang jing; J. Konkōmyō saishōōkyō; K. Kūmgwangmyōng ch'oesūngwang kyōng 金光明最勝王經). In Sanskrit, “Sūtra of Supreme Golden Light,” an influential [MAHĀYĀNA](#) sūtra, especially in East Asia. Scholars speculate that the text originated in India in the fourth century and was gradually augmented. It was translated into Chinese by [YIJING](#) in 703. The sūtra contains many [DHĀRANĪ](#) and is considered by some to be a proto-tantric text; in some editions of the Tibetan canon it is classified as a [TANTRA](#). It is important in East Asian Buddhism for two main reasons. First was the role the sūtra played in conceptualizing state-protection Buddhism ([HUGUO FOJIAO](#)). The sūtra declares that deities will protect the lands of rulers who worship and uphold the sūtra, bringing peace and prosperity, but will abandon the lands of rulers who do not, such that all manner of catastrophe will befall their kingdoms. The sūtra was thus central to “state protection” practices in East Asia, together with the [SADDHARMAPUNḌARĪKASŪTRA](#) and the [RENWANG JING](#). Second, the sūtra provides the locus classicus for the “water and land ceremony” ([SHUILU HUI](#)), a ritual intended for universal salvation, but especially of living creatures who inhabit the most painful domains of [SAMSĀRA](#); the ceremony was also performed for a variety of this-worldly purposes, including state protection and rain-making. According to the sūtra, in a previous life, the Buddha was a merchant’s son named Jalavāhana, who one day encountered a dried-up pond in the forest, filled

with thousands of dying fish. Summoning twenty elephants, he carried bags of water from a river into the forest and replenished the pond, saving the fish. He then sent for food with which to feed them. Finally, recalling that anyone who hears the name of the buddha Ratnaśikhin will be reborn in the heavens, he waded into the pond and pronounced the Buddha's name, followed by an exposition of dependent origination. When the fish died, they were reborn in the [TRĀYASTRIMŚA](#) heaven. Recalling the reason for their happy fate, they visited the world of humans, where each offered a pearl necklace to Jalavāhana's head, foot, right side, and left side. The sūtra also tells the story of Prince Mahāsattva who sees a starving tigress and her cubs. He throws himself off a cliff to commit suicide so that the tiger might eat his body (see [NAMO BUDDHA](#)). This is one of the most famous cases of [DEHADĀNA](#), or gift of the body.

Suvarṣaka. (C. Shansui; J. Zensai; K. Sōnse 善歲). In Sanskrit, the surname of the founder of the [KĀŚYAPĪYA](#) school, one of the eighteen traditional schools of mainstream Indian Buddhism. See [KĀŚYAPĪYA](#).

***suvibhaktadharmacakra**. (T. legs par mnam par phye ba dang ldan pa'i chos 'khor; C. zhengzhuan falun; J. shōtenpōrin; K. chūngjōn pōmnyun 證轉法輪). In Sanskrit, lit., “the dharma wheel that makes a fine delineation”; the third of the three turnings of the wheel of the dharma described in the [SAMDHINIRMOCANASŪTRA](#), said to have been delivered in [VAIŚĀLI](#). It is also known as the [PARAMĀRTHAVINIŚCAYADHARMACAKRA](#), or “the dharma wheel for ascertaining the ultimate,” as the pravacayadharmacakra, or “the dharma wheel of investigation,” and simply as the antyadharmacakra or “final wheel of the dharma.” The sūtra identifies this as a teaching for bodhisattvas and classifies it as definitive ([NĪTĀRTHA](#)); this third turning of the wheel is the teaching of the *Samdhinirmocanasūtra* itself. According to the commentators, in this sūtra the Buddha, through his anamuensis Paramārthasamudgata, sets forth in clear and plain language what he means by his provisional statements in the first wheel of the dharma (see [CATUḤSATYADHARMACAKRA](#)), namely, that the [FOUR NOBLE TRUTHS](#) exist; and his statement in his middle wheel of the dharma in the [PRAJÑĀPĀRAMITĀ SŪTRAS](#) (perfection of wisdom sūtras) (see [ALAKSANADHARMACAKRA](#)) that no dharmas exist. Both of the first two wheels are declared to be provisional ([NEYĀRTHA](#)). Here, in this definitive teaching called “the dharma wheel that makes a fine delineation,” he says that dharmas have three natures ([TRISVABHĀVA](#)), and each of those in its own way lacks an intrinsic

nature ([SVABHĀVA](#)). The three natures are the [PARIKALPITA](#) or imaginary nature, the [PARATANTRA](#) or dependent nature, and the [PARINIṢPANNA](#) or consummate nature. ¶ In Tibet there were different schools of interpretation of the three wheels of doctrine. The third Karma pa [RANG 'BYUNG RDO RJE](#), [DOL PO PA SHES RAB RGYAL MTSHAN](#), and the nineteenth-century [RIS MED](#) masters assert that the *Samdhinirmocanasūtra*'s third wheel of dharma is definitive and teaches a great [MADHYAMAKA](#) ([DBU MA CHEN PO](#)). They say this great Madhyamaka is set forth with great clarity in the [ŚRĪMĀLĀDEVĪSIMHANĀDASŪTRA](#) and, particularly, in the [RATNAGOTRAVIBHĀGA](#) (“Delineation of the Jewel Lineage”; alt. title, *Uttaratantra*). They argue that in the second turning of the wheel, the *prajñāpāramitā sūtras*, the Buddha uses apophatic language to stress the need to eliminate [KLEŚAs](#) and false superimpositions. He does not clearly delineate, as he does in the third turning, the [TATHĀGATAGARBHA](#), which is both empty (*śūnya*) of all afflictions (*kleśa*) and nonempty (*aśūnya*), viz., full of all the Buddha's virtues. Hence they assert that the third turning of dharma in the *Samdhinirmocanasūtra* sets forth the “great Madhyamaka” (*dbu ma chen po*), and is a definitive teaching that avoids both apophatic and kataphatic extremes. Others, most notably [TSONG KHA PA](#), disagree, asserting that the *Samdhinirmocanasūtra*'s second turning of the wheel is the definitive teaching of the Buddha, and say that its third turning, i.e., the presentation of Buddhist tenets in the *Samdhinirmocanasūtra*, is a Yogācāra teaching intended for those temporarily incapable of understanding Madhyamaka.

[Suvikrāntavikrāmaparipṛcchāprajñāpāramitā](#). (T. Rab kyi rtsal gyis nam par gnon pas shus pa shes rab kyi pha rol tu phyin pa; C. Shengtian wang bore boluomi jing; J. Shōtennō hannya haramikkyō; K. Sūngch'ōn wang panya paramil kyōng 勝天王般若波羅蜜經). In Sanskrit, the “Perfection of Wisdom Requested by Suvikrāntavikrāmin.” A [PRAJÑĀPĀRAMITĀ](#) (“perfection of wisdom”) sūtra in seven chapters, it is closely related to the first two chapters of the [ASTASĀHASRIKĀPRAJÑĀPĀRAMITĀ](#) in its themes, and displays a great familiarity with the various categories of the [ABHIDHARMA](#), more so than other *prajñāpāramitā sūtras*. In the fourth chapter, it uses twelve similes for dharmas and the [PRAJÑĀPĀRAMITĀ](#), including a reflection, a mirage, an echo, the pith of a banana tree, and a bubble (cf. [LIUYU](#), [ASTAMĀYOPĀMA](#)). The [PRAJÑĀPĀRAMITĀ](#) is described as inaccessible and unestablished (*apariniṣpannā*) but pure and infinite. In the fifth chapter, [ŚĀRIPUTRA](#) asks [SUBHŪTI](#) to explain the dharma but Subhūti replies that there is nothing to explain.

[Suvinda](#). (S). See [SUBINDA](#).

[Suyōn](#). (K) (秀演). See [MUYONG SUYŌN](#).

[Suzuki, Daisetz Teitaro](#). (鈴木大拙[貞太郎]) (1870–1966). A Japanese scholar of Zen Buddhism, widely regarded as the person most responsible for introducing [ZEN](#) thought to the West. Born in Kanazawa, D. T. Suzuki, as he is usually known in Western writings, was the son of a physician. He taught English in primary schools before enrolling in what is now Waseda University in Tokyo. While he was a university student, he traveled to Kamakura to practice Zen meditation at the monastery of [ENGAKUJI](#) under the direction of the [RINZAI](#) master [SHAKU SŌEN](#). He became Sōen's disciple and translated into English Sōen's lecture for the 1893 World's Parliament of Religions. Sōen subsequently arranged for Suzuki to travel to America to work with [PAUL CARUS](#), author of *The Gospel of Buddha* and a leading proponent of Buddhism in America. Suzuki lived with Carus' family in LaSalle, Illinois from 1897 to 1908, producing translations and writing his first book in English, *Outlines of Mahayana Buddhism* (1907). He returned to Japan in 1909, where he taught English until 1921, when he accepted a chair in Buddhist philosophy at Ōtani University in Kyoto. In 1911, he married an American student of Buddhism, Beatrice Erskine Lane (1878–1939), who served as the coeditor of many of his books and published her own studies of Mahāyāna Buddhism. Suzuki remained in Japan during World War II, but in 1950, after the war, he returned to the United States and lectured on Zen Buddhism at a number of universities, including Columbia University, where he was a long-time visiting professor. Suzuki was a prolific author in both Japanese and English, and eventually came to be renowned in both academic traditions. Because Suzuki was something of an autodidact in Buddhism, he initially struggled to be accepted into the mainstream of Japanese academe, but his prodigious output (his writings in Japanese filled thirty-two volumes) and his emphasis on the Indian and Chinese foundations of Japanese Buddhism (at a time when Japanese nationalist interpretations of Buddhism were the order of the day) eventually brought him wide respect at home. In the West, he wrote on both Mahāyāna Buddhism and Zen. His writings on Mahāyāna Buddhism include his highly regarded English translation and study of the [LAṆKĀVATĀRASŪTRA](#) and a critical edition of the Sanskrit recension of the [GANDAVYŪHA](#). But Suzuki's most influential works in English scholarship are his voluminous writings on the Zen tradition, including his three-volume *Essays in*

Zen Buddhism, An Introduction to Zen Buddhism, The Training of a Zen Buddhist Monk, and Zen and Japanese Culture. These books, for the first time, made Zen philosophy and history serious topics of Buddhological research, and also inspired many Zen popularizers, such as ALAN WATTS and [JACK KEROUAC](#), whose works introduced the notion of “Zen” to the Western popular imagination. Suzuki also mentored many of the preeminent Western Buddhologists of the mid-twentieth century; even the notorious curmudgeon EDWARD CONZE gushed over Suzuki, such was his high regard for his Japanese colleague. Suzuki died in Tokyo at the age of ninety-six.

[Suzuki Shōzan](#). [alt. Suzuki Shōsan] (鈴木正三) (1579–1655). Japanese [ZEN](#) monk of the Tokugawa period. Suzuki Shōzan was born into a samurai family in Mikawa, present-day Aichi prefecture. He is said to have fought under Tokugawa Ieyasu (1543–1616) at Sekigahara in 1600 and again at Ōsaka fourteen years later. He retired from lay life at the age of forty-one, and during this retirement he studied under various teachers such as [DAIGU SŌCHIKU](#) and [GUDŌ TŌSHOKU](#) of the [RINZAISHŪ](#) and Bannan Eishu (1591–1654) of the [SŌTŌSHŪ](#). Whether he inherited the lineages of any of these figures is unclear. He established several temples throughout the country, which are now registered with the Sōtō Zen sect. At these temples, he taught a unique form of Zen called Niōzen or Ninōzen, which emphasized the fearsome cultivation of Zen in everyday life. He left many writings including the *Roankyō* (“Donkey-Saddle Bridge”), *Ninin bikuni* (“Two Nuns”), *Mōanjō* (“A Safe Staff for the Blind”), and *Banmin dokuyō* (“Right Action for All”).

[Suzuki Shunryū](#). (鈴木俊隆) (1904–1971). Japanese [ZEN](#) priest influential in American Buddhism during the mid-twentieth century. Suzuki Shunryū was born in a village forty miles southwest of Tokyo, the son of a poor Zen priest. After elementary school, he went to live at a temple run by a disciple of his father. He was ordained as a novice monk in 1917. After completing his secondary school education, where he excelled at English, he attended Komazawa University in Tokyo, the university affiliated with the Sōtō sect of Zen, graduating in 1930. He then went on to train at [EIHEJI](#), the head temple of the [SŌTŌSHŪ](#). In 1932, he took over as priest of his father’s temple before moving on to serve as abbot at the larger temple of Rinsōin. He married in 1935. He spent the war years at Rinsōin and, unlike many Buddhist priests, did not actively support the war, although his temple was used to house soldiers, Korean

laborers, and children displaced by the bombing of Tokyo. After the war, he engaged in a common occupation of Zen priests: performing services for the dead, while also opening a kindergarten. In 1959, he accepted a post offered by the headquarters of the Sōtō sect to serve as priest at a Japanese-American Zen temple in San Francisco, where he performed religious services for a community of some sixty families. He began to give lectures in English and to lead meditation retreats at the San Francisco temple. He continued to serve as priest to the Japanese community until 1969, when the tensions between his Japanese parishioners and his American disciples led him to resign from his original position. He then founded the San Francisco Zen Center, which eventually established both a residential center in the city, a mountain center in Tassajara, and a farm at Green Gulch. In 1970, an edited version of some of his lectures were published as *Zen Mind, Beginner's Mind*, a work that became a bestseller and classic of American Zen. Suzuki died in San Francisco in 1971.

svabhāva. (T. rang bzhin; C. zixing; J. jishō; K. chasōng 自性). In Sanskrit, “self-nature,” “intrinsic existence,” or “inherent existence,” the term has a general sense of “essence” or “nature,” but is used in philosophical literature. It has at least three important, and different, usages, in [MAHĀYĀNA](#) Buddhist doctrine. In the [MADHYAMAKA](#) school, it refers to a hypostatized and reified nature that is falsely attributed to phenomena by ignorance, such that phenomena are mistakenly conceived to exist in and of themselves. In this sense, it is used as a synonym for [ĀTMAN](#). Therefore, there is no svabhāva, nothing possesses svabhāva, and all phenomena are said to lack, or be empty of, svabhāva. This doctrine is sufficiently central to Madhyamaka that the school is also called [NĪHRSVABHĀVAVĀDA](#), the “Proponents of No Svabhāva.” In [YOGĀCĀRA](#), as represented in the [SAMDHINIRMOCANASŪTRA](#), all phenomena can be categorized into three natures ([TRISVABHĀVA](#)): the imaginary ([PARIKALPITA](#)), the dependent ([PARATANTRA](#)), and the consummate ([PARINISPANNA](#)). In the [LĀNKĀVATĀRASŪTRA](#), seven forms of svabhāva or natures are enumerated to account for the functioning of phenomena: (1) samudayasvabhāva (C. jixing zixing), the nature of things that derives from the interaction between various conditions; (2) bhāvasvabhāva (C. xing zixing), the nature that is intrinsic to things themselves; (3) lakṣaṇasvabhāva (C. xiangxing zixing), the characteristics or marks ([LAKSANA](#)) that distinguish one thing from another; (4) mahābhūtasvabhāva (C. dazhongxing zixing), the nature of things that derives from being constituted by the four physical elements ([MAHĀBHŪTA](#)); (5) hetusvabhāva (C. yinxing zixing),

the nature of things that is derived from the “proximate causes” ([HETU](#)) that are necessary for their production; (6) *pratyayasvabhāva* (C. *yuanxing zixing*), the nature derived from the “facilitating conditions” ([PRATYAYA](#)); (7) *niṣpattisvabhāva* (C. *chengxing zixing*), the consummate, actualized buddha-nature that is the fundamental reality of things. See also [NIHVSABHĀVA](#).

[svabhāvakāya](#). (T. *ngo bo nyid sku*; C. *zixing shen*; J. *jishōshin*; K. *chasōng sin* 自性身). In Sanskrit, lit. “self-nature body,” the buddha-body in its most elemental nature (also seen written as *svābhāvīkākāya*); one of the four types of buddha bodies ([BUDDHAKĀYA](#)) discussed in the [BUDDHABHŪMIŚĀSTRA](#) (*Fodijing lun*), the [MAHĀYĀNASAMGRAHA](#) (*She dasheng lun*), and the [CHENG WEISHI LUN](#) (**Vijñaptimātratāsiddhiśāstra*), along with the “body intended for personal enjoyment” ([SVASAMBHOGAKĀYA](#)), the “body intended for others’ enjoyment” ([PARASAMBHOGAKĀYA](#)), and the “transformation body” ([NIRMĀNAKĀYA](#)). This type of buddha-body is functionally equivalent to the [DHARMAKĀYA](#) in the two or “three bodies” ([TRIKĀYA](#)) schema of buddha-bodies. ¶ A different understanding of the *svabhāvakāya* derives from the [PRAJÑĀPĀRAMITĀ](#) literature. The final chapter of the [ABHISAMAYĀLAMKĀRA](#) sets forth an elliptic presentation of the *svabhāvakāya* that led to a number of different later interpretations. According to Ārya [VIMUKTISENA](#)’s interpretation, the *svabhāvakāya* is not a separate buddha-body, but rather the ultimate nature (in essence, the emptiness or [ŚŪNYATĀ](#)) that locates or underpins the other three bodies (the *dharmakāya*, [SAMBHOGAKĀYA](#), and *nirmāṇakāya*). He proposes just three bodies. [HARIBHADRA](#) disagrees with this interpretation and proposes four bodies. Strongly influenced by [YOGĀCĀRA](#) thought, he privileges the *dharmakāya* and says it has two parts: a knowledge body ([JÑĀNADHARMAKĀYA](#)), which is a buddha’s omniscient mind, and a *svabhāvakāya*, which is the ultimate nature of that mind. This controversy was widely debated in Tibet in the commentarial tradition.

[svabhāvaśūnya](#). (T. *rang bzhin gyis stong pa*; C. *zixing kong*; J. *jishōkū*; K. *chasōng kong* 自性空). In Sanskrit, “empty of intrinsic nature,” a term used in the [MADHYAMAKA](#) school to specify that all persons and phenomena are empty of an intrinsic nature ([SVABHĀVA](#)). The term *svabhāva* is used in *Madhyamaka* to refer to a hypostatized and reified nature that is falsely attributed to phenomena by ignorance, such that phenomena are mistakenly conceived to exist in and of themselves. In this sense, it is used as a synonym for [ĀTMAN](#). All phenomena are declared to lack, or be empty of, *svabhāva* and hence are *svabhāvaśūnya*. The

term svabhāvaśūnyatā, “emptiness of intrinsic nature,” is one in the list of emptinesses, sometimes as long as twenty, beginning with adhyātmaśūnyatā (“emptiness of the internal”), bahirdhāśūnyatā (“emptiness of the external”), ubhayaśūnyatā (“emptiness of both,”), and including abhāvaśūnyatā (“emptiness of nonbeing”).

[svabhāvavikalpa](#). (T. rang bzhin la rnam par rtog pa; C. zixing fenbie; J. jishō funbetsu; K. chasōng punbyōl 自性分別). In Sanskrit, “intrinsic discrimination”; the first of the three types of conceptual discrimination ([VIKALPA](#)). See [TRIVIKALPA](#).

[Svāgata](#). (P. Sāgata; T. Legs ’ongs; C. Shanlai; J. Zenrai; K. Sōllae 善來). Sanskrit proper name of an eminent [ARHAT](#) elder declared by the Buddha to be foremost among his monk disciples in contemplation of the heat element (tejadhātu); also written in [BUDDHIST HYBRID SANSKRIT](#) as Sāgata. According to the Pāli account, Sāgata was the personal attendant of the Buddha when [SONA KOLIVĪSA](#) (S. Śrona-Viṃśatikoti/Śrona-Koṭivimśa) and eighty thousand companions visited [RAJAGRHA](#) at the request of King [BIMBISĀRA](#). Sāgata appears to have been naturally endowed with supernatural powers (P. iddhi, S. [RDDHI](#)) and left such an impression on Soṇa Kolavīsa that he joined the order. At the king’s request, Sāgata displayed numerous marvels in the sky and, when asked to show an even greater wonder, he fell at the Buddha’s feet and declared him to be his teacher. In the hermitage of the Jaṭilas in Ambatittha (S. Āmratirtha), Sāgata dwelt in a powerful [NĀGA](#)’s cave, angering him, yet he was easily able to defeat the creature. When the people of Kosambī (S. [KAUŚAMBĪ](#)) heard of this feat, they resolved to honor Svāgata with a feast. The wicked chabbaggīyā (S. [SADVĀRGIKA](#)) monks, jealous of Sāgata’s fame, were intent on his undoing, and so recommended to the citizens of Kosambī that they offer him liquor. Sāgata was offered liquor at every house until he fell unconscious and had to be carried back to the Buddha. Although he was laid down properly with his head facing the Buddha, he turned around and lay with his feet towards the Buddha. The Buddha used this occasion to preach about the heedlessness ([PRAMĀDA](#)) that arises from intoxication and passed a rule against the use of alcohol and other intoxicants. The next day when Sāgata awoke, he was informed of what had happened and begged the Buddha for forgiveness. After a short while, through diligent practice, he attained insight into the three marks of existence and became an arhat.

[svalakṣaṇa](#). (T. rang mtshan; C. zixiang; J. jisō; K. chasang 自相). In Sanskrit, “own characteristic,” or “specifically characterized,” a term used in contrast to “general” or “generic” “characteristic” ([SĀMĀNYALAKṢANA](#)). In views that Tibetan doxographers have associated with the [SAUTRĀNTIKA](#) school, as set forth in the early chapters of [DHARMAKĪRTI](#)’s [PRAMĀNAVĀRTTIKA](#), svalakṣaṇa is used to refer to impermanent things, which are objects of direct perception ([PRATYAKṢA](#)) and hence can be perceived in all of their specificity, as opposed to the objects of thought, which must be apprehended through the medium of mental images. For the *[PRĀSAṄGIKA](#) branch of [MADHYAMAKA](#), svalakṣaṇa takes on the meaning of “established by means of its own characteristic,” and thus is identified as a quality falsely ascribed to persons and phenomena by ignorance, a quality that all phenomena in the universe lack and of which they are empty. Thus, in Madhyamaka, nothing is svalakṣaṇasiddha, or “established by way of own nature.” All phenomena lack this quality and are therefore described as [SVALAKṢANAŚŪNYA](#).

[svalakṣaṇaśūnya](#). (T. rang mtshan gyis stong pa; C. zixiang kong; J. jisōkū; K. chasang kong 自相空). In Sanskrit, “empty of own characteristic,” a term is used in the perfection of wisdom ([PRAJÑĀPĀRAMITĀ](#)) literature to describe the fundamental truth of all phenomena. According to some [ABHIDHARMA](#) schools, the factors ([DHARMA](#)) that constitute physical and mental existence were real and were endowed with specific essential qualities ([SVALAKṢANA](#)). One of the major doctrinal developments present in prajñāpāramitā literature is the assertion that ultimate reality should be properly understood as devoid of such characteristics (svalakṣaṇaśūnya). The term svalakṣaṇa was used in the *[PRĀSAṄGIKA](#) branch of [MADHYAMAKA](#) to specify an intrinsic nature. In this context, the term svalakṣaṇa takes on the meaning of “established by means of its own characteristic,” and thus is identified as a false quality imagined to exist by ignorance, a quality that all phenomena in the universe lack and of which they are empty; hence, they are svalakṣaṇaśūnya.

[Svalpākṣaraprajñāpāramitā](#). (T. Shes rab kyi pha rol tu phyin pa yi ge nyung ngu; C. Shengfomu xiaozi bore boluomiduo jing; J. Shōbutsumo shōji hannya haramittakyō; K. Sōngbulmo soja panya p’aramilta kyōng 聖佛母小字般若波羅蜜多經). In Sanskrit, “Perfection of Wisdom in a Few Words”; also known as the *Alpākṣaraprajñāpāramitā*. Sometimes referred to in Western scholarship as the “Tantric Heart Sūtra,” this brief [PRAJÑĀPĀRAMITĀ](#) sūtra that takes the form of a

dialogue between the Buddha and [AVALOKITEŚVARA](#), in which the buddha enjoins the bodhisattva to recite the “heart of the perfection of wisdom.” The sūtra is directed to those beings of little merit and of limited intellectual capacity. The Buddha enters the [SAMĀDHI](#) called “liberation from all suffering” (sarvaduḥkhapramocana) and provides a [MANTRA](#) and [DHĀRANĪ](#) to his audience. The mantra is connected with an earlier buddha called Mahāśākyamuni. By reciting the mantra and the dhāraṇī, hindrances from past actions are extinguished and beings turn toward enlightenment.

svarga. (P. sagga; T. mtho ris; C. tianshang; J. tenjō; K. ch’ōnsang 天上). In Sanskrit, “heaven,” the realm of the divinities within the cycle of rebirth ([SAMSĀRA](#)). The terms encompasses the six heavens of the sensuous realm ([KĀMADHĀTU](#)) as well as the heavens of the subtle-materiality realm ([RŪPADHĀTU](#)) and the immaterial realm ([ĀRŪPYADHĀTU](#)). Although sublime states, none of these are permanent abodes; the beings reborn there eventually die and are reborn elsewhere when the causes that led to their celestial births are exhausted. However, the Buddha repeatedly teaches the virtues that result in rebirth in heaven, and such rebirth has been one of the primary goals of Buddhist practice, especially among the laity, throughout the history of Buddhism. Rebirth as a divinity ([DEVA](#)) is presumed to be the reward of wholesome acts ([KUŚALA-KARMAN](#)) performed in previous lives and is thus considered a salutary, if provisional, religious goal. For example, in his typical “graduated discourse” (P. [ANUPUBBIKATHĀ](#)) the Buddha uses the prospect of heavenly rebirth, and its attendant pleasures, as one means of attracting laypersons to the religious life. Despite the many appealing attributes of these heavenly beings, such as their physical beauty, comfortable lives, and long life spans, even heavenly existence is ultimately unsatisfactory because it does not offer permanent release from the continued cycle of birth and death ([SAMSĀRA](#)). Since devas are merely enjoying the rewards of their previous good deeds rather than performing new wholesome actions, they are considered to be spiritually stagnant, such that when the karmic effect of the deed that led to rebirth in heaven is exhausted, they are inevitably reborn in a lower realm of existence ([GATI](#)), perhaps even in one of the baleful destinies ([DURGATI](#)). For these reasons, Buddhist soteriological literature sometimes condemns religious practice performed solely for the goal of achieving rebirth in the heavens. It is only in certain higher level of the heavens, such as the those belonging to the five pure abodes ([ŚUDDHĀVĀSA](#)), that beings are not subject to further rebirth, because they have already eliminated all the

fetters ([SAMYOJANA](#)) associated with that realm and are destined to achieve [ARHAT](#)ship. ¶ In traditional Indian cosmology, the heavens of the sensuous realm are thought to rest on and extend far above the peak of Mt. [SUMERU](#), the axis mundi of the universe. They are ranked according to their elevation, so the higher the heaven, the greater the enjoyments of their inhabitants. The lowest of these heavens is the heaven of the four heavenly kings ([CĀTURMAHĀRĀJAKĀYIKA](#)), who are protectors of the dharma ([DHARMAPĀLA](#)). The highest is the heaven of the divinities who have power over the creations of others, or the divinities who partake of the pleasures created in other heavens ([PARANIRMITAVAŚAVARTIN](#)), which is said to be the heaven where [MĀRA](#) resides. [TUSITA](#), the heaven into which [ŚĀKYAMUNI](#) was born as the divinity [ŚVETAKETU](#) in his penultimate life, is the fourth of the kāmadhātu heavens, in ascending order. ¶ The heavens of the subtle-materiality realm are grouped into four categories that correspond to the four stratified levels of [DHYĀNA](#)—states of profound meditative concentration. Thus, rebirth into any one of these heavens is dependent on the attainment of the dhyāna to which it corresponds in the immediately preceding lifetime. Each of the four dhyāna has various heavens. The lowest of these heavens is the heaven of brahmā’s retainers ([BRAHMAKĀYIKA](#)), which corresponds to the first subtle-materiality absorption ([RŪPĀVACARADHYĀNA](#)), and the highest is the highest heaven ([AKANISTHA](#)), which is also classified as one of the “pure abodes,” or [ŚUDDHĀVĀSA](#). ¶ The heavens of the immaterial realm similarly correspond to the four immaterial dhyānas ([ĀRŪPYĀVACARADHYĀNA](#)), beginning with the sphere of infinite space ([ĀKĀŚĀNANTYĀYATANA](#)) and so on up to the sphere of neither perception nor nonperception ([NAIVASAMJÑĀNĀSAMJÑĀYATANA](#)). As noted, despite their many enjoyments, none of these realms is eternal and all are thus understood to fall within the realm of saṃsāra. For a full account of all the heavens, see [DEVA](#).

svārtha. (T. rang don; C. zili; J. jiri; K. chari 自利). In Sanskrit, “self-benefit,” “benefitting oneself.” The term is used in several contexts. First, it may refer to the goal of worldly actions that selfishly seek happiness but, because they are motivated by the afflictions ([KLEŚA](#)), in fact result in suffering. Second, the term may be used to describe the goal of the [ŚRĀVAKA](#) and [PRATYEKABUDDHA](#), who seek their own welfare by becoming an [ARHAT](#), in contrast to the [BODHISATTVA](#) who seeks the welfare of others ([PARĀRTHA](#)), willingly relinquishing motivations and deeds that would lead to his own personal benefit. In the case of the bodhisattva, it is said that by following the bodhisattva path to buddhahood, the

bodhisattva fulfills both his own welfare (because he achieves the omniscience of a buddha) as well as the welfare of others (because he teaches the dharma so that others may also become buddhas).

[svārthānumāna](#). (T. rang don rjes dpag; C. zibiliang; J. jihiryō; K. chabiryang 自比量). In Sanskrit, “inference for oneself,” a term used in Buddhist logic to refer to what would generally be referred to as a correct inference, that is, a mental process of reasoning that results in a factual assumption about a particular state of affairs. Technically speaking, inference for oneself is a conceptual consciousness that discerns an object by means of a sign or reason ([LINGA](#)) that has the three qualities (trirūpa) of legitimate evidence. This refers to three relations that must obtain between the three elements of a syllogism: the subject, the predicate, and the reason. The three qualities are (1) the [PAKSADHARMA](#), that the reason is a quality of the subject; (2) the forward pervasion (anvayavyāpti), that whatever is the reason is necessarily the predicate; and (3) the “exclusion” or reverse pervasion (vyatirekavyāpti), that whatever is not the predicate is necessarily not the reason. [DIGNĀGA](#) contrasted the inference for oneself with the inference for others ([PARĀRTHĀNUMĀNA](#)), which is not an inference in a technical sense, but is used only metaphorically. Inference for others refers to a proof that would be stated to another person, such as an opponent in a debate, in order for that person to arrive at the correct conclusion that one oneself has understood. Because the proof serves as the cause of the other person’s inference, it is called an inference for others.

[svasambhogakāya](#). (C. zi shouyong shen; J. jijuyūshin; K. cha suyong sin 自受用身). In Sanskrit, “body intended for personal enjoyment,” in contrast to the [PARASAMBHOGAKĀYA](#), “body intended for others’ enjoyment”; one of the four types of buddha bodies ([BUDDHAKĀYA](#)) discussed in the [BUDDHABHŪMISĀSTRA](#) (*Fodijing lun*), the [MAHĀYĀNASAMGRAHA](#) (*She dasheng lun*), and the [CHENG WEISHI LUN](#) (**Vijñaptimātratāsiddhiśāstra*), along with the “self-nature body” ([SVABHĀVAKĀYA](#) or svābhāvīkākāya), the “body intended for others’ enjoyment” (parasambhogakāya), and the “transformation body” ([NIRMĀNAKĀYA](#)). This fourfold schema of buddha bodies derives from the better-known three bodies of a buddha ([TRIKĀYA](#))—viz., dharma body ([DHARMAKĀYA](#)), reward body ([SAMBHOGAKĀYA](#)), and transformation body (nirmāṇakāya)—but distinguishes between these two different types of reward bodies. The svasambhogakāya derives from the countless virtues that originate from the accumulation of

immeasurable merit and wisdom over a buddha's infinitely-long career; this body is a perfect, pure, eternal and omnipresent material body that enjoys the bliss of dharma ([DHARMAPRĪTI](#)) for oneself until the end of time. By contrast, the parasambhogakāya is a subtle virtuous body deriving from the cognition of equality ([SAMATAJÑĀNA](#)), which resides in a [PURE LAND](#) and displays supernatural powers in order to enhance the enjoyment of the dharma by bodhisattvas at all ten stages of the bodhisattva's career ([BODHISATTVABHŪMI](#)).

[svasaṃvedana](#). (T. rang rig; C. zizheng/zijue; J. jishō/jikaku; K. chajŭng/chagak 自證/自覺). In Sanskrit, lit. "self-knowledge" or "self-awareness," also seen written as svasaṃveda, svasaṃvit, svasaṃvitti. In Buddhist epistemology, svasaṃvedana is that part of consciousness which, during a conscious act of seeing, hearing, thinking, and so on, apprehends not the external sensory object but the knowing consciousness itself. For example, when a visual consciousness ([CAKSURVIJÑĀNA](#)) apprehends a blue color, there is a simultaneous svasaṃvedana that apprehends the cakṣurvijñāna; it is directed at the consciousness, and explains not only how a person knows that he knows, but also how a person can later remember what he saw or heard, and so on. There is disagreement as to whether such a form of consciousness exists, with proponents (usually [YOGĀCĀRA](#)) arguing that there must be this consciousness of consciousness in order for there to be memory of past cognitions, and opponents ([MADHYAMAKA](#)) propounding a radical form of nonessentialism that explains memory as a mere manipulation of objects with no more than a language-based reality. Beside the basic use of the term svasaṃvedana to explain the nature of consciousness and the mechanism of memory, the issue of the necessary existence of svasaṃvedana was pressed by the Yogācāra school because of how they understood enlightenment ([BODHI](#)). They argued that the liberating vision taught by the Buddha consisted of a self-reflexive act that was utterly free of subject-object distortion ([GRĀHYAGRĀHAKAVIKALPA](#)). In ordinary persons, they argued, all conscious acts take place within a bifurcation of subject and object, with a sense of distance between the two, because of the residual impressions or latencies ([VĀSANĀ](#)) left by ignorance. Infinite numbers of earlier conscious acts have been informed by that particular deeply ingrained ignorance. These impressions are carried at the foundational level of consciousness ([ĀLAYAVIJÑĀNA](#)). When they are finally removed by the process of [BHĀVANĀ](#), knowledge ([JÑĀNA](#)) purified of distortion emerges in a fundamental transformation ([ĀŚRAYAPARĀVṚTTI](#)), thus knowing itself in a nondual vision. Such a vision presupposes self-knowledge. In

tantric literature, svasaṃvedana has a less technical sense of a profound and innate knowledge or awareness. See also [RIG PA](#).

[svastika](#). (P. sotthika/sotthiya; T. bkra shis ldan/g.yung drung; C. wan/wanzi; J. man/manji; K. man/mancha 卍/萬字). In Sanskrit, lit. “well-being,” “auspicious”; a mark of good fortune that is widely used in the Buddhist world as an auspicious symbol in both its right-facing and left-facing forms. It is one of the auspicious marks on the soles of a buddha’s feet and it often appears on the chest of buddha images in East Asia (see [ANUVYAÑJANA](#)). It commonly appears as a pattern in Buddhist vestments and in various decorative patterns in works of art. Even in the most ancient of Indian art, where the Buddha is represented in aniconic rather than physical form, this symbol is sometimes used to indicate his presence. Although the symbol originated in India, it is subsequently transmitted throughout the Buddhist world and is commonly used as a decorative element on Buddhist temples and shrines. In East Asia, the symbol itself was even constituted as the Sinograph wan (“myriad”). In Tibet, it was translated as g.yung drung, a pre-Buddhist term meaning “eternal” or “unchanging.” A variety of theories have been offered on the origin of the svastika symbol, one of the more widely accepted being that it was originally connected with solar worship. ¶ Svastika was also the name of the grass cutter who prepared a seat for the buddha beneath the [BODHI TREE](#).

[svatantrānumāna](#). (S). See [SVATANTRAPRAYOGA](#).

[svatantraprayoga](#). (T. rang rgyud kyi sbyor ba). In Sanskrit, “autonomous syllogism.” Among the many meanings of the term [PRAYOGA](#) is its use as a technical term in logic, where it is often translated as “syllogism,” and refers to a statement that contains a subject, a predicate, and a reason. A svatantraprayoga leads to a svatantrānumāna (T. rang rgyud rjes dpag), an “autonomous inference.” The correct syllogism that gives rise to correct inference is composed of three parts, the subject (dharmin), the property being proved ([SĀDHYADHARMA](#)), and the reason ([HETU](#) or [LIṄGA](#)). For example, consider the syllogism “Sound is impermanent because of being produced.” The subject is sound, the property being proved is impermanence, and the reason is being produced. For the syllogism to be correct, three relations must exist among its three components: (1) the reason must be a property ([DHARMA](#)) of the subject, also called the “position” ([PAKSA](#)); (2) there must be a relationship of forward pervasion (anvayavyāpti) between the reason and the property being proved

([SĀDHYADHARMA](#)), such that whatever is the reason is necessarily the property being proved, and (3) there must be a relationship of “exclusion” or reverse pervasion (*vyatirekavyāpti*) between the property being proved and the reason such that whatever is not the property being proved is necessarily not the reason. In the example (“Sound is impermanent because of being produced”), the syllogism is correct because the reason (“being produced”) is a quality of the subject (“sound”), there is forward pervasion in the sense that whatever is produced is necessarily impermanent, and there is reverse pervasion because whatever is not impermanent is necessarily not produced. It is generally the case in Indian logic that all elements of the syllogism must be accepted by both parties in a debate (see [SAMĀNAPRATIBHĀSADHARMIN](#)); such a syllogism is referred to as an “autonomous syllogism” (*svatantrānumāna* or *svatantraprayoga*). In the Madhyamaka school of Indian Buddhist philosophy, there was a controversy over whether such syllogisms were acceptable when a Madhyamaka debated with a proponent of another school. The locus classicus of the controversy is the debate between [BHĀVAVIVEKA](#) and [CANDRAKĪRTI](#) concerning [BUDDHAPĀLITA](#)’s commentary on the first chapter of [NĀGĀRJUNA](#)’s [MŪLAMADHYAMAKAKĀRIKĀ](#). It was Candrakīrti’s position that the Madhyamaka should only use consequences ([PRASAṄGA](#)) or an inference familiar to others ([PARAPRASIDDHĀNUMĀNA](#)), i.e., that they should only draw out the unintended consequences in others’ positions; to use an autonomous syllogism implied acceptance of intrinsically established relations among the elements of the syllogism. Bhāvaviveka had argued that it was necessary for the Madhyamaka to state an autonomous syllogism at the conclusion of a debate. Based on this controversy, the Tibetans coined the terms *[SVĀTANTRIKA](#) and *[PRĀSAṄGIKA](#) to designate these two positions.

***[Svātantrika](#)**. (T. rang rgyud pa). In Sanskrit, “Autonomist,” one of the two main branches (together with the *[PRĀSAṄGIKA](#) or “Consequentialist”) of the [MADHYAMAKA](#) school in India. It is important to note that the designation Svātantrika as a subschool of Madhyamaka does not occur in Indian literature and was coined retrospectively in Tibet to describe the developments of the Madhyamaka in India. The name *Svātantrika is derived from the insistence on the use of autonomous syllogisms ([SVĀTANTRAPRAYOGA](#)) in debates about the nature of reality, as set forth by [BHĀVAVIVEKA](#) and rejected by [CANDRAKĪRTI](#) in their respective commentaries on [NĀGĀRJUNA](#)’s [MŪLAMADHYAMAKAKĀRIKĀ](#). In the Tibetan doxographies, the leading proponents of the *Svātantrika include

[BHĀVAVIVEKA](#) and [ŚĀNTARAKṢITA](#); the former is regarded as the founder of the [SAUTRĀNTIKA-SVĀTANTRIKA](#) branch and the latter is considered the founder of the [YOGĀCĀRA-SVĀTANTRIKA](#) branch.

[Svayambhū](#). [alt. Svayambhūnāth] (T. 'Phags pa shing kun). A large [CAITYA](#) complex located atop a hill at the western edge of the Kathmandu Valley, forming one of Nepal's most ancient and venerated Buddhist sites. The caitya of Svayambhū, whose name literally means “self-arisen” or “self-created,” is closely tied to the mythic origins of the Kathmandu Valley. According to legend, in prehistoric times the Kathmandu Valley formed a lake above which the summit of Svayambhū hill rose. The buddha [VIPĀŚYIN](#), who is said to predate [ŚĀKYAMUNI](#) by several eons, cast a lotus seed into the waters. A lotus blossom grew from this seed, upon which appeared a spontaneously manifested (svayambhū) crystalline caitya radiating five-colored rays of light. This light attracted the attention of the bodhisattva [MAÑJUŚRĪ](#), who was residing at [WUTAISHAN](#) in China. Mañjuśrī traveled to Nepal where he miraculously drained the lake, thereby making the Kathmandu Valley an inhabitable land for the spread of Buddhism. The earliest Newar inscriptions at Svayambhū date to the reign of the fifth-century Buddhist king Vṛṣadeva. Over the next 1,500 years, the stūpa and surrounding complex were renovated and expanded numerous times by Newar and Tibetan Buddhist priests. The complex of temples at Svayambhū is under the guardianship of Newar Buddhist priests and it continues to play a central role in the religious lives of Newari and Tibetan Buddhists. According to some accounts, the Tibetan name (literally “Noble All Trees”) stems from a legend recounting how the Buddhist sage [NĀGĀRJUNA](#) scattered his hair about Svayambhū hill, from which many types of trees miraculously arose. Later Tibetan commentators have argued, however, that shing kun is likely a corruption of the Newar name Shinggu in use during the eighteenth century. According to Tibetan tradition, the Svayambhū caitya is counted as one of Nepal's three great stūpas, along with [BODHNĀTH](#) and [NAMO BUDDHA](#).

[Śvetaketu](#). (P. Setaketu; T. Dam pa tog dkar po; C. Baijing/Baiying; J. Byakujō/Byakuei; K. Paekchōng/Paegyōng 白淨/白英). Proper name of [ŚĀKYAMUNI](#) when he was a divinity in the [TUṢITA](#) heaven, during his lifetime immediately preceding his attainment of buddhahood. He was a [BODHISATTVA](#) of the tenth [BHŪMI](#), appointed as regent of tuṣita by the preceding buddha [KĀŚYAPA](#). As Śvetaketu, he surveyed [JAMBUDVĪPA](#) to determine the proper time, place,

caste, and family of his final lifetime. Upon his descent into the womb of Queen [MĀYĀ](#), he appointed [MAITREYA](#) as regent. Depictions of Śvetaketu in heaven, alongside [INDRA](#) and [BRAHMĀ](#), appear at a number of ancient Indian Buddhist sites, including [NĀGĀRJUNAKONDĀ](#) and [AMARĀVATĪ](#).

[Swam-oo Ponnya-shin Pagoda](#). A gilded pagoda (Burmese, [JEDI](#)) located at the center of the Sagaing range of hills in Upper Burma (Myanmar). It is situated atop a prominence known as Dhammika Taung, or the “Hill of the Practitioners,” because it has always been surrounded by monasteries suitable for study and meditation. The pagoda was built in 1332 by a royal minister named Ponnya (meaning “Brāhmaṇa”) shortly after Sagaing was made the Burmese capital. The minister had neglected to seek the king’s permission prior to the monument’s construction, and because its foundation buried two earlier pagodas, the king ordered the minister to be drowned. At the last moment the execution order was rescinded, for which reason the pagoda received the name, “Ponnya-shin,” meaning, “Ponnya lives.” Ponnya made it a practice of donating his first offering of alms during the period of the Buddhist rains retreat ([VARŚĀ](#)) at this pagoda. For this reason it also became known as “Swam-oo,” or “First alms-offering.” To the present day, people pray at this pagoda to ward off any prospect of sudden death, and in Sagaing it is customary to make one’s first donation of alms at the beginning of the Buddhist rains retreat season at this pagoda.

[Swāt](#). A valley in present-day northern Pakistan, commonly identified with the ancient region known as [ODDIYĀNA](#), Uḍḍiyāna, or Udyāna; an important center in the history of Indian Buddhism. Buddhism moved into this area shortly after the time of King [AŚOKA](#) and flourished there in the periods that followed. Swāt contains many important archeological sites including [STŪPAs](#) and such relics as the footprints of the Buddha ([BUDDHAPĀDA](#)). Many of the first buddha images also come from this region. Swāt’s geographical location between Central Asia and the Indian subcontinent made it an important trading and religious center. According to Chinese pilgrims, beginning with [FAXIAN](#), who visited this region in the fifth century CE, this area was at one time home to five hundred Buddhist monasteries. This area is also fabled as the birthplace of [PADMASAMBHAVA](#) and the origin of numerous tantric texts and lineages, including the [GUHYASAMĀJATANTRA](#). Several Tibetan masters also wrote accounts of their travels through Oḍḍiyāna, including [O RGYAN PA RIN CHEN DPAL](#), whose name

literally means “the man of Oḍḍiyāna,” Stag tshang ras pa (Taktsangrepa), and BUDDHAGUPTA. Muslim armies began to moving into the region in the eighth century, which eventually led to the demise of Buddhism.

Śyāmatārā. (T. Sgrol ljang). In Sanskrit, “Dark Tārā”; in Tibetan “Green Tārā”; according to a widely held Tibetan myth, the goddess who consorted with a monkey (an emanation of [AVALOKITEŚVARA](#)) and gave birth to the Tibetan people. Later, she took the form of the princess [BHRKUTĪ](#), Nepalese wife of King [SRONG BTSAN SGAM PO](#). After Avalokiteśvara, Śyāmatārā is perhaps the most widely worshipped Buddhist deity in Tibet and the focus of the nonsectarian Tārā cult. The *Namas Tāre Ekaviṃśatistotra* (“Twenty-One Praises of Tārā”) is one of the most widely known prayers in Tibet, and her [MANTRA](#), om̐ tāre tuttāre ture svāha, is second in popularity only to [OM MANI PADME HŪM](#), [AVALOKITEŚVARA](#)’s mantra. Each Tibetan sect has its own tantric rituals ([SĀDHANA](#)) and ritual propitiations ([VIDHI](#)) for Green Tārā, who is considered particularly helpful to those building monasteries and other religious structures, and to those starting business ventures. Green Tārā is iconographically represented as sitting in [LALITĀSANA](#) with her left leg bent and resting on her lotus seat, her right leg pendant, with the knee slightly raised, the foot resting on a second smaller lotus. [ATĪŚA DĪPAMKARĀŚRĪJÑĀNA](#), an Indian Buddhist monk and scholar revered by Tibetan Buddhists as a leading teacher in the later dissemination ([PHYI DAR](#)) of Buddhism in Tibet, was a devotee of Green Tārā, and the temple commemorating his principal residence during his later years in central Tibet, in Snye thang (Nyethang), is the Sgrol ma lha khang (Drolma Lhakang) “Tārā Temple,” which is widely believed by Tibetans to have a statue of Śyāmatārā that can speak. See also [TĀRĀ](#).

Śyāmāvatī. (P. Sāmāvatī; T. Sngo bsangs can; C. Ganrong; J. Kon’yō; K. Kamyong 紺容). Lay disciple whom the Buddha declared to be foremost among laywomen who live in kindness. She was the daughter of a wealthy man from the city of Bhadravatī. When plague broke out in the city, she and her parents fled to Kauśāmbī (P. Kosambī) where her parents fell ill and died. She was adopted by two donors of alms to the poor, Mitra and Ghoṣaka, who noticed her virtue and intelligence. Śyāmāvatī was exceptionally beautiful and one festival day, Udāyana (P. Udena), the king of Kauśāmbī, noticed her on her way to the river to bathe and fell in love with her. Initially rebuffed in his advances, Udāyana eventually wed Śyāmāvatī and made her his chief queen. Śyāmāvatī’s

slave girl was Kṣudratārā (P. Khujjutārā) who each day was given eight coins to buy flowers from the market. Kṣudratārā was dishonest and would spend four coins on flowers and pocket the rest. One day on her way to the market, Kṣudratārā listened to the Buddha preach and at once became a stream-enterer ([SROTAĀPANNA](#)). She then confessed her thievery to Śyāmāvatī, who immediately forgave her, and she told her mistress about the Buddha's teachings. Enthralled, Śyāmāvatī asked Kṣudratārā to listen to the Buddha's sermons daily and report his message to her and her attendants. In this way, under Kṣudratārā's instruction, Śyāmāvatī and her attendants also became stream-enterers. On Kṣudratārā's advice, Śyāmāvatī had holes made in the walls of the women's quarters so that she and her attendants could watch the Buddha as he passed through the lane below. Śyāmāvatī had a wicked co-wife, Māgandiyā, who, out of jealousy of her and a hatred for the Buddha, sought her destruction. Śyāmāvatī survived three plots, which were eventually revealed, winning in compensation the boon to have [ĀNANDA](#) preach daily to her and her companions. Finally Māgandiyā had the palace set afire and Śyāmāvatī along with her attendants burned to death. The Buddha declared, however, that none of the deceased had attained less than the state of stream-enterer, while some had even reached the state of once-returners ([SAKRDĀGĀMIN](#)) and nonreturners ([ANĀGĀMIN](#)).

[syllogism](#). See [PRAYOGA](#).

Tachikawaryū. (立川流). A strand of Japanese esoteric Buddhism that is generally regarded as heterodox by the mainstream [SHINGONSHŪ](#) tradition because of its involvement in ritual sex and magical elements. The school was established in 1114 in the town of Tachikawa (Izu province) by Ninkan (1057–1123), who is known to have combined Daoist yin-yang cosmology with Shingon rituals and taught sexual union as a direct way of attaining buddhahood. Its teachings were subsequently systematized by Raiyu (1226–1304). The school sought to achieve buddhahood in this very body ([SOKUSHIN JŌBUTSU](#)) and taught that the loss of self that occurs through ritual sexuality was the most immediate approach to enlightenment; sexual climax, which the school termed the lion’s roar (see [SIMHANĀDA](#)), constituted the moment of awakening. The Tachikawaryū was officially proscribed in the thirteenth century and its practices eliminated from the mainstream esoteric tradition through the efforts of the Shingon monk Yūkai (1345–1416). Although its scriptures were lost (except for a few that are said to have been sealed so that they would never be reopened), some of its practices are thought to have continued to circulate in secret in Shingon circles.

Taegak Ŭich’ŏn. (K) (大覺義天). See [ŬICH’ŐN](#).

T’aego chong. (太古宗). In Korean, “T’aego Order”; an order of Korean married monks established in 1969, in response to the post-Korean War domination of Korean Buddhism by the [CHOGYE CHONG](#) of celibate monks. The name of the school is taken from the late Koryŏ-period monk [T’AEGO POU](#) (1310–1382), who was presumed to have introduced the lineage of the Chinese [LINJI ZONG](#) (K. Imje chong) to Korea at the end of the Koryŏ dynasty. The Korean monastic tradition had traditionally institutionalized celibacy throughout its history, but during the Japanese colonial period in Korea (1910–1945), the Japanese government-general had officially sanctioned clergy marriage along with many other reforms of Korean Buddhism that mirrored Japanese policies toward Buddhism in Japan during the Meiji Restoration. Following liberation from Japan in 1945, the celibate monks of Korea launched a purification movement (chŏnghwa undong) in 1955 to remove all vestiges of Japanese influence from Korean Buddhism,

including the institution of clergy marriage. This campaign was supported by the Korean president Syngman Rhee, who issued a series of orders calling for the resignation of all “Waesaek süngnyŏ” (Japanized monks) from monastic positions. The married monks regarded these orders as the beginning of a pŏmnan (C. fanan), or persecution, of their way of life. The schism between the two sides deepened, often involving violent confrontations and continuing litigation. In 1961, a Korean Supreme Court ruling formally returned administrative control of virtually all the major monasteries to the celibate monks of the Chogye chong. In 1969, the remaining married monks who refused to leave their families split from the Chogye chong and, under the leadership of [TAERYUN](#) (1884–1979), organized themselves into the T’aego chong. The T’aego chong is now the second largest Buddhist order in Korea, following the Chogye chong, which continues officially to observe celibacy. The major monasteries that remain under the control of the T’aego chong are T’AEGOSA and [PONGWŎNSA](#) in Seoul and [SŎNAMSA](#) in South Chŏlla province.

[T’aego Pou](#). (太古普愚) (1301–1382). In Korean, “Grand Ancient, Universal Stupidity”; [SŎN](#) master of the late Koryŏ dynasty, who is presumed to have introduced the lineage of the [LINJI ZONG](#) (K. Imje chong) of the Chinese [CHAN](#) school to Korea. T’aego was a native of Hongju in present-day South Ch’ungchŏng province. He is said to have been born into the prominent family of a court official and ordained as a youth in 1313 by the monk Kwangji (d.u.) at the monastery of Hoeamsa (Kyŏnggi province). T’aego later passed the clerical examinations ([SŬNGKWA](#)) for specialists of the Hwaŏm (C. [HUAYAN](#)) school in 1329. While investigating the Chan case ([GONG’AN](#)) “the ten thousand dharmas return to one” (case 45 of the [BIYANLU](#)) in 1333, T’aego is said to have attained his first awakening at the monastery of Kamnosa in Sŏngsŏ (South Chŏlla province). Four years later, he is said to have had another awakening while investigating [ZHAOZHOU CONGSHE](#)N’s [WU GONG’AN](#). In 1341, he built a hermitage near the monastery Chŭnghŭngsa on Mt. Samgak (Kyŏnggi province) named T’aegoam, whence he acquired his toponym. In 1346, T’aego headed for China, where he resided at the monastery of Daguangsi in the Yuan capital of Yanjing. T’aego is also said to have visited the eminent Chan master Shiwu Qinggong (1272–1352) and received his seal of transmission (C. [YINKE](#), K. in’ga) and thus an affiliation with Shiwu’s Linji lineage. After T’aego returned to Korea in 1348, he retired to Miwŏn on Mt. Sosŏl (Kyŏnggi province). In 1356, he was summoned to the Koryŏ capital of Kaesŏng, where he taught at the influential

monastery of Pongŭnsa. That same year he was appointed the king's personal instructor, or "royal preceptor" (wangsa), and abbot of the monastery [KWANGMYŎNGSA](#), the major Sŏn monastery in the capital. T'aego continued to serve as the personal advisor to successive kings until his death on Mt. Sosŏl in 1382. His teachings are recorded in the *T'aego hwasang ōrok*. ¶ In the last half of the twentieth century, attempts to trace the orthodox lineage of the contemporary Korean [CHOGYE CHONG](#) back to T'aego and his Chinese Linji lineage rather than to [POJO CHINUL](#) (1158–1210) caused a rift within the Korean Buddhist community. The focus of the critique is Chinul's putatively "gradualist" approach to Sŏn Buddhist soteriology (viz., his advocacy of tonochŏmsu, C. [DUNWU JIANXIU](#)) and Chinul's lack of an authentic dharma transmission from a recognized Chan or Sŏn master (he is known to have been an autodidact). T'aego was therefore credited with initiating true Sŏn orthodoxy in Korea, based on T'aego's transmission from Shiwu Qinggong, an authentic successor in the Chinese Linji school with its quintessentially "sudden awakening" ([DUNWU](#)) soteriology. This issue remains a matter of unremitting controversy in contemporary Chogye order politics. T'aego's name has also been adopted by the [T'AEGO CHONG](#), a modern order of Korean married monks, in order to give a patina of orthodoxy to its school as well.

[Taehan Pulgyo Chogye Chong](#). (大韓佛教曹溪宗). In Korean, "Chogye Order of Korean Buddhism"; full name of the largest contemporary order in the Korean Buddhist tradition. See [CHOGYE CHONG](#).

[Taehŭngsa](#). (大興寺). In Korean, "Monastery of Great Flourishing"; the twenty-second district monastery ([PONSA](#)) of the contemporary [CHOGYE CHONG](#) of Korean Buddhism, located on Turyun Mountain in near Haenam County in South Chŏlla province. According to memorial stele erected for early Koryŏ-dynasty monks, the monastery was founded some time before 900 CE, perhaps by either Chŏnggwan (fl. c. 426) or [TOSŎN](#) (827–898). During the Japanese Hideyoshi invasions of the late sixteenth century, the monk [CH'ŎNGHŎ HYUJŎNG](#) (1520–1604), also known as [SŎSAN TAESA](#), led a monastic militia based at the monastery in fighting the Japanese. After the fighting ended in 1598, Sŏsan proclaimed that Taehŭngsa would never be touched by the "three disasters" (samjae) of flood, fire, or wind, and it was in part due to his efforts that Taehŭngsa became an important Buddhist center. Sŏsan requested that his personal belongings be kept there even after his death, and today his calligraphy,

portrait, robe, and bowls can be seen in the monastery's museum. A famous resident was the Sŏn master [CH'ŌŬI ŬISUN](#) (1786–1866), the eighteenth-century reviver of the tea traditions of Korea, who developed the tea ceremony as a form of religious practice and is known for synthesizing the tea ceremony and Sŏn practice, as exemplified in his slogan ta Sŏn ilgi (tea and Sŏn are a single taste). The monastery's main shrine hall ([TAEŬNG CHŎN](#)) is approached by use of the Sinjin Bridge and enshrines images of [ŚĀKYAMUNI](#), [AMITĀBHA](#), and [BHAISAJYAGURU](#). Taehŭngsa is also known for its Ch'ŏnbul chŏn, "Thousand-Buddha Hall," which enshrines a thousand miniature jade statues of the Buddha, all carved in Kyŏngju about 250 years ago. There is a story that the ship transporting the buddha images was hijacked by Japanese pirates, but the pirates later had a dream in which the Buddha severely admonished them and voluntarily returned the statues to Taehŭngsa. The grounds of the monastery also include a three-story stone pagoda from the Koryŏ dynasty, which is said to have held relics (K. sari; S. [ŚARĪRA](#)) of the Buddha brought to Korea by the [VINAYA](#) master [CHAJANG](#) (608–686). A five-inch (twelve-cm) high, seated bronze Buddha was found inside the base during repairs in 1967 to one of the other three-story pagodas, which appears to date back to the Silla dynasty. A seated [MAITREYA](#) Buddha is carved on a rock at Taehŭngsa, which is dated to the early Koryŏ dynasty. Taehŭngsa is also the home of a highly decorated bronze bell formerly owned by T'apsansa, which is held aloft by a hook shaped like a dragon.

[Taehwi](#). (大輝) (fl. c. 1748). Renowned Korean chanting (pŏmp'ae) monk during the Chosŏn dynasty and author of the *Pŏmŭmjong po* ("Lineage of the Brahmā's Voice School"). See [FANBAI](#).

[Taehyŏn](#). [alt. T'aehyŏn] (C. Daxian/Taixian; J. Daiken/Taigen 大賢/太賢) (d.u.; fl. c. mid-eighth century). In Korean, "Great/Grand Sagacity"; Silla-dynasty monk during the reign of king Kyŏngdŏk (r. 742–765) and reputed founder of the Yuga ([YOGĀCĀRA](#)) tradition in Korea; also known as Ch'ŏnggu Samun ("Green Hill [viz., Korea] [ŚRAMANA](#)") and often referred to as Yuga cho, "Patriarch of Yogācāra," due to his mastery of that school's complex doctrine. As one of the three most productive scholars of the Silla Buddhist tradition, Taehyŏn is matched in his output only by [WŎNHYO](#) (617–686) and Kyŏnghŭng (fl. c. eighth century). Although renowned for his mastery of Yogācāra doctrine, his fifty-two works, in over one hundred rolls, cover a broad range of Buddhist

doctrinal material, including Yogācāra, [MADHYAMAKA](#), Hwaōm (C. [HUAYAN ZONG](#)), and bodhisattva-precept texts. It is presumed that Taehyōn was a disciple of [WŎNCH'ŪK](#)'s (613–696) student Tojŭng (d.u.), and that his scholastic positions were therefore close to those of the Ximing school, a lineage of [FAXIANG ZONG](#) thought that derived from Wōnch'ūk; their connection remains, however, a matter of debate. Taehyōn's *Sōng yusik non hakki* (“Study Notes to the [CHENG WEISHI LUN](#) [**Vijñaptimātratāsiddhi-śāstra*]”) (six rolls), the only complete Korean commentary on the *Cheng weishi lun* that is still extant, is particularly important because of its copious citation of the works of contemporary Yogācāra exegetes, such as [KUIJI](#) (632–682) and Wōnch'ūk. Taehyōn appears to have been influenced by the preeminent Silla scholiast Wōnhyo, since Taehyōn accepts in his *Taesŭng kisin non naeŭi yak tamgi* (“Brief Investigation of the Inner Meaning of the [DASHENG QIXIN LUN](#)”) Wōnhyo's ecumenical ([HWAJAENG](#)) perspective on the “Awakening of Faith According to the Mahāyāna.” Although Taehyōn never traveled abroad, his works circulated throughout East Asia and were commented upon by both Chinese and Japanese exegetes. His *Pōmmang kyōng kojōkki* (“Record of Old Traces of the [FANWANG JING](#)”), for example, was widely consulted in Japan and more than twenty commentaries on Taehyōn's text were composed by Japanese monks, including [EISON](#) (1201–1290) and [GYŌNEN](#) (1240–1321). Unfortunately, only five of Taehyōn's works are extant; in addition to the above three texts, these are his *Yaksa ponwōn kyōng kojōkki* (“Record of Old Traces of the [BHAIJAYAGURUSŪTRA](#)”) and *Pōmmang kyōng posalgyebon chongyo* (“Doctrinal Essentials of the Bodhisattva's Code of Morality from the ‘Sūtra of Brahmā's Net’”).

t'aenghwa. (幀畫). In Korean, lit. “painting”; referring to the large “hanging paintings” painted on cloth or paper, which are hung on the inside walls of Korean shrine halls or behind buddha images on the altars. The term t'aenghwa may have been in use since the Koryō dynasty (918–1392), since a painting from 1306 includes the Sinograph t'aeng in its title. Because of their vulnerability to fire, most extant t'aenghwa date from the seventeenth century onward, the period following the depredations caused by the Japanese Hideyoshi invasions (1592–1598) of the Korean peninsula. T'aenghwa tend to depict different arrangements of various buddhas, [BODHISATTVAS](#), and [ARHATS](#), with guardians illustrated around the perimeter of the painting. Although t'aenghwa are usually painted in full color, it is possible to find them in various restrained formats such as gold and white on a black or red background; in this type, the lines are

generally drawn in gold, while the skin is painted in white. There are no examples of this restrained type of t'aenghwa before the late 1800s. In main shrine halls, t'aenghwa tend to come in sets of three, with a main painting behind the central image and accompanying paintings on the walls to the left and right of the altar. Popular themes for such central t'aenghwa include the Buddha lecturing at Vulture Peak ([GRDHRĀKŪTAPARVATA](#)), the [PURE LAND](#) of [AMITĀBHA](#), the medicine buddha [BHAIŚAJYAGURU](#) with the twelve zodiacal signs, and stories from Buddhist history. The t'aenghwa on the right is usually the “host of spirits” ([SINJUNG](#)) hanging painting, and shows the [LOKAPĀLAS](#), with the dharma protector [KUMĀRABHŪTA](#) (K. Tongjin) prominently featured. Kumārabhūta is typically portrayed wearing a grand, feathered headdress accompanied by over a dozen associates, who aid him in protecting the religion. The t'aenghwa on the left often commemorates the deceased and features the bodhisattva [KṢITIGARBHA](#), who has vowed to rescue all beings from the hells. Sometimes monasteries with restricted budgets or space will use t'aenghwa without accompanying statues, especially for the t'aenghwas to the left and right. T'aenghwa in smaller shrine halls may include paintings of the mountain spirit (K. sansin), the guardian kings, and the seven star (ch'ilsŏng; see [BEIDOU QIXING](#)) spirits of the Big Dipper. ¶ Large hanging t'aenghwa, which were traditionally displayed outdoors during Buddhist ceremonies, are known as [KWAEBUL](#). Kwaebul are generally twenty-five to forty feet (eight to twelve m.) high, although one at [SSANGGYESA](#) is fifty feet (fifteen m.) in height. Kwaebul with a depiction of a standing [MAITREYA](#) are common. The kwaebul are displayed on the Buddha's birthday and during rites such as [YŎNGSANJAE](#), as well as for the funerals of important monks. Kwaebul are the equivalent of the Tibetan [THANG KA](#) and were especially popular in the seventeenth century.

Taeryun. (大輪) (1884–1979). In Korean, “Great Wheel”; founder of the [T'AEGO CHONG](#) of Korean Buddhism. In 1898, at the age of fifteen, he was ordained by Kwagun (d.u.) at the monastery of [YUJŎMSA](#) in the Diamond Mountains ([KŪMGANGSAN](#)), and later received the full [BHIKSU](#) precepts from the [VINAYA](#) master Tongŏn Chŏngŭi (1856–1936). In 1908, upon the completion of his studies at a Buddhist seminary (kangwŏn), Taeryun left for Seoul, where he served as the administrative director of the monastery of Kakhwangsa (present-day [CHOGYESA](#)) for six years. In 1915, he established a branch of Yujŏmsa in Pyongyang. He actively participated in the anti-Japanese and Buddhist reformation movements led by [HAN YONGUN](#). In 1929, he established the

monastery of Pŏmnyunsa in Sagandong, Seoul, and became the abbot of Yujŏmsa in 1945. In the 1950s, he served as both the chairman of the board of trustees of what is now Tongguk University and the chief of the general affairs bureau of the [CHOGYE CHONG](#). As a result of an internal conflict between Korean monks over the issue of clerical marriage, he left the Chogye order in 1960 and established the T'aego chong of married monks in 1969.

[Taesŭng kisin non pyŏlgi](#). (C. Dasheng qixin lun bieji; J. Daijō kishinron bekki 大乘起信論別記). In Korean, “Separate Record on the ‘Awakening of Faith According to the Mahāyāna,’” written by [WŎNHYO](#) (617–686); a short commentary on the “Establishing the Meaning” (Liyi fen) and “Explanation” (Jieshi fen) chapters of the [DASHENG QIXIN LUN](#). As Wŏnhyo himself explains, the *Taesŭng kisin non pyŏlgi* was meant to serve as personal notes for future reference, and the ideas broached in the *Taesŭng kisin non pyŏlgi* are expanded upon in detail in Wŏnhyo’s longer commentary on the text, the [TAESŬNG KISIN NON SO](#). There is also some evidence that the *pyŏlgi* may have been a transcription of his oral lectures on the *Dasheng qixin lun*, which was to be kept separate from Wŏnhyo’s more formal commentary to the text.

[Taesŭng kisin non so](#). (C. Dasheng qixin lun shu; J. Daijō kishinron sho 大乘起信論疏). In Korean, “Commentary on the ‘Awakening of Faith According to the Mahāyāna,’” an influential commentary on the [DASHENG QIXIN LUN](#) composed by the eminent Korean monk [WŎNHYO](#) (617–686); also known as the *Haedong so* (lit. the “Korean commentary”). Wŏnhyo’s commentary is traditionally regarded as one of the three great commentaries on the “Awakening of Faith,” along with [FAZANG](#)’s (643–712) [DASHENG QIXIN LUN YI JI](#) and [JINGYING HUIYUAN](#)’s (523–592) *Dasheng qixin lun yishu*. Wŏnhyo’s exegesis was especially influential in Fazang’s (643–712) understanding of the text. The *Taesŭng kisin non so* builds upon the ideas developed in Wŏnhyo’s earlier work, the *Taesŭng kisin non pyŏlgi*, but provides an exhaustive line-by-line exegesis of the entire text. In this commentary, Wŏnhyo attempts to combine [MADHYAMAKA](#) and [YOGĀCĀRA](#) thought by demonstrating that the “one mind” (K. *ilsim*; see [YIXIN](#)) or [TATHĀGATAGARBHA](#) is the ground of all existence. He explains “mind as suchness” (K. *sim chinyŏ*; C. *xin zhenru*) and “mind that is subject to production-and-cessation” (K. *sim saengmyŏl*; C. *xin shengmie*) as being two aspects of the “one mind.” Although Yogācāra and tathāgatagarbha materials formed the basis of his analysis of the *Dasheng qixin lun*, Wŏnhyo introduces

Madhyamaka method as well into this commentary; for example, he uses the Madhyamaka tetralemma to explicate ineffable suchness. In distinction to Huiyuan, Wŏnhyo explains the [ĀLAYAVIJÑĀNA](#) as consisting of “three subtle characteristics,” namely, the characteristic of [KARMA](#) (K. ŏpsang; C. yexing), perceiving subject (K. nŭnggyŏn sang; C. nengjian xiang), and perceived objects (K. kyŏnggye sang; C. jingjie xing), which was adopted later by the Chinese Huayan master Fazang in his own commentary on the *Dasheng qixin lun*.

[taeung chŏn](#). (大雄殿). In Korean, “basilica of the great hero”; the main worship hall in a Korean Buddhist monastery, where the main Buddha image of the monastery will be enshrined. The taeung chŏn is typically the largest shrine hall on the monastic campus and is intended to serve as the center of institutional life. Most of the monastery’s residents will gather in this basilica for daily services in the early morning, before the noontime meal, and in the evening; other ceremonies and rituals that require the attendance of most of the monks will also be held in this hall. “Great hero” is an epithet for a buddha, and which “great hero” is enshrined in the hall will vary from monastery to monastery, although [VAIROCANA](#) and [ŚĀKYAMUNI](#) are most common. The taeung chŏn at [T’ONGDOSA](#) is unusual in Korea for having no enshrined image; instead, the back of the basilica is open and looks out on a [STŪPA](#) that is said to contain relics (K. sari; S. [ŚARĪRA](#)) of the Buddha himself; the relics thus represent the Buddha’s presence in the monastery, rendering an image superfluous.

[taigong](#). (C) (胎宮). See [BIANDI](#).

[taimitsu](#). (J) (台密). See [MIKKYŌ](#).

[Taisekiji](#). (大石寺). In Japanese, lit., “Great Stone Temple”; located on the lower slopes of Mount Fuji in Shizuoka Prefecture. The temple was originally named Daibō (Great Lodging) but takes its current name after Ōishigahara (Great Stone Field), the tract of land where it was first established. Taisekiji is the administrative head temple (sōhonzan) of the [NICHIREN SHŌSHŪ](#) school of Japanese Buddhism, and its abbot serves as the sect’s leader. Taisekiji was founded in 1290 by [NICHIREN](#)’s (1222–1282) principal successor Nichikō (1246–1333), who enshrined at the temple the [DAI-GOHONZON](#) (lit. great object of adoration), Nichiren’s unique cosmological chart ([MANDALA](#)) of the spiritual universe, along with his teacher’s ashes and extant writings. The temple’s Sanmon gate, built in 1717, is well known, as is the Mutsubō, most recently

rebuilt in 1988. The Grand Reception Hall, Daikyakuden, was built in 1465 and rebuilt in 1995. Taisekiji's five-storied wooden pagoda, dating from 1749, faces toward the west rather than the usual south, signifying that Nichiren Buddhism would eventually spread back to the homeland of Buddhism. The Founders Hall, Mieidō, built in 1522, houses an image of Nichiren made in 1388, and Nichiren's autograph of the Dai-gohonzon is enshrined in the sanctuary (kaidan), known also as the Hōanden. Because the temple is the home of the sanctuary where the Dai-gohonzon is enshrined, Taisekiji has long been a major pilgrimage center for both Nichiren Shōshū and later [SŌKA GAKKAI](#) adherents; since the 1991 excommunication of the Sōka Gakkai lay organization from the Nichiren Shōshū, however, Sōka Gakkai members are barred from viewing the Dai-gohonzon.

[Taishō shinshū daizōkyō](#). (大正新修大藏經). In Japanese, “The Taishō New Edition of the Buddhist Canon”; a modern Japanese edition of the East Asian Buddhist canon ([DAZANGJING](#)), edited by [TAKAKUSU JUNJIŌ](#) and Watanabe Kaigyoku and published using movable-type printing between 1924 and 1935, during the Taishō reign era. This edition of the Buddhist canon has become the standard reference source for East Asian Buddhist materials; in Western sources, it is often referred to simply as “The Taishō”; in Korea, it is usually called the *Sinsu taejanggyōng*. The Taishō canon includes 2,920 texts in eighty-five bound volumes (each volume is about one thousand pages in length), along with twelve volumes devoted to iconography, and three volumes of bibliography and scriptural catalogues, for a total of one hundred volumes. The Taishō's arrangement is constructed following modern scholarly views regarding the historical development of the Buddhist scriptural tradition, with scriptures of the [MAINSTREAM BUDDHIST SCHOOLS](#) opening the canon, followed by Indian [MAHĀYĀNA](#) materials, indigenous Chinese (and some Korean) writings, and finally Japanese writings:

1. [ĀGAMA](#) (vols. 1–2, nos. 1–151)
2. [AVADĀNA](#) (vols. 3–4, nos. 152–219)
3. [PRAJÑĀPĀRAMITĀ](#) (vols. 5–8, nos. 220–261)
4. [SADDHARMAPUNDAŪKA](#) (vol. 9, nos. 262–277)

5. [AVATAMSAKA/GANDAVYŪHA](#) (vols. 9–10, nos. 278–309)
6. [RATNAKŪTA](#) (vols. 11–12, nos. 310–373)
7. [MAHĀPARINIRVĀNA](#) (vol. 12, nos. 374–396)
8. [MAHĀSAMNIPĀTA](#) (vol. 13, nos. 397–424)
9. Miscellaneous sūtras (vols. 14–17, nos. 425–847), e.g.,
[YOGĀCĀRABHŪMI](#) (nos. 602–620)
[RATNAMEGHA](#) (nos. 658–660)
[SUARNAPRABHĀSA](#) (nos. 663–665)
[TATHĀGATAGARBHA](#) (nos. 666–667)
[LAṆKĀVATĀRA](#) (nos. 670–672)
[SAMDHINIRMOCAṆA](#) (nos. 675–679)
[BUDDHABHŪMI](#) (no. 680)
[GHANAVYŪHA](#) (nos. 681–682)
10. Esoteric Buddhism (vols. 18–21, nos. 848–1420), e.g.,
[SARVATATHĀGATATATTVASAMGRAHA](#) (vol. 18, no. 866)
[MAHĀMĀYŪRĪ](#) (vol. 19, nos. 982–988)
11. [VINAYA](#) (vols. 22–24, nos. 1421–1506), e.g.,
[MAHĪŚĀSAKA](#) (nos. 1421–1424)
[MAHĀSĀMGHIKA](#) (nos. 1425–1427)
[DHARMAGUPTAKA](#) (nos. 1428–1434)

[SARVĀSTIVĀDA](#) (nos. 1435–1441)

[MŪLASARVĀSTIVĀDA](#) (nos. 1442–1459)

[MAHĀYĀNA-BODHISATTVA](#) (nos. 1487–1504)

12. Commentaries to Sūtras (vols. 24–26, nos. 1505–1535), e.g.,

Āgamas (nos. 1505–1508)

Mahāyāna sūtras (nos. 1509–1535)

13. [ABHIDHARMA](#) (vols. 26–29, nos. 1536–1563), e.g.,

[JÑĀNAPRATHĀNA](#) (nos. 1543–1544)

[ABHIDHARMAMAHAṀVIBHĀSĀ](#) (nos. 1545)

Vibhāṣā (nos. 1546–1547)

[ABHIDHARMAKOŚABHĀSYA](#) (nos. 1558–1559)

14. [MADHYAMAKA](#) (vol. 30, nos. 1564–1578), e.g.,

[MŪLAMADHYAMAKAKĀRIKĀ](#) (no. 1564)

*[ŚATAŚĀSTRA](#) (no. 1569)

15. [YOGĀCĀRA](#) (vols. 30–31, nos. 1579–1627), e.g.,

[YOGĀCĀRABHŪMIŚĀSTRA](#) (no. 1579)

*[VIJÑĀPTIMĀTRATĀSIDDHIŚĀSTRA](#) (Cheng weishi lun; no. 1585)

[MAHĀYĀNASAMGRAHA](#) (nos. 1592–1598)

16. Treatises (vol. 32, nos. 1628–1692), e.g.,

[SŪTRASAMUCCAYA](#) (no. 1635)

[ŚIKSĀSAMUCCAYA](#) (no. 1636)

[DASHENG QIXIN LUN](#) (nos. 1667–1668)

17. Chinese sūtra commentaries (vols. 33–39)

18. Chinese vinaya commentaries (vol. 40)

19. Chinese śāstra commentaries (vols. 40–44)

20. Chinese sectarian writings (vols. 44–48), e.g.,

[HUAYAN](#) school (vol. 45, nos. 1866–1890)

[TIANTAI](#) school (vol. 46, nos. 1911–1950)

[PURE LAND](#) school (vol. 47, nos. 1957–1984)

[CHAN](#) school (vols. 47–48, nos. 1985–2025)

21. Histories (vols. 49–52, nos. 2026–2120), e.g.,

[FOZU TONGJI](#) (vol. 49, no. 2035)

[GAOSEN ZHUAN](#) collections (vols. 50–51, nos. 2059–2066)

[GUANG HONGMINGJI](#) (vol. 52, no. 2103)

22. Encyclopedias and references (vols. 53–54, nos. 2121–2136), e.g.,

[FAYUAN ZHULIN](#) (vol. 53, no. 2122)

[YIQIEJING YINYI](#) (vol. 54, no. 2128)

23. Non-Buddhist schools (vol. 54, nos. 2137–2144), e.g.,

Śaṃkhyakārikā (vol. 54, no. 2137)

24. Scriptural Catalogues (vol. 55, nos. 2145–2184), e.g.,

[KAIYUAN SHIJIAO LU](#) (vol. 55, no. 2152)

25. Japanese Buddhist writings (vols. 56–84)

26. Buddhist apocrypha and fragments (vol. 85)

27. Iconography (vols. 86–92)

28. Bibliography and catalogues (vols. 93–100).

The textus receptus for the Taishō was the second Korean xylographic edition of the Buddhist canon, the [KORYŌ TAEJANGGYŌNG](#). This second Koryō canon enjoyed such a strong reputation for scholarly accuracy that the Japanese Taishō editors adopted its readings wholesale in preparing their canon—meaning that where there was a Koryō edition available for a text, the Taishō editors simply copied it verbatim, listing in footnotes any alternate readings appearing in other canonical editions. Although the Taishō is often considered to be the definitive East Asian canon, it is therefore not a true “critical edition” but, to a large extent, a modern typeset reprint of the xylographical Koryō canon, with an updated arrangement of its contents according to modern historiographical criteria. The standard format of the Taishō uses a page with three columns or registers, each register with twenty-nine lines of Sinographs; therefore, it is typical to cite texts included in the Taishō by sequential number in the canon, and/or volume number in the canon, followed by page, register (either a, b, or c) and line number, e.g., *Dafangguang fo huayan jing (Buddhāvataṃsakasūtra)* 23, *T* 278:9.542c27 = Chinese text name (Sanskrit name, where relevant), roll (juan) no. 23, *T*[aishō canon], sequential no. 278, volume no. 9, page no. 542, register c, line 27. (Note that sometimes the sequential number and the Taishō volume number are reversed, or the sequential number is dropped.) See also [DAZANGJING](#); [KORYŌ TAEJANGGYŌNG](#); [SUGI](#); [TRIPITAKA](#).

[Tai Si tu incarnations](#). An influential incarnation ([SPRUL SKU](#)) lineage in the [KARMA BKA' BRGYUD](#) sect of Tibetan Buddhism. The Tai Si tu incarnations are traditionally venerated as emanations of the future buddha [MAITREYA](#) and, according to Tibetan sources, early members of the line include the Indian [MAHĀSIDDHA DOMBĪ HERUKA](#) and the Tibetans [MAR PA CHOS KYI BLO GROS](#) and [TĀRANĀTHA](#). As one of the leading incarnate lamas of the Karma bka' brgyud, the Si tu incarnations traditionally maintained a close relationship with the

[KARMA PAS](#), the sect’s spiritual leader; indeed, the two often alternated as guru and disciple. The first of the line, Chos kyi rgyal mtshan (Chökyi Gyaltzen, 1377–1448), trained under the fifth Karma pa and in 1407 received the honorary title from the Ming Emperor Yongle (r. 1403–1425). Perhaps most famous in the lineage is the eighth Si tu, [CHOS KYI ’BYUNG GNAS](#), who is renowned for his erudition and literary accomplishments. The Tai Si tu lineage includes:

1. Chos kyi rgyal mtshan (1377–1448)
2. Bkra shis rnam rgyal (Tashi Namgyal, 1450–1497)
3. Bkra shis dpal ’byor (Tashi Paljor, 1498–1541)
4. Mi ’khrugs chos kyi go cha (Mitruk Chökyi Gocha, 1542–1585)
5. Chos kyi rgyal mtshan dge legs dpal bzang (Chökyi Gyaltzen Gelek Palsang, 1586–1657)
6. Mi pham phrin las rab brtan (Mipam Trinle Raptan, 1658–1682)
7. Legs bshad smra ba’i nyi ma (Lekshe Mawe Nyima, 1683–1698)
8. Chos kyi ’byung gnas (Chökyi Jungne, 1699–1774)
9. Padma nyin byed dbang po (Pema Nyinje Wangpo, 1774–1853)
10. Padma kun bzang (Pema Kunsang, 1854–1885)
11. Padma dbang mchog rgyal po (Pema Wangchok Gyalpo, 1886–1952)
12. Padma don yod nyin byed dbang po (Pema Dönyö Nyinje Wangpo, b. 1954)

[Taixu](#). (太虛) (1889–1947). In Chinese, “Grand Voidness”; a leading figure in the Chinese Buddhist revival during the first half of the twentieth century. Taixu was ordained at the age of fourteen, purportedly because he wanted to acquire the supernatural powers of the buddhas. He studied under the famous Chinese monk, “Eight Fingers” (Bazhi Toutou), so called because he had burned off one finger of each hand in reverence to the Buddha, and achieved an awakening when reading a [PRAJÑĀPĀRAMITĀ SŪTRA](#). In 1908, he joined a group of radicals,

including other Buddhist monks, intent on revolution. In 1911, he organized the first of many groups (many of them short-lived) to revitalize Buddhism during this time of national crisis following the fall of the Qing dynasty. In 1912, he was involved in a failed attempt to turn the famous monastery of Chinshansi into a modern school for monks. After this disgrace, beginning in 1914, he went into retreat for three years, during which time he studied Buddhist scriptures and formulated plans to revitalize Buddhism, outlined in such works as his 1915 *Zhengli sengqie zhidu lun* (“The Reorganization of the [SAMGHA](#) System”). He drafted a number of such plans over the remainder of his career, although none was ever implemented. In general, these plans called for improved and modernized education for monks and their participation in community and governmental affairs. He believed that Buddhism had become ossified in China and needed to be reformed into a force that would both inspire and improve society. In his view, for an effective reform of the monastic system to take place, Chinese Buddhists had to be educated according to the same standards as those in other Buddhist countries, beginning with Japan. For Taixu, the revival of Chinese Buddhism entailed starting a dialogue with the Buddhist traditions of other Asian countries; hence, a modern Buddhism had to reach out to these traditions and incorporate their intuitions and original insights. It was from these initial ideas that, during the 1920s, Taixu developed a strong interest in Japanese [MIKKYŌ](#) and Tibetan [VAJRAYĀNA](#), as well as in the [THERAVĀDA](#) tradition of Sri Lanka. Taixu’s participation in the “Revival of Tantra” (*mijiao chongxing*) debates with Wang Hongyuan (1876–1937), a Chinese convert to Japanese [SHINGON](#), demonstrated his eclectic ideas about the reformation of Chinese Buddhism. The first of Taixu’s activities after his return to public life was the founding of the Bodhi Society (*Jueshe*) in Shanghai in 1918. He was involved in the publication of a wide variety of Buddhist periodicals, such as “Masses Enlightenment Weekly,” “Sound of Enlightenment,” “Buddhist Critic,” “New Buddhist Youth,” “Modern Saṃgha,” “Mind’s Light,” and the most enduring, “Sound of the Tides” (*Haichaoyin*). In 1922, he founded the Wuchang Buddhist Institute, where he hoped to produce a new generation of Buddhist leaders in China. In 1923, he founded the first of several “world Buddhist organizations,” as a result of which he began to travel and lecture widely, becoming well known in Europe and America. He encouraged several of his students to learn the languages and traditions of Buddhist Asia. Among his students who went abroad in Tibet and Sri Lanka, [FAZUN](#) was the most accomplished in making several commentaries of late Indian Buddhism available to the Chinese public, thus

fostering a comparison between the historical and doctrinal developments of Buddhism in China and in Tibet. In 1928 in Paris, Taixu donated funds for the establishment of the World Buddhist Institute, devoted to the unification of Buddhism and science; it would eventually be renamed Les Amis du Bouddhisme. He lectured in Sri Lanka and arranged an exchange program under which Chinese monks would study there. In 1929, he organized the Chinese Buddhist Society, which would eventually attract millions of members. During the Japanese occupation of China in the 1930s and 1940s, Taixu followed the Nationalist government into retreat in Sichuan. In this period, as a result of his efforts to internationalize Chinese Buddhism, Taixu founded two branches of the Wuchang Institute of Buddhist Studies specializing in Pāli and Tibetan Buddhism: the Pāli Language Institute in Xi'an, and the Sino-Tibetan Institute in Chongqing. In 1937, at the Sino-Tibetan Institute, in his famous essay “Wo de fojiao geming shibai shi” (“History of My Failed Buddhist Revolutions”), Taixu began an earnest self-reflection on his lifelong efforts to reform Chinese Buddhism, deeming them a failure in three domains: conceiving a Buddhist revolution, globalizing Buddhist education, and reorganizing the Chinese Buddhist Association. When the first global Buddhist organization, the [WORLD FELLOWSHIP OF BUDDHISTS](#), was founded in 1950, Taixu, who had died three years earlier, was credited as its inspiration. His insights would eventually be developed and implemented by later generations of Buddhists in China and Taiwan. His collected works were published in sixty-four volumes. Several of the leading figures of modern and contemporary Chinese and Taiwanese Buddhism were close disciples of Taixu, including Fazun (1902–1980), Yinshun (1905–2005), Shengyan (1930–2009), and Xingyun (1927–).

taizōkai. (S. *garbhadhātu; C. taizang jie; K. t'aejang kye 胎藏界). In Japanese, “womb realm” or “womb world”; one of the two principal diagrams ([MANDALA](#)) used in the esoteric traditions of Japan (see [MIKKYŌ](#)), along with the [KONGŌKAI](#) (“diamond realm”); this diagram is known in Sanskrit as the garbhadhātu maṇḍala. The taizōkai maṇḍala is believed to be based on instructions found in the [MAHĀVAIROCANĀBHISAMBODHISŪTRA](#) (*Dainichikyō*); the term, however, does not actually appear in any Buddhist scripture and its pictorial form seems to have developed independently of any written documents. Although [KŪKAI](#) (774–835) is often recognized as introducing the taizōkai maṇḍala to Japan, in fact various versions developed over time. Use of the two maṇḍalas flourished during the Heian period, gradually becoming central to Japanese [TENDAI](#) Buddhism and

[SHUGENDŌ](#). The taizōkai consists of twelve cloisters, which contain various bodhisattvas and deities. At the very center of the maṇḍala is located the Cloister of the Central Dais with Eight Petals (J. Chūdaihachiyōin). There, the [DHARMAKĀYA MAHĀVAIROCANA](#) sits in the center of an eight-petaled lotus flower, with four companion buddhas and bodhisattvas sitting on its petals. In the four cardinal directions sit the buddhas Ratnaketu (J. Hōdō), Saṃkusumitarāja (J. Kaifukeō), [AMITĀBHA](#) (J. Muryōju), and Divyadundubhimeghanirghoṣa (J. Tenkuraion). In the four ordinal directions sit the bodhisattvas [SAMANTABHADRA](#) (J. Fugen), [MAÑJUŚRĪ](#) (J. Monju), [ĀVALOKITEŚVARA](#) (J. Kanjizai; Kannon), and [MAITREYA](#) (J. Miroku). The central Buddha and the surrounding four buddhas and bodhisattvas represent the five wisdoms ([PAÑCAJÑĀNA](#)). ¶ Mahāvairocana's central cloister is surrounded by a series of cloisters in all the four directions. In the eastern section (the topside of the maṇḍala), there are three cloisters from the central cloister at the outside: (1) Cloister of Universal Knowledge (J. Henchiin), in which three deities sit on each side of a triangle; (2) Cloister of [ŚĀKYAMUNI](#) (J. Shakain), where Śākyamuni sits surrounded by his disciples, as a manifestation of Mahāvairocana in the phenomenal world; and (3) Cloister of Mañjuśrī (J. Monjuin), in which Mañjuśrī sits surrounded by many attendants. In the western section (the bottom of the maṇḍala), there are also three cloisters: (1) The Cloister of the Mantra Holders (J. Jimyōin) includes the bodhisattva Prajñā surrounded by the four [VIDYĀRĀJA](#): [ACALANĀTHA](#) (Fudō), [TRAILOKYAVIJAYA](#) (Gōzanze), [YAMĀNTAKA](#) (Daiitoku), and an alternate manifestation of Trailokyavijaya. (2) The Cloister of [ĀKĀŚAGARBHA](#) (Kokūzōin) represents worldly virtue and merit in the form of Ākāśagarbha. (3) The Cloister of Unsurpassed Attainment (Soshitchiin) includes eight bodhisattvas, symbolizing the achievement of the various virtues through which Mahāvairocana benefits sentient beings. In the southern section (the right side of the maṇḍala), there are two cloisters: (1) Cloister of [VAJRAPĀNI](#) (Kongōshuin); in this cloister, [VAJRASATTVA](#) is the main deity, representing the Buddha's wisdom inherent in all sentient beings; and (2) Cloister of Removing Obstacles (Jogaishōin), where sits the bodhisattva [SARVAŪVARANAVISKAMBHIN](#), representing the elimination of the hindrances to enlightenment. In the northern section (the left side of the maṇḍala), there are also two cloisters: (1) Cloister of the Lotus Division (Rengebuin) where Avalokiteśvara is the central deity; and (2) Cloister of [KSITIGARBHA](#) (Jizōin), dedicated to the bodhisattva who saves those suffering in hell. All of these eleven cloisters are then enclosed by the Cloister of Outer [VAJRADHARA](#)s (Ge Kongōbuin), where there are 205 deities,

many of them deriving from Indic mythology. In one distinctively Shingon usage, the maṇḍala was placed in the east and the kongōkai stood in juxtaposition across from it. The initiate would then invite all buddhas, bodhisattvas, and divinities into the sacred space, invoking all of their power and ultimately unifying with them. In Shugendō, the two maṇḍalas were often spatially superimposed over mountain geography or worn as robes on the practitioner while entering the mountain.

[Takakusu Junjirō](#). (高楠順次郎) (1866–1945). One of the leading Japanese scholars of Indian Buddhism of the early twentieth century, who played a leading role in establishing Japan as a major center of scholarship in Buddhist Studies. He was born, surnamed Sawai, in today's Hiroshima prefecture. He was raised in a [JŌDO SHINSHŪ](#) family belonging to the [NISHI HONGANJIHA](#), and he remained a devout layman throughout his life. After primary school, he studied at the leading Jōdo Shinshū educational institution, today's Ryūkoku University, from 1885 to 1889, during which time, through Jōdo Shinshū connections, he was adopted into the Takakusu merchant house of Kōbe. With the support of his adoptive father, he spent the period from 1890 to 1897 in Europe. Through the introduction of the Jōdo Shinshū cleric [NANJŌ BUN'YŪ](#), Takakusu was able to study Indology under [FRIEDRICH MAX MÜLLER](#) at Oxford University, receiving a B.A. in 1894 and an M.A. in 1896. While at Oxford, he assisted Müller with the Sacred Books of the East project. The final volume of the series, entitled *Buddhist Mahāyāna Texts* (1894), included the [VAJRACCHEDIKĀPRAJÑĀPĀRAMITĀSŪTRA](#), the [PRAJÑĀPĀRAMITĀHRDAYA](#), and the three [PURE LAND](#) sūtras, all Indian works (or at least so regarded at the time) but selected because of their importance for Japanese Buddhism. Müller's choice of these texts was influenced by Takakusu and Nanjō Bun'yū. The works in *Buddhist Mahāyāna Texts* were translated by Müller, with the exception of the [GUAN WULIANGSHOU JING](#), which was translated by Takakusu. Takakusu also studied in Paris with [SYLVAIN LÉVI](#), with whom he would later collaborate on the *Hōbōgirin* Buddhist encyclopedia project. He returned to Japan in 1897 to lecture in Indian philosophy at Tokyo Imperial University, where he served as professor from 1899 to 1927, being appointed to the chair of Sanskrit studies in 1901. He was a devoted supporter of Esperanto and in 1906 was a founding member of the Japanese Esperantists Association. He supervised and contributed substantially to three monumental publishing projects: (1) the *Upanishaddo zensho*, a Japanese translation of the Upaniṣads (1922–1924); (2) the [TAISHŌ](#)

[SHINSHŪ DAIZŌKYŌ](#), a modern typeset edition of the East Asian Buddhist canon (see [DAZANGJING](#)) (1922–1934); and (3) the *Kokuyaku nanden daizōkyō*, a Japanese translation of the Pāli canon of what he called “Southern Buddhism” (1936–1941). For his work on editing the Taishō canon, he was awarded the Prix Stanislas Julien in Sinology from the Institut de France in 1929. Among his English-language publications, he is known especially for *A Record of the Buddhist Religion as Practised in India and the Malay Archipelago* (1896), which is his translation of [YIJING](#)’s pilgrimage record ([NANHAI JIGUI NEIFA ZHUAN](#)), and *Essentials of Buddhist Philosophy* (1947). He died in Shizuoka Prefecture, outside Tokyo.

[Takṣaśilā](#). (P. Takkasilā; T. Rdo ’jog; C. Shishi guo; J. Sekishitsu koku; K. Sōksil kuk 石室國). Capital of [GANDHĀRA](#) (in the Punjab province of modern Pakistan), often known in the West by its Greek name Taxila; an important early center of Indian Buddhist learning and transcontinental trade. The city is mentioned frequently in the [JĀTAKAS](#), but not in the Pāli suttas, although it is presumed that the Buddha’s physician [JĪVAKA](#) studied there. [AŚOKA](#) is said to have built a dharmarājika [STŪPA](#) and monastery there, which were enlarged when the city was rebuilt following Scythian invasions. Takṣaśilā was a center for both Hindu and Buddhist scholarship, which flourished especially between the first and fifth centuries CE. Among the schools of Indian Buddhism, the [SARVĀSTIVĀDA](#) was especially strong in the city. Takṣaśilā was visited by the Chinese pilgrims [FAXIAN](#) and [XUANZANG](#), who described it in their travel records.

[Takuan Sōhō](#). (沢庵宗彭) (1573–1645). Japanese [ZEN](#) master in the [RINZAISHŪ](#), especially known for his treatments of Zen and sword fighting. A native of Tajima in Hyōgo prefecture, he was ordained at a young age and later became a disciple of Shun’oku Sōon (1529–1611) at Sangen’in, a subtemple of the monastery [DAITOKUJI](#), who gave him the name Sōhō. In 1599, Takuan followed Shun’oku to the Zuiganji in Shiga prefecture, but later returned to Sangen’in. In 1601, Takuan visited Itō Shōteki (1539–1612) and became his disciple. In 1607, Takuan was appointed first seat (daiichiza) at [DAITOKUJI](#), but he opted to reside at Tokuzenji and Nanshūji, instead. Takuan was appointed abbot of Daitokuji in 1609, but again he quickly abandoned this position. Takuan later became involved in a political incident (the so-called purple-robe incident; J. shi’e jiken), which led to the forced abdication of Emperor Gomizunoo (r. 1611–1629) and in

1629 to Takuan's exile to Kaminoyama in Uzen (present-day Yamagata prefecture). Takuan had befriended Yagyū Munenori (1571–1646), the swordsman and personal instructor to the shōgun, and while he was in exile composed for him the [FUDŌCHI SHINMYŌROKU](#) (“Record of the Mental Sublimity of Immovable Wisdom”). This treatise on Zen and sword fighting draws on the concept of no-mind (J. mushin; C. [WUXIN](#)) from the [LIUZU TAN JING](#) (“Platform Sūtra of the Sixth Patriarch”) to demonstrate the proper method of mind training incumbent on adepts in both the martial arts and Zen meditation. Takuan later returned to Edo (present-day Tōkyō) and, with the support of prominent patrons, became the founding abbot of Tōkaiji in nearby Shinagawa in 1638. He died at the capital in 1645.

[takuhatsu](#). (C. tuobo; K. t'akbal 托鉢). In Japanese, lit. “lifting up the bowl,” viz., “to seek alms”; the Japanese form of the traditional monastic practice of alms-round ([PINDAPĀTA](#)). In Japan, takuhatsu is most commonly associated with the [ZEN](#) school and is typically conducted by a small group of monks who walk together through the streets with walking staffs (khakkhara) and bells that alert residents to their presence. Monks typically receive money or uncooked rice in their bowls as alms, rather than the cooked food received by monks in Southeast Asia. See also [PĀTRA](#).

[Tambadīpa](#). The region occupied by [PAGAN](#) and Sirīkhetarā (Prome) in Middle Burma (Myanmar), it is the southern portion of the Burmese homeland of Sunāparanta-Tambadīpa. The name is most probably derived from Tambapannidīpa, one of several names of Sri Lanka.

[tamnan](#). In northern (Lānnā) Thai, “chronicle”; a genre of northern Thai historical writing combining local legends, myths, and Buddhist literary traditions, and written in Lānnā Thai, Mon, or Pāli; this genre flourished in the Lānnā kingdom between the fourteenth and seventeenth centuries. A tamnan generally begins with events in the life of Gotama (S. [GAUTAMA](#)) Buddha and continues on to the establishment of the dispensation (P. sāsanā; S. [ŚĀSANA](#)) at a specific location. Notable tamnan include the [CĀMADEVĪVAMSA](#), the [JINAKĀLAMĀLĪ](#), and the [MŪLASĀSANA](#).

[tanch'ōng](#). (丹青). In Korean, “red and blue,” or more literally “cinnabar and azure-green”; a style of painting colors and patterns on the wooden beams, rafters, and pillars of Korean Buddhist monastery buildings, as well as on

palaces and other traditional-style wooden buildings. The five colors used in tanch'ōng painting are red, azure-green, yellow, black, and white. These colors are related to the five Chinese elements (metal, wood, fire, water, earth) and the five directions (the four cardinal directions plus the center). The paint, made from a thick coating of minerals mixed with glue, protects the wood from burrowing insects and water damage and sets the monasteries and palaces apart from the buildings of private citizens, who were prohibited by law from using the same decorative techniques. Tanch'ōng painting may date from early in the inception of Buddhism in Korea during the fourth or fifth centuries, and there is evidence of the use of tanch'ōng during both the Koguryō and Silla kingdoms. There are various types of tanch'ōng, which range from applying a utilitarian base coat, usually in azure-green, to protect the wood, to much more elaborate styles that uses all five colors in geometric patterns, sometimes interspersed with stylized flowers, water lilies, pomegranates, and bubbles. Tanch'ōng is usually painted using stencils made from perforated paper dusted with chalk to imprint the pattern on the surface to be painted. After the painting is done, an oil coat is spread over the paint to protect and brighten the colors. Some of the best-known examples of tanch'ōng can be found at the monasteries of [PUSŎKSA](#) and [SUDŎKSA](#).

tanengi. (多念義). In Japanese, “the doctrine of multiple recitations,” in the Japanese [PURE LAND](#) traditions, the practice of multiple or even continuous recitations of the buddha Amitābha’s name (J. nenbutsu; C. [NIANFO](#)). The debate between multiple recitations and a single recitation ([ICHINENGI](#)) emerged in the early [JŌDOSHŪ](#) movement of [HŌNEN](#) (1133–1212). Hōnen himself emphasized faith, stating that even a single moment of faith would be sufficient to bring about rebirth in Amitābha’s pure land of [SUKHĀVATĪ](#). However, he himself practiced assiduously, chanting the nenbutsu tens of thousands of times a day. Hōnen’s disciples Ryūkan (1148–1228) and Shōkōbō Benchō (1162–1238) are especially well known for promoting the tanengi position. Tanengi emphasized the value of a lifetime of practice, in which each moment of a disciple’s life would come to be imbued with the power of the nenbutsu. It is said that, thanks to such constant practice, a disciple would gain the assurance of rebirth in sukhāvātī through a vision of Amitābha in the moments before death.

Tang gaoseng zhuan. (C) (唐高僧傳). See [GAOSEN ZHUAN](#); [XU GAOSEN ZHUAN](#).

tangho. (堂號). In Korean, lit. “hall epithet”; a new cognomen given to an

especially eminent monk, which is bestowed by his teacher some twenty to thirty years after his ordination, often in conjunction with transmitting the master's lineage to his pupil; this name subsequently serves as the monk's funerary name. The name is typically selected to reflect the designated monk's spiritual attainments and/or the specific practices with which he is identified. For example, the monk [CH'ŌNGHŎ HYUJŎNG](#) (1520–1604) was given the hall epithet Ch'ōnghödang (Clear and Pure) in recognition of his enlightened understanding. The hall epithet of the monk [HWANSŎNG CHIAN](#) (1664–1729), Hwansōngdang (Calling [People] to Awake), refers to his efforts to disseminate the Buddhist teachings, while Nuram Sikhwal's (1725–1830) epithet Nuramdang (Reticent at the Hermitage) referred to the fact that he often meditated in seclusion deep in the mountains. The term originates from the designation of a person's dwelling and thus signifies the owner of a house. The term also is employed in both Confucian and secular contexts, but its usage in Buddhism seems to be unique to Korea, where it became customary to bestow such names from the late Koryŏ period onward. See also [SIHO](#).

[tanju](#). (短珠). In Japanese and Korean, “short rosary.” See [JAPAMĀLĀ](#).

[Tanluan](#). (J. Donran; K. Tamnan 曇鸞) (c. 476–542). Chinese monk and putative patriarch of the [PURE LAND](#) traditions of East Asia. He is said to have become a monk at an early age, after which he devoted himself to the study of the [MAHĀSAMNIPĀTASŪTRA](#). As his health deteriorated from his intensive studies, Tanluan is said to have resolved to search for a means of attaining immortality. During his search in the south of China, Tanluan purportedly met the Daoist master Tao Hongjing (455–536), who gave him ten rolls of scriptures of the Daoist perfected. Tanluan is then said to have visited [BODHIRUCI](#) in Luoyang, from whom he received a copy of the [GUAN WULIANGSHOU JING](#). Tanluan subsequently abandoned his initial quest for immortality in favor of the teachings of the buddha [AMITĀBHA](#)'s pure land (see [SUKHĀVATĪ](#)). He was later appointed abbot of the monasteries of Dayansi in Bingzhou (present-day Shaanxi province) and Xuanzhongsi in nearby Fenzhou. Tanluan is famous for his commentary on the [WULIANGSHOU JING YOUNPOTISHE YUANSHENG JI](#) attributed to [VASUBANDHU](#).

[Tannishō](#). (歎異抄). In Japanese, “Record of Lamentations on Divergences”; a short collection of the sayings of the [JŌDO SHINSHŪ](#) teacher [SHINRAN](#) (1173–1263), compiled by his disciple Yuien (1222–1289). The work consists of

eighteen short sections: the first ten sections are direct quotations of Shinran's sayings as recalled by the author; the remaining eight are Yuien's responses to what he considers misinterpretations of Shinran's teachings that arose after his death. The first part of the text, in particular, describes such characteristic teachings of Shinran as "evil people have the right capacity" ([AKUNIN SHŌKI](#)), i.e., that Amitābha's compassion is directed primarily to evildoers. The text was little known for centuries after its compilation, even to followers of Jōdo Shinshū, until it was popularized during the Meiji era by the [HIGASHI HONGANJI](#) reformer [KIYOZAWA MANSHI](#) (1863–1903).

tantra. (T. rgyud; C. tanteluo; J. dantokura; K. tant'ūngna 檀特羅). In Sanskrit, lit. "continuum"; a term derived from the Sanskrit root √tan ("to stretch out," "to weave"), having the sense of an arrangement or a pattern (deployed not only in a ritual, but in military and political contexts as well). The term is thus used to name a manual or handbook that sets forth such arrangements, and is not limited to Buddhism or to Indian religions more broadly. Beyond this, the term is notoriously difficult to define. It can be said, however, that tantra does not carry the connotation of all things esoteric and erotic that it has acquired in the modern West. In Buddhism, the term tantra generally refers to a text that contains esoteric teachings, often ascribed to [ŚĀKYAMUNI](#) or another buddha. Even this, however, is problematic: there are esoteric texts that do not carry the term tantra in their title (such as the [VAJRAŚEKHARASŪTRA](#)), and there are nonesoteric texts in whose title the term tantra appears (such as the [UTTARATANTRA](#)). Scholars therefore tend to define tantra (in the textual sense) based on specific sets of elements contained in the texts. These include [MANTRA](#), [MANDALA](#), [MUDRĀ](#), initiations ([ABHISEKA](#)), fire sacrifices ([HOMA](#)), and feasts ([GANACAKRA](#)), all set forth with the aim of gaining powers ([SIDDHI](#)), both mundane and supramundane. The mundane powers are traditionally enumerated as involving four activities: pacification of difficulties ([ŚĀNTIKA](#)), increase of wealth ([PAUSTIKA](#)), control of negative forces ([VAŚĪKARANA](#)), and destruction of enemies ([ABHICĀRA](#)). The supramundane power is enlightenment ([BODHI](#)). The texts called tantras began to appear in India in the late seventh and early eighth centuries CE, often written in a nonstandard (some would say "corrupt") Sanskrit that included colloquial elements and regional terms. These anonymous texts (including such famous works as the [GUHYASAMĀJATANTRA](#), the [CAKRASAMVARATANTRA](#), and the [HEVAJRATANTRA](#)), typically provided mantras and instructions for drawing maṇḍalas, among a variety of other elements, but their presentation and

organization were usually not systematic; these texts came to serve as the “root tantra” for a cycle of related texts. The more systematic of these were the [SĀDHANA](#) (lit. “means of achievement”), a ritual manual by a named author, which set forth the specific practices necessary for the attainment of siddhi. The standard form was to create a maṇḍala into which one invited a deity. The meditator would either visualize himself or herself as the deity or visualize the deity as appearing before the meditator. Various offerings would be made, mantras would be recited, and siddhis would be requested. Although scholars continue to explore the relation between the tantras and the [MAHĀYĀNA](#) sūtras, tantric exegetes viewed the tantras, like the Mahāyāna sūtras, as being the word of the Buddha ([BUDDHAVACANA](#)) and as setting forth forms of practice consistent with the bodhisattva vow and the quest for buddhahood, albeit more quickly than by the conventional path, via what came to be referred to as the [VAJRA](#) vehicle ([VAJRAYĀNA](#)). Thus, it was said that the Mahāyāna was divided into the pāramitānaya, the “mode of the perfections” set forth in the Mahāyāna sūtras, and the mantranaya, the “mode of the mantras” set forth in the tantras. These two are also, although less commonly, known as the sūtrayāna and the [TANTRAYĀNA](#). In this context, then, the term “tantra” is often used by tantric exegetes in contrast to “sūtra,” which is taken to mean the corpus of exoteric teachings of the Buddha. For those who accept the tantras as the word of the Buddha, the term “sūtras and tantras” would thus refer to the entirety of the Buddha’s teachings. The corpus of tantras was eventually classified by late Indian Buddhist exegetes into a number of schemata, the most famous of which is the fourfold division into [KRIYĀTANTRA](#), [CARYĀTANTRA](#), [YOGATANTRA](#), and [ANUTTARAYOGATANTRA](#).

[tantrayāna](#). In Sanskrit, “vehicle of the tantras”; see [TANTRA](#).

[tantric vows](#). (T. rig ’dzin gyi sdom pa; *vidyādharaśamvara). Any of a number of vows taken as part of a tantric initiation and to be maintained as part of tantric practice. Many tantras list disparate sets of rules, the best known being that found in the *Rgyud rdo rje rtse mo* (the Tibetan version of the [VAJRAŚEKHARASŪTRA](#), a [SARVATATHĀGATATATTVASAMGRAHA](#) explanatory tantra). Such texts enumerate “restraints” or “vows” ([SAMVARA](#)) and pledges ([SAMAYA](#)) connected with the five buddha families ([BUDDHAKULA](#); [PAÑCATATHĀGATA](#)), and possibly an ordination and confession ceremony modeled on the [PRĀTIMOKSA](#). These disparate rules were later codified more systematically in a number of

tantric texts: the so-called root infractions in the *Vajrayānamūlāpatti* attributed to [AŚVAGHOŚA](#), and an even shorter list of secondary vows in the *Vajrayānasthūlāpatti* attributed to [NĀGĀRJUNA](#). In addition, rules of deportment toward the guru were set forth in works such as the [GURUPAÑCĀŚIKĀ](#) (“Fifty Stanzas on the Guru”), also attributed to Aśvaghōṣa. In Tibet, these rules were codified and commented on at length in the “three vow” ([SDOM GSUM](#)) literature. The “root infractions” are the following: (1) to disparage the guru, (2) to overstep the words of the buddhas, (3) to be cruel to one’s [VAJRA](#) siblings (disciples of the same guru), (4) to abandon love for sentient beings, (5) to abandon the two types of [BODHICITTA](#), (6) to disparage the doctrines of one’s own and others’ schools, (7) to proclaim secrets to the unripened, (8) to scorn the aggregates, (9) to have doubts about the essential purity of all phenomena, (10) to show affection to the wicked, (11) to have false views about emptiness, (12) to disillusion the faithful, (13) not to rely on the pledges, and (14) to disparage women. It is noteworthy that, unlike the *prātimokṣa*, the infractions here involve attitudes and beliefs, in addition to transgressions of body and speech. It was generally said that receiving the bodhisattva vows was a prerequisite for receiving tantric vows; the prior receipt of *prātimokṣa* precepts was optional. In expositions of the “three vows,” tantric vows are the third, after the *prātimokṣa* precepts and the bodhisattva precepts. Especially in Tibet there is extensive discussion of the compatibility of the three sets of vows. See also [TRISAMVARA](#).

tao. (C) (道). The obsolete Wade–Giles transcription for the Sinograph [DAO](#) (way, path).

tāpana. (T. tsha ba; yanre diyu; J. ennetsujigoku; K. yōmyōl chiok 炎熱地獄). In Sanskrit and Pāli, “heating”; one of the hot hells, usually identified as the sixth in descending order of depth beneath the continent of [JAMBUDVĪPA](#) and in ascending order of the suffering incumbent on denizens of that realm. According to some accounts, the denizens of this hell are burned in a great cauldron of molten metal; according to others, they are impaled on burning staves.

tapas. (P. tapa; T. dka’ thub; C. kuxing; J. kugyō; K. kohaeng 苦行). In Sanskrit, “severe austerities”; mortification of the flesh, or other extreme forms of religious penance. The Buddha rejected self-mortification as a valid means of practice, after having practiced it himself, to no avail, prior to his enlightenment. For the authorized list of ascetic practices, see [DHUTAṄGA](#).

[Ta pho gtsug lag khang](#). (Tapo Tsuklakang). An important Tibetan Buddhist institution, also known as Ta pho chos 'khor, located at an altitude of ten thousand feet (3,050 m.) along the Spiti River in the modern-day Lahoul and Spiti region of Himachal Pradesh in northwest India. It is situated along two of the former routes of travel between India and Tibet. Over its long existence, Ta pho has been an important center for both scholarship and artistic activity and remains an active Tibetan monastery, preserving many important Buddhist manuscripts, scroll paintings, statues, and murals. It was established in 996 by the king of the western Tibetan region of [GU GE YE SHES 'OD](#) and the translator [RIN CHEN BZANG PO](#). According to traditional histories, at the age of seventeen, Rin chen bzang po was sent to India together with a group of twenty other youths by King Ye shes 'od to study Sanskrit and Indian vernacular languages. Rin chen bzang po made several trips to India, spending a total of seventeen years in Kashmir and the Buddhist monastic university of [VIKRAMAŚĪLA](#) before returning to Tibet. He is said to have founded 108 monasteries, among which was Ta pho. Among the many monasteries of western Tibet, it was second in importance only to [THO LING](#) and was the repository of a trove of old Tibetan texts that contributed to greater understanding of the formation of the Tibetan canon ([BKA' 'GYUR](#)). In 1996, the fourteenth [DALAI LAMA](#) gave the [KĀLACAKRA](#) initiation at Ta pho in commemoration of the one thousandth anniversary of the monastery's founding.

[Tārā](#). (T. Sgrol ma; C. Duoluo; J. Tara; K. Tara 多羅). In Sanskrit, lit. "Savior"; a female bodhisattva who has the miraculous power to be able to deliver her devotees from all forms of physical danger. Tārā is said to have arisen from either a ray of blue light from the eye of the buddha [AMITĀBHA](#), or from a tear from the eye of the [BODHISATTVA AVALOKITEŚVARA](#) as he surveyed the suffering universe. The tear fell into a valley and formed a lake, out of which grew the lotus from which Tārā appeared. She is thus said to be the physical manifestation of the compassion of Avalokiteśvara, who is himself the quintessence of the compassion of the buddhas. Because buddhas are produced from wisdom and compassion, Tārā, like the goddess [PRAJÑĀPĀRAMITĀ](#) ("Perfection of Wisdom"), is hailed as "the mother of all buddhas," despite the fact that she is most commonly represented as a beautiful sixteen-year-old maiden. She is often depicted together with [BHRKUTĪ](#) (one of her forms) as one of two female bodhisattvas flanking Avalokiteśvara. Tārā is the subject of much devotion in her own right, serving as the subject of many stories, prayers, and

tantric [SĀDHANAS](#). She can appear in peaceful or wrathful forms, depending on the circumstances, her powers extending beyond the subjugation of these worldly frights, into the heavens and into the hells. She has two major peaceful forms, however. The first is [SITATĀRĀ](#), or White Tārā. Her right hand is in [VARADAMUDRĀ](#), her left is at her chest in [VITARKAMUDRĀ](#) and holds a lotus and she sits in [DHYĀNĀSANA](#). The other is [ŚYĀMATĀRĀ](#), or Green Tārā. Her right hand is in varadamudrā, her left is at her chest in vitarkamudrā and holds an utpala, and she sits in [LALITĀSANA](#). Her wrathful forms include [KURUKULLA](#), a dancing naked [YOGINĪ](#), red in color, who brandishes a bow and arrow in her four arms. In tantric [MANDALAS](#), she appears as the consort of [AMOGHASIDDHI](#), the buddha of the northern quarter; together they are lord and lady of the [KARMAKULA](#). But she is herself also the sole deity in many tantric [SĀDHANAS](#), in which the meditator, whether male or female, visualizes himself or herself in Tārā's feminine form. Tārā is best-known for her salvific powers, appearing the instant her devotee recites her [MANTRA](#), om̐ tāre tuttāre ture svāhā. She is especially renowned as Aṣṭabhayaatrāṇatārā, “Tārā Who Protects from the Eight Fears,” because of her ability to deliver those who call upon her when facing the eight great fears (mahābhaya) of lions, elephants, fire, snakes, thieves, water, imprisonment, and demons. Many tales are told recounting her miraculous interventions. Apart from the recitation of her mantra, a particular prayer is the most common medium of invoking Tārā in Tibet. It is a prayer to twenty-one Tārās, derived from an Indian [TANTRA](#) devoted to Tārā, the *Sarvatathāgatamātṛtārāviśvakarmabhavatantra* (“Source of All Rites to Tārā, the Mother of All the Tathāgatas”). According to some commentarial traditions on the prayer, each of the verses refers to a different form of Tārā, totaling twenty-one. According to others, the forms of Tārā are iconographically almost indistinguishable. Tārā entered the Buddhist pantheon relatively late, around the sixth century, in northern India and Nepal, and her worship in Java is attested in inscriptions dating to the end of the eighth century. Like Avalokiteśvara, she has played a crucial role in Tibet's history, in both divine and human forms. One version of the creation myth that has the Tibetan race originating from a dalliance between a monkey and an ogress says the monkey was a form of Avalokiteśvara and the ogress a form of Tārā. Worship of Tārā in Tibet began in earnest with the second propagation and the arrival of [ATIŚA DĪPAMKARĀŚRĪJŪĀNA](#) in the eleventh century; she appears repeatedly in accounts of his life and in his teachings. He had visions of the goddess at crucial points in his life, and she advised him to make his fateful journey to Tibet, despite the fact that his life span would be shortened as a result.

His sādhanas for the propitiation of Sītātārā and Śyāmatārā played a key role in promoting the worship of Tārā in Tibet. He further was responsible for the translation of several important Indic texts relating to the goddess, including three by Vāgīśvarakīrti that make up the 'chi blu, or “cheating death” cycle, the foundation of all lineages of the worship of Sītātārā in Tibet. The famous Tārā chapel at Atiśa’s temple at SNYE THANG contains nearly identical statues of the twenty-one Tārās. The translator Darmadra brought to Tibet the important [ANUYOGA](#) tantra devoted to the worship of Tārā, entitled *Bcom ldan 'das ma sgrol ma yang dag par rdzogs pa'i sangs rgyas bstod pa gsungs pa*. Tārā is said to have taken human form earlier in Tibetan history as the Chinese princess [WENCHENG](#) and Nepalese princess Bhṛkutī, who married King [SRONG BTSAN SGAM PO](#), bringing with them buddha images that would become the most revered in Tibet. Which Tārā they were remains unsettled; however, some sources identify Wencheng with Śyāmatārā and Bhṛkutī with the goddess of the same name, herself said to be a form of Tārā. Others argue that the Nepalese princess was Sītātārā, and Wencheng was Śyāmatārā. These identifications, however, like that of Srong btsan sgam po with Avalokiteśvara, date only to the fourteenth century, when the cult of Tārā in Tibet was flourishing. In the next generation, Tārā appeared as the wife of King [KHRI SRONG LDE BTSAN](#) and the consort of [PADMASAMBHAVA](#), [YE SHES MTSHO RGYAL](#), who in addition to becoming a great tantric master herself, served as scribe when Padmasambhava dictated the treasure texts ([GTER MA](#)). Later, Tārā is said to have appeared as the great practitioner of the [GCOD](#) tradition, [MA GCIG LAP SGRON](#) (1055–1149). Indeed, when Tārā first vowed eons ago to achieve buddhahood in order to free all beings from [SAMSĀRA](#), she swore she would always appear in female form.

[Tāranātha](#). (1575–1634). The appellation of Kun dga' snying po (Kunga Nyingpo), a Tibetan scholar affiliated with the [JO NANG](#) tradition. Tāranātha was an author of exceptional scope, writing on a vast range of philosophical and doctrinal topics. Born in Drong, he was a precocious child, famously declaring himself to be an incarnate lama ([SPRUL SKU](#)) at the age of one, an identification that was eventually confirmed. He was installed at Chos lung rtse monastery at the age of four. By age fifteen, he had studied many tantric cycles, becoming adept at both the six yogas of [NĀROPA](#) ([NA RO CHOS DRUG](#)) and [MAHĀMUDRĀ](#). He also developed an interest in Indian languages; several of his translations of Sanskrit works are included in the Tibetan canon. Tāranātha had a strong interest in India throughout his life, not simply its ancient past but also its contemporary

present, chronicling events of the Mughal period. He even declared that he and the Mughal emperor Jahangir were emanations of the same person. He also had a strong interest in the [SIDDHA](#) tradition and studied with many Buddhist and non-Buddhist [YOGINS](#). At the age of sixteen, Tāranātha met his most influential Indian teacher, Buddhaguptanātha, who had traveled throughout the Buddhist world and studied directly with some of the last remaining members of the siddha tradition. Tāranātha surveyed the Indian siddha lineages in his [BKA' BABS BDUN LDAN GYI RNAM THAR](#) (“Biographies of the Seven Instruction Lineages”). His most famous work, informally called the [RGYA GAR CHOS 'BYUNG](#) (“History of Indian Buddhism”), is highly regarded by later Tibetan historians. Tāranātha was a great master of the [KĀLACAKRATANTRA](#) and its surrounding topics, writing extensively about them. He restored the [STŪPA](#) built by the Jo nang founder [DOL PO PA SHES RAB RGYAL MTSHAN](#). Tāranātha saw Dol po pa in many visions and strongly promoted his teachings, writing in support of the [GZHAN STONG](#) view. In 1615, with the patronage of the rulers of Gtsang, he began work on [JO NANG PHUN TSHOGS GLING](#), northwest of Gzhis ka rtse (Shigatse) in central Tibet. It was completed in 1628. Renowned for its beautiful design and sumptuous artwork, the monastery would be his primary residence in the last years of his life. After his death, the fifth [DALAI LAMA](#) suppressed the Jo nang sect, converting the monastery into a [DGE LUGS](#) establishment. He also identified Tāranātha’s incarnation in Mongolia as the first [RJE BTSUN DAM PA](#), a line of incarnations who would serve as titular head of the Dge lugs sect in Mongolia until the twentieth century. The reasons for this identification are debated. The Dalai Lama claimed in one of his autobiographies that his mother had been the tantric consort of Tāranātha and that Tāranātha was his biological father. It was also the case that Tāranātha had been supported by the rulers of Gtsang, the opponents that the Dalai Lama’s faction had defeated in the civil war that resulted in the Dalai Lama gaining political control over Tibet.

tarikī. (C. tali; K. t’aryōk 他力). In Japanese, “other power.” The term tarikī came to be used frequently by followers of [SHINRAN](#) and his [JŌDO SHINSHŪ](#) tradition. Tariki often appears in contrast with [JIRIKI](#), or “self-power.” While tarikī refers to the practitioner’s reliance on the power or grace of the buddha [AMITĀBHA](#), jiriki is often used in a pejorative sense to refer to practices requiring personal effort, such as keeping the precepts and cultivating the six [PĀRAMITĀS](#). Reliance on jiriki was often condemned as a more difficult path than that based on tarikī, such as reciting Amitābha’s name (see [NIANFO](#)). The tarikī and jiriki

distinction is traditionally attributed to the Chinese monk [TANLUAN](#) and his commentary on the [WULIANGSHOU JING YOUPTISHE YUANSHENG JI](#). Basing his claims on the vows of Amitābha that appear in the [SUKHĀVATĪVYŪHASŪTRA](#), Tanluan argued that true power belonged not to the practitioner but to Amitābha. While Tanluan himself did not condemn practices involving self-power, [SHINRAN](#) and his Japanese followers argued for exclusive faith in the power of Amitābha and denounced jiriki as inappropriate for the final age of the [DHARMA](#) (J. mappō; C. [MOFA](#)).

[tarjanīmudrā](#). (T. sdigs mdzub phyag rgya; C. qike yin; J. kikokuin; K. kigŭk in 祈克印). In Sanskrit, “wrathful” or “threatening gesture.” The tarjanīmudrā may be formed in several ways: with the index finger raised like a hook from the loosely closed fist of either hand, or with index and pinky fingers extended and remaining fingers closed lightly in a fist. This gesture is common in images of semiwrathful and wrathful deities, such as Acala and [VAJRAPĀNI](#), as well as dharma protectors ([DHARMAPĀLA](#)), and may be formed in combination with other hand gestures. See also [MUDRĀ](#).

[tarjanīyakarman](#). (P. tajjanīyakamma; T. bsdigs pa’i las; C. yinghe/lingbu; J. ōka/ryōfu; K. ūngga/yōngp’o 應訶/令怖). In Sanskrit, “act of censure” or “act of rebuke”; a formal and public criticism of a monk or nun for untoward behavior that does not require a formal punishment. Such behavior would include being quarrelsome, living among householders, and speaking disrespectfully about the Buddha, [DHARMA](#), or [SAMGHA](#). A monk or nun who acknowledges such misbehavior may then request that the censure be rescinded.

[tarka](#). (T. rtog ge; C. size; J. shichaku; K. sat’aek 思擇). In Sanskrit, “logic”; conceptual knowledge that relies on reasoning. Although often used in this neutral sense, in some contexts the term is used pejoratively to refer to a pedantic logic that is unrelated, and in some cases detrimental, to progress on the path of enlightenment. In this latter sense, the term might be better translated as “sophistry.”

[Tarkajvālā](#). (T. Rtog ge ’bar ba). In Sanskrit, the “Blaze of Reasoning”; the extensive prose autocommentary on the [MADHYAMAKAHRDAYA](#), the major work of the sixth-century Indian [MADHYAMAKA](#) (and, from the Tibetan perspective, *[SVĀTANTRIKA](#)) master [BHĀVAVIVEKA](#) (also referred to as Bhavya and Bhāviveka). The *Madhyamakahrdaya* is preserved in both Sanskrit and Tibetan;

the *Tarkajvālā* only in Tibetan. It is a work of eleven chapters, the first three and the last two of which set forth the main points in Bhāvaviveka’s view of the nature of reality and the Buddhist path, dealing with such topics as [BODHICITTA](#), the knowledge of reality (tattvajñāna), and omniscience ([SARVAJÑĀTĀ](#)). The intervening chapters set forth the positions (and Bhāvaviveka’s refutations) of various Buddhist and non-Buddhist schools, including the [ŚRĀVAKA](#), [YOGĀCĀRA](#), Sāṃkhya, Vaiśeṣika, Vedānta, and Mīmāṃsā. These chapters (along with [ŚĀNTARAKSITA](#)’s [TATTVASAMGRAHA](#)) are an invaluable source of insight into the relations between Madhyamaka and the other Indian philosophical schools of the day. The chapter on the śrāvakas, for example, provides a detailed account of the reasons put forth by the śrāvaka schools as to why the [MAHĀYĀNA](#) sūtras are not the word of the Buddha ([BUDDHAVACANA](#)). Bhāvaviveka’s response to these arguments, as well as his refutation of Yogācāra in the subsequent chapter, are particularly spirited.

[tārkika](#). (T. rtog ge ba). In Sanskrit, “logician,” but generally used in a pejorative sense of a sophist or pendant obsessed with argumentation and thus prevented from perceiving reality.

[tathāgata](#). (T. de bzhin gshegs pa; C. rulai; J. nyorai; K. yōrae 如來). In Sanskrit and Pāli, lit., “one who has thus come/gone,” and generally translated into English as the “thus gone one.” Tathāgata is, along with [BHAGAVAT](#), one of the most common epithets of the Buddha and a term the Buddha commonly uses in the [SŪTRAS](#) to refer both to himself and to the buddhas of the past. The Sanskrit compound may be parsed to mean either “one who is thus gone” (tathā + gata), or “one who has thus come” (tathā + āgata), and for this reason the translations of the Sanskrit vary across languages. The Sanskrit root √gam is also used with prepositions in words that mean “understand,” so a secondary denotation of the term is to “understand” things “as they are” (tathā). The Chinese settled on the translation “thus come one” (rulai). The Tibetan translation de bzhin gshegs pa reflects the ambiguity of the Sanskrit and can mean either “one who has thus gone” or “one who has thus come.” The Pāli commentaries typically provide eight (and sometimes as many as sixteen) denotations of tathāgata, some of which may be of pre-or non-Buddhist origin, perhaps deriving from the [JAINA](#) tradition. In the early Pāli scriptures, the term seems to evoke the infinite knowledge of the Buddha, with little attempt to provide a clear etymology. Later commentators would offer a number of interpretations, among the most common

of which are that the Buddha has “thus come” into the world like the other buddhas of the past, or that he has “thus gone” on to achieve [NIRVĀNA](#) like the other buddhas of the past. Other explanations equate it with the word [TATHATĀ](#).

[tathāgatabhūmi](#). (T. de bzhin gshegs pa'i sa; C. rulai di; J. nyoraiji; K. yōrae chi 如來地). The “stage of a thus gone one,” the name given in the [LAṆKĀVATĀRASŪTRA](#) to an eleventh ground or stage ([BHŪMI](#)) of the [BODHISATTVA](#) path that constitutes the fruition of buddhahood (buddhaphala). The tenth [BODHISATTVABHŪMI](#), [DHARMAMEGHĀ](#), the culminating stage of the “path of cultivation” ([BHĀVANĀMĀRGA](#)), still contains both subtle remnants of the cognitive obstructions ([JÑEYĀVARANA](#)) as well as seeds of the afflictive obstructions ([KLEŚĀVARANA](#)). These obstructions will be completely eradicated through the diamond-like samādhi ([VAJROPAMASAMĀDHI](#)), which marks the transition to the “ultimate path” ([NISTHĀMĀRGA](#)), or the “path where no further training is necessary” ([AŚAIKṢAMĀRGA](#)). This stage is the tathāgatabhūmi, which is also sometimes known as the “universally luminous” (samantaprabhā).

[tathāgatagarbha](#). (T. de bzhin gshegs pa'i snying po; C. rulaizang; J. nyoraizō; K. yōraejang 如來藏). In Sanskrit, variously translated as “womb of the [TATHĀGATAS](#),” “matrix of the tathāgatas,” “embryo of the tathāgatas,” “essence of the tathāgatas”; the term probably means “containing a tathāgatha.” It is more imprecisely interpreted as the “buddha-nature,” viz., the potential to achieve buddhahood that, according to some [MAHĀYĀNA](#) schools, is inherent in all sentient beings. The tathāgatagarbha is the topic of several important Mahāyāna sūtras, including the [TATHĀGATAGARBHASŪTRA](#) (with its famous nine similes about the state), the [ŚRĪMĀLĀDEVĪSIMHANĀDASŪTRA](#), the [MAHĀPARINIRVĀNASŪTRA](#), and the [LAṆKĀVATĀRASŪTRA](#) (where it is identified with the [ĀLAYAVIJÑĀNA](#)), as well as the important Indian [ŚĀSTRA](#), the [RATNAGOTRAVIBHĀGA](#) (also known as the *Uttaratantra*), with a commentary by [ASAṄGA](#). The concept is also central to such East Asian apocryphal scriptures as the [DASHENG QIXIN LUN](#) and the [KŪMGANG SAMMAE KYŎNG](#). The concept of tathāgatagarbha seems to have evolved from a relatively straightforward inspiration that all beings are capable of achieving buddhahood to a more complex doctrine of an almost genetic determination that all beings would eventually become buddhas; the *Laṅkāvatāra* goes so far as to describe the tathāgatagarbha itself as possessing the thirty-two marks of a superman ([MAHĀPURUSALAKṢANA](#)). Tathāgatagarbha thought seeks to answer the question

of why ignorant beings are able to become enlightened by suggesting that this capacity is something innate in the minds of all sentient beings, which has become concealed by adventitious afflictions ([ĀGANTUKAKLEŚA](#)) that are extrinsic to the mind. “Concealment” (S. *saṃdhi/abhisam̐dhi*; C. *yinfu*) here suggests that the *tathāgatagarbha* by the presence of the afflictions; or, second, it is an active agent of liberation, which secrets itself away inside the minds of sentient beings so as to inspire them toward enlightenment. The former passive sense is more common in Indian materials; the latter sense of *tathāgatagarbha* as an active soteriological potency is more typical of East Asian presentations of the concept. *Tathāgatagarbha* thought could thus claim that enlightenment need involve nothing more rigorous than simply relinquishing the mistaken notion that one is deluded and accepting the fact of one’s inherent enlightenment (see also [BENJUE](#); [HONGAKU](#)). The notion of *tathāgatagarbha* was a topic of extensive commentary and debate in India, Tibet, and East Asia. It was not the case, for example, that all Mahāyāna exegetes asserted that all sentient beings possess the *tathāgatagarbha* and thus the capacity for enlightenment; indeed, the [FAXIANG ZONG](#), an East Asian strand of [YOGĀCĀRA](#), famously asserted that some beings could so completely lose all aspiration for enlightenment that they would become “incorrigible” ([ICCHANTIKA](#)) and thus be forever incapable of liberation. There was also substantial debate as to the precise nature of the *tathāgatagarbha*, especially because some of its descriptions made it seem similar to the notion of a perduring self ([ĀTMAN](#)), a doctrine that is anathema to most schools of Buddhism. The *Śrīmālādevīsīṃhanāda*, for example, described the *tathāgatagarbha* as endowed with four “perfect qualities” ([GUNAPĀRAMITĀ](#)): permanence, purity, bliss, and self, but states that this “self” is different from the “self” ([ĀTMAN](#)) propounded by the non-Buddhists. In an effort to avoid any such associations, [CANDRAKĪRTI](#) explains that the *tathāgatagarbha* is not to be understood as an independent quality but rather refers to the emptiness ([ŚŪNYATĀ](#)) of the mind; it is this emptiness, with which all beings are endowed, that serves as the potential for achieving buddhahood. In Tibet, Candrakīrti’s view was taken up by the [DGE LUGS](#) sect, while the more literal view of the *tathāgatagarbha* as an ultimately real nature obscured by conventional contaminants was asserted most famously by the [JO NANG](#). Both the extensive influence of the doctrine and the controversy it provoked points to an ongoing tension in the Mahāyāna between the more apophatic discourse on emptiness, found especially in the [PRAJÑĀPĀRAMITĀ](#) sūtras, and the more substantialist descriptions of the ultimate reality implied by such terms as *tathāgatagarbha*,

[DHARMADHĀTU](#), and [DHARMAKĀYA](#). The term is also central to the larger question of whether enlightenment is something to be achieved through a sequence of practices or something to be revealed in a flash of insight (see [DUNWU](#)). See also [HIHAN BUKKYŌ](#).

[Tathāgatagarbhasūtra](#). (T. De bzhin gshegs pa'i snying po'i mdo; C. Dafangdeng rulaizang jing; J. Daihōdō nyoraizōkyō; K. Taebangdŭng yŏraejang kyŏng 大方等如來藏經). In Sanskrit, “Discourse on the Embryo of the [TATHĀGATAS](#)”; also known by the longer title of *Tathāgatagarbhanāmavaipulyasūtra*, an influential Mahāyāna sūtra, and the earliest to set forth the doctrine of the womb or embryo of buddhahood ([TATHĀGATAGARBHA](#)). The sūtra, which is preserved only in Chinese and later Tibetan translations, was probably composed in the second half of the third century CE. The sūtra, set ten years after the Buddha’s enlightenment, opens with the Buddha seated on Vulture Peak ([GRDHRAKŪTAPARVATA](#)) surrounded by one hundred thousand monks and bodhisattvas equal in number to the sands of the Ganges ([GAṄĀNADĪVĀLUKĀ](#)). The Buddha causes myriad closed lotuses to fill the sky, each enclosing a buddha who is emitting rays of light. The petals of the lotuses open and then became wilted and finally rotten, but the buddhas seated upon them remain pristine. The bodhisattva Vajramati then asks the Buddha to explain what has occurred. In the most famous section of the sūtra, the Buddha then sets forth nine similes of the tathāgatagarbha. (1) Just as there was a buddha seated cross-legged within decaying lotus petals, so in each sentient being, there is a buddha encased in the sheaths of the afflictions. (2) Just as a honeycomb is surrounded by bees, so the buddhahood within each being is surrounded by afflictions and impurities; just as the beekeeper removes the bees, so the Buddha removes the afflictions and impurities of sentient beings. (3) Just as a kernel is encased in a husk, so buddhahood is encased by the afflictions. (4) Just as a piece of gold covered with excrement would be hidden until its presence was revealed by a god, so the buddha within each being, covered as he is by the filth of the afflictions, remains unknown until a buddha reveals his presence. (5) Just as a treasure buried deep beneath the house of a poor man would be unknown to him, leaving him to presume he was poor, so is the buddha-nature hidden deeply within all beings unknown to them, causing them to wander in [SAMŚĀRA](#). The Buddha sees the body of a buddha within all beings and teaches them how to become treasures of the dharma. (6) Just as hidden within a fruit is a seed and sprout that will produce a tree, so the Buddha sees the body of a buddha within

the sheaths of the afflictions. (7) Just as a jeweled image of the Buddha wrapped in putrid rags would lie unnoticed by the side of the road until its presence was revealed by a god, so the body of a buddha wrapped in afflictions inside even an animal is seen only by the Buddha. (8) Just as a poor and ugly woman who carried the embryo of a universal emperor ([CAKRAVARTIN](#)) in her womb would remain discouraged by her lot, so sentient beings who carry a buddha within them continue to be distressed by saṃsāra. (9) Just as a golden statue remains hidden within a blackened clay mold until the goldsmith breaks the mold with a hammer, so the knowledge of a buddha remains invisible within the afflictions until the Buddha uses the dharma to remove the afflictions.

[tathāgatagotra](#). (T. de bzhin gshegs pa'i rigs; C. rulai xing; J. nyoraishō; K. yōrae sōng 如來性). In Sanskrit, “tathāgata lineage”; a term used to describe that element in the mental continuum ([SAMTĀNA](#)) of a sentient being that makes it destined to achieve enlightenment as a buddha. In this sense, the term is roughly synonymous with [TATHĀGATAGARBHA](#) and [BUDDHADHĀTU](#) (“buddha element,” or “buddha-nature”). The Mahāyāna schools differ on the question of whether all sentient beings are endowed with this lineage, with the [MADHYAMAKA](#) asserting that they are, while some followers of the [YOGĀCĀRA](#) argue that beings are endowed with different lineages, which will lead them to follow the paths of the [ŚRĀVAKA](#) or [PRATYEKABUDDHA](#) to become an [ARHAT](#), and still other beings have no spiritual lineage at all (see [ICCHANTIKA](#)).

[tathāgatakula](#). (T. de bzhin gshegs pa'i rigs; C. rulai bu; J. nyoraibu; K. yōrae pu 如來部). In Sanskrit, the “tathāgata family”; one of the three families of the [KRIYĀTANTRA](#), together with the [VAJRAKULA](#) (whose chief deity is [VAJRASATTVA](#)) and the [PADMAKULA](#) (whose chief deity is [AVALOKITEŚVARA](#)). The chief deity of the tathāgatakula is often [ŚĀKYAMUNI](#). In the three-family schema, the tathāgatakula is considered the supreme of the three families, with initiates of this family allowed to perform the rituals of the other two. In the evolution to four and then five buddha families (with the addition of the [RATNAKULA](#) and then the [KARMAKULA](#)), the tathāgatakula remains supreme, with [VAIROCANA](#) then becoming the main deity of the tathāgatakula and holding the central position in many [MANDALAS](#). Each of the five families is associated with one of the five [SKANDHAS](#), five wisdoms ([JÑĀNA](#)), five afflictions ([KLEŚA](#)), five elements, and five colors. For the tathāgata or buddha family, these are the form ([RŪPA](#)) skandha, the wisdom ([JÑĀNA](#)) of the [DHARMADHĀTU](#) (dharmadhātujñāna), the

affliction of ignorance ([AVIDYĀ](#)), the element space ([ĀKĀŚA](#)), and the color blue. See [PAÑCATATHĀGATA](#).

[Tathāgatoṣṇīśasitātapatrā](#). (T. De bzhin gshegs pa'i gtsug tor nas byung ba'i gdugs dkar po can). In Sanskrit, “She of the White Parasol [who arose from] the [USNĪSA](#) of the [TATHĀGATA](#)”; also known as Uṣṇīśasitātapatrā. This goddess is a female protective deity, sometimes associated with [TĀRĀ](#), who is propitiated to remove illness and other obstacles. Her most famous form is depicted with a thousand heads, a thousand hands, and a thousand feet.

[tathatā](#). (T. de bzhin nyid/de kho na nyid; C. zhenru; J. shinnyo; K. chinyō 眞如). In Sanskrit, “suchness” or “thusness”; a term for ultimate reality, especially in the [MAHĀYĀNA](#) schools. Along with terms such as [DHARMATĀ](#), [DHARMADHĀTU](#), and [BHŪTAKOTI](#), it has a more “positive” connotation than emptiness ([ŚŪNYATĀ](#)), referring to the eternal nature of reality that is “ever thus” or “just so” and free of all conceptual elaborations. In [YOGĀCĀRA/VIJÑĀNAVĀDA](#), the term refers to the ultimate wisdom that is free from the subject–object distinction ([GRĀHYAGRĀHAKAVIKALPA](#)). Buddhahood is sometimes described as tathatāviśuddhi, or “purity of suchness,” that is, ultimate reality purified of all obstructions. In the [MADHYAMAKA](#) school, any attempt to substantiate the nature of reality is rejected, and tathatā is instead identified with emptiness and the cessation of all dichotomizing tendencies of thought. The Chinese equivalent, [ZHENRU](#), is a seminal term in in East Asian Buddhist philosophy, figuring prominently, for example, in the [DASHENG QIXIN LUN](#). See also [TATTVA](#).

[tathyasamvṛti](#). (T. yang dag pa'i kun rdzob). In Sanskrit, “real conventionality”; a term used in [MADHYAMAKA](#) philosophy in connection with [MITHYĀSAMVṚTI](#), “false conventionality.” Real conventionality is a conventional truth ([SAMVṚTISATYA](#)) in the sense that it is not the object of an ultimate consciousness and is falsely imagined to possess [SVABHĀVA](#), or intrinsic existence. However, although it is falsely conceived, it is not utterly nonexistent (like a false conventionality) because a real conventionality is capable of performing its function ([ARTHAKRIYĀ](#)). For example, a lake would be a true conventionality because it can perform the function of a lake, whereas a mirage would be a false conventionality because it could not perform the function of a lake. Only a real conventionality is a conventional truth; it is true in the sense that it can perform a function. A false conventionality is not a conventional truth because it does not exist even conventionally.

[tatrsthlabdhajñāna](#). (S). See [PRSTHALABDHAIÑĀNA](#).

[tattva](#). (T. de nyid/de kho na nyid; C. shixiang; J. jissō; K. silsang 實相). In Sanskrit, lit., “thatness”; a term with two important denotations. First, it can mean “ultimate reality,” a synonym of [PARAMĀRTHA](#), the reality, free from all conceptual elaboration, that must be understood in order to be liberated from rebirth as well as the inexpressible reality that is the object of the Buddha’s omniscient consciousness. Second, more prosaically, the term may be translated as “principle” and refer to the central doctrine of a particular philosophical school, as in the title of the works [TATTVASAMGRAHA](#) or [TATTVASIDDHI](#). When contrasted with [TATHATĀ](#), tattva is the essential identity of a particular dharma, while tathatā is the common essential reality in which all dharmas partake.

[Tattvaratnāvalī](#). (T. De kho na nyid rin po che’i phreng ba). In Sanskrit, the “Necklace of Principles”; a scholastic exposition of Buddhist [TANTRA](#) by Advayavajra, the apparent pen name of the Indian master Maitrīpāda, who flourished in the late tenth and early eleventh centuries CE. The work provides some insight into how Buddhism was understood in the late period of Indian Buddhism, dividing it into the three vehicles of the [ŚRĀVAKAYĀNA](#), [PRATYEKABUDDHAYĀNA](#), and [MAHĀYĀNA](#), with the Mahāyāna further subdivided into the “way of the perfections” (pāramitānaya) and the “way of mantra” (mantranaya). The work also states that the Madhyamaka school is divided into the two, the Māyopamādvayavāda, or “Proponents of Illusion-like Nonduality,” and the Sarvadharmāpratiṣṭhānavāda, or “Proponents That All Dharmas Are Nonabiding.”

[Tattvasamgraha](#). (T. De kho na nyid bsdus pa). In Sanskrit, the “Compendium of Principles”; one of the major works of the eighth-century Indian master [ŚĀNTARAKṢITA](#). It is a massive work in 3,646 verses, in twenty-six chapters. The verses themselves are called the *Tattvasamgrahakārikā*; there is also an extensive prose commentary by Śāntarakṣita’s student, [KAMALAŚĪLA](#), entitled the *Tattvasamgrahapañjikā*. The *Tattvasamgraha* is a polemical text, surveying the philosophical positions of a wide variety of non-Buddhist (and some Buddhist) schools on a number of topics or principles ([TATTVA](#)) and demonstrating their faults. These topics include matter (prakṛti), the person ([PURUSA](#)), God (īśvara), the self ([ĀTMAN](#)), and valid knowledge ([PRAMĀNA](#)), among many others. Among the schools whose positions are presented and critiqued are Sāṃkhya, Nyāya,

Vaiśeṣika, Mīmāṃsā, Advaita Vedānta, [JAINA](#), and [VATSĪPUTRĪYA](#). The work is of great value to scholars for its presentation (albeit polemical) of the tenets of these schools as they existed in eighth-century India. The commentary often provides the names and positions of specific philosophers of these schools. ¶ The term is also the abbreviated title of the *Sarvatathāgatātattvasaṃgraha*; see [SARVATATHĀGATATATTVASAMGRAHA](#).

[Tattvasiddhi](#). [alt. Tattvasiddhi-nāma-prakaraṇa] (T. De kho na nyid grub pa zhes bya ba'i rab tu byed pa). In Sanskrit, “Proof of Reality”; a work of tantric philosophy, extant in Sanskrit, attributed to the eighth-century Indian master [ŚĀNTARAKSITA](#). The text presents a philosophical argument in support of the achievement of the states of yogic perception ([YOGIPRATYAKSA](#)) and bliss ([SUKHA](#)) through tantric practice, citing a number of early tantras by name. In the work, the author argues that bodhisattvas endowed with [PRAJÑĀ](#) and [UPĀYA](#) are not bound by ethical conventions.

***[Tattvasiddhi](#)**. (C. Chengshi lun; J. Jōjitsuron; K. Sōngsil non 成實論). In Sanskrit, the “Proof of Reality”; an important [ABHIDHARMA](#) text by [HARIVARMAN](#), probably composed between 250 and 350 CE. (The Sanskrit reconstruction **Tattvasiddhi* is now generally preferred over the outmoded rendering **Satyasiddhi*.) The text was translated into Chinese by [KUMĀRAJĪVA](#) and was studied widely in China during the fifth and sixth centuries. The text is valued for its presentation of the abhidharma of the [BAHUŚRUTIYA](#) school of Indian Buddhism and for its refutations of the positions of rival schools, which are organized in terms of ten points of controversy, including the person ([PUDGALA](#)), the status of past and present, and the existence of an intermediate state ([ANTARĀBHAVA](#)) between death and rebirth. See the extensive discussion in [CHENGSHI LUN](#).

[Taung-hpila Pagoda](#). A pagoda (Burmese, [JEDI](#)) built by King Thalun of [AVA](#) (r. 1629–1648) on the Taung-hpila spur of the Sagaing Hills in Upper Burma (Myanmar). Thalun also built a monastery at this locale, whose abbot came to be known as the royal preceptor, or “[SAYADAW](#),” of Taung-hpila. This first Taung-hpila Sayadaw wrote a famous commentary in Pāli on the five books of the [VINAYA](#) titled the *Vinayālaṅkāraṭīkā*. He also composed a bilingual Pāli–Myanmar commentary (nissaya) on the same five books, but when he discovered that another monk had already written such a treatise, Taung-hpila Sayadaw buried his own commentary in Thalun’s pagoda. It was because of this act that

the pagoda came to be known as Taung-hpila Pagoda. The works of Taung-hpila Sayadaw and other scholars of the Ava period were renowned throughout the [THERAVĀDA](#) world and were highly praised by the monks of Sri Lanka for their erudition.

Taxila. The Greek name for the Indian city of [TAKSAŚILĀ](#), an important center of Buddhist learning in the [GANDHĀRA](#) region (in Punjab province of modern Pakistan). See [TAKSAŚILĀ](#).

Teishō. (J) (提唱). In Japanese, “[ZEN](#) lecture.” See [TICHANG](#).

Tejaprabha. (C. Chishengguang rulai; J. Shijōkō nyorai; K. Ch’ilsōnggwang yōrae 熾盛光如來). In Sanskrit, “Effulgence”; proper name for a buddha who personifies the Pole Star as master of all asterisms, and especially the seven stars of the Big Dipper, viz., Ursa Major (see [BEIDOU QIXING](#)); this buddha is so named because light is said to stream out from every pore of his body. Tejaprabha was a popular figure within Chinese esoteric Buddhist circles after the eighth century, when the worship of the seven stars became well established during the Tang dynasty. While the cult of Tejaprabha Buddha gradually disappeared in China after the thirteenth century, the worship of the seven stars (K. ch’ilsōng) was transmitted to Korea, where it continues even today. Starting in the twelfth century, during the Koryō dynasty, court rituals to the seven stars and Tejaprabha [TATHĀGATA](#) were frequently performed, and worship of the seven stars spread widely during the following Chosŏn dynasty (1392–1910). Chosŏn-period monasteries commonly included “seven-stars shrines” (ch’ilsōnggak), inside of which were hung seven-stars paintings ([T’AENGHWA](#)), which typically depicted the seven-star tathāgatas, with Tejaprabha presiding at the center. There were also several comprehensive ritual and liturgical manuals compiled during the Chosŏn dynasty and Japanese colonial period in Korea, which include rituals and invocations to the seven stars and Tejaprabha Tathāgata, most dedicated to the prolongation of life.

tejas. [alt. tejodhātu] (P. tejo; T. me; C. huoda; J. kadai; K. hwadae 火大). In Sanskrit, lit. “fire,” viz., the property of “temperature” or “luminosity”; one of the four “great elements” ([MAHĀBHŪTA](#)) or “major elementary qualities” of which the physical world of materiality ([RŪPA](#)) is composed, along with earth (viz., solidity, [PṚTHIVĪ](#)), water (viz., cohesion, [ĀPAS](#)), and wind (viz., motion, movement, [VĀYU](#)). “Fire” is understood to be that which gives light and provides

the other elements with varying temperatures. Because fire, however, persists (viz., earth), has cohesion (viz., water), and moves (viz., wind), the existence of all the other three elements may also be inferred even in that single element. In the physical body, this element is associated with physical warmth, digestion, and maturation or aging.

tejokasina. (S. *tejaskṛtsnāyatana*; T. *me zad par gyi skye mched*; C. *huo bianchu*; J. *kahensho*; K. *hwa p'yōnch'ō* 火遍處). In Pāli, “fire device”; one of the ten devices (**KASINA**) described in the **PĀLI** tradition for developing meditative concentration (P. **JHĀNA**, S. **DHYĀNA**); the locus classicus for their exposition is the **VISUDDHIMAGGA** of **BUDDHAGHOSA**. Ten *kaṣiṇa* are enumerated there: visualization devices that are constructed from the elements (**MAHĀBHŪTA**) of earth, water, fire, air; the colors blue, yellow, red, white; and light and empty space. In each case, the meditation begins by looking at the physical object; the perception of the device is called the “beginning sign” or “preparatory sign” (P. **PARIKAMMANIMITTA**). Once the object is clearly perceived, the meditator then memorizes the object so that it is seen as clearly in his mind as with his eyes. This perfect mental image of the device is called the “eidetic sign,” or “learning sign” (P. **UGGAHANIMITTAS**), and serves as the subsequent object of concentration. As the internal visualization of this eidetic sign deepens and the five hindrances (**NĪVARANA**) to mental absorption are temporarily allayed, a “representational sign” or “counterpart sign” (P. **PATIBHĀGANIMITTA**) will emerge from out of the eidetic image, as if, the texts say, a sword is being drawn from its scabbard or the moon is emerging from behind clouds. The representational sign is a mental representation of the visualized image, which does not duplicate what was seen with the eyes but represents its abstracted, essentialized quality. Continued attention to the representational sign will lead to all four of the meditative absorptions of the subtle-materiality realm (**RŪPADHĀTU**). In the case of the *tejokaṣiṇa*, the meditator begins by making a fire of dried heartwood, hanging a curtain of reeds, leather, or cloth in front of it, then cutting a hole four fingerwidths in size in the curtain. He then sits in the meditative posture and observes the flame (rather than the sticks or the smoke) through the hole, thinking, “fire, fire,” using the perception of the flame as the preparatory sign. The eidetic sign, which is visualized without looking at the flame, appears as a tongue of flame and continually detaches itself from the fire. The representational sign is more steady, appearing motionless like a red cloth in space, a gold fan, or a gold column. With the representational sign achieved,

progress through the various stages of absorption may begin. The tejokasiṇa figures prominently in the dramatic story of the passing away of the Buddha's attendant, [ĀNANDA](#). According to [FAXIAN](#), when Ānanda was 120 years old, he set out from [MAGADHA](#) to [VAIŚĀLĪ](#) in order to die. Seeking control of the saint's relics after his death, [AJĀTAŚATRU](#) followed him to the Rohīni River, while a group for Vaiśālī awaited him on the other side. Not wishing to disappoint either group, Ānanda levitated to the middle of the river in the meditative posture, preached the dharma, and then meditated on the tejokasiṇa, which caused his body to burst into flames, with his relics dividing into two parts, one landing on each side of the river.

temple. See [VIHĀRA](#); [CHÖL](#); [TERA](#); [DGON PA](#).

Tendaishū. (天台宗). In Japanese, “Platform of Heaven School,” the Japanese counterpart of the Chinese [TIANTAI ZONG](#), the name of the Chinese tradition from which Tendai derives. The pilgrim–monk [SAICHŌ](#) (767–822) is presumed to have laid the doctrinal and institutional foundations on which the Tendai tradition in Japan was eventually constructed. Like its Chinese counterpart, the Japanese Tendai tradition took the [SADDHARMAPUNĀRIKASŪTRA](#) (“Lotus Sūtra”) and the commentaries on this sūtra by [TIANTAI ZHIYI](#) as its central scriptures. The Tendai tradition also came to espouse the doctrine of original or inherent enlightenment ([HONGAKU](#)). An important step in the development of an autonomous Japanese Tendai tradition was the establishment of a [MAHĀYĀNA](#) precepts platform (daijō kaidan). Saichō made numerous petitions to the court to have an independent Mahāyāna precepts platform established on [HIEIZAN](#) (see [ENRYAKUJI](#)), which would provide him with institutional autonomy from the powerful monasteries of the well-established Buddhist sects in Nara. Saichō's petition was finally granted after his death in 823. The following year, his disciple [GISHIN](#) (781–833) was appointed head (zasu) of the Tendai tradition, and several years later, a precepts platform was constructed at the monastery of Enryakuji on Mt. Hiei. The Tendai tradition prospered under the leadership of [ENNIN](#) (794–864) and [ENCHIN](#) (814–891). A controversy in 993 between the lineages of Enchin and Ennin over the issue of succession led to a schism between Ennin's Sanmon branch at Mt. Hiei and Enchin's Jimon branch at Onjōji (see [MIIDERA](#)). The Tendai tradition also produced important figures in the history of the [PURE LAND](#) movement in Japan, such as [GENSHIN](#), [RYŌNIN](#), [HŌNEN](#), and [SHINRAN](#). [DŌGEN KIGEN](#), founder of the [SŌTŌSHŪ](#) of [ZEN](#), began his career in the Tendai tradition,

practicing as a monk at Mt. Hiei, as did [NICHIREN](#). From the medieval period up through the Tokugawa era (1600–1868), Tendai was a dominant force in Japanese Buddhism. By extension, it had considerable political influence at the court in Kyōto and later with the Tokugawa Bakufu. In order to weaken the powerful Mt. Hiei institution, at the start of the Tokugawa era, the shogunate constructed Tō Eizan in the capital of Edo (“tō” means eastern, thus setting up a juxtaposition with the western Mt. Hiei), which received more funding and prestige than its western counterpart. A major factor in the success of the Tendai institution in Japan was its incorporation of esoteric Buddhism, or [MIKKYŌ](#), beginning with a limited number of tantric practices that Saichō brought back with him from China. The extensive training that [KŪKAI](#) (774–835), the founder of the [SHINGONSHŪ](#), received in esoteric Buddhism in China ultimately rivaled that of Saichō, a challenge that would eventually threaten Tendai’s political sway at court. However, after Saichō’s disciples Ennin, Enchin, and [ANNEN](#) (841–889?) returned from China with the latest esoteric practices, Tendai’s preeminence was secured. This Tendai form of mikkyō, which Ennin called [TAIMITSU](#), was considered equal to the teachings of the *Saddharmapuṇḍarīkasūtra*. Tendai also heavily influenced the esoteric practices of [SHUGENDŌ](#) centers around the country. During the Tokugawa era, many of these mountain practice sites became formally institutionalized under Tendai Shugendō (referred to as Honzan), and were administered by the monastery of Shōgoin in Kyōto. In addition, Tendai monks were among those who made major efforts to incorporate local native spirits ([KAMI](#)) into Tendai practice, by acknowledging them as manifestations of the Buddha (see [HONJI SUJAKU](#)).

[ten directions](#). See [DAŚADIŚ](#).

[Tenkei Denson](#). (天桂傳尊) (1648–1735). Japanese [ZEN](#) master and scholar in the [SŌTŌSHŪ](#). Tenkei was born in Kii (present-day Wakayama prefecture). He left home at an early age and served under various teachers during his youth. In 1677, he became the dharma heir of Gohō Kaion (d.u.) at the temple of Jōkoji in Suruga (present-day Shizuoka prefecture). He served as abbot of various other temples throughout his career. Tenkei is often remembered as the opponent of fellow Sōtō adept [MANZAN DŌHAKU](#) and his efforts to reform the practice of [IN’IN EKISHI](#), or “changing teachers according to temple,” whereby a monk would take the dharma lineage of the monastery where he was appointed abbot. Tenkei rejected Manzan’s call for direct, face-to-face transmission (menju shihō) from a

single master to a disciple (isshi inshō) and supported the in'in ekishi custom. The military bakufu favored Manzan's reforms and Tenkei's efforts were ultimately to no avail. Tenkei is also remembered for his extensive commentary to [DŌGEN KIGEN](#)'s magnum opus [SHŌBŌGENZŌ](#), entitled the *Shōbōgenzō benchū*.

[Ten Oxherding Pictures](#). See [OXHERDING PICTURES, TEN](#).

tera. (寺). Vernacular Japanese term for a Buddhist “temple” or “monastery”; synonymous with the Sino-Japanese reading of ji. The term is presumed to derive either from the vernacular Korean term [CHŎL](#) or the Pāli/Prakrit term THERA (elder).

Tevijjasutta. (C. Sanming jing; J. Sanmyōkyō; K. Sammyōng kyōng 三明經). In Pāli, “Discourse on the Three-fold Knowledge”; the thirteenth sutta of the [DĪGHANIKĀYA](#) (a [DHARMAGUPTAKA](#) recension appears as the twenty-sixth [SŪTRA](#) in the Chinese translation of the [DĪRGHĀGAMA](#)); preached by the Buddha to the two brāhmaṇa youths, Vāseṭṭha and Bhāradvāja, in a mango grove outside the village of Manasākata in Kosala. Vāseṭṭha and Bhāradvāja request the Buddha to resolve their debate as to which path proposed by various brāhmaṇa teachers learned in the three Vedas truly leads to union with the god [BRAHMĀ](#). The Buddha responds that since none of the brāhmaṇa teachers learned in the three Vedas themselves have attained union with Brahmā, none of the paths they teach can lead there. They are unable to attain this goal, he continues, because their minds are obstructed by the five hindrances ([NĪVARANA](#)) of sensuous desire ([KĀMACCHANDA](#)), malice ([VYĀPĀDA](#)), sloth and torpor (P. thīnamiddha, S. [STYĀNA-MIDDHA](#)), restlessness and worry (P. uddhaccakukkucca, S. [AUDDHATYA-KAUKRTYA](#)), and doubt (P. vicikicchā, S. [VICIKITSĀ](#)) about the efficacy of the path. The Buddha then describes the true path by means of which a disciple may attain union with Brahmā as follows: the disciple awakens to the teaching, abandons the household life, and enters the Buddhist order, trains in the restraint of action and speech, and observes even minor points of morality, guards the senses, practices mindfulness, is content with little, becomes freed from the five hindrances and attains joy and peace of mind. Then the disciple pervades the four quarters with loving-kindness (P. mettā; S. [MAITRĪ](#)), then compassion ([KARUNĀ](#)), sympathetic joy ([MUDITĀ](#)), and finally equanimity (P. upekkhā; S. [UPEKSĀ](#)). In this way one attains union with Brahmā. Vāseṭṭha and Bhāradvāja are pleased with the discourse and become disciples of the Buddha. In adapting the term tevijja (S. [TRIVIDYA](#)), the Buddha is intentionally redefining the meaning

of the three Vedas, contrasting his three knowledges with that of brāhmaṇa priests who have merely memorized the three Vedas.

Thammakai. (Thai). See [DHAMMAKĀYA](#).

Thammayut. (P. Dhammayuttika). In Thai, “Adherents of the Dharma,” the name of the “reformed” minority school ([NIKĀYA](#)) of the Thai tradition of Buddhism; sometimes also seen transcribed as Thommayut, or by its Pāli equivalency, Dhammayuttika. This fraternity was founded in 1830 by King [RĀMA IV](#) (Mongkut), who ruled from 1851 to 1868. From 1824 to 1851, before ascending the throne, Mongkut was a monk (P. [BHIKKHU](#); S. [BHIKSU](#)) in the Thai monastic community (P. [SAṄGHA](#); S. [SAMGHA](#)). Mongkut believed that superstition had corrupted the contemporary monastic community, obscuring the pure teachings of the tradition; he was also concerned that the monks of the predominate order, the [MAHANIKAI](#) (P. Mahānikāya), did not adhere strictly to the precepts of the [PĀLI VINAYA](#). In response, Mongkut drew on an ordination lineage from the Mon people of Burma (Myanmar) to establish this new reform tradition of Thai Buddhism. Mongkut also emphasized the rational aspects of Buddhism that made it compatible with science and modernity. Mongkut eventually became abbot of [WAT BOWONNIWET](#) in the Thai capital of Bangkok, which continues to this day to be the headquarters of the Thammayut sect. After becoming king, Mongkut continued to promote and sponsor his new school. In the nineteenth century, the Thammayut movement was also introduced into both Cambodia and Laos. Thammayut monks are known for being strict constructionists in their understanding of the precepts and seek to adhere closely to both the word and the spirit of the vinaya. For example, Thammayut monks strictly adhere to the practice of eating nothing in the afternoon (and often eating only one meal a day), never wearing sandals outside the monastery grounds, and never handling money. Since the time of [AJAHN MUN BHŪRIDATTA](#) (1870–1949), the Thammayut tradition has also been closely associated with the Thai forest-dwelling tradition (see [ARAÑÑAVĀSI](#)), whose monks engage in ascetic practices (Thai, [THUDONG](#), P. [DHUTANGA](#)) and meditation.

thang ka. In Tibetan, “scroll painting”; a Tibetan term for an image (usually of a deity or religious figure) drawn, painted, or sewn onto cloth (or sometimes paper), sewn into a border of silk brocade, and then mounted on dowels at the top and the bottom to allow the image to be rolled up and transported. It is the most common format for the presentation of Tibetan art. The term is also seen

spelled as thang kha and thang ga. See also [KWAEBUL](#); [T'AENGHWA](#).

[Thang stong rgyal po](#). (Tangtong Gyalpo) (1361–1485). A great adept famed throughout the Tibetan Buddhist world for his illustrious career as a [YOGIN](#) and teacher, as well as his many contributions to the fields of engineering, metallurgy, temple construction, and the performing arts. His biographies credit him with a life span of 124 years, during which he traveled widely throughout Tibet and the Himālayan regions, including India, Ladakh, Mongolia, China, and Bhutan. As a youth he studied under numerous masters and spent much of early life in meditation retreat. He received, and is said to have mastered, the corpus of teachings of the [SHANG PA BKA' BRGYUD](#) sect as well as the BYANG GTER (Northern Treasure) tradition of the [RNYING MA](#). He is venerated as a treasure revealer ([GTER STON](#)) who extracted treasure teachings ([GTER MA](#)) from the [CHIMS PHU](#) retreat complex near [BSAM YAS](#) monastery, from [STAG TSHANG](#) in Bhutan, and the region of [TSA RI](#) in southern Tibet. His best known teachings include instructions on the system known as “severance” ([GCOD](#)) and a visionary meditation [SĀDHANA](#) based on the bodhisattva of compassion [AVALOKITEŚVARA](#) called '*Gro don mkha' khyab ma* (“The Benefit of Others, Vast as Space”), which continues to be practiced by Tibetan Buddhists of many sectarian affiliations. Thang stong rgyal po is also remembered for his construction of iron chain-link bridges throughout Tibet and Bhutan—an activity inspired directly by visions of Avalokiteśvara. For this reason, he is often called Lcags zam pa, literally the “Iron Bridge Man,” and his lineage the “Iron Bridge” (lcags zam) tradition. He is most commonly depicted as holding links of iron chains in one hand. Thang stong rgyal po founded numerous geomantically important religious structures, including the great [STŪPA](#) of [GCUNG RIBOCHE](#) in western Tibet, which became an important seat of the master’s tradition, and the [ZLUM BRTSEGS](#) temple in Bhutan. Thang stong rgyal po is also traditionally acknowledged as the father of the Tibetan performing arts, with his image commonly displayed prior to theatrical performances.

[Thảo Đường](#). (草堂) (c. eleventh century). Vietnamese monk traditionally regarded as the founder of the third school of [THIÊN](#) in Vietnam. The [THIÊN UYÊN TẬP ANH](#) does not provide a full biography of Thảo Đường, giving only a list of the monks belonging to his school with a remark that he was the abbot of Khai Quốc monastery in the capital city of Thăng Long, and that he transmitted the lineage of the [XUEDOU CHONGXIAN](#) (980–1052) line of the [YUNMEN ZONG](#) of

Chinese [CHAN](#). The legend about Thảo Đường in the Vietnamese Buddhist tradition can be found in the *An Nam Chí Lược*. According to this source, Thảo Đường followed his teacher to live in Champa. King Lý Thánh Tông (1023–1072), in an expedition against Champa in 1069, captured him and gave him to a monk scribe as a servant. The king came to have great respect for Thảo Đường’s virtue and learning and made him state preceptor.

[Thar pa rin po che’i rgyan](#). (Tarpa rinpoche gyen). In Tibetan, “Jewel Ornament of Liberation”; a systematic presentation of Buddhist teachings and a seminal textbook for the [BKA’ BRGYUD](#) sect of Tibetan Buddhism written by [SGAM PO PA BSOD RNAM RIN CHEN](#). The text belongs to the genre of Tibetan literature known as [LAM RIM](#), or “stages of the path,” presenting an overview of the elementary tenets of [MAHĀYĀNA](#) doctrine through scriptural citation, philosophical reflection, and direct illustration. Its clear, concise, and unpedantic style has made it accessible to generations of readers. The doctrinal content reflects Sgam po pa’s training in both the [BKA’ GDAMS](#) sect and the tradition of [MAHĀMUDRĀ](#), fusing Buddhist theory prevalent in both [SŪTRA](#) and [TANTRA](#) and presenting what has been called *sūtra mahāmudrā*—a tradition of *mahāmudrā* that does not rely on prerequisite tantric initiations and commitments. Sgam po pa thus transmits the underlying insights of tantric theory outside traditional methods of the [VAJRAYĀNA](#). This system was later criticized by certain scholars such as [SA SKYA PANDITA KUN DGA’ RGYAL MTSHAN](#). The work is also commonly known as the *Dwags po thar rgyan*, after the author’s residence in the region of Dwags po (Dakpo).

[that](#). In Thai, “a relic” (S. [DHĀTU](#)), typically of the Buddha; in Thailand there are numerous monasteries known as “Wat Phra That” or [WAT MAHATHAT](#), which are said to house authentic relics of the Buddha. These monasteries are popular pilgrimage sites and have legends concerning their founding filled with descriptions of miraculous events and sometimes recounting the Buddha’s visit to that site. See also [ŚARĪRA](#).

[theg pa dgu](#). In Tibetan, the “nine vehicles”; an important formulation of the Buddhist path, especially in the [RNYING MA](#) sect of Tibetan Buddhism. In this schema, the three vehicles of [ŚRĀVAKAYĀNA](#), [PRATYEKABUDDHAYĀNA](#), and [BODHISATTVA YĀNA](#) and the three vehicles of [HĪNAYĀNA](#), [MAHĀYĀNA](#), and [VAJRAYĀNA](#) are reorganized into nine, with three groups of three. The first group is called the “causal vehicle of characteristics” (*rgyu mtshan nyid kyi theg pa*)

and consists of the śrāvakayāna, pratyekabuddhayāna, and bodhisattvayāna. The second group is called the “outer tantras” (phyi’i rgyud) and consists of [KRIYĀTANTRA](#), [CARYĀTANTRA](#) (also called upatantra), and [YOGATANTRA](#). The third group is called the “inner tantras” (nang gi rgyud) and consists of [MAHĀYOGA](#), [ANUYOGA](#), and [ATIYOGA](#) (also called [RDZOGS CHEN](#)). Although there are precedents for such a schema in Indian sources, this specific formulation appears to have originated in Tibet.

[Theragāthā](#). In Pāli, “Verses of the [Male] Elders”; the eighth book of the [KHUDDAKANIKĀYA](#) of the Pāli [SUTTAPITAKA](#), a collection of 1,279 verses ascribed to 264 elder monks (P. *thera*, S. [STHAVIRA](#)), organized by the number of verses in each poem. The *Theragāthā* contains verses said to have been composed by enlightened elder monks during the lifetime of the Buddha or shortly thereafter. In some instances, the verses recount the life stories of the elders, in others they record their spontaneous utterances of ecstasy at the moment of their enlightenments. Not all verses are said to have been recited by the monk in question; sometimes they are addressed to a particular monk or describe that monk. The dates of the verses are difficult to determine; according to tradition, the collection was recited at the first Buddhist council (see [COUNCIL, FIRST](#)), but some of its verses are said to have been recited at the second or third Buddhist councils ([SAMGĪTI](#)), suggesting that the verses were composed over the course of several centuries. A large number of the verses describe the path to and attainment of enlightenment, while others take the form of religious instruction. The pervasive sense of ecstasy appearing in these verses belies the common Western scholarly portrayal of the [ARHAT](#) as apathetic, cool, and aloof.

[Theravāda](#). (S. *Sthaviravāda*/Sthaviranikāya; T. Gnas brtan sde pa; C. Shangzuo bu; J. Jōzabu; K. Sangjwa pu 上座部). In Pāli, “Way of the Elders” or “School of the Elders”; a designation traditionally used for monastic and textual lineages, and expanded in the modern period to refer to the dominant form of Buddhism of Sri Lanka and Southeast Asia, which is associated with study of the Pāli Buddhist canon (P. *tipiṭaka*; S. [TRIPITAKA](#)). The denotation of the term Theravāda is fraught with controversy. Buddhaghosa’s commentaries to the four Pāli [NIKĀYAS](#) typically refer to himself and his colleagues as [MAHĀVIHĀRAVĀSIN](#) (lit. “Dweller in the Great Monastery”), the name of the then dominant religious order and ordination lineage in Sri Lanka; in his fifth-century commentary to the Pāli [VINAYA](#), the [SAMANTAPĀSĀDIKĀ](#), Buddhaghosa uses the term Theravāda, but

in reference not to a separate school but to a lineage of elders going back to the first Buddhist council (see [SAMGĪTI: COUNCIL, FIRST](#)). According to some accounts, the term Theravāda is equivalent to the Sanskrit term *[STHAVIRAVĀDA](#) (“School of the Elders”), which is claimed to have been transmitted to Sri Lanka in the third century BCE. However, the term Sthaviravāda is not attested in any Indian source; attested forms (both very rare) include sthāvira or sthāvārīya (“followers of the elders”). In addition, the Tibetan and Sinographic renderings of the term both translate the Sanskrit term *[STHAVIRANIKĀYA](#), suggesting again that Sthaviravāda or Theravāda was not the traditional designation of this school. By the eleventh century CE, what is today designated as the Theravāda became the dominant form of Buddhism in Sri Lanka, achieving a similar status in Burma in the same century, and in Cambodia, Thailand, and Laos by the thirteenth and fourteenth centuries. As a term of self-designation for a major branch of Buddhism, Theravāda does not come into common use until the early twentieth century, with [ĀNANDA METTEYYA](#) playing a key role. In the nineteenth century, the Buddhism of Sri Lanka and Southeast Asia was typically referred to in the West as “Southern Buddhism,” in distinction to the “Northern Buddhism” of Tibet and East Asia. (See, e.g., [EUGÈNE BURNOUF](#) and [TAKAKUSU JUNJIRŌ](#), whose treatments of Pāli materials described them as belonging to the “Southern tradition.”) With increased interest in Sanskrit [MAHĀYĀNA](#) texts and the rise of Japanese scholarship on Buddhism, the term “Southern Buddhism” began in some circles to be replaced by the term [HĪNAYĀNA](#) (“lesser vehicle”), despite that term’s pejorative connotations. Perhaps in an effort to forestall this usage, Pāli scholars, including [THOMAS W. RHYS DAVIDS](#) (who often referred to Pāli Buddhism as “original Buddhism”), began referring to what had been known as “Southern Buddhism” as Theravāda. The term has since come to be adopted widely throughout Sri Lanka and Southeast Asia. “Theravāda” had often been mistakenly regarded as a synonym of “hīnayāna,” when the latter term is used to designate the many non-Mahāyāna schools of Indian Buddhism. In fact, to the extent that the Theravāda is a remnant of the Sthaviranikāya, it represents just one of the several independent traditions of what many scholars now call [MAINSTREAM BUDDHIST SCHOOLS](#). In the 1950s, the [WORLD FELLOWSHIP OF BUDDHISTS](#) adopted a formal resolution replacing the pejorative term hīnayāna with the designation Theravāda in descriptions of the non-Mahāyāna tradition. This suggestion was reasonable as a referent for the present state of Buddhism, since the only mainstream Buddhist school that survives in the contemporary world is Theravāda, but it is not historically accurate. Despite the way in which

scholars have portrayed the tradition, Theravāda is neither synonymous with early Buddhism, nor a more pristine form of the religion prior to the rise of the Mahāyāna. Such a claim suggests a state of sectarian stasis or inertia that belies the diversity over time of doctrine and practice within what comes to be called the Theravāda tradition. In fact, the redaction of Pāli scriptures postdates in many cases the redaction of much of Mahāyāna literature. Even conceding this late coinage of the term Theravāda, it should still be acknowledged that many South and Southeast Asian Buddhists who self-identify as Theravāda do in fact regard the Pāli tipitaka (S. [TRIPITAKA](#)) as representing an earlier and more authentic presentation of the word of the Buddha ([BUDDHAVACANA](#)) than that found in other contemporary Buddhist traditions, in much the same way that many North and Northeast Asian Mahāyāna Buddhists hold that certain sūtras that most scholars identify as being of later date are authentically the teachings of the historical Buddha. Although Theravāda soteriological theory includes a path for the bodhisatta (S. [BODHISATTVA](#)), the bodhisattva is a much rarer sanctified figure here than in the Mahāyāna; the more common ideal being in Theravāda is instead the [ARHAT](#). The difference between the Buddha and the arhat is also less pronounced in the Theravāda than in the Mahāyāna schools; in the Theravāda, the Buddha and the arhat achieve the same type of [NIRVĀNA](#), the chief difference between them being that the Buddha finds the path to nirvāṇa independently, while the arhat achieves his or her enlightenment by following the path set forth by the Buddha. (For other distinctive beliefs of the Theravāda tradition, see [STHAVIRANIKĀYA](#).) [Therīgāthā](#). In Pāli, “Verses of the [Female] Elders”; the ninth book of the [KHUDDAKANIKĀYA](#) of the Pāli [SUTTAPITAKA](#). It contains 522 verses in seventy-three poems, organized according to the number of verses in each poem, composed by approximately one hundred female elders (although one poem is said to have been uttered by thirty therīs, another by five hundred). It is said to have been composed by enlightened therīs, or elder nuns, during the lifetime of the Buddha, including many of his most famous female disciples, such as his stepmother [MAHĀPRAJĀPATĪ](#). According to tradition, the collection was recited at the first Buddhist council ([SAMGĪTI](#); see [COUNCIL, FIRST](#)) held shortly after the death of the Buddha, although some verses are clearly added later. In any case, it represents one of, if not the earliest record of women’s religious experience. It corresponds to the [THERAGĀTHĀ](#) in content. The precise date and authorship of the verses is difficult to determine, although many of the poems are written from the women’s points of view, describing the sufferings of childbirth, marriage, and the loss of a child, a husband, and

physical beauty, experiences that lead the author to enter the [SAMGHA](#). The spontaneous ecstatic utterances that are said to have accompanied these women's experiences of enlightenment belie the common Western scholarly portrayal of the [ARHAT](#) as apathetic, cool, and aloof.

[Thích](#). (釋). The Vietnamese pronunciation of the Chinese transcription of the first syllable of the Buddha's clan name, [ŚĀKYA](#). In East Asian Buddhism, monks traditionally have abandoned their family's surname and replaced it with the Buddha's own clan name. See also [SHI](#); [FAMING](#).

[Thích Minh Châu](#). (釋明珠) (1918–2012). Vietnamese monk born in Quảng Nam (Central Vietnam), he received ordination in 1946 from Venerable Thích Tịnh Khiết at Trương Văn Temple in Huế. In 1951, he went to India to study Pāli and Buddhism at Nalanda University. He obtained a PhD in 1961 with a thesis entitled “A Comparative Study between the Pāli [MAJJHIMA NIKĀYA](#) and the Chinese [MADHYAMA ĀGAMA](#).” After returning to South Vietnam, he became a founding member of Vạn Hạnh University as well as its rector from 1964 until its disestablishment in 1975 when South Vietnam fell to communist forces from the North. A prolific writer and translator, Thích Minh Châu single-handedly translated into Vietnamese more than thirty works from the [PĀLI](#) canon. He also wrote a three-volume Pāli grammar. After the closing of Vạn Hạnh University, he founded the Vạn Hạnh Buddhist Institute, where he continued his research and translation. In 1989, he became president of the Vietnam Institute of Buddhist Studies and head of the Committee on the Translation of the Tripitaka. Many expatriate Vietnamese Buddhists regard Thích Minh Châu with some suspicion because of his alleged collaboration with the Communist government after 1975, while acknowledging his important contributions to Vietnamese Buddhist literature.

[Thích Nhất Hạnh](#). (釋一行) (1926–). Internationally renowned Vietnamese monk and one of the principal propounders of “Engaged Buddhism.” He was born in southern Vietnam, the son of a government bureaucrat. Nhất Hạnh entered a Buddhist monastery as a novice in 1942, where he studied with a Vietnamese Zen master, and received full ordination as a monk in 1949. His interests in philosophy, literature, and foreign languages led him to leave the Buddhist seminary to study at Saigon University. While teaching in a secondary school, he served as editor of the periodical “Vietnamese Buddhism,” the organ of the Association of All Buddhists in Vietnam. In 1961, he went to the United

States to study at Princeton University, returning to South Vietnam in December 1963 after the overthrow of the government of the Catholic president Ngô Đình Diem, which had actively persecuted Buddhists. The persecutions had led to widespread public protests that are remembered in the West through photographs of the self-immolation of Buddhist monks. Nhất Hạnh worked to found the Unified Buddhist Church and the Institute of Higher Buddhist Studies, which later became Vạn Hạnh University. He devoted much of his time to the School of Youth for Social Service, which he founded and of which he was the director. The school's activities included sending teams of young people to the countryside to offer various forms of social assistance to the people. He also founded a new Buddhist sect (the Order of Interbeing), and helped establish a publishing house, all of which promoted what he called Engaged Buddhism. A collection of his pacifist poetry was banned by the governments of both North and South Vietnam. While engaging in nonviolent resistance to the Vietnam War, he also sought to aid its victims. In 1966, Nhất Hạnh promulgated a five-point peace plan while on an international lecture tour, during which he met with Dr. Martin Luther King Jr. (who would later nominate him for the Nobel Peace Prize) and Thomas Merton in the United States, addressed the House of Commons in Britain, and had an audience with Pope Paul VI in Rome. The book that resulted from his lecture tour, *Vietnam: Lotus in a Sea of Fire*, was banned by the South Vietnamese government. Fearing that he would be arrested or assassinated if he returned to Vietnam after the lecture tour, his supporters urged him to remain abroad and he has lived in exile ever since, residing primarily in France. He founded a center called Plum Village in southern France, whence he has sought to assist Vietnamese refugees and political prisoners and to teach Engaged Buddhism to large audiences in Europe and the Americas. A prolific writer, he has published scores of books on general, nonsectarian Buddhist teachings and practices, some of which have become bestsellers. He has made numerous trips abroad to teach and lead meditation retreats. In his teachings, Nhất Hạnh calls for a clear recognition and analysis of suffering, identifying its causes, and then working to relieve present suffering and prevent future suffering through nonviolent action. Such action in bringing peace can only truly succeed when the actor is at peace or, in his words, is “being peace.”

Thích Quảng Đức. (釋廣德) (1897–1963). Vietnamese monk who became internationally known for his self-immolation (see [SHESHEN](#)) to protest the oppression of Buddhism by the government of the partisan Catholic president

Ngô Đình Diệm. Thích Quảng Đức was born in Khánh Hòa province (Central Vietnam) and his personal name was Lâm Văn Tức. He left home to become a monk at the age of seven and received full ordination at the age of twenty. Subsequently, he went to Mount Ninh Hòa to practice austerities and led the life of a mendicant monk for five years. In 1932, he was invited to be a preceptor at the Ninh Hòa branch of the An Nam Association of Buddhist Studies. In 1934, he moved to South Vietnam, working with Buddhist communities in various provinces for several years. He then traveled to Cambodia and lived there for three years, devoting himself to rebuilding monasteries and studying Pāli literature. In 1953, the Nam Việt Association of Buddhist Studies invited him to be the abbot of Phước Hòa Temple. The last temple he supervised was Quán Thế Âm Temple in Gia Định. On June 11, 1963, when the tension between Buddhism and the government reached a high point, he led a procession of more than one thousand monks through the streets of Saigon. At a crossroad, he calmly sat down in lotus posture, doused himself in gasoline, and set himself on fire. He is revered by Vietnamese Buddhists, who refer to him as Bodhisattva Quảng Đức.

Thích Thiên Ân. (釋天恩) (1926–1980). The first Vietnamese Buddhist monk to spread Buddhism in the West. He was born in 1926 in Huế (Central Vietnam) in a Buddhist family. He was ordained at age fourteen. In 1953, he went to Japan to study and earned a doctorate in literature at Waseda University in 1963. He returned to Vietnam and took a teaching position in the Department of Buddhist Studies at Vạn Hạnh University in 1964. In 1966 he was invited by the University of California, Los Angeles (UCLA), to be a visiting professor. At the urging of American students, he founded the International Buddhist Meditation Center (IBMC) in 1970 in Los Angeles, the first Vietnamese center to offer full monastic ordination to Westerners. In 1973 the College of Oriental Studies was established. After South Vietnam fell in 1975, many Vietnamese refugees relocated to Southern California and the IBMC became a shelter and residence for many of them. Eventually, it could no longer accommodate the increasing number of refugees who kept arriving in Southern California. Thích Thiên Ân purchased two houses in the same neighborhood and converted them into the Vietnamese Buddhist Temple and Amida Temple. These were the first Vietnamese Buddhist temples in North America. He was also the first Vietnamese monk to write books on Chan history and practice in Japanese and English.

Thích Trí Quang. (釋智光) (1923–). Vietnamese monk born into a Buddhist family in Đông Hới (Central Vietnam). He became a monk at the age of thirteen in 1936. The following year he entered the Buddhist Studies Institute of the Huế Association of Buddhist Studies. He graduated in 1945 and received full ordination in 1946. In 1947, he joined the resistance movement against the French together with his three brothers. In 1949, he went to Huế to teach at the Báo Quốc Institute of Buddhist Studies. He traveled to Saigon for the first time in 1950. During his sojourn there he campaigned to found the Nam Việt Institute of Buddhist Studies and the Nam Việt Association of Buddhist Studies, and assumed editorship of the Buddhist periodical *Viên Âm*. He also contributed to the founding of the General Association of Vietnamese Buddhism, whose goal is to unify Vietnamese Buddhism. In 1956, two years after the French withdrew from Vietnam, he became director of the Association of Buddhist Studies and fought to change the term “Buddhist Studies” to “Buddhism” (during French rule, Buddhism was not recognized as a religion). Thích Trí Quang was one of the most eminent Buddhist figures in numerous protests against the oppression of Buddhism by the Ngô Đình Diệm and subsequent South Vietnamese regimes throughout the 1960s.

Thiền. (禪). In Vietnamese, “Meditation”; the Vietnamese strand of the broader East Asian Chan school, which includes Chinese **CHAN**, Japanese **ZEN**, and Korean **SŎN**. According to the **THIÊN UYÊN TẬP ANH** (“Outstanding Figures in the Thiên Garden”), one of the few primary sources of the school’s history, Chan teachings were assumed to have been transmitted to Vietnam by **VINĪTARUCI** (d. 594), a South Indian brāhmaṇa who is claimed (rather dubiously) to have studied in China with the third Chan patriarch **SENGCAN** before heading south to Guangzhou and Vietnam. In 580, he is said to have arrived in Vietnam and settled at Pháp Vân monastery, where he subsequently transmitted his teachings to Pháp Hiền (d. 626), who carried on his Chan tradition. In addition to the Vinītaruci lineage, there are two other putative lineages of Vietnamese Thiền, both named after their supposed founders: **VÔ NGÔN THÔNG** (reputedly a student of **BAIZHANG HUAIHAI**), and **THẠO ĐƯƠNG** (reputedly connected to the **YUNMEN ZONG** in China). Much of this history is, however, a retrospective creation. The Thiền school is in reality a much more amorphous construct than it is in the rest of East Asia: in Vietnam, there is no obvious Chan monasticism, practices, or rituals as there were in China, Korea, and Japan. Thiền is instead more of an aesthetic approach or a way of life than an identifiable school of thought or

practice. Some of the few recognizable influences of Thiên in Vietnam are the traces of Chan literary topoi in Vietnamese Buddhist literature. There is little else, whether physical sites, ecclesiastical institutions, or textual or praxis evidence, that points to a concrete school of Thiên in Vietnam. See also [CHAN](#); [CHAN ZONG](#).

[Thiên Mụ Tự](#). [alt. Linh Mụ Tự] (天姥寺/靈姥寺). In Vietnamese, “Heavenly Matron Monastery”; important Vietnamese Buddhist sacred site, located in Huế, the ancient capital of Vietnam; also commonly known as the Chùa Thiên Mụ, or Thiên Mụ Pagoda. The pagoda was the residence of [THÍCH QUẢNG ĐỨC](#) (1897–1963), the monk whose self-immolation (see [SHESHEN](#)) in 1963 drew attention to the persecution of Buddhists by the pro-Catholic Vietnamese government of Ngô Đình Diệm. The pagoda is sometimes known as the Numinous Matron monastery (Linh Mụ Tự), because it was built in 1601 by the governor of Huế, Nguyễn Hoàng (d.u.), after a vision in which an old woman told him that the site was rife with numinous power. Afterward, the site was renovated several times by the local governors or the kings of the Nguyễn dynasty (1802–1945). It consists largely of two parts: the Phúc Điền tower, a seven-story octagonal tower at the entrance to the site that was erected in 1884, and the main hall at the center. Since its construction, the Thiên Mụ Pagoda has been an important center of Buddhist religious and political activity in modern and contemporary Vietnam. In 1993, it was listed as a UNESCO World Heritage Site.

[Thiên Uyển Tập Anh](#). (禪苑集英). In Vietnamese, “Outstanding Figures in the [THIÊN](#) Garden.” Compiled by an unknown author around the third decade of the fourteenth century, this anthology is a collection of the biographies of eminent Thiên masters in Vietnam from the sixth to the thirteenth centuries, organized around the transmission of the three major Vietnamese Thiên schools: [VINĪTARUČI](#), [VÔ NGÔN THÔNG](#), and [THẠO ĐƯƠNG](#). The *Thiền Uyển* purports to be a narrative history of Vietnamese Buddhism and as such is modeled upon the Chinese [CHAN](#) literary genre known as the “transmission of the lamplight” ([CHUANDENG LU](#)). According to the account presented in the *Thiền Uyển*, Vietnamese Buddhist history is a continuation of the development of the Chinese Chan tradition. In the same period during which the *Thiền Uyển* was compiled, there emerged a number of texts of the same genre, but only fragments of those are extant. The *Thiền Uyển* is the only such lineage history that appears to have been preserved in its entirety and is the only text that attempts to provide a

cohesive narrative history of Vietnamese Buddhism. The *Thiền Uyển*, however, was all but forgotten for centuries until a later recension of the text was accidentally discovered by the scholar Trần Văn Giáp in 1927. Trần wrote a long article outlining the content of text, which accepts the record of the *Thiền Uyển* as veridical history. Since that time, the account of the order provided in the *Thiền Uyển* has been widely regarded as the official history of Vietnamese Buddhism.

[thirty-two major marks of a buddha](#). See [MAHĀPURUSALAKSANA](#).

[Thissa Zedi](#). A pagoda located on a small hill named Hkamin-wei in the southern Sagaing Range in Upper Burma (Myanmar). It was built in 1108 CE by the king of [PAGAN](#), Kyansittha (r. 1084–1112), in fulfillment of an oath (Burmese, thissa; P. sacca) he made while still a soldier (Burmese, sit-tha). The similarity of these two words has led to this pagoda receiving several names, viz., Thissa Zedi (Pagoda of the Oath), Sittha Hpaya (Pagoda of the Soldier), and Thissa-hpaya Zedi (a spoonerism based on “Sit-tha Hpaya” meaning, again, Pagoda of the Oath).

[thod rgal](#). (tögel). In Tibetan, “crossing the crest” or “leap over” (in the sense of skipping over one or more of the stages in a sequence); a special practice of [ATIYOGA](#) and one of the two main practices in the [SNYING THIG](#) tradition of [RDZOGS CHEN](#), the other being “breakthrough” ([KHREGS CHOD](#)). Falling specifically within the “instruction class” ([MAN NGAG SDE](#)) of rdzogs chen, thod rgal follows khregs chod, in which the experience of innate awareness or [RIG PA](#) is cultivated. With this foundation, in thod rgal, the meditator uses specific physical postures to induce visions that reveal the luminous nature of external phenomena. Whereas thod rgal signifies a type of cultivated spontaneous imagery culminating in visions of [MANDALAS](#) of buddhas, and is paired with the spontaneous energy (lhun grub) of pure awareness (rig pa), khregs chod (literally, “breaking through the hard”) is paired with the essential purity (ka dag) of awareness. It is said that thod rgal is a method of contemplating light that enables rdzogs chen practitioners to attain the [‘JA’ LUS](#) (rainbow body) without leaving any bodily traces at death. The term also renders the Sanskrit vyutkrāntaka, described in the [ABHIDHARMA](#) as jumping at will from one meditative state (a [DHYĀNA](#) or [SAMĀPATTI](#)) to any other without having to go through the intermediate stages. Thod rgal ba is also used in Tibetan commentarial literature to describe a type of meditator who does not go sequentially through each of the four fruitions of the religious life, viz., the stream-enterer ([SROTAĀPANNA](#)), once-returner ([SAKRDĀGĀMIN](#)), nonreturner ([ANĀGĀMIN](#)), and [ARHAT](#), but rather jumps over the intermediate results to the final goal. Some sources suggest thod rgal may also be a translation of the pluta (sometimes rendered “floater”), a meditator who jumps over the intermediate heavens in the subtle-materiality and immaterial realms and proceeds directly to the [AKANISTHA](#) and [BHAVĀGRA](#) heavens.

Tho ling gtsug lag khang. (Toling Tsuklakang). One of the principal religious institutions of the GU GE kingdom in the western Tibetan region of Mnga' ris, established in 996 by King YE SHE 'OD and translator RIN CHEN BZANG PO; also spelled Mtho lding, Tho gling, and 'Thon 'thing. It was the first residence of the Bengali scholar ATIŚA DĪPAMKARAŚRĪJÑĀNA during his stay in Tibet, where he composed his famous treatise, the BODHIPATHAPRADĪPA. It also served as the seat for much of Rin chen bzang po's literary career. The main image in the central temple was of the buddha VAIROCANA.

Thomas, Edward Joseph. (1869–1958). British scholar of Pāli and Sanskrit Buddhism. He was the son of a Yorkshire gardener and worked as a gardener himself in his early life before studying at St. Andrews and then Cambridge, where he received his BA in 1905. He spent the remainder of his life at Cambridge, holding various positions at the university library, where he was renowned for his knowledge of languages (along with his work in Indian languages, he also published a book on Danish conversational grammar). He wrote both general works on Buddhist thought and translated Buddhist texts, including a collection of JĀTAKA stories from the Pāli. His most influential work was *The Life of the Buddha as Legend and History* (1927), in which he focused upon the structure of various biographical fragments and texts, and their role within the wider tradition. Thomas stressed the importance of studying all available language sources and the need to understand the mythic and fabulous elements of the religion as important traditions in their own right.

Thomas, Frederick William. (1867–1956). British scholar of Sanskrit and Tibetan who served as librarian at the India Office Library in London before being appointed Boden Professor of Sanskrit at Oxford, a position he held from 1927 to 1937. His research, some in collaboration with Jacques Bacot, included work on ancient Tibetan historical texts discovered at DUNHUANG. He catalogued the Tibetan manuscripts from SIR MARC AUREL STEIN's third expedition to Dunhuang.

Thommayut. (Thai). See THAMMAYUT.

Thông Biện. (通辨) (d. 1134). The first Vietnamese Buddhist author to write a history of Vietnamese Buddhism based on the model of the “transmission of the lamplight” (CHUANDENG) histories of the Chinese CHAN school. He was a native

of Đan Phượng (which is now in Hà Tây province, North Vietnam). His family name was Ngô and he was born into a Buddhist family. He was respected by the Lý court and was bestowed the title *quốc sư* (state preceptor; C. [GUOSHI](#)). The [THIỆN UYÊN TẬP ANH](#) relates that in a lecture in 1096 he interpreted Vietnamese Buddhist history as the continuation of the transmission of both the scriptural school and the mind (or Chan) school of Chinese Buddhism. According to Thông Biện, the Scriptural School began with Mou Bo and Kang Senghui, and the Chan school was transmitted by [BODHIDHARMA](#). He further claimed that Chan came to Vietnam through two streams, represented, respectively, by [VINĪTARUCI](#) (d. 594) and [VÔ NGÔN THÔNG](#) (d. 826). Vinītaruci and Vô Ngôn Thông thus were the ancestral teachers of the two streams of Chan that produced numerous side branches in Vietnam. Later in his life, Thông Biện founded a great teaching center and taught the [SADDHARMAPUNÐARĪKASŪTRA](#). His contemporaries referred to him as Ngô Pháp Hoa (Awakened to the Lotus). Thông Biện's model of Vietnamese Buddhist history was subsequently adopted by Buddhist authors of later generations and thus exercised lasting influence on the traditional understanding of Vietnamese Buddhist history. Many modern Vietnamese Buddhist leaders still accept Thông Biện's views about the history of Buddhism in Vietnam.

[Thorani](#). In Thailand and Laos, Phra Mae (Mother) Thorani or Nang (Lady) Thorani; a female deity depicted in mural depictions of the life of the Buddha. The name Thorani is the Thai and Lao pronunciation of the Sanskrit term [DHĀRANĪ](#), which, in addition to its common Buddhist denotation of “code” or “spell,” also means “the earth,” “soil,” or “ground.” In a variation of the story of [STHĀVARĀ](#), as the future Buddha sat in meditation about to attain enlightenment, he was attacked by [MĀRA](#) and his minions. Māra taunted him, saying that the bodhisattva had no one to attest to his worthiness of becoming a buddha, whereas his vast retinue was present to attest that he, Māra, should be acknowledged as the awakened one. The Buddha then touched the earth with his right hand and summoned the earth to bear witness to his meritorious acts (see [BHŪMISPĀRŚAMUDRĀ](#)), particularly acts of giving ([DĀNA](#)), that he had performed in past existences. Lady Thorani then appeared from out of the earth in the form of a beautiful woman with long wet hair. As she wrung out her hair, all the water that had accumulated on the earth each time the Buddha offered donative libations during his myriad past lives became such a torrential deluge that it swept away Māra and all his minions. (Pouring a ceremonial libation of water is

a common way to conclude many ceremonies and offering rituals in Southeast Asian Buddhism.) In paintings, Lady Thorani stands beneath the [VAJRĀSANA](#) of the Buddha while Māra and his retinue are off to either side, caught in the floodwaters. Central city shrines to Lady Thorani can be found in both Laos and northeastern Thailand, and in the past, it was common for households in northeastern Thailand to have a small shrine dedicated to Lady Thorani in their household compounds.

[Thub bstan rgya mtsho](#). (Tupten Gyatso) (1876–1933). The thirteenth **[DALAI LAMA](#)** of Tibet, remembered as a particularly forward-thinking and politically astute leader. Born in southeastern Tibet, he was recognized as the new Dalai Lama in 1878 and enthroned the next year. Surviving an assassination attempt (using black magic) by his regent, he assumed the duties of his office in 1895 during a period of complicated international politics between Britain, Russia, and China. British troops under the command of Col. Francis Younghusband entered Tibet in 1903. Before the British arrived in **[LHA SA](#)** the following year, the Dalai Lama fled to Mongolia and then continued to China, not returning to Lha sa until 1909. The following year, Chinese Manchu troops invaded Tibet and the Dalai Lama fled to India, returning in 1912. In 1912, the Manchu troops were expelled, and in 1913 the Dalai Lama declared Tibet's de facto independence. A progressive thinker, the thirteenth Dalai Lama made direct contact with Europe and the United States, and befriended Sir Charles Bell, the British political officer in Sikkim, Bhutan, and Tibet. He tried, unsuccessfully, to have Tibet admitted to the League of Nations, developed Tibet's first modern army, and sent the first young Tibetans to be educated in England. Most of his progressive plans, however, were thwarted by conservative religious and political forces within Tibet. The thirteenth Dalai Lama died in 1933, leaving behind a chilling prophecy, which read in part: "The monasteries will be looted and destroyed, and the monks and nuns killed or chased away. The great works of the noble dharma kings of old will be undone, and all of our cultural and spiritual institutions persecuted, destroyed, and forgotten. The birthrights and property of the people will be stolen. We will become like slaves to our conquerors, and will be made to wander helplessly like beggars. Everyone will be forced to live in misery, and the days and nights will pass slowly, with great suffering and terror."

[Thubten Yeshe](#). (Thub bstan ye shes) (1935–1984). Influential teacher of Tibetan Buddhism in the West. Born to a farming family, in a village near **[LHA SA](#)**, Thubten Yeshe's first experience with monasticism began when, as a toddler, he was discovered to be an incarnation of the abbess of 'Chi med lung monastery. He displayed strong leanings toward the monastic life from a very early age and, when he was six, his parents put him in the care of an uncle at **[SE RA](#)** monastery outside Lha sa. He spent the next nineteen years at Se ra, where he studied diligently but was unable to complete his **[DGE BSHE](#)** (geshe) degree prior to fleeing Tibet at the time of the Lha sa uprising of 1959. He escaped to India

with two of his brothers, going to the refugee camp in Buxador in northeast India. He began teaching Western students at Kopan monastery, near [BODHNĀTH](#) in Kathmandu, Nepal. He also traveled the world with his main disciple and fellow monk, Zopa Rinpoche. Together they created the Foundation for the Preservation of the Mahāyāna Tradition in 1975, along with Wisdom Publications, the Root Institute in [BODHGAYĀ](#), the Tushita Dharma Center in [DHARMAŚĀLĀ](#), India, and Nalanda monastery near Toulouse, France.

[Thudhamma](#). (P. Sudhamma). The majority Buddhist monastic fraternity ([B. GAING](#); P. gaṇa, cf. [NIKĀYA](#)) in contemporary Myanmar (Burma), comprising 85–90 percent of the monastic population of the country. The name derives from the Thudhamma Council, an ecclesiastical body appointed by royal decree in 1782, which was charged with reforming the Burmese saṅgha (S. [SAMGHA](#)) and uniting its various factions into a single fraternity under Thudhamma leadership. The Thudhamma Council established a common monastic curriculum and in general promoted uniformity of doctrinal interpretation and [VINAYA](#) practice among the kingdom’s monasteries. With the exception of a short hiatus in the 1810s, the council remained a permanent governing body of the Burmese saṅgha until the late nineteenth century, when it was dissolved following the British conquest of Upper Burma in 1885 and the deposition of the Burmese king. Even before that event, the authority of the council had declined in Lower Burma as a consequence of Britain’s seizure of Burma’s maritime provinces in 1824 and 1852. During the reign of [MINDON MIN](#) (1853–1878), Burmese monks living in British-controlled Lower Burma refused to recognize the authority of the Thudhamma Council and organized themselves into an independent fraternity called the [DWAYA GAING](#) (P. Dvāraṅgaṇa). In the Burmese kingdom itself, the council’s policies were not supported by ultra-orthodox monks who, because of their prominent disciplinary observances and scriptural expertise, gained popular support and royal patronage. From among these reformist monks, two prominent factions emerged, the [SHWEGYIN](#) and Hngettwin, both of which eventually organized themselves into independent fraternities with their own network of monasteries. After the disestablishment of Buddhism as the state religion of Burma by the British, all “unreformed” monasteries, which were the vast majority in the country, came to be designated Thudhamma by default, even though there was no longer an ecclesiastical umbrella under which they operated nor a hierarchy to which they were answerable. This allowed for the politicization of Thudhamma monks during the British colonial period, some of

whom became leaders of the Burmese independence movement. In 1980, the Burmese government's Ministry of Religious Affairs recognized the Thudhamma gaing as one of nine officially sanctioned monastic fraternities comprising the Burmese saṅgha. Somewhat more relaxed in matters of outward deportment than especially the Shwegyin and Dwaya, the Thudhamma gaing is renowned for its scholarship and maintains major monastic colleges in Yangon (Rangoon), Mandalay, and Pakokku.

thudong. (P. dhutaṅga). In Thai, “ascetics”; the tradition of forest monks (P. [ARAÑÑAVĀSI](#)) who observe the strict set of thirteen austerities ([DHUTAṅGA](#)), such as eating only one meal a day, living in the forest or at the root of a tree, meditating in charnel grounds, eating only from the alms bowl, *etc.* In Thailand, the thudong tradition is strongest in the Northeast, near the Laotian border, and is particularly, but not exclusively, associated with the reformed [THAMMAYUT](#) (P. Dhammayuttika) order. The thudong tradition experienced a resurgence in the late nineteenth and twentieth centuries, when it was revitalized through the efforts of [AJAHN MUN BHŪRIDATTA](#), Ajahn Sao Kantasīla (1861–1941), and, later, [AJAHN CHAH BODHIÑĀNA](#).

Thun mong ma yin pa'i mdzod. (Tunmong Mayinpe Dzö). In Tibetan, “The Uncommon Treasury”; an encyclopedic work written by the nineteenth-century Tibetan scholar '[JAM MGON KONG SPRUL BLO GROS MTHA' YAS](#). The text is counted among the five treasuries of Kongtrül ([KONG SPRUL MDZOD LNKA](#)). It preserves numerous tantric ritual and liturgical texts of the [RNYING MA](#) sect of Tibetan Buddhism, as well as works on philosophy, poetry, astrology, and descriptions of local Buddhist practices and sites.

Thūpārāma. In Pāli, “Monastery of the [STŪPA](#)”; a monastery situated to the south of the Sinhalese capital of [ANURĀDHAPURA](#) in the [MAHĀMEGHAVANA](#) grove. Built by King [DEVĀNAMPIYATISSA](#), the monastery derives its name from the thūpa reliquary mound located within its precincts. The thūpa houses the Buddha's collarbone and was the first shrine of its kind on the island. The spot where the thūpa stands is where Gotama (S. [GAUTAMA](#)) Buddha and other buddhas were thought to have once meditated. Also within the grounds of the Thūpārāma was planted a sapling taken from a branch of the [BODHI TREE](#) that had been brought to Sri Lanka by the nun [SANGHAMITTĀ](#). Once, during the first century BCE, the monks of the Thūpārāma conspired with counselors to deny kingship to the island's rightful heir, the crown prince Lañjatissa, giving it

instead to his younger brother, Thūlatthana. When Lañjatissa regained the throne, he chastised the saṅgha by causing its junior monks to be honored first, and its senior monks last—thus repaying them in kind. During the reign of King Mahāsena, the heretical monk, Saṅghamitta, planned to disassemble the Thūpārāma, but was assassinated before he could carry out the deed. The Thūpārāma has been restored and renovated numerous times and is richly ornamented with plates and bricks made of gold and silver.

Thūpavamsa. In Pāli, “Chronicle of the Thūpa”; a twelfth-century Pāli work in verse in sixteen chapters. (Thūpa is the Pāli term for S. [STŪPA](#).) The text is attributed to Vācissara. The text includes accounts of the lives of previous buddhas, the life and parinibbāna (S. [PARINIRVĀNA](#)) of Gotama (S. [GAUTAMA](#)) Buddha, the distribution of his relics, the meritorious deeds of [AŚOKA](#), the dispatch of missions to Sri Lanka and other foreign lands, culminating with the construction of the [MAHĀTHŪPA](#), or “Great Stūpa,” by the Sinhala hero-king, [DUTTHAGĀMANĪ](#), at [ANURĀDHAPURA](#).

ti. (J. tai; K. ch’e 體). In Chinese, lit. “body,” and by extension “essence,” or “substance”; a term widely used in East Asian religious traditions, including Buddhism. “Essence” often constitutes a philosophical pair together with the term “function” ([YONG](#)). In early Confucian texts, such as the *Lunyu* (“Analects”) and the *Mengzi*, ti simply referred to a “body” or the “appearance” of a person or a thing. It was Wang Bi (226–249), the founder of the “Dark Learning” ([XUANXUE](#)) school of Chinese philosophy, who imbued the term with philosophical implications, using ti as a synonym for the Daoist concepts of “nonbeing” ([WU](#)) or “voidness” (xu). However, ti, along with its companion yong, was not widely used until the Buddhists adopted both terms to provide a basic conceptual frame for reality or truth. For example, the Later Qin (384–417) monk [SENGZHAO](#) (384–414?) identified ti as the nature of calmness (ji) and advocated its unity with yong, which he defined as the function of illumination (zhao). The [SAN LUN ZONG](#) master [JIZANG](#) (549–623), in discussing the two-truth ([SATYADVAYA](#)) theory of [MADHYAMAKA](#), argued that “neither ultimate nor conventional” (feizhen feisu) was the ti (“essence”) of the two truths, while “both ultimate and conventional” (zhensu) were their yong (“function”). The [LIUZU TAN JING](#) (“Platform Sūtra of the Sixth Patriarch”) associates ti and yong with two modes of meditation: concentration ([SAMĀDHI](#)) is the ti or essence of wisdom ([PRAJÑĀ](#)); wisdom is the yong or function of concentration. [GUIFENG](#)

[ZONGMI](#) (780–841), the Tang master of both the [HUAYAN ZONG](#) scholastic and the Heze Chan traditions, systematized the Chinese discourse of the terms. Based on the [DASHENG QIXIN LUN](#) (“Awakening of Faith According to the Mahāyāna”), Zongmi interpreted *ti* as the unchanging essence of true thusness ([ZHENRU](#)), calling this absolute aspect of mind the “void and calm, numinous awareness” ([KONGJI LINGZHI](#); see [LINGZHI](#)). Yong instead referred to the diverse functional aspects of true thusness, which corresponded to the “production-and-cessation” aspect of mind (*shengmie*). He also aligned *ti* and *yong* with other indigenous Chinese philosophical polarities such as, respectively, “nature” ([XING](#)) and “characteristics” (*xiang*), “principle” ([LI](#)) and “phenomena” ([SHI](#)), and “root” (*ben*) and “branches” (*mo*). Subsequently, Neo-Confucian thinkers, such as Cheng Yi (1033–1107) and Zhu Xi (1130–1200), adopted this paradigm into their own philosophical systems. In particular, Zhu Xi connected *ti* to the “nature bestowed by the heavenly mandate” (*tianming zhixing*) and *yong* to the “physical nature” (*qizhi zhixing*).

[Tiantai](#). (C; J. Tendai; K. Ch’ont’ae 天台). See [TIANTAI ZONG](#).

[Tiantai bajiao](#). (J. Tendai hakkyō; K. Ch’ōnt’ae p’algyo 天台八教). In Chinese, “The Eight [Classes of] Teachings according to the [TIANTAI](#).” According to the [TIANTAI ZONG](#)’s system of doctrinal classification ([JIAOXIANG PANSHI](#)), the entirety of the Buddhist canon and its teachings can be divided into two groups of four teachings each. The first group of four was called “the four modes of transformative teachings” (*huafa sijiao*), which categorizes Buddhist teachings based on the content of their teachings and different doctrinal themes and their scriptural bases. The second group of four was called “the four styles of transformative edification” or “four modes of exposition” (*huayi sijiao*), which categorizes different strands of Buddhism primarily according to their means of conversion or pedagogical styles. ¶ The first group of four teachings, the transformative teachings (*huafa sijiao*), classifies Buddhism into four categories based on content: (1) *zangjiao*, the “[TRIPITAKA](#) teachings,” the basic teachings that are foundational to the [HĪNAYĀNA](#) schools, such as the notions of impermanence, suffering, and no-self, and the imperative of attaining [NIRVĀNA](#); (2) *tongjiao*, the “joint” or “common teachings,” a basic strand of [MAHĀYĀNA](#) teaching that shares many of the preceding doctrinal themes jointly with the “*hīnayāna* teachings,” the main difference being that it additionally embraces the [BODHISATTVA](#) aspiration of helping others; (3) *biejiao*, the “distinct” or “separate

teachings,” so named because, unlike the previous category, this strand of Mahāyāna includes notions exclusive to that tradition and not shared with the “hīnayāna”; (4) yuanjiao, the “consummate” or “perfect teaching,” which is the exclusive domain of the [SADDHARMAPUNḌARĪKASŪTRA](#), the main scripture the Tiantai school itself espouses. ¶ The second group of four teachings, the modes of exposition or conversion (huayi sijiao), contains the following divisions based on pedagogical style: (1) dunjiao, the “sudden teachings” or a direct pedagogical style. Epitomized by the [AVATAMSAKASŪTRA](#), this mode of teaching is characterized by a direct revelation of the stage of buddhahood, circumventing the gradual, and more conventional, stages of beginning bodhisattva practices and the “hīnayāna” tradition. (2) Jianjiao, the “gradual teachings” or pedagogical style. Representing these sequential, step-by-step soteriological approaches and pedagogical styles are the [ĀGAMAS](#), the [PRAJÑĀPĀRAMITĀ](#) sūtras, and the [VAIPULYA](#) sūtras. (3) Budingjiao, the “indefinite teachings” or pedagogical style. The same utterance of the Buddha might be given without differentiation to various members of the audience, but the depth to which they were able to penetrate to that message, and the different interpretations they gave to it, varied depending on their spiritual maturity. (4) Mimijiao, the “esoteric teachings” or pedagogical style. Not to be confused with tantric teachings, “esoteric” here refers to the Tiantai belief that the Buddha sometimes preached in such a way that his same utterance resonated differently with various members within the audience, so that each received the instruction most suitable to his needs and temperament; with this pedagogical style, the Buddha essentially left members of the audience free to fathom an inexhaustibly elastic teaching and be benefited from it according to their unique conditions. See also [WUSHI](#); [CH’ŌNT’AE SAGYO Ū](#).

[Tiantai sijiao](#). (C) (天台四教). See [Tiantai BAJIAO](#).

[Tiantai wushi](#). (J. Tendai goji; K. Ch’ōnt’ae osi 天台五時). In Chinese, “the five periods [of the Buddha’s teaching]”; the [Tiantai ZONG](#)’s temporal taxonomy of Buddhist doctrines, according to which the Buddha’s teachings differ because he preached them at different points during his pedagogical career. The five are (1) Huayan ([AVATAMSAKASŪTRA](#)), (2) [ĀGAMA](#), (3) [VAIPULYA](#), (4) [PRAJÑĀPĀRAMITĀ](#), and (5) Lotus ([SADDHARMAPUNḌARĪKASŪTRA](#)) and Nirvāṇa ([MAHĀPARINIRVĀNASŪTRA](#)). See [WUSHI](#); [WUWEI](#).

[Tiantai xiaozhiguan](#). (C) (天台小止觀). See [XIUXI ZHIGUAN ZUOCHAN FAYAO](#).

Tiantai Zhiyi. (J. Tendai Chigi; K. Ch'önt'ae Chiüi 天台智顚) (538–597). One of the most influential monks in Chinese Buddhist history and de facto founder of the **TIANTAI ZONG**. A native of Jingzhou (in present-day Hunan province), Zhiyi was ordained at the age of eighteen after his parents died during the wartime turmoil that preceded the Sui dynasty's unification of China. He studied **VINAYA** and various **MAHĀYĀNA** scriptures, including the **SADDHARMAPUNḌARĪKASŪTRA** (“Lotus Sūtra”) and related scriptures. In 560, Zhiyi met **NANYUE HUISI** (515–577), who is later listed as the second patriarch of the Tiantai lineage, on Mt. Dasu in Guangzhou and studied Huisi's teachings on the *suiziyi sanmei* (cultivating **SAMĀDHI** wherever mind is directed, or the *samādhi* of freely flowing thoughts), the “four practices of ease and bliss” (*si anle xing*), a practice based on the *Saddharmapuṇḍarīkasūtra*, and the lotus repentance ritual. Zhiyi left Huisi at his teacher's command and headed for the southern capital of Jinling (present-day Jiangsu province) at the age of thirty (567) to teach the *Saddharmapuṇḍarīkasūtra* and the **DAZHIDU LUN** for eight years at the monastery of Waguansi. The *Shi chanboluomi cidi famen* [alt. *Cidi chanmen*] are his lecture notes from this period of meditation and teaching. In 575, he retired to Mt. Tiantai (present-day Zhejiang province), where he built a monastery (later named Xiuchansi by the emperor) and devoted himself to meditative practice for eleven years. During this time he compiled the *Fajie cidi chumen* and the *Tiantai xiao zhiguan*. After persistent invitations from the king of Chen, Zhiyi returned to Jinling in 585 and two years later wrote the **FAHUA WENJU**, an authoritative commentary on the *Saddharmapuṇḍarīkasūtra*. Subsequently in Yangzhou, Zhiyi conferred the bodhisattva precepts on the crown prince, who later became Emperor Yang (r. 604–617) of the Sui dynasty. Zhiyi was then given the title Great Master Zhizhe (Wise One). Zhiyi also established another monastery on Mt. Danyang in Yuquan (present-day Hunan province), which Emperor Wen (r. 581–604) later named Yuquansi. Zhiyi then began lecturing on what became his masterpieces, the **FAHUA XUANYI** (593) and the **MOHE ZHIGUAN** (594). At the request of the king of Jin, in 595 Zhiyi returned to Yangzhou, where he composed his famous commentaries on the **VIMALAKĪRTINIRDEŚA**, i.e., the *Weimojing xuanshou* and the *Weimojing wenshou*, before dying in 597. Among the thirty or so works attributed to Zhiyi, the *Fahua xuanyi*, *Fahuawenju*, and *Mohe zhiguan* are most renowned and are together known as the Tiantai san dabu (three great Tiantai commentaries).

Tiantai zong. (J. Tendaishū; K. Ch'ōnt'ae chong 天台宗). In Chinese, “Terrace of Heaven School”; one of the main schools of East Asian Buddhism; also sometimes called the “Lotus school” (C. Lianhua zong), because of its emphasis on the [SADDHARMAPUNDARĪKASŪTRA](#) (“Lotus Sūtra”). “Terrace of Heaven” is a toponym for the school’s headquarters on Mt. Tiantai in present-day Zhejiang province on China’s eastern seaboard. Although the school retrospectively traces its origins back to Huiwen (fl. 550–577) and [NANYUE HUISI](#) (515–577), whom the school honors as its first and second patriarchs, respectively, the de facto founder was [TIANAI ZHIYI](#) (538–597), who created the comprehensive system of Buddhist teachings and practices that we now call Tiantai. Zhiyi advocated the three truths or judgments ([SANDI](#)): (1) the truth of emptiness (kongdi), viz., all things are devoid of inherent existence and are empty in their essential nature; (2) the truth of being provisionally real (jiadi), viz., all things are products of a causal process that gives them a derived reality; and (3) the truth of the mean (zhongdi), viz., all things, in their absolute reality, are neither real nor unreal, but simply thus. Zhiyi described reality in terms of [YINIAN SANQIAN](#) (a single thought contains the [TRICHILIOCOSM](#) [[TRISĀHASRAMAHĀSĀHASRALOKADHĀTU](#)]), which posits that any given thought-moment perfectly encompasses the entirety of reality; at the same time, every phenomenon includes all other phenomena ([XINGJU SHUO](#)), viz., both the good and evil aspects of the ten constituents ([DHĀTU](#)) or the five sense organs ([INDRIYA](#)) and their respective objects and the three realms of existence ([TRAIDHĀTUKA](#)) are all contained in the original nature of all sentient beings. Based on this perspective on reality, Zhiyi made unique claims about the buddha-nature ([FOXING](#)) and contemplation ([GUAN](#)): he argued that not only buddhas but even sentient beings in such baleful existences as animals, hungry ghosts, and hell denizens, possess the capacity to achieve buddhahood; by the same token, buddhas also inherently possess all aspects of the unenlightened three realms of existence. The objects of contemplation, therefore, should be the myriad of phenomena, which are the source of defilement, not an underlying pure mind. Zhiyi’s grand synthesis of Buddhist thought and practice is built around a graduated system of calmness and insight (jianzi ZHIGUAN; cf. [SAMATHA](#) and [VIPĀŚYANĀ](#)), which organized the plethora of Buddhist meditative techniques into a broad, overarching soteriological system. To Zhiyi is also attributed the Tiantai system of doctrinal classification (panjiao; see [JIAOXIANG PANSHI](#)) called [WUSHI BAJIAO](#) (five periods and eight teachings), which the Koryō Korean monk CH’EGWAN (d. 970) later elaborated in its definitive form in his [CH’ŌNT’AE SAGYO ŪI](#) (C. *Tiantai sijiao yi*). This system

classifies all Buddhist teachings according to the five chronological periods, four types of content, and four modes of conversion. Zhiyi was succeeded by Guanding (561–632), who compiled his teacher’s works, especially his three masterpieces, the [FAHUA XUANYI](#), the [FAHUA WENJU](#), and the [MOHE ZHIGUAN](#). The Tiantai school declined during the Tang dynasty, overshadowed by the newer [HUAYAN](#) and [CHAN](#) schools. The ninth patriarch [JINGXI ZHANRAN](#) (711–782) was instrumental in rejuvenating the school; he asserted the superiority of the Tiantai school over the rival Huayan school by adapting Huayan concepts and terminologies into the tradition. Koryŏ monks such as Ch’egwan and Ŭit’ong (927–988) played major roles in the restoration of the school by helping to repatriate lost Tiantai texts back to China. During the Northern Song period, Wu’en (912–988), Yuanqing (d. 997), Zhiyuan (976–1022), and their disciples, who were later pejoratively called the [SHANWAI](#) (Off-Mountain) faction by their opponents, led the resurgence of the tradition by incorporating Huayan concepts in the school’s thought and practice: they argued that since the true mind, which is pure in its essence, produces all phenomena in accord with conditions, practitioners should contemplate the true mind, rather than all phenomena. Believing this idea to be a threat to the tradition, [SIMING ZHILI](#) (960–1028) and his disciples, who called themselves [SHANJIA](#) (On-Mountain), criticized such a concept of pure mind as involving a principle of separateness, since it includes only the pure and excludes the impure, and led a campaign to expunge the Huayan elements that they felt were displacing authentic Tiantai doctrine. Although Renyue (992–1064) and Congyi (1042–1091), who were later branded as the “Later Off-Mountain Faction,” criticized Zhili and accepted some of the Shanwai arguments, the Shanjia faction eventually prevailed and legitimized Zhili’s positions. The orthodoxy of Zhili’s position is demonstrated in the [FOZU TONGJI](#) (“Comprehensive History of the Buddhas and Patriarchs”), where the compiler Zhipan (1220–1275), himself a Tiantai monk, lists Zhili as the last patriarch in the dharma transmission going back to the Buddha. Tiantai theories and practices were extremely influential in the development of the thought and practice of the Chan and [PURE LAND](#) schools; this influence is especially noticeable in the white-lotus retreat societies ([JIESHE](#); see also [BAILIAN SHE](#)) organized during the Song dynasty by such Tiantai monks as Zhili and Zunshi (964–1032) and in Koryŏ Korea (see *infra*). After the Song dynasty, the school declined again, and never recovered its previous popularity. ¶ Tiantai teachings and practices were transmitted to Korea during the Three Kingdoms period through such Korean monks as Hyŏn’gwang (fl. sixth century) and Yŏn’gwang

(fl. sixth century), both of whom traveled to China and studied under Chinese Tiantai teachers. It was not until several centuries later, however, that a Korean analogue of the Chinese Tiantai school was established as an independent Buddhist school. The foundation of the Korean [CH'ÖNT'AE CHONG](#) is traditionally assumed to have occurred in 1097 through the efforts of the Koryŏ monk [ŬICH'ÖN](#) (1055–1101). Ŭich'ön was originally a Hwaŏm monk, but he sought to use the Ch'önt'ae tradition in order to reconcile the age-old tension in Korean Buddhism between [KYO](#) (Doctrine) and [SÖN](#) (Meditation). In the early thirteenth century, the Ch'önt'ae monk [WÖNMYO YOSE](#) (1163–1245) organized the white lotus society (PAENGNYÖN KYÖLSA), which gained great popularity especially among the common people; following Yose, the school was led by Ch'ön'in (1205–1248) and [CH'ÖNCH'AEK](#) (b. 1206). Although the Ch'önt'ae monk Chogu (d. 1395) was appointed as a state preceptor (K. kuksa; C. [GUOSHI](#)) in the early Chosŏn period, the Ch'önt'ae school declined and eventually died out later in the Chosŏn dynasty. The contemporary Ch'önt'ae chong is a modern Korean order established in 1966 that has no direct relationship to the school founded by Ŭich'ön. ¶ In Japan, [SAICHÖ](#) (767–822) is credited with founding the Japanese [TENDAISHÜ](#), which blends Tiantai and tantric Buddhist elements. After Saichō, such Tendai monks as [ENNIN](#) (793–864), [ENCHIN](#) (814–891), and [ANNEN](#) (b. 841) systematized Tendai doctrines and developed its unique forms, which are often called [TAIMITSU](#) (Tendai esoteric teachings). Since the early ninth century, when the court granted the Tendai school official recognition as an independent sect, Tendai became one of the major Buddhist schools in Japan and enjoyed royal and aristocratic patronage for several centuries. The Tendai school's headquarters on [HIEIZAN](#) became an important Japanese center of Buddhist learning: the founders of the so-called new Buddhist schools of the Kamakura era, such as [HÖNEN](#) (1133–1212), [SHINRAN](#) (1173–1263), [NICHIREN](#) (1222–1282), and [DÖGEN KIGEN](#) (1200–1253), all first studied on Mt. Hiei as Tendai monks. Although the Tendai school has lost popularity and patrons to the [ZENSHÜ](#), [PURE LAND](#), and [NICHIRENSHÜ](#) schools, it remains still today an active force on the Japanese Buddhist landscape.

[Tiantong Rujing](#). (J. Tendō Nyōjō; K. Ch'öndong Yōjōng 天童如淨) (1162–1227). Chinese [CHAN](#) master in the [CAODONG ZONG](#), also known as Jingchang (Pure Chang) and Changweng (Old Man Chang); he received his toponym Tiantong after the mountain where he once dwelled. Rujing was a native of Shaoxing in Yuezhou (present-day Zhejiang province) and was ordained at a

local monastery named Tianyisi. Rujing later went to the monastery of Zishengsi on Mt. Xuedou to study under Zu'an Zhijian (1105–1192) and eventually became his dharma heir. Rujing spent the next few decades moving from one monastery to the next. In 1220, he found himself at Qingliangsi in Jiankang (Jiangsu province) and then at Rui'ansi in Taizhou and Jingcisi in Linan. In 1224, Rujing was appointed by imperial decree to the abbotship of the famous monastery of Jingdesi on Mt. Tiantong, where the Chan master [HONGZHI ZHENGJUE](#) had once resided. Rujing's teachings can be found in his recorded sayings ([YULU](#)), which were preserved in Japan. Although Rujing was a relatively minor figure in the history of Chinese Chan, he was profoundly influential in Japanese [ZEN](#), due to the fact that the Japanese [SŌTOSHŪ](#) founder [DŌGEN KIGEN](#) (1200–1253) considered himself to be Rujing's successor. Dōgen attributes many of the distinctive features of his own approach to practice, such as “just sitting” ([SHIKAN TAZA](#)) and “body and mind sloughed off” ([SHINJIN DATSURAKU](#)) to this man whom he regarded as the preeminent Chan master of his era. Little of this distinctively Sōtō terminology and approach actually appears in the records of Rujing's own lectures, however. Instead, he appears in his discourse record as a fairly typical Song-dynasty Chan master, whose only practical meditative instruction involves the contemplation of [ZHAOZHOU](#)'s “no” (see [WU GONG'AN](#)). This difference may reflect the differing editorial priorities of Rujing's Chinese disciples. It might also derive from the fact that Dōgen misunderstood Rujing or received simplified private instructions from him because of Dōgen's difficulty in following Rujing's formal oral presentations in vernacular Chinese.

[Tiantong Zhengjue](#). (C) (天童正覺). See [HONGZHI ZHENGJUE](#).

[Tianxizai](#). (J. Tensokusai; K. Ch'ōnsikchae 天息災) (d. 1000). Kashmiri monk-translator, who arrived in China in 980. While residing at a cloister to the west of the imperial monastery of Taiping-Xingguosi in Yuanzhou (present-day Jiangxi province), he translated (sometimes working in collaboration with [DĀNAPĀLA](#) and Fatian) seventeen [MAHĀYĀNA](#) and prototantric scriptures into Chinese, including the [BODHICARYĀVATĀRA](#), [KĀRANDAVYŪHA](#), *Alpākṣarāprajñāpāramitāsūtra*, *Āyusṣaryantasūtra*, (*Ārya*)*Tārābhaṭṭarīkāyanāmāṣṭottaraśataka*, *Māricīdhāraṇī*, and the [MAÑJUŚRĪMŪLAKALPA](#).

[Tianzhu](#). (J. Tenjiku; K. Ch'ōnch'uk 天竺). Early Chinese phonetic transcription

of Sindhu, viz., India, which becomes the most common designation in Chinese sources for the Indian subcontinent. See also [ZHU](#).

[Tibetan Book of the Dead](#). See [BAR DO THOS GROL CHEN MO](#).

[tichang](#). (J. teishō; K. chech'ang 提唱). In Chinese, “lecture,” a type of discourse associated especially with the [CHAN ZONG](#) and widely known in the West by its Japanese pronunciation teishō; also called tigang (J. teikō, K. chegang) or tiyao (J. teiyō, K. cheyo). Such lectures, which were often delivered in highly colloquial language, sought to point to the main purport of a Chan tradition, text, or “case” ([GONG'AN](#)) by drawing on the peculiar Chan argot and extensively citing Chan literature and Buddhist scriptures. Chan masters might also deliver a sequential series of lectures on each of the Chan cases in a larger gong'an collection, such as the [BIYAN LU](#) or the [WUMEN GUAN](#). Such lectures were sometimes delivered in conjunction with the formal “ascending the hall” ([SHANGTANG](#)) procedure; the term may also refer to the master's expository comments regarding questions that visitors might raise in the course of listening to a formal lecture. The tichang lecture is the Chan counterpart of expositions of Buddhist teachings given by lecturers in doctrinal schools, but making more use of Chan rather than commentarial and scriptural materials. The term was widely used in the Chan tradition especially from the Song dynasty onward. Although the term appears only rarely in such Chan codes as the [BAIZHANG QINGGUI](#) (“Baizhang's Pure Rules”) and the [CHANYUAN QINGGUI](#) (“Pure Rules of the Chan Garden”), these sources do describe the general procedures to be followed in delivering such a lecture. The forty-two roll *Liezu tigang lu* (“Record of the Lectures of Successive Patriarchs,” using the alternate term tigang), compiled by the Qing-dynasty Chan master Daiweng Xingyue (1619–1684), collects about four hundred Chinese masters' lectures delivered at various special occasions, such as the reigning emperor's birthday or funeral, and in conjunction with daily services.

[tīksnendriya](#). (P. tikkhindriya; T. dbang po rnon po; C. ligen; J. rikon; K. igŭn 利根). In Sanskrit, “sharp faculties,” the highest of the “three capacities” ([TRĪNDRIYA](#)), used to describe those disciples of the Buddha whose intellectual and spiritual abilities are greater than that of those of average ([MADHYENDRIYA](#)) and dull capacities ([MRDVINDRIYA](#)). The term appears particularly in discussions of [UPĀYA](#), the Buddha's ability to adapt his teachings to the intellects, interests, and aspirations of his disciples, with his highest teachings said to be reserved for

disciples of sharp faculties. Thus the term is also often used polemically to describe one's preferred teaching as intended only for those of sharp faculties, while dismissing other competing teachings as intended for those of dull or average faculties. See also [MAHĀPURUSA](#); [INDRIYA](#).

Tilokaracha. [alt. Tilokarat] (P. Tilokarājā) (r. 1441–1487). Thai name of an important Lānnā king of Chiangmai in northern Thailand who expanded the boundaries of the Lānnā kingdom militarily while promoting the reform Sinhalese monastic order led by Medhaṅkara throughout the territories under his domain. Tilokaracha promoted himself as a wheel-turning monarch (P. cakkavattin; S. [CAKRAVARTIN](#)), acting in emulation of [AŚOKA](#). He constructed hundreds of monasteries and ordination halls throughout the kingdom, and directed that [BODHI TREE](#) saplings be planted at the sites. In 1445, built a replica of the [MAHĀBODHI](#) temple named Wat Photharam Maha Wihan (P. Bodhi-Ārāma Mahāvihāra), known also as Wat Chet Yot (Temple of the Seven Spires). In 1477, he convened a saṅgha (S. [SAMGHA](#)) council at Wat Photharam for the editing of the Buddhist canon (P. tipīṭaka; S. [TRIPITAKA](#)), possibly also for the purpose of reconciling the new Sinhalese order with the older Sumana order. This meeting came to be recognized as an eighth Buddhist council by the Thais. In 1481, he restored the Wat Chedi Luang located in Chiangmai and installed the Emerald Buddha ([PHRA KAEW MORAKOT](#)) in its pinnacle. The political unification and religious and cultural integration of northern Thailand achieved under Tilokaracha laid the foundation for an efflorescence of Lānnā civilization during the reign of Phra Muang Kaew (r. 1495–1528), considered to be the golden age of Lānnā Buddhist scholarship.

Tilopa. (T. Ti lo pa) (988–1069). An Indian tantric adept counted among the eighty-four [MAHĀSIDDHAS](#) and venerated in Tibet as an important source of tantric instruction and a founder of the [BKA' BRGYUD](#) sect. Little historical information exists regarding Tilopa's life. According to his traditional biographies, Tilopa was born a brāhmaṇa in northeast India. As a young man he took the vows of a Buddhist monk, but later was compelled by the prophecies of a [DĀKINĪ](#) messenger to study with a host of tantric masters. He lived as a wandering [YOGIN](#), practicing [TANTRA](#) in secret while outwardly leading a life of transgressive behavior. For many years Tilopa acted as the servant for the prostitute Barima (in truth a wisdom ḍākinī in disguise) by night while grinding sesame seeds for oil by day. The name Tilopa, literally “Sesame Man,” derives

from the Sanskrit word for sesamum. Finally, Tilopa is said to have received instructions in the form of a direct transmission from the primordial buddha [VAJRADHARA](#). Tilopa instructed numerous disciples, including the renowned Bengali master [NĀROPA](#), who is said to have abandoned his prestigious monastic position to become Tilopa’s disciple, undergoing many difficult trials before receiving his teachings. Those teachings were later received by [MAR PA CHOS KYI BLO GROS](#), who brought Tilopa’s teachings to Tibet. As with many Indian siddhas, Tilopa’s main instructions are found in the form of [DOHA](#), or songs of realization. Many of his songs, together with several tantric commentaries and liturgical texts, are included in the Tibetan canon. Among the teachings attributed to him are the [BKA’ ’BABS BZHI](#) (“four transmissions”), the [LUS MED MKHA’ ’GRO SNYAN RGYUD CHOS SKOR DGU](#) (“nine aural lineage cycles of the formless dākinīs”), and the [MAHĀMUDROPADEŚA](#).

[tingqian boshuzi](#). (J. teizen no hakujushi; K. chŏngjŏn paeksuja 庭前柏樹子). In Chinese, “cypress tree in front of the courtyard”; a [CHAN](#) expression that becomes a popular meditative topic ([HUATOU](#)) and is used in Chan questioning meditation ([KANHUA CHAN](#)). The phrase appears in a [GONG’AN](#) exchange attributed to the Tang-dynasty monk [ZHAOZHOU CONGSHEN](#) (778–897): Once when Zhaozhou was asked, “Why did Bodhidharma come from the West?” ([XILAI YI](#)), he replied, “Cypress tree in front of the courtyard,” suggesting that enlightenment, the reason that Bodhidharma traveled to China, is to be found in everyday experience. This gong’an appears as case no. 37 in the [WUMEN GUAN](#) (“Gateless Checkpoint”). See also [XILAI YI](#).

[Ti phu pa](#). “Pigeon Man,” the Tibetan name for a twelfth-century Indian [MAHĀSIDDHA](#) in the lineage of [NĀROPA](#) who transmitted the [LUS MED MKHA’ ’GRO SNYAN RGYUD CHOS SKOR DGU](#) (“nine aural lineage cycles of the formless [DĀKINĪS](#)”) to [MILA RAS PA](#)’s disciple [RAS CHUNG PA](#) during the latter’s sojourn in India. Ti phu pa was said to be [DAR MA MDO SDE](#), the son of [MAR PA](#) the Translator, according to the following story. Dar ma mdo sde was fatally injured for an equestrian accident, but before his death his father gave him instructions for “entering a corpse” (grong ’jug) whereby one can force one’s consciousness to enter another body. Dar ma mdo sde was able to cause his consciousness to enter the body of a dead pigeon, which came back to life and flew across the Himālayas to India. There it entered the corpse of a sixteen-year-old boy who was about to be cremated. He came back to life and put into practice the teachings

he had received from Mar pa as Dar ma mdo sde, while also studying with other masters, including Nāropa, from whom he received the full transmission of the lus med mkha' 'gro snyan rgyud chos skor dgu (“nine aural lineage cycles of the formless ḍākinīs”). Nāropa’s disciples had only taught five of these nine cycles to Mar pa during his visit to India, and hence Mi la ras pa had only received partial instruction. Mi la ras pa thus sent Ras chung pa to India to receive the full transmission of the lus med mkha' 'gro snyan rgyud chos skor dgu. Ras chung pa received that transmission from Ti phu pa.

tiraścīna. (S). See [TIRYAK](#).

tīrtha. (S). See [PĪTHA](#).

tīrthika. (P. titthiya; T. mu stegs pa; C. waidao; J. gedō; K. oedo 外道). In Sanskrit, lit. “ford-maker”; referring specifically in Buddhist materials to “adherent of a non-Buddhist religion” and often seen translated as “heretic.” Tīrthika is typically used to refer to a follower of one of the non-Buddhist Indian schools, such as [ŚRAMANA](#) schools of the [ĀJĪVAKA](#) and [JAINA](#), which were contemporaries of the Buddha or the later Sāṃkhya tradition. The term probably referred originally to priests of temples near river crossings where travelers propitiated a deity before crossing, suggesting metaphorically that those teachings offered a ford across the raging river of [SAMŚĀRA](#). See also [ŚRAMANA](#).

tiryak. [alt. tiryāścīna, tiryāñc] (P. tiracchāna; T. dud 'gro; C. chusheng; J. chikushō; K. ch'uksaeng 畜生). In Sanskrit, lit. “going horizontally” (i.e., not erect), viz., an animal; one of five or six rebirth destinies ([GATI](#)) in [SAMŚĀRA](#). Among these, animals are classified as the one of the three (or four) unfortunate rebirth destinies ([APĀYA](#); [DURGATI](#)), along with denizens of hell ([NĀRAKA](#)), ghosts ([PRETA](#)), and in some lists demigods or titans ([ASURA](#)). The category of animals includes both land and sea creatures, as well as insects. The specific kinds of suffering that animals undergo are frequently mentioned in Buddhist texts; these include the constant need to search for their own food while always seeking to avoid becoming food for others. Unlike humans, animals are generally killed not for some deed they have done but for the taste of their flesh or the texture of their skin. The possibility of achieving rebirth out of the realm of animals is said to be particularly difficult because of either the inevitable killing in which predators engage or because of animals’ constant fear of becoming prey; neither mental state is conducive to higher rebirth. Despite this difficulty, there are many

stories in Buddhist literature of predators who have willed themselves to stop killing (the first of the lay precepts) in order to create a karmic propensity that will be more conducive to rebirth out of the animal destiny. See also [DAOTU](#).

[tiryāñc](#). (S). See [TIRYAK](#).

[Tiwei \[Boli\] jing](#). (提謂[波利]經). In Chinese, “Book of Trapuṣa [and Bhallika]”; an indigenous Chinese [SŪTRA](#) (see [APOCRYPHA](#)), written c. 460–464 during the Northern Wei dynasty, which praises the value of lay practice. The scripture is a retelling of the story of the encounter between the merchants [TRAPUSA](#) and (in some versions) his brother [BHALLIKA](#), who offered the Buddha his first meal after his enlightenment. Following the meal, the Buddha is said to have taught the brothers and transmitted to them the first two of the three refuges (see [TRISĀRANA](#)) (the [SAMGHA](#) not yet existing at the incipency of the religion), rendering them the first lay disciples ([UPĀSAKA](#)) of the Buddha. The Chinese text offers an extended account of what the Buddha taught during that first informal discussion of his experience. The Buddha’s account of the dharma discusses the Buddhist value of keeping the five precepts ([PAÑCAŚĪLA](#)) and the lay practice of giving ([DĀNA](#)), but all set within a philosophical framework that draws heavily on indigenous Chinese concepts of the five phases or elements, the five viscera, etc., as well as the importance of karmic cause and effect.

[tōban](#). (東班). In Japanese, lit. “east rank”; the offices of the six administrators or stewards (C. [ZHISHI](#)) at a Zen monastery, which were typically located to the east side of the monastery, hence the name. On the west are the prefects (C. [TOUSHOU](#)), who are thus referred to as the west rank. Similarly, the [CHANYUAN QINGGUI](#) refers to the stewards as the east section (C. *dongxu*) and the prefects as the west section (C. *xixu*).

[toch’am](#). (圖讖). In Korean, “geomancy and divination”; a new theory of geomancy promulgated by the monk [MYOCH’ŎNG](#) (d. 1135), which was ultimately used to justify a rebellion against the Koryŏ dynasty. See [MYOCH’ŎNG](#).

[Tocharian](#). Generic term for Tocharian A (East Tocharian, or Turfanian) and Tocharian B (West Tocharian, or Kuchean), two related, but probably mutually unintelligible, Indo-European languages in which many Central Asian Buddhist texts from the Tarim River Basin along the [SILK ROAD](#) were composed. The

languages were written in a variant of the [BRAHMĪ](#) script, which was first deciphered in 1908 by the German Indologists Emil Sieg and Wilhelm Siegling. Virtually all the extant Tocharian Buddhist manuscripts are translations of earlier Indian materials, many in bilingual editions that speeded the deciphering process. The languages were unknown until [SIR MARC AUREL STEIN](#) (1862–1943) discovered their manuscripts during his expeditions into the Tarim Basin. The name Tocharian derives from the Greek term for the people of this region. Texts in Tocharian A have been discovered in the oasis petty-kingdom of [TURFAN](#) and in the vicinity of Shorchuk/Yanqi. Tocharian B texts range much more widely across the Tarim Basin, but are especially prominent in the [KUCHA](#) region. Of the two languages, Tocharian B is the older of the two, with manuscripts ranging in age from the fifth through eighth centuries CE, and the most diverse linguistically. Tocharian A is more consistent linguistically and its manuscripts are later than those of its counterpart. The languages may have been spoken as late as the middle of the ninth century, when both became extinct; their peoples assimilated into the Uighurs who now populate the region in present-day Chinese Xinjiang.

[Tōdaiji](#). (東大寺). In Japanese, “Great Monastery of the East”; a major monastery in the ancient Japanese capital of Nara affiliated with the Kegon ([HUAYAN](#)) school of Buddhism, listed as a UNESCO World Heritage site. The monastery was founded by the Hossōshū ([FAXIANG ZONG](#)) monk [GYŌGI](#) (668–749). The monastery is renowned for its colossal buddha image of [VAIROCANA](#) (J. Birushana nyorai), which is commonly known as the [NARA DAIBUTSU](#); at forty-eight feet (fifteen meters) high, this image is the largest extant gilt-bronze image in the world and the Daibutsuden where the image is enshrined is the world’s largest wooden building. The Indian monk [BODHISENA](#) (J. Bodaisenna) (704–760), who traveled to Japan in 736 at the invitation of Emperor Shōmu (r. 724–749), performed the “opening the eyes” ([KAIYAN](#); [NETRAPRATISTHĀPANA](#)) ceremony for the 752 dedication of the great buddha image. Tōdaiji was founded on the site of Konshūsenji by order of Emperor Shōmu and became the headquarters of a network of provincial monasteries and convents in the Yamato region. The first abbot, Ryōben (689–773), is commemorated in the kaisandō (founder’s hall; see [KAISHAN](#)). Other halls include the inner sanctuary of the hokkedō (lotus hall), which was probably once Konshūsenji’s main hall. The hall enshrines the Fukūkensaku Kannon, a dry lacquer statue of the [BODHISATTVA AVALOKITEŚVARA](#), which dates from 746. The monastery was renamed

Konkōmyōji in 741 and, in 747 when major construction began on the large compound, it finally became known as Tōdaiji, the name it retains today. The Tōdaiji complex was completed in 798; monastery records state that 50,000 carpenters, 370,000 metal workers, and 2.18 million laborers worked on the compound, its buildings, and their furnishings, almost bankrupting the country. Entering the monastery through the Great Gate to the South (Nandaimon), itself a Japanese national treasure, a visitor would have passed through two seven-storyed, 328-foot high pagodas to the east and west (both subsequently destroyed by earthquakes), before passing through the Inner Gate to the Daibutsuden. North of the Daibutsuden, which is flanked by a belfry and a [SŪTRA](#) repository, is the kōdō (lecture hall), which is surrounded on three sides by the monk's quarters. An ordination hall displays exceptional clay-modeled shitennō (four heavenly kings; see [LOKAPĀLA](#)) dating from the Tenpyō Era (729–749). Of the eighth-century buildings, only the tegaimon (the western gate) and the Hokkedō's inner sanctuary have survived. After a conflagration in 1180, then-abbot Chōgen (1121–1206) spearheaded a major reconstruction in a style he had seen in Southern Song-dynasty China. This style is exemplified by the south gate, which is protected by two humane-kings statues, both twenty-eight feet in height, carved in 1203. The Tokugawa Shogunate sponsored a second reconstruction after another fire in 1567 and the current Daibutsuden dates from about 1709. The Shōsōin repository at the monastery, itself a Japanese national treasure (kokuhō), contains over nine thousand precious ornamental and fine-art objects that date from the monastery's founding in the eighth century, including scores of objects imported into Japan via the [SILK ROAD](#) from all over Asia, including cut-glass bowls and silk brocade from Persia, Byzantine cups, Egyptians chests, and Indian harps, as well as Chinese Tang and Korean Silla musical instruments, *etc.* Every spring, the two-week long Omizutori (water-drawing) festival is conducted at Tōdaiji, which is thought to cure physical ailments and cleanse moral transgressions.

[Tōji](#). (東寺). In Japanese, “Eastern Monastery,” also known as Kyōō Gokokuji; a famous temple in Kyōto, Japan. Currently, Tōji is the headquarters (honzan) of the Tōji branch of the [SHINGONSHŪ](#). Construction of Tōji and its sister temple Saiji (Western Monastery) began in 796, after the Japanese capital was moved from Nara to Kyōto and the capital divided into eastern and western precincts, following traditional Chinese city plans. The two monasteries seem to have been built for the purpose of protecting spiritually the southern borders of the new

capital. In 812, construction of the golden hall (kondō) at the monastery was completed. In 823, the emperor bestowed the temple upon the eminent Japanese monk [KŪKAI](#) and the monastery was then named the Konkōmyō Shitennō Kyōō Gokokuji Himitsu Denbōin (Radiance of Golden Light, Four Heavenly Kings, King of Teachings, Protection of the State Temple, Esoteric Transmission of the Dharma Cloister). Sixteen years later, the central altar ([SHUMIDAN](#)) was completed and eyes of the central icons were opened (see [KAIYAN](#)). The famous five-story pagoda at Tōji, a national treasure (kokuhō), was completed in the second half of the ninth century. The pagoda was consumed in flames after it was struck by lightning in 1055, but with the support of the Edo bakufu, the pagoda was reconstructed to its current shape.

[Tokushō](#). (J) (得勝) (1327–1387). See [BASSUI TOKUSHŌ](#).

[Tominaga Nakamoto](#). (富永仲基) (1715–1746). Important Japanese thinker during the Edo period. The third son of a soy sauce manufacturer in Ōsaka, Tominaga was raised in the merchant community. Tominaga’s social position and subsequent education resulted in an eclectic and fairly impartial understanding of the varying schools of Confucian thought, Buddhism, and Daoism. Tominaga received a classical Confucian education at Kaitokudō, a private academy funded by his father and a few other Ōsaka manufacturers. He began his education at age nine, and eventually studied Buddhist scripture in great breadth and depth, even though he was never ordained. Tominaga was forced to leave Kaitokudō after writing a critical piece on competing Confucian schools of thought. The work, which is no longer extant, was called *Setsuhei*, or “A Critical Examination of [Confucian] Doctrine.” Tominaga did the majority of his study of sūtras and [MAHĀYĀNA](#) Buddhism between 1730 and 1738. He published two titles that are still extant, *Shutsujō kōgo* (“Emerging from Meditation”) (1745), and *Okina no fumi* (“Writings of an Old Man”), which was published six months after he died of lung disease in 1746. In these works, he took a historical approach that critiqued all claims to authenticity by the existing schools of Japanese religion, suggesting that the different sects of Buddhism evolved by reformations of preceding schools, reformations that were then justified by appeals to the authority of the Buddha himself. He even made the radical claim that the Buddha could not have taught the Mahāyāna sūtras because their language and teachings differed so dramatically from other types of Buddhist sūtras. Although he was vigorously criticized by the Buddhist

ecclesia, his historical approach to Buddhism helped to establish the foundation for the Japanese scholarly study of Buddhism in the nineteenth and early twentieth centuries.

[tōmitsu](#). (J) (東密). See [MIKKYŌ](#).

[T'ongdosa](#). (通度寺). In Korean, “Breakthrough Monastery” (lit. “Penetrating Crossing-Over Monastery”); the fifteenth district monastery ([PONSA](#)) in the contemporary [CHOGYE CHONG](#) of Korean Buddhism, located at the base of Yŏngch'uksan (S. [GRDHRAKŪTAPARVATA](#), or Vulture Peak) in Yangsan, South Kyŏngsang province. Along with [HAEINSA](#) and [SONGGWANGSA](#), T'ongdosa is one of the “three-jewel monasteries” ([SAMBO SACH'AL](#)) that represent one of the three jewels ([RATNATRAYA](#)) of Buddhism; [T'ONGDOSA](#) is the buddha-jewel monastery (pulbo sach'al), because of its ordination platform and the relics (K. sari; S. [ŚARĪRA](#)) of the Buddha enshrined in back of its main shrine hall ([TAEUNG CHŎN](#)). The oldest of the three-jewel monasteries, T'ongdosa has long been regarded as the center of Buddhist disciplinary studies ([VINAYA](#)) in Korea, and has been one of the major sites of ordination ceremonies since the Unified Silla period (668–935). Relics, reputed to be those of the Buddha himself, are enshrined at the monastery, and its taeung chŏn is famous for being one of four in Korea that does not enshrine an image of the Buddha; instead, a window at the back of the main hall, where the image ordinarily would be placed, looks out on the Diamond Ordination Platform (Kŭmgang kyedan), which includes a reliquary ([STŪPA](#)) that enshrines the Buddha's relics. This focus on vinaya and the presence of these relics, both of which are reminders of the Buddha, have led the monastery to be designated the buddha-jewel monastery of Korea. T'ongdosa is said to have been established by the vinaya master [CHAJANG](#) (608–686) in 646 to enshrine a portion of the relics that he brought back with him from his sojourn into China. While on pilgrimage at [WUTAISHAN](#), Chajang had an encounter with the bodhisattva [MAÑJUŚRĪ](#), who entrusted Chajang with a gold studded monk's robe (K. kasa; S. [KASĀYA](#)) wrapped in purple silk gauze, one hundred pieces of relics of the Buddha's skull bone and his finger joint, beads, and sūtras. One portion of the relics was enshrined together with the Buddha's robe in a bell-shaped stone stūpa at the center of the Diamond Ordination Platform; another portion was enshrined in the nine-story pagoda at [HWANGNYONGSA](#) in the Silla capital of Kyŏngju. Under Chajang's leadership, the monastery grew into a major center of Silla Buddhism and the monastery continued to thrive

throughout the Silla and Koryŏ dynasties, until the whole monastery except the taeung chŏn was destroyed by invading Japanese troops in the late sixteenth century. In 1641, the monk Uun (d.u.) rebuilt the monastery in its current configuration. The Diamond Ordination Platform was periodically damaged during the sporadic Japanese invasions that occurred during the Chosŏn dynasty. In the fourth month of 1377, Japanese pirates invaded, seeking to plunder the śarīra; to keep them from falling into Japanese hands, the abbot went into hiding with the relics. Two years later, on the fifteenth day of the fifth month of 1379, the pirates came again, and the monks quickly whisked away the relics and hid them deep in the forest behind the monastery. The Japanese went in pursuit of the relics, but the abbot Wŏlsong (d.u.) took them to Seoul to keep them safe, returning with them once the danger had passed. During the Hideyoshi Invasions in the late sixteenth century, the relics were also removed in order to keep them safe. [SAMYŎNG YUJŎNG](#), who was leading a monk's militia fighting the Japanese invaders, sent the relics to the Diamond Mountains ([KŪMGANGSAN](#)) in the north, where his teacher and the supreme commander, [CH'ŎNGHŎ HYUJŎNG](#), was staying. Hyujŏng decided that the relics were no safer there than back at their home monastery, so he returned them to T'ongdosa. Yujŏng covered the hiding place of the relics with weeds and thorn bushes and, once the Japanese threat was rebuffed, he restored the site to its former glory and the relics were reenshrined in 1603. The platform was repaired again in 1653 and on a grand scale in 1705. The Diamond Ordination Platform remains the site where [BHIKSU](#) and [BHIKSUNI](#) ordinations are held in Korea. In 1972, T'ongdosa was elevated to the status of an ecumenical monastery ([CH'ONGNIM](#)), and is one of the five such centers in the contemporary Chogye order, which are all expected to provide training in the full range of practices that exemplify the major strands of the Korean Buddhist tradition; the monastery is thus also known as the Yŏngch'uk Ch'ongnim.

[Tonghwasŏ](#). (桐華寺). In Korean, "Paulownia Flower Monastery"; the ninth district monastery ([PONSA](#)) of the contemporary [CHOGYE CHONG](#) of Korean Buddhism, located on Mount P'algong near the city of Taegu. The monastery was founded by the monk Kŭktal (d.u.) in 493, during of the reign of the Silla king Soji (r. 479–500), and was originally called Yugasa (Yoga monastery). When the royal preceptor (wangsa) Simji (d.u.) reconstructed the monastery in 832, Paulownia trees miraculously bloomed in the middle of the winter, so it was renamed Paulownia Flower monastery (Tonghwasŏ). The monastery was

reconstructed several times: in 934, by a late-Silla monk; in 1190, by the mid-Koryŏ reformer [POJO CHINUL](#) (1158–1210); and in 1298 by the state preceptor (K. *kuksa*; C. [GUOSHI](#)) Hongjin (1228–1294). In 1606, following the deprivations of the Japanese Hideyoshi invasions, the Sŏn master [SAMYŎNG YUJŎNG](#) (1544–1610) again reconstructed the monastery. The monastery contains many hermitages, including Kŭmdangam, Piroam, Naewŏnam, Pudoam, Yangjinam, and Yŏmburam. During the Japanese colonial period (1910–1945), Tonghwaso was designated one of the thirty-one head monasteries ([PONSA](#)) and it managed fifty-five branch temples (*malsa*). The monastery contains many cultural treasures, including the three-story pagodas at Piroam, the seated image of [MAHĀVAIROCANA](#), and the seated image of the buddha carved into the cliff face. A more recent addition to the monastery campus is a massive fifty-five foot (seventeen meter) standing image of the healing buddha [BHAIṢAJYAGURU](#).

[Tongrong](#). (C) (通容) (1593–1661). See [FEIYIN TONGRONG](#).

[tongxu](#). (C) (通序). See [ER XU](#).

[tonsure](#). A somewhat antiquated term occasionally still found in discussions of East Asian and especially Japanese Buddhism, referring to the shaving of the head that occurs in conjunction with entering a monastery and taking ordination as a monk or nun. See [PRAVRAJITA](#); [UPASAMPADĀ](#).

[tooth relic](#). (S./P. *dantadhātu*). A left cuspid tooth presumed to be that of the buddha Gotama (S. [GAUTAMA](#)), which is the most sacred relic in Sri Lanka and one of the most famous Buddhist relics in the world. It is said that after the Buddha's cremation, the tooth relic was retrieved from the ashes of the funeral pyre by the monk Khema. It was passed down among several royal dynasties until coming into the possession of king Guhasīva of Kalinga in the fourth century CE. Fearing that the tooth would be destroyed by Hindus, he entrusted it to his daughter, Hemamālā, who hid the tooth in her hair. Together with her husband, prince Dantakumāra, they traveled to Sri Lanka and presented the relic to the king, who enshrined it in [ANURĀDHAPURA](#). In 1280 it was captured by invaders and taken back to India but was returned shortly thereafter. In 1560, the tooth relic (in Jaffna at the time) was captured by the Portuguese viceroy of Goa, Dom Constantino de Braganza, and taken to Goa. There, he received word that the King of Pegu in Burma (Myanmar) would offer a huge sum as ransom for the tooth. The viceroy was inclined to accept, but the agreement was vetoed by

the Archbishop of Goa who, in a public ceremony, ground the tooth to dust with a mortar and pestle, burned the dust in a brazier, and then cast the ashes into the sea. The Sinhalese later explained that this had not been the real tooth relic but was instead a replica; the real tooth was safe in Kandy. The relic is housed in the Dalada Maligawa Temple in the city of Kandy. Construction of the temple began in 1592, with the temple complex being enlarged by several kings during the seventeenth and eighteenth centuries. Possession of the tooth relic is said to confer the right to rule the island, so much so that when the British captured the tooth in 1815, this was interpreted as a sign of the legitimacy of their sovereignty. The authenticity of the tooth relic has been called into question at certain points in its history; [HENRY STEEL OLCOTT](#) declared it to be an animal bone, leading to his estrangement from the monastic authorities. The tooth relic remains an object of veneration and Dalada Maligawa Temple is an important place of pilgrimage in the South and Southeast Asian Buddhist world. See also [DĀTHĀVAMSA](#).

[Tōshōdaiji](#). (唐招提寺). In Japanese, “Monastery for a Tang Wanderer”; located in the ancient Japanese capital of Nara and the head monastery of the [VINAYA](#) school (J. Risshū). Tōshōdaiji was originally a residence for Prince Niitabe, who donated it to the Tang-Chinese monk [GANJIN](#) (C. Jianzhen; 688–763), the founder of the vinaya school ([RISSHŪ](#)) in Japan. Ganjin came to Japan in 759 at the invitation of two Japanese monks who had studied with him in China at his home monastery of Damingsi (J. Daimyōji) in present-day Yangzhou. Ganjin tried to reach Japan five times before finally succeeding; then sixty-six and blind, he established an ordination platform at [TŌDAIJI](#) before moving to Tōshōdaiji, where he passed away in 763. The monastery’s name thus refers to Ganjin, a “wandering monk from Tang.” The kondō, the golden hall that is the monastery’s main shrine, was erected after Ganjin’s death and finished around 781, followed three decades later by the monastery’s five-story pagoda, which was finished in 810. The kondō is one of the few Nara-period temple structures that has survived and is one of the reasons why the monastery is so prized. It was built in the Yosemite style, with a colonnade with eight pillars, and enshrines three main images: the cosmic buddha [VAIROCANA](#) at the center, flanked by [BHAIṢAJYAGURU](#), and a thousand-armed [AVALOKITEŚVARA](#) (see [SĀHASRABHUJASĀHASRANETRĀVALOKITEŚVARA](#)), only 953 of which remain today, with images of [BRAHMĀ](#) and [INDRA](#) at the sides and statues of the four heavenly king protectors of Buddhism standing in each corner. The kōdō, or lecture hall,

was moved to the monastery from Heijō Palace and is the only extant structure that captures the style of a Tenpyō palace; it houses a statue of the bodhisattva [MAITREYA](#). A kyōzō, or [SŪTRA](#) repository, holds the old library. The monastery also includes a treasure repository, a bell tower, and an ordination platform in the lotus pond. In 763, as Ganjin's death neared, he had a memorial statue of himself made and installed in his quarters at Tōshōdaiji. This dry-lacquer statue of a meditating Ganjin is enshrined today in the mieidō (image hall), but is brought out for display only on his memorial days of June 5–7 each year; it is the oldest example in Japan of such a memorial statue. Tōshōdaiji was designated a UNESCO World Heritage Site in 1998.

Tosŏn. (道詵) (827–898). Korean [SŌN](#) master during the Later Silla and the early Koryŏ kingdoms, who is said to have been the first Korean to combine geomancy (K. p'ungsu; C. fengshui) and Buddhism in order to assess and correct adverse energy flows in the indigenous Korean landscape. Tosŏn was probably a relatively little-known figure during his own lifetime, but he became the stuff of legend for supposedly predicting the rise to prominence of the founder of the Koryŏ dynasty, Wang Kŏn (r. 918–943), and using his geomantic prowess to locate the most auspicious site for the founding of its new capital, Kaesŏng. Tosŏn developed a theory of deploying Buddhist architectural sites as a palliative to geographic anomalies. This theory, called “reinforcing [the land] through monasteries and [STŪPAS](#)” (K. [PIBO SAT'AP SŌL](#)), proposed that building monasteries and pagodas at geomantically fragile locations could alleviate or correct weaknesses in the native topology, in much the same way that acupuncture could correct feeble energy flows within the physical body. His geomantic theory is unusual, because Chinese geomancy of the time focused more on the discovery of hidden propitious sites within the landscape, not correcting geomantic weaknesses. This term pibo (lit. “assisting and supplementing,” and thus “reinforcing,” or “remediation”) is also unattested as a technical term in Chinese geomancy. The term may derive from similar terms used in the geomantic theories of the Chinese [CHAN](#) school and thence the Korean Nine Mountains Sŏn school ([KUSAN SŌNMUN](#)), with which Tosŏn was affiliated. The geomancy of Yang Yunsong (834–900) was popular in the Jiangxi region of China; this type of geomancy sought to interpret the lay of the land as a way of locating the most auspicious sites for constructing buildings. This tradition seems to have entered into the Chan lineages in that region, whence it might have been introduced in turn into Korea by the several Sŏn

masters in the Nine Mountains school who studied in Jiangxi. The frequency with which late Silla and early Koryŏ period Sŏn monks located their monasteries following geomantic principles may well derive from the fact that seven of these nine early lineages of Korean Sŏn were associated with the Hongzhou school and the Jiangxi region. Some scholars instead propose that the source of Tosŏn's geomancy is to be found in esoteric Buddhism: Tosŏn viewed the country as a [MANDALA](#) and, in order to protect the nation, proposed to situate monasteries at locations chosen through the ritual of demarcating a sacred site (*sīmābandha*). Finally, Korean indigenous religion and Togyo (Daoism) are also sometimes presented as sources of Tosŏn's geomantic teachings. Tosŏn's theory of geomancy also played a role in resituating the religious center of Korean Buddhism, which had previously been focused on the Silla capital of [KYŎNGJU](#) or such indigenous sacred mountains as the five marchmounts (*o'ak*). The Silla royal and aristocratic families founded monasteries around the capital of Kyŏngju based on the belief that this region had previously been a Buddha land (*Pulgukt'o*). Tosŏn's theory resulted in an expansion of the concept of "Buddha land" to take in the entire Korean peninsula, instead. After the establishment of the new Koryŏ dynasty in 918, Tosŏn's theory was appropriated as a means of integrating into the dynastic political structure local power groups and monasteries. In the posthumous "Ten Injunctions" (*hunyo sipcho*) attributed to Wang Kŏn, the Koryŏ founder is reputed to have instructed that monasteries should only be constructed at sites that had been specifically designated as auspicious by Tosŏn. For this reason, the term *pibo* later comes to be used as an official ecclesiastical category in Korea to designate important monasteries that had figured in the founding of the Koryŏ dynasty. Tosŏn's thought also subsequently became associated with the theory of geomancy and divination ([TOCH'AM](#)) taught by the diviner-monk [MYOCH'ŎNG](#) (d. 1135), who eventually led an unsuccessful rebellion against the Koryŏ dynasty.

[Totagamuwa, Śrī Rāhula](#). (1408–1491). A Sinhalese monk of the fifteenth century and one of the most celebrated poets of Sri Lanka. His most famous works include *Selalihini Sandesa* ("The Bird Sela's Message") and *Kaviyasekera* ("The Crown of Poetry"). Despite his status as a monk, his verse includes many secular themes, such as the power of kings and the beauty of women. His erudition also secured him a reputation as a great debater. [TOTAGAMUWA](#) received much praise and support from the Sinhalese king [PARĀKRAMABĀHU](#) VI, who came to the throne in 1410.

touguang. (J. zōkō; K. tugwang 頭光). In Chinese, lit. “head light”; a “nimbus” encircling the head of holy figures in Buddhist painting and sculpture. See [KĀYAPRABHĀ](#).

toushou. (J. chōshu; K. tusu 頭首). In Chinese, “prefect”; the prefects or chief officers at a [CHAN](#) monastery. Ideally, there are six prefects who govern different aspects of the daily activities of the monastic community. Because their offices were often located on the west side of the monastery, they were also often referred to as the west section or rank. The six prefects are the chief seat (C. [SHOUZUO](#)), scribe (C. [SHUJI](#)), library prefect (C. [ZANGZHU](#)), guest prefect (C. [ZHIKE](#)), bath prefect (C. [ZHIYU](#)), and hall prefect (C. [ZHIDIAN](#)). Cf. [TÖBAN](#).

Touzi Yiqing. (J. Tōsu Gisei; K. T’uja Ŭich’ōng 投子義青) (1032–1083). Chinese [CHAN](#) master in the [CAODONG ZONG](#). Touzi was a native of Qingzhou prefecture in present-day Shandong province. He entered the monastery of Miaoxiangsi at the age of seven and was ordained at age fifteen. During this period, Touzi is said to have studied Buddhist doctrine and the [AVATAMSAKASŪTRA](#). Later, Touzi became a disciple of the [LINJI ZONG](#) master Fushan Fayuan (991–1067), from whom he received the portrait ([DINGXIANG](#)), leather shoes, and patched robes of the deceased [DAYANG JINGXUAN](#), a Caodong lineage holder. Touzi thus became a holder not of his teacher Fushan’s but of Dayang’s Caodong lineage. In 1073, he began his residence at the Chan monastery of Haihui Chansi on Mt. Baiyun in Shuzhou prefecture, present-day Anhui province. Eight years later, he moved to the nearby Mt. Touzi, whence he acquired his toponym. His teachings are recorded in the *Shuzhou Touzi Qing heshang yulu* and *Touzi Qing heshang yuyao*.

tracing back the radiance. See [FANZHAO](#).

traidhātuka. (P. tedhātuka; T. khams gsum; C. sanjie; J. sangai; K. samgye 三界). In Sanskrit, the “triple realm” or “three realms [of existence]”; the three realms of [SAMSĀRA](#), in which beings take rebirth: the sensuous, or desire, realm ([KĀMADHĀTU](#)); the subtle-materiality, or form, realm ([RŪPADHĀTU](#)); and the immaterial, or formless, realm ([ĀRŪPYADHĀTU](#)). See also [AVACARA](#); [LOKADHĀTU](#).

trailokya. (T. ’jig rten gsum; C. sanjie; J. sangai; K. samgye 三界). In Sanskrit, the “three realms.” See [TRILOKAIDHĀTU](#); [TRAIDHĀTUKA](#); [AVACARA](#); [LOKADHĀTU](#).

Trailokyavijaya. (T. Khams gsum rnam rgyal; C. Xiangsanshi mingwang; J. Gōzanze myōō; K. Hangsamse myōngwang 降三世明王). In Sanskrit, “Victor of the Three Realms”; a wrathful deity, he is considered a wrathful form of [VAJRAPĀṆI](#). He is depicted in Indian Buddhist iconography and plays an important role in the [SARVATATHĀGATATATTVASAMGRAHA](#). It is in the form of Trailokyavijaya that Vajrapāṇi conquers Maheśvara (the Hindu god Śiva). It was often the case that Buddhists gave Hindu deities Buddhist forms, especially in the tantras. In this case, Trailokyavijaya may have his antecedent in the Hindu god Tripurāntaka, “Destroyer of the Three [Demon] Cities,” a form of Śiva whose worship was still current at the time the *Sarvatathāgatattvasaṃgraha* was being formulated. Iconographic similarities as well as the Buddhist Trailokyavijaya’s subjugation of the rival tradition’s Maheśvara support the connection; a Hindu deity is appropriated by Buddhists, with the appropriated form then subduing the Hindu god. The cult of Trailokyavijaya entered China with the translations of the *Sarvatathāgatattvasaṃgraha*, the [MAHĀVAIROCANĀBHISAMBODHISŪTRA](#), and several other texts translated by [AMOGHA VAJRA](#) in the second half of the eighth century, whence they quickly entered Japan. He is described as being terrible to behold, with four heads and eight arms, although in the [GARBHADHĀTU MANDALA](#), he has a single face with three eyes and two arms. He stands on prone figures of Śiva and Umā, whom he has thus subdued. His worship was largely replaced by that of [HERUKA](#) in the [CAKRASAMVARATANTRA](#) cycles, who performs the same function in the taming of Maheśvara.

Traiphum Phra Ruang. In Thai, “The Three Worlds According to King Ruang”; the title of a Thai cosmological treatise written by Prince Lithai (d. 1374), before he became monarch of the central Thai kingdom of [SUKHOTHAI](#). The treatise consists of descriptions of the three worlds or realms of existence (S. [TRAI DHĀTUKA](#)) into which beings are born, that is, the sensuous realm ([KĀMADHĀTU](#)), the realm of subtle materiality ([RŪPADHĀTU](#)), and the immaterial realm ([ARŪPYADHĀTU](#)). Each of the various places of rebirth within each of these realms is described, along with the deeds that lead to rebirth there. The treatise has played an important role in teaching Buddhist morals and values in Thai society and portions of it are often depicted in temple mural paintings.

traividya. (S). See [TRIVIDYĀ](#).

Trần Nhân Tông. (陳仁宗) (1258–1308). The third king of the Vietnamese Trần

dynasty (1225–1400) and the founding patriarch of the [TRÚC LÂM](#) (Bamboo Grove) school, the first authentic Vietnamese Thiền ([CHAN](#)) school. He was also the national hero who led Vietnam to victory over the Mongols in 1285 and 1288. In 1293, he abdicated, after being on the throne for fifteen years, to become *thượng hoàng* (retired emperor). When he was crown prince, he revered Buddhism and received instructions from eminent monks, including his uncle Huệ Trung Thượng Sĩ, an eminent Chan master of the time. In 1299 he went to Mount Yên Tử to become a monk and took the sobriquet Trúc Lâm Đại Sĩ. He was reverentially referred to as Trúc Lâm Điều Ngự or simply Điều Ngự. Even after taking residence in Yên Tử, he continued to travel to various temples to give instructions to monks, devoting himself to establishing a unified sangha. The *Tam Tổ Thực Lục* (“True Records on the Three Patriarchs”) relates that he traveled extensively to shut down “depraved temples” and to encourage people to receive the ten precepts. Many eminent monks of the Trần were his disciples. According to historical records, Trần Nhân Tông left behind several treatises on Chan and a few collections of poems in both classical Chinese and Nôm (demotic script). Unfortunately, none of his writing are extant apart from a few poems collected in the *Việt Âm Thi Tập* in Chinese and two long poems in Nôm.

[transference of consciousness](#). See ['PHO BA](#).

[transfer of merit](#). See [PUNYĀNUMODANA](#).

[transmigration](#). See [REBIRTH](#); [PUNARBHAVA](#); [PUNARJANMAN](#); [SPRUL SKU](#).

[transmission](#). Many strands of Buddhism employ the concept of transmission to describe the dissemination of a particular doctrine or practice from teacher to student, with an unbroken dissemination line going back to the originator of the teaching (usually the Buddha) often considered essential for maintaining the authenticity and authority of the teaching and those who propound it. This line of transmission is often spoken of as the “lineage.” Various forms of transmission are set forth in a number of Buddhist traditions, including the famous seal of transmission ([YINKE](#)) and “mind-to-mind transmission” ([YIXIN CHUANXIN](#)) of the East Asian [CHAN](#) schools, which is considered to be a “special transmission outside the teachings” ([JIAOWAI BIECHUAN](#)). In Tibetan Buddhism, reference is often made to the “aural transmission” ([NYAN BRGYUD](#)), the teachings received orally from a master as opposed to those derived from a text. The aural transmission often refers to practical instructions for meditation practice that

have not been recorded in a text. See also [CHUANDENG LU](#); [CHUANFA](#); [FASI](#); [PARAMPARĀ](#).

[transmission of the lamplight](#). See [CHUANDENG LU](#); [JINGDE CHUANDENG LU](#).

[Trần Thái Tông](#). (陳太宗) (1218–1277). Buddhist leader and literary figure of medieval Vietnam, who was also the founder of the Trần dynasty (1225–1400), one of the most illustrious dynasties in Vietnamese history. He ascended the throne as a child of eight after his uncle, Trần Thủ Độ, overthrew the Lý dynasty (1010–1225). During his youth he attempted to escape from the capital city to Mount Yên Tử to become a monk but was forced to return to court by his uncle. Trần Thái Tông related this incident and many events of his life in one of his writings, the preface to “A Guide to the Chan School.” He reported that, even when he was a king, whenever he had free time he would gather together learned and virtuous monks to practice Chan and discuss the path of Buddhism. He also related that he often read the [VAJRACCHEDIKĀPRAJÑĀPĀRAMITĀSŪTRA](#) (“Diamond Sūtra”) and that when he came across the phrase “one should not generate a mind based on any object,” he gained realization. This and other incidents suggest that he interpreted his religious experience in accordance with that of [HUINENG](#), the sixth patriarch ([LIUZU](#)) of Chinese Chan. In 1258, Trần Thái Tông abdicated and became thượng hoàng (retired emperor). From then until his death, he devoted himself to practicing Chan and studying Buddhist scriptures. It was during this period that he composed most of his works, including the [KHÓA HƯ LỤC](#).

[Trapuṣa](#). (P. Tapussa/Tapussu; T. Ga gon; C. Tiwei; J. Daii; K. Chewi 提謂). Sanskrit proper name of one of the two merchants (together with his brother [BHALLIKA](#)) who became the first lay Buddhists ([UPĀSAKA](#)). Following his enlightenment under the [BODHI TREE](#), the Buddha remained in the vicinity for seven weeks, each week spent at a different site (see [BODHGAYA](#)). At the end of the seventh week (or in some versions the sixth), he sat under a Rājāyatana tree, where he continued his meditation. Two merchants, Trapuṣa and his younger brother Bhallika, who were leading a large trading caravan with some five hundred carts, saw him there. Realizing that he had not eaten for weeks (as many as seven weeks), upon the encouragement of a deity, the brothers offered the Buddha sweet rice cakes with butter and honey. The Buddha, however, did not have a bowl in which to receive the food and said it was inappropriate for him to receive the food directly into his hands. The divine kings of the four directions

([LOKAPĀLA](#)) then offered him bowls. (According to one account, he received four bowls and collapsed them into one, which is the origin of the “four-bowl” meals served in some East Asian monastic refectories.) In response to their act of charity ([DĀNA](#)), the Buddha spoke with them informally and they took refuge ([ŚARANA](#)) in the Buddha and the [DHARMA](#) (there being no third refuge, the [SAMGHA](#), at this early point in the dispensation), thus making them the first lay Buddhists. The Buddha is said to have given the two brothers eight strands of hair from his head, which they took back to their homeland and interred for worship as relics ([ŚARĪRA](#)) in a [STŪPA](#). According to this account, it is interesting to note that the first thing the Buddha provided to another person after his enlightenment was not a teaching but a relic. In the account of the period of the Buddha’s enlightenment in the [NIDĀNAKATHĀ](#), this incident occurs immediately before the god [BRAHMĀ](#) descends from heaven and asks the Buddha to teach the dharma. According to Mon–Burmese legend, Trapuṣa and Bhallika were Mon natives, and their homeland of Ukkala was a place also called Dagon in the Mon homeland of Rāmañña in lower Burma. The stūpa they constructed at Ukkala/Dagon, which was the first shrine in the world to be erected over relics of the present Buddha, was to be enlarged and embellished over the centuries to become, eventually, the golden [SHWEDAGON PAGODA](#) of Rangoon. Because of the preeminence of this shrine, some Burmese chroniclers date the first introduction of Buddhism among the Mon in Rāmañña to Tapussa and Bhallika. Trapuṣa achieved the stage of “stream-enterer” ([SROTAĀPANNA](#)); Bhallika eventually ordained and became an [ARHAT](#). The merchants were also the subject of a prototypical Chinese apocryphal text, the [TIWEI \[BOLI\] JING](#), written c. 460–464, which praises the value of the lay practices of giving (dāna) and keeping the five precepts ([PAÑCAŚĪLA](#)).

[trāyastriṃśa](#). (P. tāvatīṃsa; T. sum cu rtsa gsum pa; C. sanshisan tian/daoli tian; J. sanjūsanten/tōriten; K. samsipsam ch’ōn/tori ch’ōn 三十三天/忉利天). In Sanskrit, lit. “thirty-three”; the heaven of the thirty-three, the second lowest of the six heavens of the sensuous realm ([KĀMADHĀTU](#)), just above the heaven of the four heavenly kings ([CĀTURMAHĀRĀJAKĀYIKA](#)) and below the [YĀMA](#) heaven. Like all Buddhist heavens, it is a place of rebirth and not a permanent post-mortem abode. The heaven is situated on the flat summit of Mount [SUMERU](#) and is inhabited by thirty-three male divinities and their attendants, presided over by the divinity [ŚAKRA](#), the king of the gods ([ŚAKRO DEVĀNĀM INDRAH](#)). The divinities live in palaces of gold among beautiful parks and have life spans of

thirty million years. The heaven is commonly mentioned in Buddhist texts. In the seventh year after his enlightenment, after performing the [ŚRĀVASTĪ MIRACLES](#), the Buddha magically traveled to the heaven of the thirty-three, where he spent the three months of the rains retreat ([VARŚĀ](#)) teaching the [ABHIDHARMA](#) to his mother [MĀYĀ](#). (She had descended to meet him there from her abode in the [TUSITA](#) heaven, where she had been reborn as a male deity after her death as Queen Māyā.) At the conclusion of his teaching, the Buddha made his celebrated return to earth from the heaven on a bejeweled ladder provided by Śakra, descending at the city of [SĀMKĀŚYA](#). [MAHĀMAUDGALYĀYANA](#) also made numerous visits to the heaven to learn from its inhabitants about the virtuous deeds they performed in the past that resulted in their rebirth there. It was said that when a human performed a particularly virtuous deed, a mansion for that person would appear in trāyastriṃśa for that person to inhabit upon being reborn there. When Prince [SIDDHĀRTHA](#) renounced the world, he cut off his hair with his sword and cast it into the sky; the hair was caught by Śakra in trāyastriṃśa, who enshrined it in a [CAITYA](#) that is worshipped by the gods. Scholars have noted the correspondence between the number of divinities in this heaven and the traditional number of thirty-three gods of the *Rgveda*, suggesting that this heaven represents an attempt by Buddhists to absorb the pre-Buddhistic Indian pantheon.

[trepiṭaka](#). (P. *tipetaṭaka/tepiṭaka*; T. *sde snod gsum pa*; C. *sanzang fashi*; J. *sanzō hosshi*; K. *sanjang pōpsa* 三藏法師). In Sanskrit, “a master of the canon”; an honorific title attached to the name of a renowned Buddhist teacher who is well versed in the three divisions of the Buddhist canon ([TRIPITAKA](#)), viz., the collection of monastic rules and regulations ([VINAYAPITAKA](#); C. *lü*), the discourses collection ([SŪTRAPITAKA](#); C. *jing*), and the treatise collection ([ABHIDHARMAPITAKA](#), or [*ŚĀSTRAPITAKA](#); C. *lun*). The Pāli form of this term appears first in the [MILINDAPAÑHA](#), which is presumed to have been compiled around the beginning of the Common Era. In the East Asian Buddhist traditions, this term has been used as an honorific title for monks who mastered the Buddhist canon and were involved in translating Indic Buddhist literature into Chinese. Thus, such monks are also called “trepiṭaka who translate the scriptures” ([YIJING SANZANG](#)), or simply *sanzang*. There are many great translator-monks who carried this title of *sanzang* or *sanzang fashi*, including [KUMĀRAJĪVA](#) (344–413), [PARAMĀRTHA](#) (499–569), [XUANZANG](#) (600/602–664), and [AMOGHAVAJRA](#) (705–774). Later, this term was often commonly used to

refer specifically to Xuanzang, as in the “Biography of the Master of the Buddhist Canon at the Beneficence of Great Compassion Monastery” ([DACI'ENSI sanzang fashi zhuan](#)), which is a biography of Xuanzang written by Huili (615–?). The Sanskrit of *trepitaka* is sometimes (mistakenly) reconstructed from the Chinese as **tripitakācārya*.

[trichilocosm](#). See [TRISĀHASRAMAHĀSĀHASRALOKADHĀTU](#); [YINIAN SANQIAN](#).

[tricīvara](#). (P. *ticīvara*; T. *chos gos gsum*; C. *sanyi*; J. *san'e/sanne*; K. *samūi* 三衣). In Sanskrit, the “three robes” or “triple robe” worn by a monk or nun: the larger outer robe (S. [SAMGHĀTĪ](#); P. *saṅghāṭī*), the upper robe (S. [UTTARĀSAMGA](#); P. *uttarāsaṅga*), and a lower robe or waist cloth (S. [ANTARVĀSAS](#); P. *antaravāsaka*). According to the [VINAYA](#) account, the Buddha was concerned that too many monks had begun to hoard robes, which might cause them to “revert to luxury”; and after sitting through the cold one evening, he decided that the triple robe was sufficient to stay warm. The *antarvāsas* is the smallest of the three robes: normally made of one layer of cloth, it is worn around the waist and is intended to cover the body from the navel to the middle of the calf. The *uttarāsaṅga* is large enough to cover the body from the neck to the middle of the calf; it is also normally made of one layer of cloth. The *saṅghāṭī* or outer robe is the same size as the *uttarāsaṅga* but is normally made of two layers of cloth rather than one; it is worn over one or both shoulders, depending on whether one is inside or outside the monastery grounds. The *saṅghāṭī* was required to be tailored of patches, ranging in number from nine up to twenty-five, depending on the [VINAYA](#) recension; this use of patches of cloth is said to have been modeled after plots of farmland in [MAGADHA](#) that the Buddha once surveyed. All three robes must be dyed a sullied color, interpreted as anything from a reddish-or brownish-yellow saffron color to an ochre tone. For this reason, robes are also known as the [KĀSĀYA](#), or “dyed” (lit. “turbid-colored”) robes, which were traditionally required to be sewn from pieces of soiled cloth and “dyed.” Robes were one of the four major requisites (S. [NĪSĀYA](#); P. [NISSAYA](#)) allowed to monks and nuns, along with such basics as a begging bowl ([PĀTRA](#)) and lodging, and were the object of the [KATHINA](#) ceremony, in which the monastics were offered cloth for making new sets of robes at the end of each rains retreat (S. [VARSA](#); P. *vassa*).

[tridhātu](#). (S). See [TRAI DHĀTUKA](#); [AVACARA](#).

[tridvāra](#). (P. *dvārattaya*; T. *sgo gsum*; C. *sanmen*; J. *sanmon*, K. *sammun* 三門).

In Sanskrit, lit. “three doors” or “three gates”; referring to the body ([KĀYA](#)), speech ([VĀK](#); see [VĀKKARMAN](#)), and mind ([CITTA](#)) as means for the performance of physical, verbal, and mental deeds ([KARMAN](#)). It is also understood that these are the three doors through which one may enter into the physical, verbal, and mental practice of the dharma. Since it is through these three doors that beings accumulate the fruits ([VIPĀKA](#)) of either negative or positive karman, the adept is taught to guard sense faculties ([INDRIYASAMVARA](#)) throughout the activities of everyday life, in order to control the inveterate tendency toward craving. In tantric Buddhism, these three doors are known as the three mysteries (T. gsang ba gsum; J. [SANMITSU](#)), which are transformed into the three bodies of a buddha ([TRIKĀYA](#)) through tantric practice. The body is transformed into the emanation body ([NIRMĀNAKĀYA](#)), speech into the enjoyment body ([SAMBHOGAKĀYA](#)), and mind into the truth body ([DHARMAKĀYA](#)). Body, speech, and mind are said to be purified by the mantra om̐ āḥ hūṃ.

[trikāla](#). (P. tikāla; T. dus gsum; C. sanshi; J. sanze; K. samse 三世). In Sanskrit, the “three times,” used to refer collectively to the three time periods of past, present, and future; often mistakenly translated from the Chinese as “three worlds” (the Chinese term shi in this compound means an “age” or “generation”). The term often occurs in such phrases as trikāla-buddha, “the buddhas of the past, present, and future.” Trikāla is also used to refer to the three periods of one day—dawn, daylight, and dusk. There are a range of views on the ontological status of the three temporal dimensions of the past, present, and future. One of the more common arguments is that, while the past no longer exists and the future does not yet exist, the present exists as an endless series of instances or moments in which a host of mental and physical constituents arise and cease instantaneously (see [KSANIKAVĀDA](#)). On the other hand, the [SARVĀSTIVĀDA](#) school argued that dharmas exist, and can thus exert specific types of causal efficacy, in all three time periods, requiring a special set of “dissociated forces” ([CITTAVIPRAYUKTASAMSKĀRA](#)) to account for the process of change (see [CATURLAKSANA](#); [SAMSKRTALAKSANA](#)), essentially moving a dharma from past mode, to present and future modes.

[trikāya](#). (T. sku gsum; C. sanshen; J. sanshin; K. samsin 三身). In Sanskrit, lit. “three bodies”; one of the central doctrines of [MAHĀYĀNA](#) buddhology. The three bodies refer specifically to three distinct bodies or aspects of a buddha: [DHARMAKĀYA](#), the “dharma body” or “truth body”; [SAMBHOGAKĀYA](#), the

“enjoyment body” or “reward body”; and [NIRMĀNAKĀYA](#), “emanation body” or “transformation body.” The issue of what actually constituted the Buddha’s body arose among the [MAINSTREAM BUDDHIST SCHOOLS](#) over such questions as the body he used on miraculous journeys, such as the one that he took to [TRĀYASTRIMŚA](#) heaven to teach his mother [MĀYĀ](#); the conclusion was that he had used a “mind-made body” ([MANOMAYAKĀYA](#)), also called a *nirmāṇakāya*, to make the trip. The notion of different buddha bodies was also deployed to respond to the question of the nature of the Buddha jewel (*buddharatna*), one of the three jewels ([RATNATRAYA](#)) or three refuges ([TRIŚARANA](#)) of Buddhism. Since the physical body of the Buddha was subject to decay and death, was it a suitable object of refuge? In response to this question, it was concluded that the Buddha jewel was in fact a body or group (*kāya*) of qualities (*dharma*), such as the eighteen unique qualities of a buddha ([ĀVENIKA|BUDDHA|DHARMA](#)). This “body of qualities,” the original meaning of *dharmakāya*, was sometimes contrasted with the physical body of the Buddha, called the [RŪPAKĀYA](#) (“material body”) or the *vipākakāya*, the “fruition body,” which was the result of past action ([KARMA](#)). With the development of Mahāyāna thought, the notion of *dharmakāya* evolved into a kind of transcendent principle in which all buddhas partook, and it is in this sense that the term is translated as “truth body.” In the later Mahāyāna scholastic tradition, the *dharmakāya* was said to have two aspects. The first is the [SVABHĀVIKĀYA](#), or “nature body,” which is the ultimate nature of a buddha’s mind that is free from all adventitious defilements (*āgantukamala*). The second is the *jñānakāya*, or “wisdom body,” a buddha’s omniscient consciousness. The *dharmakāya* was the source of the two other bodies, both varieties of the *rūpakāya*: the *saṃbhogakāya* and the *nirmāṇakāya*. The former, traditionally glossed as “the body for the enjoyment of others,” is a resplendent form of the Buddha adorned with the thirty-two major and eighty minor marks ([MAHĀPURUṢĀLAKSANA](#)), which appears only in buddha fields ([BUDDHAKṢETRA](#)) to teach the Mahāyāna to advanced bodhisattvas. Some śāstras, such as the [BUDDHABHŪMIŚĀSTRA](#) (*Fodijing lun*) and [CHENG WEISHI LUN](#), distinguish between a “body intended for others’ enjoyment” ([PARASAMBHOGAKĀYA](#)) and a “body intended for personal enjoyment” ([SVASAMBHOGAKĀYA](#)). In the *trikāya* system, the *nirmāṇakāya* is no longer a special body conjured up for magical travel, but the body of the Buddha that manifests itself variously in the world of sentient beings in order to teach the *dharma* to them. It also has different varieties: the form that manifests in the mundane world as the Buddha adorned with the major and minor marks is called the [UTTAMANIRMĀNAKĀYA](#), or “supreme emanation

body”; the nonhuman or inanimate forms a buddha assumes in order to help others overcome their afflictions are called the [JANMANIRMĀNAKĀYA](#), or “created emanation body.”

[trilakṣana](#). (P. tilakkhaṇa; T. mtshan nyid gsum/phyag rgya gsum; C. sanxiang; J. sansō; K. samsang 三相). In Sanskrit, the “three marks”; three characteristics of all conditioned phenomena in [SAMSĀRA](#): impermanence ([ANITYA](#)), suffering ([DUHKHA](#)), and nonself ([ANĀTMAN](#)). According to the [VISUDDHIMAGGA](#), realization of the truth and reality of the three marks constitutes enlightenment ([BODHI](#)), which eradicates belief in the existence of a perduring self (P. atta; S. [ĀTMAN](#)), otherwise called “personality belief” (P. sakkāyadiṭṭhi; S. [SATKĀYADRSTI](#)), and delivers one to the noble path (P. ariyamagga; S. [ĀRYAMĀRGA](#)). Through this attainment, one becomes a stream-enterer (P. sotāpanna; S. [SROTAĀPANNA](#)) and is assured of becoming an [ARHAT](#) and entering [NIRVĀNA](#) in at most seven lifetimes.

[triloka\[dhātu\]](#). (P. tiloka; T. ’jig rten gsum; C. sanjie; J. sangai; K. samgye 三界). In Sanskrit, “three realms of existence”; a common Buddhist term for “everywhere” or “the whole world,” glossed in one of two ways: (1) the three realms ([TRAIDHĀTUKA](#)), viz., the sensuous realm ([KĀMADHĀTU](#)), the realm of subtle materiality ([RŪPADHĀTU](#)), and the formless or immaterial realm ([ĀRŪPYADHĀTU](#)); (2) the three regions, viz., the region above the earth, the region on the surface of the earth, and the region below ground. See also [TRISĀHASRAMAHĀSĀHASRALOKADHĀTU](#).

[Trimśikā](#). (T. Sum cu pa; C. Weishi sanshi lun song; J. Yuishiki sanjūronju; K. Yusik samsip non song 唯識三十論頌). In Sanskrit, lit., the “Thirty”; a work in thirty verses by the fourth or fifth century CE [YOGĀCĀRA](#) master [VASUBANDHU](#); also known as the *Triṃśatikā* and the *Triṃśikāvijñaptimātratā*. Together with his [VIMŚATIKA](#) (the “Twenty”), it is considered a classic synopsis of Yogācāra doctrine. In this work, which is extant in Sanskrit as well as in Chinese and Tibetan translations, Vasubandhu introduces the major categories of Yogācāra thought, including the foundational consciousness or [ĀLAYAVIJÑĀNA](#), and the mental concomitants ([CAITTA](#)) that accompany consciousness; the afflicted mental consciousness or [KLISTAMANAS](#) (simply called [MANAS](#) in the text), which falsely perceives the ālayavijñāna as self; the three natures ([TRISVABHĀVA](#)); the three absences of intrinsic nature ([NIH SVABHĀVA](#)); “consciousness-only” or “representation-only” ([VIJÑAPTIMĀTRATĀ](#)); and “revolution of the basis,” or

[ĀŚRAYAPARĀVṚTTI](#). Among the commentaries on the text, the most influential is that by [STHIRAMATI](#).

[trīndriya](#). (T. dbang po gsum; C. sangen; J. sankon; K. samgŭn 三根). In Sanskrit, “three capacities,” or “three faculties”; a division of disciples of the Buddha or of a particular teaching, based on relative levels of aptitude, understanding, or profundity. The three are as follows: those of dull faculties ([MRDVINDRIYA](#)), those of intermediate faculties ([MADHYENDRIYA](#)), and those of sharp faculties ([TĪKSNENDRIYA](#)). The term is often used polemically to describe one’s preferred teaching as intended only for those of sharp faculties, while dismissing other competing teachings as intended for those of dull or intermediate faculties. See also [INDRIYA](#).

[triniḥsvabhāva](#). (S.; T. ngo bo nyid med pa gsum). In Sanskrit, “three types of absence of intrinsic existence.” See [NIHSVABHĀVA](#).

[tripitaka](#). (P. tipīṭaka; T. sde snod gsum; C. sanzang; J. sanzō; K. samjang 三藏). In Sanskrit, “three baskets”; one of the most common and best known of the organizing schema of the Indian Buddhist canon. These three baskets were the [SŪTRAPITAKA](#) (basket of discourses), [VINAYAPITAKA](#) (basket of disciplinary texts) and [ABHIDHARMAPITAKA](#) [alt. *[ŚĀSTRAPITAKA](#)] (basket of “higher dharma” or “treatises”). The use of the term pīṭaka for these categories is thought to come from the custom of storing the palm-leaf or wooden slips of written texts in baskets (S. pīṭaka). (The Chinese translates pīṭaka as a “repository,” thus tripīṭaka is the “three repositories.”) The various [MAINSTREAM BUDDHIST SCHOOLS](#) in India had their own distinctive version of each of the pīṭakas; the Pāli version transmitted to Sri Lanka is the most complete to survive in an Indic language, although sections of those of other schools, such as the [DHARMAGUPTAKA](#), [SARVĀSTIVĀDA](#), and [MŪLASARVĀSTIVĀDA](#), are preserved in Chinese, Tibetan, and in Sanskrit or Middle Indic fragments. Some schools used different organizing schema. The Dharmaguptaka school, for example, is said to have had five pīṭakas; the usual three, plus a bodhisattvapīṭaka (on various doctrines and practices related to the [BODHISATTVA](#)) and a dhāraṇīpīṭaka (of [DHĀRANĪ](#) codes and spells). The [MAHĀYĀNA](#) sūtras were not organized under this rubric, although it is sometimes said that they can be when the three baskets are interpreted more figuratively, with the vinayapīṭaka including those teachings connected to the training in morality ([ŚĪLA](#)), the sūtrapīṭaka including those teachings connected to the training in meditation ([SAMĀDHI](#)), and the abhidharmapīṭaka including those

teachings connected to the training in wisdom ([PRAJÑĀ](#)). The East Asian traditions arranged their own indigenous canons as a [DAZANGJING](#) (scriptures of the great repository), rather than a tripitaka; the two terms are not synonymous. See also [BKA' 'GYUR](#); [DAZANGJING](#); [KORYŎ TAEJANGGYŎNG](#); [TAISHŌ SHINSHŪ DAIZŌKYŌ](#).

***tripitakācārya.** (S). See [TREPITAKA](#).

triratna. In Sanskrit, the “three jewels” of the [BUDDHA](#), [DHARMA](#), and [SAMGHA](#). See [RATNATRAYA](#).

trisāhasramahāsāhasralokadhātu. (T. stong gsum gyi stong chen po'i 'jig rten gyi khams; C. sanqian daqian shijie; J. sanzendaisensekai; K. samch'ŏn taech'ŏn segye 三千大千世界). In Sanskrit, lit. “three-thousandfold great-thousandfold world system,” but typically translated as “[TRICHILIOCOSM](#)”; the largest possible universe, composed of (according to some interpretations of the figure) one billion world systems, each of which have a similar geography, including a central axis at Mount [SUMERU](#), four surrounding continents, *etc.* These worlds follow similar cosmic cycles of creation, abiding, disintegration, and annihilation. See [YINIAN SANQIAN](#).

Triśākuni. (S). One of the twenty-four sacred sites associated with the [CAKRASAMVARATANTRA](#). See [PĪTHA](#).

trisaṃvara. (T. sdom gsum). In Sanskrit, “three vows” or “three restraints”; a collective term for three different sets of precepts. The *Trisaṃvaranirdeśaparivarta* of the [RATNAKŪTASŪTRA](#) collection sets forth the three types of vows as the three types of bodhisattva morality found in the śīlaparivarta (“morality chapter”) of the [BODHISATTVABHŪMI](#). Usually, however, trisaṃvara refers to the three sets of precepts a practitioner of the [VAJRAYĀNA](#) may take: the prātimokṣasaṃvara or monastic precepts (see [PRĀTIMOKṢA](#)), the [BODHISATTVASAMVARA](#) or bodhisattva precepts, and the guhyamantrasaṃvara (“secret mantra precepts”) or tantric vows ([SAMVARA](#)) or pledges ([SAMAYA](#)). The relations between and among these three types of precepts are the subject of an extensive, and often polemical, literature in Tibet, the most famous treatment being the [SDOM GSUM RAB DBYE](#), or “Differentiation of the Three Vows,” by [SA SKYA PANDITA](#). See also [SAMVARA](#); [SDOM GSUM](#); [PUSA JIE](#).

trīśaraṇa. (P. tisarāṇa; T. skyabs gsum; C. sanguiyi; J. sankie; K. samgwiüi 三歸依). In Sanskrit, the “three refuges” or the “triple refuge”; the three “safe havens” in which Buddhists seek refuge from the sufferings of [SAMSĀRA](#): the [BUDDHA](#), the [DHARMA](#), and the [SAMGHA](#). The recitation of the three refuges is one of the foundational Buddhist ritual practices: “I go for refuge to the Buddha (buddham śaraṇaṃ gacchāmi). I go for refuge to the dharma (dharmaṃ śaraṇaṃ gacchāmi). I go for refuge to the saṃgha (saṃghaṃ śaraṇaṃ gacchāmi).” Reciting these refuges three times is attestation that one is a Buddhist adherent; thus, the formula figures in a wide range of ceremonies across the Buddhist world. These three refuges are identical to the “three jewels” ([RATNATRAYA](#)).

trīśikṣā. (P. tisikkhā; T. bslab pa gsum; C. sanxue; J. sangaku; K. samhak 三學). In Sanskrit, the “three trainings”; three overarching categories of Buddhist practice. First is the training in higher morality ([ADHIŚĪLAŚIKṢĀ](#)), which encompasses all forms of restraint of body and speech, including lay and monastic precepts that serve as the foundation for the cultivation of the succeeding stages of concentration and wisdom. Second is the training in higher concentration ([ADHISAMĀDHIŚIKṢĀ](#), also called adhicitta), which encompasses all forms of meditative practice directed toward the achievement of states of concentration. Third is the training in higher wisdom ([ADHIPRAJÑĀŚIKṢĀ](#)), which includes all forms study and reflection that are directed toward developing insight into the true nature of reality. These three trainings are said to subsume all of the constituents of the noble eightfold path ([ĀRYĀSTĀNGAMĀRGA](#)): adhiprajñāśikṣā comprises the first two constituents, viz., right views ([SAMYAGDRSTI](#)) and right intention ([SAMYAKSAMKALPA](#)); adhiśīlaśikṣā, the middle three constituents, viz., right speech ([SAMYAGVĀC](#)), right action ([SAMYAKKARMĀNTA](#)), and right livelihood ([SAMYAGĀJĪVA](#)); and adhisamādhiśikṣā, the last three constituents, viz., right effort ([SAMYAGVYĀYĀMA](#)), right mindfulness ([SAMYAKSMRTI](#)), and right concentration ([SAMYAKSAMĀDHI](#)).

triskandhaka. (T. phung po gsum pa; C. sanju; J. sanju; K. samch’wi 三聚). In Sanskrit, lit. “three sections”; a three-part Mahāyāna liturgy that may have served as the foundation for more elaborate tantric liturgies ([PŪJĀ](#)), such as the sevenfold ritual ([SAPTĀṄGAVIDHI](#)). There are two versions of the three: (1) confession of transgressions ([PĀPADEŚANĀ](#)), (2) rejoicing in other’s virtues ([ANUMODANA](#)), and (3) dedication of merit ([PARINĀMANĀ](#)). A second version is: (1) confession of transgressions, (2) appreciation of other’s virtues, and (3)

requesting the buddhas to turn the wheel of the dharma (dharmacakrapravartanacodana). See also [PŪJĀ](#).

[trīsvabhāva](#). (T. mtshan nyid gsum/rang bzhin gsum; C. sanxing; J. sanshō; K. samsōng 三性). In Sanskrit, “the three natures”; one of the central doctrines of the [YOGĀCĀRA](#) school. The three are [PARIKALPITA](#), the “fabricated” or “imaginary” nature of things; [PARATANTRA](#), literally “other-powered,” their “dependent” nature; and [PARINIṢPANNA](#), their “consummate” or “perfected” nature. The terms appear in several [MAHĀYĀNA](#) sūtras, most notably the sixth chapter of the [SAMDHINIRMOCANASŪTRA](#), and are explicated by both [AŚAṄGA](#) and [VĀSUBANDHU](#). Although the terms are discussed at length in Yogācāra literature, they can be described briefly as follows. The three natures are sometimes presented as three qualities that all phenomena possess. The parikalpita or imaginary nature is a false nature, commonly identified as the contrived appearance of an object as being a different entity from the perceiving consciousness. Since, in the Yogācāra analysis, objects do not exist independently from the perceiving subject, they come into existence in dependence upon consciousnesses, which in turn are produced from seeds that (according to some forms of Yogācāra) reside in the foundational consciousness, or [ĀLAYAVIJÑĀNA](#). This quality of dependency on other causes and conditions for their existence, which is a characteristic of all objects and subjects, is the paratantra, or dependent nature. The nonduality between the consciousnesses and their objects is their consummate nature, the pariniṣpanna. Thus, it is said that the absence of the parikalpita in the paratantra is the pariniṣpanna.

[Trīsvabhāvanirdeśa](#). (T. Rang bzhin gsum nges par bstan pa). In Sanskrit, “Exposition of the Three Natures”; a work by the [YOGĀCĀRA](#) philosopher [VĀSUBANDHU](#) (fourth or fifth century CE). Possibly a late work of the author, it is less famous than several of his other works, in part because it lacks either an autocommentary or commentaries by subsequent figures in Indian Yogācāra. The work, extant in the original Sanskrit, consists of thirty-eight verses, dealing (as the title suggests) with the central Yogācāra doctrine of the three natures ([TRISVABHĀVA](#)): the [PARIKALPITA](#) or imaginary nature, the [PARATANTRA](#) or dependent nature, and the [PARINIṢPANNA](#) or consummate nature. According to this doctrine, briefly stated, objects do not exist apart from the perceiving consciousness. External objects are thus illusory and constitute the imaginary nature, the appearance of objects that arises in dependence on consciousness is

the dependent nature, and the absence of duality between subject and object is the consummate nature. Among the most famous passages in the text is the metaphor of the magician's illusion, in which a magician recites a [MANTRA](#) over a piece of wood that causes the members of the audience to see an elephant in place of the wood. In explaining the metaphor, Vasubandhu says that the elephant seen by the audience is the imaginary nature, the appearance of the elephant through the conjuring trick is the dependent nature, and the actual nonexistence of the elephant is the consummate nature. He also likens the mantra to the foundational consciousness ([MŪLAVIJÑĀNA](#), viz., [ĀLAYAVIJÑĀNA](#)) from which all appearances arise, and the wood to reality, or suchness ([TATHATĀ](#)).

trividyā. [alt. traividyā] (P. tevijjā; T. rig gsum; C. sanming; J. sanmyō; K. sammyōng 三明). In Sanskrit, lit. “three knowledges”; three specific types of knowledge ([VIDYĀ](#)) that are the products of the enlightenment experience of an [ARHAT](#) or buddha, and a sequential set of insights achieved by the Buddha during the three watches of the night of his own enlightenment. They are: (1) the ability to remember one's own former lives ([PŪRVANIVĀSĀNUMRTI](#); P. pubbenivāsānunssati) in all their detail, due to direct insight into the inexorable connection between action ([KARMA](#)) and its fruition ([VIPĀKA](#)), viz., karmic cause and effect; (2) insight into the future rebirth destinies of all other beings (S. [CYUTYUPAPATTIÑĀNA](#) [alt. cyutyupapādānumr̥ti]; P. cutūpapātañāna), a by-product of the “divine eye” ([DIVYACAKṢUS](#)); (3) knowledge of the extinction of the contaminants ([ĀSRAVAKṢAYA](#); P. āsavakhaya), which ensures complete liberation from the cycle of rebirth ([SAMŚĀRA](#)). The first and third types are also included in the superknowledges ([ABHIJÑĀ](#); P. abhiññā). At various points in the literature of the [MAINSTREAM BUDDHIST SCHOOLS](#) (e.g., the Pāli [ITIVUTTAKA](#)), the Buddha describes the above list as the three knowledges of a true brāhmaṇa; in such accounts, the Buddha is intentionally contrasting his three knowledges (vidyā) with that of brāhmaṇa priests who have merely memorized the traditional three Vedas of Brahmanical religion. See also [TEVIJJASUTTA](#).

trivikalpa. (T. rnam par rtog pa gsum; C. san fenbie; J. sanfunbetsu; K. sam punbyōl 三分別). In Sanskrit, “three types of discrimination”; three aspects of the discriminative activities of mind, generally portrayed in the negative sense of fantasy and imagination. Three types are typically described in the literature. (1) Intrinsic discrimination ([SVABHĀVAVĪKALPA](#)) refers to the initial advertence of

thought ([VITARKA](#)) and the subsequent sustained thought or reasoning ([VICĀRA](#)) regarding a perceived object of the six sensory consciousnesses ([VIJÑĀNA](#)), i.e., the discrimination of present objects, as when visual consciousness perceives a visual object, *etc.* (2) Conceptualizing discrimination ([ABHINIRŪPAṆĀVIKALPA](#)) refers to discursive thought on ideas that arise in the sixth mental consciousness when it adverts toward a mental object that is associated with any of the three time periods ([TRIKĀLA](#)) of the past, present, or future. (3) Discrimination involving reflection on past events ([ANUSMARANAṆVIKALPA](#)) refers to discriminative thought involving the memory of past objects. It is said that there is no svabhāvavikalpa from the second stage of meditative absorption ([DHYĀNA](#)) onward, since vitarka and vicāra, the first two of the five constituents of dhyāna ([DHYĀNĀṆGA](#)), are then no longer present. There is no abhinirūpaṇāvikalpa from the first stage of dhyāna onward, since the mind is then temporarily isolated from any awareness of the passage of time. Only anusmaranaṇavikalpa is involved in all three realms of existence ([TRILOKADHĀTU](#)), including both the subtle-materiality realm ([RŪPADHĀTU](#)) and the immaterial realm ([ĀRŪPYADHĀTU](#)).

[trivisa](#). (P. tivisa; T. dug gsum; C. sandu; J. sandoku; K. samdok 三毒). In Sanskrit, “three poisons”; the three primary afflictions ([MŪLAKLEŚA](#)) of sensuality, desire, or greed ([RĀGA](#) or [LOBHA](#)), hatred or aversion ([DVESA](#)), and delusion or ignorance ([MOHA](#)), regarded as poisons because of the harm they cause to those who ingest them or the way they poison the mind. This same list of three is also known as the three “unwholesome faculties” ([AKUŚĀLAMŪLA](#)), which will fructify as unhappiness in the future and provide the foundation for unfavorable rebirths ([APĀYA](#)). In the “wheel of existence” ([BHAVACAKRA](#)) that the Buddha is said to have instructed to be painted at the entrances of monasteries, showing the six realms of rebirth ([SADGATI](#)) as well as the twelve links of dependent origination ([PRATĪTYASAMUTPĀDA](#)), the three poisons are often depicted at the center of painting, suggesting their role as root causes of cycle of rebirth, with greed represented by a rooster, hatred by a snake, and delusion by a pig in a circle, each biting the tail of the other.

[triyāna](#). (T. theg pa gsum; C. sansheng; J. sanjō; K. samsŭng 三乘). In Sanskrit, “three vehicles,” three different means taught in Buddhist soteriological literature of conveying sentient beings to liberation. There are two common lists of the three: (1) the vehicles of the [ŚRĀVAKA](#), [PRATYEKABUDDHA](#) (both of which lead to the state of an [ARHAT](#)), and [BODHISATTVA](#) (which leads to buddhahood);

(2) the [HĪNAYĀNA](#), [MAHĀYĀNA](#), and [VAJRAYĀNA](#), although the vajrayāna is considered by its adherents to be a form of the Mahāyāna; the vajrayāna would speak instead of the [HĪNAYĀNA](#), [PĀRAMITĀYĀNA](#), and [VAJRAYĀNA](#). According to some Mahāyāna sūtras, most famously the [SADDHARMAPUNĀRĪKASŪTRA](#) (“Lotus Sūtra”), the three vehicles (in the first sense above) are an expedient device ([UPĀYA](#)) developed by the Buddha to entice beings of differing spiritual capacities toward enlightenment; in fact, however, there is really only one vehicle ([EKAYĀNA](#)) by which all beings proceed to buddhahood. Thus, in the Mahāyāna philosophical schools, the question arises of whether or not there are “three final vehicles,” that is, whether the state of the arhat is a permanent dead end or whether arhats would also eventually continue on to buddhahood. For example, the position that there are three separate and final vehicles is associated with the [YOGĀCĀRA](#) school of [ASAṄGA](#) and the Chinese [FAXIANG ZONG](#). The position that there are not three, but instead a single decisive vehicle, is associated with the [MADHYAMAKA](#) school of [NĀGĀRJUNA](#) and [CANDRAKĪRTI](#) and the Chinese [TĪANTAI ZONG](#).

[trṣṇā](#). (P. taṇhā; T. sred pa; C. ai; J. ai; K. ae 愛). In Sanskrit, lit. “thirst,” or “craving,” viz., the desire not to be separated from feelings of pleasure, the desire to be separated from feelings of pain, and the desire that feelings of neutrality not diminish. Typically, three types of craving are listed in the literature, such as the [DHARMAKĀPRĀVARTANASŪTRA](#): craving for sensuality ([KĀMA](#)), craving for continued existence ([BHAVA](#)), and craving for nonexistence (vibhava). Craving is thus the cause or “origination” ([SAMUDAYA](#)) of suffering ([DUḤKHA](#)), viz., the second of the [FOUR NOBLE TRUTHS](#). Craving is also the eighth link in the twelvefold chain of dependent origination ([PRATĪTYASAMUTPĀDA](#)), where it is a product of the preceding link of sensation ([VEDANĀ](#)) and leads to even stronger clinging or attachment ([UPĀDĀNA](#)). Tṛṣṇā thus manifests itself as the thirst for sensory experience of visual, auditory, olfactory, gustatory, tactile, and mental objects.

[Trúc Lâm](#). (竹林). In Vietnamese, “Bamboo Grove”; the first indigenous Vietnamese school of [THIỀN](#) (C. [CHAN](#)), founded by [TRẦN NHÂN TÔNG](#) (1258–1308), the third king of the Trần dynasty (1225–1400). During the Trần period, Chan learning became established with the arrival of Chinese monks and Chan literature. Due to its literary bent (see [WENZI CHAN](#)), Chan was embraced by the Trần aristocratic circle, many of whom received instructions from Chan masters.

Some Trần kings themselves would later in their lives be ordained and devote themselves to the practice of Chan. From the few extant writings of its three patriarchs, it is clear that Trúc Lâm Chan displays a conscious effort to emulate Chinese patriarchal Chan. There were also typical motifs that appear in Chinese Chan literature, including the use of dialogues (see [WENDA](#)) as an instructional tool, transmission directly from teacher to disciple, the construction of lineages, the teacher leaving behind instructional verses for his disciples, the teacher bequeathing his robe and begging bowl to his principal student as a mark of succession, the teacher publicly conferring precepts on both monks and laypeople, and so forth. The school died out after the death of its third patriarch Huyền Quang (1254–1334). Although the Trúc Lâm school was short-lived, it marked the first serious effort to establish a Buddhist community in medieval Vietnam, functioning essentially as a form of high-culture Buddhism for aristocrats. There were efforts among some Buddhist monks in the Later Lê (1428–1788) and Nguyễn (1802–1945) dynasties to connect themselves to Trúc Lâm Chan.

[Trungpa, Chögyam](#). (Chos rgyam Drung pa) (1939–1987). One of the most influential Tibetan teachers of the twentieth century in introducing Tibetan Buddhism to the West. Chögyam Trungpa (his name, Chos rgyam Drung pa, is an abbreviation of chos kyi rgya mtsho drung pa) was born in Kham in eastern Tibet and identified while still an infant as the eleventh incarnation of the Drung pa lama, an important lineage of teachers in the [BKA' BRGYUD](#) sect, and was enthroned as the abbot of Zur mang monastery. He was ordained as a novice monk at the age of eight and received instruction from some of the leading scholars of the Bka' brgyud and [RNYING MA](#) sects. In 1958, he received the degrees of skyor dpon and mkhan po, as well as [BHIKSU](#) ordination. After the Tibetan uprising against Chinese occupying forces in March 1959, he escaped across the Himalayas to India on horseback and on foot, accompanied by a group of monks. In 1963, he traveled to England to study at Oxford University. In 1967, he moved to Scotland, where he founded a Tibetan meditation center called Samye Ling. While there, he suffered permanent injury in a serious automobile accident and decided thereafter to give up his monastic vows and continue as a lay teacher of Buddhism. In 1969, he moved to the United States, where he established a meditation center in Vermont called Tail of the Tiger. Trungpa Rinpoche's extensive training in Tibetan Buddhism, his eclectic interests, and his facility in English combined to make him the first Tibetan lama

(apart from the fourteenth [DALAI LAMA](#)) to reach a wide Western audience through his many books, including *Born in Tibet* (1966), *Meditation in Action* (1969), and *Cutting Through Spiritual Materialism* (1973). In 1974, he founded the Naropa Institute (now Naropa University) in Boulder, Colorado, a center devoted to the study of Buddhism, psychology, and the arts. He also developed a network of centers around the world called Dharmadhatus, as well as the Shambhala Training Program. He invited several important Tibetan lamas to the United States in the late 1970s and early 1980s, including [DIL MGO MKHYEN BRTSE](#), [BDUD 'JOMS RIN PO CHE](#), and the sixteenth [KARMA PA](#). In 1986, he moved his headquarters to Halifax, Nova Scotia, and died there the following year.

[truths, three](#). See [SANDI](#).

[truths, two](#). See [SATYADVAYA](#).

[Tsa ri](#). Also spelled Tsā ri; an important pilgrimage region in the sacred geography of Tibet, its central feature is the Pure Crystal Mountain (Dag pa shel ri). The [BKA' BRGYUD](#) sect, in particular, considers the site to be one of three quintessential pilgrimage destinations connected with the [CAKRASAMVARATANTRA](#) (together with [KAILĀSA](#) and [LA PHYI](#)). According to the *Cakrasaṃvaratantra* tradition, two of the twenty-four sacred lands ([PĪTHA](#)), viz., Cārita and Devīkoṭa, are believed to be located in the region. Hunting and even cultivation are banned in some parts of the valley. Situated on the remote border between Tibet and Assam, Tsa ri is also one of the Himalayan region's most difficult and dangerous locations to access. The circumambulation trails skirting the mountain traverse high passes, deep ravines, and dense jungle. They also pass through territory controlled by tribal groups who are often unfriendly to outside visitors. For this reason, the state-sponsored pilgrimage season was traditionally preceded by government negotiations (and payments) in order to guarantee safe passage for pilgrims. The area is said to have been sanctified by visits from [PADMASAMBHAVA](#) and [VIMALAMITRA](#), who are thought to have deposited there numerous treasure texts ([GTER MA](#)). Tsa ri later became primarily associated with the '[BRUG PA BKA' BRGYUD](#) through the activity of [GTSANG PA RGYA RAS YE SHES RDO RJE](#), who is often said to have “opened” the site as a powerful place for spiritual practice.

[Tshad ma rigs gter](#). (Tsema Rikter). In Tibetan, “Treasure of Valid Knowledge and Reasoning”; an influential Tibetan work on logic and epistemology

([PRAMĀNA](#)) by the renowned scholar [SA SKYA PANDITA KUN DGA' RGYAL MTSHAN](#), composed circa 1219. The *Tshad ma rigs gter* inaugurated a new period of pramāṇa studies in Tibet by focusing particularly on [DHARMAKĪRTI](#)'s most famous work, the [PRAMĀNAVĀRTTIKA](#); prior to this time in Tibet, pramāṇa had been approached through summaries (bsdus pa) of the seven works of Dharmakīrti (see [TSHAD MA SDE BDUN](#)). Written in verse, the *Tshad ma rigs gter* seeks accurately to represent the positions of the late Indian traditions of logic and epistemology and to identify the errors of earlier Tibetan scholars, notably the summaries associated with [GSANG PHU NE'U THOG](#) monastery, especially the works of [RNGOG BLO LDAN SHES RAB](#), [PHYWA PA CHOS KYI SENG GE](#), and their disciples. The *Tshad ma rigs gter* is said to have been so highly regarded that it was translated from Tibetan into Sanskrit and circulated in northern India.

[tshad ma sde bdun](#). (tsema dedün). In Tibetan, “group of seven on valid knowledge”; the name for a collection of seven Indian treatises on logic and epistemology ([PRAMĀNA](#)) written by the Indian scholar [DHARMAKĪRTI](#). They are the [PRAMĀNAVĀRTTIKA](#), the [PRAMĀNAVINIŚCAYA](#), the [NYĀYABINDU](#), the *Hetubindu*, the *Sambandhaparīkṣā*, the *Samtānāntarasiddhi*, and the *Vādanyāya*. The collection is also known as *tshad ma'i bstan bcos sde bdun*, or the “seven treatises on valid knowledge.”

[Tshal pa bka' brgyud](#). (Tshalpa Kagyü). One of the four major and eight minor subjects of the [BKA' BRGYUD](#) sect of Tibetan Buddhism ([BKA' BRGYUD CHE BZHI CHUNG BRGYAD](#)), originating with Zhang tshal pa Brtson grus grags pa (Shangtsalpa Tsöndrū Drakpa, 1123–1193), better known as [BLA MA ZHANG](#), a disciple of Dwags po Sgom tshul (Dakpo Gomtsül, 1116–1169). In about 1175, Bla ma Zhang established Tshal Gung thang monastery near [LHA SA](#), which served as a seat of the Tshal pa bka' brgyud.

[Tshangs dbyangs rgya mtsho](#). (Tsangyang Gyatso) (1683–1706). The sixth [DALAI LAMA](#), and among the most famous and beloved of the Dalai Lamas, but not for the same qualities of sanctity and scholarship for which several other members of the lineage are known. He was born into a [RNYING MA](#) family near the border with Bhutan. The fifth Dalai Lama had died in 1682 but his death was concealed until 1697 by his minister, [SDE SRID SANGS RGYAS RGYA MTSHO](#), so that the construction of the [PO TALA](#) palace could continue unabated. The sixth Dalai Lama was identified at the age of two, but his identification was kept secret; he and his family lived in seclusion in Mtsho na (Tsona) for twelve years. The

death of the fifth Dalai Lama and the identity of the sixth were finally disclosed in 1697. In that year, the sixth Dalai Lama was brought to [LHA SA](#), where he received the vows of a novice from the [PAN CHEN LAMA](#). He received instructions in Buddhist doctrine and practice from the Pan chen Lama and other scholars for the next four years. In 1701, he was urged to take the precepts of a fully ordained monk ([BHIKSU](#)). However, he refused to do so and also asked to give up his novice vows (which included the vow of celibacy), threatening to commit suicide if he were not permitted to do so. He gave up his vows and lived as a layman, with long hair, although he still remained in the position of Dalai Lama. He had liaisons with women in Lha sa; the houses he visited were said to have been painted yellow in his honor. He is credited with a series of famous love songs, some of which contain Buddhist references. In 1705, the Qoshot Mongol leader Lha bzang Khan declared himself king of Tibet and executed Sde srid Sang rgyas rgya mtsho. In 1706, Lha bzang Khan declared, with the support of the Manchu Kangxi emperor, that Tshangs dbyangs rgya mtsho was not the true Dalai Lama and sent him into exile in Beijing. He died en route, although a legend developed that he escaped death and lived in disguise for another forty years.

[Tshangs pa dkar po](#). (Tsangpa Karpo). A Tibetan wrathful deity who figures frequently in the retinues of major [DHARMAPĀLA](#), such as [MAHĀKĀLA](#) and [PE HAR RGYAL PO](#), of whom Tshangs pa dkar po is an emanation. Although the name “Tshangs pa” was given to the Indian god [BRAHMĀ](#), Tshangs pa dkar po was in all probability a native Tibetan deity, who lost his individual identity through associations with Brahmā and Pe har.

[Tshar chen Blo gsal rgya mtsho](#). (T). See [TSHAR PA](#).

[Tshar pa](#). An offshoot of the [NGOR](#) subsect of the [SA SKYA](#) sect, established by Tshar chen Blo gsal rgya mtsho (Tsarchen Losal Gyatso, 1502–1567), founder of 'Dar Grang mo che (Dar Drangmoche) monastery. It represents a distinctive tradition of the [LAM 'BRAS](#) (path and result) teaching, including the distinction between the “assembly exegesis” (tshogs bshad) and “student exegesis” (slob bshad). It is said that the Ngor tradition became influential in the dissemination of the Sa skya tantric teachings, and the Tshar tradition in the esoteric transmission known as the slob bshad. Bco brgyad khri chen rin po che (Chogye Trichen Rinpoche, 1920–2007), a recent influential scholar of the Sa skya tradition, was head of the Tshar pa sect until his death.

tshe lha rnam gsum. (tshe lha nam sum). In Tibetan, the “three deities of long life”; three deities who are propitiated in order to extend one’s life, especially in order to practice the dharma. They are the buddha [AMITAYUS](#) and the female bodhisattvas white [TARĀ](#) ([SITATĀRĀ](#)) and Uṣṇīṣavijayā.

tshe ring mched lnga. (T). See [BKRA SHIS TSHE RING MCHED LNGA](#).

tshogs zhing. (tsok shing). In Tibetan, “field of assembly” or “field of accumulation”; the assembly of buddhas, bodhisattvas, and other deities visualized in meditation practice (and represented in Tibetan scroll paintings, or [THANG KA](#)). The term is generally glossed to mean “the field for the collection of merit” because the assembly of deities are the objects of various virtuous practices through which the meditator accumulates merit. The most common practice performed in the presence of the field of assembly would be the sevenfold offering ([SAPTĀNGAVIDHI](#)): obeisance (vandana), offering (pūjana), confession of transgressions ([PĀPADEŚANĀ](#)), rejoicing in others’ virtues ([ANUMODANA](#)), requesting that the buddhas turn the wheel of the dharma (dharmacakrapravartanacodana), beseeching the buddhas not pass into [NIRVĀNA](#) (aparinirvṛtādhyeṣaṇa), and the dedication ([PARINĀMANĀ](#)) of merit. In paintings of the field of assembly, the central figure is often depicted with previous figures in the lineage in a vertical line above, with various disciples on either side and protector deities at the bottom.

Tsi’u dmar po. (Tsi’u Marpo). The [DHARMAPĀLA](#) of [BSAM YAS](#) monastery; he succeeded [PE HAR](#) when the later moved to [GNAS CHUNG](#) outside of [LHA SA](#). Tsi’u dmar is the leader of the [BSTAN](#) class of Tibetan spirits. His medium traditionally resided in the Tsi’u dmar lcog dbug khang at [BSAM YAS](#), where each year the Lha sa glud ’gong would arrive bearing all the negative fortune of the city. Inside, Tsi’u dmar was said to sit in judgment of the dead, chopping up their spirits with such frequency that each year the chopping block would need to be replaced. According to legend, the deity Dza sa dmar po, the spirit of a nobleman who died of an illness caused by the Bsam yas protector, once defeated Tsi’u dmar, forcing the god to abandon his seat at Bsam yas. Dza sa dmar po later voluntarily left when he discovered he was unable to shoulder the burden of Tsi’u dmar po’s helmet, and hence the responsibility of guarding Bsam yas; having established peaceful relations with the dharmapāla, he was installed by the monks at Bsam yas in his own protector temple at the monastery. In memory of the conflict, the

mediums of Tsi'u dmar po begin their trance by thrusting their swords in the direction of Dza sa dmar po's temple.

[Tsong kha pa Blo bzang grags pa](#). (Tsong kha pa Losang Drakpa) (1357–1419). A Tibetan scholar and teacher venerated as the founder of the [DGE LUGS](#) sect of Tibetan Buddhism; typically known simply as Tsong kha pa. Born in the Tsong kha region of A mdo in northeastern Tibet, he received his initial lay vows under the fourth [KARMA PA](#) and began his religious education in the [BKA' GDAMS](#) tradition. In 1372, he traveled to central Tibet for further study. He became a disciple of the [SA SKYA](#) scholar Red mda' ba Gzhon nu blo gros (Rendawa Shönu Lodrö, 1349–1412) but went on to study under many of the leading scholars of the day, including masters of various schools and sectarian affiliations. Another influential teacher was the lama Dbu ma pa (Umapa), from whom he received instructions on the [KĀLACAKRATANTRA](#). He distinguished himself as a brilliant scholar and exegete of both [SŪTRA](#) and [TANTRA](#). According to his traditional biographies, Tsong kha pa experienced visions of Indian masters such as [NĀGĀRJUNA](#) and [BUDDHAPĀLITA](#), who helped to clarify difficult points of doctrine. He is also said to have maintained a special relationship with [MAÑJUŚRĪ](#), the bodhisattva of wisdom, who appeared in visions throughout Tsong kha pa's life offering instruction and advice; Tsong kha pa is sometimes called 'Jam mgon, or “protected by Mañjuśrī.” Tsong kha pa's biographies speak of four major deeds undertaken during his lifetime. The first, in 1399, was his restoration of an image of the future buddha, [MAITREYA](#). The second was a council to reform the code of [VINAYA](#), convened in 1403 and attended by monks representing all sects of Tibetan Buddhism. The third was the Great Prayer Festival ([SMON LAM CHEN MO](#)) inaugurated in 1409 at the [JO KHANG](#) in [LHA SA](#), in which he offered the ornaments of a [SAMBHOGAKĀYA](#) to the famous statue of [JO BO SHĀKYAMUNI](#), celebrating the Buddha's performance of the [ŚRĀVASTĪ MIRACLES](#). The festival became an important annual event, drawing thousands of participants from all quarters of the Tibetan Buddhist world. The fourth was the founding in 1409 of [DGA' LDAN](#) monastery, which would become one of principal religious institutions in the Lha sa region and seat of the leader of the Dge lugs sect. Tsong kha pa was an original and penetrating philosopher, who saw reason and intellectual development as key aspects of the path to enlightenment. Born during a period when the Tibetan Buddhist canon had been newly formulated, he sought a comprehensive explanation of the Buddhist path, with the [PRĀSAṄGIKA-MADHYAMAKA](#) of [BUDDHAPĀLITA](#) and [CANDRAKĪRTI](#) as the

highest philosophical view. His works are marked with a concern with systematic consistency, whether it be between sūtra and tantra or [PRAMĀNA](#) and [MADHYAMAKA](#). A prolific author, Tsong kha pa's works fill eighteen volumes. Among his best known writings are the [LAM RIM CHEN MO](#) ("Great Treatise on the Stages of the Path to Enlightenment"), composed in 1402 at [RWA SGRENG](#) monastery, the [SNGAGS RIM CHEN MO](#) ("Great Treatise on the Stages of Mantra"), and the *Drang nges* [LEGS BSHAD SNYING PO](#) ("Essence of Eloquence on the Definitive and Interpretable"). Tsong kha pa called his system of religious practice the Bka' gdams gсар ma, or "New Bka' gdams," after the sect founded by the Bengali master [ATIŚA DĪPAMKARAŚRĪJÑĀNA](#). His followers were later known as Dga' ldan pa (Gandenpa), "those of Dga' ldan," after the monastic seat established by Tsong kha pa. This was sometimes abbreviated as Dga' lugs pa, "those of the system of Dga' ldan," eventually evolving into the current name Dge lugs pa, "those of the system of virtue." Tsong kha pa's fame was greatly elevated through the political power of the Dge lugs sect after the establishment of the institution of the [DALAI LAMA](#). His tomb at Dga' ldan became an important site of pilgrimage prior to its destruction during the Chinese Cultural Revolution. Tsong kha pa's fame in Tibet was sufficiently great that he is commonly known simply as Rje rin po che, the "precious leader."

[Tucci, Giuseppe](#). (1894–1984). One of the leading European Tibetologists of the twentieth century. Born in Macerata, Italy, Giuseppe Tucci attended the University of Rome, where he later became professor of the religions and philosophies of India and the Far East. Between 1925 and 1930, he taught Italian, Chinese, and Tibetan in India at the University of Calcutta and the University of Santiniketan. During this time, he made numerous expeditions into Nepal and Tibet, gathering historical, religious, and artistic materials. In 1937, the Fascist government of Italy sent him to Japan in order to promote understanding between the two countries. In 1948, he was named president of the Italian Institute for the Middle and Far East. Over the next two decades, he led expeditions in Pakistan, Afghanistan, and Iran and remained an active scholar until shortly before his death. Tucci published extensively in Italian and English on a wide range of topics using Sanskrit, Chinese, and Tibetan sources. His works include *Indo-Tibetica* (published in seven volumes 1932–1942), *To Lhasa and Beyond* (1946), *Minor Buddhist Texts* (1956), and what many consider his magnum opus, *Tibetan Painted Scrolls* (1949).

Tuê Trung. (V) (1230–1291). See [HUÊ TRUNG](#).

tulku. (T). See [SPRUL SKU](#).

Turfan. Central Asian petty kingdom located along the northern track of the [SILK ROAD](#) through the Takla Makhan desert, in what is now the Chinese province of Xinjiang. This and other oasis kingdoms in Central Asia served as crucial stations in the transmission of Buddhism from India to China. Buddhism had a strong presence in Turfan from the seventh century through the fourteenth century, with important texts being translated, cave temples built, and works of art produced. The oldest physical manuscripts of the Indian Buddhist tradition are manuscripts in the [KHAROSTHĪ](#) script (see [GĀNDHĀRĪ](#)), dated to the fourth to fifth centuries CE, which were discovered at Turfan. These and other discoveries were made by a team of German researchers led by Albert Grünwedel and Albert von Le Coq in a series of expeditions between 1902 and 1914. Turfan was also the locus where [TOCHARIAN A](#) (East Tocharian, or Turfanian) was used; manuscripts in Tocharian A date primarily from the eighth century. Western expeditions into the area led to the discovery of tens of thousands of textual fragments, in a variety of languages and scripts, which came to be known collectively as the “Turfan Collection.” These texts belong to a variety of genres and schools, but the [SARVĀSTIVĀDA](#) is prevalent, leading to the conclusion that the school was prominent in Turfan. As with other locations in this region, the dry desert air helped to preserve the various materials on which these texts were written. In Turfan were found translations of Sanskrit and Chinese Buddhist texts, as well as some original Buddhist poetry and lay literature. Also discovered in Turfan were the Bezaklik rock caves, dating from around the ninth century, which contain the painted images of thousands of buddhas. Albert von le Coq removed many of these and transported them to Berlin, where many were destroyed by Allied bombing during the Second World War. Although this area was a melting pot of Indian, Chinese, and Central Asian traditions, Buddhist activity in the Turfan region saw a sharp rise in the ninth century, when the Uighur people moved from Mongolia into the Turfan region and many Turfan texts are recorded in the Uighur script. Buddhism seems to have survived in this region until as late as the fifteenth century.

tusita. (P. tusita; T. dga’ ldan; C. doushuai tian; J. tosotsuten; K. tosol ch’ŏn 兜率天). In Sanskrit, “contentment”; in Buddhist cosmology, the fourth highest of six heavens within the sensuous realm ([KĀMADHĀTU](#)). This heaven is of particular

importance to the Buddhist tradition because it is understood that [BODHISATTVA](#)s are born here before taking their final birth in the human world and attaining buddhahood. It was from this heaven that the deity [ŚVETAKETU](#) (the future [ŚĀKYAMUNI](#)) departed to enter [MĀYĀ](#)'s womb for his final rebirth, and it is understood that the bodhisattva [MAITREYA](#) currently resides in the tuṣita heaven awaiting his own final rebirth when he will in turn achieve buddhahood. Consequently, many Buddhists throughout history have aspired for rebirth in the tuṣita heaven so that they may learn from Maitreya and accompany him when he takes his final birth as a buddha. Beings reborn in tuṣita enjoy unimaginable pleasure and live for hundreds of thousands of years. One day in this heaven is equal to four hundred earth years. In some texts, this heaven is described as having an inner and outer courtyard, the former of which is said to be utterly indestructible.

[twelve categories of scripture](#). See [AṄGA](#); [DVĀDAŚĀṄGA\[PRAVACANA\]](#).

[twelve deeds of a buddha](#). (S. buddhakārya; T. sangs rgyas kyi mdzad pa). A list of twelve acts said to be performed or “displayed” by the “transformation body” ([NIRMĀNAKĀYA](#)) of each buddha. Although the specific deeds in the list of twelve vary, the notion of the twelve deeds seems to have become popular during the Pāla dynasty in India, where it is often depicted. The *Dvādaśakāranāmanayastotra* (*Mdzad pa bcu gnyis kyi tshul la bstod pa*), “Praise of the Twelve Deeds of a Buddha,” is extremely popular in Tibet and is often a part of a monastery’s daily liturgy. One version of the list of deeds is (1) descent from [TUSITA](#), (2) entry into the womb (viz., conception), (3) taking birth in the [LUMBINĪ](#) Garden, (4) proficiency in the arts, (5) enjoyment of consorts, (6) renouncing the world, (7) practicing asceticism on the banks of the [NAIRAÑJANĀ](#) River, (8) seeking enlightenment in [BODHGAYĀ](#), (9) subjugating [MĀRA](#), (10) attaining enlightenment, (11) turning the wheel of the dharma ([DHARMAKRAPRAVARTANA](#)), and (12) passing into [PARINIRVĀNA](#) in [KUSĪNAGARĪ](#). Although the notion of twelve deeds seems to have developed in the [MAHĀYĀNA](#), the idea of a specific set of actions common to all the buddhas is also found in the [MAINSTREAM BUDDHIST SCHOOLS](#); for example, the Pāli tradition notes that thirty facts are common to all buddhas. For a similar East Asian list of eight stereotypical episodes in a buddha’s life, see [BAXIANG](#).

[U Ba Khin](#). (1899–1971). See [BA KHIN, U](#).

[ubhayatobhāgavimukta](#). (P. ubhatobhāgavimutta; T. gnyis ka'i cha las rnam par grol ba; C. ju jietuo; J. kugedatsu; K. ku haet'al 俱解脫). In Sanskrit, “liberated both ways.” This is the type of liberation achieved by those noble persons ([ĀRYA](#)) who are liberated, first, by way of meditative absorption ([DHYĀNA](#); P. [JHĀNA](#)), which is called “liberation of mind” ([CETOVIMUKTI](#); P. cetovimutti), and second, “liberation through wisdom” ([PRAJÑĀVIMUKTI](#); P. paññāvimutti), which involves insight by way of any of the four noble paths ([ĀRYAMĀRGA](#)), viz., the path of the stream-enterer ([SROTAĀPANNA](#)) to the path of the [ARHAT](#). Liberation may be achieved via wisdom alone, but arhats enlightened in this manner, without any attainment of dhyāna, are in some materials pejoratively termed “dry insight workers” (P. [SUKKHAVIPASSAKA](#)); strands of contemporary Burmese [VIPASSANĀ](#) meditation theory, however, emphasize this focus on wisdom alone as a more subtle approach to enlightenment that does not require lengthy perfection of the dhyānas. Twofold liberation is thought to be a more complete experience, and all buddhas and their chief disciples are liberated in both these two ways. The ubhayatobhāgavimukta is also one of the [VIMŚATIPRABHEDASAMGHA](#) (“twenty varieties of the [ĀRYASAMGHA](#)”) based on the list given in the [MAHĀVYUTPATTI](#).

[ucchedadr̥ṣṭi](#). (P. ucchedadiṭṭhi; T. chad lta; C. duanjian; J. danken; K. tan'gyōn 斷見). In Sanskrit, lit. the “[wrong] view of annihilationism”; one of the two “extreme views” ([ANTAGRĀHADRSTI](#)) together with [ŚĀŚVATADRSTI](#), the “[wrong] view of eternalism.” Ucchedadr̥ṣṭi is variously defined in the Buddhist philosophical schools but generally refers to the wrong view that causes do not have effects, thus denying the central tenets of [KARMA](#) and rebirth (the denial of the possibility of rebirth was attributed to the Cārvāka school of ancient India). Among the divisions of the root affliction ([MŪLAKLEŚA](#)) of “wrong view” ([DRSTI](#)), ucchedadr̥ṣṭi occurs in connection with [SATKĀYADRSTI](#), where it is defined as the mistaken belief or view that the self is the same as one or all of the five aggregates ([SKANDHA](#)) and that as such it ceases to exist at death. In this context,

it is contrasted with [ŚĀSVATADRṢṬI](#), the mistaken belief that the self is different from the aggregates and that it continues to exist eternally from one rebirth to the next. Annihilationism is thus a form of antagrāhadṛṣṭi, “[wrong] view of holding to an extreme,” i.e., the view that the person ceases to exist at death and is not reborn (ucchedadṛṣṭi), in distinction to the view that there is a perduring soul that continues to be reborn unchanged from one lifetime to the next (śāśvatadṛṣṭi). The Buddhist middle way ([MADHYAMAPRATIPAD](#)) between these two extremes posits that there is no permanent, perduring soul (countering eternalism), and yet there is karmic continuity from one lifetime to the next (countering annihilationism). In the [MADHYAMA](#) school, ucchedadṛṣṭi is more broadly defined as the view that nothing exists, even at a conventional level. Thus, following statements in the [PRAJÑĀPĀRAMITĀ SŪTRAS](#), the Madhyamaka school sets forth a middle way between the extremes of existence and nonexistence. In general, the middle way between extremes is able to acknowledge the insubstantiality of persons and phenomena (whether that insubstantiality is defined as impermanence, no-self, or emptiness) while upholding functionality, most importantly in the realm of cause and effect (and thus the conventional reality of karman and rebirth).

[ucchedānta](#). (T. chad mtha’; C. duanbian; J. danhen; K. tanbyōn 斷邊). In Sanskrit, “extreme of annihilation” or “extreme of nihilism”; along with the extreme of permanence ([ŚĀSVATĀNTA](#)), one of the two extremes to be avoided in pursuit of the middle way ([MADHYAMAPRATIPAD](#)). Precisely how these two extremes are defined varies among the schools of Indian Buddhist philosophy. All Buddhist schools would consign the various non-Buddhist schools of Indian philosophy to one of the two extremes, with the Sāṃkhya, Vaiśeṣika, [JAINA](#), Vedānta, Mīmāṃsaka, and Nyāya falling into the extreme of permanence ([ŚĀSVATĀNTA](#)) and the Cārvāka falling into the extreme of nihilism (ucchedānta). The Buddhist schools each claim to avoid these two extremes, avoiding the extreme of permanence by denying the existence of a perduring, indivisible, and independent self, and avoiding the extreme of annihilation by upholding the existence of moral cause and effect ([KARMAN](#)) and of rebirth. Beyond this basic analysis, the various Buddhist schools refine the two extremes according to their specific tenets and charge their rivals with falling into one or the other of the two extremes. For example, the [YOGĀCĀRA](#) school claims that the [MADHYAMA](#) doctrine that all phenomena are devoid of intrinsic nature ([NIHṢVABHĀVA](#)) flirts with the extreme of nihilism, and the Madhyamaka claims that the Yogācāra

emphasis on the autonomy of consciousness ([VIJÑĀNA](#); [VIJÑAPTIMĀTRATĀ](#)) tends toward the extreme of permanence.

[ucchedavāda](#). (T. chad par smra ba; C. duanjian lun; J. dankenron; K. tan'gyŏn non 斷見論). In Sanskrit and Pāli, “teaching on annihilationism,” a synonym of [UCCHEDADRSTI](#).

[Udam Honggi](#). (優曇洪基) (1822–1881). Korean [SŎN](#) monk of the late Chosŏn dynasty; his original dharma name was Uhaeng, and his sobriquet was Udam. A native of Andong, he lost his parents at an early age and entered the [SAMGHA](#) in 1837. Honggi studied under the monks Chasin (d.u.) at the monastery of Hŭibangsa and Yŏnwŏl (d.u.) at the major monastery of [SONGGWANGSA](#). Honggi also studied under Ch'immyŏng Hansŏng (1801–1876) and received the full monastic precepts from the [VINAYA](#) master Inp'a (d.u.). Honggi is most famous for his treatise, the *Sŏnmun chŭngjŏng nok* (“Record of Attesting to Orthodoxy in the Sŏn School”), a criticism of [PAEKP'A KŪNGSŎN](#)'s magnum opus, the *Sŏnmun sugyŏng* (“Hand Mirror of the Sŏn School”). Honggi criticized Paekp'a for mistakenly positing three types of Sŏn, drawing heavily on [CH'ŌŬI ŬISUN](#)'s arguments in his *Sŏnmun sabyŏnmanŏ* (“Prolix Words on Four Distinctive Types in the Sŏn School”) to posit that there are, in fact, only two. [SŎLTU YUHYŎNG](#) (1824–1889), a second-generation successor in Paekp'a's lineage, responded to Honggi's critique by writing his own treatise, the *Sŏnwŏn soryu* (“Tracing the Source of Sŏn”), where he also criticizes Ch'ŏui Ŭisun's treatise *Sŏnmun sabyŏnmanŏ*. Ch'ugwŏn Chinha (1861–1926) criticized Paekp'a and Sŏltu from Ch'ŏui's standpoint in his short treatise, *Sŏnmun chaejŏng nok* (“Reconsidering Orthodoxy in Sŏn Writings”), written in 1890, arguing for the ultimate unity of all types of Sŏn.

[udāna](#). (T. ched du brjod pa; C. youtuona; J. udana; K. udana 優陀那). In Sanskrit and Pāli, lit. “utterance,” or “meaningful expression,” a term with three important denotations. ¶ The *Udāna* is the third book of the Pāli [KHUDDAKANIKĀYA](#) and comprises eighty stories containing eighty utterances of the Buddha. The utterances are mostly in verse and are accompanied by prose accounts of the circumstances that prompted the Buddha to speak on those occasions. ¶ The name udāna is also given to a broader classification of texts within the Pāli canon as a whole, and in this usage it refers to a set of eighty-two suttas containing verses uttered out of joy. ¶ Finally, udāna are one of the standard sections in the division of the word of the Buddha ([BUDDHAVACANA](#))

into nine [NAVANĠA](#) (Pāli) or twelve (DVĀDAŚĀNĠA) categories based on genre. In that context, udāna are defined as solemn utterances intended to convey an understanding of the dharma. Many of the Buddha’s statements in the [DHAMMAPADA](#) are said to fall into this category.

[Udānavarga](#). (T. Ched du brjod pa’i tshoms; C. Chuyao jing; J. Shutchōgyō; K. Ch’uryo kyōng 出曜經). In Sanskrit, “Groups of Utterances,” a Sanskrit text associated with the [SARVĀSTIVĀDA](#) school that corresponds to the [DHAMMAPADA](#) (S. Dharmapada) in the Pāli scriptural tradition. The *Udānavarga* collects some 1,050 verses in thirty-three groups, or vargas, and is therefore more than twice as long as the Pāli *Dhammapada*, which includes 423 verses in twenty-six vaggas. Approximately 360 verses appear to be shared by the two texts. There are four translations of varying recensions of the *Udānavarga* cum *Dharmapada* made into Chinese, the earliest of which was produced by [ZHU FONIAN](#) in 374 CE. The Tibetan translation (c. 900) of the *Udānavarga* is of an anthology compiled by Dharmatrāta (Chos skyob); it is included in both the [BKA’ ’GYUR](#) and the [BSTAN ’GYUR](#). There is also a Tibetan translation of a commentary by Prajñāvarman. The *Udānavarga* was one of the six basic texts (gzhung drug) of the [BKA’ GDAMS](#) pa school.

[udayabbayānupassanāñāna](#). In Pāli, “knowledge arising from the contemplation of arising and passing away”; the first of nine knowledges (P. ñāṇa) cultivated as part of the “purity of knowledge and vision of progress along the path” (P. [PATIPADĀÑĀNADASSANAVISUDDHI](#)), according to the account in the [VISUDDHIMAGGA](#). This latter category, in turn, constitutes the sixth and penultimate purity (P. visuddhi; S. [VISUDDHI](#)) to be developed along the path to liberation. Knowledge arising from the contemplation of arising and passing away refers to the clear comprehension of the arising, presence, and dissolution of material and mental phenomena ([NĀMARŪPA](#)). Through contemplating this process, the three universal marks of existence (P. tilakkhaṇa; S. [TRILAKSANA](#)) become apparent, viz., (1) impermanence ([ANITYA](#)), (2) suffering ([DUHKHA](#)), and (3) no-self ([ANĀTMAN](#)). Full comprehension of the three universal marks of existence is not possible so long as the mind is disturbed by attachment to any of the ten “defilements of insight” (P. vipassanūpakkilesa), which arise as concomitants of insight meditation (P. vipassanābhāvanā); these are (1) a vision of radiant light (obhāsa), (2) knowledge (ñāṇa), (3) rapture (pīti), (4) tranquillity (passaddhi), (5) happiness (sukha), (6) determination (adhimokkha), (7) energy

(paggaha), (8) heightened awareness (upaṭṭhāna), (9) equanimity (upekkhā), and (10) delight (nikanti). The ten defilements are overcome by understanding them for what they are, as mere by-products of meditation. This understanding is developed through perfecting the “purity of knowledge and vision of what is and is not the path” (P. [MAGGĀMAGGAÑĀNADASSANAVISUDDHI](#)), which is the fifth of seven “purities” (visuddhi) to be developed along the path to liberation.

[Udāyana Buddha](#). (C. Youtian wang Shijia xiang; J. Uten’ō Shakazō; K. Ujōn wang Sōkka sang 優填王釋迦像). An Indian sandalwood image of [ŚĀKYAMUNI](#) Buddha that is purported to be the world’s first Buddha image; supposedly commissioned by the [VATSĀ](#) king Udāyana (also called Rudrāyana in some versions) and hence named after him. While ancient Indian sources only mention a buddha image made for king [PRASENAJIT](#), the story of this supposedly earlier image made for King Udāyana first appears in the 397 CE Chinese translation of the [EKOTTARĀGAMA](#). [XUANZANG](#) later reports a legend about the image’s production. According to this legend, when [ŚĀKYAMUNI](#) Buddha ascended to the [TRĀYASTRIMŚĀ](#) (heaven of the thirty-three) to preach the [DHARMA](#) to his mother [MĀYĀ](#), King Udāyana so missed his teacher that he asked [MAHĀMAUDGALYĀYANA](#) to transport an artist to the heaven to observe the Buddha’s thirty-two bodily marks ([MAHĀPURUSALAKSANA](#)) and carve a sandalwood image of the master. Subsequent Indian rulers were unable to dislodge the miraculously powerful statue from its spot and therefore made copies of it for their own realms. [FAXIAN](#) and Xuanzang remark in their travel records that they saw a sandalwood image at the [JETAVANA VIHĀRA](#) in [ŚRĀVASTĪ](#), which had been commissioned by King Prasenajit on the model of the Udāyana image. In addition, Xuanzang saw a Udāyana Buddha image enshrined in a large vihāra at Kauśāmbī, and mentions a third one, which was reputedly the original statue, that had flown north over the mountains to the Central Asian oasis kingdom of [KHOTAN](#). Both [KUMĀRAJIVA](#) and Xuanzang are claimed to have brought the Udāyana Buddha image to the Chinese capital of Chang’an. The Japanese pilgrim Chōnen (938–1016), during his sojourn in China, saw a replica of the allegedly original Indian statue at Qishenyuan in Kaifeng. He hired the artisans Zhang Yanjiao and Zhang Yanxi to make an exact copy of this replica. According to the legend, the original statue spoke to Chōnen in a dream, expressing its wish to go to Japan. Chōnen thus darkened the copy with smoke and took the original to Japan in 986. The tenth-century Chinese wooden sculpture is commonly known as the Seiryōji Shaka, since it was enshrined in

1022 in the monastery of Seiryōji. In February 1954, a group of Japanese scholars, including the renowned Buddhistologist and Seiryōji abbot, Tsukamoto Zenryū (1898–1980), opened the cavity in the back of the image and discovered that it contained silk and brocade textiles, coins, mirrors, glass fragments, a small brass bell, textile intestines, woodblock prints of texts such as the [VAJRACCHEDIKĀPRAJÑĀPĀRAMITĀSŪTRA](#) (“Diamond Sūtra”), a Japanese manuscript of the [SUVARNAPRABHĀSOTTAMASŪTRA](#) (“Sūtra of Golden Light”) dated 804, as well as other handwritten documents, such as a vow written by Chōnen and Gizō dated 972, which they witnessed with the imprint of their hands in their own blood. The veneration of the Udāyana Buddha image reached its peak in thirteenth-century Japan, when further copies of the Seiryōji Shaka were made, for example, at [SAIDAIJI](#) (dated 1249) and [TŌSHŌDAIJI](#) (dated 1258) in Nara and at Gokurakuji (second half of the thirteenth century) in Kamakura.

Udāyin. (P. Udāyī; T. 'Char ka; C. Youtuoyi; J. Udai; K. Ut'ai 優陀夷). Sanskrit proper name of an eminent [ARHAT](#) disciple of the Buddha. According to the Pāli accounts, where he is known as Udāyī, he was a brāhmaṇa from Kapilavatthu (S. [KAPILAVASTU](#)), who first encountered the Buddha when the Buddha visited his native Sākiya (S. [ŚĀKYA](#)) clan who resided in the city. Attracted by the Buddha's charisma, he entered the order and later became an arhat. Udāyī once uttered sixteen verses, which compared the Buddha to a majestic elephant. Udāyī was a gifted preacher who attracted large, enthusiastic audiences; once, while staying at Todeyya's mango grove in Kāmandā, he converted a pupil of a brāhmaṇa belonging to the clan of Lady Verahaccāni. Hearing of his triumph, Verahaccāni invited Udāyī to her home several times to preach and eventually became a convert to the Buddha's teachings. In several suttas, Udāyī is described discussing points of doctrine with his fellow monks. In the *Udāyīsutta*, he asks [ĀNANDA](#) whether consciousness can also be deemed as lacking selfhood, and elsewhere he explains the concept of sensation ([VEDANĀ](#)) to the carpenter Pañcakaṅga. Ānanda reports this conversation to the Buddha, who confirms the accuracy of Udāyī's understanding. Udāyī requested instruction in the limbs of enlightenment (P. bhojjaṅga; S. [BODHYAṄGA](#)) from the Buddha, and later reported to him how he won liberation through their cultivation. Although an arhat, Udāyī was not without fault. Once he ridiculed Ānanda for not taking advantage of his close association with the Buddha to attain arhatship. The Buddha chastised Udāyī for his remark, pointing out to him that Ānanda was destined to become an arhat in that very life.

Uddandapura. See [ODANTAPURĪ](#).

Uddiyāna. One of the twenty-four sacred sites associated with the [CAKRASAMVARATANTRA](#). See [PĪTHA](#); [ODDIYĀNA](#).

Udgata. (P. Uggata; T. 'Phags pa; C. Yujiatuo; J. Utsukada; K. Ulgat'a 鬱伽陀). Lay disciple of the Buddha deemed to be foremost among laymen who served the order ([SAMGHA](#)). According to the Pāli account, where he is known as Uggata, he was a wealthy householder living in the town of Hatthigāma. One day, while the Buddha was sojourning at the Nāgavanuyyāna garden in the town, Uggata visited the garden in a drunken state, accompanied by dancers, after a drinking binge that had lasted seven days. Seeing the Buddha, he was filled with shame and immediately sobered up. The Buddha preached to him, and he became a nonreturner ([ANĀGĀMIN](#)) on the spot. He dismissed the dancers and, from that time onward, devoted himself to serving the order. He used to receive visitations from the divinities, who told him of the attainments of various members of the order and suggested that he favor these above the rest. Uggata, however, treated all monks equally and showed no preference in his benefactions between those who had attained distinction as [ĀRYAPUDGALA](#) and those who were still unenlightened. When queried, Uggata said that there were eight wonderful things that happened to, and were done by, him in this life: he recovered his sobriety the very moment he saw the Buddha; he readily understood the Buddha's teaching of the [FOUR NOBLE TRUTHS](#); when he took a vow of celibacy, he provided for his four wives even to the point of finding one of them a new husband of her choice; he shared his great wealth with persons of good conduct; he served monks wholeheartedly, listening to their sermons or preaching to them when they did not speak; he was equally generous to all monks without making distinctions; he was not prideful of his conversations with the divinities; and he did not worry about death, for the Buddha had assured him that he would not return to this world.

Udraka Rāmaputra. (P. Uddaka Rāmaputta; T. Rang byed kyī bu lhag spyod; C. Yutoulānfu; J. Utsuzuranhotsu; K. Ulturambul 鬱頭藍弗). One of two teachers (the other being [ĀRĀDA KĀLĀMA](#)) from whom Prince [SIDDHĀRTHA](#) received instruction in meditation after he renounced the world and before he achieved enlightenment. Both teachers are mentioned in the [ĀRIYAPARIYESANĀSUTTA](#), one of the sparsest accounts of the Buddha's quest that is considered by some scholars to be among the earliest. After having studied with Ārāḍa Kālāma and

determining that his teachings did not lead to liberation, the [BODHISATTVA](#) next studied with Udraka Rāmaputra, whose father, Rāma, taught a form of meditation resulting in the state of neither perception nor nonperception (identified by commentators as the fourth immaterial [DHYĀNA](#); see [NAIVASAMJÑĀNĀSAMJÑĀYATANA](#)). When the bodhisattva attained this state, Udraka Rāmaputra offered him the position of teacher of his disciples. Realizing that this state was not in fact liberation from rebirth, the bodhisattva declined and left Udraka Rāmaputra to practice austerities in [URUVILVA](#). After his achievement of enlightenment, the Buddha determined that Ārāḍa Kālāma and Udraka Rāmaputra would be the most suitable recipients of his teachings, but both had recently died, so he proceeded to [RSIPATANA](#) to teach the “group of five” ([PAÑCAVARGIKA](#)).

[udumbara](#). (T. u dum bā ra; C. youtan hua; J. udonge; K. udam hwa 優曇華). In Sanskrit and Pāli, name of a flowering tree (the *Ficus glomerata*) that is said to bloom only once every one thousand or three thousand years. Because it blossoms so infrequently, Buddhist texts often use the udumbara in similes to indicate something exceedingly rare, such as the appearance of a buddha in the world or the chance of encountering the [BUDDHADHARMA](#) during one’s lifetime.

[Udumbaragiri](#). A mountain in Sri Lanka and legendary abode of demons (P. yakkha; S. [YAKSA](#)), site of a monastery of forest-dwelling monks noted (according to the *Mahāvamsaṭṭikā*) for their scholarship and piety; also known as Udumbarapabbata, Dhūmarakkha, and Dimbulāgala. By the twelfth century CE, the Udumbaragiri monastery became the standard bearer of orthodoxy and played a central role in the monastic purifications of [PARAKRĀMABĀHU I](#) and his successors, Vijayabāhu III and Parakrāmabāhu II. The monastic reforms instituted by these three kings represented a watershed in Sinhalese Buddhist history, insofar as patterns of [SAMGHA](#) organization and saṃgha–state relations were established that were to remain essentially unchanged from that period onward. These reforms were transmitted in stages to Burma (Myanmar) beginning in the twelfth century. In the fourteenth and fifteenth centuries, the Udumbaragiri monastery was again the fountainhead of a major [THERAVĀDA](#) revival that was propagated into the Thai kingdoms of [AYUTHAYA](#), [SUKHOTHAI](#), and Chiangmai and the Mon kingdom of [PEGU](#).

[Udumbarikasīhanādasutta](#). (C. Santuona jing; J. Sandanagyō; K. Sandana kyōng 散陀那經). In Pāli, the “Discourse on the Lion’s Roar at Udumbarika Park,”

the twenty-fifth sutta of the [DĪGHANIKĀYA](#) (a [DHARMAGUPTAKA](#) recension appears as the eighth [SŪTRA](#) in the Chinese translation of the [DĪRGHĀGAMA](#)), preached by the Buddha to the ascetic Nigrodha and his followers at the Udumbarikā hermitage near [RAJAGRHA](#). The Buddha explains to Nigrodha the relative merits of ascetic practices and the superiority of his own path that can lead to liberation in seven days. Infatuated with [MĀRA](#)'s deceits, Nigrodha and his followers remain skeptical and do not heed the Buddha's message.

[uggahanimitta](#). In Pāli, “eidetic image” or “learning sign,” the second of the three major visualization signs experienced in calmness or tranquillity (P. *samatha*; S. [ŚAMATHA](#)) exercises, along with the [PARIKAMMANIMITTA](#) (preparatory image) and the [PATIBHĀGANIMITTA](#) (counterpart, or representational, image). The signs are listed sequentially according to the degree of concentration necessary for them to appear. These three visualization signs and the meditative exercises employed to experience them are discussed in detail in [BUDDHAGHOSA](#)'s [VISUDDHIMAGGA](#). These signs are particularly associated with the ten visualization devices ([KASINA](#)) that are used in the initial development of concentration. In these exercises, the meditator attempts to convert a visual object of meditation, such as earth, fire, or light, into a mental projection or conceptualization that is as clear as the visual image itself. When the image the practitioner sees with his eyes (the so-called *parikammanimitta*, or “preparatory image”) is equally clear when visualized in the mind, the practitioner is said to have obtained the *uggahanimitta*. With the fire *kaṣiṇa*, for example, the eidetic image of the visualized flame appears like a detached flame, with any embers, ashes, or smoke that were present in the preparatory image still visible. This *uggahanimitta*, however, still represents a relatively weak degree of concentration, and it must be strengthened until the *paṭibhāganimitta*, or “counterpart/representational image,” emerges, which marks the access to meditative absorption (P. [JHĀNA](#); S. [DHYĀNA](#)).

[Ugra](#). (P. *Ugga*; T. Drag shul can; C. Yuqie; J. Ikuga/Ikuka; K. Ukka 郁伽). An eminent lay disciple of the Buddha whom he declared to be foremost among laymen who give pleasant gifts. According to the Pāli accounts, where he is known as *Ugga*, he was a householder who lived in Vesālī (S. [VAIŚALĪ](#)). He became a stream-enterer ([SROTAĀPANNA](#)) when he saw the Buddha the first time and later became a nonreturner ([ANĀGĀMIN](#)). He vowed to give to the Buddha and his followers whatever they found most agreeable. The Buddha, reading his

mind, appeared before him, whereupon he provided them with a sumptuous meal and communicated his intentions to the Buddha. The list of favorite things included rice cakes in the shape of sāla flowers, pork, and Kāsī cloth. He was possessed of six special qualities: steadfast confidence in the Buddha, his teachings, and the order, noble conduct, insight, and liberation. Ugga declared that there were eight wonderful things that happened to him and that he did in this life. The list is similar to what is found in the story of [UDGATA](#) and concludes with the freedom he achieved from the five lower fetters ([SAMYOJANA](#)) that bind living beings to the cycle of existence: belief in the existence of the body as a real person (P. sakkāyadiṭṭhi; S. [SATKĀYADRSTI](#)), doubt about the efficacy of the path (P. vicikicchā; S. [VICIKITSĀ](#)), clinging to the rules and rituals (P. sīlabbataparāmāsa; S. [ŚĪLAVRATAPARĀMARŚA](#)), sensuous craving ([KĀMARĀGA](#)), and ill will ([VYĀPĀDA](#)). When Ugga died, he was reborn in the realm of subtle materiality ([RŪPALOKA](#)) among the divinities who project mind-made bodies ([MANOMAYAKĀYA](#)). He visited the Buddha and informed him that he had attained arhatship in that existence.

[Ugrapariprcchā](#). (T. Drag shul can gyis zhus pa; C. Yuqie zhangzhe hui; J. Ikuga chōjāe; K. Ukka changja hoe 郁伽長者會). In Sanskrit, “The Inquiry of Ugra,” an influential [MAHĀYĀNA SŪTRA](#), dating perhaps from the first century BCE, making it one of the earliest Mahāyāna sūtras. The text has not survived in any Indic-language version, but has been preserved in five translated versions: three in Chinese, one in Tibetan, and one in Mongolian. The sūtra is structured as a dialogue, mainly between the Buddha and the lay [BODHISATTVA UGRA](#), whose inquiry prompts the Buddha to launch into a protracted discourse on the bodhisattva path ([MĀRGA](#)). Ugra is labeled a [GRHAPATI](#), a term that literally means “lord of the house” but that comes to refer to men belonging to the upper stratum of what would later be labeled as the vaiśya (often rendered as “merchant”) caste. The sūtra is divided into two parts, one directed toward the lay bodhisattva and the other toward renunciants. In the oldest version of the sūtra, Ugra and his friends, after hearing the Buddha’s discourse, ask for and receive ordination as monks; in later translations, this event takes place in the middle of the sūtra. In all versions, however, the overall message is that, although a lay practitioner may be capable of performing at least preliminary parts of the bodhisattva path, to attain the final goal of buddhahood he must become a monk. The Buddha declares, “For no bodhisattva who lives at home has ever attained supreme perfect enlightenment.” Accordingly, the sūtra urges the lay bodhisattva to break

the ties of affection that bind him to his family and, above all, to his wife; the condemnation of marriage and family life is striking. Moreover, he is urged to emulate the conduct of the monks in his local monastery even while he still lives at home—involving, among other things, complete celibacy. This sort of practice is congruent with what was required of the [UPĀSAKA](#), the lay adherent who has taken the three refuges and the five or eight precepts and dresses in white as a sign of his semirenunciant status. The lay bodhisattva described in the *Ugraparipṛcchā* is repeatedly urged to seek ordination as soon as he possibly can. If the lay bodhisattva is portrayed as the best of all possible laymen, the renunciant bodhisattva is portrayed as the best of all possible monks. Not only does he follow the standard requirements of the monastic life, but he goes beyond them, spending large periods of time (ideally, his whole lifetime) performing strict ascetic practices in the wilderness. This is a reenactment of the biography of [ŚĀKYAMUNI](#) Buddha; it appears that aspiring bodhisattvas, both lay and monastic, took the stories of the Buddha’s life—including his previous lives, described in the [JĀTAKA](#) stories—as prescriptive for those who wished to become buddhas themselves. The *Ugraparipṛcchā* never portrays any actual female practitioner, whether lay or monastic, as a bodhisattva. Apart from a formulaic reference to “sons and daughters of good lineage,” which appears at the beginning and the end of the sūtra (and may have been added long after its initial composition), there is no indication that the authors of the sūtra believed that women were capable of embarking upon the bodhisattva path. The *Ugraparipṛcchā* was a highly influential sūtra in both India and East Asia, where it was widely quoted and commented upon and is regarded by scholars as an important and influential work in the formative period of Mahāyāna Buddhism.

[Uhaeng](#). (K) (禹行/幸). See [UDAM HONGGI](#).

[Ŭich’ŏn](#). (C. Yitian 義天) (1055–1101). Korean prince, monk, and bibliophile, and putative founder of the [CH’ŎNT’AE CHONG](#) (C. [TĪANTAI ZONG](#)) in Korea. Ŭich’ŏn was born the fourth son of the Koryŏ king Munjong (r. 1047–1082). In 1065, Ŭich’ŏn was ordained by the royal preceptor (WANGSA) Kyŏngdŏk Nanwŏn (999–1066) at the royal monastery of Yŏngt’ongsa in the Koryŏ capital of Kaesŏng. Under Nanwŏn, Ŭich’ŏn studied the teachings of the [ĀVATAMSAKASŪTRA](#) and its various commentaries. In 1067, at the age of twelve, Ŭich’ŏn was appointed “saṃgha overseer” (K. sŭngt’ong; C. [SENGTONG](#)). Ŭich’ŏn is known on several occasions to have requested permission from his

royal father to travel abroad to China, but the king consistently denied his request. Finally, in 1085, Ŭich'ŏn secretly boarded a Chinese trading ship and traveled to the mainland against his father's wishes. Ŭich'ŏn is said to have spent about fourteen months abroad studying under various teachers. His father sent his friend and colleague [NAKCHIN](#) (1045–1114) after Ŭich'ŏn, but they ended up studying together with the Huayan teacher Jingyuan (1011–1088) of Huiyinsi in Hangzhou. Ŭich'ŏn and Nakchin returned to Korea in 1086 with numerous texts that Ŭich'ŏn acquired during his sojourn in China. While residing as the abbot of the new monastery of Hŭngwangsa in the capital, Ŭich'ŏn devoted his time to teaching his disciples and collecting works from across East Asia, including the Khitan Liao kingdom. He sent agents throughout the region to collect copies of the indigenous writings of East Asian Buddhists, which he considered to be the equal of works by the bodhisattva exegetes of the imported Indian scholastic tradition. A large monastic library known as Kyojang Togam was established at Hŭngwangsa to house the texts that Ŭich'ŏn collected. In 1090, Ŭich'ŏn published a bibliographical catalogue of the texts housed at Hŭngwangsa, entitled *Sinp'yŏn chejong kyojang ch'ongnok* (“Comprehensive Catalogue of the Doctrinal Repository of All the Schools”), which lists some 1,010 titles in 4,740 rolls. The Hŭngwangsa collection of texts was carved on woodblocks and titled the *Koryŏ sokchanggyŏng* (“Koryŏ Supplement to the Canon”), which was especially important for its inclusion of a broad cross section of the writings of East Asian Buddhist teachers. (The one exception was works associated with the [CHAN](#) or [SŎN](#) tradition, which Ŭich'ŏn refused to collect because of their “many heresies.”) Unfortunately, the xylographs of the supplementary canon were burned during the Mongol invasion of Koryŏ in 1231, and many of the works included in the collection are now lost and known only through their reference in Ŭich'ŏn's catalogue. In 1097, Ŭich'ŏn was appointed the founding abbot of the new monastery of Kukch'ŏngsa (named after the renowned Chinese monastery of Guoqingsi on Mt. Tiantai). There, he began to teach Ch'ŏnt'ae thought and practice and is said to have attracted more than a thousand students. Ŭich'ŏn seems to have seen the Tiantai/Ch'ŏnt'ae synthesis of meditation and doctrine as a possible means of reconciling the Sŏn and doctrinal ([KYO](#)) traditions in Korea. Ŭich'ŏn's efforts have subsequently been regarded as the official foundation of the Ch'ŏnt'ae school in Korea; however, it seems Ŭich'ŏn was not actually attempting to start a new school, but merely to reestablish the study of Ch'ŏnt'ae texts in Korea. He was awarded the posthumous title of state preceptor (K. *kuksa*; C. [GUOSHI](#)) Taegak (Great

Enlightenment).

Ŭisang. (C. Yixiang; J. Gishō 義湘/相) (625–702). Influential Korean monk during the Silla dynasty, who was a leader in the Chinese [HUAYAN ZONG](#) and founder of the [HWAŎM](#) tradition in Korea. After ordaining at Hwangboksa in 644, Ŭisang left for China in 650 with his friend and colleague [WŎNHYO](#) (617–686) via the overland route, but was arrested by Koguryŏ border guards and forced to return to Silla. In 661, Ŭisang was able to reach China by sea and studied at Zhixiangsi on [ZHONGNANSHAN](#) under the guidance of [ZHIYAN](#) (602–668), the second patriarch in the Chinese Huayan school. In China, Ŭisang was a close colleague of [FAZANG](#) (643–712), a fellow student of Zhiyan’s, who was eighteen years his junior; he is also said to have had associations with [DAOXUAN](#) (596–667), the founder of the [NANSHAN LŬ ZONG](#), a major Chinese school of Buddhist discipline ([VINAYA](#)). According to some accounts, Ŭisang took over the leadership of Zhiyan’s community after his master’s death, but eventually returned to Korea in 671 to warn the Silla king Munmu (r. 661–681) of an impending Chinese invasion of Silla by the Tang emperor Gaozong (628–683). In gratitude, the Silla king provided munificent support for Ŭisang’s Hwaŏm school and installed the master at the new monastery of [PUSŎKSA](#) near T’aebaeksan, where Ŭisang is said to have attracted more than three thousand students. Ŭisang is also presumed to have established a network of Hwaŏm monasteries around the peninsula, which included Mirisa, [HWAŎMSA](#), and [HAEINSA](#). Thanks to royal support, by the time of Ŭisang’s death, the Hwaŏm school had emerged as the predominant scholastic tradition in Korean Buddhism. ¶ Even after his return to Korea, Ŭisang continued to exchange letters and to work with his Chinese colleague [FAZANG](#). In 692, Fazang sent Ŭisang a copy of his [HUAYAN JING TANXUAN JI](#), asking for his comments; this correspondence is still extant today. The most influential of Ŭisang’s writings is the [HWAŎM ILSŬNG PŎPKYE TO](#) (“Diagram of the [DHARMADHĀTU](#) according to the One Vehicle of Hwaŏm”), which summarizes the gist of the Huayan school’s interpretation of the [AVATAMSAKASŪTRA](#). His only other extant work is the *Paekhwa toryang parwŏn mun* (“Vow Made at the White Lotus Enlightenment Site”), a short paean to the bodhisattva [AVALOKITEŚVARA](#) (K. Kwanŭm); works attributed to Ŭisang that are no longer extant, most of which addressed aspects of Hwaŏm thought, include *Simmun kanpŏp kwan*, *Ip pŏpkye p’um ch’ogi*, and *Ilsŭng parwŏn mun*, as well as a commentary to the [AMITĀBHASŪTRA](#) (*So Amit’a ũigi*).

Ūisun. (K) (意恂). See [CH'ŌŪI ŪISUN](#).

***ullambana.** (T. yongs su skyob pa'i snod; C. yulanben; J. urabon; K. uranbun 盂蘭盆). A hypothetical [BUDDHIST HYBRID SANSKRIT](#), Middle Indic, or perhaps even Iranian reconstruction of the Chinese term yulanben and sometimes interpreted to correspond to the Sanskrit avalambana (lit. “hanging downward,” “suspended”); the term would then refer to the “ghost festival,” a ritual that sought the salvation of condemned beings who were “suspended” in hell. This interpretation of yulan is questionable, however, since this connotation of the Sanskrit term avalambana is unknown in Indian Buddhist contexts. The Tibetan translation of yulanben as yongs su skyob pa'i snod, or “vessel of complete protection,” also does not correspond to any of the connotations of “hanging down”; the Tibetan rendering does, however, seem to better fit an alternate explanation of the derivation of yulan(ben) as the Buddhist Hybrid Sanskrit term ullumpana (sometimes wrongly transcribed as ullampana, ullambana, etc.), lit. “rescuing, extracting [from an unfortunate fate].” A more recent hypothesis concerning the transcription yulanben is that “yulan” is a transcription of the Sanskrit and Pāli term odana (cooked rice) and ‘ben’ a native word for bowl; the compound ‘yulanben’ is thus not a transcription of the hypothetical Sanskrit word *ullambana but actually means a “rice bowl,” perhaps even a special kind of rice bowl for making offerings on the [PRAVĀRANĀ](#) day. The Japanese [BON FESTIVAL](#) (alt. Obon) derives from this term ullambana; it is celebrated in either mid-July or mid-August to honor the spirits of deceased ancestors. During this three-day period, family members return to their ancestral homes to make offerings to their ancestors (who are thought to return on those days) and to clean the family grave sites. On the last night, the celebrants light paper lanterns and float them down the river (J. tōrō nagashi) to help light the spirits’ way back. See also [YULANBEN](#); [YULANBEN JING](#).

Ulūka. (T. 'Ug pa; C. Youlouqu; J. Urukya; K. Uruga 優樓佉). One of the non-Buddhist philosophers of India mentioned in Buddhist texts; he is identified with Kaṇāda of the Vaiśeṣika school. He is often listed as one of a group of three, the other two being Kapila and Ṛṣabha.

U-min Ko-zei Pagoda. A multitowered pagoda (Burmese, [JEDI](#)) located in the Sagaing Hills in Upper Burma (Myanmar). Its name means “ninety caves,” and it was given this epithet in imitation of another famous shrine found in the Sagaing Hills called U-min Thon-zei, or the “Thirty Caves Shrine.” U-min Ko-

zei Pagoda is in actuality not comprised of ninety caves but is a freestanding structure with more than thirty entrances leading to an interior artificial cave. U-min Ko-zei Pagoda is one of four related pagodas originally built during the [AVA](#) period that are collectively known as Hsin-bo-lei Hpaya (“the four pagodas equal in value to an elephant”). This unusual name is explained by the following story. On one occasion, King Min-hkaung-gyi of Ava (r. 1481–1502) went by elephant to pay his respects to the monk Ariyawuntha, a famous scholar whose monastery was located between four hillocks. As it happened, while the king was meeting with this monk, his elephant ate leaves from the monastery’s [BODHI TREE](#) and promptly fell unconscious. Luckily, the elephant was revived with medicinal herbs gathered from the four surrounding hills. In memory of this event, the king built a pagoda on each of the four hilltops, the total cost of which equaled the value of his elephant.

[U-min Thon-zei Zedi](#). An artificial cave shrine (Burmese, u-min) located in the Sagaing Hills in Upper Burma (Myanmar), on the same mountain ridge as the Swam-oo Ponnya Shin Pagoda. It was built in 1366 CE by Padu Thinga-yaza, a monk from Padu Village. He was the royal preceptor ([SAMGHARĀJAN](#)) of the king of Sagaing, Tara-hpya Min-gyi, and was also venerated by Thato Min-hpaya, the king of [AVA](#). Thinga-yaza built the cave with thirty entrances in memory of the Buddha’s thirty moral perfections (P. pāramī; S. [PĀRAMITĀ](#)); hence, its name U-min Thon-zei, which means “thirty caves.” This cave also contains forty-five statues of the Buddha in memory of the Buddha’s forty-five-year teaching ministry.

[undō](#). (J) (雲堂). In Japanese, “cloud hall.” See [SENGTANG](#).

[Ŭnhaesa](#). (銀海寺). In Korean, “Silver Sea Monastery,” the tenth district monastery ([PONSA](#)) of the contemporary [CHOGYE CHONG](#) of Korean Buddhism, located in Yōngch’ōn, near Taegu, on the slopes of P’algong Mountain. It was built by state preceptor (kuksa; C. [GUOSHI](#)) Hyech’ōl (785–861) in 809 and was originally named Haeansa (Oceanic Eye Monastery), but was moved to the present site and received its new name in 1546. The monastery burned down in 1563 and was reconstructed in the following year. The monastery once again burned to the ground in 1861 and was substantially reconstructed under the supervision of the monks Palbong (d.u.) and Haewōl (d.u.). Along with [TONGHWASA](#), Ŭnhaesa is one of the representative monasteries on Mount P’algong and is known for the many hermitages that have been established in the

surrounding mountains. The monastery's current site is near to Kōjo Hermitage, which dates to approximately 738 and was once the main monastery in the area. The hermitage is noted for the Yōngsan Chōn (Vulture Peak Hall), built in 1375, which enshrines images of the Buddha and 526 stone [ARHATS](#). Another hermitage, Unbuam, has a statue of a bodhisattva that is three-feet high, with a crown decorated with flames, flowers, and a bird of paradise. Paekhūngam, a hermitage at Ŭnhaesa reserved for nuns, houses in its kūngnak chōn (hall of ultimate bliss) a pedestal called a sumidan ([MT. SUMERU](#) altar; [J. SHUMIDAN](#)) with a statue of the Buddha on top. The sumidan is also decorated with fine carvings of birds, animals, flowers, and demons. There are some ten buildings on the Ŭnhaesa grounds. The site is noted for its enshrined image of [AMITĀBHA](#), and Ŭnhaesa is famous in Korea as a center of Amitābha worship. Ŭnhaesa is also home to one of the most recognized [KWAEBUL](#), or giant hanging Korean religious art works (see also [T'AENGHWA](#); T. [THANG KA](#)). Painted in 1750 on silk, it depicts the Buddha in a [PURE LAND](#) resplendent with birds and peonies.

[Unmuk](#). (雲默) (d.u.; fl. late fourteenth century). Korean monk from the late Koryō dynasty, also known as Puam and Mugi. He entered the [SAMGHA](#) and studied Ch'ōntae (C. [TIANTAI](#)) philosophy under the state preceptor (KUKSA) Purin Chōngjo (d.u.) at the White Lotus Society (see [JIESHE](#)) on Mandōksan. After passing the monastic examinations ([SŬNGKWA](#)), he was appointed as the abbot of Kuramsa but soon left his post to travel throughout the country. He built a hermitage and settled down at Mt. Sihūng, where he spent the next twenty years painting Buddhist images, copying scriptures, and chanting the [SADDHARMAPUNĀRĪKASŪTRA](#) ("Lotus Sūtra"). He is the author of the two-roll *Sōkka yōrae haengjōk song*, a verse retelling of the life of the Buddha, and the single-roll *Ch'ōnt'ae marhak Unmuk hwasang kyōngch'aek*, a book of his teachings and admonitions, which is only partially extant.

[unsui](#). (雲水). In Japanese, lit. "clouds and water," referring to itinerant Buddhist monks, and especially monks in training. See [YUNSHUI](#).

[upacārasamādhi](#). In Pāli, "access concentration," "neighborhood concentration," or "threshold concentration"; the more elementary of the two broad types of concentration ([SAMĀDHI](#)) described in Pāli commentarial literature. Both of these two types of samādhi are used with reference to meditators who are specializing in calmness (P. *samatha*; S. [ŚAMATHA](#)) techniques. Upacārasamādhi precedes full meditative absorption (P. [JHĀNA](#); S.

[DHYĀNA](#)) and is the highest level of concentration that may be developed from the more discursive topics of meditation ([KAMMATTHĀNA](#)), viz., the first eight of ten recollections (P. anussati; S. [ANUSMRTI](#)), on the Buddha, dharma, [SAMGHA](#), morality, generosity, divinities, death, and peace, as well as the contemplation on the loathsomeness of food, and the analysis of the four material elements. Upacārasamādhi is characterized by the visualization in the mind of a luminous “counterpart” or “representational” “image” ([PATIBHĀGANIMITTA](#)) of the object of meditation. It is through further concentration on this stable representational image that the mind finally attains “full concentration” ([APPANĀSAMĀDHI](#)), which leads to jhāna. (See also [KHANIKASAMĀDHI](#); [SĀMANTAKA](#).) According to some [THERAVĀDA](#) accounts (e.g., in the modern [VIPASSANĀ](#) movement), concentration of at least the level of upacārasamādhi is said to be required for the achievement of the state of stream-enterer (P. sotāpanna; S. [SROTAĀPANNA](#)).

[upādāna](#). (T. len pa; C. qu; J. shu; K. ch’wi 取). In Sanskrit and Pāli, “clinging,” “grasping,” or “attachment”; the ninth of the twelve links ([NIDĀNA](#)) of dependent origination ([PRATĪTYASAMUTPĀDA](#)), which is preceded by craving ([TRSNĀ](#)) and followed by becoming ([BHAVA](#)). Clinging is regarded as a more intense form of craving, with craving defined as the desire not to separate from a feeling of pleasure, the desire to separate from a feeling of pain, or as a nondiminution of a neutral feeling. Upādāna is a stronger, and more sustained, type of attachment, which is said to be of four types: (1) clinging to sensuality ([RĀGA](#)), which is strong attachment to pleasing sensory objects; (2) clinging to false views and speculative theories ([DRSTI](#)); (3) clinging to faulty disciplinary codes and superstitious modes of conduct ([ŚĪLAVRATAPARĀMARŚA](#)); and (4) clinging to mistaken beliefs in a perduring self ([ĀTMAVĀDA](#)), viz., the attachment to the transitory mind and body as a real I and mine. In the context of dependent origination ([PRATĪTYASAMUTPĀDA](#)), craving (trṣṇā) leads to the clinging (upādāna) that nourishes the actions that will serve as the cause of “becoming” (bhava), viz., the next lifetime. Clinging that occurs near the moment of death is therefore particularly consequential.

[upādānakāraṇa](#). (T. nyer len gyi rgyu; C. xianqu yin; J. genshuin; K. hyōnch’wi in 現取因). In Sanskrit, “material cause” or “proximate cause”; the cause that produces an effect that is of the same substance ([DRAVYA](#)) as itself. For example, in the case of a sprout, the upādānakāraṇa is its seed; in the case of a pot, it is clay.

upādānaskandha. (P. upādānakandha; T. nyer len gyi phung po; C. quyun; J. shuun; K. ch'wion 取蘊). In Sanskrit, “aggregates that are the objects of clinging,” “aggregates of attachment”; the five aggregates ([SKANDHA](#)), which are viewed as the foundational objects of clinging ([UPĀDĀNA](#)). In the [FOUR NOBLE TRUTHS](#), the definition of the first noble truth, that of suffering ([DUHKHASATYA](#)), specifies that “the five upādānaskandha themselves are suffering,” which suggests that suffering is intrinsic to existence itself (see [SAMSKĀRADUHKHATĀ](#)), and that as long as one clings to continuing existence ([BHAVA](#)), the cycle of suffering within [SAMŚĀRA](#) will continue. The term upādānaskandha can also be translated as “appropriated aggregates,” which suggests that the aggregates are caused, or appropriated, by [KARMAN](#) and [KLEŚA](#) and thus also serve in turn as the cause of future karman and kleśa. Again, the term may also be translated as “appropriating aggregates,” which connotes that, although the skandhas are empty of a self or soul ([ĀTMAN](#)) that appropriates a new form of existence, they provide the locus for the karman and kleśa (viz., the clinging or grasping itself) that produce future forms of the aggregates and future suffering.

upadeśa. (P. upadesa; T. man ngag/gtan phab; C. youpotishe; J. upadaisha; K. ubajesa 優波提舍). In Sanskrit, “instruction,” “teaching”; one of the nine ([NAVAṄGA](#)) (Pāli) or twelve ([DVĀDAŚĀṄGA|PRAVACANA|](#)) (Sanskrit) categories ([AṄGA](#)) of Buddhist scripture according to their structure or literary style, where it may refer to the subsequent elaboration by the great disciples of a sūtra that the Buddha had just spoken. In Mahāyāna treatises ([ŚĀSTRA](#)), upadeśa may suggest that the text is conveying something hidden or special in the Buddha’s words ([BUDDHAVACANA](#)) that the student may not immediately realize is there. In Tibet, there was the question of whether a teacher’s personal instructions (man ngag) to a student were superior to the explanation in a Buddhist text. The name [BKA’ GDAMS](#), literally, “those who take the words of the Buddha as instructions” (gdams ngag), may reflect a response to such a view. See also [AṄGA](#).

upadeśasampramoṣa. (T. gdams ngag brjed pa; C. wang shengyan; J. bōshōgon; K. mang sōngōn 忘聖言). In Sanskrit, lit. “loss of the instruction,” a term that appears in instructions for developing [SAMĀDHI](#), to describe the point in the early stages of developing concentration where the meditator loses focus upon the chosen object of concentration, thus allowing the mind to wander.

upadhi. (T. rdzas; C. yi; J. e; K. ūi 依). In Sanskrit and Pāli, the “substratum” of rebirth or the “bonds” that bind one to continued existence in [SAMŚĀRA](#). Upadhi

is typically equated either with the five aggregates ([SKANDHA](#)) or with the afflictions ([KLEŚA](#)) of sensuality ([RĀGA](#)), ill will ([DVESA](#)), and delusion ([MOHA](#)). Less specifically, any of the ties that bind one to the world, whether family, possessions, or property are described as upadhi. In the [NIDDESA](#) of the Pāli [KHUDDAKANIKĀYA](#), the upadhi were ultimately systematized into a list of ten bonds. ¶ In an Indian monastic context, upadhi also refers to the “material objects” held in common by the monastery, a meaning of the term unknown in Pāli. The “provost” or “guardian of the material objects” of a monastery was given the title upadhivārika.

upādhyāya. (P. upajjhāya; T. mkhan po; C. heshang; J. oshō/wajō/kashō; K. hwasang 和尚). In Sanskrit, a religious instructor or “preceptor.” The upādhyāya is first and foremost a monk who confers the lower ordination (see [PRAVRAJITA](#)) to new novices ([ŚRĀMANERA](#)) and higher ordination ([UPASAMPADĀ](#)) to monks ([BHIKSU](#)). To act as an upādhyāya, a monk must be qualified and competent and be of at least ten years standing in the order since his own higher ordination. The relationship of the preceptor to the disciple is described as being like that of father and son. The preceptor is enjoined to teach the [DHARMA](#) and [VINAYA](#) to his disciple and, as necessary, to supply him with requisites, such as robes and an alms bowl. He should tend to his disciple if he is ill and discipline him if he commits some wrongdoing. If the disciple should begin to entertain doubts about the religion, the preceptor should try to dispel them. If the disciple should commit a grave offense against the monastic rules and regulations, the preceptor is to prevail upon him to go before the [SAMGHA](#) to seek expiation. If the disciple misbehaves or becomes disobedient, the preceptor is enjoined to expel him. But if the disciple shows remorse and asks forgiveness, the preceptor is to take him under guidance again. A monk ceases to be an upādhyāya when he goes away, dies, secedes from the order, changes religion, or expels his disciple. For the East Asian usage of the term, see also [HESHANG](#).

upādhyāyā. (P. upajjhāyā; T. mkhan mo; C. heshangni; J. oshōni; K. hwasangni 和尚尼). In Sanskrit, a female religious instructor or “female preceptor.” A qualified nun ([BHIKSUNĪ](#)) of at least twelve years standing may confirm the [UPASAMPADĀ](#) ordination on a female probationer ([ŚIKSAMĀNĀ](#)). The ordination can be performed only after formal agreement has been received from the bhikṣuṇī [SAMGHA](#). The newly ordained nun must live under the tutelage of the upādhyāyā as a disciple for a minimum of two years. The duties of the

upādhyāyā and her disciple are the same as those for a male preceptor ([UPĀDHYĀYA](#)) and his disciple.

Upagupta. (T. Nyer sbas; C. Youpojudo; J. Ubakikuta; K. Ubagukta 優婆鞠多). An Indian [ARHAT](#), said to have lived in the [MATHURĀ](#) region of India. Upagupta is unknown in Pāli canonical sources but appears frequently in the Sanskrit [AVADĀNA](#) literature, especially the [AŚOKĀVADĀNA](#) and the [DIVYĀVADĀNA](#). Upagupta is famed for having tamed (and in some versions, converted) [MĀRA](#) by placing a garland of corpses around his neck. Upagupta was later invited to [PĀTALIPUTRA](#) by King [AŚOKA](#), and then conducted the monarch on a tour of the sacred sites ([MAHĀSTHĀNA](#)) associated with the life of the Buddha. The cult of Upagupta became popular in Southeast Asian Buddhist countries from the twelfth century onward, thanks to his prominent appearance in Sanskrit materials, and he eventually comes to be featured in noncanonical Pāli materials as well. Upagupta occupies pride of place in Burmese (Myanmar) Buddhism, where he is presumed to reside in a pavilion in the southern ocean, whence he is invited to rituals to protect the Burmese from Māra’s interference. At the conclusion of the ceremonies, an image of Upagupta is placed on a raft and floated downstream. Upagupta is listed in [SARVĀSTIVĀDA](#) sources as the fifth of the Indian patriarchs who are said to have succeeded the Buddha as head of the [SAMGHA](#), following [MAHĀKĀŚYAPA](#), [ĀNANDA](#), [MADHYĀNTIKA](#), and [ŚĀNAKAVĀSIN](#); the East Asian [CHAN](#) tradition typically lists him instead as the fourth patriarch. According to a Chinese account of the origins of the [VINAYA](#), Upagupta had five major disciples who were said to have established their own schools based on their differing views regarding doctrine; these five also redacted separate editions of the vinaya, which the Chinese refer to as the “five vinaya recensions” (wubu lü).

upakleśa. (P. upakkileśa; T. nye ba’i nyon mongs; C. sui fannao; J. zuibonnō; K. su pōnnoe 隨煩惱). In Sanskrit, “secondary afflictions” (as opposed to the “root afflictions,” or [MŪLAKLEŚA](#)), or “subsidiary defilements”; a group of ten (according to the [VAIBHĀSIKA](#) school of [SARVĀSTIVĀDA ABHIDHARMA](#)), sixteen (according to Pāli materials), or twenty (according to the [YOGĀCĀRA](#) school) mental afflictions, including anger ([KRODHA](#)), envy ([IRSYĀ](#)), deceit ([MĀYĀ](#)), selfishness ([MĀTSARYA](#)), and enmity ([UPANĀHA](#)).

upalabdhi. (T. dmigs pa; C. suode; J. shotoku; K. sodük 所得). In Sanskrit, “observation” or “perception,” i.e., “getting at” something, a common term for

the cognition of an object. Upalabdhi is sometimes used in a pejorative sense to refer to the cognition of, or getting at, factors that do not exist in an object, notably, a perduring self. To be preferred to upalabdhi is cognition that is “unascertainable” ([ANUPALABDHI](#)), viz., without any bifurcation between subject and object and thus freed from any kind of false dichotomization; this is the type of perception that occurs in enlightenment.

Upāli. (T. Nye bar 'khor; C. Youboli; J. Upari; K. Ubari 優波離). Sanskrit and Pāli proper name of an [ARHAT](#) who was foremost among the Buddha's disciples in his knowledge of the monastic code of discipline ([VINAYA](#)). According to Pāli accounts, Upāli was a barber from the city of Kapilavatthu (S. [KAPILAVASTU](#)) and was in the service of the Sākiya (S. [ŚĀKYA](#)) princes who ruled there. Upāli accompanied Anuruddha (S. [ANIRUDDHA](#)) and his cousins when they decided to renounce the world and take ordination from the Buddha in Anupiyā grove. They handed him all their clothes and ornaments in preparation, but Upāli refused the gift, asking instead to be allowed to take ordination with them. Anuruddha and the others requested the Buddha to confer ordination on Upāli first so that their barber would always be senior to them and thus quell their pride in their noble birth. The Buddha refused Upāli's request to be allowed to retire to the forest to practice meditation in solitude, realizing that, while Upāli had the qualities to attain arhatship through that course, he would as a consequence neglect the study of dharma. Following the Buddha's advice, Upāli practiced insight (P. [VIPASSANĀ](#); S. [VIPĀŚYANĀ](#)) and became an arhat without retiring to the forest, thus allowing the Buddha to teach him the entire [VINAYAPITAKA](#). Upāli was frequently sought out to render decisions on matters of discipline, and he is frequently shown discussing with the Buddha the legal details of cases brought before him. Even during the Buddha's lifetime, monks frequently sought training in monastic discipline under Upāli; he was also regarded as a sympathetic guardian to monks facing difficulties. After the Buddha's demise, [MAHĀKĀŚYAPA](#) chose Upāli to recite the vinaya at the first Buddhist council ([SAMGĪTI](#); see [COUNCIL, FIRST](#)); [ĀNANDA](#) was chosen to recite the Buddha's sermons ([SŪTRA](#)). A succession of vinaya masters descended from Upāli, including [MOGGALIPUTTATIṢṢA](#), leader of the third Buddhist council (see [COUNCIL, THIRD](#)). Upāli's low status as a barber is often raised as evidence that the Buddha accepted disciples from all classes and castes in society and that all were capable of becoming arhats.

Upālisutta. (C. Youpoli jing; J. Ubarikyō; K. Ubari kyōng 優婆離經). In Pāli, “Discourse to Upāli,” the fifty-sixth sutta in the [MAJJHIMANIKĀYA](#) (a separate [SARVĀSTIVĀDA](#) recension appears as the 133rd [SŪTRA](#) in the Chinese translation of the [MADHYAMĀGAMA](#)); preached to the householder (P. gahapati; S. [GRHAPATI](#)) Upāli, a wealthy lay disciple of Nigaṇṭha Nātaputta (S. [NIRGRANTHA JĀTĪPUTRA](#); a.k.a. [MAHĀVĪRA](#); see also [JAINA](#)) at the Pāvārika’s mango grove in [NĀLANDĀ](#). Nigaṇṭha Nātaputta dispatched his lay disciple Upāli to engage the Buddha in a debate on the nature of action (P. kamma; S. [KARMA](#)). The Jaina leader held that, of the three types of action, physical, verbal, and mental, it is bodily action that is the most productive of consequences for the actor. The Buddha maintained, in contrast, that it is mental action that is the most productive of consequences for the actor, since it is the mental intention ([CETANĀ](#)) that initiates the physical action. Convinced of the Buddha’s explanations, Upāli dedicated himself as a lay disciple of the Buddha. When Nigaṇṭha Nātaputta heard of Upāli’s conversion, he was filled with rage and vomited blood.

upanāha. (T. ’khon du ’dzin pa; C. hen; J. kon; K. han 恨). In Sanskrit and Pāli, “enmity,” “resentment,” “malice,” or “animosity”; one of the ten (according to the [VAIBHĀSIKA](#) school of [SARVĀSTIVĀDA ABHIDHARMA](#)), sixteen (according to Pāli materials), or twenty (according to the [YOGĀCĀRA](#) school) secondary afflictions or subsidiary defilements ([UPAKLEŚA](#)). Upanāha is described as a pent-up anger that takes the form of a wish to harm others. Upanāha refers to a long-held grievance or bitterness and is one possible manifestation of aversion ([PRATIGHA](#); [DVEṢA](#)). Upanāha is distinguishable from “anger” ([KRODHA](#)) in that anger is a more powerful but more quickly dissipated kind of emotion, whereas “enmity” is a longer-term, simmering grudge.

Upananda. (T. Nye dga’ po; C. Youbonantuo; J. Upananda; K. Ubanant’a 優波難陀). Sanskrit and Pāli proper name of a monk disciple of the Buddha, who was regularly chastised for his greed. There are numerous stories in the [VINAYA](#) of his attempts to procure the best and most of all offerings made to monks, and especially of robes and food. The Buddha typically rebukes Upananda for his misconduct, and then goes on to promulgate a new rule of conduct in order to deter monks from committing such transgressions in the future.

upapādukayoni. (P. opapātikayoni/upapātikayoni; T. rdzus te skye ba; C. hua sheng; J. keshō; K. hwa saeng 化生). In Buddhist Hybrid Sanskrit, “metamorphic” or “spontaneous birth”; one of the four modes of birth (see [YONI](#))

of living beings in the three realms of existence, along with oviparous birth or birth from an egg (aṇḍajayoni), viviparous birth or birth from a womb (jarāyujayoni), and birth from moisture (saṃsvedajayoni). Beings born via this fourth mode are spontaneously generated and include divinities ([DEVA](#)), hungry ghosts ([PRETA](#)), denizens of hell ([NĀRAKA](#)), and those residing in the intermediate state ([ANTARĀBHAVA](#)). In addition, even beings that are generally classified under another mode of birth may in certain circumstances be spontaneously generated, such as human beings who are the first to be born at the beginning of an eon ([KALPA](#)) and certain animals, such as [NĀGAs](#) and [GARUDAs](#). Unlike the other three modes of birth, beings born via metamorphosis appear spontaneously at their rebirth destiny, are fully mature at the time of their birth, and leave no physical corpse behind at death. A spontaneously born being recognizes his appropriate rebirth destination at the moment of his death and generates a desire to appear in that specific destiny, even if that desire be directed toward a baleful place like the hells. Beings born into [SUKHĀVATĪ](#) are said to be born either spontaneously into a lotus flower in the [PURE LAND](#), or, if they are not yet advanced enough to be born directly into the pure land, viviparously to other beings at the outer perimeter of that land. Beings born metamorphically are the most numerous of all the four modes of birth and are regarded as superior.

[upapadyaparinirvāyin](#). [alt. utpattiparinirvāyin] (T. skyes nas yongs su mya ngan las 'das pa; C. sheng ban/sheng banniepan; J. shōhatsu/shōhatsunehan; K. saeng pan/saeng panyōlban 生般/生般涅槃). In Sanskrit, “one who achieves [NIRVĀNA](#) at birth,” a particular sort of nonreturner ([ANĀGĀMIN](#)), one of the twenty members of the [ĀRYASAMGHA](#) (see [VIMŚATIPRABHEDASAMGHA](#)). According to the [ABHIDHARMAKOŚABHĀSYA](#), the utpattiparinirvāyin are nonreturners who, having linked up with any of the sixteen birth states of the subtle-materiality realm ([RŪPADHĀTU](#)), enter the “nirvāṇa with remainder” ([SOPADHIŚESANIRVĀNA](#)) on that support. They are those who make an effort, unlike the [ANABHISAMSKĀRAPARINIRVĀYIN](#), but to whom effort comes naturally, unlike the [SĀBHISAMSKĀRAPARINIRVĀYIN](#).

[upapadyavedanīyakarman](#). (P. upapajjavedanīyakamma; T. skyes nas myong 'gyur gyi las; C. shunci shengshou ye; J. junjishōjugō; K. sunch'a saengsu ōp 順次生受業). In Sanskrit, “action experienced upon birth,” a category of deed whose karmic effect is experienced in the immediately following lifetime, as opposed to the present life or some other lifetime in the future.

upaputra. (T. nye sras). In Sanskrit, lit. “close sons,” a group of eight [BODHISATTVAS](#) often depicted with the Buddha in [MAHĀYĀNA](#) iconography. They are [MAÑJUŚRĪ](#), [VAJRAPĀNI](#), [AVALOKITEŚVARA](#), [KṢITIGARBHA](#), [SARVAŪVARANAṆIṢKAMBHIN](#), [ĀKĀŚAGARBHA](#), [MAITREYA](#), and [SAMANTABHADRA](#).

upāsaka. (T. dge bsnyen; C. youposai; J. ubasoku; K. ubasae 優婆塞). In Sanskrit and Pāli, “[male] lay disciple,” a lay Buddhist man who takes the three refuges ([TRĪŚARANA](#)) and the five basic precepts ([PAŅCAŚĪLA](#)): (1) not to kill, (2) not to steal, (3) not to engage in sexual misconduct, (4) not to lie, and (5) not to use intoxicants. These precepts are taken permanently, with three other precepts observed on full-moon and new-moon days (S. [UPOṢADHA](#); P. uposatha), for a total of eight lay precepts (aṣṭāṅgaśīla; see [ASTĀŅGASAMANVĀGATAM UPAVĀSAM](#)): (6) not to eat at an inappropriate time (generally interpreted to mean between noon and the following dawn), (7) not to dance, sing, play music, attend performances, or adorn one’s body with garlands, perfumes, or cosmetics, and (8) not to sleep on high beds. Also, during the full-moon and new-moon days, the vow not to engage in sexual misconduct is interpreted to mean complete celibacy. The term is often translated simply as “layman,” but given the level of religious commitment, “[male] lay disciple” is a more accurate rendering. See also [ŚIKSĀPADA](#); [ŚĪLA](#).

upāsakasamvara. (T. dge bsnyen gyi sdom pa; C. jinshi lüyi; J. gonjiritsugi; K. kūnsa yurūi 近事律儀). In Sanskrit and Pāli, “restraints of a [male] lay disciple,” any or all the five precepts ([PAŅCAŚĪLA](#)) taken by a lay disciple for life: (1) not to kill, (2) not to steal, (3) not to engage in sexual misconduct, (4) not to lie, and (5) not to use intoxicants. These precepts are meant to be observed every day, with three other precepts observed on full moon and new moon days ([UPOṢADHA](#)). The three additional precepts are (6) not to eat at an inappropriate time (generally interpreted to mean between noon and the following dawn); (7) not to dance, sing, play music, attend performances, or adorn one’s body with garlands, perfumes, or cosmetics; and (8) not to sleep on high beds. Also, during the full-moon and new-moon days, the vow not to engage in sexual misconduct is interpreted to mean complete celibacy. See also [ŚIKSĀPADA](#); [ŚĪLA](#).

upasampadā. (P. upasampadā; T. bsnyen par rdzogs pa; C. shoujie; J. jukai; K. sugye 受戒). In Sanskrit, “ordination” or “higher ordination,” the ecclesiastical ceremony whereby a male novice ([ŚRĀMANERA](#)) becomes a fully ordained monk ([BHIKSU](#)) and a female postulant ([ŚIKSAMĀNĀ](#)) becomes a fully ordained nun

([BHIKSUNĪ](#)). Although there are some variations in the procedure according to the different [VINAYAS](#), the ordination ceremony is largely the same; that described in the Pāli vinaya is outlined here. In the case of a male novice, the ordinand, who must be at least twenty years of age, must first shave his hair, moustache, and beard and be provided with a monk's robe and bowl. He must have chosen a preceptor (P. upajjhāya; S. [UPĀDHYĀYA](#)) who will confer ordination upon him. The upajjhāya must be an elder (P. therā; S. [STHAVIRA](#)) of at least ten years standing, who is qualified morally and intellectually to act as preceptor. The candidate will then be brought before an assembly comprising at least ten monks, if the ceremony is held within the Buddhist heartland of India; if not, a minimum of five monks is necessary to conduct a valid ordination. The ordination ritual must be conducted within the confines of a [SĪMĀ](#), or consecrated ordination boundary, and proceeds as follows. Seated in a squatting position, the candidate requests the assembly three times to confer ordination upon him. The assembly then asks him a set of stock questions concerning his age, his sex, his health, his legal liabilities, his preceptor, whether he has received permission from his parents, *etc.* If the candidate passes the inquiry, a formal petition is then put before the assembly three times that the candidate be admitted to the [SAMGHA](#). Silence from the assembly indicates approval, and the candidate is thereby ordained. Immediately upon receiving the higher ordination, the new monk is apprised of the four requisites ([NIŚRAYA](#)) of the monk, and of the four [PĀRĀJIKAs](#) or "defeats," these being grave misdeeds that would result in expulsion from the [SAMGHA](#). The following types of persons may not be ordained: branded thieves, fugitives from the law, convicted thieves; those punished by flogging or branding, patricides, matricides, murderers of arahants (S. [ARHAT](#)); those who have shed the blood of a buddha, eunuchs, false monks, seducers of nuns, hermaphrodites; those without an upajjhāya, persons who are maimed, disabled, or deformed in various ways; and those afflicted with various communicable diseases. In the case of a female postulant seeking higher ordination as a nun, the candidate is required to undergo a double ordination. First she is brought before the order of nuns (P. bhikkhuṇīsāṅgha, S. [BHIKSUNĪSAMGHA](#)), where she is queried and, if found suitable, given the first upasampadā. She is then brought before the order of monks, where she is given a second upasampadā.

Upasena. (T. Nye sde; C. Youbosina; J. Upashina; K. Ubasana 優波斯那). Sanskrit and Pāli proper name of an eminent [ARHAT](#) declared by the Buddha to

be foremost among his monk disciples in being altogether charming; also known in Pāli as Upasena Vaṅgantaputta. According to Pāli accounts, he was born into a brāhmaṇa family in Nālaka and was the younger brother of [ŚĀRIPUTRA](#). His father was Vaṅganta, hence his name Vaṅgantaputta. Like his brother, Upasena was learned in the three Vedas. He was converted when he heard the Buddha preach and immediately entered the order. When he had been a monk for only one year, he ordained a new monk, for which offense he was severely rebuked by the Buddha. Chastened by the criticism, Upasena took up the practice of insight in earnest and attained arahantship. Upasena became a skilled and charismatic preacher who won many converts to the religion. He engaged in various ascetic practices ([DHUTAṄGA](#)) and convinced many followers to do likewise. Each of his followers was charming in his own way, with Upasena the most charming of all. Upasena had resolved to attain such preeminence during the time of the previous buddha Padumuttara, when, as a householder of Haṃsavatī, he overheard a monk so praised and wished the same for himself in the future. Upasena's death was attended by a miracle. He was sitting at the mouth of a cave after his morning meal, mending his robe amid a pleasant breeze. At that time two snakes were in the vines above the cave door when one fell on his shoulder and bit him. As the venom coursed through his body, he requested Śāriputra and other monks near him to carry him outside so that he could die in the open. In a few moments he died, and his body immediately scattered in the breeze like chaff.

[upāsikā](#). (T. dge bsnyen ma; C. youpoyi; J. ubai; K. ubai 優婆夷). In Sanskrit and Pāli, “[female] lay disciple,” a lay Buddhist woman who takes the three refuges ([TRISĀRANA](#)) and the five basic precepts ([PAÑCAŚĪLA](#)): (1) not to kill, (2) not to steal, (3) not to engage in sexual misconduct, (4) not to lie, and (5) not to use intoxicants. These precepts are meant to be observed every day, with three other precepts observed on full-moon and new-moon days (S. [UPOSADHA](#); P. uposatha). The three are (6) not to eat at an inappropriate time (generally interpreted to mean between noon and the following dawn); (7) not to dance, sing, play music, attend performances, or adorn one's body with garlands, perfumes, or cosmetics; and (8) not to sleep on high beds. Also, during the full-moon and new-moon days, the vow not to engage in sexual misconduct is interpreted to mean complete celibacy. The term is often translated simply as “laywoman,” but given the level of religious commitment, “[female] lay disciple” is a more accurate rendering. See also [MAE CHI](#); [ŚIKSĀPADA](#).

upāsikāsamvara. (T. dge bsnyen ma'i sdom pa; C. youpoyi jie; J. ubaikai; K. ubai kye 優婆夷戒). In Sanskrit and Pāli, “restraints of a [female] lay disciple”; any or all the five restraints taken by a lay disciple for life: (1) not to kill, (2) not to steal, (3) not to engage in sexual misconduct, (4) not to lie, and (5) not to use intoxicants. These precepts are meant to be observed every day, with three other precepts observed on full-moon and new-moon days (S. [UPOSADHA](#); P. uposatha), making a total of eight precepts (aṣṭāṅgaśīla; see [ASTĀṄGASAMANVĀGATAM UPAVĀSAM](#)). The three additional precepts are (6) not to eat at an inappropriate time (generally interpreted to mean between noon and the following dawn); (7) not to dance, sing, play music, attend performances, or adorn one’s body with garlands, perfumes, or cosmetics; and (8) not to sleep on high beds. Also, during the full-moon and new-moon days, the precept not to engage in sexual misconduct is interpreted to mean complete celibacy. See [ŚĪLA](#); [ŚIKSĀPADA](#).

upavāsa. (T. bsnyen gnas; C. jinzhu; J. gonjū; K. kūnju 近住). In Sanskrit and Pāli, “fasting” or “abstinence,” a term used to refer to the abstention practiced by lay disciples during the fortnightly [UPOSADHA](#) observance. In this context, the term also refers to the eight precepts (AṢṬĀṄGAŚĪLA; see [ASTĀṄGASAMANVĀGATAM UPAVĀSAM](#)), also referred to as the “one-day precepts” observed by lay disciples at this time. They are the eight precepts: not to kill, steal, engage in sexual activity, lie, use intoxicants, eat after noon, adorn their bodies, or sleep on high beds.

upavasatha. (S). See [UPOSADHA](#).

upāya. (T. thabs; C. fangbian; J. hōben; K. pangp’yōn 方便). In Sanskrit and Pāli, “stratagem,” “method”; term with at least four important denotations: (1) as a synonym for “skillful means” ([UPĀYAKAUŚALYA](#)); (2) as a general term for the activities necessary for the attainment of buddhahood; and (3) as one of the two essential components of the path, along with “wisdom” ([PRAJÑĀ](#)). In this latter sense, method refers to the actions a [BODHISATTVA](#) takes on behalf of all sentient beings. In this formulation, the various deeds that fall under the rubric of upāya are said to fructify as the [RŪPAKĀYA](#) of a buddha, while the bodhisattva’s development of prajñā is said to fructify as his [DHARMAKĀYA](#). (4) In Buddhist tantra, the superiority of the esoteric path of the [VAJRAYĀNA](#) over the exoteric path in bringing about buddhahood is often attributed to the superior stratagems or methods set forth in the [TANTRAS](#), compared to those found in the sūtras. In tantra, upāya is associated with the male and prajñā with the female.

[upāyakaúalya](#). (P. upāyakosalla; T. thabs mkhas; C. fangbian shanqiao; J. hōbenzengyō; K. pangpy’ōn sōn’gyo 方便善巧). In Sanskrit, “skillful means,” “skill-in-means,” or “expedient means,” a term used to refer to the extraordinary pedagogical skills of the buddhas and advanced [BODHISATTVAS](#); indeed, upāyakaúalya is listed as one of the ten perfections ([PĀRAMITĀ](#)) mastered on the bodhisattva path. (The rare Pāli form refers specifically to the Buddha’s teaching proficiency.) The notion of skillful means is adumbrated in the famous “simile of the raft” from the [ALAGADDŪPAMASUTTA](#), where the Buddha compares his teachings to a makeshift raft that will help one get across a raging river to the opposite shore: after one has made it across that river of birth and death to the “other shore” of [NIRVĀNA](#), the teachings have served their purpose and may be abandoned; in one sense, therefore, all his teachings are merely an expedient. The notion of skill-in-means also suggests that the Buddha intentionally fashions different versions of his teachings to fit the predilections and aptitudes of his audience. Because of a buddha’s direct understanding of his disciples’ abilities, he is able to teach what is most appropriate for each of them, like a doctor prescribing a treatment for a specific malady. Skillful means may also be used to justify why certain acts perceived as immoral by beings of lesser capacity become virtues when performed by a bodhisattva, who has their best interests at heart (see [UPĀYAKAUŚALYASŪTRA](#)). ¶ The Buddha’s skill-in-means is often used to reconcile apparent contradictions in his teaching, since those teachings ultimately are provisional expressions of his realization. The notion of skillful means has also been put to polemical use, especially in the [MAHĀYĀNA](#) (and most famously in the [SADDHARMAPUNĀRIKASŪTRA](#)), when previous teachings of the Buddha, such as the three vehicles ([TRİYĀNA](#)), are declared by him to have been merely expedients that he employed to instruct disciples who were unable to comprehend the more profound teaching of the one vehicle ([EKAYĀNA](#)) of buddhahood. The concept of skillful means may thus also be deployed as a hermeneutical or polemical device to critique earlier, and implicitly inferior, formulations of Buddhist doctrine as expedient teachings given to those who are temporarily incapable of understanding and benefitting from the Buddha’s more advanced teachings (as variously identified by different Buddhist schools).

[Upāyakaúalyasūtra](#). (T. Thabs la mkhas pa’i mdo; C. Dasheng fangbian hui; J. Daijō hōben’e; K. Taesūng pangp’yōn hoe 大乘方便會). In Sanskrit, “Skillful Means Sūtra,” an early [MAHĀYĀNA](#) sūtra included in the [RATNAKŪTASŪTRA](#)

collection, where it is also known as the *Jñānottarabodhisattvaparipṛcchā*. (In addition to the recension embedded in the 410 CE Chinese translation of the *Ratnakūṭa*, as transcribed above, there are also two other Chinese translations, one made in 285 CE, the other c. 980.) The first part of the sūtra extols the virtues of the practice of “skillful means” ([UPĀYAKAUŚALYA](#)), generally understood in this context to refer to the dedication of the merit from a virtuous deed, such as offerings made for the welfare and ultimate enlightenment of all beings. The sūtra goes on to explain how apparently nonvirtuous acts, such as sexual misconduct, become virtues when performed by a bodhisattva with skillful means, noting, “Something that sends other sentient beings to hell sends the bodhisattva who is skilled in means to rebirth in the world of [BRAHMĀ](#).” Also recounted is the famous story of the Buddha’s previous life as a ship captain, when he kills a potential murderer in order to save others’ lives. In the second part of the sūtra, the Buddha recounts the events of his life (see [BAXIANG](#)), from his entry into his mother’s womb to his decision to teach the dharma as instances of his skillful means; none of these events are presented as the consequences of his own past nonvirtuous actions or indeed of any fault whatsoever on his part. For example, after his enlightenment, the Buddha has no hesitation to teach the dharma; nonetheless, he compels the god [BRAHMĀ](#) to descend from his heaven to implore the Buddha to teach. He forces this act so that beings who worship Brahmā will have faith in the Buddha and so that the myriad forms of the god Brahmā will generate [BODHICITTA](#). The sūtra concludes with a discussion of ten cases in the life of the Buddha in which he apparently undergoes suffering (such as a headache, backache, and being pierced by a thorn) that had previously been ascribed to his nonvirtuous deeds in a past life; in each case, these are instead explained as being examples of the Buddha’s skillful means.

[upekṣā](#). (P. upekkhā; T. btang snyoms; C. she; J. sha; K. sa 捨). In Sanskrit, “equanimity,” a term with at least four important denotations: (1) as a sensation of neutrality that is neither pleasurable nor painful; (2) as one of eleven virtuous mental concomitants ([KUŚALA-CAITTA](#)), referring to a state of evenness of mind, without overt disturbance by sensuality, hatred, or ignorance; (3) as a state of mental balance during the course of developing concentration, which is free from lethargy and excitement; and (4) one of the four “divine abidings” ([BRAHMAVIHĀRA](#)), along with loving-kindness ([MAITRĪ](#)), compassion ([KARUNĀ](#)), and sympathetic joy ([MUDITĀ](#)). As a divine abiding, upekṣā indicates an even-mindedness toward all beings, regarding them with neither attachment nor

aversion, as neither intimate nor remote; in some descriptions of the four “divine abidings,” there is the additional wish that all beings attain such equanimity. In the [VISUDDHIMAGGA](#), equanimity is listed as one of the meditative topics for the cultivation of tranquillity meditation (samathābhāvanā; see S. [ŚAMATHA](#)). Of the four divine abidings, equanimity is capable of producing all four levels of meditative absorption (P. [JHĀNA](#); S. [DHYĀNA](#)), while the other divine abidings are capable of producing only the first three of four. The text indicates that, along with the other three divine abidings, equanimity is used only for the cultivation of tranquillity, not for insight training (P. vipassanābhāvanā; see S. [VIPĀŚYANĀ](#)).

[upekṣāpramāṇa](#). (P. upekkhāppamaññā; T. btang snyoms tshad med; C. she wuliangxin; J. shamuryōshin; K. sa muryangsim 捨無量心). In Sanskrit, “unlimited equanimity” or “boundless equanimity,” a state of equanimity toward unlimited numbers of sentient beings, or the wish that unlimited sentient beings abide in a state of equanimity that is free from desire and hatred.

[upoṣadha](#). [alt. poṣadha; upavasatha] (P. uposatha; T. gso sbyong; C. busa; J. fusatsu; K. p’osal 布薩). In Sanskrit, the fortnightly retreat (the term is generally left untranslated into English). It is the semimonthly ceremony (observed on the new moon and the full moon) in which monks and nuns are to assemble within a specified boundary ([SĪMĀ](#)) to recite the monastic rules of conduct set forth in the [PRĀTIMOKṢA](#). The observance involves the confession of faults, following which the prātimokṣa is recited. The *bhikṣuprātimokṣa* is recited by fully ordained monks, the *bhikṣunīprātimokṣa* by fully ordained nuns; novices and laypeople are prohibited from participating in either observance. The purpose of the ceremony is for the [SAMGHA](#) to purify itself of misdeeds through confession and to renew its commitment to moral conduct, thus helping to ensure harmony within the monastic community and between the clergy and the laity. Laypeople will often maintain eight precepts ([ASTĀṄGASAMANVĀGATAM UPAVĀSAM](#)) on this day, which essentially turn them into monks or nuns for a day: not to kill, steal, engage in sexual activity, lie, use intoxicants, eat after noon, adorn their bodies, or sleep on high beds. The term upoṣadha means to abide in a state of fasting or abstinence, a practice that was pre-Buddhist in origin; in Vedic times, it specifically referred to the day prior to a soma sacrifice. The practice seems to have been adopted from other religious sects in India during the Buddha’s lifetime. There are several types of upoṣadha ceremony, the most common and important of which is the saṃgha upoṣadha, which is attended by four or more

monks who recite the prātimokṣa and is held on the new-and full-moon days of the month. When three or fewer monks are present, the ceremony is held but the prātimokṣa is not recited. According to the Pāli vinaya, there are twenty-one types of persons in whose presence a monk's upoṣadha ceremony may not be held, viz., nuns, women in training to become nuns, male and female novices, persons who have seceded from the order, persons guilty of a [PĀRĀJIKA](#) offense, monks who refuse to acknowledge their own wrongdoing (of three kinds), eunuchs, ersatz monks who wear monastic attire without having been ordained, monks who have joined other religions, nonhumans, patricides, matricides, murderers of [ARHATS](#), seducers of nuns, schismatics, hermaphrodites, laypersons, and those who have shed the blood of a buddha.

[ūrdhvasrotas](#). (T. gong du 'pho ba; C. shangliu ban/shangliu banniepan; J. jōruhatsu/jōruhatsunehan; K. sangnyu pan/sangnyu panyōlban 上流般/上流般涅槃). In Sanskrit, “one who goes higher” or “upstreamer”; a specific type of nonreturner ([ANĀGĀMIN](#)), one of the twenty members of the [ĀRYASAMGHA](#) (see [VIMŚATIPRABHEDASAMGHA](#)). There are different accounts of the types of ūrdhvasrotas. According to Ārya [VIMUKTISENA](#)'s explanation of the list of āryasamgha found in the [ABHISAMAYĀLAMKĀRAVRTTI](#), based on the [ABHIDHARMAKOŚABHĀSYA](#), there are four: the pluta (those who leap over), ardhapluta (those who leap over half), sarvasthānacyuta (those who die in every place), and bhavāgraparama (those who journey to the summit of existence). All cultivate a meditation that enters and exits uncontaminated ([ANĀSRAVA](#)) states that cause them to take birth in the [ŚUDDHĀVĀSA](#) (pure abodes). This meditation allows them to jump at will from one meditative state (a [DHYĀNA](#) or [SAMĀPATTI](#)) to another without having to go through the intermediate stages. The pluta enters the first dhyāna, is reborn among the [BRAHMAKĀYIKA](#) divinities of the first meditative absorption and, through the force of earlier meditative development, emerges from that level of absorption, forsakes all levels in between, and is reborn in the pure abode region of the [AKANISTHA](#) heaven of the highest divinities, where he enters [NIRVĀNA](#). The ardhapluta is similarly reborn among the brahmakāyika divinities of the first meditative absorption, also forsakes the levels in between the first and fourth absorption, and is reborn in the pure abodes, but not each in turn. Omitting some of them, he is then born in the [AKANISTHA](#) heaven, where he enters nirvāṇa. The sarvasthānacyuta, as the name suggests, is born among the brahmakāyika divinities of the first meditative absorption and then goes through the process of taking birth in every other

heaven in the subtle materiality and immaterial realms except the great Brahmā heaven until he enters nirvāṇa in the akaniṣṭha heaven. The bhavāgraparama are born as divinities in the heavens up to the level of the [BRHATPHALA](#) (great fruition) heaven, forsake the pure abodes, and, having taken rebirths in stages in the immaterial realm ([ĀRŪPYADHĀTU](#)), enter nirvāṇa in the [BHAVĀGRA](#) (the summit of existence) heaven.

[ūrṇā](#). (S). See [ŪRNĀKEŚĀ](#).

[ūrṇākeśa](#). [alt. ūrṇākośa, ūrṇā] (P. uṇṇākesa; T. mdzod spu; C. baihao; J. byakugō; K. paekho 白毫). In Sanskrit, “hair treasure” or “tuft”; a spiral of hair said to be infinite in length located between the eyebrows of a buddha. It is frequently depicted as a gem inlaid between the eyebrows on buddha and [BODHISATTVA](#) images. In some lists, the ūrṇākeśa is the thirty-first of the thirty-two major marks of a superman ([MAHĀPURUSALAKSANA](#)) and is said to be endowed with a variety of magical powers. In many sūtras, the Buddha sometimes emits a ray of light from his ūrṇākeśa in order to illuminate distant worlds; see [KĀYAPRABHĀ](#); [TOUGUANG](#).

[Uruvilvā](#). (P. Uruvelā; T. Lteng rgyas; C. Youloupinluo; J. Urubinra; K. Urubinna 優樓頻螺). In Sanskrit, said to mean “Great Bank of Sand,” the name of an area, encompassing several villages, on the banks of the [NAIRAÑJANĀ](#) River in [MAGADHA](#) (today in the Indian state of Bihar), and the site of several important events in the life of the Buddha. It was in Uruvilvā that the [BODHISATTVA](#) practiced austerities for six years together with the group of five ascetics ([PAÑCAVARGIKA](#)). It was also there that he renounced the practice of asceticism, as a result of which he was repudiated by his five companions, who left him in Uruvilvā and departed for [RSIPATANA](#). The bodhisattva then proceeded to the [BODHI TREE](#), where he achieved enlightenment. In the forty-nine days after his enlightenment, the Buddha sat under various trees in Uruvilvā, where shrines were eventually established. It was also at Uruvilvā that [BRAHMĀ SAHAMPATĪ](#) appeared before the Buddha and implored him to teach the dharma. After turning the wheel of the dharma ([DHARMAKAPRAVARTANA](#)) for the group of five in Rṣipatana, the Buddha returned to Uruvilvā, where he converted thirty young men, as well as the “Kāśyapa brothers,” led by [URUVILVĀ-KĀŚYAPA](#) and their followers.

[Uruvilvā-Kāśyapa](#). (P. Uruvela-Kassapa; T. Lteng rgyas 'od srung; C.

Youloupinluo Jiashe; J. Urubinra Kashō; K. Urubinna Kasōp (優樓頻螺迦葉). The chief of the three “Kāśyapa brothers” (together with [NADĪ-KĀŚYAPA](#) and [GAYĀ-KĀŚYAPA](#)), also known in Pāli as the Tebhātika Jaṭila. Prior to their encounter with the Buddha, the three brothers were matted-hair ascetics engaged in fire worship, living with their followers on the banks of the [NAIRAÑJANĀ](#) River. Uruvilvā-Kāśyapa himself is said to have had five hundred followers. After his first teachings in the Deer Park ([MRGADĀVA](#); [RSIPATANA](#)) at [SĀRNĀTH](#), the Buddha returned to Uruvilvā, where he had practiced asceticism prior to this enlightenment. There he encountered Uruvilvā-Kāśyapa, who mistakenly believed that he was already an [ARHAT](#) and was liberated from the bonds of rebirth. Knowing that Uruvilvā-Kāśyapa could be dissuaded from his false views by a display of yogic power, the Buddha spent the rains retreat with him, performing 3,500 magical feats to demonstrate his mastery of supernatural powers (S. [RDDHI](#)), including subduing a fire serpent ([NĀGA](#)) without being burned, a scene depicted in Indian rock carvings. Using his ability to read Kāśyapa’s mind, the Buddha was able to convince the ascetic that he was not an arhat. When the Buddha told Uruvilvā-Kāśyapa that the fire worship that he taught did not lead to enlightenment, Uruvilvā-Kāśyapa requested ordination. Uruvilvā-Kāśyapa and his five hundred followers all cut off their long locks and threw them in the river. When the other two brothers and their followers saw the hair floating by, they came to investigate and in turn sought ordination. In one fell swoop, the Buddha’s community of monks grew to over a thousand monks. The Buddha taught them the so-called “Fire Sermon” ([ĀDITTAPARIYĀYA](#)), at which point they all become arhats. They then traveled together to [RĀJAGRHA](#) where, in the presence of King [BIMBISĀRA](#), the new monks proclaimed their allegiance to the Buddha. The three brothers are often listed among the audience of [MAHĀYĀNA](#) sūtras.

[ūśman](#). [alt. ūṣmagata] (T. drod; C. nuan; J. nan; K. nan 煖). In Sanskrit, “heat”; the first of the “aids to penetration” ([NIRVEDHABHĀGĪYA](#)) that are developed during the “path of preparation” ([PRAYOGAMĀRGA](#)) and mark the transition from the mundane sphere of cultivation ([LAUKIKA|BHĀVANĀ|MĀRGA](#)) to the supramundane vision (viz., [DARŚANAMĀRGA](#)) of the [FOUR NOBLE TRUTHS](#) ([CATVĀRY ĀRYASATYĀNI](#)). This stage is called heat, the [ĀBHIDHARMAMAHĀVIBHĀSĀ](#) says, because it “can burn all the fuel of the afflictions ([KLEŚA](#)).” Heat involves ardent faith ([ŚRADDHĀ](#)) regarding the [DHARMAVINAYA](#): when that faith is conditioned by the noble truth of the path

([MĀRGASATYA](#)), it produces ardency regarding the right [DHARMA](#); when it is faith conditioned by the noble truth of extinction ([NIRODHASATYA](#)), it produces ardency regarding the [VINAYA](#). Ūṣman and summit ([MŪRDHAN](#)), the first two of the nirvedhabhāgīyas, are still subject to retrogression and thus belong to the worldly path of cultivation (laukikabhāvanāmārga).

uṣṇīṣa. (P. uṇhīsa; T. gtsug tor; C. foding/rouji; J. butchō/nikukei; K. pulchōng/yukkye 佛頂/肉髻). In Sanskrit, lit. “turban,” the protuberance appearing on the crown of a buddha’s head, which is commonly depicted in buddha images. The [MAHĀPADĀNASUTTANTA](#) and [LAKKHANASUTTANTA](#) of the Pāli [DĪGHANIKĀYA](#) refer to the uṇhīsasīsa (“wearing a turban on the head”) as one of the thirty-two major “marks of a superman” (P. mahāpurisalakkhaṇa; S. [MAHĀPURUSALAKSANA](#)). Many texts report that the uṣṇīṣa is endowed with a variety of magical powers. For example, it is said that, although the uṣṇīṣa is perfectly proportional to the Buddha’s head, it cannot be measured. It is impossible to see the top of the uṣṇīṣa, and divinities ([DEVA](#)) are unable to fly above it. Many scriptures, including the *Uṣṇīṣavijayadhāraṇī*, also mention the Buddha radiating light from his uṣṇīṣa. Later Buddhist works in Sanskrit refer to this protuberance as the uṣṇīṣa-śīraskatā (lit. “head-bone”). The origin and precise interpretation of this unique feature of a Buddha remains in dispute. The Sanskrit term uṣṇīṣa is in fact a common word for turban. Some art historians have argued that the uṣṇīṣa originated as a topknot of hair, such as is found depicted in Graeco-Gandhāran Buddhist sculpture from northwestern India from around the first century CE; the interpretation of the uṣṇīṣa as a protuberance on the top of the skull subsequently evolved at [MATHURĀ](#), where artists began to cover the uṣṇīṣa with little snail-curved hair, due to a misinterpretation of the wavy hairstyle of Gandhāran sculptures. The Chinese pilgrims [FAXIAN](#) and [XUANZANG](#) report seeing the “uṣṇīṣa bone” of the Buddha being worshipped at a monastery in Haḍḍa (in present-day Afghanistan).

Uṣṇīṣasitāpatrā. (S). See [TATHĀGATOSNĪSASITĀPATRĀ](#).

utpāda. (P. uppāda; T. skye ba; C. shengqi; J. shōki; K. saenggi 生起). In Sanskrit, “production,” or “arising,” the generation of a specific fruition or effect ([PHALA](#)) from a given cause ([HETU](#)). In generic Buddhist accounts of causality or etiology, hetu designates the main or primary cause of production, which operates in conjunction with various concomitant or subsidiary conditions ([PRATYAYA](#)); together, these two bring about the production (utpāda) of a specific

“fruition” or result (phala). In the [PRAJÑĀPĀRAMITĀ](#) literature and the [MADHYAMAKA](#) school, the notion of production comes under specific criticism (see [VAJRAKANĀ](#)), with [NĀGĀRJUNA](#) famously asking, e.g., how an effect can be produced from a cause that is either the same as or different from itself. The prajñāpāramitā sūtras thus famously declare that all dharmas are actually [ANUTPĀDA](#), or “unproduced.”

[Utpalavarnā](#). (P. Uppalavaṇṇā; T. Ut pa la'i mdog; C. Lianhuase; J. Rengeshiki; K. Yōnhwasaek 蓮華色). One of two chief nun disciples of the Buddha, the first being [KSEMĀ](#). According to Pāli accounts, where she is known as Uppalavaṇṇā, she was born into a banker's family in Sāvatti ([ŚRĀVASTĪ](#)) and was renowned for her beauty. Her name, lit. “blue-lotus colored,” refers to her skin complexion, which was dark like a blue lotus flower. Men of all ranks, royals and commoners, sought her hand in marriage. Her father, fearing to offend any of them, suggested to her that she renounce the world. Already inclined by nature to renunciation, Uppalavaṇṇā became a Buddhist nun. While sweeping an uposatha (S. [UPOSADHA](#)) assembly hall, she attained meditative absorption (P. [JHĀNA](#); [DHYĀNA](#)) by concentrating on the light of a candle, and soon became an [ARHAT](#) possessed of the analytical attainments (P. paṭisambhidā; S. [PRATISAMVID](#)). Uppalavaṇṇā was renowned for her various supernatural powers born from her mastery of meditative absorption. The Buddha declared her to be chief among his nun disciples in supranormal powers (P. iddhi; S. [RDDHI](#)). After she had become a nun and an arhat, Uppalavaṇṇā was raped by her cousin Ānanda (not the Ānanda who was the Buddha's attendant), who had been enamored of her when she was a laywoman. Although he was swallowed by the earth for his heinous crime, the case raised the question within the monastic community as to whether arhats are capable of experiencing sensual pleasure and thus had sexual desire. The Buddha asserted categorically that arhats are immune to sensuality. Several verses of the [THERIGĀTHĀ](#) are attributed to Uppalavaṇṇā. She and [ŚĀRIPUTRA](#) are also said to have been the first to greet the Buddha at [SĀMKĀŚYA](#) when he descended on ladders from the [TRĀYASTRIMŚĀ](#) heaven, where he had been instructing his mother, [MĀYĀ](#); in order to make her way through the large crowd that had gathered, she disguised herself as a [CAKRAVARTIN](#). Among the many crimes of the Buddha's evil cousin [DEVADATTA](#) was beating her to death after she chastised him for attempting to assassinate the Buddha; he thus committed the deed of immediate retribution ([ĀNANTARYAKARMAN](#)) of killing an arhat. The commentary to the *Therīgāthā* and

the Sanskrit [VINAYAVIBHAṄGA](#) provide differing accounts of how she became a nun. The first is briefer and has her come from Sāvatti (S. [ŚRĀVASTĪ](#)); the latter is more extensive and has her come from [TAKṢAŚILĀ](#) (P. Taxila). In both accounts, she gives birth to two children by two different men and becomes separated from both children. Years later, she unknowingly marries her son, who then marries her daughter (whom Utpalavarṇā also does not recognize) as his second wife, making Utpalavarṇā husband to her son and co-wife to her daughter. In the Pāli account, her eventual recognition of this state of affairs is sufficient to cause her to renounce the world. In the Sanskrit account, she gives birth to a son by her first son and when she realizes this, she becomes a courtesan, who is hired to seduce [MAHĀMAUDGALYĀYANA](#). She is unsuccessful, and his words convince her to renounce the world and become a nun.

utpattikrama. (T. bskyed rim; C. shengqi cidi; J. shōkishidai; K. saenggi ch’aje 生起次第). In Sanskrit, “stage of generation” or the “creation stage,” one of the two major phases (along with the [NISPAṆNAKRAMA](#) or the “stage of completion”) of [ANUTTARAYOGATANTRA](#) practice. The term encompasses a wide range of practices that commence after one has received initiation ([ABHISEKA](#)), generally involving the practice of the [SĀDHANA](#) of a particular deity with the aim of the “generation” or transformation of the body, environment, enjoyments, and activities of the practitioner into the body, environment, enjoyments, and activities of a buddha. This is done through the practice of deity yoga ([DEVATĀYOGA](#)), in which the meditator visualizes himself or herself as a buddha and the environment as a [MANDALA](#). In the [RNYING MA](#) sect of Tibetan Buddhism, [MAHĀYOGA](#) generally corresponds to the utpattikrama.

uttamanirmānakāya. (T. mchog gi sprul sku; C. shanghua shen; J. jōkeshin; K. sanghwa sin 上化身). In Sanskrit, “supreme emanation body,” one of the forms of the emanation body ([NIRMĀNAKĀYA](#)) of a buddha. A buddha may appear in any form in order to benefit sentient beings, including as an inanimate object. The form of a buddha that appears in the world and performs the twelve deeds or the eight episodes in the life of a buddha ([BAXIANG](#)), including achieving enlightenment, teaching the dharma, and passing into [PARINIRVĀNA](#), is called a “supreme emanation body.” The “supreme emanation body” is a body adorned with the major and minor marks of a [MAHĀPURUSA](#) and dressed in the robes of a monk, such as [ŚĀKYAMUNI](#). This type of nirmānakāya is contrasted with the [JANMANIRMĀNAKĀYA](#), or “created emanation body,” which are the nonhuman or

inanimate forms a buddha assumes in order to help others overcome their afflictions. See also [TRIKĀYA](#).

[uttamasiddhi](#). (T. mchog gi dngos grub; C. zuishang daxidi; J. saijōdaishijji; K. ch'oesang taesilchi 最上大悉地). In Sanskrit, “supreme attainment”; a term used, especially in a tantric context, to refer to the attainment of buddhahood, in distinction to the common attainments ([SĀDHĀRANASIDDHI](#)), such as the ability to fly, walk through walls, and find buried treasure, which can be achieved through the recitation of [MANTRA](#) and the propitiation of deities.

[uttarakuru](#). (T. sgra mi snyan; C. beijuluzhou; J. hokkurushū; K. pukuro chu 北俱盧洲). Sanskrit and Pāli name of one of the four island continents located in the four cardinal directions surrounding Mount [SUMERU](#), according to traditional Buddhist cosmology. Uttarakuru is the northern continent and is square in shape. Its inhabitants, classified as humans among the six types of beings who inhabit [SAMSĀRA](#), are said to be thirty-two cubits in height and to live for a thousand years. Their language is said to be very unpleasant to the ear.

[Uttaramūlanikāya](#). A monastic fraternity in Sri Lanka, deriving from the [ABHAYAGIRI](#) sect. The main monastery of the group was the Uttarola [VIHĀRA](#), built by King Mānavamma, and donated to the monks of the Abhayagiri Vihāra for having permitted his elder brother to be ordained, despite the fact that he had lost one eye and therefore would normally have been disqualified. The first head of the Uttarola monastery was the king's brother himself, whose duties included the supervision of the guardians of the [TOOTH RELIC](#). The late-eleventh or early-twelfth century scholiast [ANURUDDHA](#), author of the famous [ABHIDHAMMA](#) primer, [ABHIDHAMMATTHASAṄGAHA](#), describes himself in a colophon as an elder of the Uttaramūlanikāya.

[Uttarā-Nandamātā](#). An eminent laywoman declared by the Buddha to be foremost in the attainment of meditative power. According to Pāli accounts, she was the daughter of Puṇṇaka, a servant of the wealthy man Sumana of Rājagaha (S. [RĀGAGRHA](#)). Uttarā's family was devoted to the Buddha and, on one occasion, while listening to a sermon he was preaching, Uttarā and her parents became stream-enterers (P. sotāpanna; S. [SROTAĀPANNA](#)). When Sumana requested that Uttarā be betrothed to his son, he was at first refused on the grounds that his family was not Buddhist. Agreement was reached when Sumana promised that Uttarā would be supplied with sufficient requisites to continue her

daily devotions to the Buddha. Her new husband, however, reneged on the agreement and refused to allow her to observe the uposatha (S. [UPOṢADHA](#)) retreat day because she would have to refrain from intercourse for the night. In order that she could observe the uposatha, Uttarā requested money from her father-in-law so she could hire a courtesan named Sirimā to service her husband. According to legend, there subsequently ensued an incident that led to the enlightenment of the courtesan, her husband, and her father-in-law. It so happened that one day while Uttarā busied herself preparing a magnificent offering for the Buddha and his disciples, her husband was strolling hand in hand with Sirimā. Seeing his wife toiling, he smiled at her foolishness for not using her riches for herself. Uttarā saw her husband and likewise smiled at his foolishness for wasting his life in self-indulgence. Sirimā, misunderstanding their smiles, flew into a jealous rage and threw boiling oil at Uttarā. But through the power of Uttarā’s compassion for Sirimā, the oil did not burn her, and, witnessing this miracle, Sirimā understood her mistake and begged forgiveness. Uttarā brought Sirimā to the Buddha, who preached to her, whereupon she became a once-returner (P. sakadāgamī; S. [SAKRDĀGĀMIN](#)). Uttarā’s husband and father-in-law, who also heard the sermon, became stream-enterers.

[uttarāsamga](#). (P. uttarāsaṅga; T. bla gos; C. zhongjiayi; J. chūgee; K. chunggaŭi 中價衣). In Sanskrit, the “upper robe” or “cassock”; one of the three robes ([TRICĪVARA](#)) permitted for a monk or nun, along with the [ANTARVĀSAS](#), or lower robe, and the [SAMGHĀTĪ](#), or outer robe or waistcloth. The uttarāsamga is large enough to cover the body from the neck to the middle of the calf; it is normally made of one layer of cloth. See also [CĪVARA](#); [KĀSĀYA](#).

[Uttaratantra](#). (T. Rgyud bla ma). See [RATNAGOTRAVIBHĀGA](#).

Vāgīsa. (S). See [VĀNGĪŚĀ](#).

vāgviveka. (T. ngag dben). In Sanskrit, “isolation of speech”; one of the six stages of the completion state ([NISPANNAKRAMA](#)) in the [ANUTTARAYOGATANTRA](#) systems. In order to separate the mind from coarse conventional appearances and induce the dawning of the mind of clear light ([PRABHĀSVARACITTA](#)), the body, speech, and mind must be isolated from their ordinary forms. In the isolation of speech, the subtle wind ([PRĀNA](#)) that is the root of speech is isolated from the ordinary movement of winds. That subtle wind is then combined with [MANTRA](#).

Vaibhāṣika. (T. Bye brag smra ba; C. Piposha shi; J. Bibashashi; K. Pibasa sa 毘婆沙師). In Sanskrit, “Followers of the *Vibhāṣā*”; the [ABHIDHARMIKA](#)s associated with the [SARVĀSTIVĀDA](#) school of [ABHIDHARMA](#), especially in [KASHMIR-GANDHĀRA](#) in northwestern India but even in [BACTRIA](#). Because these masters considered their teachings to be elaborations of doctrines found in the Sarvāstivāda abhidharma treatise, the [ABHIDHARMAMAHĀVIBHĀSĀ](#), they typically referred to themselves as the Vaibhāṣika; hence, the Kashmiri strand of Sarvāstivāda may be called either Sarvāstivāda-Vaibhāṣika, or, simply, Vaibhāṣika. The root text of the Vaibhāṣika school is the *Abhidharmamahāvibhāṣā* (a.k.a. *Mahāvibhāṣā*), a massive encyclopedic compendium of Sarvāstivāda doctrine. The Vaibhāṣikas maintained that the *Mahāvibhāṣā* was originally spoken by the Buddha himself, and that the various interlocutors—including divinities, [ŚĀRIPUTRA](#), and others—who facilitate the work’s catechistic structure were summoned by the Buddha for the sake of the text’s composition. The Gandhāran response to this and other claims made by the Vaibhāṣikas led to the formation of an offshoot that rejected the authority of this abhidharma literature. This offshoot called itself the [SAUTRĀNTIKA](#), or “Those Who Adhere to the [SŪTRAS](#).” The Vaibhāṣika abhidharma system maintains the existence of seventy-five constituent factors ([DHARMA](#)). Seventy-two of these are conditioned ([SAMSKRTA](#)) and three are unconditioned ([ASAMSKRTA](#)). Like most other schools of Buddhism, the Vaibhāṣikas affirmed the selflessness ([ANĀTMAN](#)) of persons and the momentary ([KSANIKA](#)) nature of conditioned dharmas. However, they maintained that these factors have their own real existence that endures in past, present, and future modes. They believed

these factors to be both real and eternal—a view for which they generated many elaborate justifications. They also believed external objects to be composed of minute particles, like atoms ([PARAMĀNU](#)). According to the Vaibhāṣikas, consciousness ([VIJÑĀNA](#)) or cognition has no form that is independent of its object; the Vaibhāṣika model of the relationship between consciousness and its objects is therefore sometimes referred to as “direct realism” (see [ĀKĀRA](#)). [VASUBANDHU](#)’s [ABHIDHARMAKOŚABHĀŚYA](#) is mainly concerned with abhidharma theory as it was explicated in the Vaibhāṣika school; in comparison to the *Mahāvibhāṣā*, however, the *Abhidharmakośabhāṣya* presents a more systematic overview of Sarvāstivāda positions and, at various points in his expositions, Vasubandhu criticizes Sarvāstivāda doctrine from the standpoint of its more progressive Sautrāntika offshoot. This criticism elicited a spirited response from later Sarvāstivāda-Vaibhāṣika scholars, such as [SAMGHABHADRA](#) in his [*NYĀYĀNUSĀRA](#). The Vaibhāṣika disappeared as an independent school sometime around the seventh or eighth centuries CE.

[vaidalya](#). (S) (P. vedalla). See [VAIPULYA](#).

[Vaidalyaprakarana](#). (T. Zhib mo rnam par ’thag pa). In Sanskrit, “Extended” or “Woven” “Explanation”; a work now extant only in Tibetan, which is ascribed to [NĀGĀRJUNA](#) (although some modern scholarship has questioned the attribution). The treatise, also known as the *Vaidalyasūtra*, is listed in Tibet as one of Nāgārjuna’s six works in his “logical corpus” ([YUKTIKĀYA](#)). The work is devoted to the refutation of sixteen principles (padārtha) set forth in the *Nyāyasūtra*, which is accomplished in seventy-three aphorisms, or sūtras. An autocommentary is also extant.

[*Vaidalyasūtranāma](#). (S) (T. Zhib mo rnam par ’thag pa zhes bya ba’i mdo). See [VAIDALYAPRAKARANA](#).

[Vaidehī](#). (P. Videhī; T. Lus ’phags ma; C. Weitixi; J. Idaike; K. Wijehüi 韋提希). Sanskrit proper name of the queen of [BIMBISĀRA](#), king of [MAGADHA](#), and mother of [AJĀTAŚATRU](#). According to some traditions, her name derives from the fact that she hailed from [VIDEHA](#). When her son Ajātaśatru usurped the throne and imprisoned his father, no one was allowed to visit him except for Vaidehī. Although she was prohibited from bringing Bimbisāra food, she hid food in her clothes. When this was discovered, she hid food in her hair and then in her shoes. When these were discovered, she smeared her body with the four sweet

substances, which the king licked for his sustenance. When this was discovered, the king lived on the energy from walking meditation, until his son had his feet lacerated, after which he died. The incident of Vaidehī’s visit to the cell of Bimbisāra provides the setting for one of the three major sūtras of the East Asian [PURE LAND](#) traditions, the [GUAN WULIANGSHOU JING](#) (sometimes known by the hypothetical reconstructed Sanskrit title **Amitāyurdhyānasūtra*, or simply as the “Meditation Sūtra”). According to this sūtra, when Ajātaśatru discovers that his mother has been secretly feeding the king, he incarcerates her as well. Despite her sorrow, Vaidehī does not give up her faith in the Buddha and invokes his aid. The Buddha then appears before her, and she asks that he teach her about a place where there is no sorrow. The Buddha then teaches her how to visualize the [SUKHĀVATĪ](#) pure land of the buddha named “Infinite Life” ([AMITĀYUS/AMITĀBHA](#)). He next explains to her how one may be reborn in this wonderful paradise, which is a land without suffering, a world of endless bliss. At the end of the sūtra, Vaidehī is mentioned as one of many who were inspired by the Buddha’s preaching.

[vaipulya](#). [alt. vaidalya] (cf. P. vedalla; T. shin tu rgyas pa; C. fangdeng; J. hōdō; K. pangdŭng 方等). In Sanskrit, lit. “vast” or “extended,” viz., “works of great extent”; a term that appears in the title of a number of [MAHĀYĀNA](#) sūtras meant to indicate their profundity, comprehensiveness, and stereotypically great length. Such sūtras will typically offer a more comprehensive overview of Buddhist thought and practice than shorter sūtras that may have a single, or more circumscribed, message. The term is used to name one of the nine ([NAVĀṄGA](#)) (Pāli) or twelve ([DVĀDAŚĀṄGA\[PRAVACANA\]](#)) (Sanskrit) categories ([AṄGA](#)) of Buddhist scripture according to their structure or literary style. As one of the nine categories of scriptures organized by type or style, vaipulya corresponds to the Pāli category of vedalla (S. vaidalya), which refers to such catechetical texts as the [SAKKAPAÑHASUTTANTA](#) or the [SAMMĀDITTHISUTTA](#). In the twelve types of scripture used in Mahāyāna classifications, the vaipulyasūtras are listed as the eleventh category and especially refer to scriptures of massive size. Mahāyāna sūtras included in the vaipulya category include many of the seminal works of the tradition, including the [PRAJÑĀPĀRAMITĀ](#) sūtras, the [RATNAKŪTASŪTRA](#) collection, and the [AVATAMSAKASŪTRA](#).

[vairāgya](#). (P. virāga; T. chags bral; C. liran/liyu/wuyu; J. rizen/riyoku/muyoku; K. iyōm/iyok/muyok 離染/離欲/無欲). In Sanskrit, “dispassion [toward the world]”;

an important step in the soteriological process leading to [NIRVĀNA](#). In the [ABHIDHARMAMAHĀVIBHĀSĀ](#), vairāgya is said to correspond to “lack of greed” (S. [ALOBHA](#); C. wutan), one of the three wholesome faculties (trīṇi kuśalamūlāni, see [KUŚALAMŪLA](#)), along with “lack of anger” (S. apratigha; C. wuchen) and “nondelusion” (S. amoha; C. wuchi). Vairāgya is an essential factor in reaching the state that is uncontaminated ([ANĀSRAVA](#)) by the afflictions ([KLEŚA](#)), a characteristic of the [ARHAT](#) path. Vairāgya is the tenth of the twelve links ([NIDĀNA](#)) in what is known in Pāli Buddhist literature as “supramundane dependent origination” (P. lokuttara-paṭiccasamuppāda; S. [LOKOTTARA-PRATĪTYASAMUTPĀDA](#)). This supramundane chain leads to liberation (P. vimutti; S. [VIMUKTI](#)), rather than continued rebirth in [SAMŚĀRA](#), which is the end result of the more common mundane chain. In this “supramundane” chain, the twelve links are (1) suffering (P. dukkha; S. [DUḤKHA](#)), (2) faith (P. saddhā; S. [ŚRADDHĀ](#)), (3) delight or satisfaction (P. pāmojja; S. prāmodya), (4) physical rapture or joy (P. pīti; S. [PRĪTI](#)), (5) tranquillity or repose (P. passaddhi; S. [PRAŚRABDHI](#)), (6) mental ease or bliss ([SUKHA](#)), (7) concentration ([SAMĀDHI](#)), (8) knowledge and vision that accords with reality (P. yathābhūtañāṇadassana; S. [YATHĀBHŪTAJÑĀNADARŚANA](#)), (9) disillusionment (P. nibbidā; S. [NIRVEDA](#)), (10) dispassion (P. virāga; S. vairāgya), (11) liberation (P. vimutti; S. [VIMUKTI](#)), and (12) knowledge of the destruction of the contaminants (P. āsavakkhāya; S. [ĀSRAVAKSAYA](#)). The **Āryaśāsanaprakaraṇa* (C. *Xianyang shengjiao lun*), a summary exposition of the [YOGĀCĀRABHŪMIŚĀSTRA](#), also mentions vairāgya in a similar list of twelve links, the difference being that the first two links are replaced by “observance of precepts” (P. kusalasīla; S. kuśalāsīla), and “freedom from remorse” (P. avippaṭisāra; S. avipraṭisāra).

Vairocana. (T. Rnam par snang mdzad; C. Dari rulai/Piluzhena; J. Dainichi nyorai/Birushana; K. Taeil yōrae/Pirojana 大日如來/毗盧遮那). In Sanskrit, “Resplendent”; one of the five buddhas ([PAÑCATATHĀGATA](#)) and the chief buddha of the [TATHĀGATAKULA](#); he is also one of the major buddhas of East Asian Buddhism, where he is often conflated with [MAHĀVAIROCANA](#). The origin of Vairocana can be traced back to the Hindu tradition, where he appears as a relatively minor deity associated with the Sun. ¶ Although the name Vairocana appears in some mainstream Buddhist and [PRAJÑĀPĀRAMITĀ](#) materials, it is not until the emergence of the [ĀVATAMSAKASŪTRA](#) that Vairocana comes to be widely regarded as the buddha who is the personification of the universal truth of the religion. In its “Chapter on Vairocana,” Vairocana is considered to be the

main buddha of the sūtra, who is omnipresent as the [DHARMAKĀYA](#). Vairocana is, however, also described in the sūtra as a buddha who mastered the [BODHISATTVA](#) path by making vows to attain buddhahood, performing all types of virtuous deeds, hearing the dharma, cultivating meditative practices, and realizing the truth of the dependent origination of the dharma realm (C. [FAJIE YUANQI](#)) in which each and every thing in existence is in multivalent interaction with all other things in a state of complete and perfect interfusion. In this case, Vairocana as the reward body ([SAMBHOGAKĀYA](#)) is called ROCANA (C. Lushena) in order to distinguish him from Vairocana (C. Piluzhena) as the dharmakāya buddha. With the growing popularity of the *Avataṃsakasūtra*, Vairocana becomes one of the principal buddhas of East Asian Buddhism. Many Vairocana images were constructed in China starting in the sixth century, and colossal images of him were erected in the [LONGMEN](#) Grottoes near Luoyang in northern China and in [TŌDAJI](#) in Nara, Japan. In Korea, Vairocana (as the dharmakāya buddha) often appeared at the center of a buddha triad, flanked by [ŚĀKYAMUNI](#) (as the [NIRMĀNAKĀYA](#)) and ROCANA (as the sambhogakāya). Vairocana's popularity expanded with his appearance in the [MAHĀVAIROCANASŪTRA](#), and, from this point on, Vairocana is generally regarded as the main buddha of the *Avataṃsakasūtra* and the [HUAYAN ZONG](#), while Mahāvairocana is regarded as the main buddha of the [MAHĀVAIROCANĀBHISAMBODHISŪTRA](#) and the [ZHENYAN](#) or [SHINGON](#) schools. ¶ Vairocana is also the central deity of the [VAJRADHĀTU](#) (J. [KONGŌKAI](#)) and the [GARBHADHĀTU](#) (J. [TAIZŌKAI](#)) [MANDALAS](#) of [YOGATANTRA](#) associated with the [SARVATATHĀGATATATTVASAMGRAHA](#), a highly influential tantric text in India, Tibet, and East Asia. He appears in the central assembly of the vajradhātu maṇḍala, displaying the [MUDRĀ](#) of wisdom (dainichi ken-in), surrounded by the four directional buddhas ([AKṢOBHYA](#), [RATNASAMBHAVA](#), [AMITĀBHA](#), and [AMOGHASIDDHI](#)), each of whom embodies four aspects of Vairocana's wisdom. In the garbhadhātu maṇḍala, Vairocana is located at the center of the eight-petaled lotus in the central cloister of the maṇḍala, along with the four buddhas and four bodhisattvas sitting on the eight petals. Vairocana is typically depicted as white in color, holding the wheel of dharma ([DHARMAKĀYA](#)) in his hands, which are in the gesture of teaching ([VITARKAMUDRĀ](#)). Vairocana is closely associated with the bodhisattva [SAMANTABHADRA](#), and his consort is Vajradhātṽśvarī. The commentaries on the *Sarvatathāgatattvasaṃgraha* recount that Prince [SIDDHĀRTHA](#) was meditating on the banks of the [NAIRAÑJANĀ](#) River when he was roused by Vairocana and the buddhas of the ten directions, who informed him that such meditation would not

result in the achievement of buddhahood. He thus left his physical body behind and traveled in a mind-made body ([MANOMAYAKĀYA](#)) to the [AKANIṢṬHA](#) heaven, where he received various consecrations and achieved buddhahood. He next descended to the summit of Mount [SUMERU](#), where he taught the yogatantras. Finally, he returned to the world, inhabited his physical body, and then displayed to the world the well-known defeat of [MĀRA](#) and the achievement of buddhahood. ¶ Vairocana is also the name of one of the chief figures in the earlier dissemination ([SNGA DAR](#)) of Buddhism to Tibet, where he is known by his Tibetan pronunciation of Bai ro tsa na. He was one of the first seven Tibetans ([SAD MI BDUN](#)) to be ordained as Buddhist monks by the Indian master [ŚĀNTARAKSITA](#) at the first Tibetan monastery, [BSAM YAS](#). According to Tibetan accounts, he was sent by King [KHRI SRONG LDE BTSAN](#) to India to study Sanskrit and to gather texts and teachings. He is said to have received teachings of the “mind class” ([SEMS SDE](#)) and the “expanse class” ([KLONG SDE](#)) at [BODHGAYĀ](#), before traveling to [ODDIYĀNA](#), where he met the master [ŚRĪSIMHA](#), who gave him exoteric teachings during the day and instructed him secretly in the great completeness ([RDZOGS CHEN](#)) practices at night. Returning to Tibet, he followed the same program, instructing the king secretly in the “mind class” teachings at night. This raised suspicions, which led to his banishment to eastern Tibet. He was later allowed to return, at the request of [VIMALAMITRA](#). He is renowned as one of the three major figures (along with [PADMASAMBHAVA](#) and Vimalamitra) in the dissemination of the rdzogs chen teachings in Tibet and translated many texts from Sanskrit into Tibetan; the manuscripts of some of his translations have been discovered at [DUNHUANG](#). See also [JÑĀNAMUSTI](#).

[Vairocanābhisambodhi](#). (S). See [MAHĀVAIROCANĀBHISAMBODHISŪTRA](#).

[Vairocanābhisambodhitantra](#). (S). See [MAHĀVAIROCANĀBHISAMBODHISŪTRA](#).

[Vairocanadharmā](#). (T. nam snang gi chos). In Sanskrit, “features of [VAIROCANĀ](#)”; seven constituents that constitute the ideal posture for meditation: sitting in the adamant position ([VAJRAPARYĀṅKA](#)), casting the eyes down toward the tip of the nose, keeping the backbone straight, keeping the shoulders level, tucking in the chin, placing the tongue against the back of the upper teeth, placing the hands in the position of equipoise. The Tibetan translator ([LO TSĀ BA](#)) [MAR PA](#), teacher of [MI LA RAS PA](#), was a strong proponent of this meditation posture.

Vaiśālī. (P. Vesāli; T. Yangs pa can; C. Pisheli; J. Bishari; K. Pisari 毘舍離). A town approximately twenty-five miles (forty km.) to the northwest of modern-day Patna, in the state of Bihar, India. During the Buddha’s lifetime, this was the capital of the Licchavis, which was part of the Vṛji republic. The Buddha first visited the city in the fifth year after his enlightenment and spent his last rains retreat (**VARSA**) in the vicinity of Vaiśālī. The Buddha preached a number of important sūtras and established several rules of discipline in the city. The Buddha accepted the gift of a mango grove (the Āmrāpālīvana) from the city’s famous courtesan **ĀMRAPĀLĪ**. When the Buddha was en route from **KAPILAVASTU** to Vaiśālī, his stepmother **MAHĀPRAJĀPATĪ** and five hundred women shaved their heads and followed him. Upon arriving in the city, they requested and eventually received ordination as nuns (**BHIKSUNĪ**). Before departing on the journey that would end at **KUŚINAGARĪ** with his passage into **PARINIRVĀNA**, the Buddha is said to have turned his body like an elephant for one final look at the city. ¶ Vaiśālī was also the location of the second Buddhist council (**SAMGĪTĪ**; see **COUNCIL, SECOND**), held approximately one hundred years after the Buddha’s **PARINIRVĀNA**. Some seven hundred monks were said to have attended the council at Vālukārāma monastery, although the number is probably more of a representation of the council’s significance rather than an exact number of monks in attendance. The importance of the second council lies in the sectarian division that occurred within the **SAMGHA** either at the time of that council or directly thereafter. According to the traditional account, the monk **YAŚAS** entered Vaiśālī to visit the monks there and found that they were engaging in what he believed to be ten violations of the **VINAYA** code of conduct. When Yaśas criticized the Vaiśālī monks for these violations, he was rebuked and expelled from the **SAMGHA**. Yaśas later returned with the monk **ŚĀNAKAVĀSIN**, at which point the monk **REVATA** called the council and presided over it. After the senior monks ruled in Yaśas’s favor, the saṃgha split into the two groups, the **STHAVIRANIKĀYA** (the “Order of the Elders,” which included Revata and Yaśas) and the **MAHĀSĀMGHIKA** (the “Members of the Great Assembly,” which included probably the majority of monks, who opposed the ruling). By the beginning of the Common Era, the saṃgha had split into what is commonly called the eighteen **MAINSTREAM BUDDHIST SCHOOLS**, in reference to the multiple traditions that developed following the second council at Vaiśālī.

vaiśāradya. (P. vesārajja; T. mi ’jigs pa; C. wusuowei; J. mushoi; K. musooe 無所畏). In Sanskrit, “self-confidence,” or “fearlessness”; one of the qualities of all

buddhas, generally enumerated (with some variants) as four: (1) the confidence that he is fully enlightened with regard to all phenomena, (2) the confidence that he has destroyed all contamination, (3) the confidence that he has correctly identified all obstacles to liberation, and (4) the confidence that all marvelous qualities are achieved through the path.
